a2-1 (B) - a2-7 (GND)	Always	10 to 14 V

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
z2-1 (B) - z2-7 (GND)	Always	10 to 14 V

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
c2-1 (B) - c2-7 (GND)	Always	10 to 14 V

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
b2-1 (B) - b2-7 (GND)	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

DL

2	CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - CERTIFICATION ECU)

(a) Disconnect the E13 and E14 ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-33 (CLG1) - a2-10 (CLG)	Always	Below 1 Ω
E13-34 (CG1B) - a2-5 (CLGB)	Always	Below 1 Ω
E13-33 (CLG1) - Body ground	Always	10 kΩ or higher
E13-34 (CG1B) - Body ground	Always	10 kΩ or higher

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-35 (CLG2) - z2-10 (CLG)	Always	Below 1 Ω
E13-36 (CG2B) - z2-5 (CLGB)	Always	Below 1 Ω
E13-35 (CLG2) - Body ground	Always	10 kΩ or higher
E13-36 (CG2B) - Body ground	Always	10 kΩ or higher

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-8 (CLG3) - c2-10 (CLG)	Always	Below 1 Ω
E14-9 (CG3B) - c2-5 (CLGB)	Always	Below 1 Ω
E14-8 (CLG3) - Body ground	Always	10 kΩ or higher
E14-9 (CG3B) - Body ground	Always	10 kΩ or higher

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-10 (CLG4) - b2-10 (CLG)	Always	Below 1 Ω
E14-11 (CG4B) - b2-5 (CLGB)	Always	Below 1 Ω
E14-10 (CLG4) - Body ground	Always	10 kΩ or higher
E14-11 (CG4B) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR (CHECK OPERATION OF OSCILLATOR)

(a) Replace the door oscillator.

(b) Check that the entry LOCK/UNLOCK function operates normally.
OK:
Entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

4 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (CERTIFICATION ECU OUTPUT SIGNAL)

Certification ECU:

(a) Reconnect the ECU and the oscillator connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(e) Following the display on the tester, select the "ACTIVE TEST".
SMART ACCESS (Certification ECU):

Item	Vehicle Condition/Test Details
D TRANSMITTER	Door Oscillator ON/OFF
P TRANSMITTER	Door Oscillator ON/OFF
DR TRANSMITTER	Door Oscillator ON/OFF
PR TRANSMITTER	Door Oscillator ON/OFF

(f) Measure the frequency according to the value(s) in the table below.
Standard:
Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-33 (CLG1) - E13-34 (CG1B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-35 (CLG2) - E13-36 (CG2B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-8 (CLG3) - E14-9 (CG3B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-10 (CLG4) - E14-11 (CG4B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

NG → **REPLACE CERTIFICATION ECU**

DL

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Entry Lock Switch Circuit

DESCRIPTION

The entry lock switches (trigger switch) are built into the door outside handles of the all doors. The certification ECU detects the conditions of each lock switch.

WIRING DIAGRAM

DL

INSPECTION PROCEDURE

1	INSPECT ENTRY LOCK SWITCH

(a) Remove the outside handle.
(b) Disconnect the connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
a1-1 (TRG-) - a1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
z1-1 (TRG-) - z1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
c1-1 (TRG-) - c1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
b1-1 (TRG-) - b1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω

NG → **REPLACE OUTSIDE HANDLE ASSEMBLY**

OK

DL

2	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENTRY LOCK SWITCH)

Certification ECU:

Door Outside Handle (Lock Switch) Wire Harness Side:

H

B138080E01

(a) Disconnect the E13 and E14 ECU connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-3 (TSW1) - a1-3 (TRG+)	Always	Below 1 Ω
E13-3 (TSW1) - Body ground	Always	10 kΩ or higher

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-4 (TSW2) - z1-3 (TRG+)	Always	Below 1 Ω
E13-4 (TSW2) - Body ground	Always	10 kΩ or higher

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-25 (TSW3) - c1-3 (TRG+)	Always	Below 1 Ω
E14-25 (TSW3) - Body ground	Always	10 kΩ or higher

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-26 (TSW4) - b1-3 (TRG+)	Always	Below 1 Ω
E14-26 (TSW4) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

DL

3 CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - ENTRY LOCK SWITCH)

Door Outside Handle (Lock Switch) Wire Harness Side:

Electrical Key Oscillator:

H B112467E10

(a) Disconnect the electrical key oscillator connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
a2-9 (TRG-) - a1-1 (TRG-)	Always	Below 1 Ω
a2-9 (TRG-) - Body ground	Always	10 kΩ or higher

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
z2-9 (TRG-) - z1-1 (TRG-)	Always	Below 1 Ω
z2-9 (TRG-) - Body ground	Always	10 kΩ or higher

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
c2-9 (TRG-) - c1-1 (TRG-)	Always	Below 1 Ω
c2-9 (TRG-) - Body ground	Always	10 kΩ or higher

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
b2-9 (TRG-) - b1-1 (TRG-)	Always	Below 1 Ω
b2-9 (TRG-) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

(a) Replace the electrical key oscillator.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

Entry LOCK/UNLOCK function operates normally.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

DL

Touch Sensor Circuit

DESCRIPTION

The touch sensor are built into the door outside handles of the all doors. This circuit receives a signal indicating whether a touch sensor signal is detected.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Following the display on the tester, select "DATA LIST".

SMART ACCESS (Certification ECU):

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
D TOUCH SENSOR	Status of touch sensor front LH/ ON or OFF	ON: Touch sensor is touched OFF: Touch sensor is not touched	-
P TOUCH SENSOR	Status of touch sensor front RH/ ON or OFF	ON: Touch sensor is touched OFF: Touch sensor is not touched	-
DR TOUCH SENSOR	Rear door touch sensor LH/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
PR TOUCH SENSOR	Rear door touch sensor RH/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-

DL

OK:
"ON" (screen is touched) or "OFF" (screen is not touched) appears on the tester screen.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the E13 and E14 ECU connectors.
(b) Disconnect the oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-5 (SEL1) - a2-4 (SEL)	Always	Below 1 Ω
E13-22 (SEN1) - a2-6 (SENS)	Always	Below 1 Ω
E13-5 (SEL1) - Body ground	Always	10 kΩ or higher
E13-22 (SEN1) - Body ground	Always	10 kΩ or higher

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-6 (SEL2) - z2-4 (SEL)	Always	Below 1 Ω
E13-23 (SEN2) - z2-6 (SENS)	Always	Below 1 Ω
E13-6 (SEL2) - Body ground	Always	10 kΩ or higher
E13-23 (SEN2) - Body ground	Always	10 kΩ or higher

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-1 (SEL3) - c2-4 (SEL)	Always	Below 1 Ω
E14-28 (SEN3) - c2-6 (SENS)	Always	Below 1 Ω
E14-1 (SEL3) - Body ground	Always	10 kΩ or higher
E14-28 (SEN3) - Body ground	Always	10 kΩ or higher

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-2 (SEL4) - b2-4 (SEL)	Always	Below 1 Ω
E14-27 (SEN4) - b2-6 (SENS)	Always	Below 1 Ω
E14-2 (SEL4) - Body ground	Always	10 kΩ or higher
E14-27 (SEN4) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR (CHECK OPERATION OF OSCILLATOR)

(a) Replace the electrical key oscillator.
(b) Check that the entry UNLOCK function operates normally.

OK:

Entry UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

4 INSPECT CERTIFICATION ECU

Certification ECU:

(a) Reconnect the ECU and the oscillator connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-5 (SEL1) - Body ground	Move the key more than 5 m (16.4 ft) away from the front door LH	10 to 14 V
E13-5 (SEL1) - Body ground	Bring key to the outside handle	Below 1 V
E13-22 (SEN1) - Body ground	Front door LH outside handle is not held (Bring the electrical key to the outside handle)	10 to 14 V
E13-22 (SEN1) - Body ground	Front door LH outside handle is held	Below 1 V

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
E13-6 (SEL2) - Body ground	Move the key more than 5 m (16.4 ft) away from the front door RH	10 to 14 V
E13-6 (SEL2) - Body ground	Bring key to the outside handle	Below 1 V
E13-23 (SEN2) - Body ground	Front door RH outside handle is not held (Bring the electrical key to the outside handle)	10 to 14 V
E13-23 (SEN2) - Body ground	Front door RH outside handle is held	Below 1 V

Rear LH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-1 (SEL3) - Body ground	Move the key more than 5 m (16.4 ft) away from the rear door LH	10 to 14 V
E14-1 (SEL3) - Body ground	Bring key to the outside handle	Below 1 V
E14-28 (SEN3) - Body ground	Rear door LH outside handle is not held (Bring the electrical key outside the handle)	10 to 14 V
E14-28 (SEN3) - Body ground	Rear door LH outside handle is held	Below 1 V

Rear RH side

Tester Connection (Symbols)	Condition	Specified Condition
E14-2 (SEL4) - Body ground	Move the key more than 5 m (16.4 ft) away from the rear door RH	10 to 14 V
E14-2 (SEL4) - Body ground	Bring key to the outside handle	Below 1 V
E14-27 (SEN4) - Body ground	Rear door RH outside handle is not held (Bring the electrical key outside the handle)	10 to 14 V
E14-27 (SEN4) - Body ground	Rear door RH outside handle is held	Below 1 V

NG → **REPLACE CERTIFICATION ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Antenna Circuit

DESCRIPTION

The antenna are built into the door outside handles of the all doors. Terminals ANT1 and ANT2 of the antenna (door outside handle) detect if the electrical key is within the action area around the door outside handle.

WIRING DIAGRAM

DL

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - ANTENNA)

(a) Remove the outside handle.
(b) Disconnect the antenna and door oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
a1 (*1), z1 (*2), c1 (*3), b1 (*4)-2 (ANT2) - a2 (*1), z2 (*2), c2 (*3), b2 (*4)-8 (ANT2)	Always	Below 1 Ω
a1 (*1), z1 (*2), c1 (*3), b1 (*4)-6 (SGT) - a2 (*1), z2 (*2), c2 (*3), b2 (*4)-2 (SGT)	Always	Below 1 Ω
a1 (*1), z1 (*2), c1 (*3), b1 (*4)-5 (ANT1) - a2 (*1), z2 (*2), c2 (*3), b2 (*4)-3 (ANT1)	Always	Below 1 Ω
a1 (*1), z1 (*2), c1 (*3), b1 (*4)-2 (ANT2) - Body ground	Always	10 kΩ or higher
a1 (*1), z1 (*2), c1 (*3), b1 (*4)-6 (SGT) - Body ground	Always	10 kΩ or higher
a1 (*1), z1 (*2), c1 (*3), b1 (*4)-5 (ANT1) - Body ground	Always	10 kΩ or higher

*1: Front Door LH
*2: Front Door RH
*3: Rear Door LH
*4: Rear Door RH

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK AND REPLACE DOOR OUTSIDE HANDLE

(a) Replace the door outside handle.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

Entry LOCK/UNLOCK function operates normally.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

END (DOOR OUTSIDE HANDLE IS DEFECTIVE)

DL

Luggage Oscillator Circuit

DESCRIPTION

The certification ECU activates the inner and outer luggage compartment oscillators. The power is supplied from the certification ECU to both the inner and outer luggage compartment oscillators. The inner and outer luggage compartment oscillator circuits have the same wiring. If the entry luggage compartment function has a problem, check both the inner and outer luggage compartment oscillator circuits.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)

Certification ECU:

Electrical Key Oscillator

(Inside Luggage Compartment):

Electrical Key Oscillator

(Outside Luggage Compartment):

H B137965E02

(a) Disconnect the E13 ECU connector.
(b) Disconnect the oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:
Inside Luggage Compartment

Tester Connection (Symbols)	Condition	Specified Condition
E13-16 (CG7B) - R2-3 (CLGB)	Always	Below 1 Ω
E13-15 (CLG7) - R2-1 (CLG6)	Always	Below 1 Ω
E13-16 (CG7B) - Body ground	Always	10 kΩ or higher
E13-15 (CLG7) - Body ground	Always	10 kΩ or higher

Outside Luggage Compartment

Tester Connection (Symbols)	Condition	Specified Condition
E13-32 (CG8B) - R3-2 (CLGB)	Always	Below 1 Ω
E13-31 (CLG8) - R3-1 (CLG5)	Always	Below 1 Ω
E13-32 (CG8B) - Body ground	Always	10 kΩ or higher
E13-31 (CLG8) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

DL

2 CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

(a) Replace the electrical key oscillator.
(b) Check that the luggage compartment door entry LOCK/UNLOCK function operates normally.
OK:
Luggage compartment door entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

3 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

DL

Certification ECU:

(a) Reconnect the oscillator and the ECU connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Following the display on the tester, select the "ACTIVE TEST".
SMART ACCESS (Certification ECU):

Item	Vehicle Condition/Test Details
IN-BDR TRNSMTTR	Electrical key oscillator (Luggage compartment inner) ON/OFF
BDOOR TRNSMTTR	Electrical key oscillator (Luggage compartment outer) ON/OFF

(e) Measure the frequency according to the value(s) in the table below.
Standard:
Inside Luggage Compartment

Tester Connection (Symbols)	Condition	Specified Condition
E13-16 (CG7B) - E13-15 (CLG7)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

Outside Luggage Compartment

Tester Connection (Symbols)	Condition	Specified Condition
E13-32 (CG8B) - E13-31 (CLG8)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

NG → **REPLACE CERTIFICATION ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Room Oscillator Circuit

DESCRIPTION

The certification ECU activates the electrical key oscillators (console and rear seat). The power is supplied from the certification ECU to both the electrical key oscillators (console and rear seat). The electrical key oscillators (console and rear seat) circuits have the same wiring. If the smart access system with push-button start does not operate properly inside the vehicle, check both the electrical key oscillators (console and rear seat) circuits.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)

Certification ECU:

Electrical Key Oscillator (Console):

Electrical Key Oscillator (Rear Seat):

H B137966E02

(a) Disconnect the E13 ECU connector.
(b) Disconnect the oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Console

Tester Connection (Symbols)	Condition	Specified Condition
E13-12 (CG5B) - E24-3 (CLGB)	Always	Below 1 Ω
E13-11 (CLG5) - E24-1 (CLG3)	Always	Below 1 Ω
E13-12 (CG5B) - Body ground	Always	10 kΩ or higher
E13-11 (CLG5) - Body ground	Always	10 kΩ or higher

Rear Seat

Tester Connection (Symbols)	Condition	Specified Condition
E13-14 (CG6B) - L9-3 (CLGB)	Always	Below 1 Ω
E13-13 (CLG6) - L9-1 (CLG4)	Always	Below 1 Ω
E13-14 (CG6B) - Body ground	Always	10 kΩ or higher
E13-13 (CLG6) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

(a) Replace the electrical key oscillator.
(b) Check that the entry LOCK/UNLOCK function operates normally.
OK:
Entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (CERTIFICATION ECU OUTPUT SIGNAL)

Certification ECU:

H B137963E11

(a) Reconnect the oscillator and the ECU connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Following the display on the tester, select the "ACTIVE TEST".
SMART ACCESS (Certification ECU):

Item	Vehicle Condition/Test Details
FR TRANSMITTER	Electrical key oscillator (console) ON/OFF
RR TRANSMITTER	Electrical key oscillator (rear seat) ON/OFF

(e) Measure the frequency according to the value(s) in the table below.
Standard:
Console

Tester Connection (Symbols)	Condition	Specified Condition
E13-12 (CG5B) - E13-11 (CLG5)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

Rear Seat

Tester Connection (Symbols)	Condition	Specified Condition
E13-14 (CG6B) - E13-13 (CLG6)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

NG → **REPLACE CERTIFICATION ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Luggage Compartment Door Open Switch Circuit

DESCRIPTION

If the certification ECU detects that the luggage compartment open switch is pressed when the driver is carrying the electrical key or when the electrical key is unlocked in the luggage compartment door, the certification ECU sends a luggage compartment door open motor drive request signal to the main body ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - LUGGAGE COMPARTMENT OPEN SWITCH)

(a) Disconnect the E13 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E13-7 (TSW5) - Body ground	Luggage compartment open switch not pushed (OFF)	10 kΩ or higher
	Luggage compartment open switch pushed (ON)	Below 1 Ω

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT LUGGAGE COMPARTMENT OPEN SWITCH

(a) Disconnect the switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
R10-1 - R10-2	Luggage compartment open switch not pushed (OFF)	10 kΩ or higher
	Luggage compartment open switch pushed (ON)	Below 1 Ω

NG → **REPLACE LUGGAGE COMPARTMENT OPEN SWITCH**

OK

REPLACE CERTIFICATION ECU

DL

Certification ECU Power Source Circuit

DESCRIPTION

This is the power source circuit of the certification ECU.
The certification ECU controls the following:

- Electrical key verification confirmation
- Cabin and door oscillator control
- Entry door LOCK/UNLOCK request to the main body ECU
- Steering LOCK/UNLOCK request
- Immobiliser SET/UNSET request to the ID code box

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)

Certification ECU:

(a) Disconnect the E13 certification ECU connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E13-1 (+B1) - Body ground	Always	10 to 14 V
E13-18 (IG) - Body ground	Engine switch OFF	Below 1 V
	Engine switch ON (IG)	10 to 14 V
E13-19 (ACC) - Body ground	Engine switch OFF	Below 1 V
	Engine switch ON (ACC)	10 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E13-17 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the E60, E61, DO, DK, DM, DD, DA, DF, DJ, and E58 J/B and ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
DCTY (E61-24) - Body ground	GR - Body ground	Driver door courtesy switch input	Driver door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
RCTY (E60-7) - Body ground	GR - Body ground	Rear right door courtesy switch input	Rear right door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
PCTY (E60-21) - Body ground	G - Body ground	Passenger door courtesy switch input	Passenger door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
LCTY (DO-7) - Body ground	B - Body ground	Rear left door courtesy switch input	Rear left door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
GND3 (E59-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
IG (DF-11) - Body ground	B - Body ground	Engine power supply	Engine switch on (IG) → off	10 to 14 V → Below 1 V
GND1 (DF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
ACC (DF-2) - Body ground	L - Body ground	ACC power supply	Engine switch on (ACC) → OFF	10 to 14 V → Below 1 V
L1 (DJ-3) - Body ground	R - Body ground	Door control switch LOCK input	Passenger door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
UL1 (DJ-4) - Body ground	G - Body ground	Door control switch UNLOCK input	Passenger door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
LGCY (E60-25) - Body ground	W - Body ground	Luggage compartment door courtesy switch input	Luggage compartment door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the J/B and ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
LSWL (DP-5) - Body ground	GR - Body ground	Rear left door lock position switch input	Rear left door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
LSWD (E61-9) - Body ground	L - Body ground	Driver door lock position switch input	Driver door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
GSW (DE-8) - Body ground	B - Body ground	Center airbag sensor signal	Engine switch on (IG)	4.5 to 5.5 V
UL3 (E61-10) - Body ground	V - Body ground	Driver door key-linked door unlock input	Using mechanical key, operate driver door lock cylinder to LOCK → UNLOCK	Below 1 V → 10 to 14 V (or pulse generation)
L2 (DK-16) - Body ground	BR - Body ground	Driver door key-linked door lock input	Using mechanical key, operate driver door lock cylinder to UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
ACT+ (DJ-1) - Body ground	L - Body ground	Door lock motor LOCK drive output (Front passenger door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (DP-11) - Body ground	L - Body ground	Door lock motor LOCK drive output (Rear door LH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACT+ (DF-5) - Body ground	L - Body ground	Door lock motor LOCK drive output (Rear door RH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (DP-6) - Body ground	LG - Body ground	Door lock motor UNLOCK drive output (Rear door LH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (DF-18) - Body ground	LG - Body ground	Door lock motor UNLOCK drive output (Rear door RH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
TR+ (E61-1) - Body ground	B - Body ground	Door lock motor UNLOCK drive output (Luggage compartment door)	Luggage compartment open switch (Transmitter) or luggage compartment door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACTD (E61-5) - Body ground	GR - Body ground	Door lock motor UNLOCK drive output (Driver door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (DK-2) - Body ground	L - Body ground	Door lock motor LOCK drive output (Driver door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (DJ-2) - Body ground	LG - Body ground	Door lock motor UNLOCK drive output (Front passenger)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
LSWR (E60-5) - Body ground	Y - Body ground	Rear right door lock position switch input	Rear right door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
LSWP (E60-27) - Body ground	LG - Body ground	Passenger door lock position switch input	Passenger door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)

If the result is not as specified, the main body ECU (instrument panel J/B) may have a malfunction.

DOOR CONTROL TRANSMITTER

COMPONENTS

P

B128442E01

REMOVAL

1. REMOVE TRANSMITTER BATTERY

NOTICE:

Take extra care when handling these precision electronic components.

(a) Remove the mechanical key.

(b) Insert a screwdriver into the gap, and turn the screwdriver to detach the cover.

HINT:

Tape the screwdriver tip before use.

(c) Insert a screwdriver into the gap and gently remove the battery (lithium battery).

NOTICE:

- **Do not push the terminals with your finger.**
- **Do not forcibly pry up the battery (lithium battery) because doing so will deform the terminals.**
- **Do not touch the battery with wet hands. Water may result in corrosion.**
- **Do not touch or move any components inside the transmitter because handling the components may interfere with proper operation of the transmitter.**

INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER

(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery) from the transmitter (See page DL-174).

(2) Install a new or non-depleted battery (lithium battery).
HINT:
When a new or non-depleted battery is not available, first connect 2 new 1.5 V batteries in series. Then connect leads to the batteries and use the leads to apply 3 V to the transmitter, as shown in the illustration.

(3) In a location that is approximately 1 m (3.28 ft) away from the driver side outside door handle, test the transmitter by pointing it at the vehicle and pressing a transmitter's switch.
OK:
The door lock can be operated via the transmitter. The LED lights up more than once.
HINT:
- The operational area differs depending on the user, the way the transmitter is held and the location.
- The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operation area may be reduced or the transmitter may not function.

(b) Inspect the battery capacity.
HINT:
- When checking the amount of energy left in the battery (lithium battery), the battery must be checked while it is installed in the transmitter (a resistance of 1.2 kΩ is applied to the battery).
- If the transmitter is malfunctioning, the voltage reading of the energy left in the battery will be inaccurate.

(1) Remove the battery (lithium battery) from the transmitter (See page DL-174).

(2) Connect a wire to the negative (-) terminal of the transmitter and install the battery.

DL

(3) Connect the tester's positive (+) lead to the battery (lithium battery) and the negative (-) battery lead to the wire.

(4) Press one of the switches on the transmitter for approximately 1 second.

(5) Press the switch on the transmitter again to check the voltage.

Standard voltage:
2.5 V or higher

HINT:

- When the temperature of the battery is low, the inspection will not be accurate. When the outcome of the test is less than 2.5 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.
- Read the voltage immediately after the switch is pressed. When 0.8 seconds have passed after the switch is pressed, the automatic power-off function starts and resistance applied to the battery will cease. The voltage of the battery will be 2.5 V or more.
- Press the switch at least 3 times before reading the voltage. If the battery temperature has just returned to 18°C (64°F), the voltage may be unusually high for the first or second voltage reading.

INSTALLATION

1. INSTALL TRANSMITTER BATTERY

(a) Install a new battery (lithium battery) with the positive (+) side up as shown in the illustration.

(b) Press down gently on the battery to set it in place.

NOTICE:

- **Be sure that the positive and negative sides of the transmitter battery are positioned correctly.**
- **Be careful not to bend the terminals of the transmitter battery during installation.**
- **Keep the interior of the transmitter case free of dust, water and oil.**

(c) Install the cover by pressing down on it as shown in the illustration.

(d) Install the mechanical key.
HINT:
After the installation, press one of the transmitter's switches and check that the LED illuminates.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Power door lock control system data and Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

HINT:
The vehicle uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine Switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine Switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Engine Switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine Switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine Switch OFF*	6 kΩ or more

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:
Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(d) Erase the DTC by following the directions on the tester screen.

HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(d) Read the DATA LIST according to the display on the tester.

MAIN BODY:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy light switch signal/ON or OFF	ON: Driver side door is OPEN OFF: Driver side door is CLOSED	-
P DOR CTY SW	Passenger side door courtesy light switch signal/ON or OFF	ON: Passenger side door is OPEN OFF: Passenger side door is CLOSED	-
RR DOR CTY SW	Rear right door courtesy light switch signal/ON or OFF	ON: Rear right door is OPEN OFF: Rear right door is CLOSED	-
RL DOR CTY SW	Rear left door courtesy light switch signal/ON or OFF	ON: Rear left door is OPEN OFF: Rear left door is CLOSED	-
D LOCK POS SW	Driver side door lock position switch signal/ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
P LOCK POS SW	Front passenger side door lock position switch signal/ON or OFF	ON: Front passenger side door is unlocked OFF: Front passenger side door is locked	-
RR LOCK POS SW	Rear right door lock position switch signal/ON or OFF	ON: Rear right door is unlocked OFF: Rear right door is locked	-
RL LOCK POS SW	Rear left door lock position switch signal/ON or OFF	ON: Rear left door is unlocked OFF: Rear left door is locked	-
LUGG COURTSY SW	Luggage compartment door courtesy light switch signal/ON or OFF	ON: Luggage compartment door is OPEN OFF: Luggage compartment door is CLOSED	-
D/L SW-LOCK	Door control switch lock signal/ ON or OFF	ON: Door control switch is pushed to lock position OFF: Door control switch is not pushed to lock position	-
D/L SW-UNLOCK	Door control switch unlock signal/ ON or OFF	ON: Door control switch is pushed to unlock position OFF: Door control switch is not pushed to unlock position	-
DOR KEY SW-LOCK	Driver door lock/unlock switch lock signal (key-linked lock switch)/ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-
DOR KEY SW-ULCK	Driver door lock/unlock switch unlock signal (key-linked unlock switch)/ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
D DOR KEY SW-UL	Driver door lock/unlock switch unlock signal (2 times key-linked unlock switch)/ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSVs, actuators, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note
DOOR LOCK	Operate door lock motor	LOCK/UNLOCK	-
D DOOR UNLOCK	Operate driver door lock motor	LOCK/UNLOCK	-
SHOCK UNLOCK	Operate collision door lock release function	LOCK/UNLOCK	-
TRUNK/BDOR OPEN	Operate luggage compartment door lock motor	UNLOCK	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a trouble code is indicated during the DTC check, check the circuit listed for that code in the table below. Then proceed to the appropriate page.

Power door lock control system:

DTC Code	Detection Item	Trouble Area	See page
B1243	GSW Terminal Circuit Malfunction	1. Main body ECU (Instrument Panel J/B) 2. Center airbag sensor 3. Wire harness	DL-20

DTC	B1243	GSW Terminal Circuit Malfunction

DESCRIPTION

If the collision door lock release function does not operate normally, or an open or short in the GWS input circuit of the main body ECU is detected, DTC B1243 will be output.
HINT:
If DTC B1243 is output, the speed-sensitive automatic door lock function, shift-linked automatic door unlock function, and collision door lock release function will be prohibited.

DTC No.	DTC Detection Condition	Trouble Area
B1243	A malfunction occurs in the GWS input circuit of the main body ECU.	• Main body ECU (Instrument Panel J/B) • Center airbag sensor • Wire harness

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CENTER AIRBAG SENSOR - MAIN BODY ECU)

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 90 seconds.

DL

(b) Disconnect the center airbag sensor E6 and J/B DE connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E6-18 (GSW) - DE-8 (GSW)	Always	Below 1 Ω
DE-8 (GSW) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT MAIN BODY ECU

(a) Reconnect the center airbag sensor E6 and J/B DE connectors.
(b) Turn the engine switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
DE-8 (GSW) - Body ground	Engine switch on (IG)	4.5 to 5.5 V

NG → **REPLACE MAIN BODY ECU**

OK

REPLACE CENTER AIRBAG SENSOR

DL

Driver Side Door UNLOCK Detection Switch Circuit

DESCRIPTION

The driver's door unlock detection switch is built into the driver's door lock assembly. The switch turns on when the driver's door is locked and turns off when the door is unlocked.
The main body ECU is connected to the driver's door lock assembly via terminal LSWD and driver's door lock/unlock state signals are input to the main body ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWD. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the main body ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (DOOR UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D LOCK POS SW	Driver side door unlock detection switch signal /ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-

OK:
The display is as specified in the normal condition column.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR UNLOCK DETECTION SWITCH)

(a) Remove the front door lock assembly LH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
7 - 8	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
7 - 8	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω

NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

DL

3	CHECK WIRE HARNESS (FRONT DOOR LOCK ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

I2
Front Door Lock Assembly LH

E61
Main Body ECU

H

B112606E03

(a) Disconnect the front door lock assembly LH connector.
(b) Disconnect the main body ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
I2-8 (LSSR) - E61-9 (LSWD)	Always	Below 1 Ω
I2-8 (LSSR) - Body ground	Always	10 kΩ or higher
I2-7 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

Front Passenger Side Door UNLOCK Detection Switch Circuit

DESCRIPTION

The front passenger door unlock detection switch is built into the front passenger door lock assembly. The switch turns on when the front passenger door is locked and turns off when the door is unlocked.
The main body ECU is connected to the front passenger door lock assembly via terminal LSWP and front passenger door lock/unlock state signals are input to the ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWP. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (DOOR UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
P LOCK POS SW	Passenger side door lock position switch signal /ON or OFF	ON: Passenger side door lock is in UNLOCK position OFF: Passenger side door lock is in LOCK position	-

OK:

The display is as specified in the normal condition column.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR UNLOCK DETECTION SWITCH)

(a) Remove the front door lock assembly RH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
7 - 8	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	LOCK	10 kΩ or higher
7 - 8	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	UNLOCK	Below 1 Ω

NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

DL

3 CHECK WIRE HARNESS (FRONT DOOR LOCK ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

H2
Front Door Lock Assembly RH

E60
Main Body ECU

H

B111708E18

(a) Disconnect the front door lock assembly RH connector.
(b) Disconnect the ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
H2-7 (LSSR) - E60-27 (LSWP)	Always	Below 1 Ω
H2-7 (LSSR) - Body ground	Always	10 kΩ or higher
H2-8 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

REPLACE MAIN BODY ECU

LUGGAGE COMPARTMENT DOOR OPENER OUTER SWITCH

COMPONENTS

REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-71)**
2. **REMOVE LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-71)**
3. **REMOVE LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-71)**
4. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-72)**
5. **REMOVE LUGGAGE DOOR OPENING SWITCH ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 2 bolts and the luggage door opening switch assembly.

INSPECTION

1. **INSPECT LUGGAGE KEY ELECTRICAL SWITCH**
   (a) Disconnect the switch connector.
   (b) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester connection	Condition	Specified condition
R10-1 - R10-2	Luggage compartment open switch not pushed (OFF)	10 kΩ or higher
	Luggage compartment open switch pushed (ON)	Below 1 Ω

INSTALLATION

1. **INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY**
   (a) Install the luggage door opening switch assembly with the 2 bolts.
   (b) Connect the connector.
2. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-74)**
3. **INSTALL LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-74)**
4. **INSTALL LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-75)**
5. **INSTALL LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-75)**

SYSTEM DESCRIPTION

1. METER GAUGE

METER GAUGE:

Item	Detail
Speedometer	Indicates the vehicle speed receiving a signal from the skid control ECU. (CAN (CAN No. 1 Bus))
Tachometer	Indicates the engine speed based on a signal received from the ECM. (CAN (CAN No. 1 Bus))
Engine Coolant Temperature Receiver Gauge	Indicates the engine coolant temperature based on a signal received from the ECM. (CAN (CAN No. 1 Bus))
Fuel Receiver Gauge	Indicates the fuel level based on a signal received from the fuel sender gauge. (Direct Line)

WARNING/INDICATOR:

Item	Detail
TURN SIGNAL	Receives a turn signal from the turn signal flasher. (Direct Line)
BEAM	Receives a beam indicator light signal from the main body ECU. (CAN (CAN No. 1 Bus))
CHARGE	Receives a charge indicator light signal from the generator. (Direct Line)
CHECK E/G	Receives a check engine warning light signal from the ECM. (Direct Line)
DOOR	Open door indicator light comes on receiving a door condition signal from the main body ECU. (CAN (CAN MS Bus))
D-BELT	Receives a driver side seat belt signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
P-BELT	Receives a passenger side seat belt signal from the center airbag sensor assembly and transmits a passenger side seat belt condition signal to the clock assembly. (Direct Line)
HEAD (*1)	Receives a HEAD indicator light signal from the main body ECU. (CAN (CAN No. 1 Bus))
TAIL (*2)	Receives a TAIL indicator light signal from the main body ECU. (CAN (CAN No. 1 Bus))
Fr. FOG	Receives a front fog indicator light signal from the main body ECU. (CAN (CAN No. 1 Bus))
A/T SHIFT	Receives an A/T shift condition signal from the park / neutral position switch and the ECM. (CAN (CAN No. 1 Bus))
FUEL	Receives a fuel signal from the fuel sender gauge. (Direct Line)
ABS	Receives an ABS signal from the skid control ECU. (CAN (CAN No. 1 Bus))
SLIP	Receives a SLIP signal from the skid control ECU. (CAN (CAN No. 1 Bus))
BRAKE	Receives a brake signal from the brake fluid level warning switch (Direct Line) and the skid control ECU. (CAN (CAN No. 1 Bus))

Item	Detail
CRUISE	Receives a cruise signal from the ECM. (CAN (CAN No. 1 Bus))
AIRBAG	Receives an airbag signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
PCS (*3)	Receives PCS signal from the seat belt control ECU. (CAN (CAN No. 2 Bus))
Tire pressure (*4)	Receives a tire pressure signal from the tire pressure warning ECU. (Direct Line)
AFS OFF (*5)	Receives an AFS OFF signal from the AFS ECU. (CAN (CAN No. 2 Bus))
Master caution indicator light	Master caution indicator light comes on to indicate that an oil maintenance resetting procedure has finished.

*1: for U.S.A.
*2: for Canada
*3: with Pre-collision System
*4: with Tire Pressure Warning System
*5: with AFS
HINT:
- The multi-information display has been located in the center of the combination meter assembly.
- The display shows a message or animation for each of the functions described in the table below.

MULTI-INFORMATION DISPLAY:

ME

Item		Detail
Cruise Information	• Outside Temperature • Driving Range • Average Fuel Consumption • Average Fuel Consumption After Refueling • Current Fuel Consumption • Average Speed	• Six types of information (outside temperature, driving range, average fuel consumption, average fuel consumption after refueling, current fuel consumption and average speed) can be displayed. • The display can be switched by using the DISP switch.
Warning	• Door Warning • Oil Replacement Reminder (*1)	Interrupts the multi-information display immediately when a warning occurs.
Dynamic Radar Cruise Display (*2)		Displays the operating condition of the dynamic radar cruise control.
Intuitive Parking Assist Display (*3)		Displays the location of an obstacle and the approximate distance between the vehicle and the obstacle and displays malfunction warning messages about frozen sensors or the presence of dirt on the sensors.
Diagnosis		DTC (Diagnostic Trouble Code) for the brake control system (TRAC and VSC) can be displayed.

*1: for U.S.A.
*2: with Dynamic Radar Cruise Control System
*3: with Intuitive Parking Assist System

3. DIAGNOSIS SYSTEM

Example:

E132630E01

HINT:

- Diagnosis information can be displayed on the multi-information display after connecting a jumper wire between TC and CG of the DLC3 (See page BC-39).
- The multi-information display shows "DIAG VSC" before meter CPU receives the diagnosis information signal from the skid control ECU.

- The multi-information display shows "DIAG VSC 23" when meter CPU receives the diagnosis information signal from the skid control ECU.
- The multi-information display shows "DIAG VSC OK" when meter CPU receives the no diagnosis information signal from the skid control ECU.

HOW TO PROCEED WITH TROUBLESHOOTING

CUSTOMIZE PARAMETERS

1. COMBINATION METER ASSEMBLY

NOTICE:

Be sure to record the current value before customizing.

HINT:

The following items can be customized using intelligent tester.

METER:

Display (Item)	Default	Contents	Setting
SEAT-BELT WARN	D/P ON	Function to change the setting of the seat belt buzzer.	D/P ON, D ON, P ON, D/P OFF

HINT:

This setting is only valid for the buzzer which sounds at the 5 km/h (3 mph) or more.

INITIALIZATION

1. OIL MAINTENANCE INFORMATION MODE RESET OPERATION

HINT:

- The trip meter reset knob is located on the lower right side of the combination meter assembly.
- This reset operation is required only for U.S.A..

(a) Turn the engine switch on (IG).

(b) Press the ODO/TRIP switch until the TRIP A appears.

(c) Turn the engine switch off.

(d) Turn the engine switch on (IG) while pressing and holding the trip meter reset knob. Hold the trip meter reset knob until the following conditions are met and 5 seconds have passed.

- The multi-information display shows "MAINT REQD RESET MODE".
- The master caution indicator light illuminates.
- When oil change reminder light turns off, the reset is complete.

(e) When the bar disappears and LCD will display "000000" for 1 second, the master caution indicator light turns off, the reset is complete.

ME

PROBLEM SYMPTOMS TABLE

ENTIRE SYSTEM:

Symptom	Suspected Area	See page
Entire combination meter does not operate.	Power Source Circuit	ME-40
Operating light control rheostat does not change light brightness.	Light Control Rheostat Circuit	ME-55
Meter illumination is always dark.	Meter Illumination Circuit	ME-60
Meter illumination does not dim at night.	Meter Illumination Circuit	ME-63

METER GAUGES:

Symptom	Suspected Area	See page
Speedometer malfunction	Speedometer Circuit	ME-42
Tachometer malfunction	Tachometer Circuit	ME-45
Fuel receiver gauge malfunction	Fuel Receiver Gauge Circuit	ME-48
Engine coolant temperature malfunction	Engine Coolant Temperature Receiver Gauge Circuit	ME-52

WARNING LIGHTS:

Symptom	Suspected Area	See page
Check engine warning light does not come on.	1. MIL Circuit	ES-465
	2. Wire Harness or Connector	-
	3. Combination Meter Assembly	ME-67
Charge warning light does not come on.	1. Combination Meter (LED)	ME-29
	2. Wire Harness or Connector	-
	3. Generator	-
	4. Combination Meter Assembly	ME-67
Brake warning light does not come on.	1. Combination Meter (LED)	ME-29
	2. Wire Harness or Connector	-
	3. Brake Warning Light Circuit	BC-162
	4. Combination Meter Assembly	ME-67
Brake warning light does not go off.	1. Combination Meter (LED)	ME-29
	2. Wire Harness or Connector	-
	3. Brake Warning Light Circuit	BC-154
	4. Combination Meter Assembly	ME-67
ABS warning light does not come on.	1. Combination Meter (LED)	ME-29
	2. Wire Harness or Connector	-
	3. ABS Warning Light Circuit	BC-146
	4. Combination Meter Assembly	ME-67
ABS warning light does not go off.	1. Combination Meter (LED)	ME-29
	2. Wire Harness or Connector	-
	3. ABS Warning Light Circuit	BC-141
	4. Combination Meter Assembly	ME-67
Airbag warning light does not come on.	1. Combination Meter (LED)	ME-29

DATA LIST / ACTIVE TEST

1. DATA LIST

Using the intelligent tester to read the DATA LIST allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.

(a) Warm up the engine.
(b) Turn the engine switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the engine switch on (IG).
(e) Turn the tester on.
(f) Enter the following menus: DIAGNOSIS / OBD/ MOBD / METER / DATA LIST.
(g) Check values by referring to the table below.

METER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TAIL CANCEL SW	Tail cancel switch is OFF/ON	OFF: Rheostat knob is not fully turned up	-
		ON: Rheostat knob is fully turned up	-
ODO/TRIP SW	ODO/TRIP switch is OFF/ON	OFF: Switch is released	-
		ON: Switch is pushed	-
P-BELT BUCKL SW	Front passenger buckle switch is OFF/ON	OFF: Seat belt is fastened	-
		ON: Seat belt is unfastened	-
SPEED METER	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual vehicle speed (When driving)	-
TACHO METER	Engine speed/Min.: 0 rpm, Max.: 12,750 rpm	Almost same at the meter rpm (When engine is running)	-
COOLANT TEMP	Engine coolant temperature: 0°C (32°F) to 127.5°C (261.5°F)	After warning up: 80 to 95°C (176 to 203°F)	-
WASHER SW	Washer level switch is OFF/ON	OFF: Washer level is not low	-
		ON: Washer level is low	-
OIL LEVEL SW	Oil level warning switch is OFF/ ON	OFF: Oil level is more than low	-
		ON: Oil level is less than low	-
MULTI DISP SW	MODE switch in the steering pad is OFF/ON	OFF: Mode switch is OFF	-
		ON: Mode switch is ON	-
+B VOLTAGE VAL	Battery voltage/Min.: 0 V, Max.: 25.5 V	10 to 14 V	-
OIL MAINTENANCE (*)	Oil maintenance warning value: Min.: 0, Max. 25,500	The running distance after performing oil maintenance resetting procedure is displayed	If the value is 5,000 (mph) or more, perform oil maintenance resetting procedure after changing the oil.
FUEL GAUGE	Fuel input signal Min.: 0 (L), Max. 127.5 (L)	Fuel gauge indicates (E): 7.5 (L)	-
		Fuel gauge indicates (1/2): 35.0 (L)	-
		Fuel gauge indicates (F): 62.9 (L)	-
AMBIENT TEMP	Outside temperature: Min.: -40°C (-40°F) to 50°C (122°F)	Almost same as actual outside temperature	The temperature displayed on the multi-information display is -40 to 50°C (-40 to 122°F)
RHEOSTAT	Light Control Rheostat/Min.: 0%, Max.: 100%	Light control rheostat switch is Dark (0%) → Bright (100%)	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
OUTSIDE LIGHT	Quantity of outside light/Min.: 0%, Max.: 100%	Outside light is Dark (0%) → Bright (100%)	-
ECM/PCM DTC 1 to 3	Communication error: not occurred/occurred	Not occurred: UNREC	-
		Occurred: REC	-
ECM/PCM ODO 1 to 3	Distance when DTC is output Min.: 0, Max.: 999999	-	-
ABS/VSC DTC 1 to 3	Communication error: not occurred/occurred	Not occurred: UNREC	-
		Occurred: REC	-
ABS/VSC ODO 1 to 3	Distance when DTC is output Min.: 0, Max.: 999999	-	-
SEAT-BELT WARN	The inquiry of the seat belt warning buzzer is D/P ON, D ON, P ON, D/P OFF	The customized setting of the inquiry of the seat belt warning buzzer is displayed	-
CODES#	The number of the DTC which is currently output	0	-

*: for U.S.A.

ABS/TRAC/VSC:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR/FL/RR/RL WHEEL SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-
VEHICLE SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-

ME

ENGINE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ENGINE SPD	Vehicle speed/Min.: 0 rpm, Max.: 16,383.75 rpm	Almost same as actual engine speed (When engine running)	-
COOLANT TEMP	Engine coolant temperature: Min.: -40°C (-40°F), Max: 140°C (284°F)	80 to 100°C (176 to 212°F): After warming up	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted

2. ACTIVE TEST

Using the intelligent tester to perform Active Tests allows the relay, actuator, and other items to operate without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing ACTIVE TEST early in troubleshooting is one way to save diagnostic time. DATA LIST information can be display while performing ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / METER / ACTIVE TEST.
(e) From the display on the tester, perform the "ACTIVE TEST".

METER:

Tester Display	Test Part	Control Range	Diagnostic Note
SPEED METER	Speedometer	0, 40, 80, 120 mph (*1)	-
		0, 40, 80, 120, 160, 200, 240 km/h (*2))	

Tester Display	Test Part	Control Range	Diagnostic Note
TACHOMETER	Tachometer	0, 1,000, 2,000, 3,000, 4,000, 5,000, 6,000, 7,000 (rpm)	-
FUEL GAUGE	Fuel receiver gauge	EMPTY, 1/2, FULL	-
COOLANT TEMP	Engine coolant temperature receiver gauge	LOW, NORM, HIGH	-
A/T INDIC (1)	A/T shift indicator light	A/T shift indicator light D, N, R, P is OFF/ON	-
A/T INDIC (2)	A/T gear range indicator light	A/T gear range indicator light S is OFF/ON	-
METER DISPLAY1	Multi-information display	All the dots in the multi-information display OFF/ON	Confirm that the vehicle is stopped, engine idling
METER DISPLAY2	A/T shift indicator display	The segments in the combination meter assembly OFF/ON	Confirm that the vehicle is stopped, engine idling
SRS WARN	Airbag warning light	Airbag warning light is OFF/ON	-
DOORS ALL OPEN	Open door warning light	Open door warning light is OFF/ON	-
P-BELT REMIND	Front passenger side seat belt warning light	Front passenger side seat belt warning light is OFF/ON	-
D-BELT REMIND	Driver side seat belt warning light	Driver side seat belt warning light is OFF/ON	-
ABS WARN	ABS warning light	ABS warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
SLIP INDIC	Slip indicator light	Slip indicator light is OFF/ON	-
HIGH BEAM INDIC	Hi-beam indicator light	Hi-beam indicator light is OFF/ON	-
HEADLIGHT INDIC (*1)	Head indicator light	Head indicator light is OFF/ON	-
TAILLIGHT INDIC (*2)	Tail indicator light	Tail indicator light is OFF/ON	-
Fr FOG INDIC	Front fog indicator light	Front fog indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
Rr LIGHT INDIC	Rear light indicator light	Rear light indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
PRECRASH INDIC (*3)	Precrash indicator light	Precrash indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
D DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
P DOOR OPEN	Front passenger door indicator	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
RR DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
RL DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
LUGG DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
AFS INDICATOR (*4)	AFS off indicator light	AFS off indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
LOW FUEL WARN	Low fuel warning light	Fuel warning light is OFF/ON	-
TIRE PRESS WARN (*5)	Tire pressure warning light	Tire pressure warning light is OFF/ON	-
CRUISE INDIC	Cruise indicator light	Cruise indicator light is OFF/ON	-
BRAKE WARN	Brake warning light	Brake warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
MST WARN INDIC	Master caution indicator light	Master caution indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling

*1: for U.S.A.
*2: for Canada
*3: with Pre-collision System
*4: with AFS
*5: with Tire Pressure Warning System

MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note
DIMMER SIG	Auto dimmer signal	Auto dimmer signal OFF/ON	-

DIAGNOSTIC TROUBLE CODE CHART

DTC Code	Detection Item	Trouble Area	See page
U0100	Lost Communication with ECM/PCM "A"	1. ECM 2. CAN communication system	ME-36
U0129	Lost Communication with Skid Control ECU	1. ABS and traction actuator assembly (Skid control ECU) 2. CAN communication system	ME-38

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

(1) Using a speedometer tester (calibrated chassis dynamometer), check the speedometer indication according to the table below.

Reference: mph (for U.S.A.)

Chassis Dynamometer Indication	Acceptable Range
20 mph	20.0 to 23.0 mph
40 mph	40.0 to 43.5 mph
60 mph	60.0 to 64.0 mph
80 mph	80.0 to 84.5 mph
100 mph	100.0 to 105.0 mph
120 mph	120.0 to 125.5 mph
140 mph	140.0 to 146.0 mph
160 mph	160.0 to 166.5 mph

Reference: km/h (for Canada)

ME

Chassis Dynamometer Indication	Acceptable range Data in ( ) is for reference
20 km/h	(17.5 to 21.5 km/h)
40 km/h	38.0 to 42.0 km/h
60 km/h	58.0 to 63.0 km/h
80 km/h	78.0 to 84.0 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119.0 to 125.0 km/h
140 km/h	139.0 to 146.0 km/h
160 km/h	159.0 to 167.0 km/h
180 km/h	179.0 to 188.0 km/h
200 km/h	199.0 to 209.0 km/h
220 km/h	219.0 to 230.0 km/h
240 km/h	239.0 to 251.0 km/h

NOTICE:
Tire wear as well as over or under inflation will cause errors.

(2) Check the deviation from the acceptable range of the speedometer indication.

Reference:
Less than 0.5 km/h (0.3 mph)

HINT:
If the indication is not as specified, go to problem symptoms table (See page ME-16).

2. INSPECT TACHOMETER

(a) Connect a tune-up tachometer, and start the engine.

(b) Compare the test results with the tachometer indications.

DC 13.5 V, at 25°C (77°F):

Tune-up Tachometer indication (rpm)	Acceptable range Data in ( ) is for reference
700	630 to 770
1,000	(900 to 1,100)
2,000	(1,850 to 2,150)

Tune-up Tachometer indication (rpm)	Acceptable range Data in ( ) is for reference
3,000	2,800 to 3,200
4,000	(3,800 to 4,200)
5,000	4,800 to 5,200
6,000	(5,750 to 6,250)
7,000	6,700 to 7,300
8,000	(7,700 to 8,300)

HINT:
If the indication is not as specified, go to the problem symptoms table (See page ME-16).

3. INSPECT ENGINE OIL PRESSURE SWITCH

(a) Disconnect the connector from the engine oil pressure switch.
(b) Turn the engine switch on (IG).
(c) Ground the terminal of the wire harness side connector, then check the low oil pressure warning light.
OK:
Oil pressure warning message comes on.
HINT:
If the warning message is not displayed, go to the problem symptoms table (See page ME-16).

4. INSPECT MULTI-INFORMATION DISPLAY

(a) Turn the engine switch off.
(b) Press the "DISP" button and hold it down.
(c) Turn the engine switch on (IG).
OK:
All the dots in the multi-information display come on.
HINT:
This test is also available on "ACTIVE TEST" (See page ME-29).
(d) Turn the engine switch off to finish this test mode.
HINT:
If the result is not as specified, replace the combination meter assembly.

5. INSPECT ENGINE OIL LEVEL SENSOR

(a) Disconnect the engine oil level sensor connector.
(b) Turn the engine switch on (IG), and check the multi-information display.
OK:
Low engine oil level message is displayed.
HINT:
If the warning message is not displayed, go to the problem symptoms table (See page ME-16).

6. INSPECT WASHER LEVEL SWITCH

(a) Disconnect the connector from the washer level switch.
(b) Turn the engine switch on (IG).

(c) Ground the terminal of the wire harness side connector, then check the multi-information display.

OK:

Washer level warning message is displayed.

HINT:

If the warning message is not displayed, go to the problem symptoms table (See page ME-16).

DTC	U0100	Lost Communication with ECM/PCM "A"

DESCRIPTION

The combination meter assembly communicates with the ECM via the CAN communication lines (CAN No. 1 Bus).

DTC No.	DTC Detection Conditions	Trouble Areas
U0100	When either of following conditions detected: 1. Vehicle speed 5 km/h (3.1 mph) or more and IG voltage 10.5 V or more 2. No communication with ECM continues for 3 seconds or more (No communication to ECM or skid control ECU continues for 60 seconds or more)	• CAN communication system • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS / OBD/MOBD / METER / DTC INFO / CLEAR CODES.
(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.
(f) Stop the vehicle.
(g) Check for DTCs (See page CA-11).

Result

Result	Proceed to
DTC output	A (See page CA-49)
DTC not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

GO TO CAN COMMUNICATION SYSTEM

DTC	U0129	Lost Communication with Skid Control ECU

DESCRIPTION

The combination meter assembly communicates with the ABS and traction actuator assembly (skid control ECU) via the CAN communication system (CAN No. 1 Bus).

DTC No.	DTC Detection Conditions	Trouble Areas
U0129	When either of following conditions detected: 1. 15 seconds have elapsed since engine started and IG voltage 10.5 V or more 2. No communication with ABS and traction actuator (skid control ECU) continues for 3 seconds or more (No communication with ECM or skid control ECU continues for 60 seconds or more)	• ABS and traction actuator (Skid control ECU) • CAN communication system

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS / OBD/MOBD / METER / DTC INFO / CLEAR CODES.
(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.
(f) Stop the vehicle.
(g) Check for DTCs (See page CA-11).

Result

Result	Proceed to
DTC output	A (See page CA-49)
DTC not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

GO TO CAN COMMUNICATION SYSTEM

Entire Combination Meter does not Operate

DESCRIPTION

This circuit is the power source circuit for the meter. This circuit provides two types of power sources; one is a constant power source mainly used as a backup power source, and the other is a power source mainly used for signal transmission. The constant power source is mainly used as a backup power source of the meter CPU, however, it is also used for communication. If a voltage of 12 V is not applied to terminal IG+ when the engine switch is on (IG), the indicator will not operate.

WIRING DIAGRAM

ME

INSPECTION PROCEDURE

1	INSPECT COMBINATION METER ASSEMBLY

Combination Meter Assembly Wire Harness View:

H

E132615E01

(a) Disconnect the E19 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E19-12 (E2) - Body ground	Always	Below 1 Ω
E19-24 (ES) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E19-13 (IG+) - Body ground	Turn the engine switch on (IG)	10 to 14 V
E19-1 (B2) - Body ground	Always	10 to 14 V
E19-2 (B) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

ME

Speedometer Malfunction

DESCRIPTION

The meter CPU receives vehicle speed signals from the skid control ECU via the CAN communication lines (CAN No. 1 Bus). The vehicle speed sensor detects the voltage that varies according to the vehicle speed. The skid control ECU supplies power to the vehicle speed sensor. The skid control ECU detects vehicle speed signals based on the pulses of the voltage.

WIRING DIAGRAM

ME

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if CAN communication DTC is output (See page CA-11).

Result

Result	Proceed to
CAN communication DTC is not output.	A
CAN communication DTC is output.	B (See page CA-49)

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).

(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / ACTIVE TEST.
(e) Check the operation by referring to the values in the table below.

METER:

Tester Display	Test Part	Control Range	Diagnostic Note
SPEED METER	Speedometer	0, 40, (24), 80 (48), 120 (72), 160 (96), 200 (120), 240 (149) km/h (mph)	-

OK:
Needle indication is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

3 READ VALUE OF INTELLIGENT TESTER

ME

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / DATA TEST.
(e) Check the values by referring to the values in the table below.

METER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
SPEED METER	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual speed (When driving)	-

OK:
Vehicle speed displayed on the tester is almost the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

NG → **Go to step 4**

OK

REPLACE COMBINATION METER ASSEMBLY

4 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / ABS/TRAC/VSC / DATA LIST.

(e) Check the values by referring to the table below.

ABS/TRAC/VSC:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
(FL/FR/RL/RR) WHEEL SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual speed (When driving)	-

OK:

Vehicle speed displayed on the tester is almost the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

NG → **GO TO BRAKE CONTROL SYSTEM**

OK

5 REPLACE SKID CONTROL ECU

(a) Replace the skid control ECU with a new or a normal one.

OK:

The operation of the speedometer returns to normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

END

Tachometer Malfunction

DESCRIPTION

In this circuit, the meter CPU receives engine revolution signals from the ECM using the CAN communication lines (CAN No. 1 Bus). The meter CPU displays engine revolution data that is calculated based on the data received from the ECM.

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.

(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / ACTIVE TEST.
(e) Check the operation by referring to the values in the table below.

METER:

Tester Display	Test Part	Control Range	Diagnostic Note
TACHO METER	Tachometer	0, 1,000, 2,000, 3,000, 4,000, 5,000, 6,000, 7,000 (rpm)	-

OK:
Needle indication is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

3 READ VALUE OF INTELLIGENT TESTER (ENGINE SPEED SIGNAL)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / ACTIVE TEST.
(e) Check the values by referring to the values in the table below.

METER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TACHO METER	Engine speed/Min.: 0 rpm, Max.: 12,750 rpm	Almost same as actual engine speed (When engine is running)	If data received from the ECM exceeds the range that can be displayed on the meter, the meter continues to display the maximum value of the range.

OK:
Engine speed displayed on the tester is almost the same as the actual engine speed.

NG → **Go to step 4**

OK

REPLACE COMBINATION METER ASSEMBLY

4 READ VALUE OF INTELLIGENT TESTER (ENGINE SPEED SIGNAL)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / ENGINE / DATA LIST.

(e) Check the values by referring to the table below.

ENGINE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ENGINE SPD	Engine speed/Min.: 0 rpm, Max.: 16,383.75 rpm	Almost same as actual engine speed (When engine is running)	-

OK:
Engine speed displayed on the tester is almost the same as the actual engine speed.

NG → **GO TO SFI SYSTEM**

OK

5	REPLACE ECM

(a) Replace the ECM with a new or a normal one.

OK:
The operation of the tachometer returns to normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

END

Fuel Receiver Gauge Malfunction

DESCRIPTION

The meter CPU uses the fuel sender gauge assembly to determine the level of the fuel in the fuel tank. The resistance of the fuel sender gauge will vary between approximately 15 Ω with the float at the full position, and 410 Ω with the float at the empty position. The meter outputs battery voltage through two 820 Ω resistors that are mounted in parallel inside the meter ECU. The meter CPU measures the voltage between the variable resistor in the fuel sender gauge and the two resistors mounted in parallel in the meter. Voltage measured at this point will vary as the float of the fuel sender gauge is moved. The highest voltage observed should be approximately half of battery voltage.
HINT:
The fuel level warning light will come on when the fuel level is below 10.5 liters.

Operating Light Control Rheostat does not Change Light Brightness

DESCRIPTION

The meter CPU receives signals for adjusting illumination on the meter this circuit. The meter CPU detects the illumination level selected by the user according to the position of the rheostat knob.
HINT:

- This model is equipped with an Optitron meter, therefore the meter illuminates even in the daytime.
- The meter illumination level can be adjusted by turning the rheostat.
- The meter illumination dims when the light control switch is turned to the TAIL or HEAD position at night.
- Turning the rheostat knob fully upwards cancels the above dimmer control.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	SYSTEM CHECK

(a) Turn the engine switch on (IG).
(b) Turn the light control rheostat knob fully upwards.
(c) Turn the light control rheostat knob fully downwards.
(d) Turn the light control rheostat knob fully upwards and light control switch is on TAIL/HEAD.
(e) Check the meter illumination.

Result

Result	Proceed to
Meter illumination does not change when operating the light control rheostat knob	A
Dimmer cancel does not operate (Meter illumination does not dim).	B

B → **Go to step 3**

A

2 READ VALUE OF INTELLIGENT TESTER (RHEOSTAT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / DATA LIST.
(e) Check the values by referring to the table below.

METER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
RHEOSTAT	Light control rheostat/Min.: 0%, Max.: 100%	Light control rheostat switch is Dark (0%) → Bright (100%)	-

OK:
The value displayed on the tester gradually changes as the actual rheostat operation.

NG → **Go to step 4**

ME

OK

3 READ VALUE OF INTELLIGENT TESTER (TAIL CANCEL SW)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / DATA LIST.
(e) Check the values by referring to the table below.

METER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TAIL CANCEL SW	Tail cancel switch is OFF/ON	OFF: Light control rheostat position is except above	-
		ON: Light control rheostat turns fully upwards	-

OK:
Condition displayed on the tester is the same as the actual rheostat position.

NG → **Go to step 6**

OK

REPLACE COMBINATION METER ASSEMBLY

4 INSPECT LIGHT CONTROL RHEOSTAT

Light Control Rheostat Component View:

(a) Remove the light control rheostat.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E55-3 (T) - E55-4 (RV)	Turn the rheostat knob fully upwards	8 kΩ or higher
E55-3 (T) - E55-4 (RV)	Rheostat knob is between MIN. and MAX.	The value changes gradually (Between below 1 to 8 kΩ)
E55-3 (T) - E55-4 (RV)	Turn the rheostat knob fully downwards	Below 1 Ω

Standard resistance

Tester Connection	Condition	Specified Condition
E19-6 (TR) - E55-4 (RV)	Always	Below 1 Ω
E19-10 (E3) - E55-3 (T)	Always	Below 1 Ω
E19-16 (TC) - E55-1 (TC)	Always	Below 1 Ω
E55-1 (TC) - Body ground	Always	10 kΩ or higher
E55-3 (T) - Body ground	Always	10 kΩ or higher
E55-4 (RV) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

6 INSPECT LIGHT CONTROL RHEOSTAT

Light Control Rheostat Component View:

(a) Remove the light control rheostat with connector still connected.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E55-1 (TC) - E55-3 (T)	Turn the rheostat knob fully downwards	Below 1 Ω
E55-1 (TC) - E55-3 (T)	Turn the rheostat knob fully upwards	8 kΩ or higher

NG → **REPLACE LIGHT CONTROL RHEOSTAT**

ME

OK

7 CHECK HARNESS AND CONNECTOR (COMBINATION METER - LIGHT CONTROL RHEOSTAT)

Light Control Rheostat Wire Harness View:

Combination Meter Assembly Wire Harness View:

(a) Disconnect the E19 and E55 connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E55-1 (TC) - E19-16 (TC)	Always	Below 1 Ω
E55-1 (TC) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ASSEMBLY

Meter Illumination is Always Dark

DESCRIPTION

In this circuit, the meter CPU receives auto dimmer signals from the main body ECU using the CAN communication lines (CAN MS Bus). When the meter CPU receives an auto dimmer signal, it dims the meter illumination. The main body ECU determines whether it is daytime, twilight, or nighttime based on the waveform transmitted from the automatic light control sensor. If the main body ECU determines that it is daytime, the ECU does not send auto dimmer signals. Therefore, the meter illumination (warning and indicator lights) will not dim even if the driver accidentally turns the light control switch to the TAIL or HEAD position in daytime.

HINT:

When the meter illumination is always dark, there may be a malfunction in automatic light control sensor, main body ECU, CAN communication system, wire harness or connector, or combination meter assembly.

3 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

ME

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester ON.
(d) Turn the light control rheostat to the TAIL/HEAD position.
(e) Enter the following menus: DIAGNOSIS / BODY / MAIN BODY / ACTIVE TEST.
(f) Check the meter illumination.

MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note
DIMMER SIG	Auto dimmer signal	Auto dimmer signal OFF/ON	-

OK:
The meter illumination is dimmed when the DIMMER SIG is ON.
HINT:
Refer to the sensitivity setting in the customization table of the automatic light control system (See page LI-29).

NG → **Go to step 4**

OK

CHECK LIGHTING SETTING

4 REPLACE COMBINATION METER ASSEMBLY

(a) Replace the combination meter assembly with a new or a normal one.

OK:
The operation of the combination meter assembly returns to normal.

NG → **REPLACE MAIN BODY ECU**

OK

END

Meter Illumination does not Dim at Night

DESCRIPTION

In this circuit, the meter CPU receives auto dimmer signals from the main body ECU using the CAN communication lines (CAN MS Bus). When the meter CPU receives an auto dimmer signal, it dims the meter illumination. The main body ECU determines whether it is daytime, twilight, or nighttime based on the waveform transmitted from the automatic light control sensor. If the main body ECU determines that it is daytime, the ECU does not send auto dimmer signals. Therefore, the meter illumination (warning and indicator lights) will not dim even if the driver accidentally turns the light control switch to the TAIL or HEAD position in daytime.

HINT:

When the meter illumination does not dim at night, the light control rheostat position is at the tail cancel position, or there may be a malfunction in automatic light control sensor, main body ECU, CAN communication system, wire harness or connector, or combination meter assembly.

CUSTOMIZE PARAMETERS

1. COMBINATION METER ASSEMBLY

NOTICE:

Be sure to record the current value before customizing.

HINT:

The following items can be customized using intelligent tester.

METER:

Display (Item)	Default	Contents	Setting
SEAT-BELT WARN	D/P ON	Function to change the setting of the seat belt buzzer.	D/P ON, D ON, P ON, D/P OFF

HINT:

This setting is only valid for the buzzer which sounds at the 5 km/h (3 mph) or more.

INITIALIZATION

1. OIL MAINTENANCE INFORMATION MODE RESET OPERATION

HINT:

- The trip meter reset knob is located on the lower right side of the combination meter assembly.
- This reset operation is required only for U.S.A..

(a) Turn the engine switch on (IG).

(b) Press the ODO/TRIP switch until the TRIP A appears.

(c) Turn the engine switch off.

(d) Turn the engine switch on (IG) while pressing and holding the trip meter reset knob. Hold the trip meter reset knob until the following conditions are met and 5 seconds have passed.

- The multi-information display shows "MAINT REQD RESET MODE".
- The master caution indicator light illuminates.
- When oil change reminder light turns off, the reset is complete.

(e) When the bar disappears and LCD will display "000000" for 1 second, the master caution indicator light turns off, the reset is complete.

FUEL SENDER GAUGE ASSEMBLY

COMPONENTS

ME

ME

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-113)**
4. **REMOVE REAR FLOOR SERVICE HOLE COVER (See page FU-26)**
5. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-26)**
6. **REMOVE FUEL TANK VENT TUBE SET PLATE (See page FU-26)**
7. **REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-27)**
8. **REMOVE FUEL SENDER GAUGE ASSEMBLY (See page FU-27)**

INSPECTION

1. **INSPECT FUEL SENDER GAUGE ASSEMBLY**
   (a) Remove the fuel sender gauge assembly.
   (b) Check that the float moves smoothly between F and E.
   (c) Measure the resistance between the terminals 2 (S) and 3 (FE) of the connector according to the value(s) in the table below.
   Standard resistance:
   Main

Float Level	Resistance (Ω)
F	13.5 to 16.5
Between E and F	13.5 to 414.5 (Gradually changes)
E	405.5 to 414.5

HINT:
If the value is not as specified, replace the fuel sender gauge assembly.

Fuel Sender Gauge Assembly:

Fuel Sender Gauge Assembly Wire Harness View:

TERMINALS OF ECU

1. COMBINATION METER ASSEMBLY

ME

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B2 (E19-1) - Body ground	R - Body ground	Battery	Always	10 to 14 V
B (E19-2) - Body ground	V - Body ground	Battery	Always	10 to 14 V
WLVL (E19-5) - Body ground	LG - Body ground	Washer level warning switch signal	Engine switch on (IG), washer level warning display ON	Below 1 V
			Engine switch on (IG), washer level warning display off	10 to 14 V
TR (E19-6) - Body ground	G - Body ground	Light control rheostat signal	Engine switch on (IG), turn the light control rheostat knob fully downwards	Below 1 V
			Engine switch on (IG), turn the light control knob rheostat fully upwards	4 to 6 V
TIRE (E19-7) (*) - Body ground	L - Body ground	Tire pressure warning light signal	Engine switch on (IG), tire pressure warning light ON	0.9 to 3.2 V
			Engine switch on (IG), tire pressure warning light off	3.2 V or higher
S (E19-8) - Body ground	B - Body ground	Engine oil pressure warning light signal	Engine switch on (IG), engine oil pressure warning light OFF	10 to 14 V
			Engine switch on (IG), engine oil pressure warning light ON	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
P/SB (E19-9) - Body ground	P - Body ground	Passenger seat belt warning light signal	Sit on the front passenger seat, engine switch on (IG), front passenger seat belt warning light OFF	10 to 14 V
			Sit on the front passenger seat, engine switch on (IG), front passenger seat belt warning light Blinks	10 to 14 V ←→ Below 1 V
E3 (E19-10) - Body ground	P - Body ground	Ground (Rheostat ground)	Always	Below 1 V
ILL- (E19-11) - Body ground	BR - Body ground	Illumination signal	Engine switch on (IG)	Below 1 V ←→ 10 to 14 V
E2 (E19-12) - Body ground	W-B - Body ground	Ground (Power ground)	Always	Below 1 V
IG+ (E19-13) - Body ground	LG - Body ground	Engine switch signal	Turn the engine switch off	Below 1 V
			Engine switch on (IG)	10 to 14 V
TC (E19-16) - Body ground	O - Body ground	Tail cancel signal (Light control rheostat signal)	Engine switch on (IG), turn the light control rheostat knob fully downwards	Below 1 V
			Engine switch on (IG), turn the light control knob rheostat fully upwards	4 to 6 V
CANH (E19-17) - Body ground	B - Body ground	CAN communication signal	-	-
CANL (E19-18) - Body ground	W - Body ground	CAN communication signal	-	-
S (E19-20) - Body ground	GR - Body ground	Light failure sensor signal	Engine switch on (IG), rear light indicator light OFF	10 to 14 V
			Engine switch on (IG), rear light indicator light ON	Below 1 V
MSSL (E19-22) - Body ground	G - Body ground	Steering pad switch signal	Engine switch on (IG), DISP switch off	4 to 6 V
			Engine switch on (IG), DISP switch ON	Below 1 V
CHG- (E19-23) - Body ground	B - Body ground	Charge warning light signal	Engine switch on (IG), CHARGE warning light OFF	10 to 14 V
			Engine switch on (IG), CHARGE warning light ON	Below 1 V
ES (E19-24) - Body ground	W-B - Body ground	Ground (Signal ground)	Always	Below 1 V
B (E20-1) - Body ground	G - Body ground	Turn indicator light signal	Engine switch on (IG), turn signal RH indicator light OFF	Below 1 V
			Engine switch on (IG), turn signal RH indicator light is blinking	10 to 14 V ←→ Below 1 V
B (E20-2) - Body ground	B - Body ground	Turn indicator light signal	Engine switch on (IG), turn signal LH indicator light OFF	Below 1 V
			Engine switch on (IG), turn signal LH indicator light is blinking	10 to 14 V ←→ Below 1 V
CHK (E20-4) - Body ground	BR - Body ground	Malfunction indicator lamp signal	Engine switch on (IG), CHECK ENGINE warning light ON	Below 3 V
			Engine switch on (IG), CHECK ENGINE warning light OFF	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B/LE (E20-6) - Body ground	LG - Body ground	Brake fluid level warning light signal	Engine switch on (IG), BRAKE warning light OFF	10 to 14 V
			Engine switch on (IG), BRAKE warning light ON	Below 1 V
+S (E20-12) - Body ground	SB - Body ground	Speed signal for other systems (Output)	Turn the wheel slowly	Pulse generation (See waveform)
OIL (E20-13) - Body ground	LG - Body ground	Engine oil level sensor	Engine switch on (IG), engine oil level is full	Below 1 V
			Engine switch on (IG), engine oil level is low	10 to 14 V
SI (E20-14) - Body ground	BR - Body ground	Speed signal for other systems (Input)	Engine switch on (IG), turn the wheel slowly	Pulse generation (See waveform)
FR (E20-15) - Body ground	GR - Body ground	Fuel signal	Engine switch on (IG), fuel level is FULL	Below 1 V
			Engine switch on (IG), fuel level is EMPTY	3 to 7 V
FE (E20-16) - Body ground	P - Body ground	Ground (Fuel ground)	Always	Below 1 V

ENGINE OIL PRESSURE SWITCH

ON-VEHICLE INSPECTION

1. INSPECT ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Disconnect the connector from the oil pressure switch assembly.

(b) With the switch still installed, measure the resistance between the terminal of the engine oil pressure switch and engine ground.

Standard resistance:

Engine stopped:

Below 1 Ω

Engine idling:

10 kΩ or higher

HINT:

If the value is not as specified, replace the engine oil pressure switch.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace harness or connector.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
CG (4) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace harness or connector.

HINT:

If the display shows an error message after having connected the cable of the intelligent tester to the DLC3, turned the engine switch on (IG), and operated the tester, there is a problem on either the vehicle side or the tool side.

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the engine switch on (IG) and turn the intelligent tester on.

(c) Enter the following menus: DIAGNOSTICS / OBD/ MOBD / METER / DTC INFO / CURRENT CODES.

(d) Check for DTCs.

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the engine switch on (IG) and turn the intelligent tester on.

(c) Enter the following menus: DIAGNOSTICS / OBD/ MOBD / METER / DTC INFO / CURRENT CODES.

(d) Erase DTCs by pressing the YES button on the tester.

ENGINE OIL LEVEL SENSOR

ON-VEHICLE INSPECTION

1. INSPECT ENGINE OIL LEVEL SENSOR

(a) Remove the engine oil level sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Float position is at the top	Below 1 Ω
1 - 2	Float position is at the bottom	10 kΩ or higher

HINT:
If the value is not as specified, replace the engine oil level sensor.

FAIL-SAFE CHART

ENGINE COOLANT TEMPERATURE GAUGE:

Condition	Response	Recovery
Engine coolant temperature data is interrupted for 3 seconds.	The gauge needle indicates between / and C.	Engine coolant temperature data is received.

SHIFT INDICATOR:

Condition	Response	Recovery
Shift position data is interrupted for 3 seconds.	All indicator lights go off.	Normal data is received.

ABS, EBD, BA, TRAC, AND VSC:

Condition	Response	Recovery
ABS, brake, slip data is interrupted for 1 second.	The warning light comes on.	Normal data is received.

DOOR:

Condition	Response	Recovery
Each door condition data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

DRIVER SIDE SEAT BELT:

Condition	Response	Recovery
Driver side front seat inner belt assembly data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

TIRE PRESSURE (*1):

Condition	Response	Recovery
Tire pressure data is interrupted for 10 seconds.	The tire pressure indicator light blinks for 60 to 64 seconds, then comes on.	Normal data is received.

OIL MAINTENANCE (*2):

Condition	Response	Recovery
The running distance after performing oil maintenance reminder light resetting procedure is interrupted.	Oil change reminder light comes on.	Normal data is received.

HEAD (*2)/TAIL (*3):

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

BEAM:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

AIRBAG:

Condition	Response	Recovery
Airbag data is interrupted for 10 seconds or there is a malfunction in the combination meter (meter CPU).	The warning light comes on.	Normal data is received.

FRONT PASSENGER SIDE SEAT BELT:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

FRONT FOG LIGHT:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

AFS:

Condition	Response	Recovery
Regular data is interrupted for 3 seconds.	The data received most recently remains indicated.	Normal data is received.

MULTI-INFORMATION DISPLAY:

Condition	Response	Recovery
Cruise information data is interrupted for 60 seconds.	The display becomes blank (only measurement units are displayed).	Normal data is received.

*1: with Tire Pressure Warning System
*2: for U.S.A.
*3: for Canada

DATA LIST / ACTIVE TEST

1. DATA LIST

Using the intelligent tester to read the DATA LIST allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.

(a) Warm up the engine.
(b) Turn the engine switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the engine switch on (IG).
(e) Turn the tester on.
(f) Enter the following menus: DIAGNOSIS / OBD/ MOBD / METER / DATA LIST.
(g) Check values by referring to the table below.

METER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TAIL CANCEL SW	Tail cancel switch is OFF/ON	OFF: Rheostat knob is not fully turned up	-
		ON: Rheostat knob is fully turned up	-
ODO/TRIP SW	ODO/TRIP switch is OFF/ON	OFF: Switch is released	-
		ON: Switch is pushed	-
P-BELT BUCKL SW	Front passenger buckle switch is OFF/ON	OFF: Seat belt is fastened	-
		ON: Seat belt is unfastened	-
SPEED METER	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual vehicle speed (When driving)	-
TACHO METER	Engine speed/Min.: 0 rpm, Max.: 12,750 rpm	Almost same at the meter rpm (When engine is running)	-
COOLANT TEMP	Engine coolant temperature: 0°C (32°F) to 127.5°C (261.5°F)	After warning up: 80 to 95°C (176 to 203°F)	-
WASHER SW	Washer level switch is OFF/ON	OFF: Washer level is not low	-
		ON: Washer level is low	-
OIL LEVEL SW	Oil level warning switch is OFF/ ON	OFF: Oil level is more than low	-
		ON: Oil level is less than low	-
MULTI DISP SW	MODE switch in the steering pad is OFF/ON	OFF: Mode switch is OFF	-
		ON: Mode switch is ON	-
+B VOLTAGE VAL	Battery voltage/Min.: 0 V, Max.: 25.5 V	10 to 14 V	-
OIL MAINTENANCE (*)	Oil maintenance warning value: Min.: 0, Max. 25,500	The running distance after performing oil maintenance resetting procedure is displayed	If the value is 5,000 (mph) or more, perform oil maintenance resetting procedure after changing the oil.
FUEL GAUGE	Fuel input signal Min.: 0 (L), Max. 127.5 (L)	Fuel gauge indicates (E): 7.5 (L)	-
		Fuel gauge indicates (1/2): 35.0 (L)	-
		Fuel gauge indicates (F): 62.9 (L)	-
AMBIENT TEMP	Outside temperature: Min.: -40°C (-40°F) to 50°C (122°F)	Almost same as actual outside temperature	The temperature displayed on the multi-information display is -40 to 50°C (-40 to 122°F)
RHEOSTAT	Light Control Rheostat/Min.: 0%, Max.: 100%	Light control rheostat switch is Dark (0%) → Bright (100%)	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
OUTSIDE LIGHT	Quantity of outside light/Min.: 0%, Max.: 100%	Outside light is Dark (0%) → Bright (100%)	-
ECM/PCM DTC 1 to 3	Communication error: not occurred/occurred	Not occurred: UNREC	-
		Occurred: REC	-
ECM/PCM ODO 1 to 3	Distance when DTC is output Min.: 0, Max.: 999999	-	-
ABS/VSC DTC 1 to 3	Communication error: not occurred/occurred	Not occurred: UNREC	-
		Occurred: REC	-
ABS/VSC ODO 1 to 3	Distance when DTC is output Min.: 0, Max.: 999999	-	-
SEAT-BELT WARN	The inquiry of the seat belt warning buzzer is D/P ON, D ON, P ON, D/P OFF	The customized setting of the inquiry of the seat belt warning buzzer is displayed	-
CODES#	The number of the DTC which is currently output	0	-

*: for U.S.A.

ABS/TRAC/VSC:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR/FL/RR/RL WHEEL SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-
VEHICLE SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-

ME

ENGINE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ENGINE SPD	Vehicle speed/Min.: 0 rpm, Max.: 16,383.75 rpm	Almost same as actual engine speed (When engine running)	-
COOLANT TEMP	Engine coolant temperature: Min.: -40°C (-40°F), Max: 140°C (284°F)	80 to 100°C (176 to 212°F): After warming up	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted

2. ACTIVE TEST

Using the intelligent tester to perform Active Tests allows the relay, actuator, and other items to operate without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing ACTIVE TEST early in troubleshooting is one way to save diagnostic time. DATA LIST information can be display while performing ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / METER / ACTIVE TEST.
(e) From the display on the tester, perform the "ACTIVE TEST".

METER:

Tester Display	Test Part	Control Range	Diagnostic Note
SPEED METER	Speedometer	0, 40, 80, 120 mph (*1)	-
		0, 40, 80, 120, 160, 200, 240 km/h (*2))	

Tester Display	Test Part	Control Range	Diagnostic Note
TACHOMETER	Tachometer	0, 1,000, 2,000, 3,000, 4,000, 5,000, 6,000, 7,000 (rpm)	-
FUEL GAUGE	Fuel receiver gauge	EMPTY, 1/2, FULL	-
COOLANT TEMP	Engine coolant temperature receiver gauge	LOW, NORM, HIGH	-
A/T INDIC (1)	A/T shift indicator light	A/T shift indicator light D, N, R, P is OFF/ON	-
A/T INDIC (2)	A/T gear range indicator light	A/T gear range indicator light S is OFF/ON	-
METER DISPLAY1	Multi-information display	All the dots in the multi-information display OFF/ON	Confirm that the vehicle is stopped, engine idling
METER DISPLAY2	A/T shift indicator display	The segments in the combination meter assembly OFF/ON	Confirm that the vehicle is stopped, engine idling
SRS WARN	Airbag warning light	Airbag warning light is OFF/ON	-
DOORS ALL OPEN	Open door warning light	Open door warning light is OFF/ON	-
P-BELT REMIND	Front passenger side seat belt warning light	Front passenger side seat belt warning light is OFF/ON	-
D-BELT REMIND	Driver side seat belt warning light	Driver side seat belt warning light is OFF/ON	-
ABS WARN	ABS warning light	ABS warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
SLIP INDIC	Slip indicator light	Slip indicator light is OFF/ON	-
HIGH BEAM INDIC	Hi-beam indicator light	Hi-beam indicator light is OFF/ON	-
HEADLIGHT INDIC (*1)	Head indicator light	Head indicator light is OFF/ON	-
TAILLIGHT INDIC (*2)	Tail indicator light	Tail indicator light is OFF/ON	-
Fr FOG INDIC	Front fog indicator light	Front fog indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
Rr LIGHT INDIC	Rear light indicator light	Rear light indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
PRECRASH INDIC (*3)	Precrash indicator light	Precrash indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
D DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
P DOOR OPEN	Front passenger door indicator	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
RR DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
RL DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
LUGG DOOR OPEN	Open door warning light	Open door warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
AFS INDICATOR (*4)	AFS off indicator light	AFS off indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling
LOW FUEL WARN	Low fuel warning light	Fuel warning light is OFF/ON	-
TIRE PRESS WARN (*5)	Tire pressure warning light	Tire pressure warning light is OFF/ON	-
CRUISE INDIC	Cruise indicator light	Cruise indicator light is OFF/ON	-
BRAKE WARN	Brake warning light	Brake warning light is OFF/ON	Confirm that the vehicle is stopped, engine idling
MST WARN INDIC	Master caution indicator light	Master caution indicator light is OFF/ON	Confirm that the vehicle is stopped, engine idling

DIAGNOSTIC TROUBLE CODE CHART

DTC Code	Detection Item	Trouble Area	See page
U0100	Lost Communication with ECM/PCM "A"	1. ECM 2. CAN communication system	ME-36
U0129	Lost Communication with Skid Control ECU	1. ABS and traction actuator assembly (Skid control ECU) 2. CAN communication system	ME-38

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

(1) Using a speedometer tester (calibrated chassis dynamometer), check the speedometer indication according to the table below.

Reference: mph (for U.S.A.)

Chassis Dynamometer Indication	Acceptable Range
20 mph	20.0 to 23.0 mph
40 mph	40.0 to 43.5 mph
60 mph	60.0 to 64.0 mph
80 mph	80.0 to 84.5 mph
100 mph	100.0 to 105.0 mph
120 mph	120.0 to 125.5 mph
140 mph	140.0 to 146.0 mph
160 mph	160.0 to 166.5 mph

Reference: km/h (for Canada)

ME

Chassis Dynamometer Indication	Acceptable range Data in ( ) is for reference
20 km/h	(17.5 to 21.5 km/h)
40 km/h	38.0 to 42.0 km/h
60 km/h	58.0 to 63.0 km/h
80 km/h	78.0 to 84.0 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119.0 to 125.0 km/h
140 km/h	139.0 to 146.0 km/h
160 km/h	159.0 to 167.0 km/h
180 km/h	179.0 to 188.0 km/h
200 km/h	199.0 to 209.0 km/h
220 km/h	219.0 to 230.0 km/h
240 km/h	239.0 to 251.0 km/h

NOTICE:
Tire wear as well as over or under inflation will cause errors.

(2) Check the deviation from the acceptable range of the speedometer indication.

Reference:
Less than 0.5 km/h (0.3 mph)

HINT:
If the indication is not as specified, go to problem symptoms table (See page ME-16).

2. INSPECT TACHOMETER

(a) Connect a tune-up tachometer, and start the engine.

(b) Compare the test results with the tachometer indications.

DC 13.5 V, at 25°C (77°F):

Tune-up Tachometer indication (rpm)	Acceptable range Data in ( ) is for reference
700	630 to 770
1,000	(900 to 1,100)
2,000	(1,850 to 2,150)

Tune-up Tachometer indication (rpm)	Acceptable range Data in ( ) is for reference
3,000	2,800 to 3,200
4,000	(3,800 to 4,200)
5,000	4,800 to 5,200
6,000	(5,750 to 6,250)
7,000	6,700 to 7,300
8,000	(7,700 to 8,300)

HINT:
If the indication is not as specified, go to the problem symptoms table (See page ME-16).

3. INSPECT ENGINE OIL PRESSURE SWITCH

(a) Disconnect the connector from the engine oil pressure switch.
(b) Turn the engine switch on (IG).
(c) Ground the terminal of the wire harness side connector, then check the low oil pressure warning light.
OK:
Oil pressure warning message comes on.
HINT:
If the warning message is not displayed, go to the problem symptoms table (See page ME-16).

4. INSPECT MULTI-INFORMATION DISPLAY

(a) Turn the engine switch off.
(b) Press the "DISP" button and hold it down.
(c) Turn the engine switch on (IG).
OK:
All the dots in the multi-information display come on.
HINT:
This test is also available on "ACTIVE TEST" (See page ME-29).
(d) Turn the engine switch off to finish this test mode.
HINT:
If the result is not as specified, replace the combination meter assembly.

5. INSPECT ENGINE OIL LEVEL SENSOR

(a) Disconnect the engine oil level sensor connector.
(b) Turn the engine switch on (IG), and check the multi-information display.
OK:
Low engine oil level message is displayed.
HINT:
If the warning message is not displayed, go to the problem symptoms table (See page ME-16).

6. INSPECT WASHER LEVEL SWITCH

(a) Disconnect the connector from the washer level switch.
(b) Turn the engine switch on (IG).

(c) Ground the terminal of the wire harness side connector, then check the multi-information display.

OK:

Washer level warning message is displayed.

HINT:

If the warning message is not displayed, go to the problem symptoms table (See page ME-16).

LIGHT FAILURE SENSOR

INSPECTION

1. INSPECT LIGHT FAILURE SENSOR

(a) Remove the taillight bulb or stop light bulb.

(b) Turn the engine switch on (IG) and check the rear light indicator light.

(c) OK:

The rear light indicator light comes on.

HINT:

If the indicator light does not come on, check the light failure indicator (See page LI-32).

DTC	U0100	Lost Communication with ECM/PCM "A"

DESCRIPTION

The combination meter assembly communicates with the ECM via the CAN communication lines (CAN No. 1 Bus).

DTC No.	DTC Detection Conditions	Trouble Areas
U0100	When either of following conditions detected: 1. Vehicle speed 5 km/h (3.1 mph) or more and IG voltage 10.5 V or more 2. No communication with ECM continues for 3 seconds or more (No communication to ECM or skid control ECU continues for 60 seconds or more)	• CAN communication system • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS / OBD/MOBD / METER / DTC INFO / CLEAR CODES.
(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.
(f) Stop the vehicle.
(g) Check for DTCs (See page CA-11).

Result

Result	Proceed to
DTC output	A (See page CA-49)
DTC not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

GO TO CAN COMMUNICATION SYSTEM

HOW TO PROCEED WITH TROUBLESHOOTING

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 BASIC INSPECTION

AV

(a) Turn the engine switch on (IG).
(b) Check whether or not the radio receiver turns on.

Result

Result	Proceed to
Radio receiver turns on	A
Radio receiver does not turn on	B

B → **Go to step 6**

A

4 CHECK FOR DTC

(a) Check for DTCs and note any codes that are output.
(b) Delete the DTCs.
(c) Recheck by simulating the operation indicated by the DTC.
HINT:
- If the system cannot enter the diagnosis mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the problem part.
- Even if the malfunction symptom is not confirmed, check the DTCs. This is because the system stores past DTCs.
- Check and clear past DTCs. Then check for DTCs.

Result

Result	Proceed to
DTC is output again	A
DTC is not output	B

B → **Go to step 6**

A

5 DIAGNOSTIC TROUBLE CODE CHART

Find the output code on the diagnostic trouble code chart (See page AV-29).

NEXT

Go to step 8

6 PROBLEM SYMPTOMS TABLE

Refer to the problem symptoms table (See page AV-14).

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → **Go to step 8**

A

7 OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Terminals of ECU (See page AV-16).

NEXT

8 ADJUST, REPAIR OR REPLACE

NEXT

9 CONFIRMATION TEST

END

IDENTIFICATION OF NOISE SOURCE

1. Radio Description

(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	30 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM ↔		FM ↔	
Modulation	Amplitude modulation			Frequency modulation	

LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

E108734E01

T E108735E01

(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

HINT:

In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

T I100011E06

(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

(2) Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.

(3) Fade out
Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

(d) Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

Radio Frequency	Noise Occurrence Condition	Presumable Cause
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Music beat from a distant broadcast
FM	Noise occurs while driving in a specified area	Multipath or phasing noise resulting from a change in FM frequency

HINT:
If the noise does not match the examples above, refer to the descriptions about phasing and multipath.

PROBLEM SYMPTOMS TABLE

HINT:
- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check for DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Audio Function:

Symptom	Suspected Area	See page
Pressing power switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn on System"	AV-82
	2. Radio receiver power source circuit	AV-162
	3. AVC-LAN circuit	AV-133
	4. Radio receiver	AV-167
Panel switch does not function.	1. Steering pad switch circuit	AV-105
	2. AVC-LAN circuit	AV-133
	3. Radio receiver	AV-167
No sound can be heard from speakers (audio is mute).	1. AVC-LAN circuit	AV-133
	2. Radio receiver power source circuit	AV-162
	3. Proceed to "No Sound can be Heard from Speakers"	AV-83
	4. Stereo component amplifier power source circuit	AV-164
	5. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-124
	6. Speaker circuit	AV-115
	7. Proceed to "Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-129
	8. Stereo component amplifier	AV-176
	9. Radio receiver	AV-167
Only DVD sound cannot be heard or sound quality is bad. (with DVD Changer)	1. Proceed to "DVD Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-148
	2. Stereo component amplifier	AV-176
	3. Radio receiver	AV-167
Sound quality is bad in all modes. (Volume is too low.)	1. Proceed to "Poor Sound Quality in All Modes (Low Volume)"	AV-98
	2. Speaker circuit	AV-115
	3. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-124
	4. Proceed to "Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-129
	5. Stereo component amplifier	AV-176
	6. Radio receiver	AV-167
ASL does not function.	Proceed to "Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter"	AV-135
External device sound cannot be heard or sound quality is bad. (Stereo jack is used.)	1. Radio receiver power source circuit	AV-162
	2. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter"	AV-127
	3. Stereo jack adapter (Audio terminal)	AV-240
	4. Radio receiver	AV-167
Abnormal noise occurs.	1. Proceed to "Noise occurs"	AV-80
	2. Stereo component amplifier	AV-176
	3. Radio receiver	AV-167
Radio broadcast cannot be received or poor reception.	Proceed to "Radio Broadcast cannot be Received or Poor Reception"	AV-92

Symptom	Suspected Area	See page
CD cannot be inserted/played or CD is ejected right after insertion.	1. Radio receiver power source circuit	AV-162
	2. Proceed to "CD cannot be Inserted/Played or CD is Ejected Right After Insertion"	AV-88
CD cannot be ejected.	1. Radio receiver power source circuit	AV-162
	2. Proceed to "CD cannot be Ejected"	AV-87
Sound quality is bad only when CD is played. (Volume is too low.)	Proceed to "Sound Quality is Bad Only when CD is Played (Volume is Too Low)"	AV-84
CD sound skips.	Proceed to "CD Sound Skips"	AV-90
Radio receiver cannot be dimmed at night.	1. Dimmer signal circuit	AV-145
	2. Radio receiver	AV-167
Radio receiver cannot be illuminated at night.	Illumination circuit	AV-108
Cassette tape cannot be inserted or played. (*1)	1. Radio receiver power source circuit	AV-162
	2. "Cassette Tape cannot be Inserted or Played"	AV-86
Cassette tape cannot be ejected. (*1)	1. Radio receiver power source circuit	AV-162
	2. "Cassette Tape cannot be Ejected"	AV-85
Sound quality is bad only when playing tape. (*1)	"Sound Quality is Bad Only when Playing Tape"	AV-96
Tape is tangled due to incorrect tape speed or auto-reverse malfunction. (*1)	"Tape is Tangled due to Incorrect Tape Speed or Auto-Reverse Malfunction"	AV-97

Steering Pad Switch Function:

Symptom	Suspected Area	See page
Audio system cannot be operated with steering pad switch.	1. Steering pad switch circuit	AV-105
	2. Radio receiver	AV-167
Steering pad switch cannot be illuminated at night.	Illumination circuit	AV-108

"Bluetooth" Function (*1):

Symptom	Suspected Area	See page
Cellular phone registration failure, phone directory transfer failure.	Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure"	AV-99
Cellular phone cannot send/receive.	1. Proceed to "Cellular Phone cannot Send / Receive"	AV-101
	2. Steering pad switch circuit	AV-105
	3. Radio receiver	AV-167
The other callers voice cannot be heard, is too quiet, or distorted.	1. Proceed to "The Other Callers Voice cannot be Heard, is too Quiet, or Distorted"	AV-103
	2. Proceed to "Cellular Phone Voice Circuit between Radio Receiver and Stereo Component Amplifier"	AV-140
	3. Radio receiver	AV-167
	4. Stereo component amplifier	AV-176
The other caller cannot hear your voice, or your voice is too quiet or distorted.	1. Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted"	AV-104
	2. Proceed to "Microphone Circuit between Microphone and Radio Receiver"	AV-142
	3. Microphone	AV-250
	4. Radio receiver	AV-167

*1: for Radio Receiver with Built-in "Bluetooth" Handsfree Function

TERMINALS OF ECU

1. RADIO RECEIVER

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
B (E69-1) - GND (E69-20)	L - W-B	Battery	Always	10 to 14 V
ILL+ (E69-2) - GND (E69-20)	G - W-B	Illumination signal	Light control switch OFF	Below 1 V
ILL+ (E69-2) - GND (E69-20)	G - W-B	Illumination signal	Light control switch TAIL	10 to 14 V
ATX+ (E69-5) - GND (E69-20)	G - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
MUTE (E69-7) - GND (E69-20)	GR - W-B	Mute signal	Audio system is playing	Above 3.5 V
MUTE (E69-7) - GND (E69-20)	GR - W-B	Mute signal	Audio system is changing	Below 1 V
R+ (E69-8) - GND (E69-20)	R - W-B	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L+ (E69-9) - GND (E69-20)	B - W-B	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
SLD (E69-10) - Body ground	Shielded - Body ground	Shielded ground	Always	Below 1 V
ACC (E69-11) - GND (E69-20)	GR - W-B	Accessory (ON)	Turn engine switch off	Below 1 V
ACC (E69-11) - GND (E69-20)	GR - W-B	Accessory (ON)	Turn engine switch on (ACC)	10 to 14 V
ILL- (E69-12) - GND (E69-20)	W - W-B	Illumination signal	Light control switch OFF	Below 1 V
ILL- (E69-12) - GND (E69-20)	W - W-B	Illumination signal	Light control switch TAIL	10 to 14 V
ANT (E69-13) - GND (E69-20)	LG - W-B	Power source of antenna	Radio switch ON and AM or FM	10 to 14 V
ATX- (E69-15) - GND (E69-20)	R - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
R- (E69-18) - GND (E69-20)	G - W-B	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L- (E69-19) - GND (E69-20)	W - W-B	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
GND (E69-20) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
SWG (E70-6) - GND (E69-20)	B - W-B	Steering pad switch ground	Always	Below 1 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	Steering pad switch not operated	4 V or higher
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	SEEK+ switch pushed	Approx. 0.5 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	SEEK- switch pushed	Approx. 0.9 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	VOL+ switch pushed	Approx. 2.0 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	VOL- switch pushed	Approx. 3.4 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
SW2 (E70-8) - GND (E69-20)	V - W-B	Steering pad switch signal	Steering pad switch not operated	4 V or more

DTC CHECK / CLEAR

HINT:
If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication signals and repair or replace problem parts.
(See page AV-133)

1. ENTERING DIAGNOSTIC MODE

(a) Turn the engine switch on (ACC).
(b) Turn off the audio system.
(c) While pressing the preset switches "1" and "6" at the same time, press the "DISC" switch 3 times.
HINT:
A beep is emitted 3 times and the diagnostic function is activated. The system enters the all element illumination mode and the switch check mode.

2. ALL ELEMENT ILLUMINATION MODE AND SWITCH CHECK MODE

HINT:
Illumination status of all switches and operations of the panel switches can be checked.

(a) Check that all elements are on.
(b) When pressing each panel switch, check that a beep is emitted.
NOTICE:
Pressing the "SEEK TRACK UP" switch transfers the screen to the stereo jack adapter connection check screen. Check the operation of this switch by confirming the transfer of the screen.

3. STEREO JACK ADAPTER CONNECTION CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
(b) Check if the stereo jack adapter is recognized.
HINT:
Vehicles that do not have a stereo jack adapter also have this function.
NOTICE:
This function is not to check connection information on an external device, but to check recognition information on a stereo jack adapter.

4. SERVICE CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
HINT:
For details of the service check mode, refer to "6. CHECK DTC" and "7. DTC CLEAR/RECHECK".

5. FINISHING DIAGNOSTIC MODE

(a) Press the "DISC" switch for 2 seconds or more, or turn the engine switch off.

AV

6. CHECK DTC

HINT:
Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

(a) Reference:
In the system check mode, the system check and the diagnostic memory check are performed, and the check results are displayed in ascending order of the component codes (physical address).

Terms	Meaning
Component code (Physical address)	Three-digit code (in hexadecimal) given to each device comprising AVC-LAN. Corresponding to its function, individual symbol is provided.
Logical address	Two-digit code (in hexadecimal) given to each function and device unit in each device comprising AVC-LAN.

(b) Service check result display

Display	Previous term	Meaning	Action to be taken
good	Good (normal)	No DTCs are detected in both "System Check Mode" and "Diagnostic Memory Mode".	-
nCon	No connection	The system recognized the component when it was registered, but the component gives no response to the "Diagnostic Mode ON Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).
ECHn	Exchange	One or more DTCs for "Exchange" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
CHEC	Check	When no DTCs are detected for "Exchange", one or more DTCs for "Check" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
OLd	Old version	Old DTC application is identified and DTC is detected in either "System Check Mode" or "Diagnostic Memory Mode".	-
nrES	No response	The device gives no response to any one of "System Check Mode ON Request", "System Check Result Request", and "Diagnostic Memory Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).

(c) Device name and physical address

Physical Address No.	Name
190	Radio receiver
440	Stereo component amplifier
19D (*1)	"Bluetooth" handsfree module

*1: for Radio Receiver with Built-in "Bluetooth" Handsfree Function

(d) Service check mode
(1) Press the "SEEK TRACK" switch to see the check result of each component.

(2) The component code (physical address) is displayed first, and then the check result follows.
HINT:
- If all check results are "good", the system judges that no DTC exists.
- If the preset switch "1" is pressed in the service check mode, service check is performed again.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

Service Check Mode:

*1: SEEK TRACK DOWN

*2: SEEK TRACK UP

*3: P...Indicates physical address

190/440/1C6...Physical address

*4: Result

*5: Up-to-date connection check number

*6: Memory clear

P

E110920E07

(e) Detailed information mode 1

HINT:

- "Detailed information mode 1" is displayed when there is no response to "System Check Result Request" and DTC is detected only in "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.

AV

- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 1".

(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.

(3) Press the preset switch "3" to go to the "Service Check Mode".

(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 1", refer to the following:
   - "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
   - "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

   HINT:
   - The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
   - The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
   - The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
   - "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
   - "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

Service Check Mode:

AV

(f) Detailed information mode 2

HINT:

- "Detailed information mode 2" is displayed when DTCs are detected in the responses to both "System Check Result Request" and "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 2".

(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.

(3) Press the preset switch "3" to go to the "Service Check Mode".

(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 2", refer to the following:

- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

  HINT:

  - The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
  - The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
  - The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
  - "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
  - "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

System Check Mode:

AV

7. DTC CLEAR/RECHECK

(a) Clearing All DTC Memory (when clearing all the memory of the DTCs previously detected).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Service Check Mode", the DTCs for all components are cleared. ("CLr" is displayed at this time.)

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory for all the components is cleared, only the component codes (physical address) are displayed.
- After the DTC memory is cleared, the "Service Check Mode" is restored.

(b) Clearing Individual DTC Memory (when clearing the memory of the DTC previously detected individually).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Detailed Information Mode 1" or "Detailed Information Mode 2", the DTCs for the target component are cleared.

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory is cleared, only the component code (physical address) is displayed for the target component.
- After the DTC memory is cleared, the "Service Check Mode" is restored.
- To check DTCs, press the preset switch "1" and perform the system check again.

(c) Press the preset switch "1" to perform the service check again, and check that no DTCs are displayed for all the component codes (physical address).

DIAGNOSTIC TROUBLE CODE CHART

COMMUNICATION DIAGNOSIS:

DTC Code	Detection Item	Trouble Area	See page
01-21	ROM Error	Radio receiver	AV-33
01-22	RAM Error	Radio receiver	AV-33
01-D5	Absence of Registration Unit	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-D6	No Master	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-36
01-D7	Connection Check Error	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-36
01-D8	No Response for Connection Check	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-D9	Last Mode Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-DA	No Response Against ON / OFF Command	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34

DTC Code	Detection Item	Trouble Area	See page
01-DB	Mode Status Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-DC	Transmission Error	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code	AV-41
01-DD	Master Reset	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-44
01-DE	Slave Reset	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-DF	Master Error	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-49
01-E0	Registration Complete Indication Error	-	AV-53
01-E1	Voice Processing Device ON Error	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-44

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-21	A malfunction exists in ROM.	Radio receiver
01-22	A malfunction exists in RAM.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	**REPLACE RADIO RECEIVER**

NEXT

END

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *3	A device that the sub-code shows is (was) disconnected from the system when turning the engine switch on (ACC or IG). The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the radio receiver and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	The device indicated by the sub-code is (was) disconnected from the system after the engine starts.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system when the engine switch is (was) on (ACC or IG).	
01-DA *3	No response is identified when changing mode. Sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3	A slave device has been disconnected after the engine starts.	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: If the device is reported as not existing during verification, check the power source circuit and AVC-LAN circuit for the device.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	**CHECK "RADIO RECEIVER COMMUNICATION ERROR" IN FLOW CHART**

Refer to the radio receiver communication error (See page AV-150).

NEXT

END

DTC	01-D6	No Master

DTC	01-D7	Connection Check Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D6 *1	When either of the following conditions is met: • The device that stores (stored) the code has (had) been disconnected when the engine switch is on (ACC or IG) • The master device has (had) been disconnected when this code is stored	• Radio receiver power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the radio receiver and the component which has stored this code • Component which has stored this code • Radio receiver
01-D7 *2	When either of the following conditions is met: • The device that stored the code has (had) been disconnected after the engine starts (started) • The master device has (had) been disconnected when this code is (was) stored	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC or IG), this code is stored.

AV

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

Refer to the radio receiver power source circuit (See page AV-162).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical Address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-21).

AV

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → **REPLACE RADIO RECEIVER**

B

4	CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

(a) Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.

Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier power source circuit (See page AV-164)

NEXT

5	INSPECT RADIO RECEIVER

Wire Harness View:

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ - ATX-	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

6	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-16).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
   (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   OK:
   There is no open or short circuit.

AVC-LAN WIRING DIAGRAM:

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a normal one and check if the same problem occurs again.
   OK:
   Same problem does not occur.

NG → **REPLACE RADIO RECEIVER**

AV

OK

END

DTC	01-DC	Transmission Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DC	Transmission to component shown by sub-code failed (Detecting this DTC does not always mean actual failure)	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code

NOTICE:
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1 CHECK FOR DTC OF OTHER COMPONENTS

(a) Check if the component shown by the sub-code is displayed in the check result of the other components.
  (1) Check if "01-DC" is output for the other components.
  (2) If "01-DC" is output for any other components, check if the same physical address is displayed.
  Result

Result	Proceed to
"01-DC" is output and the same physical address is displayed	**A**
"01-DC" is not output or the same physical address is not displayed	**B**

HINT:
For the list of the components shown by sub-codes, refer to the table in step 2.

B → **Go to step 4**

A

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

AV

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical Address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D
Radio receiver	190

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-21).

AV

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier communication error (See page AV-154)
"Bluetooth" handsfree module	"Bluetooth" handsfree module communication error (See page AV-158)
Radio receiver	Radio receiver communication error (See page AV-150)

NEXT

END

AV

4	CLEAR DTC

(a) Clear the DTCs (See page AV-21).
HINT:
If "01-DC" is output for only one component, this may not indicate a malfunction.

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble code occurs again.
OK:
Malfunction disappears.

NG → **Go to step 3**

OK

END

DTC	01-DD	Master Reset

DTC	01-E1	Voice Processing Device ON Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DD	The device that should be the master has been disconnected after engine start	• Radio receiver power source circuit • AVC-LAN circuit between the radio receiver and the component which has stored this code • Radio receiver • Component which has stored this code
01-E1 *1	The AMP device records that the AMP output does not function even while the source device operates	

HINT:
*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

Refer to the radio receiver power source circuit (See page AV-162).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	**INSPECT RADIO RECEIVER**

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ - ATX-	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

3	**IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE**

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical Address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-21).

AV

NEXT

4	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → **REPLACE RADIO RECEIVER**

B

5	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

AV

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-16).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
   (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   OK:
   There is no open or short circuit.

AVC-LAN WIRING DIAGRAM:

P E130419E01

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	REPLACE RADIO RECEIVER

(a) Replace the radio receiver with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

DTC	01-DF	Master Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DF *1	The device with a display fails and the master is switched to the audio device. Also when a communication error between sub-master (audio) and master occurs, this code is stored.	• Radio receiver power source circuit • AVC-LAN circuit between the radio receiver and the component which has stored this code • Radio receiver • Component which has stored this code

HINT:
*1: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC or IG), this code is stored.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

AV

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

Refer to the radio receiver power source circuit (See page AV-162).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	INSPECT RADIO RECEIVER

Wire Harness View:

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ - ATX-	Always	60 to 80 Ω

NG → **CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)**

OK

3	IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical Address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

AV

HINT:
- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to the "DTC CHECK/ CLEAR" (See page AV-21).

NEXT

4	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → **REPLACE RADIO RECEIVER**

5	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-16).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
   (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   OK:
   There is no open or short circuit.

AV

AVC-LAN WIRING DIAGRAM:

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

AV

6	**REPLACE RADIO RECEIVER**

(a) Replace the radio receiver with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

DTC	01-E0	Registration Complete Indication Error

DTC	01-E3	Registration Demand Transmission

DTC	01-E4	Multiple Frame Incomplete

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E0	"Registration complete" signal from the master device cannot be received.	-
01-E3	The registration demand signal from the slave device is output. Or the registration demand signal is output by receiving connection confirmation signal from the sub-master device.	-
01-E4	The multiple frame transmission is incomplete.	-

HINT:
Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs. These DTCs do not indicate a malfunction.

DTC	01-E2	ON / OFF Indication Parameter Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E2	The command for ON/OFF control from the master device has a problem.	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	57-47	Bluetooth Module Initialization Failed

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
57-47	• "Bluetooth" module is not installed. • Problem with "Bluetooth" module • Problem in communication line to "Bluetooth" module	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	60-10	AM Tuner PLL does not Lock

DTC	60-11	FM Tuner PLL does not Lock

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
60-10	AM tuner PLL (phase locked loop) synchronization is impossible.	Radio receiver
60-11	FM tuner PLL (phase locked loop) synchronization is impossible.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	60-42	Tuner Power Source Error

DTC	60-43	AM Tuner Error

DTC	60-44	FM Tuner Error

DTC	60-50	Malfunction in Internal IC

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
60-42	The power source of the tuner is abnormal.	Radio receiver
60-43	The AM tuner is abnormal.	
60-44	The FM tuner is abnormal.	
60-50	A problem occurs in the IC inside the tuner unit and radio reception is not normal.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

AV

1 CLEAR DTC

(a) Clear the DTCs (See page AV-21).

NEXT

2 RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the radio receiver.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-10	CD Changer Mechanical Error

DTC	63-11	CD Insertion and Ejection Error

DTC	63-12	CD Reading Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-10	A mechanical error in the CD changer is detected while the CD is not being inserted or ejected.	Radio receiver
63-11	CD insertion or ejection is failed.	
63-12	CD read problem occurs.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

AV

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	63-41	Wrong Disc

DTC	63-42	Disc cannot be Read

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-41	An unsuitable disc is inserted.	• CD • Radio receiver
63-42	The disc cannot be read.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK DISC

(a) Check that the disc is not deformed or cracked.
OK:
No deformation or cracks on the disc.

