- Electrical Component List

- Connector/Ground Point Locations -- Engine Compartment
- Connector/Ground Point Locations -- Upper Dashboard
- Connector/Ground Point Locations -- Lower Dashboard
- Connector/Ground Point Locations -- Body (4SD)
- Connector/Ground Point Locations -- Body (5HB)
- Connector/Ground Point Locations -- Seat
- 00E-1a -- Electrical Wiring Schematic
- 00E-1b -- Electrical Wiring Schematic
- 00E-1c -- Electrical Wiring Schematic
- 00E-1d -- Electrical Wiring Schematic
- 00F-1a -- Relay And Fuse Block
- 00F-2 -- Fuse Block
- 00F-4 -- Main Fuse
- 00G-1a -- Ground Point (SKYACTIV-G 2.0, 2.5)
- 00G-1b -- Ground Point (SKYACTIV-G 2.0, 2.5)
- 00G-3 -- Ground Point (Upper Dashboard)
- 00G-4 -- Ground Point (Lower Dashboard)
- 00G-5 -- Ground Point (4SD)
- 00G-6 -- Ground Point (5HB)

- 00D-1a -- Data Link Connector
- 00D-1b -- Data Link Connector
- 00D-1c -- Data Link Connector
- 00D-1d -- Data Link Connector
- 00D-1e -- Data Link Connector
- 0112-1 -- Cooling System (SKYACTIV-G 2.0, 2.5)
- 0114-1 -- Fuel System (SKYACTIV-G 2.0, 2.5)
- 0117-1 -- Charging System (SKYACTIV-G 2.0, 2.5 / With i-ELOOP)
- 0117-5 -- Charging System (SKYACTIV-G 2.0, 2.5 / Without i-ELOOP)
- 0119-1 -- Starting System (SKYACTIV-G 2.0, 2.5)
- 0120-1 -- Cruise Control System (SKYACTIV-G 2.0, 2.5)
- 0140-1a -- Control System (SKYACTIV-G 2.0, 2.5)
- 0140-1b -- Control System (SKYACTIV-G 2.0, 2.5)
- 0140-1c -- Control System (SKYACTIV-G 2.0, 2.5)
- 0140-1d -- Control System (SKYACTIV-G 2.0, 2.5)
- 0140-1e -- Control System (SKYACTIV-G 2.0, 2.5)
- 0140-1f -- Control System (SKYACTIV-G 2.0, 2.5)
- 0415-1a -- Dynamic Stability Control

- **0415-1b -- Dynamic Stability Control**
- **0517-1a -- Automatic Transaxle Control System**
- **0517-1b -- Automatic Transaxle Control System**
- **0518-1 -- Shift-Lock System**
- **0613-1 -- Electric Power Steering (EPS)**
- **0740-1a -- Heater And Air Conditioner System (Manual A/C)**
- **0740-1b -- Heater And Air Conditioner System (Manual A/C)**
- **0740-2a -- Heater And Air Conditioner System (Full-Auto A/C (Single))**
- **0740-2b -- Heater And Air Conditioner System (Full-Auto A/C (Single))**
- **0740-3a -- Heater And Air Conditioner System (Full-Auto A/C (Dual))**
- **0740-3b -- Heater And Air Conditioner System (Full-Auto A/C (Dual))**
- **0740-4 -- A/C Compressor Control**
- **0810-1a -- Air Bag System (Includes Pre-Tensioner Seat Belt Information)**
- **0810-1b -- Air Bag System (Includes Pre-Tensioner Seat Belt Information)**
- **0810-1c -- Air Bag System (Includes Pre-Tensioner Seat Belt Information)**
- **0810-1d -- Air Bag System (Includes Pre-Tensioner Seat Belt Information)**
- **0912-1 -- Rear Window Defroster (Includes Heated Outer Mirror Information)**
- **0912-3 -- Power Outer Mirror**
- **0912-4 -- Auto Dimming Mirror**
- **0912-5a -- Power Window System (Auto-Open/Close Function For Driver-Side Window)**
- **0912-5b -- Power Window System (Auto-Open/Close Function For Driver-Side Window)**
- **0913-1 -- Seat Warmer**
- **0913-2 -- Power Seat**
- **0914-1a -- Door Lock System (With Keyless Entry System)**
- **0914-1b -- Door Lock System (With Keyless Entry System)**
- **0914-1c -- Door Lock System (With Keyless Entry System)**
- **0914-1d -- Door Lock System (With Keyless Entry System)**
- **0914-1e -- Door Lock System (With Keyless Entry System)**
- **0914-2a -- Door Lock System (With Advanced Keyless Entry System)**
- **0914-2b -- Door Lock System (With Advanced Keyless Entry System)**
- **0914-2c -- Door Lock System (With Advanced Keyless Entry System)**
- **0914-2d -- Door Lock System (With Advanced Keyless Entry System)**
- **0914-2e -- Door Lock System (With Advanced Keyless Entry System)**
- **0914-2f -- Door Lock System (With Advanced Keyless Entry System)**
- **0914-4 -- Theft-Deterrent System**
- **0915-1 -- Sunroof**
- **0918-1a -- Headlight (Without Discharge Headlight System)**
- **0918-1b -- Headlight (Without Discharge Headlight System)**
- **0918-2a -- Headlight (With Discharge Headlight System)**
- **0918-2b -- Headlight (With Discharge Headlight System)**
- **0918-3a -- License Plate Light / Parking Light / Side Marker Light / Taillight**
- **0918-3b -- License Plate Light / Parking Light / Side Marker Light / Taillight**
- **0918-4 -- Fog Light**
- **0918-5a -- Turn And Hazard Warning Light**
- **0918-5b -- Turn And Hazard Warning Light**
- **0918-6 -- Back-Up Light**
- **0918-7a -- Brake Light / High-Mount Brake Light**
- **0918-7b -- Brake Light / High-Mount Brake Light**
- **0918-9 -- Illumination Light**
- **0918-10 -- Headlight Manual Leveling System**
- **0918-11 -- AFS (Adaptive Front Lighting System) / Headlight Auto Leveling System**
- **0918-12 -- Steering Angle Sensor**
- **0918-13 -- High Beam Control (HBC) System**
- **0919-1a -- Wiper And Washer System**
- **0919-1b -- Wiper And Washer System**
- **0920-1a -- Audio System (Without Center Display)**
- **0920-1b -- Audio System (Without Center Display)**

- **0920-1c -- Audio System (Without Center Display)**
- **0920-1d -- Audio System (Without Center Display)**
- **0920-2a -- Audio System (With Center Display / Without Bose® Type Audio)**
- **0920-2b -- Audio System (With Center Display / Without Bose® Type Audio)**
- **0920-2c -- Audio System (With Center Display / Without Bose® Type Audio)**
- **0920-2d -- Audio System (With Center Display / Without Bose® Type Audio)**
- **0920-2e -- Audio System (With Center Display / Without Bose® Type Audio)**
- **0920-3a -- Audio System (With Center Display / Bose® Type Audio)**
- **0920-3b -- Audio System (With Center Display / Bose® Type Audio)**
- **0920-3c -- Audio System (With Center Display / Bose® Type Audio)**
- **0920-3d -- Audio System (With Center Display / Bose® Type Audio)**
- **0920-3e -- Audio System (With Center Display / Bose® Type Audio)**
- **0920-3f -- Audio System (With Center Display / Bose® Type Audio)**
- **0921-1 -- Power System**
- **0921-2 -- Accessory Socket**
- **0922-1a -- Instrument Cluster**
- **0922-1b -- Instrument Cluster**
- **0922-1c -- Instrument Cluster**
- **0922-1d -- Instrument Cluster**
- **0922-1e -- Instrument Cluster**
- **0922-2 -- Horn**
- **0922-3 -- Indicator Unit**
- **0922-5 -- Lane Departure Warning System**
- **0922-6 -- Blind Spot Monitoring (BSM)**
- **0940-1a -- Body Control System**
- **0940-1b -- Body Control System**

Workshop Manual - General Information

2014 - Mazda3

General Information

- VEHICLE IDENTIFICATION NUMBER (VIN) CODE
- VEHICLE IDENTIFICATION NUMBER (VIN)
- HOW TO USE THIS MANUAL
- UNITS
- SERVICE CAUTIONS
- INSTALLATION OF RADIO SYSTEM
- ELECTRICAL SYSTEM
- REPAIR-USE CONNECTOR REPLACEMENT PROCEDURE
- JACKING POSITIONS, VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITIONS
- TOWING
- IDENTIFICATION NUMBER LOCATIONS
- SAE STANDARDS
- ABBREVIATIONS

VEHICLE IDENTIFICATION NUMBER (VIN)

2014 - Mazda3 - General Information

HOW TO USE THIS MANUAL

Range of Topics

- This manual contains procedures for performing all required service operations. The procedures are divided into the following five basic operations:
    - Removal/Installation
    - Disassembly/Assembly
    - Replacement
    - Inspection
    - Adjustment
- Simple operations which can be performed easily just by looking at the vehicle (i.e., removal/installation of parts, jacking, vehicle lifting, cleaning of parts, and visual inspection) have been omitted.

Advisory Messages

- You will find several **Warnings, Cautions, Notes, Specifications** and **Upper and Lower Limits** in this manual.

    Warning

    - A Warning indicates a situation in which serious injury or death could result if the warning is ignored.

    Caution

    - A Caution indicates a situation in which damage to the vehicle or parts could result if the caution is ignored.

    Note

    - A Note provides added information that will help you to complete a particular procedure.

    Specification

    - The values indicate the allowable range when performing inspections or adjustments.

    Upper and lower limits

    - The values indicate the upper and lower limits that must not be exceeded when performing inspections or adjustments.

Symbols

- There are nine symbols indicating oil, grease, fluids, sealant, and the use of **SST** or equivalent. These symbols show application points or use of these materials during service.

Symbol	Meaning	Kind
	Apply oil	New appropriate engine oil or gear oil
	Apply brake fluid	New appropriate brake fluid
	Apply automatic transmission/transaxle fluid	New appropriate automatic transmission/transaxle fluid
	Apply continuously variable transaxle fluid	New appropriate continuously variable transaxle fluid

GREASE	Apply grease	Appropriate grease
SEALANT	Apply sealant	Appropriate sealant
P	Apply petroleum jelly	Appropriate petroleum jelly
R	Replace part	O ring, gasket
SST	Use SST or equivalent	Appropriate tools

Service Procedure

Inspection, adjustment

- Inspection and adjustment procedures are divided into steps. Important points regarding the location and contents of the procedures are explained in detail and shown in the illustrations.

Repair procedure

1. Most repair operations begin with an overview illustration. It identifies the components, shows how the parts fit together, and describes visual part inspection. However, only removal/installation procedures that need to be performed methodically have written instructions.

2. Expendable parts, tightening torques, and symbols for oil, grease, and sealant are shown in the overview illustration. In addition, symbols indicating parts requiring the use of special service tools or equivalent are also shown.

3. Procedure steps are numbered and the part that is the main point of that procedure is shown in the illustration with the corresponding number. Occasionally, there are important points or additional information concerning a procedure. Refer to this information when servicing the related part.

1	Split pin	7	Split pin
2	Nut	8	Nut
3	Lower trailing link ball joint (See 02-14-5 Lower Trailing Link Ball Joint Removal Note)	9	Upper trailing link ball joint (See 02-14-5 Upper Trailing Link Ball Joint Removal Note)
4	Bolt	10	Nut
5	Lower trailing link	11	Upper trailing link
6	Dust boot (lower trailing link)	12	Dust boot (upper trailing link)

Troubleshooting Procedure

Basic flow of troubleshooting

DTC troubleshooting flow (on board diagnostic)

- Diagnostic trouble codes (DTCs) are important hints for repairing malfunctions that are difficult to simulate. Perform the specific DTC diagnostic inspection to quickly and accurately diagnose the malfunction.
- The on board diagnostic function is used during inspection. When a DTC is shown specifying the cause of a malfunction, continue the diagnostic inspection according to the items indicated by the on board diagnostic function.

Diagnostic index

- The diagnostic index lists the symptoms of specific malfunctions. Select the symptoms related or most closely relating to the malfunction.

Quick diagnosis chart (if mentioned)

- The quick diagnosis chart lists diagnosis and inspection procedures to be performed specifically relating to the cause of the malfunction.

Symptom troubleshooting

- Symptom troubleshooting quickly determines the location of the malfunction according to symptom type.

Procedures for Use

Using the basic inspection (transmission/transaxle)

- Perform the basic inspection procedure before symptom troubleshooting.
- Perform each step in the order shown.
- The reference column lists the location of the detailed procedure for each basic inspection.
- Although inspections and adjustments are performed according to the reference column procedures, if the cause of the malfunction is discovered during basic inspection, continue the procedures as indicated in the action column.

SHOWS INSPECTION ORDER

SHOWS ITEM NAMES FOR DETAILED PROCEDURES

SHOW POINTS REQUIRING ATTENTION BASED ON INSPECTION RESULTS

REFERENCE COLUMN

BASIC INSPECTION

STEP	INSPECTION		ACTION
1	Perform the mechanical system test. (See 05-13-3 MECHANICAL SYSTEM TEST.) Is mechanical system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
2	Turn the ignition switch to the ON position. When the selector lever is moved, does the selector illumination indicate synchronized position to the lever location? Also, when other ranges are selected from N or P during idling, does the vehicle move within 1—2 s?	Yes	Go to next step.
		No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-14-5 SELECTOR LEVER INSPECTION.) (See 05-13-10 TRANSMISSION RANGE (TR) SWITCH INSPECTION.) If the selector lever and TR switch are normal, go to the next step.
3	Inspect the ATF color condition. (See 05-13-8 AUTOMATIC TRANSMISSION FLUID (ATF) INSPECTION.) Are ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result. Flush ATX and cooler line as necessary.
4	Perform the line pressure test. (See 05-13-3 Line Pressure Test.) Is the line pressure normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
5	Perform the stall test. (See 05-13-4 Stall Speed Test.) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
	Inspect the voltage at the following TCM terminals. (See 05-13-29 TCM INSPECTION.) • Terminal 2J (TFT sensor) • Terminals 1D, 2B, 2C, 2E (TR switch) • Terminal 2G (turbine sensor) • Terminal 2D (down switch) • Terminal 2I (up switch) • Terminal 1E (M range switch) • Terminal 1W (steering shift switch) Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.

Using the DTC troubleshooting flow

- DTC troubleshooting flow shows diagnostic procedures, inspection methods, and proper action to take for each DTC.

DTC C0020:01/C0020:1C/C0020:71 [ABS]

DTC	C0020:01, C0020:1C, C0020:71	Pump motor, motor relay
DETECTION CONDITION	· C0020:01 — ABS motor relay signal does not correspond to ABS HU/CM ON signal. · C0020:1C — ABS motor monitor signal does not correspond to ABS HU/CM OFF signal. — ABS motor monitor signal does not correspond to ABS HU/CM ON signal. · C0020:71 — ABS HU/CM motor monitor ON signal is not input within specified time limit or more when motor signal is switched from ON to OFF by ABS HU/CM.	
FAIL-SAFE FUNCTION	· Illuminates the ABS warning light and TCS/DSC indicator light. · Inhibits the ABS, TCS, DSC and brake assist controls.	
POSSIBLE CAUSE	· ABS 40A fuse malfunction · Open or short circuit in ABS HU/CM internal motor relay, or stuck motor relay · Open or short circuit in ABS HU/CM internal pump motor, or frozen pump motor · Open circuit or short to ground in the wiring harness between the battery and ABS HU/CM terminal Y · Open circuit in the wiring harness between ABS HU/CM terminal B and body ground · Poor connection at connectors (female terminal)	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS FUSE CONDITION** · Is the ABS fuse (ABS 40A) normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 6.
2	**VERIFY PUMP MOTOR OPERATION** · Switch the ignition to off. · Connect the M-MDS to the DLC-2. · Switch the ignition to ON. · Access PMP_MTR active command modes using the M-MDS. · Does the pump motor operate?	Yes	Go to the next step.
		No	Replace the ABS HU/CM, then go to Step 6. (See ABS HU/CM REMOVAL/INSTALLATION.)
3	**INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT** · Switch the ignition to off. · Disconnect the ABS HU/CM connector. · Inspect for continuity between ABS HU/CM terminal Y and the positive battery terminal. · Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
4	**INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT** · Inspect for continuity between ABS HU/CM terminal Y and body ground. · Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT** · Inspect for continuity between ABS HU/CM terminal B and body ground. · Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** · Reconnect all disconnected connectors. · Clear the DTCs from the memory. (See ON-BOARD DIAGNOSIS [ABS].) · Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. · Are the same DTCs present?	Yes	Repeat the inspection from Step·1. If the malfunction recurs, replace the ABS CM, then go to the next step. (See ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** · Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

DETECTION CONDITION describes the condition under which the DTC is detected.

TROUBLE CONDITION

FAIL-SAFE FUNCTION Indicates control status at time of detection

POSSIBLE CAUSE describes possible point(s) of malfunction

Indicates the inspection step No. to be performed

Indicates the circuit to be inspected

Indicates the direction in which to visually inspect the connector

Indicates the connector related to the inspection

STEP shows the order of troubleshooting

INSPECTION describes the method to quickly determine the malfunctioning part(s).

ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.

Reference item(s) to perform ACTION.

Using the diagnostic index

- Malfunction symptoms are listed in the diagnostic index under symptom troubleshooting.

- The exact malfunction symptoms can be selected by following the index.
- Correctly verify the malfunction symptom according to “DESCRIPTION”.

No.	TROUBLESHOOTING ITEM		DESCRIPTION	Page
1	Melting of main or other fuses		—	(See 01-03-6 MELT NO.1 MAIN OR OTHER FUSE)
2	MIL comes on		MIL is illuminated incorrectly.	(See 01-03-7 NO.2 MIL COMES ON)
3	Will not crank		Starter does not work.	(See 01-03-8 NO. 3 WILL NOT CRANK)
4	Hard start/long crank/erratic start/erratic crank		Starter cranks engine at normal speed but engine requires excessive cranking time before starting.	(See 01-03-9 NO. 4 HARD START/ LONG CRANK/ERRATIC CRANK)
5	Engine stalls.	After start/at idle	Engine stops unexpectedly at idle and/or after start.	(See 01-03-11 NO. 5 ENGINE-STALLS AFTER START/AT IDLE)
6	Cranks normally but will not start		Starter cranks engine at normal speed but engine will not run.	(See 01-03-15 NO.6 CRANKS NORMALLY BUT WILL NOT START)
7	Slow return to idle		Engine takes more time than normal to return to idle speed.	(See 01-03-19 NO. 7 SLOW RERUN TO IDLE)
8	Engine runs rough/rolling		Engine speed fluctuates between specified idle speed and lower speed and engine shakes excessively.	(See 01-03-20 NO. 8 ENGINE RUNS ROUGH/ROLLING IDLE)
9	Fast idle/runs on		Engine speed continues at fast idle after warm-up. Engine runs after ignition key is turned to OFF.	(See 01-03-23 NO. 9 FAST IDLE/RUNS ON)

Using the quick diagnosis chart

- The related malfunction cause can be understood.
- The relation between the malfunction symptom and cause is indicated.
- The relation between the malfunction symptom and cause can be detected quickly, and if multiple malfunction symptoms occur, the area which is the common cause among the multiple malfunctions can be specified.
- The effective inspection procedure for the malfunction cause specified from the malfunction symptoms can be selected using the inspection procedure chart.

MALFUNCTION CAUSE SPECIFIED BY MALFUNCTION SYMPTOM

SYMPTOM QUICK DIAGNOSTIC CHART

② **SPECIFY MALFUNCTIONING PART CORRESPONDING TO MALFUNCTION SYMPTOM**

① **SELECT MALFUNCTION SYMPTOM**

	Troubleshooting item / Possible factor		Starter motor malfunction (Mechanical or electrical)	Starter circuit including ignition switch open	Improper engine oil level	Low or dead battery	Charging system malfunction	Improper engine compression	Improper valve timing	Hydrolocked engine	Improper engine oil viscosity	Improper dipstick	Base engine malfunction	Drive plate or flywheel seized	Improper tension or damaged drive belts	Improper engine coolant level	Water and anti-freeze mixture improperly	Cooling system malfunction (Radiator, hoses, overflow system, thermostat, etc.)	Cooling fan system malfunction	Engine or transaxle mounts improperly installed	Cooling fan or condenser fan seat improperly	Accelerator cable free play mis-adjustment	Fuel quality
1	Melts of main or other fuse																						
2	MIL comes on

32	Automatic transaxle concerns	Upshift/downshift/ engagement	(See 05-01 AUTOMATIC TRANSAXLE SYMPTOM TROUBLESHOOTING)																				

Using the symptom troubleshooting

- Determine the malfunctioning part quickly and accurately based on each malfunction symptom.
- After repair, verify that the malfunction symptom is eliminated.
- There are the troubleshooting procedures and actions for each malfunctioning part.
- Structured as procedures for verifying malfunction symptom quickly and accurately.

TROUBLE SYMPTOM

DESCRIPTION describes what kind of TROUBLE SYMPTOM

POSSIBLE CAUSE describes possible point of malfunction

STEP shows the order of troubleshooting.

INSPECTION describes the method to quickly determine the malfunctioning part(s).

Reference item(s) for additional information to perform INSPECTION.

Reference item(s) to perform ACTION.

ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.

How to perform ACTION is described in the relative material shown.

NO.2 VEHICLE MOVES IN N POSITION

2	Vehicle moves in N position
DESCRIPTION	• Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.
POSSIBLE CAUSE	• If the vehicle moves in N position, basically, the malfunction is in the ATX. Since a malfunction in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. 1. Clutch burnt (Forward clutch) • Control valve body malfunction 2. Selector lever position disparity (Although the selector indicator shows N position, the hydraulic circuit shows D range or R position) **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the vehicle creep when the selector lever is moved slightly in N position?	Yes	Go to the next step.
		No	Adjust the selector cable. (See SELECTOR CABLE ADJUSTMENT.)
2	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect the TCM connector.
3	Inspect the value at the following TCM PID using the M-MDS. (See PID/DATA MONITOR INSPECTION [FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts
4	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

2014 - Mazda3 - General Information

UNITS

Electric current	A (ampere)
Electric power	W (watt)
Electric resistance	ohm
Electric voltage	V (volt)
Length	mm (millimeter)
	in (inch)
Negative pressure	kPa (kilo pascal)
	mmHg (millimeters of mercury)
	inHg (inches of mercury)
Positive pressure	kPa (kilo pascal)
	kgf/cm^2 (kilogram force per square centimeter)
	psi (pounds per square inch)
Number of revolutions	rpm (revolutions per minute)
Torque	N·m (Newton meter)
	kgf·m (kilogram force meter)
	kgf·cm (kilogram force centimeter)
	ft·lbf (foot pound force)

	in·lbf (inch pound force)
Volume	L (liter)
	US qt (U.S. quart)
	Imp qt (Imperial quart)
	ml (milliliter)
	cc (cubic centimeter)
	cu in (cubic inch)
	fl oz (fluid ounce)
Weight	g (gram)
	oz (ounce)

Conversion From SI Units

- All numerical values in this manual are based on SI units. Numbers shown in conventional units are converted from these values.

Number of Digits for Converted Values

- The number digits for converted values is the same as the number of significant figures[*1] of the SI unit.
- For the torque value, the number of significant figures is, in principle, 2 digits, in consideration of market practicalities. However, if the number of decimal places at the upper and lower limits of the converted value differs, the one with least number of decimal places is used. In addition, if the integer part is 3 digits or more, the integer part becomes the significant number of figures.

*1 **The number of significant figures is the number of digits from the left-most non-zero digit to the right-most digit including 0. (Example: 0.12 is 2 digits, 41.0 is 3 digits)**

Converted Value Rounding Off and Rounding Up/down

- If there is no tolerance in the SI unit value, after conversion, rounding off is to within the number of significant digits.

If there is tolerance in the SI unit value and the figure after conversion indicates the upper limit, the number of digits is rounded down to within the number of significant figures. If it indicates the lower limit, they are rounded up to within the number of significant figures.

- Even if the SI unit value is the same, the converted value may differ based on whether that value is the upper or lower limit.

2014 - Mazda3 - General Information

SERVICE CAUTIONS

Injury/damage Prevention Precautions

- Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is switched off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.

Protection of the Vehicle

- Always be sure to cover fenders, seats and floor areas before starting work.

Preparation of Tools and Measuring Equipment

- Be sure that all necessary tools and measuring equipment are available before starting any work.

Special Service Tools

- Use special service tools or the equivalent when they are required.

Malfunction Diagnosis System

- Use the Mazda Modular Diagnostic System (M-MDS) for malfunction diagnosis.

Connection to malfunction diagnosis system

- With the ignition switched off, connect the malfunction diagnosis system to the DLC-2 connector shown in the figure.

Oil Leakage Inspection

- Use either of the following procedures to identify the type of oil that is leaking:

Using UV light (black light)

1. Remove any oil on the engine or transmission/transaxle.

NOTE:

- Referring to the fluorescent dye instruction manual, mix the specified amount of dye into the engine oil or transmission/transaxle oil.

2. Pour the fluorescent dye into the engine oil or transmission/transaxle oil.
3. Allow the engine to run for **30 min**.
4. Inspect for dye leakage by irradiating with UV light (black light), and identify the type of oil that is leaking.
5. If no dye leakage is found, allow the engine to run for another **30 min**. or drive the vehicle then reinspect.
6. Find where the oil is leaking from, then make necessary repairs.

NOTE:

- To determine whether it is necessary to replace the oil after adding the fluorescent dye, refer to the fluorescent dye instruction manual.

Not using UV light (black light)

1. Gather sample of the leaking oil using an absorbent white tissue.

2. Then, gather some samples of engine and transmission/transaxle oil onto a white cloth or piece of paper.
    - MT vehicles: Transmission/transaxle oil
    - AT vehicles: ATF
3. Compare the appearance and smell, and identify the type of oil that is leaking.
4. Remove any oil on the engine or transmission/transaxle.
5. Allow the engine to run for **30 min**.
6. Check the area where the oil is leaking, then make necessary repairs.

Negative Battery Cable Disconnection/Connection

Warning

- Before removing the SRS air bag system-related parts, always disconnect the negative battery cable and wait for 1 min. or more to allow the back-up power supply to deplete its stored power. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)(See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Required procedure after negative battery cable disconnection/connection

System name	Conditions after disconnecting the negative battery cable	Required procedure		Reference
		Before disconnecting negative battery cable	After connecting negative battery cable	
Power window system	Reset to initial setting and auto-function is disabled.	—	Perform the power window system initial setting.	(See **POWER WINDOW SYSTEM INITIALIZATION PROCEDURE**.)
Sunroof system	Reset to initial setting and function is disabled.	—	Perform the sunroof system initial setting.	(See **SUNROOF SYSTEM INITIALIZATION PROCEDURE**.)
Clock and audio	Clock display and audio system memory are reset.	Verify the setting content.	Set the verified content before disconnecting negative battery cable.	—
Tire pressure monitoring system (TPMS)	The tire pressure monitoring system detection accuracy decreases.	—	Perform the tire pressure monitoring system initialization.	(See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)

Switch The Power Supply Using The Push Button Start And Start The Engine

- The power supply switches according to the vehicle conditions such as the shift lever (MTX)/selector lever (ATX) position and the pedal depression/release.

MTX

IGNITION	SHIFT LEVER POSITION	
	ALL	
	CLUTCH PEDAL RELEASED	CLUTCH PEDAL DEPRESSED
OFF (LOCK)*		
ACC		
ON (ENGINE OFF)		
ON (ENGINE ON)		

ATX

IGNITION	SELECTOR LEVER POSITION					
	P		N		OTHER THAN P AND N	
	BRAKE PEDAL RELEASED	BRAKE PEDAL DEPRESSED	BRAKE PEDAL RELEASED	BRAKE PEDAL DEPRESSED	BRAKE PEDAL RELEASED	BRAKE PEDAL DEPRESSED
OFF (LOCK)*						
ACC						
ON (ENGINE OFF)						
ON (ENGINE ON)						

Removal of Parts

- While correcting a problem, also try to determine its cause. Begin work only after first learning which parts and sub-components must be removed and disassembled for replacement or repair. After removing the part, plug all holes and ports to prevent foreign material from entering.

Control module configuration (initialization setting)

CAUTION:

- If the configuration procedure is not completed correctly after replacing a control module in which configuration is required, the system will not operate normally. Therefore, perform the work in accordance with the replacement procedure in the workshop manual.
- If the control module is replaced, and depending on the control module, it may be necessary to write the vehicle specification data to the new control module using the M-MDS. This procedure is for performing the configuration (initial setting).
- There are the following three methods of the configuration procedure for the control module:

Automatic configuration

- The main control module (built into instrument cluster) performs configuration of the new control module itself and automatically using the vehicle specification data sent via CAN lines.

- Configuration based on vehicle information read/write data
  - Reads the vehicle information from the control module prior to replacement, and writes the vehicle information to a new control module.
- Configuration by As-Built data:
  - Obtains the vehicle specification data when the vehicle is shipped from the factory, and writes the data to a new control module.
  - The configuration using As-Built data is used if the vehicle information cannot be read due to a damaged control module which is to be replaced, or if a DTC such as a configuration malfunction is detected.
  - If a control module having personalization features is configured using As-Built data, the settings personalized by the customer are initialized (to factory settings). In this case, verify the setting values made by the customer and change the personalized setting values using the “Programmable Parameters” from the M-MDS menu.

- If the module programming menu of the M-MDS (Programmable Module Installation, As-Built, Programmable Parameters) is performed, perform the procedure while the battery monitor icon of the M-MDS is green or gray.

Disassembly

- If the disassembly procedure is complex, requiring many parts to be disassembled, all parts should be marked in a place that will not affect their performance or external appearance, and identified so that reassembly can be performed easily and efficiently.

Inspection During Removal, Disassembly

- When removed, each part should be carefully inspected for malfunction, deformation, damage and other problems.

Arrangement of Parts

- All disassembled parts should be carefully arranged for reassembly.

- Be sure to separate or otherwise identify the parts to be replaced from those that will be reused.

Cleaning of Parts

- All parts to be reused should be carefully and thoroughly cleaned in the appropriate method.

WARNING:

- Using compressed air can cause dirt and other particles to fly out causing injury to the eyes. Wear protective eye wear whenever using compressed air.

Reassembly

- Standard values, such as torques and certain adjustments, must be strictly observed in the reassembly of all parts.

- If removed, these parts should be replaced with new ones:

Oil seals	Cotter pins
Gaskets	Locknuts (Nylon nuts)
O-rings	Spring pins
Lock washers	—

- Depending on location:
  - Sealant and gaskets, or both, should be applied to specified locations. When sealant is applied, parts should be installed before sealant hardens to prevent leakage.
  - Oil should be applied to the moving components of parts.
  - Specified oil or grease should be applied at the prescribed locations (such as oil seals) before reassembly.

Adjustment

- Use suitable gauges and testers when making adjustments.

Rubber Parts and Tubing

- Prevent gasoline or oil from getting on rubber parts or tubing.

Hose Clamps

- When reinstalling, position the hose clamp in the original location on the hose and squeeze the clamp lightly with large pliers to ensure a good fit.

NOTE:

- Follow the description in each section because the clamps which are used with the fuel-related system differ from the one indicated above.

Torque Formulas

- When using a torque wrench-**SST** or equivalent combination, the specified torque must be recalculated due to the extra length that the **SST** or equivalent adds to the torque wrench. Recalculate the torque by using the following formulas. Choose the formula that applies to you.

Torque Unit	Formula
N·m	N·m × [L/(L+A)]
kgf·m	kgf·m × [L/(L+A)]
kgf·cm	kgf·cm × [L/(L+A)]
ft·lbf	ft·lbf × [L/(L+A)]
in·lbf	in·lbf × [L/(L+A)]

A
The length of the SST past the torque wrench drive.

L
The length of the torque wrench.

Vise

- When using a vise, put protective plates in the jaws of the vise to prevent damage to parts.

Dynamometer

Cautions on chassis dynamometer use

- When inspecting and servicing the power train on the dynamometer or speedometer tester, pay attention to the following:
    - Place a fan, preferably a vehicle-speed proportional type, in front of the vehicle.
    - Make sure the vehicle is in a facility with an exhaust gas ventilation system.
    - Keep the rear bumper cool by placing a cooling fan near the exhaust pipe so that the rear bumper does not get deformed by the heat from the exhaust.
    - Keep the area around the vehicle uncluttered so that heat does not build up.
    - Watch the water temperature gauge and do not overheat the engine.
    - Avoid added load to the engine and maintain normal driving conditions as much as possible.

NOTE:

- When only the front or rear wheels are rotated on a chassis dynamometer or equivalent, the DSC HU/CM determines that there is a malfunction in the DSC and illuminates the following lights:
    - ABS warning light
    - Brake system warning light
    - TCS/DSC indicator light
- If the above lights are illuminated, dismount the vehicle from the chassis dynamometer and switch the ignition off. Then, switch the ignition ON (engine on), run the vehicle at **10 km/h {6.2 mph} or more** and verify that the warning lights go out. In this case, a DTC will be stored in the memory. Clear the DTC from the memory by following the memory clearing procedure [DSC] in the on-board diagnostic system. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)

Cautions for vehicles with Mazda Radar Cruise Control (MRCC) system/Smart Brake Support (SBS) system/Smart City Brake Support (SCBS) system/Distance Recognition Support System (DRSS)

CAUTION:

- If a vehicle with the following systems is inspected using a chassis dynamometer, always turn off each system before performing the inspection.
    - Mazda Radar Cruise Control (MRCC) system
    - Smart Brake Support (SBS) system
    - Smart City Brake Support (SCBS) system
    - Distance Recognition Support System (DRSS)
- If a chassis dynamometer is used without turning off each system, automatic braking will operate and the inspection cannot be performed correctly.
- In the event that a chassis dynamometer is used without turning off each system, take appropriate measures referring to the following as each of the system's warning lights may be illuminated/flashed and DTCs stored in the memory.

Rotating only front or rear wheels

- If only the front or rear wheels are rotated, the DSC HU/CM will determine that the DSC is malfunctioning. It will also determine that the vehicle control module is malfunctioning and the following warning lights will be illuminated or flashed.
    - Mazda radar cruise control (MRCC) warning light (amber) is flashed

Master warning light is illuminated

- If the warning light is illuminated or flashed, remove the vehicle from the chassis dynamometer and switch the ignition off.
- Switch the ignition back ON and drive the vehicle at **10 km/h {6.2 mph} or more** to verify that the warning light turns off.
- Because DTCs are stored, clear DTCs according to the memory clearing procedure.

Rotating all four wheels

- If all four wheels are rotated, the cruise control module determines that there is an error in the location information of the object which is detected by the radar sensor. As a result, the vehicle control module determines that a malfunction occurred, illuminates the following warning lights, and displays a message in the instrument cluster.
  - Master warning light
  - Displays “MRCC Inspection Required”, “SCBS Inspection Required”, “SBS Inspection Required”, and “DRSS Inspection Required”
  - If a warning light is illuminated and a message is displayed, remove the vehicle from the chassis dynamometer and switch the ignition off.
  - Switch the ignition back ON and drive the vehicle at **10 km/h {6.2 mph} or more** to verify that the warning light is turned off and the message is cleared.
  - Because DTCs are stored, clear the DTCs according to the memory clearing procedure.

SST

- Some global **SST** or equivalent are used as **SSTs** necessary for vehicle repair. Note that these **SSTs** are marked with global **SST** numbers.
- Note that a global **SST** number is written together with a corresponding Mazda **SST** number as shown below.

Example (SST List)

1: Mazda **SST** number
2: Global **SST** number

Example (In text)

2014 - Mazda3 - General Information

INSTALLATION OF RADIO SYSTEM

- The control modules and control unit have been designed with sufficient attention to radio wave disturbances from the outside. However, observe the following precautions when installing the radio set to the vehicle to prevent adverse effects on the control modules and control unit.
  - Install the radio set and its antenna as far away as possible from the control modules and control unit.
  - The antenna feeder and power cable generate radio waves, therefore, keep them **100 mm {3.94 in}** or more from the control modules, control unit, and wiring harness. If the antenna feeder and power cable cross over the wiring harness, place them perpendicular to the wiring harness.
  - Do not install a high output radio set.
  - Do not use the control modules and control unit power source for the radio set. In addition, do not use the cigar lighter and accessory socket power source.
  - Do not attach the antenna feeder or wiring harness of the radio set to the wiring harness, fuel pipe, or brake tube of the vehicle.
  - Do not install any radio set-related devices in the area where the air bag module deploys to prevent a secondary accident if the air bag were to deploy.

- After installing the radio set, perform a test transmission with the engine idling to verify that it does not affect engine control.

2014 - Mazda3 - General Information

ELECTRICAL SYSTEM

Electrical Parts

Battery cable

- Before disconnecting connectors or removing electrical parts, disconnect the negative battery cable.

Wiring Harness

- To remove the wiring harness from the clip in the engine room, pry up the hook of the clip using a flathead screwdriver.

CAUTION:

- Do not remove the wiring harness protective tape. Otherwise, the wires could rub against the body, which could result in water penetration and electrical shorting.

Connectors

Disconnecting connectors

- When disconnecting a connector, grasp the connectors, not the wires.

- Connectors can be disconnected by pressing or pulling the lock lever as shown.

Locking connector

- When locking connectors, listen for a click indicating they are securely locked.

Inspection

CAUTION:

- To prevent damage to the terminal, wrap a thin wire around the tester probe before inserting into terminal.
- When a tester is used to inspect for continuity or measuring voltage, insert the tester probe from the wiring harness side.

- Inspect the terminals of waterproof connectors from the connector side since they cannot be accessed from the wiring harness side.

Terminals

Inspection

- Pull lightly on individual wires to verify that they are secured in the terminal.

Replacement

- Use the appropriate tools to remove a terminal as shown. When installing a terminal, be sure to insert it until it locks securely.
- Insert a thin piece of metal from the terminal side of the connector and with the terminal locking tab pressed down, pull the terminal out from the connector.

Sensors, Switches, and Relays

- Handle sensors, switches, and relays carefully. Do not drop them or strike them against other objects.

Wiring Harness

Wiring color codes

- Two color wires are indicated by a two color code symbol.
- The first letter indicates the base color of the wire and the second is the color of the stripe.

CODE	COLOR	CODE	COLOR
B	Black	O	Orange
L	Blue	P	Pink
BR	Brown	R	Red
DL	Dark Blue	SB	Sky Blue
DG	Dark Green	T	Tan
GY	Gray	V	Violet
G	Green	W	White
LB	Light Blue	Y	Yellow
LG	Light Green	–	–

Fuse

Replacement

- When replacing a fuse, be sure to replace it with one of the same capacity. If a fuse malfunctions again, the circuit probably has a short and the wiring should be inspected.
- Be sure the negative battery terminal is disconnected before replacing a main fuse.

Without i-ELOOP

With i-ELOOP

- When replacing a pullout fuse, use the fuse puller.

Viewing orientation for Connectors

- The viewing orientation for connectors is indicated with a symbol.
- The figures showing the viewing orientation are the same as those used in Wiring Diagrams.
- The viewing orientations are shown in the following three ways.

Part-side connector

- The viewing orientation for part-side connectors is from the terminal side.

Vehicle harness-side connector

- The viewing orientation for vehicle wiring harness-side connectors is from the wiring harness side.

Other

- When it is necessary to show the terminal side of the vehicle wiring harness-side connectors, such as the following connectors, the viewing orientation is from the terminal side.

  - Main fuse block and the main fuse block relays
  - Data link connector
  - Check connector
  - Relay box

Electrical Troubleshooting Tools

Jumper wire

CAUTION:

- Do not connect a jumper wire from the power source line to a body ground. This may cause burning or other damage to wiring harnesses or electronic components.
- A jumper wire is used to create a temporary circuit. Connect the jumper wire between the terminals of a circuit to bypass a switch.

Voltmeter

- The direct current voltmeter is used to measure circuit voltage. A voltmeter with a range of **15 V or more** is used by connecting the positive (+) probe (red lead wire) to the point where voltage will be measured and the negative (-) probe (black lead wire) to a body ground.

Ohmmeter

CAUTION:

- Do not connect the ohmmeter to any circuit where voltage is applied. This will damage the ohmmeter.
- The ohmmeter is used to measure the resistance between two points in a circuit and to inspect for continuity and short circuits.

Precautions Before Welding

A vehicle has various electrical parts. To protect the parts from excessive current generated when welding, be sure to perform the following procedure.

1. Switch the ignition off.
2. Disconnect the battery cables.

3. Securely connect the welding machine ground near the welding area.

4. Cover the peripheral parts of the welding area to protect them from weld spatter.

Ground Inspection and Disconnection/reconnection

- The ground connection is extremely important for normal electrical circuit operation, therefore, inspect and disconnect/reconnect the ground connection according to the following guidelines.
    - Remove the bolt or screw of the ground to inspect for dirt or rust.
    - If there is any dirt or rust, clean it.
    - Securely tighten the bolt or screw to the specified tightening torque.
    - Verify that parts do not interfere with the ground circuit.

2014 - Mazda3 - General Information

REPAIR-USE CONNECTOR REPLACEMENT PROCEDURE

Wire Harness Cutting On Vehicle Side

1. If tubing or tape is used to protect the connector wiring harness, cut into it being careful not cut or damage the wiring, and expose **approx. 200 mm {7.84 in}** of the wiring from the connector.

2. Cut the wiring harness once at the position near the connector so as to leave a long length of wiring harness on the vehicle side, align the length with the repair-use connector wiring harness, and then re-cut at the wiring harness on the vehicle side or the repair-use connector wiring harness at the appropriate position.

CAUTION:

- Cut longer in consideration of the amount of wiring harness length which will be soldered.
- If the cut wiring harness length is different than the repair-use wiring harness length, the following problems may occur.
  - If too short: Tension will be applied to the terminal, splice or connector resulting in an open circuit.
  - If too long: A short may occur due to pinching and wear of the extra length of wiring harness near the connector.

NOTE:

- If several wiring harnesses are connected to the same connector, stagger the cut positions so that the repair positions do not overlap as shown in the figure to prevent thickening of the wiring harness after repair.

Cut Off The Insulation From The Wiring Harness On The Vehicle Side And The Repair-use Connector Wiring Harness.

1. Cut off **approx. 10—20 mm {0.39—0.79 in}** from the ends of the wiring harness on the vehicle side and the wiring harness of the repair-use connector. (If the repair-use wiring harness is thick, core twisting can be facilitated by lengthening the amount of insulation cut)

CAUTION:

- Do not damage or cut the cores of the wiring harnesses. After finishing the work, inspect the wiring harnesses for damage or cutting of the cores, and re-do the work if necessary.

2. Depending on the thickness of the wiring harness which is being repaired, select an appropriate heat shrinkable tube, and before twisting the cores together, pass them through the heat shrinkable tube.

	Heat shrinkable tube		Wiring size (exterior diameter)
	Before shrinking	After shrinking	
Small	4 mm {0.2 in}	1 mm {0.04 in}	φ2 mm {0.08 in} or less
Large	8 mm {0.3 in}	2 mm {0.08 in}	φ2 mm {0.08 in} or more

NOTE:

- If the exposed area of the core in which the solder is applied is **10 mm {0.39 in}**, half the **length (25 mm {0.98 in})** of the heat shrinkable tubing can be cut and used because the total length of the heat shrinkable tubing is **50 mm {2.0 in}**.

3. Line up the cores of the wiring harnesses to be connected as shown in the figure.

4. Twist together both of the cores.

Soldering

1. Twist together firmly the cores of the wiring harnesses being connected and apply soldering in that area.

CAUTION:

- Soldering for a long period of time could affect the surrounding electrical circuit. Apply soldering for an extremely short period of time.

2. Cut the ends off the connected area, and apply the soldering iron tip to the wiring harness after removing any fraying.

3. Set the heat shrinkable tubing to the soldered area and shrink the heat shrinkable tubing at a temperature of **approx. 100 °C {212 °F}** using a drier.

CAUTION:

- Completely shrink the heat shrinkable tubing to the wiring harness leaving no gaps.
- Perform the work being careful not to melt the insulation of the wiring harness by excessive heat.

Taping Work

1. Tape the surface of the heat shrinkable tubing.

CAUTION:

- Remove moisture, oil, and dust from the area to be taped before doing the taping.
- Firmly tape the ends so that they do not peel off.
- Always superimpose the tape while wrapping.
- Wrap the tape approx. 20—30 mm {0.79—1.2 in} beyond both ends of the heat shrinkable tubing.

NOTE:

- If the wiring harness is bundled and taped, bind it **approx. 30 mm {1.2 in}** away from the connector.

REPAIR-USE CONNECTOR REPLACEMENT PROCEDURE

2014 - Mazda3 - General Information

JACKING POSITIONS, VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITIONS

Jacking Positions

WARNING:

- Improperly jacking a vehicle is dangerous. The vehicle can slip off the jack and cause serious injury. Use only the correct front and rear jacking points and block the wheels.

CAUTION:

- Use safety stands to support the vehicle after it has been lifted.

NOTE:

- To prevent obstruction between the jack body and front bumper when the jack body is inserted, use a low-floor type jack.

Vehicle Lift Positions

WARNING:

- Lifting a vehicle is dangerous. The vehicle can slip off the lift and cause serious injury and/or vehicle damage. Make sure that the vehicle is on the lift horizontally by adjusting the height of support at the end of the arm of the lift.

Front and rear

- Both sides of the vehicle, on side sills.

JACKING POSITIONS, VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITIONS

2014 - Mazda3 - General Information

TOWING

Towing Description

- Proper lifting and towing are necessary to prevent damage to the vehicle. Government and local laws must be followed.
- A towed vehicle usually should have its drive wheels (front wheels) off the ground. If excessive damage or other conditions prevent this, use wheel dollies.
- When towing with the rear wheels on the ground, release the parking brake.

CAUTION:

- Do not tow the vehicle pointed backward with driving wheels on the ground. This may cause internal damage to the transaxle.

CAUTION:

- Do not tow with sling type equipment. This could damage vehicle. Use wheel lift or flatbed equipment.

Vehicle Securing Position

- When transporting the vehicle by flat bed tow truck or trailer, secure the vehicle to the trailer using the holes and left tiedown loop shown in the figure.

CAUTION:

- Do not use the tiedown hook on the end of the rear bumper for towing or transporting the vehicle. The tie down hook is used only for transporting the vehicle by ship. Using the tie down hook could cause damage to the bumper and the vehicle body.

2014 - Mazda3 - General Information

IDENTIFICATION NUMBER LOCATIONS

Vehicle Identification Number (VIN)

- The VIN marking position is located on the floor as shown in the figure.

- If the VIN plate is adhered to the dashboard, it is located in the position shown in the figure.

Engine Type / Number

IDENTIFICATION NUMBER LOCATIONS

2014 - Mazda3 - General Information

SAE STANDARDS

- In accordance with new regulations, SAE (Society of Automotive Engineers) standard names and abbreviations are now used in this manual. The table below lists the names and abbreviations that have been used in Mazda manuals up to now and their SAE equivalents.

SAE Standard		Remark	SAE Standard		Remark
Abbreviation	Name		Abbreviation	Name	
AP	Accelerator Pedal		MIL	Malfunction Indicator Lamp	
APP	Accelerator Pedal Position		MAP	Manifold Absolute Pressure	
ACL	Air Cleaner		MAF sensor	Mass Air Flow Sensor	
A/C	Air Conditioning		MFI	Multiport Fuel Injection	
A/F sensor	Air Fuel Ratio Sensor		OBD	On board Diagnostic System	
BARO	Barometric Pressure		OL	Open Loop	
B+	Battery Positive Voltage		OC	Oxidation Catalytic Converter	
CMP sensor	Camshaft Position Sensor		O2S	Oxygen sensor	
CAC	Charge Air Cooler		PNP	Park/Neutral Position	
CLS	Closed Loop System		PSP	Power Steering Pressure	
CTP	Closed Throttle Position		PCM	Powertrain Control Module	#3
CPP	Clutch Pedal Position		PAIR	Pulsed Secondary Air Injection	Pulsed injection
CIS	Continuous Fuel Injection System				

CKP sensor	Crankshaft Position Sensor		AIR	Secondary Air Injection	Injection with air pump
DLC	Data Link Connector				
DTM	Diagnostic Test Mode	#1			
DTC	Diagnostic Test Code(s)		SAPV	Secondary Air Pulse Valve	
DI	Distributor Ignition		SFI	Sequential Multiport Fuel Injection	
DLI	Distributorless Ignition				
EI	Electronic Ignition	#2	3GR	Third Gear	
ECT	Engine Coolant Temperature		TWC	Three Way Catalytic Converter	
EM	Engine Modification		TB	Throttle Body	
EVAP	Evaporative Emission		TP sensor	Throttle Position Sensor	
EGR	Exhaust Gas Recirculation		TCC	Torque Converter Clutch	
FC	Fan Control		TCM	Transmission (Transaxle) Control Module	
FF	Flexible Fuel				
4GR	Fourth Gear		TR	Transmission (Transaxle) Range	
GEN	Generator		TC	Turbocharger	
GND	Ground		VSS	Vehicle Speed Sensor	
HO2S	Heated Oxygen Sensor	With heater	VR	Voltage Regulator	
			VAF sensor	Volume Air Flow Sensor	
IAC	Idle Air Control		WU-TWC	Warm Up Three Way Catalytic Converter	#4
IAT	Intake Air Temperature				
KS	Knock Sensor		WOT	Wide Open Throttle	

- #1: Diagnostic trouble codes depend on the diagnostic test mode.
- #2: Controlled by the PCM
- #3: Device that controls engine and powertrain
- #4: Directly connected to exhaust manifold

PRE-DELIVERY INSPECTION

Pre Delivery Inspection Table

Exterior

INSPECT and **ADJUST**, if necessary, the following items to specification:
□Glass, exterior bright metal and paint for damage
□Wheel lug nuts
□All weatherstrips for damage or detachment
□Adjust tire pressures to specification

- Adjust the tire pressures when the tires are cool.
- Specified pressure is indicated on the door label.

Tire pressure record				
Left front	Right front	Left rear	Right rear	Spare

□After adjusting the tire pressures, switch the ignition ON (engine off or on) and long-press the tire pressure monitoring system set switch until the tire pressure warning light flashes two times and the buzzer sounds one time (with tire pressure monitoring system switch).

Indicated that long-pressing of the tire pressure monitoring system set switch was implemented
Yes or No

□Headlight cleaner and fluid level (if equipped)
□Operation of hood release and lock
□Operation of fuel-filler lid opener
□Door operation and alignment including side door and back door
□Headlight aiming
INSTALL the following parts:
□Wheel caps or rings (if equipped)

Under hood—engine off

INSPECT and **ADJUST**, if necessary, the following items to specification:
□Fuel, engine coolant, and hydraulic lines, fittings, connections, and components for leaks
□Engine oil level
□Brake and clutch fluid level
□Windshield washer reservoir fluid level
□Automatic transmission/Transaxle fluid level
□Power steering fluid level
□Radiator coolant level and specific gravity
□Tightness of water hose clamps
□Tightness of battery terminals, electrolyte level and specific gravity

Interior

INSTALL the following items:
□Fuse for accessories
INSPECT the operations of the following items:
□Seat controls (slide and recline) and head restraints
□Folding rear seat
□Door locks, including childproof door locks
□Seat belts and warning system
□Steering lock
□Transmission/Transaxle range switch
□Warning alarm
□Warning lights
□Air bag system using warning light
□Cruise control system (if equipped)
□Power door lock
□Shift lock system (if equipped)
□Starter interlock
□All lights including warning, and indicator lights
□Horn, wipers, and washers
□Wiper blades performance
Clean wiper blades and windshield, if necessary
□Antenna
□Entertainment system
□Cigarette lighter and clock
□Power windows
□Heater, defroster, and air conditioner at various mode selections (if equipped)
INSPECT the following items:
□Presence of spare fuse
□Upholstery and interior finish
INSPECT and **ADJUST**, if necessary, the following items:
□Operation and fit of windows
□Pedal height and free play of brake and clutch pedals
□Parking brake

Under hood—engine running at operating temperature

INSPECT the following items:
□Automatic transmission/Transaxle fluid level
□Operation of idle up system for electrical load, air conditioner or power steering (if equipped)
□Operation of throttle position sensor (when inspecting for wiring harness and connector poor connection)

On hoist

INSPECT the following items:
□Manual transmission/Transaxle oil level
□Underside fuel, coolant and hydraulic lines, fittings, connections, and components for leaks
□Tires for cuts or bruises
□Steering linkage, suspension, exhaust system, and all underside hardware for looseness or damage
□Differential oil level

Road test

INSPECT the following items:
□Brake operation
□Clutch operation
□Steering control
□Engine general performance
□Emergency locking retractors and automatic locking retractors
□Cruise control system (if equipped)
□Operation of meters and gauges, squeaks, rattles, and abnormal noises

After road test

INSPECT for necessary owner information materials, tools, and spare tire in vehicle

The following items must be completed just before delivery to your customer.

□Load test battery and charge if necessary (Load test result: Volts)

□Adjust tire pressures to specification

- Adjust the tire pressures when the tire are cool.
- Specified pressure is indicated on the door label.

Tire pressure record				
Left front	Right front	Left rear	Right rear	Spare

□After adjusting the tire pressures, switch the ignition ON (engine off or on) and long-press the tire pressure monitoring system set switch until the tire pressure warning light flashes two times and the buzzer sounds one time (with tire pressure monitoring system switch).

Indicated that long-pressing of the tire pressure monitoring system set switch was implemented
Yes or No

□Clean outside of vehicle

□Remove seat and cabin carpet protective covers

□Vacuum inside of vehicle

2014 - Mazda3 - General Information

SCHEDULED MAINTENANCE

Scheduled Maintenance Table for U.S.A., CANADA and Puerto Rico

- Follow Schedule 1 if the vehicle is operated mainly where none of the following conditions (severe driving conditions) apply.
    - Repeated short-distance driving
    - Driving in dusty conditions
    - Driving with extended use of brakes
    - Driving in areas where salt or other corrosive materials are used
    - Driving on rough or muddy roads
    - Extended periods of idling or low-speed operation
    - Driving for long periods in cold temperatures or extremely humid climates
    - Driving in extremely hot conditions
    - Driving in mountainous conditions continually
- If any do apply, follow Schedule 2. (Puerto Rico residents follow Schedule 2.)

Vehicles using Engine Oil Flexible Maintenance

- Engine Oil Flexible Maintenance is available for U.S.A. and Puerto Rico residents whose vehicle is operated mainly where none of the following conditions apply:
    - Extended periods of idling or low-speed operation such as police car, taxi or driving school car
    - Driving in dusty conditions
- If any do apply, follow Schedule 2 with engine oil fixed maintenance.
- Once engine oil flexible maintenance is selected, the vehicle calculates the remaining oil life based on engine operating conditions. The vehicle lets you know when an oil change is due by illuminating the wrench indicator light in the instrument cluster. Change the oil as soon as possible within the next 500 km's (250 miles) or 15 days.
- Mazda Genuine 0W-20 Oil and Castrol 0W-20 Oil are required to achieve optimum performance.

  NOTE:

- Please ensure that the Flexible Oil Maintenance Setting is reset after each Oil and Filter replacement.

NOTE:

- For maintenance guidelines beyond the miles/months listed, follow the maintenance intervals provided in the Scheduled Maintenance Tables.

Schedule 1: U.S.A. residents - Engine oil flexible maintenance interval

- Use when the maintenance monitor for “Oil Change” is set to “Flexible”. For details, see maintenance monitor.

Maintenance Interval		Number of months or kilometers (miles), whichever comes first.							
	Months	12	24	36	48	60	72	84	96
	×1000 km	16	32	48	64	80	96	112	128
	×1000 miles	10	20	30	40	50	60	70	80
ENGINE									
Drive belts				I			I		
Engine oil & filter*1		Replace when wrench indicator light is ON. (Max interval: 12 months/16,000km {10,000 miles})							
COOLING SYSTEM									
Engine coolant	FL22 type*2	Replace at first 192,000 km {120,000 miles} or 10 years; after that, every 96,000 km {60,000 miles} or 5 years.							
	Others	Replace at first 96,000 km {60,000 miles} or 4 years; after that, every 2 years.							
FUEL SYSTEM									
Air filter		Replace when any equivalent timing of replacing engine oil. (Max interval: 36 months/60,000km {37,500 miles})							
Fuel lines and hoses*3			I		I		I		I
Hoses and tubes for emission*3					I				I

IGNITION SYSTEM								
Spark plugs	Replace every 120,000 km {75,000 miles}.							
CHASSIS and BODY								
Brake lines, hoses and connections		I		I		I		I
Disc brakes	I	I	I	I	I	I	I	I
Tire (Rotation)	Rotate every 8,000 km {5,000 miles}.							
Steering operation and linkages		I		I		I		I
Front and rear suspension, ball joints and wheel bearing axial play		I		I		I		I
Driveshaft dust boots		I		I		I		I
Bolts and nuts on chassis and body		T		T		T		T
Exhaust system and heat shields				I				I
AIR CONDITIONER SYSTEM								
Cabin air filter	Replace when any equivalent timing of replacing engine oil. (Max interval: 24 months/48,000km {30,000 miles})							

Chart symbols

- **I**: Inspect: Inspect and clean, repair, adjust, fill up, or replace if necessary.
- **T**: Tighten

Remarks

- Refer below for a description of items marked* in the maintenance chart.
    - *1: The engine oil and filter must be changed at least once a year or within 16,000km {10,000 miles} since last engine oil and filter change. The system must be reset whenever replacing the engine oil regardless of the message/wrench indicator light display.
    - *2: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.
    - *3: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services

be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

Schedule 1: U.S.A. residents - Fixed maintenance interval

- Use when the maintenance monitor for “Oil Change” is set to “Fixed”. For details, see maintenance monitor.

Maintenance Interval		Number of months or kilometers (miles), whichever comes first.							
	Months	6	12	18	24	30	36	42	48
	×1000 km	12	24	36	48	60	72	84	96
	×1000 miles	7.5	15	22.5	30	37.5	45	52.5	60
ENGINE									
Drive belts						I			
Engine oil & filter		R	R	R	R	R	R	R	R
COOLING SYSTEM									
Engine coolant	FL22 type*1	Replace at first 192,000 km {120,000 miles} or 10 years; after that, every 96,000 km {60,000 miles} or 5 years.							
	Others	Replace at first 96,000 km {60,000 miles} or 4 years; after that, every 2 years.							
FUEL SYSTEM									
Air filter						R			
Fuel lines and hoses*2					I				I
Hoses and tubes for emission*2									I
IGNITION SYSTEM									
Spark plugs		Replace every 120,000 km {75,000 miles}.							
CHASSIS and BODY									

Brake lines, hoses and connections				I				I
Disc brakes		I		I		I		I
Tire (Rotation)*3	Rotate every 12,000 km {7,500 miles}.							
Steering operation and linkages				I				I
Front and rear suspension, ball joints and wheel bearing axial play				I				I
Driveshaft dust boots				I				I
Bolts and nuts on chassis and body				T				T
Exhaust system and heat shields	Inspect every 72,000 km {45,000 miles} or 5 years.							
AIR CONDITIONER SYSTEM								
Cabin air filter				R				R

Chart symbols

- **I**: Inspect: Inspect and clean, repair, adjust, fill up, or replace if necessary.
- **R**: Replace
- **L**: Lubricate
- **T**: Tighten

Remarks

- Refer below for a description of items marked* in the maintenance chart.
    - *1: Use FL22 type coolant in vehicles with the inscription “FL22” on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.
    - *2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.
    - *3:To equalize tread wear for maintaining good performance in handling and braking, rotate the tires every 12,000 km {7,500 miles}. However Mazda recommends to rotate every 8,000km {5,000 miles} to help increase tire life and distribute wear more evenly.

Schedule 2:U.S.A. (severe driving conditions) and Puerto Rico residents

Maintenance Interval		Number of months or kilometers (miles), whichever comes first.											
	Months	4	8	12	16	20	24	28	32	36	40	44	48

Chart symbols:

- **I**: Inspect: Inspect and clean, repair, adjust, fill up, or replace if necessary.
- **R**: Replace
- **L**: Lubricate
- **T**: Tighten

Remarks

- Refer below for a description of items marked* in the maintenance chart.
    - *1: Use FL22 type coolant in vehicles with the inscription “FL22” on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.
    - *2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

2014 - Mazda3 - Engine

FOREWORD [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as PCM circuit voltage) at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Engine

OBD-II PENDING TROUBLE CODE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- These appear when a problem is detected in a monitored system. The code for a malfunctioning system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM determines that the system has returned to normal or the problem was mistakenly detected, it deletes the pending code. If the problem is also found in the second drive cycle, the PCM determines that the system is malfunctioning, and the DTC is stored.

2014 - Mazda3 - Engine

OBD-II FREEZE FRAME DATA [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- This is technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of the Misfire or Fuel System DTCs. Once FREEZE FRAME DATA for the Misfire or Fuel System DTC is stored, it will overwrite any previous data and the FREEZE FRAME DATA will not be overwritten again.

2014 - Mazda3 - Engine

OBD-II ON-BOARD SYSTEM READINESS TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- This shows the OBD-II systems operating status. If any monitor function is incomplete, the M-MDS will identify which monitor function has not been completed. Misfires, Fuel System and Comprehensive Components (CCM) are continuous monitoring-type functions. The catalyst, evaporation system and oxygen sensor will be monitored under drive cycles. The OBD-II diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

2014 - Mazda3 - Engine

OBD-II READ/CLEAR DIAGNOSTIC TEST RESULTS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- This retrieves all stored DTCs in the PCM and clears the DTC, FREEZE FRAME DATA, On-Board Readiness Test Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

2014 - Mazda3 - Engine

OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

2014 - Mazda3 - Engine

ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC Reading Procedure

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Self Test”.

    b. Select “Modules”.

    c. Select “PCM”.

3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.

4. Verify the DTC according to the directions on the M-MDS screen.

    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

5. After completion of repairs, clear all DTCs stored in the PCM, while referring to “AFTER REPAIR PROCEDURE”.

Pending Trouble Code Access Procedure

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Self Test”.

    b. Select “Modules”.

    c. Select “PCM”.

3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.

4. Retrieve the pending trouble codes according to the directions on the M-MDS screen.

Freeze Frame PID Data Access Procedure

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “Modules”.

   c. Select “PCM”.

3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.

4. Retrieve the freeze frame PID data according to the directions on the M-MDS screen.

NOTE:

- Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

  Freeze frame data

- The freeze frame data consists of data for vehicle and engine control system operation conditions when malfunctions in the engine control system are detected and stored in the PCM.
- Freeze frame data is stored at the instant the check engine light illuminates, and only a part of the DTC data is stored.
- For the freeze frame data, if there are several malfunctions in the engine control system, the data for the malfunction which occurred initially is stored. Thereafter, if a misfire or fuel injection control malfunction occurs, data from the misfire or fuel injection control malfunction is written over the initially stored data. However, if the initially stored freeze frame data is a misfire or fuel injection control malfunction, it is not overwritten.

  Snapshot data

- The snapshot data stores the currently detected DTC data.
- The recording timing for the freeze frame data/snapshot data differs depending on the number of DTC drive cycles.
  - For a DTC with a drive cycle number 1, only the malfunction determination data is recorded.
  - For a DTC with a drive cycle number 2, both the malfunction determination and undetermined data is recorded.

Freeze frame data table

NOTE:

- Refer to the PID monitor table to confirm the engine control system operation status when the PCM does not store a DTC. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Freeze frame data items are not displayed according to detected DTC.

ECT2	°C, °F	Engine coolant temperature No.2	—	ECT2_V
IAT12	°C, °F	Intake air temperature No.2	—	IAT2

On-Board System Readiness Tests Access Procedure

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

a. Select “Powertrain”.

b. Select “OBD Test Modes”.

c. Select “Mode 1 Powertrain Data”.

d. Select “PCM”.

3. Then, select the “***SUP” and “**EVAL” PIDs in the PID selection screen.

4. Monitor those PIDs and verify that the system monitor is completed.

NOTE:

- If the on-board system readiness tests are not completed the PCM stores DTC P1000.

PID/DATA Monitor and Record Procedure

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

a. Select “DataLogger”.

b. Select “Modules”.

c. Select “PCM”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the detections on the screen.

Diagnostic Monitoring Test Results Access Procedure

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

a. Select “Powertrain”.

b. Select “OBD Test Modes”.

c. Select “Mode 6 On-Board Test Results”.

3. Verify the diagnostic monitoring test result according to the directions on the M-MDS screen.

Active Command Modes Procedure

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

a. Select “DataLogger”.

b. Select “Modules”.

c. Select “PCM”.

3. Select the simulation items from the PID table.

4. Using the active command modes function, inspect the operation of each part.

- If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

2014 - Mazda3 - Engine

AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Switch the ignition off.
2. Connect the M-MDS to the DLC 2.
3. Switch the ignition ON (engine off).
4. Verify the DTC according to the directions on the M-MDS screen.
   - Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off for **30 s or more**.

CAUTION:

- Always switch the ignition off after clearing the DTC.
- If the engine is accidentally started, disconnect the negative battery cable and reconnect it. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Switch the ignition ON (engine on).
7. Verify all accessory loads are off.
8. Start the engine and maintain the engine speed at **2,800—3,200 rpm** until the cooling fan starts running (for A/F sensor and HO2S activation).
9. When the cooling fan starts running, idle the engine.
10. Maintain idle for **30 s or more** after the cooling fan has stopped (for fuel learning).
11. Perform the DTC inspection again and verify that no DTCs are stored. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
12. Switch the ignition off.
13. Disconnect the M-MDS to the DLC 2.

2014 - Mazda3 - Engine

CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Self Test”.

    b. Select “Modules”.

    c. Select “PCM”.

3. Then, select the “Retrieve CMDTCs” and perform procedures according to the directions on the M-MDS screen.

4. Verify the DTC according to the directions on the M-MDS screen.

5. Press the clear button on the DTC screen to clear the DTC.

6. Verify that no DTCs are displayed.

7. Switch the ignition off.

2014 - Mazda3 - Engine

KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

KOEO Self Test

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Self Test”.

    b. Select “Modules”.

    c. Select “PCM”.

3. Then, select the “KOEO On Demand Self Test” and perform procedures according to directions on the M-MDS screen.

4. Verify the DTC according to the directions on the M-MDS screen.

    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

5. After completion of repairs, clear all DTCs stored in the PCM, while referring to “AFTER REPAIR PROCEDURE”.

KOER Self Test

NOTE:

- If a KOER self test is performed with the engine coolant temperature at **less than 60 °C {140 °F}**, a DTC for the variable valve timing may be detected even if the variable valve timing is normal.
- For vehicles with the variable valve timing control, execute a KOER self test after the variable valve timing learning is finished.
    - A KOER self test cannot be executed if the variable timing valve learning in not finished.
    - The variable valve timing learning is cleared if the PCM backup power supply is interrupted (including battery removal), or after reprogramming.
    - To perform variable valve timing learning, the engine speed needs to be increased momentarily to **approx. 2,000 rpm**.

1. Connect the M-MDS to the DLC-2.

2. Start engine and run it at idle.

3. After the vehicle is identified, access the ECT PID using the M-MDS.

4. Verify the ECT PID value is **above 60 °C {140 °F}**.

5. Select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “Modules”.

   c. Select “PCM”.

6. Then, select the “KOER On Demand Self Test” and perform procedures according to directions on the M-MDS screen.

7. Verify the DTC according to the directions on the M-MDS screen.

   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

8. After completion of repairs, clear all DTCs stored in the PCM, while referring to “AFTER REPAIR PROCEDURE”.

2014 - Mazda3 - Engine

OBD-II DRIVE MODE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- Using the OBD-II Drive Mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
- The OBD-II Drive Mode is divided into the specific Drive Mode and single Drive Mode.
- For the specific Drive Mode, specified Drive Modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single Drive Mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific Drive Mode. The applicable system is diagnosed by driving in the following Drive Modes.
    - Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode)
    - Mode 06 (EVAP System Repair Verification Drive Mode)
- The following systems are diagnosed with the single Drive Mode.
    - Oxygen sensor (A/F sensor, HO2S)
    - Oxygen sensor heater (A/F sensor heater, HO2S heater)
    - Catalytic converter (TWC)
    - Evaporative (EVAP) system

CAUTION:

- While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.
- When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD function and inspect later.

NOTE:

- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the M-MDS to monitor vehicle speed.
- If the OBD-II system inspection is not completed during the Drive Mode, the following causes are considered:
    - The OBD-II system detects the malfunction.
    - The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The M-MDS can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.
- The OBD monitoring status can be confirmed with the ignition switch operation. During KOEO, the check engine light illuminates for a fail-light inspection for **approx. 17 s**. The OBD monitoring status is confirmed after the fail-light inspection.
    - If all of the diagnosis is completed even one time, the check engine light will continue to illuminate.
    - If all of the diagnosis is not completed, the check engine light flashes for **approx. 7 s**, and then it illuminates until the engine is started.

Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode)

1. Start the engine and warm it up completely.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.

*1

MTX: accelerate in 5th. (accelerate to 89 km/h {55 mph} within 20 s.)/ATX: accelerate in D position. (accelerate to 89 km/h {55 mph} within 20 s.)

*2

MTX: accelerate in 4th. (accelerate to 45 km/h {28 mph} within 15 s, and then accelerate to 55 km/h {34 mph}.)/ATX: accelerate in 4th gear. (accelerate to 45 km/h {28 mph} within 15 s, and then accelerate to 55 km/h {34 mph}.)

4. Stop the vehicle and access the ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.

- If completed, the OBD monitoring status items change from non-completed to completed.
- If not completed, switch the ignition off then repeat from Step 3.

5. Access the DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.

- If detected values are not within specification, repair has not been completed.

6. Verify that no DTCs are displayed.

Mode 06 (EVAP System Repair Verification Drive Mode)

NOTE:

- If “EVAP System Repair Verification Drive Mode” cannot be performed (it is impossible to drive the vehicle under this Drive Mode condition), perform the evaporative system test procedure as an alternative. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before the engine is started to initiate the evaporative system test.

- IAT: **5—35 °C {41—95 °F}**
- FLI: **15—85 %**
- BARO: **72.2 kPa {0.736 kgf/cm^2, 10.5 psi}**

2. Start the engine and warm it up completely.

3. Clear the DTCs from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Drive the vehicle as shown in the graph.

5. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
    - If completed, the OBD monitoring status items change from non-completed to completed.
    - If not completed, switch the ignition off then go back to Step 1.
6. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
    - If detected values are not within specification, repair has not been completed.
7. Verify that no DTCs are displayed.

Single Drive Mode

1. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
2. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before the engine is started to initiate the evaporative system test.
    - IAT: **5—35 °C {41—95 °F}**
    - FLI: **15—85 %**
    - BARO: **72.3 kPa {0.737 kgf/cm^2, 10.5 psi}**
3. Start the engine and warm it up completely.
4. Clear the DTCs from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor the RPM PID for engine speed during this procedure.

6. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
    - If completed, all of the OBD monitoring status items change from non-completed to completed.
    - If not completed, switch the ignition off, then perform the applicable specific Drive Mode for any monitoring item that was not in the detection condition.
7. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
    - If detected values are not within specification, repair has not been completed.

2014 - Mazda3 - Engine

DIAGNOSTIC MONITORING TEST RESULTS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- The purpose of this test mode is to confirm the result of OBD-II monitor diagnostic test results. The result values stored when particular monitor is completed are displayed. If the monitor is not completed, initial value is displayed.

OBD Monitor ID	Test ID	Description	Related system	Scaling ID	Unit
01	80	A/F sensor lean-to-rich response time (calculated)	A/F sensor, HO2S	20	Ratio
01	81	A/F sensor rich-to-lean response time (calculated)		20	Ratio
01	82	A/F sensor lean-to-rich response time (calculated)		20	Ratio
01	83	A/F sensor rich-to-lean response time (calculated)		20	Ratio
02	03	Low HO2S voltage for switch time calculation (constant)		0A	Voltage
02	04	High HO2S voltage for switch time calculation (constant)		0A	Voltage
02	05	HO2S rich-to-lean response time (calculated)		10	Time
02	06	HO2S lean-to-rich response time (calculated)		10	Time
02	80	HO2S response time out (calculated)		10	Time
21	80	A/F sensor and HO2S switching time ratio	Catalyst	20	Ratio
35	80	Over-retarded (electric variable valve timing)	Variable valve timing	9C	deg.CA
35	81	Over-advanced (electric variable valve timing)		9C	deg.CA
35	82	Over-retarded (hydraulic variable valve timing)		9C	deg.CA
35	83	Over-advanced (hydraulic variable valve timing)		9C	deg.CA

3A	80	Phase 0 end pressure result and test limits	EVAP system	FE	Pa
3A	81	Phase 4 vapor generation minimum change in pressure and test limits		FE	Pa
3A	82	Phase 0 end pressure result and test limits		FE	Pa
3B	80	Phase 2 0.040” cruise leak check vacuum bleed-up and test limits		FE	Pa
3C	81	EONV positive pressure test result and limits		FE	Pa
3C	82	EONV negative pressure (vacuum) test result and limits		FE	Pa
3C	83	Normalized average of four EONV tests results and limits		03	Raw Value
3D	80	Blocked EVAP system line-screening test		A9	Pa/s
3D	81	Blocked EVAP system line-fault confirmation test		FE	Pa
41	80	A/F sensor heater test result and limits	A/F sensor, HO2S	14	ohm
42	80	HO2S heater test result and limits		14	ohm
A2	0B	Cylinder No.1 average misfire counts for last 10 Drive Cycle	Misfire	24	Counts
A2	0C	Cylinder No.1 misfire counts for last/current Drive Cycle		24	Counts
A3	0B	Cylinder No.2 average misfire counts for last 10 Drive Cycle		24	Counts
A3	0C	Cylinder No.2 misfire counts for last/current Drive Cycle		24	Counts
A4	0B	Cylinder No.3 average misfire counts for last 10 Drive Cycle		24	Counts
A4	0C	Cylinder No.3 misfire counts for last/current Drive Cycle		24	Counts
A5	0B	Cylinder No.4 average misfire counts for last 10 Drive Cycle		24	Counts

A5	0C	Cylinder No.4 misfire counts for last/current Drive Cycle		24	Counts

2014 - Mazda3 - Engine

DTC B10A2:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from “Function Inspection Using M-MDS”.