NG → **CHANGE DISC**

OK

2 DISC CLEANING

(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use conventional record cleaner or anti-static preservative.

NEXT

3 CLEAR DTC

(a) Clear the DTCs (See page AV-21).

NEXT

AV

4	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

5	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page AV-21).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-43	CD-ROM Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-43	CD-ROM operation is abnormal	• CD • Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal CD
HINT:
- Translucent or uniquely-shaped CDs cannot be played.
- CDs with adhesive paper labels should not be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG → **CD IS FAULTY**

OK ↓

2 REPLACE CD WITH ANOTHER AND RECHECK

(a) Replace the CD with another and recheck.
(1) Replace the CD with another normal one.
(2) Clear the DTCs (See page AV-21).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK ↓

END

AV

DTC	63-44	CD Abnormal

DTC	63-48	Excess Current

DTC	63-50	Tray Insertion / Ejection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-44	Operation error in the CD mechanism	Radio receiver
63-48	Excess current is present in the CD changer.	
63-50	Malfunction in insertion/ejection system	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

AV

1 CLEAR DTC

(a) Clear the DTCs (See page AV-21).

NEXT

2 RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the radio receiver.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-45	Eject Error

DTC	63-51	Elevator Error

DTC	63-52	Clamp Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-45	Magazine cannot be ejected.	Radio receiver
63-51	Mechanical error occurs during elevator operation.	
63-52	Error occurs in CD changer clamp.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK RADIO RECEIVER

(a) Check if a disc can be changed, inserted, or ejected normally.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-46	Scratched / Reversed Disc

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-46	Scratches or dirt is found on CD surface or CD is inserted upside down.	• CD • Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK THAT CD IS INSERTED PROPERLY

(a) Check that the CD is not inserted upside down.
OK:
CD is properly inserted.

NG → **INSERT CD PROPERLY**

OK

AV

2 CHECK DISC

(a) Check that the disc is not deformed or cracked.
OK:
No deformation or cracks on the disc.

NG → **CHANGE DISC**

OK

3 DISC CLEANING

(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

4	CLEAR DTC

(a) Clear the DTCs (See page AV-21).

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

6	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page AV-21).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-47	High Temperature

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-47	Sensor detects that CD unit temperature is high (Over 80°C (176°F))	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK RADIO RECEIVER

(a) Park the vehicle in a cool place.
(b) Check that the temperature of the radio receiver becomes sufficiently low, then start the engine.
(c) Clear the DTCs and recheck for DTCs.
(d) Check if DTC 63-47 is output.
OK:
DTC 63-47 is not output.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-78	DSP Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-78	An error occurs during the decode process (MP3/WMA)	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

NOTICE:

- **This code may be output even if there is no malfunction.**
- **If this code is output frequently, replace the radio receiver.**

1 CLEAR DTC

(a) Clear the DTCs (See page AV-21).

NEXT

2 RECHECK DTC

(a) Recheck for DTCs and check if the same trouble code occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

AV

DTC	63-7D	Disc cannot be Played

DTC	63-7E	No Playable Files

DTC	63-7F	Copyright Protection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-7D	• An incompatible MP3/WMA file is used. • Although the file has an extension of ".mp3" or ".wma", the header information cannot be read.	• CD • Radio receiver
63-7E	• A disc with no music data is used. • Playable files are not on the disc (MP3/WMA).	
63-7F	A copy-protected file, which cannot be played, is used.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

AV

1	CHANGE DISC

(a) Insert a disc with a playable file and check if the disc can be played correctly.
HINT:
For details on playable files and discs, refer to the Owner's Manual.
OK:
The disc can be played correctly.

NG → **REPLACE RADIO RECEIVER**

OK

DISC IS FAULTY

DTC	74-40	Short in Speaker Circuit

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
74-40	A short is detected in the speaker output circuit.	• Wire harness • Speaker • Stereo component amplifier

This circuit has a fail-safe function.
- When a short in the speaker circuit is detected, all sound outputs are stopped.

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 4 Ω

NG → **REPLACE FRONT NO. 1 SPEAKER (LEFT HAND)**

OK

19	**INSPECT FRONT NO. 1 SPEAKER (RIGHT HAND)**

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 4 Ω

NG → **REPLACE FRONT NO. 1 SPEAKER (RIGHT HAND)**

OK

20	**INSPECT FRONT NO. 2 SPEAKER (LEFT HAND)**

(a) Reconnect the stereo component amplifier connector and front No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE FRONT NO. 2 SPEAKER (LEFT HAND)**

OK

21	**INSPECT FRONT NO. 2 SPEAKER (RIGHT HAND)**

(a) Reconnect the stereo component amplifier connector and front No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE FRONT NO. 2 SPEAKER (RIGHT HAND)**

OK

22	**INSPECT REAR SPEAKER (LEFT HAND)**

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 4 Ω

NG → **REPLACE REAR SPEAKER (LEFT HAND)**

OK

REPLACE REAR SPEAKER (RIGHT HAND)

Noise Occurs

INSPECTION PROCEDURE

1 NOISE CONDITION

(a) Check in which direction the noise comes from (front left or right, or rear left or right).
(1) Check in which direction the noise comes from.
OK:
The location of the noise source can be determined.

NG → **Go to step 3**

OK ↓

2 CHECK SPEAKERS

(a) Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation, or other failures.

Result

Condition	Proceed to
A speaker is installed incorrectly	A
Foreign objects are in the speaker	B
A speaker cone paper is broken	C
No malfunction is found	D

A → **REINSTALL SPEAKER**

B → **REMOVE FOREIGN OBJECT**

C → **REPLACE SPEAKER**

D ↓

3 CHECK NOISE CONDITIONS

(a) Check the noise condition.
HINT:
The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

Conditions under which noise occurs	Noise Source
Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped.	Generator
Noise occurs during A/C or heater operation.	Blower motor
Noise occurs when the vehicle accelerates rapidly on an unpaved road or after the engine switch is turned on (IG).	Fuel pump

Conditions under which noise occurs	Noise Source
Noise occurs when the horn switch is pressed and released or when pressed and held.	Horn
Noise occurs synchronously with the blink of the turn signal.	Flasher
Noise occurs during window washer operation.	Washer
Noise occurs while the engine is running, and continues even after the engine is stopped.	Engine coolant temperature sensor
Noise occurs during wiper operation.	Wiper
Noise occurs when the brake pedal is depressed.	Stop light switch
Others	Static electricity

HINT:

- In the chart's left column, find the situation that matches the customer's complaint. Then, in the right column, find the part that is causing the noise. Check the noise filter on or for the part.
- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Noise should be removed in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.

OK:

The noise source can be determined.

NG → **REPAIR OR REPLACE NOISE SOURCE**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Pressing Power Switch does not Turn on System

INSPECTION PROCEDURE

1	CHECK VEHICLE CONDITION

(a) Check that conditions in the cabin are not likely to cause condensation.
HINT:
This problem occurs when the cabin is humid and the temperature changes rapidly. This may produce condensation, resulting in a short circuit.
OK:
Condensation is not likely to be produced.

NG → **DRY OUT CABIN AND RECHECK CONDITION**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

No Sound can be Heard from Speakers

INSPECTION PROCEDURE

1	CHECK RADIO RECEIVER

(a) Check radio receiver setting.
  (1) Check that the volume is not set to "0".
  (2) Check that "MUTE" is off.
  OK:
  The volume is not set to "0" and "MUTE" is off.

OK → **END**

NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Sound Quality is Bad Only when CD is Played (Volume is Too Low)

INSPECTION PROCEDURE

1	REPLACE CD WITH ANOTHER AND RECHECK

(a) Replace the CD with another one and recheck.
(1) Check if the problem recurs using another CD.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

Cassette Tape cannot be Ejected

INSPECTION PROCEDURE

1	CHECK OPERATION

(a) Press the cassette tape EJECT switch of the radio receiver for 2 seconds or more and check that the cassette tape is ejected.
OK:
Cassette tape is ejected.

NG → **REPLACE RADIO RECEIVER**

OK ↓

2	CHECK CASSETTE TAPE

(a) Check that the ejected cassette tape does not have a peeling label, cassette body deformation or other problems.
OK:
No problems with cassette tape.

NG → **CASSETTE TAPE IS FAULTY**

OK ↓

3	REPLACE CASSETTE TAPE WITH ANOTHER AND RECHECK

(a) Replace the cassette tape with a normal one and check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK ↓

CASSETTE TAPE IS FAULTY

Cassette Tape cannot be Inserted or Played

INSPECTION PROCEDURE

1 CHECK FOR ANY FOREIGN OBJECT

(a) Check that the cassette tape player is free of foreign objects.
OK:
No foreign objects.

NG → **REMOVE FOREIGN OBJECT**

OK ↓

2 CHECK CASSETTE TAPE

(a) Check that the cassette tape is a normal tape for recording sounds.
OK:
Cassette tape is normal.

NG → **CASSETTE TAPE IS FAULTY**

OK ↓

3 CHECK RADIO RECEIVER

(a) Replace the cassette tape with a normal one and check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK ↓

CASSETTE TAPE IS FAULTY

CD cannot be Ejected

INSPECTION PROCEDURE

1 **CHECK OPERATION**

(a) Press the CD EJECT switch of the radio receiver for 2 seconds or more and check that the CD is ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO RECEIVER**

OK

2 **REPLACE CD WITH ANOTHER AND RECHECK**

(a) Insert another CD and check if it is ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO RECEIVER**

OK

END

CD cannot be Inserted / Played or CD is Ejected Right After Insertion

INSPECTION PROCEDURE

1 CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal CD.
HINT:
- Translucent or uniquely-shaped CDs cannot be played.
- CDs with adhesive paper labels should not be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG → **CHANGE DISC**

OK

2 CHECK THAT CD IS INSERTED PROPERLY

(a) Check whether or not the CD is inserted upside down.
OK:
CD is properly inserted.

NG → **INSERT CD PROPERLY**

OK

3 CHECK CD

(a) Clean the disc by wiping it with a soft cloth from the inside to the outside in a radial direction.
OK:
Malfunction disappears.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NG → **Go to step 4**

AV

OK

END

4	**REPLACE CD WITH ANOTHER AND RECHECK**

(a) Replace the CD with a normal one and check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

CD Sound Skips

INSPECTION PROCEDURE

1 CHECK CD

(a) Check the CD.
OK:
The CD is clean.
HINT:
If dirt is on the CD surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NG → **CLEAN CD**

OK

AV

2 CHECK CD

(a) Check that the CD is not deformed or cracked.
OK:
No deformation or cracks on the CD.

NG → **CHANGE DISC**

OK

3 CHECK OPERATION USING ANOTHER CD

(a) Check using another CD.
(1) Check if the problem recurs using another CD.
OK:
The problem does not occur.

OK → **END**

NG

4 CHECK RADIO RECEIVER

(a) Check the radio receiver installation condition.
(1) Check that the radio receiver is properly installed.
OK:
Radio receiver is properly installed.

NG → **REINSTALL RADIO RECEIVER PROPERLY**

OK

REPLACE RADIO RECEIVER

Radio Broadcast cannot be Received or Poor Reception

INSPECTION PROCEDURE

1 CHECK RADIO RECEIVER

(a) Check the radio's automatic station search function.
  (1) Move the vehicle to a location where radio wave reception is possible.
  (2) Check the radio's automatic station search function by activating it.
  OK:
  The radio's automatic station search function works properly.

OK → **REPLACE RADIO RECEIVER**

NG

2 INSPECT RADIO RECEIVER

(a) Disconnect the radio receiver connector E69.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
ANT - Body ground	Engine switch on (IG), Radio switch ON	10 to 14 V

NG → **REPLACE RADIO RECEIVER**

OK

3	CHECK OPTIONAL COMPONENTS

(a) Check optional components (sun-shade film, telephone antenna, etc.).
  (1) Check if any optional components, such as sun-shade film or telephone antenna that may decrease reception capacity, are installed.
  OK:
  Optional components are installed.
  NOTICE:
  Do not remove any optional components installed by the customer without his or her consent.

OK → **REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)**

NG

4	CHECK RADIO RECEIVER

(a) Preparation for check
  (1) Remove the antenna plug from the radio receiver.
(b) Check for noise.
  (1) Turn the engine switch on (ACC) with the radio receiver connector connected.
  (2) Turn the radio on and put into AM mode.
  (3) Place a screwdriver, thin wire, or other metal object on the radio receiver's antenna jack and check that noise can be heard from the speaker.
  OK:
  Noise occurs.

NG → **REPLACE RADIO RECEIVER**

OK

AV

5	CHECK GLASS ANTENNA

(a) Check for continuity of the antenna.
HINT:
Check for continuity at the center of each antenna wire as shown in the illustration.
NOTICE:
When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration.
OK:
There is continuity in the antenna.

NG → **REPAIR GLASS ANTENNA**

OK

6	CHECK ANTENNA CORD

(a) Remove the antenna plug of the radio receiver and antenna.
(b) Measure the resistance between the antenna cord's inner conductor and radio receiver to check for an open circuit in the antenna cord.
Standard resistance:
Below 1 Ω
(c) Measure the resistance between the antenna cord's inner conductor and body ground to check for a short circuit in the antenna cord.
Standard resistance:
10 kΩ or higher

NG → **REPLACE ANTENNA CORD**

OK

7	REPLACE AMPLIFIER ANTENNA

(a) Replace the amplifier antenna and check if radio broadcasts can be received normally.
OK:
Radio broadcasts can be received.

OK → **END**

NG

REPLACE RADIO RECEIVER

Sound Quality is Bad Only when Playing Tape

INSPECTION PROCEDURE

1 REPLACE CASSETTE TAPE WITH ANOTHER AND RECHECK

(a) Replace the cassette tape with another one and recheck.
  (1) Replace the cassette tape with another normal one to check if the same trouble occurs again.
  OK:
  Malfunction disappears.

OK → **CASSETTE TAPE IS FAULTY**

NG

2 CHECK FOR ANY FOREIGN OBJECT

(a) Check for foreign objects.
  (1) Check that there are no foreign objects or defects in the cassette tape player.
  OK:
  No foreign objects or defects.

NG → **REMOVE FOREIGN OBJECT**

OK

3 CLEAN HEAD AND CHECK OPERATION

(a) Head cleaning
  (1) Raise the cassette door with your finger. Using a pencil or similar object, push in the guide.
  (2) Using a cleaning pen or cotton applicator soaked in cleaner, clean the head surface, pinch rollers and capstans.
  (3) Check if the same trouble occurs again.
  OK:
  Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

HEAD IS DIRTY

Tape is Tangled due to Incorrect Tape Speed or Auto-Reverse Malfunction

INSPECTION PROCEDURE

1 CHECK FOR ANY FOREIGN OBJECT

(a) Check for any foreign objects.
(1) Check that there are no foreign objects or defects in the cassette tape player of the radio receiver.
OK:
No foreign objects or defects.

NG → **REMOVE FOREIGN OBJECT**

OK

2 REPLACE CASSETTE TAPE WITH ANOTHER (90 MIN. OR LESS) AND RECHECK

(a) Check the cassette tape player using a normal cassette tape.
(1) Replace the cassette tape with another normal one (90 minutes or less) to see if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **CASSETTE TAPE IS FAULTY**

NG

3 CLEAN HEAD AND CHECK OPERATION

(a) Head cleaning
(1) Raise the cassette door with your finger. Using a pencil or similar object, push in the guide.
(2) Using a cleaning pen or cotton applicator soaked in cleaner, clean the head surface, pinch rollers and capstans.
(3) Check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

HEAD IS DIRTY

AV

Poor Sound Quality in All Modes (Low Volume)

INSPECTION PROCEDURE

1	CHECK AUDIO SETTINGS

(a) Set "BASS", "MID", and "TREB" to the initial values and check that sound is normal.
OK:
Malfunction disappears.

OK → **END**

NG

2	COMPARE WITH ANOTHER VEHICLE OF SAME MODEL

(a) Compare with another vehicle of the same model.
(1) Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.
OK:
No difference is found.

OK → **END**

NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Cellular Phone Registration Failure, Phone Directory Transfer Failure

INSPECTION PROCEDURE

1 CHECK CURRENT CONDITIONS

(a) Proceed to the next step according to the table below.

Result

Conditions	Proceed to
Another "Bluetooth" compatible cellular phone is present.	A
Another "Bluetooth" compatible vehicle is present.	B
None of the above	C

B → **Go to step 3**

C → **Go to step 4**

A

2 CHECK USING ANOTHER CELLULAR PHONE

(a) Check if the system functions using another "Bluetooth" compatible cellular phone.
HINT:
- Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.
- Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

NG → **REPLACE RADIO RECEIVER**

OK

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

3 CHECK USING ANOTHER "BLUETOOTH" COMPATIBLE VEHICLE

(a) Register the cellular phone with another vehicle and check if the system functions normally.
HINT:
Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

OK → **REPLACE RADIO RECEIVER**

NG

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

4	CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
The phone is "Bluetooth" compatible.

NG → **USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE**

OK

5	CHECK CELLULAR PHONE

(a) Check if a call can be made from the cellular phone.
HINT:
When the battery is low, registration or directory transfer cannot be done.
OK:
A call can be made from the cellular phone.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

REPLACE RADIO RECEIVER

Cellular Phone cannot Send / Receive

INSPECTION PROCEDURE

1	CHECK "BLUETOOTH" SETTINGS

(a) Check if the "Bluetooth" settings are correct.
OK:
"Bluetooth" settings are correct.

NG → **SET SETTINGS CORRECTLY**

OK ↓

2	CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
Phone is "Bluetooth" compatible.

NG → **END (ONLY A "BLUETOOTH" COMPATIBLE CELLULAR PHONE CAN BE USED)**

OK ↓

3	CHECK SETTINGS

(a) Check if the cellular phone functions.
HINT:
The cellular phone is unable to call under any of the following conditions.
- The cellular phone is locked.
- The directory is being transferred.
- The line is crossed.
- Transmission is regulated.
- The power is off.
- The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).

OK:
None of the above conditions exist.

NG → **SET CORRECTLY**

OK ↓

4	CHECK CELLULAR PHONE

(a) Check if the cellular phone can make a call.

AV

HINT:
When the battery is low, calls cannot be made or received.
OK:
Cellular phone can make a call.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

5	CHECK RECEPTION

(a) Set the cellular phone so that it can receive calls.
(b) Place the cellular phone close to the radio receiver.
(c) Check if the cellular phone has reception according to the radio receiver.
OK:
Cellular phone has reception.

NG → **REPLACE RADIO RECEIVER**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted

INSPECTION PROCEDURE

1 CHECK CELLULAR PHONE

(a) Check if the voice on the other side can be heard using a cellular phone.
OK:
Voice can be heard.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK ↓

2 CHECK AUDIO AND VISUAL SYSTEM

(a) Check that audio sound can be heard from the driver side speaker.
OK:
Audio sound can be heard.
HINT:
If audio sound cannot be heard, proceed to "No sound can be heard from speakers. (Audio is mute.)" in the PROBLEM SYMPTOMS TABLE (See page AV-14).

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ↓

3 CHECK SETTINGS

(a) Check that the received voice level setting on the cellular phone is not too low.
OK:
The received voice level setting is not too low.

NG → **SET VOLUME TO HIGH**

OK ↓

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted

INSPECTION PROCEDURE

1	CHECK CELLULAR PHONE

(a) Check if the other side can hear your voice properly.
OK:
Your voice can be heard correctly.

NG → **REPLACE CELLULAR PHONE**

OK ↓

2	CHECK SETTINGS

(a) Check if the mute is set to ON.
OK:
Mute is not set to ON.

NG → **TURN MUTE OFF**

OK ↓

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Steering Pad Switch Circuit

DESCRIPTION

This circuit sends an operation signal from the steering pad switch to the radio receiver.
If there is an open in the circuit, the audio system cannot be operated using the steering pad switch.
If there is a short in the circuit, the same condition as that when the switch is continuously depressed occurs.
Therefore, the radio receiver cannot be operated using the steering pad switch, and also the radio receiver itself cannot function.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the Supplemental Restraint System (See page RS-1).

AV

1 INSPECT RADIO RECEIVER

(a) Disconnect the radio receiver connector E70.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
SW1 - SWG	No switch is pushed	Approx. 100 kΩ
SW1 - SWG	SEEK+ switch: push	0 to 2.5 Ω
SW1 - SWG	SEEK- switch: push	Approx. 0.3 kΩ
SW1 - SWG	VOL+ switch: push	Approx. 1 kΩ
SW1 - SWG	VOL- switch: push	Approx. 3.1 kΩ
SW2 - SWG	No switch is pushed	Approx. 100 kΩ
SW2 - SWG	MODE switch: push	0 to 2.5 Ω
SW2 - SWG	ON HOOK switch: push	Approx. 0.3 kΩ
SW2 - SWG	OFF HOOK switch: push	Approx. 1 kΩ

NG → **Go to step 2**

AV

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT STEERING PAD SWITCH ASSEMBLY

(a) Disconnect the steering pad switch assembly connector d1.

(b) Measure the resistance according to the values in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
AU1 - EAU	No switch is pushed	Approx. 100 kΩ
AU1 - EAU	SEEK+ switch: push	0 to 2.5 Ω

Tester Connection	Condition	Specified Condition
AU1 - EAU	SEEK- switch: push	Approx. 0.3 kΩ
AU1 - EAU	VOL+ switch: push	Approx. 1 kΩ
AU1 - EAU	VOL- switch: push	Approx. 3.1 kΩ
AU2 - EAU	No switch is pushed	Approx. 100 kΩ
AU2 - EAU	MODE switch: push	0 to 2.5 Ω
AU2 - EAU	ON HOOK switch: push	Approx. 0.3 kΩ
AU2 - EAU	OFF HOOK switch: push	Approx. 1 kΩ

NG → **REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

3 INSPECT SPIRAL CABLE

(a) Disconnect the steering pad switch assembly and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Spiral Cable Position	Specified Condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU1 - AU1	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU2 - AU2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets.

HINT:
- Removal (See page RS-379)
- Installation (See page RS-382)

NG → **REPLACE SPIRAL CABLE**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (SPIRAL CABLE - RADIO RECEIVER)

AV

Illumination Circuit

DESCRIPTION

Power is supplied to the radio receiver and steering pad switch assembly illumination when the light control switch is in the TAIL or HEAD position.

WIRING DIAGRAM

AV

INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the supplemental restraint system (See page RS-1).

1 CHECK ILLUMINATION

(a) Check if the illumination for the radio receiver, steering pad switch, cigarette lighter or others (seat heater switch, hazard switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

Result

Result	Proceed to
Illumination comes on for all components except steering pad switch.	A
Illumination comes on for all components except radio receiver.	B
No illumination comes on (radio receiver, hazard switch, cigarette lighter, etc.).	C
Illumination comes on only for glove box light and steering pad switch.	D

B → **Go to step 6**

C → **GO TO LIGHTING SYSTEM (See page LI-28)**

D → **GO TO METER / GAUGE SYSTEM (See page ME-14)**

A

2 CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)

Spiral Cable Connector Front View:

(a) Disconnect the spiral cable connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
IL+2 - Body ground	Light control switch TAIL or HEAD	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT STEERING PAD SWITCH ASSEMBLY

(a) Disconnect the steering pad switch assembly connector.

(b) Connect the positive (+) lead to terminal IL+2 and the negative (-) lead to terminal EAU of the steering pad switch assembly connector.

AV

(c) Check if the illumination for the steering pad switch assembly comes on.

OK:

Illumination for the steering pad switch assembly comes on.

NG → **REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

4 INSPECT SPIRAL CABLE

(a) Disconnect the steering pad switch assembly and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Spiral Cable Position	Specified Condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
IL+2 - IL+2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets.

HINT:
- Removal (See page RS-379)
- Installation (See page RS-382)

NG → **REPLACE SPIRAL CABLE**

OK

AV

5	CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - RADIO RECEIVER)

Radio Receiver Wire Harness View:

Spiral Cable Connector Front View:

P E130422E01

(a) Disconnect the connectors from the radio receiver and spiral cable.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
SWG - EAU	Always	Below 1 Ω
SWG - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE RADIO RECEIVER

AV

6 CHECK HARNESS AND CONNECTOR (BATTERY - RADIO RECEIVER)

Wire Harness View:

DVD Changer Models

CD Changer Models

P E130423E01

(a) Disconnect the radio receiver connector E69.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
ILL+ - Body ground	Light control switch TAIL or HEAD	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

AV

7	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMBINATION METER)

Wire Harness View:

Radio Receiver (DVD Changer Models)

Radio Receiver (CD Changer Models)

Combination Meter

P E130424E01

(a) Disconnect the radio receiver connector and combination meter connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ILL- - ILL-	Always	Below 1 Ω
ILL- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE RADIO RECEIVER

AV

Speaker Circuit

DESCRIPTION

The sound signal that has been amplified by the stereo component amplifier is sent to the speakers from the stereo component amplifier through this circuit.
If there is a short in this circuit, the stereo component amplifier detects it and stops output to the speakers. Thus, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier or speakers.

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR

(a) Disconnect the connectors shown in the illustration from the stereo component amplifier and speakers.

(b) Measure the resistance between the front center speaker and the stereo component amplifier to check for an open circuit in the wire harness.
Standard resistance:
Below 1 Ω

(c) Measure the resistance between the front No. 2 speakers and stereo component amplifier to check for an open circuit in the wire harness.
Standard resistance:
Below 1 Ω

(d) without Rear Header Speaker:

AV

Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier

DESCRIPTION

The radio receiver sends a sound signal to the stereo component amplifier through this circuit.
The sound signal that has been sent is amplified by the stereo component amplifier, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier or speakers.

AV

Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier

DESCRIPTION

This circuit sends a signal to the stereo component amplifier to mute noise. Because of that, the noise produced by changing the sound source ceases.
If there is an open in the circuit, noise can be heard from the speakers when changing the sound source.
If there is a short in the circuit, even though the stereo component amplifier is normal, no sound, or only an extremely small sound, can be produced.

WIRING DIAGRAM

Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter

DESCRIPTION

This circuit is necessary for the ASL (Auto Sound Leveliser) built into the stereo component amplifier. Speed signals are received from the combination meter and used for the ASL.
The ASL function automatically adjusts the sound data in order to enable hearing the clear audio sound even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).
HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram below will not operate normally.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer on the combination meter is normal.

AV

OK:

Actual vehicle speed and the speed indicated on the speedometer are the same.

HINT:

The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **CHECK COMBINATION METER**

OK

2	**INSPECT STEREO COMPONENT AMPLIFIER**

(a) Disconnect the stereo component amplifier connector M30.

(b) Measure the voltage.
  (1) Jack up either one of the drive wheels.
  (2) Move the shift lever to the neutral position.
  (3) Turn the engine switch on (IG).

(4) Measure the voltage between terminal SPD of the wire harness connector and body ground when the drive wheels are turned slowly.
OK:
Voltage pulses as shown in the illustration.

NG → **Go to step 3**

OK

REPLACE STEREO COMPONENT AMPLIFIER

Radio Receiver Communication Error

INSPECTION PROCEDURE

1	IDENTIFY THE COMPONENT SHOWN BY SUB-CODE

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component shown by the sub-code.

HINT:

- "190 (radio receiver)" is the component shown by the sub-code in the example shown in the illustration.

- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-21).

NEXT

2 CHECK COMPONENT SHOWN BY SUB-CODE

(a) Select the component shown by sub-code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
"Bluetooth" handsfree module (19D)	A
Except "Bluetooth" handsfree module	B

A → **REPLACE RADIO RECEIVER**

B

3 CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

(a) Inspect the power source circuit of the component shown by the sub-code.
If the power source circuit is operating normally, proceed to the next step.

Component Table:

Component	Proceed to
Stereo component amplifier (440)	Stereo component amplifier power source circuit (See page AV-164)

NEXT

4 INSPECT RADIO RECEIVER

Wire Harness View:

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ - ATX-	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

AV

OK

5	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT SHOWN BY SUB-CODE)

HINT:
- Start the check from the circuit that is near the component shown by the sub-code first.
- For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-16).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.
  (1) Disconnect all connectors between the radio receiver and the component shown by sub-code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.
  OK:
  There is no open or short circuit.

AV

AVC-LAN WIRING DIAGRAM:

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	REPLACE COMPONENT SHOWN BY SUB-CODE

(a) Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.
  OK:
  Same problem does not occur.

NG → **REPLACE RADIO RECEIVER**

OK

END

Stereo Component Amplifier Communication Error

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

PROBLEM SYMPTOMS TABLE

HINT:
- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check for DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Audio Function:

Symptom	Suspected Area	See page
Pressing power switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn on System"	AV-82
	2. Radio receiver power source circuit	AV-162
	3. AVC-LAN circuit	AV-133
	4. Radio receiver	AV-167
Panel switch does not function.	1. Steering pad switch circuit	AV-105
	2. AVC-LAN circuit	AV-133
	3. Radio receiver	AV-167
No sound can be heard from speakers (audio is mute).	1. AVC-LAN circuit	AV-133
	2. Radio receiver power source circuit	AV-162
	3. Proceed to "No Sound can be Heard from Speakers"	AV-83
	4. Stereo component amplifier power source circuit	AV-164
	5. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-124
	6. Speaker circuit	AV-115
	7. Proceed to "Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-129
	8. Stereo component amplifier	AV-176
	9. Radio receiver	AV-167
Only DVD sound cannot be heard or sound quality is bad. (with DVD Changer)	1. Proceed to "DVD Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-148
	2. Stereo component amplifier	AV-176
	3. Radio receiver	AV-167
Sound quality is bad in all modes. (Volume is too low.)	1. Proceed to "Poor Sound Quality in All Modes (Low Volume)"	AV-98
	2. Speaker circuit	AV-115
	3. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-124
	4. Proceed to "Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-129
	5. Stereo component amplifier	AV-176
	6. Radio receiver	AV-167
ASL does not function.	Proceed to "Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter"	AV-135
External device sound cannot be heard or sound quality is bad. (Stereo jack is used.)	1. Radio receiver power source circuit	AV-162
	2. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter"	AV-127
	3. Stereo jack adapter (Audio terminal)	AV-240
	4. Radio receiver	AV-167
Abnormal noise occurs.	1. Proceed to "Noise occurs"	AV-80
	2. Stereo component amplifier	AV-176
	3. Radio receiver	AV-167
Radio broadcast cannot be received or poor reception.	Proceed to "Radio Broadcast cannot be Received or Poor Reception"	AV-92

Symptom	Suspected Area	See page
CD cannot be inserted/played or CD is ejected right after insertion.	1. Radio receiver power source circuit	AV-162
	2. Proceed to "CD cannot be Inserted/Played or CD is Ejected Right After Insertion"	AV-88
CD cannot be ejected.	1. Radio receiver power source circuit	AV-162
	2. Proceed to "CD cannot be Ejected"	AV-87
Sound quality is bad only when CD is played. (Volume is too low.)	Proceed to "Sound Quality is Bad Only when CD is Played (Volume is Too Low)"	AV-84
CD sound skips.	Proceed to "CD Sound Skips"	AV-90
Radio receiver cannot be dimmed at night.	1. Dimmer signal circuit	AV-145
	2. Radio receiver	AV-167
Radio receiver cannot be illuminated at night.	Illumination circuit	AV-108
Cassette tape cannot be inserted or played. (*1)	1. Radio receiver power source circuit	AV-162
	2. "Cassette Tape cannot be Inserted or Played"	AV-86
Cassette tape cannot be ejected. (*1)	1. Radio receiver power source circuit	AV-162
	2. "Cassette Tape cannot be Ejected"	AV-85
Sound quality is bad only when playing tape. (*1)	"Sound Quality is Bad Only when Playing Tape"	AV-96
Tape is tangled due to incorrect tape speed or auto-reverse malfunction. (*1)	"Tape is Tangled due to Incorrect Tape Speed or Auto-Reverse Malfunction"	AV-97

Steering Pad Switch Function:

Symptom	Suspected Area	See page
Audio system cannot be operated with steering pad switch.	1. Steering pad switch circuit	AV-105
	2. Radio receiver	AV-167
Steering pad switch cannot be illuminated at night.	Illumination circuit	AV-108

"Bluetooth" Function (*1):

Symptom	Suspected Area	See page
Cellular phone registration failure, phone directory transfer failure.	Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure"	AV-99
Cellular phone cannot send/receive.	1. Proceed to "Cellular Phone cannot Send / Receive"	AV-101
	2. Steering pad switch circuit	AV-105
	3. Radio receiver	AV-167
The other callers voice cannot be heard, is too quiet, or distorted.	1. Proceed to "The Other Callers Voice cannot be Heard, is too Quiet, or Distorted"	AV-103
	2. Proceed to "Cellular Phone Voice Circuit between Radio Receiver and Stereo Component Amplifier"	AV-140
	3. Radio receiver	AV-167
	4. Stereo component amplifier	AV-176
The other caller cannot hear your voice, or your voice is too quiet or distorted.	1. Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted"	AV-104
	2. Proceed to "Microphone Circuit between Microphone and Radio Receiver"	AV-142
	3. Microphone	AV-250
	4. Radio receiver	AV-167

*1: for Radio Receiver with Built-in "Bluetooth" Handsfree Function

REMOVAL

1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
2. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
5. **REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)**
6. **REMOVE INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System)**
   (a) Remove the 4 bolts.
   (b) Pull the integration control panel with radio receiver assembly toward the rear of the vehicle and disengage the 2 clips.
   (c) Disconnect each connector and remove the integration control panel with radio receiver assembly.

7. **REMOVE NO. 1 RADIO BRACKET (w/o Navigation System)**
   (a) Remove the 4 bolts, screw, and No. 1 radio bracket.

8. REMOVE NO. 2 RADIO BRACKET (w/o Navigation System)

(a) Remove the 4 bolts, screw, and No. 2 radio bracket.

9. REMOVE RADIO RECEIVER ASSEMBLY (w/o Navigation System)

(a) Disengage the 2 claws and 6 clips.

(b) Remove the radio receiver assembly.

10. REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System)

(a) Remove the 4 bolts.

(b) Pull the multi-display with radio receiver assembly toward the rear of the vehicle and disengage the 2 clips.

(c) Disconnect each connector and remove the multi-display with radio receiver assembly.

11. REMOVE NO. 1 RADIO BRACKET (w/ Navigation System)

(a) Remove the 6 bolts and No. 1 radio bracket.

12. REMOVE NO. 2 RADIO BRACKET (w/ Navigation System)

(a) Remove the 6 bolts and No. 2 radio bracket.

13. REMOVE RADIO RECEIVER ASSEMBLY (w/ Navigation System)

(a) Disengage the 2 claws and 4 clips.

(b) Remove the radio receiver assembly.

INSTALLATION

1. **INSTALL RADIO RECEIVER ASSEMBLY (w/o Navigation System)**
   (a) Engage the 2 claws and 6 clips and install the radio receiver assembly.

2. **INSTALL NO. 2 RADIO BRACKET (w/o Navigation System)**
   (a) Install the No. 2 radio bracket with the 4 bolts and screw.

3. **INSTALL NO. 1 RADIO BRACKET (w/o Navigation System)**
   (a) Install the No. 1 radio bracket with the 4 bolts and screw.

4. **INSTALL INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System)**
   (a) Connect each connector.

(b) Engage the 2 clips.
(c) Install the integration control panel with radio receiver assembly with the 4 bolts.

5. INSTALL RADIO RECEIVER ASSEMBLY (w/ Navigation System)

(a) Engage the 2 claws and 4 clips and install the radio receiver assembly.

6. INSTALL NO. 2 RADIO BRACKET (w/ Navigation System)

(a) Install the No. 2 radio bracket with the 6 bolts.

7. **INSTALL NO. 1 RADIO BRACKET (w/ Navigation System)**
   (a) Install the No. 1 radio bracket with the 6 bolts.

8. **INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System)**
   (a) Connect each connector.

   (b) Engage the 2 clips.
   (c) Install the multi-display with radio receiver assembly with the 4 bolts.

9. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**

10. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**

11. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**

12. **INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-41)**

13. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**

14. **ADJUST CLOCK**

TERMINALS OF ECU

1. RADIO RECEIVER

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
B (E69-1) - GND (E69-20)	L - W-B	Battery	Always	10 to 14 V
ILL+ (E69-2) - GND (E69-20)	G - W-B	Illumination signal	Light control switch OFF	Below 1 V
ILL+ (E69-2) - GND (E69-20)	G - W-B	Illumination signal	Light control switch TAIL	10 to 14 V
ATX+ (E69-5) - GND (E69-20)	G - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
MUTE (E69-7) - GND (E69-20)	GR - W-B	Mute signal	Audio system is playing	Above 3.5 V
MUTE (E69-7) - GND (E69-20)	GR - W-B	Mute signal	Audio system is changing	Below 1 V
R+ (E69-8) - GND (E69-20)	R - W-B	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L+ (E69-9) - GND (E69-20)	B - W-B	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
SLD (E69-10) - Body ground	Shielded - Body ground	Shielded ground	Always	Below 1 V
ACC (E69-11) - GND (E69-20)	GR - W-B	Accessory (ON)	Turn engine switch off	Below 1 V
ACC (E69-11) - GND (E69-20)	GR - W-B	Accessory (ON)	Turn engine switch on (ACC)	10 to 14 V
ILL- (E69-12) - GND (E69-20)	W - W-B	Illumination signal	Light control switch OFF	Below 1 V
ILL- (E69-12) - GND (E69-20)	W - W-B	Illumination signal	Light control switch TAIL	10 to 14 V
ANT (E69-13) - GND (E69-20)	LG - W-B	Power source of antenna	Radio switch ON and AM or FM	10 to 14 V
ATX- (E69-15) - GND (E69-20)	R - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
R- (E69-18) - GND (E69-20)	G - W-B	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L- (E69-19) - GND (E69-20)	W - W-B	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
GND (E69-20) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
SWG (E70-6) - GND (E69-20)	B - W-B	Steering pad switch ground	Always	Below 1 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	Steering pad switch not operated	4 V or higher
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	SEEK+ switch pushed	Approx. 0.5 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	SEEK- switch pushed	Approx. 0.9 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	VOL+ switch pushed	Approx. 2.0 V
SW1 (E70-7) - GND (E69-20)	O - W-B	Steering pad switch signal	VOL- switch pushed	Approx. 3.4 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
SW2 (E70-8) - GND (E69-20)	V - W-B	Steering pad switch signal	Steering pad switch not operated	4 V or more
SW2 (E70-8) - GND (E69-20)	V - W-B	Steering pad switch signal	MODE switch pushed	Approx. 0.5 V
SW2 (E70-8) - GND (E69-20) (*4)	V - W-B	Steering pad switch signal	ON HOOK switch pushed	Approx. 0.9 V
SW2 (E70-8) - GND (E69-20) (*4)	V - W-B	Steering pad switch signal	OFF HOOK switch pushed	Approx. 2.0 V
SW2 (E70-8) - GND (E69-20) (*1)	V - W-B	Steering pad switch signal	VOICE switch pushed	Approx. 3.4 V
TX+ (E70-9) - GND (E69-20) (*1)	L - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
TX- (E70-10) - GND (E69-20) (*1)	LG - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
IO1+ (E70-11) - GND (E69-20) (*4)	Y - W-B	"Bluetooth" voice signal	"Bluetooth" handsfree voice signal is playing	A waveform synchronized with sounds is output
IO1- (E70-12) - GND (E69-20) (*4)	BR - W-B	"Bluetooth" voice signal	"Bluetooth" handsfree voice signal is playing	A waveform synchronized with sounds is output
ARI (E70-15) - GND (E69-20) (*2)	B - W-B	Sound signal (Right)	External device is playing (When stereo jack adapter is used)	A waveform synchronized with sounds is output
ASGN (E70-16) - GND (E69-20) (*2)	W - W-B	Ground	Always	Below 1 V
ALI (E70-17) - GND (E69-20) (*2)	R - W-B	Sound signal (Left)	External device is playing (When stereo jack adapter is used)	A waveform synchronized with sounds is output
AUXI (E70-19) - GND (E69-20) (*2)	G - W-B	External device connection detection signal	External device is connected	Below 1 V
ADIM (E70-20) - GND (E69-20)	L - W-B	Illumination (auto dimmer) signal	Turn engine switch on (IG), headlight dimmer switch in TAIL or ON and auto light control sensor covered by hand	Above 9 V
ARI (E71-2) - GND (E69-20) (*3)	B - W-B	Sound signal (Right)	External device is playing (When stereo jack adapter is used)	A waveform synchronized with sounds is output
ASGN (E71-5) - GND (E69-20) (*3)	W - W-B	Ground	Always	Below 1 V
ALI (E71-3) - GND (E69-20) (*3)	R - W-B	Sound signal (Left)	External device is playing (When stereo jack adapter is used)	A waveform synchronized with sounds is output
AUXI (E71-6) - GND (E69-20) (*3)	G - W-B	External device connection detection signal	External device is connected	Below 1 V
NTSC (E72-1) - GND (E69-20) (*3)	BR - W-B	DVD image signal	DVD played on multi-display	Pulse generation Refer to waveform 1
GND (E72-2) - Body ground (*3)	Y - Body ground	Ground	Always	Below 1 V
SLD (E72-3) - Body ground (*3)	Shielded - Body ground	Shielded - Body ground	Always	Below 1 V
DVD (s1-1) - GND (E69-20) (*3)	B - W-B	Digital sound signal	DVD played on multi-display	Pulse generation
MIC- (E73-1) - GND (E69-20) (*4)	R - W-B	Microphone voice signal	"Bluetooth" handsfree function is ON	A waveform synchronized with sounds is output
MIC+ (E73-2) - GND (E69-20) (*4)	G - W-B	Microphone voice signal	"Bluetooth" handsfree function is ON	A waveform synchronized with sounds is output
TSW- (E73-3) - GND (E69-20) (*4)	W - W-B	Ground	Always	Below 1 V
+B (E73-5) - GND (E69-20) (*4)	L - W-B	Battery	Always	10 to 14 V
MGND (E73-6) - GND (E69-20) (*4)	W - W-B	Ground	Always	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
MCVD (E73-7) - GND (E69-20) (*4)	W - W-B	Microphone AMP power supply	Turn engine switch on (IG)	5 V
GND (E73-14) - Body ground (*4)	W-B - Body ground	Ground	Always	Below 1 V
ACC (E73-16) - GND (E69-20) (*4)	GR - W-B	Accessory (ON)	Turn engine switch on (ACC)	10 to 14 V

*1: with Navigation System
*2: for CD Changer Models
*3: for DVD Changer Models
*4: for Radio Receiver with Built-in "Bluetooth" Handsfree Function

(a) Reference: waveform 1
HINT:
- Terminal: NTSC - Body ground
- Setting: 200 mV/DIV, 10 μs/DIV
- Condition: DVD played on multi-display.

2. STEREO COMPONENT AMPLIFIER

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
+B (M29-1) - GND (M29-2)	L - W-B	Battery	Always	10 to 14 V
GND (M29-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
+B2 (M29-3) - GND (M29-2) (*1)	L - W-B	Battery	Always	10 to 14 V
GND2 (M29-6) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
WF1+ (M32-1) - GND (M29-2)	G - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
WF2+ (M32-2) - GND (M29-2)	R - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
SR+ (M32-2) - GND (M29-2) (*1)	R - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
CTR+ (M32-3) - GND (M29-2)	R - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
WFL+ (M32-4) - GND (M29-2) (*1)	R - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
WF1- (M32-5) - GND (M29-2) (*1)	B - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
WF2- (M32-6) - GND (M29-2)	W - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
SR- (M32-6) - GND (M29-2) (*1)	W - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
SL- (M32-7) - GND (M29-2) (*1)	P - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
SL+ (M32-8) - GND (M29-2) (*1)	V - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
CTR- (M32-9) - GND (M29-2)	W - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
WFL- (M32-10) - GND (M29-2) (*1)	W - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
WFR+ (M31-1) - GND (M29-2) (*1)	G - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
FL+ (M31-2) - GND (M29-2)	P - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
RL+ (M31-3) - GND (M29-2)	B - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
RR+ (M31-4) - GND (M29-2)	R - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
WFR- (M31-5) - GND (M29-2) (*1)	B - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
FL- (M31-6) - GND (M29-2)	V - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
FR- (M31-7) - GND (M29-2)	L - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
FR+ (M31-8) - GND (M29-2)	LG - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
RL- (M31-9) - GND (M29-2)	Y - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
RR- (M31-10) - GND (M29-2)	W - W-B	Sound signal	Audio system is playing	A waveform synchronized with sounds is output
MUTE (M30-1) - GND (M29-2)	GR - W-B	Mute signal	Audio system is playing	Above 3.5 V
MUTE (M30-1) - GND (M29-2)	GR - W-B	Mute signal	Audio system is changing	Below 1 V
L- (M30-2) - GND (M29-2)	W - W-B	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
L+ (M30-3) - GND (M29-2)	B - W-B	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
R- (M30-4) - GND (M29-2)	G - W-B	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
R+ (M30-5) - GND (M29-2)	R - W-B	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
SLD (M30-6) - Body ground	Shielded - Body ground	Shielded ground	Always	Below 1 V
TX- (M30-7) - GND (M29-2)	R - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
TX+ (M30-8) - GND (M29-2)	G - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
SPD (M30-11) - GND (M29-2)	SB - W-B	Speed signal	Turn engine switch on (IG), drive wheels are turned slowly	Pulse generation
ACC (M30-12) - GND (M29-2)	GR - W-B	Accessory (ON)	Turn engine switch off	Below 1 V
ACC (M30-12) - GND (M29-2)	GR - W-B	Accessory (ON)	Turn engine switch on (ACC)	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
II1- (M30-14) - GND (M29-2)	BR - W-B	Voice guidance signal	Navigation voice or "Bluetooth" handsfree voice signal is provided	A waveform synchronized with sounds is output
II1+ (M30-15) - GND (M29-2)	Y - W-B	Voice guidance signal	Navigation voice or "Bluetooth" handsfree voice signal is provided	A waveform synchronized with sounds is output
DVD (t1-1) - GND (M29-2) (*1)	B - W-B	Digital sound signal	DVD played on multi-display	Pulse generation

*1: with Rear Header Speaker

REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
2. **REMOVE SPARE WHEEL COVER TRAY**
3. **REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (See page ED-82)**
4. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-83)**
5. **REMOVE REAR FLOOR FINISH PLATE (See page ED-83)**
6. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH**
   (a) Remove the 3 clips and the luggage compartment inner trim cover RH.
7. **REMOVE CLEARANCE WARNING ECU ASSEMBLY (w/ Intuitive Parking Assist System) (See page PM-93)**
8. **REMOVE SEAT BELT CONTROL ECU (w/ Pre-collision System) (See page SB-65)**
9. **REMOVE STEREO COMPONENT AMPLIFIER ASSEMBLY WITH BRACKET**
   (a) Disconnect each connector.
   (b) Remove the 3 nuts and the stereo component amplifier assembly with bracket.

AV

without Rear Header Speaker:

with Rear Header Speaker:

P E132279E01

10. REMOVE NO. 1 AMPLIFIER BRACKET

(a) Remove the 2 bolts and the No. 1 amplifier bracket.

AV

without Rear Header Speaker:

with Rear Header Speaker:

P E132280E01

11. REMOVE NO. 2 AMPLIFIER BRACKET

(a) Remove the 2 bolts and the No. 2 amplifier bracket.

12. REMOVE STEREO COMPONENT AMPLIFIER ASSEMBLY

DTC CHECK / CLEAR

HINT:
If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication signals and repair or replace problem parts.
(See page AV-133)

1. ENTERING DIAGNOSTIC MODE

(a) Turn the engine switch on (ACC).
(b) Turn off the audio system.
(c) While pressing the preset switches "1" and "6" at the same time, press the "DISC" switch 3 times.
HINT:
A beep is emitted 3 times and the diagnostic function is activated. The system enters the all element illumination mode and the switch check mode.

2. ALL ELEMENT ILLUMINATION MODE AND SWITCH CHECK MODE

HINT:
Illumination status of all switches and operations of the panel switches can be checked.

(a) Check that all elements are on.
(b) When pressing each panel switch, check that a beep is emitted.
NOTICE:
Pressing the "SEEK TRACK UP" switch transfers the screen to the stereo jack adapter connection check screen. Check the operation of this switch by confirming the transfer of the screen.

3. STEREO JACK ADAPTER CONNECTION CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
(b) Check if the stereo jack adapter is recognized.
HINT:
Vehicles that do not have a stereo jack adapter also have this function.
NOTICE:
This function is not to check connection information on an external device, but to check recognition information on a stereo jack adapter.

4. SERVICE CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
HINT:
For details of the service check mode, refer to "6. CHECK DTC" and "7. DTC CLEAR/RECHECK".

5. FINISHING DIAGNOSTIC MODE

(a) Press the "DISC" switch for 2 seconds or more, or turn the engine switch off.

AV

6. CHECK DTC

HINT:
Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

(a) Reference:
In the system check mode, the system check and the diagnostic memory check are performed, and the check results are displayed in ascending order of the component codes (physical address).

Terms	Meaning
Component code (Physical address)	Three-digit code (in hexadecimal) given to each device comprising AVC-LAN. Corresponding to its function, individual symbol is provided.
Logical address	Two-digit code (in hexadecimal) given to each function and device unit in each device comprising AVC-LAN.

(b) Service check result display

Display	Previous term	Meaning	Action to be taken
good	Good (normal)	No DTCs are detected in both "System Check Mode" and "Diagnostic Memory Mode".	-
nCon	No connection	The system recognized the component when it was registered, but the component gives no response to the "Diagnostic Mode ON Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).
ECHn	Exchange	One or more DTCs for "Exchange" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
CHEC	Check	When no DTCs are detected for "Exchange", one or more DTCs for "Check" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
OLd	Old version	Old DTC application is identified and DTC is detected in either "System Check Mode" or "Diagnostic Memory Mode".	-
nrES	No response	The device gives no response to any one of "System Check Mode ON Request", "System Check Result Request", and "Diagnostic Memory Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).

(c) Device name and physical address

Physical Address No.	Name
190	Radio receiver
440	Stereo component amplifier
19D (*1)	"Bluetooth" handsfree module

*1: for Radio Receiver with Built-in "Bluetooth" Handsfree Function

(d) Service check mode
(1) Press the "SEEK TRACK" switch to see the check result of each component.

(2) The component code (physical address) is displayed first, and then the check result follows.
HINT:
- If all check results are "good", the system judges that no DTC exists.
- If the preset switch "1" is pressed in the service check mode, service check is performed again.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

Service Check Mode:

*1: SEEK TRACK DOWN

*2: SEEK TRACK UP

*3: P...Indicates physical address

190/440/1C6...Physical address

*4: Result

*5: Up-to-date connection check number

*6: Memory clear

P

E110920E07

(e) Detailed information mode 1

HINT:

- "Detailed information mode 1" is displayed when there is no response to "System Check Result Request" and DTC is detected only in "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.

AV

- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 1".

(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.

(3) Press the preset switch "3" to go to the "Service Check Mode".

(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 1", refer to the following:
   - "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
   - "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

   HINT:
   - The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
   - The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
   - The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
   - "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
   - "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

Service Check Mode:

AV

(f) Detailed information mode 2

HINT:

- "Detailed information mode 2" is displayed when DTCs are detected in the responses to both "System Check Result Request" and "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 2".

(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.

(3) Press the preset switch "3" to go to the "Service Check Mode".

(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 2", refer to the following:

- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

  HINT:

  - The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
  - The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
  - The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
  - "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
  - "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

System Check Mode:

AV

7. DTC CLEAR/RECHECK

(a) Clearing All DTC Memory (when clearing all the memory of the DTCs previously detected).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Service Check Mode", the DTCs for all components are cleared. ("CLr" is displayed at this time.)

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory for all the components is cleared, only the component codes (physical address) are displayed.
- After the DTC memory is cleared, the "Service Check Mode" is restored.

(b) Clearing Individual DTC Memory (when clearing the memory of the DTC previously detected individually).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Detailed Information Mode 1" or "Detailed Information Mode 2", the DTCs for the target component are cleared.

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory is cleared, only the component code (physical address) is displayed for the target component.
- After the DTC memory is cleared, the "Service Check Mode" is restored.
- To check DTCs, press the preset switch "1" and perform the system check again.

(c) Press the preset switch "1" to perform the service check again, and check that no DTCs are displayed for all the component codes (physical address).

ON-VEHICLE INSPECTION

1. INSPECT FRONT NO. 1 SPEAKER

HINT:
Remove interior parts so that the front No. 1 speaker can be seen.

(a) Check the speaker installation.
OK:
The speaker is securely installed.
If the result is not as specified, reinstall the front No. 1 speaker.

(b) Visually check the speaker.
OK:
The cone paper of the speaker is not torn.
If the result is not as specified, replace the front No. 1 speaker.

(c) Speaker resistance check
(1) Disconnect the front No. 1 speaker connector.
(2) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 4 Ω
If the result is not as specified, replace the front No. 1 speaker.

2. INSPECT FRONT NO. 2 SPEAKER

HINT:
Remove interior parts so that the front No. 2 speaker can be seen.

(a) Check the speaker installation.
OK:
The speaker is securely installed.
If the result is not as specified, reinstall the front No. 2 speaker.

(b) Visually check the speaker.
OK:
The cone paper of the speaker is not torn.
If the result is not as specified, replace the front No. 2 speaker.

REMOVAL

1. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-32)**
2. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE DOOR ARMREST COVER (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-35)**
7. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 4 screws and front No. 1 speaker assembly.
   NOTICE:
   Do not touch the cone part of the speaker.

8. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-39)**
9. **REMOVE FRONT DOOR OPENING TRIM COVER (See page IR-39)**
10. **REMOVE SIDE INSTRUMENT PANEL (See page IP-12)**
11. **REMOVE FRONT PILLAR GARNISH (See page IR-39)**
12. **REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY**
    (a) Using a screwdriver, disengage the 2 clips.
    HINT:
    Tape the screwdriver tip before use.
    (b) Disengage the 2 guides and remove the No. 1 instrument panel speaker panel sub-assembly.

13. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY

(a) Remove the 2 bolts and front No. 2 speaker assembly.

(b) Lift the front No. 2 speaker assembly and disconnect the connector to remove the front No. 2 speaker assembly.

NOTICE:

Do not touch the cone part of the speaker.

INSTALLATION

1. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY

(a) Install the front No. 1 speaker assembly with the 4 screws.

(b) Connect the connector.

2. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-52)

3. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-52)

4. INSTALL COURTESY LIGHT ASSEMBLY (See page ED-53)

5. INSTALL DOOR ARMREST COVER (See page ED-53)

6. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-53)

7. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-54)

8. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY

(a) Connect the connector.

(b) Install the front No. 2 speaker assembly with the 2 bolts.

9. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

(a) Engage the 2 guides.

(b) Engage the 2 clips and install the No. 1 instrument panel speaker panel sub-assembly.

10. INSTALL FRONT PILLAR GARNISH (See page IR-64)

11. INSTALL SIDE INSTRUMENT PANEL (See page IP-47)

12. INSTALL FRONT DOOR OPENING TRIM COVER (See page IR-64)

13. INSTALL FRONT DOOR SCUFF PLATE (See page IR-65)

DIAGNOSTIC TROUBLE CODE CHART

COMMUNICATION DIAGNOSIS:

DTC Code	Detection Item	Trouble Area	See page
01-21	ROM Error	Radio receiver	AV-33
01-22	RAM Error	Radio receiver	AV-33
01-D5	Absence of Registration Unit	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-D6	No Master	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-36
01-D7	Connection Check Error	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-36
01-D8	No Response for Connection Check	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-D9	Last Mode Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-DA	No Response Against ON / OFF Command	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34

DTC Code	Detection Item	Trouble Area	See page
01-DB	Mode Status Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-DC	Transmission Error	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code	AV-41
01-DD	Master Reset	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-44
01-DE	Slave Reset	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-34
01-DF	Master Error	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-49
01-E0	Registration Complete Indication Error	-	AV-53
01-E1	Voice Processing Device ON Error	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-44
01-E2	ON / OFF Indication Parameter Error	Radio receiver	AV-54
01-E3	Registration Demand Transmission	-	AV-53
01-E4	Multiple Frame Incomplete	-	AV-53

FRONT CENTER SPEAKER

COMPONENTS

ON-VEHICLE INSPECTION

1. INSPECT FRONT CENTER SPEAKER

HINT:
Remove interior parts so that the front center speaker can be seen.

(a) Check the speaker installation.
OK:
The speaker is securely installed.
If the result is not as specified, reinstall the front center speaker.

(b) Visually check the speaker.
OK:
The cone paper of the speaker is not torn.
If the result is not as specified, replace the front center speaker.

(c) Speaker resistance check
(1) Disconnect the front center speaker connector.
(2) Measure the resistance between the terminals of the speaker.
Standard resistance:
7 to 9 Ω
If the result is not as specified, replace the front center speaker.

REMOVAL

1. REMOVE NO. 1 SPEAKER HOLE COVER

(a) Apply protective tape to the area shown in the illustration.

(b) Using a molding remover, disengage the 4 clips and remove the No. 1 speaker hole cover.

2. REMOVE FRONT STEREO COMPONENT SPEAKER ASSEMBLY

(a) Remove the 2 bolts.

(b) Lift the front stereo component speaker assembly and disconnect the connector to remove the stereo component speaker assembly.

NOTICE:

Do not touch the cone part of the speaker.

INSTALLATION

1. INSTALL FRONT STEREO COMPONENT SPEAKER ASSEMBLY

(a) Connect the connector.

(b) Install the front stereo component speaker assembly with the 2 bolts.

2. INSTALL NO. 1 SPEAKER HOLE COVER

(a) Engage the 4 clips and install the No. 1 speaker hole cover.

DTC	01-21	ROM Error

DTC	01-22	RAM Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-21	A malfunction exists in ROM.	Radio receiver
01-22	A malfunction exists in RAM.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	**REPLACE RADIO RECEIVER**

NEXT

END

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *3	A device that the sub-code shows is (was) disconnected from the system when turning the engine switch on (ACC or IG). The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the radio receiver and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	The device indicated by the sub-code is (was) disconnected from the system after the engine starts.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system when the engine switch is (was) on (ACC or IG).	
01-DA *3	No response is identified when changing mode. Sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3	A slave device has been disconnected after the engine starts.	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: If the device is reported as not existing during verification, check the power source circuit and AVC-LAN circuit for the device.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	**CHECK "RADIO RECEIVER COMMUNICATION ERROR" IN FLOW CHART**

Refer to the radio receiver communication error (See page AV-150).

NEXT

END

REMOVAL

1. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-58)**
2. **REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-59)**
3. **REMOVE REAR DOOR ARMREST COVER (See page ED-59)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-59)**
5. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-60)**
6. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-61)**
7. **REMOVE REAR SPEAKER ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 3 screws and the rear speaker assembly.
   NOTICE:
   Do not touch the cone part of the speaker.

8. **REMOVE REAR NO. 2 SPEAKER ASSEMBLY (w/ Rear Header Speaker)**
   (a) Remove the 2 screws and the rear No. 2 speaker assembly.
   NOTICE:
   Do not touch the cone part of the speaker.

INSTALLATION

1. **INSTALL REAR SPEAKER ASSEMBLY**
   (a) Install the rear speaker assembly with the 3 screws.
   (b) Connect the connector.

2. **INSTALL REAR NO. 2 SPEAKER ASSEMBLY (w/ Rear Header Speaker)**
   (a) Install the rear No. 2 speaker assembly with the 2 screws.
3. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-76)**
4. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-76)**
5. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-77)**
6. **INSTALL REAR DOOR ARMREST COVER (See page ED-77)**
7. **INSTALL REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-78)**
8. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-78)**

DTC	01-D6	No Master

DTC	01-D7	Connection Check Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D6 *1	When either of the following conditions is met: • The device that stores (stored) the code has (had) been disconnected when the engine switch is on (ACC or IG) • The master device has (had) been disconnected when this code is stored	• Radio receiver power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the radio receiver and the component which has stored this code • Component which has stored this code • Radio receiver
01-D7 *2	When either of the following conditions is met: • The device that stored the code has (had) been disconnected after the engine starts (started) • The master device has (had) been disconnected when this code is (was) stored	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC or IG), this code is stored.

AV

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

Refer to the radio receiver power source circuit (See page AV-162).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical Address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-21).

AV

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → **REPLACE RADIO RECEIVER**

B

4	CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

(a) Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.

Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier power source circuit (See page AV-164)

NEXT

5	INSPECT RADIO RECEIVER

Wire Harness View:

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ - ATX-	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

6	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-16).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
   (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   OK:
   There is no open or short circuit.

AVC-LAN WIRING DIAGRAM:

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a normal one and check if the same problem occurs again.
   OK:
   Same problem does not occur.

NG → **REPLACE RADIO RECEIVER**

AV

OK

END

DTC	01-DC	Transmission Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DC	Transmission to component shown by sub-code failed (Detecting this DTC does not always mean actual failure)	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code

NOTICE:
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1 CHECK FOR DTC OF OTHER COMPONENTS

(a) Check if the component shown by the sub-code is displayed in the check result of the other components.
  (1) Check if "01-DC" is output for the other components.
  (2) If "01-DC" is output for any other components, check if the same physical address is displayed.
  Result

Result	Proceed to
"01-DC" is output and the same physical address is displayed	**A**
"01-DC" is not output or the same physical address is not displayed	**B**

HINT:
For the list of the components shown by sub-codes, refer to the table in step 2.

B → **Go to step 4**

A

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

AV

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical Address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D
Radio receiver	190

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-21).

AV

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier communication error (See page AV-154)
"Bluetooth" handsfree module	"Bluetooth" handsfree module communication error (See page AV-158)
Radio receiver	Radio receiver communication error (See page AV-150)

NEXT

END

AV

4	CLEAR DTC

(a) Clear the DTCs (See page AV-21).
HINT:
If "01-DC" is output for only one component, this may not indicate a malfunction.

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble code occurs again.
OK:
Malfunction disappears.

NG → **Go to step 3**

OK

END

REMOVAL

1. **PRECAUTION**
   (See page IP-1)
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE SEAT BELT ANCHOR COVER CAP LH (See page SB-22)**
4. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page SB-22)**
5. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Driver Seat)**
6. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER LH (See page SE-83)**
7. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER LH (See page SE-83)**
8. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER LH (See page SE-83)**
9. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER LH (See page SE-83)**
10. **REMOVE FRONT SEAT ASSEMBLY LH (See page SE-83)**
11. **REMOVE SEAT BELT ANCHOR COVER CAP RH (See page RS-490)**
12. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page RS-490)**
13. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Front Passenger Seat)**
14. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER RH (See page RS-490)**
15. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER RH (See page RS-490)**
16. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER RH (See page RS-490)**
17. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER RH (See page RS-490)**
18. **REMOVE FRONT SEAT ASSEMBLY RH (See page RS-491)**
19. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-367)**
20. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-367)**
21. **REMOVE STEERING PAD (See page RS-367)**
22. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-80)**

23. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-39)**
24. **REMOVE FRONT DOOR OPENING TRIM COVER LH (See page IR-39)**
25. **REMOVE SIDE INSTRUMENT PANEL LH (See page IP-12)**
26. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
27. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-13)**
28. **REMOVE STEERING COLUMN COVER (See page IP-13)**
29. **REMOVE TILT AND TELESCOPIC SWITCH (See page SR-80)**
30. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-80)**
31. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-14)**
32. **REMOVE COMBINATION METER ASSEMBLY (See page IP-14)**
33. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-14)**
34. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
35. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-42)**
36. **REMOVE FRONT DOOR OPENING TRIM COVER RH (See page IR-42)**
37. **REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-15)**
38. **REMOVE SIDE INSTRUMENT PANEL RH (See page IP-15)**
39. **REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**
40. **REMOVE LOWER INSTRUMENT PANEL RH (See page IP-16)**
41. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
42. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
43. **REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)**
44. **REMOVE INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System) (See page AV-168)**

45. **REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System) (See page AV-170)**
46. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**
47. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**
48. **REMOVE CONSOLE BOX POCKET (See page IP-18)**
49. **REMOVE CONSOLE BOX CARPET (See page IP-18)**
50. **REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-19)**
51. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-19)**
52. **REMOVE FRONT PILLAR GARNISH LH (See page IR-39)**
53. **REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-20)**
54. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-184)**
55. **REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-20)**
56. **REMOVE FRONT PILLAR GARNISH RH (See page IR-42)**
57. **REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-21)**
58. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-21)**
59. **REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-21)**
60. **REMOVE NO. 1 SPEAKER HOLE COVER (See page IP-21)**
61. **REMOVE FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)**
62. **REMOVE NO. 1 INSTRUMENT PANEL MOUNTING BRACKET (See page IP-22)**
63. **REMOVE PUSH START SWITCH (See page IP-22)**
64. **DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-414)**
65. **REMOVE ROOM TEMPERATURE SENSOR (See page AC-214)**
66. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player) (See page IP-22)**
67. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player) (See page IP-24)**

68. **REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-27)**

69. **REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT (See page IP-28)**

70. **REMOVE DEFROSTER NOZZLE ASSEMBLY (See page IP-28)**

71. **REMOVE NO. 1 HEATER TO REGISTER DUCT (See page IP-28)**

72. **REMOVE NO. 2 HEATER TO REGISTER DUCT (See page IP-28)**

73. **REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY**
    (a) Disengage the 5 clamps and remove the No. 2 antenna cord sub-assembly.

74. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-113)**

75. **REMOVE REAR SEAT HEADREST ASSEMBLY**

76. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**

77. **REMOVE REAR SEATBACK ASSEMBLY (See page SE-113)**

78. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-39)**

79. **REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-40)**

80. **REMOVE UPPER CENTER PILLAR GARNISH LH (See page IR-41)**

81. **REMOVE REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag) (See page IR-41)**

82. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)**

83. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY LH (See page IR-42)**
84. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-42)**
85. **REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-42)**
86. **REMOVE UPPER CENTER PILLAR GARNISH RH (See page IR-42)**
87. **REMOVE REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag) (See page IR-43)**
88. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag) (See page IR-43)**
89. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY RH (See page IR-43)**
90. **REMOVE NO. 2 CONSOLE BOX DUCT (See page AC-149)**
91. **REMOVE NO. 3 CONSOLE BOX DUCT (See page AC-149)**
92. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-232)**
93. **REMOVE SHIFT LEVER ASSEMBLY (See page AX-233)**
94. **REMOVE FLOOR CARPET BRACKET LH (See page AC-148)**
95. **REMOVE FLOOR CARPET BRACKET RH (See page AC-148)**
96. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (w/ DVD Player)**
97. **REMOVE SPARE WHEEL COVER TRAY (w/ DVD Player)**
98. **REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ DVD Player) (See page ED-82)**
99. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ DVD Player) (See page ED-83)**
100. **REMOVE REAR FLOOR FINISH PLATE (w/ DVD Player) (See page ED-83)**
101. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ DVD Player) (See page ED-83)**
102. **DISCONNECT STEREO COMPONENT AMPLIFIER ASSEMBLY CONNECTOR (w/ DVD Player) (See page IR-44)**
103. **REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER (See page MI-42)**
104. **REMOVE RAIN SENSOR COVER (w/ Rain Sensor) (See page WW-63)**

105. REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-44)

106. REMOVE VISOR BRACKET COVER (See page IR-45)

107. REMOVE VISOR ASSEMBLY LH (See page IR-45)

108. REMOVE VISOR ASSEMBLY RH (See page IR-45)

109. REMOVE VISOR HOLDER (See page IR-45)

110. REMOVE COAT HOOK (See page IR-45)

111. REMOVE SPOT LIGHT ASSEMBLY (for Standard) (See page IR-46)

112. REMOVE SPOT LIGHT ASSEMBLY (for Glass Roof) (See page IR-46)

113. REMOVE ASSIST GRIP SUB-ASSEMBLY (See page IR-47)

114. REMOVE ROOF HEADLINING ASSEMBLY (for Standard) (See page IR-47)

115. REMOVE ROOF HEADLINING ASSEMBLY (for Glass Roof) (See page IR-48)

116. REMOVE ANTENNA CORD SUB-ASSEMBLY

(a) Peel the strips of the tape used to secure the antenna cord only to the extent that allows removal of the antenna cord.
HINT:
Tape is not available as a supply part. Try to leave as much tape as possible on the roof headlining so that the tape can be reused.

(b) Remove the antenna cord from the roof headlining.

for Standard:

for Glass Roof:

▨: Double-sided Tape

P

E132300E02

INSTALLATION

1. INSTALL ANTENNA CORD SUB-ASSEMBLY

HINT:

The double-sided tape and tape are not available as supply parts. If these tapes still have enough adhesion to secure the roof headlining and antenna cord, reuse the tapes. If the roof headlining has been replaced with a new one, or if the tape and/or the double-sided tape is no longer sticky, apply new tape following the procedures below.

(a) Apply new double-sided tape.

for Standard:

for Glass Roof:

▨: Double-sided Tape

P

E132302E01

(1) Remove the double-sided tape from the roof headlining assembly.

(2) Peel off the appropriate amount of new double-sided tape. Be careful not to touch the adhesive surface.
(3) Apply the double-sided tape to the roof headlining while aligning the tape with the markings on the roof headlining assembly.
(4) Peel off the backing sheet from the double-sided tape.

(b) Install the antenna cord to the roof headlining assembly from the front of the vehicle.

for Standard:

for Glass Roof:

▨: Double-sided Tape

P

E132301E01

AV

(c) Put the strips of the tape back to the positions shown in the illustration in order to secure the antenna cord to the roof headlining assembly.
HINT:
- If the tape is no longer sticky, use other tape, such as packing tape, that has enough adhesion to secure the antenna cord to the roof headlining assembly.
- For the right front corner of the roof headlining assembly, align the marking tape on the antenna cord with the protrusion of the roof headlining, and wrap tape around the antenna cord and roof headlining assembly once or twice to securely hold them.
- For the right rear corner of the roof headlining assembly, align the marking tape on the antenna cord with the rear edge of the roof headlining, and secure the antenna cord to the roof headlining assembly with tape.

2. **INSTALL ROOF HEADLINING ASSEMBLY (for Standard) (See page IR-56)**
3. **INSTALL ROOF HEADLINING ASSEMBLY (for Glass Roof) (See page IR-57)**
4. **INSTALL ASSIST GRIP SUB-ASSEMBLY (See page IR-58)**
5. **INSTALL SPOT LIGHT ASSEMBLY (for Standard) (See page IR-59)**
6. **INSTALL SPOT LIGHT ASSEMBLY (for Glass Roof) (See page IR-59)**
7. **INSTALL COAT HOOK (See page IR-60)**
8. **INSTALL VISOR HOLDER (See page IR-60)**
9. **INSTALL VISOR ASSEMBLY LH (See page IR-60)**
10. **INSTALL VISOR ASSEMBLY RH (See page IR-60)**
11. **INSTALL VISOR BRACKET COVER (See page IR-60)**
12. **INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-60)**
13. **INSTALL RAIN SENSOR COVER (w/ Rain Sensor) (See page WW-65)**
14. **INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (See page MI-44)**
15. **CONNECT STEREO COMPONENT AMPLIFIER ASSEMBLY CONNECTOR (w/ DVD Player) (See page IR-61)**
16. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ DVD Player) (See page ED-88)**
17. **INSTALL REAR FLOOR FINISH PLATE (w/ DVD Player) (See page ED-88)**

18. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ DVD Player) (See page ED-89)**
19. **INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ DVD Player) (See page ED-89)**
20. **INSTALL SPARE WHEEL COVER TRAY (w/ DVD Player)**
21. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (w/ DVD Player)**
22. **INSTALL FLOOR CARPET BRACKET LH**
23. **INSTALL FLOOR CARPET BRACKET RH**
24. **INSTALL SHIFT LEVER ASSEMBLY (See page AX-240)**
25. **CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-241)**
26. **INSTALL NO. 2 CONSOLE BOX DUCT (See page AC-163)**
27. **INSTALL NO. 3 CONSOLE BOX DUCT (See page AC-163)**
28. **INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH (See page IR-62)**
29. **INSTALL REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag) (See page IR-62)**
30. **INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)**
31. **INSTALL UPPER CENTER PILLAR GARNISH LH (See page IR-63)**
32. **INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-63)**
33. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-63)**
34. **INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH (See page IR-65)**
35. **INSTALL REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag) (See page IR-65)**
36. **INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag) (See page IR-65)**
37. **INSTALL UPPER CENTER PILLAR GARNISH RH (See page IR-65)**
38. **INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-65)**
39. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-65)**
40. **INSTALL REAR SEATBACK ASSEMBLY (See page SE-121)**

41. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**

42. **INSTALL REAR SEAT HEADREST ASSEMBLY**

43. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-121)**

44. **INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY**
    (a) Engage the 5 clamps and install the No. 2 antenna cord sub-assembly.

45. **INSTALL NO. 2 HEATER TO REGISTER DUCT (See page IP-32)**

46. **INSTALL NO. 1 HEATER TO REGISTER DUCT (See page IP-32)**

47. **INSTALL DEFROSTER NOZZLE ASSEMBLY (See page IP-32)**

48. **INSTALL SIDE NO. 2 DEFROSTER NOZZLE DUCT (See page IP-32)**

49. **INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-32)**

50. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player) (See page IP-33)**

51. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player) (See page IP-35)**

52. **INSTALL ROOM TEMPERATURE SENSOR (See page AC-215)**

53. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-416)**

54. **INSTALL PUSH START SWITCH (See page IP-37)**

55. **INSTALL NO. 1 INSTRUMENT PANEL MOUNTING BRACKET (See page IP-38)**

56. **INSTALL FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)**

57. **INSTALL NO. 1 SPEAKER HOLE COVER (See page IP-38)**
58. **INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-38)**
59. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-185)**
60. **INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-39)**
61. **INSTALL FRONT PILLAR GARNISH LH (See page IR-64)**
62. **INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-39)**
63. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-39)**
64. **INSTALL NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-39)**
65. **INSTALL FRONT PILLAR GARNISH RH (See page IR-65)**
66. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-39)**
67. **INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-40)**
68. **INSTALL CONSOLE BOX CARPET (See page IP-41)**
69. **INSTALL CONSOLE BOX POCKET (See page IP-41)**
70. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)**
71. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)**
72. **INSTALL INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System) (See page AV-172)**
73. **INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System) (See page AV-173)**
74. **INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-41)**
75. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**
76. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**
77. **INSTALL LOWER INSTRUMENT PANEL RH (See page IP-42)**
78. **INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**

79. **INSTALL SIDE INSTRUMENT PANEL RH (See page IP-43)**
80. **INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-44)**
81. **INSTALL FRONT DOOR OPENING TRIM COVER RH (See page IR-65)**
82. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-65)**
83. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
84. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-44)**
85. **INSTALL COMBINATION METER ASSEMBLY (See page IP-45)**
86. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-45)**
87. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-86)**
88. **INSTALL TILT AND TELESCOPIC SWITCH (See page SR-86)**
89. **INSTALL STEERING COLUMN COVER (See page IP-46)**
90. **ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-382)**
91. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-46)**
92. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**
93. **INSTALL SIDE INSTRUMENT PANEL LH (See page IP-47)**
94. **INSTALL FRONT DOOR OPENING TRIM COVER LH (See page IR-64)**
95. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-65)**
96. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-87)**
97. **INSTALL STEERING PAD (See page RS-368)**
98. **INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-369)**
99. **INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-369)**
100. **INSTALL FRONT SEAT ASSEMBLY LH (See page SE-109)**

101. INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER LH (See page SE-110)

102. INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER LH (See page SE-110)

103. INSTALL FRONT SEAT OUTER TRACK BRACKET COVER LH (See page SE-110)

104. INSTALL FRONT SEAT INNER TRACK BRACKET COVER LH (See page SE-110)

105. INSTALL FRONT SEAT HEADREST ASSEMBLY (for Driver Seat)

106. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page SB-25)

107. INSTALL SEAT BELT ANCHOR COVER CAP LH (See page SB-25)

108. INSTALL FRONT SEAT ASSEMBLY RH (See page RS-497)

109. INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER RH (See page RS-498)

110. INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER RH (See page RS-498)

111. INSTALL FRONT SEAT OUTER TRACK BRACKET COVER RH (See page RS-498)

112. INSTALL FRONT SEAT INNER TRACK BRACKET COVER RH (See page RS-498)

113. INSTALL FRONT SEAT HEADREST ASSEMBLY (for Front Passenger Seat)

114. CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page RS-499)

115. INSTALL SEAT BELT ANCHOR COVER CAP RH (See page RS-499)

116. PERFORM INITIALIZATION
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).

117. INSPECT SHIFT LEVER POSITION (See page AX-200)

118. ADJUST SHIFT LEVER POSITION (See page AX-200)

119. INSPECT FRONT SEAT ASSEMBLY (See page SE-110)

120. INSPECT STEERING PAD (See page RS-369)

121. INSPECT FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-395)

122. INSPECT SRS WARNING LIGHT
(See page RS-37)

DTC	01-DD	Master Reset

DTC	01-E1	Voice Processing Device ON Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DD	The device that should be the master has been disconnected after engine start	• Radio receiver power source circuit • AVC-LAN circuit between the radio receiver and the component which has stored this code • Radio receiver • Component which has stored this code
01-E1 *1	The AMP device records that the AMP output does not function even while the source device operates	

HINT:
*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

Refer to the radio receiver power source circuit (See page AV-162).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	**INSPECT RADIO RECEIVER**

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ - ATX-	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

3	**IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE**

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical Address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-21).

AV

NEXT

4	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → **REPLACE RADIO RECEIVER**

B

5	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

AV

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-16).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
   (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
   OK:
   There is no open or short circuit.

AVC-LAN WIRING DIAGRAM:

P E130419E01

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	REPLACE RADIO RECEIVER

(a) Replace the radio receiver with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

AUDIO TERMINAL

COMPONENTS

AV

REMOVAL

1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
4. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
5. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**
6. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**
7. **REMOVE CONSOLE BOX POCKET (See page IP-18)**
8. **REMOVE CONSOLE BOX CARPET (See page IP-18)**
9. **REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-19)**
10. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-19)**
11. **REMOVE AUDIO TERMINAL**
    (a) Disconnect the connector.

(b) Disengage the 2 claws and remove the audio terminal.

AV

INSTALLATION

1. **INSTALL AUDIO TERMINAL**
   (a) Engage the 2 claws and install the audio terminal.

   (b) Connect the connector.

2. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-39)**
3. **INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-40)**
4. **INSTALL CONSOLE BOX CARPET (See page IP-41)**
5. **INSTALL CONSOLE BOX POCKET (See page IP-41)**
6. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)**
7. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)**
8. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**
9. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
10. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**
11. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**

STEERING PAD SWITCH

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

P

E132313E01

AV

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-367)**
3. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-367)**
4. **REMOVE STEERING PAD (See page RS-367)**
5. **REMOVE STEERING PAD SWITCH ASSEMBLY**
   (a) Disconnect the pad switch connector from the spiral cable.
   (b) Remove the 2 screws.
   (c) Disengage the 4 claws and remove the steering pad switch assembly.

MICROPHONE

COMPONENTS

P

E132316E01

REMOVAL

1. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-44)**

2. **REMOVE AMPLIFIER MICROPHONE**
   (a) Disconnect the connector.
   (b) Disengage the 2 claws and remove the amplifier microphone.

INSTALLATION

1. **INSTALL AMPLIFIER MICROPHONE**
   (a) Engage the 2 claws and install the amplifier microphone.
   (b) Connect the connector.

2. **INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-60)**

SYSTEM DESCRIPTION

1. Navigation system outline

(a) Vehicle position tracking methods

It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.

*GPS (Global Positioning System)

Operation	Description
Vehicle Position Calculation	The navigation ECU calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and the running distance signal from the vehicle speed sensor and creates the driving route.

NS

Operation	Description
Map Display Processing	The navigation ECU displays the vehicle track on the map by processing the vehicle position data, vehicle running track, and map data from the map disc.
Map Matching	The map data from the map disc is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road.
GPS Correction	The vehicle position is matched to the position measured by GPS. Then, the measurement position data from the GPS unit is compared with the vehicle position and running track data. If the position is widely different, the GPS measurement position is used.
Distance Correction	The running distance signal from the vehicle speed sensor includes the error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The navigation ECU automatically offsets the running distance signal to make up for the difference between it and the distance data of the map. The offset is automatically updated.

Navigation is performed even where the GPS radio wave does not reach.

- In a tunnel
- In an indoor parking lot
- Between tall buildings
- Under an overpass
- On a forest or tree-lined path

P

I100028E07

HINT:
The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS radio wave cannot receive a signal. When only autonomous navigation is used, however, the mapping accuracy may slightly decline.

(b) Autonomous navigation
This method determines the relative vehicle position based on the running track determined by the gyro and vehicle speed sensors located in the navigation ECU.

(1) Gyro sensor
Calculates the direction by detecting angular velocity. It is located in the navigation ECU.

(2) Vehicle speed sensor
Used to calculate the vehicle running distance.

(c) GPS navigation (Satellite navigation)
This method detects the absolute vehicle position using radio waves from a GPS satellite.
* GPS satellites were launched by the U.S. Department of Defence for military purposes.

Current longitude/latitude/altitude is determined using the radio wave arrival time from four satellites.

P

I100029E03

Number of satellites	Measurement	Description
2 or less	Measurement impossible	Vehicle position cannot be obtained because the number of satellites is not enough.
3	2-dimensional measurement is possible	Vehicle position is obtained based on the current longitude and latitude. (This is less precise than 3-dimensional measurement.)
4	3-dimensional measurement is possible	Vehicle position is obtained based on the current longitude, latitude and altitude.

(d) Map matching
The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the map disc and the vehicle position is set onto the most appropriate road.

The system compares the shape of the roads L1, L2 and L3 to the estimated running track after the vehicle makes a right turn. At point A, the vehicle position differs enough from the shape of L1 that the display switches to the road L2.

P

I100030E07

2. DVD (Digital Versatile Disc) player outline (for navigation map)

(a) The navigation ECU uses a laser pickup to read the digital signals recorded on a DVD.

HINT:

- Do not disassemble any part of the navigation ECU.
- Do not apply oil to the navigation ECU.
- Do not insert anything but a DVD into the navigation ECU.

CAUTION:

Do not look directly at the laser pickup because the navigation ECU uses an invisible laser beam.

Be sure to only operate the navigation system as instructed.

3. DVD (Digital Versatile Disc) player outline (for Radio receiver (Built-in DVD changer))

(a) Usable discs

(1) DVD player

(2) Precaution for use of discs

NOTICE:

- **PAL or SECAM color television standard discs cannot be played. (Only NTSC discs can be played.)**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, marking the disc unusable.**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.**

4. Multi-display outline

(a) Touch switch

Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends in to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

P

E106414E03

5. AVC-LAN Description

(a) What is AVC-LAN?

AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

Example:

P

I100032E09

NS

(b) Purpose:

Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multi-media interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:

(1) To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.

(2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.

HINT:

- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.
- If an audio system is equipped with a navigation system, the multi-display unit acts as the master unit.
  If an audio system is not equipped with a navigation system, the audio head unit acts as the master unit instead. If an audio system is equipped with a radio and navigation assembly, it is the master unit.

- The radio receiver contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.
- The car audio system with an AVC-LAN circuit has a diagnostic function.
- Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

6. Communication system outline

(a) Components of the navigation system communicate with each other via the AVC-LAN.

(b) The radio receiver has enough resistance (60 to 80 Ω) necessary for communication.

(c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the navigation system will stop functioning.

7. Diagnostic function outline

(a) The audio system has a diagnostic function (the result is indicated on the master unit).

(b) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

8. "Bluetooth" outline

(a) "Bluethooth" is a trademark owned by Bluetooth SIG. Inc.

(b) "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone *1) to the multi-display (the "Bluetooth" system is built in), and use a hands-free function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.
*1: Some versions of "Bluetooth" compatible cellular phones may not function.

HINT:
The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity, or antenna capacity.

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT INTO A WORKSHOP

NEXT

2	DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

(a) Ask the customer about symptoms and confirm malfunctions.

→ **THE SCREEN DISPLAYS NOTHING (GO TO STEP 9, AND PROCEED TO "No Image Appears on Multi-display")**

→ **OTHER SYMPTOMS (GO TO STEP 3)**

3	CHECK CAN COMMUNICATION SYSTEM

NS

(a) Use the intelligent tester to check for normal function of the CAN communication system.

→ **A CODE IS OUTPUT (PROCEED TO "CAN COMMUNICATION SYSTEM")**

→ **A CODE IS NOT OUTPUT (GO TO STEP 4)**

4	CONFIRM THE SYSTEM NORMAL CONDITION

→ **APPLICABLE (THIS IS NOT A MALFUNCTION)**

→ **NOT APPLICABLE (GO TO STEP 5)**

5	CHECK FOR DTC

HINT:
If the system cannot enter the diagnostic mode, inspect each AVC-LAN communication component and repair or replace problem parts.

→ **A CODE IS OUTPUT (GO TO STEP 6)**

→ **A CODE IS NOT OUTPUT (GO TO STEP 9)**

6	CLEAR DTC

(a) Clear the DTCs and finish the diagnostic mode.
HINT:
The currently output DTCs may not indicate actual malfunctions depending on the vehicle conditions.

NEXT

7	RECHECK FOR DTC

HINT:
- If the system cannot enter the diagnosis mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits.
- Even if the malfunction symptom is not confirmed, check for diagnostic trouble codes. This is because the system stores past diagnostic trouble codes.
- Refer to the detailed description on the diagnostic screen, as necessary (See page NS-30).
- Check the diagnostic trouble code and inspect the area the code indicates.

A CODE IS OUTPUT (GO TO STEP 8)

A CODE IS NOT OUTPUT (GO TO STEP 9)

8	DIAGNOSTIC TROUBLE CODE CHART

(a) Find the output code on the diagnostic trouble code chart.

NEXT **GO TO STEP 11**

9	PROBLEM SYMPTOMS TABLE

(a) Find the applicable symptom code in the problem symptoms table (See page NS-41).
HINT:
If the symptom does not recur and no code is output, perform the symptom reproduction method (See page IN-34).

THERE IS AN APPLICABLE SYMPTOM CODE IN THE TABLE (GO TO STEP 11)

THERE IS NO APPLICABLE SYMPTOM CODE IN THE TABLE (GO TO STEP 10)

10	**CHECK THE ECU TERMINAL ARRANGEMENT BASED ON THE MALFUNCTION SYMPTOM**

NEXT

11	**CHECK THE CIRCUIT**

(a) Adjust, repair, or replace as necessary.

NEXT

12	**RECHECK FOR DIAGNOSTIC TROUBLE CODE**

HINT:
After deleting the DTCs, recheck for diagnostic trouble codes.

NEXT

13	**PERFORM CONFIRMATION TEST**

NEXT

END

DISPLAY CHECK MODE

HINT:
- This mode checks the color display on the multi-display.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-48)

2. DISPLAY CHECK

(a) Select "Display Check" from the "Diagnosis MENU" screen.

3. COLOR BAR CHECK

(a) Select "Color Bar Check" from the "Display Check" screen.

(b) Select a color bar from the "Color Bar Check Mode" screen.

(c) Check the display color.

HINT:
- The entire screen turns to the color or stripe selected.
- Touching the display will return to the "Color Bar Check" screen.

NS

4. TOUCH SWITCH CHECK

(a) Select "Touch Switch Check" from the "Display Check" screen.

(b) Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.
HINT:
- A "+" mark is displayed where the display is touched.
- The "+" mark remains on the display even after the finger is removed.

5. PANEL SWITCH CHECK

(a) Select "Panel Switch Check" from the "Display Check" screen.

(b) Operate each switch and check that the switch name and condition are correctly displayed.

Display	Contents
Push switch name/*1	• Name of the pressed switch is displayed. • If more than one switch is pressed, "MULTIPLE" is displayed.

6. VEHICLE SIGNAL CHECK

(a) Select "Vehicle Signal Check" from the "Display Check" screen.

(b) When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.
HINT:
- Only conditions having inputs are displayed.
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

7. MIC & VOICE RECOGNITION CHECK

(a) Select "Mic & Voice Recognition Check" on the "Display Check" screen to display "MICROPHONE & VOICE RECOGNITION CHECK" screen.

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.

(d) Check that the recorded voice is played normally.
HINT:
For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

NS

8. CAN CHECK

(a) Select "CAN check" from the "Display check" screen.

(b) Check the CAN connection check result.
HINT:
- This function operates only for the systems connected to the CAN system.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

NS

BLUETOOTH TEL CHECK MODE

HINT:
Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-48)

2. "BLUETOOTH" TEL CHECK

(a) Select ""Bluetooth" TEL Check" from the "Diagnosis MENU" screen.

3. "BLUETOOTH" CHECK

(a) Select ""Bluetooth" Check" from the ""Bluetooth" Handsfree Check Menu" screen.

(b) Select "Serial Communication Log" from the ""Bluetooth" Check Menu" screen.

(1) The communication log data in the display ECU are displayed on this screen.
HINT:
The displayed data can be used as a reference.

NS

(c) Select "Software Version" from the ""Bluetooth" Check Menu" screen.

(1) Check the software version of the "Bluetooth" module.

Screen Description:

Display	Contents
General Version/*1	• General software version of "Bluetooth" module • If any of the API version, upper stack version, and low stack version is updated, the general version is upgraded.
API Version/*2	API software version is displayed.
Upper Stack Version/*3	Upper Stack version is displayed.
Lower Stack Version/*4	Lower Stack version is displayed.

HINT:
This function is controlled by the built-in display ECU.

4. HANDSFREE VOICE QUALITY SET

(a) Select "Handsfree Voice Quality Set" from the ""Bluetooth" Handsfree Check Menu" screen.

(b) Check the handsfree voice level.

Screen Description:

Display	Contents
Received voice level adjustment/*1	Setting possible for the voice level received from "Bluetooth" compatible phones.
Sent voice level adjustment/*2	Setting possible for the voice sent to "Bluetooth" compatible phones.

HINT:
This function is controlled by the built-in display ECU.
NOTICE:
"Voice Quality Type" should not be changed.

NAVIGATION CHECK MODE

HINT:
- This mode displays GPS satellite information.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-48)

2. NAVIGATION CHECK

(a) Select "Navigation Check" from the "Diagnosis MENU" screen.

3. GPS INFORMATION

(a) Select "GPS Information" from the "Navigation Check" screen.

(b) When GPS information is displayed, check the GPS conditions.

HINT:
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

4. VEHICLE SENSORS

(a) Select "Vehicle Sensors" from the "Navigation Check" screen.

(b) Check all the signals and sensors when vehicle signal information is displayed.
HINT:
- This screen is updated once per second when input signals to the vehicle are changed.
- This screen displays vehicle signals input to the navigation ECU.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

5. COLOR BAR CHECK

(a) Select "Color Bar Check" from the "Navigation Check" screen.

(b) Check each color of the color bar when the "NAVI Color Bar Check" screen is displayed.
HINT:
- Colors will not be displayed full-screen as in "Display Check Mode".
- This screen displays the navigation ECU display color.

NS

6. MEMORY COPY/PASTE CHECK

HINT:
This function cannot be used.

7. PARTS INFORMATION

(a) Select "Parts Information" from the "Navigation Check" screen.

(b) Check the navigation and disc information when the "Parts Information" screen is displayed.

Screen Description:

Display	Contents
Navigation Manufacturer/*1	Navigation ECU manufacturer is displayed.
Navigation Version/*2	Navigation ECU version is displayed.
Disc Manufacturer/*3	Map disc manufacturer is displayed.
Disc Version/*4	Map disc version is displayed.

8. MIC & VOICE RECOGNITION CHECK

(a) Select "Mic & Voice Recognition Check" on the "Navigation Check" screen to display "MICROPHONE & VOICE RECOGNITION CHECK" screen.

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.

(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally.

HINT:

- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).
- This function is controlled by the built-in navigation ECU.

NS

9. DVD PLAYER INFORMATION CHECK

(a) Select "DVD Player Information" from the "Navigation Check" screen.

(b) Check for DTCs.

HINT:

- This is a DVD player check function in the navigation ECU.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

NS

DIAGNOSIS DISPLAY DETAILED DESCRIPTION

HINT:
- This section contains a detailed description of displays within diagnostic mode.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. SYSTEM CHECK

(a) System Check Mode Screen

P

I100055E08

(1) Device Names and Hardware Address/*1

HINT:
- Registered device names are displayed.
- If a device name is unknown to the system, its physical address is shown instead.

Address No.	Name	Address No.	Name
110	EMV	120	AVX
128	1DIN TV	140	AVN
144	G-BOOK	178	NAVI
17C	MONET	190	AUDIO H/U
1AC	CAMERA-C	1B0	Rr-TV
1C0	Rr-CONT	19D	BT-HF
1C4	PANEL	1C6	G/W
1C8	FM-M-LCD	1D8	CONT-SW
1EC	Body	118	EMVN
1F1	XM	1F2	SIRIUS
230	TV-TUNER	240	CD-CH2
250	DVD-CH	280	CAMERA
360	CD-CH1	3A0	MD-CH

Address No.	Name	Address No.	Name
17D	TEL	440	DSP-AMP
530	ETC	1F6	RSE
1A0	DVD-P	1D6	CLOCK
238	DTV	480	AMP

(2) Check Result/*2
HINT:
Result codes for all devices are displayed.

Result	Meaning	Action
OK	The device did not respond with a DTC (excluding communication DTCs from the AVC-LAN).	-
EXCH	The device responds with a "replace"-type DTC.	Check the DTC in "Unit Check Mode" and replace the device.
CHEK	The device responds with a "check"-type DTC.	Check the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responds with an "old"-type DTC.	Check the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.

NS

(3) Code Clear/*3
- Present DTCs are cleared.
- Press the "Code CLR" switch for 3 seconds.

(4) Memory Clear/*4
- Present and past DTCs and registered connected device names are cleared.
- Press the "Memory CLR" switch for 3 seconds.

(b) Diagnosis MENU Screen

P

E120070

HINT:
Each item is grayed out or not displayed based on the device settings.

(c) Unit Check Mode Screen

P

E120071E02

NS

Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target device logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Timestamp/*4	The time and date of past DTCs are displayed. (The year is displayed in 2-digit format.)
Present Code/*5	DTCs output at the service check are displayed.
Past Code/*6	Diagnostic memory results and recorded DTCs are displayed.
Diagnosis Clear Switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

(d) LAN Monitor (Original) Screen

P

I100058E04

(1) Check Result/*1

HINT:

Check results of all the devices are displayed.

Result	Meaning	Action
No Err (OK)	There are no communication DTCs.	-
CHEK	The device responds with a "check" -type DTC.	Check the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responded with an "old" -type DTC.	Check the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.

NS

(e) LAN Monitor (Individual) Screen

P

E120072E01

NS

Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Sub-code (device address)/*4	Physical address stored with DTC (If there is no address, nothing is displayed.)
Connection check No./*5	Connection check number stored with DTC
DTC occurrence/*6	Number of times the same DTC has been recorded
Diagnosis Clear Switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

2. DISPLAY CHECK

(a) Vehicle Signal Check Mode Screen

P I100060

NS

Screen Description:

Name	Contents
Battery	Battery voltage is displayed.
PKB	Parking brake ON/OFF state is displayed.
REV	Reverse signal ON/OFF state is displayed.
IG	Engine switch ON/OFF state is displayed.
ADIM/TCAN	Brightness state DIM (with) / BRIGHT (without) is displayed.
TAIL	TAIL signal (Light control switch) ON/OFF state is displayed.
SPEED	Vehicle speed is displayed in km/h.

HINT:

- Only items sending a vehicle signal will be displayed.
- This screen is updated once per second when input signals to the vehicle are changed.

(b) Microphone & Voice Recognition Check Screen

P

E125091E02

NS

Screen Description:

Name	Contents
Microphone input level meter/*1	Monitors the microphone input level every 100 ms and displays the results in 8 different levels.
Recording switch/*2	Starts recording.
Stop switch/*3	Stops recording.
Play switch/*4	Plays the recorded voice.

HINT:

- The microphone input function is on at all times when this screen is displayed.
- While recording or playing, the switches other than the stop switch cannot be pushed.
- When no voice is recorded, the play switch cannot be pushed.
- Recording will stop after 5 seconds or by pushing the stop switch.

(c) CAN Connection Check Screen

P

E120075E01

Screen Description:

Name	Contents
CAN Connection check result/*1	• For systems connected to the CAN system, the results of the CAN connection check are displayed. • "NG" - The engine switch is on (ACC or IG) and the CAN communication lines are malfunctioning or the CAN bus lines are not connected. • "OK" - The engine switch is on (ACC or IG) and the CAN communication lines are normal. • Blank - CAN connection check is performed with the engine switch on (ACC) or off.

HINT:

- This function operates only for the systems connected to the CAN system.
- When the engine switch is turned off, the bus lines are disconnected, or a malfunction occurs in the bus lines while the CAN connection check result is being displayed, the problem will be reflected on the screen in real time.

3. NAVIGATION CHECK

(a) Navigation Check Screen

P

E120076E01

NS

HINT:
Each item is grayed out or not displayed based on the device settings.

(b) GPS Information Screen

P

E136147E02

(1) Satellite information/*1
Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction, and signal level.

(2) Receiving condition/*2

(DENSO model):

Display	Contents
T	The system is receiving a GPS signal, but is not using it for location.
P	The system is using the GPS signal for location.
-	The system cannot receive a GPS signal.

(AISIN AW model):

Display	Contents
01H	The system cannot receive a GPS signal.
02H	The system is tracing a satellite.
03H	The system is receiving a GPS signal, but is not using it for location.
04H	The system is using the GPS signal for location.

Measurement information/*3:

Display	Contents
2D	2-dimensional location method is being used.
3D	3-dimensional location method is being used.
NG	Location data cannot be used.
Error	Reception error has occurred.
-	Any other state.

Position information/*4

Display	Contents
Position	Latitude and longitude information on the current position is displayed.

Date information/*5:

Display	Contents
Date	The date/time information obtained from GPS signal is displayed in Greenwich mean time (GMT). The last 4 digits are displayed.

(c) Vehicle Sensors Screen

P

E120077E01

NS

Vehicle signal:

Display	Contents
REV/*1	REV signal ON/OFF state is displayed.
SPD/*2	SPD signal condition is displayed.

Sensor signal:

Display	Contents
Gyro sensor/*3	Gyro sensor output condition is displayed (when the vehicle runs straight or is stationary, the voltage is approximately 2.5 V).

HINT:
Signals are updated once per second only when vehicle sensor signals are changed.

(d) Microphone & Voice Recognition Check Screen

P

E125119E01

Screen Description:

Display	Contents
Microphone input level meter/*1	Monitors the microphone input level every 100 ms and displays the results in 8 different levels.
Recording switch/*2	Starts recording.
Stop switch/*3	Stops recording.
Play switch/*4	Plays the recorded voice.
Recording indicator/*5	Comes on while recording.

HINT:
- The microphone input function is on at all times when this screen is displayed.
- While recording or playing, the switches other than the stop switch cannot be pushed.
- When no voice is recorded, the play switch cannot be pushed.
- Recording will stop after 5 seconds or by pushing the stop switch.

(e) DVD Player Information Screen

P E120078E01

Screen Description:

Display	Contents
Trouble code/*1	Each code corresponding to the malfunctions is displayed. For details, refer to "Trouble Code Description".
Occurrence time/*2	• The date (year, month, day) and time (hour, minute, second) when the trouble code was detected are displayed as a time stamp. (Greenwich mean time) • The time data to be displayed are received from the GPS receiver.
Trouble code clear switch/*3	All code data being displayed are cleared by pushing this switch for 3 seconds.
Returning switch/*4	The previous page is displayed. If the current displayed page is the first page, this switch cannot be operated.
Proceeding switch/*5	The next page is displayed. If the current displayed page is the last page, this switch cannot be operated.

Trouble Code Description:

Code	Malfunction	Countermeasure
01	Cannot be recognized	Replace navigation ECU.
03	Cannot be read	Follow the inspection procedure for DTC 58-42 (See page NS-100).

HINT:
This is a DVD player check function in the navigation ECU.

NS

PROBLEM SYMPTOMS TABLE

HINT:
- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check the DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Display function:

Symptom	Suspected Area	See page
Pressing PWR switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn ON System"	NS-134
	2. Multi-display power source circuit	NS-228
	3. AVC-LAN circuit	NS-187
	4. Multi-display	NS-233
Black screen (No image appears on navigation/audio screen).	1. Proceed to "No Image Appears on Multi-display"	NS-135
	2. Multi-display power source circuit	NS-228
	3. Illumination circuit	NS-178
	4. AVC-LAN circuit	NS-187
	5. Multi-display	NS-233
Illumination for panel switch does not come on with TAIL switch on.	1. Proceed to "Illumination for Panel Switch does not Come on with Tail Switch ON"	NS-136
	2. Illumination circuit	NS-178
	3. Multi-display	NS-233
Display does not dim (Night Screen) with TAIL switch on.	1. Proceed to "Display does not DIM when Light Control Switch is Turned ON"	NS-137
	2. Dimmer signal circuit	NS-209
	3. Multi-display	NS-233
Power does not turn off (The screen remains on).	1. Multi-display power source circuit	NS-228
	2. Multi-display	NS-233
Panel switches do not function.	1. Proceed to "Panel Switches do not Function"	NS-138
	2. Steering pad switch circuit	NS-174
	3. Multi-display power source circuit	NS-228
	4. Multi-display	NS-233
Touch panel switch does not function.	1. Proceed to "Touch Panel Switch does not Function"	NS-139
	2. Steering pad switch circuit	NS-174
	3. Multi-display power source circuit	NS-228
	4. Multi-display	NS-233
Navigation screen is not displayed.	1. Proceed to "Display Signal Circuit between Navigation ECU and Multi-display"	NS-199
	2. Map disc	-
	3. Navigation ECU	NS-238
	4. Multi-display	NS-233
Navigation screen flicker or color distortion.	1. Proceed to "Screen Flicker or Color Distortion"	NS-140
	2. Proceed to "Display Signal Circuit between Navigation ECU and Multi-display"	NS-199
	3. Navigation ECU	NS-238
	4. Multi-display	NS-233

Symptom	Suspected Area	See page
DVD image cannot be displayed on multi-display. (Parking brake is on.) (*1)	1. Proceed to "Display Signal Circuit between Multi-display and Radio Receiver"	NS-201
	2. Parking brake switch circuit	NS-185
	3. Radio Receiver	AV-167
	4. Multi-display	NS-233
Navigation function switches can be operated while vehicle is running.	Proceed to "Vehicle Speed Signal Circuit between Multi-display and Combination Meter"	NS-189

*1: for Radio receiver with built-in DVD changer models.

Navigation function:

Symptom	Suspected Area	See page
Map disc cannot be inserted.	1. Proceed to "Map Disc cannot be Inserted"	NS-142
	2. Navigation ECU power source circuit	NS-230
	3. Navigation ECU	NS-238
Map disc cannot be ejected.	1. Proceed to "Map Disc cannot be Ejected"	NS-143
	2. Navigation ECU power source circuit	NS-230
	3. Navigation ECU	NS-238
Vehicle position mark deviates greatly.	1. Proceed to "Vehicle Position Mark Deviates Greatly"	NS-144
	2. GPS antenna	NS-250
	3. Navigation ECU	NS-238
Cursor or map rotates when vehicle is stopped.	1. Proceed to "Cursor or Map Rotates when Vehicle is Stopped"	NS-146
	2. Navigation ECU	NS-238
Vehicle position mark is not updated.	1. Proceed to "Vehicle Position Mark is not Updated"	NS-147
	2. Map disc	-
	3. Navigation ECU	NS-238
Current position display does not appear.	1. Proceed to "Current Position Display does not Appear"	NS-148
	2. Map disc	-
	3. GPS antenna	NS-250
	4. Navigation ECU	NS-238
GPS Mark is not displayed.	1. Proceed to "GPS Mark is not Displayed"	NS-149
	2. GPS antenna	NS-250
	3. Navigation ECU	NS-238
Voice guidance does not function.	1. Proceed to "Voice Guidance does not Function"	NS-152
	2. Navigation voice circuit	NS-196
	3. Map disc	-
	4. Navigation ECU	NS-238
	5. Stereo component amplifier	AV-176
Map display incomplete.	1. Proceed to "Map Display Incomplete"	NS-155
	2. Map disc	-
	3. Navigation ECU	NS-238
Route cannot be calculated.	1. Proceed to "Route cannot be Calculated"	NS-156
	2. Map disc	-
	3. Navigation ECU	NS-238
Voice recognition difficulty.	1. Proceed to "Voice Recognition Difficulty"	NS-157
	2. Navigation ECU	NS-238

Symptom	Suspected Area	See page
Voice is not recognized.	1. Proceed to "Voice is not Recognized"	NS-159
	2. Proceed to "Microphone circuit between Overhead J/B and Multi-display"	NS-204
	3. Proceed to "Microphone circuit between Multi-display and Navigation ECU"	NS-207
	4. Steering pad switch circuit	NS-174
	5. Microphone	AV-250
	6. Navigation ECU	NS-238
Speed signal does not change in the navigation check mode.	Proceed to "Vehicle Speed Signal Circuit between Navigation ECU and Multi-display"	NS-171
Reverse signal does not change in the navigation check mode.	Proceed to "Reverse Signal Circuit"	NS-193

Steering pad switch function:

Symptom	Suspected Area	See page
The system cannot be operated by the steering pad switch.	1. Steering pad switch circuit	NS-174
	2. Radio receiver	AV-167
Illumination for steering pad switch does not come on with tail switch on.	1. Illumination circuit	NS-178
	2. Radio receiver	AV-167

"Bluetooth" function:

Symptom	Suspected Area	See page
Cellular phone registration failure, phone directory transfer failure.	Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure"	NS-162
Cellular phone cannot send/receive.	1. Proceed to "Cellular Phone cannot Send/Receive"	NS-164
	2. Steering pad switch circuit	NS-174
	3. Radio receiver	AV-167
Cannot call in a certain place.	Proceed to "Cannot call in a Certain Place"	NS-166
The other caller's voice cannot be heard, is too quiet, or distorted.	1.Proceed to "The Other Caller's Voice cannot be Hear, is too Quiet, or Distorted"	NS-167
	2. Multi-display	NS-233
The other caller cannot hear your voice, or your voice is too quiet or distorted.	1. Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted"	NS-169
	2. Proceed to "Microphone circuit between Overhead J/B and Multi-display"	NS-204
	3. Microphone	AV-250
	4. Multi-display	NS-233

MCO- (p3-5) - GND (p2-15)	-	Microphone voice signal	See "Microphone & Voice Recognition Check" (See page NS-27)	-
SGND (p3-6) - GND (p2-15)	-	Shielded ground	Always	Below 1 V
GVI+ (q1-1) - GND (p2-15)	-	Digital image signal	Navigation display is on	Pulse generation
GVI- (q1-2) - GND (p2-15)	-	Digital image signal	Navigation display is on	Pulse generation
GND (q1-3) - Body ground	-	Ground	Always	Below 1 V

3. RADIO RECEIVER (See page AV-16)

4. STEREO COMPONENT AMPLIFIER (See page AV-16)

DTC CHECK / CLEAR

HINT:

- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.
- If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts.
  (See page NS-187)
- After the engine switch is turned on (IG), check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.

1. START DIAGNOSTIC MODE

(a) There are 2 methods to start diagnostic mode. Start the mode by using one of them.

(b) Method 1

(1) Start the engine.

(2) While pressing and holding the "INFO" switch, operate the light control switch: OFF → Turn ON → Turn OFF → Turn ON → Turn OFF → Turn ON → Turn OFF.

(3) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

E134674E01

(c) Method 2

(1) Start the engine.

(2) Switch to the "Display Check" screen.

(3) From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

(4) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

E109432

2. FINISH DIAGNOSTIC MODE

(a) There are 2 methods to end diagnostic mode. Use one of them.

(1) Turn the engine switch off.

(2) Press and hold the "DISP" switch for 3 seconds.

NS

3. DIAGNOSIS MENU

(a) The "Diagnosis MENU" screen will be displayed by pressing the menu switch on the "System Check Mode" screen.

4. CHECK DTC

(a) Read the system check result.

(1) If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result to view the results on the "Unit Check Mode" screen and record them.

HINT:

- If all check results are "OK", go to communication DTC check.
- If a device name is not known, its physical address is displayed.

HINT:

When proceeding to view the results of another device, press the service switch to return to the "System Check Mode" screen. Repeat this step.

NS

(b) Read the communication diagnostic check result.
(1) Return to the "System Check Mode" screen, and press the "LAN Mon" switch to enter the "LAN Monitor" screen.

(2) If the check result is "CHEK" or "Old", touch the displayed check result to view the results on the individual communication diagnostic screen and record them.
HINT:
- If all check results are "No Err", the system judges that no DTC exists.
- The sub-code (relevant device) will be indicated by its physical address.
- When proceeding to view the results of another device, press the "Service" switch to return to the original "LAN Monitor" screen. Repeat this step.

5. DTC CLEAR/RECHECK

(a) Clear DTC

(1) Press the "Code CLR" switch for 3 seconds.

(2) The check results are cleared.

(b) Recheck

(1) Press the "Recheck" switch.

NS

(2) Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

(3) Press the "LAN Mon" switch to change to the "LAN Monitor" screen.

(4) Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

DTC	01-21	ROM Error

DTC	01-22	RAM Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-21	A malfunction exists in ROM.	Multi-display
01-22	A malfunction exists in RAM.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE MULTI-DISPLAY

NEXT

END

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *3	• A component shown by the sub-code is (was) disconnected from the system when turning the engine switch on (ACC or IG). • The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the multi-display and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	A component shown by the sub-code is (was) disconnected from the system after engine start.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system when the engine switch is (was) on (IG or ACC).	
01-DA *3	• No response is identified when changing mode. • Sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3	A slave device has been disconnected after engine start.	

NS

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: If it is reported that the device does not exist during verification, check the power source circuit and AVC-LAN circuit for the device.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK "MULTI-DISPLAY COMMUNICATION ERROR" IN FLOW CHART

Refer to the multi-display communication error (See page NS-220).

NEXT

END

DTC	01-D6	No Master

DTC	01-D7	Connection Check Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D6 *1	When either of the following conditions is met: • The component which has stored the code has (had) been disconnected when the engine switch is on (ACC or IG). • The master device has (had) been disconnected when this code is stored.	• Multi-display power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the multi-display and the component which has stored this code • Component which has stored this code • Multi-display
01-D7 *2	When either of the following conditions is met: • The component which has stored the code has (had) been disconnected after the engine starts (started). • The master device has (had) been disconnected when this code is (was) stored.	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC or IG), this code is stored.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

NS

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

Refer to the multi-display power source circuit (See page NS-228).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:

P E121199E01

(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
AUDIO H/U	Radio receiver
DSP-AMP	Stereo component amplifier
NAVI	Navigation ECU

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NS

NEXT

3 CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

(a) Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.

Component Table:

Component	Proceed to
Radio receiver (AUDIO H/U)	Radio receiver power source circuit (See page AV-162)
Stereo component amplifier (DSP-AMP)	Stereo component amplifier power source circuit (See page AV-164)
Navigation ECU (NAVI)	Navigation ECU power source circuit (See page NS-230)

NEXT

4	CHECK RADIO RECEIVER

DVD Changer Models
Wire Harness View:

CD Changer Models
Wire Harness View:

P E124056E03

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ (E69-5) - ATX- (E69-15)	Always	60 to 80 Ω
TX+ (E70-9) - TX- (E70-10)	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

5	CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-44).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the multi-display and the component which has stored this code.
  (1) Disconnect all connectors between the multi-display and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

NS

OK:
There is no open or short circuit.

AVC-LAN WIRING DIAGRAM:

*1: Master Unit

*2: Slave Unit

P

E134675E01

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NS

NG → **REPLACE MULTI-DISPLAY**

OK

END

DTC 01-DC Transmission Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DC	Transmission to component shown by sub-code failed. (Detecting this DTC does not always mean actual failure.)	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code

NOTICE:
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1 CHECK FOR DTC OF OTHER COMPONENTS

(a) Check if the component shown by the sub-code is displayed in the check result of the other components.
(1) Check if "01-DC" is output for the other components.
(2) If "01-DC" is output for any other components, check if the same physical address is displayed.
HINT:
For the list of the components shown by sub-codes, refer to the table in step 2.
Result

Result	Proceed to
"01-DC" is output and the same physical address is displayed	**A**
"01-DC" is not output or the same physical address is not displayed	**B**

B → **Go to step 4**

A

NS

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:

(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
AUDIO H/U (190)	Radio receiver
DSP-AMP (440)	Stereo component amplifier
NAVI (178)	Navigation ECU
EMV (110)	Multi-display

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NS

NEXT

3 CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.

Component Table:

Component	Proceed to
Radio receiver (AUDIO H/U)	Radio receiver communication error (See page NS-212)
Stereo component amplifier (DSP-AMP)	Stereo component amplifier communication error (See page NS-216)
Navigation ECU (NAVI)	Navigation ECU communication error (See page NS-224)
Multi-display (EMV)	Multi-display communication error (See page NS-220)

NEXT

END

4	**CLEAR DTC**

(a) Clear the DTCs (See page NS-48).
HINT:
If "01-DC" is output for only one component, this may not indicate a malfunction.

NEXT

5	**RECHECK FOR DTC**

(a) Recheck for DTCs and check if the same trouble occurs again.

OK:
Malfunction disappears.

NG → **Go to step 3**

OK

END

DTC	01-DD	Master Reset

DTC	01-E1	Voice Processing Device ON Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DD	The device that should be the master has been disconnected after the engine starts.	• Multi-display power source circuit • AVC-LAN circuit between the multi-display and the component which has stored this code • Multi-display • Component which has stored this code
01-E1 *1	The AMP device records that the AMP output does not function even while the source device is operating.	

HINT:
*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

NS

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

Refer to the multi-display power source circuit (See page NS-228).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	**INSPECT RADIO RECEIVER**

DVD Changer Models
Wire Harness View:

CD Changer Models
Wire Harness View:

P E124056E03

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ (E69-5) - ATX- (E69-15)	Always	60 to 80 Ω
TX+ (E70-9) - TX- (E70-10)	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

NS

3 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:

P E121199E03

(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
AUDIO H/U	Radio receiver
DSP-AMP	Stereo component amplifier
NAVI	Navigation ECU

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NS

NEXT

4 CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-44).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the multi-display and the component which has stored this code.
  (1) Disconnect all connectors between the multi-display and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

OK:
There is no open or short circuit.

AVC-LAN WIRING DIAGRAM:

*1: Master Unit

*2: Slave Unit

P

E134675E01

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	**REPLACE MULTI-DISPLAY**

(a) Replace the multi-display with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NS

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

DTC	01-DF	Master Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DF *1	• The device with a display fails and the master is switched to the audio device. • A communication error between sub-master (radio receiver) and master occurs.	• Multi-display power source circuit • AVC-LAN circuit between the multi-display and the component which has stored this code • AVC-LAN circuit between the multi-display and the radio receiver • Multi-display • Component which has stored this code

HINT:
*1: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC or IG), this code is stored.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

NS

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

Refer to the multi-display power source circuit (See page NS-228).
If the power source circuit is operating normally, proceed to the next step.

NEXT

6	REPLACE MULTI-DISPLAY

(a) Replace the multi-display with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

DTC	01-E0	Registration Complete Indication Error

DTC	01-E3	Registration Demand Transmission

DTC	01-E4	Multiple Frame Incomplete

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E0	"Registration complete" signal from the master device cannot be received.	-
01-E3	The registration demand signal from the slave device is output. Or the registration demand signal is output by receiving connection confirmation signal from the sub-master device.	-
01-E4	The multiple frame transmission is incomplete.	-

HINT:
Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

INSPECTION PROCEDURE

HINT:
- After the inspection is completed, clear the DTCs.
- These DTCs do not indicate a malfunction.

DTC	01-E2	ON / OFF Indication Parameter Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E2	The signal for ON/OFF control from the master device has a problem.	Multi-display

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE MULTI-DISPLAY

NEXT

END

DTC	21-10	Panel Switch Error

DTC	23-11	Touch Switch Error

DTC	24-10	Panel Switch Error

DTC	24-11	Touch Switch Error

DTC	25-10	Panel Switch Error

DTC	25-11	Touch Switch Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
21-10	The panel switch detection circuit has a problem.	Multi-display
21-11	The touch panel switch has a problem.	
23-10	The panel switch detection circuit has a problem.	
23-11	The touch panel switch has a problem.	
24-10	The panel switch detection circuit has a problem.	
24-11	The touch panel switch has a problem.	
25-10	The panel switch detection circuit has a problem.	
25-11	The touch panel switch has a problem.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE MULTI-DISPLAY

NEXT

END

DTC	34-10	Error in Picture Circuit

DTC	34-11	No Current in Back-light

DTC	34-12	Excess Current in Back-light

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
34-10	Error in power supply system for picture circuit	Multi-display
34-11	Decline in power output from inverter circuit for back-light	
34-12	Excess power output from inverter circuit for back-light	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE MULTI-DISPLAY

NS

NEXT

END

DTC	45-10	DVD Changer Mechanical Error

DTC	45-11	DVD Insertion and Ejection Error

DTC	45-12	DVD Reading Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-10	A mechanical error in the DVD changer is detected while the DVD is not being inserted or ejected.	Radio receiver
45-11	DVD insertion or ejection is failed.	
45-12	DVD read problem occurs.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	45-41	Wrong Disc

DTC	45-42	Disc cannot be Read

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-41	An unsuitable disc is inserted.	• DVD • Radio receiver
45-42	The disc cannot be read.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK DISC

(a) Check that the disc is not deformed or cracked.
OK:
No deformation or cracks on the disc.

NG → **CHANGE DISC**

NS

OK

2 DISC CLEANING

(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or antistatic preservative.

NEXT

3 CLEAR DTC

(a) Clear the DTC (See page NS-48).

NEXT

4	RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

5	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page NS-48).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	45-43	DVD-ROM Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-43	DVD-ROM operation is abnormal.	• DVD • Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK IF A PROPER DVD IS INSERTED

(a) Make sure that the DVD is a video DVD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal DVD or CD
HINT:
- Translucent or uniquely-shaped DVDs or CDs cannot be played.
- For details on playable DVDs or CDs, refer to the Owner's Manual.

NG → **DISC IS FAULTY**

OK ↓

2 CHANGE DISC

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page NS-48).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK ↓

END

NS

DTC	45-44	DVD Malfunction

DTC	45-48	Excess Current

DTC	45-50	Tray Insertion / Ejection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-44	Operation error in the DVD mechanism	Radio receiver
45-48	Excess current is present in the DVD changer.	
45-50	Malfunction in insertion/ejection system	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NS

NEXT

2 RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the radio receiver.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	45-45	Eject Error

DTC	45-51	Elevator Error

DTC	45-52	Clamp Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-45	Disc cannot be ejected.	Radio receiver
45-51	Mechanical error occurs during elevator operation.	
45-52	Error occurs in DVD changer clamp.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK RADIO RECEIVER

(a) Check if a disc can be changed, inserted, or ejected normally.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	45-46	Scratched/Reversed Disc

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-46	Scratches or dirt is found on DVD surface or DVD is inserted upside down.	• DVD • Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK THAT CD IS INSERTED PROPERLY

(a) Check whether or not the disc is inserted upside down.
OK:
Disc is properly inserted.

NG → **INSERT DISC PROPERLY**

OK

2 CHECK DISC

(a) Check that the disc is not deformed or cracked.
OK:
No deformation or cracks on the disc.

NG → **CHANGE DISC**

OK

3 DISC CLEANING

(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or antistatic preservative.

NEXT

NS

4	CLEAR DTC

(a) Clear the DTC (See page NS-48).

NEXT

5	RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

6	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page NS-48).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	45-47	High Temperature

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-47	Sensor detects that DVD unit temperature is high. (Over 80°C (176°F))	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK RADIO RECEIVER

(a) Park the vehicle in a cool place.
(b) Check that the temperature of the radio receiver has become sufficiently low, and start the engine. Check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	45-78	DSP Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-78	An error occurs during the decode process (MP3 / WMA).	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

NOTICE:

- **This code may be output even if there is no malfunction.**
- **If this code is output frequently, replace the radio receiver.**

1 CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NEXT

2 RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble code occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	45-7D	Disc cannot be Played

DTC	45-7E	No Playable Files

DTC	45-7F	Copyright Protection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
45-7D	• An incompatible MP3 - WMA file is used. • Although the file has an extension of ".mp3" or ".wma", the header information cannot be read.	• DVD • Radio receiver
45-7E	• A disc with no music data is used. • Playable files are not on the disc (MP3 - WMA).	
45-7F	A copy-protected file, which cannot be played, is used.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHANGE DISC

NS

(a) Insert a disc with a playable file and check if the disc can be played correctly.
HINT:
For details on playable files and discs, refer to the Owner's Manual.
OK:
The disc can be played correctly.

NG → **REPLACE RADIO RECEIVER**

OK

DISC IS FAULTY

DTC	57-47	Bluetooth Module Initialization Failed

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
57-47	• Bluetooth module is not installed. • Problem with Bluetooth module • Problem in communication line to Bluetooth module	Multi-display

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE MULTI-DISPLAY

NEXT

END

DTC	58-10	Gyro Error

DTC	80-10	Gyro Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-10	Ground short, power supply short, or open circuit in the gyro signal	• Gyro sensor • Navigation ECU
80-10	Ground short, power supply short, or open circuit in the gyro signal	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)

(a) Enter the "Navigation Check" mode (Vehicle Sensors) (See page NS-27).
(b) Check the gyro voltage.
Standard voltage:
0.1 to 4.5 V

NG → **REPLACE NAVIGATION ECU**

OK

2 CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NEXT

3 RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the navigation ECU.
OK:
Malfunction disappears.

NG → **REPLACE NAVIGATION ECU**

NS

OK

DTC	80-41	GPS Antenna Power Source Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-40	GPS antenna error	• Wire harness • GPS antenna • Navigation ECU
58-41	Error of the power source to the GPS antenna	
80-40	GPS antenna error	
80-41	Error of the power source to the GPS antenna	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

NS

1 CHECK HARNESS AND CONNECTOR (GPS ANTENNA - NAVIGATION ECU)

(a) Check that the GPS antenna cord is securely connected to the navigation ECU connector.
OK:
The cord is securely connected.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 REPLACE GPS ANTENNA

(a) Replace the GPS antenna with a normal one and check if the same problem occurs again.
(1) Clear the DTCs (See page NS-48).
(2) Recheck for DTCs and check if the same trouble occurs again.
OK:
Same problem does not occur.

NG → **REPLACE NAVIGATION ECU**

OK

END

DTC	58-42	Map Disc Read Error

DTC	80-42	Map Disc Read Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-42	• Player error • Scratches or dirt on the disc • Access to an invalid address due to software error	• Map disc • Navigation ECU
80-42	• Player error • Scratches or dirt on the disc • Access to an invalid address due to software error	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on the map disc.

NG → **Go to step 4**

OK

2	DISC CLEANING

(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

3	DTC CLEAR AND RECHECK

(a) Clear the DTCs (See page NS-48).

NS

(b) Recheck for DTCs and check if the same trouble occurs again.

58-45	High map disc player temperature is detected. (Over 80°C (176°F))	Navigation ECU
80-45	High map disc player temperature is detected. (Over 80°C (176°F))	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK NAVIGATION ECU

(a) Park the vehicle in a cool place.
(b) Check that the temperature of the navigation ECU has become sufficiently low, then start the engine to verify the malfunction symptom.
OK:
Same problem does not occur.

NG → **REPLACE NAVIGATION ECU**

OK

END

NS

DTC	5C-40	Camera Picture Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
5C-40	Synchronous signal from the camera cannot be transmitted.	• Wire harness • Television camera assembly • Multi-display

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - TELEVISION CAMERA ASSEMBLY)

(a) Disconnect the E63 connector from the multi-display.
(b) Disconnect the R15 connector from the television camera assembly.

NS

(c) Measure the resistance according to the value(s) in the table below.

NS

Standard resistance

Tester Connection (Terminal No.)	Condition	Specified Condition
CB+ (R15-4) - CA+ (E63-13)	Always	Below 1 Ω
CGND (R15-3) - CGND (E63-14)	Always	Below 1 Ω
CV+ (R15-2) - V+ (E63-27)	Always	Below 1 Ω
CV- (R15-1) - V- (E63-28)	Always	Below 1 Ω
CB+ (R15-4) - Body ground	Always	10 kΩ or higher
CGND (R15-3) - Body ground	Always	10 kΩ or higher
CV+ (R15-2) - Body ground	Always	10 kΩ or higher
CV- (R15-1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT MULTI-DISPLAY

(a) Reconnect the multi-display E63 connector.

(b) Measure the voltage according to the value(s) in the table below.

NS

Standard voltage

Tester Connection (Terminal No.)	Condition	Specified Condition
CB+ (R15-4) - CGND (R15-3)	Engine switch on (IG), shift lever R position	Approx. 6 V

NG → **REPLACE MULTI-DISPLAY**

OK

REPLACE TELEVISION CAMERA ASSEMBLY

DTC	60-10	AM Tuner PLL does not Lock

DTC	60-11	FM Tuner PLL does not Lock

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
60-10	AM tuner PLL (phase locked loop) synchronization is impossible.	Radio receiver
60-11	FM tuner PLL (phase locked loop) synchronization is impossible.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	60-42	Tuner Power Source Error

DTC	60-43	AM Tuner Error

DTC	60-44	FM Tuner Error

DTC	60-50	Malfunction in Internal IC

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
60-42	The power source of the tuner is abnormal.	Radio receiver
60-43	The AM tuner is abnormal.	
60-44	The FM tuner is abnormal.	
60-50	A problem occurs in the IC inside the tuner unit and radio reception is not normal.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

NS

1 CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NEXT

2 RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the radio receiver.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	61-40	Mechanical Error of Media

DTC	61-41	Eject Error

DTC	61-42	Tape Tangling

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
61-40	A malfunction due to mechanical problem has occurred, or cassette tape is cut or entangled.	• Cassette tape • Radio receiver
61-41	A malfunction due to mechanical problem	
61-42	Cassette tape is tangled.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK OPERATION

(a) Press the cassette tape EJECT switch of the radio receiver for 2 seconds or more and check that the cassette tape is ejected.
OK:
Cassette tape is ejected.

NG → **REPLACE RADIO RECEIVER**

OK

2 CHECK CASSETTE TAPE

(a) Check that the ejected cassette tape does not have a peeling label, cassette body deformation or other problems.
OK:
No problem with cassette tape.

NG → **CASSETTE TAPE IS FAULTY**

OK

3 REPLACE CASSETTE TAPE

(a) Replace the cassette tape with a normal one and check if the same problem occurs again.
(1) Clear the DTCs (See page NS-48).
(2) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NS

NG → **REPLACE RADIO RECEIVER**

OK

CASSETTE TAPE IS FAULTY

DTC	63-10	CD Changer Mechanical Error

DTC	63-11	CD Insertion and Ejection Error

DTC	63-12	CD Reading Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-10	A mechanical error in the CD changer is detected while the CD is not being inserted or ejected.	Radio receiver
63-11	CD insertion or ejection is failed.	
63-12	CD read problem occurs.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	63-41	Wrong Disc

DTC	63-42	Disc cannot be Read

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-41	An unsuitable disc is inserted.	• CD • Radio receiver
63-42	The disc cannot be read.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK DISC

(a) Check that the disc is not deformed or cracked.
OK:
No deformations or cracks on the disc.

NG → **CHANGE DISC**

OK

2 DISC CLEANING

(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

3 CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NEXT

NS

4	RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

5	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page NS-48).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-43	CD-ROM Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-43	CD-ROM operation is abnormal.	• CD • Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal CD
HINT:
- Translucent or uniquely-shaped CDs cannot be played.
- CD with adhesive paper labels should not be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG → **CD IS FAULTY**

OK

2 REPLACE CD WITH ANOTHER AND RECHECK

(a) Replace the CD with another and recheck.
(1) Replace the CD with another normal one.
(2) Clear the DTCs (See page NS-48).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-44	CD Abnormal

DTC	63-48	Excess Current

DTC	63-50	Tray Insertion / Ejection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-44	Operation error in the CD mechanism	Radio receiver
63-48	Excess current is present in the CD changer.	
63-50	Malfunction in insertion/ejection system	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NS

NEXT

2 RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the radio receiver.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-45	Eject Error

DTC	63-51	Elevator Error

DTC	63-52	Clamp Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-45	Magazine cannot be ejected.	Radio receiver
63-51	Mechanical error occurs during elevator operation.	
63-52	Error occurs in CD changer clamp.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK RADIO RECEIVER

(a) Check if a disc can be changed, inserted, or ejected normally.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-46	Scratched / Reversed Disc

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-46	Scratches or dirt is found on CD surface or CD is inserted upside down.	• CD • Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK THAT CD IS INSERTED PROPERLY

(a) Check that the CD is not inserted upside down.
OK:
CD is properly inserted.

NG → **INSERT CD PROPERLY**

OK

2 CHECK DISC

(a) Check that the disc is not deformed or cracked.
OK:
No deformations or cracks on the disc.

NG → **CHANGE DISC**

OK

3 DISC CLEANING

(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

NS

4	CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NEXT

5	RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

6	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page NS-48).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-47	High Temperature

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-47	Sensor detects that CD unit temperature is high. (Over 80°C (176°F))	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK RADIO RECEIVER

(a) Park the vehicle in a cool place.
(b) Check that the temperature of the radio receiver has become sufficiently low, then start the engine. Check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-78	DSP Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-78	An error occurs during the decode process (MP3 / WMA).	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

NOTICE:

- **This code may be output even if there is no malfunction.**
- **If this code is output frequently, replace the radio receiver.**

1 CLEAR DTC

(a) Clear the DTCs (See page NS-48).

NEXT

2 RECHECK FOR DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	63-7D	Disc cannot be Played

DTC	63-7E	No Playable Files

DTC	63-7F	Copyright Protection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-7D	• An incompatible MP3 - WMA file is used. • Although the file has an extension of ".mp3" or ".wma", the header information cannot be read.	• CD • Radio receiver
63-7E	• A disc with no music data is used. • Playable files are not on the disc (MP3 - WMA).	
63-7F	A copy-protected file, which cannot be played, is used.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHANGE DISC

NS

(a) Insert a disc with a playable file and check if the disc can be played correctly.
HINT:
For details on playable files and discs, refer to the Owner's Manual.
OK:
The disc can be played correctly.

NG → **REPLACE RADIO RECEIVER**

OK

DISC IS FAULTY

DTC	74-40	Short in Speaker Circuit

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
74-40	A short is detected in the speaker output circuit.	• Wire harness • Speaker • Stereo component amplifier

This circuit has a fail-safe function.
- When a short in the speaker circuit is detected, all sound outputs are stopped.

INSPECTION PROCEDURE

HINT:

After the inspection is completed, clear the DTCs.

1	INSPECT STEREO COMPONENT AMPLIFIER

(a) Disconnect the stereo component amplifier connectors M31 and M32.
(b) Clear the DTCs and recheck for DTCs.
(c) Check if DTC 74-40 is output.
OK:
DTC 74-40 is not output.

NG → **REPLACE STEREO COMPONENT AMPLIFIER**

OK

2	CHECK OPERATION

(a) Reconnect the stereo component amplifier connector M31.
(b) Check if DTC 74-40 is output.
OK:
DTC 74-40 is not output.

NG → **Go to step 10**

OK

NS

3 CHECK HARNESS AND CONNECTOR

(a) Disconnect the connectors shown in the illustration from the stereo component amplifier and speakers.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
CTR+ - Body ground	Always	10 kΩ or higher
CTR- - Body ground	Always	10 kΩ or higher
SL+ - Body ground (*1)	Always	10 kΩ or higher
SL- - Body ground (*1)	Always	10 kΩ or higher
SR+ - Body ground (*1)	Always	10 kΩ or higher
SR- - Body ground (*1)	Always	10 kΩ or higher
WFL+ - Body ground (*1)	Always	10 kΩ or higher
WFL- - Body ground (*1)	Always	10 kΩ or higher
WF1+ - Body ground	Always	10 kΩ or higher
WF1- - Body ground	Always	10 kΩ or higher
WF2+ - Body ground (*2)	Always	10 kΩ or higher
WF2- - Body ground (*2)	Always	10 kΩ or higher

with Rear Header Speaker	A
without Rear Header Speaker	B

B → **Go to step 18**

A

12	INSPECT FRONT NO. 2 SPEAKER (LEFT HAND)

(a) Reconnect the stereo component amplifier connector and front No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE FRONT NO. 2 SPEAKER (LEFT HAND)**

NS

OK

13	INSPECT FRONT NO. 2 SPEAKER (RIGHT HAND)

(a) Reconnect the stereo component amplifier connector and front No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE FRONT NO. 2 SPEAKER (RIGHT HAND)**

OK

14	INSPECT REAR SPEAKER (LEFT HAND)

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 8 Ω

NG → **REPLACE REAR SPEAKER (LEFT HAND)**

OK

15	INSPECT REAR SPEAKER (RIGHT HAND)

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 8 Ω

NG → **REPLACE REAR SPEAKER (RIGHT HAND)**

OK

16	INSPECT REAR NO. 2 SPEAKER (LEFT HAND)

(a) Reconnect the stereo component amplifier connector and rear No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE REAR NO. 2 SPEAKER (LEFT HAND)**

NS

OK

17	INSPECT REAR NO. 2 SPEAKER (RIGHT HAND)

(a) Reconnect the stereo component amplifier connector and rear No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE REAR NO. 2 SPEAKER (RIGHT HAND)**

OK

REPLACE FRONT NO. 1 SPEAKER (RIGHT HAND)

18	INSPECT FRONT NO. 1 SPEAKER (LEFT HAND)

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 4 Ω

NG → **REPLACE FRONT NO. 1 SPEAKER (LEFT HAND)**

OK

19	INSPECT FRONT NO. 1 SPEAKER (RIGHT HAND)

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 4 Ω

NG → **REPLACE FRONT NO. 1 SPEAKER (RIGHT HAND)**

OK

20	INSPECT FRONT NO. 2 SPEAKER (LEFT HAND)

(a) Reconnect the stereo component amplifier connector and front No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE FRONT NO. 2 SPEAKER (LEFT HAND)**

NS

OK

21	INSPECT FRONT NO. 2 SPEAKER (RIGHT HAND)

(a) Reconnect the stereo component amplifier connector and front No. 2 speaker connector.
(b) Check that audio sound can be heard from the speaker.
OK:
Audio sound can be heard.

NG → **REPLACE FRONT NO. 2 SPEAKER (RIGHT HAND)**

OK

22	INSPECT REAR SPEAKER (LEFT HAND)

(a) Resistance check.
(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
Approximately 4 Ω

NG → **REPLACE REAR SPEAKER (LEFT HAND)**

OK

REPLACE REAR SPEAKER (RIGHT HAND)

Pressing Power Switch does not Turn on System

INSPECTION PROCEDURE

1	CHECK CABIN

(a) Check that conditions in the cabin are not likely to cause condensation.
HINT:
This problem occurs when the cabin is humid and the temperature rapidly changes. This condition may produce condensation, resulting in a short circuit.
OK:
Condensation is not likely to occur.

NG → **DRY CABIN AND RECHECK CONDITIONS**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

No Image Appears on Multi-display

INSPECTION PROCEDURE

1	CHECK DISPLAY SETTING

(a) Check that the display is not in "Screen OFF" mode.
OK:
The display setting is not in "Screen OFF" mode.

NG → **CHANGE SCREEN TO "SCREEN ON" MODE**

OK

2	CHECK IMAGE QUALITY SETTING

(a) Check that the screen color quality can be set.
OK:
Setting is possible.

NG → **Go to step 3**

NS

OK

PRESS PANEL SWITCH "DISPLAY" AND SET SCREEN COLOR QUALITY TO NORMAL

3	CHECK CABIN

(a) Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.
HINT:
- A humid cabin and a rapid change in temperature may lead to condensation, resulting in a short circuit.
- The appropriate cabin temperature is 20 to 30°C (68 to 86°F).

OK:
Condensation is not likely and temperature is not high or extremely low.

NG → **SET CABIN TO APPROPRIATE TEMPERATURE**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Illumination for Panel Switch does not Come on with Tail Switch ON

INSPECTION PROCEDURE

1 CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

(a) Enter the "Display Check" mode (Vehicle Signal Check Mode) (See page NS-21).

(b) Check that the display changes between ON and OFF according to the light control switch operation.

OK

Light Control Switch	Display
TAIL or ON	ON
OFF	OFF

HINT:
This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE MULTI-DISPLAY

NS

Display does not Dim when Light Control Switch is Turned ON

INSPECTION PROCEDURE

1 CHECK IMAGE QUALITY SETTING

(a) Enter the display adjustment screen by pressing the "DISP" switch.
(b) Turn the light control switch to the TAIL position.
(c) Check if "DAY MODE" on the display is ON.
OK:
"DAY MODE" is ON.

NG → **Go to step 2**

OK

TURN "DAY MODE" SETTING OFF

NS

2 CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

(a) Enter the "Display Check" mode (Vehicle Signal Check) (See page NS-21).
(b) Check that the display changes between DIM and BRIGHT according to the light control switch operation.
OK

Light Control Switch	Display
TAIL or HEAD	DIM
OFF	BRIGHT

HINT:
The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE MULTI-DISPLAY

Panel Switches do not Function

INSPECTION PROCEDURE

1 CHECK PANEL SWITCH

(a) Check for foreign matter around the switches that might prevent operation.
OK:
No foreign matter is found.

NG → **REMOVE ANY FOREIGN MATTER FOUND**

OK

2 CHECK PANEL SWITCH (DISPLAY CHECK MODE)

(a) Enter the "Display Check" mode (Panel Switch Check) (See page NS-21).
(b) Operate the abnormal switch and check if the switch name and status are correctly displayed.
OK:
The switch name and status are correctly displayed as operated.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE MULTI-DISPLAY

NS

Touch Panel Switch does not Function

INSPECTION PROCEDURE

1	CHECK TOUCH PANEL

(a) Check for foreign matter on the display.
OK:
The display is clean.

NG → **CLEAN DISPLAY AND RECHECK TOUCH PANEL**

OK

2	CHECK TOUCH SWITCH (DISPLAY CHECK MODE)

(a) Enter the "Display Check" mode (Touch Switch Check) (See page NS-21).
(b) Touch the display in the area where the switch malfunction occurs.
OK:
A "+" mark appears at the touched position.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE MULTI-DISPLAY

NS

Screen Flicker or Color Distortion

INSPECTION PROCEDURE

1 CHECK DISPLAY SETTING

(a) Enter the display adjustment screen by pressing the "DISP" switch.

(b) Reset display settings (contrast, brightness) and check that the screen appears normal.

(c) Press the "INFO" switch and then select "Screen Setting."

(d) Set the "Switch Color" to "Blue" (initial setting) and check if the display returns to normal.

OK:

Returns to normal.

NG → **Go to step 2**

OK

END

2 CHECK CABIN

(a) Check that the cabin temperature is warmer than -20°C (-4.0°F).

OK:

Cabin is warmer than -20°C (-4.0°F).

NG → **HEAT CABIN AND RECHECK TEMPERATURE**

NS

OK

3	CHECK COLOR BAR (DISPLAY CHECK MODE)

(a) Enter the "Display Check" mode (Color Bar Check) (See page NS-21).
(b) Check that the color bars match the displayed names.
OK:
Color bars match the displayed names.

NG → **REPLACE MULTI-DISPLAY**

OK

4	CHECK NAVI COLOR BAR (NAVIGATION CHECK MODE)

(a) Enter the "Navigation Check" mode (NAVI Color Bar Check) (See page NS-27).
(b) Check that the color bars match the displayed names.
OK:
Color bars match the displayed names.

OK → **REPLACE MULTI-DISPLAY**

NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

MAP Disc cannot be Inserted

INSPECTION PROCEDURE

1	CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on the map disc.

NG → **REPLACE MAP DISC**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

MAP Disc cannot be Ejected

INSPECTION PROCEDURE

1	CHECK MULTI-DISPLAY

(a) Turn the engine switch on (ACC).
(b) Keep pressing the MAP eject switch for 5 seconds and check if the disc is ejected by forced ejection.
OK:
The disc is ejected.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

2	CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on the map disc.

NG → **REPLACE MAP DISC**

OK

END

NS

Vehicle Position Mark Deviates Greatly

INSPECTION PROCEDURE

1 CHECK GPS MARK

(a) Check that the GPS mark is displayed.
OK:
GPS mark is displayed.

NG → **GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE**

OK

2 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)

(a) Enter the "Navigation Check" mode (Vehicle Sensors) (See page NS-27).
(b) While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.
OK:
The readings are almost equal.

NG → **GO TO "SPEED SIGNAL DOES NOT CHANGE IN NAVIGATION CHECK MODE" IN PROBLEM SYMPTOMS TABLE**

OK

3 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)

(a) Check that the display changes between ON and OFF according to the shift lever operation (P and R).
OK

Shift Lever Position	Display
P (A/T)	OFF
Reverse position	ON

HINT:
The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → **GO TO "REVERSE SIGNAL DOES NOT CHANGE IN NAVIGATION CHECK MODE" IN PROBLEM SYMPTOMS TABLE**

NS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Cursor or MAP Rotates when Vehicle Stopped

INSPECTION PROCEDURE

1	CHECK CONDITION

(a) Check with the customer if the vehicle has been turned by a turntable.

OK:

Vehicle has not been turned by turntable.

HINT:

If the vehicle is turned on a turntable with the engine switch on (IG), the system may store the angular velocity. As a result, the vehicle position cursor may deviate.

NG → **TURN ENGINE SWITCH ON (IG) WHEN VEHICLE IS COMPLETELY STOPPED**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Vehicle Position Mark is not Updated

INSPECTION PROCEDURE

1 CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

2 CHECK NAVIGATION DISPLAY

NS

(a) Check if a touch scroll can be performed on the map display.
OK:
Touch scroll can be performed.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

3 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)

(a) Enter the "Navigation Check" mode (Vehicle Sensors) (See page NS-27).
(b) While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.
OK:
The readings are almost equal.

NG → **GO TO "SPEED SIGNAL DOES NOT CHANGE IN NAVIGATION CHECK MODE" IN PROBLEM SYMPTOMS TABLE**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Current Position Display does not Appear

INSPECTION PROCEDURE

1	CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on the map disc.

NG → **REPLACE MAP DISC**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

GPS Mark is not Displayed

INSPECTION PROCEDURE

1	CHECK CABIN

(a) Check the cabin for any object that might interrupt radio reception on the instrument panel. If such an object exists, remove it and check if the GPS mark reappears.
HINT:
The GPS uses extremely faint radio waves originating from satellites. If the signal is interrupted by obstructions or other radio waves, the GPS may not be able to properly receive the signal.
OK:
Mark appears.

NG → **Go to step 2**

OK

NORMAL OPERATION

2	CHECK SURROUNDINGS

(a) Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.
HINT:
The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint your vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction, and time. For illustrated examples, see below.

OK:
GPS mark is displayed.

NG → **Go to step 3**

OK

SYSTEM RETURN TO NORMAL

3 CHECK GPS INFORMATION (NAVIGATION CHECK MODE)

(a) Enter the "Navigation Check" mode (GPS Information) (See page NS-27).

(b) Check how many of the following codes appear in the "STS" column.

For DENSO Made:
T, P

For AISIN AW Made:
08H, 04H

OK:
At least 3 codes appear.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NS

OK

REPLACE NAVIGATION ECU

Voice Guidance does not Function

INSPECTION PROCEDURE

1 CHECK NAVIGATION SYSTEM SETTING

(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Volume".

(c) Check that "OFF" is not selected.
OK:
"OFF" is not selected.

NG → **TURN VOICE GUIDANCE VOLUME UP TO 4 USING VOICE ADJUSTMENT SWITCHES**

OK

2 CHECK NAVIGATION SETTING

(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Set up".

NS

(c) Check that "Voice Guidance in All Modes" is not OFF.
OK:
Voice guidance in all modes is not OFF.

NG → **TURN VOICE GUIDANCE IN ALL MODES "ON"**

OK

3 CHECK NAVIGATION SETTING

(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Set up".

(c) Check that "Auto Voice Guidance" is not OFF.
OK:
Auto voice guidance is not OFF.

NG → **TURN AUTO VOICE GUIDANCE "ON"**

OK

4 CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

NS

OK

5	CHECK RADIO RECEIVER

(a) Check that audio sound can be heard from the driver side speaker.
OK:
Audio sound can be heard.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

GO TO AUDIO AND VISUAL SYSTEM

MAP Display Incomplete

INSPECTION PROCEDURE

1	CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

2	CHECK NAVIGATION DISPLAY

NS

(a) Check that displays other than the navigation display are complete.
OK:
No other incomplete displays are found.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE NAVIGATION ECU

Route cannot be Calculated

INSPECTION PROCEDURE

1 CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

2 SET DESTINATION

(a) Set another destination and check if the system can calculate the route correctly.
OK:
Route can be correctly calculated.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

NORMAL OPERATION

NS

Voice Recognition Difficulty

INSPECTION PROCEDURE

1	CHECK CONDITION

(a) Check if the system's voice recognition level is low by using only one particular voice.
OK:
System's voice recognition level is low with any voice.
HINT:
System's voice recognition level varies depending on voice and pronunciation. This is not a malfunction.

NG → **END**

OK

2	CHECK MAP DISC

NS

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

3	CHECK MAP DISC

(a) Check for dirt on the map disc surface.
OK:
No dirt is on map disc surface.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.
HINT:
If the disc is dirty, clean the disc by wiping the disc surface radially with a soft cloth.

NG → **CLEAN MAP DISC**

OK

4	CHECK MICROPHONE (NAVIGATION CHECK MODE)

(a) Enter the "MICROPHONE & VOICE RECOGNITION CHECK" mode (See page NS-27).

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.
HINT:
Voice can be recorded up to 5 seconds.

(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.
OK:
All check results are normal.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

END

NS

Voice is not Recognized

INSPECTION PROCEDURE

1 CHECK NAVIGATION SETTINGS

(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Set up".

(c) Check that "Voice Recognition Guidance" is not OFF.
OK:
Voice Recognition Guidance is not OFF.

NG → **TURN VOICE RECOGNITION GUIDANCE "ON"**

OK

2 CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

NS

3 CHECK MAP DISC

(a) Check for dirt on the map disc surface.
OK:
No dirt is on the map disc surface.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.
HINT:
If the disc is dirty, clean the disc by wiping the disc surface radially with a soft cloth.

NG → **CLEAN MAP DISC**

OK

4 CHECK MICROPHONE (NAVIGATION CHECK MODE)

(a) Enter the "MICROPHONE & VOICE RECOGNITION CHECK" mode (See page NS-27).
(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.
(c) Push the recording switch and perform voice recording.
HINT:
Voice can be recorded up to 5 seconds.
(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.
OK:
All check results are normal.

OK → **REPLACE NAVIGATION ECU**

NG

NS

5	CHECK MICROPHONE (DISPLAY CHECK MODE)

(a) Enter the "MICROPHONE & VOICE RECOGNITION CHECK" mode (See page NS-21).

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.
HINT:
Voice can be recorded up to 5 seconds.

(d) Check that the recorded voice is played normally without noise or distortion.
OK:
All check results are normal.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

NS

END

Cellular Phone Registration Failure, Phone Directory Transfer Failure

INSPECTION PROCEDURE

1 CHECK CURRENT CONDITIONS

(a) Proceed to the next step according to the table below.

Result

Conditions	Proceed to
Another "Bluetooth" compatible cellular phone is present.	A
Another "Bluetooth" compatible vehicle is present.	B
None of the above	C

B → **Go to step 3**

C → **Go to step 4**

A

2 CHECK USING ANOTHER CELLULAR PHONE

(a) Check if the system functions using another "Bluetooth" compatible cellular phone.
HINT:
- Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.
- Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

NG → **REPLACE MULTI-DISPLAY**

OK

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

3 CHECK USING ANOTHER "BLUETOOTH" COMPATIBLE VEHICLE

(a) Register the cellular phone with another vehicle and check if the system functions normally.
HINT:
Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

OK → **REPLACE MULTI-DISPLAY**

NG

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

4	CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
The phone is "Bluetooth" compatible.

NG → **USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE**

OK

5	CHECK CELLULAR PHONE

NS

(a) Check if a call can be made from the cellular phone.
HINT:
When the battery is low, registration or directory transfer cannot be done.
OK:
A call can be made from the cellular phone.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

REPLACE MULTI-DISPLAY

Cellular Phone cannot Send / Receive

INSPECTION PROCEDURE

1 CHECK "BLUETOOTH" SETTINGS

(a) Check if the "Bluetooth" settings are correct.
OK:
"Bluetooth" settings are correct.

NG → **SET SETTINGS CORRECTLY**

OK

2 CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
Phone is "Bluetooth" compatible.

NG → **END (ONLY A "BLUETOOTH" COMPATIBLE CELLULAR PHONE CAN BE USED)**

OK

3 CHECK SETTINGS

(a) Check if the cellular phone functions.
HINT:
The cellular phone is unable to call under any of the following conditions.
- The cellular phone is locked.
- The directory is being transferred.
- The line is crossed.
- Transmission is regulated.
- The power is off.
- The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).

OK:
None of the above conditions exist.

NG → **SET SETTINGS CORRECTLY**

OK

4 CHECK CELLULAR PHONE

(a) Check if the cellular phone can make a call.

NS

HINT:
When the battery is low, calls cannot be made or received.
OK:
Cellular phone can make a call.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

5	CHECK RECEPTION

(a) Set the cellular phone so that it can receive calls.
(b) Place the cellular phone close to the multi-display.
(c) Check if the cellular phone has reception according to the multi-display.
OK:
Cellular phone has reception.

NG → **REPLACE MULTI-DISPLAY**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Cannot Call in a Certain Place

INSPECTION PROCEDURE

1 CHECK SURROUNDING CONDITIONS

(a) Check if the cellular phone can make calls in a certain place.
OK:
It can make calls.

NG → **END (CELLULAR PHONES CAN ONLY FUNCTION IN CELLULAR SERVICE AREAS)**

OK

2 CHECK RECEPTION

(a) Enter the "Information" screen by pressing the "INFO" switch.
(b) Select "Telephone".

(c) Check the "Bluetooth" connection indicator (BT indicator).

Result

Condition	Procedure
Yellow color	Bring the cellular phone to a location where the BT mark turns blue.
Blue color	Replace multi-display.
No connection mark is displayed	Select a registered cellular phone or register a "Bluetooth" compatible phone.

NEXT

END

NS

The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted

INSPECTION PROCEDURE

1 CHECK CELLULAR PHONE

(a) Check if the voice on the other side can be heard using a cellular phone.
OK:
Voice can be heard.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

2 CHECK NAVIGATION SYSTEM

(a) Check that voice guidance can be heard from the driver side speaker.
OK:
Voice guidance can be heard.

NG → **GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE**

OK

3 CHECK SETTINGS

(a) Check if the volume level is set to low on the CALL screen.
OK:
The level is not set to low.

NG → **SET VOLUME TO HIGH**

OK

NS

4	CHECK SETTINGS

(a) Enter the "Handsfree Voice Quality Set" mode (See page NS-24).

(b) Check if the Receive Voice Level is set to "0".
HINT:
The Receive Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

(c) Check if the Receive Voice Level is set to the minimum or maximum level.
HINT:
When the Receive Voice Level is set to the minimum or maximum level, the sound may be distorted.
NOTICE:
"Voice Quality Type" should not be changed.
OK:
The Receive Voice Level is set to "0".

NG → **SET RECEIVE VOICE LEVEL TO "0"**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

NS

The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted

INSPECTION PROCEDURE

1 CHECK CELLULAR PHONE

(a) Check if the other side can hear your voice properly.
OK:
Your voice can be heard correctly.

NG → **REPLACE CELLULAR PHONE**

OK

2 CHECK SETTINGS

(a) Check if the mute switch is set to ON.
OK:
Mute switch is not set to ON.

NG → **TURN MUTE SWITCH OFF**

OK

3 CHECK SETTINGS

(a) Enter the "Handsfree Voice Quality Set" mode (See page NS-24).
(b) Check if the Send Voice Level is set to "0".
HINT:
The Send Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.
(c) Check if the Send Voice Level is set to the minimum or maximum level.
HINT:
When the Send Voice Level is set to the minimum or maximum level, the sound may be distorted.
NOTICE:
"Voice Quality Type" should not be changed.
OK:
The Send Voice Level is set to "0".

NG → **SET SEND VOICE LEVEL TO "0"**

OK

NS

4	CHECK MICROPHONE (DISPLAY CHECK MODE)

(a) Enter the "MICROPHONE & VOICE RECOGNITION CHECK" mode (See page NS-21).

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.
HINT:
Voice can be recorded up to 5 seconds.

(d) Check that the recorded voice is played normally without noise or distortion.
OK:
All check results are normal.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE MULTI-DISPLAY

Vehicle Speed Signal Circuit between Navigation ECU and Multi-Display

DESCRIPTION

The navigation ECU receives a vehicle speed signal from the multi-display and information about the GPS antenna, and then adjusts vehicle position.
HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram below will not operate normally.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

(a) Enter the "Display Check Mode (Vehicle Signal Check)" (See page NS-21).

(b) While driving, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost the same.

OK:

The readings are almost the same.

NG → **GO TO "VEHICLE SPEED SIGNAL CIRCUIT BETWEEN MULTI-DISPLAY AND COMBINATION METER"**

OK

2 INSPECT NAVIGATION ECU

(a) Disconnect the navigation ECU connector p2.

(b) Measure voltage.

(1) Jack up either one of the drive wheels.

(2) Move the shift lever to the neutral position.

(3) Turn the engine switch on (IG).

(4) Measure the voltage between terminal SPD of the navigation ECU and body ground when the drive wheels are turned slowly.

OK:

Voltage pulses as shown in the illustration.

OK → **REPLACE NAVIGATION ECU**

NS

NG

3	CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - MULTI-DISPLAY)

Wire Harness View:

N E124093E09

(a) Disconnect the multi-display connector p1 and navigation ECU connector p2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
SPD - SPD	Always	Below 1 Ω
SPD - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MULTI-DISPLAY

NS

Steering Pad Switch Circuit

DESCRIPTION

This circuit sends an operation signal from the steering pad switch to the radio receiver.
If there is an open in the circuit, the audio or navigation system cannot be operated using the steering pad switch.
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the radio receiver or multi-display cannot be operated using the steering pad switch, and the radio receiver or multi-display itself cannot function.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the Supplemental Restraint System (See page RS-1).

NS

1 INSPECT RADIO RECEIVER

Wire Harness View (DVD Changer Model):

Wire Harness View (CD Changer Model):

(a) Disconnect the radio receiver connector E70.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
SW1 - SWG	No switch is pushed	Approx. 100 kΩ
SW1 - SWG	SEEK+ switch: push	Approx. 0 Ω
SW1 - SWG	SEEK- switch: push	Approx. 0.3 kΩ
SW1 - SWG	VOL+ switch: push	Approx. 1 kΩ
SW1 - SWG	VOL- switch: push	Approx. 3.1 kΩ
SW2 - SWG	No switch is pushed	Approx. 100 kΩ
SW2 - SWG	MODE switch: push	Approx. 0 Ω
SW2 - SWG	VOICE switch: push	Approx. 3.1 kΩ
SW2 - SWG	ON HOOK switch: push	Approx. 0.3 kΩ
SW2 - SWG	OFF HOOK switch: push	Approx. 1 kΩ

NG → **Go to step 2**

NS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT STEERING PAD SWITCH ASSEMBLY

(a) Disconnect the steering pad switch assembly connector d1.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
AU1 - EAU	No switch is pushed	Approx. 100 kΩ
AU1 - EAU	SEEK+ switch: push	Approx. 0 Ω
AU1 - EAU	SEEK- switch: push	Approx. 0.3 kΩ
AU1 - EAU	VOL+ switch: push	Approx. 1 kΩ
AU1 - EAU	VOL- switch: push	Approx. 3.1 kΩ
AU2 - EAU	No switch is pushed	Approx. 100 kΩ
AU2 - EAU	MODE switch: push	Approx. 0 Ω
AU2 - EAU	VOICE switch: push	Approx. 3.1 kΩ
AU2 - EAU	ON HOOK switch: push	Approx. 0.3 kΩ
AU2 - EAU	OFF HOOK switch: push	Approx. 1 kΩ

NG → **REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

NS

3	INSPECT SPIRAL CABLE

(a) Disconnect the steering pad switch assembly and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Spiral Cable Position	Specified Condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU1 - AU1	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU2 - AU2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may cause airbag deployment. Be sure to read the page shown in the brackets.

HINT:
- Removal (See page RS-379)
- Installation (See page RS-382)

NG → **REPLACE SPIRAL CABLE**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (SPIRAL CABLE - RADIO RECEIVER)

NS

Illumination Circuit

DESCRIPTION

Power is supplied to the multi-display and steering pad switch assembly illumination when the light control switch is in the TAIL or HEAD position.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the Supplemental Restraint System (See page RS-1).

NS

1 CHECK ILLUMINATION

(a) Check if the illumination for the multi-display, steering pad switch assembly, glove box light, cigarette lighter, or others (seat heater switch, clock, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

Result

Condition	Proceed to
Illumination comes on for all components except steering pad switch.	A
Illumination comes on for all components except multi-display.	B
No illumination comes on (radio receiver, multi-display, glove box light, clock, cigarette lighter, etc.)	C
Illumination comes on only for glove box lighter, console light, and steering pad switch.	D

B → **Go to step 6**

C → **GO TO LIGHTING SYSTEM**

D → **GO TO COMBINATION METER SYSTEM**

NS

A

2 CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)

Spiral Cable Connector Front View:

H E120026E14

(a) Disconnect the spiral cable connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
IL+2 - Body ground	Light control SW TAIL or HEAD	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK STEERING PAD SWITCH ASSEMBLY

(a) Disconnect the steering pad switch assembly connector.

(b) Connect the positive (+) lead to terminal IL+2 and the negative (-) lead to terminal EAU of the steering pad switch assembly connector.

(c) Check if the illumination for the steering pad switch assembly comes on.

OK:

Illumination for the steering pad switch assembly comes on.

NS

NG → **REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

4	INSPECT SPIRAL CABLE

(a) Disconnect the steering pad switch assembly and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Spiral Cable Position	Specified Condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
IL+2 - IL+2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may cause airbag deployment. Be sure to read the page shown in the brackets.

HINT:
- Removal (See page RS-379)
- Installation (See page RS-382)

NG → **REPLACE SPIRAL CABLE**

OK

NS

5	CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - RADIO RECEIVER)

Radio Receiver (DVD Changer Models) Wire Harness View:

Radio Receiver (CD Changer Models) Wire Harness View:

Spiral Cable Connector Front View:

P E124074E05

(a) Disconnect the radio receiver and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
SWG - EAU	Always	Below 1 Ω
SWG - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE RADIO RECEIVER

NS

6 CHECK HARNESS AND CONNECTOR (BATTERY - MULTI-DISPLAY)

Wire Harness View:

N E119725E10

(a) Disconnect the multi-display connector E62.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
ILL+ - Body ground	Light control switch TAIL or HEAD	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

NS

7 CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMBINATION METER)

Multi-display Wire Harness View:

Combination Meter Wire Harness View:

N E134681E01

(a) Disconnect the multi-display and combination meter connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ILL- - ILL-	Always	Below 1 Ω
ILL- - HILL	Always	Below 1 Ω
ILL- - Body ground	Always	10 kΩ or higher
HILL - Body ground	Always	10 kΩ or higher

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Parking Brake Switch Circuit

DESCRIPTION

This circuit is from the parking brake switch to the multi-display.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK BRAKE WARNING LIGHT

(a) Check that the brake warning light comes on when the parking brake is applied and goes off when the parking brake is released.

OK:

The brake warning light operates as specified above.

OK → **Go to step 3**

NG

2 INSPECT PARKING BRAKE SWITCH

(a) Remove the parking brake switch.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Switch connector - Switch body	ON (When shaft is not pressed)	Below 1 Ω
Switch connector - Switch body	OFF (When shaft is pressed)	10 kΩ or higher

NG → **REPLACE PARKING BRAKE SWITCH**

OK

3 CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - PARKING BRAKE SWITCH)

Multi-display Wire Harness View:

Parking Brake Switch Connector Front View:

N E124076E02

(a) Disconnect the multi-display connector E62 and parking brake switch connector A32.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
PKB - A32-1	Always	Below 1 Ω
PKB - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

NS

AVC-LAN Circuit

DESCRIPTION

Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers the signal of each switch by communication.
When a short to +B or short to ground occurs in this AVC-LAN, the navigation system will not function normally as the communication is discontinued.

INSPECTION PROCEDURE

1 INSPECT RADIO RECEIVER

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ (E69-5) - ATX- (E69-15)	Always	60 to 80 Ω
TX+ (E70-9) - TX- (E70-10)	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

2 CHECK HARNESS AND CONNECTOR

HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-44).

(a) Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.
  (1) Disconnect all connectors in all AVC-LAN circuits.
  (2) Check for an open or short in all AVC-LAN circuits.
  OK:
  There is no open or short circuit.

AVC-LAN WIRING DIAGRAM:

*1: Master Unit

*2: Slave Unit

P

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

NS

Vehicle Speed Signal Circuit between Multi-display and Combination Meter

DESCRIPTION

The multi-display performs switch operation control during driving by receiving a vehicle speed signal from the combination meter.
HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram below will not operate normally.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer in the combination meter is normal.
OK:
Actual vehicle speed and the speed indicated on the speedometer are the same.

HINT:
The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **GO TO COMBINATION METER SYSTEM**

OK

2 INSPECT MULTI-DISPLAY

Multi-display Wire Harness View:

N E119725E11

(a) Disconnect the multi-display connector E62.
(b) Measure voltage.
  (1) Jack up either one of the drive wheels.
  (2) Move the shift lever to the neutral position.
  (3) Turn the engine switch on (IG).

H E110855E01

(4) Measure the voltage between terminal SPD of the multi-display and body ground when the drive wheels are turned slowly.
OK:
Voltage pulses as shown in the illustration.

OK → **REPLACE MULTI-DISPLAY**

NG

NS

3 CHECK HARNESS AND CONNECTOR (COMBINATION METER - MULTI-DISPLAY)

Multi-display Wire Harness View:

Combination Meter Wire Harness View:

N E134683E01

(a) Disconnect the multi-display connector E62 and combination meter connector E20.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
SPD - +S	Engine switch off	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - BODY GROUND)

Multi-display Wire Harness View:

N E119725E11

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
SPD - Body ground	Engine switch off	10 kΩ or higher

HINT:
If the resistance between terminal SPD and body ground is less than 10 kΩ, there may be a short in a wire harness, connector, or an ECU that is connected to the SPD signal wire.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR OR EACH ECU**

NS

OK

REPLACE COMBINATION METER

Reverse Signal Circuit

DESCRIPTION

The navigation ECU receives a reverse signal from the multi-display and information about the GPS antenna, and then adjusts vehicle position.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK BACK-UP LIGHT

(a) Move the shift lever to the R position and check if the back-up lights come on.
OK:
The back-up lights come on.

NG → **GO TO LIGHTING SYSTEM**

OK

2 CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

(a) Enter the "Display Check" mode (Vehicle Signal Check Mode) (See page NS-21).

(b) Check that the display changes between ON and OFF according to the shift lever operation (P and R).

OK

Shift Lever Position	Display
Reverse	ON
Except Reverse	OFF

HINT:
This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → **Go to step 5**

OK

3 CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - MULTI-DISPLAY)

(a) Disconnect multi-display connector p1 and navigation ECU connector p2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
REV - REV	Always	Below 1 Ω
REV - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

NS

4 INSPECT NAVIGATION ECU

Wire Harness View:

N E124079E04

(a) Reconnect the multi-display connector p1.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
REV - Body ground	Engine switch is on (IG). Shift lever is moved to Reverse position.	10 to 14 V
REV - Body ground	Engine switch is on (IG). Shift lever is moved to any position except Reverse.	Below 1 V

NG → **REPLACE MULTI-DISPLAY**

OK

REPLACE NAVIGATION ECU

NS

5 INSPECT MULTI-DISPLAY

Wire Harness View:

N E119725E12

(a) Disconnect the multi-display connector E62.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
REV - Body ground	Engine switch is on (IG). Shift lever is moved to Reverse position.	10 to 14 V
REV - Body ground	Engine switch is on (IG). Shift lever is moved to any position except Reverse.	Below 1 V

OK → **REPLACE MULTI-DISPLAY**

NG

REPAIR OR REPLACE HARNESS OR CONNECTOR (MULTI-DISPLAY - PARK/NEUTRAL POSITION SWITCH)

Navigation Voice Circuit

DESCRIPTION

This circuit is used when the voice guidance in the navigation system is on.

WIRING DIAGRAM

NS

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - NAVIGATION ECU)

Wire Harness View:

N E124093E11

(a) Disconnect the multi-display connector p1 and the navigation ECU connector p2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
IVI- - IVI-	Always	Below 1Ω
IVI+ - IVI+	Always	Below 1Ω
IVI- - Body ground	Always	10 kΩ or higher
IVI+ - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

NS

2	CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - STEREO COMPONENT AMPLIFIER)

Multi-display Wire Harness View:

Stereo Component Amplifier (with Rear Header Speaker System) Wire Harness View:

Stereo Component Amplifier (without Rear Header Speaker System) Wire Harness View:

N

E124083E05

(a) Disconnect the multi-display connector E63 and stereo component amplifier connector M30.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
IVO+ - II1+	Always	Below 1Ω
IVO- - II1-	Always	Below 1Ω
IVO+ - Body ground	Always	10 kΩ or higher
IVO- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

NS

Display Signal Circuit between Navigation ECU and Multi-display

DESCRIPTION

This is the display signal circuit from the navigation ECU to the multi-display.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - MULTI-DISPLAY)

(a) Disconnect the navigation ECU connector q1 and multi-display connector q1.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
GVI+ - GVI+	Always	Below 1 Ω
GVI- - GVI-	Always	Below 1 Ω
GVG1 - GND	Always	Below 1 Ω
GVI+ - Body ground	Always	10 kΩ or higher
GVI- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Display Signal Circuit between Multi-display and Radio Receiver

DESCRIPTION

This is the DVD display signal circuit from the radio receiver to the multi-display.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - MULTI-DISPLAY)

Multi-display Wire Harness View:

Radio Receiver Wire Harness View:

N E124085E02

(a) Disconnect the multi-display connector E64 and radio receiver E72 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
GND - SGD1	Always	Below 1 Ω
NTSC - NTSC	Always	Below 1 Ω
SLD - SGND	Always	Below 1 Ω
NTSC - Body ground	Always	10 kΩ or higher
GND - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT RADIO RECEIVER (OUTPUT SIGNAL)

Multi-display Wire Harness View:

N E119727E02

(a) Reconnect the radio receiver connector E72.

NS

(b) Measure the waveform according to the table below.
OK

Tester Connection	Condition	Specified Condition
NTSC - Body ground	**DVD display is ON**	**A waveform synchronized with display signals is output**

HINT:
The waveform pattern may differ from that shown in the illustration below due to differences in oscilloscope settings. A normal radio receiver operating condition can be determined if any waveform is output.
Oscilloscope wave
Terminal: NTSC - Body ground
Setting: 200 mV/DIV. 10 μs/DIV.
Condition: DVD display is on.

NG → **REPLACE RADIO RECEIVER**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Microphone Circuit between Overhead J/B and Multi-display

DESCRIPTION

This circuit sends a microphone signal from the overhead J/B to the multi-display. It also supplies power from the multi-display to the overhead J/B.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (OVERHEAD J/B - MULTI-DISPLAY)

Overhead J/B Wire Harness View:

Multi-display Wire Harness View:

N E134685E01

(a) Disconnect the overhead J/B connector Q2 and multi-display connector E63.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ACC - MACC	Always	Below 1 Ω
MI1+ - MIN+	Always	Below 1 Ω
MIC- - MIN-	Always	Below 1 Ω
TSW- - SGND	Always	Below 1 Ω
ACC - Body ground	Always	10 kΩ or higher
MI1+ - Body ground	Always	10 kΩ or higher
MIC- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT MULTI-DISPLAY

Wire Harness View:

N E119733E02

(a) Reconnect the multi-display connector E63.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
MACC - Body ground	Engine switch on (ACC)	4 to 6 V

NG → **REPLACE MULTI-DISPLAY**

NS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Microphone Circuit between Multi-display and Navigation ECU

DESCRIPTION

This circuit sends a microphone signal from the multi-display to the navigation ECU.

WIRING DIAGRAM

NS

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - NAVIGATION ECU)

(a) Disconnect the multi-display connector p1 and navigation ECU connector p3.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
MCO+ - MCO+	Always	Below 1 Ω
MCO- - MCO-	Always	Below 1 Ω
SGND - SGND	Always	Below 1 Ω
MCO+ - Body ground	Always	10 kΩ or higher
MCO- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Dimmer Signal Circuit

DESCRIPTION

The multi-display dims the display and panel switches by receiving a TAIL cancel signal from the main body ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - MULTI-DISPLAY)

Multi-display Wire Harness View:

Main Body ECU Wire Harness View:

E134686E01

(a) Disconnect the main body ECU connector E60 and multi-display connector E62.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
DR - ACAN	Always	Below 1 Ω
DR - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT MAIN BODY ECU (OUTPUT SIGNAL)

Multi-display Wire Harness View:

N E119725E13

(a) Reconnect the main body ECU connector.
(b) Turn the engine switch on (IG).
(c) Turn the light control switch to the TAIL or HEAD position.
(d) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
DR - Body ground	Automatic light control sensor is covered.	Above 9 V

NG → **GO TO LIGHTING SYSTEM**

NS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Radio Receiver Communication Error

INSPECTION PROCEDURE

1 IDENTIFY THE COMPONENT SHOWN BY SUB-CODE

(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component shown by the sub-code.
HINT:
- "110 (multi-display)" is the component shown by the sub-code in the example shown in the illustration.
- The sub-code will be indicated by its physical address.
- For the component list, refer to "DIAGNOSIS DISPLAY DETAILED DESCRIPTION" (See page NS-30).

NS

NEXT

2 CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

(a) Inspect the power source circuit of the component shown by the sub-code.
If the power source circuit is operating normally, proceed to the next step.

Component Table:

Component	Proceed to
Stereo component amplifier (440)	Stereo component amplifier power source circuit (See page AV-164)
Multi-display (110)	Multi-display power source circuit (See page NS-228)

Component	Proceed to
Navigation ECU (178)	Navigation ECU power source circuit (See page NS-230)

NEXT

3 INSPECT RADIO RECEIVER

DVD Changer Models
Wire Harness View:

CD Changer Models
Wire Harness View:

P E124056E03

(a) Disconnect the radio receiver connectors.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
ATX+ (E69-5) - ATX- (E69-15)	Always	60 to 80 Ω
TX+ (E70-9) - TX- (E70-10)	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

4 CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT SHOWN BY SUB-CODE)

HINT:
- Start the check from the circuit that is near the component shown by the sub-code first.
- For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-44).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.

NS

(1) Disconnect all connectors between the radio receiver and the component shown by sub-code.
(2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.
OK:
There is no open or short circuit.

Navigation ECU Power Source Circuit

DESCRIPTION

This is the power source circuit to operate the navigation ECU.
The power is sent from the battery to the navigation ECU through the multi-display.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT NAVIGATION ECU

(a) Disconnect the navigation ECU connector p2.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
GND - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
BU+B - GND	Always	10 to 14 V
ACC - GND	Engine switch on (ACC)	10 to 14 V

NG → **Go to step 2**

NS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - MULTI-DISPLAY)

Wire Harness View:

N E124093E10

(a) Disconnect the navigation ECU connector p2 and multi-display connector p1.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
GND - GND	Always	Below 1 Ω
ACC - ACC	Always	Below 1 Ω
BU+B - BU+B	Always	Below 1 Ω
GND - Body ground	Always	10 kΩ or higher
ACC - Body ground	Always	10 kΩ or higher
BU+B - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NS

OK

REPLACE MULTI-DISPLAY

SYSTEM NORMAL CONDITION CHECK

1. CHECK NORMAL CONDITION

(a) If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.

Symptom	Answer
A longer route than expected is chosen.	Depending on the road conditions, the navigation ECU may determine that a longer route is quicker.
Even when distance priority is high, the shortest route is not shown.	Some paths may not be advised due to safety concerns.
When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the actual position.	If the vehicle starts before the navigation system activates, the system may not react.
When running on certain types of roads, especially new roads, the vehicle position deviates from the actual position.	When the vehicle is driving on new roads not available on the map disc, the system attempts to match it to another nearby road, causing the position mark to deviate.

(b) The following symptoms are not a malfunction, but are caused by errors inherent in the GPS, gyro sensor, speed sensor, and navigation ECU.

(1) The current position mark may be displayed on a nearby parallel road.

(2) Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.

(3) When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.

(4) When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.

(5) When the vehicle runs on a steep hill, the current vehicle position mark may deviate from the correct position.

(6) When the vehicle makes a continuous turn of 360, 720, 1,080, etc. degrees, the current vehicle position mark may deviate from the correct position.

(7) When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

(8) When the engine switch is turned on (ACC or ON) on a turntable before parking, the current vehicle position mark may not point in the correct direction. The same will occur when the vehicle comes out of parking.

NS

(9) When the vehicle runs on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

(10) When a tire is changed, the current vehicle position mark may deviate from the correct position.
HINT:
- Diameter of the tire may change, causing a speed sensor error.
- Performing the "tire change" in calibration mode will allow the system to correct the current vehicle position faster.

REMOVAL

1. **EJECT MAP DISC (See page NS-238)**
2. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
3. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
5. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
6. **REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)**
7. **REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-170)**
8. **REMOVE NO. 1 RADIO BRACKET (See page AV-170)**
9. **REMOVE NO. 2 RADIO BRACKET (See page AV-170)**
10. **REMOVE MULTI-DISPLAY ASSEMBLY**
    (a) Disengage the 2 claws and 4 clips.

NS

(b) Remove the multi-display assembly.

INSTALLATION

1. **INSTALL MULTI-DISPLAY ASSEMBLY**
   (a) Engage the 2 claws and 4 clips and install the multi-display assembly.

2. **INSTALL NO. 2 RADIO BRACKET (See page AV-173)**
3. **INSTALL NO. 1 RADIO BRACKET (See page AV-173)**
4. **INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-173)**
5. **INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-41)**
6. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
7. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**
8. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**
9. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**
10. **INSERT MAP DISC (See page NS-241)**
11. **ADJUST CLOCK**

DISPLAY CHECK MODE

HINT:
- This mode checks the color display on the multi-display.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-48)

2. DISPLAY CHECK

(a) Select "Display Check" from the "Diagnosis MENU" screen.

3. COLOR BAR CHECK

(a) Select "Color Bar Check" from the "Display Check" screen.

(b) Select a color bar from the "Color Bar Check Mode" screen.

(c) Check the display color.

HINT:
- The entire screen turns to the color or stripe selected.
- Touching the display will return to the "Color Bar Check" screen.

NS

4. TOUCH SWITCH CHECK

(a) Select "Touch Switch Check" from the "Display Check" screen.

(b) Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.
HINT:
- A "+" mark is displayed where the display is touched.
- The "+" mark remains on the display even after the finger is removed.

5. PANEL SWITCH CHECK

(a) Select "Panel Switch Check" from the "Display Check" screen.

(b) Operate each switch and check that the switch name and condition are correctly displayed.

Display	Contents
Push switch name/*1	• Name of the pressed switch is displayed. • If more than one switch is pressed, "MULTIPLE" is displayed.

6. VEHICLE SIGNAL CHECK

(a) Select "Vehicle Signal Check" from the "Display Check" screen.

(b) When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.
HINT:
- Only conditions having inputs are displayed.
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

7. MIC & VOICE RECOGNITION CHECK

(a) Select "Mic & Voice Recognition Check" on the "Display Check" screen to display "MICROPHONE & VOICE RECOGNITION CHECK" screen.

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.

(d) Check that the recorded voice is played normally.
HINT:
For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

NS

8. CAN CHECK

(a) Select "CAN check" from the "Display check" screen.

(b) Check the CAN connection check result.
HINT:
- This function operates only for the systems connected to the CAN system.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

NS

BLUETOOTH TEL CHECK MODE

HINT:
Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-48)

2. "BLUETOOTH" TEL CHECK

(a) Select ""Bluetooth" TEL Check" from the "Diagnosis MENU" screen.

3. "BLUETOOTH" CHECK

(a) Select ""Bluetooth" Check" from the ""Bluetooth" Handsfree Check Menu" screen.

(b) Select "Serial Communication Log" from the ""Bluetooth" Check Menu" screen.

(1) The communication log data in the display ECU are displayed on this screen.
HINT:
The displayed data can be used as a reference.

NS

(c) Select "Software Version" from the ""Bluetooth" Check Menu" screen.

(1) Check the software version of the "Bluetooth" module.

Screen Description:

Display	Contents
General Version/*1	• General software version of "Bluetooth" module • If any of the API version, upper stack version, and low stack version is updated, the general version is upgraded.
API Version/*2	API software version is displayed.
Upper Stack Version/*3	Upper Stack version is displayed.
Lower Stack Version/*4	Lower Stack version is displayed.

HINT:
This function is controlled by the built-in display ECU.

4. HANDSFREE VOICE QUALITY SET

(a) Select "Handsfree Voice Quality Set" from the ""Bluetooth" Handsfree Check Menu" screen.

(b) Check the handsfree voice level.

Screen Description:

Display	Contents
Received voice level adjustment/*1	Setting possible for the voice level received from "Bluetooth" compatible phones.
Sent voice level adjustment/*2	Setting possible for the voice sent to "Bluetooth" compatible phones.

HINT:
This function is controlled by the built-in display ECU.
NOTICE:
"Voice Quality Type" should not be changed.

REMOVAL

1. EJECT MAP DISC

(a) Disengage the 8 claws and remove the cover as shown in the illustration.

(b) Turn the engine switch on (ACC).
(c) Push the "MENU" button.
(d) Touch "Map DVD" on the navigation screen.
(e) Touch "EJECT DVD" on the navigation screen to eject the map disc.
(f) Turn the engine switch off.

2. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)

3. REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)

4. REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)

5. REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)

6. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)

7. REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-170)

8. REMOVE NO. 1 RADIO BRACKET (See page AV-170)

9. REMOVE NO. 2 RADIO BRACKET (See page AV-170)

10. REMOVE MULTI-DISPLAY ASSEMBLY

(a) Disengage the 2 claws and 4 clips.

(b) Remove the multi-display assembly.

11. REMOVE NAVIGATION ECU

(a) Disconnect each connector.

(b) Remove the 2 screws.

(c) Remove the 2 screws.

NS

(d) Remove the navigation ECU as shown in the illustration.

INSTALLATION

1. INSTALL NAVIGATION ECU

(a) Install the navigation ECU as shown in the illustration.

(b) Install the 2 screws.

(c) Install the 2 screws.

(d) Connect each connector.

2. INSTALL MULTI-DISPLAY ASSEMBLY

(a) Engage the 2 claws and 4 clips and install the multi-display assembly.

3. INSTALL NO. 2 RADIO BRACKET (See page AV-173)

4. INSTALL NO. 1 RADIO BRACKET (See page AV-173)

5. INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-173)

6. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)

7. INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)

8. INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)

9. INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-41)

10. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)

11. INSERT MAP DISC

(a) Turn the engine switch on (ACC).

(b) Insert the map disc.

(c) Engage the 8 claws and install the cover as shown in the illustration.

(d) Turn the engine switch off.

12. ADJUST CLOCK

NAVIGATION CHECK MODE

HINT:
- This mode displays GPS satellite information.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-48)

2. NAVIGATION CHECK

(a) Select "Navigation Check" from the "Diagnosis MENU" screen.

3. GPS INFORMATION

(a) Select "GPS Information" from the "Navigation Check" screen.

(b) When GPS information is displayed, check the GPS conditions.

HINT:
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

4. VEHICLE SENSORS

(a) Select "Vehicle Sensors" from the "Navigation Check" screen.

(b) Check all the signals and sensors when vehicle signal information is displayed.
HINT:
- This screen is updated once per second when input signals to the vehicle are changed.
- This screen displays vehicle signals input to the navigation ECU.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

5. COLOR BAR CHECK

(a) Select "Color Bar Check" from the "Navigation Check" screen.

(b) Check each color of the color bar when the "NAVI Color Bar Check" screen is displayed.
HINT:
- Colors will not be displayed full-screen as in "Display Check Mode".
- This screen displays the navigation ECU display color.

NS

6. MEMORY COPY/PASTE CHECK

HINT:
This function cannot be used.

7. PARTS INFORMATION

(a) Select "Parts Information" from the "Navigation Check" screen.

(b) Check the navigation and disc information when the "Parts Information" screen is displayed.

Screen Description:

Display	Contents
Navigation Manufacturer/*1	Navigation ECU manufacturer is displayed.
Navigation Version/*2	Navigation ECU version is displayed.
Disc Manufacturer/*3	Map disc manufacturer is displayed.
Disc Version/*4	Map disc version is displayed.

8. MIC & VOICE RECOGNITION CHECK

(a) Select "Mic & Voice Recognition Check" on the "Navigation Check" screen to display "MICROPHONE & VOICE RECOGNITION CHECK" screen.

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.

(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally.

HINT:

- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).
- This function is controlled by the built-in navigation ECU.

NS

9. DVD PLAYER INFORMATION CHECK

(a) Select "DVD Player Information" from the "Navigation Check" screen.

(b) Check for DTCs.

HINT:

- This is a DVD player check function in the navigation ECU.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

NS

DIAGNOSIS DISPLAY DETAILED DESCRIPTION

HINT:
- This section contains a detailed description of displays within diagnostic mode.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. SYSTEM CHECK

(a) System Check Mode Screen

P

I100055E08

(1) Device Names and Hardware Address/*1

HINT:
- Registered device names are displayed.
- If a device name is unknown to the system, its physical address is shown instead.

Address No.	Name	Address No.	Name
110	EMV	120	AVX
128	1DIN TV	140	AVN
144	G-BOOK	178	NAVI
17C	MONET	190	AUDIO H/U
1AC	CAMERA-C	1B0	Rr-TV
1C0	Rr-CONT	19D	BT-HF
1C4	PANEL	1C6	G/W
1C8	FM-M-LCD	1D8	CONT-SW
1EC	Body	118	EMVN
1F1	XM	1F2	SIRIUS
230	TV-TUNER	240	CD-CH2
250	DVD-CH	280	CAMERA
360	CD-CH1	3A0	MD-CH

Address No.	Name	Address No.	Name
17D	TEL	440	DSP-AMP
530	ETC	1F6	RSE
1A0	DVD-P	1D6	CLOCK
238	DTV	480	AMP

(2) Check Result/*2
HINT:
Result codes for all devices are displayed.

Result	Meaning	Action
OK	The device did not respond with a DTC (excluding communication DTCs from the AVC-LAN).	-
EXCH	The device responds with a "replace"-type DTC.	Check the DTC in "Unit Check Mode" and replace the device.
CHEK	The device responds with a "check"-type DTC.	Check the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responds with an "old"-type DTC.	Check the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.

NS

(3) Code Clear/*3
- Present DTCs are cleared.
- Press the "Code CLR" switch for 3 seconds.

(4) Memory Clear/*4
- Present and past DTCs and registered connected device names are cleared.
- Press the "Memory CLR" switch for 3 seconds.

(b) Diagnosis MENU Screen

P

E120070

HINT:
Each item is grayed out or not displayed based on the device settings.

(c) Unit Check Mode Screen

P

E120071E02

NS

Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target device logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Timestamp/*4	The time and date of past DTCs are displayed. (The year is displayed in 2-digit format.)
Present Code/*5	DTCs output at the service check are displayed.
Past Code/*6	Diagnostic memory results and recorded DTCs are displayed.
Diagnosis Clear Switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

(d) LAN Monitor (Original) Screen

P

I100058E04

(1) Check Result/*1

HINT:

Check results of all the devices are displayed.

Result	Meaning	Action
No Err (OK)	There are no communication DTCs.	-
CHEK	The device responds with a "check" -type DTC.	Check the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responded with an "old" -type DTC.	Check the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.

NS

(e) LAN Monitor (Individual) Screen

P

E120072E01

NS

Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Sub-code (device address)/*4	Physical address stored with DTC (If there is no address, nothing is displayed.)
Connection check No./*5	Connection check number stored with DTC
DTC occurrence/*6	Number of times the same DTC has been recorded
Diagnosis Clear Switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

2. DISPLAY CHECK

(a) Vehicle Signal Check Mode Screen

P I100060

NS

Screen Description:

Name	Contents
Battery	Battery voltage is displayed.
PKB	Parking brake ON/OFF state is displayed.
REV	Reverse signal ON/OFF state is displayed.
IG	Engine switch ON/OFF state is displayed.
ADIM/TCAN	Brightness state DIM (with) / BRIGHT (without) is displayed.
TAIL	TAIL signal (Light control switch) ON/OFF state is displayed.
SPEED	Vehicle speed is displayed in km/h.

HINT:

- Only items sending a vehicle signal will be displayed.
- This screen is updated once per second when input signals to the vehicle are changed.

(b) Microphone & Voice Recognition Check Screen

P

E125091E02

NS

Screen Description:

Name	Contents
Microphone input level meter/*1	Monitors the microphone input level every 100 ms and displays the results in 8 different levels.
Recording switch/*2	Starts recording.
Stop switch/*3	Stops recording.
Play switch/*4	Plays the recorded voice.

HINT:

- The microphone input function is on at all times when this screen is displayed.
- While recording or playing, the switches other than the stop switch cannot be pushed.
- When no voice is recorded, the play switch cannot be pushed.
- Recording will stop after 5 seconds or by pushing the stop switch.

(c) CAN Connection Check Screen

P

E120075E01

Screen Description:

Name	Contents
CAN Connection check result/*1	• For systems connected to the CAN system, the results of the CAN connection check are displayed. • "NG" - The engine switch is on (ACC or IG) and the CAN communication lines are malfunctioning or the CAN bus lines are not connected. • "OK" - The engine switch is on (ACC or IG) and the CAN communication lines are normal. • Blank - CAN connection check is performed with the engine switch on (ACC) or off.

HINT:

- This function operates only for the systems connected to the CAN system.
- When the engine switch is turned off, the bus lines are disconnected, or a malfunction occurs in the bus lines while the CAN connection check result is being displayed, the problem will be reflected on the screen in real time.

3. NAVIGATION CHECK

(a) Navigation Check Screen

P

E120076E01

NS

HINT:
Each item is grayed out or not displayed based on the device settings.

(b) GPS Information Screen

P

E136147E02

(1) Satellite information/*1
Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction, and signal level.

(2) Receiving condition/*2

(DENSO model):

Display	Contents
T	The system is receiving a GPS signal, but is not using it for location.
P	The system is using the GPS signal for location.
-	The system cannot receive a GPS signal.

(AISIN AW model):

Display	Contents
01H	The system cannot receive a GPS signal.
02H	The system is tracing a satellite.
03H	The system is receiving a GPS signal, but is not using it for location.
04H	The system is using the GPS signal for location.

Measurement information/*3:

Display	Contents
2D	2-dimensional location method is being used.
3D	3-dimensional location method is being used.
NG	Location data cannot be used.
Error	Reception error has occurred.
-	Any other state.

Position information/*4

Display	Contents
Position	Latitude and longitude information on the current position is displayed.

Date information/*5:

Display	Contents
Date	The date/time information obtained from GPS signal is displayed in Greenwich mean time (GMT). The last 4 digits are displayed.

(c) Vehicle Sensors Screen

P

E120077E01

NS

Vehicle signal:

Display	Contents
REV/*1	REV signal ON/OFF state is displayed.
SPD/*2	SPD signal condition is displayed.

Sensor signal:

Display	Contents
Gyro sensor/*3	Gyro sensor output condition is displayed (when the vehicle runs straight or is stationary, the voltage is approximately 2.5 V).

HINT:
Signals are updated once per second only when vehicle sensor signals are changed.

(d) Microphone & Voice Recognition Check Screen

P

E125119E01

Screen Description:

Display	Contents
Microphone input level meter/*1	Monitors the microphone input level every 100 ms and displays the results in 8 different levels.
Recording switch/*2	Starts recording.
Stop switch/*3	Stops recording.
Play switch/*4	Plays the recorded voice.
Recording indicator/*5	Comes on while recording.

HINT:
- The microphone input function is on at all times when this screen is displayed.
- While recording or playing, the switches other than the stop switch cannot be pushed.
- When no voice is recorded, the play switch cannot be pushed.
- Recording will stop after 5 seconds or by pushing the stop switch.

(e) DVD Player Information Screen

P E120078E01

Screen Description:

Display	Contents
Trouble code/*1	Each code corresponding to the malfunctions is displayed. For details, refer to "Trouble Code Description".
Occurrence time/*2	• The date (year, month, day) and time (hour, minute, second) when the trouble code was detected are displayed as a time stamp. (Greenwich mean time) • The time data to be displayed are received from the GPS receiver.
Trouble code clear switch/*3	All code data being displayed are cleared by pushing this switch for 3 seconds.
Returning switch/*4	The previous page is displayed. If the current displayed page is the first page, this switch cannot be operated.
Proceeding switch/*5	The next page is displayed. If the current displayed page is the last page, this switch cannot be operated.

Trouble Code Description:

Code	Malfunction	Countermeasure
01	Cannot be recognized	Replace navigation ECU.
03	Cannot be read	Follow the inspection procedure for DTC 58-42 (See page NS-100).

HINT:
This is a DVD player check function in the navigation ECU.

NS

REMOVAL

1. **PRECAUTION**
   (See page IP-1)
2. **TURN FRONT WHEELS TO FACE STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Waif for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
4. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-367)**
5. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-367)**
6. **REMOVE STEERING PAD (See page RS-367)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-80)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-39)**
9. **REMOVE FRONT DOOR OPENING TRIM COVER LH (See page IR-39)**
10. **REMOVE SIDE INSTRUMENT PANEL LH (See page IP-12)**
11. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
12. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-13)**
13. **REMOVE STEERING COLUMN COVER (See page IP-13)**
14. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-80)**
15. **REMOVE TILT AND TELESCOPIC SWITCH (See page SR-80)**
16. **REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-14)**
17. **REMOVE COMBINATION METER ASSEMBLY (See page IP-14)**
18. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-14)**
19. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
20. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-42)**
21. **REMOVE FRONT DOOR OPENING TRIM COVER RH (See page IR-42)**

22. **REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-15)**
23. **REMOVE SIDE INSTRUMENT PANEL RH (See page IP-15)**
24. **REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**
25. **REMOVE LOWER INSTRUMENT PANEL RH (See page IP-16)**
26. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
27. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
28. **REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)**
29. **REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-170)**
30. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**
31. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**
32. **REMOVE CONSOLE BOX POCKET (See page IP-18)**
33. **REMOVE CONSOLE BOX CARPET (See page IP-18)**
34. **REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-19)**
35. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-19)**
36. **REMOVE FRONT PILLAR GARNISH LH (See page IR-39)**
37. **REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-20)**
38. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-184)**
39. **REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-20)**
40. **REMOVE FRONT PILLAR GARNISH RH (See page IR-42)**
41. **REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-21)**
42. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-21)**
43. **REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-21)**
44. **REMOVE NO. 1 SPEAKER HOLE COVER (See page IP-21)**

45. **REMOVE FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)**

46. **REMOVE NO. 1 INSTRUMENT PANEL MOUNTING BRACKET (See page IP-22)**

47. **REMOVE PUSH START SWITCH (See page IP-22)**

48. **DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-414)**

49. **REMOVE ROOM TEMPERATURE SENSOR (See page AC-214)**

50. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player) (See page IP-22)**

51. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player) (See page IP-24)**

52. **REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-27)**

53. **REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT (See page IP-28)**

54. **REMOVE DEFROSTER NOZZLE ASSEMBLY (See page IP-28)**

55. **REMOVE NO. 1 HEATER TO REGISTER DUCT (See page IP-28)**

56. **REMOVE NO. 2 HEATER TO REGISTER DUCT (See page IP-28)**

57. **REMOVE NAVIGATION ANTENNA ASSEMBLY**
    (a) Disengage the 2 clamps.
    (b) Remove the 2 screws and navigation antenna assembly.

NS

INSTALLATION

1. **INSTALL NAVIGATION ANTENNA ASSEMBLY**
   (a) Install the navigation antenna assembly with the 2 screws.
   (b) Engage the 2 clamps.
2. **INSTALL NO. 2 HEATER TO REGISTER DUCT (See page IP-32)**
3. **INSTALL NO. 1 HEATER TO REGISTER DUCT (See page IP-32)**
4. **INSTALL DEFROSTER NOZZLE ASSEMBLY (See page IP-32)**
5. **INSTALL SIDE NO. 2 DEFROSTER NOZZLE DUCT (See page IP-32)**
6. **INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-32)**
7. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player) (See page IP-33)**
8. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player) (See page IP-35)**
9. **INSTALL ROOM TEMPERATURE SENSOR (See page AC-215)**
10. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-416)**
11. **INSTALL PUSH START SWITCH (See page IP-37)**
12. **INSTALL NO. 1 INSTRUMENT PANEL MOUNTING BRACKET (See page IP-38)**
13. **INSTALL FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)**
14. **INSTALL NO. 1 SPEAKER HOLE COVER (See page IP-38)**
15. **INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-39)**
16. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-39)**
17. **INSTALL NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-39)**
18. **INSTALL FRONT PILLAR GARNISH RH (See page IR-65)**
19. **INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-38)**
20. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-185)**
21. **INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-39)**

22. **INSTALL FRONT PILLAR GARNISH LH (See page IR-64)**
23. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-39)**
24. **INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-40)**
25. **INSTALL CONSOLE BOX CARPET (See page IP-41)**
26. **INSTALL CONSOLE BOX POCKET (See page IP-41)**
27. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)**
28. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)**
29. **INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-173)**
30. **INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-41)**
31. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**
32. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**
33. **INSTALL LOWER INSTRUMENT PANEL RH (See page IP-42)**
34. **INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**
35. **INSTALL SIDE INSTRUMENT PANEL RH (See page IP-43)**

37. **INSTALL FRONT DOOR OPENING TRIM COVER RH (See page IR-65)**
38. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-65)**
39. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
40. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-44)**
41. **INSTALL COMBINATION METER ASSEMBLY (See page IP-45)**
42. **INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (See page IP-45)**
43. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-86)**
44. **INSTALL TILT AND TELESCOPIC SWITCH (See page SR-86)**

45. **INSTALL STEERING COLUMN COVER (See page IP-46)**
46. **ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-382)**
47. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-46)**
48. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**
49. **INSTALL SIDE INSTRUMENT PANEL LH (See page IP-47)**
50. **INSTALL FRONT DOOR OPENING TRIM COVER LH (See page IR-64)**
51. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-65)**
52. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-87)**
53. **INSTALL STEERING PAD (See page RS-368)**
54. **INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-369)**
55. **INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-369)**
56. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
57. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).
58. **INSPECT STEERING PAD (See page RS-369)**
59. **INSPECT FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-395)**
60. **INSPECT SRS WARNING LIGHT**
    (See page RS-37)

PROBLEM SYMPTOMS TABLE

HINT:
- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check the DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Display function:

Symptom	Suspected Area	See page
Pressing PWR switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn ON System"	NS-134
	2. Multi-display power source circuit	NS-228
	3. AVC-LAN circuit	NS-187
	4. Multi-display	NS-233
Black screen (No image appears on navigation/audio screen).	1. Proceed to "No Image Appears on Multi-display"	NS-135
	2. Multi-display power source circuit	NS-228
	3. Illumination circuit	NS-178
	4. AVC-LAN circuit	NS-187
	5. Multi-display	NS-233
Illumination for panel switch does not come on with TAIL switch on.	1. Proceed to "Illumination for Panel Switch does not Come on with Tail Switch ON"	NS-136
	2. Illumination circuit	NS-178
	3. Multi-display	NS-233
Display does not dim (Night Screen) with TAIL switch on.	1. Proceed to "Display does not DIM when Light Control Switch is Turned ON"	NS-137
	2. Dimmer signal circuit	NS-209
	3. Multi-display	NS-233
Power does not turn off (The screen remains on).	1. Multi-display power source circuit	NS-228
	2. Multi-display	NS-233
Panel switches do not function.	1. Proceed to "Panel Switches do not Function"	NS-138
	2. Steering pad switch circuit	NS-174
	3. Multi-display power source circuit	NS-228
	4. Multi-display	NS-233
Touch panel switch does not function.	1. Proceed to "Touch Panel Switch does not Function"	NS-139
	2. Steering pad switch circuit	NS-174
	3. Multi-display power source circuit	NS-228
	4. Multi-display	NS-233
Navigation screen is not displayed.	1. Proceed to "Display Signal Circuit between Navigation ECU and Multi-display"	NS-199
	2. Map disc	-
	3. Navigation ECU	NS-238
	4. Multi-display	NS-233
Navigation screen flicker or color distortion.	1. Proceed to "Screen Flicker or Color Distortion"	NS-140
	2. Proceed to "Display Signal Circuit between Navigation ECU and Multi-display"	NS-199
	3. Navigation ECU	NS-238
	4. Multi-display	NS-233

Symptom	Suspected Area	See page
DVD image cannot be displayed on multi-display. (Parking brake is on.) (*1)	1. Proceed to "Display Signal Circuit between Multi-display and Radio Receiver"	NS-201
	2. Parking brake switch circuit	NS-185
	3. Radio Receiver	AV-167
	4. Multi-display	NS-233
Navigation function switches can be operated while vehicle is running.	Proceed to "Vehicle Speed Signal Circuit between Multi-display and Combination Meter"	NS-189

*1: for Radio receiver with built-in DVD changer models.

Navigation function:

Symptom	Suspected Area	See page
Map disc cannot be inserted.	1. Proceed to "Map Disc cannot be Inserted"	NS-142
	2. Navigation ECU power source circuit	NS-230
	3. Navigation ECU	NS-238
Map disc cannot be ejected.	1. Proceed to "Map Disc cannot be Ejected"	NS-143
	2. Navigation ECU power source circuit	NS-230
	3. Navigation ECU	NS-238
Vehicle position mark deviates greatly.	1. Proceed to "Vehicle Position Mark Deviates Greatly"	NS-144
	2. GPS antenna	NS-250
	3. Navigation ECU	NS-238
Cursor or map rotates when vehicle is stopped.	1. Proceed to "Cursor or Map Rotates when Vehicle is Stopped"	NS-146
	2. Navigation ECU	NS-238
Vehicle position mark is not updated.	1. Proceed to "Vehicle Position Mark is not Updated"	NS-147
	2. Map disc	-
	3. Navigation ECU	NS-238
Current position display does not appear.	1. Proceed to "Current Position Display does not Appear"	NS-148
	2. Map disc	-
	3. GPS antenna	NS-250
	4. Navigation ECU	NS-238
GPS Mark is not displayed.	1. Proceed to "GPS Mark is not Displayed"	NS-149
	2. GPS antenna	NS-250
	3. Navigation ECU	NS-238
Voice guidance does not function.	1. Proceed to "Voice Guidance does not Function"	NS-152
	2. Navigation voice circuit	NS-196
	3. Map disc	-
	4. Navigation ECU	NS-238
	5. Stereo component amplifier	AV-176
Map display incomplete.	1. Proceed to "Map Display Incomplete"	NS-155
	2. Map disc	-
	3. Navigation ECU	NS-238
Route cannot be calculated.	1. Proceed to "Route cannot be Calculated"	NS-156
	2. Map disc	-
	3. Navigation ECU	NS-238
Voice recognition difficulty.	1. Proceed to "Voice Recognition Difficulty"	NS-157
	2. Navigation ECU	NS-238

Symptom	Suspected Area	See page
Voice is not recognized.	1. Proceed to "Voice is not Recognized"	NS-159
	2. Proceed to "Microphone circuit between Overhead J/B and Multi-display"	NS-204
	3. Proceed to "Microphone circuit between Multi-display and Navigation ECU"	NS-207
	4. Steering pad switch circuit	NS-174
	5. Microphone	AV-250
	6. Navigation ECU	NS-238
Speed signal does not change in the navigation check mode.	Proceed to "Vehicle Speed Signal Circuit between Navigation ECU and Multi-display"	NS-171
Reverse signal does not change in the navigation check mode.	Proceed to "Reverse Signal Circuit"	NS-193

Steering pad switch function:

Symptom	Suspected Area	See page
The system cannot be operated by the steering pad switch.	1. Steering pad switch circuit	NS-174
	2. Radio receiver	AV-167
Illumination for steering pad switch does not come on with tail switch on.	1. Illumination circuit	NS-178
	2. Radio receiver	AV-167

"Bluetooth" function:

Symptom	Suspected Area	See page
Cellular phone registration failure, phone directory transfer failure.	Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure"	NS-162
Cellular phone cannot send/receive.	1. Proceed to "Cellular Phone cannot Send/Receive"	NS-164
	2. Steering pad switch circuit	NS-174
	3. Radio receiver	AV-167
Cannot call in a certain place.	Proceed to "Cannot call in a Certain Place"	NS-166
The other caller's voice cannot be heard, is too quiet, or distorted.	1.Proceed to "The Other Caller's Voice cannot be Hear, is too Quiet, or Distorted"	NS-167
	2. Multi-display	NS-233
The other caller cannot hear your voice, or your voice is too quiet or distorted.	1. Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted"	NS-169
	2. Proceed to "Microphone circuit between Overhead J/B and Multi-display"	NS-204
	3. Microphone	AV-250
	4. Multi-display	NS-233

TERMINALS OF ECU

1. MULTI-DISPLAY

NS

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
+B1 (E62-1) - GND1 (E62-10)	GR - W-B	Battery	Always	10 to 14 V
ACC (E62-2) - GND1 (E62-10)	GR - W-B	Accessory (ON)	Turn engine switch off	Below 1 V
ACC (E62-2) - GND1 (E62-10)	GR - W-B	Accessory (ON)	Turn engine switch on (ACC or IG)	10 to 14 V
IG (E62-3) - GND1 (E62-10)	B - W-B	Ignition (ON)	Turn engine switch off	Below 1 V
IG (E62-3) - GND1 (E62-10)	B - W-B	Ignition (ON)	Turn engine switch on (IG)	10 to 14 V
HILL (E62-5) - GND1 (E62-10)	BR - W-B	Illumination signal	Turn light control switch OFF	Below 1 V
HILL (E62-5) - GND1 (E62-6)	BR - W-B	Illumination signal	Turn light control switch ON	10 to 14 V
TC (E62-7) - GND1 (E62-10)	W - W-B	Diagnosis ON signal	Turn engine switch on (IG)	9 to 14 V
HAZ (E62-8) - GND1 (E62-10)	W - W-B	Hazard signal	Turn hazard switch OFF	Below 1 V
HAZ (E62-8) - GND1 (E62-10)	W - W-B	Hazard signal	Turn hazard switch ON	Pulse generation
ARON (E62-9) - GND1 (E62-10)	R - W-B	Passenger airbag ON signal	Turn engine switch on (IG), Passenger airbag on indicator light ON	10 to 14 V
GND1 (E62-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
ILL- (E62-11) - GND1 (E62-10)	BR - W-B	Illumination signal	Turn light control switch OFF	Below 1 V
ILL- (E62-11) - GND1 (E62-10)	BR - W-B	Illumination signal	Turn light control switch ON	10 to 14 V
ILL+ (E62-12) - GND1 (E62-10)	G - W-B	Illumination signal	Turn light control switch OFF	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
ILL+ (E62-12) - GND1 (E62-10)	G - W-B	Illumination signal	Turn light control switch ON	10 to 14 V
REV (E62-13) - GND1 (E62-10)	Y - W-B	Reverse signal	See "Vehicle Signal Check" Mode (See page NS-21)	-
SPD (E62-14) - GND1 (E62-10)	SB - W-B	Speed signal from combination meter	See "Vehicle Signal Check" Mode (See page NS-21)	-
AIR (E62-20) - GND1 (E62-10)	B - W-B	Passenger airbag OFF signal	Turn engine switch on (IG), Passenger airbag off indicator light ON	10 to 14 V
PBEW (E62-21) - GND1 (E62-10)	P - W-B	Passenger seat belt warning signal	Turn engine switch on (IG), front passenger seat and front seat buckle switch ON (Belt unfastened)	10 to 14 V
PBEW (E62-21) - GND1 (E62-10)	P - W-B	Passenger seat belt warning signal	Turn engine switch on (IG), front passenger seat and front seat buckle switch OFF (Belt fastened)	Below 1 V
DR (E62-22) - GND1 (E62-10)	L - W-B	Dimmer signal	Turn engine switch on (IG), light control switch TAIL or ON and automatic light control sensor covered by hand	Above 9 V
PKB (E62-23) - GND1 (E62-10)	Y - W-B	Parking brake signal	See "Vehicle Signal Check" Mode (See page NS-21)	-
CANL (E62-25) - CANH (E62-26)	Y - L	CAN bus line	Go to CAN communication system (See page CA-16)	-
TX2- (E63-3) - GND1 (E62-10)	LG - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
TX2+ (E63-4) - GND1 (E62-10)	L - W-B	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
TSW- (E63-5) - GND1 (E62-10)	W - W-B	Telephone relation switch signal	Always	Below 1 V
MACC (E63-9) - GND1 (E62-10)	W - W-B	Microphone AMP power supply	Turn engine switch off	Below 1 V
MACC (E63-9) - GND1 (E62-10)	W - W-B	Microphone AMP power supply	Turn engine switch on (IG)	5 V
MIN- (E63-10) - GND1 (E62-10)	R - W-B	Microphone voice signal	See "Microphone & Voice Recognition Check" (See page NS-21)	-
MIN+ (E63-11) - GND1 (E62-10)	G - W-B	Microphone voice signal	See "Microphone & Voice Recognition Check" (See page NS-21)	-
SGND (E63-12) - GND1 (E62-10)	W - W-B	Signal ground	Always	Below 1 V
CA+ (E63-13) - GND1 (E62-10)	B - W-B	Television camera power supply	Turn engine switch on (IG), shift lever in R position	Approx. 6 V
CGND (E63-14) - Body ground	W - Body ground	Ground	Always	Below 1 V
IVO- (E63-21) - GND1 (E62-10)	BR - W-B	Voice guidance signal	Voice guidance is provided	A waveform synchronized with sounds is output
IVO+ (E63-22) - GND1 (E62-10)	Y - W-B	Voice guidance signal	Voice guidance is provided	A waveform synchronized with sounds is output
SLD (E63-23) - GND1 (E62-10)	Shielded - W-B	Shielded ground	Always	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
V+ (E63-27) - CGND (E63-14)	R - W	Television camera image signal	Turn engine switch on (IG), shift lever in R position	Pulse generation (Refer to waveform 1)
V- (E63-28) - CGND (E63-14)	Shielded - W	Shielded ground	Always	Below 1 V
NTSC (E64-1) - GND1 (E62-10)	BR - W-B	DVD image signal	DVD is played on radio receiver	Pulse generation (Refer to waveform 2)
SGD1 (E64-4) - GND1 (E62-10)	Y - W-B	Signal ground	Always	Below 1 V
SGND (E64-5) - Body ground	Shielded - Body ground	Shielded ground	Always	Below 1 V
TX- (p1-1) - GND (p1-6)	-	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
TX+ (p1-2) - GND (p1-6)	-	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
SGND (p1-3) - GND (p1-61)	-	Shielded ground	Always	Below 1 V
MCO- (p1-4) - GND (p1-6)	-	Microphone voice signal	See "Microphone & Voice Recognition Check" (See page NS-27)	-
MCO+ (p1-5) - GND (p1-6)	-	Microphone voice signal	See "Microphone & Voice Recognition Check" (See page NS-27)	-
GND (p1-6) - Body ground	-	Ground	Always	Below 1 V
ACC (p1-7) - GND (p1-6)	-	Accessory (ON)	Turn engine switch off	Below 1 V
ACC (p1-7) - GND (p1-6)	-	Accessory (ON)	Turn engine switch on (ACC)	10 to 14 V
BU+B (p1-8) - GND (p1-6)	-	Battery	Always	10 to 14 V
IVI- (p1-10) - GND (p1-6)	-	Voice guidance signal	Voice guidance is provided	A waveform synchronized with sounds is output
IVI+ (p1-11) - GND (p1-6)	-	Voice guidance signal	Voice guidance is provided	A waveform synchronized with sounds is output
REV (p1-15) - GND (p1-6)	-	Reverse signal	See "Vehicle Sensors" Mode (See page NS-27)	-
SPD (p1-16) - GND (p1-6)	-	Speed signal	See "Vehicle Sensors" Mode (See page NS-27)	-
GVI+ (q1-1) - GND (p1-6)	-	Digital image signal	Navigation display is on	Pulse generation
GVI- (q1-2) - GND (p1-6)	-	Digital image signal	Navigation display is on	Pulse generation
GVG1 (q1-3) - Body ground	-	Ground	Always	Below 1 V

(a) Reference: waveform 1
HINT:
- Terminal: V+ - CGND
- Gauge set: 0.2 V/DIV., 0.2 μs/DIV.
- Condition: Engine switch: IG, shift lever: R position

NS

(b) Reference: waveform 2
HINT:
- Terminal: NTSC - Body ground
- Gauge set: 200 mV/DIV., 10 μs/DIV.
- Condition: DVD is played on multi-display

2. NAVIGATION ECU

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
BU+B (p2-1) - GND (p2-15)	-	Battery	Always	10 to 14 V
SPD (p2-4) - GND (p2-15)	-	Speed signal	See "Vehicle Sensors" Mode (See page NS-27)	-
SLD (p2-7) - GND (p2-15)	-	Shielded ground	Always	Below 1 V
IVI- (p2-8) - GND (p2-15)	-	Voice guidance signal	Voice guidance is provided	A waveform synchronized with sounds is output
IVI+ (p2-9) - GND (p2-15)	-	Voice guidance signal	Voice guidance is provided	A waveform synchronized with sounds is output
ACC (p2-13) - GND (p2-15)	-	Accessory (ON)	Turn engine switch off	Below 1 V
ACC (p2-13) - GND (p2-15)	-	Accessory (ON)	Turn engine switch on (ACC)	10 to 14 V
GND (p2-15) - Body ground	-	Ground	Always	Below 1 V
TX- (p2-18) - GND (p2-15)	-	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
TX+ (p2-19) - GND (p2-15)	-	AVC-LAN communication signal	Turn engine switch on (ACC)	2 to 3 V
REV (p2-20) - GND (p2-15)	-	Reverse signal	See "Vehicle Sensors" Mode (See page NS-27)	-
MCO+ (p3-3) - GND (p2-15)	-	Microphone voice signal	See "Microphone & Voice Recognition Check" (See page NS-27)	-
MCO- (p3-5) - GND (p2-15)	-	Microphone voice signal	See "Microphone & Voice Recognition Check" (See page NS-27)	-
SGND (p3-6) - GND (p2-15)	-	Shielded ground	Always	Below 1 V
GVI+ (q1-1) - GND (p2-15)	-	Digital image signal	Navigation display is on	Pulse generation
GVI- (q1-2) - GND (p2-15)	-	Digital image signal	Navigation display is on	Pulse generation
GND (q1-3) - Body ground	-	Ground	Always	Below 1 V

3. RADIO RECEIVER (See page AV-16)

4. STEREO COMPONENT AMPLIFIER (See page AV-16)

DTC CHECK / CLEAR

HINT:

- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.
- If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts.
  (See page NS-187)
- After the engine switch is turned on (IG), check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.

1. START DIAGNOSTIC MODE

(a) There are 2 methods to start diagnostic mode. Start the mode by using one of them.

(b) Method 1

(1) Start the engine.

(2) While pressing and holding the "INFO" switch, operate the light control switch: OFF → Turn ON → Turn OFF → Turn ON → Turn OFF → Turn ON → Turn OFF.

(3) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

E134674E01

(c) Method 2

(1) Start the engine.

(2) Switch to the "Display Check" screen.

(3) From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

(4) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

E109432

2. FINISH DIAGNOSTIC MODE

(a) There are 2 methods to end diagnostic mode. Use one of them.

(1) Turn the engine switch off.

(2) Press and hold the "DISP" switch for 3 seconds.

NS

3. DIAGNOSIS MENU

(a) The "Diagnosis MENU" screen will be displayed by pressing the menu switch on the "System Check Mode" screen.

4. CHECK DTC

(a) Read the system check result.

(1) If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result to view the results on the "Unit Check Mode" screen and record them.

HINT:

- If all check results are "OK", go to communication DTC check.
- If a device name is not known, its physical address is displayed.

HINT:

When proceeding to view the results of another device, press the service switch to return to the "System Check Mode" screen. Repeat this step.

NS

(b) Read the communication diagnostic check result.
(1) Return to the "System Check Mode" screen, and press the "LAN Mon" switch to enter the "LAN Monitor" screen.

(2) If the check result is "CHEK" or "Old", touch the displayed check result to view the results on the individual communication diagnostic screen and record them.
HINT:
- If all check results are "No Err", the system judges that no DTC exists.
- The sub-code (relevant device) will be indicated by its physical address.
- When proceeding to view the results of another device, press the "Service" switch to return to the original "LAN Monitor" screen. Repeat this step.

5. DTC CLEAR/RECHECK

(a) Clear DTC

(1) Press the "Code CLR" switch for 3 seconds.

(2) The check results are cleared.

(b) Recheck

(1) Press the "Recheck" switch.

NS

(2) Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

(3) Press the "LAN Mon" switch to change to the "LAN Monitor" screen.