Details On DTCs

DESCRIPTION	Vehicle collision	
DETECTION CONDITION	Determination conditions	• A collision signal from the SAS control module is received.
	Preconditions	• Not applicable
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• PCM
FAIL-SAFE FUNCTION	• Stops fuel injection control • Stops fuel pump control • Stops ignition control • Stops engine coolant fan control	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Stops fuel pump operation when ignition is switched ON • Delays starter operation during cranking for **maximum 1.2 s**.	
POSSIBLE CAUSE	• Vehicle is involved in collision (collision signal from SAS control module is received) • SAS control module malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- During a collision, the SAS control module sends a collision signal to the PCM via the CAN signal. The PCM records a DTC by receiving a collision signal.
- This DTC does not indicate a part malfunction. It indicates operation of fail-safe from safety assurance during a vehicle collision.

Repeatability Verification Procedure

- Switch the ignition ON and leave for **5 s or more**.
- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- After switching the ignition off, switch the ignition back ON and leave for **5 s or more**.
- Using the M-MDS, display DTCs and verify that DTC U0151:00 is not displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF OPERATION IS NORMAL AFTER VEHICLE COLLISION**	Yes	Explain to the customer that the DTC is recorded as a result of a vehicle collision.

	• Ask customer about vehicle collision experience. • Has the vehicle in for servicing been involved in a collision in which the air bag is deployed?		Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO SAS CONTROL MODULE** • Switch the ignition off, then ON (engine off). • Perform the SAS control module DTC inspection using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0010:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0010:00	Electric variable valve timing control circuit range/performance problem

DETECTION CONDITION	• Any one of the following conditions is met:
	  ▪ A malfunction is detected in the results of the on-board diagnostic test received from the electric variable valve timing driver.
	  ▪ The motor speed signal received from the electric variable valve timing driver is in error.
	Diagnostic support note
	• This is a continuous monitor (CCM).
	• The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle.
	• FREEZE FRAME DATA (Mode 2)/Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	• Stops activation of the electric variable valve timing driver.

POSSIBLE CAUSE	• Electric variable valve timing motor/driver connectors or terminals malfunction
	• Electric variable valve timing relay malfunction
	• Short to ground or open circuit in electric variable valve timing relay power supply circuit
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and electric variable valve timing relay terminal C
	  ▪ MAIN 200 A fuse and/or EVVT 20 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and electric variable valve timing relay terminal C
	• Short to ground in wiring harness between the following terminals:
	  ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E
	  ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E
	  ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B
	• Open circuit in wiring harness between the following terminals:
	  ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E
	  ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B
	• Open circuit in wiring harness between electric variable valve timing motor/driver terminal 2A and body ground
	• Short to ground in wiring harness between the following terminals:

	▪ Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ ▪ Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O ▪ Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J ▪ Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: ▪ Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ ▪ Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O ▪ Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J ▪ Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • Electric variable valve timing motor/driver circuits are shorted to each other • Open circuit in wiring harness between the following terminals: ▪ Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ ▪ Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O ▪ Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J ▪ Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • Electric variable valve timing driver malfunction • Electric variable valve timing motor malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
VT IN_ACT	°	Actual intake valve timing	• Displays actual intake valve timing
VT IN_DES	°	Desired intake valve timing	• Displays desired intake valve timing

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P1380:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P1380:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the electric variable valve timing motor/driver connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 19.
		No	Go to the next step.
5	**DETERMINE IF MALFUNCTION CAUSE IS ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER POWER SUPPLY CIRCUIT OR OTHER** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Start the engine. • Measure the voltage at the following terminals (wiring harness-side): ▪ Electric variable valve timing motor/driver terminal 1E ▪ Electric variable valve timing motor/driver terminal 2B • Is the voltage **B+**?	Yes	Go to Step 11.
		No	Go to the next step.

6	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY** • Switch the ignition off. • Remove the electric variable valve timing relay. • Inspect the electric variable valve timing relay. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing relay, then go to Step 19.
		No	Go to the next step.
7	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Measure the voltage at the electric variable valve timing relay terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and EVVT 20 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and electric variable valve timing relay terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If all fuses are normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and electric variable valve timing relay terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open

			circuit. Go to Step 19.
8	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between electric variable valve timing relay terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 19.
		No	Go to the next step.
9	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the electric variable valve timing relay terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 19.
10	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Electric variable valve timing relay terminal D —Electric	Yes	Go to Step 19.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	variable valve timing motor/driver terminal 1E ▪ Electric variable valve timing relay terminal D —Electric variable valve timing motor/driver terminal 2B • Is there continuity?		Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
11	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Switch the ignition off. • Inspect for continuity between electric variable valve timing motor/driver terminal 2A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between electric variable valve timing motor/driver terminal 2A and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between electric variable valve timing motor/driver and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 19.
12	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUIT FOR SHORT TO GROUND** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Electric variable valve timing motor/driver terminal 1D ▪ Electric variable valve timing motor/driver terminal 1C ▪ Electric variable valve timing motor/driver terminal 1B ▪ Electric variable valve timing motor/driver terminal 1A	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ ▪ Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O ▪ Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J ▪ Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground.

	• Is there continuity?		If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 19.
		No	Go to the next step.
13	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 19.
		No	Go to the next step.
14	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ Electric variable valve timing motor/driver terminal 1D ▪ Electric variable valve timing motor/driver terminal 1C ▪ Electric variable valve timing motor/driver terminal 1B ▪ Electric variable valve timing motor/driver terminal 1A • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ • Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O • Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J • Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 19.
15	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity electric variable valve timing motor/driver terminals 1D, 1C, 1B and 1A	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ • Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O • Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J

	(wiring harness-side). • Is there continuity?		Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 19.
		No	Go to the next step.
16	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ ▪ Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O ▪ Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J ▪ Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ • Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O • Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J • Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
17	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 19. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
18	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor.	Yes	Replace the electric variable valve timing motor/driver, then go to the next step. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	No	Go to the next step.
19	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0011:00, P0012:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Electric variable valve timing control system: • P0011:00: Over-advanced • P0012:00: Over-retarded	
DETECTION CONDITION	Determination conditions	• P0011:00: A condition in which the actual intake valve timing advances (excess advance) compared to the target intake valve timing continues for the specified period.
		• P0012:00: A condition in which the actual intake valve timing retards (excess retard) compared to the target intake valve timing continues for the specified period.
	Preconditions	• Battery voltage: **above 11 V**[*1] • Engine speed: **5,000 rpm or less**[*1] • Engine coolant temperature: **20 °C {68 °F} or more**[*1] • The following DTCs are not detected: ▪ P0010:00, P0335:00, P0340:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **10 s** period
	Drive cycle	• **1**
	Self test type	• CMDTC self test
	Sensor used	• CKP sensor • Intake CMP sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
	• Electric variable valve timing motor/driver connectors or terminals malfunction • Short to ground or open circuit in electric variable valve timing relay power supply circuit ▪ Short to ground in wiring harness between battery positive terminal and electric variable valve timing relay terminal C ▪ MAIN 200 A fuse and/or EVVT 20 A fuse malfunction ▪ Open circuit in wiring harness between battery positive terminal and electric variable valve timing relay terminal C • Short to ground in wiring harness between the following terminals: ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E	

POSSIBLE CAUSE	▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B • Open circuit in wiring harness between the following terminals: ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B • PCM connector or terminals malfunction • Electric variable valve timing relay malfunction • Electric variable valve timing motor malfunction • Electric variable valve timing actuator malfunction ▪ Electric variable valve timing actuator is stuck in advanced position ▪ Electric variable valve timing actuator is stuck in retarded position • Loose timing chain or improper intake valve timing due to timing chain slippage • Timing chain malfunction ▪ Poor assembly of timing chain ▪ Looseness or jumping • Mis-detection of intake CMP sensor • Mis-detection of CKP sensor • PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

P0011:00

- With the preconditions met, the PCM verifies the conformity of the actual timing relative to the target valve timing. If it does not conform to the normal determination range (difference between target valve timing and actual valve timing is **15 degrees or less**) during the malfunction determination period (**approx. 10 s**), even if the target valve timing is set to the retard side, the PCM determines an excess advance malfunction condition and stores a DTC.

P0012:00

- With the preconditions met, the PCM verifies the conformity of the actual timing relative to the target valve timing. If it does not conform to the normal determination range (difference between target valve timing and actual valve timing is **15 degrees or less**) during the malfunction determination period (**approx. 10 s**), even if the target valve timing is set to the advance side, the PCM determines an excess retard malfunction condition and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
VT IN_ACT	Actual intake valve timing	°	• Displays actual intake valve timing
VT IN_DES	Desired intake valve timing	°	• Displays desired intake valve timing

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY OTHER RELATED DTCs OCCURRING** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0010:00, P0335:00, P0340:00 or P1380:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P0010:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0335:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0340:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P1380:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY CONFORMITY OF ACTUAL INTAKE VALVE TIMING** • Start the engine and idle it. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ VT IN_ACT ▪ VT IN_DES • Perform the following: ∘ Race the engine at an engine speed of **3,000 rpm or less**. ∘ Run it at idle. ∘ Repeat Step 1 and 2 operations above five times in succession. • Does the monitor value of the PID item VT IN_ACT conform to the VT IN_DES PID value?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.
5	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the VT IN_ACT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0,**	Yes	Repair or replace the applicable wiring harness or connector parts. Go to the troubleshooting procedure to perform the procedure from Step 12.

	SKYACTIV-G 2.5].) • Does the PID value fluctuate when the following connectors are shaken? ▪ Electric variable valve timing motor/driver ▪ PCM	No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—5
  - Perform an inspection of the connectors and wiring harnesses between the battery positive terminal and electric variable valve timing relay and the electric variable valve timing motor/driver.
- Step 6
  - Perform a unit inspection of the electric variable valve timing relay.
- Step 7—9
  - Perform an inspection of the electric variable valve timing drive parts.
- Step 10—11
  - Inspect the intake CMP sensor and CKP sensor detection areas for adhesion of foreign matter.
- Step 12—13
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Switch the ignition off. • Remove the electric variable valve timing relay. • Measure the voltage at the electric variable valve timing relay terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and EVVT 20 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and electric variable valve timing relay terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the malfunctioning fuse. • If the fuse is damaged: ▪ Replace the malfunctioning fuse. • If all fuses are normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and electric variable

			valve timing relay terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 12.
2	**PURPOSE: INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CONNECTOR CONDITION** • Disconnect the electric variable valve timing motor/driver connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
3	**PURPOSE: INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between electric variable valve timing relay terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 12.
		No	Go to the next step.
4	**PURPOSE: INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 1E • Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:**

	▪ Electric variable valve timing relay terminal D—Electric variable valve timing motor/driver terminal 2B • Is there continuity?		• Repair or replace the wiring harness which has an open circuit. Go to Step 12.
5	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
6	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING RELAY** • Inspect the electric variable valve timing relay. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing relay, then go to Step 12.
		No	Go to the next step.
7	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 12. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 12. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**PURPOSE: VERIFY ASSEMBLY CONDITION OF TIMING CHAIN** • Verify the condition of the timing chain assembly (intake valve timing, looseness, jumping). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part. Assemble the timing chain using the correct timing, then go to the Step 12. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**PURPOSE: VERIFY IF FOREIGN MATTER ON INTAKE CMP SENSOR DETECTION AREA AFFECTS DIAGNOSTIC RESULTS** • Visually inspect for intake CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there foreign matter such as metallic dust on the intake CMP sensor detection area?	Yes	Remove the foreign matter, then go to Step 12.
		No	Go to the next step.
11	**PURPOSE: VERIFY IF FOREIGN MATTER ON CKP SENSOR DETECTION AREA AFFECTS DIAGNOSTIC RESULTS** • Visually inspect for CKP sensor.	Yes	Remove the foreign matter, then go to the next step.
		No	Go to the next step.

	(See **CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there foreign matter such as metallic dust on the CKP sensor detection area?		
12	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC P0011:00 or P0012:00 also present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
13	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0014:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from “Function Inspection Using M-MDS”.

Details On DTCs

DESCRIPTION	Hydraulic variable valve timing control system: over-advanced	
DETECTION CONDITION	Determination conditions	• A condition in which the actual exhaust valve timing advances (excess advance) compared to the target exhaust valve timing continues for the specified period.
	Preconditions	• Battery voltage: **above 11 V**[*1] • Engine speed: **5,000 rpm or less**[*1] • Engine coolant temperature: **60 °C {140 °F} or more**[*1] • Hydraulic variable valve timing control: feedback mode • The following DTCs are not detected: ▪ P0335:00, P0365:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **5 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• CKP sensor • Exhaust CMP sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• OCV malfunction ▪ Spool valve in OCV is stuck in advanced position • Hydraulic variable valve timing actuator malfunction • Timing chain malfunction ▪ Poor assembly of timing chain ▪ Looseness or jumping • Mis-detection of exhaust CMP sensor • Engine oil malfunction ▪ Use of unspecified engine oil ▪ Low engine oil level ▪ Low engine oil pressure	

	▪ Engine oil runners are clogged or have leakage • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- With the preconditions met, the PCM verifies the conformity of the actual timing relative to the target valve timing. If it does not conform to the normal determination range (difference between target valve timing and actual valve timing is **20 degrees or less**) during the malfunction determination period (**approx. 5 s**), even if the target valve timing is set to the retard side, the PCM determines an excess advance malfunction condition and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Shift to 2nd gear and rapidly accelerate the vehicle to **50 km/h {31 mph}** (to operate hydraulic variable valve timing control).
- Decelerate to idling.
- Shift to 2nd gear and rapidly accelerate the vehicle to **50 km/h {31 mph}** again.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
VT_EX_ACT	Actual exhaust valve timing	°	• Displays actual exhaust valve timing
VT EX_DES	Desired exhaust valve timing	°	• Displays desired exhaust valve timing

Simulation item table

Item	Definition	Unit	Operation
VT EX_DES	OCV control signal	%	• Changes % and forcibly drives/stops OCV.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY OTHER RELATED DTCs OCCURRING** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0335:00, P0365:00, P2090:00 or P2091:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0335:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0365:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2090:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC OCCURRING FROM OIL PRESSURE SWITCH** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0524:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0524:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFY CONFORMITY OF ACTUAL EXHAUST VALVE TIMING AND DETERMINE IF MALFUNCTION IS CAUSED BY OCV OR CONNECTOR RELATED** • Start the engine and idle it. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ VT_EX_ACT ▪ VT EX_DES • Perform the following: ◦ Race the engine at an engine speed of **3,000 rpm or less**. ◦ Run it at idle. ◦ Repeat Step 1 and 2 operations above five times in	Yes	Go to Step 7.
		No	Go to the next step.

	succession. • Does the monitor value of the PID item VT_EX_ACT conform to the VT EX_DES PID value?		
6	**PURPOSE: VERIFY IF SPOOL VALVE IN OCV IS STUCK** • Switch the ignition off. • Remove the OCV without disconnect the connector. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Access the simulation item VT EX_DES using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Using the simulation function, force drive the OCV. • Can the spool valve in OCV operation be verified?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 4. • If a malfunction occurs, perform diagnosis from Step 1 of the malfunction diagnostic procedure.
		No	Replace the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 8.
7	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the VT_EX_ACT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the PID value fluctuate when the following connectors are shaken? ▪ OCV ▪ PCM	Yes	Repair or replace the applicable wiring harness or connector parts. Go to the troubleshooting procedure to perform the procedure from Step 8.
		No	Go to the troubleshooting procedure to perform the procedure from Step 4. • If a malfunction occurs, perform diagnosis from Step 3 of the malfunction diagnostic procedure.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an inspection of the hydraulic variable valve timing drive parts.
- Step 3
  - Inspect the exhaust CMP sensor detection areas for adhesion of foreign matter.
- Step 4—7
  - Perform an engine oil related inspection.
- Step 8—9
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF HYDRAULIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the hydraulic variable valve timing actuator. (See **HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the hydraulic variable valve timing actuator, then go to Step 8. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: VERIFY ASSEMBLY CONDITION OF TIMING CHAIN** • Verify the condition of the timing chain assembly (exhaust valve timing, looseness, jumping). (See **TIMING CHAIN REMOVAL/INSTALLATION**	Yes	Repair or replace the malfunctioning part. Assemble the timing chain using the correct timing, then go to the Step 8. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is there any malfunction?	No	Go to the next step.
3	**PURPOSE: VERIFY IF FOREIGN MATTER ON EXHAUST CMP SENSOR DETECTION AREA AFFECTS DIAGNOSTIC RESULTS** • Visually inspect for exhaust CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there foreign matter such as metallic dust on the exhaust CMP sensor detection area?	Yes	Remove the foreign matter, then go to Step 8.
		No	Go to the next step.
4	**PURPOSE: INSPECT IF INSUFFICIENT HYDRAULIC PRESSURE CAUSED BY USE OF UNSPECIFIED ENGINE OIL** • Is the specified engine oil being used?	Yes	Go to the next step.
		No	Replace the engine oil with genuine motor oil, then go to Step 8. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**PURPOSE: INSPECT ENGINE OIL LEVEL** • Inspect the engine oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the engine oil level sufficient?	Yes	Go to the next step.
		No	Add genuine motor oil, then go to Step 8. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**PURPOSE: INSPECT ENGINE OIL PRESSURE** • Inspect the engine oil pressure. (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 8.
7	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE OIL LEAK OR RESTRICTION AFFECTS DIAGNOSTIC RESULTS** • Start the engine. • Verify if there is engine oil leakage in the oil passage or restriction. • Is there engine oil leakage in the oil passage or restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Add genuine motor oil, then go to the next step. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0015:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from “Function Inspection Using M-MDS”.

Details On DTCs

DESCRIPTION	Hydraulic variable valve timing control system: over-retarded	
DETECTION CONDITION	Determination conditions	• A condition in which the actual exhaust valve timing retards (excess retard) compared to the target exhaust valve timing continues for the specified period.
	Preconditions	• Battery voltage: **above 11 V**[*1] • Engine speed: **5,000 rpm or less**[*1] • Engine coolant temperature: **60 °C {140 °F} or more**[*1] • Hydraulic variable valve timing control: maximum cam advanced mode • The following DTCs are not detected: ▪ P0335:00, P0365:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **5 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• CKP sensor • Exhaust CMP sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	

POSSIBLE CAUSE	• OCV malfunction
	  ▪ Spool valve in OCV is stuck in retard position
	• Hydraulic variable valve timing actuator malfunction
	• Timing chain malfunction
	  ▪ Poor assembly of timing chain
	  ▪ Looseness or jumping
	• Mis-detection of exhaust CMP sensor
	• Engine oil malfunction
	  ▪ Use of unspecified engine oil
	  ▪ Low engine oil level
	  ▪ Low engine oil pressure	

	▪ Engine oil runners are clogged or have leakage • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- With the preconditions met, the PCM verifies the conformity of the actual timing relative to the target valve timing. If it does not conform to the normal determination range (difference between target valve timing and actual valve timing is **20 degrees or less**) during the malfunction determination period (**approx. 5 s**), even if the target valve timing is set to the advance side, the PCM determines an excess retard malfunction condition and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Shift to 2nd gear and rapidly accelerate the vehicle to **50 km/h {31 mph}** (to operate hydraulic variable valve timing control).
- Decelerate to idling.
- Shift to 2nd gear and rapidly accelerate the vehicle to **50 km/h {31 mph}** again.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
VT_EX_ACT	Actual exhaust valve timing	°	• Displays actual exhaust valve timing
VT EX_DES	Desired exhaust valve timing	°	• Displays desired exhaust valve timing

Simulation item table

Item	Definition	Unit	Operation
VT EX_DES	OCV control signal	%	• Changes % and forcibly drives/stops OCV.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY OTHER RELATED DTCs OCCURRING** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0335:00, P0365:00, P2090:00 or P2091:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0335:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0365:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2090:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC OCCURRING FROM OIL PRESSURE SWITCH** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0524:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0524:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFY CONFORMITY OF ACTUAL EXHAUST VALVE TIMING AND DETERMINE IF MALFUNCTION IS CAUSED BY OCV OR CONNECTOR RELATED** • Start the engine and idle it. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ VT_EX_ACT ▪ VT EX_DES • Perform the following: ∘ Race the engine at an engine speed of **3,000 rpm or less**. ∘ Run it at idle. ∘ Repeat Step 1 and 2 operations above five times in	Yes	Go to Step 7.
		No	Go to the next step.

	succession. • Does the monitor value of the PID item VT_EX_ACT conform to the VT EX_DES PID value?		
6	**PURPOSE: VERIFY IF SPOOL VALVE IN OCV IS STUCK** • Switch the ignition off. • Remove the OCV without disconnect the connector. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Access the simulation item VT EX_DES using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Using the simulation function, force drive the OCV. • Can the spool valve in OCV operation be verified?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Replace the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 8.
7	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the VT_EX_ACT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the PID value fluctuate when the following connectors are shaken? ▪ OCV ▪ PCM	Yes	Repair or replace the applicable wiring harness or connector parts. Go to the troubleshooting procedure to perform the procedure from Step 8.
		No	Go to the troubleshooting procedure to perform the procedure from Step 3.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an inspection of the hydraulic variable valve timing drive parts.
- Step 3
  - Inspect the exhaust CMP sensor detection areas for adhesion of foreign matter.
- Step 4—7
  - Perform an engine oil related inspection.
- Step 8—9
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF HYDRAULIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the hydraulic variable valve timing actuator. (See **HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the hydraulic variable valve timing actuator, then go to Step 8. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: VERIFY ASSEMBLY CONDITION OF TIMING CHAIN** • Verify the condition of the timing chain assembly (exhaust valve timing, looseness, jumping). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part. Assemble the timing chain using the correct timing, then go to the Step 8. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**PURPOSE: VERIFY IF FOREIGN MATTER ON EXHAUST CMP SENSOR DETECTION AREA AFFECTS DIAGNOSTIC RESULTS** • Visually inspect for exhaust CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there foreign matter such as metallic dust on the exhaust CMP sensor detection area?	Yes	Remove the foreign matter, then go to Step 8.
		No	Go to the next step.
4	**PURPOSE: INSPECT IF INSUFFICIENT HYDRAULIC PRESSURE CAUSED BY USE OF UNSPECIFIED ENGINE OIL** • Is the specified engine oil being used?	Yes	Go to the next step.
		No	Replace the engine oil with genuine motor oil, then go to Step 8. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**PURPOSE: INSPECT ENGINE OIL LEVEL** • Inspect the engine oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the engine oil level sufficient?	Yes	Go to the next step.
		No	Add genuine motor oil, then go to Step 8. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**PURPOSE: INSPECT ENGINE OIL PRESSURE** • Inspect the engine oil pressure. (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 8.
7	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE OIL LEAK OR RESTRICTION AFFECTS DIAGNOSTIC RESULTS** • Start the engine. • Verify if there is engine oil leakage in the oil passage or restriction. • Is there engine oil leakage in the oil passage or restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Add genuine motor oil, then go to the next step. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0016:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0016:00	CKP-CMP (intake side) correlation problem
DETECTION CONDITION	• The PCM monitors the input pulses from the CKP sensor and intake CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Improper valve timing
	  ▪ Improper installation of timing chain to intake cam sprocket teeth
	  ▪ Timing chain damage
	  ▪ Intake cam sprocket damage
	• CKP sensor malfunction
	  ▪ Connector or terminals malfunction
	  ▪ Foreign matter on CKP sensor
	  ▪ Damaged or scratched CKP sensor pulse wheel
	• Intake CMP sensor malfunction
	  ▪ Connector or terminals malfunction

	▪ Foreign matter on intake CMP sensor ▪ Damaged or scratched intake CMP sensor pulse wheel • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY INTAKE VALVE TIMING MECHANISM INSTALLATION** • Verify the intake valve timing mechanism installation for the timing chain. • Is the intake valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the timing chain correctly, then go to Step 16.
4	**INSPECT TIMING CHAIN** • Inspect the timing chain. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
5	**INSPECT INTAKE CAMSHAFT SPROCKET** • Inspect the intake camshaft	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to

	sprocket. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		Step 16.
		No	Go to the next step.
6	**INSPECT VALVE TIMING** • Inspect the valve timing. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Adjust the valve timing properly, then go to Step 16. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**INSPECT CKP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 16.
		No	Go to the next step.
8	**INSPECT CKP SENSOR FOR FOREIGN MATTER** • Visually inspect the CKP sensor for foreign matter. (See **CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any foreign matter on the CKP sensor?	Yes	Remove the foreign matter from the CKP sensor, then go to Step 16.
		No	Go to the next step.
9	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Is there any damage or scratching on the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 16.
		No	Go to the next step.
10	**INSPECT CKP SENSOR** • Reconnect all disconnected connectors. • Inspect the CKP sensor.	Yes	Replace the CKP sensor, then go to Step 16. (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	No	Go to the next step.
11	**INSPECT INTAKE CMP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the intake CMP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 16.
		No	Go to the next step.
12	**INSPECT INTAKE CMP SENSOR FOR FOREIGN MATTER** • Visually inspect the intake CMP sensor for foreign matter. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any foreign matter on the intake CMP sensor?	Yes	Remove the foreign matter from the intake CMP sensor, then go to Step 16.
		No	Go to the next step.
13	**INSPECT INTAKE CMP SENSOR PULSE WHEEL** • Visually inspect the intake CMP sensor pulse wheel. • Is there any damage or scratching on the intake CMP sensor pulse wheel?	Yes	Replace the intake CMP sensor pulse wheel, then go to Step 16.
		No	Go to the next step.
14	**INSPECT INTAKE CMP SENSOR** • Reconnect all disconnected connectors. • Inspect the intake CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the intake CMP sensor, then go to Step 16. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
15	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

	as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
16	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0017:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0017:00	CKP-CMP (exhaust side) correlation problem
DETECTION CONDITION	• The PCM monitors the input pulses from the CKP sensor and exhaust CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Improper valve timing
	  ▪ Improper installation of timing chain to exhaust cam sprocket teeth
	  ▪ Timing chain damage
	  ▪ Exhaust cam sprocket damage
	• CKP sensor malfunction
	  ▪ Connector or terminals malfunction
	  ▪ Foreign matter on CKP sensor
	  ▪ Damaged or scratched CKP sensor pulse wheel
	• Exhaust CMP sensor malfunction
	  ▪ Connector or terminals malfunction

	▪ Foreign matter on exhaust CMP sensor ▪ Damaged or scratched exhaust CMP sensor pulse wheel • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY EXHAUST VALVE TIMING MECHANISM INSTALLATION** • Verify the exhaust valve timing mechanism installation for the timing chain. • Is the exhaust valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the timing chain correctly, then go to Step 16.
4	**INSPECT TIMING CHAIN** • Inspect the timing chain. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 16.
		No	Go to the next step.
5	**INSPECT EXHAUST CAMSHAFT SPROCKET** • Inspect the exhaust camshaft	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to

	sprocket. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		Step 16.
		No	Go to the next step.
6	**INSPECT VALVE TIMING** • Inspect the valve timing. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Adjust the valve timing properly, then go to Step 16. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**INSPECT CKP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 16.
		No	Go to the next step.
8	**INSPECT CKP SENSOR FOR FOREIGN MATTER** • Visually inspect the CKP sensor for foreign matter. (See **CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any foreign matter on the CKP sensor?	Yes	Remove the foreign matter from the CKP sensor, then go to Step 16.
		No	Go to the next step.
9	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Is there any damage or scratching on the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 16.
		No	Go to the next step.
10	**INSPECT CKP SENSOR** • Reconnect all disconnected connectors. • Inspect the CKP sensor.	Yes	Replace the CKP sensor, then go to Step 16. (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	No	Go to the next step.
11	**INSPECT EXHAUST CMP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the exhaust CMP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 16.
		No	Go to the next step.
12	**INSPECT EXHAUST CMP SENSOR FOR FOREIGN MATTER** • Visually inspect the exhaust CMP sensor for foreign matter. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any foreign matter on the exhaust CMP sensor?	Yes	Remove the foreign matter from the exhaust CMP sensor, then go to Step 16.
		No	Go to the next step.
13	**INSPECT EXHAUST CMP SENSOR PULSE WHEEL** • Visually inspect the exhaust CMP sensor pulse wheel. • Is there any damage or scratching on the exhaust CMP sensor pulse wheel?	Yes	Replace the exhaust CMP sensor pulse wheel, then go to Step 16.
		No	Go to the next step.
14	**INSPECT EXHAUST CMP SENSOR** • Reconnect all disconnected connectors. • Inspect the exhaust CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the exhaust CMP sensor, then go to Step 16. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
15	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector.	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
16	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0031:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0031:00	A/F sensor heater control circuit low input
DETECTION CONDITION	• When the PCM controls the A/F sensor heater, the voltage input to the PCM is too low. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel feedback control
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • Short to ground or open circuit in A/F sensor heater power supply circuit: ▪ Short to ground in wiring harness between ENGINE1 15 A fuse and A/F sensor terminal A ▪ ENGINE1 15 A fuse malfunction ▪ Open circuit in wiring harness between main relay terminal D and A/F sensor terminal A • PCM connector or terminals malfunction • Short to ground in wiring harness between A/F sensor terminal E and PCM terminal 1BY • A/F sensor heater malfunction • Open circuit in wiring harness between A/F sensor terminal E and PCM terminal 1BY • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

4	**INSPECT A/F SENSOR HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the A/F sensor connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the A/F sensor terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE1 15 A fuse and A/F sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and A/F sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
5	**INSPECT PCM CONNECTOR CONDITION**	Yes	Repair or replace the connector and/or terminals, then go to Step 9.

	• Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
		No	Go to the next step.
6	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal E and PCM terminal 1BY. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
7	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 9. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and PCM terminal 1BY (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal E and PCM terminal 1BY. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	• Is the PENDING CODE for this DTC present?		
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0032:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0032:00	A/F sensor heater control circuit high input
DETECTION CONDITION	• When the PCM controls the A/F sensor heater, the voltage input to the PCM is too high. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel feedback control
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between A/F sensor terminal E and PCM terminal 1BY • A/F sensor heater malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.

4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the A/F sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the A/F sensor terminal E (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal E and PCM terminal 1BY. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0037:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0037:00	HO2S heater control circuit low input
DETECTION CONDITION	• When the PCM controls the HO2S heater, the voltage input to the PCM is too low. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel feedback control

POSSIBLE CAUSE	• HO2S connector or terminals malfunction
	• Short to ground or open circuit in HO2S heater power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE1 15 A fuse and HO2S terminal C
	  ▪ ENGINE1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and HO2S terminal C
	• PCM connector or terminals malfunction
	• Short to ground in wiring harness between HO2S terminal D and PCM terminal 2C
	• HO2S heater malfunction
	• Open circuit in wiring harness between HO2S terminal D and PCM terminal 2C
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT HO2S HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the HO2S connector is disconnected. • Switch the ignition ON (engine off). **NOTE:**	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify

	• Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the HO2S terminal C (wiring harness-side). • Is the voltage **B+**?		whether or not there is a common connector between ENGINE1 15 A fuse and HO2S terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and HO2S terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

6	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal D and PCM terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
7	**INSPECT HO2S HEATER** • Inspect the HO2S heater. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 9. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal D (wiring harness-side) and PCM terminal 2C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal D and PCM terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”.	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0038:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0038:00	HO2S heater control circuit high input
DETECTION CONDITION	• When the PCM controls the HO2S heater, the voltage input to the PCM is too high. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel feedback control
POSSIBLE CAUSE	• HO2S connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between HO2S terminal D and PCM terminal 2C • HO2S heater malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the HO2S and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the HO2S terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal D and PCM terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT HO2S HEATER** • Inspect the HO2S heater. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to the next step. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
	VERIFY DTC TROUBLESHOOTING COMPLETED		

7	• Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0053:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0053:00	A/F sensor heater resistance
DETECTION CONDITION	• The PCM monitors the A/F sensor heater resistance when under the A/F sensor heater control. If the resistance is **more than 30 ohms**, the PCM determines that there is a A/F sensor circuit problem. **Diagnostic support note** • This is an intermittent monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel feedback control

POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction
	• A/F sensor heater malfunction
	• Short to ground or open circuit in A/F sensor heater power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE1 15 A fuse and A/F sensor terminal A
	  ▪ ENGINE1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and A/F sensor terminal A
	• PCM connector or terminals malfunction
	• Short to ground in wiring harness between A/F sensor terminal E and PCM terminal 1BY
	• Open circuit in wiring harness between A/F sensor terminal E and PCM terminal 1BY
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

4	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 9. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT A/F SENSOR HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the A/F sensor connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the A/F sensor terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE1 15 A fuse and A/F sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and A/F sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no**

			common connector: • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
6	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal E and PCM terminal 1BY. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
8	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and PCM terminal 1BY (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal E and PCM terminal 1BY. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	• Is the PENDING CODE for this DTC present?		
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0054:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0054:00	HO2S heater resistance
DETECTION CONDITION	• The PCM monitors the HO2S heater resistance when under the HO2S heater control. If the resistance is **more than 34 ohms**, the PCM determines that there is a HO2S heater circuit problem. **Diagnostic support note** • This is an intermittent monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel feedback control of HO2S

POSSIBLE CAUSE	• HO2S connector or terminals malfunction
	• HO2S heater malfunction
	• Short to ground or open circuit in HO2S heater power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE1 15 A fuse and HO2S terminal C
	  ▪ ENGINE1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and HO2S terminal C
	• PCM connector or terminals malfunction
	• Short to ground in wiring harness between HO2S terminal D and PCM terminal 2C
	• Open circuit in wiring harness between HO2S terminal D and PCM terminal 2C
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT HO2S HEATER** • Inspect the HO2S heater. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 9. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

5	**INSPECT HO2S HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the HO2S connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the HO2S terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE1 15 A fuse and HO2S terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and HO2S terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
	INSPECT PCM CONNECTOR CONDITION		

6	• Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal D and PCM terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
8	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal D (wiring harness-side) and PCM terminal 2C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal D and PCM terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”.	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0069:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0069:00	Manifold absolute pressure/atmospheric pressure correlation problem
DETECTION CONDITION	• The PCM monitors the difference between the intake manifold vacuum and the atmospheric pressure. If the difference is **below −12 kPa {−0.12 kgf/cm^2, −1.7 psi}** or **above 12 kPa {0.12 kgf/cm^2, 1.7 psi}** when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. **MONITORING CONDITIONS** ▪ **12—15 s** from when ignition is switched off. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• MAP sensor malfunction • BARO sensor (built-into PCM) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
BARO	KPa {MPa}, mBar {Bar}, psi, in H20	Actually measured barometric pressure input from barometric pressure sensor built into PCM	• Displays BARO
	V	BARO sensor voltage	• Ignition switched ON (at sea level): Approx. 4.08 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC P0069:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0107:00, P0108:00, P2228:00 or P2229:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0107:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0108:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2228:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2229:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT MAP SENSOR** • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 7. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See **BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	• Is there any malfunction?		
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Switch the ignition off and wait for **15 s or more**. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0072:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0072:00	Ambient temperature sensor circuit low input
DETECTION CONDITION	• The PCM monitors the input signal from the ambient temperature sensor. If the voltage from the ambient temperature sensor is **below 0.18 V**, the PCM determines that the ambient temperature sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Ambient temperature sensor connector or terminals malfunction • Ambient temperature sensor malfunction • Short to ground in wiring harness between ambient temperature sensor terminal A and PCM terminal 2I • PCM connector or terminals malfunction • Ambient temperature sensor signal circuit and ground circuit are shorted to each other • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT AMBIENT TEMPERATURE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ambient temperature sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
3	**INSPECT AMBIENT TEMPERATURE SENSOR**	Yes	Replace the ambient temperature sensor, then go to Step 7.

	• Inspect the ambient temperature sensor. (See **AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is there any malfunction?		(See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Go to the next step.
4	**INSPECT AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ambient temperature sensor connector is disconnected. • Inspect for continuity between ambient temperature sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between ambient temperature sensor terminal A and PCM terminal 2I. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER**	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Ambient temperature sensor terminal A—PCM terminal 2I

	Verify that the ambient temperature sensor and PCM connectors are disconnected. • Inspect for continuity between ambient temperature sensor terminals A and B (wiring harness-side). • Is there continuity?		• Ambient temperature sensor terminal B—PCM terminal 2AJ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to the next step.
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0073:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0073:00	Ambient temperature sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input signal from the ambient temperature sensor. If the voltage from the ambient temperature sensor is **above 4.88 V**, the PCM determines that the ambient temperature sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Ambient temperature sensor connector or terminals malfunction • PCM connector or terminals malfunction • Ambient temperature sensor malfunction • Short to power supply in wiring harness between ambient temperature sensor terminal A and PCM terminal 2I • Open circuit in wiring harness between the following terminals: ▪ Ambient temperature sensor terminal A—PCM terminal 2I ▪ Ambient temperature sensor terminal B—PCM terminal 2AJ • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**DETERMINE IF AMBIENT TEMPERATURE SENSOR OR WIRING HARNESS MALFUNCTION** • Access the AAT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the AAT PID value. • Is the AAT PID value **5 V** or **B+**?	Yes	Go to Step 6.
		No	Go to the next step.
3	**INSPECT AMBIENT TEMPERATURE SENSOR CONNECTOR CONDITION** • Switch the ignition off.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.

	• Disconnect the ambient temperature sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See **AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is there any malfunction?	Yes	Replace the ambient temperature sensor, then go to Step 9. (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Go to Step 9.
6	**DETERMINE IF AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT OR AMBIENT TEMPERATURE SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the ambient temperature sensor connector. • Access the AAT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the AAT PID value. • Is the AAT PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 8.
7	**INSPECT AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ambient temperature sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between ambient temperature sensor terminal A (wiring harness-side) and PCM terminal 2I (wiring harness-side).	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between ambient temperature sensor terminal A and PCM terminal 2I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:**

	• Is there continuity?		• Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ambient temperature sensor terminal A and PCM terminal 2I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT AMBIENT TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ambient temperature sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between ambient temperature sensor terminal B (wiring harness-side) and PCM terminal 2AJ (wiring harness-side). • Is there continuity?	Yes	Replace the ambient temperature sensor, then go to the next step. (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ambient temperature sensor terminal B and PCM terminal 2AJ. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0088:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Fuel pressure sensor circuit range/performance problem	
DETECTION CONDITION	Determination conditions	• The difference between the actual and target fuel pressure is equal to or **more than the 1.2 MPa {12 kgf/cm^2, 174 psi}**, even though the fuel pressure feedback amount is maintained low or high.
	Preconditions	• Engine speed: **500 rpm or more**[*1] • The following DTCs are not detected: ▪ Fuel pressure sensor: P0088:00, P0192:00, P0193:00 ▪ High pressure fuel pump: P0091:00, P0092:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **5 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Fuel pressure sensor
FAIL-SAFE FUNCTION	• Limits intake air amount • Stops high pressure fuel pump control	

VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.
POSSIBLE CAUSE	• Air suction in fuel line due to fuel is runout • High pressure fuel pump connector or terminals malfunction • Fuel pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Fuel pressure sensor malfunction • Fuel system malfunction (fuel pressure malfunction) • Fuel injector malfunction • High pressure fuel pump malfunction ▪ Relief valve (built-into high pressure fuel pump) malfunction • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM calculates the target fuel pressure appropriate to the engine conditions relative to the actual fuel pressure based on the fuel pressure sensor signal and provides feedback to the high pressure fuel pump control. If the difference between the actual fuel pressure and the target fuel pressure relative to the feedback amount is large, the PCM determines a malfunction in the fuel pressure sensor and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
FUEL_PRES	Fuel pressure	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays fuel pressure
	Fuel pressure sensor voltage	V	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0088:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
	PURPOSE: VERIFICATION IF MALFUNCTION		

4	**CAUSED BY LACK OF FUEL** • Verify the snapshot data FLI. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the snapshot data FLI **5 % or less**?	Yes	Refill the fuel. Go to the troubleshooting procedure to perform the procedure from Step 3.
		No	Go to the next step.
5	**PURPOSE: VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
6	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the PID value fluctuate when the following connectors are shaken? ▪ Fuel pressure sensor ▪ PCM	Yes	Repair or replace the applicable wiring harness or connector parts. Go to the troubleshooting procedure to perform the procedure from Step 3.
		No	Go to the next step.
7	**PURPOSE: VERIFY FUEL PRESSURE (LOW-SIDE) MALFUNCTION** • Switch the ignition off. • Disconnect the high pressure fuel pump connector. • Start the engine and idle it. • Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 200 kPa {2.04 kgf/cm^2, 29.0 psi}**	Yes	Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

	or more?		

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Inspect the fuel supply system (low pressure side).
- Step 2
  - Perform a unit inspection of the fuel pressure sensor.
- Step 3—4
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO FUEL SYSTEM PIPES (LOW PRESSURE SIDE) AFFECTS DIAGNOSTIC RESULTS** • Inspect the fuel pump unit. (See **FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 3. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the fuel system pipes (low to high pressure sides) for fuel leakage and restriction. • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results, then go to Step 3. • If there is no malfunction: ▪ Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION**	Yes	Replace the fuel distributor, then go to the next step. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is there any malfunction?		
3	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0089:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Spill valve control solenoid valve control circuit range/performance problem	
DETECTION CONDITION	Determination conditions	• The average fuel pressure on the high pressure side, measured by the fuel pressure sensor, exceeds the specified value.
	Preconditions	• Engine speed: **500 rpm or more**[*1] • The following DTCs are not detected: ▪ Fuel pressure sensor: P0088:00, P0192:00, P0193:00 ▪ High pressure fuel pump: P0091:00, P0092:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **2 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• Fuel pressure sensor
FAIL-SAFE FUNCTION	• Limits intake air amount	

VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.
POSSIBLE CAUSE	• High pressure fuel pump connector or terminals malfunction • PCM connector or terminals malfunction • Fuel pressure sensor malfunction • High pressure fuel pump malfunction ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction • High pressure fuel pipe clogging • Fuel distributor malfunction • Fuel injector malfunction • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM calculates the target fuel pressure appropriate to the engine conditions relative to the actual fuel pressure based on the fuel pressure signal, and provides feedback to the high pressure fuel pump control. If the average fuel pressure exceeds the specified value, the PCM determines a malfunction in the high pressure fuel pump system, and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0089:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Replace the high pressure fuel system parts.
- Step 2—3
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: REPLACE HIGH PRESSURE FUEL SYSTEM RELATED PARTS DUE TO MALFUNCTION IN HIGH PRESSURE FUEL SYSTEM PARTS** • Replace the following parts. ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pipe (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel injector No.1 (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel injector No.2 ▪ Fuel injector No.3 ▪ Fuel injector No.4 ▪ Fuel distributor (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—	Go to the next step.
2	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors.	Yes	Replace the PCM, then go to the next step. (See **PCM**

	• Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		**REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0091:00	Fuel pressure regulator control circuit low input
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve off but the spill valve control solenoid valve control circuit voltage is low for **5 s**, the PCM determines that the spill valve control solenoid valve control circuit has a malfunction. **MONITORING CONDITIONS** ▪ The following conditions are met: • Engine speed: **5,700 rpm or less** • Battery voltage: **10.5 V or more** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops high pressure fuel pump control • Limits intake air amount
POSSIBLE CAUSE	• High pressure fuel pump connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between high pressure fuel pump terminal B and PCM terminal 1EF • Open circuit in wiring harness between the following terminals: ▪ High pressure fuel pump terminal A—PCM terminal 1EE ▪ High pressure fuel pump terminal B—PCM terminal 1EF • Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
			• Idle (after warm up): Approx.

LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
RPM	RPM	Engine speed	• Displays engine speed

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the high pressure fuel pump and PCM connectors are disconnected. • Inspect for continuity between high pressure fuel pump terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal B and PCM terminal 1EF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.

		No	Go to the next step.
6	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CIRCUIT FOR OPEN CIRCUIT** • Verify that the high pressure fuel pump and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ High pressure fuel pump terminal A—PCM terminal 1EE ▪ High pressure fuel pump terminal B—PCM terminal 1EF • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • High pressure fuel pump terminal A—PCM terminal 1EE • High pressure fuel pump terminal B—PCM terminal 1EF **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Reconnect all disconnected connectors. • Inspect the spill valve control solenoid valve. (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to the next step. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0092:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0092:00	Fuel pressure regulator control circuit high input
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve on but the spill valve control solenoid valve circuit voltage is high for **5 s**, the PCM determines that the spill valve control solenoid valve control circuit has a malfunction. **MONITORING CONDITIONS** ▪ The following conditions are met: • Engine speed: **5,700 rpm or less** • Battery voltage: **10.5 V or more** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops high pressure fuel pump control • Limits intake air amount
POSSIBLE CAUSE	• High pressure fuel pump connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between high pressure fuel pump terminal B and PCM terminal 1EF • Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the high pressure fuel pump and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal B and PCM terminal 1EF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part.

	DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the high pressure fuel pump terminal B (wiring harness-side). • Is the voltage **0 V**?		**If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Switch the ignition off. • Reconnect all disconnected connectors. • Inspect the spill valve control solenoid valve. (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to the next step. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0097:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0097:00	IAT sensor No.2 circuit low input
DETECTION CONDITION	• If the PCM detects that the IAT sensor No.2 voltage at the PCM terminal 1CE is **0.33 V or less** for **5 s**, the PCM determines that the IAT sensor No.2 circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • IAT sensor No.2 malfunction • Short to ground in wiring harness between MAP sensor/IAT sensor No.2 terminal B and PCM terminal 1CE • PCM connector or terminals malfunction • IAT sensor No.2 signal circuit and ground circuit are shorted to each other • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

	connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT IAT SENSOR NO.2** • Inspect the IAT sensor No.2. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 8. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT IAT SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between MAP sensor/IAT sensor No.2 terminal B and PCM terminal 1CE. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT IAT SENSOR NO.2 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAP sensor/IAT sensor No.2 and PCM connectors are disconnected. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminals B and A (wiring harness-side).	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAP sensor/IAT sensor No.2 terminal B—PCM terminal 1CE • MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other.

	• Is there continuity?		• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to the next step.
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0098:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0098:00	IAT sensor No.2 circuit high input
DETECTION CONDITION	• If the PCM detects that the IAT sensor No.2 voltage at the PCM terminal 1CE is **4.96 V or more** for **5 s**, the PCM determines that the IAT sensor No.2 circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • PCM connector or terminals malfunction • IAT sensor No.2 malfunction • Short to power supply in wiring harness between MAP sensor/IAT sensor No.2 terminal B and PCM terminal 1CE • Open circuit in wiring harness between the following terminals: ▪ MAP sensor/IAT sensor No.2 terminal B—PCM terminal 1CE ▪ MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

IAT2	°C, °F	Intake air temperature (No.2)	• Displays IAT (No.2)
	V	IAT sensor No.2 voltage	• IAT2 is 20 °C {68 °F}: Approx. 3.57 V • IAT2 is 40 °C {104 °F}: Approx. 2.70 V • IAT2 is 60 °C {140 °F}: Approx. 1.87 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair

			order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF IAT SENSOR NO.2 OR WIRING HARNESS MALFUNCTION** • Access the IAT2 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the IAT2 PID value. • Is the IAT2 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT IAT SENSOR NO.2** • Inspect the IAT sensor No.2. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 10. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 10.
7	**DETERMINE IF IAT SENSOR NO.2 SIGNAL CIRCUIT OR IAT SENSOR NO.2 GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Access the IAT2 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the IAT2 PID value. • Is the IAT2 PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT IAT SENSOR NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT**	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between MAP sensor/IAT sensor No.2 terminal B and

	Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal B (wiring harness-side) and PCM terminal 1CE (wiring harness-side). • Is there continuity?		PCM terminal 1CE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between MAP sensor/IAT sensor No.2 terminal B and PCM terminal 1CE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT IAT SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal A (wiring harness-side) and PCM terminal 1BX (wiring harness-side). • Is there continuity?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to the next step. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between MAP sensor/IAT sensor No.2 terminal A and PCM terminal 1BX. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	(See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0101:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0101:00	MAF sensor circuit range/performance problem
DETECTION CONDITION	• The difference between the intake air amount measured by the MAF sensor and the estimated intake air amount estimated by the MAP sensor is outside of the specified value. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • MAF sensor/IAT sensor No.1 connector or terminals malfunction • MAP sensor/IAT sensor No.2 loose • MAF sensor/IAT sensor No.1 loose • PCM connector or terminals malfunction • MAP sensor malfunction • MAF sensor malfunction • Air leakage from intake-air system • Purge solenoid valve malfunction • PCV valve malfunction • PCM malfunction

SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Clear the DTC from the PCM memory using the M-MDS.	Yes	Go to the next step.
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING”

(See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Start the engine.
- Access the following PIDs using the M-MDS:

  (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

  - ECT
  - TP_REL
  - RPM
- Warm up the engine until the ECT PID is **above 70 °C {158 °F}**.
- Perform the following:
  - Depress the accelerator pedal to increase the engine speed to **approx. 5,000 rpm**.
  - Release the accelerator pedal to decrease the engine speed to idle speed.
  - Repeat Step 1 and Step 2 operations above **3 times** in succession.
- Perform the Pending Trouble Code Access Procedure.

  (See **ON-BOARD** procedure.

  (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is the PENDING CODE for this DTC present?		
4	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
5	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF MAP SENSOR/IAT SENSOR NO.2** • Inspect installation of MAP sensor/IAT sensor No.2. • Is the MAP sensor/IAT sensor No.2 installed securely?	Yes	Go to the next step.
		No	Retighten the MAP sensor/IAT sensor No.2, then go to Step 14. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	**INSPECT INSTALLATION OF MAF SENSOR/IAT SENSOR NO.1** • Inspect installation of MAF sensor/IAT sensor No.1. • Is the MAF sensor/IAT sensor No.1 installed securely?	Yes	Go to the next step.
		No	Retighten the MAF sensor/IAT sensor No.1, then go to Step 14. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM	Yes	Repair or replace the connector and/or terminals, then go to Step 14.

	connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	No	Go to the next step.
9	**INSPECT MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 14. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 14. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**INSPECT INTAKE-AIR SYSTEM FOR AIR LEAKAGE** • Inspect for leakage in intake-air system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
12	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 14. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
13	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G**	Yes	Replace the PCV valve, then go to the next step. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	2.0, SKYACTIV-G 2.5].) • Is there any malfunction?	No	Go to the next step.
14	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ ECT ▪ TP_REL ▪ RPM • Warm up the engine until the ECT PID is **above 70 °C {158 °F}**. • Perform the following: ◦ Depress the accelerator pedal to increase the engine speed to **approx. 5,000 rpm**. ◦ Release the accelerator pedal to decrease the engine speed to idle speed.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	◦ Repeat Step 1 and Step 2 operations above **3 times** in succession. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0102:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0102:00	MAF sensor circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from the MAF sensor. If the input voltage at the PCM terminal 2BC is **below 0.2 V** for **5 s**, the PCM determines that the MAF sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.

POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction
	• Short to ground or open circuit in MAF sensor power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE1 15 A fuse and MAF sensor/IAT sensor No.1 terminal E
	  ▪ ENGINE1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and MAF sensor/IAT sensor No.1 terminal E
	• Short to ground in wiring harness between the following terminals:
	  ▪ MAF sensor/IAT sensor No.1 terminal D—PCM terminal 2BB
	  ▪ MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC
	• PCM connector or terminals malfunction
	• MAF sensor signal circuit and ground circuit are shorted to each other
	• Open circuit in wiring harness between the following terminals:
	  ▪ MAF sensor/IAT sensor No.1 terminal D—PCM terminal 2BB
	  ▪ MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC
	• MAF sensor malfunction
	• PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT MAF SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the MAF sensor/IAT sensor No.1 terminal E (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE1 15 A fuse and MAF sensor/IAT sensor No.1 terminal E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common**

			connector: • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and MAF sensor/IAT sensor No.1 terminal E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
5	**INSPECT MAF SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ MAF sensor/IAT sensor No.1 terminal D ▪ MAF	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ MAF sensor/IAT sensor No.1 terminal D—PCM terminal 2BB ▪ MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.

	sensor/IAT sensor No.1 terminal C • Is there continuity?		Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAF sensor/IAT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminals C and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC • MAF sensor/IAT sensor No.1 terminal B—PCM terminal 2AY **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 10.
		No	Go to the next step.
8	**INSPECT MAF SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between the following	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAF sensor/IAT sensor No.1 terminal D—PCM terminal 2BB

	terminals (wiring harness-side): ▪ MAF sensor/IAT sensor No.1 terminal D—PCM terminal 2BB ▪ MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC • Is there continuity?		MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to the next step. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P0102:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P0103:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0103:00	MAF sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAF sensor. If the input voltage at the PCM terminal 2BC is **above 4.94 V** for **5 s**, the PCM determines that the MAF sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • PCM connector or terminals malfunction • MAF sensor malfunction • Short to power supply in wiring harness between MAF sensor/IAT sensor No.1 terminal C and PCM terminal 2BC • Open circuit in wiring harness between MAF sensor/IAT sensor No.1 terminal B and PCM terminal 2AY • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF MAF SENSOR OR WIRING HARNESS MALFUNCTION** • Access the MAF PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the MAF PID value. • Is the MAF PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 9. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 9.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between MAF sensor/IAT sensor No.1 terminal C and PCM terminal 2BC.

	• Disconnect the MAF sensor/IAT sensor No.1 connector. • Access the MAF PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the MAF PID value. • Is the MAF PID value **5 V** or **B+**?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
		No	Go to the next step.
8	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal B (wiring harness-side) and PCM terminal 2AY (wiring harness-side). • Is there continuity?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to the next step. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between MAF sensor/IAT sensor No.1 terminal B and PCM terminal 2AY. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
	VERIFY AFTER REPAIR PROCEDURE		

10	• Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0107:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0107:00	MAP sensor circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAP sensor. If the input voltage at the PCM terminal 1BW is **below 0.08 V** for **5 s**, the PCM determines that the MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Estimates MAP using MAF sensor and engine speed. • Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.

POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction
	• PCM connector or terminals malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ MAP sensor/IAT sensor No.2 terminal C—PCM terminal 1BO
	  ▪ MAP sensor/IAT sensor No.2 terminal D—PCM terminal 1BW
	• MAP sensor signal circuit and ground circuit are shorted to each other
	• MAP sensor malfunction
	• PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT MAP SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the MAP sensor/IAT sensor No.2 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ MAP sensor/IAT sensor No.2 terminal C ▪ MAP sensor/IAT sensor No.2 terminal D • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAP sensor/IAT sensor No.2 terminal C—PCM terminal 1BO • MAP sensor/IAT sensor No.2 terminal D—PCM terminal 1BW **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
	INSPECT MAP SENSOR SIGNAL CIRCUIT		

6	**AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAP sensor/IAT sensor No.2 and PCM connectors are disconnected. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminals D and A (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAP sensor/IAT sensor No.2 terminal D—PCM terminal 1BW • MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 8.
		No	Go to the next step.
7	**INSPECT MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to the next step. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0108:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0108:00	MAP sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAP sensor. If the input voltage at the PCM terminal 1BW is **above 4.89 V** for **5 s**, the PCM determines that the MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Estimates MAP using MAF sensor and engine speed. • Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.

POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction
	• PCM connector or terminals malfunction
	• MAP sensor malfunction
	• Short to power supply in wiring harness between MAP sensor/IAT sensor No.2 terminal D and PCM terminal 1BW
	• Open circuit in wiring harness between the following terminals:
	  ▪ MAP sensor/IAT sensor No.2 terminal C—PCM terminal 1BO
	  ▪ MAP sensor/IAT sensor No.2 terminal D—PCM terminal 1BW
	  ▪ MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX
	• PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF MAP SENSOR OR WIRING HARNESS MALFUNCTION** • Access the MAP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the MAP PID value. • Is the MAP PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 10. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 10.
7	**DETERMINE IF MAP SENSOR SIGNAL CIRCUIT OR MAP SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Access the MAP PID using the M-	Yes	Go to the next step.
		No	Go to Step 9.

	MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the MAP PID value. • Is the MAP PID value **5 V** or **B+**?		
8	**INSPECT MAP SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal D (wiring harness-side) and PCM terminal 1BW (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between MAP sensor/IAT sensor No.2 terminal D and PCM terminal 1BW. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between MAP sensor/IAT sensor No.2 terminal D and PCM terminal 1BW. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT MAP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between the following terminals (wiring harness-side): ▪ MAP sensor/IAT sensor No.2 terminal C—PCM terminal 1BO ▪ MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX • Is there continuity?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to the next step. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAP sensor/IAT sensor No.2 terminal C—PCM terminal 1BO • MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has an open circuit. Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0112:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0112:00	IAT sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the IAT sensor No.1 signal. If the PCM detects that the IAT sensor No.1 voltage at the PCM terminal 2U is **below 0.19 V** for **5 s**, the PCM determines that the IAT sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the intake air temperature (for engine control) at **20 °C {68 °F}**. • Inhibits the fuel cut control during shift change.
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • IAT sensor No.1 malfunction • Short to ground in wiring harness between MAF sensor/IAT sensor No.1 terminal A and PCM terminal 2U • PCM connector or terminals malfunction • IAT sensor No.1 signal circuit and ground circuit are shorted to each other • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAF sensor/IAT sensor No.1 connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

	Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 8. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT IAT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between MAF sensor/IAT sensor No.1 terminal A and PCM terminal 2U. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
	INSPECT IAT SENSOR NO.1 SIGNAL		

7	**CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAF sensor/IAT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminals A and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAF sensor/IAT sensor No.1 terminal A—PCM terminal 2U • MAF sensor/IAT sensor No.1 terminal B—PCM terminal 2AY **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to the next step.
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0113:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0113:00	IAT sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the IAT sensor No.1 signal. If the PCM detects that the IAT sensor No.1 voltage at the PCM terminal 2U is **above 4.62 V** for **5 s**, the PCM determines that the IAT sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the intake air temperature (for engine control) at **20 °C {68 °F}**. • Inhibits the fuel cut control during shift change.
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • PCM connector or terminals malfunction • IAT sensor No.1 malfunction • Short to power supply in wiring harness between MAF sensor/IAT sensor No.1 terminal A and PCM terminal 2U • Open circuit in wiring harness between the following terminals: ▪ MAF sensor/IAT sensor No.1 terminal A—PCM terminal 2U ▪ MAF sensor/IAT sensor No.1 terminal B—PCM terminal 2AY • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
IAT	°C, °F	Intake air temperature (No.1)	• Displays IAT (No.1)
	V	IAT sensor No.1 voltage	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
	VERIFY RELATED REPAIR INFORMATION		

2	**AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF IAT SENSOR NO.1 OR WIRING HARNESS MALFUNCTION** • Access the IAT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the IAT PID value. • Is the IAT PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 10. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 10.
7	**DETERMINE IF IAT SENSOR NO.1 SIGNAL CIRCUIT OR IAT SENSOR NO.1 GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Access the IAT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC**	Yes	Go to the next step.
		No	Go to Step 9.

	TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Verify the IAT PID value. • Is the IAT PID value **5 V** or **B+**?		
8	**INSPECT IAT SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal A (wiring harness-side) and PCM terminal 2U (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between MAF sensor/IAT sensor No.1 terminal A and PCM terminal 2U. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between MAF sensor/IAT sensor No.1 terminal A and PCM terminal 2U. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT IAT SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal B (wiring harness-side) and PCM terminal 2AY (wiring harness-side). • Is there continuity?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to the next step. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between MAF sensor/IAT sensor No.1 terminal B and PCM terminal 2AY. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part.

			If there is no common connector: • Repair or replace the wiring harness which has an open circuit. Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0116:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from “Function Inspection Using M-MDS”.

Details On DTCs

DESCRIPTION	ECT sensor No.1 circuit range/performance problem	
DETECTION CONDITION	Determination conditions	• During the **5 min** after the engine is started, the engine coolant temperature does not increase **above 6 °C {11 °F}**.
	Preconditions	• Before starting the engine, leave the vehicle with the engine turned off for **6 hours or more**. • The following DTCs are not detected: ▪ ECT sensor No.1: P0117:00, P0118:00
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• ECT sensor No.1
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• ECT sensor No.1 connector or terminals malfunction • PCM connector or terminals malfunction • ECT sensor No.1 loose • ECT sensor No.1 malfunction • Poor assembly of engine coolant hose (engine coolant passage malfunction) • Poor engine coolant, leakage, or freezing • Use of unspecified engine coolant • Thermostat malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- If the engine coolant temperature detected by the ECT sensor No.1 is not rising **6 °C {11 °F} or more** during a **5 min** period after the engine is started, the PCM determines an ECT sensor No.1 malfunction and stores a DTC.

Repeatability Verification Procedure

- Start the engine and leave it idling for **10 s**.
- Switch the ignition off.
- Leave the vehicle for **6 hours or more**.
- Start the engine and leave it idling for **6 min**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
ECT	Engine coolant temperature	°C, °F	• Displays ECT
	ECT sensor No.1 voltage	V	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO**	Yes	Go to the next step.

	UTILIZE WITH REPEATABILITY VERIFICATION • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?		
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the PID value fluctuate when the PCM and ECT sensor No.1 connectors are shaken?	Yes	Repair or replace the applicable connector parts. Go to the troubleshooting procedure to perform the procedure from Step 7.
		No	Go to the next step.
4	**PURPOSE: VERIFY ECT SENSOR NO.1 INPUT SIGNAL** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PID value within specification?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 3.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an ECT sensor No.1-related inspection.
- Step 3—5
  - Perform an engine coolant-related inspection.
- Step 6
  - Perform a unit inspection of the thermostat.
- Step 7—8
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT INSTALLATION OF ECT SENSOR NO.1** • Inspect installation of ECT sensor No.1. • Is the ECT sensor No.1 installed securely?	Yes	Go to the next step.
		No	Retighten the ECT sensor No.1, then go to Step 7. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**PURPOSE: DETERMINE INTEGRITY OF ECT SENSOR NO.1** • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ECT sensor No.1, then go to Step 7. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY POOR ENGINE COOLANT PASSAGE ASSEMBLY** • Verify the connection condition of the engine coolant passage (such as hoses). (See **COOLING SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Reconnect the engine coolant passage correctly. Replace the engine coolant, then go to Step 7. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	Is there any malfunction?		
4	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE COOLANT AFFECTS DIAGNOSTIC RESULTS** • Inspect the following: ▪ Is the system filled with the specified engine coolant? ▪ Is there the possibility of freezing (low engine coolant concentration)? ▪ Has foreign matter penetrated the engine coolant? • Are all items normal?	Yes	Go to the next step.
		No	Replace the engine coolant, then go to Step 7. (Advise the customer to use specified engine coolant used.) (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE COOLANT LEAKAGE FROM ENGINE COOLANT PASSAGE AFFECTS DIAGNOSTIC RESULTS** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there engine coolant leaking from the engine coolant passage?	Yes	Repair or replace the malfunctioning location and refill the system with engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 7.
		No	Go to the next step.
6	**PURPOSE: DETERMINE INTEGRITY OF THERMOSTAT** • Inspect the thermostat. (See **THERMOSTAT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the thermostat, then go to the next step. (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0117:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0117:00	ECT sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the ECT sensor No.1 signal. If the PCM detects that the ECT sensor No.1 voltage at the PCM terminal 1AK is **below 0.2 V** for **5 s**, the PCM determines that the ECT sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the water temperature for the engine control at **40 °C {104 °F}**, and for the idle air control at **80 °C {176 °F}**. • Operates the cooling fan (high speed rotation). • Inhibits the fuel cut control during shift change.
POSSIBLE CAUSE	• Engine overheating (cooling system malfunction) • ECT sensor No.1 connector or terminals malfunction • ECT sensor No.1 malfunction • Short to ground in wiring harness between ECT sensor No.1 terminal A and PCM terminal 1AK • PCM connector or terminals malfunction • ECT sensor No.1 signal circuit and ground circuit are shorted to each other • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Diagnostic Procedure

STEP	INSPECTION	ACTION
	VERIFY FREEZE FRAME DATA (MODE	

1	**2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY ENGINE CONDITION** • Verify the engine condition. • Is the engine overheating?	Yes	Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT ECT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ECT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**DETERMINE IF ECT SENSOR NO.1 OR WIRING HARNESS MALFUNCTION** • Reconnect all disconnected connectors. • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the ECT PID value when disconnecting the ECT sensor No.1 connector. • Does the ECT PID value change?	Yes	Replace the ECT sensor No.1, then go to Step 9. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**INSPECT ECT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ECT sensor No.1 connector is disconnected. • Switch the ignition off. • Inspect for continuity between ECT sensor No.1 terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between ECT sensor No.1 terminal A and PCM terminal 1AK. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:**

			▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT ECT SENSOR NO.1 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the ECT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between ECT sensor No.1 terminals A and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • ECT sensor No.1 terminal A—PCM terminal 1AK • ECT sensor No.1 terminal B—PCM terminal 1AM **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to the next step.
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

	• Are any DTCs present?		

2014 - Mazda3 - Engine

DTC P0118:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0118:00	ECT sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the ECT sensor No.1 signal. If the PCM detects that the ECT sensor No.1 voltage at the PCM terminal 1AK is **above 4.9 V** for **5 s**, the PCM determines that the ECT sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the water temperature for the engine control at **40 °C {104 °F}**, and for the idle air control at **80 °C {176 °F}**. • Operates the cooling fan (high speed rotation). • Inhibits the fuel cut control during shift change.

POSSIBLE CAUSE	• ECT sensor No.1 connector or terminals malfunction
	• ECT sensor No.1 malfunction
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between ECT sensor No.1 terminal A and PCM terminal 1AK
	• Open circuit in wiring harness between the following terminals:
	  ▪ ECT sensor No.1 terminal A—PCM terminal 1AK
	  ▪ ECT sensor No.1 terminal B—PCM terminal 1AM
	• PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Diagnostic Procedure

STEP	INSPECTION	ACTION
	VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT	

1	**DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ECT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**DETERMINE IF ECT SENSOR NO.1 OR WIRING HARNESS MALFUNCTION** • Verify that the ECT sensor No.1 connector is disconnected. • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect a jumper wire between ECT sensor No.1 terminals A and B (wiring harness-side). • Verify the ECT PID value. • Is the voltage **4.6 V or below**?	Yes	Replace the ECT sensor No.1, then go to Step 8. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT ECT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ECT sensor No.1 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ECT sensor No.1 terminal A (wiring harness-side).	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ECT sensor No.1 terminal A and PCM terminal 1AK. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:**

	• Is the voltage **0 V**?		• Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
7	**INSPECT ECT SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the ECT sensor No.1 and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ ECT sensor No.1 terminal A—PCM terminal 1AK ▪ ECT sensor No.1 terminal B—PCM terminal 1AM • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • ECT sensor No.1 terminal A—PCM terminal 1AK • ECT sensor No.1 terminal B—PCM terminal 1AM **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P011A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P011A:00	ECT sensor No.1/No.2 performance problem
DETECTION CONDITION	• Any of the following conditions is met after the ignition is switched ON*1: ▪ The ECT sensor No.2 detected temperature is **approx. 25.0 °C {45.0 °F}** higher than the ECT sensor No.1. ▪ The ECT sensor No.2 detected temperature is **approx. −48.0 °C {−54.0 °F}**. ▪ The ECT sensor No.2 detected temperature is **approx. 28 °C {50 °F}** higher than the ECT sensor No.1 when the intake air temperature is **15 °C {59 °F} or more***2. • *1: Ignition switch is ON when **6 h** or more have passed since the ignition was switched off. • *2: Perform determination according to the intake air temperature conditions when the calculated intake air amount **exceeds 5,000 g {176.4 oz}** (difference between ECT sensors No.1 and No.2 is determined engine coolant temperature value at engine start). **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
	• Block heater used when ambient temperature is **5 °C {41 °F} or more** • ECT sensor No.1 connector or terminals malfunction

POSSIBLE CAUSE	• ECT sensor No.2 connector or terminals malfunction • PCM connector or terminals malfunction • ECT sensor No.1 malfunction • ECT sensor No.2 malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC P011A:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ECT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ECT sensor No.1	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
5	**INSPECT ECT SENSOR NO.2 CONNECTOR CONDITION** • Disconnect the ECT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT ECT SENSOR NO.1** • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ECT sensor No.1, then go to Step 9. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT ECT SENSOR NO.2** • Inspect the ECT sensor No.2. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ECT sensor No.2, then go to the next step. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	• Switch the ignition off. • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0122:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0122:00	TP sensor No.1 circuit low input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage at the PCM terminal 1BP is **below 0.1 V**, the PCM determines that the TP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Throttle body terminal B—PCM terminal 1BS ▪ Throttle body terminal A—PCM terminal 1BP • TP sensor No.1 signal circuit and ground circuit are shorted to each other • TP sensor No.1 malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
TP1	V	TP sensor No.1 voltage	• Accelerator pedal released: Approx. 1.11 V • Accelerator pedal fully depressed: Approx. 4.59 V
	%	Throttle valve position No.1	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 92%

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Throttle body terminal B ▪ Throttle body terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal B—PCM terminal 1BS • Throttle body terminal A—PCM terminal 1BP **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.1 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the throttle body and PCM connectors are disconnected.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal A—PCM terminal 1BP • Throttle body terminal D—PCM terminal 1BQ

	• Inspect for continuity between throttle body terminals A and D (wiring harness-side). • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 8.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the TP sensor No.1. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0123:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0123:00	TP sensor No.1 circuit high input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage at the PCM terminal 1BP is **above 4.9 V**, the PCM determines that the TP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.

POSSIBLE CAUSE	• Throttle body connector or terminals malfunction
	• PCM connector or terminals malfunction
	• TP sensor No.1 malfunction
	• Short to power supply in wiring harness between throttle body terminal A and PCM terminal 1BP
	• Open circuit in wiring harness between the following terminals:
	  ▪ Throttle body terminal B—PCM terminal 1BS
	  ▪ Throttle body terminal A—PCM terminal 1BP
	  ▪ Throttle body terminal D—PCM terminal 1BQ
	• PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
TP1	V	TP sensor No.1 voltage	• Accelerator pedal released: Approx. 1.11 V • Accelerator pedal fully depressed: Approx. 4.59 V
	%	Throttle valve position No.1	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 92%

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF TP SENSOR NO.1 OR WIRING HARNESS MALFUNCTION** • Access the TP1 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the TP1 PID value. • Is the TP1 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the TP sensor No.1. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 10. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 10.
7	**DETERMINE IF TP SENSOR NO.1 SIGNAL CIRCUIT OR TP SENSOR NO.1 GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the throttle body connector. • Access the TP1 PID using the M-	Yes	Go to the next step.
		No	Go to Step 9.

	MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the TP1 PID value. • Is the TP1 PID value **5 V** or **B+**?		
8	**INSPECT TP SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between throttle body terminal A (wiring harness-side) and PCM terminal 1BP (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between throttle body terminal A and PCM terminal 1BP. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between throttle body terminal A and PCM terminal 1BP. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT TP SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Throttle body terminal B—PCM terminal 1BS ▪ Throttle body terminal D—PCM terminal 1BQ • Is there continuity?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal B—PCM terminal 1BS • Throttle body terminal D—PCM terminal 1BQ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.

10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0126:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Thermostat stuck open	
DETECTION CONDITION	Determination conditions	• Actual engine coolant temperature does not exceed **71 °C {160 °F}** even though the estimated engine coolant temperature after the engine is started exceeds **71 °C {160 °F}**.
	Preconditions	• Difference between value*2 detected by ECT sensor No.2 during malfunction determination and value detected by ECT sensor No.2 at engine start is **13 °C {23 °F} or more** • Engine coolant temperature at engine start: **52 °C {126 °F} or less***1 • IAT: **−10—45 °C {14—113 °F}***1 • Vehicle speed: **140 km/h {87 mph} or less***1 • Engine speed: **5,400 rpm or less***1 • Idle ratio: **50 % or less** • The following DTCs are not detected: ▪ Fuel system malfunction: P0171:00, P0172:00, P2096:00, P2097:00 ▪ ECT sensor No.1 malfunction: P0117:00, P0118:00 ▪ MAF sensor malfunction: P0102:00, P0103:00 • *1: Value can be verified by displaying PIDs using M-MDS • *2: Uses the ECT sensor No.1 actual temperature or the estimated temperature, whichever one reaches **71 °C {160 °F}** first, as the detection determination value.
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• Desired engine coolant temperature: intake air temperature (IAT sensor), engine speed (CKP sensor), charging efficiency • Actual engine coolant temperature: ECT sensor No.1, ECT sensor No.2
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light. • Heating is ineffective after engine is started	
POSSIBLE CAUSE	• ECT sensor No.1 malfunction • ECT sensor No.2 malfunction • Poor assembly of ECT sensor No.1 • Poor assembly of ECT sensor No.2 • Poor assembly of engine coolant hose (engine coolant passage malfunction) • Poor engine coolant, leakage, or freezing • Use of unspecified engine coolant	

	• Foreign matter caught in thermostat (foreign matter penetration in engine coolant) • Thermostat malfunction • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM calculates the estimated engine coolant temperature according to the engine speed, charging efficiency, and intake air temperature. If the actual engine coolant temperature does not exceed **71.1 °C {160 ° F}** during the malfunction determination time after the estimated engine coolant temperature exceeds **71.1 °C {160 °F}**, malfunction determination for the engine coolant system is performed and a DTC is stored.
- The malfunction determination time varies depending on the engine speed, charging efficiency, and intake air temperature.