(4) Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

DIAGNOSTIC TROUBLE CODE CHART

COMMUNICATION DIAGNOSIS:

DTC Code	Detection Item	Trouble Area	See page
01-21	ROM Error	Multi-display	NS-59
01-22	RAM Error	Multi-display	NS-59
01-D5	Absence of Registration Unit	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the multi-display and the component shown by the sub-code 3. Component shown by the sub-code	NS-60
01-D6	No Master	1. Multi-display power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the multi-display and the component which has stored this code 4. Component which has stored this code 5. Multi-display	NS-62
01-D7	Connection Check Error	1. Multi-display power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the multi-display and the component which has stored this code 4. Component which has stored this code 5. Multi-display	NS-62
01-D8	No Response for Connection Check	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the multi-display and the component shown by the sub-code 3. Component shown by the sub-code	NS-60
01-D9	Last Mode Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the multi-display and the component shown by the sub-code 3. Component shown by the sub-code	NS-60
01-DA	No Response Against ON / OFF Command	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the multi-display and the component shown by the sub-code 3. Component shown by the sub-code	NS-60

DTC Code	Detection Item	Trouble Area	See page
01-DB	Mode Status Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the multi-display and the component shown by the sub-code 3. Component shown by the sub-code	NS-60
01-DC	Transmission Error	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code	NS-67
01-DD	Master Reset	1. Multi-display power source circuit 2. AVC-LAN circuit between the multi-display and the component which has stored this code 3. Multi-display 4. Component which has stored this code	NS-70
01-DE	Slave Reset	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the multi-display and the component shown by the sub-code 3. Component shown by the sub-code	NS-60
01-DF	Master Error	1. Multi-display power source circuit 2. AVC-LAN circuit between the multi-display and the component which has stored this code 3. AVC-LAN circuit between the multi-display and the radio receiver 4. Multi-display 5. Component which has stored this code	NS-75
01-E0	Registration Complete Indication Error	-	NS-80
01-E1	Voice Processing Device ON Error	1. Multi-display power source circuit 2. AVC-LAN circuit between the multi-display and the component which has stored this code 3. Multi-display 4. Component which has stored this code	NS-70
01-E2	ON / OFF Indication Parameter Error	Multi-display	NS-81
01-E3	Registration Demand Transmission	-	NS-80
01-E4	Multiple Frame Incomplete	-	NS-80

DTC	01-21	ROM Error

DTC	01-22	RAM Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-21	A malfunction exists in ROM.	Multi-display
01-22	A malfunction exists in RAM.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE MULTI-DISPLAY

NEXT

END

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *3	• A component shown by the sub-code is (was) disconnected from the system when turning the engine switch on (ACC or IG). • The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the multi-display and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	A component shown by the sub-code is (was) disconnected from the system after engine start.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system when the engine switch is (was) on (IG or ACC).	
01-DA *3	• No response is identified when changing mode. • Sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3	A slave device has been disconnected after engine start.	

NS

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: If it is reported that the device does not exist during verification, check the power source circuit and AVC-LAN circuit for the device.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK "MULTI-DISPLAY COMMUNICATION ERROR" IN FLOW CHART

Refer to the multi-display communication error (See page NS-220).

NEXT

END

SYSTEM DIAGRAM

Input signal to clearance warning ECU:

Transmitting ECU (transmitter)	Signal	Communication Method
Combination Meter	Vehicle speed signal	CAN
ECM	Shift position signal	CAN
Multi-display	Clearance sonar system setting change signal	CAN

PM

Output signal from clearance warning ECU:

Receiving ECU	Signal	Communication Method
Combination Meter	Display signal	CAN
Multi-display	Display signal	CAN

SYSTEM DESCRIPTION

1. GENERAL

(a) This system uses ultrasonic sensors to detect any obstacles at the corners and the rear of the vehicle. The system then informs the driver of the distance between the sensors and the obstacles as well as their positions by indicating them on the multi-display or multi-information display and by sounding a buzzer.

2. FUNCTION OF COMPONENTS

Component	Function
Ultrasonic sensor (6)	Detects the distance between the vehicle and an obstacle
Clearance warning buzzer	Sounds the buzzer to inform the driver according to the distance to the obstacle
Multi-information display on the combination meter	Transmits a vehicle speed signal to the clearance warning ECU. • Displays the location of the obstacle and the approximate distance between the vehicle and the obstacle. • Informs the driver if the ultrasonic sensors malfunction, or if they freeze or become dirty
Clearance sonar main switch	Operating this switch allows the operation of intuitive parking assist to be enabled or disabled.
Multi-display	Displays the location of the obstacle and the approximate distance between the vehicle and the obstacle. The buzzer volume, distance required to sound the buzzer and distance required to trigger the display can be chosen on the setup screen for the intuitive parking assist system.
Clearance warning ECU	Judges the approximate distance between the vehicle and the obstacle based on the signals from the ultrasonic sensors and sends it to the multi-information display or the multi-display. Sounds the clearance warning buzzer.
ECM	Transmits a shift position signal to the clearance sonar ECU.

3. OPERATION EXPLANATION

(a) The operating condition of each intuitive parking assist differs according to its installed position as shown in the table below:

Installation Position	Operating Condition
Front Corner Sensor	• Engine switch is ON (IG). • Clearance sonar main switch is ON. • Shift position is except P. • Vehicle speed is approx. 10 km/h (6.2 mph) or less. The sensor stops operating when the vehicle speed exceeds 15 km/h (9.3 mph), and starts operating when the vehicle speed drops to below 10 km/h (6.2 mph).
Rear Corner Sensor	• Engine switch is ON (IG). • Clearance sonar main switch is ON. • Shift position is R. • Vehicle speed is approx. 10 km/h (6.2 mph) or less. The sensor stops operating when the vehicle speed exceeds 15 km/h (9.3 mph), and starts operating when the vehicle speed drops to below 10 km/h (6.2 mph).
Rear Center Sensor	• Engine switch is ON (IG). • Clearance sonar main switch is ON. • Shift position is R.

4. ECU OR SENORS WHICH COMMUNICATE THROUGH LIN COMMUNICATION

HINT:

- The clearance warning ECU and sensors communicate with each other using LIN communication.

- Allocation refers to the process of the clearance warning ECU setting aside IDs for the sensors.
- The vehicle has the sensors arranged in two groups. There is a front series and a rear series. The sensors are connected in a "daisy chain".

(a) Initialization mode:
An ID is allocated to each sensor and sensor diagnosis is performed.

(1) When any of the following conditions are met, the clearance warning ECU provides power to the first sensors in each series (front left sensor and rear right sensor):
- The engine switch is turned on (IG).
- The sensor operating conditions (described previously) are met and the clearance sonar main switch is turned on.
- Vehicle speed is below 25 km/h (15.5 mph).

(2) After the power is supplied, the front left sensor and rear right sensor enter standby mode to receive an ID from the ECU. When a certain amount of time has elapsed, the ECU sends an ID allocation signal to these sensors.

(3) The front left sensor and rear right sensors receive the ID allocation signal from the ECU and perform self-diagnosis. When the sensor self-diagnosis is complete, the ECU sends an ID allocation confirmation signal to the sensors.

(4) After the ID allocation confirmation is performed, the ECU provides power to the second sensors in each series (front right sensor and rear right center sensor) via the first sensors. In the same manner as the first sensors, the second sensors enter the standby mode. When a certain amount of time has elapsed, the ECU sends an ID allocation signal to the second sensors.

(5) The above operation will be repeated until an ID is allocated to the last sensor, which is in the rear series (rear left sensor). Initialization ends when ID allocation to all ultrasonic sensors is complete.

(b) Detection mode:

After the initialization mode is complete, the system switches into the detection mode. In the detection mode, the clearance warning ECU sends information request signals and sensor activation signals to the ultrasonic sensors and receives detection result signals from the sensors.

(1) The clearance warning ECU regularly sends ID signals, information request signals, and sensor activation signals to an ultrasonic sensor according to the LIN schedule.

(2) When a certain amount of time has elapsed (sensor detection operation is complete), the clearance warning ECU sends an ID signal to the sensor to receive a detection result signal.

(3) The ultrasonic sensor sends a detection result signal or detection information signal to the ECU.

(4) The above operation is repeatedly performed for each ultrasonic sensor.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use these procedures to troubleshoot the clearance sonar system.
- *: Use the intelligent tester.

OPERATION CHECK

1. SELF-CHECK FUNCTION INSPECTION

(a) Turn the engine switch on (IG).

(b) When the intuitive parking assist system is turned on, check that the following occurs: 1) after 0.1 milliseconds, the buzzer sounds for approximately 0.8 seconds, and 2) the system starts the obstacle detection operation.

HINT:

- If a sensor has an open circuit or a sensor's detection operation malfunctions because it is wet or frozen, a malfunction display is shown on the multi-information display or multi-display, and the buzzer sounds.
- When the sensor condition returns to normal, the system ends normal clearance sonar mode.
- If the clearance sonar main switch is on and the engine switch is turned on (IG), the buzzer does not sound.

2. MALFUNCTION DISPLAY (MULTI-INFORMATION DISPLAY)

(a) Ultrasonic sensor open circuit

(1) If there is an open circuit between the ultrasonic sensor and the clearance warning ECU or if a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.

Example (Front Left Sensor Disconnection):

HINT:

- The example shows an open circuit in the ultrasonic sensor (front left sensor).
- If a sensor has an open circuit, refer to "Open circuit is displayed as a result of self-check" in the Problem Symptoms Table to inspect it.

PM

(b) Ultrasonic sensor frozen

(1) If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.

HINT:

- The example shows that the ultrasonic sensor (front left sensor) is covered with foreign matter.
- If "CLEAN SONAR" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.

3. MALFUNCTION DISPLAY (MULTI-DISPLAY)

(a) Ultrasonic sensor open circuit

(1) If there is an open circuit between the ultrasonic sensor and the clearance warning ECU or if a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.

Ultrasonic Sensor Open Circuit:

Multi-display

*Multi-display (Shift Lever Position R)

*: with Rear View Monitor System

E123663E03

HINT:

- This example shows an open circuit in the ultrasonic sensor (rear right sensor).
- If a sensor has an open circuit, refer to "Open circuit is displayed as a result of self-check" in the Problem Symptoms Table to inspect it.

(b) Ultrasonic sensor frozen

(1) If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.

Ultrasonic Sensor Frozen:

Multi-display

*Multi-display (Shift Lever Position R)

*: with Rear View Monitor System

E123664E02

HINT:

- The example shows that the ultrasonic sensor (front left sensor) is covered with foreign matter.

PM

- If "CLEAN SONAR" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.

4. DETECTION RANGE MEASUREMENT AND DISPLAY INSPECTION

(a) Detection range measurement

NOTICE:

Make sure the vehicle does not move by applying the parking brake firmly.

(1) Turn the engine switch on (IG).

(2) Move the shift lever to the reverse position to check the ultrasonic sensors (rear sensors).

(b) Turn the clearance sonar main switch on.

(c) Move a ϕ 60 mm (2.36 in.) pole near each sensor to measure its detection range.

(1) Measure the clearance sonar's detection range.

Clearance Sonar:

H

B139267E03

NOTICE:
These detection ranges are applicable when positioning the ϕ 60 mm (2.36 in.) pole parallel or perpendicular to the ground. The ranges vary depending on the measuring method and type of obstacle (such as walls).

(2) Measure the back sonar's detection range.

Back Sonar:

H

B139268E01

NOTICE:

- **These detection ranges are applicable when positioning the ϕ 60 mm (2.36 in.) pole parallel or perpendicular to the ground. The ranges vary depending on the measuring method and type of obstacle (such as walls).**

PM

- ***1: A pole with a diameter of approximately 60 mm (2.36 in.) can be detected within this detection area. If there is a cylinder-shaped object with a diameter of approximately 400 mm (15.74 in.), the detection area expands to approximately 1,500 mm (59.05 in.).**

(d) When the ultrasonic sensors (front clearance sonar) have detected an obstacle, check the display and buzzer sound.

Operation condition:

Engine Switch	Clearance Sonar Main Switch	Shift Lever Position	Vehicle Speed
ON (IG)	ON	In any position except P	10 km/h (6 mph) or less

(1) Check the buzzer sound according to the waveform shown in the illustration.

Multi-information display (shift lever position R)

Detection Range	During Detection
*1 Close-range detection Within approx. 250 +- 50 mm (9.84 +- 1.97 in.)	Buzzer: Sounds continuously Number of bars displayed: 1 (Blinking)

PM

Detection Range	During Detection
*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms / OFF: 75 ms) Number of bars displayed: 2 (illuminated)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) Number of bars displayed: 3 (illuminated)

Multi-display (shift lever position not in P)

Detection Range	During Detection
*1 Close-range detection Within approx. 250 +- 50 mm (9.84 +- 1.97 in.)	Buzzer: Sounds continuously Number of bars displayed: 1 (red illumination)
*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms / OFF: 75 ms) Number of bars displayed: 2 (yellow illumination)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) Number of bars displayed: 3 (yellow illumination)

with Rear view monitor (shift lever position R)

Detection Range	During Detection
*1 Close-range detection Within approx. 250 +- 50 mm (9.84 +- 1.97 in.)	Buzzer: Sounds continuously *4: Illumination (red)
*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms. / OFF: 75 ms) *4: Blinking (yellow)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) *4: Blinking (yellow)

HINT:

- Ultrasonic waves are used to measure the detection range; however, the detection range may vary depending on the ambient temperature.
- Refer to the illustration of the display below.

(2) Check the display according to the illustration below while the buzzer is sounding.

(e) When the ultrasonic sensors (back sonar) have detected an obstacle, check the display and buzzer sound.

Operation condition:

Engine Switch	Clearance Sonar Main Switch	Shift Lever Position
ON (IG)	ON	Reverse Position

(1) Check the buzzer sound according to the waveform shown in the illustration.

Buzzer Sound:

*1: Close-range Detection

Within Approx. 350 +- 50 mm (13.78 +- 1.97 in.)

*2: Medium-range Detection

From Approx. 350 +- 50 to 450 +- 50 mm (13.78 +- 1.97 to 17.72 +- 1.97 in.)

*3: Long-range Detection

From Approx. 450 +- 50 to 600 +- 60 mm (17.72 +- 1.97 to 23.62 +- 2.36 in.)

*4: Maximum Long-range Detection

From Approx. 600 +- 60 to 1,500 +- 150 mm (23.62 +- 2.36 to 59.06 +- 5.91 in.)

E124676E04

PM

Multi-information display (shift lever position R)

Detection Range	During Detection

*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms / OFF: 75 ms) Number of bars displayed: 2 (yellow illumination)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) Number of bars displayed: 3 (yellow illumination)

with Rear view monitor (shift lever position R)

Detection Range	During Detection
*1 Close-range detection Within approx. 250 +- 50 mm (9.84 +- 1.97 in.)	Buzzer: Sounds continuously *4 : Illumination (red)
*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms / OFF: 75 ms) *4: Blinking (yellow)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) *4: Blinking (yellow)

HINT:
- Ultrasonic waves are used to measure the detection range; however, the detection range may vary depending on the ambient temperature.
- Refer to the illustration of the display below.

(2) Check the display according to the illustration below while the buzzer is sounding.

CUSTOMIZE PARAMETERS

1. CUSTOMIZE PARAMETERS (INTELLIGENT TESTER)

(a) The following items can be customized:

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Warning

DISPLAY	DEFAULT	CONTENTS	SETTING
RR SENSOR RANGE	WIDE	Function to set buzzer activation range (for rear center sensors)	NARROW / WIDE
KEEP SENSE BUZ	AVAIL	Function to make buzzer sound when distance between vehicle and obstacle does not change for more than 3 seconds	NOT AVAIL / AVAIL
F & R BUZZER VOL	M2	Function to change volume of buzzer	L / M1 / M2 / M3 / H

Sensor:

DISPLAY	DEFAULT	CONTENTS	SETTING
SENSOR COND/N	AVAIL	Function to make sensors available when shift position is N	NOT AVAIL / AVAIL

PROBLEM SYMPTOMS TABLE

INTUITIVE PARKING ASSIST SYSTEM:

Symptom	Suspected Area	See page
System does not operate at all (self-check function does not operate)	1. Clearance warning ECU power source circuit	PM-76
	2. Clearance sonar main switch circuit	PM-66
	3. Clearance warning ECU assembly	-
Ultrasonic sensor (clearance sonar) does not operate (self-check function does not operate)	1. Front left sensor (ultrasonic sensor) malfunction	PM-33
	2. Front right sensor (ultrasonic sensor) malfunction	PM-35
	3. Rear left sensor (ultrasonic sensor) malfunction	PM-38
	4. Rear right sensor (ultrasonic sensor) malfunction	PM-49
	5. Clearance warning ECU assembly	-
Ultrasonic sensor (back sensor) does not operate (self-check function does not operate)	1. Rear left center sensor (ultrasonic sensor) malfunction	PM-41
	2. Rear right center sensor (ultrasonic sensor) malfunction	PM-45
	3. Clearance warning ECU assembly	-
Sonar detection operation is normal but buzzer operation is intermittent	1. Clearance warning buzzer circuit	PM-72
	2. Clearance warning ECU assembly	-
Detection operation is normal but sonar displays do not appear on multi-information display	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-
	3. Combination meter assembly	-
Detection operation is normal but sonar displays do not appear on multi-display	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-
	3. Multi-display	-
Open circuit is displayed as a result of self-check	1. Front left sensor (ultrasonic sensor) malfunction	PM-33
	2. Front right sensor (ultrasonic sensor) malfunction	PM-35
	3. Rear left sensor (ultrasonic sensor) malfunction	PM-35
	4. Rear right sensor (ultrasonic sensor) malfunction	PM-49
	5. Rear left center sensor (ultrasonic sensor) malfunction	PM-41
	6. Rear right center sensor (ultrasonic sensor) malfunction	PM-45
Operating indicator does not illuminate	1. Clearance sonar main switch circuit	PM-66
	2. Clearance warning ECU assembly	-
Freeze condition is displayed as a result of self-check	1. Remove ice, mud or snow from the ultrasonic sensor	-
Combination meter operates normally, but detection operates when shift lever position is P, or detection does not operate when shift lever is not in P	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-
Combination meter operates normally but errors occur when vehicle speed exceeds 10 km/h (6 mph)	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU	-
	3. Combination meter	-
System operates with shift lever not in R, or does not operate with shift lever in R position (rear ultrasonic sensor)	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-

TERMINALS OF ECU

1. CHECK CLEARANCE WARNING ECU

(a) Disconnect the M2 ECU connector.

H

E102414E01

(b) Measure the resistance and voltage between each terminal of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CLSW (M2-1) - E (M2-21)	Y - W-B	Clearance sonar main switch signal	Engine switch off	Below 1 V
			Engine switch on (IG), clearance sonar main switch ON	10 to 14 V
IG (M2-10) - E (M2-21)	B - W-B	IG signal / IG power source signal	Engine switch off	Below 1 V
			Engine switch on (IG)	10 to 14 V
E (M2-21) - Body ground	W-B - Body ground	ECU ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the M2 ECU connector.

(d) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
L1 (M2-2) - E (M2-21)	P - W-B	Clearance sonar main switch indicator signal	Engine switch on (IG), clearance sonar main switch OFF	10 to 14 V
			Engine switch on (IG), clearance sonar main switch ON	Below 1 V
BOR (M2-7) - E (M2-21)	L - W-B	Rear sensor circuit power source	Engine switch off	Below 1 V
			Engine switch on (IG)	7 to 9 V
BOF (M2-9) - E (M2-21)	V - W-B	Front sensor circuit power source	Engine switch off	Below 1 V
			Engine switch on (IG)	7 to 9 V
CBZ (M2-12) - E (M2-21)	W - W-B	Clearance warning buzzer signal	Buzzer not sounding	Below 1 V
			Buzzer sounding	Waveform 1
E2 (M2-22) - E (M2-21)	G - W-B	Rear sensor circuit ground	Always	Below 1 Ω
E1 (M2-24) - E (M2-21)	GR - W-B	Front sensor circuit ground	Always	Below 1 Ω

If the result is not as specified, the ECU may have a malfunction.

(e) Reference:
(1) Waveform 1

Item	Content
Symbols (Terminal No.)	CBZ (M2-12) - E (M2-21)
Tool Setting	2 V/DIV., 1 msec./DIV.
Condition	Buzzer sounding

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the engine switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists on the vehicle side or tester side.
HINT:
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

PM

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Erase the DTCs by following the directions on the tester's screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Operate the intelligent tester according to the display and select "Data List".

Clearance warning ECU:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

DTC C1AE1 Front Left Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (front left sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the front left sensor. If the front left sensor has an open or other malfunction, it will not function normally.

DTC No.	DTC Detection Condition	Trouble Area
B2232	Malfunction of No. 1 ultrasonic sensor (Front left sensor)	• No. 1 ultrasonic sensor (Front left sensor) • Clearance warning ECU assembly

INSPECTION PROCEDURE

1 CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTC C1AE1 is output	A
No DTCs is output	B

B → USE SIMULATION METHOD TO CHECK

PM

A

2 REPLACE NO. 1 ULTRASONIC SENSOR (FRONT LEFT SENSOR)

No. 1 Ultrasonic Sensor:

H B139273E01

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

3 CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTC C1AE1 is output	A
No DTCs is output	B

B → **END**

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

DTC	C1AE4	Front Right Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (front right sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the front right sensor. If the front right sensor has an open circuit or other malfunction, it will not function normally.

DTC No.	DTC Detection Condition	Trouble Area
B2232	Malfunction of No. 1 ultrasonic sensor (Front right sensor)	• No. 1 ultrasonic sensor (Front right sensor) • Wire harness (Front right sensor - Front left sensor) • Clearance warning ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTC C1AE4 is output	A
No DTC is output	B

B → **USE SIMULATION METHOD TO CHECK**

A

2 CHECK HARNESS AND CONNECTOR (FRONT LEFT SENSOR - FRONT RIGHT SENSOR)

Wire Harness Side Connector Front View:

A45
No. 1 Ultrasonic Sensor (Front Left Sensor)

A46
No. 1 Ultrasonic Sensor (Front Right Sensor)

H

B139278E01

(a) Disconnect the A45 and A46 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A45-2 (BO) - A46-1 (BI)	Always	Below 1 Ω
A45-4 (SO) - A46-3 (SI)		
A45-6 (EO) - A46-5 (EI)		
A45-2 (BO) - Body ground		10 kΩ or higher
A45-4 (SO) - Body ground		
A45-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

3	REPLACE NO. 1 ULTRASONIC SENSOR (FRONT RIGHT SENSOR)

No. 1 Ultrasonic Sensor:

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

4	CHECK DTC OUTPUT

PM

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTC C1AE4 is output	A
No DTC is output	B

B → **END**

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

DTC	C1AE6	Rear Left Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (rear left sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the rear left sensor. If the rear left sensor has an open circuit or other malfunction, it will not function normally.

DTC No.	DTC Detection Condition	Trouble Area
C1AE6	Malfunction of No. 1 ultrasonic sensor (Rear left sensor)	• No. 1 ultrasonic sensor (Rear left sensor) • Wire harness (Rear left sensor - Rear left center sensor) • Clearance warning ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

PM

Result

Result	Proceed to
DTC C1AE6 is output	A
No DTC is output	B

B → **USE SIMULATION METHOD TO CHECK**

A

2 CHECK HARNESS AND CONNECTOR (REAR LEFT SENSOR - REAR LEFT CENTER SENSOR)

Wire Harness Side Connector Front View:

S1
No. 1 Ultrasonic Sensor
(Rear Left Center Sensor)

S3
No. 1 Ultrasonic Sensor (Rear Left Sensor)

H

B139278E04

(a) Disconnect the S1 and S3 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
S1-2 (BO) - S3-1 (BI)	Always	Below 1 Ω
S1-4 (SO) - S3-3 (SI)		
S1-6 (EO) - S3-5 (EI)		
S1-2 (BO) - Body ground		10 kΩ or higher
S1-4 (SO) - Body ground		
S1-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

3	REPLACE NO. 1 ULTRASONIC SENSOR (REAR LEFT SENSOR)

No. 1 Ultrasonic Sensor:

H B139273E01

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

4	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTC C1AE6 is output	A
No DTC is output	B

B → **END**

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

PM

DTC	C1AE7	Rear Left Center Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (rear left center sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the rear left center sensor. If the rear left center sensor has an open circuit or other malfunction, it will not function normally.

DTC Combination Table

DTC NO.	C1AE6	C1AE7	C1AE8	C1AE9	Trouble Area
DTC Detection Condition	○	○	-	-	1. Rear left center senor malfunction 2. Open in wire harness between rear right center sensor and rear left center sensor 3. Clearance warning ECU malfunction
	-	○	-	-	Rear left center senor malfunction

○: DTC is output
-: DTC is not output

DTC No.	DTC Detection Condition	Trouble Area
C1AE7	Malfunction of No. 1 ultrasonic sensor (Rear left center sensor)	• No. 1 ultrasonic sensor (rear left center sensor) • Wire harness (rear left center sensor - rear right center sensor) • Clearance warning ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTCs C1AE6 and C1AE7 are output	A
DTC C1AE7 is output	B
No DTC is output	C

B → Go to step 3

C → USE SIMULATION METHOD TO CHECK

A

PM

2 CHECK HARNESS AND CONNECTOR (REAR LEFT CENTER SENSOR - REAR RIGHT CENTER SENSOR)

Wire Harness Side Connector Front View:

(a) Disconnect the S2 and S1 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
S2-2 (BO) - S1-1 (BI)	Always	Below 1 Ω
S2-4 (SO) - S1-3 (SI)		
S2-6 (EO) - S1-5 (EI)		
S2-2 (BO) - Body ground		10 kΩ or higher
S2-4 (SO) - Body ground		
S2-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 REPLACE NO. 1 ULTRASONIC SENSOR (REAR LEFT CENTER SENSOR)

No. 1 Ultrasonic Sensor:

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

PM

NEXT

4	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE6 and C1AE7 are output	A
No DTC is output	B

B → END

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

DTC	C1AE8	Rear Right Center Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (rear right center sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the rear right center sensor. If the rear right center sensor has an open circuit or other malfunction, it will not function normally.

DTC Combination Table

DTC NO.	C1AE6	C1AE7	C1AE8	C1AE9	Trouble Area
DTC Detection Condition	○	○	○	-	1. Rear right center senor malfunction 2. Open in wire harness between rear right center sensor and rear right sensor 3. Clearance warning ECU malfunction
	-	-	○	-	Rear right center senor malfunction

○: DTC is output
-: DTC is not output

DTC No.	DTC Detection Condition	Trouble Area
C1AE8	Malfunction of No. 1 ultrasonic sensor (Rear right center sensor)	• No. 1 ultrasonic sensor (rear right center sensor) • Wire harness (rear right center sensor - right sensor) • Clearance warning ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE6, C1AE7 and C1AE8 are output	A

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Turn the engine switch off.
(c) Turn the engine switch on (IG).
(d) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTCs C1AE1, C1AE4 and C1AEC are output	A
No DTCs are output	B

B → USE SIMULATION METHOD TO CHECK

A

PM

2 CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - FRONT LEFT SENSOR)

Wire Harness Side Connector Rear View:

M2
Clearance Warning ECU Assembly

Wire Harness Side Connector Front View:

A45
No. 1 Ultrasonic Sensor (Front Left Sensor)

H B139274E01

(a) Disconnect the M2 ECU connector.
(b) Disconnect the A45 sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M2-9 (BOF) - A45-1 (BI)	Always	Below 1 Ω
M2-8 (SOF) - A45-3 (SI)		
M2-24 (E1) - A45-5 (EI)		
M2-9 (BOF) - Body ground		10 kΩ or higher
M2-8 (SOF) - Body ground		
M2-24 (E1) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK CLEARANCE WARNING ECU ASSEMBLY

Wire Harness Side Connector Rear View:

M2
Clearance Warning ECU Assembly

H B139288E01

(a) Reconnect the M2 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M2-24 (E1) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
M2-9 (BOF) - Body ground	Engine switch on (IG)	7 to 9 V

NG → **REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)**

PM

OK

4	REPLACE NO. 1 ULTRASONIC SENSOR (FRONT LEFT SENSOR)

No. 1 Ultrasonic Sensor:

H B139273E01

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

5	CHECK DTC OUTPUT

PM

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE1, C1AE4 and C1AEC are output	A
No DTCs are output	B

B → END

A

6 CHECK HARNESS AND CONNECTOR (FRONT LEFT SENSOR - FRONT RIGHT SENSOR)

Wire Harness Side Connector Front View:

A45
No. 1 Ultrasonic Sensor (Front Left Sensor)

A46
No. 1 Ultrasonic Sensor (Front Right Sensor)

H B139278E01

(a) Disconnect the A45 and A46 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A45-2 (BO) - A46-1 (BI)	Always	Below 1 Ω
A45-4 (SO) - A46-3 (SI)		
A45-6 (EO) - A46-5 (EI)		
A45-2 (BO) - Body ground		10 kΩ or higher
A45-4 (SO) - Body ground		
A45-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 REPLACE NO. 1 ULTRASONIC SENSOR (FRONT RIGHT SENSOR)

No. 1 Ultrasonic Sensor:

H B139273E01

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

PM

8	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE1, C1AE4 and C1AEC are output	A
No DTCs are output	B

B → END

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

DTC	C1AED	Rear Sensor Communication Malfunction

DESCRIPTION

This DTC is stored when there is an open or short circuit in the communication line between the rear sensors and the clearance warning ECU, or when there is a malfunction in a rear sensor.

DTC Combination Table

DTC NO.	C1AED	C1AE6	C1AE7	C1AE8	C1AE9	Trouble Area
DTC Detection Condition	○	○	○	○	○	1. Rear right senor malfunction 2. Rear right center senor malfunction 3. Rear left center senor malfunction 4. Rear left senor malfunction 5. Open or short in wire harness between rear right sensor and clearance warning ECU 6. Open or short in wire harness between rear right sensor and rear right center sensor 7. Open or short in wire harness between rear right center sensor and rear left center sensor 8. Open or short in wire harness between rear left center sensor and rear left sensor 9. Clearance warning ECU malfunction
	-	○	○	○	○	

○: DTC is output

B139270E03

DTC No.	DTC Detection Condition	Trouble Area
C1AED	Malfunctions of all rear sensors are detected during initialization mode after the engine switch is turned on (IG)	• Rear No.1 ultrasonic sensor circuit • Clearance warning ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Turn the engine switch off.
(c) Turn the engine switch on (IG).

PM

(d) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE6, C1AE7, C1AE8, C1AE9 and C1AED are output	A
No DTCs are output	B

B → **USE SIMULATION METHOD TO CHECK**

A

2 CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - REAR RIGHT SENSOR)

Wire Harness Side Connector Rear View:

M2
Clearance Warning ECU Assembly

Wire Harness Side Connector Front View:

S4
No. 1 Ultrasonic Sensor (Rear Right Sensor)

H

B139274E02

(a) Disconnect the M2 ECU connector.
(b) Disconnect the S4 sensor connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
M2-7 (BOR) - S4-1 (BI)	Always	Below 1 Ω
M2-6 (SOR) - S4-3 (SI)		
M2-22 (E2) - S4-5 (EI)		
M2-7 (BOR) - Body ground		10 kΩ or higher
M2-6 (SOR) - Body ground		
M2-22 (E2) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

3 CHECK CLEARANCE WARNING ECU ASSEMBLY

Wire Harness Side Connector Rear View:

(a) Reconnect the M2 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
M2-22 (E2) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
M2-7 (BOR) - Body ground	Engine switch on (IG)	7 to 9 V

NG → **REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)**

OK

4 REPLACE NO. 1 ULTRASONIC SENSOR (REAR RIGHT SENSOR)

PM

No. 1 Ultrasonic Sensor:

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

5 CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE6, C1AE7, C1AE8, C1AE9 and C1AED are output	A

Result	Proceed to
No DTCs are output	B

B → **END**

A

6 CHECK HARNESS AND CONNECTOR (REAR RIGHT SENSOR - REAR RIGHT CENTER SENSOR)

Wire Harness Side Connector Front View:

S4
No. 1 Ultrasonic Sensor (Rear Right Sensor)

S2
No. 1 Ultrasonic Sensor
(Rear Right Center Sensor)

H

B139278E02

(a) Disconnect the S4 and S2 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
S4-2 (BO) - S2-1 (BI)	Always	Below 1 Ω
S4-4 (SO) - S2-3 (SI)		
S4-6 (EO) - S2-5 (EI)		
S4-2 (BO) - Body ground		10 kΩ or higher
S4-4 (SO) - Body ground		
S4-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

7	REPLACE NO. 1 ULTRASONIC SENSOR (REAR RIGHT CENTER SENSOR)

No. 1 Ultrasonic Sensor:

H B139273E01

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

8	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTCs C1AE6, C1AE7, C1AE8, C1AE9 and C1AED are output	A
No DTCs are output	B

B → END

A

PM

9 CHECK HARNESS AND CONNECTOR (REAR RIGHT CENTER SENSOR - REAR LEFT CENTER SENSOR)

Wire Harness Side Connector Front View:

(a) Disconnect the S2 and S1 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
S2-2 (BO) - S1-1 (BI)	Always	Below 1 Ω
S2-4 (SO) - S1-3 (SI)		
S2-6 (EO) - S1-5 (EI)		
S2-2 (BO) - Body ground		10 kΩ or higher
S2-4 (SO) - Body ground		
S2-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10 REPLACE NO. 1 ULTRASONIC SENSOR (REAR LEFT CENTER SENSOR)

No. 1 Ultrasonic Sensor:

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

PM

NEXT

11 CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE6, C1AE7, C1AE8, C1AE9 and C1AED are output	A
No DTCs are output	B

B → **END**

A

12 CHECK HARNESS AND CONNECTOR (REAR LEFT CENTER SENSOR - REAR LEFT SENSOR)

Wire Harness Side Connector Front View:

S1
No. 1 Ultrasonic Sensor
(Rear Left Center Sensor)

S3
No. 1 Ultrasonic Sensor (Rear Left Sensor)

H

B139278E04

(a) Disconnect the S1 and S3 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
S1-2 (BO) - S3-1 (BI)	Always	Below 1 Ω
S1-4 (SO) - S3-3 (SI)		
S1-6 (EO) - S3-5 (EI)		
S1-2 (BO) - Body ground		10 kΩ or higher
S1-4 (SO) - Body ground		
S1-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

13	REPLACE NO. 1 ULTRASONIC SENSOR (REAR LEFT SENSOR)

No. 1 Ultrasonic Sensor:

H B139273E01

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

14	CHECK DTC OUTPUT

PM

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE6, C1AE7, C1AE8, C1AE9 and C1AED are output	A
No DTCs are output	B

B → **END**

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

Clearance Sonar Main Switch Circuit

DESCRIPTION

When the clearance sonar main switch is turned on, an ON signal is sent to the clearance warning ECU and the indicator on the switch comes on. The intuitive parking assist system starts operating according to this signal.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK INTUITIVE PARKING ASSIST SYSTEM

(a) Check the operation of the intuitive parking assist system (See page PM-11).

Result

Result	Proceed to
Even if the clearance sonar main switch is turned on, the system does not operate.	**A**
The indicator on the switch does not come on even though the system starts operating.	**B**

B → **Go to step 6**

A

2 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the intelligent tester main switch on.
(d) Turn the clearance sonar main switch on.
(e) Select the item below in the Data List, and read its value displayed on the intelligent tester to check the clearance sonar main switch.

Clearance warning ECU:

Tester Display	Measurement Item/ Range	Normal Condition	Diagnostic Note
MAIN SW	Clearance sonar main switch / OFF or ON	OFF: Clearance sonar main switch OFF ON: Clearance sonar main switch ON	-

OK:

ON (Clearance sonar main switch is pressed) appears on the tester.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

PM

3 INSPECT CLEARANCE SONAR MAIN SWITCH ASSEMBLY

Clearance Sonar Main Switch Assembly:

H B139271E01

(a) Remove the clearance sonar main switch assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
5 - 6	Switch free (OFF)	10 kΩ or higher
	Switch pushed (ON)	Below 1 Ω

NG → **REPLACE CLEARANCE SONAR MAIN SWITCH ASSEMBLY**

OK

4 CHECK HARNESS AND CONNECTOR (CLEARANCE SONAR MAIN SWITCH - BATTERY)

Wire Harness Side Connector Rear View:

E17
Clearance Sonar Main Switch A ssembly

H B139276E01

(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E17-6 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

5	CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - CLEARANCE SONAR MAIN SWITCH)

(a) Disconnect the M2 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M2-1 (CLSW) - E17-5 (ECU)	Always	Below 1 Ω
M2-1 (CLSW) - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

PM

6 INSPECT CLEARANCE SONAR MAIN SWITCH ASSEMBLY

Clearance Sonar Main Switch Assembly:

H B139271E02

(a) Remove the clearance sonar main switch.
(b) Apply battery voltage and check operation of the main switch, as shown in the table below.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 3	Indicator light comes on

NG → **REPLACE CLEARANCE SONAR MAIN SWITCH ASSEMBLY**

OK

7 CHECK HARNESS AND CONNECTOR (CLEARANCE SONAR MAIN SWITCH - BATTERY)

Wire Harness Side Connector Rear View:

E17
Clearance Sonar Main Switch Assembly

H B139276E03

(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
E17-4 (IND) - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

8	CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - CLEARANCE SONAR MAIN SWITCH)

(a) Disconnect the M2 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M2-2 (L1) - E17-3 (IND-)	Always	Below 1 Ω
M2-2 (L1) - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

PM

Clearance Warning Buzzer Circuit

DESCRIPTION

The clearance warning buzzer sounds using by pulse signals sent from the clearance warning ECU assembly. The buzzer sounds to alert the driver and the buzzer frequency changes depending on the distance to an obstacle.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the intelligent tester main switch on.
(d) Turn the clearance sonar main switch on.
(e) Select the Active Test, use the intelligent tester to generate a control command, and then check that the buzzer operates.

Clearance warning ECU:

Tester Display	Test Part	Control Range	Diagnostic Note
REAR BUZZER	Rear buzzer (Clearance warning buzzer)	STOP or OPERATE	-

PM

OK:
Clearance warning buzzer sounds.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT CLEARANCE WARNING BUZZER

Clearance Warning Buzzer:

(a) Remove the clearance warning buzzer (See page PM-95).
(b) Apply battery voltage and check operation of the warning buzzer, as shown in the table below.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 **Battery negative (-) → Terminal 2**	**Operating sound occurs**

HINT:
The clearance warning buzzer does not sound when battery voltage is not applied because the buzzer is a separately-excited type.

NG → **REPLACE CLEARANCE WARNING BUZZER (See page PM-95)**

OK

3	CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING BUZZER - BATTERY)

Wire Harness Side Connector Rear View:

E16
Clearance Warning Buzzer

H B139280E01

(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E16-1 - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - CLEARANCE WARNING BUZZER)

PM

Wire Harness Side Connector Rear View:

M2
Clearance Warning ECU Assembly

E16
Clearance Warning Buzzer

H B139279E04

(a) Disconnect the M2 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M2-12 (CBZ) - E16-2	Always	Below 1 Ω
M2-12 (CBZ) - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Clearance Warning ECU Power Source Circuit

DESCRIPTION

This circuit provides power to operate the clearance warning ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT FUSE (ECU IG NO. 1)

(a) Remove the ECU IG No. 1 fuse from the instrument panel junction block.
(b) Measure the resistance of the ECU IG No. 1 fuse.

PM

Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE (ECU IG NO. 1)**

OK

2 CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - BATTERY)

Wire Harness Side Connector Rear View:

(a) Disconnect the M2 ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
M2-10 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

PM

OK

3 CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - BODY GROUND)

Wire Harness Side Connector Rear View:

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
M2-21 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use these procedures to troubleshoot the clearance sonar system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS

(a) Refer to HOW TO PROCEED WITH TROUBLESHOOTING (See page IN-39).

NEXT

3 CHECK AND CLEAR DTC*

(a) Refer to the DTC check/clear (See page PM-28).

PM

NEXT

4 CHECK INITIAL CHECK FUNCTION

(a) Refer to the operation check (See page PM-11).

OPERATION CHECK

1. SELF-CHECK FUNCTION INSPECTION

(a) Turn the engine switch on (IG).

(b) When the intuitive parking assist system is turned on, check that the following occurs: 1) after 0.1 milliseconds, the buzzer sounds for approximately 0.8 seconds, and 2) the system starts the obstacle detection operation.

HINT:

- If a sensor has an open circuit or a sensor's detection operation malfunctions because it is wet or frozen, a malfunction display is shown on the multi-information display or multi-display, and the buzzer sounds.
- When the sensor condition returns to normal, the system ends normal clearance sonar mode.
- If the clearance sonar main switch is on and the engine switch is turned on (IG), the buzzer does not sound.

2. MALFUNCTION DISPLAY (MULTI-INFORMATION DISPLAY)

(a) Ultrasonic sensor open circuit

(1) If there is an open circuit between the ultrasonic sensor and the clearance warning ECU or if a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.

Example (Front Left Sensor Disconnection):

HINT:

- The example shows an open circuit in the ultrasonic sensor (front left sensor).
- If a sensor has an open circuit, refer to "Open circuit is displayed as a result of self-check" in the Problem Symptoms Table to inspect it.

PM

(b) Ultrasonic sensor frozen

(1) If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.

HINT:

- The example shows that the ultrasonic sensor (front left sensor) is covered with foreign matter.
- If "CLEAN SONAR" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.

3. MALFUNCTION DISPLAY (MULTI-DISPLAY)

(a) Ultrasonic sensor open circuit

(1) If there is an open circuit between the ultrasonic sensor and the clearance warning ECU or if a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.

Ultrasonic Sensor Open Circuit:

Multi-display

*Multi-display (Shift Lever Position R)

*: with Rear View Monitor System

E123663E03

HINT:

- This example shows an open circuit in the ultrasonic sensor (rear right sensor).
- If a sensor has an open circuit, refer to "Open circuit is displayed as a result of self-check" in the Problem Symptoms Table to inspect it.

(b) Ultrasonic sensor frozen

(1) If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.

Ultrasonic Sensor Frozen:

Multi-display

*Multi-display (Shift Lever Position R)

*: with Rear View Monitor System

E123664E02

HINT:

- The example shows that the ultrasonic sensor (front left sensor) is covered with foreign matter.

PM

- If "CLEAN SONAR" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.

4. DETECTION RANGE MEASUREMENT AND DISPLAY INSPECTION

(a) Detection range measurement

NOTICE:

Make sure the vehicle does not move by applying the parking brake firmly.

(1) Turn the engine switch on (IG).

(2) Move the shift lever to the reverse position to check the ultrasonic sensors (rear sensors).

(b) Turn the clearance sonar main switch on.

(c) Move a ϕ 60 mm (2.36 in.) pole near each sensor to measure its detection range.

(1) Measure the clearance sonar's detection range.

Clearance Sonar:

H

B139267E03

NOTICE:
These detection ranges are applicable when positioning the ϕ 60 mm (2.36 in.) pole parallel or perpendicular to the ground. The ranges vary depending on the measuring method and type of obstacle (such as walls).

(2) Measure the back sonar's detection range.

Back Sonar:

H

B139268E01

NOTICE:

- **These detection ranges are applicable when positioning the ϕ 60 mm (2.36 in.) pole parallel or perpendicular to the ground. The ranges vary depending on the measuring method and type of obstacle (such as walls).**

PM

- ***1: A pole with a diameter of approximately 60 mm (2.36 in.) can be detected within this detection area. If there is a cylinder-shaped object with a diameter of approximately 400 mm (15.74 in.), the detection area expands to approximately 1,500 mm (59.05 in.).**

(d) When the ultrasonic sensors (front clearance sonar) have detected an obstacle, check the display and buzzer sound.

Operation condition:

Engine Switch	Clearance Sonar Main Switch	Shift Lever Position	Vehicle Speed
ON (IG)	ON	In any position except P	10 km/h (6 mph) or less

(1) Check the buzzer sound according to the waveform shown in the illustration.

Multi-information display (shift lever position R)

Detection Range	During Detection
*1 Close-range detection Within approx. 250 +- 50 mm (9.84 +- 1.97 in.)	Buzzer: Sounds continuously Number of bars displayed: 1 (Blinking)

PM

Detection Range	During Detection
*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms / OFF: 75 ms) Number of bars displayed: 2 (illuminated)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) Number of bars displayed: 3 (illuminated)

Multi-display (shift lever position not in P)

Detection Range	During Detection
*1 Close-range detection Within approx. 250 +- 50 mm (9.84 +- 1.97 in.)	Buzzer: Sounds continuously Number of bars displayed: 1 (red illumination)
*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms / OFF: 75 ms) Number of bars displayed: 2 (yellow illumination)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) Number of bars displayed: 3 (yellow illumination)

with Rear view monitor (shift lever position R)

Detection Range	During Detection
*1 Close-range detection Within approx. 250 +- 50 mm (9.84 +- 1.97 in.)	Buzzer: Sounds continuously *4: Illumination (red)
*2 Medium-range detection From approx. 250 +- 50 to 375 +- 50 mm (9.84 +- 1.97 to 14.76 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 75 ms. / OFF: 75 ms) *4: Blinking (yellow)
*3 Long-range detection From approx. 375 +- 50 to 500 +- 50 mm (14.76 +- 1.97 to 19.69 +- 1.97 in.)	Buzzer: Sounds intermittently (ON: 150 ms / OFF: 150 ms) *4: Blinking (yellow)

HINT:

- Ultrasonic waves are used to measure the detection range; however, the detection range may vary depending on the ambient temperature.
- Refer to the illustration of the display below.

(2) Check the display according to the illustration below while the buzzer is sounding.

(e) When the ultrasonic sensors (back sonar) have detected an obstacle, check the display and buzzer sound.

Operation condition:

Engine Switch	Clearance Sonar Main Switch	Shift Lever Position
ON (IG)	ON	Reverse Position

(1) Check the buzzer sound according to the waveform shown in the illustration.

Buzzer Sound:

*1: Close-range Detection

Within Approx. 350 +- 50 mm (13.78 +- 1.97 in.)

*2: Medium-range Detection

From Approx. 350 +- 50 to 450 +- 50 mm (13.78 +- 1.97 to 17.72 +- 1.97 in.)

*3: Long-range Detection

From Approx. 450 +- 50 to 600 +- 60 mm (17.72 +- 1.97 to 23.62 +- 2.36 in.)

*4: Maximum Long-range Detection

From Approx. 600 +- 60 to 1,500 +- 150 mm (23.62 +- 2.36 to 59.06 +- 5.91 in.)

E124676E04

Multi-information Display

Multi-display

*Multi-display

*: with Rear View Monitor System

E124677E02

Reverse Signal Circuit

DESCRIPTION

The multi-display receives a reverse signal from the park/neutral position switch.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK BACK-UP LIGHT

(a) Move the shift lever to the R position and check if the back-up light comes on.
OK:
The back-up light comes on.

NG → **GO TO LIGHTING SYSTEM**

OK

2 CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

(a) Enter the "Display Check" mode (Vehicle Signal Check Mode) (See page NS-21).

(b) Check that the display changes between ON and OFF according to the shift lever operation (P and R).

OK

Shift Lever Position	Display
R	ON
Except R	OFF

HINT:
This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

3 INSPECT MULTI-DISPLAY

(a) Disconnect the multi-display connector E62.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
REV (E62-13) - Body ground	Engine switch is on (IG). Shift lever is moved to R position.	10 to 14 V
REV (E62-13) - Body ground	Engine switch is on (IG). Shift lever is moved to any position except R.	Below 1 V

OK → **REPLACE MULTI-DISPLAY**

NG

CHECK AND REPLACE HARNESS AND CONNECTOR (MULTI-DISPLAY - PARK/NEUTRAL POSITION SWITCH)

PM

Display Signal Circuit between Multi-display and Television Camera Assembly

DESCRIPTION

This is the display signal circuit of the television camera assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	**CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - TELEVISION CAMERA ASSEMBLY)**

(a) Disconnect the E63 connector from the multi-display.
(b) Disconnect the R15 connector from the television camera assembly.

PM

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Terminal No.)	Condition	Specified condition
CB+ (R15-4) - CA+ (E63-13)	Always	Below 1 Ω
CGND (R15-3) - CGND (E63-14)	Always	Below 1 Ω
CV+ (R15-2) - V+ (E63-27)	Always	Below 1 Ω
CV- (R15-1) - V- (E63-28)	Always	Below 1 Ω
CB+ (R15-4) - Body ground	Always	10 kΩ or higher
CGND (R15-3) - Body ground	Always	10 kΩ or higher
CV+ (R15-2) - Body ground	Always	10 kΩ or higher
CV- (R15-1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT MULTI-DISPLAY

(a) Reconnect the multi-display E63 connector.

PM

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
CB+ (R15-4) - CGND (R15-3)	Engine switch on (IG) Shift lever R position	Approx. 6 V

NG → **REPLACE MULTI-DISPLAY**

OK

3	INSPECT TELEVISION CAMERA ASSEMBLY

(a) Reconnect the television camera assembly R15 connector.

(b) Check the waveform of the television camera assembly using an oscilloscope.

PM

Standard waveform

Tester connection	Condition	Specified condition
CV+ (R15-2) - CV- (R15-1)	Engine switch on (IG) Shift lever R position	Shown in the illustration

NG → **REPLACE TELEVISION CAMERA ASSEMBLY**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

CUSTOMIZE PARAMETERS

1. CUSTOMIZE PARAMETERS (INTELLIGENT TESTER)

(a) The following items can be customized:

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Warning

DISPLAY	DEFAULT	CONTENTS	SETTING
RR SENSOR RANGE	WIDE	Function to set buzzer activation range (for rear center sensors)	NARROW / WIDE
KEEP SENSE BUZ	AVAIL	Function to make buzzer sound when distance between vehicle and obstacle does not change for more than 3 seconds	NOT AVAIL / AVAIL
F & R BUZZER VOL	M2	Function to change volume of buzzer	L / M1 / M2 / M3 / H

Sensor:

DISPLAY	DEFAULT	CONTENTS	SETTING
SENSOR COND/N	AVAIL	Function to make sensors available when shift position is N	NOT AVAIL / AVAIL

Display:

DISPLAY	DEFAULT	CONTENTS	SETTING
DISPLAY MODE	ALL	Function to change display mode	ALL / UNDISP

PROBLEM SYMPTOMS TABLE

INTUITIVE PARKING ASSIST SYSTEM:

Symptom	Suspected Area	See page
System does not operate at all (self-check function does not operate)	1. Clearance warning ECU power source circuit	PM-76
	2. Clearance sonar main switch circuit	PM-66
	3. Clearance warning ECU assembly	-
Ultrasonic sensor (clearance sonar) does not operate (self-check function does not operate)	1. Front left sensor (ultrasonic sensor) malfunction	PM-33
	2. Front right sensor (ultrasonic sensor) malfunction	PM-35
	3. Rear left sensor (ultrasonic sensor) malfunction	PM-38
	4. Rear right sensor (ultrasonic sensor) malfunction	PM-49
	5. Clearance warning ECU assembly	-
Ultrasonic sensor (back sensor) does not operate (self-check function does not operate)	1. Rear left center sensor (ultrasonic sensor) malfunction	PM-41
	2. Rear right center sensor (ultrasonic sensor) malfunction	PM-45
	3. Clearance warning ECU assembly	-
Sonar detection operation is normal but buzzer operation is intermittent	1. Clearance warning buzzer circuit	PM-72
	2. Clearance warning ECU assembly	-
Detection operation is normal but sonar displays do not appear on multi-information display	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-
	3. Combination meter assembly	-
Detection operation is normal but sonar displays do not appear on multi-display	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-
	3. Multi-display	-
Open circuit is displayed as a result of self-check	1. Front left sensor (ultrasonic sensor) malfunction	PM-33
	2. Front right sensor (ultrasonic sensor) malfunction	PM-35
	3. Rear left sensor (ultrasonic sensor) malfunction	PM-35
	4. Rear right sensor (ultrasonic sensor) malfunction	PM-49
	5. Rear left center sensor (ultrasonic sensor) malfunction	PM-41
	6. Rear right center sensor (ultrasonic sensor) malfunction	PM-45
Operating indicator does not illuminate	1. Clearance sonar main switch circuit	PM-66
	2. Clearance warning ECU assembly	-
Freeze condition is displayed as a result of self-check	1. Remove ice, mud or snow from the ultrasonic sensor	-
Combination meter operates normally, but detection operates when shift lever position is P, or detection does not operate when shift lever is not in P	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-
Combination meter operates normally but errors occur when vehicle speed exceeds 10 km/h (6 mph)	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU	-
	3. Combination meter	-
System operates with shift lever not in R, or does not operate with shift lever in R position (rear ultrasonic sensor)	1. Vehicle wire harness or connector (CAN communication)	CA-11
	2. Clearance warning ECU assembly	-

CLEARANCE WARNING ECU

COMPONENTS

PM

REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
2. **REMOVE SPARE WHEEL COVER TRAY**
3. **REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (See page ED-82)**
4. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-83)**
5. **REMOVE REAR FLOOR FINISH PLATE (See page ED-83)**
6. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (See page ED-83)**
7. **REMOVE CLEARANCE WARNING ECU**
   (a) Disconnect the connector.
   (b) Remove the bolt and clearance warning ECU.

INSTALLATION

1. **INSTALL CLEARANCE WARNING ECU**
   (a) Install the clearance warning ECU with the bolt.
   (b) Connect the connector.
2. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (See page ED-88)**
3. **INSTALL REAR FLOOR FINISH PLATE (See page ED-88)**
4. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-89)**
5. **INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (See page ED-89)**
6. **INSTALL SPARE WHEEL COVER TRAY**
7. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT**

TERMINALS OF ECU

1. CHECK CLEARANCE WARNING ECU

(a) Disconnect the M2 ECU connector.

H

E102414E01

(b) Measure the resistance and voltage between each terminal of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CLSW (M2-1) - E (M2-21)	Y - W-B	Clearance sonar main switch signal	Engine switch off	Below 1 V
			Engine switch on (IG), clearance sonar main switch ON	10 to 14 V
IG (M2-10) - E (M2-21)	B - W-B	IG signal / IG power source signal	Engine switch off	Below 1 V
			Engine switch on (IG)	10 to 14 V
E (M2-21) - Body ground	W-B - Body ground	ECU ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the M2 ECU connector.

(d) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
L1 (M2-2) - E (M2-21)	P - W-B	Clearance sonar main switch indicator signal	Engine switch on (IG), clearance sonar main switch OFF	10 to 14 V
			Engine switch on (IG), clearance sonar main switch ON	Below 1 V
BOR (M2-7) - E (M2-21)	L - W-B	Rear sensor circuit power source	Engine switch off	Below 1 V
			Engine switch on (IG)	7 to 9 V
BOF (M2-9) - E (M2-21)	V - W-B	Front sensor circuit power source	Engine switch off	Below 1 V
			Engine switch on (IG)	7 to 9 V
CBZ (M2-12) - E (M2-21)	W - W-B	Clearance warning buzzer signal	Buzzer not sounding	Below 1 V
			Buzzer sounding	Waveform 1
E2 (M2-22) - E (M2-21)	G - W-B	Rear sensor circuit ground	Always	Below 1 Ω
E1 (M2-24) - E (M2-21)	GR - W-B	Front sensor circuit ground	Always	Below 1 Ω

If the result is not as specified, the ECU may have a malfunction.

(e) Reference:
(1) Waveform 1

Item	Content
Symbols (Terminal No.)	CBZ (M2-12) - E (M2-21)
Tool Setting	2 V/DIV., 1 msec./DIV.
Condition	Buzzer sounding

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the engine switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists on the vehicle side or tester side.
HINT:
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

PM

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Erase the DTCs by following the directions on the tester's screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Operate the intelligent tester according to the display and select "Data List".

Clearance warning ECU:

CLEARANCE WARNING BUZZER

COMPONENTS

PM

REMOVAL

1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
2. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
3. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
5. **REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)**
6. **REMOVE INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System) (See page AV-168)**
7. **REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System) (See page AV-170)**
8. **REMOVE CLEARANCE WARNING BUZZER**
   (a) Disconnect the connector.

   (b) Disengage the clamp and remove the clearance warning buzzer.

PM

DIAGNOSTIC TROUBLE CODE CHART

INTUITIVE PARKING ASSIST SYSTEM

DTC Code	Detection Item	Trouble Area	See page
C1AE1	Front Left Sensor Malfunction	1. No. 1 ultrasonic sensor (Front left sensor) 2. Clearance warning ECU assembly	PM-33
C1AE4	Front Right Sensor Malfunction	1. No. 1 ultrasonic sensor (Front right sensor) 2. Wire harness 3. Clearance warning ECU assembly	PM-35
C1AE6	Rear Left Sensor Malfunction	1. No. 1 ultrasonic sensor (Rear left sensor) 2. Wire harness 3. Clearance warning ECU assembly	PM-38
C1AE7	Rear Left Center Sensor Malfunction	1. No. 1 ultrasonic sensor (Rear left center sensor) 2. Wire harness 3. Clearance warning ECU assembly	PM-41
C1AE8	Rear Right Center Sensor Malfunction	1. No. 1 ultrasonic sensor (Rear right center sensor) 2. Wire harness 3. Clearance warning ECU assembly	PM-45
C1AE9	Rear Right Sensor Malfunction	1. No. 1 ultrasonic sensor (Rear right sensor) 2. Clearance warning ECU assembly	PM-49
C1AEC	Front Sensor Communication Malfunction	1. Front No. 1 ultrasonic sensor circuit 2. Clearance warning ECU assembly	PM-51
C1AED	Rear Sensor Communication Malfunction	1. Rear No. 1 ultrasonic sensor circuit 2. Clearance warning ECU assembly	PM-57

DTC C1AE1 Front Left Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (front left sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the front left sensor. If the front left sensor has an open or other malfunction, it will not function normally.

DTC No.	DTC Detection Condition	Trouble Area
B2232	Malfunction of No. 1 ultrasonic sensor (Front left sensor)	• No. 1 ultrasonic sensor (Front left sensor) • Clearance warning ECU assembly

INSPECTION PROCEDURE

1 CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTC C1AE1 is output	A
No DTCs is output	B

B → USE SIMULATION METHOD TO CHECK

2 REPLACE NO. 1 ULTRASONIC SENSOR (FRONT LEFT SENSOR)

No. 1 Ultrasonic Sensor:

H B139273E01

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

3 CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTC C1AE1 is output	A
No DTCs is output	B

B → **END**

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (for Front Side) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (for Front Side) (See page ET-5)**
3. **REMOVE NO. 1 ULTRASONIC SENSOR (for Front Side)**
   (a) Disconnect the No. 1 ultrasonic sensor connector.
   (b) Remove the No. 2 ultrasonic sensor retainer as shown in the illustration.

   (c) Remove the No. 1 ultrasonic sensor from the No. 1 ultrasonic sensor retainer.

4. **REMOVE NO. 1 ULTRASONIC SENSOR RETAINER (for Front Side)**
   (a) Disengage the 2 claws and remove the No. 1 ultrasonic sensor retainer from the front bumper assembly.

5. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT (for Rear Side)**
6. **REMOVE SPARE WHEEL COVER TRAY (for Rear Side)**
7. **REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (for Rear Side) (See page ED-82)**
8. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (for Rear Side) (See page ED-83)**
9. **REMOVE REAR FLOOR FINISH PLATE (for Rear Side) (See page ED-83)**

10. REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (for Rear Side) (See page ED-83)

11. REMOVE REAR BUMPER ASSEMBLY (for Rear Side) (See page ET-19)

12. REMOVE NO. 1 ULTRASONIC SENSOR (for Rear Side)

(a) Disconnect the No. 1 ultrasonic sensor connector.

(b) Disengage the clamp.

(c) Remove the No. 2 ultrasonic sensor retainer as shown in the illustration.

(d) Remove the No. 1 ultrasonic sensor from the No. 1 ultrasonic sensor retainer.

13. REMOVE NO. 1 ULTRASONIC SENSOR RETAINER (for Rear Side)

(a) Disengage the 2 claws and remove the No. 1 ultrasonic sensor retainer from the rear bumper assembly.

INSTALLATION

1. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER (for Rear Side)

(a) Install the No. 1 ultrasonic sensor retainer as shown in the illustration.
HINT:
Align the protrusions on the bumper hole with the slits of the No. 1 ultrasonic sensor retainer and install the No. 1 ultrasonic sensor.

2. INSTALL NO. 1 ULTRASONIC SENSOR (for Rear Side)
NOTICE:
Do not apply excessive force to the No. 1 ultrasonic sensor while performing the following procedures.

(a) Install the No. 1 ultrasonic sensor to the No. 1 ultrasonic sensor retainer.

(b) Install the No. 2 ultrasonic sensor retainer as shown in the illustration.

(c) Connect the No. 2 ultrasonic sensor connector and engage the clamp.

3. INSTALL REAR BUMPER ASSEMBLY (for Rear Side) (See page ET-23)

4. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (for Rear Side) (See page ED-88)

5. INSTALL REAR FLOOR FINISH PLATE (for Rear Side) (See page ED-88)

6. INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (for Rear Side) (See page ED-89)

7. **INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (for Rear Side) (See page ED-89)**

8. **INSTALL SPARE WHEEL COVER TRAY (for Rear Side)**

9. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (for Rear Side)**

10. **INSTALL NO. 1 ULTRASONIC SENSOR RETAINER (for Front Side)**
    (a) Install the No. 1 ultrasonic sensor retainer as shown in the illustration.
    HINT:
    Align the protrusions on the bumper hole with the slits of the No. 1 ultrasonic sensor retainer and install the No. 1 ultrasonic sensor.

11. **INSTALL NO. 1 ULTRASONIC SENSOR (for Front Side)**
    NOTICE:
    Do not apply excessive force to the No. 1 ultrasonic sensor while performing the following procedures.
    (a) Install the No. 1 ultrasonic sensor to the No. 1 ultrasonic sensor retainer.

    (b) Install the No. 2 ultrasonic sensor retainer as shown in the illustration.

12. **INSTALL FRONT BUMPER ASSEMBLY (for Front Side) (See page ET-14)**

13. **INSTALL COOL AIR INTAKE DUCT SEAL (for Front Side) (See page ET-14)**

14. **VEHICLE PREPARATION FOR FOG LIGHT AIM ADJUSTMENT (See page LI-141)**

15. **PREPARATION FOR FOG LIGHT AIMING (See page LI-142)**

16. **FOG LIGHT AIMING INSPECTION (See page LI-143)**

17. **FOG LIGHT AIMING ADJUSTMENT (See page LI-144)**

DTC	C1AE4	Front Right Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (front right sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the front right sensor. If the front right sensor has an open circuit or other malfunction, it will not function normally.

DTC No.	DTC Detection Condition	Trouble Area
B2232	Malfunction of No. 1 ultrasonic sensor (Front right sensor)	• No. 1 ultrasonic sensor (Front right sensor) • Wire harness (Front right sensor - Front left sensor) • Clearance warning ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTC C1AE4 is output	A
No DTC is output	B

B → **USE SIMULATION METHOD TO CHECK**

A

2 CHECK HARNESS AND CONNECTOR (FRONT LEFT SENSOR - FRONT RIGHT SENSOR)

Wire Harness Side Connector Front View:

A45
No. 1 Ultrasonic Sensor (Front Left Sensor)

A46
No. 1 Ultrasonic Sensor (Front Right Sensor)

H

B139278E01

(a) Disconnect the A45 and A46 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A45-2 (BO) - A46-1 (BI)	Always	Below 1 Ω
A45-4 (SO) - A46-3 (SI)		
A45-6 (EO) - A46-5 (EI)		
A45-2 (BO) - Body ground		10 kΩ or higher
A45-4 (SO) - Body ground		
A45-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PM

3	REPLACE NO. 1 ULTRASONIC SENSOR (FRONT RIGHT SENSOR)

No. 1 Ultrasonic Sensor:

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

NEXT

4	CHECK DTC OUTPUT

PM

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTC C1AE4 is output	A
No DTC is output	B

B → **END**

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

TELEVISION CAMERA

COMPONENTS

REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-71)**
2. **REMOVE LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-71)**
3. **REMOVE LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-71)**
4. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-72)**
5. **REMOVE TELEVISION CAMERA ASSEMBLY**
   (a) Disconnect the television camera connector.
   (b) Remove the 2 bolts.

   (c) Disengage the 2 claws and remove the television camera assembly as shown in the illustration.

PM

INSTALLATION

1. **INSTALL TELEVISION CAMERA ASSEMBLY**
   (a) Engage the 2 claws and temporarily install the television camera assembly to the luggage compartment as shown in the illustration.

   (b) Install the television camera assembly with the 2 bolts.
   (c) Connect the television camera connector.

2. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-74)**
3. **INSTALL LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-74)**
4. **INSTALL LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-75)**

5. **INSTALL LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-75)**

DTC	C1AE6	Rear Left Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (rear left sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the rear left sensor. If the rear left sensor has an open circuit or other malfunction, it will not function normally.

DTC No.	DTC Detection Condition	Trouble Area
C1AE6	Malfunction of No. 1 ultrasonic sensor (Rear left sensor)	• No. 1 ultrasonic sensor (Rear left sensor) • Wire harness (Rear left sensor - Rear left center sensor) • Clearance warning ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

PM

Result

Result	Proceed to
DTC C1AE6 is output	A
No DTC is output	B

B → **USE SIMULATION METHOD TO CHECK**

A

Result	Proceed to
DTC C1AE6 is output	A
No DTC is output	B

B → **END**

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

PM

DTC	C1AE7	Rear Left Center Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (rear left center sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the rear left center sensor. If the rear left center sensor has an open circuit or other malfunction, it will not function normally.

DTC Combination Table

DTC NO.	C1AE6	C1AE7	C1AE8	C1AE9	Trouble Area
DTC Detection Condition	○	○	-	-	1. Rear left center senor malfunction 2. Open in wire harness between rear right center sensor and rear left center sensor 3. Clearance warning ECU malfunction
	-	○	-	-	Rear left center senor malfunction

○: DTC is output
-: DTC is not output

DTC No.	DTC Detection Condition	Trouble Area
C1AE7	Malfunction of No. 1 ultrasonic sensor (Rear left center sensor)	• No. 1 ultrasonic sensor (rear left center sensor) • Wire harness (rear left center sensor - rear right center sensor) • Clearance warning ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).

Result

Result	Proceed to
DTCs C1AE6 and C1AE7 are output	A
DTC C1AE7 is output	B
No DTC is output	C

C → USE SIMULATION METHOD TO CHECK

A

PM

2 CHECK HARNESS AND CONNECTOR (REAR LEFT CENTER SENSOR - REAR RIGHT CENTER SENSOR)

Wire Harness Side Connector Front View:

(a) Disconnect the S2 and S1 sensor connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
S2-2 (BO) - S1-1 (BI)	Always	Below 1 Ω
S2-4 (SO) - S1-3 (SI)		
S2-6 (EO) - S1-5 (EI)		
S2-2 (BO) - Body ground		10 kΩ or higher
S2-4 (SO) - Body ground		
S2-6 (EO) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 REPLACE NO. 1 ULTRASONIC SENSOR (REAR LEFT CENTER SENSOR)

No. 1 Ultrasonic Sensor:

(a) Replace the ultrasonic sensor (See page PM-99) with a normally functioning sensor.

PM

NEXT

4	CHECK DTC OUTPUT

(a) Delete the DTCs (See page PM-28).
(b) Recheck for DTCs (See page PM-28).
Result

Result	Proceed to
DTCs C1AE6 and C1AE7 are output	A
No DTC is output	B

B → END

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

DTC	C1AE8	Rear Right Center Sensor Malfunction

DESCRIPTION

The No. 1 ultrasonic sensor (rear right center sensor) is installed on the front bumper. The clearance warning ECU detects obstacles based on signals received from the rear right center sensor. If the rear right center sensor has an open circuit or other malfunction, it will not function normally.

DTC Combination Table

DTC NO.	C1AE6	C1AE7	C1AE8	C1AE9	Trouble Area
DTC Detection Condition	○	○	○	-	1. Rear right center senor malfunction 2. Open in wire harness between rear right center sensor and rear right sensor 3. Clearance warning ECU malfunction
	-	-	○	-	Rear right center senor malfunction

○: DTC is output
-: DTC is not output

DTC No.	DTC Detection Condition	Trouble Area
C1AE8	Malfunction of No. 1 ultrasonic sensor (Rear right center sensor)	• No. 1 ultrasonic sensor (rear right center sensor) • Wire harness (rear right center sensor - right sensor) • Clearance warning ECU assembly

B → END

A

REPLACE CLEARANCE WARNING ECU ASSEMBLY (See page PM-93)

SYSTEM DIAGRAM

PROBLEM SYMPTOMS TABLE

HORN SYSTEM

Symptom	Suspected Area	See page
Horn does not sound	1. HORN fuse	HO-4
	2. Horn relay	HO-4
	3. Steering pad switch	RS-365
	4. Spiral cable	RS-380
	5. Wire harness	-
Horn blows all the time	1. Horn relay	HO-4
	2. Steering pad switch	RS-365
	3. Wire harness	-
Low pitched horn operates but high pitched horn does not operate	1. High pitched horn	HO-8
	2. Wire harness	-
High pitched horn operates but low pitched horn does not operate	1. Low pitched horn	HO-6
	2. Wire harness	-

HORN RELAY

INSPECTION

1. INSPECT FUSE (HORN)

(a) Check the resistance of the HORN fuse.

Standard:

Below 1 Ω

2. INSPECT HORN RELAY

(a) Remove the engine room R/B and J/B (horn relay).

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1G-1 - 1B-6	When battery voltage is not applied to terminals 1G-1 and 1D-10	10 kΩ or higher
1G-1 - 1B-6	When battery voltage is applied to terminals 1G-1 and 1D-10	Below 1 Ω

LOW PITCHED HORN

COMPONENTS

REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-5)**
3. **REMOVE LOW PITCHED HORN ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the bolt and the low pitched horn assembly.

INSPECTION

1. **INSPECT LOW PITCHED HORN**
   (a) Apply battery voltage and check operation of the horn, as shown in the table below.
   Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Body ground	Horn sounds

HO

INSTALLATION

1. **INSTALL LOW PITCHED HORN ASSEMBLY**
   (a) Install the low pitched horn assembly with the bolt.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (b) Connect the connector.
2. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-14)**
3. **INSTALL COOL AIR INTAKE DUCT SEAL (See page ET-14)**
4. **VEHICLE PREPARATION FOR FOG LIGHT AIM ADJUSTMENT (See page LI-141)**
5. **PREPARATION FOR FOG LIGHT AIMING (See page LI-142)**
6. **FOG LIGHT AIMING INSPECTION (See page LI-143)**
7. **FOG LIGHT AIMING ADJUSTMENT (See page LI-144)**

HIGH PITCHED HORN

COMPONENTS

HO

REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-5)**
3. **REMOVE HIGH PITCHED HORN ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the bolt and the high pitched horn assembly.

INSPECTION

1. **INSPECT HIGH PITCHED HORN**
   (a) Apply battery voltage and check operation of the horn, as shown in the table below.
   Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Body ground	Horn sounds

INSTALLATION

1. **INSTALL HIGH PITCHED HORN ASSEMBLY**
   (a) Install the high pitched horn assembly with the bolt.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (b) Connect the connector.
2. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-14)**
3. **INSTALL COOL AIR INTAKE DUCT SEAL (See page ET-14)**
4. **VEHICLE PREPARATION FOR FOG LIGHT AIM ADJUSTMENT (See page LI-141)**
5. **PREPARATION FOR FOG LIGHT AIMING (See page LI-142)**
6. **FOG LIGHT AIMING INSPECTION (See page LI-143)**
7. **FOG LIGHT AIMING ADJUSTMENT (See page LI-144)**

TERMINALS OF ECU

1. CLOCK ASSEMBLY (IN HEATER CONTROL PANEL) (WITHOUT NAVIGATION SYSTEM)

HINT:

- Measure the voltage with the connector still connected.
- The whole heater control panel should be replaced if the clock assembly has a malfunction because this part is not independently supplied.

H

E130403E02

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E3-1 (+B) - Body ground	GR - Body ground	Battery	Always	10 to 14 V
E3-10 (ACC) - Body ground	L - Body ground	Engine switch signal (Accessory)	Engine switch off	Below 1 V
			Engine switch on (ACC)	10 to 14 V
ILL+ (E3-11) - Body ground	G - Body ground	Illumination signal	Engine switch on (IG), light control switch OFF	Below 1 V
			Engine switch on (IG), light control switch TAIL/HEAD	10 to 14 V
TX+ (E3-15) - Body ground	GR - Body ground	LIN communication line (Illumination signal)	Engine switch on (IG), cover the automatic light control sensor by hand, and light control switch TAIL/HEAD	Pulse generation
ILL- (E3-17) - Body ground	BR - Body ground	Illumination signal	Engine switch on (IG)	Pulse generation (See waveform)
E3-18 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V

I037750E01

(a) Waveform (Reference): Using oscilloscope:

Item	Condition
Tool setting	2 V/DIV, 1 ms./DIV
Vehicle condition	Turn the engine switch on (IG), light control switch TAIL/HEAD

HINT:
Duty ratio changes as the illumination becomes darker (the period "A" shown in the illustration becomes longer).

2. CLOCK ASSEMBLY (IN MULTI-DISPLAY) (WITH NAVIGATION SYSTEM)

HINT:

- Measure the voltage with the connector still connected.

- The whole multi-display assembly should be replaced if the clock assembly has a malfunction because this part is not independently supplied.

H

E132695E01

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (E18-1) - Body ground	R - Body ground	Battery	Always	10 to 14 V
ACC (E18-2) - Body ground	L - Body ground	Engine switch signal (Accessory)	Engine switch off	Below 1 V
			Engine switch on (ACC)	10 to 14 V
LIN (E18-4) - Body ground	GR - Body ground	LIN communication line (Illumination signal)	Engine switch on (IG), cover the automatic light control sensor by hand, and light control switch TAIL/HEAD	Pulse generation
IG+ (E18-5) - Body ground	B - Body ground	Engine switch signal	Engine switch off	Below 1 V
			Engine switch on (IG)	10 to 14 V
ILL+ (E18-6) - Body ground	G - Body ground	Illumination signal	Engine switch on (IG), light control switch OFF	Below 1 V
			Engine switch on (IG), light control switch TAIL/HEAD	10 to 14 V
ILL- (E18-7) - Body ground	BR - Body ground	Illumination signal	Engine switch on (IG)	Pulse generation (See waveform)
E (E18-8) - Body ground	W-B - Body ground	Ground	Always	Below 1 V

OT

I037750E01

(a) Waveform (Reference): Using oscilloscope:

Item	Condition
Tool setting	2 V/DIV, 1 ms./DIV
Vehicle condition	Turn the engine switch on (IG), light control switch TAIL/HEAD

HINT:
Duty ratio changes as the illumination becomes darker (the period "A" shown in the illustration becomes longer).

Clock Assembly
Wire Harness View:

ON-VEHICLE INSPECTION

1. INSPECT CLOCK ASSEMBLY (w/o Navigation System)

(a) Disconnect the E3 connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E3-1 (+B) - Body ground	Always	10 to 14 V
E3-10 (ACC) - Body ground	Engine switch off	Below 1 V
	Engine switch on (ACC)	10 to 14 V
E3-11 (ILL+) - Body ground	Engine switch on (IG), light control switch OFF	Below 1 V
	Engine switch on (IG), light control switch TAIL/HEAD	10 to 14 V

HINT:
If the value is not as specified, repair or replace the wire harness or connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E3-18 (GND) - Body ground	Always	Below 1 Ω

HINT:
If the value is not as specified, repair or replace the wire harness or connector.

(d) Reconnect the E3 connector.

(e) Check the waveform according to the illustration shown in below.

OK

Tester Connection	Condition	Specified Condition
E3-17 (ILL-) - Body ground	Engine switch on (IG)	Pulse generation (See waveform)

HINT:
If the result is not as specified, replace the heater control panel because the clock assembly does not supplied independently.

Clock Assembly
Wire Harness View:

(1) Waveform (Reference): Using oscilloscope:

Item	Condition
Tool setting	2 V/DIV, 1 ms./DIV
Vehicle condition	Turn the engine switch on (IG), light control switch TAIL/HEAD

HINT:
Duty ratio changes as the illumination becomes darker (the period "A" shown in the illustration becomes longer).

Clock Assembly Wire Harness View:

2. INSPECT CLOCK ASSEMBLY (w/ Navigation System)

(a) Disconnect the E18 connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E18-1 (B) - Body ground	**Always**	**10 to 14 V**
E18-2 (ACC) - Body ground	**Engine switch off**	**Below 1 V**
	Engine switch on (ACC)	**10 to 14 V**
E18-6 (ILL+) - Body ground	**Engine switch on (IG), light control switch OFF**	**Below 1 V**
	Engine switch on (IG), light control switch TAIL/HEAD	**10 to 14 V**

HINT:
If the value is not as specified, repair or replace the wire harness or connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E18-8 (E) - Body ground	**Always**	**Below 1 Ω**

HINT:
If the value is not as specified, repair or replace the wire harness or connector.

(d) Reconnect the E18 connector.

(e) Check the waveform according to the illustration shown in below.
OK

Tester Connection	Condition	Specified Condition
E18-7 (ILL-) - Body ground	**Engine switch on (IG)**	**Pulse generation (See waveform)**

HINT:
Because the clock assembly does not supplied independently, if the result is not as specified, replace the multi-display.
HINT:
If the result is not as specified, replace the multi-display because the clock assembly does not supplied independently.

(1) Waveform (Reference): Using oscilloscope:

Item	Condition
Tool setting	2 V/DIV, 1 ms./DIV
Vehicle condition	Turn the engine switch on (IG), light control switch TAIL/HEAD

HINT:
Duty ratio changes as the illumination becomes darker (the period "A" shown in the illustration becomes longer).

REMOVAL

1. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
4. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
5. **REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)**
6. **REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-170)**
7. **REMOVE NO. 1 RADIO BRACKET (See page AV-170)**
8. **REMOVE NO. 2 RADIO BRACKET (See page AV-170)**
9. **REMOVE CLOCK ASSEMBLY**
   (a) Remove the 2 screws and the clock assembly.

OT

INSTALLATION

1. **INSTALL CLOCK ASSEMBLY**
   (a) Install the clock assembly with the 2 screws.
2. **INSTALL NO. 2 RADIO BRACKET (See page AV-173)**
3. **INSTALL NO. 1 RADIO BRACKET (See page AV-173)**
4. **INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-173)**
5. **INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-41)**
6. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**
7. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**
8. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
9. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**

Clock Display Circuit

DESCRIPTION

The clock assembly uses this circuit to communicate with the A/C amplifier via the direct line. The clock assembly uses this circuit to receive auto dimmer signals. When the clock assembly receives an auto dimmer signal from the main body ECU through the A/C amplifier via the direct line, the clock assembly causes the clock display to be dimmed.
HINT:
If the automatic light control sensor has a malfunction, DTC B1244 is output.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if CAN communication DTC is output (See page CA-41).

Result

Result	Proceed to
CAN communication DTC is not output	A
CAN communication DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

OT

A

2	CHECK AIR CONDITIONING SYSTEM

(a) Check the the heater control panel illumination.

OK:

The heater control panel illumination operates normally.

NG → **GO TO AIR CONDITIONING SYSTEM**

OK

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Engine switch on (IG).
(c) Turn the tester ON.
(d) Light control switch TAIL/HEAD.
(e) Enter the following menus: DIAGNOSIS / BODY / MAIN BODY / ACTIVE TEST.
(f) Check the clock illumination.

MAIN BODY:

Item	Test Details	Diagnostic Note
DIMMER SIG	Auto dimmer signal ON/OFF	-

OK:

The clock illumination is dimmed when the DIMMER SIG is ON.

HINT:

Refer to the sensitivity setting in the customization table of the automatic light control system (See page LI-29).

NG → **Go to step 4**

OK

REPLACE MAIN BODY ECU

4	CHECK HARNESS AND CONNECTOR (ILL+)

Clock Assembly Wire Harness View (without Navigation System):

Clock Assembly Wire Harness View (with Navigation System):

E134455E01

(a) Disconnect the E3 (*1)/E18 (*2) connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E3-11 (ILL+) (*1) - Body ground	Engine switch on (IG), light control switch TAIL/HEAD	10 to 14 V
E18-6 (ILL+) (*2) - Body ground	Engine switch on (IG), light control switch TAIL/HEAD	10 to 14 V

*1: without Navigation System
*2: with Navigation System

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (CLOCK ASSEMBLY - COMBINATION METER)

Clock Assembly Wire Harness View (without Navigation System):

Clock Assembly Wire Harness View (with Navigation System):

Combination Meter Assembly Wire Harness View:

E132717E01

(a) Disconnect the E19 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E3-17 (ILL-) (*1) - E19-11 (ILL-)	Always	Below 1 Ω
E18-7 (ILL-) (*2) - E19-11 (ILL-)	Always	Below 1 Ω
E19-11 (ILL-) - Body ground	Always	10 kΩ or higher

*1: without Navigation System
*2: with Navigation System

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

OT

6 INSPECT CLOCK ASSEMBLY

Combination Meter Assembly Wire Harness View:

H

E132615E07

(a) Reconnect the E19 connector.
(b) Check the waveform shown in the illustration below.
OK

Tester Connection	Condition	Specified Condition
E19-11 (ILL-) - Body ground	**Turn the engine switch on (IG), light control switch TAIL/HEAD**	**Pulse generation (See waveform)**

I037750E01

(1) Waveform (Reference): Using oscilloscope:

Item	Condition
Tool setting	2 V/DIV, 1 ms./DIV
Vehicle condition	Turn the engine switch on (IG), light control switch TAIL/HEAD

HINT:
Duty ratio changes as the illumination becomes darker (the period "A" shown in the illustration becomes longer).

Result

Result	Proceed to
NG (without Navigation System)	**A**
NG (with Navigation System)	**B**
OK	**C**

HINT:
The whole heater control panel/multi-display should be replaced if the clock assembly has a malfunction because this part is not independently supplied.

A → **REPLACE HEATER CONTROL PANEL**

B → **REPLACE MULTI-DISPLAY**

C

REPLACE COMBINATION METER ASSEMBLY

OT

REMOVAL

1. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
4. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
5. **REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-17)**
6. **REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-170)**
7. **REMOVE NO. 1 RADIO BRACKET (See page AV-170)**
8. **REMOVE NO. 2 RADIO BRACKET (See page AV-170)**
9. **REMOVE CLOCK ASSEMBLY**
   (a) Remove the 2 screws and the clock assembly.

OT

INSTALLATION

1. **INSTALL CLOCK ASSEMBLY**
   (a) Install the clock assembly with the 2 screws.
2. **INSTALL NO. 2 RADIO BRACKET (See page AV-173)**
3. **INSTALL NO. 1 RADIO BRACKET (See page AV-173)**
4. **INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (See page AV-173)**
5. **INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-41)**
6. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**
7. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**
8. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
9. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**

Clock Display Circuit

DESCRIPTION

The clock assembly uses this circuit to communicate with the A/C amplifier via the direct line. The clock assembly uses this circuit to receive auto dimmer signals. When the clock assembly receives an auto dimmer signal from the main body ECU through the A/C amplifier via the direct line, the clock assembly causes the clock display to be dimmed.
HINT:
If the automatic light control sensor has a malfunction, DTC B1244 is output.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if CAN communication DTC is output (See page CA-41).

Result

Result	Proceed to
CAN communication DTC is not output	A
CAN communication DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

OT

A

2	CHECK AIR CONDITIONING SYSTEM

(a) Check the the heater control panel illumination.

OK:

The heater control panel illumination operates normally.

NG → **GO TO AIR CONDITIONING SYSTEM**

OK

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Engine switch on (IG).
(c) Turn the tester ON.
(d) Light control switch TAIL/HEAD.
(e) Enter the following menus: DIAGNOSIS / BODY / MAIN BODY / ACTIVE TEST.
(f) Check the clock illumination.

MAIN BODY:

Item	Test Details	Diagnostic Note
DIMMER SIG	Auto dimmer signal ON/OFF	-

OK:

The clock illumination is dimmed when the DIMMER SIG is ON.

HINT:

Refer to the sensitivity setting in the customization table of the automatic light control system (See page LI-29).

NG → **Go to step 4**

OK

REPLACE MAIN BODY ECU

4	CHECK HARNESS AND CONNECTOR (ILL+)

Clock Assembly Wire Harness View (without Navigation System):

Clock Assembly Wire Harness View (with Navigation System):

E134455E01

(a) Disconnect the E3 (*1)/E18 (*2) connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E3-11 (ILL+) (*1) - Body ground	Engine switch on (IG), light control switch TAIL/HEAD	10 to 14 V
E18-6 (ILL+) (*2) - Body ground	Engine switch on (IG), light control switch TAIL/HEAD	10 to 14 V

*1: without Navigation System
*2: with Navigation System

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (CLOCK ASSEMBLY - COMBINATION METER)

Clock Assembly Wire Harness View (without Navigation System):

Clock Assembly Wire Harness View (with Navigation System):

Combination Meter Assembly Wire Harness View:

E132717E01

(a) Disconnect the E19 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E3-17 (ILL-) (*1) - E19-11 (ILL-)	Always	Below 1 Ω
E18-7 (ILL-) (*2) - E19-11 (ILL-)	Always	Below 1 Ω
E19-11 (ILL-) - Body ground	Always	10 kΩ or higher

*1: without Navigation System
*2: with Navigation System

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

OT

6 INSPECT CLOCK ASSEMBLY

Combination Meter Assembly Wire Harness View:

H

E132615E07

(a) Reconnect the E19 connector.
(b) Check the waveform shown in the illustration below.
OK

Tester Connection	Condition	Specified Condition
E19-11 (ILL-) - Body ground	**Turn the engine switch on (IG), light control switch TAIL/HEAD**	**Pulse generation (See waveform)**

I037750E01

(1) Waveform (Reference): Using oscilloscope:

Item	Condition
Tool setting	2 V/DIV, 1 ms./DIV
Vehicle condition	Turn the engine switch on (IG), light control switch TAIL/HEAD

HINT:
Duty ratio changes as the illumination becomes darker (the period "A" shown in the illustration becomes longer).

Result

Result	Proceed to
NG (without Navigation System)	**A**
NG (with Navigation System)	**B**
OK	**C**

HINT:
The whole heater control panel/multi-display should be replaced if the clock assembly has a malfunction because this part is not independently supplied.

A → **REPLACE HEATER CONTROL PANEL**

B → **REPLACE MULTI-DISPLAY**

C

REPLACE COMBINATION METER ASSEMBLY

OT

Power Source Circuit

DESCRIPTION

This circuit is the power source for the clock assembly. This circuit provides two types of power sources; one is a constant power source mainly used as a backup power source, and the other is a power source mainly used for signal transmission. The constant power source is mainly used as a backup power source of the clock assembly, however, it is also used for communication.
HINT:
If the clock assembly displays "1:00" when the engine switch is turned off, then on (IG) again, the +B (*1)/ B (*2) terminal has a malfunction.
The maximum clock assembly margin of error is -4 to 4 seconds per day when the temperature is between -20°C (-4°F) and 60°C (140°F).

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR

Clock Assembly Wire Harness View (without Navigation System):

Clock Assembly Wire Harness View (with Navigation System):

E134455E05

(a) Disconnect the E3 (*1)/E18 (*2) connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E3-1 (B) (*1) - Body ground	Always	10 to 14 V
E18-1 (B) (*2) - Body ground	Always	10 to 14 V
E3-10 (ACC) (*1) - Body ground	Engine switch on (ACC)	10 to 14 V
E18-2 (ACC) (*2) - Body ground	Engine switch on (ACC)	10 to 14 V

*1: without Navigation System
*2: with Navigation System

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E3-18 (GND) (*1) - Body ground	Always	Below 1 Ω
E18-8 (E) (*2) - Body ground	Always	Below 1 Ω

*1: without Navigation System
*2: with Navigation System

Result

Result	Proceed to
OK (without Navigation System)	A
OK (with Navigation System)	B
NG	C

HINT:
The whole heater control panel (*1)/multi-display should be replaced if the clock assembly has a malfunction because this part is not independently supplied.

B	REPLACE MULTI-DISPLAY
C	REPAIR OR REPLACE HARNESS OR CONNECTOR

A

REPLACE HEATER CONTROL PANEL

POWER OUTLET SOCKET

COMPONENTS

OT

REMOVAL

1. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
4. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
5. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**
6. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**
7. **REMOVE CONSOLE BOX POCKET (See page IP-18)**
8. **REMOVE CONSOLE BOX CARPET (See page IP-18)**
9. **REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-19)**
10. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-19)**
11. **REMOVE POWER OUTLET SOCKET ASSEMBLY**
    (a) Disconnect the connector.
    (b) Disengage the claw and remove the power outlet socket assembly.

12. REMOVE POWER OUTLET SOCKET COVER

(a) Disengage the 2 claws and remove the power outlet socket cover.

INSTALLATION

1. INSTALL POWER OUTLET SOCKET COVER

(a) Engage the 2 claws and install the power outlet socket cover.

2. INSTALL POWER OUTLET SOCKET ASSEMBLY

(a) Referring to the shape of the parts, align the power outlet socket assembly with the power outlet socket cover and install the power outlet socket assembly.

(b) Connect the connector.

3. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-39)**
4. **INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-40)**
5. **INSTALL CONSOLE BOX CARPET (See page IP-41)**
6. **INSTALL CONSOLE BOX POCKET (See page IP-41)**
7. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)**
8. **INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)**
9. **INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)**
10. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)**
11. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
12. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**

SYSTEM DESCRIPTION

1. POWER WINDOW CONTROL SYSTEM DESCRIPTION

(a) The power window control system controls the power window operation using the power window regulator motors. The main controls of this system are the power window regulator master switch, which is mounted on the driver side door, and the power window regulator switches, which are mounted on the passenger side door and rear doors. Operating a window switch results in electrical power being transmitted to the corresponding power window regulator motor.

(b) The power window control system has the following functions:

Function	Outline
Manual up-and-down function	Function that causes window to go up while power window switch is being pulled halfway up and to go down while pushed halfway down. Window stops as soon as the switch is released.
All door auto up-and-down function	Function that enables windows of all doors to be fully opened or closed by one press of power window switch.
Jam protection function	Function that automatically stops power window and moves it downward if a foreign object gets jammed in door window during auto-up operation.
Remote control function	Function that allows power window master switch to control MANUAL up-and-down operations of front passenger door window and rear door windows.
Key-off operation function	Function that makes it possible to operate power window for approx. 45 seconds after engine switch is turned on (ACC) or off, if either front door is not opened.
Key-linked up-and-down function	Function that causes window to go up while driver's door key is turned to lock side for more than 1.5 seconds and to go down while turned to unlock side for more than 1.5 seconds. Window stops as soon as the key is returned to original position.
Diagnosis	Function that allows the power window switch to make a diagnosis for failed section when power window switch detects a malfunction in power window system. Power window switch light comes on or blinks to inform driver.
Fail-safe	A fail-safe function to disable a part of power window functions if pulse sensor in power window motor has a malfunction: Driver's door auto up-and-down function and remote control function are disabled.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use the following procedure to troubleshoot the power window control system.
- The intelligent tester should be used in steps 3 and 5.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

NEXT

3 CHECK COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM

(a) Use the intelligent tester, inspect the LIN communication function to ensure there are no malfunctions in the communication system.

HINT:
See page WS-12.

NEXT

6	ADJUST, REPAIR OR REPLACE

NEXT

7	RESET POWER WINDOW MOTOR

HINT:
See page WS-10.

NEXT

END

OPERATION CHECK

1. CHECK WINDOW LOCK SWITCH

(a) Check that the front passenger side power window and rear power windows operation are disabled when the window lock switch of the power window master switch is pressed.

Standard:

Front passenger side power window and rear power windows operation are disabled.

(b) Check that the front passenger side power window and rear power windows can be operated when the window lock switch is pressed again.

Standard:

Front passenger side power window and rear power windows can be operated.

WS

2. CHECK MANUAL UP/DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
Engine switch on (IG)	Driver side	Pulled halfway up	UP (Closed)
		Pushed halfway down	DOWN (Open)

(b) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Switch	Switch Operation	Power Window
• Engine switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)

3. CHECK AUTO UP/DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
Engine switch on (IG)	Driver side	Pulled up fully	UP (Closed)
		Pushed down fully	DOWN (Open)

(b) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Switch	Switch Operation	Power Window
• Engine switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)

4. CHECK REMOTE MANUAL UP/DOWN FUNCTION

(a) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
• Engine switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)

5. CHECK REMOTE AUTO UP/DOWN FUNCTION

(a) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
• Engine switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)

6. CHECK JAM PROTECTION FUNCTION

NOTICE:

- **The jam protection function can activate when either the AUTO UP function or MANUAL UP function is used.**
- **Limbs, fingers or other body parts should not be used to test the jam protection function. Do not allow any body parts to get caught by the moving window or regulator.**

HINT:
The jam protection function can activate when either the AUTO UP function or MANUAL UP function are used with the engine switch on (IG). The jam protection function can also activate as long as the driver's door remains closed, within 45 seconds after the engine switch is turned off.

(a) Check the reversing distance.
  (1) Fully open the door glass.
  (2) Place a check jig measuring 4 to 10 mm (0.16 to 0.40 in.) thick near the window fully closed position.
  (3) When the door glass is closed using AUTO or MANUAL operation, check that the door glass goes down after contacting the check jig. The glass should go 200 to 240 mm (7.90 to 9.44 in.) away from the position where it contacted the check jig.
  (4) While the door glass is going down, verify that the window switch cannot be used to make the glass go up.

(b) Check the reversing distance.
  (1) Fully open the door glass.
  (2) Place a check jig measuring 200 to 250 mm (7.90 to 9.84 in.) thick near the window fully closed position.
  (3) When the door glass is closed using AUTO or MANUAL operation, check that the door glass goes down after contacting the check jig. The door glass should go 80 to 100 mm away from the position where it contacted the check jig.
  (4) While the door glass is going down, verify that the window switch cannot be used to make the glass go up.

INITIALIZATION

1. INITIALIZE POWER WINDOW REGULATOR MOTOR FRONT LH

NOTICE:

- **If the power window motor or power window regulator assembly is replaced, initialization is required (initialization is not necessary when the negative battery terminal is disconnected and reconnected).**
- **No other electrical systems should be operated during initialization. Initialization will be interrupted if a voltage drop occurs in the power being supplied to the power window motor.**
- **Replacing the door glass or door glass run may cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.**

HINT:

- The AUTO UP function will not work unless initialization is completed.
- The indicator on the power window master switch will blink when the engine switch is on (IG), until initialization has been completed. The indicator will remain on after initialization is successfully completed.

(a) Connect the negative battery terminal.

(b) Turn the engine switch on (IG). The indicator on the power window master switch will blink.

(c) Fully close the door glass by operating the power window master switch. After the door glass stops, hold the power window master switch in the AUTO UP position for 1 second or more.

(d) Check that the indicator on the power window master switch remains on.

HINT:

If the indicator does not remain on, this means that initialization has not been completed successfully. In this case, lower the door glass at least 50 mm (1.96 in.) and hold the power window master switch in the AUTO UP position for 1 second after the window closes fully.

2. TO RETURN THE SYSTEM TO THE PRE-INITIALIZED CONDITION

Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

PROBLEM SYMPTOMS TABLE

POWER WINDOW CONTROL SYSTEM

Symptom	Suspected Area	See page
Power window does not operate with power window regulator master switch	1. ECU-B No. 2 fuse	-
	2. Power window master switch	WS-31

TERMINALS OF ECU

1. POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

H

B145493E03

(a) Disconnect the I5 switch connector.
(b) Measure the voltage and resistance of each terminal according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (I5-12) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (I5-11) - E (I5-12)	V - W-B	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the I5 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

WS

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D (I5-15) - E (I5-12)	R - W-B	Power window motor DOWN output	Engine switch on (IG), driver side power window switch OFF → DOWN (Manual operation)	10 to 14 V → 0 V
U (I5-20) - E (I5-12)	G - W-B	Power window motor UP output	Engine switch on (IG), driver side power window switch OFF → UP (Manual operation)	10 to 14 V → 0 V

If the result is not as specified, there may be a malfunction in the wire harness.

2. CHECK POWER WINDOW SWITCH (FRONT PASSENGER SIDE)

(a) Disconnect the H6 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (H6-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the H6 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
A (H6-4) - E (H6-5)	L - W-B	Power window motor AUTO UP output	Engine switch on (IG), front passenger side power window fully open → UP (AUTO UP position) → fully closed	10 to 14 V → 0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Engine switch on (IG), front passenger side power window fully closed → DOWN (AUTO UP position) → fully open	10 to 14 V → 0 V → 10 to 14 V
D (H6-10) - E (H6-5)	R - W-B	Power window motor DOWN output	Engine switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
U (H6-2) - E (H6-5)	G - W-B	Power window motor UP output	Engine switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

3. CHECK POWER WINDOW SWITCH (REAR LH SIDE)

H

B145492E08

(a) Disconnect the K4 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (K4-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the K4 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
A (K4-4) - E (K4-5)	L - W-B	Power window motor AUTO UP output	Engine switch on (IG), rear LH side power window fully open → UP (AUTO UP position) → fully closed	10 to 14 V → 0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Engine switch on (IG), rear LH side power window fully closed → DOWN (AUTO UP position) → fully open	10 to 14 V → 0 V → 10 to 14 V
D (K4-10) - E (K4-5)	R - W-B	Power window motor DOWN output	Engine switch on (IG), rear LH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
U (K4-2) - E (K4-5)	G - W-B	Power window motor UP output	Engine switch on (IG), rear LH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

4. CHECK POWER WINDOW SWITCH (REAR RH SIDE)

H

B145492E09

(a) Disconnect the J4 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (J4-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the J4 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
A (J4-4) - E (J4-5)	L - W-B	Power window motor AUTO UP output	Engine switch on (IG), rear RH side power window fully open → UP (AUTO UP position) → fully closed	10 to 14 V → 0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Engine switch on (IG), rear RH side power window fully closed → DOWN (AUTO UP position) → fully open	10 to 14 V → 0 V → 10 to 14 V
D (J4-10) - E (J4-5)	R - W-B	Power window motor DOWN output	Engine switch on (IG), rear RH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
U (J4-2) - E (J4-5)	G - W-B	Power window motor UP output	Engine switch on (IG), rear RH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

5. CHECK POWER WINDOW ECU (DRIVER SIDE)

(a) Disconnect the I4 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (I4-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (I4-2) - Body ground	W - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

6. CHECK POWER WINDOW ECU (FRONT PASSENGER SIDE)

(a) Disconnect the H5 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (H5-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (H5-2) - Body ground	V - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

7. CHECK POWER WINDOW ECU (REAR LH SIDE)

(a) Disconnect the K3 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (K3-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (K3-2) - Body ground	V - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

8. CHECK POWER WINDOW ECU (REAR RH SIDE)

WS

(a) Disconnect the J3 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (J3-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (J3-2) - Body ground	V - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The power window control system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch OFF*	6 kΩ or more

WS

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

B064900E01

3. CHECK DIAGNOSIS (WITH JAM PROTECTION)

HINT:

If there is a malfunction in the pulse sensor, manually operating the power window switch will cause the power window switch light to blink.

(a) Turn the engine switch on (IG).

(b) Manually operate the power window master switch or power window switch on each door.

(c) Check the blinking pattern of the AUTO light as shown in the illustration.

Brinking Pattern of Light:

(A): LIN communication fail

(B): - Initial fail (Window position)
- Pulse sensor fail

Normal

H

B145472E02

(1) If pattern (A) is displayed, check the wire harness or power window ECU.

(2) If pattern (B) is displayed, check the power window regulator motor or power window ECU.

(3) If the normal pattern is displayed, replace the power window regulator master switch.

DATA LIST / ACTIVE TEST

1. USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Monitor the ECU data by following the prompts on the tester screen.

HINT:

The intelligent tester has a "Snapshot" function which records the monitored data. Refer to the intelligent tester operator's manual for further details.

2. DATA LIST

HINT:

Using the DATA LIST displayed on the intelligent tester, the value of the switches, sensors, actuators, etc. can be read without part removal. Reading the DATA LIST as the first step in troubleshooting is one way to shorten the labor time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the DATA LIST according to the display on the tester.

MASTER SW:

3. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows you to operate the relay, VSV, actuator, etc. without parts removal. Performing the ACTIVE TEST as the first step in troubleshooting is one way to shorten the labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

DIAGNOSTIC TROUBLE CODE CHART

POWER WINDOW CONTROL SYSTEM

DTC Code	Detection Item	Trouble Area	See page
B2311	Driver Door Motor Malfunction	1. Battery disconnection when the engine switch is on (IG) 2. Power window regulator motor (on driver side) 3. Incorrect installation of power window components 4. Overheated power window regulator motor (on driver side)	WS-24
B2312	Driver Side Door Master Switch Malfunction	1. Power window regulator motor (on driver side) 2. Power window regulator master switch 3. Wire harness 4. Power window regulator master switch is held in same position for more than 20 seconds	WS-26
B2313	Glass Position Initialization Incomplete	1. Power window regulator motor (on driver side) 2. Power window regulator motor (on driver side) not initialized	WS-29

DTC	B2311	Driver Door Motor Malfunction

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).
DTC B2311 is set when the ECU for the driver door power window regulator motor assembly malfunctions.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

HINT:

- Initialization is required only when the power window regulator motor is replaced. However, replacing the motor may cause the motor gear to be engaged in a different position. This can cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.
- To return the system to the pre-initialized condition:
  Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

DTC No.	DTC Detection Condition	Trouble Area
B2311	When either condition below is met: • The power window regulator motor (on driver side) malfunctions • When the ECU in the power widow regulator motor (on driver side) determines that the fully closed window position has deviated approximately 20 mm (0.79 in.) or more from the normal position	• Battery disconnection when the engine switch is on (IG) • Power window regulator motor (on driver side) • Incorrect installation of power window components • Overheated power window regulator motor (on driver side)

WS

INSPECTION PROCEDURE

1	INITIALIZE POWER WINDOW CONTROL SYSTEM

(a) Initialize the power window regulator motor assembly (on the driver side) (See page WS-10).

(b) Check that the power window operates normally by opening and closing the window.

OK:

Driver side power window operates normally.

NG → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)**

OK

2	CHECK WHETHER PARTS HAVE BEEN INSTALLED CORRECTLY

(a) Check that the power window components (on the driver side) are installed correctly.

OK:

Power window components (on driver side) are installed correctly.

HINT:

When the power window components are installed correctly, the problem has been caused by battery disconnection while the engine switch is on (IG), improper installation of the power window components or the motor being overheated.

NG → **INSTALL PARTS CORRECTLY**

OK

END

DTC	B2312	Driver Side Door Master Switch Malfunction

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).

When the ECU determines that the power window master switch is stuck, DTC B2312 is set.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

DTC No.	DTC Detection Condition	Trouble Area
B2312	The power window regulator master switch is stuck	• Power window regulator motor (on driver side) • Power window regulator master switch • Wire harness • Power window regulator master switch is held in same position for more than 20 seconds

WIRING DIAGRAM

WS

INSPECTION PROCEDURE

1 INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
20 (U) - 12 (E)	Manual UP	Below 1 Ω
15 (D) - 12 (E)	Manual DOWN	Below 1 Ω

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH**

OK

2 CHECK WIRE HARNESS (WINDOW REGULATOR MASTER SWITCH - POWER WINDOW ECU)

(a) Disconnect the I4 and I5 connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
I4-1 (E) - I5-12 (E)	Always	Below 1 Ω
I4-5 (LED) - I5-3 (LED)	Always	Below 1 Ω
I4-7 (DWN1) - I5-15 (D)	Always	Below 1 Ω
I4-9 (LIN) - I5-16 (LIN2)	Always	Below 1 Ω
I4-10 (UP1) - I5-20 (U)	Always	Below 1 Ω
I4-1 (E) - Body ground	Always	10 kΩ or higher
I4-5 (LED) - Body ground	Always	10 kΩ or higher
I4-7 (DWN1) - Body ground	Always	10 kΩ or higher
I4-9 (LIN) - Body ground	Always	10 kΩ or higher
I4-10 (UP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE DRIVER SIDE POWER WINDOW REGULATOR MOTOR ASSEMBLY

DTC	B2313	Glass Position Initialization Incomplete

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).
When the ECU determines that the driver's door power window regulator motor assembly has not been initialized, DTC B2313 is set.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

HINT:

- Replacing the door glass or door glass run may cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.
- To return the system to the pre-initialized condition:
  Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

DTC No.	DTC Detection Condition	Trouble Area
B2313	• The power window regulator motor (on driver side) is not initialized • The power window regulator motor (on driver side) malfunctions	• Power window regulator motor (on driver side) • Power window regulator motor (on driver side) not initialized

INSPECTION PROCEDURE

NOTICE:

When using the intelligent tester to troubleshoot the LIN communication line: Connect the intelligent tester to the vehicle, and turn the courtesy light switch on and off at 1.5 second intervals until communication between the tester and vehicle begins.

WS

1	CHECK DTC OUTPUT

(a) Turn the engine switch off.
(b) Wait for at least 10 seconds, and then turn the engine switch on (IG).
(c) Check whether the DTC output recurs.
Result

Display (DTC Output)	Proceed to
B2313	A
No output	B

B → END

A

2	INITIALIZE SYSTEM (POWER WINDOW CONTROL SYSTEM)

(a) Turn the engine switch on (IG) and initialize the power window regulator motor (on the driver side) (See page WS-10).
(b) Turn the engine switch off.
(c) Wait for at least 10 seconds, and then turn the engine switch on (IG).
(d) Check whether the DTC output recurs.

Result

Display (DTC Output)	Proceed to
No output	A
B2313	B

B → **REPLACE DRIVER SIDE POWER WINDOW REGULATOR MOTOR ASSEMBLY**

A

END

Power Window Master Switch Power Source Circuit

DESCRIPTION

This circuit supplies to operate the power window master switch.

WIRING DIAGRAM

When using intelligent tester:

WS

1	CHECK WIRE HARNESS

(a) Disconnect the I5 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
I5-11 (B) - Body ground	Engine switch on (IG)	10 to 14 V

Standard resistance

Tester Connection	Condition	Specified Condition
I5-12 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FUSE, HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Front Passenger Side Power Window Switch Circuit

DESCRIPTION

This circuit supplies power to operate the power window regulator switch assembly (Front passenger side).

WIRING DIAGRAM

INSPECTION PROCEDURE

WS

1	INSPECT POWER WINDOW REGULATOR SWITCH

(a) Disconnect the H6 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (E) - 4 (A) - 5 (E)	Auto UP	Below 1 Ω
2 (U) - 5 (E)	Manual UP	Below 1 Ω
5 (E) - 10 (D)	Manual DOWN	Below 1 Ω
4 (A) - 10 (D) - 5 (E)	Auto DOWN	Below 1 Ω

NG → **REPAIR OR REPLACE POWER WINDOW REGULATOR SWITCH**

OK

2	REPLACE WIRE HARNESS (POWER WINDOW REGULATOR SWITCH - POWER WINDOW ECU)

(a) Disconnect the H5 and H6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
H5-4 (AUTO) - H6-4 (A)	Always	Below 1 Ω
H5-5 (LED) - H6-8 (LED)	Always	Below 1 Ω
H5-7 (DWN1) - H6-2 (U)	Always	Below 1 Ω
H5-10 (UP1) - H6-10 (D)	Always	Below 1 Ω
H5-4 (AUTO) - Body ground	Always	10 kΩ or higher
H5-5 (LED) - Body ground	Always	10 kΩ or higher
H5-7 (DWN1) - Body ground	Always	10 kΩ or higher
H5-10 (UP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

END

Rear Power Window Switch LH Circuit

DESCRIPTION

This circuit supplies power to operate the power window regulator switch assembly (Rear LH).

WIRING DIAGRAM

INSPECTION PROCEDURE

WS

1	INSPECT POWER WINDOW REGULATOR SWITCH

(a) Disconnect the K4 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (E) - 4 (A) - 5 (E)	Auto UP	Below 1 Ω
2 (U) - 5 (E)	Manual UP	Below 1 Ω
5 (E) - 10 (D)	Manual DOWN	Below 1 Ω
4 (A) - 10 (D) - 5 (E)	Auto DOWN	Below 1 Ω

NG → **REPLACE POWER WINDOW REGULATOR SWITCH**

OK

2	CHECK WIRE HARNESS (POWER WINDOW REGULATOR SWITCH - POWER WINDOW ECU)

Power Window Switch:

Power Window ECU:

H B145499E02

(a) Disconnect the K3 and K4 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
K3-4 (AUTO) - K4-4 (A)	Always	Below 1 Ω
K3-5 (LED) - K4-8 (LED)	Always	Below 1 Ω
K3-7 (DWN1) - K4-2 (U)	Always	Below 1 Ω
K3-10 (UP1) - K4-10 (D)	Always	Below 1 Ω
K3-4 (AUTO) - Body ground	Always	10 kΩ or higher
K3-5 (LED) - Body ground	Always	10 kΩ or higher
K3-7 (DWN1) - Body ground	Always	10 kΩ or higher
K3-10 (UP1) - Body ground	Always	10 kΩ or higher

WS

TERMINALS OF ECU

1. POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

H

B145493E03

(a) Disconnect the I5 switch connector.
(b) Measure the voltage and resistance of each terminal according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (I5-12) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (I5-11) - E (I5-12)	V - W-B	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the I5 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

WS

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D (I5-15) - E (I5-12)	R - W-B	Power window motor DOWN output	Engine switch on (IG), driver side power window switch OFF → DOWN (Manual operation)	10 to 14 V → 0 V
U (I5-20) - E (I5-12)	G - W-B	Power window motor UP output	Engine switch on (IG), driver side power window switch OFF → UP (Manual operation)	10 to 14 V → 0 V

If the result is not as specified, there may be a malfunction in the wire harness.

2. CHECK POWER WINDOW SWITCH (FRONT PASSENGER SIDE)

(a) Disconnect the H6 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (H6-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the H6 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
A (H6-4) - E (H6-5)	L - W-B	Power window motor AUTO UP output	Engine switch on (IG), front passenger side power window fully open → UP (AUTO UP position) → fully closed	10 to 14 V → 0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Engine switch on (IG), front passenger side power window fully closed → DOWN (AUTO UP position) → fully open	10 to 14 V → 0 V → 10 to 14 V
D (H6-10) - E (H6-5)	R - W-B	Power window motor DOWN output	Engine switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
U (H6-2) - E (H6-5)	G - W-B	Power window motor UP output	Engine switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

3. CHECK POWER WINDOW SWITCH (REAR LH SIDE)

H

B145492E08

(a) Disconnect the K4 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (K4-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the K4 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
A (K4-4) - E (K4-5)	L - W-B	Power window motor AUTO UP output	Engine switch on (IG), rear LH side power window fully open → UP (AUTO UP position) → fully closed	10 to 14 V → 0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Engine switch on (IG), rear LH side power window fully closed → DOWN (AUTO UP position) → fully open	10 to 14 V → 0 V → 10 to 14 V
D (K4-10) - E (K4-5)	R - W-B	Power window motor DOWN output	Engine switch on (IG), rear LH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
U (K4-2) - E (K4-5)	G - W-B	Power window motor UP output	Engine switch on (IG), rear LH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

4. CHECK POWER WINDOW SWITCH (REAR RH SIDE)

H

B145492E09

(a) Disconnect the J4 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (J4-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the J4 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
A (J4-4) - E (J4-5)	L - W-B	Power window motor AUTO UP output	Engine switch on (IG), rear RH side power window fully open → UP (AUTO UP position) → fully closed	10 to 14 V → 0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Engine switch on (IG), rear RH side power window fully closed → DOWN (AUTO UP position) → fully open	10 to 14 V → 0 V → 10 to 14 V
D (J4-10) - E (J4-5)	R - W-B	Power window motor DOWN output	Engine switch on (IG), rear RH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
U (J4-2) - E (J4-5)	G - W-B	Power window motor UP output	Engine switch on (IG), rear RH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

5. CHECK POWER WINDOW ECU (DRIVER SIDE)

(a) Disconnect the I4 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (I4-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (I4-2) - Body ground	W - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

6. CHECK POWER WINDOW ECU (FRONT PASSENGER SIDE)

(a) Disconnect the H5 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (H5-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (H5-2) - Body ground	V - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

7. CHECK POWER WINDOW ECU (REAR LH SIDE)

(a) Disconnect the K3 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (K3-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (K3-2) - Body ground	V - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

8. CHECK POWER WINDOW ECU (REAR RH SIDE)

WS

(a) Disconnect the J3 switch connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (J3-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (J3-2) - Body ground	V - Body ground	Power supply	Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

POWER WINDOW MASTER SWITCH

COMPONENTS

P

B149101E01

REMOVAL

1. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
2. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (See page ED-33)**

INSPECTION

1. **INSPECT POWER WINDOW MASTER SWITCH**
   (a) Measure the resistance when the switch is operated according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
20 (U) - 12 (E)	Manual UP	Below 1 Ω
15 (D) - 12 (E)	Manual DOWN	Below 1 Ω

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The power window control system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch OFF*	6 kΩ or more

WS

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

B064900E01

3. CHECK DIAGNOSIS (WITH JAM PROTECTION)

HINT:

If there is a malfunction in the pulse sensor, manually operating the power window switch will cause the power window switch light to blink.

(a) Turn the engine switch on (IG).

(b) Manually operate the power window master switch or power window switch on each door.

(c) Check the blinking pattern of the AUTO light as shown in the illustration.

Brinking Pattern of Light:

(A): LIN communication fail

(B): - Initial fail (Window position)
- Pulse sensor fail

Normal

H

B145472E02

(1) If pattern (A) is displayed, check the wire harness or power window ECU.

(2) If pattern (B) is displayed, check the power window regulator motor or power window ECU.

(3) If the normal pattern is displayed, replace the power window regulator master switch.

FRONT PASSENGER SIDE POWER WINDOW SWITCH

COMPONENTS

REMOVAL

1. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**

2. **REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY (See page ED-33)**

INSPECTION

1. **INSPECT POWER WINDOW SWITCH**
   (a) Remove the power window switch.
   (b) Measure the resistance when the switch is operated according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
2 (E) - 4 (A) - 5 (E)	Auto UP	Below 1 Ω
2 (U) - 5 (E)	Manual UP	Below 1 Ω
5 (E) - 10 (D)	Manual DOWN	Below 1 Ω
4 (A) - 10 (D) - 5 (E)	Auto DOWN	Below 1 Ω

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Check the DTC(s).

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG) .
(c) Clear the DTCs.
(d) Check that "DTCs are cleared" is displayed.
NOTICE:
If any DTCs are output, troubleshoot those DTCs again.

FAIL-SAFE CHART

1. POWER WINDOW OPERATION IN FAIL-SAFE MODE

HINT:
If the pulse sensor built into the power window regulator motor (on the driver side) malfunctions, the power window control system enters fail-safe mode.

Fail mode	Fail Detection Condition
Pulse direction error	With the door glass going up or down, the pulse that indicates door glass operation in the opposite direction is detected for 400 msec.
Pulse stop error	With the door glass going up or down, no pulse is detected for 350 to 450 msec.

(a) The power window control system prohibits the following power window operation when the pulse sensor for the jam protection function has problems and the window position or the learned value is abnormal.

Power window control system

Power window operation	Engine switch on (IG)	Key-off (Within approx. 45 seconds after engine switch turned off)	Key-off (After approx. 45 seconds elapsed after engine switch turned off)
Manual UP	Operation prohibited	Operation prohibited	Operation prohibited
Manual DOWN	Operative (Jam protection not operative)	Operation prohibited	Operation prohibited
AUTO UP (hold switch at AUTO UP position)	Operative (in MANUAL mode) (Jam protection not operative)	Operation prohibited	Operation prohibited
AUTO UP	Operation prohibited	Operation prohibited	Operation prohibited
AUTO DOWN	Operation prohibited	Operation prohibited	Operation prohibited

HINT:
When the pulse sensor is normal, the AUTO UP/DOWN function can be resumed by deactivating fail-safe mode. To deactivate fail-safe mode, pull up the driver door power window switch to the AUTO UP position and hold it for at least 1 second to fully close the window from the fully open position.

(b) If the LIN communication system malfunctions (communication blackout), the power window control system prohibits the following operations.

LIN communication system

Power window operation	Engine switch on (IG)
MANUAL UP	Operative (Jam protection operative)
MANUAL DOWN	Operative (Jam protection not operative)
AUTO UP (hold switch at AUTO UP position)	Operative (Jam protection operative)
AUTO UP	Operative (Jam protection operative)
AUTO DOWN	Operative (Jam protection not operative)

REAR POWER WINDOW SWITCH

COMPONENTS

REMOVAL

1. **REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-59)**

2. **REMOVE REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY (See page ED-59)**

INSPECTION

1. **INSPECT POWER WINDOW SWITCH (for Rear RH)**
   (a) Remove the power window switch.
   (b) Measure the resistance when the switch is operated according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
2 (E) - 4 (A) - 5 (E)	Auto UP	Below 1 Ω
2 (U) - 5 (E)	Manual UP	Below 1 Ω
5 (E) - 10 (D)	Manual DOWN	Below 1 Ω
4 (A) - 10 (D) - 5 (E)	Auto DOWN	Below 1 Ω

2. **REMOVE POWER WINDOW SWITCH (for Rear LH)**
   (a) Remove the power window switch.
   (b) Measure the resistance when the switch is operated according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
2 (E) - 4 (A) - 5 (E)	Auto UP	Below 1 Ω
2 (U) - 5 (E)	Manual UP	Below 1 Ω
5 (E) - 10 (D)	Manual DOWN	Below 1 Ω
4 (A) - 10 (D) - 5 (E)	Auto DOWN	Below 1 Ω

DATA LIST / ACTIVE TEST

1. USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Monitor the ECU data by following the prompts on the tester screen.

HINT:

The intelligent tester has a "Snapshot" function which records the monitored data. Refer to the intelligent tester operator's manual for further details.

2. DATA LIST

HINT:

Using the DATA LIST displayed on the intelligent tester, the value of the switches, sensors, actuators, etc. can be read without part removal. Reading the DATA LIST as the first step in troubleshooting is one way to shorten the labor time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the DATA LIST according to the display on the tester.

MASTER SW:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D P/W AUTO SW	Driver door power window auto switch signal/ON or OFF	ON: Driver door power window auto switch operates OFF: Driver door power window auto switch does not operate	-
P P/W AUTO SW	Front passenger door remote power window auto switch signal/ON or OFF	ON: Front passenger door remote power window auto switch operates OFF: Front passenger door remote power window auto switch does not operate	-
RR P/W AUTO SW	Rear RH door remote power window auto switch signal/ON or OFF	ON: Rear RH door remote power window auto switch operates OFF: Rear RH door remote power window auto switch does not operate	-
RL P/W AUTO SW	Rear LH door remote power window auto switch signal/ON or OFF	ON: Rear LH door remote power window auto switch operates OFF: Rear LH door remote power window auto switch does not operate	-
P P/W UP SW	Front passenger door remote power window manual up switch signal/ON or OFF	ON: Front passenger door remote power window manual up switch operates OFF: Front passenger door remote power window manual up switch does not operate	-
RR P/W UP SW	Rear RH door remote power window manual up switch signal/ON or OFF	ON: Rear RH door remote power window manual up switch operates OFF: Rear RH door remote power window manual up switch does not operate	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
RL P/W UP SW	Rear LH door remote power window manual up switch signal/ ON or OFF	ON: Rear LH door remote power window manual up switch operates OFF: Rear LH door remote power window manual up switch does not operate	-

RR P/W DOWN SW	Rear RH door remote power window manual down switch signal/ON or OFF	ON: Rear RH door remote power window manual down switch operates OFF: Rear RH door remote power window manual down switch does not operate	-
RL P/W DOWN SW	Rear LH door remote power window manual down switch signal/ON or OFF	ON: Rear LH door remote power window manual down switch operates OFF: Rear LH door remote power window manual down switch does not operate	-

Body:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
COM MASTER SW	Master switch communication signal OK/STOP	OK: Communication is normal STOP: Communication is stopped	-

3. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows you to operate the relay, VSV, actuator, etc. without parts removal. Performing the ACTIVE TEST as the first step in troubleshooting is one way to shorten the labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

Body:

Tester Display	Measurement Item/Range	Normal Condition
IG OFF P/W	Operates power window ON/OFF (After ignition OFF)	-

REMOVAL

1. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-32)**
2. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE DOOR ARMREST COVER (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-35)**
7. **REMOVE DOOR FRAME GARNISH (See page ED-35)**
8. **REMOVE OUTER MIRROR PROTECTOR (See page ED-35)**
9. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)**
10. **REMOVE FRONT NO. 1 DOOR TRIM BRACKET (See page ED-36)**
11. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-36)**
12. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-36)**
13. **REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-36)**
14. **REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY (See page ED-37)**
15. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-58)**
16. **REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-59)**
17. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-59)**
18. **REMOVE REAR DOOR ARMREST COVER (See page ED-59)**
19. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-60)**
20. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-61)**
21. **REMOVE REAR DOOR FRAME GARNISH (See page ED-61)**
22. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-61)**

23. **REMOVE REAR DOOR TRIM BRACKET (See page ED-62)**

24. **REMOVE REAR DOOR GLASS RUN (See page ED-63)**

25. **REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY (See page ED-63)**

26. **REMOVE REAR DOOR QUARTER WINDOW GLASS (See page ED-63)**

27. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-63)**

28. **REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-64)**

29. **REMOVE REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY (See page ED-64)**

INSPECTION

1. **INSPECT POWER WINDOW REGULATOR MOTOR FRONT RH**
   (a) Apply battery voltage to the motor connector according to the table below.
   NOTICE:
   Do not apply battery voltage to any terminals except terminals 1, 2, 4, 7 and 10.
   Standard

Switch Condition	Measurement Condition	Specified Condition
Manual Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 10 (UP1)	Motor gear rotates clockwise
Auto Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO) 10 (UP1)	Motor gear rotates clockwise

2. **INSPECT POWER WINDOW REGULATOR MOTOR FRONT LH**
   (a) Apply battery voltage to the motor connector according to the table below.
   NOTICE:
   Do not apply battery voltage to any terminals except terminals 1, 2, 4, 7 and 10.

WS

Standard

Switch Condition	Measurement Condition	Specified Condition
Manual Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 10 (UP1)	Motor gear rotates clockwise
Auto Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO) 10 (UP1)	Motor gear rotates clockwise

3. INSPECT POWER WINDOW REGULATOR MOTOR REAR RH

(a) Apply battery voltage to the motor connector according to the table below.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1, 2, 4, 7 and 10.

Standard

Switch Condition	Measurement Condition	Specified Condition
Manual Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 10 (UP1)	Motor gear rotates clockwise
Auto Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO) 10 (UP1)	Motor gear rotates clockwise

4. INSPECT POWER WINDOW REGULATOR MOTOR REAR LH

(a) Apply battery voltage to the motor connector according to the table below.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1, 2, 4, 7 and 10.

Standard

Switch Condition	Measurement Condition	Specified Condition
Manual Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 10 (UP1)	Motor gear rotates clockwise
Auto Operation	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO), 7 (DWN1)	Motor gear rotates counterclockwise
	Battery positive (+) → Terminal 2 (B) Battery negative (-) → Terminal 1 (E), 4 (AUTO) 10 (UP1)	Motor gear rotates clockwise

DIAGNOSTIC TROUBLE CODE CHART

POWER WINDOW CONTROL SYSTEM

DTC Code	Detection Item	Trouble Area	See page
B2311	Driver Door Motor Malfunction	1. Battery disconnection when the engine switch is on (IG) 2. Power window regulator motor (on driver side) 3. Incorrect installation of power window components 4. Overheated power window regulator motor (on driver side)	WS-24
B2312	Driver Side Door Master Switch Malfunction	1. Power window regulator motor (on driver side) 2. Power window regulator master switch 3. Wire harness 4. Power window regulator master switch is held in same position for more than 20 seconds	WS-26
B2313	Glass Position Initialization Incomplete	1. Power window regulator motor (on driver side) 2. Power window regulator motor (on driver side) not initialized	WS-29

DTC	B2311	Driver Door Motor Malfunction

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).
DTC B2311 is set when the ECU for the driver door power window regulator motor assembly malfunctions.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

HINT:

- Initialization is required only when the power window regulator motor is replaced. However, replacing the motor may cause the motor gear to be engaged in a different position. This can cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.
- To return the system to the pre-initialized condition:
  Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

DTC No.	DTC Detection Condition	Trouble Area
B2311	When either condition below is met: • The power window regulator motor (on driver side) malfunctions • When the ECU in the power widow regulator motor (on driver side) determines that the fully closed window position has deviated approximately 20 mm (0.79 in.) or more from the normal position	• Battery disconnection when the engine switch is on (IG) • Power window regulator motor (on driver side) • Incorrect installation of power window components • Overheated power window regulator motor (on driver side)

WS

INSPECTION PROCEDURE

1	INITIALIZE POWER WINDOW CONTROL SYSTEM

(a) Initialize the power window regulator motor assembly (on the driver side) (See page WS-10).

(b) Check that the power window operates normally by opening and closing the window.

OK:

Driver side power window operates normally.

NG → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)**

OK

2	CHECK WHETHER PARTS HAVE BEEN INSTALLED CORRECTLY

(a) Check that the power window components (on the driver side) are installed correctly.

OK:

Power window components (on driver side) are installed correctly.

HINT:

When the power window components are installed correctly, the problem has been caused by battery disconnection while the engine switch is on (IG), improper installation of the power window components or the motor being overheated.

NG → **INSTALL PARTS CORRECTLY**

OK

END

DTC	B2312	Driver Side Door Master Switch Malfunction

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).

When the ECU determines that the power window master switch is stuck, DTC B2312 is set.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

DTC No.	DTC Detection Condition	Trouble Area
B2312	The power window regulator master switch is stuck	• Power window regulator motor (on driver side) • Power window regulator master switch • Wire harness • Power window regulator master switch is held in same position for more than 20 seconds

WIRING DIAGRAM

WS

INSPECTION PROCEDURE

1 INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
20 (U) - 12 (E)	Manual UP	Below 1 Ω
15 (D) - 12 (E)	Manual DOWN	Below 1 Ω

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH**

OK

2 CHECK WIRE HARNESS (WINDOW REGULATOR MASTER SWITCH - POWER WINDOW ECU)

(a) Disconnect the I4 and I5 connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
I4-1 (E) - I5-12 (E)	Always	Below 1 Ω
I4-5 (LED) - I5-3 (LED)	Always	Below 1 Ω
I4-7 (DWN1) - I5-15 (D)	Always	Below 1 Ω
I4-9 (LIN) - I5-16 (LIN2)	Always	Below 1 Ω
I4-10 (UP1) - I5-20 (U)	Always	Below 1 Ω
I4-1 (E) - Body ground	Always	10 kΩ or higher
I4-5 (LED) - Body ground	Always	10 kΩ or higher
I4-7 (DWN1) - Body ground	Always	10 kΩ or higher
I4-9 (LIN) - Body ground	Always	10 kΩ or higher
I4-10 (UP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE DRIVER SIDE POWER WINDOW REGULATOR MOTOR ASSEMBLY

DTC	B2313	Glass Position Initialization Incomplete

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).
When the ECU determines that the driver's door power window regulator motor assembly has not been initialized, DTC B2313 is set.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

HINT:

- Replacing the door glass or door glass run may cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.
- To return the system to the pre-initialized condition:
  Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

DTC No.	DTC Detection Condition	Trouble Area
B2313	• The power window regulator motor (on driver side) is not initialized • The power window regulator motor (on driver side) malfunctions	• Power window regulator motor (on driver side) • Power window regulator motor (on driver side) not initialized

INSPECTION PROCEDURE

NOTICE:

When using the intelligent tester to troubleshoot the LIN communication line: Connect the intelligent tester to the vehicle, and turn the courtesy light switch on and off at 1.5 second intervals until communication between the tester and vehicle begins.

WS

1	CHECK DTC OUTPUT

(a) Turn the engine switch off.
(b) Wait for at least 10 seconds, and then turn the engine switch on (IG).
(c) Check whether the DTC output recurs.
Result

Display (DTC Output)	Proceed to
B2313	A
No output	B

B → END

A

2	INITIALIZE SYSTEM (POWER WINDOW CONTROL SYSTEM)

(a) Turn the engine switch on (IG) and initialize the power window regulator motor (on the driver side) (See page WS-10).
(b) Turn the engine switch off.
(c) Wait for at least 10 seconds, and then turn the engine switch on (IG).
(d) Check whether the DTC output recurs.

Result

Display (DTC Output)	Proceed to
No output	A
B2313	B

B → **REPLACE DRIVER SIDE POWER WINDOW REGULATOR MOTOR ASSEMBLY**

A

END

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use the following procedure to troubleshoot the defogger system.
- The intelligent tester should be used in step 4.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3	PROBLEM SYMPTOMS TABLE

HINT:
(See page WS-97)

NEXT

4	OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Terminals of ECU (See page WS-97)
(b) Data List/Active Test (See page WS-99)
(c) On-vehicle inspection (See page WS-99)

NEXT

5	REPAIR OR REPLACE

NEXT

6	CONFIRMATION TEST

NEXT

END

PROBLEM SYMPTOMS TABLE

WINDOW DEFOGGER SYSTEM:

Symptom	Suspected Area	See page
Rear window defogger does not operate	1. A/C No. 2 fuse	-
	2. RR DEF fuse	-
	3. RR DEF relay	WS-102
	4. A/C controller assembly	WS-102
	5. A/C amplifier assembly	WS-102
	6. Rear window defogger wire	WS-99
	7. Wire harness	-

TERMINALS OF ECU

1. CHECK A/C AMPLIFIER ASSEMBLY

(a) Measure the voltage and resistance of each terminal of the connectors.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RDFG (E1-38) - GND (E1-14)	G - W-B	Rear Defogger Signal	Engine switch on (IG), Rear defogger switch OFF	10 to 14 V

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (E1-14) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The defogger system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J 1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch OFF*	6 kΩ or more

WS

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. PERFORM ACTIVE TEST

HINT:
Performing the intelligent tester's ACTIVE TEST allows a relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

Air Conditioner:

Tester Display	Measurement Item/Range	Normal Condition
Defogger Relay (Rear)	Turns rear window defogger OFF/ON	-

ON-VEHICLE INSPECTION

1. CHECK REAR WINDOW DEFOGGER SYSTEM OPERATION

(a) When the engine switch is turned on (IG) and the defogger switch is pressed, check that the rear window defogger operates.
HINT:
After 15 minutes, check that the defogger automatically turns off.

2. INSPECT BACK WINDOW (DEFOGGER WIRE)
NOTICE:

- **When cleaning the glass, wipe the glass along the wire using a soft and dry cloth. Take care not to damage the wires.**
- **Do not use detergents or glass cleaners that have abrasive ingredients.**

- **When measuring voltage, wrap a piece of tin foil around the tip of the negative tester probe and press the foil against the wire with your finger, as shown in the illustration.**

(a) Turn the engine switch on (IG).
(b) Turn the defogger switch on.

WS

(c) Check the voltage at the center of each defogger wire, as shown in the illustration.
Standard voltage

Voltage	Criteria
Approx. 5 V	Wire is not broken
Approx. 10 or 0 V	Wire is broken

HINT:
If there is approximately 10 V, the wire may be faulty between the center of the wire and the wire end on the battery side. If there is no voltage, the wire may be faulty between the center of the wire and the wire end on the ground side.

(d) Place the voltmeter's positive (+) lead against the defogger wire on the battery side.
(e) Place the voltmeter's negative (-) lead with the foil strip against the wire on the ground side.
(f) Slide the positive (+) lead from the battery side to the ground side.

(g) The point where the voltage drops from approximately 10 V to 0 V is the place where the defogger wire is broken.
HINT:
If the defogger wire is not broken, the voltmeter should indicate 0 V at the positive (+) end of the defogger wire but gradually increase to approximately 12 V as the meter probe moves to the other end.

REPAIR

1. REPAIR WINDOW DEFOGGER WIRE

(a) Clean the broken wire tips with a grease, wax and silicone remover.

(b) Place the masking tape along both sides of the wire.

(c) Thoroughly mix the repair agent (Dupont paste No. 4817 or equivalent).

(d) Using a fine tip brush, apply a small amount of the agent to the wire.

(e) After a few minutes, remove the masking tape.
NOTICE:
Do not repair the defogger wire again for at least 24 hours.

Rear Window Defogger System does not Operate

DESCRIPTION

When the rear window defogger switch, which is built into the heater control assembly, is operated, the operation signals are transmitted to the A/C amplifier assembly through LIN. When the A/C amplifier assembly receives the signals, it turns on the RR DEF relay to operate the rear window defogger.

WIRING DIAGRAM

WS

INSPECTION PROCEDURE

1 CHECK FOR DTCs

(a) Select the DTC check on the intelligent tester to check for communication errors.

Result

Result	Proceed to
No DTC is output	A
DTC are output (LIN communication)	B

B → **GO TO MULTIPLEX COMMUNICATION SYSTEM**

A

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Select the ACTIVE TEST, use the intelligent tester to issue a control command, and then check the window defogger operation.

Air Conditioner

Item	Test Details
Defogger Relay (Rear)	Turns rear window defogger OFF/ON

OK → **Go to step 5**

NG

3 REPLACE AIR CONDITIONER CONTROL ASSEMBLY

(a) Replace the air conditioner control assembly.

NEXT

4 CONFIRM REAR WINDOW DEFOGGER OPERATION

(a) Turn the engine switch on (IG), press the defogger switch, and check that the window defogger operates.

NG → **REPLACE A/C AMPLIFIER ASSEMBLY**

OK

END

5 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Select the ACTIVE TEST, use the intelligent tester to issue a control command, and then check the DEFOG relay operation.
(b) Check that operation sound of the RR DEF relay is heard.

Result	Proceed to
Relay operating sound is heard	OK
Relay operating sound is not heard	NG

OK → **Go to step 9**

NG

6 INSPECT RR DEF RELAY

See page WS-108.

NG → **REPLACE RR DEF RELAY**

OK

7 CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE)

(a) Disconnect the RR DEF relay.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
1 - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE A/C NO. 2 FUSE, HARNESS OR CONNECTOR**

OK

WS

8 CHECK WIRE HARNESS (RR DEF RELAY - A/C AMPLIFIER ASSEMBLY)

(a) Disconnect the RR DEF relay and A/C amplifier assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 - E1-38	Always	Below 1 Ω
2 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE A/C AMPLIFIER ASSEMBLY

9 INSPECT RR DEF RELAY

WS

See page WS-108.

NG → **REPLACE RR DEF RELAY**

OK

10 CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE AND BODY GROUND)

(a) Disconnect the RR DEF relay.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
4 - Body ground	Always	Below 1 Ω

Standard voltage:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
5 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE RR DEF FUSE, HARNESS OR CONNECTOR**

OK

11 INSPECT NOISE FILTER

(a) Disconnect the noise filter connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
L20-1 - L20-2	Always	Below 1 Ω
L20-1 - Body ground	Always	10 kΩ or higher

NG → **REPLACE NOISE FILTER**

OK

12 CHECK WIRE HARNESS (RR DEF RELAY - NOISE FILTER)

(a) Disconnect the RR DEF relay and defogger wire connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
3 - L20-2	Always	Below 1 Ω
3 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

WS

13 CHECK WIRE HARNESS (NOISE FILTER - DEFOGGER WIRE CONNECTOR)

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
L20-1 - N1-1	Always	Below 1 Ω
L20-1 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

14 CHECK WIRE HARNESS (DEFOGGER WIRE CONNECTOR - BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
N1-1 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPAIR OR REPLACE REAR WINDOW DEFOGGER WIRE

Power Window Master Switch Power Source Circuit

DESCRIPTION

This circuit supplies to operate the power window master switch.

WIRING DIAGRAM

When using intelligent tester:

WS

1	CHECK WIRE HARNESS

(a) Disconnect the I5 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
I5-11 (B) - Body ground	Engine switch on (IG)	10 to 14 V

Standard resistance

Tester Connection	Condition	Specified Condition
I5-12 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FUSE, HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Front Passenger Side Power Window Switch Circuit

DESCRIPTION

This circuit supplies power to operate the power window regulator switch assembly (Front passenger side).

WIRING DIAGRAM

INSPECTION PROCEDURE

WS

1	INSPECT POWER WINDOW REGULATOR SWITCH

(a) Disconnect the H6 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (E) - 4 (A) - 5 (E)	Auto UP	Below 1 Ω
2 (U) - 5 (E)	Manual UP	Below 1 Ω
5 (E) - 10 (D)	Manual DOWN	Below 1 Ω
4 (A) - 10 (D) - 5 (E)	Auto DOWN	Below 1 Ω

NG → **REPAIR OR REPLACE POWER WINDOW REGULATOR SWITCH**

OK

2	REPLACE WIRE HARNESS (POWER WINDOW REGULATOR SWITCH - POWER WINDOW ECU)

(a) Disconnect the H5 and H6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
H5-4 (AUTO) - H6-4 (A)	Always	Below 1 Ω
H5-5 (LED) - H6-8 (LED)	Always	Below 1 Ω
H5-7 (DWN1) - H6-2 (U)	Always	Below 1 Ω
H5-10 (UP1) - H6-10 (D)	Always	Below 1 Ω
H5-4 (AUTO) - Body ground	Always	10 kΩ or higher
H5-5 (LED) - Body ground	Always	10 kΩ or higher
H5-7 (DWN1) - Body ground	Always	10 kΩ or higher
H5-10 (UP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

END

DEFOGGER RELAY

ON-VEHICLE INSPECTION

1. INSPECT DEFOGGER RELAY (Marking: RR DEF)

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Condition	Specified Condition
3 - 4	Below 1 Ω (when battery voltage is not applied between terminals)
3 - 5	10 kΩ or higher (when battery voltage is not applied between terminals)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

SYSTEM DESCRIPTION

The memory system can store the driver seat, front passenger seat, outside rear view mirror positions and tilt & telescopic position. Up to 2 memory positions can be stored in the system memory and recalled. 2 positions can be saved for the driver memory switch or front passenger memory switch.

- Each seat ECU stores the seat position (seat slide, front vertical, rear vertical and reclining) in its memory. Each seat ECU is built into the power seat switch.
- The mirror ECU stores the outside rear view mirror position in its memory.
- The tile & telescopic ECU stores the tilt & telescopic position in its memory.
- The seat ECU (Driver) outputs a reproduction signal to ECU.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use this procedure to troubleshoot the power mirror control system.
- The intelligent tester should be used in steps 3 and 5.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

NEXT

3	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM (CAN)

HINT:
See page CA-11

(a) Use the intelligent tester to check for normal function of the CAN communication system.
  (1) (ECU unconnected, communication line malfunctioning) If no codes are output, proceed to A.
  (2) (ECU unconnected, communication line malfunctioning) If any codes are output, proceed to B.

B → **GO TO MULTIPLEX COMMUNICATION SYSTEM**

MI

A

4	PROBLEM SYMPTOMS TABLE

HINT:
See page MI-9

NEXT

5	OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Inspect Data list/Active test.
  HINT:
  See page MI-12
(b) Inspect circuit inspection.
  HINT:
  See page MI-14 to MI-32
(c) Inspect terminals of ECU.

HINT:
See page MI-9

TERMINALS OF ECU

1. CHECK OUTER MIRROR CONTROL ECU LH

(a) Disconnect the E65 and E66 connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACC (E66-4) - Body ground	L - Body ground	Ignition power supply	Engine switch off → on (IG)	0 V → 10 to 14 V
B (E66-3) - Body ground	V - Body ground	+B power supply	Always	10 to 14 V

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E1 (E65-3) - Body ground	Y - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E65 and E66 connectors.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

MI

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
VC (E65-2) - Body ground	V - Body ground	Power source for mirror position sensor	Engine switch off → on (IG)	0 V → 0 to 5 V
VSR (E65-4) - Body ground	GR - Body ground	Vertical direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch uppermost position → lowermost position	0 V → 1 to 3 V
HSRL (E65-5) - Body ground	P - Body ground	Horizontal direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch innermost position → outermost position	0 V → 1 to 3 V
LP (E65-17) - Body ground	O - Body ground	Foot light signal (LH side)	Foot light OFF → ON	0 V → 10 to 14 V
M+L (E65-18) - Body ground	R - Body ground	Outer mirror switch signal (Right or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → RIGHT or DOWN	0 V → 10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
MHL (E65-19) - Body ground	B - Body ground	Outer mirror switch signal (Left or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → LEFT or DOWN	0 V → 10 to 14 V
MVL (E65-20) - Body ground	L - Body ground	Outer mirror switch signal (Up or Right)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → UP or Right	0 V → 10 to 14 V
VSRR (E65-24) - Body ground	W - Body ground	Vertical direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch uppermost position → lowermost position	0 V → 1 to 3 V
HSRR (E65-25) - Body ground	B - Body ground	Horizontal direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch innermost position → outermost position	0 V → 1 to 3 V
LP (E65-37) - Body ground	L - Body ground	Foot light signal (RH side)	Foot light OFF → ON	0 V → 10 to 14 V
M+R (E65-38) - Body ground	O - Body ground	Outer mirror switch signal (Right or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → RIGHT or DOWN	0 V → 10 to 14 V
MHR (E65-39) - Body ground	GR - Body ground	Outer mirror switch signal (Left or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → LEFT or DOWN	0 V → 10 to 14 V
MVR (E65-40) - Body ground	P - Body ground	Outer mirror switch signal (Up or Right)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → UP or Right	0 V → 10 to 14 V

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Data of the system can be read from the Data Link Connector 3 (DLC3) of the vehicle. Therefore, when the system seems to be malfunctioning, use the intelligent tester to check for a malfunction and repair it.

2. CHECK DLC3

(a) The vehicle's ECM uses ISO 9141-2 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 9141-2 format.

Standard

Tester Connection	Condition	Specified Condition
7 (Bus + line) - 5 (Signal ground)	During communication	Pulse generation
4 (Chassis ground) - Body ground	Constant	Below 1 Ω
5 (Signal ground) - Body ground	Constant	Below 1 Ω
16 (B+) - Body ground	Constant	9 to 14 V

HINT:
If the screen displays a communication error message after you have connected the cable of the intelligent tester to the DLC3, turned the engine switch on (IG) and used the intelligent tester, the problem may be on the vehicle side or tester side.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself, so consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Monitor the ECU data by following the prompts on the tester screen.

HINT:

The intelligent tester has a "Snapshot" function which records the monitored data. Refer to the intelligent tester operator's manual for further details.

2. DATA LIST

HINT:

Using the DATA LIST displayed on the intelligent tester, the value of the switch, sensor, actuator, etc. can be read without part removal. Reading the DATA LIST as the first step of troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the DATA LIST according to the display on the tester.

MIRROR-L/MIRROR-R

Tester Display	Measurement Item/Range	Normal Condition
RH MIR POS V	Vertical mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V
RH MIR POS V	Vertical mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V
LH MIR POS H	Horizontal mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V
LH MIR POS H	Horizontal mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V
MIRROR MEM 1	Mirror position memorized in memory switch M1/ON (1) or OFF (0)	1: Memorized 0: Not memorized
MIRROR MEM 2	Mirror position memorized in memory switch M2/ON (1) or OFF (0)	1: Memorized 0: Not memorized
D SET MEMORY	Driving position memorized in seat memory switch MEMORY/ON (1) or OFF (0)	1: Memorized 0: Not memorized
D MEM 1 SW	Driving position memorized in seat memory switch M1/ON (1) or OFF (0)	1: Memorized 0: Not memorized
D MEM 2 SW	Driving position memorized in seat memory switch M2/ON (1) or OFF (0)	1: Memorized 0: Not memorized
FP SET MEMORY	Driving position memorized in seat memory switch MEMORY/ON (1) or OFF (0)	1: Memorized 0: Not memorized
FP MEM 2 SW	Driving position memorized in seat memory switch M2/ON (1) or OFF (0)	1: Memorized 0: Not memorized
FP MEM 2 SW	Driving position memorized in seat memory switch M2/ON (1) or OFF (0)	1: Memorized 0: Not memorized
FOOT LIGHT	Foot light /Not memorized (000) or 30 seconds (011) or 7.5 seconds (001) or Off (100) or 15 seconds (010)	000: Not memorized 011: 30 seconds 001: 7.5 seconds 100: Off 010: 15 seconds

3. ACTIVE TEST

HINT:
Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator, etc. to be operated without part removal. Performing the ACTIVE TEST as the first step of troubleshooting is one way to shorten labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

MIRROR-L/MIRROR-R

Tester Display	Test Part	Control Range
RH MIRR UP/DOWN	Mirror vertical operation: UP/DOWN	-
RH MIRR R/L	Mirror horizontal operation: RIGHT/LEFT	-
LH MIRR UP/DOWN	Mirror vertical operation: UP/DOWN	-
LH MIRR R/L	Mirror horizontal operation: RIGHT/LEFT	-
FOOT LIGHT	Foot light operation: ON/OFF	-

ON-VEHICLE INSPECTION

1. CHECK POWER MIRROR SWITCH OPERATION

(a) Remote control
The mirror adjust switch can control the adjustment axis of the mirror surface.

(b) Reverse-linked
This function tilts the mirror surface downward to improve the visibility when driving in reverse, provided that all the conditions given below have been met.
- Engine switch is on (IG).
- Shift lever is moved to "R".

2. CHECK MEMORY SWITCH OPERATION

(a) Memory
Memorizes the positions when all conditions below have been met and the 1or 2 button is pushed while the "SET" button is pushed.
- Engine switch is on (IG).
- Shift position is "P".

When the memory setting is completed, the buzzer will sound for 0.5 seconds.

(b) Recall
If the button 1 or 2 is pressed when all conditions below have been met, it recalls the positions.
- Engine switch is on (IG).
- Shift position is "P".
- Engine switch is on (IG).
- Driver door is opened.

Power Mirror cannot be Adjusted with Power Mirror Switch

DESCRIPTION

- A switch signal of the outer mirror switch is transmitted to the selected outer mirror control ECU by way of the main body ECU. Then, the outer mirror control ECU activates the mirror motor to move the mirror UP, DOWN, RIGHT and LEFT in response to the input.
- Mirror control switch and memorized mirror position signals (from the position control ECU & switch (seat ECU)) are sent to the mirror control ECU. The mirror control ECU moves the selected mirror UP, DOWN, LEFT and RIGHT in response to the input.

HINT:
The power mirror control system is a part of the multiplex communication system. This system features shared communication wiring that reduces the wiring complexity of the communication lines. The first step in any repair is to confirm the proper operation of the communication system. Proceed with troubleshooting after the communication has been verified (See the Multiplex Communication System).

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTCs

(a) Select the DTC check on the intelligent tester to check for communication errors.

Result

No DTC is output	A
DTCs are output (CAN communication)	B

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-49)**

A

2	INSPECT OUTER MIRROR SWITCH

(a) Remove the outer mirror switch.
(b) Measure the resistance according to the value(s) in the table below when the switch is operated.
Standard resistance:
Select "L" on the left/right adjustment switch

Tester Connection	Switch Position	Specified Condition
7 - 9	UP	100 Ω
	DOWN	470 Ω
	LEFT	800 Ω
	RIGHT	250 Ω

Select "R" on the left/right adjustment switch

Tester Connection	Switch Position	Specified Condition
7 - 9	UP	100 Ω
	DOWN	470 Ω
	LEFT	800 Ω
	RIGHT	250 Ω

NG → **REPLACE OUTER MIRROR SWITCH (See page MI-52)**

OK

MI

3 CHECK WIRE HARNESS (OUTER MIRROR SWITCH - MAIN BODY ECU)

(a) Disconnect the E61 and E67 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E67-7 - E61-11	Always	Below 1 Ω
E67-8 - E61-12	Always	Below 1 Ω
E67-9 - E61-2	Always	Below 1 Ω
E67-7 - Body ground	Always	10 kΩ or higher
E67-8 - Body ground	Always	10 kΩ or higher
E67-9 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT OUTER REAR VIEW MIRROR ASSEMBLY

(a) Outer rear view mirror LH:
Disconnect the I3 connector.
(b) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → I3-1 (MV) Battery negative (-) → I3-10 (M+)	Turns upward (A)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-1 (MV)	Turns downward (B)
Battery positive (+) → I3-9 (MH) Battery negative (-) → I3-10 (M+)	Turns left (C)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-9 (MH)	Turns right (D)

(c) Outer rear view mirror RH:
Disconnect the H4 connector.

(d) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → H4-1 (MV) Battery negative (-) → H4-10 (M+)	Turns upward (A)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-1 (MV)	Turns downward (B)
Battery positive (+) → H4-9 (MH) Battery negative (-) → H4-10 (M+)	Turns left (C)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-9 (MH)	Turns right (D)

NG → **REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-46)**

OK

REPLACE OUTER MIRROR CONTROL ECU

Mirror Heater does not Operate with Rear Defogger Switch

DESCRIPTION

When the mirror defogger switch, which is built into the heater control assembly, is operated, operation signals are transmitted to the A/C amplifier assembly through LIN. When the amplifier assembly receives the signals, it turns on the RR DEF relay to operate the mirror defogger.

WIRING DIAGRAM

Mirror Heater Operation:

MI

INSPECTION PROCEDURE

1 CHECK LIN COMMUNICATION LINE

(a) Disconnect the E1 and E3 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E1-37 (LIN1) - E3-15 (TX+)	Always	Below 1 Ω
E1-37 (LIN1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Disconnect the E1 connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E1-38 (RDFG) - Body ground	Engine switch on (IG)	10 to 14 V

OK → **Go to step 5**

NG

3 REPLACE AIR CONDITIONING CONTROL ASSEMBLY

(a) Replace the air conditioning control assembly.
HINT:
See page AC-226

NEXT

MI

4 CONFIRMATION DRIVING PATTERN

(a) Turn the engine switch on (IG), press the mirror defogger switch, and check that the mirror defogger operates.

NG → **REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY**

OK

END

5 CHECK DEFOGGER RELAY

(a) Turn the engine switch on (IG), and press the mirror defogger switch.
(b) Check that operating sound of the RR DEF relay is heard.

Result

Result	Proceed to
Relay operating sound is heard	OK
Relay operating sound is not heard	NG

NG → **Go to step 9**

NG

6 INSPECT DEFOGGER RELAY

NG → **REPLACE DEFOGGER RELAY**

OK

7 CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE)

(a) Disconnect the RR DEF relay.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
1 - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE A/C NO. 2 FUSE, HARNESS OR CONNECTOR**

OK

MI

8 CHECK WIRE HARNESS (RR DEF RELAY - A/C AMPLIFIER ASSEMBLY)

(a) Disconnect the RR DEF relay and A/C amplifier assembly connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
2 - E1-38	Always	Below 1 Ω
1 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY

9 INSPECT DEFOGGER RELAY

NG → **REPLACE DEFOGGER RELAY**

OK

10 CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE AND BODY GROUND)

(a) Disconnect the RR DEF relay.
(b) Measure the voltage and resistance according to the value(s) in the table below.
Standard resistance:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
4 - Body ground	Always	Below 1 Ω

Standard voltage:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
5 - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11 INSPECT MIR HTR FUSE

(a) Remove the MIR HTR fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
MIR HTR fuse	Always	Below 1 Ω

NG → **REPLACE MIR HTR FUSE**

OK

12 CHECK WIRE HARNESS (ENGINE ROOM R/B, J/B - INSTRUMENT PANEL J/B)

Engine Room R/B, J/B:

Instrument Panel J/B:

H B145478E01

(a) Disconnect the RR DEF relay and instrument panel J/B connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
3 - DB-2	Always	Below 1 Ω
3 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

13 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - OUTER REAR VIEW MIRROR)

Outer Rear View Mirror:

Instrument Panel J/B:

Instrument Panel J/B:

H B145479E01

(a) Disconnect the outer rear view mirror and instrument panel J/B connectors.

(b) Measure the resistance according to the value(s) in the table below.
( ): Outer mirror RH
Standard resistance:
Outer rear view mirror LH

Tester Connection	Condition	Specified Condition
I3-4 - DK-1	Always	Below 1 Ω
DK-1 - Body ground	Always	10 kΩ or higher

Outer rear view mirror RH

Tester Connection	Condition	Specified Condition
H4-4 - DJ-1	Always	Below 1 Ω
DJ-1 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

END

Power Mirrors do not Return to Memorized Position

DESCRIPTION

When the seat memory switch M1 or M2 is pressed, the seat memory switch transmits a signal of the memorized mirror position to the outer mirror control ECU Then, the outer mirror control ECU drives the mirror motor.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 READ VALUE OF INTELLIGENT TESTER

(a) Check the DATA LIST for proper function of the seat memory switch.

MIRROR-L/MIRROR-L

Item	Switch Position	Specified Condition
D MEM 1SW	Driver side mirror position memorized in seat memory switch M1/ON (1) or OFF (2)	1: Memorized 0: Not memorized
D MEM 2 SW	Driver side mirror position memorized in seat memory switch M2/ON (1) or OFF (2)	
FP-MEM 1 SW	Passenger side mirror position memorized in seat memory switch M1/ON (1) or OFF (2)	
FP MEM 2 SW	Passenger side mirror position memorized in seat memory switch M2/ON (1) or OFF (2)	

OK → **REPLACE OUTER MIRROR CONTROL ECU**

NG

2 CHECK SEAT MEMORY SWITCH

(a) Remove the seat memory switch.

(b) Measure the resistance according to the value(s) in the table below when the switch is operated.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 (E) - 2 (MMRY)	"SET" switch ON	Below 1 Ω
	"SET" switch OFF	10 kΩ or higher
1 (E) - 4 (M1)	"1" switch ON	Below 1 Ω
	"SET" switch OFF	10 kΩ or higher
1 (E) - 3 (M2)	"2" switch ON	Below 1 Ω
	"SET" switch OFF	10 kΩ or higher

NG → **REPLACE SEAT MEMORY SWITCH**

OK

MI

3 CHECK WIRE HARNESS (SEAT MEMORY SWITCH - OUTER MIRROR CONTROL ECU)

(a) Disconnect the E65 and I6 (H7) switch connectors.
(b) Measure the resistance according to the value(s) in the table below.
( ): RH side
Standard resistance:
LH side

Tester Connection	Condition	Specified Condition
I6-2 (MMRY) - E65-9 (MM)	Always	Below 1 Ω
I6-4 (M1) - E65-8 (M1)	Always	Below 1 Ω
I6-3 (M2) - E65-7 (M2)	Always	Below 1 Ω
E6-1 (E) - E65-10 (MSWE)	Always	Below 1 Ω

LH side

Tester Connection	Condition	Specified Condition
H7-2 (MMRY) - E65-29 (MM)	Always	Below 1 Ω
H7-4 (M1) - E65-28 (M1)	Always	Below 1 Ω
H7-3 (M2) - E65-27 (M2)	Always	Below 1 Ω
H7-1 (E) - E65-30 (MSWE)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT OUTER REAR VIEW MIRROR ASSEMBLY

MI

(a) Outer rear view mirror LH:
Disconnect the I3 connector.
(b) Apply battery voltage and check operation of the mirror face.
Standard

Measurement Condition	Mirror Operation
Battery positive (+) → I3-1 (MV) Battery negative (-) → I3-10 (M+)	Turns upward (A)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-1 (MV)	Turns downward (B)
Battery positive (+) → I3-9 (MH) Battery negative (-) → I3-10 (M+)	Turns left (C)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-9 (MH)	Turns right (D)

(c) Outer rear view mirror RH:
Disconnect the H4 connector.

(d) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → H4-1 (MV) Battery negative (-) → H4-10 (M+)	**Turns upward (A)**
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-1 (MV)	**Turns downward (B)**
Battery positive (+) → H4-9 (MH) Battery negative (-) → H4-10 (M+)	**Turns left (C)**
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-9 (MH)	**Turns right (D)**

NG → **REPLACE OUTER REAR VIEW MIRROR ASSEMBLY**

OK

END

Reverse Shift-linked Function of Power Mirrors do not Operate

DESCRIPTION

After the transmission control ECU receives a reverse signal from the park/neutral position switch, transmission control ECU the sends a reverse signal to the outer mirror control ECU via the CAN communication systems. The outer mirror control ECU activates the mirror motor in response to the reverse signal.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK DTCs

(a) Select the DTC check on the intelligent tester to check for communication errors.

Result

Not output DTC codes	**A**
Output DTC codes (CAN communication)	**B**

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-11)**

A

2 READ VALUE OF INTELLIGENT TESTER

(a) Check the DATA LIST for proper function of the reverse signal.

ECT

Item	Measurement item/Display (Range)	Normal Condition	Diagnostic Note
REVERSE	**PNP switch status/ON or OFF**	**Shift lever position/ON (R) or OFF**	**When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.**

OK → **Go to step 7**

NG

3 CHECK WIRE HARNESS (BATTERY POSITIVE VOLTAGE)

(a) Disconnect the B36 connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
B36-1 - Body ground	**Engine switch on (IG)**	**10 to 14 V**

NG → **REPAIR OR REPLACE GAUGE NO. 1 FUSE OR HARNESS AND CONNECTOR**

OK

MI

4 CHECK WIRE HARNESS (TRANSMISSION CONTROL ECU - PARK/NEUTRAL POSITION SWITCH)

(a) Disconnect the B36 and B40 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
B40-15 - B36-2	Always	Below 1 Ω
B40-15 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

5 INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Disconnect the B36 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Shift Position	Tester Connection	Specified Condition
P	1 - 2	Below 1 Ω
Except P	1 - 2	10 kΩ or higher

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AX-184)**

OK

6 CONFIRM MIRROR OPERATION

Turn the engine switch on (IG), and check the mirror operation.

NG → **REPLACE OUTER MIRROR CONTROL ECU**

OK

END

7 INSPECT OUTER REAR VIEW MIRROR ASSEMBLY

(a) Outer rear view mirror LH:
Disconnect the I3 connector.

(b) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → I3-1 (MV) Battery negative (-) → I3-10 (M+)	Turns upward (A)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-1 (MV)	Turns downward (B)
Battery positive (+) → I3-9 (MH) Battery negative (-) → I3-10 (M+)	Turns left (C)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-9 (MH)	Turns right (D)

(c) Outer rear view mirror RH:
Disconnect the H4 connector.

(d) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → H4-1 (MV) Battery negative (-) → H4-10 (M+)	Turns upward (A)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-1 (MV)	Turns downward (B)
Battery positive (+) → H4-9 (MH) Battery negative (-) → H4-10 (M+)	Turns left (C)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-9 (MH)	Turns right (D)

NG → **REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-46)**

OK

REPLACE OUTER MIRROR CONTROL ECU

Power Source Circuit

DESCRIPTION

This is the power source circuit for the outer mirror control ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

MI

1	INSPECT OUTER MIRROR CONTROL ECU (POWER SOURCE)

(a) Disconnect the E66 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E66-3 (B) - Body ground	Always	10 to 14 V
E66-4 (ACC) - Body ground	Engine switch on (ACC)	10 to 14 V

Standard resistance

Tester Connection	Condition	Specified Condition
E66-9 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TERMINALS OF ECU

1. CHECK OUTER MIRROR CONTROL ECU LH

(a) Disconnect the E65 and E66 connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACC (E66-4) - Body ground	L - Body ground	Ignition power supply	Engine switch off → on (IG)	0 V → 10 to 14 V
B (E66-3) - Body ground	V - Body ground	+B power supply	Always	10 to 14 V

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E1 (E65-3) - Body ground	Y - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E65 and E66 connectors.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

MI

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
VC (E65-2) - Body ground	V - Body ground	Power source for mirror position sensor	Engine switch off → on (IG)	0 V → 0 to 5 V
VSR (E65-4) - Body ground	GR - Body ground	Vertical direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch uppermost position → lowermost position	0 V → 1 to 3 V
HSRL (E65-5) - Body ground	P - Body ground	Horizontal direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch innermost position → outermost position	0 V → 1 to 3 V
LP (E65-17) - Body ground	O - Body ground	Foot light signal (LH side)	Foot light OFF → ON	0 V → 10 to 14 V
M+L (E65-18) - Body ground	R - Body ground	Outer mirror switch signal (Right or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → RIGHT or DOWN	0 V → 10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
MHL (E65-19) - Body ground	B - Body ground	Outer mirror switch signal (Left or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → LEFT or DOWN	0 V → 10 to 14 V
MVL (E65-20) - Body ground	L - Body ground	Outer mirror switch signal (Up or Right)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → UP or Right	0 V → 10 to 14 V
VSRR (E65-24) - Body ground	W - Body ground	Vertical direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch uppermost position → lowermost position	0 V → 1 to 3 V
HSRR (E65-25) - Body ground	B - Body ground	Horizontal direction position signal	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch innermost position → outermost position	0 V → 1 to 3 V
LP (E65-37) - Body ground	L - Body ground	Foot light signal (RH side)	Foot light OFF → ON	0 V → 10 to 14 V
M+R (E65-38) - Body ground	O - Body ground	Outer mirror switch signal (Right or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → RIGHT or DOWN	0 V → 10 to 14 V
MHR (E65-39) - Body ground	GR - Body ground	Outer mirror switch signal (Left or Down)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → LEFT or DOWN	0 V → 10 to 14 V
MVR (E65-40) - Body ground	P - Body ground	Outer mirror switch signal (Up or Right)	Engine switch on (IG), Left/Right adjustment switch L side, Mirror switch OFF → UP or Right	0 V → 10 to 14 V

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Data of the system can be read from the Data Link Connector 3 (DLC3) of the vehicle. Therefore, when the system seems to be malfunctioning, use the intelligent tester to check for a malfunction and repair it.

2. CHECK DLC3

(a) The vehicle's ECM uses ISO 9141-2 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 9141-2 format.

Standard

Tester Connection	Condition	Specified Condition
7 (Bus + line) - 5 (Signal ground)	During communication	Pulse generation
4 (Chassis ground) - Body ground	Constant	Below 1 Ω
5 (Signal ground) - Body ground	Constant	Below 1 Ω
16 (B+) - Body ground	Constant	9 to 14 V

HINT:
If the screen displays a communication error message after you have connected the cable of the intelligent tester to the DLC3, turned the engine switch on (IG) and used the intelligent tester, the problem may be on the vehicle side or tester side.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself, so consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Monitor the ECU data by following the prompts on the tester screen.

HINT:

The intelligent tester has a "Snapshot" function which records the monitored data. Refer to the intelligent tester operator's manual for further details.

2. DATA LIST

HINT:

Using the DATA LIST displayed on the intelligent tester, the value of the switch, sensor, actuator, etc. can be read without part removal. Reading the DATA LIST as the first step of troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the DATA LIST according to the display on the tester.

MIRROR-L/MIRROR-R

Tester Display	Measurement Item/Range	Normal Condition
RH MIR POS V	Vertical mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V
RH MIR POS V	Vertical mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V
LH MIR POS H	Horizontal mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V
LH MIR POS H	Horizontal mirror position/MIN: 0, MAX: 5 V	Within range from 0 to 5 V

FP MEM 2 SW	Driving position memorized in seat memory switch M2/ON (1) or OFF (0)	1: Memorized 0: Not memorized
FP MEM 2 SW	Driving position memorized in seat memory switch M2/ON (1) or OFF (0)	1: Memorized 0: Not memorized
FOOT LIGHT	Foot light /Not memorized (000) or 30 seconds (011) or 7.5 seconds (001) or Off (100) or 15 seconds (010)	000: Not memorized 011: 30 seconds 001: 7.5 seconds 100: Off 010: 15 seconds

3. ACTIVE TEST

HINT:
Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator, etc. to be operated without part removal. Performing the ACTIVE TEST as the first step of troubleshooting is one way to shorten labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

MIRROR-L/MIRROR-R

Tester Display	Test Part	Control Range
RH MIRR UP/DOWN	Mirror vertical operation: UP/DOWN	-
RH MIRR R/L	Mirror horizontal operation: RIGHT/LEFT	-
LH MIRR UP/DOWN	Mirror vertical operation: UP/DOWN	-
LH MIRR R/L	Mirror horizontal operation: RIGHT/LEFT	-
FOOT LIGHT	Foot light operation: ON/OFF	-

PROBLEM SYMPTOMS TABLE

AUTOMATIC GLARE-RESISTANT EC MIRROR

Symptom	Suspected Area	See page
Auto glare-resistant EC mirror does not operate	1. ECU-IG fuse	-
	2. Inner rear view mirror	MI-43
	3. Wire harness	-

REMOVAL

1. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER

(a) Disengage the 2 claws and slide the inner rear view mirror stay holder cover as shown in the illustration.

(b) Disengage the 6 claws and remove the inner rear view mirror stay holder cover.

2. REMOVE INNER REAR VIEW MIRROR ASSEMBLY

(a) Disconnect the connector.

(b) Using a "TORX" socket wrench (T20), remove the screw and the inner rear view mirror.

(c) Slide the inner rear view mirror assembly in the direction indicated by the arrow shown in the illustration to remove it.

INSPECTION

1. INSPECT INNER REAR VIEW MIRROR ASSEMBLY

(a) Inspect operation of the electrochromic inner mirror.

(1) Connect the positive (+) lead from the battery to terminal 4 and the negative (-) lead to terminal 1.

(2) Attach black colored tape to the forward sensor to prevent it from sensing.

(3) Light up the mirror with an electric light, and check that the mirror surface changes from bright to dark.

Standard:

Mirror surface changes from bright to dark.

If the result is not as specified, replace the mirror assembly.

INSTALLATION

1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY

(a) Slide the inner rear view mirror assembly in the direction indicated by the arrow shown in the illustration to install it.

(b) Using a "TORX" socket wrench (T20), install the inner rear view mirror with the screw.

Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)

(c) Connect the connector.

2. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER

(a) Engage the 6 claws and install the inner rear view mirror stay holder cover.

(b) Engage the 2 claws and install the inner rear view mirror stay holder cover as shown in the illustration.

ON-VEHICLE INSPECTION

1. CHECK POWER MIRROR SWITCH OPERATION

(a) Remote control
The mirror adjust switch can control the adjustment axis of the mirror surface.

(b) Reverse-linked
This function tilts the mirror surface downward to improve the visibility when driving in reverse, provided that all the conditions given below have been met.
- Engine switch is on (IG).
- Shift lever is moved to "R".

2. CHECK MEMORY SWITCH OPERATION

(a) Memory
Memorizes the positions when all conditions below have been met and the 1or 2 button is pushed while the "SET" button is pushed.
- Engine switch is on (IG).
- Shift position is "P".

When the memory setting is completed, the buzzer will sound for 0.5 seconds.

(b) Recall
If the button 1 or 2 is pressed when all conditions below have been met, it recalls the positions.
- Engine switch is on (IG).
- Shift position is "P".
- Engine switch is on (IG).
- Driver door is opened.

Power Mirror cannot be Adjusted with Power Mirror Switch

DESCRIPTION

- A switch signal of the outer mirror switch is transmitted to the selected outer mirror control ECU by way of the main body ECU. Then, the outer mirror control ECU activates the mirror motor to move the mirror UP, DOWN, RIGHT and LEFT in response to the input.
- Mirror control switch and memorized mirror position signals (from the position control ECU & switch (seat ECU)) are sent to the mirror control ECU. The mirror control ECU moves the selected mirror UP, DOWN, LEFT and RIGHT in response to the input.

HINT:
The power mirror control system is a part of the multiplex communication system. This system features shared communication wiring that reduces the wiring complexity of the communication lines. The first step in any repair is to confirm the proper operation of the communication system. Proceed with troubleshooting after the communication has been verified (See the Multiplex Communication System).

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTCs

(a) Select the DTC check on the intelligent tester to check for communication errors.

Result

No DTC is output	A
DTCs are output (CAN communication)	B

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-49)**

A

2	INSPECT OUTER MIRROR SWITCH

(a) Remove the outer mirror switch.
(b) Measure the resistance according to the value(s) in the table below when the switch is operated.
Standard resistance:
Select "L" on the left/right adjustment switch

Tester Connection	Switch Position	Specified Condition
7 - 9	UP	100 Ω
	DOWN	470 Ω
	LEFT	800 Ω
	RIGHT	250 Ω

Select "R" on the left/right adjustment switch

Tester Connection	Switch Position	Specified Condition
7 - 9	UP	100 Ω
	DOWN	470 Ω
	LEFT	800 Ω
	RIGHT	250 Ω

NG → **REPLACE OUTER MIRROR SWITCH (See page MI-52)**

OK

MI

3 CHECK WIRE HARNESS (OUTER MIRROR SWITCH - MAIN BODY ECU)

(a) Disconnect the E61 and E67 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E67-7 - E61-11	Always	Below 1 Ω
E67-8 - E61-12	Always	Below 1 Ω
E67-9 - E61-2	Always	Below 1 Ω
E67-7 - Body ground	Always	10 kΩ or higher
E67-8 - Body ground	Always	10 kΩ or higher
E67-9 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT OUTER REAR VIEW MIRROR ASSEMBLY

(a) Outer rear view mirror LH:
Disconnect the I3 connector.
(b) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → I3-1 (MV) Battery negative (-) → I3-10 (M+)	Turns upward (A)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-1 (MV)	Turns downward (B)
Battery positive (+) → I3-9 (MH) Battery negative (-) → I3-10 (M+)	Turns left (C)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-9 (MH)	Turns right (D)

(c) Outer rear view mirror RH:
Disconnect the H4 connector.

(d) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → H4-1 (MV) Battery negative (-) → H4-10 (M+)	Turns upward (A)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-1 (MV)	Turns downward (B)
Battery positive (+) → H4-9 (MH) Battery negative (-) → H4-10 (M+)	Turns left (C)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-9 (MH)	Turns right (D)

NG → **REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-46)**

OK

REPLACE OUTER MIRROR CONTROL ECU

OUTER REAR VIEW MIRROR

COMPONENTS

REMOVAL

1. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-32)**
2. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE DOOR ARMREST COVER (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-35)**
7. **REMOVE DOOR FRAME GARNISH (See page ED-35)**
8. **REMOVE OUTER MIRROR PROTECTOR (See page ED-35)**
9. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY**
   (a) Remove the 3 nuts.
   (b) Disconnect the connector.
   (c) Disengage the clamp.

   (d) Disengage the claw and remove the outer rear view mirror assembly.

INSPECTION

1. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY RH

(a) Inspect outer mirror motor operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table and illustration.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 (MV) Battery negative (-) → Terminal 10 (M+)	**Turns upward (A)**
Battery positive (+) → Terminal 10 (M+) Battery negative (-) → Terminal 1 (MV)	**Turns downward (B)**
Battery positive (+) → Terminal 9 (MH) Battery negative (-) → Terminal 10 (M+)	**Turns left (C)**
Battery positive (+) → Terminal 10 (M+) Battery negative (-) → Terminal 9 (MH)	**Turns right (D)**

(b) Inspect outer mirror heater operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table below.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 (HTR+) Battery negative (-) → Terminal 12 (HTR-)	**Mirror surface temperature becomes higher**

(c) Inspect electrochromic outer mirror operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table and illustration.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 7 (EC+) Battery negative (-) → Terminal 15 (EC-)	**Mirror surface changes to dark**

2. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY LH

(a) Inspect outer mirror motor operation.

(1) Remove the outer rear view mirror assembly.

(2) Apply battery voltage and check operation of the mirror face, as shown in the table and illustration.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 (MV) Battery negative (-) → Terminal 10 (M+)	**Turns upward (A)**
Battery positive (+) → Terminal 10 (M+) Battery negative (-) → Terminal 1 (MV)	**Turns downward (B)**
Battery positive (+) → Terminal 9 (MH) Battery negative (-) → Terminal 10 (M+)	**Turns left (C)**
Battery positive (+) → Terminal 10 (M+) Battery negative (-) → Terminal 9 (MH)	**Turns right (D)**

(b) Inspect outer mirror heater operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table below.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 (HTR+) Battery negative (-) → Terminal 12 (HTR-)	**Mirror surface temperature becomes higher**

(c) Inspect electrochromic outer mirror operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table and illustration.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 7 (EC+) Battery negative (-) → Terminal 15 (EC-)	**Mirror surface changes to dark**

INSTALLATION

1. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY

(a) Engage the claw to install the outer rear view mirror assembly.

(b) Install the outer rear view mirror assembly with the 3 nuts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(c) Engage the clamp.

(d) Connect the connector.

2. INSTALL OUTER MIRROR PROTECTOR (See page ED-51)

3. INSTALL DOOR FRAME GARNISH (See page ED-51)

4. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-52)

5. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-52)

6. INSTALL DOOR ARMREST COVER (See page ED-53)

7. INSTALL COURTESY LIGHT ASSEMBLY (See page ED-53)

8. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-53)

9. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-54)

Mirror Heater does not Operate with Rear Defogger Switch

DESCRIPTION

When the mirror defogger switch, which is built into the heater control assembly, is operated, operation signals are transmitted to the A/C amplifier assembly through LIN. When the amplifier assembly receives the signals, it turns on the RR DEF relay to operate the mirror defogger.

WIRING DIAGRAM

Mirror Heater Operation:

MI

INSPECTION PROCEDURE

1 CHECK LIN COMMUNICATION LINE

(a) Disconnect the E1 and E3 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E1-37 (LIN1) - E3-15 (TX+)	Always	Below 1 Ω
E1-37 (LIN1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Disconnect the E1 connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E1-38 (RDFG) - Body ground	Engine switch on (IG)	10 to 14 V

OK → **Go to step 5**

NG

3 REPLACE AIR CONDITIONING CONTROL ASSEMBLY

(a) Replace the air conditioning control assembly.
HINT:
See page AC-226

NEXT

MI

4 CONFIRMATION DRIVING PATTERN

(a) Turn the engine switch on (IG), press the mirror defogger switch, and check that the mirror defogger operates.

NG → **REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY**

OK

END

5 CHECK DEFOGGER RELAY

(a) Turn the engine switch on (IG), and press the mirror defogger switch.
(b) Check that operating sound of the RR DEF relay is heard.

Result

Result	Proceed to
Relay operating sound is heard	OK
Relay operating sound is not heard	NG

NG → **Go to step 9**

NG

6 INSPECT DEFOGGER RELAY

NG → **REPLACE DEFOGGER RELAY**

OK

7 CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE)

(a) Disconnect the RR DEF relay.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
1 - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE A/C NO. 2 FUSE, HARNESS OR CONNECTOR**

OK

MI

8 CHECK WIRE HARNESS (RR DEF RELAY - A/C AMPLIFIER ASSEMBLY)

(a) Disconnect the RR DEF relay and A/C amplifier assembly connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
2 - E1-38	Always	Below 1 Ω
1 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY

9 INSPECT DEFOGGER RELAY

NG → **REPLACE DEFOGGER RELAY**

OK

10 CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE AND BODY GROUND)

(a) Disconnect the RR DEF relay.
(b) Measure the voltage and resistance according to the value(s) in the table below.
Standard resistance:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
4 - Body ground	Always	Below 1 Ω

Standard voltage:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
5 - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11 INSPECT MIR HTR FUSE

(a) Remove the MIR HTR fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
MIR HTR fuse	Always	Below 1 Ω

NG → **REPLACE MIR HTR FUSE**

OK

12 CHECK WIRE HARNESS (ENGINE ROOM R/B, J/B - INSTRUMENT PANEL J/B)

Engine Room R/B, J/B:

Instrument Panel J/B:

H B145478E01

(a) Disconnect the RR DEF relay and instrument panel J/B connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
3 - DB-2	Always	Below 1 Ω
3 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

13 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - OUTER REAR VIEW MIRROR)

Outer Rear View Mirror:

Instrument Panel J/B:

Instrument Panel J/B:

H B145479E01

(a) Disconnect the outer rear view mirror and instrument panel J/B connectors.

(b) Measure the resistance according to the value(s) in the table below.
( ): Outer mirror RH
Standard resistance:
Outer rear view mirror LH

Tester Connection	Condition	Specified Condition
I3-4 - DK-1	Always	Below 1 Ω
DK-1 - Body ground	Always	10 kΩ or higher

Outer rear view mirror RH

Tester Connection	Condition	Specified Condition
H4-4 - DJ-1	Always	Below 1 Ω
DJ-1 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

END

Power Mirrors do not Return to Memorized Position

DESCRIPTION

When the seat memory switch M1 or M2 is pressed, the seat memory switch transmits a signal of the memorized mirror position to the outer mirror control ECU Then, the outer mirror control ECU drives the mirror motor.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 READ VALUE OF INTELLIGENT TESTER

(a) Check the DATA LIST for proper function of the seat memory switch.

MIRROR-L/MIRROR-L

Item	Switch Position	Specified Condition
D MEM 1SW	Driver side mirror position memorized in seat memory switch M1/ON (1) or OFF (2)	1: Memorized 0: Not memorized
D MEM 2 SW	Driver side mirror position memorized in seat memory switch M2/ON (1) or OFF (2)	
FP-MEM 1 SW	Passenger side mirror position memorized in seat memory switch M1/ON (1) or OFF (2)	
FP MEM 2 SW	Passenger side mirror position memorized in seat memory switch M2/ON (1) or OFF (2)	

OK → **REPLACE OUTER MIRROR CONTROL ECU**

NG

2 CHECK SEAT MEMORY SWITCH

(a) Remove the seat memory switch.

(b) Measure the resistance according to the value(s) in the table below when the switch is operated.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 (E) - 2 (MMRY)	"SET" switch ON	Below 1 Ω
	"SET" switch OFF	10 kΩ or higher
1 (E) - 4 (M1)	"1" switch ON	Below 1 Ω
	"SET" switch OFF	10 kΩ or higher
1 (E) - 3 (M2)	"2" switch ON	Below 1 Ω
	"SET" switch OFF	10 kΩ or higher

NG → **REPLACE SEAT MEMORY SWITCH**

OK

MI

3 CHECK WIRE HARNESS (SEAT MEMORY SWITCH - OUTER MIRROR CONTROL ECU)

(a) Disconnect the E65 and I6 (H7) switch connectors.
(b) Measure the resistance according to the value(s) in the table below.
( ): RH side
Standard resistance:
LH side

Tester Connection	Condition	Specified Condition
I6-2 (MMRY) - E65-9 (MM)	Always	Below 1 Ω
I6-4 (M1) - E65-8 (M1)	Always	Below 1 Ω
I6-3 (M2) - E65-7 (M2)	Always	Below 1 Ω
E6-1 (E) - E65-10 (MSWE)	Always	Below 1 Ω

LH side

Tester Connection	Condition	Specified Condition
H7-2 (MMRY) - E65-29 (MM)	Always	Below 1 Ω
H7-4 (M1) - E65-28 (M1)	Always	Below 1 Ω
H7-3 (M2) - E65-27 (M2)	Always	Below 1 Ω
H7-1 (E) - E65-30 (MSWE)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT OUTER REAR VIEW MIRROR ASSEMBLY

MI

(a) Outer rear view mirror LH:
Disconnect the I3 connector.
(b) Apply battery voltage and check operation of the mirror face.
Standard

Measurement Condition	Mirror Operation
Battery positive (+) → I3-1 (MV) Battery negative (-) → I3-10 (M+)	Turns upward (A)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-1 (MV)	Turns downward (B)
Battery positive (+) → I3-9 (MH) Battery negative (-) → I3-10 (M+)	Turns left (C)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-9 (MH)	Turns right (D)

(c) Outer rear view mirror RH:
Disconnect the H4 connector.

(d) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → H4-1 (MV) Battery negative (-) → H4-10 (M+)	**Turns upward (A)**
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-1 (MV)	**Turns downward (B)**
Battery positive (+) → H4-9 (MH) Battery negative (-) → H4-10 (M+)	**Turns left (C)**
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-9 (MH)	**Turns right (D)**

NG → **REPLACE OUTER REAR VIEW MIRROR ASSEMBLY**

OK

END

OUTER MIRROR SWITCH

COMPONENTS

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-39)**
2. **REMOVE FRONT DOOR OPENING TRIM COVER LH (See page IR-39)**
3. **REMOVE SIDE INSTRUMENT PANEL LH (See page IP-12)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
5. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-13)**
6. **REMOVE NO. 1 SWITCH HOLE BASE (See page IP-14)**
7. **REMOVE OUTER MIRROR SWITCH ASSEMBLY**
   (a) Disengage the 3 claws and remove the outer mirror switch assembly.

INSPECTION

1. **INSPECT OUTER MIRROR SWITCH**
   (a) Inspect the outer mirror switch.
      (1) Measure the resistance according to the value(s) in the table below when the switch is operated.
      Standard resistance:
      Select "L" on the left/right adjustment switch

Tester Connection	Switch Position	Specified Condition
7 - 9	UP	100 Ω
	DOWN	470 Ω
	LEFT	800 Ω
	RIGHT	250 Ω

Select "R" on the left/right adjustment switch

Tester Connection	Switch Position	Specified Condition
7 - 9	UP	100 Ω
	DOWN	470 Ω
	LEFT	800 Ω
	RIGHT	250 Ω

INSTALLATION

1. **INSTALL OUTER MIRROR SWITCH ASSEMBLY**
   (a) Engage the 3 claws and install the outer mirror switch assembly.
2. **INSTALL NO. 1 SWITCH HOLE BASE (See page IP-44)**
3. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-46)**
4. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**
5. **INSTALL SIDE INSTRUMENT PANEL LH (See page IP-47)**
6. **INSTALL FRONT DOOR OPENING TRIM COVER LH (See page IR-64)**
7. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-65)**

Reverse Shift-linked Function of Power Mirrors do not Operate

DESCRIPTION

After the transmission control ECU receives a reverse signal from the park/neutral position switch, transmission control ECU the sends a reverse signal to the outer mirror control ECU via the CAN communication systems. The outer mirror control ECU activates the mirror motor in response to the reverse signal.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK DTCs

(a) Select the DTC check on the intelligent tester to check for communication errors.

Result

Not output DTC codes	**A**
Output DTC codes (CAN communication)	**B**

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-11)**

A

2 READ VALUE OF INTELLIGENT TESTER

(a) Check the DATA LIST for proper function of the reverse signal.

ECT

Item	Measurement item/Display (Range)	Normal Condition	Diagnostic Note
REVERSE	**PNP switch status/ON or OFF**	**Shift lever position/ON (R) or OFF**	**When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.**

OK → **Go to step 7**

NG

3 CHECK WIRE HARNESS (BATTERY POSITIVE VOLTAGE)

(a) Disconnect the B36 connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
B36-1 - Body ground	**Engine switch on (IG)**	**10 to 14 V**

NG → **REPAIR OR REPLACE GAUGE NO. 1 FUSE OR HARNESS AND CONNECTOR**

OK

MI

4 CHECK WIRE HARNESS (TRANSMISSION CONTROL ECU - PARK/NEUTRAL POSITION SWITCH)

(a) Disconnect the B36 and B40 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
B40-15 - B36-2	Always	Below 1 Ω
B40-15 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

5 INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Disconnect the B36 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Shift Position	Tester Connection	Specified Condition
P	1 - 2	Below 1 Ω
Except P	1 - 2	10 kΩ or higher

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AX-184)**

OK

6 CONFIRM MIRROR OPERATION

Turn the engine switch on (IG), and check the mirror operation.

NG → **REPLACE OUTER MIRROR CONTROL ECU**

OK

END

7 INSPECT OUTER REAR VIEW MIRROR ASSEMBLY

(a) Outer rear view mirror LH:
Disconnect the I3 connector.

(b) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → I3-1 (MV) Battery negative (-) → I3-10 (M+)	Turns upward (A)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-1 (MV)	Turns downward (B)
Battery positive (+) → I3-9 (MH) Battery negative (-) → I3-10 (M+)	Turns left (C)
Battery positive (+) → I3-10 (M+) Battery negative (-) → I3-9 (MH)	Turns right (D)

(c) Outer rear view mirror RH:
Disconnect the H4 connector.

(d) Apply battery voltage and check operation of the mirror face.

Standard

Measurement Condition	Mirror Operation
Battery positive (+) → H4-1 (MV) Battery negative (-) → H4-10 (M+)	Turns upward (A)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-1 (MV)	Turns downward (B)
Battery positive (+) → H4-9 (MH) Battery negative (-) → H4-10 (M+)	Turns left (C)
Battery positive (+) → H4-10 (M+) Battery negative (-) → H4-9 (MH)	Turns right (D)

NG → **REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-46)**

OK

REPLACE OUTER MIRROR CONTROL ECU

Power Source Circuit

DESCRIPTION

This is the power source circuit for the outer mirror control ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

MI

1	INSPECT OUTER MIRROR CONTROL ECU (POWER SOURCE)

(a) Disconnect the E66 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E66-3 (B) - Body ground	Always	10 to 14 V
E66-4 (ACC) - Body ground	Engine switch on (ACC)	10 to 14 V

Standard resistance

Tester Connection	Condition	Specified Condition
E66-9 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

OUTER MIRROR CONTROL ECU

COMPONENTS

MI

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
3. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-42)**
4. **REMOVE FRONT DOOR OPENING TRIM COVER RH (See page IR-42)**
5. **REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-15)**
6. **REMOVE SIDE INSTRUMENT PANEL RH (See page IP-15)**
7. **REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**
8. **REMOVE LOWER INSTRUMENT PANEL RH (See page IP-16)**
9. **REMOVE OUTER MIRROR CONTROL ECU ASSEMBLY**
   (a) Disconnect the 2 connectors.
   (b) Remove the nut and the outer mirror control ECU assembly.

INSTALLATION

1. **INSTALL OUTER MIRROR CONTROL ECU ASSEMBLY**
   (a) Install the outer mirror control ECU assembly with the nut.
   (b) Connect the 2 connectors.
2. **INSTALL LOWER INSTRUMENT PANEL RH (See page IP-42)**
3. **INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**
4. **INSTALL SIDE INSTRUMENT PANEL RH (See page IP-43)**
5. **INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-44)**
6. **INSTALL FRONT DOOR OPENING TRIM COVER RH (See page IR-65)**
7. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-65)**
8. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
10. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).
11. **INSPECT SRS WARNING LIGHT**
    (See page RS-37)

PROBLEM SYMPTOMS TABLE

Power Mirror Control System

Symptom	Suspected area	See page
Power mirrors cannot be adjusted manually	1. ECU-ACC, ECU-B No. 1 fuses	-
	2. Outer mirror switch	MI-53
	3. Outer rear view mirror LH/RH	MI-47
	4. Wire harness	-
Auto glare-resistant EC mirror does not operate	1. ECU-IG No. 1 fuse	-
	2. Outer rear view mirror LH/RH	MI-47
	3. Wire harness	-
Mirror heater does not operate	1. Heater control panel assembly	MI-18
	2. A/C amplifier assembly	MI-18
	3. MIR HTR relay	MI-18
	4. Outer rear view mirror LH/RH	MI-18
	5. Wire harness	-

REMOVAL

1. **PRECAUTION**
   (See page IP-1)
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
4. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-367)**
5. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-367)**
6. **REMOVE STEERING PAD (See page RS-367)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-80)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-39)**
9. **REMOVE FRONT DOOR OPENING TRIM COVER LH (See page IR-39)**
10. **REMOVE SIDE INSTRUMENT PANEL LH**
    (a) Disengage the 3 clips.
    (b) Disengage the 2 guides and remove the side instrument panel LH.

11. REMOVE INSTRUMENT PANEL FINISH PANEL END LH

(a) Disengage the 3 clips and remove the instrument panel finish panel end LH.

12. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Remove the 2 bolts <A>.
(b) Disconnect the hood lock control cable assembly.
(c) Disengage the 9 clips.
(d) Disconnect each connector and remove the lower instrument panel sub-assembly.

13. REMOVE STEERING COLUMN COVER

(a) Remove the 2 screws <J>.
(b) Disengage the 2 claws <B> and remove the lower steering column cover.
(c) Disengage the claw <A> and remove the upper steering column cover.

14. REMOVE TILT AND TELESCOPIC SWITCH (See page SR-80)

15. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-80)

16. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Remove the screw <B>.
(b) Disengage the 2 clips.
(c) Disengage the guide and the 4 claws, and remove the instrument cluster finish panel sub-assembly.

17. REMOVE COMBINATION METER ASSEMBLY

(a) Remove the 4 screws <B> or <C>.
(b) Disconnect each connector and remove the combination meter assembly.

18. REMOVE NO. 1 SWITCH HOLE BASE

(a) Disengage the 4 clips.
(b) Disconnect each connector and remove the No. 1 switch hole base.

19. REMOVE INSTRUMENT PANEL FINISH PANEL END RH

(a) Disengage the claw and 4 clips, and remove the instrument panel finish panel end RH.

20. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-42)

21. REMOVE FRONT DOOR OPENING TRIM COVER RH (See page IR-42)

22. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Disengage the 5 clips.

(b) Disengage the 2 guides and remove the No. 2 instrument panel under cover sub-assembly.

(c) Disconnect the connector.

23. REMOVE SIDE INSTRUMENT PANEL RH

(a) Disengage the 3 clips.

(b) Disengage the 2 guides and remove the side instrument panel RH.

24. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)

25. REMOVE LOWER INSTRUMENT PANEL RH

(a) Remove the 6 screws <D>.
(b) Disengage the 2 clips.
(c) Disconnect each connector and remove the lower instrument panel RH

26. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY

(a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.

27. REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE

(a) Disengage the 5 claws and 6 clips.
(b) Disconnect the connector and remove the upper console panel assembly with front ash receptacle.

28. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 claws and 4 clips, and remove the No. 2 instrument panel register assembly.

(c) Disconnect the connector.

29. REMOVE INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System) (See page AV-168)

30. REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System) (See page AV-170)

31. REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System)

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 clips and remove the heater seat switch console base.

32. REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System)

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 clips.

(c) Disconnect each connector and remove the heater seat switch console base.

33. REMOVE CONSOLE BOX POCKET

(a) Remove the console box pocket.

34. REMOVE CONSOLE BOX CARPET

(a) Remove the console box carpet.

35. REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Disengage the 6 claws and remove the console rear end panel sub-assembly.

36. REMOVE REAR CONSOLE BOX ASSEMBLY

(a) Remove the 2 screws <F>.

(b) Remove the 2 bolts <E>.

(c) Remove the 2 bolts <E>.

(d) Disengage the 4 clips and remove the rear console box assembly.
(e) Disconnect each connector.

37. REMOVE FRONT PILLAR GARNISH LH (See page IR-39)

38. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY
(a) Using a screwdriver, disengage the 2 clips.
HINT:
Tape the screwdriver tip before use.
(b) Disengage the 2 guides and remove the No. 1 instrument panel speaker panel sub-assembly.

39. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-184)

40. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY
(a) Disengage the 4 clips and remove the No. 1 instrument panel register assembly.

41. REMOVE FRONT PILLAR GARNISH RH (See page IR-42)

42. REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

(a) Using a screwdriver, disengage the 2 clips.
HINT:
Tape the screwdriver tip before use.

(b) Disengage the 2 guides and remove the No. 2 instrument panel speaker panel sub-assembly.

43. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)

HINT:
Use the same procedures described for the LH side (See page AV-184).

44. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Disengage the 4 clips and remove the No. 3 instrument panel register assembly.

45. REMOVE NO. 1 SPEAKER HOLE COVER

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 clips and remove the No. 1 speaker hole cover.

46. REMOVE FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)

47. REMOVE NO. 1 INSTRUMENT PANEL MOUNTING BRACKET

(a) Remove the clip and the No. 1 instrument panel mounting bracket.

48. REMOVE PUSH START SWITCH

(a) Disengage the 2 claws and remove the push start switch.

(b) Disconnect the connector.

49. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-414)

50. REMOVE ROOM TEMPERATURE SENSOR (See page AC-214)

51. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player)

(a) Disconnect each connector.

(b) Disengage each clamp.

(c) Remove the 2 passenger airbag bolts <K>.

(d) Remove the clip.

(e) Remove the bolt <L>.

(f) Remove the 5 bolts <G> and nut <H>.
(g) Remove the 4 clips.

(h) Disengage the 5 claws and remove the instrument panel safety pad assembly.

52. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player)

(a) Disconnect each connector.
(b) Disengage each clamp.
(c) Remove the 2 passenger airbag bolts <K>.
(d) Remove the clip.

(e) Remove the bolt <L>.

(f) Remove the 5 bolts <G> and nut <H>.
(g) Remove the 4 clips.

(h) Disengage the 5 claws and remove the instrument panel safety pad assembly.

53. REMOVE NO. 1 INSTRUMENT PANEL CLIP

(a) Disengage the 3 claws and remove the 3 No. 1 instrument panel clips.

54. REMOVE NO. 3 INSTRUMENT PANEL STAY

(a) Disengage the 2 claws and remove the 2 No. 3 instrument panel stays.

DISASSEMBLY

1. REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT

(a) Remove the 2 screws <F> and the side No. 1 defroster nozzle duct.

2. REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT

(a) Remove the 2 screws <F> and the side No. 2 defroster nozzle duct.

3. REMOVE DEFROSTER NOZZLE ASSEMBLY

(a) Remove the 3 screws <F> and the defroster nozzle assembly.

4. REMOVE NO. 1 HEATER TO REGISTER DUCT

(a) Remove the 3 screws <F> and the No. 1 heater to register duct.

5. REMOVE NO. 2 HEATER TO REGISTER DUCT

(a) Remove the 4 screws <F> and the No. 2 heater to register duct.

6. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-220)

7. REMOVE NO. 3 INSTRUMENT PANEL WIRE

(a) Disconnect the connector.

(b) Disengage the 3 clamps and remove the No. 3 instrument panel wire.

8. REMOVE NAVIGATION ANTENNA ASSEMBLY (See page NS-253)

9. REMOVE AUTOMATIC LIGHT CONTROL SENSOR

(a) Disengage the 2 claws and remove the automatic light control sensor.

10. REMOVE NO. 1 METER HOOD RETAINER

(a) Remove the 2 screws <I> and the 2 No. 1 meter hood retainer.

11. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-415)

12. REMOVE NO. 1 INSTRUMENT PANEL PIN

(a) Remove the 4 screws <I> and the 4 No. 1 instrument panel pins.

13. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH

(a) Disengage the 3 claws <A>.

(b) Disengage the 3 claws <B > and remove the No. 1 defroster nozzle garnish as shown in the illustration.

14. REMOVE NO. 2 DEFROSTER NOZZLE GARNISH

(a) Disengage the 3 claws <A>.

(b) Disengage the 3 claws <B > and remove the No. 2 defroster nozzle garnish as shown in the illustration.

REASSEMBLY

1. INSTALL NO. 2 DEFROSTER NOZZLE GARNISH

(a) Engage the 3 claws <A>.

(b) Engage the 3 claws <B> and install the No. 2 defroster nozzle garnish as shown in the illustration.

2. INSTALL NO. 1 DEFROSTER NOZZLE GARNISH

(a) Engage the 3 claws <A>.

(b) Engage the 3 claws <B> and install the No. 1 defroster nozzle garnish as shown in the illustration.

3. INSTALL NO. 1 INSTRUMENT PANEL PIN

(a) Install the 4 No. 1 instrument panel pins with the 4 screws <I>.

4. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-416)

5. INSTALL NO. 1 METER HOOD RETAINER

(a) Install the 2 No. 1 meter hood retainers with the 2 screws <I>.

6. INSTALL AUTOMATIC LIGHT CONTROL SENSOR

(a) Engage the 2 claws and install the automatic light control sensor.

7. INSTALL NAVIGATION ANTENNA ASSEMBLY (See page NS-254)

8. INSTALL NO. 3 INSTRUMENT PANEL WIRE

(a) Engage the 3 clamps.

(b) Connect the connector and install the No. 3 instrument panel wire.

9. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-230)

IP

10. INSTALL NO. 2 HEATER TO REGISTER DUCT

(a) Install the No. 2 heater to register duct with the 4 screws <F>.

11. INSTALL NO. 1 HEATER TO REGISTER DUCT

(a) Install the No. 1 heater to register duct with the 3 screws <F>.

12. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Install the defroster nozzle assembly with the 3 screws <F>.

13. INSTALL SIDE NO. 2 DEFROSTER NOZZLE DUCT

(a) Install the side No. 2 defroster nozzle duct with the 2 screws <F>.

14. INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT

(a) Install the side No. 1 defroster nozzle duct with the 2 screws <F>.

INSTALLATION

1. INSTALL NO. 3 INSTRUMENT PANEL STAY

(a) Engage the 2 claws and install the 2 No. 3 instrument panel stays.

2. INSTALL NO. 1 INSTRUMENT PANEL CLIP

(a) Engage the 3 claws and install the 3 No. 1 instrument panel clips.

3. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player)

(a) Engage the 5 claws.

NOTICE:

Do not allow the wire harness to get caught in the claws.

(b) Install the 4 clips.

(c) Install the 5 bolts <G> and nut <H>.

(d) Engage the clip.
(e) Install the bolt <L>.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
(f) Engage each clamp.
(g) Install the 2 passenger airbag bolts <K>.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(h) Connect each connector and install the instrument panel safety pad assembly.

4. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player)

(a) Engage the 5 claws.

(b) Install the 4 clips.

(c) Install the 5 bolts <G> and nut <H>.

(d) Engage the clip.
(e) Install the bolt <L>.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
(f) Engage each clamp.
(g) Install the 2 passenger airbag bolts <K>.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(h) Connect each connector and install the instrument panel safety pad assembly.

5. **INSTALL ROOM TEMPERATURE SENSOR (See page AC-215)**

6. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-416)**

7. **INSTALL PUSH START SWITCH**
   (a) Connect the connector.

(b) Engage the 2 claws and install the push start switch.

8. INSTALL NO. 1 INSTRUMENT PANEL MOUNTING BRACKET

(a) Install the clip and the No. 1 instrument panel mounting bracket.

9. INSTALL FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)

10. INSTALL NO. 1 SPEAKER HOLE COVER

(a) Engage the 4 clips and install the No. 1 speaker hole cover.

11. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Engage the 4 clips and install the No. 1 instrument panel register assembly.

12. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-185)

13. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY
(a) Engage the 2 guides.
(b) Engage the 2 clips and install the No. 1 instrument panel speaker panel sub-assembly.

14. INSTALL FRONT PILLAR GARNISH LH (See page IR-64)

15. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY
(a) Engage the 4 clips and install the No. 3 instrument panel register assembly.

16. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)
HINT:
Use the same procedures described for the LH side (See page AV-185).

17. INSTALL NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY
(a) Engage the 2 guides.
(b) Engage the 2 clips and install the No. 2 instrument panel speaker panel sub-assembly.

18. INSTALL FRONT PILLAR GARNISH RH (See page IR-65)

19. INSTALL REAR CONSOLE BOX ASSEMBLY
(a) Connect each connector.

(b) Engage the 4 clips.

IP

(c) Install the 2 screws <F>.

(d) Install the 2 bolts <E>.

(e) Install the rear console box assembly with the 2 bolts <E>.

20. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Engage the 6 clips and install the console rear end panel sub-assembly.

21. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.

22. INSTALL CONSOLE BOX POCKET

(a) Install the console box pocket.

23. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System)

(a) Engage the 4 clips and install the heater seat switch base.

24. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System)

(a) Connect each connector.

(b) Engage the 4 clips and install the heater seat switch base.

25. INSTALL INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System) (See page AV-172)

26. INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System) (See page AV-173)

27. INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Connect the connector.

(b) Engage the 4 claws and 4 clips, and install the No. 2 instrument panel register assembly.

28. INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE

(a) Connect the connector.

(b) Engage the 5 claws and 6 clips to install the upper console panel assembly with front ash receptacle.

29. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

(a) Install the shift lever knob sub-assembly.

30. INSTALL LOWER INSTRUMENT PANEL RH

(a) Connect each connector.

(b) Engage the 2 clips.
(c) Install the lower instrument panel RH with the 6 screws <D>.

31. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)

32. INSTALL SIDE INSTRUMENT PANEL RH
(a) Apply protective tape to the area shown in the illustration.
(b) Engage the upper end of the side instrument panel RH with the lower end of the front pillar garnish RH as shown in the illustration.

(c) Engage the 2 guides and the 3 clips to install the side instrument panel RH.

33. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Connect the connector.

(b) Engage the 2 guides.

(c) Engage the 5 clips and install the No. 2 instrument panel under cover sub-assembly.

34. INSTALL FRONT DOOR OPENING TRIM COVER RH (See page IR-65)

35. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-65)

36. INSTALL INSTRUMENT PANEL FINISH PANEL END RH

(a) Engage the claw and 4 clips to install the instrument panel finish panel end RH.

37. INSTALL NO. 1 SWITCH HOLE BASE

(a) Connect each connector.

(b) Engage the 4 clips and install the No. 1 switch hole base.

38. INSTALL COMBINATION METER ASSEMBLY

(a) Connect each connector.

(b) Install the combination meter assembly with the 4 screws <B> or <C>.

39. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Engage the guide and the 4 claws.

(b) Engage the 2 clips.

(c) Install the instrument cluster finish panel sub-assembly with the screw <B>.

40. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-86)

41. INSTALL TILT AND TELESCOPIC SWITCH (See page SR-86)

42. INSTALL STEERING COLUMN COVER

(a) Engage the claw <A> and install the upper steering column cover.

(b) Engage the 2 claws <B> and install the lower steering column cover.

(c) Install the 2 screws <J>.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)

43. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-382)

44. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Connect each connector.

(b) Engage the 9 clips.

(c) Connect the hood lock control cable assembly.

(d) Install the lower instrument panel sub-assembly with the 2 bolts <A>.

45. INSTALL INSTRUMENT PANEL FINISH PANEL END LH

(a) Engage the 3 clips and install the instrument panel finish panel end LH.

46. INSTALL SIDE INSTRUMENT PANEL LH

(a) Apply protective tape to the area shown in the illustration.

(b) Engage the upper end of the side instrument panel LH with the lower end of the front pillar garnish LH as shown in the illustration.

(c) Engage the 2 guides and the 3 clips to install the side instrument panel LH.

47. INSTALL FRONT DOOR OPENING TRIM COVER LH (See page IR-64)

48. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-65)

49. INSTALL STEERING WHEEL ASSEMBLY (See page SR-87)

50. INSTALL STEERING PAD (See page RS-368)

51. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-369)

52. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-369)

53. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

54. INSPECT STEERING PAD (See page RS-369)

55. INSPECT FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-395)

56. INSPECT SRS WARNING LIGHT (See page RS-369)

57. PERFORM INITIALIZATION

NOTICE:

Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).

INSTRUMENT PANEL SAFETY PAD

PRECAUTION

1. PRECAUTION FOR VEHICLE WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

(a) Some operations in this section may affect the SRS airbags. Prior to performing the corresponding operations, read the SRS airbag NOTICE.

2. TABLE OF BOLT, SCREW AND NUT

Code	Shape	Size	Parts No.
<A>		ϕ = 6 mm (0.24 in.) Length = 25 mm (0.98 in.)	91635-60625
<B>		ϕ = 5 mm (0.20 in.) Length = 16 mm (0.63 in.)	93567-55016
<C>		ϕ = 5 mm (0.20 in.) Length = 20 mm (0.79 in.)	93567-55020
<D>		ϕ = 5 mm (0.20 in.) Length = 14 mm (0.55 in.)	93568-55014
<E>		ϕ = 6 mm (0.24 in.) Length = 16 mm (0.63 in.)	91635-40616
<F>		ϕ = 5 mm (0.20 in.) Length = 15 mm (0.59 in.)	90159-50327
<G>		ϕ = 6 mm (0.24 in.) Length = 18 mm (0.71 in.)	91553-80614

Code	Shape	Size	Parts No.
<H>		ϕ = 6 mm (0.24 in.)	90179-06307
<I>		ϕ = 5 mm (0.20 in.) Length = 14 mm (0.55 in.)	93568-15014
<J>		ϕ = 5 mm (0.20 in.) Length = 15 mm (0.59 in.)	90164-50034
<K>		ϕ = 8 mm (0.31 in.) Length = 18 mm (0.71 in.)	91626-60818
<L>		ϕ = 6 mm (0.24 in.) Length = 15 mm (0.59 in.)	90119-06915
<M>		ϕ = 5 mm (0.20 in.) Length = 16 mm (0.63 in.)	90159-50068

REMOVAL

1. **PRECAUTION**
   (See page IP-1)
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
4. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-367)**
5. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-367)**
6. **REMOVE STEERING PAD (See page RS-367)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-80)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-39)**
9. **REMOVE FRONT DOOR OPENING TRIM COVER LH (See page IR-39)**
10. **REMOVE SIDE INSTRUMENT PANEL LH**
    (a) Disengage the 3 clips.
    (b) Disengage the 2 guides and remove the side instrument panel LH.

11. REMOVE INSTRUMENT PANEL FINISH PANEL END LH

(a) Disengage the 3 clips and remove the instrument panel finish panel end LH.

12. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Remove the 2 bolts <A>.
(b) Disconnect the hood lock control cable assembly.
(c) Disengage the 9 clips.
(d) Disconnect each connector and remove the lower instrument panel sub-assembly.

13. REMOVE STEERING COLUMN COVER

(a) Remove the 2 screws <J>.
(b) Disengage the 2 claws <B> and remove the lower steering column cover.
(c) Disengage the claw <A> and remove the upper steering column cover.

14. REMOVE TILT AND TELESCOPIC SWITCH (See page SR-80)

15. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-80)

16. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Remove the screw <B>.
(b) Disengage the 2 clips.
(c) Disengage the guide and the 4 claws, and remove the instrument cluster finish panel sub-assembly.

17. REMOVE COMBINATION METER ASSEMBLY

(a) Remove the 4 screws <B> or <C>.
(b) Disconnect each connector and remove the combination meter assembly.

18. REMOVE NO. 1 SWITCH HOLE BASE

(a) Disengage the 4 clips.
(b) Disconnect each connector and remove the No. 1 switch hole base.

19. REMOVE INSTRUMENT PANEL FINISH PANEL END RH

(a) Disengage the claw and 4 clips, and remove the instrument panel finish panel end RH.

20. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-42)

21. REMOVE FRONT DOOR OPENING TRIM COVER RH (See page IR-42)

22. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Disengage the 5 clips.

(b) Disengage the 2 guides and remove the No. 2 instrument panel under cover sub-assembly.

(c) Disconnect the connector.

23. REMOVE SIDE INSTRUMENT PANEL RH

(a) Disengage the 3 clips.

(b) Disengage the 2 guides and remove the side instrument panel RH.

24. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)

25. REMOVE LOWER INSTRUMENT PANEL RH

(a) Remove the 6 screws <D>.
(b) Disengage the 2 clips.
(c) Disconnect each connector and remove the lower instrument panel RH

26. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY

(a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.

27. REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE

(a) Disengage the 5 claws and 6 clips.
(b) Disconnect the connector and remove the upper console panel assembly with front ash receptacle.

28. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 claws and 4 clips, and remove the No. 2 instrument panel register assembly.

(c) Disconnect the connector.

29. REMOVE INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System) (See page AV-168)

30. REMOVE MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System) (See page AV-170)

31. REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System)

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 clips and remove the heater seat switch console base.

32. REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System)

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 clips.

(c) Disconnect each connector and remove the heater seat switch console base.

33. REMOVE CONSOLE BOX POCKET

(a) Remove the console box pocket.

34. REMOVE CONSOLE BOX CARPET

(a) Remove the console box carpet.

35. REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Disengage the 6 claws and remove the console rear end panel sub-assembly.

36. REMOVE REAR CONSOLE BOX ASSEMBLY

(a) Remove the 2 screws <F>.

(b) Remove the 2 bolts <E>.

(c) Remove the 2 bolts <E>.

(d) Disengage the 4 clips and remove the rear console box assembly.
(e) Disconnect each connector.

37. REMOVE FRONT PILLAR GARNISH LH (See page IR-39)

38. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY
(a) Using a screwdriver, disengage the 2 clips.
HINT:
Tape the screwdriver tip before use.
(b) Disengage the 2 guides and remove the No. 1 instrument panel speaker panel sub-assembly.

39. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-184)

40. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY
(a) Disengage the 4 clips and remove the No. 1 instrument panel register assembly.

41. REMOVE FRONT PILLAR GARNISH RH (See page IR-42)

42. REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

(a) Using a screwdriver, disengage the 2 clips.
HINT:
Tape the screwdriver tip before use.

(b) Disengage the 2 guides and remove the No. 2 instrument panel speaker panel sub-assembly.

43. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)

HINT:
Use the same procedures described for the LH side (See page AV-184).

44. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Disengage the 4 clips and remove the No. 3 instrument panel register assembly.

45. REMOVE NO. 1 SPEAKER HOLE COVER

(a) Apply protective tape to the area shown in the illustration.

(b) Using a moulding remover, disengage the 4 clips and remove the No. 1 speaker hole cover.

46. REMOVE FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)

47. REMOVE NO. 1 INSTRUMENT PANEL MOUNTING BRACKET

(a) Remove the clip and the No. 1 instrument panel mounting bracket.

48. REMOVE PUSH START SWITCH

(a) Disengage the 2 claws and remove the push start switch.

(b) Disconnect the connector.

49. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-414)

50. REMOVE ROOM TEMPERATURE SENSOR (See page AC-214)

51. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player)

(a) Disconnect each connector.

(b) Disengage each clamp.

(c) Remove the 2 passenger airbag bolts <K>.

(d) Remove the clip.

(e) Remove the bolt <L>.

(f) Remove the 5 bolts <G> and nut <H>.
(g) Remove the 4 clips.

(h) Disengage the 5 claws and remove the instrument panel safety pad assembly.

52. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player)

(a) Disconnect each connector.
(b) Disengage each clamp.
(c) Remove the 2 passenger airbag bolts <K>.
(d) Remove the clip.

(e) Remove the bolt <L>.

(f) Remove the 5 bolts <G> and nut <H>.
(g) Remove the 4 clips.

(h) Disengage the 5 claws and remove the instrument panel safety pad assembly.

53. REMOVE NO. 1 INSTRUMENT PANEL CLIP

(a) Disengage the 3 claws and remove the 3 No. 1 instrument panel clips.

54. REMOVE NO. 3 INSTRUMENT PANEL STAY

(a) Disengage the 2 claws and remove the 2 No. 3 instrument panel stays.

DISASSEMBLY

1. REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT

(a) Remove the 2 screws <F> and the side No. 1 defroster nozzle duct.

2. REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT

(a) Remove the 2 screws <F> and the side No. 2 defroster nozzle duct.

3. REMOVE DEFROSTER NOZZLE ASSEMBLY

(a) Remove the 3 screws <F> and the defroster nozzle assembly.

4. REMOVE NO. 1 HEATER TO REGISTER DUCT

(a) Remove the 3 screws <F> and the No. 1 heater to register duct.

5. REMOVE NO. 2 HEATER TO REGISTER DUCT

(a) Remove the 4 screws <F> and the No. 2 heater to register duct.

6. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-220)

7. REMOVE NO. 3 INSTRUMENT PANEL WIRE

(a) Disconnect the connector.

(b) Disengage the 3 clamps and remove the No. 3 instrument panel wire.

8. REMOVE NAVIGATION ANTENNA ASSEMBLY (See page NS-253)

9. REMOVE AUTOMATIC LIGHT CONTROL SENSOR

(a) Disengage the 2 claws and remove the automatic light control sensor.

10. REMOVE NO. 1 METER HOOD RETAINER

(a) Remove the 2 screws <I> and the 2 No. 1 meter hood retainer.

11. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-415)

12. REMOVE NO. 1 INSTRUMENT PANEL PIN

(a) Remove the 4 screws <I> and the 4 No. 1 instrument panel pins.

13. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH

(a) Disengage the 3 claws <A>.

(b) Disengage the 3 claws <B > and remove the No. 1 defroster nozzle garnish as shown in the illustration.

14. REMOVE NO. 2 DEFROSTER NOZZLE GARNISH

(a) Disengage the 3 claws <A>.

(b) Disengage the 3 claws <B > and remove the No. 2 defroster nozzle garnish as shown in the illustration.

REASSEMBLY

1. INSTALL NO. 2 DEFROSTER NOZZLE GARNISH

(a) Engage the 3 claws <A>.

(b) Engage the 3 claws <B> and install the No. 2 defroster nozzle garnish as shown in the illustration.

2. INSTALL NO. 1 DEFROSTER NOZZLE GARNISH

(a) Engage the 3 claws <A>.

(b) Engage the 3 claws <B> and install the No. 1 defroster nozzle garnish as shown in the illustration.

3. INSTALL NO. 1 INSTRUMENT PANEL PIN

(a) Install the 4 No. 1 instrument panel pins with the 4 screws <I>.

4. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-416)

5. INSTALL NO. 1 METER HOOD RETAINER

(a) Install the 2 No. 1 meter hood retainers with the 2 screws <I>.

6. INSTALL AUTOMATIC LIGHT CONTROL SENSOR

(a) Engage the 2 claws and install the automatic light control sensor.

7. INSTALL NAVIGATION ANTENNA ASSEMBLY (See page NS-254)

8. INSTALL NO. 3 INSTRUMENT PANEL WIRE

(a) Engage the 3 clamps.

(b) Connect the connector and install the No. 3 instrument panel wire.

9. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-230)

IP

10. INSTALL NO. 2 HEATER TO REGISTER DUCT

(a) Install the No. 2 heater to register duct with the 4 screws <F>.

11. INSTALL NO. 1 HEATER TO REGISTER DUCT

(a) Install the No. 1 heater to register duct with the 3 screws <F>.

12. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Install the defroster nozzle assembly with the 3 screws <F>.

13. INSTALL SIDE NO. 2 DEFROSTER NOZZLE DUCT

(a) Install the side No. 2 defroster nozzle duct with the 2 screws <F>.

14. INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT

(a) Install the side No. 1 defroster nozzle duct with the 2 screws <F>.

INSTALLATION

1. INSTALL NO. 3 INSTRUMENT PANEL STAY

(a) Engage the 2 claws and install the 2 No. 3 instrument panel stays.

2. INSTALL NO. 1 INSTRUMENT PANEL CLIP

(a) Engage the 3 claws and install the 3 No. 1 instrument panel clips.

3. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/o DVD Player)

(a) Engage the 5 claws.

NOTICE:

Do not allow the wire harness to get caught in the claws.

(b) Install the 4 clips.

(c) Install the 5 bolts <G> and nut <H>.

(d) Engage the clip.
(e) Install the bolt <L>.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
(f) Engage each clamp.
(g) Install the 2 passenger airbag bolts <K>.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(h) Connect each connector and install the instrument panel safety pad assembly.

4. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (w/ DVD Player)

(a) Engage the 5 claws.

(b) Install the 4 clips.

(c) Install the 5 bolts <G> and nut <H>.

(d) Engage the clip.
(e) Install the bolt <L>.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
(f) Engage each clamp.
(g) Install the 2 passenger airbag bolts <K>.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(h) Connect each connector and install the instrument panel safety pad assembly.

5. **INSTALL ROOM TEMPERATURE SENSOR (See page AC-215)**

6. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-416)**

7. **INSTALL PUSH START SWITCH**
   (a) Connect the connector.

(b) Engage the 2 claws and install the push start switch.

8. INSTALL NO. 1 INSTRUMENT PANEL MOUNTING BRACKET

(a) Install the clip and the No. 1 instrument panel mounting bracket.