Repeatability Verification Procedure

- Switch the ignition off.
- Leave the vehicle until the engine coolant temperature reaches **approx. 35 °C {95 °F}**.
- Start the engine.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
ECT	Engine coolant temperature	°C, °F	• Displays ECT
	ECT sensor No.1 voltage	V	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**DETERMINE IF MALFUNCTION CAUSE IS ECT SENSOR NO.1 (PCM INPUT SIGNAL) OR OTHER PART** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0116:00 also present?	Yes	Inspect for DTC P0116:00 due to the high possibility of an ECT sensor No.1 malfunction. (See **DTC P0116:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an engine coolant-related inspection.
- Step 3
  - Perform an engine coolant passage assembly condition-related inspection.
- Step 4
  - Perform a unit inspection of the thermostat.
- Step 5—6
  - Perform a PCM input signal part-related inspection.
- Step 7—8
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE IF ENGINE COOLANT USED AFFECTS CONDITION BY VERIFYING WITH CUSTOMER AND INSPECTING COLOR, ODOR, AND FOAMING DUE TO POSSIBILITY OF ENGINE COOLANT FREEZING IF ENGINE COOLANT CONCENTRATION IS LOW** • Is the specified engine coolant being used?	Yes	Go to the next step.
		No	Replace the engine coolant, then go to Step 7. (Advise the customer to use specified engine coolant used.) (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**PURPOSE: VERIFY THAT THERE IS NO ENGINE COOLANT LEAKAGE OR FOREIGN MATTER PENETRATION BECAUSE ECT SENSOR MAY NOT MEASURE CORRECT TEMPERATURE DUE TO ENGINE COOLANT LEAKAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there engine coolant leakage or foreign matter penetration?	Yes	If there is engine coolant leakage: • Repair or replace the malfunctioning location and refill the system with engine coolant. If there is foreign matter penetration: • Replace engine coolant after removing the foreign matter. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 7.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF ENGINE COOLANT PASSAGE IS CORRECT BECAUSE CORRECT ENGINE COOLANT TEMPERATURE CANNOT BE DETERMINED IF ENGINE COOLANT PASSAGE IS INCORRECT** • Is the engine coolant passage (such as hose) connected correctly? (ask customer if engine coolant passage has been serviced somewhere other than Authorized Mazda Dealer)	Yes	Go to the next step.
		No	Connect engine coolant passage correctly, then go to Step 7.
4	**PURPOSE: EXAMINE THERMOSTAT BECAUSE ENGINE COOLANT TEMPERATURE INCREASE SLOWS IF THERMOSTAT IS STUCK OPEN** • Inspect the thermostat. (See **THERMOSTAT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the thermostat, then go to Step 7. (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: EXAMINE ECT SENSOR BECAUSE ENGINE COOLANT TEMPERATURE CANNOT BE MEASURED CORRECTLY IF ECT SENSOR IS MALFUNCTIONING** • Inspect the ECT sensor No.1 and ECT sensor No.2. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ECT sensor No.1 or ECT sensor No.2, then go to Step 7. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: VERIFY ASSEMBLY CONDITION BECAUSE ENGINE COOLANT TEMPERATURE CANNOT BE MEASURED CORRECTLY IF ECT SENSOR IS NOT ASSEMBLED CORRECTLY** • Verify the ECT sensor No.1 and ECT sensor No.2 assembly conditions. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are the ECT sensor No.1 and ECT sensor No.2 assembled correctly?	Yes	Go to the next step.
		No	Assemble the ECT sensor No.1 and ECT sensor No.2 correctly, then go to the next step. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1 of the troubleshooting diagnostic procedure. • If the malfunction recurs, replace the PCM.

	• Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0130:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Voltage problem between PCM terminal 1AB and PCM terminal 1AG	
DETECTION CONDITION	Determination conditions	• A condition in which the voltage between PCM terminals 1AB and 1AG exceeds the specified range continues for the specified period or more.
	Preconditions	• Switch the ignition ON (engine off or on) • Battery voltage: **11—18 V**[*1] • The following DTC is not detected: ▪ Internal PCM malfunction: P064D:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Drive cycle	• 2
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Fixes duty value of A/F sensor heater • Stops fuel feedback control of A/F sensor	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	

POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction
	• PCM connector or terminals malfunction
	• Deterioration in wiring harness between the following terminals:
	  ▪ A/F sensor terminal F—PCM terminal 1W
	  ▪ A/F sensor terminal D—PCM terminal 1AB
	  ▪ A/F sensor terminal B—PCM terminal 1AG
	• A/F sensor malfunction
	• PCM malfunction	

System Wiring Diagram

A/F SENSOR
WIRING HARNESS-SIDE
CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR

Function Explanation (DTC Detection Outline)

- If the voltage between PCM terminal 1AB and PCM terminal 1AG exceeds the specified range with the A/F sensor activated, the element in the A/F sensor could deteriorate. To prevent this, the PCM stops control of the A/F sensor and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order. **NOTE:** • Recording can be facilitated using the screen capture function of the PC. Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an inspection of the A/F sensor and PCM-related connectors.
- Step 3
  - Inspect the wiring harness between the A/F sensor and PCM for deterioration.
- Step 4
  - Perform a unit inspection of the A/F sensor.
- Step 5—6
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION

1	**PURPOSE: INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 5. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the PCM, then go to Step 5. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: INSPECT WIRING HARNESS BETWEEN A/F SENSOR AND PCM FOR DETERIORATION** • Inspect for deterioration between the following terminals (wiring harness-side): ▪ A/F sensor terminal F—PCM terminal 1W ▪ A/F sensor terminal D—PCM terminal 1AB ▪ A/F sensor terminal B—PCM terminal 1AG • Is there any malfunction?	Yes	Repair or replace the wiring harness which has deteriorated, then go to Step 5.
		No	Go to the next step.
4	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Start the engine and warm it up completely. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking. • Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more**	Yes	Go to the next step.
		No	Replace the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repair the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

6	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0131:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	A/F sensor circuit low input	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ Voltage of A/F sensor terminal F is less than specified value ▪ Voltage of A/F sensor terminal D is less than specified value ▪ Voltage of A/F sensor terminal B is less than specified value
	Preconditions	• Switch the ignition ON (engine off or on) • Battery voltage: **11—18 V**[*1] • The following DTC is not detected: ▪ Internal PCM malfunction: P064D:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Drive cycle	• 2
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Fixes duty value of A/F sensor heater • Stops fuel feedback control of A/F sensor	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ A/F sensor terminal F—PCM terminal 1W ▪ A/F sensor terminal D—PCM terminal 1AB ▪ A/F sensor terminal B—PCM terminal 1AG • A/F sensor malfunction	

	• PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- If any of the following conditions is detected, the PCM determines a short to ground between the A/F sensor terminal and PCM terminal and stores a DTC.
    - Voltage of A/F sensor terminal F is less than specified value
    - Voltage of A/F sensor terminal D is less than specified value
    - Voltage of A/F sensor terminal B is less than specified value

Repeatability Verification Procedure

- Start the engine and leave it idling for **1 min**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order. **NOTE:** • Recording can be facilitated using the screen capture function of the PC. Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—3
  - Perform an inspection of the A/F sensor and PCM-related connectors and wiring harnesses.
- Step 4
  - Perform a unit inspection of the A/F sensor.
- Step 5—6
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
	PURPOSE: INSPECT A/F SENSOR CONNECTOR CONDITION		

1	• Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 5. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the PCM, then go to Step 5. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**PURPOSE: INSPECT A/F SENSOR CIRCUIT FOR SHORT TO GROUND**
	• Verify that the A/F sensor and PCM connectors are disconnected.
	• Inspect for continuity between the following terminals (wiring harness-side) and body ground:
	  ▪ A/F sensor terminal F
	  ▪ A/F sensor terminal D
	  ▪ A/F sensor terminal B
	• Is there continuity?
		Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:
			  • A/F sensor terminal F—PCM terminal 1W
			  • A/F sensor terminal D—PCM terminal 1AB
			  • A/F sensor terminal B—PCM terminal 1AG
			  If there is a common connector:
			  • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.
			  • Repair or replace the malfunctioning part.
			  If there is no common connector:
			  • Repair or replace the wiring harness which has a short to ground.
			Go to Step 5.

		No	Go to the next step.
4	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Start the engine and warm it up completely. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and	Yes	Go to the next step.
		No	Replace the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking. • Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more**		
5	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0132:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	A/F sensor circuit high input	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ Voltage of A/F sensor terminal F is more than specified value ▪ Voltage of A/F sensor terminal D is more than specified value ▪ Voltage of A/F sensor terminal B is more than specified value
	Preconditions	• Switch the ignition ON (engine off or on) • Battery voltage: **11—18 V**[*1] • The following DTC is not detected: ▪ Internal PCM malfunction: P064D:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Drive cycle	• 2
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Fixes duty value of A/F sensor heater • Stops fuel feedback control of A/F sensor	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: ▪ A/F sensor terminal F—PCM terminal 1W ▪ A/F sensor terminal D—PCM terminal 1AB ▪ A/F sensor terminal B—PCM terminal 1AG • A/F sensor malfunction	

	• PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- If any of the following conditions is detected, the PCM determines a short to the power supply between the A/F sensor terminal and the PCM terminal and stores a DTC.
    - Voltage of A/F sensor terminal F is above specified value
    - Voltage of A/F sensor terminal D is above specified value
    - Voltage of A/F sensor terminal B is above specified value

Repeatability Verification Procedure

- Start the engine and leave it idling for **1 min**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order. **NOTE:** • Recording can be facilitated using the screen capture function of the PC. Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an inspection of the A/F sensor and PCM-related connectors.
- Step 3
  - Perform an inspection of the short to power supply in wiring harness between A/F sensor and PCM.
- Step 4
  - Perform a unit inspection of the A/F sensor.
- Step 5—6
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 5. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the PCM, then go to Step 5. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: INSPECT A/F SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the A/F sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ A/F sensor terminal F ▪ A/F sensor terminal D ▪ A/F sensor terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • A/F sensor terminal F—PCM terminal 1W • A/F sensor terminal D—PCM terminal 1AB • A/F sensor terminal B—PCM terminal 1AG **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 5.
4	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Start the engine and warm it up completely. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician	Yes	Go to the next step.
		No	Replace the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking. • Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more**		
5	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0133:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	A/F sensor circuit slow response	
DETECTION CONDITION	Determination conditions	• The response speed of the A/F sensor input signal when the air/fuel ratio is fluctuated is slow.
	Preconditions	• Engine speed: Within specified range • Charging efficiency: Within specified range • Engine coolant temperature: Specified value or more • Mass airflow: Within specified range • The following DTCs are not detected: ▪ A/F sensor heater: P0031:00, P0032:00 ▪ ECT sensor No.1: P0117:00, P0118:00 ▪ VSS signal: P0500:00 ▪ Misfire: P0300:00, P0301:00, P0302:00, P0303:00, P0304:00 ▪ Fuel injection correction: P0171:00, P0172:00, P2096:00, P2097:00
	Drive cycle	• **2**
	Self test type	• CMDTC self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Fixes duty value of A/F sensor heater • Stops fuel feedback control of A/F sensor	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• A/F sensor signal malfunction ▪ A/F sensor connector or terminals malfunction ▪ A/F sensor loose ▪ Exhaust system leakage • A/F sensor deterioration • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects the oxygen concentration in the exhaust gas based on the A/F sensor signal. By intentionally increasing/decreasing the fuel injection amount, the PCM controls the oxygen concentration in the exhaust gas to rich or lean and monitors the response speed of the A/F sensor to sudden changes in the oxygen concentration. If the response speed of the signal input from the A/F sensor is slow while switching repeatedly between rich and lean, the PCM determines an A/F sensor malfunction and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.
- Shift to 3rd gear and drive the vehicle for **10 min** at an engine speed of **1,500 rpm or more** and a vehicle speed of **50 km/h {31 mph} or more**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
HTR11	A/F sensor heater operation status	Off/On	• Ignition switched ON (engine off): Off • Idle (after warm up): On
	A/F sensor heater control duty value	%	• Ignition switched ON (engine off): 0% • Idle (after warm up): Approx. 40%
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0133:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC OCCURRING FROM A/F SENSOR UNIT** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0131:00, P0132:00, P0134:00, P2237:00, P2243:00 or P2251:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P0131:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0132:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0134:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2237:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2243:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2251:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFY A/F SENSOR** • Start the engine and idle it. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0,**	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

	SKYACTIV-G 2.5].) • Is the O2S11 PID value normal? (See PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)		
6	**PURPOSE: VERIFY A/F SENSOR HEATER** • Start the engine and idle it. • Access the HTR11 PID using the M-MDS. (See ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is the HTR11 PID value normal? (See PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 5.
7	**PURPOSE: VERIFY DTC** • Switch the ignition off, then ON (engine off). • Retrieve the PCM DTCs using the M-MDS. (See ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—5
  - Perform inspection of A/F sensor signal related parts.
- Step 6
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
2	**PURPOSE: INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 6. (See AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)
3	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO EMISSION SYSTEM AFFECTS A/F SENSOR SIGNAL** • Inspect for exhaust gas leakage from the exhaust system. (between A/F sensor and HO2S) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 6.
		No	Go to the next step.
4	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor.	Yes	Replace the A/F sensor, then go to Step 6. (See AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G

	(See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		**2.5]**.)
		No	Go to the next step.
5	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0134:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	A/F sensor circuit no activity detected	
DETECTION CONDITION	Determination conditions	• The condition in which the A/F sensor element impedance is the specified value or more continues for **35 s**.
	Preconditions	• Battery voltage: **11—18 V**[*1] • The following DTCs are not detected: ▪ A/F sensor heater: P0031:00, P0032:00 ▪ A/F sensor: P0131:00, P0132:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **35 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Fixes duty value of A/F sensor heater • Stops fuel feedback control of A/F sensor	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• A/F sensor malfunction ▪ A/F sensor connector or terminals malfunction ▪ A/F sensor related wiring harness malfunction ▪ A/F sensor loose ▪ A/F sensor deterioration • A/F sensor related wiring harness malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

The PCM performs verification as to whether a condition in which A/F (air/fuel ratio) detection is not implemented due to poor A/F sensor activation by a decrease in A/F sensor performance or other malfunction has occurred. A DTC is stored if the A/F sensor cannot implement feedback (non-active condition (resistance value is specified value or more)) for a continuous 35 s or more under the condition in which the A/F sensor heater control has been normally implemented. However, under a condition prior to the A/F sensor performing activation (such as ignition switched off), and if there is an open/short circuit (P2251:00) between the A/F sensor terminal D and PCM terminal 1AB (COM terminal), or an open/short circuit (P2243:00) between A/F sensor terminal F and PCM terminal 1W (B+ terminal), A/F sensor activation determination is not performed and A/F sensor non-activation (P0134:00) is determined. In addition, if a temporary malfunction is determined in the previous drive cycle because poor A/F sensor activation was determined at the second drive cycle, DTCs are established for each malfunction determination even if the PCM determined a COM open circuit (P2251:00 temporary malfunction) or a B+ open circuit (P2243:00 temporary malfunction) in the previous drive cycle.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION

1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0134:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
5	**PURPOSE: PERFORM DTC INSPECTION RELATED TO A/F SENSOR OPEN CIRCUIT** • Perform the DTC P2243:00 and DTC P2251:00 procedure. (See **DTC P2243:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2251:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—	Go to the next step.
6	**PURPOSE: VERIFY A/F SENSOR INPUT SIGNAL** • Start the engine and warm it up completely. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking. • Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more**	Yes	Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the next step.
	PURPOSE: INSPECT RELATED SENSOR WIRING HARNESS AND CONNECTOR		

7	• Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the PID value fluctuate when the PCM and A/F sensor connectors are shaken?	Yes	Inspect the related wiring harness and connector. • Repair or replace the malfunctioning part. Go to the troubleshooting procedure to perform the procedure from Step 3.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform inspection of A/F sensor signal related parts.
- Step 3—4
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Replace the A/F sensor, then go to Step 3. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Retighten the A/F sensor, then go to Step 3. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**PURPOSE: INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0137:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	HO2S circuit low input	
DETECTION CONDITION	Determination conditions	• A condition in which the HO2S input voltage is less than the specified value continues for the specified period.
	Preconditions	• HO2S is activated. • The following DTCs are not detected: ▪ MAF sensor: P0102:00, P0103:00 ▪ ECT sensor: P0117:00, P0118:00
	Malfunction determination period	• **5 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• HO2S
FAIL-SAFE FUNCTION	• Fixes duty value of A/F sensor heater • Stops fuel feedback control of A/F sensor	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
	• HO2S connector or terminals malfunction • PCM connector or terminals malfunction	

POSSIBLE CAUSE	• Short to ground in wiring harness between HO2S terminal A and PCM terminal 2AI • Open circuit in wiring harness between the following terminals: ▪ HO2S terminal A—PCM terminal 2AI ▪ HO2S terminal B—PCM terminal 2AG • HO2S malfunction • PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- The PCM detects the oxygen concentration in the exhaust gas based on the HO2S signal. The PCM determines a HO2S signal error based on the condition in which the HO2S input voltage continues to be less than the specified value, and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order. **NOTE:** • Recording can be facilitated using the screen capture function of the PC. Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—4
  - Perform an inspection of the HO2S and PCM-related connectors and wiring harnesses.
- Step 5
  - Perform a unit inspection of the HO2S.
- Step 6—7
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 6. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the PCM, then go to Step 6. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: INSPECT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal A and PCM terminal 2AI. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and

	between HO2S terminal A (wiring harness-side) and body ground. • Is there continuity?		the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**PURPOSE: INSPECT HO2S CIRCUIT FOR OPEN CIRCUIT** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ HO2S terminal A—PCM terminal 2AI ▪ HO2S terminal B—PCM terminal 2AG • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • HO2S terminal A—PCM terminal 2AI • HO2S terminal B—PCM terminal 2AG **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**PURPOSE: DETERMINE INTEGRITY OF HO2S** • Reconnect all disconnected connectors. • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to the next step. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION**	Yes	Repeat the inspection from Step 1.

	• Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		• If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0138:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	HO2S circuit high input	
DETECTION CONDITION	Determination conditions	• A condition in which the HO2S input voltage exceeds the specified value continues for the specified period.
	Preconditions	• Not applicable
	Malfunction determination period	• **5 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test, KOEO self test, KOER self test
	Sensor used	• HO2S
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• HO2S connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: ▪ HO2S terminal A—PCM terminal 2AI ▪ HO2S terminal B—PCM terminal 2AG • HO2S malfunction	

	• PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- The PCM detects the oxygen concentration in the exhaust gas based on the HO2S signal. The PCM determines a HO2S signal error based on the condition in which the HO2S input voltage continues to exceed the specified value, and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order. **NOTE:** • Recording can be facilitated using the screen capture function of the PC. Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an inspection of the HO2S and PCM-related connectors.

- Step 3
    - Perform an inspection of the short to power supply in wiring harness between HO2S and PCM.
- Step 4
    - Perform a unit inspection of the HO2S.
- Step 5—6
    - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 5. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the PCM, then go to Step 5. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: INSPECT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the HO2S and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • HO2S terminal A—PCM terminal 2AI • HO2S terminal B—PCM terminal 2AG **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common

	PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ HO2S terminal A ▪ HO2S terminal B • Is the voltage **0 V**?		wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 5.
4	**PURPOSE: DETERMINE INTEGRITY OF HO2S** • Reconnect all disconnected connectors. • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to the next step. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P0138:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P013A:00, P013B:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	P013A:00 • HO2S: Slow response (during transition from rich to lean) P013B:00 • HO2S: Slow response (during transition from lean to rich)	
DETECTION CONDITION	Determination conditions	P013A:00 • The response speed of the HO2S input signal when the air/fuel ratio is fluctuated from rich to lean is slow.
		P013B:00 • The response speed of the HO2S input signal when the air/fuel ratio is fluctuated from lean to rich is slow.
	Preconditions	• Fuel injection control: during fuel cut*1 (P013A:00) • Catalytic converter estimated temperature: specified value or more • HO2S estimated temperature: specified value or more • HO2S output voltage during fuel cut: Specified value or more (P013A:00) • HO2S output voltage at fuel cut recovery: Specification or less (P013B:00) • The following DTCs are not detected:

		▪ HO2S heater: P0037:00, P0038:00 ▪ MAF sensor: P0102:00, P0103:00 ▪ ECT sensor No.1: P0117:00, P0118:00 ▪ HO2S: P0137:00, P0138:00, P0140:00 • *1: Condition can be verified by displaying PIDs using M-MDS
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• HO2S
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• HO2S malfunction ▪ HO2S connector or terminals malfunction ▪ HO2S loose ▪ Exhaust system leakage ▪ TWC damaged or malfunction • HO2S deterioration • HO2S heater malfunction • Improper operation of purge control system ▪ Purge solenoid valve malfunction ▪ Improper connection of evaporative hose (purge solenoid valve side) • Fuel leakage in fuel line • Engine malfunction ▪ Insufficient engine compression • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

P013A:00

- If the rate at which the HO2S output voltage is lowered is slow during fuel cut, a DTC is stored.

P013B:00

- If the speed at which the HO2S output voltage rises is slow during fuel cut recovery, a DTC is stored.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Verify that OBD-II information (such as FREEZE FRAME DATA (Mode 2)) has been obtained and recorded.
- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Switch the ignition off.
- Drive the vehicle for **15 min** at a speed of **40 km/h {25 mph} or more**.
- Shift to 3rd gear and rapidly accelerate the vehicle to **60 km/h {37 mph}**.
- Release the accelerator pedal and decelerate the vehicle to **40 km/h {25 mph}**.
- Repeat Step 5 to 7 operations **above 5 times**.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

NOTE:

- Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification

O2S12	HO2S voltage	V	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO A/F SENSOR RESPONSIVENESS** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0133:00 also present?	Yes	Go to the next step.
		No	P013A:00 is diagnosed: • Go to Step 6. P013B:00 is diagnosed: • Go to Step 7.

4	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO PURGE SOLENOID VALVE** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0443:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0443:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC OCCURRING FROM FUEL SYSTEM RELATED PART** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a DTC related to a fuel system part stored?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	A factor other than the HO2S can be considered the cause of the malfunction. • Go to the troubleshooting procedure to perform the procedure from Step 1.
6	**PURPOSE: VERIFY FLUCTUATION OF HO2S INPUT SIGNAL AT START OF FUEL CUT** • Start the engine and warm it up completely. • Access the O2S12 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.	Yes	Go to the troubleshooting procedure to perform the procedure from Step 10. • If a malfunction occurs, perform diagnosis from Step 1 of the malfunction diagnostic procedure.
		No	HO2S signal can be considered the cause. • Go to the troubleshooting procedure to perform the procedure from Step 4.

	• While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **4,000 rpm**, decelerate using engine braking. • Can a fluctuation in the displayed PID value be verified?		
7	**PURPOSE: VERIFY FLUCTUATION OF HO2S INPUT SIGNAL AT FUEL CUT RECOVERY** • Start the engine and warm it up completely. • Access the O2S12 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **4,000 rpm**, decelerate using engine braking. • Stop deceleration from engine braking. • After stopping deceleration from engine braking, can a fluctuation in the displayed PID value be verified?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 10. • If a malfunction occurs, perform diagnosis from Step 1 of the malfunction diagnostic procedure.
		No	HO2S signal can be considered the cause. • Go to the troubleshooting procedure to perform the procedure from Step 4.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an emission system parts inspection.
- Step 3
  - Perform an engine inspection.
- Step 4—9
  - Perform inspection of HO2S signal related parts.
- Step 10—11
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 10. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY MALFUNCTION RELATED TO POOR EVAPORATIVE HOSE CONNECTION** • Verify the connection condition of the evaporative hose (purge solenoid valve side). (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the evaporative hose (purge solenoid valve side) connection normal?	Yes	Go to the next step.
		No	Connect evaporative hose correctly, then go to Step 10. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE COMPRESSION AFFECTS DIAGNOSTIC RESULTS** • Inspect the engine compression. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Replace or overhaul the engine, then go to Step 10.

	• Are compression pressures within specification?
	
	Specification:
	
	• Compression [SKYACTIV-G 2.0]
	  ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)**
	  ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)**
	  ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**)
	
	• Compression [SKYACTIV-G 2.5]
	  ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)**
	  ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)**
	  ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**)
	
	NOTE:
	
	• Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		

4	**PURPOSE: INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the HO2S connector. • Inspect for poor connection (such	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.

	as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
5	**PURPOSE: INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 10. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**PURPOSE: DETERMINE INTEGRITY OF HO2S** • Reconnect all disconnected connectors. • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 10. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**PURPOSE: DETERMINE INTEGRITY OF HO2S HEATER** • Reconnect all disconnected connectors. • Inspect the HO2S heater. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 10. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust gas leakage from the exhaust system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
9	**PURPOSE: VERIFY IF CATALYTIC CONVERTER DAMAGE AFFECTS HO2S SIGNAL** • Verify if the catalytic converter is damaged. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Replace the HO2S, then go to the next step. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1 of the troubleshooting diagnostic procedure. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0140:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	HO2S circuit no activity detected	
DETECTION CONDITION	Determination conditions	• With the estimated temperature of the HO2S element exceeding the specified value, a condition in which the HO2S signal voltage is less than the specified value continues for the specified period.
	Preconditions	• Battery voltage: **above 11 V**[*1] • The following DTCs are not detected: ▪ HO2S: P0137:00, P0138:00 ▪ ECT sensor No.1: P0117:00, P0118:00 ▪ MAF sensor: P0101:00, P0102:00, P0103:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• HO2S
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
	• HO2S signal line error ▪ HO2S connector or terminals malfunction	

POSSIBLE CAUSE	▪ PCM connector or terminals malfunction ▪ Short to ground in wiring harness between HO2S terminal A and PCM terminal 2AI ▪ Open circuit in wiring harness between HO2S terminal A and PCM terminal 2AI • HO2S loose • HO2S malfunction • Exhaust gas leakage from exhaust system (between A/F sensor and HO2S) • Insufficient engine compression • HO2S heater malfunction • PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- If the output voltage of the HO2S continues to be low for the specified time or more even though the estimated temperature of the HO2S element after the engine is started exceeds the specified value, the PCM determines that the HO2S is not activating, and stores a DTC. The malfunction determination time varies depending on the intake air amount.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
HTR12	HO2S heater operation status	Off/On	• Ignition switched ON (engine off): Off • Idle (after warm up): On
	HO2S heater control duty value	%	• Ignition switched ON (engine off): 0% • Idle (after warm up): Approx. 40%
O2S12	HO2S voltage	V	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability.	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next

	• Is any related repair information available?		step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ HTR12 ▪ O2S12 • When the following parts are shaken, does the PID value include a PID item which has changed? ▪ HO2S ▪ PCM	Yes	Repair or replace the applicable connector parts. Go to the troubleshooting procedure to perform the procedure from Step 10.
		No	Go to the next step.
4	**PURPOSE: VERIFICATION IF MALFUNCTION CAUSED BY HO2S** • Start the engine and idle it. • Access the O2S12 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the O2S12 PID value normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.
5	**PURPOSE: VERIFICATION IF MALFUNCTION CAUSED BY HO2S HEATER** • Start the engine and idle it. • Access the HTR12 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 9.

	• Is the HTR12 PID value normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)		

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—4
  - Perform an inspection of the HO2S signal line-related parts.
- Step 5—6
  - Verify the condition of the HO2S installation and perform a unit inspection.
- Step 7
  - Perform an exhaust system parts inspection.
- Step 8
  - Perform an inspection of the engine compression.
- Step 9
  - Perform an inspection of the HO2S heater.
- Step 10—11
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 10. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as	Yes	Replace the PCM, then go to Step 10. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	damaged/pulled-out pins, corrosion). • Is there any malfunction?		
3	**PURPOSE: INSPECT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal A and PCM terminal 2AI. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 10.
		No	Go to the next step.
4	**PURPOSE: INSPECT HO2S CIRCUIT FOR OPEN CIRCUIT** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and PCM terminal 2AI (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between HO2S terminal A and PCM terminal 2AI. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
5	**PURPOSE: INSPECT INSTALLATION OF HO2S** • Verify the installation condition of the HO2S (installation angle, tightening torque value). **HEATED OXYGEN**	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 10. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the HO2S installed securely?		
6	**PURPOSE: DETERMINE INTEGRITY OF HO2S** • Reconnect all disconnected connectors. • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 10. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO EMISSION SYSTEM AFFECTS HO2S SIGNAL** • Verify the exhaust gas leakage from the exhaust system. (between A/F sensor and HO2S) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
8	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE COMPRESSION AFFECTS DIAGNOSTIC RESULTS** • Inspect the engine compression. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa**	Yes	Go to the next step.
		No	Replace or overhaul the engine, then go to Step 10.

	{7.22 kgf/cm^2, 103 psi} (300 rpm) ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
9	**PURPOSE: DETERMINE INTEGRITY OF HO2S HEATER** • Inspect the HO2S heater.	Yes	Replace the HO2S, then go to the next step. (See **HEATED OXYGEN SENSOR (HO2S)**

	(See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		**REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0171:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Fuel trim system too lean	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ While the engine is idling or the vehicle is driven, the fuel feedback correction amount (**30 %**) is the threshold or more, and the fuel learning correction amount is the specified value (**15 %**) or more for **10 s or more**. ▪ While the engine is idling or the vehicle is driven, the fuel feedback correction amount reaches the upper limit (**25 % or more**) for **20 s or more**.
	Preconditions	• Engine coolant temperature: **0—45 °C {32—113 °F}**, **60 °C {140 °F} or more**[*1] • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **10 s** or **20 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
	• Erratic signal to PCM ▪ ECT sensor No.1 signal malfunction ▪ MAF sensor signal malfunction ▪ MAP sensor signal malfunction ▪ IAT sensor No.2 signal malfunction ▪ Related connector or terminals malfunction ▪ Related wiring harness malfunction • High-pressure side fuel delivery system malfunction ▪ Fuel pressure sensor malfunction	

POSSIBLE CAUSE	▪ Relief valve (built-into high pressure fuel pump) malfunction ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction ▪ High pressure fuel pump malfunction • Fuel leakage in fuel line • Low-pressure side fuel delivery system malfunction ▪ Fuel filter clogged (built-into fuel pump unit) ▪ Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) ▪ Fuel pump unit malfunction ▪ Pressure regulator (built-into fuel pump unit) malfunction ▪ Fuel pump control module malfunction • Fuel injector malfunction ▪ Improper operation of fuel injector ▪ Fuel injector related wiring harness malfunction • Improper operation of purge control system ▪ Purge solenoid valve malfunction ▪ Purge solenoid hoses improper connection • PCV valve malfunction • MAF sensor malfunction • Air cleaner element malfunction • MAP sensor malfunction • Air suction in intake air system • Improper operation of electric variable valve timing control system ▪ Electric variable valve timing driver malfunction ▪ Electric variable valve timing motor malfunction ▪ Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • A/F sensor malfunction ▪ A/F sensor loose ▪ Exhaust system leakage • Poor fuel quality • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects the oxygen concentration in the exhaust gas from the A/F sensor signal and performs fuel injection amount feedback to maintain the optimum air/fuel ratio. If a condition in which the feedback correction amount is large (fuel injection amount being increased) continues for the specified time, a feedback correction amount malfunction is determined, and a DTC is stored. The feedback correction amount has a “Fuel feedback correction amount” for the air/fuel ratio and a

"Fuel learning correction amount" for fuel injector deterioration over time.

- "Fuel feedback correction amount (SHRTFT1)" and "Fuel learning correction amount (LONGFT1)" can be verified from the M-MDS PID item.
- The sum of the fuel feedback correction amount (SHRTFT1) and the fuel learning correction amount (LONGFT1) is the specified value (**30 %**) or more, and **10 s or more** have elapsed with the fuel learning correction amount (LONGFT1) at the specified value (**15 %**) or more.

  Engine coolant temperature: **0—45 °C {32—113 °F}**, **60 °C {140 °F} or more**

- Fuel learning correction amount (LONGFT1) at specified value (25%) or more.

  Engine coolant temperature: **0—45 °C {32—113 °F}**, **60 °C {140 °F} or more**

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
APP	Accelerator pedal opening angle (relative value) with the fully released status as 0% and fully depressed status as 100%	%	• Accelerator pedal released: Approx. 0% • Accelerator pedal fully depressed: Approx. 100%
ECT	Engine coolant temperature	°C, °F	• Displays ECT
	ECT sensor No.1 voltage	V	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
EVAPCP	Purge solenoid valve control duty value	%	• Idle (after warm up): Approx. 0% • Racing (Engine speed 2,000 rpm): 4.3—35% • Racing (Engine speed 4,000 rpm): Approx. 66%
FP	Fuel pump relay operation status	Off/On	• Ignition switched ON (engine off): Off • Cranking: On • Idle (after warm up): On
FUEL_PRES	Fuel pressure	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays fuel pressure
	Fuel pressure sensor voltage	V	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
HTR11	A/F sensor heater operation status	Off/On	• Ignition switched ON (engine off): Off • Idle (after warm up): On
	A/F sensor heater control duty value	%	• Ignition switched ON (engine off): 0% • Idle (after warm up): Approx. 40%

MAF	Mass air flow	g/Sec	• Displays MAF
	MAF sensor voltage	V	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	Manifold absolute pressure	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays MAP
	MAP sensor voltage	V	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. -39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
TP_REL	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	%	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VT_EX_ACT	Actual exhaust valve timing	°	• Displays actual exhaust valve timing
VT EX_DES	Desired exhaust valve timing	°	• Displays desired exhaust valve timing
VT IN_ACT	Actual intake valve timing	°	• Displays actual intake valve timing
VT IN_DES	Desired intake valve timing	°	• Displays desired intake valve timing

Simulation item table

Item	Definition	Unit	Operation
INJ_1	Fuel injector No.1	OFF	• Select OFF to forcibly stop fuel injector No.1.
INJ_2	Fuel injector No.2	OFF	• Select OFF to forcibly stop fuel injector No.2.
INJ_3	Fuel injector No.3	OFF	• Select OFF to forcibly stop fuel injector No.3.
INJ_4	Fuel injector No.4	OFF	• Select OFF to forcibly stop fuel injector No.4.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0171:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY IF INPUT SIGNAL TO PCM AFFECTS FUEL INJECTION** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ ECT ▪ APP ▪ TP_REL • Is there any signal that is far out of specification? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Inspect the suspected sensor and related wiring harness. • If there is any malfunction: ▪ Repair or replace the malfunctioning part. ▪ Go to the troubleshooting procedure to perform the procedure from Step 20. • If there is no malfunction: ▪ Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ FUEL_PRES ▪ FP ▪ EVAPCP ▪ MAF ▪ MAP ▪ VT_EX_ACT ▪ VT IN_ACT • When the following parts are shaken, does the PID value include a PID item which has changed?	Yes	Repair or replace the applicable connector parts. Go to the troubleshooting procedure to perform the procedure from Step 20.
		No	Go to the next step.

	▪ Fuel pressure sensor ▪ Fuel pump control module ▪ Purge solenoid valve ▪ MAF sensor ▪ MAP sensor ▪ OCV ▪ Electric variable valve timing motor/driver ▪ PCM		
6	**PURPOSE: VERIFY FUEL PRESSURE (HIGH-SIDE) MALFUNCTION** • Switch the ignition off. • Reconnect all disconnected connectors. • Start the engine and idle it. • Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to the next step.
		No	FUEL_PRES PID value is lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the troubleshooting procedure to perform the procedure from Step 1. FUEL_PRES PID value is higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to Step 8.
7	**PURPOSE: VERIFY FUEL PRESSURE (LOW-SIDE) MALFUNCTION** • Switch the ignition off. • Disconnect the high pressure fuel pump connector. • Start the engine and idle it. • Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 200 kPa {2.04 kgf/cm^2, 29.0 psi} or more**?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 5.
8	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY FUEL INJECTOR IMPROPER OPERATION** • Switch the ignition off. • Reconnect all disconnected connectors. • Start the engine and idle it. • Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ INJ_1 ▪ INJ_2 ▪ INJ_3 ▪ INJ_4 • Turn each fuel injector from on to off using the simulation items. • Does the vibration during idling worsen?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 7.
9	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY PURGE SOLENOID VALVE IMPROPER OPERATION** • Start the engine and idle it.	Yes	Go to the next step.

	• Access the EVAPCP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the EVAPCP PID value normal?	No	Go to the troubleshooting procedure to perform the procedure from Step 8.
10	**PURPOSE: VERIFY MAF SENSOR** • Start the engine and idle it. • Access the MAF PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the MAF PID value normal?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 10.
11	**PURPOSE: VERIFY MAP SENSOR** • Start the engine and idle it. • Access the MAP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the MAP PID value normal?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 12.
12	**PURPOSE: VERIFY INTAKE VALVE TIMING** • Start the engine and idle it. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ VT IN_ACT ▪ VT IN_DES • Depress the accelerator pedal to increase the engine speed. • Does the monitor value of the PID item VT IN_ACT conform to the VT IN_DES PID value?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 14.
13	**PURPOSE: VERIFY EXHAUST VALVE TIMING** • Start the engine and idle it. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ VT_EX_ACT ▪ VT EX_DES • Depress the accelerator pedal to increase the engine speed. • Does the monitor value of the PID item VT_EX_ACT conform to the VT EX_DES PID value?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 17.
14	**PURPOSE: VERIFY A/F SENSOR** • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the O2S11 PID value normal?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 18.
15	**PURPOSE: VERIFY DTC** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0,**	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	SKYACTIV-G 2.5].) • Are any DTCs present?		Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—7
  - Perform a fuel injector control system inspection.
- Step 8—9
  - Perform an emission system parts inspection.
- Step 10—13
  - Perform an intake air system parts inspection.
- Step 14—17
  - Perform a valve timing inspection.
- Step 18—19
  - Perform an exhaust system parts inspection.
- Step 20
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY IF CAUSE OF MALFUNCTION IS RELATED TO LACK OF FUEL** • Verify the remaining amount of fuel. • Is there a lack of fuel?	Yes	Refill the fuel, then go to Step 20.
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 20. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: DETERMINE INTEGRITY OF HIGH PRESSURE FUEL PUMP** • Inspect the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to Step 20. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO FUEL LEAK FROM FUEL SYSTEM OR RESTRICTION AFFECTS DIAGNOSTIC RESULTS** • Inspect the fuel system pipes (low to high pressure sides) for fuel leakage and restriction. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 20.
		No	Go to the next step.
	PURPOSE: DETERMINE INTEGRITY OF FUEL PUMP		

5	**CONTROL MODULE** • Inspect the fuel pump control module. (See **FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to Step 20. (See **FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: DETERMINE INTEGRITY OF FUEL PUMP UNIT** • Inspect the fuel pump unit. (See **FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 20. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**PURPOSE: DETERMINE INTEGRITY OF FUEL INJECTOR** • Inspect the fuel injector. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step 20. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: DETERMINE INTEGRITY OF PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 20. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**PURPOSE: DETERMINE INTEGRITY OF PCV VALVE** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the PCV valve, then go to Step 20. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**PURPOSE: DETERMINE INTEGRITY OF MAF SENSOR** • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 20. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO AIR CLEANER ELEMENT AFFECTS MEASUREMENT OF INTAKE AIR AMOUNT** • Inspect the air cleaner element. (See **AIR CLEANER ELEMENT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the air cleaner element, then go to Step 20. (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
12	**PURPOSE: DETERMINE INTEGRITY OF MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 20. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
13	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO INTAKE AIR SYSTEM AFFECTS DIAGNOSTIC RESULTS**	Yes	Repair or replace the malfunctioning part according to the

	• Visually inspect for loose, cracked or damaged hoses on intake air system. • Is there any malfunction?		inspection results, then go to Step 20.
		No	Go to the next step.
14	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 20. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
15	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 20. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
16	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 20. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
17	**PURPOSE: DETERMINE INTEGRITY OF OCV** • Inspect the OCV. (See **OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the OCV, then go to Step 20. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
18	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 20. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
19	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO EMISSION SYSTEM AFFECTS HO2S SIGNAL** • Verify the exhaust gas leakage from the exhaust system. (between A/F sensor and HO2S) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
20	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.

	• Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0172:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Fuel trim system too rich	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ While the engine is idling or the vehicle is driven, the fuel feedback correction amount (SHRTFT1) is the threshold (**−25 %**) or less, and the fuel learning correction amount (LONGFT1) is the threshold (**−15 %**) or less for **10 s or more**. ▪ While the engine is idling or the vehicle is driven, the fuel feedback correction amount reaches the lower limit (**−25 % or less**) for **20 s or more**.
	Preconditions	• Engine coolant temperature: **0—45 °C {32—113 °F}**, **60 °C {140 °F} or more**[*1] • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **10 s** or **20 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
	• Erratic signal to PCM ▪ ECT sensor No.1 signal malfunction ▪ MAF sensor signal malfunction ▪ MAP sensor signal malfunction ▪ IAT sensor No.2 signal malfunction ▪ Related connector or terminals malfunction ▪ Related wiring harness malfunction • High-pressure side fuel delivery system malfunction ▪ Fuel pressure sensor malfunction	

POSSIBLE CAUSE	▪ Relief valve (built-into high pressure fuel pump) malfunction ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction ▪ High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction ▪ Fuel filter clogged (built-into fuel pump unit) ▪ Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) ▪ Fuel pump unit malfunction ▪ Pressure regulator (built-into fuel pump unit) malfunction ▪ Fuel pump control module malfunction • Fuel injector malfunction ▪ Improper operation of fuel injector ▪ Fuel injector related wiring harness malfunction • Improper operation of purge control system ▪ Purge solenoid valve malfunction ▪ Purge solenoid hoses improper connection • MAF sensor malfunction • MAP sensor malfunction • Improper operation of electric variable valve timing control system ▪ Electric variable valve timing driver malfunction ▪ Electric variable valve timing motor malfunction ▪ Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • A/F sensor malfunction ▪ A/F sensor loose • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects the oxygen concentration in the exhaust gas from the A/F sensor signal and performs fuel injection amount feedback to maintain the optimum air/fuel ratio. If a condition in which the feedback correction amount is small (fuel injection amount being decreased) continues for the specified time, a feedback correction amount malfunction is determined, and a DTC is stored. The feedback correction amount has a “Fuel feedback correction amount” for the air/fuel ratio and a “Fuel learning correction amount” for fuel injector deterioration over time.
- “Fuel feedback correction amount (SHRTFT1)” and “Fuel learning correction amount (LONGFT1)” can be verified from the M-MDS PID item.
- The sum of the fuel feedback correction amount (SHRTFT1) and the fuel learning correction amount (LONGFT1) is the specified value (**−25 %**) or less, and **10 s or more** have elapsed with the fuel learning correction amount (LONGFT1) at the specified value (**−15 %**) or less.

  Engine coolant temperature: **0—45 °C {32—113 °F}**, **60 °C {140 °F} or more**

- Fuel learning correction amount (LONGFT1) at the specified value (-25%) or less.

  Engine coolant temperature: **0—45 °C {32—113 °F}**, **60 °C {140 °F} or more**

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
APP	Accelerator pedal opening angle (relative value) with the fully released status as 0% and fully depressed status as 100%	%	• Accelerator pedal released: Approx. 0% • Accelerator pedal fully depressed: Approx. 100%
ECT	Engine coolant temperature	°C, °F	• Displays ECT
	ECT sensor No.1 voltage	V	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
EVAPCP	Purge solenoid valve control duty value	%	• Idle (after warm up): Approx. 0% • Racing (Engine speed 2,000 rpm): 4.3—35% • Racing (Engine speed 4,000 rpm): Approx. 66%
FP	Fuel pump relay operation status	Off/On	• Ignition switched ON (engine off): Off • Cranking: On • Idle (after warm up): On
FUEL_PRES	Fuel pressure	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays fuel pressure
	Fuel pressure sensor voltage	V	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
HTR11	A/F sensor heater operation status	Off/On	• Ignition switched ON (engine off): Off • Idle (after warm up): On
	A/F sensor heater control duty value	%	• Ignition switched ON (engine off): 0% • Idle (after warm up): Approx. 40%
MAF	Mass air flow	g/Sec	• Displays MAF
	MAF sensor voltage	V	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm)

			(MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	Manifold absolute pressure	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays MAP
	MAP sensor voltage	V	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. -39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
TP_REL	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	%	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VT_EX_ACT	Actual exhaust valve timing	°	• Displays actual exhaust valve timing
VT EX_DES	Desired exhaust valve timing	°	• Displays desired exhaust valve timing
VT IN_ACT	Actual intake valve timing	°	• Displays actual intake valve timing
VT IN_DES	Desired intake valve timing	°	• Displays desired intake valve timing

Simulation item table

Item	Definition	Unit	Operation
INJ_1	Fuel injector No.1	OFF	• Select OFF to forcibly stop fuel injector No.1.
INJ_2	Fuel injector No.2	OFF	• Select OFF to forcibly stop fuel injector No.2.
INJ_3	Fuel injector No.3	OFF	• Select OFF to forcibly stop fuel injector No.3.
INJ_4	Fuel injector No.4	OFF	• Select OFF to forcibly stop fuel injector No.4.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0172:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY IF INPUT SIGNAL TO PCM AFFECTS FUEL INJECTION** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ ECT ▪ APP ▪ TP_REL • Is there any signal that is far out of specification? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Inspect the suspected sensor and related wiring harness. • If there is any malfunction: ▪ Repair or replace the malfunctioning part. ▪ Go to the troubleshooting procedure to perform the procedure from Step 13. • If there is no malfunction: ▪ Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ FUEL_PRES ▪ FP ▪ EVAPCP ▪ MAF ▪ MAP ▪ VT_EX_ACT ▪ VT IN_ACT • When the following parts are shaken, does the PID value include a PID item which has changed? ▪ Fuel pressure sensor ▪ Fuel pump control module ▪ Purge solenoid valve ▪ MAF sensor ▪ MAP sensor ▪ OCV ▪ Electric variable valve timing	Yes	Repair or replace the applicable connector parts. Go to the troubleshooting procedure to perform the procedure from Step 13.
		No	Go to the next step.

	motor/driver ▪ PCM		
6	**PURPOSE: VERIFY FUEL PRESSURE (HIGH-SIDE) MALFUNCTION** • Switch the ignition off. • Reconnect all disconnected connectors. • Start the engine and idle it. • Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to the next step.
		No	FUEL_PRES PID value is lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the troubleshooting procedure to perform the procedure from Step 1. FUEL_PRES PID value is higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to Step 8.
7	**PURPOSE: VERIFY FUEL PRESSURE (LOW-SIDE) MALFUNCTION** • Switch the ignition off. • Disconnect the high pressure fuel pump connector. • Start the engine and idle it. • Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 200 kPa {2.04 kgf/cm^2, 29.0 psi} or more**?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.
8	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY FUEL INJECTOR IMPROPER OPERATION** • Switch the ignition off. • Reconnect all disconnected connectors. • Start the engine and idle it. • Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ INJ_1 ▪ INJ_2 ▪ INJ_3 ▪ INJ_4 • Turn each fuel injector from on to off using the simulation items. • Does the vibration during idling worsen?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 3.
9	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY PURGE SOLENOID VALVE IMPROPER OPERATION** • Start the engine and idle it. • Access the EVAPCP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the EVAPCP PID value normal?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 4.
10	**PURPOSE: VERIFY MAF SENSOR** • Start the engine and idle it. • Access the MAF PID using the M-MDS. **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0,**	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 5.

	(See **SKYACTIV-G 2.5]**.) • Is the MAF PID value normal?		
11	**PURPOSE: VERIFY MAP SENSOR** • Start the engine and idle it. • Access the MAP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the MAP PID value normal?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 7.
12	**PURPOSE: VERIFY INTAKE VALVE TIMING** • Start the engine and idle it. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ VT IN_ACT ▪ VT IN_DES • Depress the accelerator pedal to increase the engine speed. • Does the monitor value of the PID item VT IN_ACT conform to the VT IN_DES PID value?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 8.
13	**PURPOSE: VERIFY EXHAUST VALVE TIMING** • Start the engine and idle it. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ VT_EX_ACT ▪ VT EX_DES • Depress the accelerator pedal to increase the engine speed. • Does the monitor value of the PID item VT_EX_ACT conform to the VT EX_DES PID value?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 11.
14	**PURPOSE: VERIFY A/F SENSOR** • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the O2S11 PID value normal?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 12.
15	**PURPOSE: VERIFY DTC** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—3
  - Perform a fuel injector control system inspection.
- Step 4
  - Perform an emission system parts inspection.
- Step 5—7
  - Perform an intake air system parts inspection.
- Step 8—11
  - Perform a valve timing inspection.
- Step 12
  - Perform an exhaust system parts inspection.
- Step 13
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF FUEL PUMP CONTROL MODULE** • Inspect the fuel pump control module. (See **FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to Step 13. (See **FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF FUEL PUMP UNIT** • Inspect the fuel pump unit. (See **FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 13. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: DETERMINE INTEGRITY OF FUEL INJECTOR** • Inspect the fuel injector. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step 13. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: DETERMINE INTEGRITY OF PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 13. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: DETERMINE INTEGRITY OF MAF SENSOR** • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 13. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

6	**PURPOSE: AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine is running. (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the engine speed increase?	Yes	Inspect the air cleaner element. (See **AIR CLEANER ELEMENT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Clean or replace the air cleaner element, then go to Step 13. (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is no malfunction: ▪ Go to the next step.
		No	Go to the next step.
7	**PURPOSE: DETERMINE INTEGRITY OF MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 13. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 13. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 13. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**PURPOSE: DETERMINE INTEGRITY OF ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 13. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**PURPOSE: DETERMINE INTEGRITY OF OCV** • Inspect the OCV. (See **OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the OCV, then go to Step 13. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

12	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
13	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0192:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0192:00	Fuel pressure sensor circuit low input
DETECTION CONDITION	• If the input voltage at the PCM terminal 1CA is **less than 0.16 V** for **5 s**, the PCM determines that the fuel pressure sensor circuit is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops high pressure fuel pump control • Limits intake air amount
POSSIBLE CAUSE	• Fuel pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Fuel pressure sensor terminal C—PCM terminal 1BJ ▪ Fuel pressure sensor terminal B—PCM terminal 1CA • Fuel pressure sensor signal circuit and ground circuit are shorted to each other • Fuel pressure sensor malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pressure sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Fuel pressure sensor terminal C ▪ Fuel pressure sensor terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel pressure sensor terminal C—PCM terminal 1BJ • Fuel pressure sensor terminal B—PCM terminal 1CA **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
6	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the fuel pressure sensor and PCM connectors	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel pressure sensor terminal B—PCM terminal 1CA • Fuel pressure sensor terminal A—PCM terminal 1CB

	are disconnected. • Inspect for continuity between fuel pressure sensor terminals B and A (wiring harness-side). • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 8.
		No	Go to the next step.
7	**INSPECT FUEL PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction**?**	Yes	Replace the fuel distributor, then go to the next step. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0193:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0193:00	Fuel pressure sensor circuit high input
DETECTION CONDITION	• If the input voltage at the PCM terminal 1CA is **more than 4.86 V** for **5 s**, the PCM determines that the fuel pressure sensor circuit is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops high pressure fuel pump control • Limits intake air amount
POSSIBLE CAUSE	• Fuel pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Fuel pressure sensor malfunction • Short to power supply in wiring harness between fuel pressure sensor terminal B and PCM terminal 1CA • Open circuit in wiring harness between the following terminals: ▪ Fuel pressure sensor terminal C—PCM terminal 1BJ ▪ Fuel pressure sensor terminal B—PCM terminal 1CA ▪ Fuel pressure sensor terminal A—PCM terminal 1CB • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF FUEL PRESSURE SENSOR OR WIRING HARNESS MALFUNCTION** • Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the FUEL_PRES PID value. • Is the FUEL_PRES PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction**?**	Yes	Replace the fuel distributor, then go to Step 10. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 10.
7	**DETERMINE IF FUEL PRESSURE SENSOR SIGNAL CIRCUIT OR FUEL PRESSURE SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the fuel pressure sensor connector.	Yes	Go to the next step.
		No	Go to Step 9.

	• Access the FUEL_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the FUEL_PRES PID value. • Is the FUEL_PRES PID value **5 V** or **B+**?		
8	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pressure sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between fuel pressure sensor terminal B (wiring harness-side) and PCM terminal 1CA (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pressure sensor terminal B and PCM terminal 1CA. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pressure sensor terminal B and PCM terminal 1CA. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pressure sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel pressure sensor terminal C—PCM terminal 1BJ ▪ Fuel pressure sensor terminal A—PCM terminal 1CB • Is there continuity?	Yes	Replace the fuel distributor, then go to the next step. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel pressure sensor terminal C—PCM terminal 1BJ • Fuel pressure sensor terminal A—PCM terminal 1CB **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0201:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0201:00	Fuel injector circuit/open cylinder No.1
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.1, the PCM determines that there is an open circuit in the fuel injector No.1 control circuit. **MONITORING CONDITIONS** ▪ The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel injector No.1 connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Fuel injector No.1 terminal B—PCM terminal 1DP ▪ Fuel injector No.1 terminal A—PCM terminal 1DO • Short to power supply in wiring harness between fuel injector No.1 terminal A and PCM terminal 1DO • Open circuit in wiring harness between the following terminals: ▪ Fuel injector No.1 terminal B—PCM terminal 1DP ▪ Fuel injector No.1 terminal A—PCM terminal 1DO • Fuel injector No.1 malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel injector No.1 connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.1 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Fuel injector No.1 terminal B ▪ Fuel injector No.1 terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel injector No.1 terminal B—PCM terminal 1DP • Fuel injector No.1 terminal A—PCM terminal 1DO **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.1 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel injector No.1 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel injector No.1 terminal A and PCM terminal 1DO. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
7	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.1 and PCM connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:

	• Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel injector No.1 terminal B—PCM terminal 1DP ▪ Fuel injector No.1 terminal A—PCM terminal 1DO • Is there continuity?		Fuel injector No.1 terminal B—PCM terminal 1DP • Fuel injector No.1 terminal A—PCM terminal 1DO **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT FUEL INJECTOR NO.1** • Inspect the fuel injector No.1. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector No.1, then go to the next step. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0202:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0202:00	Fuel injector circuit/open cylinder No.2
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.2, the PCM determines that there is an open circuit in the fuel injector No.2 control circuit. **MONITORING CONDITIONS** ▪ The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel injector No.2 connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Fuel injector No.2 terminal B—PCM terminal 1DX ▪ Fuel injector No.2 terminal A—PCM terminal 1DW • Short to power supply in wiring harness between fuel injector No.2 terminal A and PCM terminal 1DW • Open circuit in wiring harness between the following terminals: ▪ Fuel injector No.2 terminal B—PCM terminal 1DX ▪ Fuel injector No.2 terminal A—PCM terminal 1DW • Fuel injector No.2 malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel injector No.2 connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.2 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Fuel injector No.2 terminal B ▪ Fuel injector No.2 terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel injector No.2 terminal B—PCM terminal 1DX • Fuel injector No.2 terminal A—PCM terminal 1DW **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.2 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel injector No.2 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel injector No.2 terminal A and PCM terminal 1DW. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
7	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.2 and PCM connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:

	• Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel injector No.2 terminal B—PCM terminal 1DX ▪ Fuel injector No.2 terminal A—PCM terminal 1DW • Is there continuity?		Fuel injector No.2 terminal B—PCM terminal 1DX • Fuel injector No.2 terminal A—PCM terminal 1DW **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT FUEL INJECTOR NO.2** • Inspect the fuel injector No.2. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector No.2, then go to the next step. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0203:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0203:00	Fuel injector circuit/open cylinder No.3
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.3, the PCM determines that there is an open circuit in the fuel injector No.3 control circuit. **MONITORING CONDITIONS** ▪ The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel injector No.3 connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Fuel injector No.3 terminal B—PCM terminal 1EB ▪ Fuel injector No.3 terminal A—PCM terminal 1EA • Short to power supply in wiring harness between fuel injector No.3 terminal A and PCM terminal 1EA • Open circuit in wiring harness between the following terminals: ▪ Fuel injector No.3 terminal B—PCM terminal 1EB ▪ Fuel injector No.3 terminal A—PCM terminal 1EA • Fuel injector No.3 malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.3 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel injector No.3 connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.3 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Fuel injector No.3 terminal B ▪ Fuel injector No.3 terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel injector No.3 terminal B—PCM terminal 1EB • Fuel injector No.3 terminal A—PCM terminal 1EA **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.3 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel injector No.3 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel injector No.3 terminal A and PCM terminal 1EA. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
7	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.3 and PCM connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:

	• Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel injector No.3 terminal B—PCM terminal 1EB ▪ Fuel injector No.3 terminal A—PCM terminal 1EA • Is there continuity?		Fuel injector No.3 terminal B—PCM terminal 1EB • Fuel injector No.3 terminal A—PCM terminal 1EA **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT FUEL INJECTOR NO.3** • Inspect the fuel injector No.3. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector No.3, then go to the next step. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0204:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0204:00	Fuel injector circuit/open cylinder No.4
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.4, the PCM determines that there is an open circuit in the fuel injector No.4 control circuit. **MONITORING CONDITIONS** ▪ The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel injector No.4 connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Fuel injector No.4 terminal B—PCM terminal 1DT ▪ Fuel injector No.4 terminal A—PCM terminal 1DS • Short to power supply in wiring harness between fuel injector No.4 terminal A and PCM terminal 1DS • Open circuit in wiring harness between the following terminals: ▪ Fuel injector No.4 terminal B—PCM terminal 1DT ▪ Fuel injector No.4 terminal A—PCM terminal 1DS • Fuel injector No.4 malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.4 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel injector No.4 connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.4 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Fuel injector No.4 terminal B ▪ Fuel injector No.4 terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel injector No.4 terminal B—PCM terminal 1DT • Fuel injector No.4 terminal A—PCM terminal 1DS **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.4 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel injector No.4 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel injector No.4 terminal A and PCM terminal 1DS. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
7	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.4 and PCM connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:

	• Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel injector No.4 terminal B—PCM terminal 1DT ▪ Fuel injector No.4 terminal A—PCM terminal 1DS • Is there continuity?		Fuel injector No.4 terminal B—PCM terminal 1DT • Fuel injector No.4 terminal A—PCM terminal 1DS **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT FUEL INJECTOR NO.4** • Inspect the fuel injector No.4. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector No.4, then go to the next step. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0222:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0222:00	TP sensor No.2 circuit low input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.2 voltage at the PCM terminal 1BU is **below 0.1 V**, the PCM determines that the TP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Throttle body terminal B—PCM terminal 1BS ▪ Throttle body terminal C—PCM terminal 1BU • PCM connector or terminals malfunction • TP sensor No.2 signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: ▪ Throttle body terminal B—PCM terminal 1BS ▪ Throttle body terminal C—PCM terminal 1BU • TP sensor No.2 malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
TP2	V	TP sensor No.2 voltage	• Accelerator pedal released: Approx. 3.92 V • Accelerator pedal fully depressed: Approx. 0.41 V
	%	Throttle valve position No.2	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 82%

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Throttle body terminal B ▪ Throttle body terminal C • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Throttle body terminal B—PCM terminal 1BS ▪ Throttle body terminal C—PCM terminal 1BU **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	damaged/pulled-out pins, corrosion). • Is there any malfunction?		
6	**INSPECT TP SENSOR NO.2 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between throttle body terminals C and D (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal C—PCM terminal 1BU • Throttle body terminal D—PCM terminal 1BQ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 9.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Throttle body terminal B—PCM terminal 1BS ▪ Throttle body terminal C—PCM terminal 1BU • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal B—PCM terminal 1BS • Throttle body terminal C—PCM terminal 1BU **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT TP SENSOR NO.2** • Reconnect all disconnected connectors. • Inspect the TP sensor No.2. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED**	Yes	Repeat the inspection from Step 1.

	• Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		• If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0223:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0223:00	TP sensor No.2 circuit high input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.2 voltage at the PCM terminal 1BU is **above 4.9 V**, the PCM determines that the TP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • TP sensor No.2 malfunction • Short to power supply in wiring harness between throttle body terminal C and PCM terminal 1BU • Open circuit in wiring harness between throttle body terminal D and PCM terminal 1BQ • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
TP2	V	TP sensor No.2 voltage	• Accelerator pedal released: Approx. 3.92 V • Accelerator pedal fully depressed: Approx. 0.41 V
	%	Throttle valve position No.2	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 82%

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF TP SENSOR NO.2 OR WIRING HARNESS MALFUNCTION** • Access the TP2 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the TP2 PID value. • Is the TP2 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.2** • Reconnect all disconnected connectors. • Inspect the TP sensor No.2. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 9. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 9.
7	**INSPECT TP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off. • Disconnect the throttle body connector. • Access the TP2 PID using the M-MDS.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between throttle body terminal C and PCM terminal 1BU. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the TP2 PID value. • Is the TP2 PID value **5 V** or **B+**?		• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
		No	Go to the next step.
8	**INSPECT TP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between throttle body terminal D (wiring harness-side) and PCM terminal 1BQ (wiring harness-side). • Is there continuity?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between throttle body terminal D and PCM terminal 1BQ. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P025B:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P025B:00	Fuel pump control module circuit range/performance problem
DETECTION CONDITION	• When any of the following conditions is met: ▪ The temperature in the fuel pump control module is too high. ▪ Output duty ratio signal received from PCM is in error. ▪ Output signal from fuel pump control module is erratic (noise overlap). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel pump control
POSSIBLE CAUSE	• Fuel pump control module connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between fuel pump control module terminal 1B and PCM terminal 2AE • Short to power supply in wiring harness between fuel pump control module terminal 1B and PCM terminal 2AE • Open circuit in wiring harness between fuel pump control module terminal 1B and PCM terminal 2AE • Fuel pump control module malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pump control module and PCM connectors are disconnected. • Inspect for continuity between fuel pump control module terminal 1B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump control module terminal 1B and PCM terminal 2AE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel pump control module terminal 1B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump control module terminal 1B and PCM terminal 2AE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
7	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between fuel pump control module	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump control module terminal 1B and PCM terminal 2AE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for

	terminal 1B (wiring harness-side) and PCM terminal 2AE (wiring harness-side). • Is there continuity?		corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT FUEL PUMP CONTROL MODULE** • Reconnect all disconnected connectors. • Inspect the fuel pump control module. (See **FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See **FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P025C:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P025C:00	Fuel pump control module result of on-board diagnostic test low input
DETECTION CONDITION	• Result of on-board test cannot be received from fuel pump control module (voltage is too low). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel pump control module connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • Open circuit in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • Fuel pump control module malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pump control module and PCM connectors are disconnected. • Inspect for continuity between fuel pump control module terminal 1A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump control module terminal 1A and PCM terminal 2AM. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
6	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump control module and PCM connectors are disconnected. • Inspect for continuity between fuel pump control module terminal 1A (wiring harness-side) and PCM terminal 2AM (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump control module terminal 1A and PCM terminal 2AM. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**INSPECT FUEL PUMP CONTROL MODULE** • Reconnect all disconnected connectors. • Inspect the fuel pump control module. (See **FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See **FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P025D:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P025D:00	Fuel pump control module result of on-board diagnostic test high input
DETECTION CONDITION	• Result of on-board test cannot be received from fuel pump control module (voltage is too high). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel pump control module connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • Open circuit in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • Fuel pump control module malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel pump control module terminal 1A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump control module terminal 1A and PCM terminal 2AM. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
6	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between fuel pump control module terminal 1A (wiring harness-side) and PCM terminal 2AM (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump control module terminal 1A and PCM terminal 2AM. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**INSPECT FUEL PUMP CONTROL MODULE** • Reconnect all disconnected connectors. • Inspect the fuel pump control module. (See **FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the fuel pump control module, then go to the next step. (See **FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	• Is there any malfunction?		
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0300:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Random misfire detected	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ The misfire rate for **every 200 rotations** of the crankshaft exceeds the specified value (misfire which may damage catalytic converter). ▪ The misfire rate for **every 1,000 rotations** of the crankshaft exceeds the specified value (misfire going against emission regulations).
	Preconditions	• Battery voltage: **9—18 V**[*1] • Engine speed: **500—6,700 rpm**[*1] (U.S.A. and CANADA) • Engine speed: **500—4,500 rpm**[*1] (except U.S.A. and CANADA) • Engine coolant temperature: **−10 °C {14 °F} or more**[*1] (U.S.A. and CANADA) • Engine coolant temperature: **20 °C {68 °F} or more**[*1] (except U.S.A. and CANADA) • Not cranking (U.S.A. and CANADA) • Not stalling (U.S.A. and CANADA) • Fuel-cut control not implemented • Crankshaft installation tolerance learning completed • Engine condition is stabilized (not directly after gear change) • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• 200 rotations of crankshaft (misfire which may damage catalytic converter) • 1,000 rotations of crankshaft (misfire going against emission regulations)
	Drive cycle	• **2**
	Self test type	• CMDTC self test
	Sensor used	• CKP sensor • MAF sensor • MAP sensor
FAIL-SAFE FUNCTION	• Limits intake air amount • Implement fuel-cut control (if the catalytic converter may be damaged, perform fuel-cut on cylinder misfiring the most).	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Misfiring which may damage catalytic converter (number of drive cycles: 1): ▪ Check engine light flashes and pending code is recorded • Drive cycle directly after above drive cycle (number of drive cycles: 2): ▪ Malfunction determined: check engine light is illuminated	

	Normal is determined: Pending code cleared • Rough idling, poor acceleration, stalling
POSSIBLE CAUSE	• Improper operation of ignition system ▪ Spark plug malfunction ▪ Ignition coil related wiring harness or connector malfunction ▪ Ignition coil malfunction • Fuel injector malfunction ▪ Improper operation of fuel injector ▪ Fuel injector related wiring harness malfunction • Erratic signal to PCM ▪ CKP sensor signal malfunction ▪ ECT sensor No.1 signal malfunction ▪ MAF sensor signal malfunction ▪ MAP sensor signal malfunction ▪ IAT sensor No.1 signal malfunction ▪ APP sensor signal malfunction ▪ TP sensor signal malfunction ▪ VSS signal malfunction ▪ Related connector or terminals malfunction ▪ Related wiring harness malfunction • Poor drive belt assembly or adhesion of oil • Drive belt auto tensioner malfunction • Air leakage from intake air system (between intake manifold and cylinder head) • Engine malfunction ▪ Insufficient engine compression ▪ Engine coolant leakage to combustion chamber • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects the crankshaft rotation speed based on the crankshaft position sensor signal. If there is a small amount of fluctuation in crankshaft rotation speed due to the effect of combustion of each cylinder while the engine is rotating and a misfire occurs in any of the pistons, the crankshaft rotation speed will change suddenly. The PCM adds the number of changes in sudden rotation speed (misfire rate) to each specified crankshaft rotation speed, and if the misfire rate exceeds a certain value, a DTC is recorded.

Repeatability Verification Procedure

- Drive the vehicle at a speed of **40 km/h {25 mph} or more**.
- Shift to 3rd gear and rapidly accelerate the vehicle to **60 km/h {37 mph}** (to execute misfire monitor).
- Release the accelerator pedal and decelerate the vehicle to **40 km/h {25 mph}**.
- Repeat Step 1 to 3 operations **above 5 times**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table—: Not applicable

Item	Definition	Unit	Condition/Specification
APP1	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	%	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	APP sensor No.1 voltage	V	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
APP2	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	%	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	APP sensor No.2 voltage	V	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
ECT	Engine coolant temperature	°C, °F	• Displays ECT
			• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V

	ECT sensor No.1 voltage	V	• ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
IAT	Intake air temperature (No.1)	°C, °F	• Displays IAT (No.1)
	IAT sensor No.1 voltage	V	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V
MAF	Mass air flow	g/Sec	• Displays MAF
	MAF sensor voltage	V	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	Manifold absolute pressure	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays MAP
	MAP sensor voltage	V	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
MF_CAT1	Number of misfires in No.1 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.1 cylinder)
MF_CAT_2	Number of misfires in No.2 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.2 cylinder)
MF_CAT_3	Number of misfires in No.3 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.3 cylinder)
MF_CAT_4	Number of misfires in No.4 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.4 cylinder)
MF_EMI1	Number of misfires in No.1 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.1 cylinder)

MF_EMI_2	Number of misfires in No.2 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.2 cylinder)
MF_EMI_3	Number of misfires in No.3 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.3 cylinder)
MF_EMI_4	Number of misfires in No.4 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.4 cylinder)
RPM	Engine speed	RPM	• Displays engine speed
TP_REL	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	%	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	Vehicle speed	KPH, MPH	• Displays vehicle speed

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0300:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: VERIFY IF THERE IS PID ITEM CAUSING DRASTIC CHANGES OF ACCELERATION FLUCTUATION BY INPUT SIGNAL TO PCM** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**	Yes	Inspect the suspected sensor and related wiring harness. • If there is any malfunction: ▪ Repair or replace the malfunctioning part. ▪ Go to the

	.) ▪ APP1 ▪ APP2 ▪ ECT ▪ IAT ▪ MAF ▪ MAP ▪ RPM ▪ TP_REL ▪ VSS • Is there a PID item affected by acceleration fluctuation?		troubleshooting procedure to perform the procedure from Step 10. • If there is no malfunction: ▪ Go to the next step.
		No	Go to the next step.
6	**PURPOSE: RECORD NUMBER OF CURRENT MISFIRES FOR USE WITH MISFIRE INSPECTION** • Display the misfire rate and record the number of misfires. ▪ Access the following PIDs using the M-MDS (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • MF_CAT1 • MF_CAT_2 • MF_CAT_3 • MF_CAT_4 • MF_EMI1 • MF_EMI_2 • MF_EMI_3 • MF_EMI_4	—	Go to the next step.
7	**PURPOSE: VERIFY IF MISFIRE CAUSE IS BAD SPARK PLUGS** • Switch the spark plugs on a cylinder that is misfiring and a cylinder that is not misfiring. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off. • Under no-load conditions (P or N position (ATX)/neutral (MTX), increase the engine speed to **3,000 rpm**. • Display the misfire rate and record the number of misfires. ▪ Access the following PIDs using the M-MDS (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • MF_CAT1 • MF_CAT_2 • MF_CAT_3 • MF_CAT_4 • MF_EMI1 • MF_EMI_2 • MF_EMI_3	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.

	• MF_EMI_4 • Is there a change from the recorded number of misfires?		
8	**PURPOSE: VERIFY IF MISFIRE CAUSE IS BAD IGNITION COIL** • Switch the ignition coils on a cylinder that is misfiring and a cylinder that is not misfiring. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off. • Under no-load conditions (P or N position (ATX)/neutral (MTX), increase the engine speed to **3,000 rpm**. • Display the misfire rate and record the number of misfires. ▪ Access the following PIDs using the M-MDS (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • MF_CAT1 • MF_CAT_2 • MF_CAT_3 • MF_CAT_4 • MF_EMI1 • MF_EMI_2 • MF_EMI_3 • MF_EMI_4 • Is there a change from the recorded number of misfires?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the troubleshooting procedure to perform the procedure from Step 3.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an ignition system parts inspection.
- Step 3
  - Perform a fuel injector control system inspection.
- Step 4—9
  - Perform an inspection of parts which may be affected by misfire except for ignition-related parts and fuel injection control-related parts.
- Step 10—11
  - Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF SPARK PLUG** • Inspect the spark plug. (See **SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the spark plug, then go to Step 10. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF IGNITION COIL** • Inspect the ignition coil.	Yes	Replace the ignition coil/ion sensor, then go to Step 10.

	(See **IGNITION COIL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		(See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: DETERMINE INTEGRITY OF FUEL INJECTOR** • Inspect the fuel injector. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step 10. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO INTAKE-AIR SYSTEM IS CAUSE OF MISFIRE** • Visually inspect for loose, cracked or damaged hoses on intake air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
5	**PURPOSE: VERIFY IF POOR DRIVE BELT ASSEMBLY IS CAUSE OF MISFIRE** • Verify the condition of the drive belt assembly. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Assemble drive belt correctly, then go to Step 10. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: VERIFY IF FOREIGN MATTER ON DRIVE BELT IS CAUSE OF MISFIRE** • Verify if oil is on the drive belt. • Is there foreign matter on the drive belt?	Yes	Remove the foreign matter on the drive belt, then go to Step 10.
		No	Go to the next step.
7	**PURPOSE: DETERMINE INTEGRITY OF DRIVE BELT AUTO TENSIONER** • Inspect the drive belt auto tensioner. (See **DRIVE BELT AUTO TENSIONER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the drive belt auto tensioner, then go to Step 10. (See **DRIVE BELT AUTO TENSIONER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE COMPRESSION IS CAUSE OF MISFIRE** • Inspect the engine compression. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:**	Yes	Go to the next step.
		No	Replace or overhaul the engine, then go to Step 10.

	• Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
9	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO SEALING OF ENGINE UNIT (COMBUSTION CHAMBER AND ENGINE COOLANT PASSAGE) IS CAUSE OF MISFIRE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
10	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	P0301:00: Cylinder No.1 misfire detected P0302:00: Cylinder No.2 misfire detected P0303:00: Cylinder No.3 misfire detected P0304:00: Cylinder No.4 misfire detected	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ The misfire rate of specific cylinders for **every 200 rotations** of the crankshaft exceeds the specified value (misfire which may damage catalytic converter). ▪ The misfire rate of specific cylinders for **every 1,000 rotations** of the crankshaft exceeds the specified value (misfire going against emission regulations).
	Preconditions	• Battery voltage: **9—18 V**[*1] • Engine speed: **500—6,700 rpm**[*1] (U.S.A. and CANADA) • Engine speed: **500—4,500 rpm**[*1] (except U.S.A. and CANADA) • Engine coolant temperature: **−10 °C {14 °F} or more**[*1] (U.S.A. and CANADA) • Engine coolant temperature: **20 °C {68 °F} or more**[*1] (except U.S.A. and CANADA) • Not cranking (U.S.A. and CANADA) • Not stalling (U.S.A. and CANADA) • Fuel-cut control not implemented • Crankshaft installation tolerance learning completed • Engine condition is stabilized (not directly after gear change) • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• 200 rotations of crankshaft (misfire which may damage catalytic converter) • 1,000 rotations of crankshaft (misfire going against emission regulations)
	Drive cycle	• **2**
	Self test type	• CMDTC self test
	Sensor used	• CKP sensor • MAF sensor • MAP sensor
FAIL-SAFE FUNCTION	• Limits intake air amount • Implement fuel-cut control (if the catalytic converter may be damaged, perform fuel-cut on cylinder misfiring the most).	

VEHICLE STATUS WHEN DTCs ARE OUTPUT	Misfiring which may damage catalytic converter (number of drive cycles: 1): ▪ Check engine light flashes and pending code is recorded • Drive cycle directly after above drive cycle (number of drive cycles: 2): ▪ Malfunction determined: check engine light is illuminated ▪ Normal is determined: Pending code cleared • Rough idling, poor acceleration, stalling
POSSIBLE CAUSE	• Improper operation of ignition system ▪ Spark plug malfunction ▪ Ignition coil related wiring harness or connector malfunction ▪ Ignition coil malfunction • Fuel injector malfunction ▪ Improper operation of fuel injector ▪ Fuel injector related wiring harness malfunction • Erratic signal to PCM ▪ CKP sensor signal malfunction ▪ ECT sensor No.1 signal malfunction ▪ MAF sensor signal malfunction ▪ MAP sensor signal malfunction ▪ IAT sensor No.1 signal malfunction ▪ APP sensor signal malfunction ▪ TP sensor signal malfunction ▪ VSS signal malfunction ▪ Related connector or terminals malfunction ▪ Related wiring harness malfunction • Poor drive belt assembly or adhesion of oil • Drive belt auto tensioner malfunction • Air leakage from intake air system (between intake manifold and cylinder head) • Engine malfunction ▪ Insufficient engine compression ▪ Engine coolant leakage to combustion chamber • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects the crankshaft rotation speed based on the crankshaft position sensor signal. If there is a small amount of fluctuation in crankshaft rotation speed due to the effect of combustion of each cylinder while the engine is rotating and a misfire occurs in any of the pistons, the crankshaft rotation speed will change suddenly. The PCM adds the number of changes in sudden rotation speed (misfire rate) to each specified crankshaft rotation speed, and if the misfire rate exceeds a certain value, a DTC is recorded.

Repeatability Verification Procedure

- Drive the vehicle at a speed of **40 km/h {25 mph} or more**.
- Shift to 3rd gear and rapidly accelerate the vehicle to **60 km/h {37 mph}** (to execute misfire monitor).
- Release the accelerator pedal and decelerate the vehicle to **40 km/h {25 mph}**.
- Repeat Step 1 to 3 operations **above 5 times**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table—: Not applicable

Item	Definition	Unit	Condition/Specification
APP1	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	%	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	APP sensor No.1 voltage	V	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
APP2	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	%	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	APP sensor No.2 voltage	V	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
ECT	Engine coolant temperature	°C, °F	• Displays ECT
			• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V

	ECT sensor No.1 voltage	V	• ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
IAT	Intake air temperature (No.1)	°C, °F	• Displays IAT (No.1)
	IAT sensor No.1 voltage	V	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V
MAF	Mass air flow	g/Sec	• Displays MAF
	MAF sensor voltage	V	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	Manifold absolute pressure	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays MAP
	MAP sensor voltage	V	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
MF_CAT1	Number of misfires in No.1 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.1 cylinder)
MF_CAT_2	Number of misfires in No.2 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.2 cylinder)
MF_CAT_3	Number of misfires in No.3 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.3 cylinder)
MF_CAT_4	Number of misfires in No.4 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	—	• Displays number of misfires corresponding to possible catalytic converter damage (No.4 cylinder)
MF_EMI1	Number of misfires in No.1 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.1 cylinder)

MF_EMI_2	Number of misfires in No.2 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.2 cylinder)
MF_EMI_3	Number of misfires in No.3 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.3 cylinder)
MF_EMI_4	Number of misfires in No.4 cylinder under conditions required by emission regulations	—	• Displays number of misfires possibly affecting emission (No.4 cylinder)
RPM	Engine speed	RPM	• Displays engine speed
TP_REL	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	%	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	Vehicle speed	KPH, MPH	• Displays vehicle speed

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0301:00, P0302:00, P0303:00 or P0304:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: VERIFY IF THERE IS PID ITEM CAUSING DRASTIC CHANGES OF ACCELERATION FLUCTUATION BY INPUT SIGNAL TO PCM** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**	Yes	Inspect the suspected sensor and related wiring harness. • If there is any malfunction: ▪ Repair or replace the malfunctioning part. ▪ Go to the

	.) ▪ APP1 ▪ APP2 ▪ ECT ▪ IAT ▪ MAF ▪ MAP ▪ RPM ▪ TP_REL ▪ VSS • Is there a PID item affected by acceleration fluctuation?		troubleshooting procedure to perform the procedure from Step 10. • If there is no malfunction: ▪ Go to the next step.
		No	Go to the next step.
6	**PURPOSE: RECORD NUMBER OF CURRENT MISFIRES FOR USE WITH MISFIRE INSPECTION** • Display the misfire rate and record the number of misfires. ▪ Access the following PIDs using the M-MDS (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • MF_CAT1 • MF_CAT_2 • MF_CAT_3 • MF_CAT_4 • MF_EMI1 • MF_EMI_2 • MF_EMI_3 • MF_EMI_4	—	Go to the next step.
7	**PURPOSE: VERIFY IF MISFIRE CAUSE IS BAD SPARK PLUGS** • Switch the spark plugs on a cylinder that is misfiring and a cylinder that is not misfiring. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off. • Under no-load conditions (P or N position (ATX)/neutral (MTX), increase the engine speed to **3,000 rpm**. • Display the misfire rate and record the number of misfires. ▪ Access the following PIDs using the M-MDS (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • MF_CAT1 • MF_CAT_2 • MF_CAT_3 • MF_CAT_4 • MF_EMI1 • MF_EMI_2 • MF_EMI_3	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.

	• MF_EMI_4 • Is there a change from the recorded number of misfires?		
8	**PURPOSE: VERIFY IF MISFIRE CAUSE IS BAD IGNITION COIL** • Switch the ignition coils on a cylinder that is misfiring and a cylinder that is not misfiring. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off. • Under no-load conditions (P or N position (ATX)/neutral (MTX), increase the engine speed to **3,000 rpm**. • Display the misfire rate and record the number of misfires. ▪ Access the following PIDs using the M-MDS (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • MF_CAT1 • MF_CAT_2 • MF_CAT_3 • MF_CAT_4 • MF_EMI1 • MF_EMI_2 • MF_EMI_3 • MF_EMI_4 • Is there a change from the recorded number of misfires?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the troubleshooting procedure to perform the procedure from Step 3.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform an ignition system parts inspection.
- Step 3
  - Perform a fuel injector control system inspection.
- Step 4—9
  - Perform an inspection of parts which may be affected by misfire except for ignition-related parts and fuel injection control-related parts.
- Step 10—11
  - Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF SPARK PLUG** • Inspect the spark plug. (See **SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the spark plug, then go to Step 10. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF IGNITION COIL** • Inspect the ignition coil.	Yes	Replace the ignition coil/ion sensor, then go to Step 10.

	(See **IGNITION COIL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		(See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: DETERMINE INTEGRITY OF FUEL INJECTOR** • Inspect the fuel injector. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step 10. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO INTAKE-AIR SYSTEM IS CAUSE OF MISFIRE** • Visually inspect for loose, cracked or damaged hoses on intake air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
5	**PURPOSE: VERIFY IF POOR DRIVE BELT ASSEMBLY IS CAUSE OF MISFIRE** • Verify the condition of the drive belt assembly. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Assemble drive belt correctly, then go to Step 10. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: VERIFY IF FOREIGN MATTER ON DRIVE BELT IS CAUSE OF MISFIRE** • Verify if oil is on the drive belt. • Is there foreign matter on the drive belt?	Yes	Remove the foreign matter on the drive belt, then go to Step 10.
		No	Go to the next step.
7	**PURPOSE: DETERMINE INTEGRITY OF DRIVE BELT AUTO TENSIONER** • Inspect the drive belt auto tensioner. (See **DRIVE BELT AUTO TENSIONER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the drive belt auto tensioner, then go to Step 10. (See **DRIVE BELT AUTO TENSIONER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO ENGINE COMPRESSION IS CAUSE OF MISFIRE** • Inspect the engine compression. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:**	Yes	Go to the next step.
		No	Replace or overhaul the engine, then go to Step 10.

	• Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
9	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO SEALING OF ENGINE UNIT (COMBUSTION CHAMBER AND ENGINE COOLANT PASSAGE) IS CAUSE OF MISFIRE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
10	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0301:00, P0302:00, P0303:00 or P0304:00 also present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0327:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0327:00	KS circuit low input
DETECTION CONDITION	• The PCM monitors input signal from the KS. If the input voltage is low for **5 s**, the PCM determines that the KS circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Sets the knocking spark retard correction value of the ignition control to the fixed value.

POSSIBLE CAUSE	• KS connector or terminals malfunction
	• KS malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ KS terminal A—PCM terminal 1H
	  ▪ KS terminal B—PCM terminal 1D
	• PCM connector or terminals malfunction
	• KS circuits are shorted to each other
	• Open circuit in wiring harness between the following terminals:
	  ▪ KS terminal A—PCM terminal 1H
	  ▪ KS terminal B—PCM terminal 1D
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the KS connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT KS** • Inspect the KS. (See **KNOCK SENSOR (KS) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the KS, then go to Step 9. (See **KNOCK SENSOR (KS) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT KS CIRCUIT FOR SHORT TO GROUND** • Verify that the KS connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ KS terminal A ▪ KS terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ KS terminal A—PCM terminal 1H ▪ KS terminal B—PCM terminal 1D **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT KS CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the KS and PCM connectors are disconnected. • Inspect for continuity between KS terminals A and B (wiring harness-side).	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • KS terminal A—PCM terminal 1H • KS terminal B—PCM terminal 1D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each

	Is there continuity?		other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 9.
		No	Go to the next step.
8	**INSPECT KS CIRCUIT FOR OPEN CIRCUIT** • Verify that the KS and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ KS terminal A—PCM terminal 1H ▪ KS terminal B—PCM terminal 1D • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • KS terminal A—PCM terminal 1H • KS terminal B—PCM terminal 1D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0328:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0328:00	KS circuit high input
DETECTION CONDITION	• The PCM monitors input signal from the KS. If the input voltage is high for **5 s**, the PCM determines that the KS circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Sets the knocking spark retard correction value of the ignition control to the fixed value.

POSSIBLE CAUSE	• KS connector or terminals malfunction
	• KS malfunction
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between the following terminals:
	  ▪ KS terminal A—PCM terminal 1H
	  ▪ KS terminal B—PCM terminal 1D
	• KS circuits are shorted to each other
	• Open circuit in wiring harness between the following terminals:
	  ▪ KS terminal A—PCM terminal 1H
	  ▪ KS terminal B—PCM terminal 1D
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the KS connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT KS** • Inspect the KS. (See **KNOCK SENSOR (KS) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the KS, then go to Step 9. (See **KNOCK SENSOR (KS) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT KS CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the KS and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ KS terminal A ▪ KS terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • KS terminal A—PCM terminal 1H • KS terminal B—PCM terminal 1D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
7	**INSPECT KS CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the KS and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between KS terminals A	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • KS terminal A—PCM terminal 1H • KS terminal B—PCM terminal 1D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

	and B (wiring harness-side). • Is there continuity?		connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 9.
		No	Go to the next step.
8	**INSPECT KS CIRCUIT FOR OPEN CIRCUIT** • Verify that the KS and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ KS terminal A—PCM terminal 1H ▪ KS terminal B—PCM terminal 1D • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • KS terminal A—PCM terminal 1H • KS terminal B—PCM terminal 1D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0335:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0335:00	CKP sensor circuit problem
DETECTION CONDITION	• There is no CKP sensor signal input while the exhaust camshaft rotates **5 times**. • The CKP sensor input signal pattern, received while the crankshaft rotates **10 times**, is incorrect. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel injection • Stops ignition
POSSIBLE CAUSE	• CKP sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ CKP sensor terminal A—PCM terminal 1BN ▪ CKP sensor terminal C—PCM terminal 1AD • PCM connector or terminals malfunction • Short to power supply in wiring harness between CKP sensor terminal C and PCM terminal 1AD • CKP sensor circuits are shorted to each other • Open circuit in wiring harness between the following terminals: ▪ CKP sensor terminal A—PCM terminal 1BN ▪ CKP sensor terminal C—PCM terminal 1AD ▪ CKP sensor terminal B—PCM terminal 1AH • CKP sensor malfunction ▪ CKP sensor is dirty ▪ CKP sensor pulse wheel malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CKP SENSOR CONNECTOR CONDITION**	Yes	Repair or replace the connector and/or terminals, then go to Step 10.

	• Switch the ignition off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	No	Go to the next step.
4	**INSPECT CKP SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the CKP sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ CKP sensor terminal A ▪ CKP sensor terminal C • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ CKP sensor terminal A—PCM terminal 1BN ▪ CKP sensor terminal C—PCM terminal 1AD **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT CKP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the CKP sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between CKP sensor terminal C and PCM terminal 1AD. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:**

	PCM detecting an open circuit. • Measure the voltage at the CKP sensor terminal C (wiring harness-side). • Is the voltage **0 V**?		• Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
7	**INSPECT CKP SENSOR CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the CKP sensor and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between CKP sensor terminals A, C and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • CKP sensor terminal A—PCM terminal 1BN • CKP sensor terminal C—PCM terminal 1AD • CKP sensor terminal B—PCM terminal 1AH **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 10.
		No	Go to the next step.
8	**INSPECT CKP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the CKP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ CKP sensor terminal A—PCM terminal 1BN ▪ CKP sensor terminal C—PCM terminal 1AD ▪ CKP sensor terminal B—PCM terminal 1AH • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • CKP sensor terminal A—PCM terminal 1BN • CKP sensor terminal C—PCM terminal 1AD • CKP sensor terminal B—PCM terminal 1AH **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT CKP SENSOR**	Yes	Replace the CKP sensor, then go to the next step.

	• Inspect the CKP sensor. (See **CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		(See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and race it. • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0340:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0340:00	Intake CMP sensor circuit problem
DETECTION CONDITION	• The intake CMP sensor input signal pattern, received while the crankshaft rotates **24 times**, is incorrect. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Set the electric variable valve timing control to the maximum cam retard mode.

POSSIBLE CAUSE	• Intake CMP sensor connector or terminals malfunction
	• Short to ground or open circuit in intake CMP sensor power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE1 15 A fuse and intake CMP sensor terminal C
	  ▪ ENGINE1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and intake CMP sensor terminal C
	• Short to ground in wiring harness between intake CMP sensor terminal A and PCM terminal 1Y
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between intake CMP sensor terminal A and PCM terminal 1Y
	• Intake CMP sensor signal circuit and ground circuit are shorted to each other
	• Open circuit in wiring harness between the following terminals:
	  ▪ Intake CMP sensor terminal A—PCM terminal 1Y
	  ▪ Intake CMP sensor terminal B—PCM terminal 1AC
	• Intake CMP sensor malfunction
	  ▪ Intake CMP sensor is dirty
	  ▪ Intake CMP sensor pulse wheel malfunction
	  ▪ Damage to the detection area of the intake CMP sensor
	• CKP sensor connector or terminals malfunction
	• Loose timing chain or improper valve timing
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC**	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?		
		No	Go to the next step.
4	**INSPECT INTAKE CMP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the intake CMP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
5	**INSPECT INTAKE CMP SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the intake CMP sensor connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the intake CMP sensor terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE1 15 A fuse and intake CMP sensor terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and intake CMP sensor terminal C.

			If there is a common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 14.
6	**INSPECT INTAKE CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the intake CMP sensor connector is disconnected. • Switch the ignition off. • Inspect for continuity between intake CMP sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between intake CMP sensor terminal A and PCM terminal 1Y. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 14.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
8	**INSPECT INTAKE CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the intake CMP sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off).	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between intake CMP sensor terminal A and PCM terminal 1Y. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin

	NOTE: • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the intake CMP sensor terminal A (wiring harness-side). • Is the voltage **0 V**?		disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 14.
9	**INSPECT INTAKE CMP SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the intake CMP sensor and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between intake CMP sensor terminals A and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Intake CMP sensor terminal A—PCM terminal 1Y • Intake CMP sensor terminal B—PCM terminal 1AC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 14.
		No	Go to the next step.
10	**INSPECT INTAKE CMP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the intake CMP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Intake CMP sensor terminal A—PCM terminal 1Y ▪ Intake CMP sensor terminal B—PCM terminal 1AC	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Intake CMP sensor terminal A—PCM terminal 1Y • Intake CMP sensor terminal B—PCM terminal 1AC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 14.

	• Is there continuity?		
11	**INSPECT INTAKE CMP SENSOR** • Inspect the intake CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the intake CMP sensor, then go to Step 14. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
12	**INSPECT CKP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
13	**VERIFY ASSEMBLY CONDITION OF TIMING CHAIN** • Verify the condition of the timing chain assembly (intake valve timing, looseness, jumping). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part. Assemble the timing chain using the correct timing, then go to the the next step. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
14	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and race it. • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR**	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

	PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Are any DTCs present?		

2014 - Mazda3 - Engine

DTC P0365:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0365:00	Exhaust CMP sensor circuit problem
DETECTION CONDITION	• The exhaust CMP sensor input signal pattern, received while the crankshaft rotates **24 times**, is incorrect. • Cylinder identification is not completed while the crankshaft rotates **15 times**. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel injection • Stops ignition

POSSIBLE CAUSE	• Exhaust CMP sensor connector or terminals malfunction
	• Short to ground or open circuit in exhaust CMP sensor power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and exhaust CMP sensor terminal C
	  ▪ ENGINE2 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and exhaust CMP sensor terminal C
	• Short to ground in wiring harness between exhaust CMP sensor terminal A and PCM terminal 1T
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between exhaust CMP sensor terminal A and PCM terminal 1T
	• Exhaust CMP sensor signal circuit and ground circuit are shorted to each other
	• Open circuit in wiring harness between the following terminals:
	  ▪ Exhaust CMP sensor terminal A—PCM terminal 1T
	  ▪ Exhaust CMP sensor terminal B—PCM terminal 1X
	• Exhaust CMP sensor malfunction
	  ▪ Exhaust CMP sensor is dirty
	  ▪ Exhaust CMP sensor pulse wheel malfunction
	• CKP sensor connector or terminals malfunction
	• Loose timing chain or improper valve timing
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC**	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?		
		No	Go to the next step.
4	**INSPECT EXHAUST CMP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the exhaust CMP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
5	**INSPECT EXHAUST CMP SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the exhaust CMP sensor connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the exhaust CMP sensor terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and exhaust CMP sensor terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and exhaust CMP sensor terminal

			C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 14.
6	**INSPECT EXHAUST CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the exhaust CMP sensor connector is disconnected. • Switch the ignition off. • Inspect for continuity between exhaust CMP sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between exhaust CMP sensor terminal A and PCM terminal 1T. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 14.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
8	**INSPECT EXHAUST CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the exhaust CMP sensor and PCM connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between exhaust CMP sensor terminal A and PCM terminal 1T. **If there is a common connector:**

	• Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the exhaust CMP sensor terminal A (wiring harness-side). • Is the voltage **0 V**?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 14.
9	**INSPECT EXHAUST CMP SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the exhaust CMP sensor and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between exhaust CMP sensor terminals A and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Exhaust CMP sensor terminal A—PCM terminal 1T • Exhaust CMP sensor terminal B—PCM terminal 1X **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 14.
		No	Go to the next step.
10	**INSPECT EXHAUST CMP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the exhaust CMP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Exhaust CMP sensor terminal A—PCM terminal 1T ▪ Exhaust CMP sensor terminal B—PCM terminal 1X	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Exhaust CMP sensor terminal A—PCM terminal 1T • Exhaust CMP sensor terminal B—PCM terminal 1X **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 14.

	• Is there continuity?		
11	**INSPECT EXHAUST CMP SENSOR** • Inspect the exhaust CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the exhaust CMP sensor, then go to Step 14. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
12	**INSPECT CKP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
13	**VERIFY ASSEMBLY CONDITION OF TIMING CHAIN** • Verify the condition of the timing chain assembly (exhaust valve timing, looseness, jumping). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part. Assemble the timing chain using the correct timing, then go to the the next step. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
14	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and race it. • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G**	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

	2.0, SKYACTIV-G 2.5].) • Are any DTCs present?		

2014 - Mazda3 - Engine

DTC P0421:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Catalytic converter system	
DETECTION CONDITION	Determination conditions	• The fuel amount*1 supplied to the catalyst, from an HO2S output voltage of around **0 V** and until increasing to the specified value or more after recovery from fuel cut control, decreases below the specified value. However, determination must have been performed **11 times or more** after resetting battery and clearing DTCs. • *1: The estimated value is calculated based on the A/F sensor signal.
	Preconditions	• Catalytic converter is activated sufficiently. • HO2S is activated sufficiently. • The following DTCs are not detected: ▪ Misfire: P0300:00, P0301:00, P0302:00, P0303:00, P0304:00 ▪ Fuel injection correction: P0171:00, P0172:00, P2096:00, P2097:00 ▪ A/F sensor: P0130:00, P0131:00, P0132:00, P0133:00, P0134:00, P064D:00, P2237:00, P2243:00, P2251:00 ▪ HO2S: P0137:00, P0138:00, P013A:00, P0140:00 ▪ A/F sensor heater: P0031:00, P0032:00 ▪ HO2S heater: P0037:00, P0038:00
	Drive cycle	• **1** (U.S.A.) • **2** (except U.S.A.)
	Self test type	• CMDTC self test
	Sensor used	• A/F sensor, HO2S
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• HO2S malfunction ▪ HO2S loose • A/F sensor malfunction ▪ A/F sensor loose ▪ Exhaust system leakage	

	▪ A/F sensor deterioration • TWC deterioration or malfunction • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- If the fuel amount*1 supplied to the catalyst, from the period of recovery by fuel cut control until the HO2S indicates a rich signal (**0.2 V or more**), is less than the specified value, the PCM determines catalytic converter deterioration and stores a DTC.
- *1: The estimated value is calculated based on the A/F sensor signal.

*1: THE ESTIMATED VALUE IS CALCULATED BASED ON THE A/F SENSOR SIGNAL.

Repeatability Verification Procedure

- Start the engine and leave it idling for **1 min**.
- Drive the vehicle normally for **15 min**. After that, shift to 3rd gear and maintain the vehicle speed at **approx. 40 km/h {25 mph}**.
- Accelerate the vehicle to **60 km/h {37 mph}** while in 3rd gear.
- Release the accelerator pedal and decelerate the vehicle to **40 km/h {25 mph}**.
- Accelerate the vehicle to **60 km/h {37 mph}** again while in 3rd gear.
- Drive the vehicle for **20 s** at a speed of **50 km/h {31 mph}** while in 3rd gear.
- Repeat Step 4 to 6 operations above **20 times**.

  NOTE:

- Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	HO2S voltage	V	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P0421:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY RELATED PENDING CODE AND/OR DTC**	Yes	Go to the applicable PENDING

	Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?		CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFY A/F SENSOR AND HO2S INPUT SIGNAL** • Start the engine and warm it up completely. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ O2S11 ▪ O2S12 • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking. • Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more** ▪ O2S12: **0.3 V or less**	Yes	Go to the troubleshooting procedure to perform the procedure from Step 3.
		No	Go to the next step.
6	**INSPECT RELATED SENSOR WIRING HARNESS AND CONNECTOR** • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ O2S11 ▪ O2S12 • When the PCM, A/F sensor and HO2S are shaken, does the PID value include a PID item which has changed?	Yes	Inspect the related wiring harness and connector. • Repair or replace the malfunctioning part. Go to the troubleshooting procedure to perform the procedure from Step 8.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform inspection of HO2S and A/F sensor signal related parts.
- Step 3—7
  - Perform inspection of each separate part.
- Step 8—9
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 8. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**PURPOSE: INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Replace the A/F sensor and/or HO2S, then go to Step 8. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Retighten the A/F sensor, then go to Step 8. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 8. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**PURPOSE: INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 8. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**PURPOSE: INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust gas leakage from the exhaust system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF OTHER DTCs ARE DISPLAYED** • Reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**PURPOSE: VERIFY CATALYTIC CONVERTER MALFUNCTION** • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification	Yes	Replace the TWC, then go to the next step. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

	procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is DTC P0421:00 or pending code displayed?		
8	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is DTC P0421:00 or pending code displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0442:00, P0455:00, P0456:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	P0442:00 • Evaporative gas leakage (leakage amount: low) P0455:00 • Evaporative gas leakage (leakage amount: large) P0456:00 • Evaporative gas leakage (leakage amount: extremely low)	
DETECTION CONDITION	Determination conditions	P0442:00 • Hole of **0.04 in (1.0 mm) or more** in evaporative gas passage
		P0455:00 • Hole of **0.09 in (2.25 mm) or more** in evaporative gas passage
		P0456:00 • Hole of **0.02 in (0.5 mm) or more** in evaporative gas passage
	Preconditions	P0442:00, P0455:00 • Period ignition is switched off before engine starts: **120 min or more** • Engine coolant temperature at engine start: **2—43 °C {36—109 °F}** *1 • Time elapsed from engine start: **6—90 min** • Fuel level in fuel tank: **10—90 %** *1 • Desired ambient air temperature: **4.4—43.3 °C {40—109 °F}** *1 • Barometric pressure: **72.23 kPa {0.7365 kgf/cm^2, 10.48 psi} or more** *1 • Charging efficiency: **3—65 %** *1 • Vehicle speed: **64—144 km/h {40.0—89.4 mph}** *1 P0456:00 • Engine coolant temperature at engine start: **2—43 °C {36—109 °F}** *1 • Intake air temperature at engine start: **7 °C {13 °F} or more** higher than engine coolant temperature at engine start *1 • Time elapsed from engine start: **15—90 min** • Fuel level in fuel tank: **10—90 %** *1 • Desired ambient air temperature: **5—37 °C {41—98 °F}** *1 • Barometric pressure: **72.35 kPa {0.7378 kgf/cm^2, 10.49 psi} or more** *1 • Battery voltage: **above 10 V** *1 • The following DTCs are not detected: ▪ Fuel tank pressure sensor: P0451:00, P0452:00, P0453:00

		▪ Purge solenoid valve: P0443:00 ▪ CV solenoid valve: P0446:00 ▪ EVAP monitor: P0442:00, P0455:00, P0457:00, P144A:00, P1450:00 ▪ Fuel gauge sender unit: P0460:00, P0461:00, P0462:00, P0463:00 • *1: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **75 s period**
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Fuel tank pressure sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• Missing or loose fuel filler cap • Fuel filler cap malfunction • Fuel tank pressure sensor malfunction • CV solenoid valve malfunction • Purge solenoid valve malfunction • Evaporative gas passage malfunction ▪ Improper connection of evaporative hose ▪ Evaporative hose damaged • Charcoal canister malfunction • Catch tank malfunction • Fuel pump unit loose • Fuel tank malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The pressure change of the evaporative gas passage is measured using barometric pressure and intake manifold vacuum to detect evaporative gas leakage. The PCM introduces barometric pressure or intake manifold vacuum into the evaporative gas passage by opening/closing the purge solenoid valve and CV solenoid valve, and measures the pressure change using the fuel tank pressure sensor.

  P0455:00

- The PCM closes the CV solenoid valve while the vehicle is being driven, and seals the fuel tank. The PCM introduces intake manifold vacuum into the fuel tank and measures the pressure change of the fuel tank using the fuel tank pressure sensor by opening the purge solenoid valve after sealing the fuel tank. If the pressure of the fuel tank does not reach the target value after the specified time has elapsed since the pressure was measured, the PCM determines that there is an evaporative gas leakage. If the PCM determines that refueling is not performed before the engine starts according to the result of the refuel determination, DTC P0455:00 is stored (if the PCM determines that refueling is performed, DTC P0457:00 is stored).
- If the fuel tank level increases after the engine starts, the PCM determines that refueling was performed by comparing the fuel tank level before one drive cycle with the fuel tank level after engine start.

  P0442:00

- The PCM closes the purge solenoid valve after diagnosing (normal) DTC P0455:00, and seals the fuel tank. The pressure change of the

fuel tank is measured by the fuel tank pressure sensor after the fuel tank is sealed. The PCM determines a temporary malfunction if the pressure change is the specified value or more after the specified time has elapsed since the pressure was measured. If the CV solenoid valve is open after determining a temporary malfunction and the pressure change (increase) of the fuel tank is the specified value or less, the PCM determines that there is an evaporative gas leakage and a DTC is stored.

P0456:00

- After the engine stops with the preconditions met, the PCM closes the CV solenoid valve and seals the fuel tank. The pressure change of the fuel tank is measured by the fuel tank pressure sensor after the fuel tank is sealed. The PCM determines a temporary malfunction when the pressure change is the specified value or less after the specified time has elapsed since the pressure was measured. If the CV solenoid valve is open after determining a temporary malfunction and the pressure change of the fuel tank is the specified value or less, the PCM determines that there is an evaporative gas leakage and a DTC is stored.

Repeatability Verification Procedure

P0442:00, P0455:00

- Set the remaining fuel quantity in the fuel tank between **30—85 %**.
- Start the engine and switch the ignition off after **5 s** have elapsed.
- Leave the vehicle for **6 hours or more**.
- Start the engine and leave it idling for **2 min**.
- Drive the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** (to increase temperature in fuel tank and generate evaporative gas).

NOTE:

- If driving the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** is not feasible, the vehicle can be driven for a continuous **15 min or more** with the engine coolant temperature at **80 °C {176 °F} or more**.

P0456:00

- Set the remaining fuel quantity in the fuel tank between **30—85 %**.
- Verify that OBD-II information (such as FREEZE FRAME DATA (Mode 2)) has been obtained and recorded.
- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine and switch the ignition off after **5 s** have elapsed.
- Leave the vehicle for **6 hours or more**.
- Start the engine and leave it idling for **2 min**.
- Drive the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** (to increase temperature in fuel tank and generate evaporative gas).

NOTE:

- If driving the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** is not feasible, the vehicle can be driven for a continuous **15 min or more** with the engine coolant temperature at **80 °C {176 °F} or more**.

- Stop the engine.
- Leave the vehicle for **1 hours or more**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
BARO	Actually measured barometric pressure input from barometric pressure sensor built into PCM	KPa {MPa}, mBar {Bar}, psi, in H20	• Displays BARO
	BARO sensor voltage	V	• Ignition switched ON (at sea level): Approx. 4.08 V
EVAPCP	Purge solenoid valve control duty value	%	• Idle (after warm up): Approx. 0% • Racing (Engine speed 2,000 rpm): 4.3 —35% • Racing (Engine speed 4,000 rpm): Approx. 66%
EVAPCV	CV solenoid valve operation status	Off/On	• Simulation item (EVAPCV) is ON: On
FCL	Check fuel cap warning light illumination status	Off/On	• Check fuel cap warning light not illuminated: Off • Check fuel cap warning light illuminated: On
FTP	Fuel tank pressure	Pa {KPa} {MPa}, mBar {Bar}, psi, in H20	• Displays fuel tank pressure
	Fuel tank pressure sensor voltage	V	• Fuel tank pressure is equal to barometric pressure: Approx. 2.6 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY MALFUNCTION OF CONTROL PART REQUIRED FOR DIAGNOSIS** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0443:00, P0446:00, P0451:00, P0452:00 or P0453:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0443:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0446:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0451:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0452:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0453:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

		No	P0442:00 or P0455:00 is diagnosed: • Go to the next step. P0456:00 is diagnosed: • Go to Step 5.
4	**PURPOSE: INSPECTION OF EVAPORATIVE GAS LEAKAGE** • Perform the Evaporative Emission (EVAP) System Leak Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is evaporative gas leakage detected?	Yes	Go to Step 6.
		No	Go to Step 9.
5	**PURPOSE: INSPECTION OF EVAPORATIVE GAS LEAKAGE** • Perform the smoke test using the tester (134-01049). • Is evaporative gas leakage detected?	Yes	Go to the next step.
		No	Go to Step 9.
6	**PURPOSE: VERIFY FUEL FILLER CAP MALFUNCTION** • Access the FCL PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FCL PID value On?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
7	**PURPOSE: SPECIFY LOCATION OF EVAPORATIVE GAS LEAKAGE (FUEL TANK SIDE)** • Disconnect the evaporative hose of the following: (See **QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Between charcoal canister and purge solenoid valve (charcoal canister side) ▪ Between charcoal canister and CV solenoid valve (charcoal canister side) • Plug the charcoal canister. • Open the fuel-filler cap. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ BARO ▪ FTP • Does the FTP PID value correspond to the BARO PID value?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 3.
8	**PURPOSE: SPECIFY LOCATION OF EVAPORATIVE GAS LEAKAGE (CHARCOAL CANISTER SIDE)** • Reconnect all the removed parts. • Disconnect the evaporative hose of the following: (See **QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Between charcoal canister and purge solenoid valve (purge solenoid valve side) ▪ Between charcoal canister and CV solenoid valve (CV solenoid valve side) • Plug the evaporative hoses (purge solenoid valve side and CV solenoid valve side). • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ BARO ▪ FTP	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 6.

	• Does the FTP PID value correspond to the BARO PID value?		
9	**PURPOSE: DETERMINE IF MALFUNCTION CAUSED BY CONTROL PART (PURGE SOLENOID VALVE) REQUIRED FOR DIAGNOSIS** • Reconnect all the removed parts. • Start the engine and idle it. • Access the EVAPCP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the EVAPCP PID value normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 9.
10	**PURPOSE: DETERMINE IF MALFUNCTION CAUSED BY CONTROL PART (CV SOLENOID VALVE) REQUIRED FOR DIAGNOSIS** • Start the engine and idle it. • Access the EVAPCV PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the EVAPCV PID value normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 10.
11	**PURPOSE: DETERMINE IF MALFUNCTION CAUSED BY CONTROL PART (FUEL TANK PRESSURE SENSOR) REQUIRED FOR DIAGNOSIS** • Start the engine and idle it. • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FTP PID value normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 11.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Inspect for evaporative gas leakage from the fuel-filler opening.
- Step 3—5
  - Inspect for evaporative gas leakage from the fuel tank side.
- Step 6—8
  - Inspect for evaporative gas leakage from the charcoal canister side.
- Step 9—11
  - Inspect control parts for normal operation.
- Step 12—13
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECTION OF EVAPORATIVE GAS LEAKAGE FROM FUEL-FILLER CAP** • Verify that the fuel-filler cap is completely closed. • Is the fuel-filler cap completely closed?	Yes	Go to the next step.
		No	Close the fuel-filler cap completely, then go to Step 12.
2	**PURPOSE: DETERMINE INTEGRITY OF FUEL FILLER CAP** • Inspect the fuel filler cap.	Yes	Replace the fuel filler cap, then go to Step 12. (See **FUEL-FILLER PIPE REMOVAL/INSTALLATION [SKYACTIV-**

	Is there any malfunction?		G 2.0, SKYACTIV-G 2.5].)
		No	Go to the next step.
3	**PURPOSE: INSPECTION OF EVAPORATIVE GAS LEAKAGE FROM EVAPORATIVE GAS PASSAGE** • Verify the hoses between the following parts, pipe connection condition, and that there is no cracking or damage. ▪ Between fuel tank and charcoal canister • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.
		No	Go to the next step.
4	**PURPOSE: INSPECTION OF EVAPORATIVE GAS LEAKAGE CAUSED BY POOR INSTALLATION OF FUEL PUMP** • Verify the fuel pump unit installation condition (clearance between affixing surfaces, installation angle). (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the fuel pump unit installed securely?	Yes	Go to the next step.
		No	Retighten the fuel pump unit, then go to Step 12. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**PURPOSE: DETERMINE INTEGRITY OF FUEL TANK** • Inspect the fuel tank. (See **FUEL TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel tank, then go to Step 12. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: INSPECTION OF EVAPORATIVE GAS LEAKAGE FROM EVAPORATIVE GAS PASSAGE** • Verify the hoses between the following parts, pipe connection condition, and that there is no cracking or damage. ▪ Between charcoal canister and catch tank ▪ Between charcoal canister and CV solenoid valve ▪ Between catch tank and purge solenoid valve ▪ Between purge solenoid valve and intake manifold • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.
		No	Go to the next step.
7	**PURPOSE: DETERMINE INTEGRITY OF CHARCOAL CANISTER** • Inspect the charcoal canister. (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to Step 12. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: DETERMINE INTEGRITY OF CATCH TANK** • Inspect the catch tank. (See **CATCH TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the catch tank, then go to Step 12. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**PURPOSE: DETERMINE INTEGRITY OF PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 12. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**PURPOSE: DETERMINE INTEGRITY OF CV SOLENOID VALVE** • Inspect the CV solenoid valve. (See **CANISTER VENT (CV) SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the CV solenoid valve, then go to Step 12. (See **CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

11	**PURPOSE: DETERMINE INTEGRITY OF FUEL TANK PRESSURE SENSOR** • Inspect the fuel tank pressure sensor. (See **FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to the next step. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
12	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Reconnect all the removed parts. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1 of the troubleshooting diagnostic procedure. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
13	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0443:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0443:00	Purge solenoid valve circuit problem
DETECTION CONDITION	• The purge control voltage at the PCM terminal 1AI is low or high relative to the PCM control condition. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Purge solenoid valve connector or terminals malfunction
	• Short to ground or open circuit in purge solenoid valve power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and purge solenoid valve terminal B
	  ▪ ENGINE2 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and purge solenoid valve terminal B
	• PCM connector or terminals malfunction
	• Short to ground in wiring harness between purge solenoid valve terminal A and PCM terminal 1AI
	• Short to power supply in wiring harness between purge solenoid valve terminal A and PCM terminal 1AI
	• Open circuit in wiring harness between purge solenoid valve terminal A and PCM terminal 1AI
	• Purge solenoid valve malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PURGE SOLENOID VALVE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the purge solenoid valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion).	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.

	Is there any malfunction?		
4	**INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the purge solenoid valve connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the purge solenoid valve terminal B (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and purge solenoid valve terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and purge solenoid valve terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off.	Yes	Repair or replace the connector and/or terminals, then go to Step 10.

	• Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the purge solenoid valve and PCM connectors are disconnected. • Inspect for continuity between purge solenoid valve terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between purge solenoid valve terminal A and PCM terminal 1AI. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 10.
		No	Go to the next step.
7	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the purge solenoid valve and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the purge solenoid valve terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between purge solenoid valve terminal A and PCM terminal 1AI. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
8	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the purge solenoid valve and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between purge solenoid valve terminal A (wiring harness-side) and PCM terminal 1AI (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between purge solenoid valve terminal A and PCM terminal 1AI. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
	INSPECT PURGE SOLENOID VALVE		

9	• Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to the next step. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0446:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0446:00	CV solenoid valve control circuit problem
DETECTION CONDITION	• The PCM monitors the CV solenoid valve circuit for an electrical failure. The test fails when the signal moves outside the minimum or maximum allowable calibrated parameters for a specified canister vent duty cycle by the PCM command. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• CV solenoid valve connector or terminals malfunction
	• Short to ground or open circuit in CV solenoid valve power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE1 15 A fuse and CV solenoid valve terminal A
	  ▪ ENGINE1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and CV solenoid valve terminal A
	• PCM connector or terminals malfunction
	• Short to ground in wiring harness between CV solenoid valve terminal B and PCM terminal 2BF
	• Short to power supply in wiring harness between CV solenoid valve terminal B and PCM terminal 2BF
	• Open circuit in wiring harness between CV solenoid valve terminal B and PCM terminal 2BF
	• CV solenoid valve malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT CV SOLENOID VALVE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the CV solenoid	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.

	valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
5	**INSPECT CV SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the CV solenoid valve connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the CV solenoid valve terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE1 15 A fuse and CV solenoid valve terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and CV solenoid valve terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 11.
6	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
7	**INSPECT CV SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the CV solenoid valve and PCM connectors are disconnected. • Inspect for continuity between CV solenoid valve terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between CV solenoid valve terminal B and PCM terminal 2BF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 11.
		No	Go to the next step.
8	**INSPECT CV SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the CV solenoid valve and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the CV solenoid valve terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between CV solenoid valve terminal B and PCM terminal 2BF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 11.
9	**INSPECT CV SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the CV solenoid valve and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between CV solenoid valve terminal B (wiring harness-side) and PCM terminal 2BF (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between CV solenoid valve terminal B and PCM terminal 2BF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 11.
10	**INSPECT CV SOLENOID VALVE** • Inspect the CV solenoid valve. (See **CANISTER VENT (CV) SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the CV solenoid valve, then go to the next step. (See **CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0451:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Fuel tank pressure sensor: sensor characteristic malfunction	
DETECTION CONDITION	Determination conditions	• The fuel tank pressure sensor input voltage is the threshold or more.

	Preconditions	• Battery voltage: **above 8 V**[*1]
		• Period ignition is switched off before engine starts: **120 min or more**
		• Purge solenoid valve not operating
		• The following DTCs are not detected:
		  ▪ Purge solenoid valve: P0443:00
		  ▪ Evaporative passage blockage: P1450:00
		• [*1]: Value can be verified by displaying PIDs using M-MDS

	Malfunction determination period	• During one drive cycle
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Fuel tank pressure sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• Fuel tank pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Fuel tank pressure sensor malfunction • Charcoal canister malfunction • CV solenoid valve malfunction • Evaporative chamber malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects the pressure of the fuel tank based on the fuel tank pressure sensor signal. The PCM determines a fuel tank pressure sensor signal error based on the condition in which the fuel tank pressure sensor voltage continues to be the specified value or more, and stores a DTC.

Repeatability Verification Procedure

- Switch the ignition off.
- Leave the vehicle for **2 hours or more**.
- Start the engine and leave it idling for **1 min**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
AAT	Ambient air temperature	°C, °F	• Displays ambient air temperature
FTP	Fuel tank pressure	Pa {KPa} {MPa}, mBar {Bar}, psi, in H20	• Displays fuel tank pressure
	Fuel tank pressure sensor voltage	V	• Fuel tank pressure is equal to barometric pressure: Approx. 2.6 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF FUEL TANK PRESSURE SENSOR HAS MALFUNCTION** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0452:00, P0453:00 or P0454:00 also present?	Yes	The possibility of a fuel tank pressure sensor malfunction is high. • Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0452:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0453:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0454:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: INSPECTION OF CLOGGING BETWEEN FUEL TANK PRESSURE SENSOR AND FUEL TANK** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P144A:00 also present?	Yes	The possibility of clogging between fuel tank pressure sensor and fuel tank is high. • Go to the applicable PENDING CODE or DTC inspection. (See **DTC P144A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: VERIFY IF CV SOLENOID VALVE HAS MALFUNCTION** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0446:00 also present?	Yes	The possibility of a CV solenoid valve malfunction is high. • Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0446:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: VERIFY IF FUEL TANK PRESSURE IS STUCK TO EITHER LOW OR HIGH PRESSURE SIDE** • Start the engine and idle it. • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FTP PID value **0.424 kPa {0.00432 kgf/cm^2, 0.0615 psi} or more**?	Yes	The possibility that the fuel tank pressure is stuck to the high pressure side is high. • Go to the next step.
		No	The possibility that the fuel tank pressure is stuck to the low pressure side is high. • Go to the troubleshooting procedure to perform the procedure from Step 3.
7	**PURPOSE: VERIFY IF MALFUNCTION CAUSE IS FREEZING OF FUEL TANK PRESSURE SENSOR BY VERIFYING AMBIENT TEMPERATURE** • Start the engine and idle it. • Access the AAT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the AAT PID value **0 °C {32 °F} or less**?	Yes	The possibility of a malfunction caused by freezing of the fuel tank pressure sensor is high. • Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 2.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Visually verify that there are no traces of freezing on the fuel tank pressure sensor.
- Step 2
  - Inspect the charcoal canister for clogging.
- Step 3
  - Perform a unit inspection of the CV solenoid valve.
- Step 4
  - Verify that there is no breakage or clogging in the evaporative hose.
- Step 5
  - Inspect the evaporative chamber for clogging.
- Step 6
  - Perform a unit inspection of the fuel tank pressure sensor.
- Step 7—8
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VISUALLY VERIFY THAT THERE ARE NO TRACES OF FREEZING ON THE FUEL TANK PRESSURE SENSOR** • Visually inspect for fuel tank pressure sensor. • Can traces of freezing be verified on the fuel tank pressure sensor?	Yes	Evaporative gas freezes when the ambient temperature is low, and it is highly possible that the fuel tank pressure sensor measurement is affected because the vehicle was not refueled appropriately. • Replace the fuel, then go to Step 7.
		No	Go to Step 6.
2	**PURPOSE: INSPECTION OF CHARCOAL CANISTER FOR CLOGGING** • Inspect for clogging in the charcoal canister. (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to Step 7. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: DETERMINE INTEGRITY OF CV SOLENOID VALVE** • Inspect the CV solenoid valve. (See **CANISTER VENT (CV) SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the CV solenoid valve, then go to Step 7. (See **CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: INSPECTION OF EVAPORATIVE HOSE FOR BREAKAGE OR CLOGGING** • Inspect for breakage or clogging in the evaporative hose (hose between evaporative chamber and atmosphere). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 7.
		No	Go to the next step.
5	**PURPOSE: INSPECTION OF EVAPORATIVE CHAMBER FOR CLOGGING** • Inspect for clogging in the evaporative chamber. (See **EVAPORATIVE CHAMBER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the evaporative chamber, then go to Step 7. (See **EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

6	**PURPOSE: DETERMINE INTEGRITY OF FUEL TANK PRESSURE SENSOR** • Inspect the fuel tank pressure sensor. (See **FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to the next step. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Reconnect all the removed parts. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1 of the troubleshooting diagnostic procedure. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0452:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0452:00	Fuel tank pressure sensor low input
DETECTION CONDITION	• The PCM monitors the EVAP control system fuel tank pressure sensor input signal to the PCM. The test fails when the signal average drops below a minimum allowable calibrated parameter. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel tank pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Fuel tank pressure sensor terminal A—PCM terminal 2BB ▪ Fuel tank pressure sensor terminal C—PCM terminal 2Y • Fuel tank pressure sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: ▪ Fuel tank pressure sensor terminal A—PCM terminal 2BB ▪ Fuel tank pressure sensor terminal C—PCM terminal 2Y • Fuel tank pressure sensor malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL TANK PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel tank pressure sensor	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FUEL TANK PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel tank pressure sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Fuel tank pressure sensor terminal A ▪ Fuel tank pressure sensor terminal C • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel tank pressure sensor terminal A—PCM terminal 2BB • Fuel tank pressure sensor terminal C—PCM terminal 2Y **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL TANK PRESSURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the fuel tank pressure sensor and PCM connectors are disconnected. • Inspect for continuity between fuel tank pressure sensor terminals C and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel tank pressure sensor terminal C—PCM terminal 2Y • Fuel tank pressure sensor terminal B—PCM terminal 2AJ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short

			to each other. Go to Step 9.
		No	Go to the next step.
7	**INSPECT FUEL TANK PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel tank pressure sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel tank pressure sensor terminal A—PCM terminal 2BB ▪ Fuel tank pressure sensor terminal C—PCM terminal 2Y • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel tank pressure sensor terminal A—PCM terminal 2BB • Fuel tank pressure sensor terminal C—PCM terminal 2Y **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT FUEL TANK PRESSURE SENSOR** • Inspect the fuel tank pressure sensor. (See **FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to the next step. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0,**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	SKYACTIV-G 2.5].) • Is the same DTC present?		
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0453:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0453:00	Fuel tank pressure sensor high input
DETECTION CONDITION	• The PCM monitors the EVAP control system fuel tank pressure sensor input signal to the PCM. The test fails when the signal average jumps above a maximum allowable calibrated parameter. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel tank pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Fuel tank pressure sensor malfunction • Short to power supply in wiring harness between fuel tank pressure sensor terminal C and PCM terminal 2Y • Fuel tank pressure sensor power supply circuit and signal circuit are shorted to each other • Short to power supply in wiring harness between fuel tank pressure sensor terminal A and PCM terminal 2BB • Open circuit in wiring harness between fuel tank pressure sensor terminal B and PCM terminal 2AJ • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
FTP	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel tank pressure	• Displays fuel tank pressure
	V	Fuel tank pressure sensor voltage	• Fuel tank pressure is equal to barometric pressure: Approx. 2.6 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF FUEL TANK PRESSURE SENSOR OR WIRING HARNESS MALFUNCTION** • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the FTP PID value. • Is the FTP PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT FUEL TANK PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel tank pressure sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
6	**INSPECT FUEL TANK PRESSURE SENSOR** • Inspect the fuel tank pressure sensor. (See **FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to Step 12. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 12.
7	**DETERMINE IF FUEL TANK PRESSURE SENSOR SIGNAL CIRCUIT OR FUEL TANK PRESSURE SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the fuel tank pressure sensor connector.	Yes	Go to the next step.
		No	Go to Step 10.

	• Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the FTP PID value. • Is the FTP PID value **5 V** or **B+**?		
8	**INSPECT FUEL TANK PRESSURE SENSOR SIGNAL CIRCUIT FOR TO POWER SUPPY** • Verify that the fuel tank pressure sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel tank pressure sensor terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel tank pressure sensor terminal C and PCM terminal 2Y. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 12.
9	**INSPECT FUEL TANK PRESSURE SENSOR POWER SUPPLY CIRCUIT AND SIGNAL CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the fuel tank pressure sensor and PCM connectors are disconnected. • Inspect for continuity between fuel tank pressure sensor terminal A and C (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel tank pressure sensor terminal A—PCM terminal 2BB • Fuel tank pressure sensor terminal C—PCM terminal 2Y **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 12.
		No	Replace the PCM, then go to the Step 12. **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G**

			(See **2.5]**.)
10	**INSPECT FUEL TANK PRESSURE SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel tank pressure sensor connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel tank pressure sensor terminal A (wiring harness-side). • Is the voltage **5 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel tank pressure sensor terminal A and PCM terminal 2BB. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 12.
11	**INSPECT FUEL TANK PRESSURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel tank pressure sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between fuel tank pressure sensor terminal B (wiring harness-side) and PCM terminal 2AJ (wiring harness-side). • Is there continuity?	Yes	Replace the charcoal canister, then go to the next step. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel tank pressure sensor terminal B and PCM terminal 2AJ. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
12	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	(See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0454:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0454:00	Fuel tank pressure sensor intermittent malfunction

DETECTION CONDITION	• Any one of the following conditions is met:
	  ▪ The difference between the currently detected fuel tank pressure sensor input voltage and the previously detected input voltage is large.
	  ▪ The input voltage of the fuel tank pressure sensor remains low or high.
	Diagnostic support note
	• This is a continuous monitor (CCM).
	• The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle.
	• FREEZE FRAME DATA (Mode 2)/Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Wiring harness malfunction between PCM and fuel tank pressure sensor • Fuel tank pressure sensor malfunction ▪ Intermittent open or short circuit in the fuel tank pressure sensor or fuel tank pressure sensor signal • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT FUEL TANK PRESSURE SENSOR** • Switch the ignition off. • Inspect the fuel tank pressure sensor. (See **FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to the next step. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0457:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Fuel-filler cap installation malfunction	
DETECTION CONDITION	Determination conditions	• Hole of **0.09 in (2.25 mm) or more** in evaporative gas passage
	Preconditions	• Period ignition is switched off before engine starts: **120 min or more** • Engine coolant temperature at engine start: **1.67—43.00 °C {35.1—109.0 °F}** *1 • Time elapsed from engine start: **5.5—90 min** • Fuel level in fuel tank: **10—90 %** *1 • Desired ambient air temperature: **4.4—43.3 °C {40—109 °F}** *1 • Barometric pressure: **72.23 kPa {0.7365 kgf/cm^2, 10.48 psi} or more** *1 • Charging efficiency: **3—65 %** *1 • Vehicle speed: **64—144.8 km/h {40.00—89.97 mph}** *1 • When refueling (determines that refueling was performed by comparing fuel tank level before one drive cycle with fuel tank level at engine start) • *1: Value can be verified by displaying PIDs using M-MDS
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Fuel tank pressure sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check fuel cap warning light (DTC P0457:00 detected). • Illuminates check engine light (after two drive cycle since P0457:00 was detected).	
POSSIBLE CAUSE	• Missing or loose fuel filler cap • Fuel filler cap malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM closes the purge solenoid valve and CV solenoid valve while the vehicle is being driven, and seals the fuel tank. By opening the purge solenoid valve after sealing the fuel tank, evaporative gas in the fuel tank is inducted into the intake manifold, fuel tank

pressure is reduced, and the pressure change of the fuel tank is measured by the fuel tank pressure sensor. If the pressure of the fuel tank does not reach the target vacuum after the specified time has elapsed since the pressure was measured, the PCM determines that there is an evaporative gas leakage. If the PCM determines that refueling was performed before the engine starts, according to the result of the refueling determination, the PCM determines that the fuel-filler cap is open and stores DTC P0457:00 (if PCM determines that refueling is not performed, it stores DTC P0455:00).

- If the fuel tank level increases after the engine starts, the PCM determines that refueling is performed by comparing the fuel tank level before one drive cycle with the fuel tank level after engine start.

Repeatability Verification Procedure

- Set the remaining fuel quantity in the fuel tank between **30—85 %**.
- Verify that OBD-II information (such as FREEZE FRAME DATA (Mode 2)) has been obtained and recorded.
- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine and switch the ignition off after **5 s** have elapsed.
- Leave the vehicle for **6 hours or more**.
- Start the engine and leave it idling for **2 min**.
- Drive the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** (to increase temperature in fuel tank and generate evaporative gas).

  NOTE:

  - If driving the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** is not feasible, the vehicle can be driven for a continuous **15 min or more** with the engine coolant temperature at **80 °C {176 °F} or more**.
- Stop the engine.
- Leave the vehicle for **1 hours or more**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
FCL	Check fuel cap warning light illumination status	Off/On	• Check fuel cap warning light not illuminated: Off • Check fuel cap warning light illuminated: On

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY FUEL FILLER CAP MALFUNCTION** • Access the FCL PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FCL PID value On?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 2.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Verify that the driver forgot to close the fuel-filler cap.
- Step 2
  - Perform a unit inspection of the fuel filler cap.
- Step 3—4
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECTION OF EVAPORATIVE GAS LEAKAGE FROM FUEL-FILLER CAP** • Verify that the fuel-filler cap is completely closed. • Is the fuel-filler cap completely closed?	Yes	Go to the next step.
		No	Close the fuel-filler cap completely, then go to Step 3.
2	**PURPOSE: DETERMINE INTEGRITY OF FUEL FILLER CAP** • Inspect the fuel filler cap. • Is there any malfunction?	Yes	Replace the fuel filler cap, then go to the next step. (See **FUEL-FILLER PIPE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Reconnect all the removed parts. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1 of the troubleshooting diagnostic procedure. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0460:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0460:00	Fuel level sensor circuit malfunction
DETECTION CONDITION	• The PCM monitors the fuel tank level sensor output signal. If the difference between maximum and minimum value of input signal is **25 % or more** for **14 s**, the PCM determines that there is a fuel level sensor circuit malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Instrument cluster malfunction
	  ▪ Incorrectly installed fuel gauge
	  ▪ Fuel level input signal circuit malfunction
	• Fuel gauge sender unit malfunction
	• PCM malfunction

SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT NON-GENUINE ACCESSORY FOR MALFUNCTION** • Remove any non-genuine accessory. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Explain to the customer that the vehicle is normal. • Go to Step 8.
5	**VERIFY STORED DTC IN INSTRUMENT CLUSTER**	Yes	Go to the applicable DTC inspection.

	• Switch the ignition off, then ON (engine off). • Retrieve the instrument cluster DTC using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?		(See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
6	**INSPECT FUEL GAUGE SENDER UNIT** • Switch the ignition off. • Inspect the fuel gauge sender unit. (See **FUEL GAUGE SENDER UNIT INSPECTION**.) • Is there any malfunction?	Yes	Replace the fuel gauge sender unit, then go to the next step. (See **FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P0460:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P0461:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0461:00	Fuel gauge sender unit circuit range/performance problem
DETECTION CONDITION	• The change in the remaining fuel quantity in the fuel tank is **less than 5 %** when the amount of fuel consumption by fuel injection reaches **25 L {26 US qt, 22 Imp qt}**. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED**	Yes	Go to the next step.

	Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Inspect the fuel gauge sender unit. (See **FUEL GAUGE SENDER UNIT INSPECTION**.) • Is there any malfunction?	Yes	Replace the fuel gauge sender unit, then go to Step 5. (See **FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	RECORD capturing function and inspect later. • Drive the vehicle under the snapshot data condition. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0462:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0462:00	Fuel gauge sender unit circuit low input
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too low, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel gauge sender unit connector or terminals malfunction • Rear body control module (RBCM) connector or terminals malfunction • Short to ground in wiring harness between fuel gauge sender unit terminal D and rear body control module (RBCM) terminal 3I • Fuel gauge sender unit signal circuit and ground circuit are shorted to each other • Fuel gauge sender unit malfunction • Rear body control module (RBCM) malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

3	**INSPECT FUEL GAUGE SENDER UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel gauge sender unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL GAUGE SENDER UNIT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel gauge sender unit and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between fuel gauge sender unit terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between fuel gauge sender unit terminal D and rear body control module (RBCM) terminal 3I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL GAUGE SENDER**	Yes	Refer to the wiring diagram and verify whether or not there

	UNIT SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER • Verify that the fuel gauge sender unit and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between fuel gauge sender unit terminals D and C (wiring harness-side). • Is there continuity?		is a common connector between the following terminals: • Fuel gauge sender unit terminal D—Rear body control module (RBCM) terminal 3I • Fuel gauge sender unit terminal C—Rear body control module (RBCM) terminal 3C **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 10.
		No	Go to the next step.
7	**INSPECT FUEL GAUGE SENDER UNIT** • Inspect the fuel gauge sender unit. (See **FUEL GAUGE SENDER UNIT INSPECTION**.) • Is there any malfunction?	Yes	Replace the fuel gauge sender unit, then go to Step 10. (See **FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT REAR BODY CONTROL MODULE (RBCM)** • Inspect the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) INSPECTION**.) • Is there any malfunction?	Yes	Replace the rear body control module (RBCM), then go to Step 10. (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.)
		No	Go to the next step.
9	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster.	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

	(See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0463:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0463:00	Fuel gauge sender unit circuit high input
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too high, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel gauge sender unit connector or terminals malfunction • Rear body control module (RBCM) connector or terminals malfunction • Short to power supply in wiring harness between fuel gauge sender unit terminal D and rear body control module (RBCM) terminal 3I • Open circuit in wiring harness between the following terminals: ▪ Fuel gauge sender unit terminal D—Rear body control module (RBCM) terminal 3I ▪ Fuel gauge sender unit terminal C—Rear body control module (RBCM) terminal 3C • Fuel gauge sender unit malfunction • Rear body control module (RBCM) malfunction • Instrument cluster malfunction

	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

	information available?		
3	**INSPECT FUEL GAUGE SENDER UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel gauge sender unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL GAUGE SENDER UNIT SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel gauge sender unit and rear body control module (RBCM) connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the fuel gauge sender unit terminal D (wiring	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuel gauge sender unit terminal D and rear body control module (RBCM) terminal 3I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.

	harness-side). • Is the voltage **0 V**?		
6	**INSPECT FUEL GAUGE SENDER UNIT CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel gauge sender unit and rear body control module (RBCM) connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel gauge sender unit terminal D—Rear body control module (RBCM) terminal 3I ▪ Fuel gauge sender unit terminal C—Rear body control module (RBCM) terminal 3C • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel gauge sender unit terminal D—Rear body control module (RBCM) terminal 3I • Fuel gauge sender unit terminal C—Rear body control module (RBCM) terminal 3C **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
7	**INSPECT FUEL GAUGE SENDER UNIT** • Inspect the fuel gauge sender unit. (See **FUEL GAUGE SENDER UNIT INSPECTION**.) • Is there any malfunction?	Yes	Replace the fuel gauge sender unit, then go to Step 10. (See **FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT REAR BODY CONTROL MODULE (RBCM)**	Yes	Replace the rear body control module (RBCM), then go

	• Inspect the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) INSPECTION**.) • Is there any malfunction?		to Step 10. (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.)
		No	Go to the next step.
9	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0480:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0480:00	Cooling fan relay No.1 control circuit malfunction
DETECTION CONDITION	• The cooling fan relay No.1 control voltage at the PCM terminal 2AU is low or cooling fan relay No.1 control current is high for a continuous **5 s** relative to the PCM control signal. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Cooling fan relay No.1 malfunction
	• Short to ground or open circuit in cooling fan relay No.1 power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE3 15 A fuse and cooling fan relay No.1 terminal A
	  ▪ ENGINE3 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and cooling fan relay No.1 terminal A
	• Short to ground in wiring harness between cooling fan relay No.1 terminal E and PCM terminal 2AU
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between cooling fan relay No.1 terminal E and PCM terminal 2AU
	• Open circuit in wiring harness between cooling fan relay No.1 terminal E and PCM terminal 2AU
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT COOLING FAN RELAY NO.1** • Switch the ignition off. • Remove the cooling fan relay No.1. • Inspect the cooling fan relay No.1. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the cooling fan relay No.1, then go to Step 8.
		No	Go to the next step.
3	**INSPECT COOLING FAN RELAY NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Cooling fan relay No.1 is	Yes	Go to the next step.
		No	Inspect the ENGINE3 15 A fuse.

removed.

- Switch the ignition ON (engine off).
- Measure the voltage at the cooling fan relay No.1 terminal A (wiring harness-side).
- Is the voltage **B+**?

- If the fuse is blown:
  - Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE3 15 A fuse and cooling fan relay No.1 terminal A.

    If there is a common connector:

    - Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.
    - Repair or replace the malfunctioning part.

    If there is no common connector:

    - Repair or replace the wiring harness which has a short to ground.
    - Replace the fuse.
- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and cooling fan relay No.1 terminal A.

    If there is a common connector:

    - Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.
    - Repair or replace the malfunctioning part.

    If there is no common connector:

    - Repair or replace the wiring harness which has an open circuit.

			Go to Step 8.
4	**INSPECT COOLING FAN RELAY NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Cooling fan relay No.1 is removed. • Switch the ignition off. • Inspect for continuity between cooling fan relay No.1 terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between cooling fan relay No.1 terminal E and PCM terminal 2AU. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT COOLING FAN RELAY NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Cooling fan relay No.1 is removed. • Verify that the PCM connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between cooling fan relay No.1 terminal E and PCM terminal 2AU. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.

	cooling fan relay No.1 terminal E (wiring harness-side). • Is the voltage **0 V**?		
7	**INSPECT COOLING FAN RELAY NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Cooling fan relay No.1 is removed. • Verify that the PCM connector is disconnected. • Switch the ignition off. • Inspect for continuity between cooling fan relay No.1 terminal E (wiring harness-side) and PCM terminal 2AU (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between cooling fan relay No.1 terminal E and PCM terminal 2AU. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0482:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0482:00	Cooling fan relay No.2 and No.3 control circuit malfunction
DETECTION CONDITION	• The cooling fan relay No.2 and No.3 control voltage at the PCM terminal 2AV is low or cooling fan relay No.2 and No.3 control current is high for a continuous **5 s** relative to the PCM control signal. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Cooling fan relay No.2 and/or No.3 malfunction • Short to ground or open circuit in cooling fan relay No.2 and/or No.3 power supply circuit ▪ Short to ground in wiring harness between the following terminals: • ENGINE3 15 A fuse—Cooling fan relay No.2 terminal A • ENGINE3 15 A fuse—Cooling fan relay No.3 terminal A ▪ ENGINE3 15 A fuse malfunction ▪ Open circuit in wiring harness between the following terminals: • Main relay terminal D—Cooling fan relay No.2 terminal A • Main relay terminal D—Cooling fan relay No.3 terminal A • Short to ground in wiring harness between the following terminals: ▪ Cooling fan relay No.2 terminal E—PCM terminal 2AV ▪ Cooling fan relay No.3 terminal E—PCM terminal 2AV

- PCM connector or terminals malfunction
- Short to power supply in wiring harness between the following terminals:
    - Cooling fan relay No.2 terminal E—PCM terminal 2AV
    - Cooling fan relay No.3 terminal E—PCM terminal 2AV
- Open circuit in wiring harness between the following terminals:
    - Cooling fan relay No.2 terminal E—PCM terminal 2AV
    - Cooling fan relay No.3 terminal E—PCM terminal 2AV
- PCM malfunction

PCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT COOLING FAN RELAY NO.2 AND NO.3** • Switch the ignition off. • Remove the cooling fan relay No.2 and No.3. • Inspect the cooling fan relay No.2 and No.3. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the cooling fan relay No.2 and/or No.3, then go to Step 8.
		No	Go to the next step.
3	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Cooling fan relay No.2 and No.3 are removed. • Switch the ignition ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): ▪ Cooling fan relay No.2 terminal A ▪ Cooling fan relay No.3 terminal A • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE3 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • ENGINE3 15 A fuse—Cooling fan relay No.2 terminal A • ENGINE3 15 A fuse—Cooling fan relay No.3 terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and

the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.

- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:
    - Main relay terminal D—Cooling fan relay No.2 terminal A
    - Main relay terminal D—Cooling fan relay No.3 terminal A

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and

			the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
4	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Cooling fan relay No.2 and No.3 are removed. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Cooling fan relay No.2 terminal E ▪ Cooling fan relay No.3 terminal E • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Cooling fan relay No.2 terminal E—PCM terminal 2AV ▪ Cooling fan relay No.3 terminal E—PCM terminal 2AV **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring

			harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Cooling fan relay No.2 and No.3 are removed. • Verify that the PCM connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ Cooling fan relay No.2 terminal E ▪ Cooling fan relay No.3	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Cooling fan relay No.2 terminal E—PCM terminal 2AV • Cooling fan relay No.3 terminal E—PCM terminal 2AV **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.

	terminal E • Is the voltage **0 V**?		
7	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Cooling fan relay No.2 and No.3 are removed. • Verify that the PCM connector is disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Cooling fan relay No.2 terminal E—PCM terminal 2AV ▪ Cooling fan relay No.3 terminal E—PCM terminal 2AV • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Cooling fan relay No.2 terminal E—PCM terminal 2AV • Cooling fan relay No.3 terminal E—PCM terminal 2AV **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0500:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0500:00	VSS circuit problem
DETECTION CONDITION	• An error in the wheel speed signal from the DSC HU/CM is detected by CAN when the following conditions are met: ▪ Neutral switch and CPP switch: OFF (MTX) ▪ Shift position: except P or N position (ATX) ▪ Absolute load: **above 40 %** ▪ Engine speed: **above 2,000 rpm** ▪ Brake switch: OFF **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the vehicle speed for the control at **0 km/h {0 mph}**.
POSSIBLE CAUSE	• DSC HU/CM malfunction • Front ABS wheel-speed sensor malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
RPM	RPM	Engine speed	• Displays engine speed

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

		No	Go to the next step.
3	**VERIFY STORED DTC IN DSC HU/CM** • Retrieve the DSC HU/CM DTC using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Access the RPM and LOAD PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Drive the vehicle under the following conditions for **14 s**. ▪ Absolute load: **above 40 %** ▪ Engine speed: **above 2,000 rpm** • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0,**

	• Are any DTCs present?		**SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0504:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0504:00	Brake switch circuit problem
DETECTION CONDITION	• The condition in which the brake switch No.1 and No.2 signals are both on or off for **3 s or more** is repeated five times when performing the brake operation. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	**CAUTION:**
	• Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.
	• Brake switch connector or terminals malfunction
	• Short to ground or open circuit in brake switch No.1 power supply circuit
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and brake switch terminal A
	  ▪ MAIN 200 A fuse and/or STOP 10 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and brake switch terminal A
	• Open circuit in wiring harness between brake switch terminal B and body ground
	• Short to ground in wiring harness between the following terminals:
	  ▪ Brake switch terminal D—PCM terminal 2G
	  ▪ Brake switch terminal C—PCM terminal 2R
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Brake switch terminal D—PCM terminal 2G
	  ▪ Brake switch terminal C—PCM terminal 2R

	Open circuit in wiring harness between the following terminals: ▪ Brake switch terminal D—PCM terminal 2G ▪ Brake switch terminal C—PCM terminal 2R • Brake switch malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

	availability. • Is any related repair information available?	No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0703:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0703:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
5	**INSPECT BRAKE SWITCH NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the brake switch connector is disconnected. • Measure the voltage at the brake switch terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and STOP 10 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and brake switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short

			to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If all fuses are normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and brake switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 12.
6	**INSPECT BRAKE SWITCH NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake switch connector is disconnected. • Inspect for continuity	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between brake switch terminal B and body ground. **If there is a common connector:**

	between brake switch terminal B (wiring harness-side) and body ground. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between brake switch and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 12.
7	**INSPECT BRAKE SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the brake switch connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Brake switch terminal D ▪ Brake switch terminal C • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Brake switch terminal D—PCM terminal 2G ▪ Brake switch terminal C—PCM terminal 2R **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 12.
		No	Go to the next step.

8	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
9	**INSPECT BRAKE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ Brake switch terminal D ▪ Brake switch terminal C • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Brake switch terminal D—PCM terminal 2G • Brake switch terminal C—PCM terminal 2R **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 12.
10	**INSPECT BRAKE SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Brake switch	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Brake switch terminal D—PCM terminal 2G • Brake switch terminal C—PCM terminal 2R **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	terminal D—PCM terminal 2G ▪ Brake switch terminal C—PCM terminal 2R • Is there continuity?		• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 12.
11	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See **BRAKE SWITCH INSPECTION**.) • Is there any malfunction?	Yes	Replace the brake switch, then go to the next step. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)
		No	Go to the next step.
12	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off). • After depressing the brake pedal for **3 s or more**, perform the operation of depressing and releasing the brake pedal **5 times**. • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P0504:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P0506:00, P151B:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0506:00	IAC system RPM lower than expected
DTC P151B:00	IAC system problem
DETECTION CONDITION	**DTC P0506:00** • The actual idle speed is lower than expected by **100 rpm** for **14 s**, when the brake pedal is depressed (brake switch is on). **NOTE:** • If the atmospheric pressure is **less than 72.3 kPa {0.737 kgf/cm^2, 10.5 psi}** or the intake air temperature is **below −10 °C {14 °F}**, the PCM cancels the diagnosis of DTC P0506:00. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory. **DTC P151B:00** • The PCM cannot control the idle speed toward the target idle speed during the KOER self test. **Diagnostic support note** • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available.

	DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• A/C magnetic clutch malfunction • Drive-by-wire control system malfunction • Malfunction in injection amount measurement system (refer to DTC P0101:00) • Purge solenoid valve malfunction • Air cleaner element restricted • Throttle body passage blockage • Engine malfunction ▪ Insufficient engine compression • Generator control circuit malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ALTF	%	Field coil current control signal output to generator	• Ignition switched ON (engine off): 0% • Idle: Approx. 42% • Racing (Engine speed is 2,000 rpm): Approx. 29%
ALTT V	V	Generator output voltage	• Idle (no E/L): Approx. 14 V (This is internal calculation value and differs from terminal voltage)
	V	TP sensor No.1 voltage	• Accelerator pedal released: Approx. 1.11 V

TP1			• Accelerator pedal fully depressed: Approx. 4.59 V
	%	Throttle valve position No.1	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 92%
TP2	V	TP sensor No.2 voltage	• Accelerator pedal released: Approx. 3.92 V • Accelerator pedal fully depressed: Approx. 0.41 V
	%	Throttle valve position No.2	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 82%

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	DTCs present?		
4	**INSPECT A/C MAGNETIC CLUTCH OPERATION** • Turn the fan switch off. • Is the magnetic clutch still on?	Yes	Perform the symptom troubleshooting "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM MALFUNCTION** • Perform the Drive-by-wire Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 11. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine is running. • Does the engine speed increase?	Yes	Clean or replace the air cleaner element, then go to Step 11.
		No	Go to the next step.
8	**INSPECT THROTTLE BODY PASSAGE** • Visually inspect the throttle body passage. • Is the throttle body passage dirty and/or restricted?	Yes	Clean or replace the throttle body passage, then go to Step 11. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.

	Are compression pressures within specification?
	
	Specification:
	
	• Compression [SKYACTIV-G 2.0]
	  ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)**
	  ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)**
	  ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**)
	• Compression [SKYACTIV-G 2.5]
	  ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)**
	  ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)**
	  ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**)
	
	NOTE:
	
	• Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		

10	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Apply the electrical load (such as blower fan, rear window defroster, or headlight). • Does the engine speed increase?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM**

	(See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Depress the brake pedal for **14 s or more**. • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE and/or DTC for this DTC present?		**REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0507:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0507:00	IAC system RPM higher than expected
DETECTION CONDITION	• The actual idle speed is higher than expected by **200 rpm** for **14 s**, when the brake pedal is depressed (brake switch is on). **NOTE:** ▪ If the atmospheric pressure is **less than 72.3 kPa {0.737 kgf/cm^2, 10.5 psi}** or the intake air temperature is **below −10 °C {14 °F}**, the PCM cancels the diagnosis of DTC P0507:00. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Vacuum hose not installed correctly • Drive-by-wire control system malfunction ▪ Throttle valve malfunction (stuck open) • Malfunction in injection amount measurement system (refer to DTC P0101:00) • Purge solenoid valve malfunction (stuck open) (in this case, the PCM records DTC P0443:00.) • PCM malfunction

SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONNECTION** • Visually inspect the vacuum hoses connection. (See **INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Reconnect the vacuum hoses correctly, then go to Step 6.
		No	Go to the next step.
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM MALFUNCTION** • Perform the Drive-by-wire Control System Inspection.	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.

	(See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Depress the brake pedal for **14 s or more.** • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P050A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Cold start IAC system performance problem	
DETECTION CONDITION	Determination conditions	• The difference between the actual engine speed and the target engine speed is **100 rpm or more**.
	Preconditions	• Engine speed: **500 rpm or more**[*1] • Engine coolant temperature: **0—45 °C {32—113 °F}**[*1] • Catalytic converter estimated temperature: **380 °C {716 °F} or less**[*1] • Vehicle speed: **0 km/h {0 mph}**[*1] • The following DTCs are not detected: ▪ ECT sensor No.1 malfunction: P0116:00, P0117:00, P0118:00 ▪ MAP sensor malfunction: P0069:00, P0107:00, P0108:00 ▪ BARO sensor malfunction: P2228:00, P2229:00 ▪ Instrument cluster malfunction: P2610:00 • [*1]: Value can be verified by displaying PIDs using M-MDS

	Malfunction determination period	• **9 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• CKP sensor • ECT sensor No.1
FAIL-SAFE FUNCTION	• Limits intake air amount • Stops high pressure fuel pump control	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• Air suction in intake air system • Drive-by-wire control system malfunction • Throttle valve malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM calculates the target engine speed appropriate to the engine conditions relative to the actual engine speed based on the CKP sensor signal and provides feedback to the drive-by-wire control (idling speed control). If the actual engine speed is **lower or higher than 100 rpm** relative to the target engine speed during cold-engine idling, the PCM determines a malfunction in the idling speed control, and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
ETC_ACT	Actual throttle valve opening angle	°	**Ignition switched ON (engine off)** • Accelerator pedal released: Approx. 12.89 ° • Accelerator pedal fully depressed: Approx. 86.03 ° **Idle (after warm up)** • Accelerator pedal released: Approx. 3.2 °

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P050A:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:**

			Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
5	**PURPOSE: VERIFICATION IF MALFUNCTION CAUSED BY THROTTLE VALVE** • Switch the ignition ON (engine off). • Access the ETC_ACT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • While gradually depressing the accelerator pedal, verify that PID monitor ETC_ACT value increases. • Does the monitor value change according to the amount the accelerator pedal is depressed?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 2.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Perform an intake air system parts inspection.
- Step 2
  - Perform a throttle valve related inspection.
- Step 3—4
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION** • Inspect the following parts of the intake air system for looseness, damage, and loss. ▪ Between air cleaner and throttle body ▪ Between throttle body and intake manifold • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 3.
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF THROTTLE VALVE** • Inspect the throttle valve. (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Clean the throttle valve, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		
4	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P050B:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P050B:00	Cold start ignition timing performance problem
DETECTION CONDITION	• PCM internal RAM malfunction. **Diagnostic support note** • This is a continuous monitor (cold start emission reduction strategy monitoring). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• PCM internal RAM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST**	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2).

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is the DTC P050B:00 on FREEZE FRAME DATA (Mode 2)?		(See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (cold start emission reduction strategy monitoring related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P050B:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P0520:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0520:00	Oil pressure switch circuit problem
DETECTION CONDITION	• The oil pressure switch is off for a continuous **5 s** even though the engine is stopped. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Oil pressure switch connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between oil pressure switch terminal A and PCM terminal 1P • Oil pressure switch malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT OIL PRESSURE SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the oil pressure switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.

4	**INSPECT OIL PRESSURE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the oil pressure switch and PCM connectors are disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and PCM terminal 1P (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between oil pressure switch terminal A and PCM terminal 1P. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT OIL PRESSURE SWITCH** • Inspect for continuity between oil pressure switch terminal A (part-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Replace the oil pressure switch, then go to the next step. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0524:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0524:00	Engine oil pressure too low
DETECTION CONDITION	• The oil pressure switch is on for a continuous **5 s** with the following condition met: (engine oil warning light illuminates when **1 s** has elapsed) ▪ When engine speed is **above 650 rpm** and engine coolant temperature is **30 °C {86 °F} or less** ▪ When engine speed is **above 1,500 rpm** and engine coolant temperature is **68 °C {154 °F} or less** ▪ When engine speed is **above 2,500 rpm** and engine coolant temperature is **68 °C {154 °F} or more** **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Engine oil leakage • Improper engine oil level • Oil pressure switch connector or terminals malfunction • Short to ground in wiring harness between oil pressure switch terminal A and PCM terminal 1P • PCM connector or terminals malfunction • Oil pressure switch malfunction • Oil pump malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ENGINE OIL LEAKAGE** • Start the engine. • Verify that there is no engine oil leakage in the hydraulic circuit. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then add genuine motor oil. Go to Step 8.
		No	Go to the next step.
3	**INSPECT ENGINE OIL LEVEL** • Inspect the engine oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the engine oil level sufficient?	Yes	Go to the next step.
		No	Add genuine motor oil, then go to the next step. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4	**INSPECT OIL PRESSURE SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the oil pressure switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT OIL PRESSURE SWITCH CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the oil pressure switch connector is disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between oil pressure switch terminal A and PCM terminal 1P. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT ENGINE OIL PRESSURE** • Inspect the engine oil pressure. (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the oil pump, then go to the next step. (See **OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the oil pressure switch, then go to the next step. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.

	MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Increase and keep the engine speed at **2,500 rpm** for **5 s**. • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0532:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0532:00	Refrigerant pressure sensor circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from the refrigerant pressure sensor. If the input voltage at the PCM terminal 2AX is **below 0.1 V** for **5 s**, the PCM determines that the refrigerant pressure sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Refrigerant pressure sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Refrigerant pressure sensor terminal A—PCM terminal 2BB ▪ Refrigerant pressure sensor terminal B—PCM terminal 2AX • PCM connector or terminals malfunction • Refrigerant pressure sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between refrigerant pressure sensor terminal A and PCM terminal 2BB • Refrigerant pressure sensor malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT REFRIGERANT PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the refrigerant pressure sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
3	**INSPECT REFRIGERANT PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the refrigerant	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the

	pressure sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Refrigerant pressure sensor terminal A ▪ Refrigerant pressure sensor terminal B • Is there continuity?		following terminals: ▪ Refrigerant pressure sensor terminal A—PCM terminal 2BB ▪ Refrigerant pressure sensor terminal B—PCM terminal 2AX **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 8.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT REFRIGERANT PRESSURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the refrigerant pressure sensor and PCM connectors are disconnected. • Inspect for continuity between refrigerant pressure sensor terminals B and C (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Refrigerant pressure sensor terminal B—PCM terminal 2AX • Refrigerant pressure sensor terminal C—PCM terminal 2AJ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a

			short to each other. Go to Step 8.
		No	Go to the next step.
6	**INSPECT REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Verify that the refrigerant pressure sensor and PCM connectors are disconnected. • Inspect for continuity between refrigerant pressure sensor terminal A (wiring harness-side) and PCM terminal 2BB (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between refrigerant pressure sensor terminal A and PCM terminal 2BB. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**INSPECT REFRIGERANT PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is there any malfunction?	Yes	Replace the refrigerant pressure sensor, then go to the next step. (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR	Yes	Go to the applicable DTC inspection. **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**

	PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?		(See .)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0533:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0533:00	Refrigerant pressure sensor circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from the refrigerant pressure sensor. If the input voltage at the PCM terminal 2AX is **above 4.9 V** for **5 s**, the PCM determines that the refrigerant pressure sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Refrigerant pressure sensor connector or terminals malfunction
	• PCM connector or terminals malfunction
	• Refrigerant pressure sensor malfunction
	• Short to power supply in wiring harness between refrigerant pressure sensor terminal B and PCM terminal 2AX
	• Open circuit in wiring harness between the following terminals:
	  ▪ Refrigerant pressure sensor terminal B—PCM terminal 2AX
	  ▪ Refrigerant pressure sensor terminal C—PCM terminal 2AJ
	• PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
AC_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Refrigerant pressure input from refrigerant pressure sensor	• Displays refrigerant pressure
	V	Refrigerant pressure sensor voltage	• Refrigerant pressure is 1.0 MPa {10 kgf/cm^2, 145 psi}: Approx. 1.58 V • Refrigerant pressure is 1.1 MPa {11 kgf/cm^2, 160 psi}: Approx. 1.75 V • Refrigerant pressure is 1.2 MPa {12 kgf/cm^2, 174 psi}: Approx. 1.88 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY**	Yes	Perform repair or diagnosis according to the available repair information.

	• Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?		• If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**DETERMINE IF REFRIGERANT PRESSURE SENSOR OR WIRING HARNESS MALFUNCTION** • Access the AC_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the AC_PRES PID value. • Is the AC_PRES PID value **5 V** or **B+**?	Yes	Go to Step 6.
		No	Go to the next step.
3	**INSPECT REFRIGERANT PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the refrigerant pressure sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT REFRIGERANT PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is there any malfunction?	Yes	Replace the refrigerant pressure sensor, then go to Step 9. (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Go to Step 9.
6	**DETERMINE IF REFRIGERANT PRESSURE SENSOR SIGNAL CIRCUIT OR REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition off. • Disconnect the refrigerant pressure sensor connector.	Yes	Go to the next step.
		No	Go to Step 8.

	• Access the AC_PRES PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the AC_PRES PID value. • Is the AC_PRES PID value **5 V** or **B+**?		
7	**INSPECT REFRIGERANT PRESSURE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the refrigerant pressure sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between refrigerant pressure sensor terminal B (wiring harness-side) and PCM terminal 2AX (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between refrigerant pressure sensor terminal B and PCM terminal 2AX. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between refrigerant pressure sensor terminal B and PCM terminal 2AX. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the refrigerant pressure sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between refrigerant pressure sensor terminal C (wiring harness-side) and PCM terminal 2AJ (wiring harness-side). • Is there continuity?	Yes	Replace the refrigerant pressure sensor, then go to the next step. (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between refrigerant pressure sensor terminal C and PCM terminal 2AJ. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the

			common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P057F:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Power system: Battery deterioration	
DETECTION CONDITION	Determination conditions	• The battery charge/discharge flow exceeds the specification.
	Preconditions	• Not applicable
	Drive cycle	• **1**
	Self test type	• CMDTC self test
	Sensor used	• Current sensor
FAIL-SAFE FUNCTION	• Inhibits the i-ELOOP control.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates master warning light • The engine cannot be started or the engine may stall due to battery voltage decrease.	
POSSIBLE CAUSE	• Battery malfunction • Current sensor malfunction • Front body control module (FBCM) malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The battery assures voltage for engine starting and for the vehicle's electrical devices when the vehicle is being driven. If the frequency of battery charging/discharging is high, the battery will deteriorate which could result in poor engine startability and the loss of assured supply voltage to the vehicle’s electrical load.
- The current sensor sends a battery charge/discharge value to the PCM via the front body control module (FBCM). If the accumulated charge/discharge value exceeds the specified value, the PCM determines battery deterioration. In this case, the PCM determines a malfunction in a battery-related part and stores a DTC.

Repeatability Verification Procedure

- Start the engine.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
BATT_DAY	Number of days elapsed since current sensor initialization	—	• Displays vehicle battery days in service.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF BATTERY VOLTAGE IS FALSELY RECOGNIZED**	Yes	Go to the applicable PENDING CODE or DTC

	BY DTC RELATED CURRENT SENSOR • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P058A:00 also present?		inspection. (See **DTC P058A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF BATTERY VOLTAGE IS FALSELY RECOGNIZED BY DTC RELATED CAN OR LIN COMMUNICATION** • Perform the PCM and front body control module (FBCM) DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Are DTCs related CAN or LIN communication recorded?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.) Go to the next step
		No	Go to the next step
4	**PURPOSE: VERIFY IF A MALFUNCTION OCCURRED DUE TO FAILURE OF PERFORMING THE BATTERY INITIAL SETTING** • Access the BATT_DAY PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Has it only been a	Yes	Verify the battery replacement record (servicing record or consultation with customer), and if it can be determined that the battery initial setting was not performed, perform the battery initial setting. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

	short while since the battery was replaced?		

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Replace the battery.
- Step 2—3
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: REPLACE THE BATTERY** • Replace the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the Operation After Replacing Battery (With i-ELOOP).	—	Go to the next step.
2	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Perform the Operation After Replacing Battery (With i-ELOOP). (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repeat the inspection from Step 2. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	• Is the same DTC present?		
3	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P058A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Current sensor: Function malfunction	
DETECTION CONDITION	Determination conditions	• Error signal from the current sensor is received.
	Preconditions	• Not applicable
	Malfunction determination period	• **5 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• Current sensor
FAIL-SAFE FUNCTION	• Inhibits the i-ELOOP control.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates master warning light • A warning message is displayed on the center display. (Type A instrument cluster) • Illuminates charging system warning light. (Type B or type C instrument cluster) • The engine cannot be started or the engine may stall due to battery voltage decrease.	
POSSIBLE CAUSE	• Connector or terminal malfunction of the following parts: ▪ Current sensor ▪ Front body control module (FBCM) ▪ PCM • Short to ground or open circuit in current sensor power supply circuit ▪ Short to ground in wiring harness between battery positive terminal and current sensor terminal A ▪ MAIN 200 A fuse and/or ENG+B 7.5 A fuse malfunction ▪ Open circuit in wiring harness between battery positive terminal and current sensor terminal A • Short to ground in wiring harness between the following terminals: ▪ Current sensor terminal B—Front body control module (FBCM) terminal 2E ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Short to power supply in wiring harness between the following terminals: ▪ Battery positive terminal—Current sensor terminal A	

	▪ Current sensor terminal B—Front body control module (FBCM) terminal 2E ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Open circuit in wiring harness between the following terminals: ▪ Current sensor terminal B—Front body control module (FBCM) terminal 2E ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Current sensor malfunction • Front body control module (FBCM) malfunction • PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- The current sensor detects the battery condition and sends the battery condition signal to the PCM via the FBCM. The PCM receives the battery condition signal from the current sensor and controls the battery. If the current sensor malfunctions, the battery is constantly charged because battery control is lost, which could cause the fuel economy to worsen.
- The current sensor performs self-diagnosis on the battery voltage, battery fluid temperature and internal circuit, and if the PCM receives a malfunction signal from the current sensor, it stores a DTC.

Repeatability Verification Procedure

- Start the engine.
- Wait for **10 s** (idle).

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF CURRENT SENSOR MALFUNCTION IS FALSELY RECOGNIZED BY DTC RELATED CAN OR LIN COMMUNICATION** • Switch the ignition off, then ON (engine off). • Perform the PCM and front body control module (FBCM) DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Are DTCs related CAN or LIN communication recorded?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF CURRENT SENSOR MALFUNCTION IS FALSELY RECOGNIZED BY DTC RELATED TO FRONT BODY CONTROL MODULE (FBCM)** • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—6
  - Perform inspection of each signal transmission system.

Step 7

- Perform a unit inspection of the current sensor.

- Step 8—9
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION

1	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS**
	NOTE:
	• Always disconnect current sensor connector before disconnecting the negative battery cable.
	• Switch the ignition off.
	• Disconnect the connector of the following parts.
	  ▪ Current sensor
	  ▪ Front body control module (FBCM)
	  ▪ PCM
	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion).
	• Is there any malfunction?
		Yes	Repair or replace the connector and/or terminals, then go to Step 8.

		No	Go to the next step.

2	**PURPOSE: VERIFY IF OPEN CIRCUIT OR SHORT TO GROUND IN CURRENT SENSOR POWER SUPPLY CIRCUIT AFFECTS DIAGNOSTIC RESULTS**
	• Verify that the current sensor, front body control module (FBCM) and PCM connectors are disconnected.
	• Measure the voltage at the current sensor terminal A (wiring harness-side).
	• Is the voltage **0 V**?
		Yes	Inspect the MAIN 200 A fuse and ENG+B 7.5 A fuse.
			• If the fuse is blown:
			  ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and current sensor terminal A.
			  If there is a common connector:
			  • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.
			  • Repair or replace the malfunctioning part.
			  If there is no common connector:
			  • Repair or replace the wiring harness which has a short to ground.
			  • Replace the malfunctioning fuse.
			• If the fuse is damaged:
			  ▪ Replace the malfunctioning fuse.
			• If all fuses are normal:
			  ▪ Refer to the wiring diagram and verify whether or not there is a common

			connector between battery positive terminal and current sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF SHORT TO GROUND IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the current sensor, front body control module (FBCM) and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Current sensor terminal B ▪ Front body control module (FBCM) terminal 2P ▪ Front body control module (FBCM) terminal 2N • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Current sensor terminal B—Front body control module (FBCM) terminal 2E • Front body control module (FBCM) terminal 2P—PCM terminal 2AK • Front body control module (FBCM) terminal 2N—PCM terminal 2AL **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF SHORT TO POWER SUPPLY IN CURRENT SENSOR POWER SUPPLY CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the current sensor, front body control module (FBCM) and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** ▪ Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the current sensor terminal A (wiring harness-	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and current sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.

	side). • Is the voltage **above B+**?	No	Go to the next step.
5	**PURPOSE: VERIFY IF SHORT TO POWER SUPPLY IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the current sensor, front body control module (FBCM) and PCM connectors are disconnected. • Measure the voltage at the following terminals (wiring harness-side): ▪ Current sensor terminal B ▪ Front body control module (FBCM) terminal 2P ▪ Front body control module (FBCM) terminal 2N • Is the voltage **0 V**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Current sensor terminal B—Front body control module (FBCM) terminal 2E • Front body control module (FBCM) terminal 2P—PCM terminal 2AK • Front body control module (FBCM) terminal 2N—PCM terminal 2AL **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF OPEN CIRCUIT IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the current sensor, front body control module (FBCM) and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Current sensor terminal B—Front body control module (FBCM) terminal 2E ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Current sensor terminal B—Front body control module (FBCM) terminal 2E • Front body control module (FBCM) terminal 2P—PCM terminal 2AK • Front body control module (FBCM) terminal 2N—PCM terminal 2AL **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**PURPOSE: DETERMINE INTEGRITY OF CURRENT SENSOR** • Inspect the current sensor. (See **CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the current sensor, then go to the next step. (See **CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0,**

	• Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		**SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P059F:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P059F:00	Active air shutter: Opening angle abnormality (spinning free)
DETECTION CONDITION	• Active air shutter opening angle is certain value or more. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Performs fully open/closed position learning function three times.
POSSIBLE CAUSE	• Active air shutter malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY**	Yes	Perform repair or diagnosis according to the

	• Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?		available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO ACTIVE AIR SHUTTER** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC U0284:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC U0284:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT ACTIVE AIR SHUTTER** • Inspect the active air shutter. (See **ACTIVE AIR SHUTTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the active air shutter, then go to the next step. (See **ACTIVE AIR SHUTTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Drive the vehicle at **10 km/h {6.2 mph} or more** for **approx. 1 min**. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	Is the PENDING CODE and/or DTC for this DTC present?		
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P05A0:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P05A0:00	Active air shutter: Opening angle abnormality (sticking)
DETECTION CONDITION	• Active air shutter opening angle is certain value or less while intake air temperature is **5 °C {41 °F} or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Performs fully open/closed position learning function three times.
POSSIBLE CAUSE	• Foreign matter caught in active air shutter • Active air shutter malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO ACTIVE AIR SHUTTER** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC U0284:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC U0284:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY IF FOREIGN MATTER IS LODGED** • Verify if the active air shutter has lodged foreign matter. • Has the active air shutter lodged any foreign matter?	Yes	Remove the foreign matter, then go to Step 6.
		No	Go to the next step.
5	**INSPECT ACTIVE AIR SHUTTER** • Inspect the active air shutter. (See **ACTIVE AIR SHUTTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the active air shutter, then go to the next step. (See **ACTIVE AIR SHUTTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Drive the vehicle at **10 km/h**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	{6.2 mph} or more for **approx. 1 min**. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE and/or DTC for this DTC present?		
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P05A3:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P05A3:00	Active air shutter: Actuator internal malfunction

DETECTION CONDITION	• Any of the following conditions is met:
	  ▪ Internal circuit of active air shutter actuator is malfunctioning
	  ▪ Active air shutter Hall sensor is malfunctioning
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	• Turns master warning light on. • Stops active air shutter control
POSSIBLE CAUSE	• Active air shutter malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA	Yes	Go to the next step.

	(Mode 2)/snapshot data been recorded?	No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO ACTIVE AIR SHUTTER** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC U0284:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC U0284:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT ACTIVE AIR SHUTTER** • Inspect the active air shutter. (See **ACTIVE AIR SHUTTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the active air shutter, then go to the next step. (See **ACTIVE AIR SHUTTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Drive the vehicle at **10 km/h {6.2 mph} or more** for **approx. 1 min**. • Perform the Pending Trouble	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is DTC P05A3:00 or pending code displayed?		
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P05C0:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P05C0:00	Active air shutter: Actuator temperature abnormality
DETECTION CONDITION	• Internal temperature of active air shutter actuator is certain value or more. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Turns master warning light on. • Stops active air shutter control.
POSSIBLE CAUSE	• Engine overheating • Active air shutter malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
	VERIFY RELATED REPAIR INFORMATION		

2	**AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO ACTIVE AIR SHUTTER** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC U0284:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC U0284:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY ENGINE CONDITION** • Verify the engine condition. • Is the engine overheating?	Yes	Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT ACTIVE AIR SHUTTER** • Inspect the active air shutter. (See **ACTIVE AIR SHUTTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the active air shutter, then go to the next step. (See **ACTIVE AIR SHUTTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.

	• Drive the vehicle at **10 km/h {6.2 mph} or more** for **approx. 1 min**. • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0600:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0600:00	Serial communication link
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

	information available?	No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0601:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0601:00	PCM memory check sum error
DETECTION CONDITION	• PCM internal memory check sum error. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM malfunction ▪ PCM internal memory malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY**	Yes	Perform repair or diagnosis according to the

	• Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?		available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0602:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0602:00	PCM programming error
DETECTION CONDITION	• No configuration data in the PCM. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Configuration has not been completed • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins	Yes	Perform repair or diagnosis according to the available repair information.

	and/or on-line repair information availability. • Is any related repair information available?		• If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**PERFORM PCM CONFIGURATION (USING READ/WRITE FUNCTION)** • Perform the PCM configuration (using read/write function). (See **PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Go to the next step.
		No	Go to Step 6.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Perform the PCM configuration (using read/write function) again. (See **PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction recurs, perform the PCM configuration (using as-built data). (See **PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors.	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-**

	• Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		**G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0604:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0604:00	PCM RAM error
DETECTION CONDITION	• PCM internal RAM malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM malfunction ▪ PCM internal RAM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY**	Yes	Perform repair or diagnosis according to the

	• Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?		available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

	information available?	No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0610:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0610:00	PCM vehicle configuration error
DETECTION CONDITION	• PCM data configuration error. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Configuration procedure has not been completed • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins	Yes	Perform repair or diagnosis according to the available repair information.

	and/or on-line repair information availability. • Is any related repair information available?		• If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**PERFORM PCM CONFIGURATION (USING READ/WRITE FUNCTION)** • Perform the PCM configuration (using read/write function). (See **PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Go to the next step.
		No	Go to Step 6.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Perform the PCM configuration (using read/write function) again. (See **PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction recurs, perform the PCM configuration (using as-built data). (See **PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors.	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-**

	• Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		**G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P061B:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P061B:00	Internal control module torque calculation performance problem
DETECTION CONDITION	• Indicates an error occurred in the PCM. • There is a malfunction in the sensor input signal to the PCM. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins	Yes	Perform repair or diagnosis according to the available repair information.

	and/or on-line repair information availability. • Is any related repair information available?		• If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”.	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G**

	(See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?		**2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P061D:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P061D:00	Internal control module engine air mass performance problem
DETECTION CONDITION	• Indicates an error occurred in the PCM. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• PCM connector or terminals malfunction • Software incompatibility issue • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins	Yes	Perform repair or diagnosis according to the available repair information.

	and/or on-line repair information availability. • Is any related repair information available?		• If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 5.
		No	Go to the next step.
4	**INSPECT PCM FOR LATEST CALIBRATION** • Reconnect all disconnected connectors. • Program the PCM to the latest calibration. • Use the customer information to recreate the concern. • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P061F:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P061F:00	Internal control module throttle valve actuator controller performance problem

DETECTION CONDITION	• When any of the following conditions is met:
	  ▪ Start stop unit internal malfunction
	  ▪ CAN communication line malfunction between start stop unit and PCM
	  ▪ PCM internal malfunction
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• CAN communication line malfunction between start stop unit and PCM
	  ▪ Start stop unit terminal 2M—Front body control module (FBCM) terminal 2K
	  ▪ Start stop unit terminal 2O—Front body control module (FBCM) terminal 2I
	  ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK
	  ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL
	• Start stop unit connector or terminals malfunction
	• PCM connector or terminals malfunction
	• Start stop unit malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the start stop unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 5.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0628:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0628:00	Fuel pump control module circuit low input
DETECTION CONDITION	• When the PCM outputs a duty signal to the fuel pump control module, the difference in voltage between fuel pump unit terminals A and B is **less than 1.5 V** for a continuous **5 s**. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Fuel pump unit connector or terminals malfunction • Fuel pump unit malfunction • Fuel pump control module connector or terminals malfunction • Short to ground in wiring harness between fuel pump unit terminal A and fuel pump control module terminal 2C • Open circuit in wiring harness between the following terminals: ▪ Fuel pump unit terminal A—Fuel pump control module terminal 2C ▪ Fuel pump unit terminal B—Fuel pump control module terminal 2D • Fuel pump control module malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

2	**INSPECT FUEL PUMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel pump unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
3	**INSPECT FUEL PUMP UNIT** • Inspect the fuel pump unit. (See **FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 8. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT FUEL PUMP UNIT CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pump unit and fuel pump control module connectors are disconnected. • Inspect for continuity between fuel pump unit terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between fuel pump unit terminal A and fuel pump control module terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
6	**INSPECT FUEL PUMP UNIT CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump unit and fuel pump control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Fuel pump unit terminal A—Fuel pump control module terminal 2C ▪ Fuel pump unit terminal B—Fuel pump control module terminal 2D • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel pump unit terminal A—Fuel pump control module terminal 2C • Fuel pump unit terminal B—Fuel pump control module terminal 2D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**INSPECT FUEL PUMP CONTROL MODULE** • Inspect the fuel pump control module. (See **FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See **FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0629:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0629:00	Fuel pump control module circuit high input
DETECTION CONDITION	• The PCM detects over-current during the fuel pump control module control. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops fuel pump control
POSSIBLE CAUSE	• Fuel pump unit connector or terminals malfunction • Fuel pump unit malfunction • Fuel pump control module connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: ▪ Fuel pump unit terminal A—Fuel pump control module terminal 2C ▪ Fuel pump unit terminal B—Fuel pump control module terminal 2D • Fuel pump control module malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

2	**INSPECT FUEL PUMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the fuel pump unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
3	**INSPECT FUEL PUMP UNIT** • Inspect the fuel pump unit. (See **FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 7. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FUEL PUMP UNIT CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel pump unit and fuel pump control module connectors are disconnected. • Switch the ignition ON (engine off). • Measure the voltage at the following terminals (wiring harness-side): ▪ Fuel pump	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Fuel pump unit terminal A—Fuel pump control module terminal 2C • Fuel pump unit terminal B—Fuel pump control module terminal 2D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and

	unit terminal A ▪ Fuel pump unit terminal B • Is the voltage **0 V**?		the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT FUEL PUMP CONTROL MODULE** • Inspect the fuel pump control module. (See **FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See **FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

	• Are any DTCs present?		

2014 - Mazda3 - Engine

DTC P0638:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0638:00	Throttle valve actuator control range/performance problem
DETECTION CONDITION	• The PCM compares the actual TP with the target TP. If the difference is more than the threshold value, the PCM determines that there is a throttle valve actuator control range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Open circuit in wiring harness between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Throttle valve actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC P0638:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Throttle body terminal E ▪ Throttle body terminal F • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO POWER SUPPLY**	Yes	Go to the next step.

	• Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Is the voltage **0 V**?	No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal E—PCM terminal 1CG • Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
8	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal E—PCM terminal 1CG • Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT THROTTLE VALVE** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL**	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is there any malfunction?		
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P064D:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Details On DTCs

DESCRIPTION	Internal control module A/F sensor processor performance problem	
DETECTION CONDITION	Determination conditions	• Malfunction in A/F sensor signal circuit in PCM occurs.
	Preconditions	• Battery voltage: **11—18 V**[*1] • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **0.1 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• PCM
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- If there is communication error between the A/F signal control driver and the CPU, the PCM stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 2
  - Verify if malfunctioning part is PCM.
- Step 3
  - Verify that there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM**	Yes	Replace the PCM, then go to the next

	• Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0685:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0685:00	Main relay control circuit open
DETECTION CONDITION	• The period of time in which the PCM power supply remains on after the ignition is switched off is not within the specified time. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Main relay malfunction
	• Short to ground or open circuit in main relay power supply circuit:
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and main relay terminal C
	  ▪ MAIN 200 A fuse and/or ENG.MAIN 40 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and main relay terminal C
	• ENGINE2 15 A fuse malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Main relay terminal D—PCM terminal 2S
	  ▪ Main relay terminal D—PCM terminal 2T
	• PCM connector or terminals malfunction
	• Open circuit in wiring harness between PCM terminal 1BZ and body ground
	• Open circuit in wiring harness between PCM terminal 2AA and body ground
	• Open circuit in wiring harness between the following terminals:
	  ▪ Main relay terminal D—PCM terminal 2S
	  ▪ Main relay terminal D—PCM terminal 2T
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

	data been recorded?		
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAIN RELAY** • Switch the ignition off. • Remove the main relay. • Inspect the main relay. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the main relay, then go to Step 10.
		No	Go to the next step.
4	**INSPECT MAIN RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Main relay is removed. • Measure the voltage at the main relay terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG.MAIN 40 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and main relay terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If all fuses are normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and main relay terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part.

			If there is no common connector: • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
5	**INSPECT ENGINE2 15 A FUSE** • Remove the ENGINE2 15 A fuse. • Inspect the ENGINE2 15 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Main relay terminal D—PCM terminal 2S ▪ Main relay terminal D—PCM terminal 2T **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the fuse. If the fuse is damaged: • Replace the fuse. Go to Step 10.
		No	Reinstall the ENGINE2 15 A fuse, then go to the next step.
6	**INSPECT PCM POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Main relay is removed. • Inspect for continuity between main relay terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Main relay terminal D—PCM terminal 2S ▪ Main relay terminal D—PCM terminal 2T **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.

	connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
8	**INSPECT PCM GROUND CIRCUIT FOR OPEN CIRCUIT** • Main relay is removed. • Verify that the PCM connector is disconnected. • Inspect for continuity between the following harnesses: ▪ PCM terminal 1BZ (wiring harness-side)—Body ground ▪ PCM terminal 2AA (wiring harness-side)—Body ground • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • PCM terminal 1BZ (wiring harness-side)—Body ground • PCM terminal 2AA (wiring harness-side)—Body ground **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between PCM and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 10.
9	**INSPECT PCM POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Main relay is removed. • Verify that the PCM connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Main relay terminal D—PCM terminal 2S ▪ Main relay terminal D—PCM terminal 2T • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Main relay terminal D—PCM terminal 2S • Main relay terminal D—PCM terminal 2T **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P06B8:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P06B8:00	Internal control module non-volatile RAM error
DETECTION CONDITION	• PCM internal EEPROM malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM internal EEPROM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability.	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

	• Is any related repair information available?	No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P06DA:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P06DA:00	Engine oil solenoid valve circuit problem
DETECTION CONDITION	• The engine oil solenoid valve control current is high or the control voltage at the PCM terminal 1AS is low relative to the PCM control condition. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits the engine oil control.

POSSIBLE CAUSE	• Engine oil solenoid valve connector or terminals malfunction
	• Short to ground or open circuit in engine oil solenoid valve power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and engine oil solenoid valve terminal A
	  ▪ ENGINE2 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and engine oil solenoid valve terminal A
	• Short to ground in wiring harness between engine oil solenoid valve terminal B and PCM terminal 1AS
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between engine oil solenoid valve terminal B and PCM terminal 1AS
	• Open circuit in wiring harness between engine oil solenoid valve terminal B and PCM terminal 1AS
	• Engine oil solenoid valve malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ENGINE OIL SOLENOID VALVE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the engine oil solenoid valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
3	**INSPECT ENGINE OIL SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the engine oil solenoid valve connector is disconnected.	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown:

	• Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the engine oil solenoid valve terminal A (wiring harness-side). • Is the voltage **B+**?		▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and engine oil solenoid valve terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and engine oil solenoid valve terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
4	**INSPECT ENGINE OIL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the engine oil solenoid valve connector is disconnected. • Switch the ignition off. • Inspect for continuity between engine oil solenoid valve terminal B (wiring harness-side) and body ground.	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between engine oil solenoid valve terminal B and PCM terminal 1AS. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin

	• Is there continuity?		disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT ENGINE OIL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the engine oil solenoid valve and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the engine oil solenoid valve terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between engine oil solenoid valve terminal B and PCM terminal 1AS. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
7	**INSPECT ENGINE OIL SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the engine oil solenoid valve and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between engine oil solenoid valve terminal B (wiring harness-side) and PCM terminal 1AS (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between engine oil solenoid valve terminal B and PCM terminal 1AS. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open

			circuit. Go to Step 9.
8	**INSPECT ENGINE OIL SOLENOID VALVE** • Inspect the engine oil solenoid valve. (See **ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the engine oil solenoid valve, then go to the next step. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0703:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0703:00	Brake switch input circuit problem
DETECTION CONDITION	• The brake switch does not switch even though the vehicle is stopped **8 times** repeatedly from a vehicle speed of **30 km/h {19 mph} or more**. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	**CAUTION:** • Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one. • Brake switch connector or terminals malfunction • Short to ground or open circuit in brake switch No.1 power supply circuit ▪ Short to ground in wiring harness between MAIN 200 A fuse and brake switch terminal A ▪ MAIN 200 A fuse and/or STOP 10 A fuse malfunction ▪ Open circuit in wiring harness between battery positive terminal and brake switch terminal A • Short to ground in wiring harness between brake switch terminal D and PCM terminal 2G • PCM connector or terminals malfunction • Short to power supply in wiring harness between brake switch terminal D and PCM terminal 2G • Open circuit in wiring harness between brake switch terminal D and PCM terminal 2G • Brake switch No.1 malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.

4	**INSPECT BRAKE SWITCH NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the brake switch connector is disconnected. • Measure the voltage at the brake switch terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and STOP 10 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and brake switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If all fuses are normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and brake switch terminal A. **If there is a**

			common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
5	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the brake switch connector is disconnected. • Inspect for continuity between brake switch terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between brake switch terminal D and PCM terminal 2G. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring

			harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the brake switch terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between brake switch terminal D and PCM terminal 2G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
8	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between brake switch terminal D (wiring harness-side) and PCM terminal 2G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between brake switch terminal D and PCM terminal 2G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 10.
9	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See **BRAKE SWITCH INSPECTION**.) • Is there any malfunction?	Yes	Replace the brake switch, then go to the next step. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Drive the vehicle at a vehicle speed of **30 km/h {19 mph} or more 8 times**. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	DTC present?		
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0704:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0704:00	CPP switch input circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage from the CPP switch. If the PCM does not detect a voltage change while the vehicle runs with vehicle speed **above 30 km/h {19 mph}** and stops **8 times** alternately, the PCM determines that the CPP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	**CAUTION:** • Inspect the CPP switch with it installed to the clutch pedal, otherwise the CPP switch may not operate normally after inspection. If the CPP switch is removed from the clutch pedal, replace the CPP switch with a new one. • CPP switch connector or terminals malfunction • Foreign object lodged between clutch switch plunger and clutch pedal contact surface • CPP switch malfunction • Open circuit in wiring harness between CPP switch terminal B and body ground • Short to ground in wiring harness between CPP switch terminal A and PCM terminal 2J • PCM connector or terminals malfunction • Open circuit in wiring harness between CPP switch terminal A and PCM terminal 2J • Driver continues to depress clutch pedal causing mistaken detection by PCM • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CPP SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**VERIFY IF MALFUNCTION OCCURS DUE TO FOREIGN OBJECT LODGED BETWEEN CLUTCH SWITCH PLUNGER AND CLUTCH PEDAL CONTACT SURFACE** • Visually verify the area between the clutch switch plunger and clutch pedal contact surface.	Yes	Remove the foreign object, then go to the next step.
		No	Go to the next step.

	• Is there a lodged foreign object?		
5	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See **CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the CPP switch, then go to Step 11. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
		No	Go to the next step.
6	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between CPP switch terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between CPP switch and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 11.
7	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between CPP switch terminal A and PCM terminal 2J. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit).

			(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 11.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
9	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the CPP switch and PCM connectors are disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and PCM terminal 2J (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between CPP switch terminal A and PCM terminal 2J. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
10	**VERIFY THAT THERE IS NO PROBLEM WITH CUSTOMER CLUTCH PEDAL OPERATION** • Is the clutch pedal depressed after operating the shift lever during a traffic jam?	Yes	Explain to the customer that it is necessary to remove the foot from the clutch pedal completely after operating the shift lever. Go to the next step.
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Operate the clutch pedal while driving the vehicle **above 30 km/h {19 mph}** and stopping **8 times** alternately. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0850:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P0850:00	Neutral switch input circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage from the neutral switch. If the PCM does not detect a voltage change while driving the vehicle at a vehicle speed **above 30 km/h {19 mph}** and the clutch pedal is pressed and released **10 times** repeatedly, the PCM determines that the neutral switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Neutral switch connector or terminals malfunction • Neutral switch malfunction • Open circuit in wiring harness between neutral switch terminal B and body ground • Short to ground in wiring harness between neutral switch terminal A and PCM terminal 1K • PCM connector or terminals malfunction • Open circuit in wiring harness between neutral switch terminal A and PCM terminal 1K • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT NEUTRAL SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the neutral switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

4	**INSPECT NEUTRAL SWITCH** • Inspect the neutral switch. (See **NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the neutral switch, then go to Step 9. (See **NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
		No	Go to the next step.
5	**INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the neutral switch connector is disconnected. • Inspect for continuity between neutral switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between neutral switch terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between neutral switch and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 9.
6	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the neutral switch connector is disconnected. • Inspect for continuity between neutral switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between neutral switch terminal A and PCM terminal 1K. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 9.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	No	Go to the next step.
8	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the neutral switch and PCM connectors are disconnected. • Inspect for continuity between neutral switch terminal A (wiring harness-side) and PCM terminal 1K (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between neutral switch terminal A and PCM terminal 1K. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle **above 30 km/h {19 mph}** and stop the vehicle. • Depress and release the clutch pedal **more than 10 times** during drive cycle. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0A12:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	DC-DC converter: low input/output	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ Any DC-DC converter terminal value, either 3A or 4A, is specified value or less ▪ Ignition switch ON condition detected by DC-DC converter and PCM differ
	Preconditions	• Not applicable
	Drive cycle	• **1**
	Self test type	• CMDTC self test
	Sensor used	• Not applicable
FAIL-SAFE FUNCTION	• Depending on the type of malfunction, any of the following controls may be implemented. ▪ Transition to i-ELOOP bypass mode. ▪ i-ELOOP bypass mode inhibited.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• A warning message is displayed on the center display. (Type A instrument cluster) • Illuminates charging system warning light. (Type B or type C instrument cluster) • If the vehicle continues to be driven while the DTC is detected the battery will be depleted. ▪ A malfunction occurs with an electrical device and the vehicle stops. • The following vehicle conditions differ depending on the type of malfunction:	

	▪ Pre-charge warning is displayed.
POSSIBLE CAUSE	• Connector or terminal malfunction of the following parts: ▪ PCM ▪ Generator ▪ Battery ▪ Capacitor (i-ELOOP) ▪ DC-DC converter ▪ Electric load part connected to C/U IG1 15 A fuse • Malfunction in the following fuses: ▪ STARTER 250 A fuse • Short to ground in wiring harness between the following terminals: ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A ▪ Capacitor (i-ELOOP) terminal 3A—DC-DC converter terminal 3A ▪ Battery positive terminal—DC-DC converter terminal 4A ▪ IG1 relay terminal C—DC-DC converter terminal 1H (DTC P1628:11 may be detected simultaneously) ▪ IG1 relay terminal C—Generator terminal 2C (DTC P1628:11, P2503:00 may be detected simultaneously) ▪ Electric load part connected to C/U IG1 15 A fuse—C/U IG1 15 A fuse • Open circuit in wiring harness between the following terminals: ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A ▪ Capacitor (i-ELOOP) terminal 3A—DC-DC converter terminal 3A ▪ Battery positive terminal—DC-DC converter terminal 4A ▪ IG1 relay terminal C—DC-DC converter terminal 1H (DTC P1628:11 may be detected simultaneously) ▪ Electric load part connected to C/U IG1 15 A fuse—C/U IG1 15 A fuse • DC-DC converter malfunction • PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- When the charge/discharge circuit for the power supplying the vehicle is normal, the vehicle will operate normally.In this diagnostic, a malfunction in the DC-DC converter output line is detected, and verification of vehicle malfunctions/safety assurance is performed.

Repeatability Verification Procedure

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.

- Leave for **180 s** while idling with no electrical load.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF POWER SUPPLY IS AFFECTED BY DTC RELATED TO DC-DC CONVERTER** • Switch the ignition off, then ON (engine off). • Perform the DC-DC converter DTC inspection using the M-MDS. (See **DTC INSPECTION [i-ELOOP]**.) • Is the PENDING CODE/DTC U3000:49 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC U3000:49 [i-ELOOP]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF POWER SUPPLY IS AFFECTED BY DTC RELATED TO DC-DC CONVERTER** • Perform the DC-DC converter DTC inspection using the M-MDS. (See **DTC INSPECTION [i-ELOOP]**.) • Is the PENDING CODE/DTC P1628:11 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P1628:11 [i-ELOOP]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: DETERMINE IF MALFUNCTION CAUSED BY DC-DC CONVERTER** • Start the engine. • Is “i-ELOOP charging. Stop the vehicle and wait a minute” displayed in the LCD?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
5	**PURPOSE: DETERMINE LOCATION OF MALFUNCTION OCCURRENCE FROM BLOWN STARTER 250 A FUSE** • Switch the ignition off. • Inspect the STARTER 250 A fuse.	Yes	Go to the troubleshooting procedure to perform the procedure from Step 4.
		No	Go to the troubleshooting procedure to perform the procedure from Step 6.

	Is the STARTER 250 A fuse blown?		

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—3
  - Verifying malfunction related to DC-DC converter 3A terminal
- Step 4—6
  - Verifying malfunction related to DC-DC converter 4A terminal
- Step 7—8
  - Verifying/replacing malfunctioning part
- Step 9—10
  - Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY IF SHORT TO GROUND IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Disconnect the connector of the following parts. ▪ Generator ▪ DC-DC converter ▪ Capacitor (i-ELOOP) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Generator terminal 1A ▪ Capacitor (i-ELOOP) terminal 2A ▪ Capacitor (i-ELOOP) terminal 3A ▪ DC-DC	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A • Capacitor (i-ELOOP) terminal 3A—DC-DC converter terminal 3A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 3.
		No	Go to the next step.

	converter terminal 3A • Is there continuity?		
2	**PURPOSE: VERIFY IF OPEN CIRCUIT IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the generator, capacitor (i-ELOOP), and DC-DC converter connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A ▪ Capacitor (i-ELOOP) terminal 3A—DC-DC converter terminal 3A • Is there continuity?	Yes	Go to Step 6.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A • Capacitor (i-ELOOP) terminal 3A—DC-DC converter terminal 3A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
3	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Start the engine. • Is "i-ELOOP charging? Stop the vehicle and wait a minute" displayed in the LCD, and the master warning light illuminated after **approx. 3 min**?	Yes	**NOTE:** • A fuse is blown in the capacitor (i-ELOOP) due to excess current can be considered. Replace the capacitor (i-ELOOP). (See **CAPACITOR (i-ELOOP) REMOVAL/INSTALLATION [i-ELOOP]**.) Go to Step 9.
		No	Go to Step 9.
4	**PURPOSE: VERIFY IF SHORT TO GROUND IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Disconnect the DC-DC converter	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Battery positive terminal—DC-DC converter terminal 4A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or

	connector. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ DC-DC converter terminal 4A • Is there continuity?		pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Replace the STARTER 250 A fuse. Go to Step 9.
		No	Go to the next step.
5	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Repelace the STARTER 250 A fuse. • Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Start the engine. • Inspect the STARTER 250 A fuse. • Is the STARTER 250 A fuse blown?	Yes	Replace the STARTER 250 A fuse and DC-DC converter. (See **DC-DC CONVERTER REMOVAL/INSTALLATION [i-ELOOP]**.) Go to Step 9.
		No	Go to Step 9.
6	**PURPOSE: VERIFY IF OPEN CIRCUIT IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Disconnect the DC-DC converter connector. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Battery positive terminal—DC-DC converter terminal 4A • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Battery positive terminal—DC-DC converter terminal 4A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
	PURPOSE: VERIFY IF MALFUNCTION		

7	**OCCURRING IS CAUSED BY WIRING HARNESS/CONNECTOR LOSS** • Have all the wiring harnesses/connectors which can be considered the cause of DTC P0A12:00 been inspected?	Yes	Go to the next step.
		No	Inspect all the related wiring harnesses/connectors. **If there is a malfunction** • Repair or replace the connector and/or terminals, then go to Step 9. **If there is no malfunction** • Go to the next step.
8	**PURPOSE: VERIFY DC-DC CONVERTER REPLACEMENT RECORD** • Is the DC-DC converter being replaced within the troubleshooting diagnostic procedure this time?	Yes	Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Replace the DC-DC converter. (See **DC-DC CONVERTER REMOVAL/INSTALLATION [i-ELOOP]**.) Go to the next step.
9	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 7.
		No	Go to the next step.
10	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P0A12:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P0A8D:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Power supply system circuit low input	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ PCM terminal voltage is **6.2 V or less** when engine starts. ▪ Battery internal resistance is specified value or more. ▪ Battery voltage is **11 V or less** after 30 s since system began switch to relay mode
	Preconditions	• Not applicable
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Current sensor
FAIL-SAFE FUNCTION	• Inhibits the i-ELOOP control.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates master warning light. • The engine cannot be started or the engine may stall due to battery voltage decrease.	
	• Battery malfunction • Connector or terminal malfunction of the following parts: ▪ Battery ▪ Current sensor	

POSSIBLE CAUSE	▪ PCM ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Malfunction in the following fuses: ▪ C/U IG1 15 A fuse • Short to ground in wiring harness between the following terminals: ▪ IG1 relay terminal C—DC-DC converter terminal 1H ▪ DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A • Open circuit in wiring harness between the following terminals: ▪ IG1 relay terminal C—DC-DC converter terminal 1H ▪ DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A • Current sensor malfunction • Front body control module (FBCM) malfunction • DC-DC converter malfunction • PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- The PCM assures engine startability and power during driving based on control of the battery related parts.
- The PCM detects the battery voltage during engine starting and the battery internal resistance based on the current sensor signal, and if the battery voltage during engine starting is low or the battery internal resistance is high, it determines that there is a malfunction in the battery related parts and stores a DTC.

Repeatability Verification Procedure

- Start the engine.
- After leaving for **30 s** with the engine idling and no electrical load, leave for **60 s** at the maximum electrical load (**50 A or more**).

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification

BATT_CUR	Battery current	A	• Displays battery charge/discharge current value
VPWR	Battery positive voltage	V	• Displays battery voltage

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF POWER SUPPLY IS AFFECTED BY DTC RELATED TO DC-DC CONVERTER** • Switch the ignition off, then ON (engine off). • Perform the DC-DC converter DTC inspection using the M-MDS. (See **DTC INSPECTION [i-ELOOP]**.) • Are any DTCs present?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [i-ELOOP]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF BATTERY VOLTAGE IS FALSELY RECOGNIZED BY DTC RELATED CURRENT SENSOR** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P058A:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P058A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF BATTERY VOLTAGE IS FALSELY RECOGNIZED BY DTC RELATED CAN OR LIN COMMUNICATION** • Perform the PCM and front body control module (FBCM) DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Are DTCs related CAN or LIN communication	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.) Go to the next troubleshooting procedure to perform the procedure from step 1.

	recorded?	No	Go to the next troubleshooting procedure to perform the procedure from step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Perform a unit inspection of the battery.
- Step 2—5
  - Perform the inspection for each power supply line.
- Step 6—7
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the battery, then go to Step 6. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Disconnect the connector of the following parts. ▪ Battery ▪ Current sensor ▪ PCM ▪ Capacitor (i-ELOOP)	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.

	▪ DC-DC converter • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
3	**PURPOSE: INSPECT FUSE** • Remove the following fuses: ▪ C/U IG1 15 A fuse • Inspect the following fuses: ▪ C/U IG1 15 A fuse • Are all the fuses normal?	Yes	Install all the removed fuses, then go to the next step.
		No	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal C and DC-DC converter terminal 1H. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the malfunctioning fuse. If the fuse is damaged: • Replace the malfunctioning fuse. Go to Step 6.
4	**PURPOSE: VERIFY IF SHORT TO GROUND IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery,	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:

	current sensor, PCM, capacitor (i-ELOOP), and DC-DC converter connectors are disconnected. • Remove the IG1 relay. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ IG1 relay terminal C ▪ DC-DC converter terminal 3A • Is there continuity?		• IG1 relay terminal C—DC-DC converter terminal 1H • DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
5	**PURPOSE: VERIFY IF OPEN CIRCUIT IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • IG1 relay is removed. • Verify that the battery, current sensor, PCM, capacitor (i-ELOOP), and DC-DC converter connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ IG1 relay terminal C—DC-DC converter terminal 1H ▪ DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • IG1 relay terminal C—DC-DC converter terminal 1H • DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION**	Yes	Repeat the inspection from Step 1.

	• Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		• If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P0A8F:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Power system: Low input	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ Battery voltage is **11 V or less** when ignition is switched off after leaving vehicle for **30 days or more**. ▪ Battery voltage is **11 V or less** for a continuous **5 days** when ignition is switched off.
	Preconditions	• Difference in battery voltage for **30 min** since ignition was switched off is specified value or less • Electrical current from battery for **30 min** since ignition was switched off is within specified value
	Drive cycle	• **2**
	Self test type	• CMDTC self test
	Sensor used	• Current sensor
FAIL-SAFE FUNCTION	• Inhibits the i-ELOOP control.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates master warning light. • The engine cannot be started or the engine may stall due to battery voltage decrease.	

POSSIBLE CAUSE	• Battery malfunction • Current sensor malfunction • Front body control module (FBCM) malfunction • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The battery assures voltage for engine starting and while the vehicle is being driven. (Addition necessary for both domestic and overseas)
- The PCM determines a dendrite malfunction by the condition in which the battery voltage value continues to be low for the specified time. In this case, the PCM determines a malfunction in a battery-related part and stores a DTC.

Repeatability Verification Procedure

- Start the engine

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
	PURPOSE: VERIFY IF BATTERY VOLTAGE IS		

2	**FALSELY RECOGNIZED BY DTC RELATED CURRENT SENSOR** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P058A:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P058A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF BATTERY VOLTAGE IS FALSELY RECOGNIZED BY DTC RELATED CAN OR LIN COMMUNICATION** • Perform the PCM and front body control module (FBCM) DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Are DTCs related CAN or LIN communication recorded?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY DTC** • Retrieve the PCM DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC P058A:00 also present?	Yes	Replace the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Perform a unit inspection of the battery.
- Step 2—3

- Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the battery, then go to the next step. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P0A8F:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P0A94:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	DC-DC converter: control circuit signal error	
DETECTION CONDITION	Determination conditions	**With i-ELOOP** • Internal malfunction signal from DC-DC converter is received. • Condition in which DC-DC converter output voltage, based on demand voltage of PCM, is low continues. • When PCM outputs drive command signal for each type of relay in DC-DC converter, relay condition signal returned from DC-DC converter differs from drive command, or not returned
	Preconditions	• Not applicable
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Not applicable
FAIL-SAFE FUNCTION	• The following fail-safe differ depending on the type of malfunction ▪ Transition to i-ELOOP bypass mode. ▪ i-ELOOP bypass mode inhibited.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• The following vehicle conditions differ depending on the type of malfunction ▪ Illuminates master warning light ▪ Illuminates charging system warning light ▪ The pre-charge mode is implemented after the engine is started.	
	With i-ELOOP • Connector or terminal malfunction of the following parts: ▪ PCM	

POSSIBLE CAUSE	▪ Battery ▪ DC-DC converter • Short to ground in wiring harness between the following terminals: ▪ DC-DC converter terminal 1G—PCM terminal 2W ▪ DC-DC converter terminal 1I—PCM terminal 2L • Open circuit in wiring harness between the following terminals: ▪ DC-DC converter terminal 1G—PCM terminal 2W ▪ DC-DC converter terminal 1I—PCM terminal 2L • DC-DC converter malfunction (DTC U3000:49 may be detected simultaneously) • PCM malfunction

System Wiring Diagram

With i-ELOOP

Function Explanation (DTC Detection Outline)

With i-ELOOP

- With the DC-DC converter function, the PCM performs malfunction determination, and verification of vehicle malfunctions/safety assurance is performed.
    - The DC-DC converter is equipped with a voltage lowering function which supplies power to the **12 V** line from the **25 V** line. If this function does not operate, it may not be possible to supply power to the vehicle's electrical devices. In this diagnostic, the system detects whether the DC-DC converter can respond to the command voltage from the PCM, or it detects a malfunction in the voltage lowering circuit based on the on-board diagnostic of the DC-DC converter.
    - The DC-DC converter is equipped with a discharge circuit which discharges a certain amount of capacitor (i-ELOOP) voltage when the ignition is switched off. If this function does not operate, the capacitor (i-ELOOP) may deteriorate. In this diagnostic, a discharge circuit malfunction condition is detected in the DC-DC converter, and a malfunction is determined by the PCM.
    - The DC-DC converter is equipped with a bypass circuit which supplies voltage generated by the generator to the **12 V** line. If this function does not operate, a power supply shortage may occur. In this diagnostic, a bypass circuit malfunction condition is detected in the DC-DC converter, and a malfunction is determined by the PCM. In addition, a malfunction is determined by the PCM from a mismatch with the response signal of the DC-DC converter in relation to the bypass relay drive command signal from the PCM.
    - The DC-DC converter monitors the input/output voltage and the output current, and the PCM performs charge/discharge control of the generator based on each of the signals to assure the vehicle's power supply. If the output current of the DC-DC converter exceeds the assurance value of the internal circuit, or each input/output value indicates an abnormal value, normal supply of electricity may not be possible. In this diagnostic, each input/output terminal of the DC-DC converter is detected as an abnormal value/exceeding assurance value, and a malfunction is determined by the PCM.

Repeatability Verification Procedure

With i-ELOOP

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.
- Leave for **30 s** while idling with no electrical load.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis

- Not applicable

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY**	Yes	Perform repair or diagnosis according to the

	Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?		available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF POWER SUPPLY IS AFFECTED BY DTC RELATED TO DC-DC CONVERTER** • Switch the ignition off, then ON (engine off). • Perform the DC-DC converter DTC inspection using the M-MDS. (See **DTC INSPECTION [i-ELOOP]**.) • Is the PENDING CODE/DTC U3000:49 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC U3000:49 [i-ELOOP]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF POWER SUPPLY IS AFFECTED BY DTC RELATED TO PCM** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0A12:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0A12:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: DETERMINE IF MALFUNCTION CAUSED BY DC-DC CONVERTER** • Start the engine. • Is illuminate the master warning light?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 3.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Verifying malfunction related to DC-DC converter 1G or 1I terminal
- Step 3—4
  - Verifying/replacing malfunctioning part
- Step 5—6
  - Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY IF SHORT TO GROUND IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS**	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:

	Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Disconnect the connector of the following parts. ▪ PCM ▪ DC-DC converter • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ DC-DC converter terminal 1G ▪ DC-DC converter terminal 1I • Is there continuity?		PCM terminal 2W—DC-DC converter terminal 1G • PCM terminal 2L—DC-DC converter terminal 1I **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF OPEN CIRCUIT IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the DC-DC converter and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ PCM terminal 2W—DC-DC converter terminal 1G ▪ PCM terminal 2L—DC-DC converter terminal 1I • Is there continuity?	Yes	Replace the DC-DC converter. (See **DC-DC CONVERTER REMOVAL/INSTALLATION [i-ELOOP]**.) Go to Step 5.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • PCM terminal 2W—DC-DC converter terminal 1G • PCM terminal 2L—DC-DC converter terminal 1I **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 5.
3	**PURPOSE: VERIFY IF MALFUNCTION OCCURRING IS CAUSED BY WIRING HARNESS/CONNECTOR LOSS** • Have all the wiring	Yes	Go to the next step.
		No	Inspect all the related wiring harnesses/connectors.

	harnesses/connectors which can be considered the cause of DTC P0A94:00 been inspected?		**If there is a malfunction** • Repair or replace the connector and/or terminals, then go to Step 5. **If there is no malfunction** • Go to the next step.
4	**PURPOSE: VERIFY DC-DC CONVERTER REPLACEMENT RECORD** • Is the DC-DC converter being replaced within the troubleshooting diagnostic procedure this time?	Yes	Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Replace the DC-DC converter. (See **DC-DC CONVERTER REMOVAL/INSTALLATION [i-ELOOP]**.) Go to the next step.
5	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 3.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P0A94:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P111A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P111A:00	Engine coolant temperature is high
DETECTION CONDITION	• The engine coolant temperature is **122 °C {252 °F} or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Limits intake air amount
POSSIBLE CAUSE	• Cooling system malfunction • High engine speed condition continues • ECT sensor malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine	Yes	Go to the applicable PENDING CODE or DTC inspection.

	off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?		(See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT VEHICLE CONDITION FOR EFFECT ON MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: ▪ Engine speed is high and remains high for continuous long periods like when climbing a long steep grade. • Is the engine generating excessive heat when driven?	Yes	Go to the next step.
		No	Go to Step 5.
4	**DETERMINE IF MALFUNCTION CAUSE IS OVERHEATING OR OTHER** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Is the ECT PID value **less than 122 °C {252 °F}** while the vehicle is driven on a flat road?	Yes	Explain to the customer that the vehicle is normal. Go to Step 6.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to the next step. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Drive the vehicle. • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P117A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P117A:00	Engine oil temperature is high

DETECTION CONDITION	• Any one of the following conditions is met:
	  ▪ With the transmission in 5th gear or lower gear, an engine speed of **6,100 rpm** (SKYACTIV-G 2.0)/**5,800 rpm** (SKYACTIV-G 2.5) **or more** continues for **6 min**.
	  ▪ The estimated engine oil temperature **exceeds 140 °C {284 °F}** continues for **6 min** (with active air shutter).
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	• Limits intake air amount
POSSIBLE CAUSE	• High engine speed condition continues • Active air shutter close malfunction (with active air shutter) • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

	availability. • Is any related repair information available?	No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0335:00, P059F:00, P05A0:00, P05A3:00, P05C0:00 or U0284:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0335:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P059F:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P05A0:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P05A3:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P05C0:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC U0284:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT VEHICLE CONDITION FOR EFFECT ON MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: • Does the engine speed exceed **6,100 rpm** (SKYACTIV-G 2.0)/**5,800 rpm** (SKYACTIV-G 2.5) for **6 min or more** while driving in 5th gear or lower gear?	Yes	Explain to the customer that the vehicle is normal (performs control to protect the engine due to continuous engine speed exceeding **6,100 rpm** (SKYACTIV-G 2.0)/**5,800 rpm** (SKYACTIV-G 2.5) for **6 min or more** while in 5th gear or lower gear). If there is a concern with customer's driving, provide the customer some pertinent advice (such as gear selection, how to use manual mode). Go to the next step.
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	warm it up completely. • Drive the vehicle. • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P1260:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P1260:00	Immobilizer system problem
DETECTION CONDITION	• The start stop unit detects an immobilizer system malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is not stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Immobilizer system malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY IMMOBILIZER SYSTEM DTC** • Verify the immobilizer system DTC.	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)

	(See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Are any DTCs present?	No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P130C:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from “Function Inspection Using M-MDS”.

Details On DTCs

DESCRIPTION	Pre-ignition detected	
DETECTION CONDITION	Determination conditions	• Pre-ignition is detected a few times continuously.
	Preconditions	• Engine coolant temperature: **80 °C {176 °F} or more**[*1] [*1]: Value can be verified by displaying the PIDs using the M-MDS.
	Malfunction determination period	• Not applicable
	Drive cycle	• 1
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• Ion sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates the check engine light	
POSSIBLE CAUSE	• Fuel having octane rating lower than specified fuel is used • Carbon accumulated in combustion chamber • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects pre-ignition for each cylinder based on the ion sensor signal. If pre-ignition is detected continuously, even though pre-ignition is detected and engine output is restricted by the fuel injection control and the variable valve timing control, the PCM stores a DTC.

Repeatability Verification Procedure

- Start the engine and warm it up completely (engine coolant temperature is increased to **80 °C {176 °F} or more**).
- Wait for **1 min** (idle).

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Function Inspection Using M-MDS

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC OCCURRING FROM FUEL SYSTEM OR VARIABLE VALVE TIMING SYSTEM RELATED PART** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a DTC related to a fuel system or variable valve timing system part stored?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Drain the fuel, add the specified fuel, and verify the malfunctioning location.
- Step 3—4

- Verify that the primary malfunction is resolved and there are no other malfunctions.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSED BY ABNORMAL FUEL** • Switch the ignition off. • Drain the fuel and add the specified fuel. (See **FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED BY REFUELING** • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	**NOTE:** • A malfunction has occurred because carbon has accumulated in combustion chamber. Overhaul the engine and remove the carbon in the combustion chamber. Go to the next step.
		No	Go to Step 4.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE**	Yes	Go to the applicable DTC inspection.

	• Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?		(See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P1380:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P1380:00	Electric variable valve timing control circuit problem
DETECTION CONDITION	• A malfunction is detected in the results of the on-board diagnostic test received from the electric variable valve timing driver. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops activation of the electric variable valve timing driver.
POSSIBLE CAUSE	• Electric variable valve timing motor/driver connectors or terminals malfunction • Short to ground in wiring harness between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE • PCM connector or terminals malfunction • Short to power supply in wiring harness between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE • Open circuit in wiring harness between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE • Electric variable valve timing driver malfunction • Electric variable valve timing motor malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
VT IN_ACT	°	Actual intake valve timing	• Displays actual intake valve timing
VT IN_DES	°	Desired intake valve timing	• Displays desired intake valve timing

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the electric variable valve timing motor/driver connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between electric variable valve timing motor/driver terminal 1A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY**	Yes	Go to the next step.

	• Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the electric variable valve timing motor/driver terminal 1A (wiring harness-side). • Is the voltage **0 V**?	No	Refer to the wiring diagram and verify whether or not there is a common connector between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
7	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between electric variable valve timing motor/driver terminal 1A (wiring harness-side) and PCM terminal 1AE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
8	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 10. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to the next step. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	(See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P144A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Evaporator system: clogging between fuel tank and fuel tank pressure sensor	
DETECTION CONDITION	Determination conditions	• The following conditions are all met while the vehicle is being driven: ▪ If negative pressure is inducted to the fuel tank via the intake manifold by the operation of the purge solenoid valve with the fuel tank in a sealed condition and the target negative pressure is reached within a shorter period of time than the estimated time. ▪ When the barometric pressure in the fuel tank is fixed and the purge solenoid valve is opened/closed, the negative pressure fluctuation in the fuel tank generates negative pressure exceeding the threshold.
	Preconditions	• Period ignition is switched off before engine is started: **120 min or more** • Engine coolant temperature at engine start: **1.67—43.33 °C {35.1—109.9 °F}** *1 • Time elapsed from engine start: **5.5—90 min** • Fuel level in fuel tank: **10—90 %** *1 • Desired ambient air temperature: **4.4—43.3 °C {40—109 °F}** *1 • Barometric pressure: **72.23 Pa {7.365 kgf/m^2, 0.01048 psi} or more** *1 • Charging efficiency: **3—65 %** *1 • Vehicle speed: **64—144.8 km/h {40.00—89.97 mph}** *1 • Purge flow amount: **15 l/min or more** • *1: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **75 s period**
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Fuel tank pressure sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
	• Erratic signal to PCM ▪ Fuel tank pressure sensor signal malfunction • Fuel gauge sender unit malfunction • Fuel tank pressure sensor malfunction	

POSSIBLE CAUSE	• Clogging between fuel tank and fuel tank pressure sensor • Fuel shut-off valve malfunction • Rollover valve malfunction • Purge solenoid valve malfunction • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM closes the purge solenoid valve and CV solenoid valve while the vehicle is being driven and seals the fuel tank. Then, gas in the fuel tank is inducted into the intake manifold and the pressure in the fuel tank is decreased by opening the purge solenoid valve, and the pressure change in the fuel tank is measured using the fuel tank pressure sensor. If the pressure in the fuel tank decreases below the target negative pressure during the specified period from the pressure measurement (malfunction determination time (1)), positive pressure is inducted to the fuel tank via the intake manifold by closing the purge solenoid valve and opening the CV solenoid valve. After positive pressure is inducted to the fuel tank, the fuel tank is sealed, opening/closing of the purge solenoid valve is performed repeatedly, and the pressure change in the fuel tank is monitored at that time (malfunction determination time (2)). If the amount of pressure change veers towards negative pressure exceeding the malfunction determination threshold, the PCM determines that there is clogging between the fuel tank pressure sensor and fuel tank, and stores a DTC.

Repeatability Verification Procedure

- Set the remaining fuel quantity in the fuel tank between **30—85 %**.
- Verify that OBD-II information (such as FREEZE FRAME DATA (Mode 2)) has been obtained and recorded.

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine and switch the ignition off after **5 s** have elapsed.
- Leave the vehicle for **6 hours or more**.
- Start the engine and leave it idling for **2 min**.
- Drive the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** (to increase temperature in fuel tank and generate evaporative gas).

  NOTE:

  - If driving the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** is not feasible, the vehicle can be driven for a continuous **15 min or more** with the engine coolant temperature at **80 °C {176 °F} or more**.
- Stop the engine.
- Leave the vehicle for **1 hours or more**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
FTP	Fuel tank pressure	Pa {KPa} {MPa}, mBar {Bar}, psi, in H20	• Displays fuel tank pressure
	Fuel tank pressure sensor voltage	V	• Fuel tank pressure is equal to barometric pressure: Approx. 2.6 V

Simulation item table

Item	Definition	Unit	Operation
EVAPCP	Purge solenoid valve control signal	%	• Changes % and forcibly drives/stops purge solenoid valve.
EVAPCV	CV solenoid valve control signal	Off/On	• Selects Off/On to forcibly drive/stop the CV solenoid valve.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY IF FUEL GAUGE SENDER UNIT HAS MALFUNCTION** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Perform the DTC troubleshooting for the fuel gauge sender unit first because the fuel gauge sender unit cannot detect the fuel tank level and determines that a malfunction is occurring. (See **DTC P0460:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	• Is the PENDING CODE/DTC P0460:00, P0461:00, P0462:00 or P0463:00 also present?		(See **DTC P0461:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0462:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0463:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: VERIFY FUEL TANK PRESSURE SENSOR MEASURED CORRECTLY** • Start the engine and idle it. • Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ EVAPCP ▪ EVAPCV • Change to the following conditions using the simulation function. ▪ EVAPCP: **100 %** ▪ EVAPCV: On • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the negative pressure change when racing the engine?	Yes	The fuel tank pressure sensor measures correctly. • Go to the next step.
		No	The possibility of a fuel tank pressure sensor malfunction is high. • Go to the troubleshooting procedure to perform the procedure from Step 1.
5	**PURPOSE: VERIFY IF PURGE SOLENOID VALVE IS STUCK OPEN** • Perform the following procedure to induct barometric pressure to the fuel tank. ▪ Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • EVAPCP • EVAPCV ▪ Change to the following conditions using the simulation function. • EVAPCP: **0 %** • EVAPCV: Off ▪ Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **NOTE:** • The displayed PID value is as follows: ▪ BARO: **approx. 2.6 V** (barometric pressure) • Perform the following procedure to force drive the CV solenoid valve. ▪ Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • EVAPCP • EVAPCV ▪ Change to the following conditions using the	Yes	The possibility of a stuck purge solenoid valve open is high. • Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	The possibility of clogging between fuel tank pressure sensor and fuel tank is high. • Go to the troubleshooting procedure to perform the procedure from Step 3.

	simulation function. • EVAPCP: **0 %** • EVAPCV: On • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FTP PID value negative pressure?		

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Perform a PCM input signal part-related inspection.
- Step 2
  - Perform a unit inspection of the purge solenoid valve.
- Step 3—5
  - Inspect for clogging between fuel tank pressure sensor and fuel tank.
- Step 6—7
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF FUEL TANK PRESSURE SENSOR** • Inspect the fuel tank pressure sensor. (See **FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to Step 6. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 6. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: VERIFY IF THERE IS CLOGGING BETWEEN FUEL TANK PRESSURE SENSOR AND FUEL TANK** • Verify the following passage hoses, pipe connection condition, and that there is no clogging. ▪ Between fuel tank pressure sensor and fuel shut-off valve • Is there any poor connection or clogging?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 6.
		No	Go to the next step.
4	**PURPOSE: DETERMINE INTEGRITY OF FUEL SHUT-OFF VALVE** • Inspect the fuel shut-off valve. (See **FUEL TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel tank, then go to Step 6. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: DETERMINE INTEGRITY OF ROLLOVER VALVE** • Inspect the rollover valve. (See **FUEL TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel tank, then go to the next step. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

6	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Reconnect all the removed parts. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1 of the troubleshooting diagnostic procedure. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P1450:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Evaporator system: abnormal negative pressure in fuel tank	
DETECTION CONDITION	Determination conditions	• Target negative pressure exceeding the specified time or more is generated from negative pressure inducted to the fuel tank by the operation of the purge solenoid valve after the fuel tank is sealed (CV solenoid valve ON).
	Preconditions	• Period ignition is switched off before engine is started: **120 min or more** • Engine coolant temperature at engine start: **1.67—43.33 °C {35.1—109.9 °F}** *1 • Time elapsed from engine start: **5.5—90 min** • Fuel level in fuel tank: **10—90 %** *1 • Desired ambient air temperature: **4.4—43.3 °C {40—109 °F}** *1 • Barometric pressure: **72.23 Pa {7.365 kgf/m^2, 0.01048 psi} or more** *1 • Charging efficiency: **3—65 %** *1 • Vehicle speed: **64—144.8 km/h {40.00—89.97 mph}** *1 • Purge flow amount: **15 l/min or more** • *1: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **75 s period**
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Fuel tank pressure sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	

POSSIBLE CAUSE	• Fuel tank pressure sensor malfunction
	• Restriction between charcoal canister and release-side passage
	  ▪ CV solenoid valve malfunction
	  ▪ Evaporative chamber malfunction
	  ▪ Charcoal canister malfunction
	• Clogging between fuel tank and fuel tank pressure sensor
	• Purge solenoid valve malfunction	

	• PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM closes the purge solenoid valve and CV solenoid valve while the vehicle is being driven and seals the fuel tank. Then, the evaporative gas in the fuel tank is inducted into the intake manifold and the pressure in the fuel tank is decreased by opening the purge solenoid valve, and the pressure change of the fuel tank is measured using the fuel tank pressure sensor. If the pressure in the fuel tank decreases below the target negative pressure for the specified period from the pressure measurement, the PCM determines that abnormal negative pressure in the fuel tank is being generated and stores a DTC.