9. INSTALL FRONT STEREO COMPONENT SPEAKER ASSEMBLY (See page AV-188)

10. INSTALL NO. 1 SPEAKER HOLE COVER

(a) Engage the 4 clips and install the No. 1 speaker hole cover.

11. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Engage the 4 clips and install the No. 1 instrument panel register assembly.

12. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-185)

13. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY
(a) Engage the 2 guides.
(b) Engage the 2 clips and install the No. 1 instrument panel speaker panel sub-assembly.

14. INSTALL FRONT PILLAR GARNISH LH (See page IR-64)

15. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY
(a) Engage the 4 clips and install the No. 3 instrument panel register assembly.

16. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)
HINT:
Use the same procedures described for the LH side (See page AV-185).

17. INSTALL NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY
(a) Engage the 2 guides.
(b) Engage the 2 clips and install the No. 2 instrument panel speaker panel sub-assembly.

18. INSTALL FRONT PILLAR GARNISH RH (See page IR-65)

19. INSTALL REAR CONSOLE BOX ASSEMBLY
(a) Connect each connector.

(b) Engage the 4 clips.

IP

(c) Install the 2 screws <F>.

(d) Install the 2 bolts <E>.

(e) Install the rear console box assembly with the 2 bolts <E>.

20. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Engage the 6 clips and install the console rear end panel sub-assembly.

21. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.

22. INSTALL CONSOLE BOX POCKET

(a) Install the console box pocket.

23. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System)

(a) Engage the 4 clips and install the heater seat switch base.

24. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System)

(a) Connect each connector.

(b) Engage the 4 clips and install the heater seat switch base.

25. INSTALL INTEGRATION CONTROL PANEL WITH RADIO RECEIVER ASSEMBLY (w/o Navigation System) (See page AV-172)

26. INSTALL MULTI-DISPLAY WITH RADIO RECEIVER ASSEMBLY (w/ Navigation System) (See page AV-173)

27. INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Connect the connector.

(b) Engage the 4 claws and 4 clips, and install the No. 2 instrument panel register assembly.

28. INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE

(a) Connect the connector.

(b) Engage the 5 claws and 6 clips to install the upper console panel assembly with front ash receptacle.

29. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

(a) Install the shift lever knob sub-assembly.

30. INSTALL LOWER INSTRUMENT PANEL RH

(a) Connect each connector.

(b) Engage the 2 clips.
(c) Install the lower instrument panel RH with the 6 screws <D>.

31. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)

32. INSTALL SIDE INSTRUMENT PANEL RH
(a) Apply protective tape to the area shown in the illustration.
(b) Engage the upper end of the side instrument panel RH with the lower end of the front pillar garnish RH as shown in the illustration.

(c) Engage the 2 guides and the 3 clips to install the side instrument panel RH.

33. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Connect the connector.

(b) Engage the 2 guides.

(c) Engage the 5 clips and install the No. 2 instrument panel under cover sub-assembly.

34. INSTALL FRONT DOOR OPENING TRIM COVER RH (See page IR-65)

35. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-65)

36. INSTALL INSTRUMENT PANEL FINISH PANEL END RH

(a) Engage the claw and 4 clips to install the instrument panel finish panel end RH.

37. INSTALL NO. 1 SWITCH HOLE BASE

(a) Connect each connector.

(b) Engage the 4 clips and install the No. 1 switch hole base.

38. INSTALL COMBINATION METER ASSEMBLY

(a) Connect each connector.

(b) Install the combination meter assembly with the 4 screws <B> or <C>.

39. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Engage the guide and the 4 claws.

(b) Engage the 2 clips.

(c) Install the instrument cluster finish panel sub-assembly with the screw <B>.

40. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-86)

41. INSTALL TILT AND TELESCOPIC SWITCH (See page SR-86)

42. INSTALL STEERING COLUMN COVER

(a) Engage the claw <A> and install the upper steering column cover.

(b) Engage the 2 claws <B> and install the lower steering column cover.

(c) Install the 2 screws <J>.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)

43. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-382)

44. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Connect each connector.

(b) Engage the 9 clips.

(c) Connect the hood lock control cable assembly.

(d) Install the lower instrument panel sub-assembly with the 2 bolts <A>.

45. INSTALL INSTRUMENT PANEL FINISH PANEL END LH

(a) Engage the 3 clips and install the instrument panel finish panel end LH.

46. INSTALL SIDE INSTRUMENT PANEL LH

(a) Apply protective tape to the area shown in the illustration.

(b) Engage the upper end of the side instrument panel LH with the lower end of the front pillar garnish LH as shown in the illustration.

(c) Engage the 2 guides and the 3 clips to install the side instrument panel LH.

47. INSTALL FRONT DOOR OPENING TRIM COVER LH (See page IR-64)

48. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-65)

49. INSTALL STEERING WHEEL ASSEMBLY (See page SR-87)

50. INSTALL STEERING PAD (See page RS-368)

51. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-369)

52. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-369)

53. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

54. INSPECT STEERING PAD (See page RS-369)

55. INSPECT FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-395)

56. INSPECT SRS WARNING LIGHT (See page RS-369)

57. PERFORM INITIALIZATION

NOTICE:

Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).

REMOVAL

1. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
4. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
5. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**
6. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**
7. **REMOVE CONSOLE BOX POCKET**
   (a) Remove the console box pocket.

8. **REMOVE CONSOLE BOX CARPET**
   (a) Remove the console box carpet.

9. REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Disengage the 6 claws and remove the console rear end panel sub-assembly.

10. REMOVE REAR CONSOLE BOX ASSEMBLY

(a) Remove the 2 screws.

(b) Remove the 2 bolts.

(c) Remove the 2 bolts.

(d) Disengage the 4 clips and remove the rear console box assembly.
(e) Disconnect each connector.

DISASSEMBLY

1. REMOVE NO. 5 CONSOLE BOX RETAINER

(a) Remove the No. 5 console box retainer as shown in the illustration.

2. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

(a) Open the console compartment door sub-assembly.

(b) Slightly deform areas <A> and <B> of the console box assembly inward to disengage the 2 claws. Next, raise the console compartment door sub-assembly as shown in the illustration.

(c) Remove the 4 screws and the console compartment door sub-assembly.

3. REMOVE CONSOLE BOX ILLUMINATION LIGHT ASSEMBLY

(a) Loosen the 10 screws and disconnect the connector.

(b) Turn the console box illumination light assembly in the direction indicated by the arrow and remove it.

4. REMOVE POWER OUTLET SOCKET ASSEMBLY (See page OT-21)

5. REMOVE POWER OUTLET SOCKET COVER (See page OT-22)

6. REMOVE AUDIO TERMINAL (See page AV-241)

REMOVAL

1. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**
4. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**
5. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**
6. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**
7. **REMOVE CONSOLE BOX POCKET**
   (a) Remove the console box pocket.

8. **REMOVE CONSOLE BOX CARPET**
   (a) Remove the console box carpet.

9. REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Disengage the 6 claws and remove the console rear end panel sub-assembly.

10. REMOVE REAR CONSOLE BOX ASSEMBLY

(a) Remove the 2 screws.

(b) Remove the 2 bolts.

(c) Remove the 2 bolts.

(d) Disengage the 4 clips and remove the rear console box assembly.
(e) Disconnect each connector.

DISASSEMBLY

1. REMOVE NO. 5 CONSOLE BOX RETAINER

(a) Remove the No. 5 console box retainer as shown in the illustration.

2. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

(a) Open the console compartment door sub-assembly.

(b) Slightly deform areas <A> and <B> of the console box assembly inward to disengage the 2 claws. Next, raise the console compartment door sub-assembly as shown in the illustration.

(c) Remove the 4 screws and the console compartment door sub-assembly.

3. REMOVE CONSOLE BOX ILLUMINATION LIGHT ASSEMBLY

(a) Loosen the 10 screws and disconnect the connector.

(b) Turn the console box illumination light assembly in the direction indicated by the arrow and remove it.

4. REMOVE POWER OUTLET SOCKET ASSEMBLY (See page OT-21)

5. REMOVE POWER OUTLET SOCKET COVER (See page OT-22)

6. REMOVE AUDIO TERMINAL (See page AV-241)

REASSEMBLY

1. **INSTALL AUDIO TERMINAL (See page AV-241)**
2. **INSTALL POWER OUTLET SOCKET COVER (See page OT-22)**
3. **INSTALL POWER OUTLET SOCKET ASSEMBLY (See page OT-22)**
4. **INSTALL CONSOLE BOX ILLUMINATION LIGHT ASSEMBLY**
   (a) Turn the console box illumination light assembly in the direction indicated by the arrow and install it.

   (b) Tighten the 10 screws and connect the connector.

5. **INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY**
   (a) Install the console compartment door sub-assembly with the 4 screws.

(b) Assemble the 2 upper console box insulators as shown in the illustration.
CAUTION:
Make sure the upper console box insulators are assembled as shown in the illustration. If they are not assembled properly, the console compartment door may not slide smoothly, or injury may result when the console compartment door slides.

(c) Align the 2 claws to the guides and engage the console compartment door sub-assembly to the rail on the console box assembly as shown in the illustration.

(d) Check the sliding operation of the console compartment door sub-assembly.
   (1) Check if the console compartment door sub-assembly slides smoothly.

6. INSTALL NO. 5 CONSOLE BOX RETAINER

(a) Install the No. 5 console box retainer.

INSTALLATION

1. INSTALL REAR CONSOLE BOX ASSEMBLY

(a) Connect each connector.

(b) Engage the 4 clips.

(c) Install the 2 screws.

(d) Install the 2 bolts.

(e) Install the rear console box assembly with the 2 bolts.

2. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Engage the 6 clips and install the console rear end panel sub-assembly.

3. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.

4. INSTALL CONSOLE BOX POCKET

(a) Install the console box pocket.

5. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)

6. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)

7. INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)

8. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)

9. INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)

10. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)

REASSEMBLY

1. **INSTALL AUDIO TERMINAL (See page AV-241)**
2. **INSTALL POWER OUTLET SOCKET COVER (See page OT-22)**
3. **INSTALL POWER OUTLET SOCKET ASSEMBLY (See page OT-22)**
4. **INSTALL CONSOLE BOX ILLUMINATION LIGHT ASSEMBLY**
   (a) Turn the console box illumination light assembly in the direction indicated by the arrow and install it.

   (b) Tighten the 10 screws and connect the connector.

5. **INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY**
   (a) Install the console compartment door sub-assembly with the 4 screws.

(b) Assemble the 2 upper console box insulators as shown in the illustration.
CAUTION:
Make sure the upper console box insulators are assembled as shown in the illustration. If they are not assembled properly, the console compartment door may not slide smoothly, or injury may result when the console compartment door slides.

(c) Align the 2 claws to the guides and engage the console compartment door sub-assembly to the rail on the console box assembly as shown in the illustration.

(d) Check the sliding operation of the console compartment door sub-assembly.
   (1) Check if the console compartment door sub-assembly slides smoothly.

6. INSTALL NO. 5 CONSOLE BOX RETAINER

(a) Install the No. 5 console box retainer.

INSTALLATION

1. INSTALL REAR CONSOLE BOX ASSEMBLY

(a) Connect each connector.

(b) Engage the 4 clips.

(c) Install the 2 screws.

(d) Install the 2 bolts.

(e) Install the rear console box assembly with the 2 bolts.

2. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY

(a) Engage the 6 clips and install the console rear end panel sub-assembly.

3. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.

4. INSTALL CONSOLE BOX POCKET

(a) Install the console box pocket.

5. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)

6. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)

7. INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)

8. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)

9. INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)

10. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)

SYSTEM DESCRIPTION

1. FRONT POWER SEAT CONTROL SYSTEM DESCRIPTION

- The driver's seat is equipped with slide, reclining, lifter, front vertical, leg support, and lumbar support adjustment functions.
- The front passenger seat is equipped with slide, reclining, lifter, front vertical, and lumbar support adjustment functions.
- The memory system for the front seats is optional. With the memory function, the front power seat switch (position control ECU) performs the following: 1) controls the slide, reclining, lifter, and front vertical motors; 2) memorizes the seat position; and 3) performs the seat restoring operation.
- The memory call function uses the key ID code of the electrical key to memorize and reproduce the appropriate driving position for each individual who possesses an electrical key.

2. FUNCTION OF MAIN COMPONENT

The following functions are available:

Components	Function
Power seat motor assembly (slide motor)	Activated based on a signal from the position control ECU and slides the seat forward and rearward.
Power seat motor assembly (reclining motor)	Activated based on a signal from the position control ECU and tilts and reclines the seat.
Power seat motor assembly (front vertical motor)	Activated based on a signal from the position control ECU and raises and lowers the seat cushion front vertically.
Power seat motor assembly (lifter motor)	Activated based on a signal from the position control ECU and raises and lowers the seat cushion vertically.
Lumbar support adjuster motor	Activated based on a signal from the lumbar front power seat switch and adjusts the lumbar support.
Leg support motor	Activated based on a signal from the seat variable cushion switch and slides the seat cushion forward and rearward.
Front power seat switch (reclining, lifter, slide, front vertical)	Based on switches operated, the seat adjuster signals are input in the position control ECU and the seat is adjusted accordingly.
Seat variable cushion switch	Based on switches operated, the seat cushion is adjusted accordingly.
Lumbar front power seat switch	Based on switches operated, the seat is adjusted accordingly.
Seat memory switch LH (driver side) (SET switch, memory switch)	When the SET switch and the SW1 or SW2 switch are pressed simultaneously, a signal is input to the outer mirror control ECU and sent to the position control ECU, which records the seat position, steering wheel position (tilt and telescopic), and outer mirror position (RH and LH). When the SW1 or SW2 switch is pressed, a signal is input to the outer mirror control ECU and sent to the position control ECU, which changes the seat position, steering wheel position (tilt and telescopic), and outer mirror position (RH and LH) to each recorded position.
Seat memory switch RH (passenger side) (SET switch, memory switch)	When the SET switch and the SW1 or SW2 switch are pressed simultaneously, a signal is input to the outer mirror control ECU and sent to the position control ECU, which records the seat position. When the SW1 or SW2 switch is pressed, a signal is input to the outer mirror control ECU and sent to the position control ECU, which changes the seat position to the recorded position.

3. SYSTEM OPERATION

The front power seat adjustment and position memory are shown in the table below.

Seat Adjustment Function	Driver's Seat	Passenger Seat
Fore-and-Aft Slide	Power and memory	Power and memory
Reclining	Power and memory	Power and memory
Front Vertical Height	Power and memory	Power and memory
Lifter	Power and memory	Power and memory
Lumbar Support	Power	Power
Leg Support	Power	-

For the driver side memory function, the memory switch operation is first transferred from the outer mirror control ECU to the front power seat switch LH (position control ECU) via the CAN communication line. For the passenger side memory function, memory switch operation is first transferred from the outer mirror control ECU to the front power seat switch (position control ECU) via the CAN communication line. Then, either the seat position is stored in memory or a previously stored seat position is recalled.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use the following procedures to troubleshoot the front power seat control system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN communication system is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

OPERATION CHECK

1. CHECK POWER SEAT FUNCTION (DRIVER AND FRONT PASSENGER)

(a) Check the basic functions.

(1) Operate the power seat switches and check to make sure each seat function works:
- Sliding
- Front vertical
- Lifter
- Reclining
- Lumbar support
- Leg support (Driver's seat only)

2. CHECK POWER SEAT MOTOR ASSEMBLY (DRIVER AND FRONT PASSENGER) (SLIDING, FRONT VERTICAL, LIFTER, AND RECLINING FUNCTIONS)

(a) Check the PTC operation inside the power seat motor.

HINT:

The PTC thermistor's resistance increases when the power seat switch is held down even after the power seat has been moved to the furthest possible position in one direction. If the resistance increases beyond a specified level, the current is shut off to prevent a short circuit.

NOTICE:
- **The inspection should be performed with the seat installed in the vehicle.**
- **Perform the 4 steps below to check the full range of motion for each power seat function.**

(1) Choose a power seat function. Operate the power seat switch and move the seat to the furthest possible position in one direction. Keep the seat in that position for approximately 60 seconds.

SE

(2) Operate the power seat switch again and continue to try to move the seat in the same direction as in the previous step. Measure the time until the current is shut off (motor operation sound will stop).
Standard:
4 to 90 seconds

(3) After the current is shut off, release the power seat switch and wait for approximately 60 seconds.

(4) Operate the same power seat switch and move the seat in the opposite direction. Check that the motor operates.

3. CHECK LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Check the PTC operation inside the power seat motor.
NOTICE:
The inspection should be performed with the seat installed in the vehicle.

(1) Operate the lumbar support switch and move the lumbar support to either the foremost or rearmost position. Keep the seat in that position for approximately 60 seconds.

(2) Operate the lumbar support switch again and continue to try to move the lumbar support in the same direction as in the previous step. Measure the time until the current is shut off (motor operation sound will stop).
Standard:
4 to 90 seconds

(3) After the current is shut off, release the lumbar support switch and wait for approximately 60 seconds.

(4) Operate the lumbar support switch and move the seat in the opposite direction. Check that the motor operates.

4. CHECK LEG SUPPORT MOTOR

(a) Check the PTC operation inside the power seat motor.
NOTICE:
The inspection should be performed with the seat installed in the vehicle.

(1) Operate the seat variable cushion switch and move the leg support motor to either the foremost or rearmost position. Keep the seat in that position for approximately 60 seconds.

(2) Operate the seat variable cushion switch again and continue to try to move the leg support motor in the same direction as in the previous step. Measure the time until the current is shut off (motor operation sound will stop).
Standard:
4 to 90 seconds

(3) After the current is shut off, release the seat variable cushion switch and wait for approximately 60 seconds.
(4) Operate the seat variable cushion switch and move the seat in the opposite direction. Check that the motor operates.

5. CHECK MEMORY AND SEAT RESTORING OPERATION (DRIVER AND FRONT PASSENGER)

(a) Turn the engine switch on (IG) and move the shift lever to P.
(b) Move the seat to the foremost and uppermost position using the seat switch.
(c) Check that the buzzer sounds for 0.5 seconds and the seat position is memorized when the SW1 switch is pressed while the SET switch is being pressed.
(d) Move the seat from the foremost and uppermost position using the seat switch.
(e) Check that the buzzer sounds for 0.5 seconds and the seat position is memorized when the SW2 switch is pressed while the SET switch is being pressed.
(f) Check that the buzzer sounds for 0.1 seconds and the seat automatically moves to the foremost and uppermost position (memorized position) when the SW1 switch of the memory switch is pressed.
(g) Check that the buzzer sounds for 0.1 seconds and the seat automatically moves out of the maximum front and upper position (memorized position) when the SW2 switch of the memory switch is pressed.
(h) After the engine switch is turned off and the driver side door is opened, check that the buzzer sounds for 0.1 seconds and the seat automatically moves to the memorized position when the SW1 or SW2 switch is pressed within 30 seconds.
(i) Check that the following procedures erase the memorized seat positions of the SW1 or SW2 switch: slide the seat fully forward or rearward; hold the SW1 or SW2 switch; disconnect the cable from the negative (-) battery terminal; and wait for 3 minutes.
HINT:
The seat position will not be stored if the SET switch and 2 or more of the memory switches (for example, SW1 and SW2) are pressed simultaneously.

6. CHECK MEMORY CALL FUNCTION (DRIVER SIDE ONLY)

(a) Automatic memory call function check (automatic wireless memory call function)

(1) With a transmitter key recognition code registered:
Perform a wireless door unlock operation and check that opening the driver side door causes: 1) the buzzer to sound for 0.1 seconds, and 2) the front seat and the steering wheel (tilt and telescopic), and outer mirror (RH and LH) automatically to move to each stored position.
HINT:
- The registered transmitter key recognition code is recalled automatically.
- If the front seats are not operated, the buzzer will not sound.

(b) Memory registration (transmitter key recognition code registration)

(1) With the engine switch off and the driver side door closed, press and hold the SW1 or SW2 switch. The front power seat switch (position control ECU) will enter transmitter key recognition code registration mode to allow a key to be linked to seat memory position.
HINT:
If the memory switch is released before entering registration mode, the front power seat switch (position control ECU) will not enter registration mode.

(2) When the transmitter's LOCK or UNLOCK switch is pressed, check that the buzzer of the front power seat switch (position control ECU) sounds once (0.5 seconds).

(c) Memory deletion (transmitter key recognition code memory deletion)

(1) With the engine switch off and the driver side door closed, press and hold the SW1 or SW2 switch. The front power seat switch (position control ECU) will enter transmitter key recognition code deletion mode.
HINT:
If the memory switch is released before entering deletion mode, the front power seat switch (position control ECU) will not enter deletion mode.

(2) When the transmitter's LOCK or UNLOCK switch is pressed, check that the buzzer of the front power seat switch (position control ECU) sounds twice (0.1 seconds each time).

7. MEMORY CALL EMERGENCY STOP FUNCTION (DRIVER SIDE ONLY)

(a) While a memory call function is operating, check that performing one of the following will stop the memory call operation: 1) press the SET, SW1 or SW2 switch, or 2) press the front power seat switch (position control ECU).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use the following procedures to troubleshoot the front power seat control system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN communication system is functioning normally.

OPERATION CHECK

1. CHECK POWER SEAT FUNCTION (DRIVER AND FRONT PASSENGER)

(a) Check the basic functions.

(1) Operate the power seat switches and check to make sure each seat function works:
- Sliding
- Front vertical
- Lifter
- Reclining
- Lumbar support
- Leg support (Driver's seat only)

2. CHECK POWER SEAT MOTOR ASSEMBLY (DRIVER AND FRONT PASSENGER) (SLIDING, FRONT VERTICAL, LIFTER, AND RECLINING FUNCTIONS)

(a) Check the PTC operation inside the power seat motor.

HINT:

The PTC thermistor's resistance increases when the power seat switch is held down even after the power seat has been moved to the furthest possible position in one direction. If the resistance increases beyond a specified level, the current is shut off to prevent a short circuit.

NOTICE:
- **The inspection should be performed with the seat installed in the vehicle.**
- **Perform the 4 steps below to check the full range of motion for each power seat function.**

(1) Choose a power seat function. Operate the power seat switch and move the seat to the furthest possible position in one direction. Keep the seat in that position for approximately 60 seconds.

SE

(2) Operate the power seat switch again and continue to try to move the seat in the same direction as in the previous step. Measure the time until the current is shut off (motor operation sound will stop).
Standard:
4 to 90 seconds

(3) After the current is shut off, release the power seat switch and wait for approximately 60 seconds.

(4) Operate the same power seat switch and move the seat in the opposite direction. Check that the motor operates.

3. CHECK LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Check the PTC operation inside the power seat motor.
NOTICE:
The inspection should be performed with the seat installed in the vehicle.

(1) Operate the lumbar support switch and move the lumbar support to either the foremost or rearmost position. Keep the seat in that position for approximately 60 seconds.

(2) Operate the lumbar support switch again and continue to try to move the lumbar support in the same direction as in the previous step. Measure the time until the current is shut off (motor operation sound will stop).
Standard:
4 to 90 seconds

(3) After the current is shut off, release the lumbar support switch and wait for approximately 60 seconds.

(4) Operate the lumbar support switch and move the seat in the opposite direction. Check that the motor operates.

4. CHECK LEG SUPPORT MOTOR

(a) Check the PTC operation inside the power seat motor.
NOTICE:
The inspection should be performed with the seat installed in the vehicle.

(1) Operate the seat variable cushion switch and move the leg support motor to either the foremost or rearmost position. Keep the seat in that position for approximately 60 seconds.

(2) Operate the seat variable cushion switch again and continue to try to move the leg support motor in the same direction as in the previous step. Measure the time until the current is shut off (motor operation sound will stop).
Standard:
4 to 90 seconds

(3) After the current is shut off, release the seat variable cushion switch and wait for approximately 60 seconds.
(4) Operate the seat variable cushion switch and move the seat in the opposite direction. Check that the motor operates.

5. CHECK MEMORY AND SEAT RESTORING OPERATION (DRIVER AND FRONT PASSENGER)

(a) Turn the engine switch on (IG) and move the shift lever to P.
(b) Move the seat to the foremost and uppermost position using the seat switch.
(c) Check that the buzzer sounds for 0.5 seconds and the seat position is memorized when the SW1 switch is pressed while the SET switch is being pressed.
(d) Move the seat from the foremost and uppermost position using the seat switch.
(e) Check that the buzzer sounds for 0.5 seconds and the seat position is memorized when the SW2 switch is pressed while the SET switch is being pressed.
(f) Check that the buzzer sounds for 0.1 seconds and the seat automatically moves to the foremost and uppermost position (memorized position) when the SW1 switch of the memory switch is pressed.
(g) Check that the buzzer sounds for 0.1 seconds and the seat automatically moves out of the maximum front and upper position (memorized position) when the SW2 switch of the memory switch is pressed.
(h) After the engine switch is turned off and the driver side door is opened, check that the buzzer sounds for 0.1 seconds and the seat automatically moves to the memorized position when the SW1 or SW2 switch is pressed within 30 seconds.
(i) Check that the following procedures erase the memorized seat positions of the SW1 or SW2 switch: slide the seat fully forward or rearward; hold the SW1 or SW2 switch; disconnect the cable from the negative (-) battery terminal; and wait for 3 minutes.
HINT:
The seat position will not be stored if the SET switch and 2 or more of the memory switches (for example, SW1 and SW2) are pressed simultaneously.

6. CHECK MEMORY CALL FUNCTION (DRIVER SIDE ONLY)

(a) Automatic memory call function check (automatic wireless memory call function)

(1) With a transmitter key recognition code registered:
Perform a wireless door unlock operation and check that opening the driver side door causes: 1) the buzzer to sound for 0.1 seconds, and 2) the front seat and the steering wheel (tilt and telescopic), and outer mirror (RH and LH) automatically to move to each stored position.
HINT:
- The registered transmitter key recognition code is recalled automatically.
- If the front seats are not operated, the buzzer will not sound.

(b) Memory registration (transmitter key recognition code registration)

(1) With the engine switch off and the driver side door closed, press and hold the SW1 or SW2 switch. The front power seat switch (position control ECU) will enter transmitter key recognition code registration mode to allow a key to be linked to seat memory position.
HINT:
If the memory switch is released before entering registration mode, the front power seat switch (position control ECU) will not enter registration mode.

(2) When the transmitter's LOCK or UNLOCK switch is pressed, check that the buzzer of the front power seat switch (position control ECU) sounds once (0.5 seconds).

(c) Memory deletion (transmitter key recognition code memory deletion)

(1) With the engine switch off and the driver side door closed, press and hold the SW1 or SW2 switch. The front power seat switch (position control ECU) will enter transmitter key recognition code deletion mode.
HINT:
If the memory switch is released before entering deletion mode, the front power seat switch (position control ECU) will not enter deletion mode.

(2) When the transmitter's LOCK or UNLOCK switch is pressed, check that the buzzer of the front power seat switch (position control ECU) sounds twice (0.1 seconds each time).

7. MEMORY CALL EMERGENCY STOP FUNCTION (DRIVER SIDE ONLY)

(a) While a memory call function is operating, check that performing one of the following will stop the memory call operation: 1) press the SET, SW1 or SW2 switch, or 2) press the front power seat switch (position control ECU).

TERMINALS OF ECU

1. FRONT POWER SEAT SWITCH LH (POSITION CONTROL ECU)

(a) Disconnect the U3 and U4 ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (U3-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (U3-5) - GND (U3-1)	G - W-B	Power source	Always	10 to 14 V
IG (U4-4) - GND (U3-1)	B - W-B	Engine switch signal	Engine switch off	Below 1 V
			Engine switch on (IG)	10 to 14 V
CANH (U4-5) - CANL (U4-1)	LG - L	CAN communication line	Always	Pulse generation
SYSB (U4-8) - GND (U3-1)	V - W-B	System power source	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the U3 and U4 ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SLD+ (U3-2) - GND (U3-1)	L - W-B	Sliding motor signal (forward)	Slide switch OFF	Below 1 V
			Slide switch FRONT ON	10 to 14 V
SLD- (U3-3) - GND (U3-1)	Y - W-B	Sliding motor signal (rearward)	Slide switch OFF	Below 1 V
			Slide switch REAR ON	10 to 14 V
FRV+ (U3-6) - GND (U3-1)	G - W-B	Front vertical motor signal (upward)	Front vertical switch OFF	Below 1 V
			Front vertical switch UP ON	10 to 14 V
FRV- (U3-4) - GND (U3-1)	B - W-B	Front vertical motor signal (downward)	Front vertical switch OFF	Below 1 V
			Front vertical switch DOWN ON	10 to 14 V
LFT+ (U3-7) - GND (U3-1)	W - W-B	Lifter motor signal (upward)	Lifter switch OFF	Below 1 V
			Lifter switch UP ON	10 to 14 V
LFT- (U3-9) - GND (U3-1)	SB - W-B	Lifter motor signal (downward)	Lifter switch OFF	Below 1 V
			Lifter switch DOWN ON	10 to 14 V
RCL+ (U3-8) - GND (U3-1)	P - W-B	Reclining motor signal (forward)	Reclining switch OFF	Below 1 V
			Reclining switch FRONT ON	10 to 14 V
RCL- (U3-10) - GND (U3-1)	BR - W-B	Reclining motor signal (rearward)	Reclining switch OFF	Below 1 V
			Reclining switch REAR ON	10 to 14 V

If the result is not as specified, the front power seat switch LH (position control ECU) may have a malfunction.

2. FRONT POWER SEAT SWITCH RH (POSITION CONTROL ECU)

(a) Disconnect the T6 and T7 ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (T6-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (T6-5) - GND (T6-1)	G - W-B	Power source	Always	10 to 14 V
IG (T7-4) - GND (T6-1)	B - W-B	Engine switch signal	Engine switch off	Below 1 V
			Engine switch (IG)	10 to 14 V
CANH (T7-5) - CANL (T7-1)	V - P	CAN communication line	Always	Pulse generation
SYSB (T7-8) - GND (T6-1)	V - W-B	System power source	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the T6 and T7 ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SLD+ (T6-2) - GND (T6-1)	L - W-B	Sliding motor signal (forward)	Slide switch OFF	Below 1 V
			Slide switch FRONT ON	10 to 14 V
SLD- (T6-3) - GND (T6-1)	Y - W-B	Sliding motor signal (rearward)	Slide switch OFF	Below 1 V
			Slide switch REAR ON	10 to 14 V
FRV+ (T6-6) - GND (T6-1)	G - W-B	Front vertical motor signal (upward)	Front vertical switch OFF	Below 1 V
			Front vertical switch UP ON	10 to 14 V
FRV- (T6-4) - GND (T6-1)	B - W-B	Front vertical motor signal (downward)	Front vertical switch OFF	Below 1 V
			Front vertical switch DOWN ON	10 to 14 V
LFT+ (T6-7) - GND (T6-1)	W - W-B	Lifter motor signal (upward)	Lifter switch OFF	Below 1 V
			Lifter switch UP ON	10 to 14 V
LFT- (T6-9) - GND (T6-1)	SB - W-B	Lifter motor signal (downward)	Lifter switch OFF	Below 1 V
			Lifter switch DOWN ON	10 to 14 V
RCL+ (T6-8) - GND (T6-1)	P - W-B	Reclining motor signal (forward)	Reclining switch OFF	Below 1 V
			Reclining switch FRONT ON	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RCL- (T6-10) - GND (T6-1)	BR - W-B	Reclining motor signal (rearward)	Reclining switch OFF	Below 1 V
			Reclining switch REAR ON	10 to 14 V

If the result is not as specified, the front power seat switch RH (position control ECU) may have a malfunction.

3. OUTER MIRROR CONTROL ECU

(a) Disconnect the E65 and E66 ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANH (E65-1) - CANL (E65-21)	O - P	CAN communication line	Always	Pulse generation
MSWE (E65-10) - GND (E66-9)	B - W-B	Ground for seat memory switch LH	Always	Below 1 Ω
MSWE (E65-30) - GND (E66-9)	LG - W-B	Ground for seat memory switch RH	Always	Below 1 Ω
GND (E66-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B (E66-3) - GND (E66-9)	V - W-B	Battery (ECU power source)	Always	10 to 14 V
ACC (E66-4) - GND (E66-9)	L - W-B	Engine switch (ACC) power source supply	Engine switch off	Below 1 V
			Engine switch on (ACC)	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E65 and E66 ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
M2 (E65-7) - MSWE (E65-10)	G - B	M2 switch signal for seat memory switch LH	M2 switch ON	10 to 14 V
			M2 switch OFF	Below 1 V
M1 (E65-8) - MSWE (E65-10)	L - B	M1 switch signal for seat memory switch LH	M1 switch ON	10 to 14 V
			M1 switch OFF	Below 1 V
MM (E65-9) - MSWE (E65-10)	W - B	SET switch signal for seat memory switch LH	SET switch ON	10 to 14 V
			SET switch OFF	Below 1 V
M2 (E65-27) - MSWE (E65-10)	Y - B	M2 switch signal for seat memory switch RH	M2 switch ON	10 to 14 V
			M2 switch OFF	Below 1 V
M1 (E65-28) - MSWE (E65-10)	R - B	M1 switch signal for seat memory switch RH	M1 switch ON	10 to 14 V
			M1 switch OFF	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
MM (E65-29) - MSWE (E65-10)	V - B	SET switch signal for seat memory switch RH	SET switch ON	10 to 14 V
			SET switch OFF	Below 1 V

If the result is not as specified, the outer mirror control ECU may have a malfunction.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DATA LIST.

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows a relay, VSV, actuator, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST.

D-SEAT:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE	Seat sliding operation	FRONT / REAR	-
F VERTICAL	Seat front vertical operation	UP / DOWN	-
LIFTER	Seat lifter operation	UP / DOWN	-
RECLINING	Seat reclining operation	FRONT / REAR	-
BUZZER	Buzzer operation	ON / OFF	-

P-SEAT:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE	Seat sliding operation	FRONT / REAR	-
F VERTICAL	Seat front vertical operation	UP / DOWN	-
LIFTER	Seat lifter operation	UP / DOWN	-
RECLINING	Seat reclining operation	FRONT / REAR	-
BUZZER	Buzzer operation	ON / OFF	-

Driver Side Power Seat Motor Circuit

DESCRIPTION

When the power seat control switch is operated, a command signal is sent to the front power seat switch LH (position control ECU). The front power seat switch LH (position control ECU) then controls the appropriate seat motor as needed. This memory system does not use a seat position sensor. The seat position is detected by counting pulses that are output when the motor turns. If there is no pulse output from the motor, the motor will stop operating. The front power seat switch LH (position control ECU) is designed so that any malfunction of the seat memory system will not interfere with manual seat control. If the front power seat switch LH (position control ECU) detects a low motor speed, abnormal activity, or sudden motor current fluctuation, the system will stop the motor. If the motor operates continuously for 120 seconds or more, the system will stop the motor until the switch is turned on again.

WIRING DIAGRAM

SE

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (FRONT POWER SEAT SWITCH LH (POSITION CONTROL ECU))

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST by following the directions on the tester screen.

D-SEAT:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE	Seat sliding operation	FRONT / REAR	-
F VERTICAL	Seat front vertical operation	UP / DOWN	-
LIFTER	Seat lifer operation	UP / DOWN	-
RECLINING	Seat reclining operation	FRONT / REAR	-

OK:
Each power seat motor operates.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2	INSPECT FRONT SEAT ADJUSTER SUB-ASSEMBLY (POWER SEAT MOTOR)

(a) Inspect the power seat motor (See page SE-95).
OK:
The power seat motor operates.

NG → **REPLACE FRONT SEAT ADJUSTER SUB-ASSEMBLY (POWER SEAT MOTOR)**

OK

3 CHECK WIRE HARNESS (FRONT POWER SEAT SWITCH LH - POWER SEAT MOTOR)

Front Power Seat Switch LH (Position Control ECU) Connector:

Wire Harness Rear View:

Power Seat Motor Connector:

Wire Harness Front View:

B128715E07

(a) Disconnect the front power seat switch LH (position control ECU) connector and power seat motor connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
U3-2 (SLD+) - U10-1	Always	Below 1 Ω
U3-3 (SLD-) - U10-2	Always	Below 1 Ω
U3-4 (FRV-) - U5-2	Always	Below 1 Ω
U3-6 (FRV+) - U5-1	Always	Below 1 Ω
U3-7 (LFT+) - U7-2	Always	Below 1 Ω

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Driver Side Seat Memory Switch Circuit

DESCRIPTION

The seat memory switch LH sends signals to the outer mirror control ECU via the CAN communication system to memorize a given seat position. This memory system does not use a position sensor. The seat position is detected by counting pulses that are output when the motor turns. If there is no pulse output from the motor, the motor will stop operating. The seat memory switch LH is later used to send signals to the front power seat switch LH (position control ECU) to return the seat to one of the memorized positions. The power seat memory switch LH operation can be performed only when the engine switch is on (IG) and the shift lever is in the P position.

H7-1 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE OUTER MIRROR CONTROL ECU

Driver Side ECU Power Source Circuit

DESCRIPTION

The driver side position control ECU is contained in the front power seat switch LH.
During manual operation, only one switch signal is accepted. If signals are input from 2 or more switches simultaneously, all of them are ignored, except when signals are input from the front vertical switch and lifter switch simultaneously. In this case, the signal from the lifter switch will be accepted.
During automatic operation, a manual switch input will override any other operations, i.e. automatic operations will stop and the manual input operation only will be performed. For example, if a manual switch input is activated during a seat store/restore operation, the previous operation will cease and manual operation will be performed. After the manual operation is performed, the previous automatic operation will not resume.
The power mirror store/restore operation is not affected by manual switch inputs.
The front power seat switch does not allow the restore operation of the power seat when the system detects that the voltage of terminal SYSB is less than 8.0 +- 0.5 V for 3 sec. or more than 10 +- 0.5 V for 3 sec.
This circuit is the power source circuit for the front power seat switch LH (position control ECU).
HINT:

- Manual adjustment of the slide, reclining, or lumbar can be performed even when the front power seat switch LH is not functional if current is allowed to flow into terminals +B and SYSB.
- Lumbar support operation and leg support operation can be performed at all times.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	**INSPECT FRONT POWER SEAT SWITCH LH (POSITION CONTROL ECU POWER SOURCE CIRCUIT)**

(a) Disconnect the front power seat switch LH (position control ECU) connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
U3-5 (+B) - Body ground	Always	10 to 14 V
U4-4 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

One or all manual seat functions do not operate (memorized positions OK).	Front power seat switch RH (Position control ECU)	SE-132

Symptom	Suspected Area	See page
Memory function does not operate.	1. Front passenger side seat memory switch circuit	SE-36
	2. CAN communication system	CA-15
	3. Front power seat switch RH (Position control ECU)	SE-132
No memory functions operate or all memory functions operate briefly and then stop (manual functions OK).	1. Front passenger side ECU power source circuit	SE-43
	2. Front power seat switch RH (Position control ECU)	SE-132
One memory function does not operate briefly and then stops (manual functions OK).	Front seat frame with adjuster RH (Power seat motor)	SE-96
Lumbar support operation function only does not operate.	1. Front power seat lumbar switch RH	SE-139
	2. Lumbar support adjuster assembly RH	SE-144
	3. Wire harness connector	-

TERMINALS OF ECU

1. FRONT POWER SEAT SWITCH LH (POSITION CONTROL ECU)

(a) Disconnect the U3 and U4 ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (U3-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (U3-5) - GND (U3-1)	G - W-B	Power source	Always	10 to 14 V
IG (U4-4) - GND (U3-1)	B - W-B	Engine switch signal	Engine switch off	Below 1 V
			Engine switch on (IG)	10 to 14 V
CANH (U4-5) - CANL (U4-1)	LG - L	CAN communication line	Always	Pulse generation
SYSB (U4-8) - GND (U3-1)	V - W-B	System power source	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the U3 and U4 ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SLD+ (U3-2) - GND (U3-1)	L - W-B	Sliding motor signal (forward)	Slide switch OFF	Below 1 V
			Slide switch FRONT ON	10 to 14 V
SLD- (U3-3) - GND (U3-1)	Y - W-B	Sliding motor signal (rearward)	Slide switch OFF	Below 1 V
			Slide switch REAR ON	10 to 14 V
FRV+ (U3-6) - GND (U3-1)	G - W-B	Front vertical motor signal (upward)	Front vertical switch OFF	Below 1 V
			Front vertical switch UP ON	10 to 14 V
FRV- (U3-4) - GND (U3-1)	B - W-B	Front vertical motor signal (downward)	Front vertical switch OFF	Below 1 V
			Front vertical switch DOWN ON	10 to 14 V
LFT+ (U3-7) - GND (U3-1)	W - W-B	Lifter motor signal (upward)	Lifter switch OFF	Below 1 V
			Lifter switch UP ON	10 to 14 V
LFT- (U3-9) - GND (U3-1)	SB - W-B	Lifter motor signal (downward)	Lifter switch OFF	Below 1 V
			Lifter switch DOWN ON	10 to 14 V
RCL+ (U3-8) - GND (U3-1)	P - W-B	Reclining motor signal (forward)	Reclining switch OFF	Below 1 V
			Reclining switch FRONT ON	10 to 14 V
RCL- (U3-10) - GND (U3-1)	BR - W-B	Reclining motor signal (rearward)	Reclining switch OFF	Below 1 V
			Reclining switch REAR ON	10 to 14 V

If the result is not as specified, the front power seat switch LH (position control ECU) may have a malfunction.

2. FRONT POWER SEAT SWITCH RH (POSITION CONTROL ECU)

(a) Disconnect the T6 and T7 ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (T6-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (T6-5) - GND (T6-1)	G - W-B	Power source	Always	10 to 14 V
IG (T7-4) - GND (T6-1)	B - W-B	Engine switch signal	Engine switch off	Below 1 V
			Engine switch (IG)	10 to 14 V
CANH (T7-5) - CANL (T7-1)	V - P	CAN communication line	Always	Pulse generation
SYSB (T7-8) - GND (T6-1)	V - W-B	System power source	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the T6 and T7 ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SLD+ (T6-2) - GND (T6-1)	L - W-B	Sliding motor signal (forward)	Slide switch OFF	Below 1 V
			Slide switch FRONT ON	10 to 14 V
SLD- (T6-3) - GND (T6-1)	Y - W-B	Sliding motor signal (rearward)	Slide switch OFF	Below 1 V
			Slide switch REAR ON	10 to 14 V
FRV+ (T6-6) - GND (T6-1)	G - W-B	Front vertical motor signal (upward)	Front vertical switch OFF	Below 1 V
			Front vertical switch UP ON	10 to 14 V
FRV- (T6-4) - GND (T6-1)	B - W-B	Front vertical motor signal (downward)	Front vertical switch OFF	Below 1 V
			Front vertical switch DOWN ON	10 to 14 V
LFT+ (T6-7) - GND (T6-1)	W - W-B	Lifter motor signal (upward)	Lifter switch OFF	Below 1 V
			Lifter switch UP ON	10 to 14 V
LFT- (T6-9) - GND (T6-1)	SB - W-B	Lifter motor signal (downward)	Lifter switch OFF	Below 1 V
			Lifter switch DOWN ON	10 to 14 V
RCL+ (T6-8) - GND (T6-1)	P - W-B	Reclining motor signal (forward)	Reclining switch OFF	Below 1 V
			Reclining switch FRONT ON	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RCL- (T6-10) - GND (T6-1)	BR - W-B	Reclining motor signal (rearward)	Reclining switch OFF	Below 1 V
			Reclining switch REAR ON	10 to 14 V

If the result is not as specified, the front power seat switch RH (position control ECU) may have a malfunction.

3. OUTER MIRROR CONTROL ECU

(a) Disconnect the E65 and E66 ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANH (E65-1) - CANL (E65-21)	O - P	CAN communication line	Always	Pulse generation
MSWE (E65-10) - GND (E66-9)	B - W-B	Ground for seat memory switch LH	Always	Below 1 Ω
MSWE (E65-30) - GND (E66-9)	LG - W-B	Ground for seat memory switch RH	Always	Below 1 Ω
GND (E66-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B (E66-3) - GND (E66-9)	V - W-B	Battery (ECU power source)	Always	10 to 14 V
ACC (E66-4) - GND (E66-9)	L - W-B	Engine switch (ACC) power source supply	Engine switch off	Below 1 V
			Engine switch on (ACC)	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E65 and E66 ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
M2 (E65-7) - MSWE (E65-10)	G - B	M2 switch signal for seat memory switch LH	M2 switch ON	10 to 14 V
			M2 switch OFF	Below 1 V
M1 (E65-8) - MSWE (E65-10)	L - B	M1 switch signal for seat memory switch LH	M1 switch ON	10 to 14 V
			M1 switch OFF	Below 1 V
MM (E65-9) - MSWE (E65-10)	W - B	SET switch signal for seat memory switch LH	SET switch ON	10 to 14 V
			SET switch OFF	Below 1 V
M2 (E65-27) - MSWE (E65-10)	Y - B	M2 switch signal for seat memory switch RH	M2 switch ON	10 to 14 V
			M2 switch OFF	Below 1 V
M1 (E65-28) - MSWE (E65-10)	R - B	M1 switch signal for seat memory switch RH	M1 switch ON	10 to 14 V
			M1 switch OFF	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
MM (E65-29) - MSWE (E65-10)	V - B	SET switch signal for seat memory switch RH	SET switch ON	10 to 14 V
			SET switch OFF	Below 1 V

If the result is not as specified, the outer mirror control ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Front power seat control system data and Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

(b) Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use the following procedure to troubleshoot the climate control seat system.
- The intelligent tester should be used in step 4.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

NEXT

3	PROBLEM SYMPTOMS TABLE

HINT:
See page SE-61.

NEXT

4	OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Circuit inspection
(b) Terminal of ECU
HINT:
See page SE-62.

NEXT

5	ADJUST, REPAIR OR REPLACE

NEXT

PROBLEM SYMPTOMS TABLE

CLIMATE CONTROL SYSTEM

Symptom	Suspected Area	See page
Climate control seat system does not operate.	1. ECU IG No. 1 fuse	SE-64
	2. S-HTR fuse	SE-64
	3. Seat heater switch	SE-64
	4. Seat climate blower	SE-64
	5. Seatback blower	SE-64
	6. A/C amplifier assembly	-

TERMINALS OF ECU

1. A/C AMPLIFIER ASSEMBLY

(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SG-5 (E2-6) - Body ground	R - Body ground	GND	Engine switch on (IG)	4 to 6 V
S5-2 (E2-8) - Body ground	Y - Body ground	Power supply	Always	10 to 14 V
SVDS (E2-15) - Body ground	L - Body ground	Input climate control signal (Driver side)	Always	10 to 14 V
SVPS (E2-16) - Body ground	G - Body ground	Input climate control signal (Front passenger side)	Always	10 to 14 V

Standard

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SVDB (E2-9) - Body ground	LG - Body ground	Output climate control signal (Driver side)	Engine switch on (IG)	Pulse generation
SVPB (E2-10) - Body ground	O - Body ground	Output climate control signal (Front passenger side)	Engine switch on (IG)	Pulse generation

(1) Waveform (Reference): Using an oscilloscope:

Item	Condition
Tool setting	2 V/DIV., 500 μsec/DIV.
Vehicle condition	Engine switch on (IG)

SE

ON-VEHICLE INSPECTION

1. CHECK FRONT SEATBACK CLIMATE CONTROL BLOWER LH

(a) Turn the engine switch on (IG).
(b) Set the seat heater switch blower side volume to level 3 (maximum).
(c) Check that the fan motor turns smoothly.

2. CHECK FRONT SEAT CUSHION CLIMATE CONTROL BLOWER LH

(a) Turn the engine switch on (IG).
(b) Set the seat heater switch blower side volume to level 3 (maximum).
(c) Check that the fan motor turns smoothly.

3. CHECK FRONT SEATBACK CLIMATE CONTROL BLOWER RH

(a) Turn the engine switch on (IG).
(b) Set the seat heater switch blower side volume to level 3 (maximum).
(c) Check that the fan motor turns smoothly.

4. CHECK FRONT SEAT CUSHION CLIMATE CONTROL BLOWER RH

(a) Turn the engine switch on (IG).
(b) Set the seat heater switch blower side volume to level 3 (maximum).
(c) Check that the fan motor turns smoothly.

Climate Control Seat System does not Operate

DESCRIPTION

The A/C amplifier assembly receives seat position signals when the engine switch is on (IG), and then transmits airflow amount signals to each seat climate blower.

WIRING DIAGRAM

SE

INSPECTION PROCEDURE

1 SYSTEM CHECK

(a) Check if the climate control seat system operates normally.
Result

Result	Proceed to
Climate control does not operate on driver side	A
Climate control does not operate on front passenger side	B
Climate control does not operate on both driver and front passenger sides	C

B → **Go to step 8**

C → **Go to step 14**

A

2 CHECK WIRE HARNESS

Seat Cushion Blower:

(a) Disconnect the U15 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
U15-4 (GND) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
U15-1 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

(c) Reconnect the U15 connector.
(d) Disconnect the U14 connector.
(e) Measure the voltage and resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
U14-1 (GND) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
U14-2 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

SE

Seatback Blower:

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

3 INSPECT SEAT CLIMATE CONTROL BLOWER

Seat Cushion Blower:

(a) Check the input signal waveform.
  (1) Connect an oscilloscope to terminal U15-3 (SIGN) and body ground with the climate control blower connector still connected.
  (2) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	2 V/DIV., 500 μsec/DIV.
Vehicle condition	Engine switch on (IG), seat heater switch ON

OK:
The waveform is displayed as shown in the illustration.

Result

Result	Proceed to
NG	A
OK (Seat cushion blower side)	B
OK (Seatback blower side)	C

B → **REPLACE SEAT CUSHION BLOWER**

C → **REPLACE SEATBACK BLOWER**

A

4 CHECK WIRE HARNESS (A/C AMPLIFIER ASSEMBLY - SEAT CLIMATE CONTROL BLOWER)

A/C Amplifier Assembly:

(a) Disconnect the E2 and U15 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E2-9 (SVDB) - U15-3 (SIGN)	Always	Below 1 Ω
E2-9 (SVDB) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

SE

OK

5 CHECK WIRE HARNESS (SEAT HEATER SWITCH)

(a) Disconnect the F3 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F3-12 (E) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
F3-5 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

6 INSPECT SEAT HEATER SWITCH

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F3-7 (BLLH) - F3-10 (SVSG)	Blower switch OFF	Below 1.1 kΩ
	Blower switch ON (Vol: 3)	Below 111 Ω
F3-8 (SVS5) - F3-10 (SVSG)	Always	Below 1 kΩ

NG → **REPLACE SEAT HEATER SWITCH**

OK

7 CHECK WIRE HARNESS (SEAT HEATER SWITCH - A/C AMPLIFIER ASSEMBLY)

Seat Heater Switch:

A/C Amplifier Assembly:

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F3-7 (BLLH) - E2-15 (SVDS)	Always	Below 1 Ω
F3-8 (SVS5) - E2-6 (SG-5)	Always	Below 1 Ω
F3-10 (SVSG) - E2-8 (S5-2)	Always	Below 1 Ω
F3-12 (E) - Body ground	Always	Below 1 Ω
F3-7 (BLLH) - Body ground	Always	10 kΩ or higher
F3-8 (SVS5) - Body ground	Always	10 kΩ or higher
F3-10 (SVSG) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

REPLACE A/C AMPLIFIER ASSEMBLY

8 CHECK WIRE HARNESS

Seat Cushion Blower:

(a) Disconnect the T17 connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
T17-4 (GND) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
T17-1 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

(c) Reconnect the T17 connector.

SE

Seatback Blower:

B118674E05

(d) Disconnect the T16 connector.
(e) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
T16-1 (GND) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
T16-2 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

9 INSPECT SEAT CLIMATE CONTROL BLOWER

Seat Cushion Blower:

B126263E02

(a) Check the input signal waveform.
  (1) Connect an oscilloscope to terminal T17-3 (SIGN) and body ground with the climate control blower connector still connected.
  (2) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	2 V/DIV., 500 μsec/DIV.
Vehicle condition	Engine switch on (IG), seat heater switch ON

OK:
The waveform is displayed as shown in the illustration.

Result

Result	Proceed to

A

SE

10 CHECK WIRE HARNESS (A/C AMPLIFIER ASSEMBLY - SEAT CLIMATE CONTROL BLOWER)

(a) Disconnect the E2 and T17 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E2-10 (SVPB) - T17-3 (SIGN)	Always	Below 1 Ω
E2-10 (SVPB) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

11 CHECK WIRE HARNESS (SEAT HEATER SWITCH)

(a) Disconnect the F3 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F3-12 (E) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
F3-5 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

SE

12 INSPECT SEAT HEATER SWITCH

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
F3-8 (SVS5) - F3-9 (BLRH)	Blower switch OFF	Below 1.1 kΩ
	Blower switch ON (Vol: 3)	Below 111 Ω
F3-8 (SVS5) - F3-10 (SVSG)	Always	Below 1 kΩ

NG → **REPLACE SEAT HEATER SWITCH**

OK

13 CHECK WIRE HARNESS (SEAT HEATER SWITCH - A/C AMPLIFIER ASSEMBLY)

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
F3-8 (SVS5) - E2-6 (SG-5)	Always	Below 1 Ω
F3-9 (BLRH) - E2-16 (SVPS)	Always	Below 1 Ω
F3-10 (SVSG) - E2-8 (S5-2)	Always	Below 1 Ω
F3-12 (E) - Body ground	Always	Below 1 Ω
F3-8 (SVS5) - Body ground	Always	10 kΩ or higher
F3-9 (BLRH) - Body ground	Always	10 kΩ or higher
F3-10 (SVSG) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

REPLACE A/C AMPLIFIER ASSEMBLY

14 CHECK WIRE HARNESS

Seat Cushion Blower:

(a) Disconnect the U15 and T17 connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance:
Front LH

Tester Connection	Condition	Specified Condition
U15-4 (GND) - Body ground	Always	Below 1 Ω

Front RH

Tester Connection	Condition	Specified Condition
T17-4 (GND) - Body ground	Always	Below 1 Ω

Standard voltage:
Front LH

Tester Connection	Condition	Specified Condition
U15-1 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

Front RH

Tester Connection	Condition	Specified Condition
T17-1 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

Seatback Blower:

(c) Reconnect the U15 and T17 connectors.
(d) Disconnect the U14 and T16 connectors.
(e) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance:
Front LH

Tester Connection	Condition	Specified Condition
U14-1 (GND) - Body ground	Always	Below 1 Ω

Front RH

Tester Connection	Condition	Specified Condition
T16-1 (GND) - Body ground	Always	Below 1 Ω

Standard voltage:
Front LH

Tester Connection	Condition	Specified Condition
U14-2 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

Front RH

Tester Connection	Condition	Specified Condition
U16-2 (IG) - Body ground	Engine switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

15 INSPECT SEAT CLIMATE CONTROL BLOWER

(a) Check the input signal waveform.
  (1) Connect an oscilloscope to terminal 3 and body ground with the climate control blower connector still connected.
  (2) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	2 V/DIV., 500 μsec/DIV.
Vehicle condition	Engine switch on (IG), seat heater switch ON

OK:
The waveform is displayed as shown in the illustration.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DATA LIST.

MIRROR:

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows a relay, VSV, actuator, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST.

D-SEAT:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE	Seat sliding operation	FRONT / REAR	-
F VERTICAL	Seat front vertical operation	UP / DOWN	-
LIFTER	Seat lifter operation	UP / DOWN	-
RECLINING	Seat reclining operation	FRONT / REAR	-
BUZZER	Buzzer operation	ON / OFF	-

P-SEAT:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE	Seat sliding operation	FRONT / REAR	-
F VERTICAL	Seat front vertical operation	UP / DOWN	-
LIFTER	Seat lifter operation	UP / DOWN	-
RECLINING	Seat reclining operation	FRONT / REAR	-
BUZZER	Buzzer operation	ON / OFF	-

REMOVAL

1. REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)

2. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)

3. REMOVE FRONT SEAT HEADREST ASSEMBLY

4. REMOVE FRONT SEAT OUTER TRACK BRACKET COVER

(a) Move the front seat assembly to the rearmost position by operating the slide and vertical power seat switch knob.

(b) Using a screwdriver, disengage the 2 claws and remove the front seat outer track bracket cover.
HINT:
Tape the screwdriver tip before use.

5. REMOVE FRONT SEAT INNER TRACK BRACKET COVER

(a) Using a screwdriver, disengage the 2 claws and remove the front seat inner track bracket cover.
HINT:
Tape the screwdriver tip before use.

6. REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER

(a) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.

(b) Using a screwdriver, disengage the 4 claws and remove the front seat rear outer track bracket cover.
HINT:
Tape the screwdriver tip before use.

7. REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER

(a) Using a screwdriver, disengage the 4 claws and remove the front seat rear inner track bracket cover.
HINT:
Tape the screwdriver tip before use.

8. REMOVE FRONT SEAT ASSEMBLY

(a) Operate the power seat switch knob and move the seat to its rearmost position.

(b) Remove the 2 bolts on the front seat track bracket.

(c) Operate the power seat switch knob and move the seat to the position farthest forward.

SE

(d) Remove the 2 bolts on the rear seat track bracket.

(e) Disconnect the negative (-) battery terminal.
CAUTION:
Wait at least 90 seconds after disconnecting the negative (-) battery terminal to prevent the airbag and seat belt pretensioner from deploying (See page RS-1).

(f) Disconnect the connectors under the seat. Then remove the front seat assembly.

DISASSEMBLY

1. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**

2. **REMOVE OCCUPANT DETECTION ECU (See page RS-502)**

3. **REMOVE RECLINING POWER SEAT SWITCH KNOB**
   (a) Using a screwdriver, remove the reclining power seat switch knob.
   HINT:
   Tape the screwdriver tip before use.

4. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB**
   (a) Using a screwdriver, remove the slide and vertical power seat switch knob.
   HINT:
   Tape the screwdriver tip before use.

5. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY**
   (a) Release the 2 rubber bands on the backside of the front seatback board sub-assembly.

   (b) Remove the 8 screws.
   (c) Disengage the 2 claws and separate the front seat cushion shield assembly.

(d) Disconnect the 2 clamps and 2 connectors, and then remove the front seat cushion shield assembly.

6. REMOVE FRONT INNER NO. 1 SEAT CUSHION SHIELD

(a) Remove the 2 screws and front inner No. 1 seat cushion shield.

7. REMOVE SEAT VARIABLE CUSHION SWITCH (w/ Seat Cushion Front Edge Adjustment Function)

(a) Remove the 2 screws and seat variable cushion switch.

8. REMOVE FRONT POWER SEAT LUMBAR SWITCH

(a) Remove the 2 screws and front power seat lumbar switch.

9. REMOVE LOWER NO. 3 SEAT TRACK SPACER

(a) Remove the 2 screws and lower No. 3 seat track spacer.

10. REMOVE FRONT POWER SEAT SWITCH (w/ Seat Position Memory System)
(a) Disconnect the 2 connectors.
(b) Remove the 3 screws and front power seat switch.

11. REMOVE FRONT POWER SEAT SWITCH (w/o Seat Position Memory System)
(a) Disconnect the connector.
(b) Remove the 3 screws and power seat switch.

12. REMOVE FRONT SEAT INNER CUSHION SHIELD
(a) Remove the screw.
(b) Disengage the 2 claws and clip, and then remove the front seat inner cushion shield.

13. REMOVE LOWER NO. 4 SEAT TRACK SPACER
(a) Remove the 2 screws and lower No. 4 seat track spacer.

14. REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Seat Cushion Front Edge Adjustment Function)
(a) Disconnect the 2 connectors.
(b) Disengage the 4 clamps and claw.

(c) Disconnect the connector and detach the 2 clamps.

SE

(d) Disengage the 4 clamps.

(e) Using a screwdriver, detach the hook.

(f) Remove the 2 clips.
(g) Disengage the hooks and remove the front separate type seat cushion cover with pad.

15. REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Seat Cushion Front Edge Adjustment Function)

(a) Disconnect the 2 connectors.
(b) Disengage the 4 clamps and claw.

SE

(c) Disconnect the connector and detach the 2 clamps.

(d) Disengage the 4 clamps.

(e) Using a screwdriver, detach the hook.

(f) Remove the 2 clips.
(g) Disengage the hooks and clamp.

(h) Disengage the 2 hooks and remove the front separate type seat cushion cover with pad.

16. REMOVE FRONT SEAT CUSHION ASSEMBLY (See page RS-494)

17. REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (w/o Seat Cushion Front Edge Adjustment Function)

(a) Remove the 3 hog rings.

(b) Remove the 18 hog rings and front separate type front seat cushion cover.

18. REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (w/ Seat Cushion Front Edge Adjustment Function)

(a) Remove the 3 hog rings.

(b) Remove the 14 hog rings and front separate type front seat cushion cover.

19. REMOVE FRONT SEAT CUSHION HEATER ASSEMBLY (w/ Climate Control Seat System)

(a) Cut off the tack pins that fasten the seat heater, and then remove the front seat cushion heater from the front separate type seat cushion cover.

20. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY

(a) Open the front seatback board cover sub-assembly of the front seatback board sub-assembly. Then remove the 2 screws.

(b) Pull the seatback board in the direction indicated by the arrow in the illustration to disengage the 2 claws. Then remove the front seatback board sub-assembly.

21. REMOVE FRONT SEATBACK BOARD COVER SUB-ASSEMBLY

(a) Disengage the hooks and front seatback board cover sub-assembly.

22. REMOVE FRONT SEAT HEADREST SUPPORT

(a) Disengage the 2 claws to remove the front seat headrest support.

23. REMOVE FRONT SEAT HEADREST SUPPORT

24. REMOVE FRONT SEPARATE TYPE SEATBACK COVER WITH PAD

(a) Disengage the hooks.

(b) Remove the nut and separate the bracket.

(c) Remove the front separate type seatback cover with pad.

25. REMOVE FRONT SEPARATE TYPE SEATBACK COVER

(a) Remove the 8 hog rings and the front separate type seatback cover.

26. REMOVE FRONT SEATBACK HEATER ASSEMBLY (w/ Climate Control Seat System)

(a) Cut off the tack pins that fasten the seat heater, and then remove the front seatback heater assembly from the separate type front seatback cover.

27. REMOVE SEAT RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the 2 screws.
(b) Disengage the clamp.
(c) Disengage the claw and remove the seat reclining adjuster inside cover LH.

28. REMOVE SEAT RECLINING ADJUSTER INSIDE COVER RH

HINT:
Use the same procedure for the RH side and the LH side.

29. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the screw.
(b) Remove the reclining adjuster inside cover LH.

30. REMOVE RECLINING ADJUSTER INSIDE COVER RH

HINT:
Use the same procedure for the RH side and the LH side.

31. REMOVE FRONT SEAT LOWER CUSHION SHIELD LH

(a) Remove the screw.

(b) Disengage the hook to remove the front seat lower cushion shield LH as shown in the illustration.

32. REMOVE FRONT SEAT LOWER CUSHION SHIELD RH

HINT:

Use the same procedure for the RH side and the LH side.

33. REMOVE SEAT POSITION SENSOR (for Driver Side) (See page RS-485)

34. REMOVE LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 2 screws and lumbar support adjuster assembly.

35. REMOVE SEATBACK CLIMATE CONTROL BLOWER (w/ Climate Control Seat System)

(a) Disconnect the connector and detach the 4 clamps.

(b) Using a T30 "TORX" socket, remove the 6 "TORX" bolts and remove the seatback climate control blower.

36. REMOVE SEAT CUSHION CLIMATE CONTROL DUCT (w/ Climate Control Seat System)

(a) Separate the 2 clamps (A) in the direction indicated by the arrow (1).

(b) Separate the 2 clamps (B) in the direction indicated by the arrow (2).

(c) Disengage the 2 claws, and remove the seat cushion climate control duct.

37. REMOVE SEAT CUSHION CLIMATE CONTROL BLOWER (w/ Climate Control Seat System)

(a) Disconnect the connector.

(b) Remove the screw, detach the claw and remove the seat cushion climate control blower.

38. REMOVE SEAT CLIMATE CONTROL BLOWER

(a) Remove the 3 bolts, 3 nuts, bracket, and seat climate control blower.

39. REMOVE SEAT HEATER CONTROL (See page SE-174)

40. REMOVE FRONT SEAT WIRE

(a) Disengage the clamps.

(b) Disconnect the connectors and remove the front seat wire.

INSPECTION

1. INSPECT FRONT SEAT FRAME WITH ADJUSTER LH

(a) Check operation of the front vertical motor.

(1) Check if the seat frame moves smoothly when the battery is connected to the front vertical motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → U5-1 Battery negative (-) → U5-2	**Upward**
Battery positive (+) → U5-2 Battery negative (-) → U5-1	**Downward**

SE

(b) Check operation of the reclining motor.
(1) Check if the seat frame moves smoothly when the battery is connected to the reclining motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → U7-2 Battery negative (-) → U7-1	**Forward**
Battery positive (+) → U7-1 Battery negative (-) → U7-2	**Backward**

(c) Check operation of the lifter motor.
(1) Check if the seat frame moves smoothly when the battery is connected to the lifter motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → U9-2 Battery negative (-) → U9-1	**Upward**
Battery positive (+) → U9-1 Battery negative (-) → U9-2	**Downward**

(d) Check operation of the slide motor.
(1) Check if the seat frame moves smoothly when the battery is connected to the slide motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → U10-1 Battery negative (-) → U10-2	**Forward**
Battery positive (+) → U10-2 Battery negative (-) → U10-1	**Backward**

(e) Check operation of the leg support motor (with Seat Position Memory System).
(1) Check if the seat frame moves smoothly when the battery is connected to the leg support motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → U6-1 Battery negative (-) → U6-2	**Forward**
Battery positive (+) → U6-2 Battery negative (-) → U6-1	**Backward**

If the result is not as specified, replace the seat frame with adjuster LH.

B081621E30

2. INSPECT FRONT SEAT FRAME WITH ADJUSTER RH

(a) Check operation of the front vertical motor.

(1) Check if the seat frame moves smoothly when the battery is connected to the front vertical motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → T8-2 Battery negative (-) → T8-1	**Upward**
Battery positive (+) → T8-1 Battery negative (-) → T8-2	**Downward**

B081621E31

(b) Check operation of the lifter motor.

(1) Check if the seat frame moves smoothly when the battery is connected to the lifter motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → T9-1 Battery negative (-) → T9-2	**Upward**
Battery positive (+) → T9-2 Battery negative (-) → T9-1	**Downward**

B081621E32

(c) Check operation of the reclining motor.

(1) Check if the seat frame moves smoothly when the battery is connected to the reclining motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → T11-2 Battery negative (-) → T11-1	**Forward**
Battery positive (+) → T11-1 Battery negative (-) → T11-2	**Backward**

B081621E29

(d) Check operation of the slide motor.

(1) Check if the seat frame moves smoothly when the battery is connected to the slide motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → T12-2 Battery negative (-) → T12-1	**Forward**
Battery positive (+) → T12-1 Battery negative (-) → T12-2	**Backward**

If the result is not as specified, replace the seat frame with adjuster RH.

REASSEMBLY

1. INSTALL FRONT SEAT WIRE
(a) Connect the connectors.
(b) Engage the clamps to install the front seat wire.

2. INSTALL SEAT HEATER CONTROL (See page SE-175)

3. INSTALL SEAT CLIMATE CONTROL BLOWER (w/ Climate Control Seat System)
(a) Install the seat climate control blower and bracket with the 3 bolts and 3 nuts.

4. INSTALL SEAT CUSHION CLIMATE CONTROL BLOWER (w/ Climate Control Seat System)
(a) Engage the 2 claws to install the seat cushion climate control blower.

(b) Install the seat cushion climate control blower with the screw.
Torque: 2.6 N*m (27 kgf*cm, 23 in.*lbf)
(c) Connect the connector.

5. INSTALL SEAT CUSHION CLIMATE CONTROL DUCT (w/ Climate Control Seat System)
(a) Engage the 2 claws to install the seat cushion climate control duct.
(b) Engage the 2 clamps (B).
(c) Engage the 2 clamps (A).

6. INSTALL SEATBACK CLIMATE CONTROL BLOWER (w/ Climate Control Seat System)

(a) Using a T30 "TORX" socket, install the seatback climate control blower with the 6 "TORX" bolts.

(b) Connect the 4 clamps and connector.

7. INSTALL LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Install the lumbar support adjuster with the 2 screws.

(b) Connect the connector.

8. INSTALL SEAT POSITION SENSOR (for Driver Side) (See page RS-485)

9. INSTALL SEAT SLIDE POSITION SENSOR PROTECTOR

10. INSTALL FRONT SEAT LOWER CUSHION SHIELD LH

(a) Engage the hook.

(b) Install the front seat lower cushion shield LH with the screw.

11. INSTALL FRONT SEAT LOWER CUSHION SHIELD RH

HINT:

Use the same procedure for the RH side and the LH side.

12. INSTALL RECLINING ADJUSTER INSIDE COVER LH

(a) Install the reclining adjuster inside cover LH with the screw.

13. INSTALL RECLINING ADJUSTER INSIDE COVER RH

HINT:

Use the same procedure for the RH side and the LH side.

14. INSTALL SEAT RECLINING ADJUSTER INSIDE COVER LH

(a) Engage the claw and clamp.

(b) Install the reclining adjuster inside cover LH with the 2 screws.

15. INSTALL SEAT RECLINING ADJUSTER INSIDE COVER RH

HINT:

Use the same procedure for the RH side and the LH side.

16. INSTALL FRONT SEATBACK HEATER ASSEMBLY (w/ Climate Control Seat System)

(a) Using a tracker, install the front seatback heater to the end of the seat cover with the 11 new tack pins.

17. INSTALL FRONT SEPARATE TYPE SEATBACK COVER

(a) Using hog ring pliers, install the front separate type seatback cover with 8 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

18. INSTALL FRONT SEPARATE TYPE SEATBACK COVER WITH PAD

(a) Install the front separate type seatback cover with pad to the front seatback spring assembly.

(b) Install the front seatback cover bracket with the nut.

Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

NOTICE:

- **For vehicles with side airbags, the side airbags may not be activated normally unless the front seatback cover is securely installed.**
- **Check that the strap is not twisted after installing the bracket.**
- **Install the bracket securely.**

(c) Engage the hooks.

19. INSTALL FRONT SEAT HEADREST SUPPORT

(a) Engage the 2 claws to install the front seat headrest support.

20. INSTALL FRONT SEAT HEADREST SUPPORT

21. INSTALL FRONT SEATBACK BOARD COVER SUB-ASSEMBLY

(a) Engage the 2 hooks and install the front seatback board cover sub-assembly.

22. INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY

(a) Engage the 2 claws.

(b) Install the front seatback board sub-assembly with the 2 screws.

23. INSTALL FRONT SEAT CUSHION HEATER ASSEMBLY (w/ Climate Control Seat System)

(a) Using a tacker, install the front seat cushion heater to the end of the seat cover with the 28 new tack pins.

24. INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER (w/o Seat Cushion Front Edge Adjustment Function)

(a) Using hog ring pliers, install 18 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

(b) Using hog ring pliers, install 3 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

25. INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER (w/ Seat Cushion Front Edge Adjustment Function)

(a) Using hog ring pliers, install 14 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

(b) Using hog ring pliers, install 3 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

26. INSTALL FRONT SEAT CUSHION ASSEMBLY (See page RS-495)

27. INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Seat Cushion Front Edge Adjustment Function)

(a) Engage the hooks.

(b) Install the 2 clips.

(c) Engage the hook.

(d) Engage the 4 clamps.

(e) Connect the connector and engage the 2 clamps.

SE

(f) Engage the 4 clamps and claw.
(g) Connect the 2 connectors.

28. INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Seat Cushion Front Edge Adjustment Function)

(a) Engage the 2 hooks to install the front separate type seat cushion cover with pad.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

(b) Engage the hooks.
(c) Install the 2 clips.

(d) Engage the hook.

(e) Engage the 4 clamps.

(f) Connect the connector and engage the 2 clamps.

(g) Engage the 4 clamps and claw.
(h) Connect the 2 connectors.

29. INSTALL LOWER NO. 4 SEAT TRACK SPACER

(a) Install the lower No. 4 seat track spacer with the 2 screws.

SE

30. INSTALL FRONT SEAT INNER CUSHION SHIELD
(a) Engage the 2 claws and clip.
(b) Install the front seat inner cushion shield with the screw.

31. INSTALL FRONT POWER SEAT SWITCH (w/ Seat Position Memory System)
(a) Install the power seat switch with the 3 screws.
(b) Connect the 2 connectors.

32. INSTALL FRONT POWER SEAT SWITCH (w/o Seat Position Memory System)
(a) Install the power seat switch with the 3 screws.
(b) Connect the connector.

33. INSTALL LOWER NO. 3 SEAT TRACK SPACER
(a) Install the lower No. 3 seat track spacer with the 2 screws.

34. INSTALL FRONT POWER SEAT LUMBAR SWITCH
(a) Install the front power seat lumbar switch with the 2 screws.

35. INSTALL SEAT VARIABLE CUSHION SWITCH (w/ Seat Cushion Front Edge Adjustment Function)
(a) Install the seat variable cushion switch with the 2 screws.

36. INSTALL FRONT INNER NO. 1 SEAT CUSHION SHIELD

(a) Install the front inner No. 1 seat cushion shield with the 2 screws.

37. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY

(a) Connect the 2 clamps and 2 connectors.

(b) Engage the 2 claws.

(c) Install the front seat cushion shield assembly with the 8 screws.

(d) Install the 2 rubber bands on the backside of the front seatback board sub-assembly.

38. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB

(a) Install the slide and vertical power seat switch knob.

39. INSTALL RECLINING POWER SEAT SWITCH KNOB

(a) Install the reclining power seat switch knob.

40. INSTALL OCCUPANT DETECTION ECU (See page RS-502)

41. INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)

INSTALLATION

1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the seat in the cabin.
(b) Connect the connectors under the seat.
(c) Connect the negative (-) battery terminal.
(d) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.
NOTICE:
Check that the seat is locked.

(e) Temporarily install the front side of the front seat assembly with the 2 bolts.
(f) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.
NOTICE:
Check that the seat is locked.

(g) Temporarily install the rear side of the front seat assembly with the 2 bolts.
(h) Move the front seat assembly to the rearmost position by operating the slide and vertical power seat switch knob.
NOTICE:
Check that the seat is locked.
(i) Fully tighten the 2 bolts on the front side of the front seat assembly in the order of the inner side bolt and then the outer side bolt.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
(j) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.
NOTICE:
Check that the seat is locked.
(k) Fully tighten the 2 bolts on the rear side of the front seat assembly in the order of the inner side bolt and then the outer side bolt.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

2. INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER

(a) Engage the 4 claws and install the front seat rear outer track cover.

3. INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER

(a) Engage the 4 claws and install the inner seat track bracket cover.

4. INSTALL FRONT SEAT OUTER TRACK BRACKET COVER

(a) Move the front seat assembly to the rearmost position by operating the slide and vertical power seat switch knob.

(b) Engage the 2 claws and install the front seat outer track bracket cover.

5. INSTALL FRONT SEAT INNER TRACK BRACKET COVER

(a) Engage the 2 claws and install the front seat inner track bracket cover.

6. INSTALL FRONT SEAT HEADREST ASSEMBLY

7. CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)

8. INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)

9. PERFORM INITIALIZATION

NOTICE:

Some systems need initialization after reconnecting the negative battery cable (See page IN-33).

10. INSPECT FRONT SEAT ASSEMBLY

(a) Check the power seat operation.

(b) Check the seat heater operation (with seat heater system).

(1) Turn the engine switch on (IG).

(2) Turn the seat heater switch ON.

(3) Wait 5 minutes or more and confirm that the seat surface becomes warm.

11. INSPECT SRS WARNING LIGHT

(See page RS-37)

Driver Side Power Seat Motor Circuit

DESCRIPTION

When the power seat control switch is operated, a command signal is sent to the front power seat switch LH (position control ECU). The front power seat switch LH (position control ECU) then controls the appropriate seat motor as needed. This memory system does not use a seat position sensor. The seat position is detected by counting pulses that are output when the motor turns. If there is no pulse output from the motor, the motor will stop operating. The front power seat switch LH (position control ECU) is designed so that any malfunction of the seat memory system will not interfere with manual seat control. If the front power seat switch LH (position control ECU) detects a low motor speed, abnormal activity, or sudden motor current fluctuation, the system will stop the motor. If the motor operates continuously for 120 seconds or more, the system will stop the motor until the switch is turned on again.

WIRING DIAGRAM

SE

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (FRONT POWER SEAT SWITCH LH (POSITION CONTROL ECU))

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST by following the directions on the tester screen.

D-SEAT:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE	Seat sliding operation	FRONT / REAR	-
F VERTICAL	Seat front vertical operation	UP / DOWN	-
LIFTER	Seat lifer operation	UP / DOWN	-
RECLINING	Seat reclining operation	FRONT / REAR	-

OK:
Each power seat motor operates.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2	INSPECT FRONT SEAT ADJUSTER SUB-ASSEMBLY (POWER SEAT MOTOR)

(a) Inspect the power seat motor (See page SE-95).
OK:
The power seat motor operates.

NG → **REPLACE FRONT SEAT ADJUSTER SUB-ASSEMBLY (POWER SEAT MOTOR)**

OK

3 CHECK WIRE HARNESS (FRONT POWER SEAT SWITCH LH - POWER SEAT MOTOR)

Front Power Seat Switch LH (Position Control ECU) Connector:

Wire Harness Rear View:

Power Seat Motor Connector:

Wire Harness Front View:

B128715E07

(a) Disconnect the front power seat switch LH (position control ECU) connector and power seat motor connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
U3-2 (SLD+) - U10-1	Always	Below 1 Ω
U3-3 (SLD-) - U10-2	Always	Below 1 Ω
U3-4 (FRV-) - U5-2	Always	Below 1 Ω
U3-6 (FRV+) - U5-1	Always	Below 1 Ω
U3-7 (LFT+) - U7-2	Always	Below 1 Ω
U3-9 (LFT-) - U7-1	Always	Below 1 Ω
U3-8 (RCL+) - U9-2	Always	Below 1 Ω
U3-10 (RCL-) - U9-1	Always	Below 1 Ω

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY

(a) Detach the 2 front hooks of the rear seat cushion assembly from the vehicle body.

NOTICE:

Follow the instructions below carefully as the cushion frame deforms easily.

(1) Choose a hook to detach first. Place your hands near the hook as shown in the illustration. Then lift the seat cushion to detach the hook.

(2) Repeat for the other hook.

(b) Detach the 2 rear hooks of the seat cushion from the seatback.

(c) Remove the seat cushion.

2. REMOVE REAR SEAT HEADREST ASSEMBLY

3. REMOVE REAR SEAT CENTER HEADREST ASSEMBLY

4. REMOVE REAR SEATBACK ASSEMBLY

(a) Using a screwdriver, detach the claws to open the caps of the rear seat shoulder belt guide RH.

(b) Remove the 3 screws and rear seat shoulder belt guide RH.

HINT:

- Tape the screwdriver tip before use.
- Use the same procedure for the LH side and RH side

(c) Using a screwdriver, detach the claw to open the cap of the rear seat shoulder belt guide.

HINT:

Tape the screwdriver tip before use.

(d) Remove the 2 screws and rear seat shoulder belt guide.

(e) Remove the 4 bolts and rear seatback assembly.
(f) Detach the 3 upper hooks of the rear seatback assembly from the vehicle body.

(b) Using hog ring pliers, install the rear bench type seat cushion cover to the seat cushion frame (with pad) with 33 new hog rings.

NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

INSTALLATION

1. INSTALL REAR SEATBACK ASSEMBLY

(a) Place the rear seatback assembly in the cabin.
NOTICE:
Be careful not to damage the vehicle body.

(b) Install the rear seatback assembly with the 4 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

(c) Install the rear seat shoulder belt guide RH with the 3 screws.

(d) Pass the seat belt through and close the caps of the rear seat shoulder belt guide RH.
HINT:
Use the same procedure for the LH side and RH side.

(e) Install the rear seat center shoulder belt guide with the 2 screws.
(f) Pass the seat belt through and close the cap of the rear seat center shoulder belt guide.

2. INSTALL REAR SEAT CENTER HEADREST ASSEMBLY

3. INSTALL REAR SEAT HEADREST ASSEMBLY

4. INSTALL REAR SEAT CUSHION ASSEMBLY

(a) Attach the 2 rear hooks of the seat cushion to the seatback.
(b) Attach the 2 front hooks of the seat cushion to the vehicle body.
(c) Confirm that the seat cushion is firmly installed.
NOTICE:
When installing the seat cushion, make sure the seat belt buckle is not under the seat cushion.
HINT:
After installing the seat cushion, vertically (up and down) rock the area around the rear seat cushion lock hooks. Make sure that there is no abnormal noise. If abnormal noise is heard, replace the rear seat cushion lock hooks with new ones.

Front Passenger Side Power Seat Motor Circuit

DESCRIPTION

When the power seat control switch is operated, a command signal is sent to the front power seat switch RH (position control ECU). The front power seat switch RH (position control ECU) then controls the appropriate seat motor as needed. This memory system does not use a seat position sensor. The seat position is detected by counting pulses that are output when the motor turns. If there is no pulse output from the motor, the motor will stop operating. The front power seat switch RH (position control ECU) is designed so that any malfunction of the seat memory system will not interfere with manual seat control. If the front power seat switch RH (position control ECU) detects a low motor speed, abnormal activity, or sudden motor current fluctuation, the system will stop the motor. If the motor operates continuously for 120 seconds or more, the system will stop the motor until the switch is turned on again.

REMOVAL

1. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-32)**
2. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE DOOR ARMREST COVER (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-35)**
7. **REMOVE SEAT MEMORY SWITCH**
   (a) Remove the 2 screws.
   (b) Disengage the 4 claws of the inside handle.
   HINT:
   The inside handle cannot be removed from the trim board sub-assembly.

   (c) Disengage the 4 claws, and remove the seat memory switch.

Seat Memory Switch LH:

B149663E02

INSPECTION

1. INSPECT SEAT MEMORY SWITCH LH

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
I6-1 (E) - I6-2 (MMRY)	SET switch is pressed	Below 1 Ω
	SET switch is not pressed	10 kΩ or higher
I6-1 (E) - I6-3 (2)	M2 switch is pressed	Below 1 Ω
	M2 switch is not pressed	10 kΩ or higher
I6-1 (E) - I6-4 (1)	M1 switch is pressed	Below 1 Ω
	M1 switch is not pressed	10 kΩ or higher

If the result is not as specified, replace the switch.

Seat Memory Switch RH:

B149663E03

2. INSPECT SEAT MEMORY SWITCH RH

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
H7-1 (E) - H7-2 (MRY)	SET switch is pressed	Below 1 Ω
	SET switch is not pressed	10 kΩ or higher
H7-1 (E) - H7-3 (M2)	M2 switch is pressed	Below 1 Ω
	M2 switch is not pressed	10 kΩ or higher
H7-1 (E) - H7-4 (M1)	M1 switch is pressed	Below 1 Ω
	M1 switch is not pressed	10 kΩ or higher

If the result is not as specified, replace the switch.

B145402

INSTALLATION

1. INSTALL SEAT MEMORY SWITCH

(a) Install the seat memory switch to the inside handle.

(b) Engage the 4 claws and install the inside handle.
(c) Install the 2 screws.

2. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-52)**
3. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-52)**
4. **INSTALL DOOR ARMREST COVER (See page ED-53)**
5. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-53)**
6. **INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-53)**
7. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-54)**

Driver Side Seat Memory Switch Circuit

DESCRIPTION

The seat memory switch LH sends signals to the outer mirror control ECU via the CAN communication system to memorize a given seat position. This memory system does not use a position sensor. The seat position is detected by counting pulses that are output when the motor turns. If there is no pulse output from the motor, the motor will stop operating. The seat memory switch LH is later used to send signals to the front power seat switch LH (position control ECU) to return the seat to one of the memorized positions. The power seat memory switch LH operation can be performed only when the engine switch is on (IG) and the shift lever is in the P position.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK FOR DTC (CAN COMMUNICATION SYSTEM)

(a) Check for DTCs in the CAN communication system (See page CA-11).

SE

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

2 READ VALUE OF INTELLIGENT TESTER (SEAT MEMORY SWITCH LH)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DATA LIST.

MIRROR:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D SET MEMORY	Driver side SET memory switch / ON or OFF	ON: Driver side SET memory switch is ON OFF: Driver side SET memory switch is OFF	-
D MEM 1 SW	Driver side memory switch 1 / ON or OFF	ON: Driver side M1 memory switch is ON OFF: Driver side M1 memory switch is OFF	-
D MEM 2 SW	Driver side memory switch 2 / ON or OFF	ON: Driver side M2 memory switch is ON OFF: Driver side M2 memory switch is OFF	-

OK:
On the tester screen, each item changes between ON and OFF according to the above chart.

T14-4 (E) - T14-2 (RCLR)	OFF	Below 1 Ω
T14-4 (E) - T14-3 (RCLF)	OFF	Below 1 Ω
T14-1 (B) - T14-3 (RCLF)	OFF	10 kΩ or higher
T14-1 (B) - T14-2 (RCLR)	OFF	10 kΩ or higher
T14-1 (B) - T14-2 (RCLR)	REAR	Below 1 Ω
T14-4 (E) - T14-3 (RCLF)	REAR	Below 1 Ω
T14-1 (B) - T14-3 (RCLF)	REAR	10 kΩ or higher
T14-4 (E) - T14-2 (RCLR)	REAR	10 kΩ or higher

If the result is not as specified, replace the front power seat switch RH.

INSTALLATION

1. **INSTALL FRONT POWER SEAT SWITCH (w/ Seat Position Memory System)**
   (a) Install the power seat switch with the 3 screws.
   (b) Connect the 2 connectors.
2. **INSTALL FRONT POWER SEAT SWITCH (w/o Seat Position Memory System)**
   (a) Install the power seat switch with the 3 screws.
   (b) Connect the connector.
3. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
4. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
5. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
6. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
7. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
8. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
9. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
10. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
11. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
12. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
13. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
14. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
15. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
16. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

Front Passenger Side Seat Memory Switch Circuit

DESCRIPTION

The seat memory switch RH sends signals to the outer mirror control ECU via the CAN communication system to memorize a given seat position. This memory system does not use a position sensor. The seat position is detected by counting pulses that are output when the motor turns. If there is no pulse output from the motor, the motor will stop operating. The seat memory switch RH is later used to send signals to the front power seat switch RH (position control ECU) to return the seat to one of the memorized positions.

The power seat memory RH operation can be performed only when the engine switch is on (IG) and the shift lever is in the P position.

WIRING DIAGRAM

SE

INSPECTION PROCEDURE

1 CHECK FOR DTC (CAN COMMUNICATION SYSTEM)

(a) Check for DTCs in the CAN communication system (See page CA-11).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

2 READ VALUE OF INTELLIGENT TESTER (SEAT MEMORY SWITCH RH)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DATA LIST.

MIRROR:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FP SET MEMORY	Front passenger side SET memory switch / ON or OFF	ON: Front passenger side SET memory switch is ON OFF: Front passenger side SET memory switch is OFF	-
FP MEM 1 SW	Front passenger side memory switch 1 / ON or OFF	ON: Front passenger side M1 memory switch is ON OFF: Front passenger side M1 memory switch is OFF	-
FP MEM 2 SW	Front passenger side memory switch 2 / ON or OFF	ON: Front passenger side M2 memory switch is ON OFF: Front passenger side M2 memory switch is OFF	-

SE

OK:

On the tester screen, each item changes between ON and OFF according to the above chart.

NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

3 INSPECT SEAT MEMORY SWITCH RH

(a) Remove the seat memory switch RH (See page SE-124).

Seat Memory Switch RH:

B149663E03

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
H7-1 (E) - H7-2 (MRY)	SET switch is pressed	Below 1 Ω
	SET switch is not pressed	10 kΩ or higher
H7-1 (E) - H7-3 (M2)	M2 switch is pressed	Below 1 Ω
	M2 switch is not pressed	10 kΩ or higher
H7-1 (E) - H7-4 (M1)	M1 switch is pressed	Below 1 Ω
	M1 switch is not pressed	10 kΩ or higher

NG → **REPLACE SEAT MEMORY SWITCH RH**

OK

4 CHECK HARNESS AND CONNECTOR (SEAT MEMORY SWITCH RH CIRCUIT)

Wire Harness Rear View:

B111886E06

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
H7-1 (E) - Body ground	Always	Below 1 Ω
H7-1 (E) - H7-2 (MRY)	Always	10 kΩ or higher
H7-1 (E) - H7-3 (M2)	Always	10 kΩ or higher
H7-1 (E) - H7-4 (M1)	Always	10 kΩ or higher

NG → **Go to step 5**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

5	CHECK HARNESS AND CONNECTOR (OUTER MIRROR CONTROL ECU - SEAT MEMORY SWITCH, BODY GROUND)

(a) Disconnect the outer mirror control ECU RH connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E65-27 (M2) - H7-3 (M2)	Always	Below 1 Ω
E65-28 (M1) - H7-4 (M1)	Always	Below 1 Ω
E65-29 (MM) - H7-2 (MRY)	Always	Below 1 Ω
E65-30 (MSWE) - H7-1 (E)	Always	Below 1 Ω
E65-30 (MSWE) - Body ground	Always	Below 1 Ω
H7-1 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE OUTER MIRROR CONTROL ECU

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
10. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
12. **REMOVE FRONT POWER SEAT LUMBAR SWITCH**
    (a) Remove the 2 screws and front power seat lumbar switch.

SE

INSPECTION

1. **INSPECT FRONT POWER SEAT LUMBAR SWITCH LH**
   (a) Measure the resistance between the terminals when the switch is operated.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
U12-4 (E2) - U12-3 (R)	HOLD	Below 1 Ω
U12-2 (B) - U12-5 (H)	HOLD	Below 1 Ω
U12-4 (E2) - U12-5 (H)	HOLD	10 Ω or higher
U12-2 (B) - U12-3 (R)	HOLD	10 Ω or higher
U12-4 (E2) - U12-3 (R)	OFF	Below 1 Ω
U12-5 (H) - U12-1 (E)	OFF	Below 1 Ω
U12-4 (E2) - U12-1 (E)	OFF	10 Ω or higher
U12-5 (H) - U12-3 (R)	OFF	10 Ω or higher
U12-2 (B) - U12-3 (R)	RELEASE	Below 1 Ω

Tester Connection	Switch Condition	Specified Condition
U12-5 (H) - U12-1 (E)	RELEASE	Below 1 Ω
U12-2 (B) - U12-1 (E)	RELEASE	10 Ω or higher
U12-5 (H) - U12-3 (R)	RELEASE	10 Ω or higher

If the result is not as specified, replace the switch.

2. INSPECT FRONT POWER SEAT LUMBAR SWITCH RH

(a) Measure the resistance between the terminals when the switch is operated.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
T13-1 (GND) - T13-5 (R)	HOLD	Below 1 Ω
T13-2 (B) - T13-3 (H)	HOLD	Below 1 Ω
T13-1 (GND) - T13-3 (H)	HOLD	10 Ω or higher
T13-2 (B) - T13-5 (R)	HOLD	10 Ω or higher
T13-1 (GND) - T13-5 (R)	OFF	Below 1 Ω
T13-3 (H) - T13-4 (E)	OFF	Below 1 Ω
T13-1 (GND) - T13-4 (E)	OFF	10 Ω or higher
T13-3 (H) - T13-5 (R)	OFF	10 Ω or higher
T13-2 (B) - T13-5 (R)	RELEASE	Below 1 Ω
T13-3 (H) - T13-4 (E)	RELEASE	Below 1 Ω
T13-2 (B) - T13-4 (E)	RELEASE	10 Ω or higher
T13-3 (H) - T13-5 (R)	RELEASE	10 Ω or higher

If the result is not as specified, replace the switch.

INSTALLATION

1. INSTALL FRONT POWER SEAT LUMBAR SWITCH

(a) Install the front power seat lumbar switch with the 2 screws.

2. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)

3. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)

4. INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)

5. INSTALL FRONT SEAT ASSEMBLY (See page SE-109)

6. INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)

7. INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)

8. INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)

9. INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)

10. INSTALL FRONT SEAT HEADREST ASSEMBLY

11. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
12. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
13. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
14. **INSTALL FRONT SEAT ASSEMBLY (See page SE-110)**
15. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
10. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
12. **REMOVE SEAT VARIABLE CUSHION SWITCH**
    (a) Remove the 2 screws and seat variable cushion switch.

SE

INSPECTION

1. **INSPECT SEAT VARIABLE CUSHION SWITCH (w/ Seat Position Memory System)**
   (a) Inspect the seat variable cushion switch.
      (1) Measure the resistance between the terminals when the switch is operated.
      Standard resistance

Tester Connection	Switch Condition	Specified Condition
U11-4 (E2) - U11-5 (CSNF)	FRONT	Below 1 Ω
U11-2 (B) - U11-3 (CSNR)	FRONT	Below 1 Ω
U11-4 (E2) - U11-3 (CSNR)	FRONT	10 kΩ or higher
U11-2 (B) - U11-5 (CSNF)	FRONT	10 kΩ or higher

Tester Connection	Switch Condition	Specified Condition
U11-4 (E2) - U11-5 (CSNF)	OFF	Below 1 Ω
U11-1 (E1) - U11-3 (CSNR)	OFF	Below 1 Ω
U11-4 (E2) - U11-3 (CSNR)	OFF	10 kΩ or higher
U11-1 (E1) - U11-5 (CSNF)	OFF	10 kΩ or higher
U11-1 (E1) - U11-3 (CSNR)	REAR	Below 1 Ω
U11-2 (B) - U11-5 (CSNF)	REAR	Below 1 Ω
U11-1 (E1) - U11-5 (CSNF)	REAR	10 kΩ or higher
U11-2 (B) - U11-3 (CSNR)	REAR	10 kΩ or higher

If the result is not as specified, replace the seat variable cushion switch.

INSTALLATION

1. **INSTALL SEAT VARIABLE CUSHION SWITCH**
   (a) Install the seat variable cushion switch with the 2 screws.
2. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
3. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
4. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
5. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
6. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
7. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
8. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
9. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
10. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
11. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
12. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
13. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)

14. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**

15. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**
10. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
12. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
13. **REMOVE FRONT SEAT INNER CUSHION SHIELD (See page SE-86)**
14. **REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-91)**
15. **REMOVE FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-91)**
16. **REMOVE FRONT SEAT HEADREST SUPPORT (See page SE-91)**
17. **REMOVE FRONT SEAT HEADREST SUPPORT**
18. **REMOVE FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-92)**
19. **REMOVE LUMBAR SUPPORT ADJUSTER ASSEMBLY**
    (a) Disconnect the connector.
    (b) Remove the 2 screws and lumbar support adjuster assembly.

SE

INSPECTION

1. INSPECT LUMBAR SUPPORT ADJUSTER ASSEMBLY LH

(a) Check operation of the lumbar support adjuster.

(1) Check if the lumbar support adjuster moves smoothly when the battery is connected to the lumbar support adjuster motor connector terminals.

OK

Measurement Condition	Operation Direction
Battery positive (+) → U8-2 Battery negative (-) → U8-1	Clockwise
Battery positive (+) → U8-1 Battery negative (-) → U8-2	Counterclockwise

If the result is not as specified, replace the lumbar support adjuster LH.

2. INSPECT LUMBAR SUPPORT ADJUSTER ASSEMBLY RH

(a) Check operation of the lumbar support adjuster.

(1) Check if the lumbar support adjuster moves smoothly when the battery is connected to the lumbar support adjuster motor connector terminals.

OK

Measurement Condition	Operation Direction
Battery positive (+) → T10-1 Battery negative (-) → T10-2	Clockwise
Battery positive (+) → T10-2 Battery negative (-) → T10-1	Counterclockwise

If the result is not as specified, replace the lumbar support adjuster RH.

INSTALLATION

1. INSTALL LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Install the lumber support adjuster assembly with the 2 screws.

(b) Connect the connector.

2. INSTALL FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-100)

3. INSTALL FRONT SEAT HEADREST SUPPORT (See page SE-101)

4. INSTALL FRONT SEAT HEADREST SUPPORT

5. INSTALL FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-101)

6. INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-101)

7. INSTALL FRONT SEAT INNER CUSHION SHIELD (See page SE-107)

8. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
9. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
10. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
11. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)**
12. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
13. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
14. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
15. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
16. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
17. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
18. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
19. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
20. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
21. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
22. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**
10. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
12. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
13. **REMOVE FRONT SEAT INNER CUSHION SHIELD (See page SE-86)**
14. **REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-91)**
15. **REMOVE FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-91)**
16. **REMOVE FRONT SEAT HEADREST SUPPORT (See page SE-91)**
17. **REMOVE FRONT SEAT HEADREST SUPPORT**
18. **REMOVE FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-92)**
19. **REMOVE SEATBACK CLIMATE CONTROL BLOWER**
    (a) Disconnect the connector and detach the 4 clamps.

SE

(b) Using a T30 "TORX" socket, remove the 6 "TORX" bolts and remove the seatback climate control blower.

INSPECTION

1. INSPECT SEAT CLIMATE CONTROL BLOWER LH (FRONT SEATBACK BLOWER LH)

(a) Connect the battery positive (+) lead to terminal U14-2 (IG), and the negative (-) lead to terminal U14-1 (GND). Check that the blower fan motor operates smoothly.
If the result is not as specified, replace the blower.

2. INSPECT SEAT CLIMATE CONTROL BLOWER RH (FRONT SEATBACK BLOWER RH)

(a) Connect the battery positive (+) lead to terminal T16-2 (IG), and the negative (-) lead to terminal T16-1 (GND). Check that the blower fan motor operates smoothly.
If the result is not as specified, replace the blower.

INSTALLATION

1. INSTALL SEATBACK CLIMATE CONTROL BLOWER

(a) Using T30 "TORX" socket, install the seatback climate control blower with the 6 "TORX" bolts.

(b) Connect the 4 clamps and connector.

2. INSTALL FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-100)

3. INSTALL FRONT SEAT HEADREST SUPPORT (See page SE-101)

4. INSTALL FRONT SEAT HEADREST SUPPORT

5. INSTALL FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-101)

6. **INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-101)**
7. **INSTALL FRONT SEAT INNER CUSHION SHIELD (See page SE-107)**
8. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
9. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
10. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
11. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)**
12. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
13. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
14. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
15. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
16. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
17. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
18. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
19. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
20. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
21. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
22. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
10. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
12. **REMOVE SEAT VARIABLE CUSHION SWITCH**
    (a) Remove the 2 screws and seat variable cushion switch.

SE

INSPECTION

1. **INSPECT SEAT VARIABLE CUSHION SWITCH (w/ Seat Position Memory System)**
   (a) Inspect the seat variable cushion switch.
      (1) Measure the resistance between the terminals when the switch is operated.
      Standard resistance

Tester Connection	Switch Condition	Specified Condition
U11-4 (E2) - U11-5 (CSNF)	FRONT	Below 1 Ω
U11-2 (B) - U11-3 (CSNR)	FRONT	Below 1 Ω
U11-4 (E2) - U11-3 (CSNR)	FRONT	10 kΩ or higher
U11-2 (B) - U11-5 (CSNF)	FRONT	10 kΩ or higher

Tester Connection	Switch Condition	Specified Condition
U11-4 (E2) - U11-5 (CSNF)	OFF	Below 1 Ω
U11-1 (E1) - U11-3 (CSNR)	OFF	Below 1 Ω
U11-4 (E2) - U11-3 (CSNR)	OFF	10 kΩ or higher
U11-1 (E1) - U11-5 (CSNF)	OFF	10 kΩ or higher
U11-1 (E1) - U11-3 (CSNR)	REAR	Below 1 Ω
U11-2 (B) - U11-5 (CSNF)	REAR	Below 1 Ω
U11-1 (E1) - U11-5 (CSNF)	REAR	10 kΩ or higher
U11-2 (B) - U11-3 (CSNR)	REAR	10 kΩ or higher

If the result is not as specified, replace the seat variable cushion switch.

INSTALLATION

1. **INSTALL SEAT VARIABLE CUSHION SWITCH**
   (a) Install the seat variable cushion switch with the 2 screws.
2. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
3. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
4. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
5. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
6. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
7. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
8. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
9. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
10. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
11. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
12. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
13. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)

14. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**

15. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**
10. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
12. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
13. **REMOVE FRONT SEAT INNER CUSHION SHIELD (See page SE-86)**
14. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Variable Cushion) (See page SE-86)**
15. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Variable Cushion) (See page SE-90)**
16. **REMOVE SEAT CUSHION CLIMATE CONTROL DUCT (See page SE-94)**
17. **REMOVE SEAT CUSHION CLIMATE CONTROL BLOWER**
    (a) Disconnect the connector.
    (b) Remove the screw, detach the claw and remove the seat cushion climate control blower.

SE

18. REMOVE SEAT CLIMATE CONTROL BLOWER

(a) Remove the 3 bolts, 3 nuts, bracket, and seat climate control blower.

INSPECTION

1. INSPECT SEAT CLIMATE CONTROL BLOWER LH (FRONT SEAT CUSHION BLOWER LH)

(a) Connect the battery positive (+) lead to terminal U15-1 (IG), and the negative (-) lead to terminal U15-4 (GND). Check that the blower fan motor operates smoothly.
If the result is not as specified, replace the blower.

2. INSPECT SEAT CLIMATE CONTROL BLOWER RH (FRONT SEAT CUSHION BLOWER RH)

(a) Connect the battery positive (+) lead to terminal T17-1 (IG), and the negative (-) lead to terminal T17-4 (GND). Check that the blower fan motor operates smoothly.
If the result is not as specified, replace the blower.

INSTALLATION

1. INSTALL SEAT CLIMATE CONTROL BLOWER

(a) Install the seat climate control blower and bracket with the 3 bolts and 3 nuts.

2. INSTALL SEAT CUSHION CLIMATE CONTROL BLOWER

(a) Engage the 2 claws to install the seat cushion climate control blower.

(b) Install the seat cushion climate control blower with the screw.
Torque: 2.6 N*m (27 kgf*cm, 23 in.*lbf)

(c) Connect the connector.

3. INSTALL SEAT CUSHION CLIMATE CONTROL DUCT (See page SE-98)

SE

4. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Variable Cushion) (See page SE-104)**
5. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Variable Cushion) (See page SE-105)**
6. **INSTALL FRONT SEAT INNER CUSHION SHIELD (See page SE-107)**
7. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
8. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
9. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
10. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)**
11. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
12. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
13. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
14. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
15. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
16. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
17. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
18. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
19. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
20. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
21. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

(c) Inspect seat heater switch illumination.
(1) Apply battery voltage and check operation of the switch, as shown in the table below.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal F3-4 (ILL+) Battery negative (-) → Terminal F3-3 (ILL-)	Illumination comes on

INSTALLATION

1. INSTALL SEAT HEATER SWITCH
(a) Engage the 4 claws and install the seat heater switch.

2. INSTALL HEATER SEAT SWITCH CONSOLE BASE
(See page IP-41)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**
10. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
12. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
13. **REMOVE FRONT SEAT INNER CUSHION SHIELD (See page SE-86)**
14. **REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-91)**
15. **REMOVE FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-91)**
16. **REMOVE FRONT SEAT HEADREST SUPPORT (See page SE-91)**
17. **REMOVE FRONT SEAT HEADREST SUPPORT**
18. **REMOVE FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-92)**
19. **REMOVE FRONT SEPARATE TYPE SEATBACK COVER (See page SE-92)**

20. REMOVE FRONT SEATBACK HEATER

(a) Cut off the tack pins that fasten the seat heater, and then remove the front seatback heater from the front separate type seatback cover.

INSPECTION

1. INSPECT FRONT SEATBACK HEATER

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Always	Below 1 Ω

INSTALLATION

1. INSTALL FRONT SEATBACK HEATER

(a) Using a tacker, install the front seatback heater to the end of the seat cover with the 11 new tack pins.

2. INSTALL FRONT SEPARATE TYPE SEATBACK COVER (See page SE-100)

3. INSTALL FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-100)

4. INSTALL FRONT SEAT HEADREST SUPPORT (See page SE-101)

5. INSTALL FRONT SEAT HEADREST SUPPORT

6. INSTALL FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-101)

7. INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-101)

8. INSTALL FRONT SEAT INNER CUSHION SHIELD (See page SE-107)

9. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)

10. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)

11. INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)

12. INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)

13. INSTALL FRONT SEAT ASSEMBLY (See page SE-109)

14. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
15. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
16. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
17. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
18. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
19. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
20. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
21. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
22. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
23. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

SEAT HEATER SWITCH

COMPONENTS

P

B145397E01

REMOVAL

1. REMOVE HEATER SEAT SWITCH CONSOLE BASE (See page IP-18)

2. REMOVE SEAT HEATER SWITCH

(a) Disengage the 4 claws and remove the seat heater switch.

INSPECTION

1. INSPECT SEAT HEATER SWITCH

(a) Inspect seat heater switch operation.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
F3-1 (RV) - F3-6 (SW)	OFF: Front RH Vol: 0	Below 2.5 kΩ
	OFF: Front RH Vol: 3	Below 376 Ω
F3-2 (REL1) - F3-11 (SW)	OFF: Front LH Vol: 0	Below 2.5 kΩ
	OFF: Front LH Vol: 3	Below 376 Ω
F3-7 (BLLH) - F3-10 (SVSG)	OFF: Front RH Vol: 0	Below 1.1 kΩ
	OFF: Front RH Vol: 3	Below 111 Ω
F3-8 (SVS5) - F3-10 (SVSG)	Always	Below 770 Ω to 1.43 kΩ
F3-9 (BLRH) - F3-10 (SVSG)	OFF: Front LH Vol: 0	Below 1.1 kΩ
	OFF: Front LH Vol: 3	Below 111 Ω

(b) Inspect seat heater switch indicator operation.

(1) Apply battery voltage and check operation of the switch, as shown in the table below.

OK

Measurement Condition	Condition	Specified Condition
Battery positive (+) → Terminal F3-5 (IG) Battery negative (-) → Terminal F3-12 (E)	Seat heater switch ON	Indicator comes on

SE

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**
10. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
12. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
13. **REMOVE FRONT SEAT INNER CUSHION SHIELD (See page SE-86)**
14. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Variable Cushion) (See page SE-86)**
15. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Variable Cushion) (See page SE-88)**
16. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (W/o variable cushion) (See page SE-89)**
17. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (W/ variable cushion) (See page SE-90)**
18. **REMOVE FRONT SEAT CUSHION HEATER**
    (a) Cut off the tack pins that fasten the seat heater, and then remove the front seat cushion heater assembly from the separate type front seat cushion cover.

SE

INSPECTION

1. **INSPECT FRONT SEAT CUSHION HEATER**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Condition	Specified Condition
A-1 - B-1	Below 25°C (77°F)	3.05 to 3.65 Ω
A-4 - B-2		
A-1 - A-4		
B-1 - B-2		
A-2 - A-3	35°C (95°F)	8 to 12 kΩ

INSTALLATION

1. **INSTALL FRONT SEAT CUSHION HEATER**
   (a) Using a tacker, install the front seat cushion heater to the end of the seat cover with the tack pins.
2. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER (w/o variable cushion) (See page SE-102)**
3. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (w/ variable cushion) (See page SE-103)**
4. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Variable Cushion) (See page SE-104)**
5. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Variable Cushion) (See page SE-105)**
6. **INSTALL FRONT SEAT INNER CUSHION SHIELD (See page SE-107)**
7. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
8. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
9. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
10. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)**
11. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
12. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
13. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**

14. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
15. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
16. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
17. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
18. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
19. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
20. **INSPECT AND ADJUST FRONT SEAT ASSEMBLY (See page SE-110)**
21. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**
10. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
12. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
13. **REMOVE FRONT SEAT INNER CUSHION SHIELD (See page SE-86)**
14. **REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-91)**
15. **REMOVE FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-91)**
16. **REMOVE FRONT SEAT HEADREST SUPPORT (See page SE-91)**
17. **REMOVE FRONT SEAT HEADREST SUPPORT**
18. **REMOVE FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-92)**
19. **REMOVE FRONT SEPARATE TYPE SEATBACK COVER (See page SE-92)**

20. REMOVE FRONT SEATBACK HEATER

(a) Cut off the tack pins that fasten the seat heater, and then remove the front seatback heater from the front separate type seatback cover.

INSPECTION

1. INSPECT FRONT SEATBACK HEATER

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Always	Below 1 Ω

INSTALLATION

1. INSTALL FRONT SEATBACK HEATER

(a) Using a tacker, install the front seatback heater to the end of the seat cover with the 11 new tack pins.

2. INSTALL FRONT SEPARATE TYPE SEATBACK COVER (See page SE-100)

3. INSTALL FRONT SEPARATE TYPE SEATBACK COVER WITH PAD (See page SE-100)

4. INSTALL FRONT SEAT HEADREST SUPPORT (See page SE-101)

5. INSTALL FRONT SEAT HEADREST SUPPORT

6. INSTALL FRONT SEATBACK BOARD COVER SUB-ASSEMBLY (See page SE-101)

7. INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY (See page SE-101)

8. INSTALL FRONT SEAT INNER CUSHION SHIELD (See page SE-107)

9. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)

10. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)

11. INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)

12. INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)

13. INSTALL FRONT SEAT ASSEMBLY (See page SE-109)

14. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
15. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
16. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
17. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
18. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
19. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
20. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
21. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
22. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
23. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

INSPECTION

1. INSPECT FRONT SEAT HEATER CONTROL LH

(a) Disconnect the seat heater control LH connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
U16-6 (E) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
U16-1 (SWL) - U16-6 (E)	Engine switch on (IG), seat heater switch OFF → ON	0 V → 10 to 14 V
U16-4 (B) - U16-6 (E)	Engine switch off → on (IG)	0 V → 10 to 14 V

(c) Reconnect the seat heater control LH connector.

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
U16-5 (THL) - U16-6 (E)	Engine switch on (IG), seat heater switch volume 1 → 3	Gradual increase 0 V → 10 to 14 V

2. INSPECT FRONT SEAT HEATER CONTROL RH

(a) Disconnect the seat heater control RH connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
T18-6 (E) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
T18-1 (SWR) - T18-6 (E)	Engine switch on (IG), seat heater switch OFF → ON	0 V → 10 to 14 V
T18-4 (B1) - T18-6 (E)	Engine switch off → on (IG)	0 V → 10 to 14 V

(c) Reconnect the seat heater control RH connector.

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
T18-5 (THR) - T18-6 (E)	Engine switch on (IG), seat heater switch volume 1 → 3	Gradual increase 0 V → 10 to 14 V

INSTALLATION

1. **INSTALL SEAT HEATER CONTROL**
   (a) Install the seat heater control with the clamp and claw.
   (b) Connect the 2 connectors.
2. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
3. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
4. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
5. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
6. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
7. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
8. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
9. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
10. **REMOVE PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
11. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
12. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)**
10. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-84)**
11. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-84)**
12. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-84)**
13. **REMOVE FRONT SEAT INNER CUSHION SHIELD (See page SE-86)**
14. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Variable Cushion) (See page SE-86)**
15. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Variable Cushion) (See page SE-88)**
16. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (W/o variable cushion) (See page SE-89)**
17. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (W/ variable cushion) (See page SE-90)**
18. **REMOVE FRONT SEAT CUSHION HEATER**
    (a) Cut off the tack pins that fasten the seat heater, and then remove the front seat cushion heater assembly from the separate type front seat cushion cover.

SE

INSPECTION

1. **INSPECT FRONT SEAT CUSHION HEATER**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Condition	Specified Condition
A-1 - B-1	Below 25°C (77°F)	3.05 to 3.65 Ω
A-4 - B-2		
A-1 - A-4		
B-1 - B-2		
A-2 - A-3	35°C (95°F)	8 to 12 kΩ

INSTALLATION

1. **INSTALL FRONT SEAT CUSHION HEATER**
   (a) Using a tacker, install the front seat cushion heater to the end of the seat cover with the tack pins.
2. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER (w/o variable cushion) (See page SE-102)**
3. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (w/ variable cushion) (See page SE-103)**
4. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/o Variable Cushion) (See page SE-104)**
5. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER WITH PAD (w/ Variable Cushion) (See page SE-105)**
6. **INSTALL FRONT SEAT INNER CUSHION SHIELD (See page SE-107)**
7. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-108)**
8. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-108)**
9. **INSTALL RECLINING POWER SEAT SWITCH KNOB (See page SE-109)**
10. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-24)**
11. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
12. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
13. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**

14. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
15. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
16. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
17. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
18. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
19. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
20. **INSPECT AND ADJUST FRONT SEAT ASSEMBLY (See page SE-110)**
21. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

SEAT HEATER CONTROL

COMPONENTS

SE

REMOVAL

1. **REMOVE SEAT BELT ANCHOR COVER CAP (See page SB-22)**
2. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-22)**
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
4. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-83)**
5. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER (See page SE-83)**
6. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-83)**
7. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-83)**
8. **REMOVE FRONT SEAT ASSEMBLY (See page SE-83)**
9. **REMOVE SEAT HEATER CONTROL**
   (a) Disconnect the 2 connectors.
   (b) Disconnect the clamp and claw, and remove the seat heater control sub-assembly.

INSPECTION

1. INSPECT FRONT SEAT HEATER CONTROL LH

(a) Disconnect the seat heater control LH connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
U16-6 (E) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
U16-1 (SWL) - U16-6 (E)	Engine switch on (IG), seat heater switch OFF → ON	0 V → 10 to 14 V
U16-4 (B) - U16-6 (E)	Engine switch off → on (IG)	0 V → 10 to 14 V

(c) Reconnect the seat heater control LH connector.

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
U16-5 (THL) - U16-6 (E)	Engine switch on (IG), seat heater switch volume 1 → 3	Gradual increase 0 V → 10 to 14 V

2. INSPECT FRONT SEAT HEATER CONTROL RH

(a) Disconnect the seat heater control RH connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
T18-6 (E) - Body ground	Always	Below 1 Ω

Standard voltage

Tester Connection	Condition	Specified Condition
T18-1 (SWR) - T18-6 (E)	Engine switch on (IG), seat heater switch OFF → ON	0 V → 10 to 14 V
T18-4 (B1) - T18-6 (E)	Engine switch off → on (IG)	0 V → 10 to 14 V

(c) Reconnect the seat heater control RH connector.

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
T18-5 (THR) - T18-6 (E)	Engine switch on (IG), seat heater switch volume 1 → 3	Gradual increase 0 V → 10 to 14 V

INSTALLATION

1. **INSTALL SEAT HEATER CONTROL**
   (a) Install the seat heater control with the clamp and claw.
   (b) Connect the 2 connectors.
2. **INSTALL FRONT SEAT ASSEMBLY (See page SE-109)**
3. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER (See page SE-110)**
4. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER (See page SE-110)**
5. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER (See page SE-110)**
6. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER (See page SE-110)**
7. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
8. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY (See page SB-31)**
9. **INSTALL SEAT BELT ANCHOR COVER CAP (See page SB-31)**
10. **REMOVE PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery cable (See Page IN-33)
11. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**
12. **INSPECT SRS WARNING LIGHT**
    Check the SRS warning light. (See Page RS-37)

PROBLEM SYMPTOMS TABLE

LUGGAGE COMPARTMENT DOOR OPENER SYSTEM

Symptom	Suspected Area	See page
Luggage compartment door opener does not operate	Luggage compartment door opener circuit	ED-8

TERMINALS OF ECU

1. CHECK MAIN BODY ECU

(a) Disconnect the DA and DF junction block connectors.

(b) Disconnect the E59 main body ECU connector.

(c) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BATB (DA-1) - Body ground	W - Body ground	Battery (power supply)	Always	10 to 14 V
GND1 (DF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND3 (E59-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(d) Reconnect the DF and DA junction block connectors.

(e) Reconnect the E59 main body ECU connector.

(f) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
TSW (E61-26) - Body ground	V - Body ground	Luggage compartment door opener inner switch signal input	Luggage compartment door inner opener switch OFF	10 to 14 V
			Luggage compartment door inner opener switch ON	Below 1 V
TMSW (E59-3) - Body ground	P - Body ground	Luggage compartment door opener main switch signal input	Luggage compartment door opener main switch OFF	10 to 14 V
			Luggage compartment door opener main switch ON	Below 1 V

If the result is not as specified, the ECU or the switch may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

ED

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch off*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the engine switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side or tester side.
HINT:
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester to read the DATA LIST allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful as intermittent conditions or signals may be discovered before parts or wiring are disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DATA LIST on the tester's screen.

MAIN BODY:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TRNK/BDR OPN SW	Luggage door opener inner switch signal/ON or OFF	ON: Luggage compartment door opener inner switch is pushed OFF: Luggage compartment door opener inner switch is not pushed	-
TRNK MAIN SW	Luggage door opener main switch signal/ON or OFF	ON: Luggage compartment door opener main switch is pushed OFF: Luggage compartment door opener main switch is not pushed	-

2. PERFORM ACTIVE TEST

HINT:
Using the intelligent tester to perform ACTIVE TEST allows relays, VSVs, actuators and other items to be tested without removing any parts. This non-intrusive inspection can be very useful as intermittent conditions or signals may be discovered before parts or wiring are disturbed. Using the ACTIVE TEST early in troubleshooting is one way to save diagnostic time. It is possible to view Data List information on the intelligent tester while performing ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).

(c) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note
TRUNK/BDR OPEN	Operate luggage compartment door lock motor	ON/OFF	-

PROBLEM SYMPTOMS TABLE

LUGGAGE COMPARTMENT DOOR OPENER SYSTEM

Symptom	Suspected Area	See page
Luggage compartment door opener does not operate	Luggage compartment door opener circuit	ED-8

TERMINALS OF ECU

1. CHECK MAIN BODY ECU

(a) Disconnect the DA and DF junction block connectors.

(b) Disconnect the E59 main body ECU connector.

(c) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BATB (DA-1) - Body ground	W - Body ground	Battery (power supply)	Always	10 to 14 V
GND1 (DF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND3 (E59-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(d) Reconnect the DF and DA junction block connectors.

(e) Reconnect the E59 main body ECU connector.

(f) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
TSW (E61-26) - Body ground	V - Body ground	Luggage compartment door opener inner switch signal input	Luggage compartment door inner opener switch OFF	10 to 14 V
			Luggage compartment door inner opener switch ON	Below 1 V
TMSW (E59-3) - Body ground	P - Body ground	Luggage compartment door opener main switch signal input	Luggage compartment door opener main switch OFF	10 to 14 V
			Luggage compartment door opener main switch ON	Below 1 V

If the result is not as specified, the ECU or the switch may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

ED

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω

MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note
TRUNK/BDR OPEN	Operate luggage compartment door lock motor	ON/OFF	-

Luggage Compartment Door Opener Circuit

DESCRIPTION

While the main body ECU has received the OFF signal from the luggage compartment opener main switch, the main body ECU activates the luggage compartment door lock motor when the ON signal from the luggage compartment door opener inner switch is received.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY LUGGAGE COMPARTMENT DOOR LOCK

(a) Select the ACTIVE TEST, use the intelligent tester (with CAN VIM) to generate a control command, and check that the luggage compartment door lock motor operates.

Tester Display	Test Part	Control Range	Diagnostic Note
TRUNK/BDOR OPEN	Operate luggage compartment door lock motor	ON/OFF	-

ED

OK:
Luggage compartment door lock motor operates.

OK → **Go to step 4**

NG

2 INSPECT LUGGAGE COMPARTMENT DOOR LOCK

(a) Remove the luggage compartment door lock (See page ED-90).
(b) Move the door lock to the lock position.
(c) Apply battery voltage to the door lock motor and check operation of the door lock motor.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Luggage compartment door lock motor unlock

NG → **REPLACE LUGGAGE COMPARTMENT DOOR LOCK (See page ED-90)**

OK

3 CHECK HARNESS AND CONNECTOR (LUGGAGE COMPARTMENT DOOR LOCK - MAIN BODY ECU)

(a) Disconnect the R1 lock and E61 ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
R1-1 - E61-1 (TR+)	Always	Below 1 Ω
R1-1 - Body ground	Always	10 kΩ or higher
R1-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG) and turn the intelligent tester main switch on.
(c) Select TRNK/BDR OPN SW and TRNK MAIN SW in the DATA LIST and read the value displayed on the intelligent tester.

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TRNK/BDR OPN SW	Luggage door opening inner switch/ON or OFF	ON: Luggage compartment door opener inner switch is pressed OFF: Luggage compartment door opener inner switch is not pressed	-
TRNK MAIN SW	Luggage door opener main switch signal/ON or OFF	ON: Luggage compartment door opener main switch is pushed ON: Luggage compartment door opener main switch is not pushed	-

OK:
ON (luggage compartment door opener inner switch is pressed) appears on the tester.
OK:
ON (luggage compartment door opener main switch is pressed) appears on the tester.

5 INSPECT LUGGAGE COMPARTMENT DOOR OPENER MAIN SWITCH

Luggage Compartment Door Opener Main Switch:

B139226E01

(a) Remove the luggage compartment door opener main switch (See page ED-102).
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch free (OFF)	10 kΩ or higher
	Switch pushed (ON)	Below 1 Ω

NG → **REPLACE LUGGAGE COMPARTMENT DOOR MAIN OPENER SWITCH (See page ED-102)**

OK

6 CHECK HARNESS AND CONNECTOR (LUGGAGE COMPARTMENT DOOR OPENER MAIN SW - MAIN BODY ECU)

(a) Install the luggage compartment door opener main switch (See page ED-103).

ED

Wire Harness Side Connector Front View:

(b) Disconnect the E57 switch and E59 ECU connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E57-2 - E59-3 (TMSW)	Always	Below 1 Ω
E57-2 - Body ground	Always	10 kΩ or higher
E57-1 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

7 INSPECT LUGGAGE COMPARTMENT DOOR OPENER INNER SWITCH

Luggage Compartment Door Opener Inner Switch:

(a) Remove the luggage compartment door opener inner switch (See page ED-99).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
5 - 6	Switch free (OFF)	10 kΩ or higher
	Switch pushed (ON)	Below 1 Ω

NG → **REPLACE LUGGAGE COMPARTMENT DOOR OPENER INNER SWITCH (See page ED-99)**

OK

ED

8	CHECK HARNESS AND CONNECTOR (LUGGAGE COMPARTMENT DOOR OPENER INNER SW - MAIN BODY ECU)

(a) Install the luggage compartment door opener inner switch (See page ED-100).
(b) Disconnect the E56 switch and E61 ECU connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E56-6 - E61-26 (TSW)	Always	Below 1 Ω
E56-6 - Body ground	Always	10 kΩ or higher
E56-5 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Luggage Compartment Door Opener Circuit

DESCRIPTION

While the main body ECU has received the OFF signal from the luggage compartment opener main switch, the main body ECU activates the luggage compartment door lock motor when the ON signal from the luggage compartment door opener inner switch is received.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY LUGGAGE COMPARTMENT DOOR LOCK

(a) Select the ACTIVE TEST, use the intelligent tester (with CAN VIM) to generate a control command, and check that the luggage compartment door lock motor operates.

Tester Display	Test Part	Control Range	Diagnostic Note
TRUNK/BDOR OPEN	Operate luggage compartment door lock motor	ON/OFF	-

ED

OK:
Luggage compartment door lock motor operates.

OK → **Go to step 4**

NG

2 INSPECT LUGGAGE COMPARTMENT DOOR LOCK

(a) Remove the luggage compartment door lock (See page ED-90).
(b) Move the door lock to the lock position.
(c) Apply battery voltage to the door lock motor and check operation of the door lock motor.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Luggage compartment door lock motor unlock

NG → **REPLACE LUGGAGE COMPARTMENT DOOR LOCK (See page ED-90)**

OK

3 CHECK HARNESS AND CONNECTOR (LUGGAGE COMPARTMENT DOOR LOCK - MAIN BODY ECU)

(a) Disconnect the R1 lock and E61 ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
R1-1 - E61-1 (TR+)	Always	Below 1 Ω
R1-1 - Body ground	Always	10 kΩ or higher
R1-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG) and turn the intelligent tester main switch on.
(c) Select TRNK/BDR OPN SW and TRNK MAIN SW in the DATA LIST and read the value displayed on the intelligent tester.

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TRNK/BDR OPN SW	Luggage door opening inner switch/ON or OFF	ON: Luggage compartment door opener inner switch is pressed OFF: Luggage compartment door opener inner switch is not pressed	-
TRNK MAIN SW	Luggage door opener main switch signal/ON or OFF	ON: Luggage compartment door opener main switch is pushed ON: Luggage compartment door opener main switch is not pushed	-

OK:
ON (luggage compartment door opener inner switch is pressed) appears on the tester.
OK:
ON (luggage compartment door opener main switch is pressed) appears on the tester.

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

FUEL LID OPENER SYSTEM

PRECAUTION

NOTICE:
Some systems need to be initialized after reconnecting the negative (-) battery terminal (See page IN-33).

PARTS LOCATION

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

The fuel lid opener is an electric type.

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

The fuel lid opener is an electric type.

HOOD

ON-VEHICLE INSPECTION

1. INSPECT HOOD SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through D are within each standard range.

Standard clearance

Area	Measurement	Area	Measurement
A	2.8 to 5.8 mm (0.110 to 0.228 in.)	C	2.0 to 5.0 mm (0.079 to 0.197 in.)
B	0.8 to 3.8 mm (0.032 to 0.150 in.)	D	-1.3 to 1.7 mm (-0.051 to 0.067 in.)

ADJUSTMENT

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts on. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-22)

2. REMOVE FRONT BUMPER ASSEMBLY (See page ET-5)

3. REMOVE MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-122)

4. ADJUST HOOD SUB-ASSEMBLY

(a) Horizontally and vertically adjust the hood.
  (1) Loosen the 4 hinge bolts of the hood.
  (2) Adjust the clearance between the hood and front fender by moving the hood.
  (3) Tighten the 4 hinge bolts after the adjustment.
  Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

(b) Adjust the height of the front end of the hood using the cushion rubber.
  (1) Adjust the cushion rubber so that the height of the hood and fender are aligned.
  HINT:
  Raise or lower the front end of the hood by turning the cushion rubber.

(c) Adjust the hood lock.
  (1) Using a screwdriver, remove the hood lock nut cap as shown in the illustration.
  HINT:
  Tape the screwdriver tip before use.

  (2) Loosen the 2 bolts and hood lock nut.
  (3) Tighten the bolts and nut after the adjustment.
  Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
  (4) Check that the striker can engage with the hood lock smoothly.
  (5) Install a new cap.

5. INSTALL MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-128)

6. INSTALL FRONT BUMPER ASSEMBLY

7. INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-50)

8. ADJUST MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-122)

9. VEHICLE PREPARATION FOR FOG LIGHT AIM (See page LI-141)

10. PREPARATION FOR FOG LIGHT AIMING (See page LI-142)

11. **FOG LIGHT AIMING INSPECTION (See page LI-143)**
12. **FOG LIGHT AIMING ADJUSTMENT (See page LI-144)**

HOW TO PROCEED WITH TROUBLESHOOTING

END

PROBLEM SYMPTOMS TABLE

FUEL LID OPENER SYSTEM

Symptom	Suspected Area	See page
Fuel lid does not open	1. FUEL OPN fuse	ED-14
	2. Fuel lid opener switch	ED-108
	3. Fuel lid opener motor assembly	ED-105
	4. Wire harness	ED-15

INSTALLATION

NOTICE:

- **Avoid touching the stroke portions of the rod as much as possible to prevent foreign matter from attaching to the stroke portions. Be sure to hold the cylinders while servicing the vehicle.**
- **Do not wear cotton gloves or other similar materials when handling the rod. Fibers may attach to the rod and result in gas leaks.**
- **Do not apply any load to the cylinders in the horizontal direction in order to prevent the rod from being deformed.**

1. **INSTALL HOOD STAY BRACKET**
   (a) Install the hood stay bracket with the bolt.
   Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)

2. **INSTALL HOOD SUPPORT ASSEMBLY**
   (a) Install the hood support assembly.
   NOTICE:
   - **Install the hood support assembly while supporting the hood by hand.**
   - **Check that the hood support assembly is engaged in the ball joint and that the hood support assembly cannot be pulled out.**

3. **INSTALL ENGINE ROOM SIDE COVER (See page WW-47)**

4. **INSTALL HOOD HINGE COVER (See page WW-47)**

5. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-50)**

DISPOSAL

1. **DISPOSE OF HOOD SUPPORT ASSEMBLY**
   (a) Secure the hood support horizontally in a vise with the piston-rod pulled out.
   (b) Wear safety glasses. Use a metal saw to slowly cut a groove between A and B shown in the illustration to release the gas.
   NOTICE:
   Although the gas inside the hood support is colorless, odorless, and harmless, metal debris may scatter. Therefore, cover the hood support with a piece of cloth or other material.

HOOD LOCK CONTROL CABLE ASSEMBLY

COMPONENTS

ED

REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-22)**
2. **REMOVE HOOD HINGE COVER (See page WW-38)**
3. **REMOVE ENGINE ROOM SIDE COVER (See page WW-39)**
4. **REMOVE HOOD TO FRONT FENDER SEAL**
5. **REMOVE FRONT WHEEL**
6. **REMOVE FRONT WHEEL OPENING EXTENSION PAD**
   (a) Remove the 3 screws and the front wheel opening extension pad.
7. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-5)**

8. **REMOVE FRONT FENDER LINER**
   (a) Remove the 6 clips and 5 screws.
   (b) Remove the 2 bolts and the front fender liner.
9. **REMOVE MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-122)**

10. **REMOVE HOOD LOCK ASSEMBLY**
    (a) Using a screwdriver, remove the hood lock nut cap as shown in the illustration.
    HINT:
    Tape the screwdriver tip before use.

ED

(b) Remove the 2 bolts and nut.

(c) Disconnect the hood lock control cable and connector.
(d) Remove the hood lock assembly.

11. REMOVE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY
(a) Detach the 3 claws.
(b) Disconnect the hood lock control cable and remove the hood lock control lever.

12. REMOVE HOOD LOCK CONTROL CABLE ASSEMBLY
(a) Using a screwdriver, disconnect the clamps shown in the illustration.

ED

Area	Part Name	Area	Part Name
A	Hood lock control cable	D	Radiator support upper
B	Radiator support brace	E	Grommet
C	Clamp	F	Side member outer panel

HINT:
Tape the screwdriver tip before use.

(b) Pull the cable from the engine compartment and remove it.

INSTALLATION

1. INSTALL HOOD LOCK CONTROL CABLE ASSEMBLY

(a) Pass the cable into the engine compartment.

Area	Part Name	Area	Part Name
A	Hood lock control cable	D	Radiator support upper
B	Radiator support brace	E	Grommet
C	Clamp	F	Side member outer panel

(b) Pass the cable rear side through the grommet until the cable stopper is attached to the grommet.

(c) Pass the cable front side through the upper radiator support.

2. INSTALL HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Install the hood lock control lever and connect the hood lock control cable.

(b) Attach the 3 claws.

3. INSTALL HOOD LOCK ASSEMBLY

(a) Apply MP grease to the sliding areas of the lock.

(b) Connect the hood lock control cable and connector.

(c) Install the hood lock assembly with the 2 bolts and nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(d) Install a new hood lock nut cap.

4. INSPECT HOOD SUB-ASSEMBLY (See page ED-17)

5. ADJUST HOOD SUB-ASSEMBLY (See page ED-18)

6. INSTALL MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-128)

7. INSTALL FRONT FENDER LINER

(a) Install the front fender liner with the 2 bolts.

(b) Install the 5 screws and 6 clips.

8. INSTALL FRONT BUMPER ASSEMBLY (See page ET-14)

9. INSTALL FRONT WHEEL OPENING EXTENSION PAD
(a) Install the front wheel opening extension pad with the 3 screws.

10. INSTALL FRONT WHEEL (See page SP-20)

11. INSTALL HOOD TO FRONT FENDER SEAL

12. INSTALL ENGINE ROOM SIDE COVER (See page WW-47)

13. INSTALL HOOD HINGE COVER (See page WW-47)

14. INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-50)

15. ADJUST MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-122)

16. VEHICLE PREPARATION FOR FOG LIGHT AIM (See page LI-141)

17. PREPARATION FOR FOG LIGHT AIMING (See page LI-142)

18. FOG LIGHT AIMING INSPECTION (See page LI-143)

19. FOG LIGHT AIMING ADJUSTMENT (See page LI-144)

INSTALLATION

1. INSTALL HOOD LOCK CONTROL CABLE ASSEMBLY

(a) Pass the cable into the engine compartment.

Area	Part Name	Area	Part Name
A	Hood lock control cable	D	Radiator support upper
B	Radiator support brace	E	Grommet
C	Clamp	F	Side member outer panel

(b) Pass the cable rear side through the grommet until the cable stopper is attached to the grommet.

(c) Pass the cable front side through the upper radiator support.

2. INSTALL HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Install the hood lock control lever and connect the hood lock control cable.

(b) Attach the 3 claws.

3. INSTALL HOOD LOCK ASSEMBLY

(a) Apply MP grease to the sliding areas of the lock.

(b) Connect the hood lock control cable and connector.

(c) Install the hood lock assembly with the 2 bolts and nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(d) Install a new hood lock nut cap.

4. INSPECT HOOD SUB-ASSEMBLY (See page ED-17)

5. ADJUST HOOD SUB-ASSEMBLY (See page ED-18)

6. INSTALL MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-128)

7. INSTALL FRONT FENDER LINER

(a) Install the front fender liner with the 2 bolts.

(b) Install the 5 screws and 6 clips.

8. INSTALL FRONT BUMPER ASSEMBLY (See page ET-14)

9. INSTALL FRONT WHEEL OPENING EXTENSION PAD
(a) Install the front wheel opening extension pad with the 3 screws.

10. INSTALL FRONT WHEEL (See page SP-20)

11. INSTALL HOOD TO FRONT FENDER SEAL

12. INSTALL ENGINE ROOM SIDE COVER (See page WW-47)

13. INSTALL HOOD HINGE COVER (See page WW-47)

14. INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-50)

15. ADJUST MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) (See page CC-122)

16. VEHICLE PREPARATION FOR FOG LIGHT AIM (See page LI-141)

17. PREPARATION FOR FOG LIGHT AIMING (See page LI-142)

18. FOG LIGHT AIMING INSPECTION (See page LI-143)

19. FOG LIGHT AIMING ADJUSTMENT (See page LI-144)

ON-VEHICLE INSPECTION

1. INSPECT FRONT DOOR PANEL SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through L are within each standard range.

Standard clearance

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	G	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	H	0.3 to 3.3 mm (0.012 to 0.130 in.)
C	3.3 to 6.3 mm (0.130 to 0.248 in.)	I	3.0 to 6.0 mm (0.118 to 0.236 in.)
D	1.8 to 4.8 mm (0.071 to 0.189 in.)	J	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
E	3.3 to 6.3 mm (0.130 to 0.248 in.)	K	2.5 to 5.5 mm (0.098 to 0.217 in.)
F	0.2 to 3.2 mm (0.008 to 0.126 in.)	L	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

DISASSEMBLY

1. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 3 claws, and remove the front door inside handle bezel plug.

2. REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 5 claws and 3 clips, and remove the front door armrest base panel assembly.

(b) Disconnect the connector.

3. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Driver Side)

(a) Remove the 3 screws and the power window regulator master switch assembly.

4. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side)

(a) Disengage the 2 claws and remove the power window regulator switch assembly.

5. REMOVE DOOR CONTROL SWITCH ASSEMBLY (for Front Passenger Side)

(a) Disengage the 2 claws and remove the door control switch assembly.

6. REMOVE COURTESY LIGHT ASSEMBLY

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the claw and remove the courtesy light assembly.

(b) Disconnect the connector.

7. REMOVE DOOR ARMREST COVER

(a) Remove the door armrest cover.

8. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Remove the 5 screws.

(b) Using a clip remover, disengage the 9 clips.

(c) Pull up the front door trim board in the direction indicated by the arrow.

(d) Disengage the reference bosses from the front door panel.

(e) Raise the front door trim board to disengage the 4 claws and remove the front door trim board together with the front door inner glass weatherstrip.

(f) Disconnect the cables and each connector from the back side of the inside handle and remove the front door trim board sub-assembly.

9. REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP

(a) Disengage the 4 clips as shown in the illustration and remove the front door inner glass weatherstrip from the front door trim board.

10. REMOVE SEAT MEMORY SWITCH (w/ Seat Position Memory System) (See page SE-123)

11. REMOVE DOOR FRAME GARNISH

(a) Using a clip remover, remove the clip.

(b) Disengage the clip and remove the door frame garnish.

12. REMOVE OUTER MIRROR PROTECTOR

(a) Remove the outer mirror protector.

HINT:

Remove the remaining butyl tape on the door side.

13. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-46)

14. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)

15. REMOVE FRONT NO. 1 DOOR TRIM BRACKET

(a) Remove the 2 screws and the front No. 1 door trim bracket.

16. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) Disconnect each connector and each clamp, and remove the front door service hole cover.
HINT:
Remove the remaining butyl tape on the door side.

17. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

(a) Remove the 2 bolts.
NOTICE:
After the bolts are removed, the door glass may fall, causing damage.

(b) Remove the front door glass sub-assembly as shown in the illustration.
NOTICE:
Do not damage the door glass.

18. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Loosen the temporary bolt.
NOTICE:
Do not remove the temporary bolt. If the temporary bolt is removed, the front door window regulator may fall, causing damage.

(b) Remove the 5 bolts.

(c) Remove the front door window regulator sub-assembly and the front power window regulator motor assembly as a unit.

(d) Remove the temporary bolt from the front door window regulator sub-assembly.

19. REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

(a) Using a "TORX" driver (T25), remove the 3 screws and the front power window regulator motor assembly.

20. REMOVE FRONT NO. 1 DOOR STIFFENER CUSHION

(a) Remove the 2 bolts.

(b) Remove the double-sided tape and the front No. 1 door stiffener cushion.

21. REMOVE FRONT DOOR GLASS RUN

(a) Remove the front door glass run.

22. REMOVE FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

(a) Remove the 2 bolts and the front door front lower frame sub-assembly as shown in the illustration.

23. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Remove the bolt and the front door rear lower frame sub-assembly as shown in the illustration.

24. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)

(a) Using an emergency key, disengage the 2 claws and remove the front door outside handle cover.

25. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)

(a) Remove the hole plug.

(b) Using a "TORX" socket wrench (T30), loosen the screw and remove the front door outside handle cover.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

26. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Remove the hole plug.

(b) Using a "TORX" socket wrench (T30), loosen the screw and remove the front door outside handle cover and the door lock key cylinder as a unit.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

(c) Disconnect the connector.

(d) Using a "TORX" socket wrench (T30), loosen the screw.

(e) Remove the front door outside handle assembly as shown in the illustration.

27. REMOVE FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the front door front outside handle pad.

28. REMOVE FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the front door rear outside handle pad.

29. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

(b) Slide the front door lock assembly downward, pull out the front door lock open rod from the outside handle frame, and remove the front door lock assembly and cables as a unit.

(c) Remove the front door lock open rod from the front door lock assembly.

(d) Remove the door lock wiring harness seal from the front door lock assembly.

30. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Remove the front door lock remote control cable assembly.

31. REMOVE FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.

(b) Remove the front door inside locking cable assembly.

32. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a "TORX" socket wrench (T30), loosen the screw.
HINT:
The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.
(b) Disconnect the connector.
(c) Disengage the 2 clamps.
(d) Disengage the claw and remove the front door outside handle frame sub-assembly.

33. REMOVE FRONT DOOR LOCK OPEN ROD

(a) Remove the front door lock open rod as shown in the illustration.

34. REMOVE DOOR ELECTRICAL KEY OSCILLATOR

(a) Remove the screw and door electrical key oscillator.

35. REMOVE FRONT DOOR CHECK COVER

(a) Remove the front door check cover.

36. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the bolt, 2 nuts, and front door check assembly.

37. REMOVE FRONT NO. 3 DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 4 clips and remove the front No. 3 door weatherstrip.

38. REMOVE FRONT DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 19 clips and remove the front door weatherstrip.

39. REMOVE FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)

40. REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-55)

41. REMOVE FRONT DOOR FRONT LOWER FRAME UPPER COVER (See page ET-56)

42. REMOVE FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY (See page ET-57)

43. REMOVE FRONT DOOR LOWER OUTSIDE MOULDING (See page ET-41)

ADJUSTMENT

HINT:

- Before adjusting the door positions of vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system, and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. DISCONNECT NEGATIVE BATTERY TERMINAL

CAUTION:
Wait for 90 seconds after disconnecting the terminal to prevent airbag deployment (See page RS-1).

2. ADJUST FRONT DOOR

(a) Using a clip remover, disengage the 4 clips and remove the front fender side panel protector.

(b) Using SST, loosen the hinge bolts on the vehicle body and adjust the door position.
SST 09812-00010

(c) Tighten the hinge bolts on the vehicle body after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(d) Loosen the hinge bolts on the door and adjust the door position.

(e) Tighten the hinge bolts on the door after the adjustment.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)

(f) Using a screwdriver, detach the 4 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.

(g) Adjust the striker position by slightly loosening the striker mounting screws with a "TORX" socket wrench (T40) and hitting the striker with a plastic hammer.

(h) Using a "TORX" socket wrench (T40), tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

3. CONNECT NEGATIVE BATTERY TERMINAL

4. PERFORM INITIALIZATION
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).

5. INSPECT SRS WARNING LIGHT
(See page RS-37)

REASSEMBLY

1. **INSTALL FRONT DOOR LOWER OUTSIDE MOULDING (See page ET-42)**
2. **INSTALL FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY (See page ET-57)**
3. **INSTALL FRONT DOOR FRONT LOWER FRAME UPPER COVER (See page ET-58)**
4. **INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-59)**
5. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)**
6. **INSTALL FRONT DOOR WEATHERSTRIP**
   (a) Engage the 19 clips and install the front door weatherstrip.

7. **INSTALL FRONT NO. 3 DOOR WEATHERSTRIP**
   (a) Install the front No. 3 door weatherstrip with the 4 clips.

8. **INSTALL FRONT DOOR CHECK ASSEMBLY**
   (a) Install the front door check assembly with the bolt and the 2 nuts.
   Torque: Bolt
   27 N*m (275 kgf*cm, 20 ft.*lbf)
   Nut
   8.0 N*m (82 kgf*cm, 71 in.*lbf)

9. INSTALL FRONT DOOR CHECK COVER

(a) Install the front door check cover.

10. INSTALL DOOR ELECTRICAL KEY OSCILLATOR

(a) Install the door electrical key oscillator with the screw.

11. INSTALL FRONT DOOR LOCK OPEN ROD

(a) Install the front door lock open rod as shown in the illustration.

12. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts of the front door outside handle frame sub-assembly.

(b) Engage the claw to install the front door outside handle frame sub-assembly.

(c) Using a "TORX" socket wrench (T30), install the front door outside handle frame sub-assembly with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

(d) Engage the 2 clamps.

(e) Connect the connector.

13. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Install the front door inside locking cable assembly.

(b) Engage the 3 claws.

14. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Install the front door lock remote control cable assembly.

15. INSTALL FRONT DOOR LOCK ASSEMBLY

NOTICE:

- **When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the connector with a new one.**
- **Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.**
- **Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion to the connection. This may result in a malfunction of the front door lock assembly.**

(a) Apply MP grease to the sliding parts of the front door lock assembly.

(b) Install a new door lock wiring harness seal to the front door lock assembly.

(c) Insert the front door lock open rod to the front door lock assembly, and set it to the front door outside handle frame.
(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.
(e) Using a "TORX" socket wrench (T30), install the front door lock assembly with the 3 screws.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
(f) Connect the connector.

16. INSTALL FRONT DOOR REAR OUTSIDE HANDLE PAD
(a) Engage the 2 claws to install the front door rear outside handle pad.

17. INSTALL FRONT DOOR FRONT OUTSIDE HANDLE PAD
(a) Engage the 3 claws to install the front door front outside handle pad.

18. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY
(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.
(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame. Next, slide the front door outside handle assembly toward the front of the vehicle to install it.

(c) Using a "TORX" socket wrench (T30), install the front door outside handle assembly with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(d) Connect the connector.

19. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)
(a) Install the front door lock cylinder.
HINT:
Make sure that the front door lock cylinder rod is inserted into the front door lock assembly.

(b) Using a "TORX" socket wrench (T30), install the front door lock cylinder with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(c) Install the hole plug.

(d) Engage the 2 claws to install the front door outside handle cover to the front door lock cylinder.

20. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)
(a) Using a "TORX" socket wrench (T30), install the front door outside handle cover with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(b) Install the hole plug.

21. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Install the front door rear lower frame sub-assembly with the bolt.

22. INSTALL FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

(a) Install the front door front lower frame sub-assembly with the 2 bolts.

23. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run.

24. INSTALL FRONT NO. 1 DOOR STIFFENER CUSHION

(a) Install a new front No. 1 door stiffener cushion with the 2 bolts and double-sided tape.

25. INSTALL FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

NOTICE:

The regulator arm must be below the intermediate position when installing the power window regulator motor.

(a) Using a "TORX" driver (T25), install the front power window regulator motor sub-assembly with the 3 screws.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

HINT:

A new front window regulator adopts a self-tapping method. The installation position of the regulator will be threaded when the self-tapping screw is inserted.

26. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts of the front door window regulator sub-assembly.

(b) Install the temporary bolt to the front door window regulator sub-assembly.
NOTICE:
Align the claw on the regulator bracket with the panel hole on the front side.

(c) Temporarily install the window regulator.

(d) Tighten the 6 bolts in the order shown in the illustration to install the front window regulator.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)

27. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

(a) Insert the front door glass sub-assembly into the front door panel along the front door glass run as indicated in the order of the arrows in the illustration.

(b) Install the front door glass sub-assembly with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

28. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the front door panel.

(b) Pass the front door lock remote control cable and rear door inside locking cable through a new front door service hole cover.

(c) Install the new service hole cover.
NOTICE:
Securely install the front door service hole cover avoiding wrinkles and air bubbles.

(d) Connect each connector and each clamp.

29. INSTALL FRONT NO. 1 DOOR TRIM BRACKET

(a) Install the front No. 1 door trim bracket with the 2 screws.

30. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)

31. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-49)

32. INSTALL OUTER MIRROR PROTECTOR

(a) Apply butyl tape to the front door panel.

(b) Install a new outer mirror protector.
NOTICE:
Securely install the outer mirror protector avoiding wrinkles and air bubbles.

33. INSTALL DOOR FRAME GARNISH

(a) Engage the clip and install the door frame garnish.

(b) Install the clip.

34. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP

(a) Engage the 4 claws and install the front door inner glass weatherstrip.

35. INSTALL SEAT MEMORY SWITCH (w/ Seat Position Memory System) (See page SE-124)

36. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect the front door lock remote control cable and front door inside locking cable to the front inside handle.

(b) Engage the front door trim board with the 4 clips of the front door inner glass weatherstrip.

(c) Engage the 9 clips and install the front door trim board to the front door panel.

NOTICE:

Only when installing the front door trim RH, be careful not to allow the wire harness for the courtesy light to get caught between the trim board and the door panel.

(d) Install the 5 screws.

ED

37. INSTALL DOOR ARMREST COVER

(a) Install the door armrest cover.

38. INSTALL COURTESY LIGHT ASSEMBLY

(a) Connect the connector.

(b) Engage the claw and install the courtesy light assembly.

39. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Driver Side)

(a) Install the power window regulator master switch assembly with the 3 screws.

40. INSTALL DOOR CONTROL SWITCH ASSEMBLY (for Front Passenger Side)

(a) Engage the 2 claws and install the door control switch assembly.

41. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side)

(a) Engage the 2 claws and install the power window regulator switch assembly.

42. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY

(a) Connect the connector.

(b) Engage the 5 claws and 3 clips, and install the front door armrest base panel assembly.

43. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Engage the 3 claws and install the front door inside handle bezel plug.

44. INITIALIZE POWER WINDOW CONTROL SYSTEM

(See page WS-10)

ON-VEHICLE INSPECTION

1. INSPECT FRONT DOOR PANEL SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through L are within each standard range.

Standard clearance

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	G	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	H	0.3 to 3.3 mm (0.012 to 0.130 in.)
C	3.3 to 6.3 mm (0.130 to 0.248 in.)	I	3.0 to 6.0 mm (0.118 to 0.236 in.)
D	1.8 to 4.8 mm (0.071 to 0.189 in.)	J	-1.5 to 1.5 mm (-0.059 to 0.059 in.)
E	3.3 to 6.3 mm (0.130 to 0.248 in.)	K	2.5 to 5.5 mm (0.098 to 0.217 in.)
F	0.2 to 3.2 mm (0.008 to 0.126 in.)	L	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

DISASSEMBLY

1. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 3 claws, and remove the front door inside handle bezel plug.

2. REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 5 claws and 3 clips, and remove the front door armrest base panel assembly.

(b) Disconnect the connector.

3. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Driver Side)

(a) Remove the 3 screws and the power window regulator master switch assembly.

4. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side)

(a) Disengage the 2 claws and remove the power window regulator switch assembly.

5. REMOVE DOOR CONTROL SWITCH ASSEMBLY (for Front Passenger Side)

(a) Disengage the 2 claws and remove the door control switch assembly.

6. REMOVE COURTESY LIGHT ASSEMBLY

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the claw and remove the courtesy light assembly.

(b) Disconnect the connector.

7. REMOVE DOOR ARMREST COVER

(a) Remove the door armrest cover.

8. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Remove the 5 screws.

(b) Using a clip remover, disengage the 9 clips.

(c) Pull up the front door trim board in the direction indicated by the arrow.

(d) Disengage the reference bosses from the front door panel.

(e) Raise the front door trim board to disengage the 4 claws and remove the front door trim board together with the front door inner glass weatherstrip.

(f) Disconnect the cables and each connector from the back side of the inside handle and remove the front door trim board sub-assembly.

9. REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP

(a) Disengage the 4 clips as shown in the illustration and remove the front door inner glass weatherstrip from the front door trim board.

10. REMOVE SEAT MEMORY SWITCH (w/ Seat Position Memory System) (See page SE-123)

11. REMOVE DOOR FRAME GARNISH

(a) Using a clip remover, remove the clip.

(b) Disengage the clip and remove the door frame garnish.

12. REMOVE OUTER MIRROR PROTECTOR

(a) Remove the outer mirror protector.

HINT:

Remove the remaining butyl tape on the door side.

13. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-46)

14. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)

15. REMOVE FRONT NO. 1 DOOR TRIM BRACKET

(a) Remove the 2 screws and the front No. 1 door trim bracket.

16. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) Disconnect each connector and each clamp, and remove the front door service hole cover.
HINT:
Remove the remaining butyl tape on the door side.

17. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

(a) Remove the 2 bolts.
NOTICE:
After the bolts are removed, the door glass may fall, causing damage.

(b) Remove the front door glass sub-assembly as shown in the illustration.
NOTICE:
Do not damage the door glass.

18. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Loosen the temporary bolt.
NOTICE:
Do not remove the temporary bolt. If the temporary bolt is removed, the front door window regulator may fall, causing damage.

(b) Remove the 5 bolts.

(c) Remove the front door window regulator sub-assembly and the front power window regulator motor assembly as a unit.

(d) Remove the temporary bolt from the front door window regulator sub-assembly.

19. REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

(a) Using a "TORX" driver (T25), remove the 3 screws and the front power window regulator motor assembly.

20. REMOVE FRONT NO. 1 DOOR STIFFENER CUSHION

(a) Remove the 2 bolts.

(b) Remove the double-sided tape and the front No. 1 door stiffener cushion.

21. REMOVE FRONT DOOR GLASS RUN

(a) Remove the front door glass run.

22. REMOVE FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

(a) Remove the 2 bolts and the front door front lower frame sub-assembly as shown in the illustration.

23. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Remove the bolt and the front door rear lower frame sub-assembly as shown in the illustration.

24. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)

(a) Using an emergency key, disengage the 2 claws and remove the front door outside handle cover.

25. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)

(a) Remove the hole plug.

(b) Using a "TORX" socket wrench (T30), loosen the screw and remove the front door outside handle cover.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

26. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Remove the hole plug.

(b) Using a "TORX" socket wrench (T30), loosen the screw and remove the front door outside handle cover and the door lock key cylinder as a unit.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

(c) Disconnect the connector.

(d) Using a "TORX" socket wrench (T30), loosen the screw.

(e) Remove the front door outside handle assembly as shown in the illustration.

27. REMOVE FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the front door front outside handle pad.

28. REMOVE FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the front door rear outside handle pad.

29. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

(b) Slide the front door lock assembly downward, pull out the front door lock open rod from the outside handle frame, and remove the front door lock assembly and cables as a unit.

(c) Remove the front door lock open rod from the front door lock assembly.

(d) Remove the door lock wiring harness seal from the front door lock assembly.

30. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Remove the front door lock remote control cable assembly.

31. REMOVE FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.

(b) Remove the front door inside locking cable assembly.

32. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a "TORX" socket wrench (T30), loosen the screw.
HINT:
The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.
(b) Disconnect the connector.
(c) Disengage the 2 clamps.
(d) Disengage the claw and remove the front door outside handle frame sub-assembly.

33. REMOVE FRONT DOOR LOCK OPEN ROD

(a) Remove the front door lock open rod as shown in the illustration.

34. REMOVE DOOR ELECTRICAL KEY OSCILLATOR

(a) Remove the screw and door electrical key oscillator.

35. REMOVE FRONT DOOR CHECK COVER

(a) Remove the front door check cover.

36. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the bolt, 2 nuts, and front door check assembly.

37. REMOVE FRONT NO. 3 DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 4 clips and remove the front No. 3 door weatherstrip.

ON-VEHICLE INSPECTION

1. INSPECT REAR DOOR PANEL SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through L are within each standard range.

Standard clearance

Area	Measurement	Area	Measurement
A	2.5 to 5.5 mm (0.098 to 0.217 in.)	G	3.4 to 6.4 mm (0.134 to 0.252 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	H	-0.4 to 2.6 mm (-0.016 to 0.102 in.)
C	2.9 to 5.9 mm (0.114 to 0.232 in.)	I	3.4 to 6.4 mm (0.134 to 0.252 in.)
D	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	J	0 to 3.0 mm (0 to 0.118 in.)
E	3.3 to 6.3 mm (0.130 to 0.248 in.)	K	2.5 to 5.5 mm (0.098 to 0.217 in.)
F	0.3 to 3.3 mm (0.012 to 0.130 in.)	L	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

DISASSEMBLY

1. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 3 claws and remove the rear door inside handle bezel plug.

2. REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 5 claws and 3 clips, and remove the rear door armrest base panel assembly.

(b) Disconnect the connector.

3. REMOVE REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Disengage the 2 claws and remove the rear power window regulator switch assembly.

4. REMOVE COURTESY LIGHT ASSEMBLY

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the claw and remove the courtesy light assembly.

(b) Disconnect the connector.

5. REMOVE REAR DOOR ARMREST COVER

(a) Remove the rear door armrest cover.

6. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

(a) Remove the 3 screws.

(b) Using a clip remover, disengage the 9 clips.

(c) Pull up the rear door trim board in the direction indicated by the arrow.

(d) Disengage the reference bosses from the rear door panel.

(e) Raise the rear door trim board to disengage the 4 claws and remove the rear door trim board together with the rear door inner glass weatherstrip.

(f) Disconnect the cables and each connector from the back side of the inside handle and the rear door trim board sub-assembly, and remove the rear door trim board sub-assembly.

7. REMOVE REAR NO. 2 SPEAKER ASSEMBLY (w/ Rear Header Speaker) (See page AV-191)

8. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP

(a) Disengage the 4 clips as shown in the illustration and remove the rear door inner glass weatherstrip from the rear door trim board.

9. REMOVE REAR DOOR FRAME GARNISH

(a) Using a clip remover, remove the 2 clips and rear door frame garnish.

10. REMOVE REAR SPEAKER ASSEMBLY (See page AV-191)

11. REMOVE REAR DOOR INSIDE PANEL REINFORCE

(a) Remove the 4 screws and the rear door inside panel reinforce.

(b) Remove the 4 grommets.

12. REMOVE REAR DOOR SERVICE HOLE COVER

(a) Disconnect the connector and 2 clamps.

(b) Remove the rear door service hole cover.

HINT:

Remove the remaining tape on the door side.

13. REMOVE REAR DOOR TRIM BRACKET

(a) Remove the 3 screws and the rear door trim bracket.

14. REMOVE REAR DOOR CHECK COVER

(a) Remove the rear door check cover.

15. REMOVE REAR DOOR CHECK ASSEMBLY

(a) Remove the bolt, 2 nuts, and the rear door check assembly.

16. REMOVE REAR DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 20 clips and remove the rear door weatherstrip.

17. REMOVE REAR DOOR GLASS RUN

(a) Remove the rear door glass run.

18. REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY

(a) Remove the 2 bolts, the screw, and the rear door window division bar sub-assembly.

19. REMOVE REAR DOOR QUARTER WINDOW GLASS

(a) Remove the rear door quarter window glass and the rear door quarter window weatherstrip as a unit as shown in the illustration.

(b) Remove the rear door quarter window glass from the rear door quarter window weatherstrip.

20. REMOVE REAR DOOR GLASS SUB-ASSEMBLY

(a) Remove the rear door glass sub-assembly from the rear door window regulator sub-assembly as shown in the illustration.

NOTICE:

Do not damage the door glass.

21. REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Connect the rear power window regulator switch assembly and move the lift arm to the position shown in the illustration.

(b) Remove the rear power window regulator switch assembly.

(c) Disconnect the connector.

(d) Loosen the temporary bolt.

NOTICE:

Do not remove the temporary bolt. If the temporary bolt is removed, the rear door window regulator may fall, causing damage.

(e) Remove the 3 bolts.

(f) Remove the rear door window regulator sub-assembly and the rear power window regulator motor assembly as a unit.

(g) Remove the temporary bolt from the rear door window regulator.

22. REMOVE REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY

(a) Using a "TORX" driver (T25), remove the 3 screws and the rear power window regulator motor assembly.

23. REMOVE REAR DOOR LOCK ASSEMBLY

(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.

(c) Remove the door lock wiring harness seal from the rear door lock assembly.

24. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Using a screwdriver, disengage the claw.
HINT:
Tape the screwdriver tip before use.

(b) Remove the rear door lock remote control cable assembly.

25. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.

(b) Remove the rear door inside locking cable assembly.

26. REMOVE REAR DOOR OUTSIDE HANDLE COVER

(a) Using a "TORX" socket wrench (T30), loosen the screw.
HINT:
The screw cannot be removed because it is integrated into the rear door outside handle frame sub-assembly.

(b) Remove the rear door outside handle cover.

27. REMOVE REAR DOOR OUTSIDE HANDLE ASSEMBLY

(a) Disconnect the connector.

(b) Using a "TORX" socket wrench (T30), loosen the screw.

(c) Pull and hold the release plate of the outside handle frame as shown in the illustration.

NOTICE:

The release plate may interfere with the outside handle and may be damaged when removing the handle, unless the release plate of the outside handle frame is pulled and held.

(d) Remove the rear door outside handle assembly as shown in the illustration.

28. REMOVE REAR DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the rear door front outside handle pad.

29. REMOVE REAR DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the rear door rear outside handle pad.

30. REMOVE REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a "TORX" socket wrench (T30), loosen the screw.
HINT:
The screw cannot be removed because it is integrated into the rear door outside handle frame sub-assembly.

(b) Disconnect the connector.

(c) Disengage the 2 clamps.

(d) Disengage the claw and remove the rear door outside handle frame sub-assembly.

31. REMOVE DOOR ELECTRICAL KEY OSCILLATOR

(a) Remove the screw and the door electrical key oscillator.

32. REMOVE REAR DOOR BELT MOULDING ASSEMBLY (See page ET-34)

33. REMOVE REAR NO. 3 DOOR WEATHERSTRIP

(a) Remove the rear No. 3 door weatherstrip.

34. REMOVE REAR DOOR FRONT WINDOW FRAME MOULDING (See page ET-64)

35. REMOVE REAR DOOR WINDOW FRAME MOULDING SUB-ASSEMBLY (See page ET-65)

36. REMOVE REAR DOOR LOWER OUTSIDE MOULDING (See page ET-42)

ADJUSTMENT

HINT:

- Before adjusting the door positions of vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system, and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. DISCONNECT NEGATIVE BATTERY TERMINAL
CAUTION:
Wait for 90 seconds after disconnecting the terminal to prevent airbag deployment (See page RS-1).

2. ADJUST REAR DOOR

(a) Loosen the hinge bolts on the vehicle body and adjust the door position.
SST 09812-00010

(b) Tighten the hinge bolts on the vehicle body after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(c) Loosen the hinge bolts on the door and adjust the door position.

(d) Tighten the hinge bolts on the door after the adjustment.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)

(e) Using a screwdriver, detach the 4 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.

(f) Adjust the striker position by slightly loosening the striker mounting screws with a "TORX" socket wrench (T40) and hitting the striker with a plastic hammer.

(g) Using a "TORX" socket wrench (T40), tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

3. CONNECT NEGATIVE BATTERY TERMINAL

4. PERFORM INITIALIZATION
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).

5. INSPECT SRS WARNING LIGHT
(See page RS-37)

REASSEMBLY

1. **INSTALL REAR DOOR LOWER OUTSIDE MOULDING (See page ET-43)**
2. **INSTALL REAR DOOR WINDOW FRAME MOULDING SUB-ASSEMBLY (See page ET-66)**
3. **INSTALL REAR DOOR FRONT WINDOW FRAME MOULDING (See page ET-67)**
4. **INSTALL REAR NO. 3 DOOR WEATHERSTRIP**
   (a) Install a new rear No. 3 door weatherstrip with double-sided tape.
5. **INSTALL REAR DOOR BELT MOULDING ASSEMBLY (See page ET-34)**

6. **INSTALL DOOR ELECTRICAL KEY OSCILLATOR**
   (a) Install the door electrical key oscillator with the screw.
7. **INSTALL REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY**
   (a) Apply MP grease to the sliding parts of the rear door outside handle frame sub-assembly.

   (b) Engage the claw to install the rear door outside handle frame sub-assembly.
   (c) Using a "TORX" socket wrench (T30), install the rear door outside handle frame sub-assembly with the screw.
   Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
   (d) Engage the 2 clamps.
   (e) Connect the connector.

8. INSTALL REAR DOOR REAR OUTSIDE HANDLE PAD

(a) Engage the 2 claws to install the rear door rear outside handle pad.

9. INSTALL REAR DOOR FRONT OUTSIDE HANDLE PAD

(a) Engage the 3 claws to install the rear door front outside handle pad.

10. INSTALL REAR DOOR OUTSIDE HANDLE ASSEMBLY

(a) Insert the front end of the rear door outside handle assembly into the rear door outside handle frame.
NOTICE:
If the bellcrank lever is not pulled and held when installing the outside handle, the bellcrank lever will interfere with the outside handle and the release plate will be damaged.

(b) Insert the rear end of the rear door outside handle assembly into the rear door outside handle frame. Next, slide the rear door outside handle assembly toward the front of the vehicle to install it.

(c) Using a "TORX" socket wrench (T30), install the rear door outside handle assembly with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

(d) Connect the connector.

11. INSTALL REAR DOOR OUTSIDE HANDLE COVER

(a) Using a "TORX" socket wrench (T30), install the rear door outside handle cover with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

12. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Install the rear door inside locking cable assembly.

(b) Engage the 3 claws.

13. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Install the rear door lock remote control cable assembly.

(b) Engage the claw.

14. INSTALL REAR DOOR LOCK ASSEMBLY

NOTICE:

- **When reusing the removed rear door lock assembly, replace the door lock wiring harness seal on the connector with a new one.**
- **Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.**

- **Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion to the connection. This may result in a malfunction of the rear door lock assembly.**

(a) Apply MP grease to the sliding parts of the rear door lock assembly.
(b) Install a new door lock wiring harness seal to the rear door lock assembly.
(c) Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.
(d) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.
(e) Using a "TORX" socket wrench (T30), install the rear door lock assembly with the 3 screws.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
(f) Connect the connector.

15. INSTALL REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY
NOTICE:
The regulator arm must be below the intermediate position when installing the power window regulator motor.

(a) Using a "TORX" driver (T25), install the power window regulator motor assembly with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
HINT:
The new rear window regulator adopts a self-tapping method. The installation position of the regulator will be threaded when the self-tapping screw is inserted.

16. INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY
(a) Apply MP grease to the sliding parts of the rear door window regulator sub-assembly.
(b) Install the temporary bolt to the rear door window regulator sub-assembly.
(c) Temporarily install the window regulator.
(d) Tighten the 4 bolts in the order shown in the illustration to install the rear door window regulator.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)
(e) Connect the connector.

(f) Connect the rear power window regulator switch assembly and move the lift arm to the position shown in the illustration.
(g) Remove the rear power window regulator switch assembly.

17. INSTALL REAR DOOR GLASS RUN
(a) Install the rear door glass run.

18. INSTALL REAR DOOR GLASS SUB-ASSEMBLY
(a) Slide the rear door glass sub-assembly to install it as shown in the illustration.

19. INSTALL REAR DOOR QUARTER WINDOW GLASS
(a) Install the rear door quarter window glass to the rear door quarter window weatherstrip.

(b) Install the rear door quarter window glass together with the rear door quarter window weatherstrip in the direction indicated by the arrow in the illustration.

20. INSTALL REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY
(a) Insert the rear door window division bar sub-assembly from above.
(b) Install the rear door glass run to the rear door window division bar sub-assembly.

(c) Install the rear door window division bar sub-assembly with the 2 bolts and screw.

21. INSTALL REAR DOOR WEATHERSTRIP

(a) Engage the 20 clips and install a new rear door weatherstrip.

22. INSTALL REAR DOOR CHECK ASSEMBLY

(a) Install the rear door check assembly with the bolt and the 2 nuts.

Torque: Bolt
27 N*m (275 kgf*cm, 20 ft.*lbf)
Nut
5.0 N*m (51 kgf*cm, 44 in.*lbf)

23. INSTALL REAR DOOR CHECK COVER

(a) Install the rear door check cover.

24. INSTALL REAR DOOR TRIM BRACKET

(a) Install the rear door trim bracket with the 3 screws.

25. INSTALL REAR DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the rear door panel.

(b) Pass the rear door lock remote control cable, rear door inside locking cable and each connector through a new rear door service hole cover.

(c) Install the new rear door service hole cover.

NOTICE:

Securely install the rear door service hole cover avoiding wrinkles and air bubbles.

(d) Connect the connector and 2 clamps.

26. INSTALL REAR DOOR INSIDE PANEL REINFORCE

(a) Install 4 new grommets.

(b) Install a new rear door inside panel reinforce with the 4 screws.

27. INSTALL REAR SPEAKER ASSEMBLY (See page AV-192)

28. INSTALL REAR DOOR FRAME GARNISH

(a) Install the door frame garnish with the 2 clips.

29. INSTALL REAR DOOR INNER GLASS WEATHERSTRIP

(a) Engage the 4 claws to install the rear door inner glass weatherstrip.

30. INSTALL REAR NO. 2 SPEAKER ASSEMBLY (w/ Rear Header Speaker) (See page AV-192)

31. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect the rear door lock remote control cable and rear door inside locking cable to the rear inside handle.

(b) Connect each connector.

(c) Engage the rear door trim board with the 4 clips of the rear door inner glass weatherstrip.

(d) Engage the 9 clips to install the rear door trim board to the rear door panel.

NOTICE:

Only when installing the rear door trim LH, be careful not to allow the wire harness for the courtesy light to get caught between the trim board and the door panel.

(e) Install the 3 screws.

32. INSTALL REAR DOOR ARMREST COVER

(a) Install the rear door armrest cover.

33. INSTALL COURTESY LIGHT ASSEMBLY

(a) Connect the connector.

(b) Engage the claw and install the courtesy light assembly.

34. INSTALL REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Engage the 2 claws and install the rear power window regulator switch assembly.

35. INSTALL REAR DOOR ARMREST BASE PANEL ASSEMBLY

(a) Connect the connector.

(b) Engage the 5 claws and 3 clips, and install the rear power window regulator switch assembly with rear door armrest base panel.

36. INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG

(a) Engage the 3 claws to install the rear door inside handle bezel plug.

37. INITIALIZE POWER WINDOW CONTROL SYSTEM

(See page WS-10)

38. REMOVE FRONT DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 19 clips and remove the front door weatherstrip.

39. REMOVE FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)

40. REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-55)

41. REMOVE FRONT DOOR FRONT LOWER FRAME UPPER COVER (See page ET-56)

42. REMOVE FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY (See page ET-57)

43. REMOVE FRONT DOOR LOWER OUTSIDE MOULDING (See page ET-41)

ADJUSTMENT

HINT:

- Before adjusting the door positions of vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system, and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. DISCONNECT NEGATIVE BATTERY TERMINAL

CAUTION:
Wait for 90 seconds after disconnecting the terminal to prevent airbag deployment (See page RS-1).

2. ADJUST FRONT DOOR

(a) Using a clip remover, disengage the 4 clips and remove the front fender side panel protector.

(b) Using SST, loosen the hinge bolts on the vehicle body and adjust the door position.
SST 09812-00010

(c) Tighten the hinge bolts on the vehicle body after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(d) Loosen the hinge bolts on the door and adjust the door position.

(e) Tighten the hinge bolts on the door after the adjustment.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)

(f) Using a screwdriver, detach the 4 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.

(g) Adjust the striker position by slightly loosening the striker mounting screws with a "TORX" socket wrench (T40) and hitting the striker with a plastic hammer.

(h) Using a "TORX" socket wrench (T40), tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

3. CONNECT NEGATIVE BATTERY TERMINAL

4. PERFORM INITIALIZATION
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).

5. INSPECT SRS WARNING LIGHT
(See page RS-37)

ON-VEHICLE INSPECTION

1. INSPECT LUGGAGE COMPARTMENT DOOR PANEL SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through E are within each standard range.

Standard clearance

Area	Measurement	Area	Measurement
A	5.1 to 7.9 mm (0.201 to 0.311 in.)	D	4.3 to 7.3 mm (0.169 to 0.287 in.)
B	2.0 to 5.0 mm (0.079 to 0.197 in.)	E	2.5 to 5.5 mm (0.098 to 0.217 in.)
C	-1.3 to 1.7 mm (-0.051 to 0.067 in.)	-	-

DISASSEMBLY

1. REMOVE LUGGAGE COMPARTMENT FLOOR MAT

2. REMOVE NO. 2 SPARE WHEEL COVER

3. REMOVE SPARE WHEEL COVER TRAY

4. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY

(a) Remove the 2 bolts and the 2 luggage hold belt striker assemblies.

5. REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK

(a) Remove the 2 screws and the 2 No. 1 luggage compartment trim hooks.

6. REMOVE REAR FLOOR FINISH PLATE

(a) Remove the 3 clips.

(b) Disengage the 4 clips and remove the rear floor finish plate.

7. REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER LH

(a) Remove the 3 clips and the luggage compartment inner trim cover LH.

8. REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH

(a) Remove the 3 clips and the luggage compartment inner trim cover RH.

9. REMOVE LUGGAGE COMPARTMENT FRONT TRIM COVER

(a) Disengage the 2 clamps.

(b) Remove the double-sided tape and the luggage compartment front trim cover.

10. REMOVE LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-71)

11. REMOVE LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-71)

12. REMOVE LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-71)

13. REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-72)

14. REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (See page ED-91)

15. REMOVE LUGGAGE LOCK CONTROL CABLE CLAMP

(a) Disengage the clamp and remove the luggage lock control cable clamp.

ED

16. REMOVE LUGGAGE COMPARTMENT DOOR HINGE COVER RH

(a) Remove the clip.

(b) Disengage the 6 claws and remove the luggage compartment door hinge cover RH.

17. REMOVE LUGGAGE DOOR HINGE ARM PLATE RH

REASSEMBLY

1. **INSTALL LICENSE PLATE LIGHT ASSEMBLY LH (See page LI-157)**
2. **INSTALL LICENSE PLATE LIGHT ASSEMBLY RH**
3. **INSTALL LUGGAGE COMPARTMENT OUTSIDE DOOR GARNISH SUB-ASSEMBLY (w/o Rear View Monitor System) (See page ET-73)**
4. **INSTALL LUGGAGE COMPARTMENT OUTSIDE DOOR GARNISH SUB-ASSEMBLY (w/ Rear View Monitor System) (See page ET-74)**
5. **INSTALL TELEVISION CAMERA ASSEMBLY (w/ Rear View Monitor System) (See page PM-105)**
6. **INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY (See page DL-203)**
7. **INSTALL REAR LIGHT ASSEMBLY LH (See page LI-154)**
8. **INSTALL REAR LIGHT ASSEMBLY RH**
9. **INSTALL LUGGAGE DOOR LOCK CONTROL CABLE SUB-ASSEMBLY**
   (a) Engage the clamp and guide, and connect the holder.
   (b) Engage the 6 clamps and install the luggage door lock control cable sub-assembly.
10. **INSTALL LUGGAGE DOOR HINGE ARM PLATE RH**

11. **INSTALL LUGGAGE COMPARTMENT DOOR HINGE COVER RH**
    (a) Engage the 6 claws and install the luggage compartment door hinge cover RH.
    (b) Install the clip.

ED

12. INSTALL LUGGAGE LOCK CONTROL CABLE CLAMP

(a) Engage the clamp and install the luggage lock control cable clamp.

13. INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (See page ED-91)

14. INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-74)

15. INSTALL LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-74)

16. INSTALL LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-75)

17. INSTALL LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-75)

18. INSTALL LUGGAGE COMPARTMENT FRONT TRIM COVER

(a) Engage the 2 clamps.

(b) Install the luggage compartment front trim cover with double-sided tape.

19. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH

(a) Install the luggage compartment inner trim cover RH with the 3 clips.

ED

20. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH

(a) Install the luggage compartment inner trim cover LH with the 3 clips.

21. INSTALL REAR FLOOR FINISH PLATE

(a) Engage the 4 clips and install the rear floor finish plate.

(b) Install the 3 clips.

22. INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK

(a) Install the 2 No. 1 luggage compartment trim hooks with the 2 screws.

23. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY

(a) Install the 2 luggage hold belt striker assemblies with the 2 bolts.

24. INSTALL SPARE WHEEL COVER TRAY

25. INSTALL NO. 2 SPARE WHEEL COVER

26. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

REASSEMBLY

1. **INSTALL FRONT DOOR LOWER OUTSIDE MOULDING (See page ET-42)**
2. **INSTALL FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY (See page ET-57)**
3. **INSTALL FRONT DOOR FRONT LOWER FRAME UPPER COVER (See page ET-58)**
4. **INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-59)**
5. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)**
6. **INSTALL FRONT DOOR WEATHERSTRIP**
   (a) Engage the 19 clips and install the front door weatherstrip.

7. **INSTALL FRONT NO. 3 DOOR WEATHERSTRIP**
   (a) Install the front No. 3 door weatherstrip with the 4 clips.

8. **INSTALL FRONT DOOR CHECK ASSEMBLY**
   (a) Install the front door check assembly with the bolt and the 2 nuts.
   Torque: Bolt
   27 N*m (275 kgf*cm, 20 ft.*lbf)
   Nut
   8.0 N*m (82 kgf*cm, 71 in.*lbf)

9. INSTALL FRONT DOOR CHECK COVER

(a) Install the front door check cover.

10. INSTALL DOOR ELECTRICAL KEY OSCILLATOR

(a) Install the door electrical key oscillator with the screw.

11. INSTALL FRONT DOOR LOCK OPEN ROD

(a) Install the front door lock open rod as shown in the illustration.

12. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts of the front door outside handle frame sub-assembly.

(b) Engage the claw to install the front door outside handle frame sub-assembly.

(c) Using a "TORX" socket wrench (T30), install the front door outside handle frame sub-assembly with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

(d) Engage the 2 clamps.

(e) Connect the connector.

13. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Install the front door inside locking cable assembly.

(b) Engage the 3 claws.

14. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Install the front door lock remote control cable assembly.

15. INSTALL FRONT DOOR LOCK ASSEMBLY

NOTICE:

- **When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the connector with a new one.**
- **Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.**
- **Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion to the connection. This may result in a malfunction of the front door lock assembly.**

(a) Apply MP grease to the sliding parts of the front door lock assembly.

(b) Install a new door lock wiring harness seal to the front door lock assembly.

(c) Insert the front door lock open rod to the front door lock assembly, and set it to the front door outside handle frame.
(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.
(e) Using a "TORX" socket wrench (T30), install the front door lock assembly with the 3 screws.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
(f) Connect the connector.

16. INSTALL FRONT DOOR REAR OUTSIDE HANDLE PAD
(a) Engage the 2 claws to install the front door rear outside handle pad.

17. INSTALL FRONT DOOR FRONT OUTSIDE HANDLE PAD
(a) Engage the 3 claws to install the front door front outside handle pad.

18. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY
(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.
(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame. Next, slide the front door outside handle assembly toward the front of the vehicle to install it.

(c) Using a "TORX" socket wrench (T30), install the front door outside handle assembly with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(d) Connect the connector.

19. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)
(a) Install the front door lock cylinder.
HINT:
Make sure that the front door lock cylinder rod is inserted into the front door lock assembly.

(b) Using a "TORX" socket wrench (T30), install the front door lock cylinder with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(c) Install the hole plug.

(d) Engage the 2 claws to install the front door outside handle cover to the front door lock cylinder.

20. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)
(a) Using a "TORX" socket wrench (T30), install the front door outside handle cover with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(b) Install the hole plug.

21. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Install the front door rear lower frame sub-assembly with the bolt.

22. INSTALL FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

(a) Install the front door front lower frame sub-assembly with the 2 bolts.

23. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run.

24. INSTALL FRONT NO. 1 DOOR STIFFENER CUSHION

(a) Install a new front No. 1 door stiffener cushion with the 2 bolts and double-sided tape.

25. INSTALL FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

NOTICE:

The regulator arm must be below the intermediate position when installing the power window regulator motor.

(a) Using a "TORX" driver (T25), install the front power window regulator motor sub-assembly with the 3 screws.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

HINT:

A new front window regulator adopts a self-tapping method. The installation position of the regulator will be threaded when the self-tapping screw is inserted.

26. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts of the front door window regulator sub-assembly.

(b) Install the temporary bolt to the front door window regulator sub-assembly.
NOTICE:
Align the claw on the regulator bracket with the panel hole on the front side.

(c) Temporarily install the window regulator.

(d) Tighten the 6 bolts in the order shown in the illustration to install the front window regulator.
Torque: 11 N*m (112 kgf*cm, 8.1 ft.*lbf)

27. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

(a) Insert the front door glass sub-assembly into the front door panel along the front door glass run as indicated in the order of the arrows in the illustration.

(b) Install the front door glass sub-assembly with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

28. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the front door panel.

(b) Pass the front door lock remote control cable and rear door inside locking cable through a new front door service hole cover.

(c) Install the new service hole cover.
NOTICE:
Securely install the front door service hole cover avoiding wrinkles and air bubbles.

(d) Connect each connector and each clamp.

29. INSTALL FRONT NO. 1 DOOR TRIM BRACKET

(a) Install the front No. 1 door trim bracket with the 2 screws.

30. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)

31. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-49)

32. INSTALL OUTER MIRROR PROTECTOR

(a) Apply butyl tape to the front door panel.

(b) Install a new outer mirror protector.
NOTICE:
Securely install the outer mirror protector avoiding wrinkles and air bubbles.

33. INSTALL DOOR FRAME GARNISH

(a) Engage the clip and install the door frame garnish.

(b) Install the clip.

34. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP

(a) Engage the 4 claws and install the front door inner glass weatherstrip.

35. INSTALL SEAT MEMORY SWITCH (w/ Seat Position Memory System) (See page SE-124)

36. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect the front door lock remote control cable and front door inside locking cable to the front inside handle.

(b) Engage the front door trim board with the 4 clips of the front door inner glass weatherstrip.

(c) Engage the 9 clips and install the front door trim board to the front door panel.

NOTICE:

Only when installing the front door trim RH, be careful not to allow the wire harness for the courtesy light to get caught between the trim board and the door panel.

(d) Install the 5 screws.

ED

37. INSTALL DOOR ARMREST COVER

(a) Install the door armrest cover.

38. INSTALL COURTESY LIGHT ASSEMBLY

(a) Connect the connector.

(b) Engage the claw and install the courtesy light assembly.

39. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Driver Side)

(a) Install the power window regulator master switch assembly with the 3 screws.

40. INSTALL DOOR CONTROL SWITCH ASSEMBLY (for Front Passenger Side)

(a) Engage the 2 claws and install the door control switch assembly.

41. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side)

(a) Engage the 2 claws and install the power window regulator switch assembly.

42. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY

(a) Connect the connector.

(b) Engage the 5 claws and 3 clips, and install the front door armrest base panel assembly.

43. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Engage the 3 claws and install the front door inside handle bezel plug.

44. INITIALIZE POWER WINDOW CONTROL SYSTEM

(See page WS-10)

LUGGAGE COMPARTMENT DOOR LOCK

COMPONENTS

REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-71)**
2. **REMOVE LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-71)**
3. **REMOVE LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-71)**
4. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-72)**
5. **REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**
   (a) Raise the cover of the luggage compartment door lock as shown in the illustration.
   (b) Separate the luggage door lock control cable sub-assembly.
   (c) Return the cover of the luggage compartment door lock to its original position.

   (d) Disconnect the connector and cable.
   (e) Remove the 2 bolts and luggage compartment door lock assembly.

INSPECTION

1. **INSPECT LUGGAGE COMPARTMENT DOOR LOCK**
   (a) Move the door lock to the lock position.
   (b) Apply battery voltage to the door lock motor and check operation of the door lock motor.
   OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Luggage compartment door lock motor unlock

If the result is not as specified, replace the door lock assembly.

ED

INSTALLATION

1. **INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**
   (a) Install the luggage compartment door lock assembly with the 2 bolts.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
   (b) Connect the connector and cable.

   (c) Raise the cover of the luggage compartment door lock as shown in the illustration.
   (d) Connect the luggage door lock control cable sub-assembly.
   (e) Return the cover of the luggage compartment door lock to its original position.
2. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-74)**
3. **INSTALL LUGGAGE COMPARTMENT DOOR INSIDE HANDLE (See page ET-74)**
4. **INSTALL LUGGAGE LOCK CONTROL CABLE PLATE (See page ET-75)**
5. **INSTALL LUGGAGE COMPARTMENT DOOR ASSIST GRIP (See page ET-75)**

INSTALLATION

1. **INSTALL FUEL LID OPENER MOTOR ASSEMBLY**
   (a) Install the lock and nut as shown in the illustration.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
   (b) Connect the connector.
2. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-88)**
3. **INSTALL REAR FLOOR FINISH PLATE (See page ED-88)**
4. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-89)**
5. **INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (See page ED-89)**
6. **INSTALL SPARE WHEEL COVER TRAY**
7. **INSTALL NO. 2 SPARE WHEEL COVER**
8. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT**

LUGGAGE COMPARTMENT DOOR OPENER INNER SWITCH

COMPONENTS

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-39)**
2. **REMOVE FRONT DOOR OPENING TRIM COVER LH (See page IR-39)**
3. **REMOVE SIDE INSTRUMENT PANEL LH (See page IP-12)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
5. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-13)**
6. **REMOVE LUGGAGE COMPARTMENT DOOR OPENER INNER SWITCH**
   (a) Disengage the 2 claws and remove the luggage compartment door opener inner switch.

INSPECTION

1. **INSPECT LUGGAGE COMPARTMENT DOOR OPENER INNER SWITCH**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
5 - 6	Switch pushed (ON)	Below 1 Ω
	Switch free (OFF)	10 kΩ or higher

If the result is not as specified, replace the switch assembly.

Luggage Compartment Door Opener Inner Switch:

INSTALLATION

1. **INSTALL LUGGAGE COMPARTMENT DOOR OPENER INNER SWITCH**
   (a) Engage the 2 claws and install the luggage compartment door opener inner switch.
2. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-46)**
3. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**
4. **INSTALL SIDE INSTRUMENT PANEL LH (See page IP-47)**
5. **INSTALL FRONT DOOR OPENING TRIM COVER LH (See page IR-64)**

6. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-65)**

LUGGAGE COMPARTMENT DOOR OPENER MAIN SWITCH

COMPONENTS

ED

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**
3. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-42)**
4. **REMOVE FRONT DOOR OPENING TRIM COVER RH (See page IR-42)**
5. **REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-15)**
6. **REMOVE SIDE INSTRUMENT PANEL RH (See page IP-15)**
7. **REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**
8. **REMOVE LOWER INSTRUMENT PANEL RH (See page IP-16)**
9. **REMOVE LUGGAGE COMPARTMENT DOOR OPENER MAIN SWITCH**
   (a) Disengage the 2 claws and remove the luggage compartment door opener main switch.

INSPECTION

1. **INSPECT LUGGAGE COMPARTMENT DOOR OPENER MAIN SWITCH**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pushed (ON)	Below 1 Ω
	Switch free (OFF)	10 kΩ or higher

If the result is not as specified, replace the switch assembly.

Luggage Compartment Door Opener Main Switch:

ED

INSTALLATION

1. **INSTALL LUGGAGE COMPARTMENT DOOR OPENER MAIN SWITCH**
   (a) Engage the 2 claws and install the luggage compartment door opener main switch.
2. **INSTALL LOWER INSTRUMENT PANEL RH (See page IP-42)**
3. **INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (See page RS-396)**
4. **INSTALL SIDE INSTRUMENT PANEL RH (See page IP-43)**
5. **INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-44)**
6. **INSTALL FRONT DOOR OPENING TRIM COVER RH (See page IR-65)**
7. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-65)**
8. **INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
10. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).
11. **INSPECT SRS WARNING LIGHT**
    (See page RS-37)

FUEL LID OPENER MOTOR ASSEMBLY

COMPONENTS

ED

REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
2. **REMOVE NO. 2 SPARE WHEEL COVER**
3. **REMOVE SPARE WHEEL COVER TRAY**
4. **REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (See page ED-82)**
5. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-83)**
6. **REMOVE REAR FLOOR FINISH PLATE (See page ED-83)**
7. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-83)**
8. **REMOVE FUEL LID OPENER MOTOR ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the lock and nut as shown in the illustration.
   (c) Remove the fuel lid with motor lock assembly.

INSPECTION

1. **INSPECT FUEL LID OPENER MOTOR ASSEMBLY**
   (a) Apply battery voltage to the lock terminals and check that the motor operates and the shaft moves in the open direction.
   OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor operates and shaft moves in open direction

   (b) Measure the shaft stroke.
   Standard:
   10.3 mm (0.406 in.) or more
   If the result is not as specified, replace the motor assembly.

ED

FUEL LID OPENER SWITCH

COMPONENTS

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-39)**
2. **REMOVE FRONT DOOR OPENING TRIM COVER LH (See page IR-39)**
3. **REMOVE SIDE INSTRUMENT PANEL LH (See page IP-12)**
4. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**
5. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-13)**
6. **REMOVE FUEL LID OPENER SWITCH**
   (a) Disengage the 2 claws and remove the fuel lid opener switch.

INSPECTION

1. **INSPECT FUEL LID OPENER SWITCH**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pushed (ON)	Below 1 Ω
	Switch free (OFF)	10 kΩ or higher

If the result is not as specified, replace the switch.

INSTALLATION

1. **INSTALL FUEL LID OPENER SWITCH**
   (a) Engage the 2 claws and install the fuel lid opener switch.
2. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-46)**
3. **INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)**
4. **INSTALL SIDE INSTRUMENT PANEL LH (See page IP-47)**
5. **INSTALL FRONT DOOR OPENING TRIM COVER LH (See page IR-64)**
6. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-65)**

DISASSEMBLY

1. **REMOVE NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-100)**

2. **REMOVE NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-100)**

3. **REMOVE FRONT BUMPER HOLE COVER**
   (a) Disengage the 2 claws and remove the front bumper hole cover.

4. **REMOVE FRONT BUMPER EXTENSION MOUNTING BRACKET**
   (a) Remove the 2 screws and front bumper extension mounting bracket.

5. **REMOVE RADIATOR GRILLE SEAL**
   (a) Disengage the 17 clips and remove the radiator grille seal.

6. **REMOVE RADIATOR GRILLE**
   (a) Remove the 2 screws and 2 clips.

(b) Disengage each claw and remove the radiator grille and radiator grille moulding.

7. REMOVE RADIATOR GRILLE MOULDING

(a) Remove the 2 clips.

(b) Disengage each claw and remove the radiator grille moulding.

8. REMOVE RADIATOR GRILLE EMBLEM (w/o Dynamic Radar Cruise Control System)

HINT:

When removing the emblem, heat the radiator grille and emblem using a heat light.

Heating temperature

Item	Temperature
Radiator Grille	**40 to 60°C (104 to 140°F)**
Emblem	**20 to 30°C (68 to 86°F)**

NOTICE:

Do not heat the radiator grille and emblem excessively.

(a) Put protective tape around the radiator grille emblem.

(b) Insert a piano wire between the radiator grille and radiator grille emblem.

(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.

(d) Pull the piano wire and scrape off the double-sided tape that holds the moulding to the radiator grille.

NOTICE:

- **If reusing the radiator grille emblem, take care not to damage the radiator grille emblem.**
- **Be careful not to damage the radiator grille.**

(e) Remove the radiator grille emblem.

9. REMOVE RADIATOR GRILLE EMBLEM (w/ Dynamic Radar Cruise Control System)
(a) Remove the 2 spring nuts.
(b) Disengage the claw and remove the radiator grille emblem.

10. REMOVE FOG LIGHT ASSEMBLY LH (See page LI-141)

11. REMOVE FOG LIGHT ASSEMBLY RH

12. REMOVE FOG LIGHT BRACKET LH
(a) Disengage the claw and remove the fog light bracket LH.

13. REMOVE FOG LIGHT BRACKET RH

14. REMOVE RADIATOR GRILLE GARNISH
(a) Disengage the 2 claws and radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

15. REMOVE NO. 2 RADIATOR GRILLE GARNISH
(a) Disengage the 2 claws and No. 2 radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

16. REMOVE NO. 3 RADIATOR GRILLE GARNISH
(a) Remove the 4 No. 3 radiator grille garnishes.

17. REMOVE FRONT BUMPER ENERGY ABSORBER

(a) Remove the front bumper energy absorber from the front bumper reinforcement.

18. REMOVE FRONT BUMPER REINFORCEMENT

(a) Disengage each clamp.

(b) Remove the bolt and separate the cooler bracket.

(c) Remove the 6 bolts and front bumper reinforcement.

19. REMOVE FRONT BUMPER STAY LH

(a) Remove the screw.

(b) Disengage the 2 claws and remove the front bumper stay LH.

20. REMOVE FRONT BUMPER STAY RH

REASSEMBLY

1. INSTALL FRONT BUMPER STAY LH

(a) Engage the 2 claws and install the front bumper stay LH.

(b) Install the screw.

2. INSTALL FRONT BUMPER STAY RH

3. INSTALL FRONT BUMPER REINFORCEMENT

(a) Install the front bumper reinforcement with the 6 bolts.
Torque: 72 N*m (734 kgf*cm, 53 ft.*lbf)

(b) Install the cooler bracket with the bolt.

(c) Engage each clamp.

4. INSTALL FRONT BUMPER ENERGY ABSORBER

(a) Install the front bumper energy absorber to the front bumper reinforcement.

5. INSTALL NO. 3 RADIATOR GRILLE GARNISH

(a) Install the 4 No. 3 radiator grille garnishes.

6. INSTALL NO. 2 RADIATOR GRILLE GARNISH

(a) Engage the 2 claws and install the No. 2 radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

7. INSTALL RADIATOR GRILLE GARNISH

(a) Engage the 2 claws and install the radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

8. INSTALL FOG LIGHT BRACKET LH

(a) Engage the claw and install the fog light bracket LH.

9. INSTALL FOG LIGHT BRACKET RH

10. INSTALL FOG LIGHT ASSEMBLY LH (See page LI-144)

11. INSTALL FOG LIGHT ASSEMBLY RH

12. INSTALL RADIATOR GRILLE EMBLEM (w/o Dynamic Radar Cruise Control System)

HINT:
When installing the emblem, heat the radiator grille and emblem using a heat light.

Heating temperature

Item	Temperature
Radiator grille	**40 to 60°C (104 to 140°F)**
Emblem	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the radiator grille and emblem excessively.

(a) Clean the radiator grille surface.
  (1) Using a heat light, heat the radiator grille surface.
  (2) Remove the double-sided tape from the radiator grille.
  (3) Wipe off any tape adhesive residue with cleaner.
(b) Clean the radiator grille emblem. (If reusing the radiator grille emblem)
  (1) Using a heat light, heat the radiator grille emblem.
  (2) Remove the double-sided tape from the radiator grille emblem.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the radiator grille emblem.

(c) Install the radiator grille emblem.
  (1) Using a heat light, heat the radiator grille and radiator grille emblem.
  (2) Remove the release paper from the radiator grille emblem.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Install the radiator grille emblem.

13. INSTALL RADIATOR GRILLE EMBLEM (w/ Dynamic Radar Cruise Control System)
(a) Engage the claw and install the radiator grille emblem.
(b) Install the 2 spring nuts.

14. INSTALL RADIATOR GRILLE MOULDING
(a) Engage each claw and install the radiator grille moulding.
(b) Install the 2 clips.

15. INSTALL RADIATOR GRILLE

(a) Engage each claw and install the radiator grille and radiator grille moulding.

(b) Install the 2 screws and 2 clips.

16. INSTALL RADIATOR GRILLE SEAL

(a) Engage the 17 clips and install the radiator grille seal.

17. INSTALL FRONT BUMPER EXTENSION MOUNTING BRACKET

(a) Install the front bumper extension mounting bracket with the 2 screws.

18. INSTALL FRONT BUMPER HOLE COVER
(a) Engage the 2 claws and remove the front bumper hole cover.

19. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-103)

20. INSTALL NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-103)

INSTALLATION

1. INSTALL FRONT BUMPER ASSEMBLY
(a) Connect each connector.
(b) Engage each claw.
(c) Install the front bumper assembly with the 9 screws, 2 clips, 2 radiator grille protectors and bolt.
Torque: Screw (A)
2.0 N*m (20 kgf*cm, 18 in.*lbf)

(d) Install the 2 pin hold clips.
HINT:
Use the same procedures for the RH side and LH side.

2. INSTALL COOL AIR INTAKE DUCT SEAL
(a) Install the cool air intake duct seal with the 7 clips.

3. VEHICLE PREPARATION FOR FOG LIGHT AIMING (See page LI-141)

4. PREPARATION FOR FOG LIGHT AIMING (See page LI-142)

5. INSPECT FOG LIGHT AIMING (See page LI-143)

6. ADJUST FOG LIGHT AIMING (See page LI-144)

REMOVAL

1. REMOVE REAR BUMPER ASSEMBLY (w/o Intuitive Parking Assist System)

(a) Put protective tape around the rear bumper assembly.

(b) Using a screwdriver, open the 2 rear bumper plates.
HINT:
Tape the screwdriver tip before use.

(c) Remove the 2 clips, 4 screws and 2 bolts.

(d) Disengage the 14 claws and disconnect the rear bumper assembly as shown in the illustration.
HINT:
- When disengaging claw A, slide the rear bumper toward the center of the vehicle.
- Use the same procedures for the RH side and LH side.

(e) Remove the rear bumper assembly.

2. REMOVE LUGGAGE COMPARTMENT FLOOR MAT (w/ Intuitive Parking Assist System)

3. REMOVE SPARE WHEEL COVER TRAY (w/ Intuitive Parking Assist System)

4. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ Intuitive Parking Assist System) (See page ED-82)

5. REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ Intuitive Parking Assist System) (See page ED-83)

6. **REMOVE REAR FLOOR FINISH PLATE (w/ Intuitive Parking Assist System) (See page ED-83)**

7. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ Intuitive Parking Assist System) (See page ED-83)**

8. **REMOVE REAR BUMPER ASSEMBLY (w/ Intuitive Parking Assist System)**
   (a) Disconnect the connector.
   (b) Disengage the grommet.

   (c) Put protective tape around the rear bumper assembly.

   (d) Using a screwdriver, open the 2 rear bumper plates.
   HINT:
   Tape the screwdriver tip before use.

   (e) Remove the 2 clips, 4 screws and 2 bolts.

(f) Disengage the 14 claws and disconnect the rear bumper assembly as shown in the illustration.
HINT:
- When disengaging claw A, slide the rear bumper toward the center of the vehicle.
- Use the same procedures for the RH side and LH side.

(g) Remove the rear bumper assembly.

REMOVAL

1. REMOVE COOL AIR INTAKE DUCT SEAL

(a) Remove the 7 clips and cool air intake duct seal.

2. REMOVE FRONT BUMPER ASSEMBLY

(a) Put protective tape around the front bumper assembly.

(b) Using a screwdriver, turn the pin 90 degrees and remove the 2 pin hold clips.
HINT:
Use the same procedures for the RH side and LH side.

(c) Remove the 9 screws, 2 clips, 2 radiator grille protectors and bolt.

(d) Disengage the 3 claws and disconnect the front bumper assembly as shown in the illustration.
HINT:
Use the same procedures for the RH side and LH side.

(e) Disconnect each connector, and then remove the front bumper assembly.

DISASSEMBLY

1. **REMOVE NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-100)**

2. **REMOVE NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-100)**

3. **REMOVE FRONT BUMPER HOLE COVER**
   (a) Disengage the 2 claws and remove the front bumper hole cover.

4. **REMOVE FRONT BUMPER EXTENSION MOUNTING BRACKET**
   (a) Remove the 2 screws and front bumper extension mounting bracket.

5. **REMOVE RADIATOR GRILLE SEAL**
   (a) Disengage the 17 clips and remove the radiator grille seal.

6. **REMOVE RADIATOR GRILLE**
   (a) Remove the 2 screws and 2 clips.

(b) Disengage each claw and remove the radiator grille and radiator grille moulding.

7. REMOVE RADIATOR GRILLE MOULDING

(a) Remove the 2 clips.

(b) Disengage each claw and remove the radiator grille moulding.

8. REMOVE RADIATOR GRILLE EMBLEM (w/o Dynamic Radar Cruise Control System)

HINT:

When removing the emblem, heat the radiator grille and emblem using a heat light.

Heating temperature

Item	Temperature
Radiator Grille	**40 to 60°C (104 to 140°F)**
Emblem	**20 to 30°C (68 to 86°F)**

NOTICE:

Do not heat the radiator grille and emblem excessively.

(a) Put protective tape around the radiator grille emblem.

(b) Insert a piano wire between the radiator grille and radiator grille emblem.

(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.

(d) Pull the piano wire and scrape off the double-sided tape that holds the moulding to the radiator grille.

NOTICE:

- **If reusing the radiator grille emblem, take care not to damage the radiator grille emblem.**
- **Be careful not to damage the radiator grille.**

(e) Remove the radiator grille emblem.

9. REMOVE RADIATOR GRILLE EMBLEM (w/ Dynamic Radar Cruise Control System)
(a) Remove the 2 spring nuts.
(b) Disengage the claw and remove the radiator grille emblem.

10. REMOVE FOG LIGHT ASSEMBLY LH (See page LI-141)

11. REMOVE FOG LIGHT ASSEMBLY RH

12. REMOVE FOG LIGHT BRACKET LH
(a) Disengage the claw and remove the fog light bracket LH.

13. REMOVE FOG LIGHT BRACKET RH

14. REMOVE RADIATOR GRILLE GARNISH
(a) Disengage the 2 claws and radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

15. REMOVE NO. 2 RADIATOR GRILLE GARNISH
(a) Disengage the 2 claws and No. 2 radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

16. REMOVE NO. 3 RADIATOR GRILLE GARNISH
(a) Remove the 4 No. 3 radiator grille garnishes.

17. REMOVE FRONT BUMPER ENERGY ABSORBER

(a) Remove the front bumper energy absorber from the front bumper reinforcement.

18. REMOVE FRONT BUMPER REINFORCEMENT

(a) Disengage each clamp.

(b) Remove the bolt and separate the cooler bracket.

(c) Remove the 6 bolts and front bumper reinforcement.

19. REMOVE FRONT BUMPER STAY LH

(a) Remove the screw.

(b) Disengage the 2 claws and remove the front bumper stay LH.

20. REMOVE FRONT BUMPER STAY RH

REASSEMBLY

1. INSTALL FRONT BUMPER STAY LH

(a) Engage the 2 claws and install the front bumper stay LH.

(b) Install the screw.

2. INSTALL FRONT BUMPER STAY RH

3. INSTALL FRONT BUMPER REINFORCEMENT

(a) Install the front bumper reinforcement with the 6 bolts.
Torque: 72 N*m (734 kgf*cm, 53 ft.*lbf)

(b) Install the cooler bracket with the bolt.

(c) Engage each clamp.

4. INSTALL FRONT BUMPER ENERGY ABSORBER

(a) Install the front bumper energy absorber to the front bumper reinforcement.

5. INSTALL NO. 3 RADIATOR GRILLE GARNISH

(a) Install the 4 No. 3 radiator grille garnishes.

6. INSTALL NO. 2 RADIATOR GRILLE GARNISH

(a) Engage the 2 claws and install the No. 2 radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

7. INSTALL RADIATOR GRILLE GARNISH

(a) Engage the 2 claws and install the radiator grille garnish.
HINT:
Use the same procedures for the RH side and LH side.

8. INSTALL FOG LIGHT BRACKET LH

(a) Engage the claw and install the fog light bracket LH.

9. INSTALL FOG LIGHT BRACKET RH

10. INSTALL FOG LIGHT ASSEMBLY LH (See page LI-144)

11. INSTALL FOG LIGHT ASSEMBLY RH

12. INSTALL RADIATOR GRILLE EMBLEM (w/o Dynamic Radar Cruise Control System)

HINT:
When installing the emblem, heat the radiator grille and emblem using a heat light.

Heating temperature

Item	Temperature
Radiator grille	**40 to 60°C (104 to 140°F)**
Emblem	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the radiator grille and emblem excessively.

(a) Clean the radiator grille surface.
  (1) Using a heat light, heat the radiator grille surface.
  (2) Remove the double-sided tape from the radiator grille.
  (3) Wipe off any tape adhesive residue with cleaner.
(b) Clean the radiator grille emblem. (If reusing the radiator grille emblem)
  (1) Using a heat light, heat the radiator grille emblem.
  (2) Remove the double-sided tape from the radiator grille emblem.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the radiator grille emblem.

(c) Install the radiator grille emblem.
  (1) Using a heat light, heat the radiator grille and radiator grille emblem.
  (2) Remove the release paper from the radiator grille emblem.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Install the radiator grille emblem.

13. INSTALL RADIATOR GRILLE EMBLEM (w/ Dynamic Radar Cruise Control System)
(a) Engage the claw and install the radiator grille emblem.
(b) Install the 2 spring nuts.

14. INSTALL RADIATOR GRILLE MOULDING
(a) Engage each claw and install the radiator grille moulding.
(b) Install the 2 clips.

15. INSTALL RADIATOR GRILLE

(a) Engage each claw and install the radiator grille and radiator grille moulding.

(b) Install the 2 screws and 2 clips.

16. INSTALL RADIATOR GRILLE SEAL

(a) Engage the 17 clips and install the radiator grille seal.

17. INSTALL FRONT BUMPER EXTENSION MOUNTING BRACKET

(a) Install the front bumper extension mounting bracket with the 2 screws.

18. INSTALL FRONT BUMPER HOLE COVER
(a) Engage the 2 claws and remove the front bumper hole cover.

19. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-103)

20. INSTALL NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-103)

INSTALLATION

1. INSTALL FRONT BUMPER ASSEMBLY
(a) Connect each connector.
(b) Engage each claw.
(c) Install the front bumper assembly with the 9 screws, 2 clips, 2 radiator grille protectors and bolt.
Torque: Screw (A)
2.0 N*m (20 kgf*cm, 18 in.*lbf)

(d) Install the 2 pin hold clips.
HINT:
Use the same procedures for the RH side and LH side.

2. INSTALL COOL AIR INTAKE DUCT SEAL
(a) Install the cool air intake duct seal with the 7 clips.

3. VEHICLE PREPARATION FOR FOG LIGHT AIMING (See page LI-141)

4. PREPARATION FOR FOG LIGHT AIMING (See page LI-142)

5. INSPECT FOG LIGHT AIMING (See page LI-143)

6. ADJUST FOG LIGHT AIMING (See page LI-144)

DISASSEMBLY

1. **REMOVE NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-101)**
2. **REMOVE NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-101)**
3. **REMOVE LUGGAGE ROOM WIRE (w/ Intuitive Parking Assist System)**
4. **REMOVE REAR BUMPER PLATE**
5. **REMOVE REAR BUMPER ENERGY ABSORBER**
   (a) Remove the rear bumper energy absorber.

6. **REMOVE REAR BUMPER BAR**
   (a) Remove the rear bumper bar.

7. **REMOVE REAR BUMPER ARM LH**
   (a) Disengage the 4 claws and remove the rear bumper arm LH.
8. **REMOVE REAR BUMPER ARM RH**

9. **REMOVE REAR BUMPER REINFORCEMENT**
   (a) Remove the 6 nuts and rear bumper reinforcement.

10. REMOVE REAR BUMPER SIDE SUPPORT LH
(a) Remove the 4 screws.
(b) Disengage the clip, claw and 4 guides, and remove the rear bumper side support LH.

11. REMOVE REAR BUMPER SIDE SUPPORT RH

12. REMOVE WHEEL HOUSE REINFORCEMENT LH
(a) Remove the nut and wheel house reinforcement LH.

13. REMOVE WHEEL HOUSE REINFORCEMENT RH

REASSEMBLY

1. INSTALL WHEEL HOUSE REINFORCEMENT LH
(a) Install the wheel house reinforcement LH with the nut.

2. INSTALL WHEEL HOUSE REINFORCEMENT RH

3. INSTALL REAR BUMPER SIDE SUPPORT LH
(a) Engage the clip, claw and 4 guides, and install the rear bumper side support LH.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)
(b) Install the 4 screws.

4. INSTALL REAR BUMPER SIDE SUPPORT RH

5. INSTALL REAR BUMPER REINFORCEMENT

(a) Install the rear bumper reinforcement with the 6 nuts.
Torque: 68 N*m (693 kgf*cm, 50 ft.*lbf)

6. INSTALL REAR BUMPER ARM LH

(a) Engage the 4 claws and install the rear bumper arm LH.

7. INSTALL REAR BUMPER ARM RH

8. INSTALL REAR BUMPER BAR

(a) Install the rear bumper bar as shown in the illustration.

9. INSTALL REAR BUMPER ENERGY ABSORBER

(a) Install the rear bumper energy absorber.

10. INSTALL REAR BUMPER PLATE

11. INSTALL LUGGAGE ROOM WIRE (w/ Intuitive Parking Assist System)

12. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-102)

13. INSTALL NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-102)

INSTALLATION

1. INSTALL REAR BUMPER ASSEMBLY (w/o Intuitive Parking Assist System)

(a) Engage each claw.

(b) Install the rear bumper assembly with the 2 clips, 4 screws and 2 bolts.

Torque: Bolt
5.5 N*m (56 kgf*cm, 49 in.*lbf)
Screw
2.0 N*m (20 kgf*cm, 18 in.*lbf)

(c) Install the 2 rear bumper plates.

2. INSTALL REAR BUMPER ASSEMBLY (w/ Intuitive Parking Assist System)

(a) Install the grommet.

(b) Connect the connector.

(c) Engage each claw.

(d) Install the rear bumper assembly with the 2 clips, 4 screws and 2 bolts.

Torque: Bolt
5.5 N*m (56 kgf*cm, 49 in.*lbf)
Screw
2.0 N*m (20 kgf*cm, 18 in.*lbf)

(e) Install the 2 rear bumper plates.

3. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ Intuitive Parking Assist System) (See page ED-88)**
4. **INSTALL REAR FLOOR FINISH PLATE (w/ Intuitive Parking Assist System) (See page ED-88)**
5. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ Intuitive Parking Assist System) (See page ED-89)**
6. **INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ Intuitive Parking Assist System) (See page ED-89)**
7. **INSTALL SPARE WHEEL COVER TRAY (w/ Intuitive Parking Assist System)**
8. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (w/ Intuitive Parking Assist System)**

REMOVAL

1. REMOVE REAR BUMPER ASSEMBLY (w/o Intuitive Parking Assist System)

(a) Put protective tape around the rear bumper assembly.

(b) Using a screwdriver, open the 2 rear bumper plates.
HINT:
Tape the screwdriver tip before use.

(c) Remove the 2 clips, 4 screws and 2 bolts.

(d) Disengage the 14 claws and disconnect the rear bumper assembly as shown in the illustration.
HINT:
- When disengaging claw A, slide the rear bumper toward the center of the vehicle.
- Use the same procedures for the RH side and LH side.

(e) Remove the rear bumper assembly.

2. REMOVE LUGGAGE COMPARTMENT FLOOR MAT (w/ Intuitive Parking Assist System)

3. REMOVE SPARE WHEEL COVER TRAY (w/ Intuitive Parking Assist System)

4. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ Intuitive Parking Assist System) (See page ED-82)

5. REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ Intuitive Parking Assist System) (See page ED-83)

6. **REMOVE REAR FLOOR FINISH PLATE (w/ Intuitive Parking Assist System) (See page ED-83)**

7. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ Intuitive Parking Assist System) (See page ED-83)**

8. **REMOVE REAR BUMPER ASSEMBLY (w/ Intuitive Parking Assist System)**
   (a) Disconnect the connector.
   (b) Disengage the grommet.

   (c) Put protective tape around the rear bumper assembly.

   (d) Using a screwdriver, open the 2 rear bumper plates.
   HINT:
   Tape the screwdriver tip before use.

   (e) Remove the 2 clips, 4 screws and 2 bolts.

(f) Disengage the 14 claws and disconnect the rear bumper assembly as shown in the illustration.
HINT:
- When disengaging claw A, slide the rear bumper toward the center of the vehicle.
- Use the same procedures for the RH side and LH side.

(g) Remove the rear bumper assembly.

DISASSEMBLY

1. **REMOVE NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-101)**
2. **REMOVE NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-101)**
3. **REMOVE LUGGAGE ROOM WIRE (w/ Intuitive Parking Assist System)**
4. **REMOVE REAR BUMPER PLATE**
5. **REMOVE REAR BUMPER ENERGY ABSORBER**
   (a) Remove the rear bumper energy absorber.

6. **REMOVE REAR BUMPER BAR**
   (a) Remove the rear bumper bar.

7. **REMOVE REAR BUMPER ARM LH**
   (a) Disengage the 4 claws and remove the rear bumper arm LH.
8. **REMOVE REAR BUMPER ARM RH**

9. **REMOVE REAR BUMPER REINFORCEMENT**
   (a) Remove the 6 nuts and rear bumper reinforcement.

10. REMOVE REAR BUMPER SIDE SUPPORT LH
(a) Remove the 4 screws.
(b) Disengage the clip, claw and 4 guides, and remove the rear bumper side support LH.

11. REMOVE REAR BUMPER SIDE SUPPORT RH

12. REMOVE WHEEL HOUSE REINFORCEMENT LH
(a) Remove the nut and wheel house reinforcement LH.

13. REMOVE WHEEL HOUSE REINFORCEMENT RH

REASSEMBLY

1. INSTALL WHEEL HOUSE REINFORCEMENT LH
(a) Install the wheel house reinforcement LH with the nut.

2. INSTALL WHEEL HOUSE REINFORCEMENT RH

3. INSTALL REAR BUMPER SIDE SUPPORT LH
(a) Engage the clip, claw and 4 guides, and install the rear bumper side support LH.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)
(b) Install the 4 screws.

4. INSTALL REAR BUMPER SIDE SUPPORT RH

5. INSTALL REAR BUMPER REINFORCEMENT

(a) Install the rear bumper reinforcement with the 6 nuts.
Torque: 68 N*m (693 kgf*cm, 50 ft.*lbf)

6. INSTALL REAR BUMPER ARM LH

(a) Engage the 4 claws and install the rear bumper arm LH.

7. INSTALL REAR BUMPER ARM RH

8. INSTALL REAR BUMPER BAR

(a) Install the rear bumper bar as shown in the illustration.

9. INSTALL REAR BUMPER ENERGY ABSORBER

(a) Install the rear bumper energy absorber.

10. INSTALL REAR BUMPER PLATE

11. INSTALL LUGGAGE ROOM WIRE (w/ Intuitive Parking Assist System)

12. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER (w/ Intuitive Parking Assist System) (See page PM-102)

13. INSTALL NO. 1 ULTRASONIC SENSOR (w/ Intuitive Parking Assist System) (See page PM-102)

INSTALLATION

1. INSTALL REAR BUMPER ASSEMBLY (w/o Intuitive Parking Assist System)

(a) Engage each claw.

(b) Install the rear bumper assembly with the 2 clips, 4 screws and 2 bolts.

Torque: Bolt
5.5 N*m (56 kgf*cm, 49 in.*lbf)
Screw
2.0 N*m (20 kgf*cm, 18 in.*lbf)

(c) Install the 2 rear bumper plates.

2. INSTALL REAR BUMPER ASSEMBLY (w/ Intuitive Parking Assist System)

(a) Install the grommet.

(b) Connect the connector.

(c) Engage each claw.

(d) Install the rear bumper assembly with the 2 clips, 4 screws and 2 bolts.

Torque: Bolt
5.5 N*m (56 kgf*cm, 49 in.*lbf)
Screw
2.0 N*m (20 kgf*cm, 18 in.*lbf)

(e) Install the 2 rear bumper plates.

3. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ Intuitive Parking Assist System) (See page ED-88)**
4. **INSTALL REAR FLOOR FINISH PLATE (w/ Intuitive Parking Assist System) (See page ED-88)**
5. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ Intuitive Parking Assist System) (See page ED-89)**
6. **INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ Intuitive Parking Assist System) (See page ED-89)**
7. **INSTALL SPARE WHEEL COVER TRAY (w/ Intuitive Parking Assist System)**
8. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT (w/ Intuitive Parking Assist System)**

INSTALLATION

HINT:
When installing the symbol emblem or name plate, heat the vehicle body and symbol emblem or name plate using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Symbol Emblem	**20 to 30°C (68 to 86°F)**
Name Plate	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and name plate excessively.