Repeatability Verification Procedure

- Set the remaining fuel quantity in the fuel tank between **30—85 %**.
- Verify that OBD-II information (such as FREEZE FRAME DATA (Mode 2)) has been obtained and recorded.
- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine and switch the ignition off after **5 s** have elapsed.
- Leave the vehicle for **6 hours or more**.
- Start the engine and leave it idling for **2 min**.
- Drive the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** (to increase temperature in fuel tank and generate evaporative gas).

  NOTE:

  - If driving the vehicle for **30 min** at a speed of **50 km/h {31 mph} or more** is not feasible, the vehicle can be driven for a continuous **15 min or more** with the engine coolant temperature at **80 °C {176 °F} or more**.

- Stop the engine.

- Leave the vehicle for **1 hours or more**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
FTP	Fuel tank pressure	Pa {KPa} {MPa}, mBar {Bar}, psi, in H20	• Displays fuel tank pressure
	Fuel tank pressure sensor voltage	V	• Fuel tank pressure is equal to barometric pressure: Approx. 2.6 V

Simulation item table

Item	Definition	Unit	Operation
EVAPCP	Purge solenoid valve control signal	%	• Changes % and forcibly drives/stops purge solenoid valve.
EVAPCV	CV solenoid valve control signal	Off/On	• Selects Off/On to forcibly drive/stop the CV solenoid valve.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: INSPECTION OF CLOGGING BETWEEN FUEL TANK PRESSURE SENSOR AND FUEL TANK** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P144A:00 also present?	Yes	The possibility of clogging between fuel tank pressure sensor and fuel tank is high. • Go to the applicable PENDING CODE or DTC inspection. (See **DTC P144A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: VERIFY FUEL TANK PRESSURE SENSOR MEASURED CORRECTLY** • Start the engine and idle it. • Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

	EVAPCP ▪ EVAPCV • Change to the following conditions using the simulation function. ▪ EVAPCP: **100 %** ▪ EVAPCV: On • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the negative pressure change when racing the engine?		
5	**PURPOSE: VERIFY IF ATMOSPHERE BETWEEN CV SOLENOID VALVE AND ATMOSPHERE CAN RELEASE** • Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ EVAPCP ▪ EVAPCV • Change to the following conditions using the simulation function. ▪ EVAPCP: **0 %** ▪ EVAPCV: Off • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the displayed PID value as follows? ▪ BARO: **approx. 2.6 V** (barometric pressure)	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 2.
6	**PURPOSE: VERIFY IF PURGE SOLENOID VALVE IS STUCK OPEN** • Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ EVAPCP ▪ EVAPCV • Change to the following conditions using the simulation function. ▪ EVAPCP: **0 %** ▪ EVAPCV: On • Access the FTP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FTP PID value negative pressure?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 6.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Perform a PCM input signal part-related inspection.
- Step 2—5
  - Verify if there is restriction in atmosphere release passage.
- Step 6

- Perform the inspection for a purge solenoid valve stuck open.

- Step 7—8
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF FUEL TANK PRESSURE SENSOR** • Inspect the fuel tank pressure sensor. (See **FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to Step 7. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF CV SOLENOID VALVE** • Inspect the CV solenoid valve. (See **CANISTER VENT (CV) SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the CV solenoid valve, then go to Step 7. (See **CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**PURPOSE: VERIFY IF THERE IS RESTRICTION BETWEEN CHARCOAL CANISTER AND ATMOSPHERE RELEASE PASSAGE**
	• Verify the following passage hoses, pipe connection condition, and that there is no restriction.
	  ▪ Between charcoal canister and CV solenoid valve
	  ▪ Between CV solenoid valve and evaporative chamber
	  ▪ Between evaporative chamber and atmosphere release
	• Is there any poor connection or restriction?
		Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 7.

		No	Go to the next step.
4	**PURPOSE: DETERMINE INTEGRITY OF EVAPORATIVE CHAMBER** • Inspect the evaporative chamber. (See **EVAPORATIVE CHAMBER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the evaporative chamber, then go to Step 7. (See **EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: DETERMINE INTEGRITY OF CHARCOAL CANISTER** • Inspect the charcoal canister. (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the charcoal canister, then go to Step 7. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: DETERMINE INTEGRITY OF PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to the next step. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

7	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION**
	• Reconnect all the removed parts.
	• Clear the DTC from the PCM memory using the M-MDS.
	(See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	• Implement the repeatability verification procedure.
	(See **Repeatability Verification Procedure**.)
	• Perform the DTC Reading Procedure.
		Yes	Repeat the inspection from Step 1 of the troubleshooting diagnostic procedure.
			  • If the malfunction recurs, replace the PCM.
			  (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
			Go to the next step.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	No	Go to the next step.
8	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P1794:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Capacitor (i-ELOOP) system: Capacitor (i-ELOOP) malfunction	

DETECTION CONDITION	Determination conditions	• Capacitor malfunction determined
		  • Any one of the following conditions is met:
		  ▪ Capacitor (i-ELOOP) internal resistance exceeds the specification.
		  ▪ Capacitor (i-ELOOP) capacitance exceeds the specification.
		  ▪ Capacitor (i-ELOOP) voltage exceeds the specification.
		• Capacitor (i-ELOOP) deterioration determined
		  • Any one of the following conditions is met:
		  ▪ Capacitor (i-ELOOP) internal resistance exceeds the specification.
		  ▪ Capacitor (i-ELOOP) capacitance is less the than specification.
		• Over-charge determined

		• Capacitor (i-ELOOP) voltage exceeds the specification.
	Preconditions	• Not applicable
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• DC-DC converter
FAIL-SAFE FUNCTION	• Inhibits the i-ELOOP control.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• The following vehicle conditions differ depending on the type of malfunction ▪ Master warning light is illuminated (illumination during bypass mode by i-ELOOP) ▪ Charging system warning light is illuminated (illumination while generator output is inhibited) ▪ Pre-charge warning is displayed after the engine is started.	
POSSIBLE CAUSE	• Engagement malfunction in capacitor (i-ELOOP), DC-DC converter • Capacitor (i-ELOOP) malfunction ▪ Capacitor (i-ELOOP) deterioration • Generator overcharge (in this case, PCM detects DTC P2504:00) • DC-DC converter malfunction • PCM malfunction	

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The capacitor (i-ELOOP) can store generated electrical energy from the generator efficiently.
- The electrical energy stored during deceleration fuel-cut is used during driving, which reduces the power generating load on the generator and the amount of fuel consumption.
- If a malfunction occurs with the capacitor (i-ELOOP), constant charging takes place by operation of the bypass mode which could cause the fuel economy to worsen.
- In this diagnostic, the internal resistance/capacitance is calculated from the capacitor (i-ELOOP)

voltage value and charge/discharge current value, and the PCM determines that there is a malfunction in the battery-related parts by the internal resistance/capacitance/capacitor (i-ELOOP) voltage exceeding the specified value, and it stores a DTC.

Repeatability Verification Procedure

- Start the engine.(no electrical load)
- Depress the accelerator pedal to increase the engine speed to **3,000 rpm**.
- Release the accelerator pedal to idle the engine.
- Stop the engine.
- Switch the ignition on and wait for **1 min**.
- Switch the ignition off and wait for **20 min**.
- Switch the ignition on.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
CAP_SYS_10	Open circuit in capacitor (i-ELOOP) (power cannot be supplied from capacitor)	Off/On	• Open circuit status in capacitor (i-ELOOP) is normal: Off • Open circuit status in capacitor (i-ELOOP) is not normal: On
CAP_SYS 13	Capacitor (i-ELOOP) capacitance malfunction	Off/On	• Capacitor (i-ELOOP) capacitance status is not normal: On • Capacitor (i-ELOOP) capacitance status is normal: Off
CAP_SYS 14	Capacitor (i-ELOOP) capacitance deterioration	Off/On	• Capacitor (i-ELOOP) capacitance status deteriorates: On • Capacitor (i-ELOOP) capacitance status is normal: Off
CAP_SYS 15	Capacitor (i-ELOOP) internal resistance malfunction	Off/On	• Internal resistance status in capacitor (i-ELOOP) is not normal: On • Internal resistance status in

			capacitor (i-ELOOP) is normal: Off
CAP_SYS 16	Capacitor (i-ELOOP) internal resistance deterioration	Off/On	• Internal resistance status in capacitor (i-ELOOP) deteriorates: On • Internal resistance status in capacitor (i-ELOOP) is normal: Off

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF POWER SUPPLY IS AFFECTED BY DTC RELATED TO DC-DC CONVERTER** • Switch the ignition off, then ON (engine off). • Perform the DC-DC converter DTC inspection using the M-MDS. (See **DTC INSPECTION [i-ELOOP]**.) • Are any DTCs present?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [i-ELOOP]**.)
		No	Go to the next step.
3	**PURPOSE: VERIFY IF DIAGNOSTIC RESULT IS AFFECTED BY DTC RELATED TO GENERATOR OVERCHARGE** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P2504:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P2504:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

4	**PURPOSE: DETERMINE IF THE MALFUNCTION IS CAUSED BY CAPACITOR (i-ELOOP) BY VERIFYING THE PID RELATED TO THE CAPACITOR (i-ELOOP)** • Access the following PIDs using the M-MDS (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ CAP_SYS_10 ▪ CAP_SYS 13 ▪ CAP_SYS 14 ▪ CAP_SYS 15 ▪ CAP_SYS 16 • Are all of the PID item “CAP_SYS_10, CAP_SYS 13, CAP_SYS 14, CAP_SYS 15, CAP_SYS 16” values off?	Yes	**NOTE:** • If excessive voltage is applied to the capacitor (i-ELOOP), all the PIDs displayed in Step 4 indicate "Off", and the PCM determines a capacitor (i-ELOOP) malfunction and stores DTC P1794:00. Replace the capacitor (i-ELOOP). (See **CAPACITOR (i-ELOOP) REMOVAL/INSTALLATION [i-ELOOP]**.) Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the next step.
5	**PURPOSE: DETERMINE IF THE MALFUNCTION IS CAUSED BY CAPACITOR (i-ELOOP) BY VERIFYING THE PID RELATED TO THE CAPACITOR (i-ELOOP)** • Are all of the PID item “CAP_SYS_10, CAP_SYS 13” values on?	Yes	Replace the capacitor (i-ELOOP). (See **CAPACITOR (i-ELOOP) REMOVAL/INSTALLATION [i-ELOOP]**.) Go to the troubleshooting procedure to perform the procedure from Step 2.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Verify the engagement condition of each part.
- Step 2—3
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY ENGAGEMENT MALFUNCTION OF EACH PART**	Yes	Go to the next step.

	• Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Verify that the following parts are engaged correctly. ▪ DC-DC converter (See **DC-DC CONVERTER REMOVAL/INSTALLATION [i-ELOOP]**.) ▪ Capacitor (i-ELOOP) (See **CAPACITOR (i-ELOOP) REMOVAL/INSTALLATION [i-ELOOP]**.) • Is the engagement condition of each part normal?	No	Tighten the DC-DC converter or capacitor (i-ELOOP) properly, then go to the next step.
2	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the capacitor (i-ELOOP) and verify that the repairs have been completed in Step 2. (See **CAPACITOR (i-ELOOP) REMOVAL/INSTALLATION [i-ELOOP]**.) • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2090:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2090:00	OCV circuit low input
DETECTION CONDITION	• The OCV control voltage relative to the PCM control is too low. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Set the exhaust variable valve timing control to the maximum advanced position.
POSSIBLE CAUSE	• OCV connector or terminals malfunction • Short to ground or open circuit in OCV power supply circuit ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and OCV terminal B ▪ ENGINE2 15 A fuse malfunction ▪ Open circuit in wiring harness between main relay terminal D and OCV terminal B • Short to ground in wiring harness between OCV terminal A and PCM terminal 1AN • PCM connector or terminals malfunction • Open circuit in wiring harness between OCV terminal A and PCM terminal 1AN • OCV malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the OCV connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion).	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Is there any malfunction?		
4	**INSPECT OCV POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the OCV connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the OCV terminal B (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and OCV terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and OCV terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
5	**INSPECT OCV SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the OCV connector is disconnected. • Switch the ignition off.	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between OCV terminal A and PCM terminal 1AN. **If there is a common connector:**

	• Inspect for continuity between OCV terminal A (wiring harness-side) and body ground. • Is there continuity?		▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT OCV SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the OCV and PCM connectors are disconnected. • Inspect for continuity between OCV terminal A (wiring harness-side) and PCM terminal 1AN (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between OCV terminal A and PCM terminal 1AN. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT OCV** • Inspect the OCV. (See **OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the OCV, then go to the next step. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0,**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.

	SKYACTIV-G 2.5].) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2091:00	OCV circuit high input
DETECTION CONDITION	• The OCV control voltage relative to the PCM control is too high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Set the exhaust variable valve timing control to the maximum advanced position.
POSSIBLE CAUSE	• OCV connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between OCV terminal A and PCM terminal 1AN • OCV malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the OCV connector. • Inspect for poor connection (such as	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.

	damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the OCV and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the OCV terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between OCV terminal A and PCM terminal 1AN. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT OCV** • Inspect the OCV. (See **OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the OCV, then go to the next step. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	• Is the same DTC present?		
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2096:00, P2097:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	HO2S fuel injection control system: • P2096:00: Air fuel too lean • P2097:00: Air fuel too rich	
DETECTION CONDITION	Determination conditions	• P2096:00: Depending on the correction deviation of the A/F sensor, a condition in which the fuel feedback correction amount (SHRTFT12) for the HO2S is the specified value (**2 %**) or more and the sum (SHRTFT12+LONGFT12) of the fuel feedback correction amount and the fuel learning correction amount is the specified value (**2.3—2.5 %**) or more continues for a period of **25 s**.
		• P2097:00: Depending on the correction deviation of the A/F sensor, a condition in which the fuel feedback correction amount (SHRTFT12) for the HO2S is the specified value (**−2 %**) or less and the sum (SHRTFT12+LONGFT12) of the fuel feedback correction amount and the fuel learning correction amount is the specified value (**−2.5— −2.3 %**) or less continues for a period of **25 s**.
	Preconditions	• HO2S estimated temperature: **above 450 °C {842 °F}**
	Malfunction determination period	• **25 s** period
	Drive cycle	• **2**
	Self test type	• CMDTC self test
	Sensor used	• HO2S
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
	• Erratic signal to PCM ▪ ECT sensor No.1 signal malfunction ▪ MAF sensor signal malfunction ▪ MAP sensor signal malfunction ▪ IAT sensor No.2 signal malfunction ▪ Related connector or terminals malfunction ▪ Related wiring harness malfunction • Improper operation of electric variable valve timing control system ▪ Electric variable valve timing driver malfunction ▪ Electric variable valve timing motor malfunction	

POSSIBLE CAUSE	▪ Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • Air suction in intake air system • Poor fuel quality • HO2S malfunction ▪ HO2S loose • A/F sensor malfunction ▪ A/F sensor loose ▪ Exhaust system leakage ▪ A/F sensor deterioration • Fuel leakage or restriction in fuel line • Fuel injector malfunction ▪ Improper operation of fuel injector ▪ Fuel injector related wiring harness malfunction • Improper operation of purge control system ▪ Purge solenoid valve malfunction ▪ Purge solenoid hoses improper connection • MAP sensor malfunction • MAF sensor malfunction • Air cleaner element restricted • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM detects the oxygen concentration passing through the catalyst by the HO2S signal and performs fuel injection amount correction to maintain optimum purification conditions in the catalyst. To maintain optimum purification conditions in the catalyst, the fuel injection correction has a “Feedback correction amount” which performs correction according to the driving conditions relative to the previously set air/fuel ratio, and a “Learning correction amount” which corrects for deterioration over time.
- “Fuel feedback correction amount (SHRTFT12)” and “Fuel learning correction amount (LONGFT12)” can be verified from the M-MDS PID item.

P2096:00

- If a condition in which the feedback correction amount from the HO2S signal is large (fuel injection amount being increased) continues for the specified time (**25 s**), the PCM determines a feedback correction amount malfunction and stores a DTC.
- A condition in which the fuel feedback correction amount (SHRTFT12) for the HO2S is the specified value (**2 %**) or more and the sum (SHRTFT12+LONGFT12) of the fuel feedback correction amount and the fuel learning correction amount is the specified value (**2.3—2.5 %**) or more continues for a period of **25 s**.

P2097:00

- If a condition in which the feedback correction amount from the HO2S signal is small (fuel injection amount being decreased) continues for the specified time (**25 s**), the PCM determines a feedback correction amount malfunction and stores a DTC.
- A condition in which the fuel feedback correction amount (SHRTFT12) for the HO2S is the specified value (**−2 %**) or less and the sum (SHRTFT12+LONGFT12) of the fuel feedback correction amount and the fuel learning correction amount is the specified value (**−2.5—−2.3 %**) or less continues for a period of **25 s**.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Shift to 3rd gear and drive the vehicle for **20 min** at an engine speed of **1,500 rpm or more** and a vehicle speed of **50 km/h {31 mph} or more**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.
- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table—: Not applicable

Item	Definition	Unit	Condition/Specification
EQ_RAT11	Excess air factor (estimated value) to theoretical air/fuel ratio (14.7) by fuel feedback control	—	• Idle (after warm up): Approx. 1
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	HO2S voltage	V	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine

			speed of 4,000 rpm or more): Approx. 0 V

Simulation item table

Item	Definition	Unit	Operation
EVAPCP	Purge solenoid valve control signal	%	• Changes % and forcibly drives/stops purge solenoid valve.
INJ_1	Fuel injector No.1	OFF	• Select OFF to forcibly stop fuel injector No.1.
INJ_2	Fuel injector No.2	OFF	• Select OFF to forcibly stop fuel injector No.2.
INJ_3	Fuel injector No.3	OFF	• Select OFF to forcibly stop fuel injector No.3.
INJ_4	Fuel injector No.4	OFF	• Select OFF to forcibly stop fuel injector No.4.

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Is the DTC P2096:00 or P2097:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
4	**PURPOSE: VERIFICATION IF MALFUNCTION CAUSED BY LACK OF FUEL** • Verify the snapshot data FLI. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the snapshot data FLI **5% or less**?	Yes	Refill the fuel. Go to the troubleshooting procedure to perform the procedure from Step 13.
		No	Go to the next step.
5	**PURPOSE: VERIFY DTCs FOR FUEL PRESSURE SENSOR** • Switch the ignition off, then ON (engine off).	Yes	Go to the applicable DTC inspection.

	• Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0088:00, P0192:00 or P0193:00 also present?		(See **DTC P0088:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0192:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0193:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
6	**PURPOSE: VERIFY DTCs FOR ELECTRIC VARIABLE VALVE TIMING CONTROL SYSTEM AND HYDRAULIC VARIABLE VALVE TIMING** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0010:00, P0011:00, P0012:00, P0014:00, P0015:00, P1380:00, P2090:00 or P2091:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P0010:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0011:00, P0012:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0014:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0015:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P1380:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2090:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**PURPOSE: VERIFY DTCs FOR MISFIRE** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0300:00, P0301:00, P0302:00, P0303:00 or P0304:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P0300:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**PURPOSE: VERIFY A/F SENSOR AND HO2S INPUT SIGNAL** • Start the engine and warm it up completely. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ O2S11 ▪ O2S12 • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking.	Yes	Go to Step 10.
		No	Go to the next step.

	• Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more** ▪ O2S12: **0.3 V or less**		
9	**INSPECT RELATED SENSOR WIRING HARNESS AND CONNECTOR** • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ O2S11 ▪ O2S12 • When the PCM, A/F sensor and HO2S are shaken, does the PID value include a PID item which has changed?	Yes	Inspect the related wiring harness and connector. • Repair or replace the malfunctioning part. Go to the troubleshooting procedure to perform the procedure from Step 13.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.
10	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY FUEL INJECTOR IMPROPER OPERATION** • Start the engine and idle it. • Access the following simulation items using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ INJ_1 ▪ INJ_2 ▪ INJ_3 ▪ INJ_4 • Using the simulation function, can the change in engine speed be verified when operation of each of the fuel injectors is stopped?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 3.
11	**PURPOSE: VERIFY IF MALFUNCTION CAUSED BY PURGE SOLENOID VALVE IMPROPER OPERATION** • Start the engine and idle it. • Access the EQ_RAT11 PID and simulation item EVAPCP using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Using the simulation function, does the EQ_RAT11 PID value change when the purge solenoid valve is opened/closed?	Yes	Go to the troubleshooting procedure to perform the procedure from Step 5.
		No	Go to the troubleshooting procedure to perform the procedure from Step 4.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Perform inspection of HO2S and A/F sensor signal related parts.
- Step 3
  - Perform a fuel injector control system inspection.
- Step 4
  - Perform a purge control system inspection.
- Step 5—6
  - Perform inspection of fuel line.
- Step 7—12
  - Perform inspection of each separate part.
- Step 13—14
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 13. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**PURPOSE: INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Replace the A/F sensor and/or HO2S, then go to Step 13. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Retighten the A/F sensor, then go to Step 13. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**PURPOSE: INSPECT FUEL INJECTOR OPERATION** • In Step 10 of the function inspection using the M-MDS, perform a fail-safe injector operation inspection on the cylinders in which engine speed fluctuation could not be verified. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 13. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**PURPOSE: DETERMINE INTEGRITY OF PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 13. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO FUEL LEAK FROM FUEL SYSTEM AFFECTS DIAGNOSTIC RESULTS** • Visually inspect for leakage from fuel line between fuel distributor and fuel pump. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 13.
		No	Go to the next step.
6	**PURPOSE: INSPECT FUEL LINE (LOW-SIDE)** • Inspect for leakage or restriction in the fuel line (low-side). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 13.
		No	Go to the next step.
7	**PURPOSE: INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 13. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**PURPOSE: INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 13. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	PURPOSE: INSPECT EXHAUST SYSTEM FOR LEAKAGE		

9	• Verify the exhaust gas leakage from the exhaust system. (between A/F sensor and HO2S) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 13.
		No	Go to the next step.
10	**PURPOSE: DETERMINE INTEGRITY OF MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 13. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**PURPOSE: DETERMINE INTEGRITY OF MAF SENSOR** • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 13. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
12	**PURPOSE: AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine is running. (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the engine speed increase?	Yes	Inspect the air cleaner element. (See **AIR CLEANER ELEMENT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Clean or replace the air cleaner element, then go to Step 13. (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is no malfunction: ▪ Go to the next step.
		No	Go to the next step.
13	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P2096:00 or P2097:00 also present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
14	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2101:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2101:00	Throttle valve actuator control motor circuit range/performance problem
DETECTION CONDITION	• The PCM turns the main relay on, but if the input voltage is **6.0 V or less**, then the PCM determines that the main relay control circuit voltage is low. • There is a system error in the electrical throttle control system of the PCM. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).

POSSIBLE CAUSE	• Short to ground or open circuit in main relay power supply circuit:
	  ▪ MAIN 200 A fuse and/or ENG.MAIN 40 A fuse malfunction
	• ENGINE2 15 A fuse malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Main relay terminal D—PCM terminal 1CK
	  ▪ Main relay terminal D—PCM terminal 2S
	  ▪ Main relay terminal E—PCM terminal 2K
	• PCM connector or terminals malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ Main relay terminal D—PCM terminal 1CK
	  ▪ Main relay terminal D—PCM terminal 2S
	  ▪ Main relay terminal E—PCM terminal 2K
	• Throttle valve actuator and/or related circuit malfunction
	• Throttle valve actuator malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
	VERIFY RELATED REPAIR		

2	**INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT MAIN RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Switch the ignition off. • Remove the main relay. • Measure the voltage at the following terminals (wiring harness-side): ▪ Main relay terminal C ▪ Main relay terminal A • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG.MAIN 40 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • MAIN 200 A fuse—Main relay terminal C • MAIN 200 A fuse—Main relay terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If all fuses are normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Battery positive terminal—Main relay terminal C • Battery positive terminal—Main relay terminal A **If there is a common connector:** • Determine the malfunctioning part by

			inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
5	**INSPECT ENGINE2 15 A FUSE** • Remove the ENGINE2 15 A fuse. • Inspect the ENGINE2 15 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Main relay terminal D—PCM terminal 1CK ▪ Main relay terminal D—PCM terminal 2S **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the fuse. If the fuse is damaged: • Replace the fuse. Go to Step 10.
		No	Reinstall the ENGINE2 15 A fuse, then go to the next step.
6	**INSPECT MAIN RELAY CIRCUIT FOR SHORT TO GROUND** • Main relay is removed. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Main relay terminal D ▪ Main relay terminal E • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Main relay terminal D—PCM terminal 1CK ▪ Main relay terminal D—PCM terminal 2S ▪ Main relay terminal E—PCM terminal 2K **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.

		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
8	**INSPECT MAIN RELAY CIRCUIT FOR OPEN CIRCUIT** • Main relay is removed. • Verify that the PCM connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Main relay terminal D—PCM terminal 1CK ▪ Main relay terminal D—PCM terminal 2S ▪ Main relay terminal E—PCM terminal 2K • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Main relay terminal D—PCM terminal 1CK • Main relay terminal D—PCM terminal 2S • Main relay terminal E—PCM terminal 2K **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
9	**INSPECT THROTTLE VALVE ACTUATOR** • Inspect the throttle valve actuator. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Inspect the throttle valve actuator related circuits and connectors. • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Replace the throttle body. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	2.0, SKYACTIV-G 2.5].) • Perform the KOEO self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2107:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2107:00	Throttle valve actuator control module processor error
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • Throttle body circuits are shorted to each other • PCM malfunction ▪ Throttle valve actuator control module internal processor malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off.	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.

	Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ACTUATOR CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between throttle body terminals E and F (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal E—PCM terminal 1CG • Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE**	Yes	Go to the applicable DTC inspection.

	• Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?		(See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2109:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2109:00	TP sensor minimum stop range/performance problem
DETECTION CONDITION	• If the fully-close throttle position is **5.1 ° or lower**, or **15.9 ° or more** (even though fully-closed throttle position learning is finished), the PCM determines there is a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Open circuit in wiring harness between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Throttle valve malfunction • Throttle valve actuator malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off.	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.

	• Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Throttle body terminal E ▪ Throttle body terminal F • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal E—PCM terminal 1CG • Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part.

	an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Is the voltage **0 V**?		**If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 10.
7	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal E—PCM terminal 1CG • Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
8	**INSPECT THROTTLE VALVE** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.
9	**INSPECT THROTTLE VALVE ACTUATOR** • Inspect the throttle valve actuator. (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.

10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2110:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2110:00	Throttle valve actuator control system-forced limited RPM
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• Throttle body malfunction • PCM malfunction ▪ Throttle valve actuator control module internal processor error (built-into PCM) ▪ Fuel injector control driver internal processor error (built-into PCM)
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to

	recorded?		the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY** • Inspect the throttle body. (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2112:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2112:00	Throttle valve actuator motor current range/performance problem
DETECTION CONDITION	• The throttle valve actuator control duty ratio is **95 % or more** with the ignition switched ON (engine on). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Throttle valve malfunction • Throttle valve actuator malfunction • PCM malfunction ▪ Throttle valve actuator control module malfunction (built-into PCM)

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off.	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

	• Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Throttle body terminal E—PCM terminal 1CG ▪ Throttle body terminal F—PCM terminal 1CC • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Throttle body terminal E—PCM terminal 1CG • Throttle body terminal F—PCM terminal 1CC **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
6	**INSPECT THROTTLE VALVE** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.
		No	Go to the next step.
7	**INSPECT THROTTLE VALVE ACTUATOR** • Inspect the throttle valve actuator. (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	• Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2119:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2119:00	Throttle valve actuator control throttle body range/performance problem
DETECTION CONDITION	• The PCM compares the actual TP with initial setting TP when the ignition is switched off. If the actual TP is higher than the initial setting TP, the PCM determines that there is a throttle valve return spring malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • Drive-by-wire control malfunction • Throttle body (return spring) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED**	Yes	Go to the next step.

	Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Drive-by-wire Control System Inspection.	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.

	(See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	No	Go to the next step.
7	**INSPECT THROTTLE BODY** • Inspect the throttle body. (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off) and wait for **1 min or more**. • Switch the ignition off. • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2122:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2122:00	APP sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1. If the input voltage at the PCM terminal 2AN is **less than 0.1 V**, the PCM determines that the APP sensor No.1 circuit input voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Regulates the upper limit of the APP sensor output.
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ APP sensor terminal A—PCM terminal 2AR ▪ APP sensor terminal B—PCM terminal 2AN • PCM connector or terminals malfunction • APP sensor No.1 signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: ▪ APP sensor terminal A—PCM terminal 2AR ▪ APP sensor terminal B—PCM terminal 2AN • APP sensor No.1 malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%

APP2			
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Verify that the APP sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ APP sensor terminal A ▪ APP sensor terminal	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ APP sensor terminal A—PCM terminal 2AR ▪ APP sensor terminal B—PCM terminal 2AN **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning

	B • Is there continuity?		part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the APP sensor and PCM connectors are disconnected. • Inspect for continuity between APP sensor terminals B and C (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • APP sensor terminal B—PCM terminal 2AN • APP sensor terminal C—PCM terminal 2AO **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to Step 9.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the APP sensor and PCM connectors are disconnected. • Inspect for continuity between the following	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • APP sensor terminal A—PCM terminal 2AR • APP sensor terminal B—PCM terminal 2AN

	terminals (wiring harness-side): ▪ APP sensor terminal A—PCM terminal 2AR ▪ APP sensor terminal B—PCM terminal 2AN • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
8	**INSPECT APP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the APP sensor No.1. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to the next step. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2123:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2123:00	APP sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1. If the input voltage at the PCM terminal 2AN is **above 4.9 V**, the PCM determines that the APP sensor No.1 circuit input voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Regulates the upper limit of the APP sensor output.
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • PCM connector or terminals malfunction • APP sensor No.1 malfunction • Short to power supply in wiring harness between APP sensor terminal B and PCM terminal 2AN • Open circuit in wiring harness between APP sensor terminal C and PCM terminal 2AO • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF APP SENSOR NO.1 OR WIRING HARNESS MALFUNCTION** • Access the APP1 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the APP1 PID value. • Is the APP1 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion).	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Is there any malfunction?		
6	**INSPECT APP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the APP sensor No.1. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to Step 9. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 9.
7	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off. • Disconnect the APP sensor connector. • Access the APP1 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the APP1 PID value. • Is the APP1 PID value **5 V** or **B+**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between APP sensor terminal B and PCM terminal 2AN. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
		No	Go to the next step.
8	**INSPECT APP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the APP sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between APP sensor terminal C (wiring harness-side) and PCM terminal 2AO (wiring harness-side). • Is there continuity?	Yes	Replace the accelerator pedal, then go to the next step. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between APP sensor terminal C and PCM terminal 2AO. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	• Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2127:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2127:00	APP sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2. If the input voltage at the PCM terminal 2AS is **less than 0.1 V**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Regulates the upper limit of the APP sensor output.
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ APP sensor terminal F—PCM terminal 2AW ▪ APP sensor terminal E—PCM terminal 2AS • PCM connector or terminals malfunction • APP sensor No.2 signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: ▪ APP sensor terminal F—PCM terminal 2AW ▪ APP sensor terminal E—PCM terminal 2AS • APP sensor No.2 malfunction • PCM malfunction

CAUTION:

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**DETERMINE IF APP SENSOR NO.2 OR WIRING HARNESS MALFUNCTION** • Access the APP2 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the APP2 PID value. • Is the APP2 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion).	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	• Is there any malfunction?		
6	**INSPECT APP SENSOR NO.2** • Reconnect all disconnected connectors. • Inspect the APP sensor No.2. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to Step 9. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 9.
7	**INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off. • Disconnect the APP sensor connector. • Access the APP2 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the APP2 PID value. • Is the APP2 PID value **5 V** or **B+**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between APP sensor terminal E and PCM terminal 2AS. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
		No	Go to the next step.
8	**INSPECT APP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the APP sensor connector is disconnected. • Switch the ignition off. • Disconnect the PCM connector. • Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 2AT (wiring harness-side). • Is there continuity?	Yes	Replace the accelerator pedal, then go to the next step. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between APP sensor terminal D and PCM terminal 2AT. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	• Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2135:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2135:00	TP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from TP sensor No.1 with the input voltage from TP sensor No.2. If the difference is more than the specification, the PCM determines that there is a TP sensor No.1/No.2 voltage correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • TP sensor No.1 malfunction • TP sensor No.2 malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
TP1	V	TP sensor No.1 voltage	• Accelerator pedal released: Approx. 1.11 V • Accelerator pedal fully depressed: Approx. 4.59 V
	%	Throttle valve position No.1	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 92%
TP2	V	TP sensor No.2 voltage	• Accelerator pedal released: Approx. 3.92 V • Accelerator pedal fully depressed: Approx. 0.41 V
	%	Throttle valve position No.2	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 82%

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON	Yes	Go to the applicable PENDING CODE or DTC inspection.

	(engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0122:00, P0123:00, P0222:00 or P0223:00 also present?		(See **DTC P0122:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0123:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0222:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0223:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.1 AND NO.2** • Reconnect all disconnected connectors. • Inspect the TP sensor No.1 and No.2. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G**

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		**2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2138:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2138:00	APP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from APP sensor No.1 with the input voltage from APP sensor No.2. If the difference is more than the specification, the PCM determines that there is an APP sensor No.1/No.2 angle correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • PCM connector or terminals malfunction • APP sensor No.1 malfunction • APP sensor No.2 malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
APP2	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired,

	availability. • Is any related repair information available?		go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P2122:00, P2123:00, P2127:00 or P2128:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P2122:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2123:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2127:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2128:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.1 AND NO.2** • Reconnect all disconnected connectors. • Inspect the APP sensor No.1 and No.2. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to the next step. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
	VERIFY DTC TROUBLESHOOTING COMPLETED		

7	• Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2183:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	ECT sensor No.2 circuit range/performance problem	
DETECTION CONDITION	Determination conditions	• When the ECT sensor No.2 detected temperature is **approx. 12.1 °C {21.8 °F}** higher than the IAT sensor No.1, or the ECT sensor No.2 detected temperature is **approx. −14.3 °C {−25.7 °F}** less than the IAT sensor No.1 with the ignition switched ON, the PCM detects a circuit range/performance problem.
	Preconditions	• Before starting the engine, leave the vehicle with the engine turned off for **6 hours or more**. • The following DTCs are not detected: ▪ IAT sensor No.1: P0112:00, P0113:00 ▪ ECT sensor No.2: P2184:00, P2185:00
	Drive cycle	• 2
	Self test type	• CMDTC self test
	Sensor used	• IAT sensor No.1 • ECT sensor No.2
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs	• Illuminates check engine light.	

ARE OUTPUT	
POSSIBLE CAUSE	• ECT sensor No.2 connector or terminals malfunction • MAF sensor/IAT sensor No.1 connector or terminals malfunction • PCM connector or terminals malfunction • ECT sensor No.2 malfunction • IAT sensor No.1 malfunction • PCM malfunction

System Wiring Diagram

- Not applicable

Function Explanation (DTC Detection Outline)

- The PCM compares the signals of ECT sensor No.2 and IAT sensor No.1 to detect a malfunction in the ECT sensor No.2. If the difference between the engine coolant temperature (ECT sensor No. 2 signal) and the intake air temperature (IAT sensor No.1 signal) is high, the PCM determines a malfunction in ECT sensor No.2, and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
ECT2_V	ECT sensor No.2 voltage	V	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

IAT	Intake air temperature (No.1)	°C, °F	• Displays IAT (No.1)
	IAT sensor No.1 voltage	V	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: VERIFY CONNECTOR CONNECTIONS** • Start the engine. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ ECT2_V ▪ IAT • Does the PID value fluctuate when the following connectors are shaken?	Yes	Repair or replace the applicable connector parts. Go to the troubleshooting procedure to perform the procedure from Step 3.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

	▪ ECT sensor No.2 ▪ IAT sensor No.1 ▪ PCM		

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1
  - Perform a unit inspection of the ECT sensor No.2.
- Step 2
  - Perform a unit inspection of the IAT sensor No.1.
- Step 3—4
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE INTEGRITY OF ECT SENSOR NO.2** • Inspect the ECT sensor No.2. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ECT sensor No.2, then go to Step 3. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: DETERMINE INTEGRITY OF IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to the next step. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION**	Yes	Repeat the inspection from Step 1.

	• Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?		• If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2184:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2184:00	ECT sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the ECT sensor No.2 signal. If the PCM detects that the ECT sensor No.2 voltage at the PCM terminal 2F is **below 0.16 V** for **5 s**, the PCM determines that the ECT sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• ECT sensor No.2 connector or terminals malfunction • ECT sensor No.2 malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between ECT sensor No.2 terminal A and PCM terminal 2F • ECT sensor No.2 signal circuit and ground circuit are shorted to each other • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT2_V	V	ECT sensor No.2 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC**	Yes	Go to the next step.

	MONITORING TEST RESULTS HAVE BEEN RECORDED • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ECT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**DETERMINE IF ECT SENSOR NO.2 OR WIRING HARNESS MALFUNCTION** • Reconnect all disconnected connectors. • Access the ECT2_V PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the ECT2_V PID value when disconnecting the ECT sensor No.2 connector. • Does the ECT2_V PID value change?	Yes	Replace the ECT sensor No.2, then go to Step 8. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
	INSPECT ECT SENSOR NO.2 SIGNAL		

6	**CIRCUIT FOR SHORT TO GROUND** • Verify that the PCM connector is disconnected. • Disconnect the ECT sensor No.2 connector. • Inspect for continuity between ECT sensor No.2 terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between ECT sensor No.2 terminal A and PCM terminal 2F. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
7	**INSPECT ECT SENSOR NO.2 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the ECT sensor No.2 and PCM connectors are disconnected. • Inspect for continuity between ECT sensor No.2 terminals A and B (wiring harness-side). • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • ECT sensor No.2 terminal A—PCM terminal 2F • ECT sensor No.2 terminal B—PCM terminal 2AJ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to each other. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to each other. Go to the next step.
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.

	• Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2185:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2185:00	ECT sensor No.2 circuit high input
DETECTION CONDITION	• The PCM monitors the ECT sensor No.2 signal. If the PCM detects that the ECT sensor No.2 voltage at the PCM terminal 2F is **above 4.92 V** for **5 s**, the PCM determines that the ECT sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• ECT sensor No.2 connector or terminals malfunction • ECT sensor No.2 malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between ECT sensor No.2 terminal A and PCM terminal 2F • Open circuit in wiring harness between the following terminals: ▪ ECT sensor No.2 terminal A—PCM terminal 2F ▪ ECT sensor No.2 terminal B—PCM terminal 2AJ • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT2_V	V	ECT sensor No.2 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC**	Yes	Go to the next step.

	MONITORING TEST RESULTS HAVE BEEN RECORDED • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ECT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**DETERMINE IF ECT SENSOR NO.2 OR WIRING HARNESS MALFUNCTION** • Verify that the ECT sensor No.2 connector is disconnected. • Access the ECT2_V PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect a jumper wire between ECT sensor No.2 terminals A and B (wiring harness-side). • Verify the ECT2_V PID value. • Is the voltage **4.95 V or below**?	Yes	Replace the ECT sensor No.2, then go to Step 8. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

6	**INSPECT ECT SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ECT sensor No.2 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ECT sensor No.2 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ECT sensor No.2 terminal A and PCM terminal 2F. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
7	**INSPECT ECT SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the ECT sensor No.2 and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ ECT sensor No.2 terminal A—PCM terminal 2F ▪ ECT sensor No.2 terminal B—PCM terminal 2AJ • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • ECT sensor No.2 terminal A—PCM terminal 2F • ECT sensor No.2 terminal B—PCM terminal 2AJ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.

	2.5].) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2199:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2199:00	IAT sensor No.2 correlation problem
DETECTION CONDITION	• IAT sensor No.1 and IAT sensor No.2 are compared and correlation error occurs. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • IAT sensor No.1 malfunction • IAT sensor No.2 malfunction • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 7. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT IAT SENSOR NO.2** • Inspect the IAT sensor No.2. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 7. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

	damaged/pulled-out pins, corrosion). • Is there any malfunction?		
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Start the engine and run the engine under the FREEZE FRAME DATA (Mode 2) condition. • Perform the Pending Trouble Code Access Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC P2199:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC P2228:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2228:00	BARO sensor circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from the BARO sensor. If the input voltage is low for **5 s**, the PCM determines that the BARO sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the barometric pressure for the engine control at **101.32 kPa {1.0332 kgf/cm^2, 14.695 psi}**.
POSSIBLE CAUSE	• BARO sensor (built-into PCM) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
	KPa {MPa}, mBar {Bar}, psi, in	Actually measured barometric pressure input from barometric pressure sensor built into	• Displays BARO

		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2237:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Open circuit between A/F sensor terminal B and PCM terminal 1AG	
DETECTION CONDITION	Determination conditions	• After A/F sensor activation, a condition in which PCM terminal 1AB voltage is within the specified range continues for **5 s or more**.
	Preconditions	• Battery voltage: **11—18 V**[*1] • The following DTC is not detected: ▪ Internal PCM malfunction: P064D:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Drive cycle	• 2
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Fixes duty value of A/F sensor heater • Stops fuel feedback control of A/F sensor	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between A/F sensor terminal B and PCM terminal 1AG • A/F sensor malfunction • PCM malfunction	

System Wiring Diagram

A/F SENSOR
WIRING HARNESS-SIDE
CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR

Function Explanation (DTC Detection Outline)

- If a condition in which terminal 1AB remains within the specified range for 5 s or more, the PCM determines an open circuit between A/F sensor terminal B and PCM terminal 1AG and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **1 min**.
- Shift to 2nd gear and drive the vehicle for **1 min** at a speed of **50 km/h {31 mph} or more**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. -39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the troubleshooting procedure to perform the procedure from step 1.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order. **NOTE:** • Recording can be facilitated using the screen capture function of the PC. Go to the troubleshooting procedure to perform the procedure from step 1

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—3
  - Perform an inspection of the A/F sensor and PCM-related connectors and wiring harnesses.
- Step 4
  - Perform a unit inspection of the A/F sensor.
- Step 5—6
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: INSPECT A/F SENSOR CONNECTOR CONDITION**	Yes	Replace the A/F sensor, then go to Step 5.

	Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		(See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the PCM, then go to Step 5. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PURPOSE: INSPECT A/F SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal B (wiring harness-side) and PCM terminal 1AG (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal B and PCM terminal 1AG. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 5.
4	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Start the engine and warm it up completely. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking.	Yes	Go to the next step.
		No	Replace the A/F sensor, then go to the next step. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	• Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more**		
5	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2243:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	A/F sensor reference voltage circuit open	
DETECTION CONDITION	Determination conditions	• A condition in which the PCM terminal 1W voltage is the specified value or more continues for **30 s**.
	Preconditions	• Switch the ignition ON (engine off or on) • Battery voltage: **11—18 V**[*1] • The following DTCs are not detected: ▪ A/F sensor heater: P0031:00, P0032:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Malfunction determination period	• **30 s** period
	Drive cycle	• 2
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between A/F sensor terminal F and PCM terminal 1W • A/F sensor malfunction • PCM malfunction	

System Wiring Diagram

A/F SENSOR
WIRING HARNESS-SIDE
CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR

Function Explanation (DTC Detection Outline)

- With an open circuit in the supply voltage line and a condition in which the supply voltage to PCM terminal 1W continues to be supplied, the PCM determines an open circuit in the wiring harness between the A/F sensor and the PCM and stores a DTC.

Repeatability Verification Procedure

- Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.
- Start the engine and leave it idling for **90 s**.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification

O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. -39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
4	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
5	**PURPOSE: INSPECT A/F SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal F (wiring harness-side) and PCM terminal 1W (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal F and PCM terminal 1W. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for

			corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the troubleshooting procedure to perform the procedure from Step 1.
6	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Start the engine and warm it up completely. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking. • Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more**	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
7	**PURPOSE: INSPECT RELATED SENSOR WIRING HARNESS AND CONNECTOR** • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the PID value fluctuate when the PCM and A/F sensor connectors are shaken?	Yes	Inspect the related wiring harness and connector. • Repair or replace the malfunctioning part. Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Replace the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2251:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs

DESCRIPTION	Open circuit between A/F sensor terminal D and PCM terminal 1AB	
DETECTION CONDITION	Determination conditions	• The following conditions are met: ▪ A/F sensor element impedance is specified value or more ▪ A/F sensor terminal F voltage (B+ terminal) is less than specified value or unstable.
	Preconditions	• Battery voltage: **11—18 V**[*1] • A/F sensor is activated. • The following DTCs are not detected: ▪ A/F sensor terminal F voltage (B+ terminal) is less than specified value: • A/F sensor heater: P0031:00, P0032:00 ▪ A/F sensor terminal F voltage (B+ terminal) is unstable: • Internal PCM malfunction: P064D:00 • [*1]: Value can be verified by displaying PIDs using M-MDS
	Drive cycle	• 2
	Self test type	• CMDTC self test, KOER self test
	Sensor used	• A/F sensor
FAIL-SAFE FUNCTION	• Not applicable	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates check engine light.	
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between A/F sensor terminal D and PCM terminal 1AB • A/F sensor malfunction	

	PCM malfunction

System Wiring Diagram

Function Explanation (DTC Detection Outline)

- If the PCM detects an open circuit in the wiring harness between A/F sensor terminal D and PCM terminal 1AB (COM wiring harness), it stores a DTC. In addition, when there is an open circuit in the wiring harness between A/F sensor terminal D and PCM terminal 1AB (COM wiring harness), the A/F sensor terminal F (B+ terminal) becomes unstable. At this time, the PCM determines an open circuit in the wiring harness (COM wiring harness) between A/F sensor terminal D and PCM terminal 1AB and stores a DTC.
- If the A/F sensor does not activate, monitoring cannot occur because the A/F sensor element has an insulation property which keeps it at a specific temperature range or less.

Repeatability Verification Procedure

Warm up the engine to allow the engine coolant temperature to reach **80 °C {176 °F} or more**.

- Start the engine and leave it idling for **1 min**.

  NOTE:

  - Match the engine coolant temperature in the recorded FREEZE FRAME DATA (Mode 2)/snapshot data, the vehicle speed, and engine speed values to the best extent possible while driving the vehicle.

- Try to reproduce the malfunction by driving the vehicle for **5 min** based on the values in the FREEZE FRAME DATA (Mode 2)/snapshot data.

PID Item/Simulation Item Used In Diagnosis

PID/DATA monitor item table

Item	Definition	Unit	Condition/Specification
O2S11	A/F sensor current	µA	• Idle (after warm up): Approx. -39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA

Function Inspection Using M-MDS

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: RECORD VEHICLE STATUS AT TIME OF DTC DETECTION TO UTILIZE WITH REPEATABILITY VERIFICATION** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step. **NOTE:** • Recording can be facilitated using the screen capture function of the PC.
3	**PURPOSE: INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
4	**PURPOSE: INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector.	Yes	Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G**

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		**2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
5	**PURPOSE: INSPECT A/F SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal D (wiring harness-side) and PCM terminal 1AB (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/F sensor terminal D and PCM terminal 1AB. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the troubleshooting procedure to perform the procedure from Step 1.
6	**PURPOSE: DETERMINE INTEGRITY OF A/F SENSOR** • Start the engine and warm it up completely. • Access the O2S11 PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Drive the vehicle under the following conditions. **WARNING:** • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • While performing this step, always operate the vehicle in a safe and lawful manner. ▪ After increasing the engine speed to **3,000 rpm**, decelerate using engine braking. • Is the displayed PID value as follows? ▪ O2S11: **0.25 mA or more**	Yes	Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the next step.
7	**PURPOSE: INSPECT RELATED SENSOR WIRING HARNESS AND CONNECTOR** • Access the O2S11 PID using the M-MDS.	Yes	Inspect the related wiring harness and connector. • Repair or replace the

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the PID value fluctuate when the PCM and A/F sensor connectors are shaken?		malfunctioning part. Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Replace the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure

Intention of troubleshooting procedure

- Step 1—2
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2299:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2299:00	Accelerator pedal: spring back malfunction

DETECTION CONDITION	• When under the following conditions it is detected that the brake pedal is depressed during driving for the specified time*.
	  ▪ Racing
	  ▪ Engine speed: **875 rpm or more**
	• *: Specified time is **0.6—10 s** according to braking force calculated in PCM.
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	• Controls the throttle valve so that the engine speed is at specification*. (Brake override system) *: For MTX vehicles, engine speed is **1,200 rpm** when in neutral, and **1,100 rpm** when not in neutral. For ATX vehicles, engine speed is **1,200 rpm** when in N position, and **1,100 rpm** when in D position.
	NOTE: • If the brake override system operates, the PCM detects DTC P2299:00. • Driver depresses accelerator and brake pedals simultaneously (during braking operation using left foot) • Accelerator pedal is pressed in by object such as floor mat • Accelerator pedal sticking • APP sensor signal malfunction ▪ APP sensor malfunction

POSSIBLE CAUSE	▪ Related connector or terminals malfunction ▪ Related wiring harness malfunction • Brake switch signal malfunction ▪ Brake switch malfunction ▪ Related connector or terminals malfunction ▪ Related wiring harness malfunction ▪ Brake pedal malfunction (increase in play due to joint pin wear) • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP	%	Accelerator pedal opening angle (relative value) with the fully released status as 0% and fully depressed status as 100%	• Accelerator pedal released: Approx. 0% • Accelerator pedal fully depressed: Approx. 100%
BOO	High/Low	Brake switch (No.1 signal) ON/OFF status	• Brake pedal released: Low • Brake pedal fully depressed: High
			• Brake pedal released: Low

BPA	High/Low	Brake switch (No.2 signal) ON/OFF status	• Brake pedal fully depressed: High

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC REPEATABILITY** • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Go to the next step.
		No	DTC troubleshooting completed. • Explain to the customer that P2299:00 is stored by the brake override system operation.
3	**VERIFY VEHICLE USE CONDITION** • Verify the vehicle use condition. ▪ The floor mat is doubled over ▪ The floor mat is spread against the accelerator pedal ▪ The accelerator and brake pedals are being depressed simultaneously	Yes	**There is a malfunction in a related floor mat** • Explain to the customer that the floor mat may prevent the accelerator pedal from springing back after release, then go to Step 11. **There is a malfunction in the pedal operation** • Give the customer advice on how to depress the accelerator and brake pedals while driving the vehicle, then go to Step 11.
		No	Go to the next step.

	• Are any of the conditions above applicable to the vehicle use condition?		
4	**INSPECT ACCELERATOR PEDAL** • Is the condition of the accelerator pedal one of the following? ▪ Accelerator pedal sticking has occurred when operated ▪ There is evidence of accelerator pedal disassembly	Yes	Replace the accelerator pedal, then go to Step 11. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF APP SENSOR** • Access the APP PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the value for PID APP **0 %** when the accelerator pedal is not depressed? • Does the value for PID APP change when the accelerator pedal is continually depressed?	Yes	Go to Step 7.
		No	Go to the next step.
6	**INSPECT APP SENSOR RELATED WIRING HARNESS AND CONNECTOR** • Inspect the wiring harness related to the APP sensor for connector disconnection, short circuit, and poor contact. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	APP sensor malfunction. • Replace the accelerator pedal, then go to Step 11. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF BRAKE SWITCH** • Access the following PIDs using the M-MDS:	Yes	Go to Step 10.
		No	Go to the next step.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ BOO ▪ BPA • Are all PIDs normal?		
8	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See **BRAKE SWITCH INSPECTION**.) • Is there any malfunction?	Yes	Replace the brake switch, then go to Step 11. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)
		No	Go to the next step.
9	**INSPECT BRAKE PEDAL PLAY AMOUNT** • Inspect the brake pedal play amount. (See **BRAKE PEDAL INSPECTION**.) • Is the amount of brake pedal play normal?	Yes	Inspect the wiring harness related to the brake switch for connector disconnection, short circuit, and poor contact. • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
10	**VERIFY IF A DTC RELATED TO DRIVE-BY-WIRE CONTROL IS DETECTED** • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a DTC related to the drive-by-wire control present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	It is possible that the accelerator and brake pedals have been depressed simultaneously. (during braking operation using left foot) • Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. **AFTER REPAIR PROCEDURE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**

	(See **[SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2302:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2302:00	Ion sensor No.1 circuit problem
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.1 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Cylinder No.1 misfire
	• Ignition coil/ion sensor No.1 connector or terminals malfunction
	• Short to ground or open circuit in ion sensor No.1 power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.1 terminal A
	  ▪ ENGINE2 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and ignition coil/ion sensor No.1 terminal A
	• Open circuit in wiring harness between ignition coil/ion sensor No.1 terminal D and body ground
	• Short to ground in wiring harness between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK
	• Open circuit in wiring harness between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK
	• Ion sensor No.1 malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure.	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0301:00 also present?		
3	**INSPECT IGNITION COIL/ION SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ignition coil/ion sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.1 connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.1 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and ignition coil/ion sensor No.1 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and ignition coil/ion sensor No.1 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

			connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.1 connector is disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.1 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.1 terminal D and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between ignition coil/ion sensor No.1 and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 11.
6	**INSPECT ION SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.1 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.1 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0,**

			SKYACTIV-G 2.5].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
8	**INSPECT ION SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.1 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.1 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 11.
9	**INSPECT ION SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.1 and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.1 terminal C (wiring harness-side) and PCM terminal 1BK (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
10	**INSPECT ION SENSOR NO.1** • Inspect the ion sensor No.1. (See **ION SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.1, then go to the next step. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2305:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2305:00	Ion sensor No.2 circuit problem
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.2 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Cylinder No.2 misfire
	• Ignition coil/ion sensor No.2 connector or terminals malfunction
	• Short to ground or open circuit in ion sensor No.2 power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.2 terminal A
	  ▪ ENGINE2 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and ignition coil/ion sensor No.2 terminal A
	• Open circuit in wiring harness between ignition coil/ion sensor No.2 terminal D and body ground
	• Short to ground in wiring harness between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF
	• Open circuit in wiring harness between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF
	• Ion sensor No.2 malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure.	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0302:00 also present?		
3	**INSPECT IGNITION COIL/ION SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ignition coil/ion sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.2 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.2 connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.2 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and ignition coil/ion sensor No.2 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and ignition coil/ion sensor No.2 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

			connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.2 connector is disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.2 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.2 terminal D and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between ignition coil/ion sensor No.2 and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 11.
6	**INSPECT ION SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.2 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.2 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0,**

			SKYACTIV-G 2.5].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
8	**INSPECT ION SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.2 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.2 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 11.
9	**INSPECT ION SENSOR NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.2 and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.2 terminal C (wiring harness-side) and PCM terminal 1BF (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
10	**INSPECT ION SENSOR NO.2** • Inspect the ion sensor No.2. (See **ION SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.2, then go to the next step. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2308:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2308:00	Ion sensor No.3 circuit problem
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.3 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Cylinder No.3 misfire
	• Ignition coil/ion sensor No.3 connector or terminals malfunction
	• Short to ground or open circuit in ion sensor No.3 power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.3 terminal A
	  ▪ ENGINE2 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and ignition coil/ion sensor No.3 terminal A
	• Open circuit in wiring harness between ignition coil/ion sensor No.3 terminal D and body ground
	• Short to ground in wiring harness between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA
	• Open circuit in wiring harness between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA
	• Ion sensor No.3 malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure.	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0303:00 also present?		
3	**INSPECT IGNITION COIL/ION SENSOR NO.3 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ignition coil/ion sensor No.3 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.3 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.3 connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.3 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and ignition coil/ion sensor No.3 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and ignition coil/ion sensor No.3 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

			connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.3 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.3 connector is disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.3 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.3 terminal D and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between ignition coil/ion sensor No.3 and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 11.
6	**INSPECT ION SENSOR NO.3 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.3 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.3 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0,**

			SKYACTIV-G 2.5].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
8	**INSPECT ION SENSOR NO.3 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.3 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.3 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 11.
9	**INSPECT ION SENSOR NO.3 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.3 and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.3 terminal C (wiring harness-side) and PCM terminal 1BA (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
10	**INSPECT ION SENSOR NO.3** • Inspect the ion sensor No.3. (See **ION SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.3, then go to the next step. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2311:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2311:00	Ion sensor No.4 circuit problem
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.4 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Cylinder No.4 misfire
	• Ignition coil/ion sensor No.4 connector or terminals malfunction
	• Short to ground or open circuit in ion sensor No.4 power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.4 terminal A
	  ▪ ENGINE2 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and ignition coil/ion sensor No.4 terminal A
	• Open circuit in wiring harness between ignition coil/ion sensor No.4 terminal D and body ground
	• Short to ground in wiring harness between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV
	• PCM connector or terminals malfunction
	• Short to power supply in wiring harness between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV
	• Open circuit in wiring harness between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV
	• Ion sensor No.4 malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure.	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P0304:00 also present?		
3	**INSPECT IGNITION COIL/ION SENSOR NO.4 CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the ignition coil/ion sensor No.4 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.4 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.4 connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.4 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE2 15 A fuse and ignition coil/ion sensor No.4 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and ignition coil/ion sensor No.4 terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

			connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.4 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.4 connector is disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.4 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.4 terminal D and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between ignition coil/ion sensor No.4 and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 11.
6	**INSPECT ION SENSOR NO.4 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.4 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.4 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0,**

			SKYACTIV-G 2.5].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
8	**INSPECT ION SENSOR NO.4 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.4 and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the ignition coil/ion sensor No.4 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 11.
9	**INSPECT ION SENSOR NO.4 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.4 and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between ignition coil/ion sensor No.4 terminal C (wiring harness-side) and PCM terminal 1AV (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
10	**INSPECT ION SENSOR NO.4** • Inspect the ion sensor No.4. (See **ION SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.4, then go to the next step. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM.

	connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2502:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs (Without i-ELOOP)

DESCRIPTION	Generator system: Malfunction in voltage generated by generator	
DETECTION CONDITION	Determination conditions	• The voltage generated by the generator is **17 V or higher** and the battery voltage is **11 V or less** for a continuous specified time.
	Preconditions	• While engine is running
	Malfunction determination period	• **5 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• PCM • Generator
FAIL-SAFE FUNCTION	• Generator control is inhibited.	

VEHICLE STATUS WHEN DTCs ARE OUTPUT	• A warning message is displayed on the center display. (Type A instrument cluster)
	• Illuminates charging system warning light. (Type B or type C instrument cluster)
	• If the vehicle continues to be driven while the DTC is detected the battery will be depleted.
	  ▪ A malfunction occurs with an electrical device and the vehicle stops.
	• The following vehicle conditions differ depending on the type of malfunction:
	  ▪ Vehicle shock may occur due to generator load.
	  ▪ Idling feel due to generator-stop may occur.	

POSSIBLE CAUSE	• Poor connection of the following parts:
	  ▪ Battery
	  ▪ Generator
	  ▪ PCM
	• Connector or terminal malfunction of the following parts:
	  ▪ Battery
	  ▪ Generator
	  ▪ PCM
	• Short to ground or open circuit in generator charge/discharge circuit	

	▪ Short to ground in wiring harness between battery positive terminal and generator terminal 1A ▪ STARTER 250 A fuse malfunction ▪ Open circuit in wiring harness between battery positive terminal and generator terminal 1A • Generator malfunction • Battery malfunction • PCM malfunction

System Wiring Diagram (Without i-ELOOP)

Function Explanation (DTC Detection Outline) (Without i-ELOOP)

- When the charge/discharge circuit for the power supplying the vehicle is normal, the vehicle will operate normally. In this diagnostic, a low vehicle supply voltage is detected even though the generator is generating power, a malfunction in the charge/discharge circuit is detected, and verification of vehicle malfunctions/safety assurance is performed.

Repeatability Verification Procedure (Without i-ELOOP)

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.
- Leave for **180 s** while idling with no electrical load.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis (Without i-ELOOP)

- Not applicable

Troubleshooting Diagnostic Procedure (Without i-ELOOP)

Intention of troubleshooting procedure

- Step 1—6
  - Perform an inspection of each signal transmission system.
- Step 7
  - Perform the inspection of the part supplied power to the generator.
- Step 8
  - Perform a unit inspection of the generator.
- Step 9—10
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF POOR CONNECTION OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Inspect the connection condition (part installation condition, connector connection condition) for the following parts: ▪ Battery ▪ Generator ▪ PCM • Is the connection condition (part installation condition, connector connection condition) for each part normal?	Yes	Go to the next step.
		No	Connect each part or the connector correctly, then go to Step 9.
3	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Disconnect the connector of the following parts. ▪ Battery ▪ Generator	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.

	▪ PCM • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**PURPOSE: INSPECT FUSE** • Remove the STARTER 250 A fuse. • Inspect the STARTER 250 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and generator terminal 1A. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the malfunctioning fuse. If the fuse is damaged: • Replace the fuse. Go to Step 9.
		No	Reinstall the STARTER 250 A fuse, then go to the next step.
5	**PURPOSE: VERIFY IF SHORT TO GROUND IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery, generator and PCM connectors are disconnected. • Inspect for continuity between generator terminal 1A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and generator terminal 1A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF OPEN CIRCUIT IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery, generator and PCM connectors are disconnected. • Inspect for continuity between battery positive terminal (wiring harness-side)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and generator terminal 1A. **If there is a common connector:**

	and generator terminal 1A (wiring harness-side). • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
7	**PURPOSE: VERIFY IF DIAGNOSTIC RESULTS ARE AFFECTED BY INSUFFICIENT EXCITATION CURRENT TO GENERATOR DUE TO POWER SUPPLY PART MALFUNCTION** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the battery, then go to Step 9. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: DETERMINE INTEGRITY OF GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)
		No	Go to the next step.
9	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure (Without i-ELOOP)**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

Details On DTCs (With i-ELOOP)

DESCRIPTION	Generator system: Malfunction in voltage generated by generator	

DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ Battery voltage is **11 V or less** and condition in which current sensor detects battery charging for specified period continues ▪ Pre-charge mode is implemented and pre-charge mode is not completed even though specified period has elapsed.
	Preconditions	• All of the following conditions are met: ▪ While engine is running ▪ CAN communication condition related to current sensor is normal ▪ Pre-charge mode is not operating ▪ Bypass mode is not operating
	Malfunction determination period	• Pre-charge mode condition: **3 min** • Other condition: **5 s**
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• Current sensor • Front body control module (FBCM) • PCM • Generator • DC-DC converter
FAIL-SAFE FUNCTION	• Generator control is inhibited.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• A warning message is displayed on the center display. (Type A instrument cluster) • Illuminates charging system warning light. (Type B or type C instrument cluster) • If the vehicle continues to be driven while the DTC is detected the battery will be depleted. ▪ A malfunction occurs with an electrical device and the vehicle stops. • The following vehicle conditions differ depending on the type of malfunction: ▪ Vehicle shock may occur due to generator load. ▪ Idling feel due to generator-stop may occur.	
	• Poor connection of the following parts: ▪ Battery ▪ Generator ▪ PCM ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Connector or terminal malfunction of the following parts: ▪ Battery ▪ Generator ▪ PCM ▪ Capacitor (i-ELOOP)	

POSSIBLE CAUSE	▪ DC-DC converter • STARTER 250 A fuse malfunction • Short to ground in wiring harness between the following terminals: ▪ DC-DC converter terminal 4A—Battery positive terminal ▪ DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A ▪ DC-DC converter terminal 1I—PCM terminal 2L ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A • Open circuit in wiring harness between the following terminals: ▪ DC-DC converter terminal 4A—Battery positive terminal ▪ DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A ▪ DC-DC converter terminal 1I—PCM terminal 2L ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A • Capacitor (i-ELOOP) malfunction • Generator malfunction • Current sensor malfunction • Front body control module (FBCM) malfunction • DC-DC converter malfunction • PCM malfunction

System Wiring Diagram (With i-ELOOP)

Function Explanation (DTC Detection Outline) (With i-ELOOP)

- When the charge/discharge circuit for the power supplying the vehicle is normal, the vehicle will operate normally. In this diagnostic, a low vehicle supply voltage is detected even though the generator is generating power, a malfunction in the charge/discharge circuit is detected, and verification of vehicle malfunctions/safety assurance is performed.

Repeatability Verification Procedure (With i-ELOOP)

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.
- Leave for **180 s** while idling with no electrical load.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis (With i-ELOOP)

- Not applicable

Function Inspection Using M-MDS (With i-ELOOP)

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY**	Yes	Perform repair or diagnosis according to the

	• Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?		available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY THE PRE-CHARGE MODE CONDITION AND DETERMINE THE MALFUNCTION LOCATION** • Start the engine. • Is “i-ELOOP charging Please don’t Drive This will take less than 3 min” displayed in the LCD?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.
3	**PURPOSE: VERIFY IF GENERATOR VOLTAGE IS FALSELY RECOGNIZED BY DTC RELATED CURRENT SENSOR** • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the PENDING CODE/DTC P058A:00 also present?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC P058A:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY DTC** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure (With i-ELOOP)

Intention of troubleshooting procedure

- Step 1
  - Perform inspection of generator voltage.
- Step 2—6
  - Perform inspection of each signal transmission system.
- Step 7
  - Perform a unit inspection of the generator.
- Step 8—10
  - Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE THE MALFUNCTION CAUSE BY VERIFYING THE OUTPUT VOLTAGE OF GENERATOR TERMINAL 1A.** • Start the engine. • Measure the voltage at the generator terminal 1A (wiring harness-side). • Is the voltage **approx. 0 V**?	Yes	Perform the troubleshooting procedure for DTC P2503:00. (See **DTC P2503:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
	PURPOSE: VERIFY IF POOR CONNECTION		

2	**OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Inspect the connection condition (part installation condition, connector connection condition) for the following parts: ▪ Battery ▪ Generator ▪ PCM ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Is the connection condition (part installation condition, connector connection condition) for each part normal?	Yes	Go to the next step.
		No	Connect each part or the connector correctly, then go to Step 9.
3	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Disconnect the connector of the following parts. ▪ Battery ▪ Generator ▪ PCM ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**PURPOSE: INSPECT FUSE** • Remove the STARTER 250 A fuse. • Inspect the STARTER 250 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between DC-DC converter terminal 4A and battery positive terminal. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground.

			▪ Replace the malfunctioning fuse. If the fuse is damaged: • Replace the fuse. Go to Step 9.
		No	Reinstall the STARTER 250 A fuse, then go to the next step.
5	**PURPOSE: VERIFY IF SHORT TO GROUND IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery, generator, PCM, capacitor (i-ELOOP), and DC-DC converter connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ DC-DC converter terminal 4A ▪ DC-DC converter terminal 3A ▪ DC-DC converter terminal 1I ▪ Generator terminal 1A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • DC-DC converter terminal 4A—Battery positive terminal • DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A • DC-DC converter terminal 1I—PCM terminal 2L • Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF OPEN CIRCUIT IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery, generator, PCM, capacitor (i-ELOOP), and DC-DC converter connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ DC-DC converter terminal 4A—Battery positive terminal ▪ DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A ▪ DC-DC converter terminal 1I—PCM terminal 2L ▪ Capacitor (i-ELOOP) terminal 2A—Generator	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • DC-DC converter terminal 4A—Battery positive terminal • DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A • DC-DC converter terminal 1I—PCM terminal 2L • Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.

	terminal 1A • Is there continuity?		
7	**PURPOSE: DETERMINE INTEGRITY OF GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
		No	Go to the next step.
8	**PURPOSE: VERIFY CONDITIONS OF BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—	Follow the inspection instructions, then go to the next step.
9	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure (With i-ELOOP)**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
10	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2503:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs (Without i-ELOOP)

DESCRIPTION	Generator system: Voltage generated by generator is low	
DETECTION CONDITION	Determination conditions	• A condition continues for a specified period of time in which the target generator output current calculated by the PCM is **20 A or more** and the generator output voltage is **8.5 V or less**.
	Preconditions	• While engine is running
	Malfunction determination period	• **5 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• PCM • Generator
FAIL-SAFE FUNCTION	• Generator control is inhibited.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• A warning message is displayed on the center display. (Type A instrument cluster) • Illuminates charging system warning light. (Type B or type C instrument cluster) • The following vehicle conditions differ depending on the type of malfunction: ▪ Vehicle shock may occur due to generator load. ▪ Idling feel due to generator-stop may occur.	
	• Poor connection of the following parts: ▪ Battery ▪ Generator ▪ PCM • Connector or terminal malfunction of the following parts: ▪ Battery ▪ Generator ▪ PCM	

POSSIBLE CAUSE	STARTER 250 A fuse malfunction
	• Short to ground or open circuit in generator charge/discharge circuit
	  ▪ Short to ground in wiring harness between battery positive terminal and generator terminal 1A
	  ▪ STARTER 250 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and generator terminal 1A
	• Drive belt exceeds limit
	• Battery malfunction
	• Generator malfunction
	• PCM malfunction

System Wiring Diagram (Without i-ELOOP)

Function Explanation (DTC Detection Outline) (Without i-ELOOP)

- Although a power generation command is made to the generator, a malfunction is diagnosed indicating no output from

the generator, and verification of vehicle malfunctions/safety assurance is performed.

Repeatability Verification Procedure (Without i-ELOOP)

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis (Without i-ELOOP)

- Not applicable

Troubleshooting Diagnostic Procedure (Without i-ELOOP)

Intention of troubleshooting procedure

- Step 1—6
  - Perform an inspection of each signal transmission system.
- Step 7
  - Perform the inspection of the part supplied power to the generator.
- Step 8
  - Perform a generator drive belt related inspection.
- Step 9
  - Perform a unit inspection of the generator.
- Step 10—11
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF POOR CONNECTION OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Inspect the connection condition (part installation condition, connector connection condition) for the following parts: ▪ Battery ▪ Generator ▪ PCM • Is the connection condition (part installation condition, connector connection condition) for each part	Yes	Go to the next step.
		No	Connect each part or the connector correctly, then go to Step 10.

	normal?		
3	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Disconnect the connector of the following parts. ▪ Battery ▪ Generator ▪ PCM • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**PURPOSE: INSPECT FUSE** • Remove the STARTER 250 A fuse. • Inspect the STARTER 250 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and generator terminal 1A. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the malfunctioning fuse. If the fuse is damaged: • Replace the fuse. Go to Step 10.
		No	Reinstall the STARTER 250 A fuse, then go to the next step.
5	**PURPOSE: VERIFY IF SHORT TO GROUND IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery, generator and PCM connectors are disconnected. • Inspect for continuity between generator terminal 1A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and generator terminal 1A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has

			a short to ground. Go to Step 10.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF OPEN CIRCUIT IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery, generator and PCM connectors are disconnected. • Inspect for continuity between battery positive terminal (wiring harness-side) and generator terminal 1A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and generator terminal 1A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
7	**PURPOSE: VERIFY IF DIAGNOSTIC RESULTS ARE AFFECTED BY INSUFFICIENT EXCITATION CURRENT TO GENERATOR DUE TO POWER SUPPLY PART MALFUNCTION** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the battery, then go to Step 10. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO GENERATOR DRIVE BELT AFFECTS DIAGNOSTIC RESULTS** • Inspect the generator drive belt. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the indicator mark on the drive belt auto tensioner within the normal range?	Yes	Go to the next step.
		No	Replace the generator drive belt, then go to Step 10. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9	**PURPOSE: DETERMINE INTEGRITY OF GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)
		No	Go to the next step.
10	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	procedure. (See **Repeatability Verification Procedure (Without i-ELOOP)**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
11	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

Details On DTCs (With i-ELOOP)

DESCRIPTION	Generator system: Voltage generated by generator is low	
DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ Field current demand output to generator is normal range and condition in which field current returned from generator is in non-power generation range continues for specified period ▪ Condition in which malfunction status signal from generator is in returned condition continues for specified period
	Preconditions	• All of the following conditions are met: ▪ While engine is running ▪ Three min have elapsed since pre-charge mode starts ▪ Generator switches to default mode (**14.5 V** constant voltage power generation)
	Malfunction determination period	• **5 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• PCM • Generator
FAIL-SAFE FUNCTION	• Generator control is inhibited.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• A warning message is displayed on the center display. (Type A instrument cluster) • Illuminates charging system warning light. (Type B or type C instrument cluster) • The following vehicle conditions differ depending on the type of malfunction ▪ A vehicle shock may occur due to generator load ▪ Idling feel due to generator-stop may occur.	