1. INSTALL SYMBOL EMBLEM

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the symbol emblem. (If reusing the symbol emblem)
  (1) Using a heat light, heat the symbol emblem.
  (2) Remove the double-sided tape from the symbol emblem.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the symbol emblem.

(c) Install the symbol emblem.

  (1) Using a heat light, heat the vehicle body and symbol emblem.

(2) Remove the release paper from the symbol emblem.
HINT:
After removing the release paper, keep the exposed adhesive free from foreign matter.
(3) Install the symbol emblem.

2. INSTALL NO. 7 LUGGAGE COMPARTMENT DOOR NAME PLATE

(a) Clean the vehicle body surface.
(1) Using a heat light, heat the vehicle body surface.
(2) Remove the double-sided tape from the vehicle body.
(3) Wipe off any tape adhesive residue with cleaner.
(b) Clean the name plate. (If reusing the name plate)
(1) Using a heat light, heat the name plate.
(2) Remove the double-sided tape from the name plate.
(3) Wipe off any tape adhesive residue with cleaner.
(4) Apply new double-sided tape to the name plate.
(c) Install the name plate.

(1) Using a heat light, heat the vehicle body and name plate.
(2) Remove the release paper from the name plate.
HINT:
After removing the release paper, keep the exposed adhesive free from foreign matter.
(3) Install the name plate.

3. INSTALL NO. 2 LUGGAGE COMPARTMENT DOOR NAME PLATE

(a) Clean the vehicle body surface.
(1) Using a heat light, heat the vehicle body surface.

(2) Remove the double-sided tape from the vehicle body.
(3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the name plate. (If reusing the name plate)
(1) Using a heat light, heat the name plate.
(2) Remove the double-sided tape from the name plate.
(3) Wipe off any tape adhesive residue with cleaner.
(4) Apply new double-sided tape to the name plate.

(c) Install the name plate.

P B145530E01

(1) Using a heat light, heat the vehicle body and name plate.
(2) Remove the release paper from the name plate.
HINT:
After removing the release paper, keep the exposed adhesive free from foreign matter.
(3) Install the name plate.

INSTALLATION

1. INSTALL ROOF DRIP SIDE FINISH MOULDING CLIP

NOTICE:

If installing new clips, remove the double-sided tape remaining where the clips will be installed on the body and clean the body with a non-residue type solvent.

(a) Apply a 2 to 3 mm (0.07 to 0.11 in.) bead of adhesive (3M DP-105 or equivalent) to new roof drip side finish moulding clips.
HINT:
Adhesive strength (tensile strength): 13.7 MPa (140 kgf/cm^2) or more (when the temperature is 23°C)

(b) Install the roof drip side finish moulding clips to the positions on the roof panel shown in the illustration. Determine the locations and firmly press and install the roof drip side finish moulding clips after lightly rubbing up adhesive (3M DP-105 or equivalent).

HINT:
- Initial hardening time: 20 minutes
- Complete hardening time: 48 hours

2. INSTALL ROOF DRIP SIDE FINISH MOULDING CENTER

HINT:
When installing the roof drip side finish moulding center, heat the vehicle body and roof drip side finish moulding center using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**

Item	Temperature
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and roof drip side finish moulding center excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the roof drip side finish moulding center. (If reusing the roof drip side finish moulding center)

  (1) Using a heat light, heat the roof drip side finish moulding center.
  (2) Remove the double-sided tape from the roof drip side finish moulding center.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the roof drip side finish moulding center.

(c) Install the roof drip side finish moulding center.

(1) Using a heat light, heat the vehicle body and roof drip side finish moulding center.

(2) Remove the release paper from the roof drip side finish moulding center.
HINT:
After removing the release paper, keep the exposed adhesive free from foreign matter.

(3) Install the roof drip side finish moulding center when 20 minutes or more have elapsed after pressing and installing the roof drip side finish moulding clips.
NOTICE:
- **Install the roof drip side finish moulding center in the proper direction.**
- **Set the front clip to the installation datum. Make sure that the front clip and roof drip side finish moulding center are fit each other.**

FRONT DOOR BELT MOULDING

COMPONENTS

REMOVAL

1. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-32)**
2. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE DOOR ARMREST COVER (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-35)**
7. **REMOVE FRONT DOOR BELT MOULDING ASSEMBLY**
   (a) Fully open the front door glass.
   (b) Put protective tape around the front door belt moulding assembly.

   (c) Using a moulding remover, disengage the 5 clips and remove the front door belt moulding assembly.
   HINT:
   Tape the remover tip before use.

INSTALLATION

1. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY**
   (a) Engage the 5 clips and install the front door belt moulding assembly.
2. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-52)**
3. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-52)**
4. **INSTALL DOOR ARMREST COVER (See page ED-53)**
5. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-53)**
6. **INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-53)**

7. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-54)**

INSTALLATION

1. INSTALL FRONT DOOR LOWER OUTSIDE MOULDING

HINT:
When installing the front door lower outside moulding, heat the vehicle body and front door lower outside moulding using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and front door lower outside moulding excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door lower outside moulding. (If reusing the front door lower outside moulding)

  (1) Using a heat light, heat the front door lower outside moulding.
  (2) Remove the double-sided tape from the front door lower outside moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door lower outside moulding.

(c) Install the front door lower outside moulding.
  (1) Using a heat light, heat the vehicle body and front door lower outside moulding.
  (2) Remove the release paper from the front door lower outside moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Engage the 7 clips and install the front door lower outside moulding.

2. INSTALL REAR DOOR LOWER OUTSIDE MOULDING

HINT:
When installing the rear door lower outside moulding, heat the vehicle body and rear door lower outside moulding using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and rear door lower outside moulding excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.
(b) Clean the rear door lower outside moulding. (If reusing the rear door lower outside moulding)

  (1) Using a heat light, heat the rear door lower outside moulding.
  (2) Remove the double-sided tape from the rear door lower outside moulding.
  (3) Wipe off any tape adhesive residue with cleaner.

(4) Apply new double-sided tape to the rear door lower outside moulding.

(c) Install the rear door lower outside moulding.
(1) Using a heat light, heat the vehicle body and rear door lower outside moulding.
(2) Remove the release paper from the rear door lower outside moulding.
HINT:
After removing the release paper, keep the exposed adhesive free from foreign matter.
(3) Engage the 4 clips and install the rear door lower outside moulding.

REAR DOOR BELT MOULDING

COMPONENTS

REMOVAL

1. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-58)**
2. **REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-59)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-59)**
4. **REMOVE REAR DOOR ARMREST COVER (See page ED-59)**
5. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-60)**
6. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-61)**
7. **REMOVE REAR DOOR BELT MOULDING ASSEMBLY**
   (a) Fully open the rear door glass.
   (b) Put protective tape around the rear door belt moulding assembly.

   (c) Using a moulding remover, disengage the 5 clips and remove the rear door belt moulding assembly.
   HINT:
   Tape the remover tip before use.

INSTALLATION

1. **INSTALL REAR DOOR BELT MOULDING ASSEMBLY**
   (a) Engage the 5 clips and install the rear door belt moulding assembly.
2. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-76)**
3. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-76)**
4. **INSTALL REAR DOOR ARMREST COVER (See page ED-77)**
5. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-77)**
6. **INSTALL REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-78)**

7. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-78)**

INSTALLATION

1. INSTALL ROCKER PANEL MOULDING

(a) Check if the 2 clip installation portions are folded down and attached securely with the double-sided tape as shown in the illustration.

If any of the clip installation portions are not attached securely, replace the double-sided tape by following the procedures below:

(1) Remove the double-sided tape from the rocker panel moulding.

(2) Wipe off any tape adhesive residue with cleaner.

(3) Align new double-sided tape to the marking lines on the rocker panel moulding and attach it.

(4) Fold down the clip installation portions and attach them securely.

2. INSTALL LOWER ROCKER PANEL MOULDING

(a) Engage the 5 guides and install the lower rocker panel moulding.

(b) Install the 6 clips.

3. INSTALL REAR ROCKER PANEL MOULDING

(a) Engage the 3 guides and install the rear rocker panel moulding.

(b) Install the 4 clips.

4. INSTALL ROCKER PANEL MOULDING SUB-ASSEMBLY

(a) Engage the 10 clips and install the rocker panel moulding sub-assembly.

(b) Install the 2 screws.

(c) Install the 8 clips.

(d) Install the screw (A).
(e) Using a 4 mm hexagon wrench, install the screw (B).

(f) Using a 4 mm hexagon wrench, install the screw.

5. INSTALL FRONT DOOR WEATHERSTRIP

(a) Engage the 12 claws and install the front door weatherstrip.

6. INSTALL ROCKER PANEL MOULDING PROTECTOR

(a) Install the rocker panel moulding protector with the 2 screws.

REMOVAL

1. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-32)**
2. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE DOOR ARMREST COVER (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-35)**
7. **REMOVE DOOR FRAME GARNISH (See page ED-35)**
8. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)**
9. **REMOVE FRONT NO. 1 DOOR TRIM BRACKET (See page ED-36)**
10. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-36)**
11. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-36)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-37)**
13. **REMOVE FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)**
14. **REMOVE FRONT DOOR WEATHERSTRIP (See page ED-42)**
15. **REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING**

    HINT:
    When removing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.

    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and moulding excessively.

(a) Using a heat light, heat the front door rear window frame moulding.

ET

(b) Disengage the clip.

(c) Using a moulding remover, peel off the double-sided tape and remove the front door rear window frame moulding.

16. REMOVE FRONT DOOR FRONT LOWER FRAME UPPER COVER

HINT:
When removing the front door front lower frame upper cover, heat the vehicle body and front door front lower frame upper cover using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Cover	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and cover excessively.

(a) Using a heat light, heat the front door front lower frame upper cover.

(b) Using a moulding remover, peel off the double-sided tape.

(c) Using a moulding remover, disengage the clip and remove the front door front lower frame upper cover.

17. REMOVE FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY

(a) Put a 4 mm (0.16 in.) drill bit into a drill.

(b) Tape the drill bit without the portion of 5 mm (0.20 in.) from the tip covered.
HINT:
Tape the drill bit to prevent the drill bit from going too deep.

(c) Lightly press the drill against the rivets, drill off the flanges of the rivets, and remove the 8 rivets.
NOTICE:
- **Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.**
- **Do not pry the rivets with the drill, because this may cause damage to the installation holes of the rivets or the drill bit.**
- **Be careful when touching the drilled rivets as they may become hot.**

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.

(e) Disengage the clip and guide, and remove the front door outside moulding sub-assembly from the door frame.

INSTALLATION

1. INSTALL FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY

(a) Engage the guide.

(b) Engage the clip and install the front door outside moulding sub-assembly to the door frame.

(c) Using an air riveter or hand riveter with a nose piece, install the 8 new rivets in the order shown in the illustration to install the front door upper window frame moulding sub-assembly.

HINT:
If the rivet cannot be cut, pull it once and cut it.

NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**

- **Do not leave any space between the moulding and door frame. Firmly hold together the 2 items while installing the rivet.**

ET

2. INSTALL FRONT DOOR FRONT LOWER FRAME UPPER COVER

HINT:
When installing the front door front lower frame upper cover, heat the vehicle body and front door front lower frame upper cover using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Cover	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and front door front lower frame upper cover excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door front lower frame upper cover. (If reusing the front door front lower frame upper cover)
  (1) Using a heat light, heat the front door front lower frame upper cover.
  (2) Remove the double-sided tape from the front door front lower frame upper cover.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door front lower frame upper cover.

(c) Install the front door front lower frame upper cover.
  (1) Using a heat light, heat the vehicle body and front door front lower frame upper cover.
  (2) Remove the release paper from the front door front lower frame upper cover.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Engage the clip and install the front door front lower frame upper cover.

3. INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING

HINT:
When installing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and front door window frame moulding excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door rear window frame moulding. (If reusing the front door rear window frame moulding)
  (1) Using a heat light, heat the front door rear window frame moulding.
  (2) Remove the double-sided tape from the front door rear window frame moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door rear window frame moulding.

(c) Install the front door rear window frame moulding.
  (1) Using a heat light, heat the vehicle body and front door rear window frame moulding.
  (2) Remove the release paper from the front door rear window frame moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.

  (3) Engage the clip and install the front door rear window frame moulding.

4. **INSTALL FRONT DOOR WEATHERSTRIP (See page ED-44)**
5. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)**
6. **INSTALL FRONT DOOR GLASS RUN (See page ED-49)**
7. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-50)**
8. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-50)**
9. **INSTALL FRONT NO. 1 DOOR TRIM BRACKET (See page ED-51)**
10. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)**
11. **INSTALL DOOR FRAME GARNISH (See page ED-51)**
12. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-52)**
13. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-52)**
14. **INSTALL DOOR ARMREST COVER (See page ED-53)**

15. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-53)**
16. **INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-53)**
17. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-54)**

OUTSIDE MOULDING

COMPONENTS

REMOVAL

1. REMOVE FRONT DOOR LOWER OUTSIDE MOULDING

(a) Using a moulding remover, disengage the 7 clips.

(b) Peel off the double-sided tape and remove the front door lower outside moulding.

2. REMOVE REAR DOOR LOWER OUTSIDE MOULDING

(a) Using a moulding remover, disengage the 4 clips.

(b) Peel off the double-sided tape and remove the rear door lower outside moulding.

INSTALLATION

1. INSTALL FRONT DOOR LOWER OUTSIDE MOULDING

HINT:
When installing the front door lower outside moulding, heat the vehicle body and front door lower outside moulding using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and front door lower outside moulding excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door lower outside moulding. (If reusing the front door lower outside moulding)

  (1) Using a heat light, heat the front door lower outside moulding.
  (2) Remove the double-sided tape from the front door lower outside moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door lower outside moulding.

(c) Install the front door lower outside moulding.
  (1) Using a heat light, heat the vehicle body and front door lower outside moulding.
  (2) Remove the release paper from the front door lower outside moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Engage the 7 clips and install the front door lower outside moulding.

2. INSTALL REAR DOOR LOWER OUTSIDE MOULDING

HINT:
When installing the rear door lower outside moulding, heat the vehicle body and rear door lower outside moulding using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and rear door lower outside moulding excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.
(b) Clean the rear door lower outside moulding. (If reusing the rear door lower outside moulding)

  (1) Using a heat light, heat the rear door lower outside moulding.
  (2) Remove the double-sided tape from the rear door lower outside moulding.
  (3) Wipe off any tape adhesive residue with cleaner.

(4) Apply new double-sided tape to the rear door lower outside moulding.

(c) Install the rear door lower outside moulding.
(1) Using a heat light, heat the vehicle body and rear door lower outside moulding.
(2) Remove the release paper from the rear door lower outside moulding.
HINT:
After removing the release paper, keep the exposed adhesive free from foreign matter.
(3) Engage the 4 clips and install the rear door lower outside moulding.

REMOVAL

1. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-32)**
2. **REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE DOOR ARMREST COVER (See page ED-34)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-34)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-35)**
7. **REMOVE DOOR FRAME GARNISH (See page ED-35)**
8. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)**
9. **REMOVE FRONT NO. 1 DOOR TRIM BRACKET (See page ED-36)**
10. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-36)**
11. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-36)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-37)**
13. **REMOVE FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)**
14. **REMOVE FRONT DOOR WEATHERSTRIP (See page ED-42)**
15. **REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING**

    HINT:
    When removing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.

    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and moulding excessively.

(a) Using a heat light, heat the front door rear window frame moulding.

ET

(b) Disengage the clip.

(c) Using a moulding remover, peel off the double-sided tape and remove the front door rear window frame moulding.

16. REMOVE FRONT DOOR FRONT LOWER FRAME UPPER COVER

HINT:
When removing the front door front lower frame upper cover, heat the vehicle body and front door front lower frame upper cover using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Cover	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and cover excessively.

(a) Using a heat light, heat the front door front lower frame upper cover.

(b) Using a moulding remover, peel off the double-sided tape.

(c) Using a moulding remover, disengage the clip and remove the front door front lower frame upper cover.

17. REMOVE FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY

(a) Put a 4 mm (0.16 in.) drill bit into a drill.

(b) Tape the drill bit without the portion of 5 mm (0.20 in.) from the tip covered.
HINT:
Tape the drill bit to prevent the drill bit from going too deep.

(c) Lightly press the drill against the rivets, drill off the flanges of the rivets, and remove the 8 rivets.
NOTICE:
- **Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.**
- **Do not pry the rivets with the drill, because this may cause damage to the installation holes of the rivets or the drill bit.**
- **Be careful when touching the drilled rivets as they may become hot.**

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.

(e) Disengage the clip and guide, and remove the front door outside moulding sub-assembly from the door frame.

INSTALLATION

1. INSTALL FRONT DOOR OUTSIDE MOULDING SUB-ASSEMBLY

(a) Engage the guide.

(b) Engage the clip and install the front door outside moulding sub-assembly to the door frame.

(c) Using an air riveter or hand riveter with a nose piece, install the 8 new rivets in the order shown in the illustration to install the front door upper window frame moulding sub-assembly.

HINT:
If the rivet cannot be cut, pull it once and cut it.

NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**

- **Do not leave any space between the moulding and door frame. Firmly hold together the 2 items while installing the rivet.**

ET

2. INSTALL FRONT DOOR FRONT LOWER FRAME UPPER COVER

HINT:
When installing the front door front lower frame upper cover, heat the vehicle body and front door front lower frame upper cover using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Cover	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and front door front lower frame upper cover excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door front lower frame upper cover. (If reusing the front door front lower frame upper cover)
  (1) Using a heat light, heat the front door front lower frame upper cover.
  (2) Remove the double-sided tape from the front door front lower frame upper cover.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door front lower frame upper cover.

(c) Install the front door front lower frame upper cover.
  (1) Using a heat light, heat the vehicle body and front door front lower frame upper cover.
  (2) Remove the release paper from the front door front lower frame upper cover.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Engage the clip and install the front door front lower frame upper cover.

3. INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING

HINT:
When installing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and front door window frame moulding excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door rear window frame moulding. (If reusing the front door rear window frame moulding)
  (1) Using a heat light, heat the front door rear window frame moulding.
  (2) Remove the double-sided tape from the front door rear window frame moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door rear window frame moulding.

(c) Install the front door rear window frame moulding.
  (1) Using a heat light, heat the vehicle body and front door rear window frame moulding.
  (2) Remove the release paper from the front door rear window frame moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.

  (3) Engage the clip and install the front door rear window frame moulding.

4. **INSTALL FRONT DOOR WEATHERSTRIP (See page ED-44)**
5. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-31)**
6. **INSTALL FRONT DOOR GLASS RUN (See page ED-49)**
7. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-50)**
8. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-50)**
9. **INSTALL FRONT NO. 1 DOOR TRIM BRACKET (See page ED-51)**
10. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-184)**
11. **INSTALL DOOR FRAME GARNISH (See page ED-51)**
12. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-52)**
13. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-52)**
14. **INSTALL DOOR ARMREST COVER (See page ED-53)**

15. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-53)**
16. **INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-53)**
17. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-54)**

REMOVAL

1. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-58)**
2. **REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-59)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-59)**
4. **REMOVE REAR DOOR ARMREST COVER (See page ED-59)**
5. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-60)**
6. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-61)**
7. **REMOVE REAR DOOR BELT MOULDING ASSEMBLY (See page ET-34)**
8. **REMOVE REAR DOOR FRAME GARNISH (See page ED-61)**
9. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-61)**
10. **REMOVE REAR DOOR TRIM BRACKET (See page ED-62)**
11. **REMOVE REAR DOOR WEATHERSTRIP (See page ED-62)**
12. **REMOVE REAR DOOR GLASS RUN (See page ED-63)**
13. **REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY (See page ED-63)**
14. **REMOVE REAR DOOR QUARTER WINDOW GLASS (See page ED-63)**
15. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-63)**
16. **REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-64)**
17. **REMOVE REAR DOOR FRONT WINDOW FRAME MOULDING**
    HINT:
    When removing the rear door front window frame moulding, heat the vehicle body and rear door front window frame moulding using a heat light.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and moulding excessively.

(a) Using a heat light, heat the rear door front window frame moulding.

(b) Disengage the clip.

(c) Using a moulding remover, peel off the double-sided tape and remove the rear door front window frame moulding.

18. REMOVE REAR DOOR WINDOW FRAME MOULDING SUB-ASSEMBLY

(a) Put a 4 mm (0.16 in.) drill bit into a drill.

(b) Tape the drill bit without the portion of 5 mm (0.20 in.) from the tip covered.
HINT:
Tape the drill bit to prevent the drill bit from going too deep.

(c) Lightly press the drill bit against the rivets, drill off the flanges of the rivets, and remove the 7 rivets.
NOTICE:
- **Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.**
- **Do not pry the rivets with the drill, as this may cause damage to the installation holes of the rivets or the drill bit.**
- **Be careful when touching the drilled rivets, as they may become hot.**

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.

(e) Disengage the 3 clips and guide, and remove the rear door window frame moulding sub-assembly from the door frame.

INSTALLATION

1. INSTALL REAR DOOR WINDOW FRAME MOULDING SUB-ASSEMBLY

(a) Engage the guide and 3 clips, and install the rear door window frame moulding sub-assembly to the door frame.

(b) Using an air riveter or hand riveter with a nose piece, install the 7 new rivets in the order shown in the illustration to install the rear door window frame moulding sub-assembly.

HINT:

- Make sure that there is no clearance between the rear door window frame moulding sub-assembly and the rear door panel.
- If the rivet cannot be cut, pull it once and cut it.

NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**

- **Do not leave any space between the moulding and door frame. Firmly hold together the 2 items while installing the rivet.**

2. INSTALL REAR DOOR FRONT WINDOW FRAME MOULDING

HINT:
When installing the rear door front window frame moulding, heat the vehicle body and rear door front window frame using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:
Do not heat the vehicle body and rear door window frame moulding excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the rear door front window frame moulding. (If reusing the rear door front window frame moulding)
  (1) Using a heat light, heat the rear door front window frame moulding.
  (2) Remove the double-sided tape from the rear door front window frame moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the rear door front window frame moulding.

(c) Install the rear door front window frame moulding.
  (1) Using a heat light, heat the vehicle body and rear door front window frame moulding.
  (2) Remove the release paper from the rear door front window frame moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.

  (3) Engage the clip and install the rear door front window frame moulding.

3. **INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-73)**
4. **INSTALL REAR DOOR GLASS RUN (See page ED-73)**
5. **INSTALL REAR DOOR GLASS SUB-ASSEMBLY (See page ED-74)**
6. **INSTALL REAR DOOR QUARTER WINDOW GLASS (See page ED-74)**
7. **INSTALL REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY (See page ED-74)**
8. **INSTALL REAR DOOR WEATHERSTRIP (See page ED-74)**
9. **INSTALL REAR DOOR TRIM BRACKET (See page ED-75)**
10. **INSTALL REAR DOOR SERVICE HOLE COVER (See page ED-75)**

11. **INSTALL REAR DOOR FRAME GARNISH (See page ED-76)**
12. **INSTALL REAR DOOR BELT MOULDING ASSEMBLY (See page ET-34)**
13. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-76)**
14. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-76)**
15. **INSTALL REAR DOOR ARMREST COVER (See page ED-77)**
16. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-77)**
17. **INSTALL REAR DOOR ARMREST BASE PANEL ASSEMBLY (See page ED-78)**
18. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-78)**

LUGGAGE COMPARTMENT DOOR GARNISH

COMPONENTS

ET

REMOVAL

1. REMOVE LUGGAGE COMPARTMENT DOOR ASSIST GRIP

(a) Using a screwdriver, disengage the 3 claws and open the assist grip cover.
HINT:
Tape the screwdriver tip before use.

(b) Remove the 2 screws and luggage compartment door assist grip.

2. REMOVE LUGGAGE LOCK CONTROL CABLE PLATE

(a) Disengage the 2 claws and remove the luggage lock control cable plate.

3. REMOVE LUGGAGE COMPARTMENT DOOR INSIDE HANDLE

(a) Disconnect the cable as shown in the illustration, then remove the luggage compartment door inside handle.

4. REMOVE LUGGAGE COMPARTMENT DOOR COVER
(a) Using a clip remover, remove the 10 clips.
(b) Disengage the 2 clips and luggage compartment door cover.

5. REMOVE REAR LIGHT ASSEMBLY LH (See page LI-149)

6. REMOVE REAR LIGHT ASSEMBLY RH

7. REMOVE LUGGAGE DOOR OPENING SWITCH ASSEMBLY (See page DL-203)

8. REMOVE LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH SUB-ASSEMBLY (w/o Rear View Monitor System)
(a) Put protective tape around the luggage compartment door outside garnish sub-assembly.

(b) Remove the 3 bolts and 4 nuts.

(c) Using a moulding remover, disengage the 3 clips and remove the luggage compartment door outside garnish sub-assembly.

9. REMOVE TELEVISION CAMERA ASSEMBLY (w/ Rear View Monitor System) (See page PM-105)

10. REMOVE LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH SUB-ASSEMBLY (w/ Rear View Monitor System)

(a) Put protective tape around the luggage compartment door outside garnish sub-assembly.

(b) Remove the bolt and 4 nuts.

(c) Using a moulding remover, disengage the 3 clips and remove the luggage compartment door outside garnish sub-assembly.

INSTALLATION

1. INSTALL LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH SUB-ASSEMBLY (w/o Rear View Monitor System)

(a) Engage the 3 clips and install the luggage compartment door outside garnish sub-assembly.

(b) Install the 3 bolts and 4 nuts.

2. INSTALL LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH SUB-ASSEMBLY (w/ Rear View Monitor System)

(a) Engage the 3 clips and install the luggage compartment door outside garnish sub-assembly.

(b) Install the bolt and 4 nuts.

3. INSTALL TELEVISION CAMERA ASSEMBLY (w/ Rear View Monitor System) (See page PM-105)

4. INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY (See page DL-203)

5. INSTALL REAR LIGHT ASSEMBLY LH (See page LI-154)

6. INSTALL REAR LIGHT ASSEMBLY RH

7. INSTALL LUGGAGE COMPARTMENT DOOR COVER

(a) Engage the 2 clips and install the luggage compartment door cover.

(b) Install the 10 clips.

8. INSTALL LUGGAGE COMPARTMENT DOOR INSIDE HANDLE

(a) Connect the cable as shown in the illustration, then install the luggage compartment door inside handle.

9. INSTALL LUGGAGE LOCK CONTROL CABLE PLATE

(a) Engage the 2 claws and install the luggage lock control cable plate.

10. INSTALL LUGGAGE COMPARTMENT DOOR ASSIST GRIP

(a) Install the luggage compartment door assist grip with the 2 screws.

(b) Engage the 3 claws and close the assist grip cover.

HOW TO PROCEED WITH TROUBLESHOOTING

Use these procedures to troubleshoot the rear sunshade system.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN communication system is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

A

4 PROBLEM SYMPTOMS TABLE

(a) Refer to the problem symptoms table (See page IR-6).

Result

Result	Proceed to
Fault not listed in problem symptoms table	A
Fault listed in problem symptoms table	B

B → **Go to step 6**

A

5 OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Terminals of ECU (See page IR-6)
(b) Circuit Inspection (See page IR-9, IR-13)

NEXT

6	**REPAIR OR REPLACE**

NEXT

7	**CONFIRMATION TEST**

NEXT

END

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

OTHERS

System	Default	Contents	Selection
R OUTPUT TIME	0.7 sec.	Function to change the time before reverse-linked sunshade lowering function is activated	0 / 0.7 / 0.9 / 1.2
R-SHADE REVERSE	AVAIL	NOT AVL/AVAIL of the rear sunshade reverse function	NOT AVL / AVAIL

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptoms. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Rear sunshade system

Symptom	Suspected Area	See page
Rear sunshade does not operate by manual operation	Rear sunshade switch	IR-9
	Fuse (GAUGE NO. 1)	IR-9
	Wire harness	IR-9
	Rear sunshade relay	IR-9
Rear sunshade shift-linked function does not operate when shift lever is moved to R position	CAN communication line	IR-13
	Park/Neutral position switch	AX-185
	Rear sunshade relay	IR-13
	Wire harness	IR-13

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

OTHERS

System	Default	Contents	Selection
R OUTPUT TIME	0.7 sec.	Function to change the time before reverse-linked sunshade lowering function is activated	0 / 0.7 / 0.9 / 1.2
R-SHADE REVERSE	AVAIL	NOT AVL/AVAIL of the rear sunshade reverse function	NOT AVL / AVAIL

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptoms. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Rear sunshade system

Symptom	Suspected Area	See page
Rear sunshade does not operate by manual operation	Rear sunshade switch	IR-9
	Fuse (GAUGE NO. 1)	IR-9
	Wire harness	IR-9
	Rear sunshade relay	IR-9
Rear sunshade shift-linked function does not operate when shift lever is moved to R position	CAN communication line	IR-13
	Park/Neutral position switch	AX-185
	Rear sunshade relay	IR-13
	Wire harness	IR-13

TERMINALS OF ECU

1. CHECK REAR SUNSHADE RELAY

N

B131189E01

(a) Disconnect the L24 relay connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG (L24-1) - E (L24-5)	R - W-B	Power source (IG)	Engine switch off	Below 1 V
IG (L24-1) - E (L24-5)	R - W-B	Power source (IG)	Engine switch on (IG)	10 to 14 V
SW (L24-3) - E (L24-5)	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch OFF	10 kΩ or higher
SW (L24-3) - E (L24-5)	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch ON	Below 1 Ω
E (L24-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness side connector.

(c) Connect the L24 relay connector.
(d) Measure the voltage of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
REV (L24-2) - Body ground	P - W-B	Reverse signal	Engine switch on (IG), shift lever not in R	Below 1 V
REV (L24-2) - Body ground	P - W-B	Reverse signal	Engine switch on (IG), shift lever in R	10 to 14 V
SW (L24-3) - Body ground	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch not pushed	10 to 14 V
SW (L24-3) - Body ground	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch pushed	Below 1.5 V

If the result is not as specified, there may be a malfunction in the wire harness side connector.

DIAGNOSIS SYSTEM

1. DESCRIPTION

Rear sunshade system data can be read through the vehicle's Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the intelligent tester to check and perform repairs.

2. CHECK DLC3

HINT:

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	Low-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	Low-level CAN bus line	Engine switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Rear Sunshade does not Operate with Rear Sunshade Switch

SYSTEM DESCRIPTION

When the rear sunshade switch is pressed, a signal is sent directly to the rear sunshade relay.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT FUSE (GAUGE NO. 1)

(a) Remove the GAUGE NO. 1 fuse from the instrument panel J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2	CHECK WIRE HARNESS (COWL SIDE JUNCTION BLOCK LH - RELAY, BATTERY AND BODY GROUND)

Rear Sunshade Relay Connector Front View:

Main Body ECU Connector Front View:

Rear Sunshade Switch Connector Front View:

N B131190E01

(a) Disconnect the L24 relay connector.
(b) Disconnect the E58 main body ECU connector.
(c) Disconnect the E75 rear sunshade switch connector.
(d) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester connection	Specified condition
REV (L24-2) - RSSR (E58-3)	Below 1 Ω
SW (L24-3) - E75-3	Below 1 Ω
E (L24-5) - Body ground	Below 1 Ω
REV (L24-2) - E (L24-5)	10 kΩ or higher
SW (L24-3) - E (L24-5)	10 kΩ or higher

(e) Turn the engine switch on (IG).
(f) Measure the voltage of the wire harness side connector.
Standard voltage

Tester connection	Specified condition
IG (L24-1) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT REAR SUNSHADE SWITCH

(a) Disconnect the connector from the rear sunshade switch.

(b) Measure the resistance between the terminals according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
E75-3 (ECU) - E75-2 (E)	Rear sunshade switch is pressed	Below 1 Ω
E75-3 (ECU) - E75-2 (E)	Rear sunshade switch is not pressed	10 kΩ or higher

NG → **REPLACE REAR SUNSHADE SWITCH**

OK

REPLACE REAR SUNSHADE RELAY

Rear Sunshade Shift-linked Function does not Operate when Shift Lever is Moved to R Position

SYSTEM DESCRIPTION

When the engine switch is on (IG) and the rear sunshade is raised, moving the shift lever to the R position causes the park/neutral position switch to send a reverse-linked signal to the main body ECU through the ECM (the ECM and main body ECU communicate via CAN). Then the main body ECU sends the signal to the rear sunshade relay. The relay then lowers the rear sunshade.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK OPERATION

(a) Check that the back-up light comes on when the shift lever is moved to the R position.
OK:
Back-up light comes on when shift lever is moved to R position.

NG → **GO TO LIGHTING SYSTEM**

OK

2 CHECK REAR SUNSHADE RELAY

Rear Sunshade Relay Connector Front View:

H B131040E05

(a) Disconnect the L24 rear sunshade relay connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester connection	Condition	Specified condition
REV (L24-2) - Body ground	Engine switch on (IG), shift lever not in R	Below 1 V
REV (L24-2) - Body ground	Engine switch on (IG), shift lever in R	10 to 14 V

NG → **Go to step 3**

OK

REPLACE REAR SUNSHADE RELAY

3 CHECK WIRE HARNESS (MAIN BODY ECU - PARK/NEUTRAL POSITION SWITCH)

Main Body ECU Connector Front View:

N B131191E01

(a) Disconnect the E58 main body ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester connection	Condition	Specified condition
RSSR (E58-3) - Body ground	Engine switch on (IG), shift lever not in R	Below 1 V
RSSR (E58-3) - Body ground	Engine switch on (IG), shift lever in R	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK WIRE HARNESS (REAR SUNSHADE RELAY - MAIN BODY ECU)

Rear Sunshade Relay Connector Front View:

Main Body ECU Connector Front View:

N B131193E04

(a) Disconnect the L24 relay connector.
(b) Disconnect the E58 main body ECU connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester connection	Condition	Specified condition
REV (L24-2) - RSSR (E58-3)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

TERMINALS OF ECU

1. CHECK REAR SUNSHADE RELAY

N

B131189E01

(a) Disconnect the L24 relay connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG (L24-1) - E (L24-5)	R - W-B	Power source (IG)	Engine switch off	Below 1 V
IG (L24-1) - E (L24-5)	R - W-B	Power source (IG)	Engine switch on (IG)	10 to 14 V
SW (L24-3) - E (L24-5)	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch OFF	10 kΩ or higher
SW (L24-3) - E (L24-5)	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch ON	Below 1 Ω
E (L24-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness side connector.

(c) Connect the L24 relay connector.
(d) Measure the voltage of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
REV (L24-2) - Body ground	P - W-B	Reverse signal	Engine switch on (IG), shift lever not in R	Below 1 V
REV (L24-2) - Body ground	P - W-B	Reverse signal	Engine switch on (IG), shift lever in R	10 to 14 V
SW (L24-3) - Body ground	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch not pushed	10 to 14 V
SW (L24-3) - Body ground	SB - W-B	Rear sunshade switch signal	Engine switch on (IG), rear sunshade switch pushed	Below 1.5 V

If the result is not as specified, there may be a malfunction in the wire harness side connector.

DIAGNOSIS SYSTEM

1. DESCRIPTION

Rear sunshade system data can be read through the vehicle's Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the intelligent tester to check and perform repairs.

2. CHECK DLC3

HINT:

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	Low-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	Low-level CAN bus line	Engine switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ Rear Seat Side Airbag)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-113)**
3. **REMOVE REAR SEAT HEADREST ASSEMBLY**
4. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
5. **REMOVE REAR SEATBACK ASSEMBLY (See page SE-113)**
6. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-40)**
7. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-42)**
8. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)**
9. **REMOVE REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag) (See page IR-41)**
10. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the LH side and RH side.
11. **REMOVE REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag) (See page IR-43)**
12. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY LH (See page IR-42)**
13. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY RH (See page IR-43)**
14. **DISCONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY LH (See page SB-40)**
15. **DISCONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY RH (See page SB-40)**
16. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (See page SB-40)**
17. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-41)**
18. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY**
    (a) Disengage the 2 clips and raise the front portion of the package tray trim panel assembly.

(b) Pass the 3 rear seat belt floor anchors through the holes in the package tray trim panel assembly.
(c) Remove the package tray trim panel assembly.

19. REMOVE CENTER STOP LIGHT SET (See page LI-159)

20. REMOVE NO. 2 PACKAGE TRAY TRIM PANEL ASSEMBLY
(a) Disengage the 3 clips and 6 claws, and remove the No. 2 package tray trim panel assembly.

21. REMOVE REAR WINDOW SHADE ASSEMBLY
(a) Disconnect the connector.
(b) Remove the 4 bolts <A>.
(c) Loosen bolt <B> and remove the rear window shade assembly.
NOTICE:
Bolt <B> cannot be removed from the rear window shade assembly.

22. REMOVE REAR SUNSHADE RELAY
NOTICE:
When disassembling the rear sunshade assembly, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

(a) Remove the screw.
(b) Disengage the 4 claws and remove the rear sunshade relay cover.

(c) Disconnect the connector.
(d) Remove the 2 screws and the rear sunshade relay.

INSTALLATION

1. INSTALL REAR SUNSHADE RELAY

NOTICE:

When reassembling the rear sunshade assembly, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

(a) Install the rear sunshade relay with the 2 screws.
(b) Connect the connector.

(c) Engage the 4 claws and install the rear sunshade relay cover.
(d) Install the screw.

2. INSTALL REAR WINDOW SHADE ASSEMBLY

(a) Install the rear window shade assembly, and temporarily tighten the 4 bolts <A> and bolt <B>.
(b) Fully tighten the 5 bolts.
(c) Connect the connector.

3. **INSTALL NO. 2 PACKAGE TRAY TRIM PANEL ASSEMBLY**
   (a) Engage the 6 claws and 3 clips, and install the No. 2 package tray trim panel assembly.

4. **INSTALL CENTER STOP LIGHT SET (See page LI-159)**

5. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY**
   (a) Thread the 3 rear seat belt floor anchors into the package tray trim panel assembly.
   (b) Insert the rear end of the package tray trim panel assembly into the rear window shade assembly.
   (c) Engage the 2 clips and install the package tray trim panel assembly.

6. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-42)**

7. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (See page SB-42)**

8. **CONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY LH (See page SB-42)**

9. **CONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY RH (See page SB-43)**

10. **INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH (See page IR-62)**

11. **INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH (See page IR-65)**

12. **INSTALL REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag) (See page IR-62)**

13. **INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)**

14. **INSTALL REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag) (See page IR-65)**

15. **INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the LH side and RH side.

16. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-63)**

17. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-65)**
18. **INSTALL REAR SEATBACK ASSEMBLY (See page SE-121)**
19. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
20. **INSTALL REAR SEAT HEADREST ASSEMBLY**
21. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-121)**
22. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/ Rear Seat Side Airbag)**
23. **PERFORM INITIALIZATION (w/ Rear Seat Side Airbag)**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).
24. **INSPECT SRS WARNING LIGHT (w/ Rear Seat Side Airbag)**
    (See page RS-37)

Rear Sunshade does not Operate with Rear Sunshade Switch

SYSTEM DESCRIPTION

When the rear sunshade switch is pressed, a signal is sent directly to the rear sunshade relay.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT FUSE (GAUGE NO. 1)

(a) Remove the GAUGE NO. 1 fuse from the instrument panel J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2	CHECK WIRE HARNESS (COWL SIDE JUNCTION BLOCK LH - RELAY, BATTERY AND BODY GROUND)

Rear Sunshade Relay Connector Front View:

Main Body ECU Connector Front View:

Rear Sunshade Switch Connector Front View:

N B131190E01

(a) Disconnect the L24 relay connector.
(b) Disconnect the E58 main body ECU connector.
(c) Disconnect the E75 rear sunshade switch connector.
(d) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester connection	Specified condition
REV (L24-2) - RSSR (E58-3)	Below 1 Ω
SW (L24-3) - E75-3	Below 1 Ω
E (L24-5) - Body ground	Below 1 Ω
REV (L24-2) - E (L24-5)	10 kΩ or higher
SW (L24-3) - E (L24-5)	10 kΩ or higher

(e) Turn the engine switch on (IG).
(f) Measure the voltage of the wire harness side connector.
Standard voltage

Tester connection	Specified condition
IG (L24-1) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT REAR SUNSHADE SWITCH

(a) Disconnect the connector from the rear sunshade switch.

(b) Measure the resistance between the terminals according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
E75-3 (ECU) - E75-2 (E)	Rear sunshade switch is pressed	Below 1 Ω
E75-3 (ECU) - E75-2 (E)	Rear sunshade switch is not pressed	10 kΩ or higher

NG → **REPLACE REAR SUNSHADE SWITCH**

OK

REPLACE REAR SUNSHADE RELAY

REMOVAL

1. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-113)**
2. **REMOVE REAR SEAT HEADREST ASSEMBLY**
3. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
4. **REMOVE REAR SEATBACK ASSEMBLY (See page SE-113)**
5. **REMOVE SEAT BELT ANCHOR COVER CAP LH (See page SB-22)**
6. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page SB-22)**
7. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Driver Seat)**
8. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER LH (See page SE-83)**
9. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER LH (See page SE-83)**
10. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER LH (See page SE-83)**
11. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER LH (See page SE-83)**
12. **REMOVE FRONT SEAT ASSEMBLY LH (See page SE-83)**
13. **REMOVE SEAT BELT ANCHOR COVER CAP RH (See page RS-490)**
14. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page RS-490)**
15. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Front Passenger Seat)**
16. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER RH (See page RS-490)**
17. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER RH (See page RS-490)**
18. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER RH (See page RS-490)**
19. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER RH (See page RS-490)**
20. **REMOVE FRONT SEAT ASSEMBLY RH (See page RS-491)**

21. REMOVE FRONT DOOR SCUFF PLATE LH

(a) Disengage the 12 claws and remove the front door scuff plate LH.

22. REMOVE FRONT DOOR OPENING TRIM COVER LH

(a) Disengage the 3 claws and remove the front door opening trim cover LH.

23. REMOVE SIDE INSTRUMENT PANEL LH (See page IP-12)

24. REMOVE FRONT PILLAR GARNISH LH

(a) Pull the upper portion of the garnish towards the inside of the cabin and disengage the 2 clips.
(b) Cut off clip <A>.
(c) Disengage the claw and remove the front pillar garnish LH.
(d) Remove clip <A> from the vehicle body.

(e) Protect the curtain shield airbag assembly.
  (1) Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.
  NOTICE:
  Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

25. REMOVE REAR DOOR SCUFF PLATE LH

(a) Disengage the 8 claws and remove the rear door scuff plate LH.

26. REMOVE LOWER CENTER PILLAR GARNISH LH

(a) Disengage the 2 claws and 5 clips, and remove the lower center pillar garnish LH.

27. REMOVE UPPER CENTER PILLAR GARNISH LH

(a) Remove the 2 screws.

(b) Pull the lower part of the pillar garnish toward the inside of the vehicle.

(c) Using a clip remover, disengage the clip and remove the upper center pillar garnish LH.

28. REMOVE REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag)

(a) Disengage the 4 claws and rear seat side garnish LH.

29. REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)

30. REMOVE ROOF SIDE INNER GARNISH ASSEMBLY LH

(a) Disengage the 5 clips and claw, and remove the roof side inner garnish assembly LH.

31. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

32. REMOVE FRONT DOOR OPENING TRIM COVER RH

HINT:
Use the same procedure for the RH side and the LH side.

33. REMOVE SIDE INSTRUMENT PANEL RH (See page IP-15)

34. REMOVE FRONT PILLAR GARNISH RH

(a) Pull the upper portion of the garnish towards the inside of the cabin and disengage the 2 clips.
(b) Cut off clip <A>.
(c) Disengage the claw and remove the front pillar garnish RH.
(d) Remove the clip <A> from the vehicle body.

(e) Protect the curtain shield airbag assembly.
  (1) Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.
  NOTICE:
  Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

35. REMOVE REAR DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

36. REMOVE LOWER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

37. REMOVE UPPER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

38. **REMOVE REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the RH side and the LH side.

39. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the RH side and the LH side.

40. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY RH**
    HINT:
    Use the same procedure for the RH side and the LH side.

41. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**

42. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**

43. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**

44. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**

45. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**

46. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**

47. **REMOVE CONSOLE BOX POCKET (See page IP-52)**

48. **REMOVE CONSOLE BOX CARPET (See page IP-52)**

49. **REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-53)**

50. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-53)**

51. **REMOVE NO. 2 CONSOLE BOX DUCT (See page AC-149)**

52. **REMOVE NO. 3 CONSOLE BOX DUCT (See page AC-149)**

53. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-232)**

54. **REMOVE SHIFT LEVER ASSEMBLY (See page AX-233)**

55. **REMOVE FLOOR CARPET BRACKET LH (See page AC-148)**

56. **REMOVE FLOOR CARPET BRACKET RH (See page AC-148)**

57. REMOVE LUGGAGE COMPARTMENT FLOOR MAT (w/ DVD Player)

58. REMOVE SPARE WHEEL COVER TRAY (w/ DVD Player)

59. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ DVD Player) (See page ED-82)

60. REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ DVD Player) (See page ED-83)

61. REMOVE REAR FLOOR FINISH PLATE (w/ DVD Player) (See page ED-83)

62. REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ DVD Player) (See page ED-83)

63. DISCONNECT STEREO COMPONENT AMPLIFIER ASSEMBLY CONNECTOR (w/ DVD Player)

(a) Disconnect the stereo component amplifier assembly connector.

64. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER (See page MI-42)

65. REMOVE RAIN SENSOR COVER (w/ Rain Sensor) (See page WW-63)

66. REMOVE ROOF CONSOLE BOX ASSEMBLY

(a) Using a screwdriver, disengage the 2 claws and open the 2 covers.
HINT:
Tape the screwdriver tip before use.

(b) Remove the 2 screws.

(c) Using a moulding remover, disengage the 2 clips.
(d) Disconnect the connectors and remove the roof console box assembly.

67. REMOVE VISOR BRACKET COVER

(a) Using a moulding remover, disengage the 4 claws and remove the visor bracket cover.
HINT:
Use the same procedure to remove the cover on the other side.

68. REMOVE VISOR ASSEMBLY LH

(a) Remove the 2 screws and visor assembly LH.

69. REMOVE VISOR ASSEMBLY RH

HINT:
Use the same procedure for the RH side and the LH side.

70. REMOVE VISOR HOLDER

(a) Remove the visor holder by turning it counterclockwise.
HINT:
Use the same procedure to remove the hook on the other side.

71. REMOVE COAT HOOK

(a) Remove the screw and coat hook.
HINT:
Use the same procedure to remove the coat hook on the other side.

72. REMOVE SPOT LIGHT ASSEMBLY (for Standard)

(a) Using a moulding remover, disengage the 2 clips.

(b) Disconnect the connector and remove the spot light assembly.

73. REMOVE SPOT LIGHT ASSEMBLY (for Glass Roof)

(a) Using a moulding remover, disengage the 2 clips.

(b) Disconnect the connector and remove the spot light assembly.

74. REMOVE ASSIST GRIP SUB-ASSEMBLY

(a) Using a screwdriver, disengage the 4 claws and remove the 2 assist grip covers.

HINT:
Tape the screwdriver tip before use.

(b) Disengage the 2 clips and remove the assist grip sub-assembly.
HINT:
Use the same procedure for the other 3 assist grips.

75. REMOVE ROOF HEADLINING ASSEMBLY (for Standard)

(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.

(b) Disconnect the antenna cord sub-assembly connector and disengage each clamp from the front pillar RH.

(c) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

(d) Disengage the 12 claws, 4 clips, and 11 fasteners.

(e) Remove the roof headlining assembly from the vehicle through the front right door.

76. REMOVE ROOF HEADLINING ASSEMBLY (for Glass Roof)

(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.

(b) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

(c) Disengage the 12 claws, 4 clips, and 21 fasteners.

(d) Remove the roof headlining assembly from the vehicle through the front right door.

77. REMOVE ANTENNA CORD SUB-ASSEMBLY (See page AV-222)

78. REMOVE VANITY LIGHT ASSEMBLY

(a) Disengage the 2 claws and separate the bulb holder from the vanity light assembly as shown in the illustration.

(b) Disengage the claw and remove the vanity light assembly.
HINT:
Use the same procedure to remove the light on the other side.

79. REMOVE NO. 1 ROOF WIRE (for Standard)

(a) Turn the visor connectors clockwise approximately 90° and separate the connectors from the roof headlining assembly.

(b) Remove the adhesive tape from the roof headlining assembly.

(c) Remove the No. 1 roof wire from the roof headlining assembly.

(d) Remove the double-sided tape from the roof headlining assembly.

80. REMOVE NO. 1 ROOF WIRE (for Glass Roof)

(a) Turn the visor connectors clockwise approximately 90° and separate the connectors from the roof headlining assembly.

(b) Remove the adhesive tape from the roof headlining assembly.

(c) Remove the No. 1 roof wire from the roof headlining assembly.

(d) Remove the double-sided tape from the roof headlining assembly.

P
B147715

INSTALLATION

1. INSTALL NO. 1 ROOF WIRE (for Standard)

(a) Apply new double-sided tape to the locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations

P

B147716E01

NOTICE:
Securely apply the double-sided tape to prevent the tape from being out of alignment and peeling off.

(b) Peel off the release paper from the double-sided tape.

(c) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.

NOTICE:

- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

(d) Turn the visor connectors clockwise approximately 90° to the connectors of the roof headlining.

(e) Apply adhesive tape to the locations shown in the illustration.

Reference: Tape Attachment Locations

HINT:
As shown at point A in the illustration, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

2. INSTALL NO. 1 ROOF WIRE (for Glass Roof)

(a) Apply new double-sided tape to the locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations

P

B147718E01

NOTICE:
Securely apply the double-sided tape to prevent the tape from being out of alignment and peeling off.

(b) Peel off the release paper from the double-sided tape.

(c) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.
NOTICE:
- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

(d) Turn the visor connectors clockwise approximately 90° to the connectors of the roof headlining.

(e) Apply adhesive tape to the locations shown in the illustration.

Reference: Tape Attachment Locations

HINT:
As shown at point A in the illustration, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

3. INSTALL VANITY LIGHT ASSEMBLY

(a) Install the vanity light to the roof headlining.

(b) Connect the 2 claws to install the bulb holder.
HINT:
Use the same procedure to install the light on the other side.

4. INSTALL ANTENNA CORD SUB-ASSEMBLY (See page AV-224)

5. INSTALL ROOF HEADLINING ASSEMBLY (for Standard)

(a) Pull the roof headlining assembly into the vehicle through the front right door.

(b) Engage the 12 claws, 4 clips, and 11 fasteners.

(c) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.

(d) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.

(e) Connect the No. 1 wire connector and engage each clamp to the front pillar LH.

6. INSTALL ROOF HEADLINING ASSEMBLY (for Glass Roof)

(a) Pull the roof headlining assembly into the vehicle through the front right door.

(b) Engage the 12 claws, 4 clips, and 21 fasteners.

(c) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.

(d) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.

(e) Connect the No. 1 wire connector and engage each clamp to the front pillar LH.

7. INSTALL ASSIST GRIP SUB-ASSEMBLY

(a) Engage the 2 clips to an assist grip sub-assembly as shown in the illustration.

(b) Install the assist grip sub-assembly.
(c) Install the 2 assist grip covers to the assist grip sub-assembly.
HINT:
Use the same procedure for the other 3 assist grips.

8. INSTALL SPOT LIGHT ASSEMBLY (for Standard)
(a) Connect the connector.

(b) Engage the 2 clips and install the spot light assembly.

9. INSTALL SPOT LIGHT ASSEMBLY (for Glass Roof)
(a) Connect the connector.

(b) Engage the 2 clips and install the spot light assembly.

10. INSTALL COAT HOOK

(a) Install the coat hook with the screw.
HINT:
Use the same procedure to install the hook on the other side.

11. INSTALL VISOR HOLDER

(a) Set the claws of the visor holder as shown in the illustration.
(b) Engage the claws and install the visor holder.
HINT:
Use the same procedure to install the holder on the other side.

12. INSTALL VISOR ASSEMBLY LH

(a) Install the visor assembly LH with the 2 screws.

13. INSTALL VISOR ASSEMBLY RH

HINT:
Use the same procedure for the RH side and the LH side.

14. INSTALL VISOR BRACKET COVER

(a) Engage the 4 claws and install the visor bracket cover.
HINT:
Use the same procedure to install the cover on the other side.

15. INSTALL ROOF CONSOLE BOX ASSEMBLY

(a) Connect the connector.
(b) Engage the 2 clips.

(c) Install the roof console box assembly with the 2 screws.

16. INSTALL RAIN SENSOR COVER (w/ Rain Sensor) (See page WW-65)

17. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (See page MI-44)

18. CONNECT STEREO COMPONENT AMPLIFIER ASSEMBLY CONNECTOR (w/ DVD Player)

(a) Connect the stereo component amplifier assembly connector.

19. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ DVD Player) (See page ED-88)

20. INSTALL REAR FLOOR FINISH PLATE (w/ DVD Player) (See page ED-88)

21. INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ DVD Player) (See page ED-89)

22. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ DVD Player) (See page ED-89)

23. INSTALL SPARE WHEEL COVER TRAY (w/ DVD Player)

24. INSTALL LUGGAGE COMPARTMENT FLOOR MAT (w/ DVD Player)

25. INSTALL FLOOR CARPET BRACKET LH

26. INSTALL FLOOR CARPET BRACKET RH

27. INSTALL SHIFT LEVER ASSEMBLY (See page AX-240)

28. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-241)

29. INSTALL NO. 2 CONSOLE BOX DUCT (See page AC-163)

30. INSTALL NO. 3 CONSOLE BOX DUCT (See page AC-163)

31. INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-39)

32. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-40)

33. INSTALL CONSOLE BOX CARPET (See page IP-41)

34. INSTALL CONSOLE BOX POCKET (See page IP-41)

35. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)

36. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)

37. INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)

38. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)

39. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)

40. INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)

41. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH

(a) Engage the claw and 5 clips, and install the roof side inner garnish assembly LH.

42. INSTALL REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag)

(a) Install the 4 claws and install the rear seat side garnish LH.

43. INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)

44. INSTALL UPPER CENTER PILLAR GARNISH LH

(a) Engage the clip.

(b) Install the upper center pillar garnish LH with the 2 screws.

45. INSTALL LOWER CENTER PILLAR GARNISH LH

(a) Engage the 5 clips and 2 claws, and install the lower center pillar garnish LH.

46. INSTALL REAR DOOR SCUFF PLATE LH

(a) Engage the 8 claws, then install the rear door scuff plate LH.

47. INSTALL FRONT PILLAR GARNISH LH

(a) Remove the protective cover.

(b) Install a new clip <A> on the front pillar garnish LH.

(c) Engage the claw and 2 clips, then install the front pillar garnish LH.

48. INSTALL SIDE INSTRUMENT PANEL LH (See page IP-47)

49. INSTALL FRONT DOOR OPENING TRIM COVER LH

(a) Engage the 3 claws and install the front door opening trim cover LH.

50. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 12 claws, and install the front door scuff plate LH.

51. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH

HINT:
Use the same procedure for the RH side and the LH side.

52. INSTALL REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag)

HINT:
Use the same procedure for the RH side and the LH side.

53. INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)

HINT:
Use the same procedure for the RH side and the LH side.

54. INSTALL UPPER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

55. INSTALL LOWER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

56. INSTALL REAR DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

57. INSTALL FRONT PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

58. INSTALL SIDE INSTRUMENT PANEL RH (See page IP-43)

59. INSTALL FRONT DOOR OPENING TRIM COVER RH

HINT:
Use the same procedure for the RH side and the LH side.

60. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

61. INSTALL FRONT SEAT ASSEMBLY LH (See page SE-109)

62. INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER LH (See page SE-110)

63. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER LH (See page SE-110)**
64. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER LH (See page SE-110)**
65. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER LH (See page SE-110)**
66. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page SB-25)**
67. **INSTALL SEAT BELT ANCHOR COVER CAP LH (See page SB-25)**
68. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Driver Seat)**
69. **INSTALL FRONT SEAT ASSEMBLY RH (See page RS-497)**
70. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER RH (See page RS-498)**
71. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER RH (See page RS-498)**
72. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER RH (See page RS-498)**
73. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER RH (See page RS-498)**
74. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page RS-499)**
75. **INSTALL SEAT BELT ANCHOR COVER CAP RH (See page RS-499)**
76. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Front Passenger Seat)**
77. **INSTALL REAR SEATBACK ASSEMBLY (See page SE-121)**
78. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
79. **INSTALL REAR SEAT HEADREST ASSEMBLY**
80. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-121)**
81. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).
82. **INSPECT SHIFT LEVER POSITION (See page AX-200)**
83. **ADJUST SHIFT LEVER POSITION (See page AX-200)**
84. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**

85. INSPECT SRS WARNING LIGHT
(See page RS-37)

Rear Sunshade Shift-linked Function does not Operate when Shift Lever is Moved to R Position

SYSTEM DESCRIPTION

When the engine switch is on (IG) and the rear sunshade is raised, moving the shift lever to the R position causes the park/neutral position switch to send a reverse-linked signal to the main body ECU through the ECM (the ECM and main body ECU communicate via CAN). Then the main body ECU sends the signal to the rear sunshade relay. The relay then lowers the rear sunshade.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK OPERATION

(a) Check that the back-up light comes on when the shift lever is moved to the R position.
OK:
Back-up light comes on when shift lever is moved to R position.

NG → **GO TO LIGHTING SYSTEM**

OK

2 CHECK REAR SUNSHADE RELAY

Rear Sunshade Relay Connector Front View:

H B131040E05

(a) Disconnect the L24 rear sunshade relay connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester connection	Condition	Specified condition
REV (L24-2) - Body ground	Engine switch on (IG), shift lever not in R	Below 1 V
REV (L24-2) - Body ground	Engine switch on (IG), shift lever in R	10 to 14 V

NG → **Go to step 3**

OK

REPLACE REAR SUNSHADE RELAY

3 CHECK WIRE HARNESS (MAIN BODY ECU - PARK/NEUTRAL POSITION SWITCH)

Main Body ECU Connector Front View:

N B131191E01

(a) Disconnect the E58 main body ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester connection	Condition	Specified condition
RSSR (E58-3) - Body ground	Engine switch on (IG), shift lever not in R	Below 1 V
RSSR (E58-3) - Body ground	Engine switch on (IG), shift lever in R	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK WIRE HARNESS (REAR SUNSHADE RELAY - MAIN BODY ECU)

Rear Sunshade Relay Connector Front View:

Main Body ECU Connector Front View:

N B131193E04

(a) Disconnect the L24 relay connector.
(b) Disconnect the E58 main body ECU connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester connection	Condition	Specified condition
REV (L24-2) - RSSR (E58-3)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ Rear Seat Side Airbag)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-113)**
3. **REMOVE REAR SEAT HEADREST ASSEMBLY**
4. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
5. **REMOVE REAR SEATBACK ASSEMBLY (See page SE-113)**
6. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-40)**
7. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-42)**
8. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)**
9. **REMOVE REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag) (See page IR-41)**
10. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the LH side and RH side.
11. **REMOVE REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag) (See page IR-43)**
12. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY LH (See page IR-42)**
13. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY RH (See page IR-43)**
14. **DISCONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY LH (See page SB-40)**
15. **DISCONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY RH (See page SB-40)**
16. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (See page SB-40)**
17. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-41)**
18. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY**
    (a) Disengage the 2 clips and raise the front portion of the package tray trim panel assembly.

(b) Pass the 3 rear seat belt floor anchors through the holes in the package tray trim panel assembly.
(c) Remove the package tray trim panel assembly.

19. REMOVE CENTER STOP LIGHT SET (See page LI-159)

20. REMOVE NO. 2 PACKAGE TRAY TRIM PANEL ASSEMBLY
(a) Disengage the 3 clips and 6 claws, and remove the No. 2 package tray trim panel assembly.

21. REMOVE REAR WINDOW SHADE ASSEMBLY
(a) Disconnect the connector.
(b) Remove the 4 bolts <A>.
(c) Loosen bolt <B> and remove the rear window shade assembly.
NOTICE:
Bolt <B> cannot be removed from the rear window shade assembly.

22. REMOVE REAR SUNSHADE RELAY
NOTICE:
When disassembling the rear sunshade assembly, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

(a) Remove the screw.
(b) Disengage the 4 claws and remove the rear sunshade relay cover.

(c) Disconnect the connector.
(d) Remove the 2 screws and the rear sunshade relay.

INSTALLATION

1. INSTALL REAR SUNSHADE RELAY

NOTICE:

When reassembling the rear sunshade assembly, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

(a) Install the rear sunshade relay with the 2 screws.
(b) Connect the connector.

(c) Engage the 4 claws and install the rear sunshade relay cover.
(d) Install the screw.

2. INSTALL REAR WINDOW SHADE ASSEMBLY

(a) Install the rear window shade assembly, and temporarily tighten the 4 bolts <A> and bolt <B>.
(b) Fully tighten the 5 bolts.
(c) Connect the connector.

3. **INSTALL NO. 2 PACKAGE TRAY TRIM PANEL ASSEMBLY**
   (a) Engage the 6 claws and 3 clips, and install the No. 2 package tray trim panel assembly.

4. **INSTALL CENTER STOP LIGHT SET (See page LI-159)**

5. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY**
   (a) Thread the 3 rear seat belt floor anchors into the package tray trim panel assembly.
   (b) Insert the rear end of the package tray trim panel assembly into the rear window shade assembly.
   (c) Engage the 2 clips and install the package tray trim panel assembly.

6. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-42)**

7. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (See page SB-42)**

8. **CONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY LH (See page SB-42)**

9. **CONNECT REAR SEAT 3 POINT TYPE BELT ASSEMBLY RH (See page SB-43)**

10. **INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH (See page IR-62)**

11. **INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH (See page IR-65)**

12. **INSTALL REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag) (See page IR-62)**

13. **INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)**

14. **INSTALL REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag) (See page IR-65)**

15. **INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the LH side and RH side.

16. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-63)**

17. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-65)**
18. **INSTALL REAR SEATBACK ASSEMBLY (See page SE-121)**
19. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
20. **INSTALL REAR SEAT HEADREST ASSEMBLY**
21. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-121)**
22. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/ Rear Seat Side Airbag)**
23. **PERFORM INITIALIZATION (w/ Rear Seat Side Airbag)**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).
24. **INSPECT SRS WARNING LIGHT (w/ Rear Seat Side Airbag)**
    (See page RS-37)

REMOVAL

1. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-113)**
2. **REMOVE REAR SEAT HEADREST ASSEMBLY**
3. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
4. **REMOVE REAR SEATBACK ASSEMBLY (See page SE-113)**
5. **REMOVE SEAT BELT ANCHOR COVER CAP LH (See page SB-22)**
6. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page SB-22)**
7. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Driver Seat)**
8. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER LH (See page SE-83)**
9. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER LH (See page SE-83)**
10. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER LH (See page SE-83)**
11. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER LH (See page SE-83)**
12. **REMOVE FRONT SEAT ASSEMBLY LH (See page SE-83)**
13. **REMOVE SEAT BELT ANCHOR COVER CAP RH (See page RS-490)**
14. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page RS-490)**
15. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Front Passenger Seat)**
16. **REMOVE FRONT SEAT OUTER TRACK BRACKET COVER RH (See page RS-490)**
17. **REMOVE FRONT SEAT INNER TRACK BRACKET COVER RH (See page RS-490)**
18. **REMOVE FRONT SEAT REAR OUTER TRACK BRACKET COVER RH (See page RS-490)**
19. **REMOVE FRONT SEAT REAR INNER TRACK BRACKET COVER RH (See page RS-490)**
20. **REMOVE FRONT SEAT ASSEMBLY RH (See page RS-491)**

21. REMOVE FRONT DOOR SCUFF PLATE LH

(a) Disengage the 12 claws and remove the front door scuff plate LH.

22. REMOVE FRONT DOOR OPENING TRIM COVER LH

(a) Disengage the 3 claws and remove the front door opening trim cover LH.

23. REMOVE SIDE INSTRUMENT PANEL LH (See page IP-12)

24. REMOVE FRONT PILLAR GARNISH LH

(a) Pull the upper portion of the garnish towards the inside of the cabin and disengage the 2 clips.
(b) Cut off clip <A>.
(c) Disengage the claw and remove the front pillar garnish LH.
(d) Remove clip <A> from the vehicle body.

(e) Protect the curtain shield airbag assembly.
  (1) Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.
  NOTICE:
  Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

25. REMOVE REAR DOOR SCUFF PLATE LH

(a) Disengage the 8 claws and remove the rear door scuff plate LH.

26. REMOVE LOWER CENTER PILLAR GARNISH LH

(a) Disengage the 2 claws and 5 clips, and remove the lower center pillar garnish LH.

27. REMOVE UPPER CENTER PILLAR GARNISH LH

(a) Remove the 2 screws.

(b) Pull the lower part of the pillar garnish toward the inside of the vehicle.

(c) Using a clip remover, disengage the clip and remove the upper center pillar garnish LH.

28. REMOVE REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag)

(a) Disengage the 4 claws and rear seat side garnish LH.

29. REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)

30. REMOVE ROOF SIDE INNER GARNISH ASSEMBLY LH

(a) Disengage the 5 clips and claw, and remove the roof side inner garnish assembly LH.

31. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

32. REMOVE FRONT DOOR OPENING TRIM COVER RH

HINT:
Use the same procedure for the RH side and the LH side.

33. REMOVE SIDE INSTRUMENT PANEL RH (See page IP-15)

34. REMOVE FRONT PILLAR GARNISH RH

(a) Pull the upper portion of the garnish towards the inside of the cabin and disengage the 2 clips.
(b) Cut off clip <A>.
(c) Disengage the claw and remove the front pillar garnish RH.
(d) Remove the clip <A> from the vehicle body.

(e) Protect the curtain shield airbag assembly.
  (1) Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.
  NOTICE:
  Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

35. REMOVE REAR DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

36. REMOVE LOWER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

37. REMOVE UPPER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

38. **REMOVE REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the RH side and the LH side.

39. **REMOVE REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)**
    HINT:
    Use the same procedure for the RH side and the LH side.

40. **REMOVE ROOF SIDE INNER GARNISH ASSEMBLY RH**
    HINT:
    Use the same procedure for the RH side and the LH side.

41. **REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-13)**

42. **REMOVE INSTRUMENT PANEL FINISH PANEL END RH (See page IP-15)**

43. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-16)**

44. **REMOVE UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-16)**

45. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-17)**

46. **REMOVE HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-18)**

47. **REMOVE CONSOLE BOX POCKET (See page IP-52)**

48. **REMOVE CONSOLE BOX CARPET (See page IP-52)**

49. **REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-53)**

50. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-53)**

51. **REMOVE NO. 2 CONSOLE BOX DUCT (See page AC-149)**

52. **REMOVE NO. 3 CONSOLE BOX DUCT (See page AC-149)**

53. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-232)**

54. **REMOVE SHIFT LEVER ASSEMBLY (See page AX-233)**

55. **REMOVE FLOOR CARPET BRACKET LH (See page AC-148)**

56. **REMOVE FLOOR CARPET BRACKET RH (See page AC-148)**

57. REMOVE LUGGAGE COMPARTMENT FLOOR MAT (w/ DVD Player)

58. REMOVE SPARE WHEEL COVER TRAY (w/ DVD Player)

59. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ DVD Player) (See page ED-82)

60. REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ DVD Player) (See page ED-83)

61. REMOVE REAR FLOOR FINISH PLATE (w/ DVD Player) (See page ED-83)

62. REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ DVD Player) (See page ED-83)

63. DISCONNECT STEREO COMPONENT AMPLIFIER ASSEMBLY CONNECTOR (w/ DVD Player)

(a) Disconnect the stereo component amplifier assembly connector.

64. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER (See page MI-42)

65. REMOVE RAIN SENSOR COVER (w/ Rain Sensor) (See page WW-63)

66. REMOVE ROOF CONSOLE BOX ASSEMBLY

(a) Using a screwdriver, disengage the 2 claws and open the 2 covers.
HINT:
Tape the screwdriver tip before use.

(b) Remove the 2 screws.

(c) Using a moulding remover, disengage the 2 clips.
(d) Disconnect the connectors and remove the roof console box assembly.

67. REMOVE VISOR BRACKET COVER

(a) Using a moulding remover, disengage the 4 claws and remove the visor bracket cover.
HINT:
Use the same procedure to remove the cover on the other side.

68. REMOVE VISOR ASSEMBLY LH

(a) Remove the 2 screws and visor assembly LH.

69. REMOVE VISOR ASSEMBLY RH

HINT:
Use the same procedure for the RH side and the LH side.

70. REMOVE VISOR HOLDER

(a) Remove the visor holder by turning it counterclockwise.
HINT:
Use the same procedure to remove the hook on the other side.

71. REMOVE COAT HOOK

(a) Remove the screw and coat hook.
HINT:
Use the same procedure to remove the coat hook on the other side.

72. REMOVE SPOT LIGHT ASSEMBLY (for Standard)

(a) Using a moulding remover, disengage the 2 clips.

(b) Disconnect the connector and remove the spot light assembly.

73. REMOVE SPOT LIGHT ASSEMBLY (for Glass Roof)

(a) Using a moulding remover, disengage the 2 clips.

(b) Disconnect the connector and remove the spot light assembly.

74. REMOVE ASSIST GRIP SUB-ASSEMBLY

(a) Using a screwdriver, disengage the 4 claws and remove the 2 assist grip covers.

HINT:
Tape the screwdriver tip before use.

(b) Disengage the 2 clips and remove the assist grip sub-assembly.
HINT:
Use the same procedure for the other 3 assist grips.

75. REMOVE ROOF HEADLINING ASSEMBLY (for Standard)

(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.

(b) Disconnect the antenna cord sub-assembly connector and disengage each clamp from the front pillar RH.

(c) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

(d) Disengage the 12 claws, 4 clips, and 11 fasteners.

(e) Remove the roof headlining assembly from the vehicle through the front right door.

76. REMOVE ROOF HEADLINING ASSEMBLY (for Glass Roof)

(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.

(b) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

(c) Disengage the 12 claws, 4 clips, and 21 fasteners.

(d) Remove the roof headlining assembly from the vehicle through the front right door.

77. REMOVE ANTENNA CORD SUB-ASSEMBLY (See page AV-222)

78. REMOVE VANITY LIGHT ASSEMBLY

(a) Disengage the 2 claws and separate the bulb holder from the vanity light assembly as shown in the illustration.

(b) Disengage the claw and remove the vanity light assembly.
HINT:
Use the same procedure to remove the light on the other side.

79. REMOVE NO. 1 ROOF WIRE (for Standard)

(a) Turn the visor connectors clockwise approximately 90° and separate the connectors from the roof headlining assembly.

(b) Remove the adhesive tape from the roof headlining assembly.

(c) Remove the No. 1 roof wire from the roof headlining assembly.

(d) Remove the double-sided tape from the roof headlining assembly.

80. REMOVE NO. 1 ROOF WIRE (for Glass Roof)

(a) Turn the visor connectors clockwise approximately 90° and separate the connectors from the roof headlining assembly.

(b) Remove the adhesive tape from the roof headlining assembly.

(c) Remove the No. 1 roof wire from the roof headlining assembly.

(d) Remove the double-sided tape from the roof headlining assembly.

P
B147715

INSTALLATION

1. INSTALL NO. 1 ROOF WIRE (for Standard)

(a) Apply new double-sided tape to the locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations

P

B147716E01

NOTICE:
Securely apply the double-sided tape to prevent the tape from being out of alignment and peeling off.

(b) Peel off the release paper from the double-sided tape.

(c) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.

NOTICE:

- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

(d) Turn the visor connectors clockwise approximately 90° to the connectors of the roof headlining.

(e) Apply adhesive tape to the locations shown in the illustration.

Reference: Tape Attachment Locations

HINT:
As shown at point A in the illustration, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

2. INSTALL NO. 1 ROOF WIRE (for Glass Roof)

(a) Apply new double-sided tape to the locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations

P

B147718E01

NOTICE:
Securely apply the double-sided tape to prevent the tape from being out of alignment and peeling off.

(b) Peel off the release paper from the double-sided tape.

(c) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.
NOTICE:
- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

(d) Turn the visor connectors clockwise approximately 90° to the connectors of the roof headlining.

(e) Apply adhesive tape to the locations shown in the illustration.

Reference: Tape Attachment Locations

HINT:
As shown at point A in the illustration, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

3. INSTALL VANITY LIGHT ASSEMBLY

(a) Install the vanity light to the roof headlining.

(b) Connect the 2 claws to install the bulb holder.
HINT:
Use the same procedure to install the light on the other side.

4. INSTALL ANTENNA CORD SUB-ASSEMBLY (See page AV-224)

5. INSTALL ROOF HEADLINING ASSEMBLY (for Standard)

(a) Pull the roof headlining assembly into the vehicle through the front right door.

(b) Engage the 12 claws, 4 clips, and 11 fasteners.

(c) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.

(d) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.

(e) Connect the No. 1 wire connector and engage each clamp to the front pillar LH.

6. INSTALL ROOF HEADLINING ASSEMBLY (for Glass Roof)

(a) Pull the roof headlining assembly into the vehicle through the front right door.

(b) Engage the 12 claws, 4 clips, and 21 fasteners.

(c) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.

(d) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.

(e) Connect the No. 1 wire connector and engage each clamp to the front pillar LH.

7. INSTALL ASSIST GRIP SUB-ASSEMBLY

(a) Engage the 2 clips to an assist grip sub-assembly as shown in the illustration.

(b) Install the assist grip sub-assembly.
(c) Install the 2 assist grip covers to the assist grip sub-assembly.
HINT:
Use the same procedure for the other 3 assist grips.

8. INSTALL SPOT LIGHT ASSEMBLY (for Standard)
(a) Connect the connector.

(b) Engage the 2 clips and install the spot light assembly.

9. INSTALL SPOT LIGHT ASSEMBLY (for Glass Roof)
(a) Connect the connector.

(b) Engage the 2 clips and install the spot light assembly.

10. INSTALL COAT HOOK

(a) Install the coat hook with the screw.
HINT:
Use the same procedure to install the hook on the other side.

11. INSTALL VISOR HOLDER

(a) Set the claws of the visor holder as shown in the illustration.
(b) Engage the claws and install the visor holder.
HINT:
Use the same procedure to install the holder on the other side.

12. INSTALL VISOR ASSEMBLY LH

(a) Install the visor assembly LH with the 2 screws.

13. INSTALL VISOR ASSEMBLY RH

HINT:
Use the same procedure for the RH side and the LH side.

14. INSTALL VISOR BRACKET COVER

(a) Engage the 4 claws and install the visor bracket cover.
HINT:
Use the same procedure to install the cover on the other side.

15. INSTALL ROOF CONSOLE BOX ASSEMBLY

(a) Connect the connector.
(b) Engage the 2 clips.

(c) Install the roof console box assembly with the 2 screws.

16. INSTALL RAIN SENSOR COVER (w/ Rain Sensor) (See page WW-65)

17. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (See page MI-44)

18. CONNECT STEREO COMPONENT AMPLIFIER ASSEMBLY CONNECTOR (w/ DVD Player)

(a) Connect the stereo component amplifier assembly connector.

19. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (w/ DVD Player) (See page ED-88)

20. INSTALL REAR FLOOR FINISH PLATE (w/ DVD Player) (See page ED-88)

21. INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (w/ DVD Player) (See page ED-89)

22. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (w/ DVD Player) (See page ED-89)

23. INSTALL SPARE WHEEL COVER TRAY (w/ DVD Player)

24. INSTALL LUGGAGE COMPARTMENT FLOOR MAT (w/ DVD Player)

25. INSTALL FLOOR CARPET BRACKET LH

26. INSTALL FLOOR CARPET BRACKET RH

27. INSTALL SHIFT LEVER ASSEMBLY (See page AX-240)

28. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page AX-241)

29. INSTALL NO. 2 CONSOLE BOX DUCT (See page AC-163)

30. INSTALL NO. 3 CONSOLE BOX DUCT (See page AC-163)

31. INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-39)

32. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY (See page IP-40)

33. INSTALL CONSOLE BOX CARPET (See page IP-41)

34. INSTALL CONSOLE BOX POCKET (See page IP-41)

35. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/o Seat Heater System) (See page IP-41)

36. INSTALL HEATER SEAT SWITCH CONSOLE BASE (w/ Seat Heater System) (See page IP-41)

37. INSTALL UPPER CONSOLE PANEL ASSEMBLY WITH FRONT ASH RECEPTACLE (See page IP-42)

38. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-42)

39. INSTALL INSTRUMENT PANEL FINISH PANEL END LH (See page IP-46)

40. INSTALL INSTRUMENT PANEL FINISH PANEL END RH (See page IP-44)

41. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH

(a) Engage the claw and 5 clips, and install the roof side inner garnish assembly LH.

42. INSTALL REAR SEAT SIDE GARNISH LH (w/o Rear Seat Side Airbag)

(a) Install the 4 claws and install the rear seat side garnish LH.

43. INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY LH (w/ Rear Seat Side Airbag) (See page RS-460)

44. INSTALL UPPER CENTER PILLAR GARNISH LH

(a) Engage the clip.

(b) Install the upper center pillar garnish LH with the 2 screws.

45. INSTALL LOWER CENTER PILLAR GARNISH LH

(a) Engage the 5 clips and 2 claws, and install the lower center pillar garnish LH.

46. INSTALL REAR DOOR SCUFF PLATE LH

(a) Engage the 8 claws, then install the rear door scuff plate LH.

47. INSTALL FRONT PILLAR GARNISH LH

(a) Remove the protective cover.

(b) Install a new clip <A> on the front pillar garnish LH.

(c) Engage the claw and 2 clips, then install the front pillar garnish LH.

48. INSTALL SIDE INSTRUMENT PANEL LH (See page IP-47)

49. INSTALL FRONT DOOR OPENING TRIM COVER LH

(a) Engage the 3 claws and install the front door opening trim cover LH.

50. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 12 claws, and install the front door scuff plate LH.

51. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH

HINT:
Use the same procedure for the RH side and the LH side.

52. INSTALL REAR SEAT SIDE GARNISH RH (w/o Rear Seat Side Airbag)

HINT:
Use the same procedure for the RH side and the LH side.

53. INSTALL REAR SEAT SIDE AIRBAG ASSEMBLY RH (w/ Rear Seat Side Airbag)

HINT:
Use the same procedure for the RH side and the LH side.

54. INSTALL UPPER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

55. INSTALL LOWER CENTER PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

56. INSTALL REAR DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

57. INSTALL FRONT PILLAR GARNISH RH

HINT:
Use the same procedure for the RH side and the LH side.

58. INSTALL SIDE INSTRUMENT PANEL RH (See page IP-43)

59. INSTALL FRONT DOOR OPENING TRIM COVER RH

HINT:
Use the same procedure for the RH side and the LH side.

60. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:
Use the same procedure for the RH side and the LH side.

61. INSTALL FRONT SEAT ASSEMBLY LH (See page SE-109)

62. INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER LH (See page SE-110)

63. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER LH (See page SE-110)**
64. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER LH (See page SE-110)**
65. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER LH (See page SE-110)**
66. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page SB-25)**
67. **INSTALL SEAT BELT ANCHOR COVER CAP LH (See page SB-25)**
68. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Driver Seat)**
69. **INSTALL FRONT SEAT ASSEMBLY RH (See page RS-497)**
70. **INSTALL FRONT SEAT REAR OUTER TRACK BRACKET COVER RH (See page RS-498)**
71. **INSTALL FRONT SEAT REAR INNER TRACK BRACKET COVER RH (See page RS-498)**
72. **INSTALL FRONT SEAT OUTER TRACK BRACKET COVER RH (See page RS-498)**
73. **INSTALL FRONT SEAT INNER TRACK BRACKET COVER RH (See page RS-498)**
74. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page RS-499)**
75. **INSTALL SEAT BELT ANCHOR COVER CAP RH (See page RS-499)**
76. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Front Passenger Seat)**
77. **INSTALL REAR SEATBACK ASSEMBLY (See page SE-121)**
78. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
79. **INSTALL REAR SEAT HEADREST ASSEMBLY**
80. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-121)**
81. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-33).
82. **INSPECT SHIFT LEVER POSITION (See page AX-200)**
83. **ADJUST SHIFT LEVER POSITION (See page AX-200)**
84. **INSPECT FRONT SEAT ASSEMBLY (See page SE-110)**

85. INSPECT SRS WARNING LIGHT
(See page RS-37)

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use the following procedures to troubleshoot the sliding roof system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Using the intelligent tester, check if the CAN communication system is functioning normally.

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

CUSTOMIZE PARAMETERS

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:
The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Sliding roof ECU

Display (Item)	Default	Contents	Setting
OPEN/DOOR KEY (Door key related OPEN)	ON	Function to manually open sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to unlock position when engine switch is off	ON/OFF
CLOSE/DOOR KEY (Door key related CLOSE)	ON	Function to manually close sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to lock position when engine switch is off	ON/OFF
OPEN/WIRELESS (Wireless key related OPEN)	ON	Function to manually open sliding roof linked with power window if pressing transmitter UNLOCK switch for 2.4 seconds or more when engine switch is off	ON/OFF
DOOR HANDLE BTN (Door Handle Lock Button)	ON	Function to close the sliding roof manually linking the power window if holding the door handle button for 1.5 seconds or more to the lock side when the engine switch is off.	ON/OFF
DOOR KEY OPER (Door key related operation)	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by holding driver's side door key for 1.5 seconds or more to unlock position when engine switch is off	TILT/SLIDE
WIRELESS OPER (Wireless key related operation)	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by pressing on transmitter UNLOCK switch for 2.4 seconds or more when engine switch is off	TILT/SLIDE

INITIALIZATION

1. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

NOTICE:

If the sliding roof drive gear is replaced or if the battery is removed during sliding roof operation, the sliding roof drive gear will require initialization. If initialization is not performed, the following functions will not operate: auto operation and key off operation.

(a) Turn the engine switch on (IG).

(b) Make sure that the sliding roof is fully closed.

(c) Push and hold the CLOSE switch or the UP switch until the following movement finishes: Tilt up → approximately 1 second → tilt down → slide open → slide closed.

(d) Check that the sliding roof stops at the fully closed position.

(e) Finish the initialization.

(f) Check that the AUTO operation works normally.

NOTICE:

If the following conditions occur during initialization procedure, initialization will fail.

- **Engine switch is turned off.**
- **Sliding roof control switch is released while sliding roof is operating.**
- **Vehicle speed is 5 km/h (3 mph) or more.**
- **Communication is cut off.**
- **Another switch is turned on during initialization.**
- **The vehicle experiences a strong vibration during initialization, such as the slamming of a door.**

HINT:

- If the sliding roof cannot be fully closed or its position has become misaligned, perform initialization again.
- If the roof glass stops moving or starts moving in the opposite direction while the CLOSE or UP switch is held down, continue to hold the switch for another 10 seconds or more to return the sliding roof control ECU to an uninitialized condition. Then perform the initialization procedure again.
- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear (sliding roof ECU).

CUSTOMIZE PARAMETERS

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:
The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Sliding roof ECU

Display (Item)	Default	Contents	Setting
OPEN/DOOR KEY (Door key related OPEN)	ON	Function to manually open sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to unlock position when engine switch is off	ON/OFF
CLOSE/DOOR KEY (Door key related CLOSE)	ON	Function to manually close sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to lock position when engine switch is off	ON/OFF
OPEN/WIRELESS (Wireless key related OPEN)	ON	Function to manually open sliding roof linked with power window if pressing transmitter UNLOCK switch for 2.4 seconds or more when engine switch is off	ON/OFF

DOOR KEY OPER (Door key related operation)	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by holding driver's side door key for 1.5 seconds or more to unlock position when engine switch is off	TILT/SLIDE
WIRELESS OPER (Wireless key related operation)	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by pressing on transmitter UNLOCK switch for 2.4 seconds or more when engine switch is off	TILT/SLIDE

INITIALIZATION

1. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

NOTICE:

If the sliding roof drive gear is replaced or if the battery is removed during sliding roof operation, the sliding roof drive gear will require initialization. If initialization is not performed, the following functions will not operate: auto operation and key off operation.

(a) Turn the engine switch on (IG).

(b) Make sure that the sliding roof is fully closed.

(c) Push and hold the CLOSE switch or the UP switch until the following movement finishes: Tilt up → approximately 1 second → tilt down → slide open → slide closed.

(d) Check that the sliding roof stops at the fully closed position.

(e) Finish the initialization.

(f) Check that the AUTO operation works normally.

NOTICE:

If the following conditions occur during initialization procedure, initialization will fail.

- **Engine switch is turned off.**
- **Sliding roof control switch is released while sliding roof is operating.**
- **Vehicle speed is 5 km/h (3 mph) or more.**
- **Communication is cut off.**
- **Another switch is turned on during initialization.**
- **The vehicle experiences a strong vibration during initialization, such as the slamming of a door.**

HINT:

- If the sliding roof cannot be fully closed or its position has become misaligned, perform initialization again.
- If the roof glass stops moving or starts moving in the opposite direction while the CLOSE or UP switch is held down, continue to hold the switch for another 10 seconds or more to return the sliding roof control ECU to an uninitialized condition. Then perform the initialization procedure again.
- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear (sliding roof ECU).

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column in the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Sliding Roof System

Symptom	Suspected Area	See page
Sliding function and tilt function do not operate	Sliding roof ECU power source circuit	RF-29
Either sliding function or tilt function does not operate	Sliding roof control switch circuit	RF-27

TERMINALS OF ECU

1. CHECK SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

B050671E37

(a) Disconnect the Q7 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (Q7-1) - E (Q7-2)	R - W-B	+B power supply	Always	10 to 14 V
IG (Q7-5) - E (Q7-2)	B - W-B	Engine switch power supply	Engine switch off	Below 1 V
IG (Q7-5) - E (Q7-2)	B - W-B	Engine switch power supply	Engine switch on (IG)	10 to 14 V
OPN (Q7-7) - E (Q7-2)	R - W-B	Sliding roof motor open	OPEN switch OFF	10 kΩ or higher
OPN (Q7-7) - E (Q7-2)	R - W-B	Sliding roof motor open	OPEN switch ON	Below 1 Ω
CLS (Q7-9) - E (Q7-2)	B - W-B	Sliding roof motor closed	CLOSE switch OFF	10 kΩ or higher
CLS (Q7-9) - E (Q7-2)	B - W-B	Sliding roof motor closed	CLOSE switch ON	Below 1 Ω
UP (Q7-10) - E (Q7-2)	W - W-B	Sliding roof motor up	UP switch OFF	10 kΩ or higher
UP (Q7-10) - E (Q7-2)	W - W-B	Sliding roof motor up	UP switch ON	Below 1 Ω
DWN (Q7-8) - E (Q7-2)	LG - W-B	Sliding roof motor down	DOWN switch OFF	10 kΩ or higher
DWN (Q7-8) - E (Q7-2)	LG - W-B	Sliding roof motor down	DOWN switch ON	Below 1 Ω
E (Q7-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the Q7 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
OPN (Q7-7) - E (Q7-2)	R - W-B	Sliding roof motor open	Engine switch on (IG), sliding roof closed, OPEN switch OFF	Below 1 V
OPN (Q7-7) - E (Q7-2)	R - W-B	Sliding roof motor open	Engine switch on (IG), sliding roof closed, OPEN switch ON	10 to 14 V
CLS (Q7-9) - E (Q7-2)	B - W-B	Sliding roof motor closed	Engine switch on (IG), sliding roof open, CLOSE switch OFF	Below 1 V
CLS (Q7-9) - E (Q7-2)	B - W-B	Sliding roof motor closed	Engine switch on (IG), sliding roof open, CLOSE switch ON	10 to 14 V
UP (Q7-10) - E (Q7-2)	W - W-B	Sliding roof motor up	Engine switch on (IG), sliding roof tilted downward, UP switch OFF	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
UP (Q7-10) - E (Q7-2)	W - W-B	Sliding roof motor up	Engine switch on (IG), sliding roof tilted downward, UP switch ON	10 to 14 V
DWN (Q7-8) - E (Q7-2)	LG - W-B	Sliding roof motor down	Engine switch on (IG), sliding roof tilted upward, DOWN switch OFF	Below 1 V
DWN (Q7-8) - E (Q7-2)	LG - W-B	Sliding roof motor down	Engine switch on (IG), sliding roof tilted upward, DOWN switch ON	10 to 14 V

If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Sliding roof system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle's Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

HINT:
The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 69 Ω
CANH (6) - CG (4)	CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	CAN bus line	Engine switch off*	6 kΩ or higer

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.
HINT:
Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's Data List allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the Data List early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the Data List according to the display on the tester.

SLIDE ROOF:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-
CLOSE SW	Slide switch close signal/ON or OFF	ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.	-
UP SW	Tilt switch up signal/ON or OFF	ON: UP switch is pressed. OFF: UP switch is not pressed.	-
DOWN SW	Tilt switch down signal/ON or OFF	ON: DOWN switch is pressed. OFF: DOWN switch is not pressed.	-
HALL IC1 STATUS	Sliding roof operation signal/ NORMAL or LOCK	NORMAL: Sliding roof motor is operating. LOCK: Sliding roof motor is not operating.	-
HALL IC1 PULSE	Sliding roof operation signal/LO or HI	LO: Sliding roof motor is not operating. HI: Sliding roof motor is operating.	-
HALL IC2 STATUS	Sliding roof operation signal/ NORMAL or LOCK	NORMAL: Sliding roof motor is operating. LOCK: Sliding roof motor is not operating.	-
HALL IC2 PULSE	Sliding roof operation signal/LO or HI	LO: Sliding roof motor is not operating. HI: Sliding roof motor is operating.	-
D-DOOR WARN SW	Driver's door courtesy light switch signal/ON or OFF	ON: Driver's door is open. OFF: Driver's door is closed.	-
IG (MPX)	Engine switch signal (MPX signal)/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
IG (DIRCT SIG)	Engine switch signal/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
KEY OFF PERMS	Key-OFF sliding roof operation permit signal/ON or OFF	ON: Driver's side door is not closed within 45 sec. after engine switch is turned off. OFF: Any status except "ON" status	-
WIRELESS OPER (*1)	Wireless sliding roof operating direction signal/Tilt or Slide	TILT: Slide close direction → Tilt up direction SLIDE: Slide open direction → Tilt down direction	-
DOOR KEY OPER (*1)	Key-linked sliding roof operating direction signal/Tilt or Slide	TILT: Slide close direction → Tilt up direction SLIDE: Slide open direction → Tilt down direction	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DOOR HANDLE BTN (*1)	Door handle button close signal/ Available or Not Available	Available: Door handle button close. Not Available: Any status except "Available" status.	-
OPEN /WIRELESS (*1)	Wireless sliding roof open permit signal/Available or Not Available	Available: No key is in vehicle and all doors are closed. Not Available: Any status except "Available" status.	-
CLOSE /DOOR KEY (*1)	Key-linked sliding roof close permit signal/Available or Not Available	Available: Driver's side door is not closed within 45 sec. after engine switch is turned off. Not Available: Any status except "Available" status.	-
OPEN /DOOR KEY (*1)	Key-linked sliding roof open permit signal/Available or Not Available	Available: Driver's side door is not closed within 45 sec. after engine switch is turned off. Not Available: Any status except "Available" status.	-
CURRENT DOWN SW	Down switch failure signal (Current)/Fail or Not Fail	Fail: Sliding roof tilt down signal failure (Current) Not Fail: Sliding roof tilt down signal not fail (Current)	-
CURRENT UP SW	Up switch failure signal (Current)/ Fail or Not Fail	Fail: Sliding roof tilt up signal failure (Current) Not Fail: Sliding roof tilt up signal not fail (Current)	-
CURRENT CLS SW	Close switch failure signal (Current)/Fail or Not Fail	Fail: Sliding roof close signal failure (Current) Not Fail: Sliding roof close signal not fail (Current)	-
CURRENT OPN SW	Open switch failure signal (Current)/Fail or Not Fail	Fail: Sliding roof open signal failure (Current) Not Fail: Sliding roof open signal not fail (Current)	-

PAST OPN SW	Open switch failure signal (Past)/ Fail or Not Fail	Fail: Sliding roof open signal failure (Past) Not Fail: Sliding roof open signal not fail (Past)	-
#CODE	Number of trouble code	Number of trouble code	-

HINT:
*1: Except multi-panel moon roof

2. PERFORM ACTIVE TEST

HINT:
Performing the intelligent tester's Active Test allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the Active Test early in troubleshooting is one way to save time. The Data List can be displayed during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the Active Test according to the display on the tester.

SLIDE ROOF:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE ROOF	Operate sliding roof SLIDE CLOSE/TILT UP	CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN	OPN/DWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

DIAGNOSTIC TROUBLE CODE CHART

If any trouble code is displayed during DTC check, check the circuit corresponding to the code in the table below. Proceed to the page given for the circuit.

Sliding Roof System

DTC Code	Detection Item	Trouble Area	See page
B2341	Sensor (Motor) Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-15
B2342	Switch Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-20
B2343	Position Initialization Incomplete	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-24
B2344	Position Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-15

ON-VEHICLE INSPECTION

1. CHECK AUTO OPERATION

(a) Turn the engine switch on (IG).

(b) When the roof glass is fully closed, press the OPEN switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully opened.

(c) When the roof glass is fully open, press the CLOSE switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully closed.

(d) When the roof glass is fully closed, press the UP switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted upward.

(e) When the roof glass is fully open, press the DOWN switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted downward.

(f) When the auto operation is operating, check that pressing any personal light switch stops the roof glass operation.
HINT:
When pressing the switch for 0.3 seconds or less, the roof glass moves but auto operation does not operate.

2. CHECK SLIDING ROOF OPERATION AFTER ENGINE SWITCH IS TURNED OFF

(a) Turn the engine switch from on (IG) to off, and check that the sliding roof operates. Then open and close the driver's side door once, and check that the sliding roof does not operate.

(b) Turn the engine switch from on (IG) to off and wait for approximately 43 seconds. Check that the sliding roof does not operate.

(c) Operate the auto (SLIDE OPEN/CLOSE or TILT UP/DOWN) operation. While the roof glass is in motion, turn the engine switch from on (IG) to off. Check that the auto operation continues until the roof glass opens or closes fully.

3. CHECK JAM PROTECTION FUNCTION

CAUTION:

- **Do not use a part of your body, for example, your hand, to check the jam protection.**
- **Do not allow anything to become caught in the sliding roof by accident in this procedure.**
- **Perform the inspection from the inside of the vehicle.**

NOTICE:

- **Do not use hard objects such as a hammer, to avoid damage to the roof.**
- **If the jam protection does not operate, reset the sliding roof drive gear (motor).**

(a) When the sliding roof auto operation is operating and an object is caught between the vehicle body and glass, check that the roof glass opens 218 mm (8.58 in.) from the point of contact with the object, or opens fully if there is not an opening distance of 218 mm (8.58 in.).

(b) When the TILT UP/DOWN function is operating, and an object is caught between the vehicle body and the roof glass, check that the sliding roof tilts up fully.

DTC	B2341	Sensor (Motor) Failure

DTC	B2344	Position Failure

DESCRIPTION

When the sliding roof drive gear sub-assembly (sliding roof control ECU) detects malfunctions in the motor, and the sliding roof operation is stopped, DTC B2341 is output. When the sliding roof drive gear sub-assembly (sliding roof control ECU) detects malfunctions in the gear, and the sliding roof operation is stopped, DTC B2344 is output.

DTC No.	DTC Detection Condition	Trouble Area
B2341	Sensor (motor) Failure	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness
B2344	Position Failure	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

WIRING DIAGRAM

INSPECTION PROCEDURE

1	**CHECK SLIDING ROOF FUNCTION**

(a) Check the auto operation with the OPEN, DOWN, CLOSE and UP switches (See page RF-12).

RF

OK:
Auto operation operates normally with OPEN, DOWN, CLOSE and UP switches.

NG → **Go to step 3**

OK

2	DELETE DTC

(a) Delete the DTCs (See page RF-9).

NEXT

END

3	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-6).
OK:
Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 6**

OK

4	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, DOWN, CLOSE and UP switches (See page RF-12).
OK:
Auto operation operates normally with OPEN, DOWN, CLOSE and UP switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

RF

5	DELETE DTC

(a) Delete the DTCs (See page RF-9).

NEXT

END

6	**CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)**

Sliding Roof Control ECU Connector:

Roof Console Box Assembly Connector:

N B131186E02

(a) Disconnect the Q7 and Q2 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q7-2 (E) - Q2-5 (GND3)	Always	Below 1 Ω
Q7-7 (OPN) - Q2-3 (OPN)	Always	Below 1 Ω
Q7-8 (DWN) - Q2-2 (DOWN)	Always	Below 1 Ω
Q7-9 (CLS) - Q2-1 (CLS)	Always	Below 1 Ω
Q7-10 (UP) - Q2-4 (UP)	Always	Below 1 Ω
Q2-1 (CLS) - Body ground	Always	10 kΩ or higher
Q2-2 (DOWN) - Body ground	Always	10 kΩ or higher
Q2-3 (OPN) - Body ground	Always	10 kΩ or higher
Q2-4 (UP) - Body ground	Always	10 kΩ or higher
Q2-5 (GND3) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:

(a) Remove the roof console box assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q2-1 (CLS) - Q2-5 (GND3)	CLOSE	Below 100 Ω
Q2-2 (DOWN) - Q2-5 (GND3)	DOWN	Below 100 Ω
Q2-3 (OPN) - Q2-5 (GND3)	OPEN	Below 100 Ω
Q2-4 (UP) - Q2-5 (GND3)	UP	Below 100 Ω
Q2-1 (CLS) - Q2-5 (GND3)	OPEN	1 kΩ or higher
Q2-2 (DOWN) - Q2-5 (GND3)	CLOSE	1 kΩ or higher
Q2-3 (OPN) - Q2-5 (GND3)	UP	1 kΩ or higher
Q2-4 (UP) - Q2-5 (GND3)	DOWN	1 kΩ or higher

NG → **REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

DTC	B2342	Switch Failure

DESCRIPTION

This DTC is output when the sliding roof drive gear sub-assembly (sliding roof control ECU) detects that the OPEN, CLOSE, UP or DOWN switch in the roof console box assembly (sliding roof control switch) is stuck for 30 seconds or more.

DTC No.	DTC Detection Condition	Trouble Area
B2342	Sliding roof drive gear sub-assembly (sliding roof control ECU) detects OPEN, CLOSE, UP or DOWN switch in overhead junction block is stuck for 30 seconds or more	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-16).

INSPECTION PROCEDURE

1 READ VALUE OF INTELLIGENT TESTER (SLIDE OPEN AND TILT UP SWITCH)

(a) Use the DATA LIST to check if the sliding roof switch is functioning properly.

Sliding roof ECU

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
OPEN SW	**Slide switch open signal/ON or OFF**	**ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.**	**-**
CLOSE SW	**Slide switch close signal/ON or OFF**	**ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.**	**-**
UP SW	**Tilt switch up signal/ON or OFF**	**ON: UP switch is pressed. OFF: UP switch is not pressed.**	**-**
DOWN SW	**Tilt switch down signal/ON or OFF**	**ON: DOWN switch is pressed. OFF: DOWN switch is not pressed.**	**-**

OK:

The intelligent tester displays as shown in the table according to the operation of each switch.

NG → **Go to step 4**

OK

2 CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, CLOSE, UP and DOWN switches (See page RF-12).

OK:

Auto operation operates normally with OPEN, CLOSE, UP and DOWN switches.

NG → **Go to step 7**

RF

OK

3	DELETE DTC

(a) Delete the DTCs (See page RF-9).

NEXT

END

4	INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:

(a) Remove the roof console box assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q2-1 (CLS) - Q2-5 (GND3)	CLOSE	Below 100 Ω
Q2-2 (DOWN) - Q2-5 (GND3)	DOWN	Below 100 Ω
Q2-3 (OPN) - Q2-5 (GND3)	OPEN	Below 100 Ω
Q2-4 (UP) - Q2-5 (GND3)	UP	Below 100 Ω
Q2-1 (CLS) - Q2-5 (GND3)	OPEN	1 kΩ or higher
Q2-2 (DOWN) - Q2-5 (GND3)	CLOSE	1 kΩ or higher
Q2-3 (OPN) - Q2-5 (GND3)	UP	1 kΩ or higher
Q2-4 (UP) - Q2-5 (GND3)	DOWN	1 kΩ or higher

OK → **Go to step 10**

NG

5	REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

(a) Temporarily replace the roof console box assembly (sliding roof control switch) with a new one or normally functioning one (See page LI-160).

RF

NEXT

6	DELETE DTC

(a) Delete the DTCs (See page RF-9).

NEXT

END

7	**INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-6).
OK:
Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 10**

OK

8	**CHECK SLIDING ROOF FUNCTION**

(a) Check the auto operation with the OPEN, CLOSE, UP and DOWN switches (See page RF-12).
OK:
Auto operation operates normally with OPEN, CLOSE, UP and DOWN switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

9	**DELETE DTC**

(a) Delete the DTCs (See page RF-9).

NEXT

END

10	CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)

Sliding Roof Control ECU Connector:

Roof Console Box Assembly Connector:

N B131186E02

(a) Disconnect the Q7 and Q2 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q7-2 (E) - Q2-5 (GND3)	Always	Below 1 Ω
Q7-7 (OPN) - Q2-3 (OPN)	Always	Below 1 Ω
Q7-8 (DWN) - Q2-2 (DOWN)	Always	Below 1 Ω
Q7-9 (CLS) - Q2-1 (CLS)	Always	Below 1 Ω
Q7-10 (UP) - Q2-4 (UP)	Always	Below 1 Ω
Q2-1 (CLS) - Body ground	Always	10 kΩ or higher
Q2-2 (DOWN) - Body ground	Always	10 kΩ or higher
Q2-3 (OPN) - Body ground	Always	10 kΩ or higher
Q2-4 (UP) - Body ground	Always	10 kΩ or higher
Q2-5 (GND3) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

DTC	B2343	Position Initialization Incomplete

DESCRIPTION

This DTC is output when the sliding roof drive gear sub-assembly (sliding roof control ECU) has not been initialized.

DTC No.	DTC Detection Condition	Trouble Area
B2343	Sliding roof drive gear sub-assembly (sliding roof control ECU) has not been initialized	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-16).

INSPECTION PROCEDURE

1 INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-6).

OK:

Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 3**

OK

2 CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, CLOSE, UP and DOWN switches (See page RF-12).

OK:

Auto operation operates normally with OPEN, CLOSE, UP and DOWN switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

END

3 CHECK WIRE HARNESS (SLIDING ROOF DRIVE GEAR - OVERHEAD JUNCTION BLOCK)

Sliding Roof Control ECU Connector:

Roof Console Box Assembly Connector:

N B131186E02

(a) Disconnect the Q7 and Q2 connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q7-2 (E) - Q2-5 (GND3)	Always	Below 1 Ω
Q7-7 (OPN) - Q2-3 (OPN)	Always	Below 1 Ω
Q7-8 (DWN) - Q2-2 (DOWN)	Always	Below 1 Ω
Q7-9 (CLS) - Q2-1 (CLS)	Always	Below 1 Ω
Q7-10 (UP) - Q2-4 (UP)	Always	Below 1 Ω
Q2-1 (CLS) - Body ground	Always	10 kΩ or higher
Q2-2 (DOWN) - Body ground	Always	10 kΩ or higher
Q2-3 (OPN) - Body ground	Always	10 kΩ or higher
Q2-4 (UP) - Body ground	Always	10 kΩ or higher
Q2-5 (GND3) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:

(a) Remove the roof console box assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q2-1 (CLS) - Q2-5 (GND3)	CLOSE	Below 100 Ω
Q2-2 (DOWN) - Q2-5 (GND3)	DOWN	Below 100 Ω
Q2-3 (OPN) - Q2-5 (GND3)	OPEN	Below 100 Ω
Q2-4 (UP) - Q2-5 (GND3)	UP	Below 100 Ω
Q2-1 (CLS) - Q2-5 (GND3)	OPEN	1 kΩ or higher
Q2-2 (DOWN) - Q2-5 (GND3)	CLOSE	1 kΩ or higher
Q2-3 (OPN) - Q2-5 (GND3)	UP	1 kΩ or higher
Q2-4 (UP) - Q2-5 (GND3)	DOWN	1 kΩ or higher

NG → **REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

Sliding Roof Control Switch Circuit

DESCRIPTION

The sliding roof drive gear sub-assembly (sliding roof control ECU) receives slide switch and tilt switch signals and drives its built-in motor.

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-16).

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIDING ROOF OPERATION)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the sliding roof slides open/close and tilts up/down.

SLIDE ROOF

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE ROOF	Operate sliding roof SLIDE CLOSE/TILT UP	CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN	OPN/DWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

OK:
Sliding roof operates normally.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

2	READ VALUE OF INTELLIGENT TESTER (SLIDING ROOF SWITCH)

(a) Use the DATA LIST to check if the sliding roof switch is functioning properly.

SLIDE ROOF

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-
CLOSE SW	Slide switch close signal/ON or OFF	ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.	-
UP SW	Tilt switch up signal/ON or OFF	ON: UP switch is pressed. OFF: UP switch is not pressed.	-
DOWN SW	Tilt switch down signal/ON or OFF	ON: DOWN switch is pressed. OFF: DOWN switch is not pressed.	-

OK:
The intelligent tester displays as shown in the table according to the operation of each switch.

OK → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

NG

3 CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)

Sliding Roof Control ECU Connector:

Roof Console Box Assembly Connector:

N B131186E02

(a) Disconnect the Q7 and Q2 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q7-2 (E) - Q2-5 (GND3)	Always	Below 1 Ω
Q7-7 (OPN) - Q2-3 (OPN)	Always	Below 1 Ω
Q7-8 (DWN) - Q2-2 (DOWN)	Always	Below 1 Ω
Q7-9 (CLS) - Q2-1 (CLS)	Always	Below 1 Ω
Q7-10 (UP) - Q2-4 (UP)	Always	Below 1 Ω
Q2-1 (CLS) - Body ground	Always	10 kΩ or higher
Q2-2 (DOWN) - Body ground	Always	10 kΩ or higher
Q2-3 (OPN) - Body ground	Always	10 kΩ or higher
Q2-4 (UP) - Body ground	Always	10 kΩ or higher
Q2-5 (GND3) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Sliding Roof ECU Power Source Circuit

DESCRIPTION

The sliding roof drive gear sub-assembly (sliding roof control ECU) receives signals from the sliding roof switch and activates the sliding roof. However, malfunctions in the fuse, wire harness or sliding roof drive gear sub-assembly (sliding roof control ECU) may cause the sliding roof system to stop operating.

WIRING DIAGRAM

RF

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIDING ROOF OPERATION)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the sliding roof slides open/close and tilts up/down.

SLIDE ROOF

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE ROOF	Operate sliding roof SLIDE CLOSE/TILT UP	CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN	OPN/DWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

OK:
Sliding roof operates normally.

NG → **Go to step 2**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

2	INSPECT FUSE (S/ROOF, ECU IG NO. 1)