	▪ i-ELOOP pre-charge mode operates.
POSSIBLE CAUSE	• Poor connection of the following parts: ▪ Generator ▪ PCM ▪ Capacitor (i-ELOOP) • Connector or terminal malfunction of the following parts: ▪ Generator ▪ PCM ▪ Capacitor (i-ELOOP) • MAIN 200 A fuse malfunction • C/U IG1 15 A fuse malfunction • Short to ground in wiring harness between the following terminals: ▪ Battery positive terminal—IG1 relay terminal D ▪ IG1 relay terminal C—Generator terminal 2C ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A ▪ Generator terminal 2B—PCM terminal 1BR ▪ Generator terminal 2A—PCM terminal 1Z • Open circuit in wiring harness between the following terminals: ▪ Battery positive terminal—IG1 relay terminal D ▪ IG1 relay terminal C—Generator terminal 2C ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A ▪ Generator terminal 2B—PCM terminal 1BR ▪ Generator terminal 2A—PCM terminal 1Z • Drive belt exceeds limit • Generator malfunction • PCM malfunction

System Wiring Diagram (With i-ELOOP)

Function Explanation (DTC Detection Outline) (With i-ELOOP)

- The PCM determines that a malfunction occurred based on the condition in which a power generation command is made to the generator but there is no output from the generator, or the generator detected an open/short circuit between the PCM and generator or a power generation command signal abnormality, and verification of vehicle malfunctions/safety assurance is performed.

Repeatability Verification Procedure (With i-ELOOP)

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis (With i-ELOOP)

- Not applicable.

Function Inspection Using M-MDS (With i-ELOOP)

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY THE PRE-CHARGE MODE CONDITION AND DETERMINE THE MALFUNCTION LOCATION** • Start the engine. • Is "i-ELOOP charging Please don't Drive This will take **less than 3 min**" displayed in the LCD?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.
3	**PURPOSE: VERIFY IF GENERATOR OUTPUT IS AFFECTED BY DTC OCCURRING FROM DC-DC CONVERTER RELATED PART** • Switch the ignition off, then ON (engine off). • Perform the DC-DC converter DTC inspection using the M-MDS. (See **DTC INSPECTION [i-ELOOP]**.) • Are any DTCs present? **NOTE:** • If DTC P1628:11 is stored, perform the on-board diagnostic function first from DTC P1628:11.	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [i-ELOOP]**.) Go to the next step.
		No	Go to the next step.
4	**PURPOSE: VERIFY DTC** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure (With i-ELOOP)

Intention of troubleshooting procedure

- Step 1
  - Perform inspection of generator voltage.
- Step 2—10
  - Perform inspection of each signal transmission system.
  - Perform the inspection of the part supplied power to the generator.
- Step 11
  - Perform a generator drive belt related inspection.
- Step 12
  - Perform a unit inspection of the generator.
- Step 13—15
  - Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: DETERMINE THE MALFUNCTION CAUSE BY VERIFYING THE OUTPUT VOLTAGE OF GENERATOR TERMINAL 1A.** • Start the engine. • Measure the voltage at the generator terminal 1A (wiring harness-side). • Is the voltage **14—15 V**?	Yes	Go to the next step.
		No	If the voltage is **approx. 0 V**: • Go to Step 7. If the voltage is except for **approx. 0 V**: • Go to the next step.

2	**PURPOSE: VERIFY IF POOR CONNECTION OF EACH PART AFFECTS DIAGNOSTIC RESULTS**
	• Switch the ignition off.
	• Remove the service plug.
	(See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.)
	• Inspect the connection condition (part installation condition, connector connection condition) for the following parts:
	  ▪ Generator
	  ▪ PCM
	• Is the connection condition (part installation condition, connector connection condition) for each part normal?
		Yes	Go to the next step.

		No	Connect each part or the connector correctly, then go to the next step.

3	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS**
	• Disconnect the connector of the following parts.
	  ▪ Generator
	  ▪ PCM
	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion).
		Yes	Repair or replace the connector and/or terminals, then go to the next step.

		No	Go to the next step.

	• Is there any malfunction?		
4	**PURPOSE: INSPECT FUSE** • Remove the following fuses: ▪ MAIN 200 A fuse ▪ C/U IG1 15 A fuse • Inspect the following fuses: ▪ MAIN 200 A fuse ▪ C/U IG1 15 A fuse • Are all the fuses normal?	Yes	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: ▪ Battery positive terminal—IG1 relay terminal D ▪ IG1 relay terminal C—Generator terminal 2C **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the malfunctioning fuse. If the fuse is damaged: • Replace the malfunctioning fuse. Go to the next step.
		No	Install all the removed fuses, then go to the next step.
5	**PURPOSE: VERIFY IF SHORT TO GROUND IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the generator and PCM connectors are disconnected. • Disconnect the battery positive terminal. • Remove the IG1 relay. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ IG1 relay terminal D ▪ IG1 relay terminal C ▪ Generator terminal 2B ▪ Generator terminal 2A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Battery positive terminal—IG1 relay terminal D • IG1 relay terminal C—Generator terminal 2C • Generator terminal 2B—PCM terminal 1BR • Generator terminal 2A—PCM terminal 1Z **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**PURPOSE: VERIFY IF OPEN CIRCUIT IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS**	Yes	Go to Step 13.

	• Verify that the battery, generator and PCM connectors are disconnected. • IG1 relay is removed. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Battery positive terminal—IG1 relay terminal D ▪ IG1 relay terminal C—Generator terminal 2C ▪ Generator terminal 2B—PCM terminal 1BR ▪ Generator terminal 2A—PCM terminal 1Z • Is there continuity?	No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Battery positive terminal—IG1 relay terminal D • IG1 relay terminal C—Generator terminal 2C • Generator terminal 2B—PCM terminal 1BR • Generator terminal 2A—PCM terminal 1Z **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
7	**PURPOSE: VERIFY IF POOR CONNECTION OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Inspect the connection condition (part installation condition, connector connection condition) for the following parts: ▪ Generator terminal 1A ▪ Capacitor (i-ELOOP) • Is the connection condition (part installation condition, connector connection condition) for each part normal?	Yes	Go to the next step.
		No	Connect each part or the connector correctly, then go to the next step.
8	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Disconnect the connector of the following parts. ▪ Generator terminal 1A ▪ Capacitor (i-ELOOP) • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
9	**PURPOSE: VERIFY IF SHORT TO GROUND IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS**	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between capacitor (i-ELOOP) terminal 2A and generator terminal 1A.

	• Verify that the generator terminal 1A and capacitor (i-ELOOP) connectors are disconnected. • Inspect for continuity between generator terminal 1A (wiring harness-side) and body ground. • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
10	**PURPOSE: VERIFY IF OPEN CIRCUIT IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the generator terminal 1A and capacitor (i-ELOOP) connectors are disconnected. • Inspect for continuity between capacitor (i-ELOOP) terminal 2A (wiring harness-side) and generator terminal 1A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between capacitor (i-ELOOP) terminal 2A and generator terminal 1A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
11	**PURPOSE: VERIFY IF MALFUNCTION RELATED TO GENERATOR DRIVE BELT AFFECTS DIAGNOSTIC RESULTS** • Inspect the generator drive belt. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the indicator mark on the drive belt auto tensioner within the normal range?	Yes	Go to the next step.
		No	Replace the generator drive belt, then go to the next step. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
12	**PURPOSE: DETERMINE INTEGRITY OF GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
		No	Go to the next step.
13	**PURPOSE: VERIFY CONDITIONS OF BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—	Follow the inspection instructions, then go to the next step.
14	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION**	Yes	Repeat the inspection from Step 1.

	• Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure (With i-ELOOP)**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		• If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
15	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2504:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- To determine the malfunctioning part, proceed with the diagnostics from "Function Inspection Using M-MDS".

Details On DTCs (Without i-ELOOP)

DESCRIPTION	Generator system: Voltage generated by generator is high	
DETECTION CONDITION	Determination conditions	• The voltage generated by the generator is **18.5 V or higher** or the battery voltage is **16 V or higher** for a continuous specified time.
	Preconditions	• While engine is running
	Malfunction determination period	• **5 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• PCM • Generator
FAIL-SAFE FUNCTION	• Generator control is inhibited.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• A warning message is displayed on the center display. (Type A instrument cluster) • Illuminates charging system warning light. (Type B or type C instrument cluster) • The following vehicle conditions differ depending on the type of malfunction: ▪ Vehicle shock may occur due to generator load. ▪ Idling feel due to generator-stop may occur.	
POSSIBLE CAUSE	• Poor connection of the following parts: ▪ Battery ▪ Generator ▪ PCM • Connector or terminal malfunction of the following parts: ▪ Battery ▪ Generator ▪ PCM • Short to power supply in wiring harness between battery positive terminal and generator terminal 1A • Battery malfunction	

	Generator malfunction • PCM malfunction

System Wiring Diagram (Without i-ELOOP)

Function Explanation (DTC Detection Outline) (Without i-ELOOP)

- The PCM determines an over-charge malfunction by detecting that the generator terminal voltage or battery terminal voltage are abnormally high, and verification of vehicle malfunctions/safety assurance is performed.

Repeatability Verification Procedure (Without i-ELOOP)

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.
- Leave for **30 s** while idling with no electrical load.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis (Without i-ELOOP)

- Not applicable

Troubleshooting Diagnostic Procedure (Without i-ELOOP)

Intention of troubleshooting procedure

- Step 1—4
  - Perform an inspection of each signal transmission system.
- Step 5
  - Perform the inspection of the part supplied power to the generator.
- Step 6
  - Perform a unit inspection of the generator.
- Step 7—8
  - Verify that the primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF POOR CONNECTION OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Inspect the connection condition (part installation condition, connector connection condition) for the following parts: ▪ Battery ▪ Generator ▪ PCM • Is the connection condition (part installation condition, connector connection condition) for each part normal?	Yes	Go to the next step.
		No	Connect each part or the connector correctly, then go to Step 7.
3	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Disconnect the connector of the following parts. ▪ Battery ▪ Generator ▪ PCM • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**PURPOSE: VERIFY IF SHORT TO POWER SUPPLY IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the battery, generator and PCM connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and generator terminal 1A.

	• Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the generator terminal 1A (wiring harness-side). • Is the voltage **0 V**?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
5	**PURPOSE: VERIFY IF DIAGNOSTIC RESULTS ARE AFFECTED BY INSUFFICIENT EXCITATION CURRENT TO GENERATOR DUE TO POWER SUPPLY PART MALFUNCTION** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the battery, then go to Step 7. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**PURPOSE: DETERMINE INTEGRITY OF GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)
		No	Go to the next step.
7	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure (Without i-ELOOP)**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

Details On DTCs (With i-ELOOP)

DESCRIPTION	Generator system: Voltage generated by generator is high

DETECTION CONDITION	Determination conditions	• Any one of the following conditions is met: ▪ Field current value returned by generator is abnormally larger than field current value demanded of generator, or condition in which battery voltage is **15.9 V or more** continues for specified period ▪ Capacitor (i-ELOOP) voltage is **27.5 V or more**, or condition in which over-voltage notification signal from generator continues for specified period. ▪ Condition in which overheating detection signal output from generator continues for specified period.
	Preconditions	• While engine is running
	Malfunction determination period	• **5 s** period
	Drive cycle	• 1
	Self test type	• CMDTC self test
	Sensor used	• PCM • Generator
FAIL-SAFE FUNCTION	• The PCM outputs a non-power generation demand to the generator and then demands the generator to go into default mode (**14.5 V** constant voltage power generation). If the temperature of the generator exceeds the specified value, the generator itself stops power generation. But, if the internal circuit of the generator is malfunctioning, the generator may not accept the demand from the PCM.	
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• A warning message is displayed on the center display. (Type A instrument cluster) • Illuminates charging system warning light. (Type B or type C instrument cluster) • The following vehicle conditions differ depending on the type of malfunction. ▪ A vehicle shock may occur due to generator load. ▪ Idling feel due to generator-stop may occur.	
POSSIBLE CAUSE	• Poor connection of the following parts: ▪ PCM ▪ Generator ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Connector or terminal malfunction of the following parts: ▪ PCM ▪ Generator ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Short to power supply in wiring harness between the following terminals: ▪ DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A ▪ Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A • Open circuit in wiring harness between capacitor (i-ELOOP) terminal 2A—Generator terminal 1A • Battery malfunction • Capacitor (i-ELOOP) malfunction • DC-DC converter malfunction	

	• Generator malfunction • PCM malfunction

System Wiring Diagram (With i-ELOOP)

Function Explanation (DTC Detection Outline) (With i-ELOOP)

- If the PCM detects any of the following conditions, it determines that the generator is over-charging and verification of vehicle malfunctions/safety assurance is performed.
    - Vehicle capacitor (i-ELOOP) and battery voltage are specified value or more
    - Large difference between field current value demanded of generator from PCM and field current value returned from generator
    - Signal from generator notifying of malfunction is received

Repeatability Verification Procedure (With i-ELOOP)

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.
- Leave for **30 s** while idling with no electrical load.
- Leave for **30 s** while idling with high electrical load.

PID Item/Simulation Item Used In Diagnosis (With i-ELOOP)

- Not applicable

Function Inspection Using M-MDS (With i-ELOOP)

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**PURPOSE: VERIFY IF GENERATOR OUTPUT IS AFFECTED BY DTC OCCURRING FROM DC-DC CONVERTER RELATED PART** • Switch the ignition off, then ON (engine off). • Perform the DC-DC converter DTC inspection using the M-MDS. (See **DTC INSPECTION [i-ELOOP]**.) • Are any DTCs present?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [i-ELOOP]**.) Go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY DTC** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the troubleshooting procedure to perform the procedure from Step 1.
		No	Go to the troubleshooting procedure to perform the procedure from Step 1.

Troubleshooting Diagnostic Procedure (With i-ELOOP)

Intention of troubleshooting procedure

- Step 1—4
  - Perform inspection of each signal transmission system.
- Step 5
  - Perform a unit inspection of the generator.
- Step 6—8
  - Verify that primary malfunction is resolved and there are no other malfunctions.

STEP	INSPECTION	RESULTS	ACTION
1	**PURPOSE: VERIFY IF POOR CONNECTION OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Switch the ignition off. • Remove the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Inspect the connection condition (part installation condition, connector connection condition) for the following parts: ▪ PCM ▪ Generator ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Is the connection condition (part installation condition, connector connection condition) for each part normal?	Yes	Go to the next step.
		No	Connect each part or the connector correctly, then go to the next step.
2	**PURPOSE: VERIFY IF CONNECTOR DAMAGE OF EACH PART AFFECTS DIAGNOSTIC RESULTS** • Disconnect the connector of the following parts. ▪ PCM ▪ Generator ▪ Capacitor (i-ELOOP) ▪ DC-DC converter • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
3	**PURPOSE: VERIFY IF SHORT TO POWER SUPPLY IN EACH WIRING HARNESS AFFECTS DIAGNOSTIC RESULTS** • Verify that the PCM, generator, capacitor (i-ELOOP), and DC-DC converter connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the following terminals (wiring harness-side): ▪ Capacitor (i-ELOOP) terminal 3A ▪ Capacitor (i-ELOOP) terminal 2A • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • DC-DC converter terminal 3A—Capacitor (i-ELOOP) terminal 3A • Capacitor (i-ELOOP) terminal 2A—Generator terminal 1A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.

4	**PURPOSE: VERIFY IF OPEN CIRCUIT IN GENERATOR CHARGE/DISCHARGE CIRCUIT AFFECTS DIAGNOSTIC RESULTS** • Verify that the PCM, generator, capacitor (i-ELOOP), and DC-DC converter connectors are disconnected. • Switch the ignition off. • Inspect for continuity between capacitor (i-ELOOP) terminal 2A (wiring harness-side) and generator terminal 1A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between capacitor (i-ELOOP) terminal 2A and generator terminal 1A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
5	**PURPOSE: DETERMINE INTEGRITY OF GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
		No	Go to the next step.
6	**PURPOSE: VERIFY CONDITIONS OF BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—	Follow the inspection instructions, then go to the next step.
7	**PURPOSE: VERIFICATION OF VEHICLE REPAIR COMPLETION** • Always reconnect all disconnected connectors. • Reinstall the service plug. (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.) • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure (With i-ELOOP)**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
8	**PURPOSE: VERIFY IF THERE IS ANY OTHER MALFUNCTION** • Is any other DTC or pending code stored?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2507:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2507:00	PCM battery voltage low input
DETECTION CONDITION	• The PCM monitors the voltage of backup battery positive terminal. If the PCM detects that the battery positive terminal voltage is **below 6 V** for **5 s**, the PCM determines that the backup voltage circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Battery malfunction • Short to ground or open circuit in backup voltage circuit ▪ Short to ground in wiring harness between MAIN 200 A fuse and PCM terminal 2O ▪ MAIN 200 A fuse and/or ENG+B 7.5 A fuse malfunction ▪ Open circuit in wiring harness between battery positive terminal and PCM terminal 2O • PCM connector or terminals malfunction • PCM malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
VPWR	V	Battery positive voltage	• Displays battery voltage

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.

	(Mode 2)/snapshot data been recorded?		
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BATTERY** • Switch the ignition off. • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT BACKUP VOLTAGE CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Reconnect all disconnected connectors. • Access the VPWR PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the VPWR PID value. • Is the VPWR PID value **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG+B 7.5 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and PCM terminal 2O. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.

- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If all fuses are normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and PCM terminal 2O.

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the

			common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	2.5].) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC P2610:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC P2610:00	Malfunction in instrument cluster
DETECTION CONDITION	• Malfunction detected in instrument cluster. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• The fast idle up correction for the drive-by-wire control is inhibited.
POSSIBLE CAUSE	• Instrument cluster power supply circuit malfunction (in this case, the instrument cluster records DTC U3003:16.) • Instrument cluster malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode

	(Mode 2)/snapshot data been recorded?		2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN INSTRUMENT CLUSTER** • Switch the ignition off, then ON (engine off). • Retrieve the instrument cluster DTC using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER BACKUP VOLTAGE CIRCUIT** • Switch the ignition off. • Remove the MAIN 200 A fuse and ROOM 15 A fuse. • Inspect the MAIN 200 A fuse and ROOM 15 A fuse. • Is there any malfunction?	Yes	Replace the malfunctioning fuse. Switch the ignition ON (engine on) and wait for **10 s or more**. Switch the ignition off. Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	2.5].) • Is the PENDING CODE for this DTC present?		
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0073:00, U0101:00, U0121:00, U0131:00, U0140:00, U0151:00, U0155:00, U0214:00, U0235:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0073:00	CAN system communication error (HS CAN)
DETECTION CONDITION	• Malfunction in CAN bus communication line. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• CAN bus communication line malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0101:00	CAN communication: communication error to TCM
DETECTION CONDITION	• Communication error between the PCM and TCM continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	• Controls the turbine rotation signal at **0**. • Inhibits the AT torque reduction request.
POSSIBLE CAUSE	**NOTE:** • During malfunction diagnosis, first verify the malfunction detection of DTC U0074:00 or U0115:00 for the TCM. • CAN communication line malfunction between PCM and TCM • TCM malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0121:00	CAN communication: communication error to DSC HU/CM
DETECTION CONDITION	• Communication error between the PCM and DSC HU/CM continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits the DSC control.
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and DSC HU/CM • DSC HU/CM malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0131:00	CAN communication: communication error to EPS control module

DETECTION CONDITION	• Communication error between the PCM and EPS control module continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and EPS control module • EPS control module malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0140:00	CAN communication: communication error to front body control module (FBCM)
DETECTION CONDITION	• Communication error between the PCM and front body control module (FBCM) continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and front body control module (FBCM) • Front body control module (FBCM) malfunction

	• PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0151:00	CAN communication: communication error to SAS control module
DETECTION CONDITION	• Communication error between the PCM and SAS control module continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and SAS control module • SAS control module malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0155:00	CAN communication: communication error to instrument cluster
DETECTION CONDITION	• Communication error between the PCM and instrument cluster continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available.

	• DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and instrument cluster • Instrument cluster malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0214:00	CAN communication: communication error to start stop unit
DETECTION CONDITION	• Communication error between the PCM and start stop unit continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and start stop unit • Start stop unit malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0235:00	CAN communication: communication error to laser sensor
	• Communication error between the PCM and laser sensor

DETECTION CONDITION	continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• The smart city brake support function is cancelled.
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and laser sensor • Laser sensor malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

- Inspect according to the diagnostic procedure in ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]. (See **FOREWORD**.)

2014 - Mazda3 - Engine

DTC U0074:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0074:00	CAN system communication error (local CAN between PCM and TCM)
DETECTION CONDITION	• Malfunction in CAN bus communication line. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and TCM (local CAN between PCM and TCM) ▪ TCM terminal G—PCM terminal 1A ▪ TCM terminal H—PCM terminal 1B • TCM DTC is stored. • PCM malfunction • TCM malfunction

Repeatability Verification Procedure

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

	on-line repair information availability. • Is any related repair information available?		
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY TCM DTC** • Perform the TCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	DTC U0074:00 or U0115:00 is displayed: • CAN communication line can be considered the cause. ▪ Repair or replace the wiring harness between PCM and TCM, then go to the next step. DTC other than U0074:00 and U0115:00 is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	TCM can be considered the cause. • Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0284:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0284:00	LIN communication system: Communication error between active air shutter and PCM
DETECTION CONDITION	• PCM detects a communication error between the PCM and active air shutter. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops active air shutter control.

POSSIBLE CAUSE	• LIN communication line malfunction between active air shutter and PCM
	• Active air shutter connector or terminals malfunction
	• Short to ground or open circuit in active air shutter power supply circuit
	  ▪ Short to ground in wiring harness between ENGINE3 15 A fuse and active air shutter terminal A
	  ▪ ENGINE3 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between main relay terminal D and active air shutter terminal A
	• Open circuit in wiring harness between active air shutter terminal D and body ground
	• PCM connector or terminals malfunction
	• Short to ground in wiring harness between active air shutter terminal C and PCM terminal 2Z
	• Short to power supply in wiring harness between active air shutter terminal C and PCM terminal 2Z
	• Open circuit in wiring harness between active air shutter terminal C and PCM terminal 2Z
	• Active air shutter malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ACTIVE AIR SHUTTER CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the active air shutter connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
4	**INSPECT ACTIVE AIR SHUTTER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the active air shutter connector is disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the active air shutter terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE3 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE3 15 A fuse and active air shutter terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between main relay terminal D and active air shutter terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an

			open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
5	**INSPECT ACTIVE AIR SHUTTER GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the active air shutter connector is disconnected. • Switch the ignition off. • Inspect for continuity between active air shutter terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between active air shutter terminal D and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between active air shutter and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Go to Step 11.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
7	**INSPECT ACTIVE AIR SHUTTER SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the active air shutter and PCM connectors are disconnected. • Inspect for continuity between active air shutter terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between active air shutter terminal C and PCM terminal 2Z. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:**

			Repair or replace the wiring harness which has a short to ground. Go to Step 11.
		No	Go to the next step.
8	**INSPECT ACTIVE AIR SHUTTER SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the active air shutter and PCM connectors are disconnected. • Switch the ignition ON (engine off). **NOTE:** • Another DTC may be stored by the PCM detecting an open circuit. • Measure the voltage at the active air shutter terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between active air shutter terminal C and PCM terminal 2Z. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 11.
9	**INSPECT ACTIVE AIR SHUTTER SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the active air shutter and PCM connectors are disconnected. • Switch the ignition off. • Inspect for continuity between active air shutter terminal C (wiring harness-side) and PCM terminal 2Z (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between active air shutter terminal C and PCM terminal 2Z. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
10	**INSPECT ACTIVE AIR SHUTTER** • Inspect the active air shutter. (See **ACTIVE AIR SHUTTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the active air shutter, then go to the next step. (See **ACTIVE AIR SHUTTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
	VERIFY DTC TROUBLESHOOTING		

11	**COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine. • Drive the vehicle at **10 km/h {6.2 mph} or more** for **approx. 1 min**. • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0298:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Details On DTCs

DTC U0298:00	CAN communication: communication error to DC-DC converter
DETECTION CONDITION	• PCM detects a communication error between the PCM and DC-DC converter. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Not applicable
VEHICLE STATUS WHEN DTCs ARE OUTPUT	• Illuminates charging system warning light.
POSSIBLE CAUSE	• Communication line between DC-DC converter and PCM malfunction • DC-DC converter malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Repeatability Verification Procedure

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Start the engine.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ACCORDING TO THE DIAGNOSTIC PROCEDURE IN ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]** • Inspect according to the diagnostic procedure in ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]. (See **FOREWORD**.)	—	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0,**	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G**

	SKYACTIV-G 2.5].) • Are any DTCs present?		**2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0302:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0302:00	TCM processor error

DETECTION CONDITION	• When any of the following conditions is met:
	  ▪ CAN communication line malfunction between TCM and PCM
	  ▪ TCM internal malfunction
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle.
	• FREEZE FRAME DATA (Mode 2)/Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• TCM connector or terminals malfunction
	• PCM connector or terminals malfunction
	• CAN communication line malfunction between PCM and TCM (local CAN between PCM and TCM)
	  ▪ TCM terminal G—PCM terminal 1A
	  ▪ TCM terminal H—PCM terminal 1B
	• TCM DTC is stored.
	• CAN drive error (TCM or PCM)
	• PCM malfunction
	• TCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (other related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT TCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**VERIFY TCM DTC** • Perform the TCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	DTC U0074:00 or U0115:00 is displayed: • CAN communication line can be considered the cause. ▪ Repair or replace the wiring harness between PCM and TCM, then go to the next step. DTC other than U0074:00 and U0115:00 is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	TCM can be considered the cause. • Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0315:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0315:00	DSC HU/CM error

DETECTION CONDITION	• When any of the following conditions is met:
	  ▪ CAN communication line malfunction between DSC HU/CM and PCM
	  ▪ DSC HU/CM internal malfunction
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• CAN drive error (DSC HU/CM or PCM)
	• CAN communication line malfunction between DSC HU/CM and PCM
	  ▪ DSC HU/CM terminal AF—Front body control module (FBCM) terminal 2R
	  ▪ DSC HU/CM terminal AC—Front body control module (FBCM) terminal 2L
	  ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK
	  ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL
	• DSC HU/CM connector or terminals malfunction
	• PCM connector or terminals malfunction
	• DSC HU/CM malfunction

	PCM malfunction

FBCM
WIRING HARNESS-SIDE
CONNECTOR

DSC HU/CM WIRING HARNESS-SIDE CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition off, then ON (engine off). • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY DSC HU/CM DTC** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
4	**INSPECT DSC HU/CM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the DSC HU/CM connector.	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.

	• Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?		
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0320:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0320:00	EPS control module error

DETECTION CONDITION	• When any of the following conditions is met:
	  ▪ CAN communication line malfunction between EPS control module and PCM
	  ▪ EPS control module internal malfunction
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• CAN drive error (EPS control module or PCM)
	• CAN communication line malfunction between EPS control module and PCM
	  ▪ EPS control module terminal 2B—Front body control module (FBCM) terminal 2K
	  ▪ EPS control module terminal 2D—Front body control module (FBCM) terminal 2I
	  ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK
	  ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL
	• EPS control module connector or terminals malfunction
	• PCM connector or terminals malfunction
	• EPS control module malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition off, then ON (engine off).	Yes	Go to the applicable PENDING CODE or DTC inspection.

	• Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?		(See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY EPS CONTROL MODULE DTC** • Perform the EPS control module DTC inspection using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
4	**INSPECT EPS CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the EPS control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

DTC U0320:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

DTC U0323:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0323:00	Instrument cluster error

DETECTION CONDITION	• When any of the following conditions is met:
	  ▪ CAN communication line malfunction between instrument cluster and PCM
	  ▪ Instrument cluster internal malfunction
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• CAN drive error (instrument cluster or PCM)
	• CAN communication line malfunction between instrument cluster and PCM
	  ▪ Instrument cluster terminal B—Front body control module (FBCM) terminal 2K
	  ▪ Instrument cluster terminal D—Front body control module (FBCM) terminal 2I
	  ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK
	  ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL
	• Instrument cluster connector or terminals malfunction
	• PCM connector or terminals malfunction
	• Instrument cluster malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition off, then ON (engine off). • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	and/or DTCs present?		
3	**VERIFY INSTRUMENT CLUSTER DTC** • Perform the instrument cluster DTC inspection using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	DTC U0100:00 is displayed: • CAN communication line can be considered the cause. ▪ Repair or replace the wiring harness between PCM and instrument cluster, then go to Step 6. DTC other than U0100:00 is displayed: • Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0336:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0336:00	SAS control module error

DETECTION CONDITION	• When any of the following conditions is met:
	  ▪ CAN communication line malfunction between SAS control module and PCM
	  ▪ SAS control module internal malfunction
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• CAN drive error (SAS control module or PCM)
	• CAN communication line malfunction between SAS control module and PCM
	  ▪ SAS control module terminal 3K—Front body control module (FBCM) terminal 2K
	  ▪ SAS control module terminal 3L—Front body control module (FBCM) terminal 2I
	  ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK
	  ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL
	• SAS control module connector or terminals malfunction
	• PCM connector or terminals malfunction
	• SAS control module malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
	VERIFY DTC FOR MODULE COMMUNICATION		

2	• Switch the ignition off, then ON (engine off). • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY SAS CONTROL MODULE DTC** • Perform the SAS control module DTC inspection using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
4	**INSPECT SAS CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the SAS control module connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0338:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0338:00	Start stop unit error

DETECTION CONDITION	• When any of the following conditions is met:
	  ▪ CAN communication line malfunction between start stop unit and PCM
	  ▪ Start stop unit internal malfunction
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• CAN drive error (start stop unit or PCM)
	• CAN communication line malfunction between start stop unit and PCM
	  ▪ Start stop unit terminal 2M—Front body control module (FBCM) terminal 2K
	  ▪ Start stop unit terminal 2O—Front body control module (FBCM) terminal 2I
	  ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK
	  ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL
	• Start stop unit connector or terminals malfunction
	• PCM connector or terminals malfunction
	• Start stop unit malfunction
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition off, then ON (engine off). • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**VERIFY START STOP UNIT DTC** • Perform the start stop unit DTC inspection using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the start stop unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U0433:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U0433:00	Abnormal message from rear body control module (RBCM)
DETECTION CONDITION	• Correct data cannot be received from rear body control module (RBCM). **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Illuminates TCS/DSC indicator light. • Inhibits the TCS (engine control) and DSC controls.
POSSIBLE CAUSE	• CAN communication line malfunction between rear body control module (RBCM) and PCM ▪ Rear body control module (RBCM) terminal 3E—Instrument cluster terminal C ▪ Rear body control module (RBCM) terminal 3G—Instrument cluster terminal E ▪ Instrument cluster terminal B—Front body control module (FBCM) terminal 2K ▪ Instrument cluster terminal D—Front body control module (FBCM) terminal 2I ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • PCM connector or terminals malfunction • Instrument cluster connector or terminals malfunction • Rear body control module (RBCM) connector or terminals malfunction • Rear body control module (RBCM) malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.

	availability. • Is any related repair information available?	No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition off, then ON (engine off). • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTC** • Perform the rear body control module (RBCM) DTC inspection using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Rear body control module (RBCM) can be considered the cause. • Inspect the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) INSPECTION**.) ▪ If there is any malfunction: • Replace the rear body control module (RBCM), then go to Step 8. (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) ▪ If there is no malfunction:

			• Go to the next step.
7	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U1007:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U1007:00	CAN/LIN communication system: current sensor information communication error with front body control module (FBCM)
DETECTION CONDITION	• PCM detects a current sensor information communication error from front body control module (FBCM). **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits a part of the generator output control.

POSSIBLE CAUSE	• Communication line between current sensor and front body control module (FBCM) malfunction
	• Communication line between front body control module (FBCM) and PCM malfunction
	• Current sensor connector or terminals malfunction
	• Short to ground or open circuit in current sensor power supply circuit
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and current sensor terminal A
	  ▪ MAIN 200 A fuse and/or ENG+B 7.5 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and current sensor terminal A
	• Front body control module (FBCM) connector or terminals malfunction
	• Short to ground in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E
	• Open circuit in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E
	• Current sensor malfunction
	• Front body control module (FBCM) malfunction

Repeatability Verification Procedure

- Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
	VERIFY RELATED PENDING CODE AND/OR DTC		

2	• Switch the ignition off, then ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT CURRENT SENSOR CONNECTOR CONDITION** **NOTE:** • Always disconnect current sensor connector before disconnecting the negative battery cable. • Switch the ignition off. • Disconnect the current sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT CURRENT SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the current sensor connector is disconnected. • Measure the voltage at the current sensor terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG+B 7.5 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and current sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If all fuses are normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and current sensor terminal A.

			If there is a common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
5	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT CURRENT SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between current sensor terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between current sensor terminal B and front body control module (FBCM) terminal 2E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 10.
		No	Go to the next step.
7	**INSPECT CURRENT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between current sensor terminal B (wiring harness-side) and front body control module (FBCM) terminal 2E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between current sensor terminal B and front body control module (FBCM) terminal 2E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.

8	**INSPECT CURRENT SENSOR** • Inspect the current sensor. (See **CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the current sensor, then go to Step 10. (See **CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**INSPECT FRONT BODY CONTROL MODULE (FBCM)** • Inspect the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) INSPECTION**.) • Is there any malfunction?	Yes	Replace the front body control module (FBCM), then go to the next step. (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **CLEARING DTC [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Implement the repeatability verification procedure. (See **Repeatability Verification Procedure**.) • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U2300:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U2300:00	Global central configuration error

DETECTION CONDITION	• Any of following conditions occurs:
	  ▪ No configuration of the instrument cluster.
	  ▪ The configuration signal with the estimated CAN ID is not sent from the instrument cluster.
	  ▪ The configuration signal value sent via CAN from the instrument cluster is unknown or invalid.
	  ▪ The configuration signal value sent via CAN from the instrument cluster is a value other than the estimated value.
	  ▪ The configuration signal value sent via CAN from the instrument cluster does not match the PCM value.
	Diagnostic support note
	• This is a continuous monitor (other).
	• The check engine light does not illuminate.
	• FREEZE FRAME DATA (Mode 2) is not available.
	• Snapshot data is available.
	• DTC is stored in the PCM memory.

FAIL-SAFE FUNCTION	• Operates by the previously learned configuration value.

POSSIBLE CAUSE	• CAN drive error (instrument cluster or PCM)
	• Configuration data for the instrument cluster is incorrectly set
	• CAN communication line malfunction between instrument cluster and PCM
	  ▪ Instrument cluster terminal B—Front body control module (FBCM) terminal 2K
	  ▪ Instrument cluster terminal D—Front body control module (FBCM) terminal 2I
	  ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK
	  ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL
	• PCM connector or terminals malfunction
	• Instrument cluster connector or terminals malfunction
	• Instrument cluster loose
	• Instrument cluster malfunction
	• Error in non-volatile memory in PCM
	• PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition off, then ON (engine off). • Perform the DTC Reading Procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the applicable DTC inspection. (See **DTC U0073:00, U0101:00, U0121:00, U0131:00, U0140:00, U0151:00, U0155:00, U0214:00, U0235:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	• Is the DTC U0155:00 also present?		
3	**VERIFY INSTRUMENT CLUSTER DTC** • Perform the instrument cluster DTC inspection using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF INSTRUMENT CLUSTER** • Inspect installation of instrument cluster. • Is the instrument cluster installed securely?	Yes	Go to the next step.
		No	Retighten the instrument cluster, then go to Step 8. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
7	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off) and wait for **15 s or more**. • Switch the ignition off. • Wait until the main relay is off (**approx. 1 min**). • Perform the KOER self test. (See **KOEO/KOER SELF TEST**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to the next step.
		No	Go to the next step.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is the same DTC present?		
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

DTC U3000:41 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC U3000:41	PCM processor error
DETECTION CONDITION	• Communication error in the PCM. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2) is not available. • Snapshot data is available. • DTC is not stored in the PCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• PCM internal malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY PCM DTC** • Clear the DTC from the PCM memory using the M-MDS. (See **AFTER REPAIR PROCEDURE**	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Perform the KOEO self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the same DTC present?		
		No	Go to the next step.
3	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See **AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Engine

FOREWORD [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as PCM circuit voltage) at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

49 L088 009

2014 - Mazda3 - Engine

SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

- Verify malfunction symptoms using the following diagnostic index, then go to the appropriate troubleshooting chart.

Diagnostic Index—: Not applicable

No.	TROUBLESHOOTING ITEM		DESCRIPTION
1	Blown fuses		—
2	Check engine light illuminates		• Check engine light illuminates incorrectly.
3	Will not crank		• Starter does not work.
4	Hard to start/long crank/erratic start/erratic crank		• Starter cranks engine at normal speed but engine requires excessive cranking time before starting. • Battery is operating normally.
5	Engine stalls	After start/at idle	• Engine stops unexpectedly at idle, after start, or both.
6	Cranks normally but will not start		• Starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE” if this symptom appears after engine stalls. • Fuel is in tank. • Battery is in normal condition.
7	Engine oil warning light illuminates/message “Engine Oil Pressure Inspection Required” is indicated in LCD		• Engine oil warning light illuminates. • Message “Engine Oil Pressure Inspection Required” is indicated in LCD.
			• Engine speed fluctuates between specified idle speed and lower speed

8	Engine runs rough/rolling idle		and, engine shakes excessively. • Idle speed is too slow and engine shakes excessively.
9	Fast idle/runs on		• Engine speed continues at fast idle after warm-up. • Engine runs after ignition is switched off.
10	Low idle/stalls during deceleration		• Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.
11	Engine stalls/quits	Acceleration/cruise	• Engine stops unexpectedly at beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising.
	Engine runs rough	Acceleration/cruise	• Engine speed fluctuates during acceleration or cruising.
	Misses	Acceleration/cruise	• Engine misses during acceleration or cruising.
	Buck/jerk	Acceleration/cruise/deceleration	• Vehicle bucks/jerks during acceleration, cruising, or deceleration.
	Hesitation/stumble	Acceleration	• Momentary pause at beginning of acceleration or during acceleration.
	Surges	Acceleration/cruise	• Momentary minor irregularity in engine output.
12	Lack/loss of power	Acceleration/cruise	• Performance is poor under load. (e.g., power down when climbing hills)
13	Knocking/pinging	Acceleration/cruise	• Abnormal combustion occurs under the condition such as the temperature in the combustion chamber is too high resulting in abnormal noise. • Knocking sound occurs from the engine compartment during acceleration.

14	Poor fuel economy		• Fuel economy is unsatisfactory.
15	Emission compliance		• Fails emissions test.
16	High oil consumption/leakage		• Oil consumption is excessive.
17	Cooling system concerns	Overheating	• Engine runs at higher than normal temperature/overheats.
18	Cooling system concerns	Runs cold	• Engine does not reach normal operating temperature.
19	Exhaust smoke		• Blue, black, or white smoke from exhaust system.
20	Fuel odor (in engine compartment)		• Gasoline fuel smell or visible leakage.
21	Engine noise		• Engine noise from under hood.
22	Vibration concerns (engine)		• Vibration from under hood or driveline.
23	A/C does not work sufficiently		• A/C compressor magnetic clutch does not engage when A/C switch is turned on.
24	A/C is always on or A/C compressor runs continuously		• A/C compressor magnetic clutch does not disengage.
25	Exhaust sulphur smell		• Rotten egg smell (sulphur) from exhaust.
26	Fuel refill concerns		• Fuel tank does not fill smoothly.
27	Fuel filling shut off concerns		• Fuel does not shut off properly.
28	Spark plug condition		• Incorrect spark plug condition.
29	ATX concerns	Upshift/downshift/engagement	• ATX concerns not related to engine performance.

Vehicles with i-ELOOP

2014 - Mazda3 - Engine

NO.2 CHECK ENGINE LIGHT ILLUMINATES [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2	CHECK ENGINE LIGHT ILLUMINATES
DESCRIPTION	• Check engine light illuminates incorrectly. **NOTE:** • If there is a malfunction in the engine system, the PCM stores a DTC and illuminates the check engine light.
POSSIBLE CAUSE	• Check engine light illuminates for emission-related concern (DTC is stored in PCM) • Short to ground in wiring harness between the following terminals: ▪ Instrument cluster terminal B—Front body control module (FBCM) terminal 2K ▪ Instrument cluster terminal D—Front body control module (FBCM) terminal 2I ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Open circuit in wiring harness between the following terminals: ▪ Instrument cluster terminal B—Front body control module (FBCM) terminal 2K ▪ Instrument cluster terminal D—Front body control module (FBCM) terminal 2I ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Instrument cluster malfunction

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT COMMUNICATION LINE BETWEEN PCM AND INSTRUMENT CLUSTER** • Inspect for a short or open circuit between the following terminals: ▪ Instrument	Yes	Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results, then go to the next step.

	cluster terminal B—Front body control module (FBCM) terminal 2K ▪ Instrument cluster terminal D—Front body control module (FBCM) terminal 2I ▪ Front body control module (FBCM) terminal 2P—PCM terminal 2AK ▪ Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Is the wiring harness normal?		(See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Instrument cluster terminal B—Front body control module (FBCM) terminal 2K • Instrument cluster terminal D—Front body control module (FBCM) terminal 2I • Front body control module (FBCM) terminal 2P—PCM terminal 2AK • Front body control module (FBCM) terminal 2N—PCM terminal 2AL **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground or open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground or open circuit.
3	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.3 WILL NOT CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

3	WILL NOT CRANK
DESCRIPTION	• Starter does not work.

POSSIBLE CAUSE	• Poor connection of push button start connector
	• Instrument cluster or related wiring harness malfunction
	• Immobilizer system malfunction
	• PCM continuous memory DTC is stored
	• Open circuit in wiring harness between the following terminals:
	  ▪ Main relay terminal E—PCM terminal 2K
	  ▪ Main relay terminal D—PCM terminal 2S, 1CK
	  ▪ DLC-2—PCM terminal 2AK, 2AL
	• Main relay malfunction (stuck open)
	• Open or poor ground circuit
	• Poor connection of vehicle body ground
	• Battery malfunction
	• Fuse malfunction
	• Starter relay malfunction
	• Starter relay related wiring harness malfunction
	  ▪ Between starter relay terminal E and PCM terminal 2AZ
	  ▪ Between starter relay terminal E and start stop unit terminal 1D
	  ▪ Between start stop unit terminal 2V and starter relay terminal A
	• Following circuit malfunction:
	  ▪ Between battery positive terminal and starter terminal 1A
	  ▪ Between battery positive terminal and starter relay terminal C
	  ▪ Between starter relay terminal D and starter terminal 2A
	• Starter interlock switch and related wiring harness malfunction (MTX)
	• Starting system malfunction
	• Following circuit and/or connector malfunction:
	  ▪ Between push button start terminal A and start stop unit terminal 1AC
	  ▪ Between push button start terminal B and start stop unit terminal 1AE
	  ▪ Between PCM terminal 2AK and start stop unit terminal 2M
	  ▪ Between PCM terminal 2AL and start stop unit terminal 2O
	• Seized engine, flywheel (MTX) or drive plate (ATX)
	• Engine damage during compression due to liquid (such as water, fuel, or engine oil) penetration into cylinder

WARNING:

The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
VPWR	V	Battery positive voltage	• Displays battery voltage

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS IMMOBILIZER SYSTEM OR OTHER** • Are any of the following conditions present? ▪ Engine does not start completely. ▪ PCM DTC P1260:00 is displayed.	Yes	Both conditions present: • Go to Step 4.
		No	Either or other condition present: • Go to the next step.
2	**INSPECT PUSH BUTTON START CONNECTOR CONNECTION** • Inspect the connection of the push button start connector. • Is the push button start connector securely connected to the coil antenna?	Yes	Go to the next step.
		No	Reconnect the push button start securely, then repeat from Step 1.
3	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR OTHER** • Switch the ignition ON (engine off). • Does the security indicator light	Yes	Go to the next step.
		No	Inspect the following wiring harness and connectors: • Instrument cluster terminal B—Front body control

	flash?		module (FBCM) terminal 2K • Instrument cluster terminal D—Front body control module (FBCM) terminal 2I • Front body control module (FBCM) terminal 2P—PCM terminal 2AK • Front body control module (FBCM) terminal 2N—PCM terminal 2AL ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
4	**VERIFY IMMOBILIZER SYSTEM DTC** • Retrieve the immobilizer system DTC using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	Go to the next step.
5	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any continuous memory DTCs present?	Yes	Continuous memory DTC is displayed: • Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Communication error message is displayed: • Inspect the following: ▪ Open circuit in wiring harness between main relay terminal E and PCM terminal 2K ▪ Open circuit in wiring harness between main relay terminal D and PCM terminal 1CK or 2S ▪ Main relay (stuck open) ▪ Open or short circuit in wiring harness between DLC-2 and PCM terminal 2AK or 2AL ▪ Open or poor ground circuit (PCM terminal 1BZ, 1CL, 1CP, 1CT, 1CX, 1DB, 1DH, 1DL and 2AA) ▪ Poor connection of vehicle body ground • Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

6	**INSPECT POWER SUPPLY** • Access the VPWR PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the VPWR PID value. • Is the VPWR PID value **B+**?	Yes	Go to the next step.
		No	Inspect the following: • Battery connection • Battery condition (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Fuse (See **NO.1 BLOWN FUSES [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then repeat this step.
7	**DETERMINE IF MALFUNCTION CAUSE IS STARTER RELAY CONTROL SIGNAL CIRCUIT OR OTHER** • Switch the ignition to START. • Is a clicking sound heard from the starter relay?	Yes	Go to Step 18.
		No	ATX: • Go to Step 11. MTX: • Go to the next step.
8	**DETERMINE IF MALFUNCTION CAUSE IS STARTER INTERLOCK SWITCH OR OTHER** • Switch the ignition off. • Short the starter interlock switch terminals A and B (wiring harness-side) using a jumper wire. • Switch the ignition to START. • Does the engine start?	Yes	Inspect the starter interlock switch. (See **STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Replace the starter interlock switch, then repeat Step 7. (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.) • If there is no malfunction: ▪ Go to the next step.
		No	Go to the next step.
9	**INSPECT STARTER INTERLOCK SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the starter interlock switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then repeat Step 7.
		No	Go to the next step.
10	**INSPECT STARTER INTERLOCK SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the starter interlock switch connector is disconnected. • Inspect for continuity between starter interlock switch terminal B	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between starter interlock switch terminal B and body ground. **If there is a common connector:**

	(wiring harness-side) and body ground. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between starter interlock switch and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part. Repeat Step 7.
11	**INSPECT STARTER RELAY** • Switch the ignition off. • Remove the starter relay. • Inspect the starter relay. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the starter relay. Repeat Step 7.
		No	Go to the next step.
12	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then repeat Step 7.
		No	Go to the next step.
13	**INSPECT STARTER RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Starter relay is removed. • Verify that the starter interlock switch and start stop unit connectors are disconnected. • Inspect for continuity between starter relay terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between starter relay terminal A and start stop unit terminal 2V. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Repeat Step 7.
		No	Go to the next step.
14	**INSPECT STARTER RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Starter relay is removed. • Verify that the starter interlock switch and start stop unit connectors are disconnected. • Inspect for continuity between	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between starter relay terminal A and start stop unit terminal 2V. **If there is a common connector:** • Determine the malfunctioning part by inspecting the

	starter relay terminal A (wiring harness-side) and start stop unit terminal 2V (wiring harness-side). • Is there continuity?		common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Repeat Step 7.
15	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then repeat Step 7.
		No	Go to the next step.
16	**INSPECT STARTER RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Starter relay is removed. • Verify that the starter interlock switch, start stop unit and PCM connectors are disconnected. • Inspect for continuity between starter relay terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Starter relay terminal E—PCM terminal 2AZ • Starter relay terminal E—Start stop unit terminal 1D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Repeat Step 7.
		No	Go to the next step.
17	**INSPECT STARTER RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Starter relay is removed. • Verify that the starter interlock switch, start stop unit and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Starter relay terminal E—PCM terminal 2AZ ▪ Starter interlock switch terminal A—PCM terminal 2BD (MTX) ▪ Starter relay terminal E—Start stop unit terminal 1D • Is there continuity?	Yes	Inspect the start stop unit. (See **START STOP UNIT INSPECTION**.) • If there is any malfunction: ▪ Replace the start stop unit, then repeat Step 7. (See **START STOP UNIT REMOVAL/INSTALLATION**.) • If there is no malfunction: ▪ Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Starter relay terminal E—PCM terminal 2AZ • Starter interlock switch terminal A—PCM terminal 2BD (MTX) • Starter relay terminal E—Start stop unit terminal 1D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion,

			damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Repeat Step 7.
18	**INSPECT WIRING HARNESS OF STARTER POWER SUPPLY CIRCUIT** • Inspect the following circuit: ▪ Between battery positive terminal and starter terminal 1A ▪ Between battery positive terminal and starter relay terminal C ▪ Between starter relay terminal D and starter terminal 2A • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Go to the next step.
19	**INSPECT STARTING SYSTEM** • Inspect the starting system. (See **STARTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT IMMOBILIZER SYSTEM RELATED CIRCUIT** • Inspect the following wiring harness and connectors: ▪ Between push button start terminal A and start stop unit terminal 1AC ▪ Between push button start terminal B and start stop unit terminal 1AE ▪ Between PCM terminal 2AK and start stop unit terminal 2M ▪ Between PCM terminal 2AL and start stop unit terminal 2O • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
21	**VERIFY PRESENT MALFUNCTION DTC** • Perform the KOEO self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

22	**DETERMINE IF MALFUNCTION CAUSE IS BASE ENGINE OR OTHER** • Inspect for a seized flywheel (MTX) or drive plate (ATX). • Is the flywheel (MTX) or drive plate (ATX) seized?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Base engine malfunction or engine damage during compression due to liquid (such as water, fuel, or engine oil) penetration into cylinder. • Overhaul or replace the engine.
23	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

4	HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK
DESCRIPTION	• Starter cranks engine at normal speed but engine requires excessive cranking time before starting. • Battery is operating normally.

	NOTE:
	• If the ignition is not switched off (to LOCK or ACC) after the engine stalls, and then an engine restart is attempted, the PCM corrects the difference between CKP sensor and CMP sensor signals caused by engine stalling, which may result in more time needed to restart the engine.
	• Engine overheating
	• PCM DTC is stored
	• Erratic signal to PCM
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ MAP sensor or related circuit malfunction
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ Improper air/fuel mixture ratio control
	• Improper operation of drive-by-wire control system
	• Incorrect fuel injection timing
	• Fuel injector malfunction
	• Purge solenoid valve malfunction
	• Contamination in MAF sensor
	• Under the condition in which the engine starts and stops repeatedly while the vehicle is not driven, the fuel injected prior to complete ignition during engine start may drop into the oil pan from the cylinder and mix with the engine oil. The situation in which excess quantities of fuel continue to be injected due to an engine coolant temperature signal error is the same.
	• Intermittent open circuit in PCM ground circuit

POSSIBLE CAUSE	• Poor fuel quality
	• Fuel leakage
	• Air leakage from intake-air system
	• Intake-air system restriction
	• Vacuum leakage
	• Improper engine oil viscosity
	• Erratic signal from CMP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (intake camshaft and/or exhaust camshaft)
	  ▪ Open or short circuit in related wiring harness
	• Erratic signal from CKP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (crankshaft pulley)
	  ▪ Open or short circuit in related wiring harness
	• Inadequate fuel pressure (high or low pressure side)
	  ▪ Fuel pressure sensor malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve malfunction (built-into high pressure fuel pump)
	  ▪ Relief valve (built-into high pressure fuel pump) malfunction
	  ▪ Fuel line restriction
	  ▪ Fuel filter clogged (built-into fuel pump unit)
	  ▪ Fuel pump unit malfunction
	• Starting system malfunction
	• Low engine compression
	• Improper intake valve timing
	• Improper exhaust valve timing
	• Improper operation of electric variable valve timing control system
	  ▪ Electric variable valve timing driver malfunction
	  ▪ Electric variable valve timing motor malfunction

	Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • Spark plug malfunction • Erratic signal to ignition coils • Exhaust system or TWC restriction • PCV valve malfunction • Injector driver (built-into PCM) malfunction
POSSIBLE CAUSE	**WARNING:** The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
	KPa {MPa}, mBar		

FUEL_PRES	{Bar}, psi, in H20	Fuel pressure	Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
			• Idle (after warm up): 0—1.0 V

O2S12	V	HO2S voltage	• Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS OVERHEATING OR OTHER** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ ECT ▪ MAF ▪ MAP ▪ O2S11 ▪ O2S12 ▪ SHRTFT1 ▪ LONGFT1 • Do the PIDs indicate the correct values under the malfunction condition? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAP PID is not as specified: • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL SYSTEM OR OTHER** • Will the engine run smoothly at part throttle?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Electronic Control Throttle Operation Inspection.	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction:

	(See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?		▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**INSPECT MAF SENSOR** • Inspect the MAF sensor for the following: ▪ Contamination • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	**INSPECT PCM FOR POOR GROUND** • Verify the PCM ground point condition. • Is there any ground point loose or lifting in the PCM?	Yes	Repair the ground point.
		No	Go to the next step.
10	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Fuel quality (proper octane, contamination, winter/summer blend) ▪ Fuel leakage ▪ Intake-air system leakage or restriction ▪ Vacuum leakage ▪ Engine oil viscosity ▪ CKP sensor, intake CMP sensor and exhaust CMP sensor	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

	• Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?		
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 15.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results.

			• If there is no malfunction: ▪ Go to Step 14. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
12	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 15.
14	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump.	Yes	Go to the next step.
		No	Inspect the following:

	Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**		• Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
16	**INSPECT STARTING SYSTEM** • Inspect the starting system. (See **STARTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the starting system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
17	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)**	Yes	Go to Step 23.
		No	Go to the next step.

	Minimum: **763 kPa {7.78 kgf/cm , 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
18	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
19	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
20	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
21	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
22	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring • Intake valve

	• Is the valve timing normal?		• Exhaust valve • Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
23	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
24	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
25	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
26	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.5 ENGINE STALLS-AFTER START/AT IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

5	ENGINE STALLS-AFTER START/AT IDLE
DESCRIPTION	• Engine stops unexpectedly at idle, after start, or both.

	• Engine overheating
	• PCM DTC is stored
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ MAP sensor or related circuit malfunction
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ Improper air/fuel mixture ratio control
	• Improper operation of A/C system
	• Improper operation of drive-by-wire control system
	• Purge solenoid valve malfunction
	• Open circuit in MAF sensor ground circuit
	• Intermittent open circuit in PCM ground circuit
	• Poor fuel quality
	• Air leakage from intake-air system
	• Intake-air system restriction
	• Electrical connector disconnected
	• No battery power supply to PCM or poor ground
	• Fuel leakage

POSSIBLE CAUSE	• Vacuum leakage
	• Erratic signal from CMP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (intake camshaft and/or exhaust camshaft)
	  ▪ Open or short circuit in related wiring harness
	• No signal from CKP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (crankshaft pulley)
	  ▪ Open or short circuit in related wiring harness
	• Inadequate fuel pressure (high or low pressure side)
	  ▪ Open or short circuit in the fuel pump (low-side) body or related wiring harness
	  ▪ Fuel pressure sensor or related circuit malfunction
	  ▪ Fuel pump (low-side) body mechanical malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve malfunction (built-into high pressure fuel pump)
	  ▪ Relief valve (built-into high pressure fuel pump) malfunction
	  ▪ Fuel line restriction
	  ▪ Fuel filter clogged (built-into fuel pump unit)
	  ▪ Fuel pump unit malfunction
	• Fuel injector malfunction
	• Incorrect fuel injection timing
	• Improper operation of electric variable valve timing control system
	  ▪ Electric variable valve timing driver malfunction
	  ▪ Electric variable valve timing motor malfunction
	  ▪ Electric variable valve timing actuator malfunction
	• Improper operation of hydraulic variable valve timing control system
	• Ignition system malfunction
	• Ignition coil malfunction
	• Low engine compression
	• Improper intake valve timing

	• Improper exhaust valve timing • Exhaust system and/or TWC restricted • PCV valve malfunction • Injector driver (built-into PCM) malfunction
POSSIBLE CAUSE	**WARNING:** The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V

			• Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VPWR	V	Battery positive voltage	• Displays battery voltage
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY TIMING OCCURRING MALFUNCTION** • Verify the symptom. • Does the malfunction symptom occur just after the engine is started?	Yes	Perform the symptom troubleshooting “NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK”. (See **NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Verify the symptom. • Does the engine idle rough?	Yes	Perform the symptom troubleshooting “NO.8 ENGINE RUNS ROUGH/ROLLING IDLE”. (See **NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

		No	Go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP1 ▪ APP2 ▪ ECT	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	▪ MAF ▪ MAP ▪ O2S11 ▪ O2S12 ▪ SHRTFT1 ▪ LONGFT1 • Do the PIDs indicate the correct values under the malfunction condition? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)		MAP PID is not as specified: • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**INSPECT PCM POWER SUPPLY VOLTAGE** • Access the VPWR PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the VPWR PID value **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between main relay terminal D and PCM terminal 2S and 1CK.
7	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.23 A/C DOES NOT WORK SUFFICIENTLY" and "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL SYSTEM OR OTHER** • Will the engine run smoothly at part throttle?	Yes	Go to Step 10.

		No	Go to the next step.
9	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
10	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
11	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect the MAF sensor for the following: ▪ MAF sensor terminal B voltage (ground circuit) • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Go to the next step.
12	**INSPECT PCM FOR POOR GROUND** • Verify the PCM ground point condition. • Is there any ground point loose or lifting in the PCM?	Yes	Repair the ground point.
		No	Go to the next step.
13	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Fuel quality (proper octane, contamination, winter/summer blend) ▪ Intake-air system leakage or restriction ▪ Electrical connectors ▪ Poor connection for PCM ground and body ground ▪ Fuel leakage ▪ Vacuum leakage ▪ CKP sensor, intake CMP sensor and	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

	exhaust CMP sensor • Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?		
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 18.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part

			according to the inspection results. • If there is no malfunction: ▪ Go to Step 17. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
15	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 17.
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 18.
17	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and	Yes	Go to the next step.

	high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
19	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
20	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)**	Yes	Go to Step 26.
		No	Go to the next step.

	▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
21	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
22	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
23	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
24	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
25	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring

	• Is the valve timing normal?		• Intake valve • Exhaust valve • Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
26	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
27	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
28	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
29	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.5 ENGINE STALLS-AFTER START/AT IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.6 CRANKS NORMALLY BUT WILL NOT START [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

6	CRANKS NORMALLY BUT WILL NOT START
DESCRIPTION	• Starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE” if this symptom appears after engine stalls. • Fuel is in tank. • Battery is in normal condition.

	• Because engine is started with accelerator pedal fully depressed, it goes into dechoke mode and fuel is not injected
	• Engine overheating
	• PCM DTC is stored
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ Improper air/fuel mixture ratio control
	• Power is not supplied from main relay
	• Power is not supplied from fuel injector relay and/or fuel pump relay
	• Improper operation of drive-by-wire control system
	• Purge solenoid valve malfunction
	• No signal from MAF sensor
	• Poor fuel quality
	• Air leakage from intake-air system
	• Intake-air system restriction

POSSIBLE CAUSE	• Electrical connector disconnected
	• No battery power supply to PCM or poor ground
	• Fuse malfunction
	• Fuel leakage
	• Vacuum leakage
	• No signal from CMP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (exhaust camshaft)
	  ▪ Open or short circuit in related wiring harness
	• No signal from CKP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (crankshaft pulley)
	  ▪ Open or short circuit in related wiring harness
	• Inadequate fuel pressure (high or low pressure side)
	  ▪ Open or short circuit in the fuel pump (low-side) body or related wiring harness
	  ▪ Fuel pressure sensor or related circuit malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve malfunction (built-into high pressure fuel pump)
	  ▪ Fuel line restriction
	  ▪ Fuel filter clogged (built-into fuel pump unit)
	  ▪ Fuel pump (low-side) body mechanical malfunction
	• Incorrect fuel injection timing
	• Fuel injector malfunction
	• Improper intake valve timing
	• Improper exhaust valve timing
	• Improper operation of electric variable valve timing control system
	  ▪ Electric variable valve timing driver malfunction
	  ▪ Electric variable valve timing motor malfunction
	  ▪ Electric variable valve timing actuator malfunction
	• Improper operation of hydraulic variable valve timing control system

	• Low engine compression • Ignition system malfunction • Ignition coil malfunction • Vapor occurs around fuel pump (fuel problem) • Because vapor occurs in high pressure fuel pump, fuel injector cannot adjust fuel injection to correct amount • Exhaust system and/or TWC restricted • PCV valve malfunction • Injector driver (built-into PCM) malfunction
POSSIBLE CAUSE	**WARNING:** The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45%

APP2			• Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
			• Idle (after warm up): Approx. −39 μA

O2S11	µA	A/F sensor current	• Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT VEHICLE CONDITION FOR EFFECT ON MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: ▪ Because engine is started with accelerator pedal fully depressed, it goes into dechoke mode and fuel is not injected • Does the engine start with the accelerator pedal fully depressed?	Yes	Explain to the customer that the vehicle is normal and give them advice on how to start the engine and a specific example of the conditions in which the engine goes into dechoke mode.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	VERIFY PCM DTC		

3	• Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP1 ▪ APP2 ▪ ECT ▪ MAF ▪ O2S11 ▪ O2S12 ▪ SHRTFT1 ▪ LONGFT1 • Do the PIDs indicate the correct values under the malfunction condition? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL**	Yes	Go to Step 7.

	SYSTEM OR OTHER • Will the engine run smoothly at part throttle?		
		No	Go to the next step.
6	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**VERIFY IF MALFUNCTION CAUSE IS MAF SENSOR SIGNAL** **NOTE:** • If the inspection in Step 8 is performed, the PCM detects a DTC and performs fail-safe control. After performing the inspection, clear DTCs using the M-MDS. • Switch the ignition off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Start the engine. • Does the engine start normally?	Yes	Clean the MAF sensor. Verify that the symptom is solved. • If the symptom remains, inspect the MAF sensor related wiring harness and connector. ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the MAF sensor/IAT sensor No.1. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

9	**INSPECT FUEL INJECTOR RELAY** • Switch the ignition off. • Remove the fuel injector relay. • Inspect the fuel injector relay. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the fuel injector relay.
		No	Reinstall the fuel injector relay, then go to the next step.
10	**INSPECT FUEL PUMP RELAY** • Remove the fuel pump relay. • Inspect the fuel pump relay. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the fuel pump relay.
		No	Inspect for a short or open circuit between the following terminals: • IG1 relay terminal C—PCM terminal 2AQ • Battery positive terminal—PCM terminal 1CO • Battery positive terminal—PCM terminal 1CS • Battery positive terminal—PCM terminal 1CW • Battery positive terminal—PCM terminal 1DA • Battery positive terminal—PCM terminal 1DG • Battery positive terminal—PCM terminal 1DK • Main relay terminal D—Fuel injector relay terminal A • Fuel injector relay terminal E—Body ground ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Reinstall the fuel pump relay, then go to the next step.
11	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Fuel quality (proper octane, contamination, winter/summer blend) ▪ Intake-air system leakage or restriction ▪ Electrical connectors ▪ Poor connection for PCM ground and	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

	body ground ▪ Fuses ▪ Fuel leakage ▪ Vacuum leakage ▪ CKP sensor and exhaust CMP sensor • Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel exhaust camshaft • Is there any malfunction?		
12	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access the FUEL_PRES PID using the M-MDS while cranking the engine. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value within specification? **Specification:** • **4—6 MPa {41—61 kgf/cm^2, 581—870 psi}**	Yes	Go to Step 14.
		No	Lower than specification: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP**

			INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step. Higher than specification: • Go to the next step.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification?	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the

	Specification: • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**		malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
15	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
16	**INSPECT FUEL TANK** • Inspect the fuel tank. (See **FUEL TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is vapor occurring?	Yes	Replace the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
17	**INSPECT HIGH PRESSURE FUEL PUMP** • Inspect the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
18	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)**	Yes	Go to Step 24.
		No	Go to the next step.

	▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
19	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
20	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
21	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
22	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

	• Is there any malfunction?		
23	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the valve timing normal?	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring • Intake valve • Exhaust valve • Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
24	**INSPECT IGNITION SYSTEM OPERATION** **NOTE:** • Because the malfunction may have been resolved by removing the carbon adhered to the spark plug during the spark inspection for the spark plug, verify that the repairs have been completed. • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
25	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
26	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

			If the problem remains, overhaul the engine.
27	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

NO.7 ENGINE OIL WARNING LIGHT ILLUMINATED/MESSAGE RELATED TO ENGINE HYDRAULIC PRESSURE MALFUNCTION INDICATED IN DISPLAY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

7	ENGINE OIL WARNING LIGHT ILLUMINATED/MESSAGE RELATED TO ENGINE HYDRAULIC PRESSURE MALFUNCTION INDICATED IN DISPLAY
DESCRIPTION	• Engine oil warning light illuminates. • Message related to engine hydraulic pressure malfunction indicated in display.
POSSIBLE CAUSE	• Improper engine oil level • Engine oil leakage • Oil pressure switch connector or terminals malfunction • PCM connector or terminals malfunction • Short to ground in wiring harness between oil pressure switch terminal A and PCM terminal 1P • Open circuit in wiring harness between oil pressure switch terminal A and PCM terminal 1P • Oil pressure switch malfunction • Oil pump malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT ENGINE OIL LEVEL** • Inspect the engine oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Engine oil level is below L: • Add genuine motor oil, then go to the next step. Engine oil level is above F: • Replace the engine oil, then go to the next step. (penetration of fuel into engine oil can be considered) (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 3.
2	**VERIFY IF ENGINE OIL WARNING LIGHT ILLUMINATES** • Start the engine. • Increase and keep the engine speed at **2,500 rpm** for **5 s**. • Does the engine oil warning light illuminate?	Yes	Go to the next step.
		No	Symptom troubleshooting is completed.
3	**VERIFY DTC** • Retrieve the PCM and instrument	Yes	Go to the applicable DTC inspection.

	cluster DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?		(See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
4	**INSPECT OIL PRESSURE SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the oil pressure switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals.
		No	Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the oil pressure switch and PCM connectors are disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between oil pressure switch terminal A and PCM terminal 1P. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground.
		No	Go to the next step.
7	**INSPECT OIL PRESSURE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the oil pressure switch and PCM connectors are disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and PCM terminal 1P (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between oil pressure switch terminal A and PCM terminal 1P. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

8	**INSPECT ENGINE OIL PRESSURE** • Inspect the engine oil pressure. (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the oil pump, then go to the next step. (See **OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the oil pressure switch, then go to the next step. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

8	ENGINE RUNS ROUGH/ROLLING IDLE
DESCRIPTION	• Engine speed fluctuates between specified idle speed and lower speed and, engine shakes excessively. • Idle speed is too slow and engine shakes excessively.

	• Engine overheating
	• PCM DTC is stored
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ MAP sensor or related circuit malfunction
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ Improper air/fuel mixture ratio control operation
	• Improper load signal input
	  ▪ Improper A/C request signal
	• Improper operation of A/C system
	• Improper operation of drive-by-wire control system
	• Incorrect fuel injection timing
	• Unbalanced fuel injection amount for each cylinder
	• Purge solenoid valve malfunction
	• Poor fuel quality
	• Air leakage from intake-air system
	• Intake-air system restriction

POSSIBLE CAUSE	• Electrical connector disconnected
	• Fuel leakage
	• Vacuum leakage
	• Improper engine oil viscosity
	• Erratic or no signal from CMP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (intake camshaft and/or exhaust camshaft)
	  ▪ Open or short circuit in related wiring harness
	• Erratic signal from CKP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (crankshaft pulley)
	  ▪ Open or short circuit in related wiring harness
	• Inadequate fuel pressure (high or low pressure side)
	  ▪ Fuel pressure sensor or related circuit malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction
	  ▪ Relief valve (built-into high pressure fuel pump) malfunction
	  ▪ Fuel pump (low-side) body mechanical malfunction
	  ▪ Fuel filter clogged (built-into fuel pump unit)
	  ▪ Fuel injector malfunction
	• Improper intake valve timing
	• Improper exhaust valve timing
	• Improper operation of electric variable valve timing control system
	  ▪ Electric variable valve timing driver malfunction
	  ▪ Electric variable valve timing motor malfunction
	  ▪ Electric variable valve timing actuator malfunction
	• Improper operation of hydraulic variable valve timing control system
	• Low engine compression or excessive unbalance for each cylinder
	• Spark plug malfunction
	• Incorrect signal to ignition coil

	• Exhaust system or TWC restricted • PCV valve malfunction • Injector driver (built-into PCM) malfunction
POSSIBLE CAUSE	**WARNING:** The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
AC_REQ	Off/On	A/C switch status received by PCM via CAN	• A/C switch off: Off • A/C switch on: On
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
APP2	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V

			Accelerator pedal fully depressed: Approx. 2.05 V
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
			• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V

MAP	V	MAP sensor voltage	• Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES HARD ENGINE STARTING** • Verify the vehicle engine condition. • Can idling be maintained?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE”. (See **NO.5 ENGINE STALLS-AFTER START/AT IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating.

	CAUTION: • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Is the ECT PID value **less than 116 °C {241 °F}** during driving?		Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP1 ▪ APP2 ▪ ECT ▪ MAF ▪ MAP ▪ O2S11 ▪ O2S12	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAP PID is not as specified: • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified:

	SHRTFT1 ▪ LONGFT1 • Do the PIDs indicate the correct values under the malfunction condition? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)		• Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Monitor the AC_REQ PID while turning on and off the air conditioner using the switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection

			results.
7	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Fuel quality (proper octane, contamination, winter/summer blend) ▪ Intake-air system restriction or leakage ▪ Electrical connectors connection ▪ Fuel leakage in fuel system ▪ Vacuum leakage ▪ Engine oil viscosity ▪ CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

10	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 14.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to Step 13. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
11	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	Is there any malfunction?	No	Go to Step 14.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

15	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.	Yes	Go to Step 21.
		No	Go to the next step.
16	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
17	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

18	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
19	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the valve timing normal?	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring • Intake valve • Exhaust valve • Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
21	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
22	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
	INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR		

23	**DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
24	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

9	FAST IDLE/RUNS ON
DESCRIPTION	• Engine speed continues at fast idle after warm-up. • Engine runs after ignition is switched off.

POSSIBLE CAUSE	• Cooling system malfunction
	• PCM DTC is stored
	• Accelerator pedal stuck depressed
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ Neutral switch or related circuit malfunction (MTX)
	  ▪ Communication error between TCM and PCM (ATX)
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ Improper air/fuel mixture ratio control operation
	• Improper load signal input
	  ▪ Improper A/C request signal
	• Improper operation of drive-by-wire control system
	• Throttle body malfunction
	• Fuel injector malfunction
	• Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction
	• Improper operation of cruise control system
	• Air leakage from intake-air system
	• Injector driver (built-into PCM) malfunction
	WARNING:
	The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:
	• Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
	• Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION”

	described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
AC_REQ	Off/On	A/C switch status received by PCM via CAN	• A/C switch off: Off • A/C switch on: On
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
APP2	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
CPP/PNP (MTX)	Off/On	Shift lever position	• Other than neutral: Off • Neutral: On
	°C, °F	Engine coolant temperature	• Displays ECT
			• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V

ECT	V	ECT sensor No.1 voltage	• ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000

		based on A/F sensor signal	rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT COOLING SYSTEM FOR MALFUNCTION** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and warm it up completely. • Is the ECT PID value between **82—112 °C {180—234 °F}**?	Yes	Go to the next step.
		No	ECT PID value is **higher than 112 °C {234 °F}**: • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID value is **less than 82 °C {180 °F}**: • Perform the symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS-RUNS COLD". (See **NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch.

	you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP1 ▪ APP2 ▪ CPP/PNP (MTX) ▪ O2S11 ▪ O2S12 ▪ SHRTFT1 ▪ LONGFT1 • Do the PIDs indicate the correct values under the malfunction condition? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)		(See **NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Inspect communication error between TCM and PCM. (ATX) • Repair or replace the malfunctioning part according to the inspection results if necessary. ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Monitor the AC_REQ PID while turning on and off the air conditioner using the switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION**	Yes	Visually inspect the throttle body (damage/scratching).

	• Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?		• If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT HIGH PRESSURE FUEL PUMP** • Inspect the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT CRUISE CONTROL SYSTEM** • Inspect the operation of cruise control system. • Does the cruise control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT INTAKE-AIR SYSTEM FOR AIR LEAKAGE** • Inspect for leakage in intake-air system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
10	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis.		

	▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

2014 - Mazda3 - Engine

NO.10 LOW IDLE/STALLS DURING DECELERATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

10	LOW IDLE/STALLS DURING DECELERATION
DESCRIPTION	• Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.

	• PCM DTC is stored
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ Brake switch or related circuit malfunction
	  ▪ Neutral switch or related circuit malfunction (MTX)
	  ▪ Communication error between TCM and PCM (ATX)
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ MAP sensor or related circuit malfunction
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ TP sensor or related circuit malfunction
	  ▪ Generator malfunction (part, system, control malfunction)
	  • Amount of generator voltage is large
	  ▪ Improper air/fuel mixture ratio control
	• Improper operation of A/C magnetic clutch
	• Improper operation of drive-by-wire control system
	• Incorrect fuel injection timing
	• Fuel injector malfunction
	• Purge solenoid valve malfunction
	• Poor fuel quality

POSSIBLE CAUSE	• Air leakage from intake-air system
	• Intake-air system restriction
	• Fuel leakage
	• Vacuum leakage
	• Engine mount installation loose
	• Erratic signal from intake CMP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (intake camshaft and/or exhaust camshaft)
	  ▪ Open or short circuit in related wiring harness
	• Erratic signal from CKP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (crankshaft pulley)
	  ▪ Open or short circuit in related wiring harness
	• Inadequate fuel pressure (high or low pressure side)
	  ▪ Fuel pressure sensor or related circuit malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction
	  ▪ Relief valve (built-into high pressure fuel pump) malfunction
	  ▪ Fuel line restriction
	  ▪ Fuel filter clogged (built-into fuel pump unit)
	  ▪ Fuel pump unit malfunction
	• TCC mechanism malfunction (ATX)
	• Low engine compression
	• Improper intake valve timing
	• Improper exhaust valve timing
	• Improper operation of electric variable valve timing control system
	  ▪ Electric variable valve timing driver malfunction
	  ▪ Electric variable valve timing motor malfunction
	  ▪ Electric variable valve timing actuator malfunction
	• Improper operation of hydraulic variable valve timing control system

- Injector driver (built-into PCM) malfunction

WARNING:

The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
AC_REQ	Off/On	A/C switch status received by PCM via CAN	• A/C switch off: Off • A/C switch on: On
ALTF	%	Field coil current control signal output to generator	• Ignition switched ON (engine off): 0% • Idle: Approx. 42% • Racing (Engine speed is 2,000 rpm): Approx. 29%
ALTT V	V	Generator output voltage	• Idle (no E/L): Approx. 14 V (This is internal calculation value and differs from terminal voltage)

	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
		Accelerator pedal opening angle (absolute value) input from	• Accelerator pedal released: Approx. 7.45%

APP2	%	APP sensor No.2	• Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
BOO	High/Low	Brake switch (No.1 signal) ON/OFF status	• Brake pedal released: Low • Brake pedal fully depressed: High
CPP/PNP (MTX)	Off/On	Shift lever position	• Other than neutral: Off • Neutral: On
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%
	g/Sec	Mass air flow	• Displays MAF
			• Ignition switched ON (engine off) (MAF: 0.59 g/s

MAF	V	MAF sensor voltage	{0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
	VERIFY IF MALFUNCTION INCLUDES HARD ENGINE STARTING		

1	• Is the engine unable to start after it has stalled?	Yes	If the engine is unable to start, perform the symptom troubleshooting “NO.3 WILL NOT CRANK” and “NO.6 CRANKS NORMALLY BUT WILL NOT START”. (See **NO.3 WILL NOT CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **NO.6 CRANKS NORMALLY BUT WILL NOT START [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Does the engine idle rough?	Yes	Perform the symptom troubleshooting “NO.8 ENGINE RUNS ROUGH/ROLLING IDLE”. (See **NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP1 ▪ APP2 ▪ BOO ▪ CPP/PNP (MTX) ▪ ECT ▪ MAF	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) BOO PID is not as specified: • Inspect the brake switch. (See **BRAKE SWITCH INSPECTION**.) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch. (See **NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- MAP
- TP_REL
- O2S11
- O2S12
- SHRTFT1
- LONGFT1
- ALTT V

- Do the PIDs indicate the correct values under the malfunction condition?

  (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

MAF PID is not as specified:

- Inspect the MAF sensor.

  (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

MAP PID is not as specified:

- Inspect the MAP sensor.

  (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

TP_REL PID is not as specified:

- Inspect the TP sensor.

  (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

O2S11, SHRTFT1, LONGFT1 PIDs are not as specified:

- Inspect the A/F sensor.

  (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

O2S12 PID is not as specified:

- Inspect the HO2S.

  (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

ALTT V PID is not as specified:

- Inspect the generator.

  (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)

Repair or replace the malfunctioning part according to the inspection results.

- If the malfunction remains:
  - Inspect communication error between TCM and PCM. (ATX)
    - Repair or replace the malfunctioning part according to the inspection results if necessary.
  - Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure.

    (See **INTERMITTENT CONCERN**

			TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Monitor the AC_REQ PID while turning on and off the air conditioner using the switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL SYSTEM OR OTHER** • Will the engine run smoothly at part throttle?	Yes	Go to Step 8.
		No	Go to the next step.
7	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

	• Does the purge solenoid valve work properly?		
10	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Fuel quality (proper octane, contamination, winter/summer blend) ▪ Intake-air system restriction ▪ Fuel leakage in fuel system ▪ Vacuum leakage ▪ CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 15.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

			▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to Step 14. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
12	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 15.
14	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground.

			If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
16	**INSPECT IF MALFUNCTION CAUSE IS ENGINE COMPRESSION OR INJECTOR DRIVER (PCM INTEGRATED)** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)**	Yes	Go to Step 22.
		No	Go to the next step.

	▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
17	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
18	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
19	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
20	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

	Is there any malfunction?		
21	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the valve timing normal?	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring • Intake valve • Exhaust valve • Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
22	**INSPECT FOR MALFUNCTION DUE TO ENGINE MOUNT INSTALLATION LOOSE** • Verify the engine mount installation condition. • Is the engine mount installation condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
23	**INSPECT TCC MECHANISM** • Inspect the TCC mechanism. • Is the TCC mechanism normal?	Yes	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
		No	Repair or replace the malfunctioning part according to the inspection results.
24	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.10 LOW IDLE/STALLS DURING DECELERATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

11	ENGINE STALLS/QUITS-ACCELERATION/CRUISE ENGINE RUNS ROUGH-ACCELERATION/CRUISE MISSES-ACCELERATION/CRUISE BUCK/JERK-ACCELERATION/CRUISE/DECELERATION HESITATION/STUMBLE-ACCELERATION SURGES-ACCELERATION/CRUISE
DESCRIPTION	• Engine stops unexpectedly at beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising. • Engine speed fluctuates during acceleration or cruising. • Engine misses during acceleration or cruising. • Vehicle bucks/jerks during acceleration, cruising, or deceleration. • Momentary pause at beginning of acceleration or during acceleration. • Momentary minor irregularity in engine output.

	• Engine overheating
	• Drive-by-wire control system operates with brake override system
	• PCM DTC is stored
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ Neutral switch or related circuit malfunction (MTX)
	  ▪ Communication error between TCM and PCM (ATX)
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ Fuel pressure sensor or related circuit malfunction
	  ▪ IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction

POSSIBLE CAUSE	▪ MAF sensor or related circuit malfunction ▪ MAP sensor or related circuit malfunction ▪ A/F sensor or related circuit malfunction ▪ HO2S or related circuit malfunction ▪ Improper air/fuel mixture ratio control operation ▪ Intermittent open or short circuit MAF sensor, APP sensor, TP sensor • Improper operation of A/C system • Improper operation of drive-by-wire control system • Throttle body malfunction • Incorrect fuel injection timing • Fuel injector malfunction • Purge solenoid valve malfunction • Improper A/F sensor signal ▪ A/F sensor malfunction ▪ Open or short circuit in related wiring harness ▪ Loose installation ▪ Exhaust system leakage • Main relay intermittent malfunction • Poor fuel quality • Air leakage from intake-air system • Intake-air system restriction • Air cleaner restriction • Clutch slippage (MTX) • Fuel leakage • Vacuum leakage • Engine mount installation loose • Erratic or no signal from CMP sensor ▪ Loose installation ▪ Damaged trigger wheel (intake camshaft and/or exhaust camshaft) ▪ Open or short circuit in related wiring harness • Erratic signal from CKP sensor

	▪ Loose installation ▪ Damaged trigger wheel (crankshaft pulley) ▪ Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) ▪ Fuel pressure sensor malfunction ▪ High pressure fuel pump malfunction ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction ▪ Relief valve (built-into high pressure fuel pump) malfunction ▪ Fuel line restricted ▪ Fuel filter clogged (built-into fuel pump unit) ▪ Fuel pump mechanical malfunction
POSSIBLE CAUSE	• Low engine compression • Improper intake valve timing • Improper exhaust valve timing • Improper operation of electric variable valve timing control system ▪ Electric variable valve timing driver malfunction ▪ Electric variable valve timing motor malfunction ▪ Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • Spark plug malfunction • Exhaust system and/or TWC restriction (PCM DTC is stored.) • PCV valve malfunction • Check valve (two-way) malfunction • Injector driver (built-into PCM) malfunction **WARNING:** The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described

in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
APP2	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
CPP/PNP (MTX)	Off/On	Shift lever position	• Other than neutral: Off • Neutral: On
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
IAT	°C, °F	Intake air temperature (No.1)	• Displays IAT (No.1)
	V	IAT sensor No.1 voltage	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V

O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES HARD ENGINE STARTING** • Is the engine unable to start after it has stalled? **NOTE:** • If the ignition is not switched off (to LOCK or ACC) after the engine stalls, and then an engine restart is attempted, the PCM corrects the difference between CKP sensor and CMP sensor signals caused by engine stalling, which may result in more time needed to restart the engine.	Yes	If the engine is unable to start, perform the symptom troubleshooting “NO.3 WILL NOT CRANK” and “NO.6 CRANKS NORMALLY BUT WILL NOT START”. (See **NO.3 WILL NOT CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **NO.6 CRANKS NORMALLY BUT WILL NOT START [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Does the engine idle rough?	Yes	Perform the symptom troubleshooting “NO.8 ENGINE RUNS ROUGH/ROLLING IDLE”. (See **NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**VERIFY DRIVE-BY-WIRE CONTROL SYSTEM OPERATES WITH BRAKE OVERRIDE SYSTEM** • Retrieve the PCM DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC P2299:00 present?	Yes	Go to the applicable DTC inspection. (drive-by-wire control system operates with brake override system.) (See **DTC P2299:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0,**	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch. (See **NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

SKYACTIV-G 2.5].)

- APP1
- APP2
- CPP/PNP (MTX)
- ECT
- FUEL_PRES
- IAT
- MAF
- MAP
- O2S11
- O2S12
- SHRTFT1
- LONGFT1

- Do the PIDs indicate the correct values under the malfunction condition?

  (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

ECT PID is not as specified:

- Inspect the ECT sensor No.1.

  (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

FUEL_PRES PID is not as specified:

- Inspect the fuel pressure sensor.

  (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

IAT PID is not as specified:

- Inspect the IAT sensor No.1.

  (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

MAF PID is not as specified:

- Inspect the MAF sensor.

  (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

MAP PID is not as specified:

- Inspect the MAP sensor.

  (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

O2S11, SHRTFT1, LONGFT1 PIDs are not as specified:

- Inspect the A/F sensor.

  (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

O2S12 PID is not as specified:

- Inspect the HO2S.

  (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Repair or replace the malfunctioning part according to the inspection results.

- If the malfunction remains:
  - Inspect communication error between TCM and PCM. (ATX)
    - Repair or replace the malfunctioning part

			according to the inspection results if necessary. ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.23 A/C DOES NOT WORK SUFFICIENTLY" and "NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL SYSTEM OR OTHER** • Will the engine run smoothly at part throttle?	Yes	Go to Step 10.
		No	Go to the next step.
9	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
10	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
11	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. **ENGINE CONTROL SYSTEM OPERATION INSPECTION**	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection

	(See **[SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the purge solenoid valve work properly?		results.
12	**INSPECT CURRENT A/F SENSOR SIGNAL** • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 14.
13	**DETERMINE IF MALFUNCTION CAUSE IS A/F SENSOR MALFUNCTION OR A/F SENSOR RELATED WIRING HARNESS MALFUNCTION** **NOTE:** • If the inspection in Step 13 is performed, the PCM detects a DTC and performs fail-safe control. After performing the inspection, clear DTCs using the M-MDS. • Switch the ignition off. • Disconnect the A/F sensor connector. • Verify the symptom. • Does the symptom disappear?	Yes	Replace the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the following: • Exhaust system leakage between exhaust manifold and A/F sensor • Loose installation of A/F sensor ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Inspect the A/F sensor signal circuit. • Repair or replace the suspected wiring harness if necessary.
14	**INSPECT MAIN RELAY OPERATION** • Perform the Main Relay Operation Inspection with wiggle the related harness. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the main relay operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
15	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Fuel quality (proper octane, contamination, winter/summer blend)	Yes	Service if necessary. • Repeat this step.

	▪ Air leakage from intake-air system ▪ Intake-air system restriction ▪ Air cleaner element ▪ Clutch slippage (MTX) ▪ Fuel leakage from fuel line ▪ Vacuum leakage ▪ Engine mount loose ▪ CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	No	Go to the next step.
16	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 18.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

			▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
17	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and	Yes	Go to the next step.

	high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
19	**INSPECT THROTTLE BODY FOR CLOGGING** • Visually inspect the throttle valve. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is any foreign matter adhering around the throttle valve?	Yes	Clean the throttle valve.
		No	Go to the next step.
20	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)**	Yes	Go to Step 26.
		No	Go to the next step.

	▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
21	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
22	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
23	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
24	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
25	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring

	• Is the valve timing normal?		• Intake valve • Exhaust valve • Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
26	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
27	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
28	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
29	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

12	LACK/LOSS OF POWER-ACCELERATION/CRUISE
DESCRIPTION	• Performance is poor under load. (e.g., power down when climbing hills)

	• Engine overheating
	• Drive-by-wire control system operates with brake override system
	• PCM DTC is stored
	• Improper operation of A/C system
	• Improper operation of drive-by-wire control system
	• Throttle body malfunction
	• Incorrect fuel injection timing
	• Fuel injector malfunction
	• Purge solenoid valve malfunction
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ Neutral switch or related circuit malfunction (MTX)
	  ▪ Communication error between TCM and PCM (ATX)
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ Fuel pressure sensor or related circuit malfunction
	  ▪ IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ MAP sensor or related circuit malfunction
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ Improper air/fuel mixture ratio control operation

POSSIBLE CAUSE	▪ Intermittent open or short circuit MAF sensor, APP sensor, TP sensor • Fuel leakage • Poor fuel quality • Air leakage or restriction in intake-air system • Air cleaner restricted or dirty • Vacuum leakage • Clutch slippage (MTX) • Brake dragging • Tire air pressure malfunction • Erratic or no signal from CMP sensor ▪ Loose installation ▪ Damaged trigger wheel (intake camshaft and/or exhaust camshaft) ▪ Open or short circuit in related wiring harness • Erratic signal from CKP sensor ▪ Loose installation ▪ Damaged trigger wheel (crankshaft pulley) ▪ Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) ▪ Fuel pressure sensor malfunction ▪ High pressure fuel pump malfunction ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction ▪ Relief valve (built-into high pressure fuel pump) malfunction ▪ Fuel line restricted ▪ Fuel filter clogged (built-into fuel pump unit) ▪ Fuel pump mechanical malfunction • Throttle valve clogged • Low engine compression • Improper intake valve timing • Improper exhaust valve timing • Improper operation of electric variable valve timing control system

	▪ Electric variable valve timing driver malfunction ▪ Electric variable valve timing motor malfunction ▪ Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • Spark plug malfunction • Incorrect signal to ignition coil • Exhaust system and/or TWC restriction • PCV valve malfunction • Injector driver (built-into PCM) malfunction • ATX internal malfunction (ATX)
POSSIBLE CAUSE	**WARNING:** The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V

APP2	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
CPP/PNP (MTX)	Off/On	Shift lever position	• Other than neutral: Off • Neutral: On
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
IAT	°C, °F	Intake air temperature (No.1)	• Displays IAT (No.1)
	V	IAT sensor No.1 voltage	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78%

			• Racing (engine speed is 4,000 rpm): Approx. -0.78%
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Does the engine idle rough?	Yes	Perform the symptom troubleshooting “NO.8 ENGINE RUNS ROUGH/ROLLING IDLE”. (See **NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY DRIVE-BY-WIRE CONTROL SYSTEM OPERATES WITH BRAKE OVERRIDE SYSTEM** • Retrieve the PCM DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC P2299:00 present?	Yes	Go to the applicable DTC inspection. (drive-by-wire control system operates with brake override system.) (See **DTC P2299:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS**	Yes	Go to the next step.

CAUTION:

- While performing this step, always operate the vehicle in a safe and lawful manner.
- When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.
- Access the following PIDs using the M-MDS:

  (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

  - APP1
  - APP2
  - CPP/PNP (MTX)
  - ECT
  - FUEL_PRES
  - IAT
  - MAF
  - MAP
  - TP_REL
  - O2S11
  - O2S12
  - SHRTFT1
  - LONGFT1
- Do the PIDs indicate the correct values under the malfunction condition?

  (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch. (See **NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) FUEL_PRES PID is not as specified: • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) IAT PID is not as specified: • Inspect the IAT sensor No.1. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAP PID is not as specified: • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) TP_REL PID is not as specified: • Inspect the TP sensor. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor.

			(See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Inspect communication error between TCM and PCM. (ATX) • Repair or replace the malfunctioning part according to the inspection results if necessary. ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Electronic Control Throttle Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the drive-by-wire control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

9	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Inspect for fuel leakage in the fuel line. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
10	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Fuel quality (proper octane, contamination, winter/summer blend) ▪ Air leakage or restriction in intake-air system ▪ Air cleaner restricted or dirty ▪ Vacuum leakage ▪ Clutch slippage (MTX) ▪ Brake dragging ▪ Tire air pressure ▪ CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31**	Yes	Go to Step 13.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector

	kgf/cm^2, 435 psi}?		▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to the next step. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
12	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM)

			(See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
13	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
14	**INSPECT THROTTLE BODY FOR CLOGGING** • Visually inspect the throttle valve. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is any foreign matter adhering around the throttle valve?	Yes	Clean the throttle valve.
		No	Go to the next step.
15	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)**	Yes	Go to Step 21.
		No	Go to the next step.

	▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
16	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
17	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
18	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
19	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection.	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

	(See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		
20	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the valve timing normal?	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring • Intake valve • Exhaust valve • Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
21	**VERIFY SPARK PLUG CONDITION** • Inspect the spark plug condition. (See **SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Repair or replace the malfunctioning part according to the inspection results. Spark plug is grayish white: • Inspect the fuel injector for restriction. ▪ Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
22	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
23	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve.	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
24	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

13	KNOCKING/PINGING-ACCELERATION/CRUISE
DESCRIPTION	• Abnormal combustion occurs under the condition such as the temperature in the combustion chamber is too high resulting in abnormal noise. • Knocking sound occurs from the engine compartment during acceleration.

POSSIBLE CAUSE	• Poor fuel quality
	  ▪ Fuel RON is not specified
	  ▪ Excessive cleaning agents added in fuel
	• Poor connection of KS, wiring harness
	• The following information for calculating ignition timing is incorrect:
	  ▪ KS signal
	  ▪ ECT sensor No.1 signal
	  ▪ IAT sensor No.2 (integrated in MAP sensor) signal
	  ▪ MAF sensor signal
	  • Air suction in intake-air system
	  ▪ MAP sensor signal
	• Combustion temperature is high
	  ▪ Cooling system malfunction
	  ▪ Carbon accumulation
	  ▪ Use of non-genuine spark plug
	WARNING:
	The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:
	• Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
	• Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes.

	To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
BARO	KPa {MPa}, mBar {Bar}, psi, in H20	Actually measured barometric pressure input from barometric pressure sensor built into PCM	• Displays BARO
	V	BARO sensor voltage	• Ignition switched ON (at sea level): Approx. 4.08 V
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
IAT2	°C, °F	Intake air temperature (No.2)	• Displays IAT (No.2)
	V	IAT sensor No.2 voltage	• IAT2 is 20 °C {68 °F}: Approx. 3.57 V • IAT2 is 40 °C {104 °F}: Approx. 2.70 V

			• IAT2 is 60 °C {140 °F}: Approx. 1.87 V
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**REPLACE FUEL** • Drain the remaining fuel in the fuel tank	Yes	Symptom troubleshooting completed.

	and add the specified fuel. • Leave idling **for approx. 15 min** to refill the hose with fuel. • Does the symptom disappear?		(If customer has used fuel additive, give them advice not to use it)
		No	Go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**VERIFY SPARK PLUG CONDITION** • Remove all spark plugs. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the spark plug. (See **SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the spark plug. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION** • Verify if there is air suction into the intake air system (such as between MAF sensor and intake valve, vacuum hose). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
6	**INSPECT MAP SENSOR** • Access the following PIDs using the M-	Yes	Go to the next step.

	MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ MAP ▪ BARO • Measure the intake manifold vacuum when idling (no load). (See **INTAKE MANIFOLD VACUUM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the difference between PIDs BARO and MAP nearly match the intake manifold vacuum value?	No	Replace the MAP sensor/IAT sensor No.2. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT IAT SENSOR NO.2** • Inspect the IAT sensor No.2 resistance. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
9	**INSPECT ECT SENSOR NO.1** • Inspect the ECT sensor No.1 resistance. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
	INSPECT KS		

10	• Inspect the KS. (See **KNOCK SENSOR (KS) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the KS, then go to the next step. (See **KNOCK SENSOR (KS) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Remove the accumulated matter in the cylinder head using the following procedure: • Carbon remover • Overhauling Go to the next step.
11	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.14 POOR FUEL ECONOMY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

14	POOR FUEL ECONOMY
DESCRIPTION	• Fuel economy is unsatisfactory.

	• Engine cooling system malfunction
	• PCM DTC is stored
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ MAP sensor or related circuit malfunction
	  ▪ TP sensor or related circuit malfunction
	  ▪ Intermittent open or short circuit MAF sensor, APP sensor, TP sensor
	• Improper operation of cooling fan control system
	• Improper operation of A/C system
	• Incorrect fuel injection timing
	• Fuel injector malfunction
	• Contaminated air cleaner element
	• Air leakage or restriction in intake-air system
	• Poor fuel quality
	• Improper coolant level
	• Clutch slippage (MTX)
	• Improper ATF level (ATX)
	• Brake dragging

POSSIBLE CAUSE	• Tire air pressure malfunction
	• Vacuum leakage
	• Fuel leakage
	• Contamination in MAF sensor
	• Tires, wheels (large size)
	• Change of intake air system components and exhaust system components
	• Engine operation time is longer than traveled distance
	  ▪ Vehicle is driven in congested traffic frequently
	  ▪ Left idling for long periods
	• Amount of fuel injection increases
	  ▪ Overloaded
	  ▪ Frequent acceleration/deceleration
	  ▪ Frequently driving on ascending roads
	  ▪ Travel distance per one drive is short (amount of time for warm-up is long during engine operation)
	  ▪ Improper load signal input
	  • Improper A/C request signal
	• Discharge is high when the vehicle is not used
	  ▪ Driver forgets to switch electronic device off
	  ▪ Electronic device is frequently used with engine stopped (no power generation)
	  ▪ Remote transmitter is left in vehicle with engine stopped (no power generation) (with advanced keyless entry system)
	  ▪ Vehicle left undriven for long periods
	  ▪ Large amount of parasitic draw (especially after-market electronic devices)
	  ▪ Short to power supply in wiring harness between IG1 relay terminal C and PCM terminal 2H
	• Erratic or no signal from CMP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (intake camshaft and/or exhaust camshaft)
	  ▪ Open or short circuit in related wiring harness
	• Erratic signal from CKP sensor
	  ▪ Loose installation
	  ▪ Damaged trigger wheel (crankshaft pulley)
	  ▪ Open or short circuit in related wiring harness

- Inadequate fuel pressure (high-pressure side)
  - Fuel pressure sensor malfunction
  - High pressure fuel pump malfunction
  - Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
  - Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction
  - Relief valve (built-into high pressure fuel pump) malfunction
  - Fuel line restricted
  - Fuel pump unit malfunction
- Improper engine compression
- Improper intake valve timing
- Improper exhaust valve timing
- Improper operation of electric variable valve timing control system
  - Electric variable valve timing driver malfunction
  - Electric variable valve timing motor malfunction
  - Electric variable valve timing actuator malfunction
- Improper operation of hydraulic variable valve timing control system
- Spark plug malfunction
- Exhaust system and/or TWC restriction
- PCV valve malfunction
- Injector driver (built-into PCM) malfunction

POSSIBLE CAUSE

WARNING:

The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
AC_REQ	Off/On	A/C switch status received by PCM via CAN	• A/C switch off: Off • A/C switch on: On
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%

	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
APP2	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
IAT	°C, °F	Intake air temperature (No.1)	• Displays IAT (No.1)
	V	IAT sensor No.1 voltage	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
	g/Sec	Mass air flow	• Displays MAF

MAF	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V	MAP sensor voltage	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION CAUSED BY ENGINE MALFUNCTION** • Verify the vehicle engine condition. • Can malfunction symptoms other than “NO.14 POOR FUEL ECONOMY” be verified?	Yes	Go to the applicable symptom troubleshooting. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT COOLING SYSTEM FOR MALFUNCTION** • Is any cooling system concern (overheating, runs cold) present?	Yes	Perform the applicable symptom troubleshooting. (See **NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0,**	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	SKYACTIV-G 2.5].) • Are any DTCs present?	No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP1 ▪ APP2 ▪ ECT ▪ IAT ▪ MAF ▪ MAP ▪ TP_REL • Do the PIDs indicate the correct values under the malfunction condition? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) IAT PID is not as specified: • Inspect the IAT sensor No.1. (See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAP PID is not as specified: • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) TP_REL PID is not as specified: • Inspect the TP sensor. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Monitor the AC_REQ PID while turning on and off the air conditioner using the switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT ENGINE.IG1 15 A FUSE** • Switch the ignition off. • Remove the ENGINE.IG1 15 A fuse. • Inspect the ENGINE.IG1 15 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE.IG1 15 A fuse and PCM terminal 2H. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the fuse. If the fuse is damaged: • Replace the fuse.

			Go to the next step.
		No	Reinstall the ENGINE.IG1 15 A fuse, then go to the next step.
8	**INSPECT IG1 RELAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the IG1 relay. • Disconnect the PCM connector. • Measure the voltage at the IG1 relay terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Inspect the IG1 relay. (See **RELAY INSPECTION**.) • If there is any malfunction: ▪ Replace the IG1 relay. • If there is no malfunction: ▪ Reconnect all disconnected connectors. ▪ Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal C and PCM terminal 2H. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply.
9	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Air cleaner element for contamination ▪ Intake-air system restriction ▪ Fuel quality (proper octane, contamination, winter/summer blend) ▪ Coolant level ▪ Clutch slippage (MTX) ▪ ATF level (ATX) ▪ Brake dragging ▪ Tire air pressure ▪ Vacuum leakage	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

- Fuel leakage
- MAF sensor contaminated
- Tires, wheels (large size)
- Change of intake air system components and exhaust system components
- Engine operation time is longer than traveled distance
    - Vehicle is driven in congested traffic frequently
    - Left idling for long periods
- Amount of fuel injection increases
    - Overloaded
    - Frequent acceleration/deceleration
    - Frequently driving on ascending roads
    - Travel distance per one drive is short (amount of time for warm-up is long during engine operation)
    - Improper load signal input
- Discharge is high when the vehicle is not used
    - Driver forgets to switch electronic device off
    - Electronic device is frequently used with engine stopped (no power generation)
    - Remote transmitter is left in vehicle with engine stopped (no power generation) (with advanced keyless entry system)
    - Vehicle left undriven for long periods

	• Large amount of parasitic draw (especially after-market electronic devices) ▪ CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?		
10	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 14.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP**

			INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to Step 13. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
11	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 14.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G**

			2.0, SKYACTIV-G 2.5].)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
15	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)**	Yes	Go to Step 21.
		No	Go to the next step.

	▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
16	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
17	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
18	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
19	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT FOR MALFUNCTION DUE TO DEVIATED VALVE TIMING** • Inspect the valve timing (timing chain installation condition). (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the valve timing normal?	Yes	Inspect for the following engine internal parts: • Cylinder • Piston ring • Intake valve • Exhaust valve

			• Such as cylinder head gasket ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Adjust the valve timing to the correct timing.
21	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
22	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
23	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
24	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.14 POOR FUEL ECONOMY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.15 EMISSION COMPLIANCE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

15	EMISSION COMPLIANCE
DESCRIPTION	• Fails emissions test.

POSSIBLE CAUSE	• Engine overheating
	• Cooling system malfunction
	• PCM DTC is stored
	• Incorrect ignition timing
	• Spark plug malfunction
	• Purge solenoid valve malfunction
	• Inadequate fuel pressure
	  ▪ Fuel leakage at the fuel line and/or fuel injector
	  ▪ Fuel pressure sensor or related circuit malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction
	  ▪ Relief valve (built-into high pressure fuel pump) malfunction
	  ▪ Fuel line restriction
	  ▪ Fuel pump unit malfunction
	• Air leakage from intake-air system
	• Vacuum lines leakage or blockage
	• Charcoal canister damage
	• Improper engine coolant level
	• Excessive carbon built-up in combustion chamber
	• Improper engine compression
	• Improper intake valve timing
	• Improper exhaust valve timing
	• Exhaust system and/or TWC restriction
	• Exhaust gas leakage from exhaust system

- TWC malfunction (PCM DTC is stored.)
- PCV valve malfunction or incorrect valve installation

WARNING:

The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION

1	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY DRIVE MODE CONDITION** • Verify that the drive mode is completed. • Is the drive mode completed?	Yes	Go to the next step.
		No	Perform the Drive Mode. (See **OBD-II DRIVE MODE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT FOR ANY OTHER MALFUNCTION** • Can malfunction symptoms other than “NO.15 EMISSION COMPLIANCE” be verified?	Yes	Go to the applicable symptom troubleshooting. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY CO AND HC CONCENTRATION** • Verify CO and HC concentration. • Is the CO or HC concentration excessive?	Yes	Go to Step 6. **NOTE:** • If the HC concentration is normal and the CO concentration is excessive, a rich A/F can be considered the cause. • If the CO concentration is normal and the HC concentration is excessive, a A/F lean can be considered the cause. • If the CO and HC concentration is excessive, incomplete combustion or a rich A/F can be considered the cause.
		No	Go to the next step.
5	**VERIFY NOx CONCENTRATION** • Verify NOx concentration. • Is the NOx concentration excessive?	Yes	Go to the next step.
		No	Symptom troubleshooting is completed.
6	**VERIFY IF MALFUNCTION CAUSED BY IGNITION TIMING MALFUNCTION** • Inspect the ignition timing. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Inspect the following: • Spark plug (See **SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Ignition coil/ion sensor No.1 (See **IGNITION COIL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Ignition coil/ion sensor No.2

			• Ignition coil/ion sensor No.3 • Ignition coil/ion sensor No.4 ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. ▪ If there is no malfunction: • Go to Step 18.
		No	Go to the next step.
7	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
8	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to the next step.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor

			(See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel line and fuel injector restriction ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (Relief valve clogged) Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
9	**INSPECT INTAKE-AIR SYSTEM FOR AIR LEAKAGE** • Inspect for leakage in intake-air system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
10	**INSPECT RESTRICTION IN VENTILATION HOSE** • Inspect for restriction in the ventilation hose. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
11	**VERIFY IF MALFUNCTION CAUSE IS CHARCOAL CANISTER** • Inspect the charcoal canister. (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the charcoal canister damaged?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
12	**VERIFY IF MALFUNCTION CAUSED BY LACK OF ENGINE COOLANT** • Inspect the engine coolant level. (See **ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Add engine coolant and verify that there is no engine coolant leakage. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction:

	• Is there any malfunction?		▪ Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. • If there is no malfunction: ▪ Go to Step 18.
		No	Go to the next step.
13	**VERIFY CARBON ACCUMULATION CONDITION IN COMBUSTION CHAMBER** • Verify carbon accumulation condition in combustion chamber. • Has carbon accumulated?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
14	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**)	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.

	• Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
15	**INSPECT TWC FOR RESTRICTION** • Inspect for restriction in the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
16	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust gas leakage from the exhaust system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
17	**INSPECT PCV VALVE** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the PCV valve, then go to the next step. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

	• Is there any malfunction?		
18	**VERIFY SYMPTOM TROUBLESHOOTING COMPLETED** • Measure CO, HC, and NOx concentration again. • Is CO, HC, and NOx concentration within specification?	Yes	Symptom troubleshooting is completed.
		No	Repeat the inspection from Step 1.

2014 - Mazda3 - Engine

NO.16 HIGH OIL CONSUMPTION/LEAKAGE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

16	HIGH OIL CONSUMPTION/LEAKAGE
DESCRIPTION	• Oil consumption is excessive.
POSSIBLE CAUSE	• Improper dipstick • Improper engine oil viscosity • Oil leakage • PCV valve malfunction • Engine internal parts malfunction

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT ENGINE OIL AND RELATED PARTS** • Inspect the following: ▪ Proper dipstick ▪ Proper engine oil viscosity ▪ Engine oil level • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
2	**VISUALLY INSPECT FOR ENGINE OIL LEAKAGE** • Inspect for engine oil leakage outside of the engine. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR ENGINE INTERNAL PART**	Yes	Replace the PCV valve.

	• Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		(See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the internal engine parts such as valves, valve guides, valve stem seals, cylinder head drain passage, and piston rings. Repair or replace the malfunctioning part according to the inspection results, then install the removed parts.
4	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

17	COOLING SYSTEM CONCERNS-OVERHEATING
DESCRIPTION	• Engine runs at higher than normal temperature/overheats.

POSSIBLE CAUSE	• Engine heat generation amount is excessive
	  ▪ Engine speed is high and remains high for continuous long periods
	• PCM DTC is stored
	• Improper operation of A/C system
	• Insufficient air blow volume
	  ▪ Cooling fan inoperative
	  ▪ Fan rotation speed decreases (such as generator malfunction) due to battery voltage decrease
	• Cooling system cap malfunction
	• Cooling fan motor assembly malfunction
	• Cooling fan motor connector malfunction
	• Improper indication of low engine coolant temperature indicator light and/or high engine coolant temperature warning light
	  ▪ ECT sensor No.1 malfunction
	  ▪ Instrument cluster malfunction
	• Blown fuse
	• Engine coolant system malfunction
	  ▪ Improper engine coolant level
	  ▪ Engine coolant performance deterioration
	  ▪ Coolant leakage (engine internal, external)
	  ▪ Improper water/anti-freeze mixture
	  ▪ Thermostat malfunction (not fully open)
	  ▪ Radiator malfunction (clogging)
	• Leakage around heater unit in passenger compartment
	• Drive belt damage

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT VEHICLE CONDITION FOR EFFECT ON MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: ▪ Engine speed is high and remains high for continuous long periods like when climbing a long, steep grade. • Is the engine generating excessive heat when driven?	Yes	Explain to the customer that the vehicle is normal and give them advice how to use vehicle and provide a specific example of the conditions in which the engine overheats.
		No	Go to the next step.
2	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**DETERMINE IF MALFUNCTION CAUSE IS A/C SYSTEM OR OTHER** • Start the engine and run it at	Yes	Go to the next step.

	idle speed. • Turn the A/C switch off. • Does the A/C compressor disengaged?	No	Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**INSPECT ECT SENSOR NO.1 SIGNAL** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Compare the ECT PID and low engine coolant temperature indicator light and high engine coolant temperature warning light operation. • Is the ECT PID value same as indicator/warning light readings?	Yes	Go to the next step.
		No	Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Replace the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is no malfunction: ▪ Perform the instrument cluster symptom troubleshooting “LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY”. (See **LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER]**.)
5	**INSPECT COOLING FAN CONTROL SYSTEM OPERATION** • Perform the Cooling Fan Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the cooling fan control	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

	system operate properly?		
6	**INSPECT COOLING SYSTEM CAP** • Inspect the cooling system cap. (See **COOLING SYSTEM CAP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the cooling system cap.
		No	Go to the next step.
7	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Engine coolant level ▪ Engine coolant performance ▪ Water and anti-freeze mixture ▪ Thermostat (not fully open) ▪ Radiator (clogging) ▪ Fuses • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
8	**VERIFY IF MALFUNCTION CAUSED BY LACK OF ENGINE COOLANT** • Inspect the engine coolant level. (See **ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Add engine coolant and verify that there is no engine coolant leakage. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	**DETERMINE IF MALFUNCTION CAUSE IS THERMOSTAT OR OTHER** • Verify the radiator hose tension. **WARNING:**	Yes	Go to Step 11.
		No	Go to the next step.

	To prevent burns, use a cloth with your hand to verify the tension of the radiator hose. • After the engine warms up, does the engine coolant circulate to the radiator hose?		
10	**INSPECT THERMOSTAT** • Inspect the thermostat. (See **THERMOSTAT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the thermostat normal?	Yes	Inspect the water pump. • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. (See **WATER PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the thermostat. (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
11	**INSPECT DRIVE BELT** • Inspect the drive belt. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the indicator mark on the drive belt auto tensioner within the normal range?	Yes	Go to the next step.
		No	Replace the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
12	**INSPECT RADIATOR FOR CLOGGING** • Inspect for clogging in the radiator. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Replace the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
13	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis.		

	▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

2014 - Mazda3 - Engine

NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

18	COOLING SYSTEM CONCERNS-RUNS COLD
DESCRIPTION	• Engine does not reach normal operating temperature.

POSSIBLE CAUSE	• Improper indication of low engine coolant temperature indicator light and/or high engine coolant temperature warning light
	  ▪ ECT sensor No.1 malfunction
	  ▪ Instrument cluster malfunction
	• Cooling fan system malfunction
	• Condenser fan system malfunction
	• Thermostat malfunction (stuck at fully open)
	• Foreign matter penetration in engine coolant

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS HVAC SYSTEM OR ENGINE** • Is a customer complaint “Lack of passenger compartment heat” only?	Yes	Inspect the A/C heater system. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
2	**VERIFY IDLE SPEED** • Does the engine speed continue at fast idle?	Yes	Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See **NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT ECT SENSOR NO.1 SIGNAL** • Access the ECT PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Compare the ECT PID and low engine coolant temperature indicator light and high engine coolant temperature warning light operation. • Is the ECT PID value same as indicator/warning light readings?	Yes	Go to the next step.
		No	Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Replace the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is no malfunction: ▪ Perform the instrument cluster symptom troubleshooting “LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY”. (See **LOW ENGINE COOLANT TEMPERATURE**

			INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER].)
4	**INSPECT COOLING FAN CONTROL SYSTEM OPERATION** • Perform the Cooling Fan Control System Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the cooling fan control system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
5	**INSPECT THERMOSTAT** • Cool down the engine. • Remove the thermostat. (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the thermostat operation. (See **THERMOSTAT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the thermostat. (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Reinstall the thermostat, then go to the next step. (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**VERIFY THAT NO FOREIGN MATTER IS IN ENGINE COOLANT** • Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Has foreign matter penetrated the engine coolant?	Yes	Replace the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms.		

(See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis.
    - If the vehicle is repaired, troubleshooting is completed.
    - If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

2014 - Mazda3 - Engine

NO.19 EXHAUST SMOKE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

19	EXHAUST SMOKE
DESCRIPTION	• Blue, black, or white smoke from exhaust system.

POSSIBLE CAUSE	**Blue smoke (Burning oil):**
	• PCV valve malfunction
	• Engine internal oil leakage
	White smoke (Water in combustion):
	• Cooling system malfunction (coolant loss)
	• Engine internal coolant leakage
	Black smoke (Rich fuel mixture):
	• Erratic signal to PCM
	  ▪ APP sensor or related circuit malfunction
	  ▪ ECT sensor No.1 or related circuit malfunction
	  ▪ IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction
	  ▪ MAF sensor or related circuit malfunction
	  ▪ MAP sensor or related circuit malfunction
	  ▪ A/F sensor or related circuit malfunction
	  ▪ HO2S or related circuit malfunction
	  ▪ TP sensor or related circuit malfunction
	• Improper fuel injection timing and amount
	• Air cleaner restriction
	• Intake-air system is collapsed or restricted
	• Leakage at engine intake manifold and/or exhaust manifold
	• Inadequate/Excessive fuel pressure
	  ▪ Fuel pressure sensor malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction
	  ▪ Relief valve (built-into high pressure fuel pump) malfunction
	  ▪ Fuel line restricted
	  ▪ Fuel pump unit malfunction

- Ignition system malfunction
- Improper engine compression
- Improper intake valve timing
- Improper exhaust valve timing
- Injector driver (built-into PCM) malfunction

WARNING:

The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
IAT	°C, °F	Intake air temperature (No.1)	• Displays IAT (No.1)
	V	IAT sensor No.1 voltage	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	• Displays MAP
	V		• Switch ignition ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34

			V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. −3.12% • Racing (engine speed is 4,000 rpm): Approx. −8.59%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY EXHAUST COLOR** • What color is smoke coming from the exhaust system?	Blue	Burning oil is indicated. • Go to the next step.
		White	Water in combustion is indicated. • Go to Step 4.
		Black	Rich fuel mixture is indicated. • Go to Step 5.
2	**INSPECT PCV VALVE** • Inspect the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the PCV valve. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT ENGINE INTERNAL PARTS** • Inspect for the following	Yes	Repair or replace the malfunctioning part according to the inspection results.

	engine internal parts: ▪ Damaged valve guide, stems or valve seals ▪ Blocked oil drain passage in cylinder head ▪ Piston ring is not seated, seized or worn ▪ Damage cylinder bore • Is there any malfunction?		
		No	Engine internal parts are normal. • If other driveability symptoms are present: ▪ Return to the diagnostic index to service additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**INSPECT ENGINE FOR ENGINE COOLANT LEAKAGE** • Does the cooling system hold the coolant pressure? (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Inspect the following: • Cylinder head gasket leakage • Intake manifold gasket leakage • Cracked or porous engine block Repair or replace the malfunctioning part according to the inspection results. • If other driveability symptoms are present: ▪ Return to the diagnostic index to service additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect for the cause. Repair or replace the malfunctioning part according to the inspection results.
5	**VERIFY CURRENT INPUT SIGNAL STATUS** **CAUTION:** • While performing this step, always operate the vehicle in a safe and lawful manner. • When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ECT PID is not as specified: • Inspect the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) IAT PID is not as specified: • Inspect the IAT sensor No.1.

	inspect later. • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP1 ▪ APP2 ▪ ECT ▪ IAT ▪ MAF ▪ MAP ▪ TP_REL ▪ O2S11 ▪ O2S12 ▪ SHRTFT1 ▪ LONGFT1 • Monitor the PIDs under the black smoke appeared engine condition. • Do the PIDs indicate normal according to engine conditions? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)		(See **INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect the MAF sensor. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAP PID is not as specified: • Inspect the MAP sensor. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) TP_REL PID is not as specified: • Inspect the TP sensor. (See **THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: ▪ Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See **INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT INTAKE AIR SYSTEM** • Inspect the following for intake-air system: ▪ Air cleaner restriction ▪ Collapsed or	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

	restricted air hose ▪ Leakage • Is there any malfunction?		
8	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage from exhaust manifold. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 13.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following: ▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to Step 12. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
10	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 12.
11	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE**	Yes	Replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is there any malfunction?	No	Go to Step 13.
12	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
13	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
14	**INSPECT IGNITION SYSTEM OPERATION** **NOTE:** • Because the malfunction may have been resolved by removing the carbon adhered to the spark plug during the spark inspection for the spark	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

	plug, verify that the repairs have been completed. • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible at each cylinder?		
15	**INSPECT IF MALFUNCTION CAUSE IS ENGINE COMPRESSION OR INJECTOR DRIVER (PCM INTEGRATED)** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)**	Yes	Injector driver malfunction. • Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the problem remains, overhaul the engine.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.

	Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
16	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.20 FUEL ODOR (IN ENGINE COMPARTMENT) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

20	FUEL ODOR (IN ENGINE COMPARTMENT)
DESCRIPTION	• Gasoline fuel smell or visible leakage.
POSSIBLE CAUSE	• Missing or loose fuel filler cap • Fuel filler cap malfunction (seal malfunction) • Fuel leakage from fuel system • Charcoal canister damage • Improper connection of evaporative related vacuum hoses • Fuel leakage at the fuel injector • Purge solenoid valve malfunction (stuck) **WARNING:** The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: • Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. • Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT FOR MISSING OR LOOSE FUEL FILLER CAP** • Visually inspect if the fuel filler cap is missing or loose. • Is there any malfunction?	Yes	Repair or replace the fuel filler cap.
		No	Go to the next step.
2	**INSPECT VACUUM HOSE CONNECTION** • Inspect the vacuum hose routing.	Yes	Go to the next step.
		No	Reconnect the vacuum hose. (See **INTAKE-AIR SYSTEM VACUUM HOSE ROUTING**

	(See **INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **EMISSION SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are vacuum hoses routed properly?		**DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **EMISSION SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect the fuel leakage at the fuel line. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
4	**INSPECT PURGE SOLENOID VALVE** • Inspect the airflow of purge solenoid valve. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the purge solenoid airflow properly?	Yes	Go to the next step.
		No	Replace the purge solenoid valve. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**INSPECT CHARCOAL CANISTER** • Inspect the charcoal canister. (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there cracking or damage in the charcoal canister?	Yes	Repair or replace the malfunctioning part according to the inspection results. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Remove the fuel injector and visually inspect fuel injector or leakage. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Replace the fuel injector

				if necessary. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.			

2014 - Mazda3 - Engine

NO.21 ENGINE NOISE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

21	ENGINE NOISE
DESCRIPTION	• Engine noise from under hood.
POSSIBLE CAUSE	**Squeal, click or chirp noise:** • Improper engine oil level • Loose installation of solenoid valves • Improper drive belt tension • Generator installation • Auto tensioner bearing malfunction • Splash shield or under cover loose (water splashes on drive belt) **Rumble or grinding sound noise:** • Improper drive belt tension • Loose parts **Hiss sound noise:** • Vacuum leakage • Loose spark plug • Air leakage from the intake-air system **Rattle noise:** • Loose parts **Rap or roar noise:** • Dynamic damper loose • Exhaust system loose • Intake-air system loose **Other noise:** • Electric variable valve timing actuator malfunction

- Hydraulic variable valve timing actuator malfunction
- Timing chain noise
- Hydraulic lash adjuster (HLA) noise

WARNING:

The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF THERE IS SQUEAL, CLICK, OR CHIRP SOUND** • Is squeal, click or chirp sound present?	Yes	Inspect the following: • Engine oil level • Solenoid valves installation • Drive belt tension • Generator installation • Auto tensioner bearing damaged • Splash shield or under cover loose Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
2	**VERIFY IF THERE IS RUMBLE OR GRIND SOUND** • Is rumble or grinding sound present?	Yes	Inspect the following: • Drive belt tension • Loose parts in engine compartment If there is any malfunction:

			• Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
3	**VERIFY IF THERE IS RATTLE SOUND** • Is rattle sound present?	Yes	Inspect the location of rattle for loose parts. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
4	**VERIFY IF THERE IS HISS SOUND** • Is hiss sound present?	Yes	Inspect the following: • Vacuum leakage • Spark plug loose • Intake-air system leakage Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
5	**VERIFY IF THERE IS RAP OR ROAR SOUND** • Is rap or roar sound present?	Yes	Inspect the following: • Exhaust system installation • Intake-air system installation • Dynamic damper installation Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
6	**VERIFY IF THERE IS KNOCK SOUND** • Is knocking noise present?	Yes	Perform the symptom troubleshooting “NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE”. (See **NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	If noise comes from engine internal: • Inspect the following: ▪ Timing chain ▪ Hydraulic lash adjuster (HLA) noise

			▪ Electric variable valve timing actuator ▪ Hydraulic variable valve timing actuator ▪ Engine compression • Repair or replace the malfunctioning part according to the inspection results.
7	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.22 VIBRATION CONCERNS (ENGINE) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

22	VIBRATION CONCERNS (ENGINE)
DESCRIPTION	• Vibration from under hood or driveline.
POSSIBLE CAUSE	• Loose attaching bolts or worn parts • Components malfunction such as worn parts

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PART INSTALLATION CONDITION** • Inspect the following components for loose attaching bolts or worn parts: ▪ Cooling fan ▪ Condenser fan ▪ Drive belt and pulley ▪ Engine mounts ▪ Exhaust system • Is there any malfunction?	Yes	Readjust installation position or retighten the suspect parts. Repair or replace the malfunctioning part according to the inspection results for other parts.
		No	Inspect the following systems: • Wheels • Transmission and mounts • Driveline • Suspension Repair or replace the malfunctioning part according to the inspection results.
2	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed.		

		▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

2014 - Mazda3 - Engine

NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

23	A/C DOES NOT WORK SUFFICIENTLY
DESCRIPTION	• A/C compressor magnetic clutch does not engage when A/C switch is turned on.
POSSIBLE CAUSE	• PCM, instrument cluster or climate control unit DTC is stored • Refrigerant pressure sensor malfunction • Improper refrigerant charging amount • Seized A/C compressor • Evaporator temperature sensor malfunction • Open or short circuit in wiring harness between the following terminals: ▪ Evaporator temperature sensor terminal B—Climate control unit terminal H (with manual air conditioner) ▪ Evaporator temperature sensor terminal A—Climate control unit terminal K (with manual air conditioner) ▪ Evaporator temperature sensor terminal B—Climate control unit terminal J (with full-auto air conditioner (single air mix actuator type)) ▪ Evaporator temperature sensor terminal A—Climate control unit terminal E (with full-auto air conditioner (single air mix actuator type)) ▪ Evaporator temperature sensor terminal B—Climate control unit terminal 1L (with full-auto air conditioner (dual air mix actuator type)) ▪ Evaporator temperature sensor terminal A—Climate control unit terminal 1J (with full-auto air conditioner (dual air mix actuator type)) • Instrument cluster malfunction (Does not receive A/C request signal from climate control unit or transmit it to PCM) • Climate control unit malfunction (A/C switch malfunction or climate control unit does not determine A/C request or transmit A/C request signal) • Open circuit in wiring harness between magnetic clutch and body ground • A/C relay stuck open • Open circuit in wiring harness between the following terminals: ▪ Front body control module (FBCM) terminal 1C—A/C relay terminal A ▪ Battery positive terminal—A/C relay terminal C ▪ A/C relay terminal D—Magnetic clutch terminal A ▪ A/C relay terminal E—PCM terminal 2AF

(FULL-AUTO A/C (DUAL AIR MIX ACTUATOR TYPE))

PCM WIRING HARNESS-SIDE CONNECTOR

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
AC_REQ	Off/On	A/C switch status received by PCM via CAN	• A/C switch off: Off • A/C switch on: On
ACCS	Off/On	A/C relay status input from A/C relay	• A/C relay off: Off • A/C relay on: On

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM, INSTRUMENT CLUSTER AND CLIMATE CONTROL UNIT DTC** • Retrieve the PCM, instrument cluster and climate control unit DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [INSTRUMENT CLUSTER]**.) (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS A/C RELAY CONTROL SIGNAL OR A/C REQUEST SIGNAL** • Access the PCM PID ACCS using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and idle it. • Turn the ACCS PID to ON from OFF using the M-MDS simulation function. • Is the magnetic clutch engaged?	Yes	Go to the next step.
		No	Go to Step 8.

3	**DETERMINE IF MALFUNCTION CAUSE IS REFRIGERANT PRESSURE SENSOR OR OTHER** • Access the PCM PID AC_REQ using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Monitor the AC_REQ PID while turning on and off the air conditioner using the switch on the control panel. • Is the AC_REQ PID value normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Inspect the following: • Refrigerant charging amount • A/C compressor seized Repair or replace the malfunctioning part according to the inspection results if necessary.
5	**DETERMINE IF MALFUNCTION CAUSE IS EVAPORATOR TEMPERATURE SENSOR OR OTHER** • Measure the voltage at the climate control unit terminal H (wiring harness-side). (with manual air conditioner) • Measure the voltage at the climate control unit terminal J (wiring harness-side). (with full-auto air conditioner (single air mix actuator type)) • Measure the voltage at the climate control unit terminal 1L (wiring harness-side). (with full-auto air conditioner (dual air mix actuator type)) • Is the voltage normal? (See **CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER]**.) (See **CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER]**.)	Yes	Vehicles with manual air conditioner: • Go to Step 7. Vehicles with full-auto air conditioner: • Go to Step 8.
		No	Go to the next step.
6	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor.	Yes	Replace the evaporator temperature sensor. (See **EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

	(See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is there any malfunction?		(See **EVAPORATOR TEMPERATURE SENSOR REMOVAL / INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Inspect for a short or open circuit between the following terminals: • Evaporator temperature sensor terminal B—Climate control unit terminal H (with manual air conditioner) • Evaporator temperature sensor terminal A—Climate control unit terminal K (with manual air conditioner) • Evaporator temperature sensor terminal B—Climate control unit terminal J (with full-auto air conditioner (single air mix actuator type)) • Evaporator temperature sensor terminal A—Climate control unit terminal E (with full-auto air conditioner (single air mix actuator type)) • Evaporator temperature sensor terminal B—Climate control unit terminal 1L (with full-auto air conditioner (dual air mix actuator type)) • Evaporator temperature sensor terminal A—Climate control unit terminal 1J (with full-auto air conditioner (dual air mix actuator type)) **If there is any malfunction:** ▪ Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Evaporator temperature sensor terminal B—Climate control unit terminal H (with manual air conditioner) • Evaporator temperature sensor terminal A—Climate control unit terminal K (with manual air conditioner) • Evaporator temperature sensor terminal B—Climate control unit terminal J (with full-auto air conditioner (single air mix actuator type)) • Evaporator temperature sensor terminal A—Climate control unit terminal E (with full-auto air conditioner (single air mix actuator type)) • Evaporator temperature sensor terminal B—

			Climate control unit terminal 1L (with full-auto air conditioner (dual air mix actuator type)) • Evaporator temperature sensor terminal A— Climate control unit terminal 1J (with full-auto air conditioner (dual air mix actuator type)) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short or open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short or open circuit.
7	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR OTHER** • Verify the information display indication of A/C system while turning on and off the air conditioner using the switch on the control panel. • Does the information display indicate properly?	Yes	Instrument cluster does not receive the A/C request signal from climate control unit or transmit it to PCM. • Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	A/C switch malfunction, or climate control unit cannot determine the A/C request or transmit the A/C request signal. • Replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
8	**DETERMINE IF MALFUNCTION CAUSE IS A/C CONTROL SIGNAL OR MAGNETIC CLUTCH** • Start the engine and idle it. • Access the PCM PID ACCS using the M-MDS.	Yes	Go to the next step.
		No	Go to Step 10.

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Turn the ACCS PID to ON from OFF using the M-MDS simulation function. • Measure the voltage at the magnetic clutch terminal A (wiring harness-side). • Is the voltage **10.5 V or more**?		
9	**INSPECT IF MALFUNCTION CAUSE IS MAGNETIC CLUTCH OR MAGNETIC CLUTCH GROUND CIRCUIT** • Switch the ignition off. • Disconnect the magnetic clutch connector. • Inspect for continuity between magnetic clutch terminal A (part-side) and body ground. • Is there continuity?	Yes	Inspect the magnetic clutch. (See **MAGNETIC CLUTCH INSPECTION**.) Replace the magnetic clutch if necessary.
		No	Inspect the A/C compressor. (poor contact to ground) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Replace the A/C compressor. (internal circuit open)
10	**INSPECT A/C RELAY** • Switch the ignition off. • Remove the A/C relay. • Inspect the A/C relay. (See **RELAY INSPECTION**.) • Is there any malfunction?	Yes	Replace the A/C relay.
		No	Go to the next step.
11	**INSPECT A/C RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • A/C relay is removed. • Disconnect the PCM connector. • Inspect for continuity between A/C relay terminal E (wiring harness-side) and PCM terminal 2AF (wiring harness-side). • Is there continuity?	Yes	Inspect for continuity between the following: • Front body control module (FBCM) terminal 1C—A/C relay terminal A • Battery positive terminal—A/C relay terminal C • A/C relay terminal D—Magnetic clutch terminal A Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Front body control module (FBCM) terminal 1C—A/C relay terminal A • Battery positive terminal—A/C relay terminal C • A/C relay terminal D—Magnetic clutch terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has an open circuit.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/C relay terminal E and PCM terminal 2AF. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.
12	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

24	A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY
DESCRIPTION	• A/C compressor magnetic clutch does not disengage.
POSSIBLE CAUSE	• PCM, instrument cluster or climate control unit DTC is stored • Short to power supply in wiring harness between A/C relay terminal D and magnetic clutch terminal A • Magnetic clutch engagement is stuck • Climate control unit malfunction (Climate control unit always transmits A/C request signal) • A/C relay is stuck closed • Short to ground in wiring harness between A/C relay terminal E and PCM terminal 2AF

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)

ACCS	Off/On	A/C relay status input from A/C relay	• A/C relay off: Off • A/C relay on: On

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM, INSTRUMENT CLUSTER AND CLIMATE CONTROL UNIT DTC** • Retrieve the PCM, instrument cluster and climate control unit DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [INSTRUMENT CLUSTER]**.) (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS MAGNETIC CLUTCH OR OTHER** • Start the engine and idle it. • Turn the A/C switch on. • Remove the A/C relay. • Does the magnetic clutch disengage?	Yes	Go to Step 5.
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION CAUSE IS MAGNETIC CLUTCH POWER SUPPLY CIRCUIT OR MAGNETIC CLUTCH** • A/C relay is removed. • Switch the ignition off. • Disconnect the magnetic clutch	Yes	Inspect for short to power supply circuit between magnetic clutch terminal A and A/C relay terminal D. • Refer to the wiring diagram and verify whether or not there is a common connector between magnetic clutch terminal A and A/C relay terminal D. **If there is a common connector:** ▪ Determine the malfunctioning

	connector. • Start the engine and idle it. • Does the magnetic clutch disengage?		part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to power supply.
		No	Go to the next step.
4	**INSPECT MAGNETIC CLUTCH CLEARANCE** • Verify the magnetic clutch clearance. (See **MAGNETIC CLUTCH ADJUSTMENT**.) • Is the magnetic clutch clearance normal?	Yes	Inspect the magnetic clutch to see if it is stuck. (See **MAGNETIC CLUTCH INSPECTION**.) Replace the magnetic clutch if necessary. (See **MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY**.)
		No	Adjust the magnetic clutch clearance. (See **MAGNETIC CLUTCH ADJUSTMENT**.)
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C RELAY CONTROL SIGNAL OR A/C REQUEST SIGNAL** • Access the PCM PID ACCS using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Monitor the PID ACCS while turning on and off the air conditioner using the switch on the control panel. • Is the ACCS PID value always ON?	Yes	Climate control unit always transmits A/C request signal. • Replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Go to the next step.
6	**INSPECT A/C RELAY** • Inspect the A/C relay. (See **RELAY INSPECTION**.) • Is there any	Yes	Replace the A/C relay.
		No	Inspect for short to ground circuit between A/C relay terminal E and PCM terminal 2AF. • Refer to the wiring diagram and verify whether or not there is a common connector between

	malfunction?		A/C relay terminal E and PCM terminal 2AF. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground.
7	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

2014 - Mazda3 - Engine

NO.25 EXHAUST SULPHUR SMELL [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

25	EXHAUST SULPHUR SMELL
DESCRIPTION	• Rotten egg smell (sulphur) from exhaust.

POSSIBLE CAUSE	• Electrical connectors are disconnected or connected poorly
	• Vacuum lines are disconnected or connected improperly.
	• Poor fuel quality
	• PCM DTC is stored
	• Inadequate fuel pressure
	  ▪ Fuel pressure sensor malfunction
	  ▪ High pressure fuel pump malfunction
	  ▪ Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system)
	  ▪ Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction
	  ▪ Relief valve (built-into high pressure fuel pump) malfunction
	  ▪ Fuel line restricted
	  ▪ Fuel pump unit malfunction
	• Charcoal canister malfunction
	• Fuel tank vent system malfunction
	WARNING:
	The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:
	• Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
	• Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	CAUTION:
	• Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	• Displays fuel pressure
	V	Fuel pressure sensor voltage	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF THERE IS POOR DRIVEABILITY OR EXHAUST GAS RELATED MALFUNCTION** • Are any driveability or exhaust smoke concerns present?	Yes	Go to the applicable symptom troubleshooting. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT RELATED PART CONDITION** • Inspect the following: ▪ Electrical connections ▪ Vacuum lines ▪ Fuel quality • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle.	Yes	Go to Step 8.
		No	Lower than **3 MPa {31 kgf/cm^2, 435 psi}**: • Inspect the following:

	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?		▪ Fuel leakage at the fuel line and fuel injector ▪ Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Fuel pressure sensor (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ High pressure fuel pump (See **HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If there is any malfunction: ▪ Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: ▪ Go to Step 7. Higher than **3 MPa {31 kgf/cm^2, 435 psi}**: • Go to the next step.
5	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 8.
7	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between high pressure fuel pump terminal A and PCM terminal 1EE. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground.

			If the malfunction remains: • Replace the PCM. (damage to driver in PCM) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9	**DETERMINE IF MALFUNCTION CAUSE IS CHARCOAL CANISTER OR FUEL TANK VENT SYSTEM** • Inspect the charcoal canister for fuel saturation. (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there excess amount of liquid fuel present in canister?	Yes	Replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the fuel tank vent system. • If the fuel tank vent system is normal: ▪ Suggest trying a different brand since sulfur content can vary in different fuels. • If fuel tank vent system is not normal: ▪ Repair or replace the malfunctioning part according to the inspection results.
10	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.25 EXHAUST SULPHUR SMELL [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.26 FUEL REFILL CONCERNS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

26	FUEL REFILL CONCERNS
DESCRIPTION	• Fuel tank does not fill smoothly.
POSSIBLE CAUSE	• PCM DTC is stored. • Non-return valve malfunction • Check valve (Except U.S.A. And CANADA) • Improper use of fuel nozzle • Inadequate fuel filling speed **WARNING:** • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system: ▪ Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. ▪ Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

Diagnostic Procedure

STEP	INSPECTION	ACTION

1	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS NON-RETURN VALVE** • Remove the fuel-filler pipe. • Make sure non-return valve is installed properly. • Inspect the non-return valve operation. • Is there any malfunction?	Yes	Non-return valve is installed improperly: • Reinstall the non-return valve to proper position. Non-return valve does not operate properly: • Replace the non-return valve.
		No	Go to the next step.
3	**DETERMINE IF MALFUNCTION CAUSE IS CHECK VALVE** • Inspect the check valve. (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the check valve. (See **CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the following: • Improper use of fuel nozzle • Inadequate fuel filling speed Repair or replace the malfunctioning part according to the inspection results.
4	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.26 FUEL REFILL CONCERNS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.27 FUEL FILLING SHUT OFF CONCERNS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

27	FUEL FILLING SHUT OFF CONCERNS
DESCRIPTION	• Fuel does not shut off properly.
POSSIBLE CAUSE	• PCM DTC is stored. • Nonreturn valve malfunction • Check valve (Except U.S.A. And CANADA) • Fuel nozzle is not inserted correctly. • Fuel nozzle malfunction • Fuel shut-off valve malfunction **WARNING:** • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system: ▪ Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. ▪ Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) **CAUTION:** • Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS NON-RETURN VALVE** • Remove the fuel-filler pipe. • Make sure non-return valve is installed properly. • Inspect the non-return valve operation. • Is there any malfunction?	Yes	Non-return valve is installed improperly: • Reinstall the non-return valve to proper position. Non-return valve does not operate properly: • Replace the non-return valve.
		No	Go to the next step.
3	**DETERMINE IF MALFUNCTION CAUSE IS CHECK VALVE** • Inspect the check valve. (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the check valve. (See **CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the following: • Improper use of fuel nozzle • Inadequate fuel filling speed Repair or replace the malfunctioning part according to the inspection results.
4	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed. ▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.		

NO.27 FUEL FILLING SHUT OFF CONCERNS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

NO.28 SPARK PLUG CONDITION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

28	SPARK PLUG CONDITION
DESCRIPTION	• Incorrect spark plug condition.
POSSIBLE CAUSE	**NOTE:** • Inspecting the spark plug conditions can determine whether a problem is related to a specific cylinder or possibly all cylinders. **Wet/carbon stuck on specific plug:** • Spark—Weak, not visible • Air/fuel mixture—Excessive fuel injection volume • Compression—No compression, low compression • Malfunction spark plug **Grayish white with specific plug:** • Air/fuel mixture—Insufficient fuel injection volume • Malfunction spark plug **Wet/carbon is stuck on all plugs:** • Spark—Spark weak • Air/fuel mixture—Too rich, excessive fuel line pressure • Erratic signal to PCM ▪ ECT sensor No.1 or related circuit malfunction ▪ MAF sensor or related circuit malfunction ▪ A/F sensor or related circuit malfunction ▪ HO2S or related circuit malfunction • Compression—Low compression • Restriction in intake/exhaust system **Grayish white with all plugs:** • Erratic signal to PCM ▪ ECT sensor No.1 or related circuit malfunction ▪ MAF sensor or related circuit malfunction ▪ A/F sensor or related circuit malfunction ▪ HO2S or related circuit malfunction • Air/fuel mixture—Too lean, insufficient fuel line pressure **WARNING:** • The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:

- Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign matter.

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
O2S11	µA	A/F sensor current	• Idle (after warm up): Approx. −39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA
O2S12	V	HO2S voltage	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V
RPM	RPM	Engine speed	• Displays engine speed
VSS	KPH, MPH	Vehicle speed	• Displays vehicle speed

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY SPARK PLUG CONDITION** • Remove all spark plugs. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the spark plug. (See **SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Specific plug is wet or covered with carbon: • Go to the next step. Specific plug looks grayish white: • Go to Step 7. All plugs are wet or covered with carbon: • Go to Step 9. All plugs look grayish white: • Go to Step 15.
		No	Symptom troubleshooting completed.
2	**DETERMINE IF MALFUNCTION CAUSE IS ENGINE OIL LOSS OR OTHER** • Are the spark plugs wet/covered with carbon from the engine oil?	Yes	Inspect all areas related to oil, working up and down. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
3	**INSPECT SPARK PLUG** • Inspect the spark plugs for the following: ▪ Air gap ▪ Cracked insulator ▪ Heat range ▪ Worn electrode • Is there any malfunction?	Yes	Replace the spark plug. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT ENGINE COMPRESSION** • Inspect the compression pressure at the suspected cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0] ▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2,**	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

	103 psi} **(300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
5	**INSPECT IGNITION SYSTEM OPERATION** • Reinstall all spark plugs. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform the Spark Test at the suspected cylinder. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible (compare with normal cylinder)?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	**INSPECT FUEL LINE PRESSURE** • Inspect the fuel line pressure.	Yes	Inspect the fuel injector for the following: • Injection volume

	(See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**		• Leakage • Open or short circuit in fuel injector Repair or replace the malfunctioning part according to the inspection results.
		No	Zero or low: • Inspect the fuel pump relay and the fuel pump circuit. (See **RELAY INSPECTION**.) • Inspect the fuel line for restriction. ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (Pressure regulator or fuel pump malfunction) (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) High: • Replace the fuel pump unit. (Pressure regulator malfunction) (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	**INSPECT SPARK PLUG** • Inspect the spark plug for the following: ▪ Air gap ▪ Heat range • Is there any malfunction?	Yes	Replace the spark plug. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT AIR CLEANER ELEMENT** • Is the air cleaner element clean?	Yes	Go to the next step.
		No	Replace the air cleaner element.
10	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs	Yes	Go to the next step.
		No	ECT PID is not as specified:

	using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ ECT ▪ MAF ▪ O2S11 (When engine can be started) ▪ O2S12 (When engine can be started) • Are the PIDs normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)		• Inspect for an intermittent open circuit of the ECT sensor No.1 and the related wiring harness. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect for an intermittent open circuit of the MAF sensor and the related wiring harness. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11 PID is not as specified: • Inspect for an intermittent open circuit of the A/F sensor and the related wiring harness. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect for an intermittent open circuit of the HO2S and the related wiring harness. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results.
11	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection when the engine can be started. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
12	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
13	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are compression pressures within specification? **Specification:** • Compression [SKYACTIV-G 2.0]	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

	▪ Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** ▪ Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** ▪ Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** (**300 rpm**) • Compression [SKYACTIV-G 2.5] ▪ Standard: **954 kPa {9.73 kgf/cm^2, 138 psi} (300 rpm)** ▪ Minimum: **763 kPa {7.78 kgf/cm^2, 111 psi} (300 rpm)** ▪ Maximum difference between cylinders: **161 kPa {1.64 kgf/cm^2, 23.4 psi}** (**300 rpm**) **NOTE:** • Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.		
14	**INSPECT FUEL LINE PRESSURE** • Inspect the fuel line pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:**	Yes	Visually inspect for deformed exhaust system parts. Repair or replace the malfunctioning part according to the inspection results.
		No	Zero or low: • Inspect the fuel pump relay and the fuel pump circuit. (See **RELAY INSPECTION**.) • Inspect the fuel line for restriction.

	• **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**		▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (Pressure regulator or fuel pump malfunction) (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) High: • Replace the fuel pump unit. (Pressure regulator malfunction) (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
15	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs using the M-MDS: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ ECT ▪ MAF ▪ O2S11 (When engine can be started) ▪ O2S12 (When engine can be started) • Are the PIDs normal? (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	ECT PID is not as specified: • Inspect for an intermittent open circuit of the ECT sensor No.1 and the related wiring harness. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) MAF PID is not as specified: • Inspect for an intermittent open circuit of the MAF sensor and the related wiring harness. (See **MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S11 PID is not as specified: • Inspect for an intermittent open circuit of the A/F sensor and the related wiring harness. (See **AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) O2S12 PID is not as specified: • Inspect for an intermittent open circuit of the HO2S and the related wiring harness. (See **HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Repair or replace the malfunctioning part according to the inspection results.
16	**INSPECT INTAKE-AIR SYSTEM FOR AIR SUCTION** • If the engine cannot be started: ▪ Inspect the intake air system for air leakage.	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

	• If the engine can be started: ▪ Perform the Intake Manifold Vacuum Inspection. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is air being sucked in from intake air system?		
17	**INSPECT FUEL LINE PRESSURE** • Inspect the fuel line pressure. (See **FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Inspect the PCM ground condition. Repair or replace the malfunctioning part according to the inspection results.
		No	Zero or low: • Inspect the fuel pump relay and the fuel pump circuit. (See **RELAY INSPECTION**.) • Inspect the fuel line for restriction. ▪ If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. ▪ If there is no malfunction: • Replace the fuel pump unit. (Pressure regulator or fuel pump malfunction) (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) High: • Replace the fuel pump unit. (Pressure regulator malfunction) (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
18	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If the malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. ▪ If the vehicle is repaired, troubleshooting is completed.		

		▪ If the vehicle is not repaired or additional diagnostic information is not available, reprogram the PCM if a later calibration is available. Retest.

2014 - Mazda3 - Engine

INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Vibration Method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

  NOTE:

  - There are several reasons why the vehicle or engine vibration could cause an electrical malfunction. Check the following:
    - Connectors are not fully seated.
    - Wiring harnesses do not have full play.
    - Wires laying across brackets or moving parts.
    - Wires routed too close to hot parts.
  - An improperly routed, improperly clamped, or loose harness can cause a wiring harness to become pinched between parts.
  - The connector joints, points of vibration, and places where the wiring harnesses pass through the firewall and body panels are the major areas to be checked.

Inspection Method for Switch Connectors or Wires

1. Connect the M-MDS to the DLC-2.

2. Switch the ignition ON (engine off).

NOTE:

- If engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.

4. Turn the switch on manually.

5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.

- If the PID value is unstable, check for a poor connection.

Inspection Method for Sensor Connectors or Wires

1. Connect the M-MDS to the DLC-2.

2. Switch the ignition ON (engine off).

NOTE:

- If the engine starts and runs, perform the following steps during idling.

3. Access the PIDs for the switch you are inspecting.

4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.

- If the PID value is unstable, check for poor connection.

Inspection Method for Sensors

1. Connect the M-MDS to the DLC-2.

2. Switch the ignition ON (engine off).

NOTE:

- If the engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.

4. Shake the sensor slightly with your finger.

- If the PID value is unstable or a malfunction occurs, check for a poor connection or a poorly mounted sensor or both.

Inspection Method for Actuators or Relays

1. Connect the M-MDS to the DLC-2.

2. Switch the ignition ON (engine off).

NOTE:

- If engine starts and runs, perform the following steps during idling.

3. Prepare the output state control function for actuators or relays that you are inspecting.

4. Shake the actuator or relay with your finger for **3 s** after the output state control function is activated.

- If a variable click sound is heard, check for a poor connection or a poorly mounted actuator or both, or the relay.

NOTE:

- Shaking the relays too strongly may result in open circuits.

Water Sprinkling Method

If a malfunction occurs only during high humidity or rainy/snowy weather, perform the following steps:

CAUTION:

- Indirectly change the temperature and humidity by spraying water onto the front of the radiator.
- If a vehicle is subject to water leakage, the leakage may damage the control module.

When testing a vehicle with a water leakage problem, special caution must be used.

1. Connect the M-MDS to the DLC-2 if you are inspecting sensors or switches.
2. Switch the ignition ON (engine off).

NOTE:

- If the engine starts and runs, perform the following steps at idle.

3. Access the PIDs for the sensor or the switch if you are inspecting sensors or switches.
4. If you are inspecting the switch, turn it on manually.
5. Spray water onto the vehicle or run it through a car wash.
   - If the PID value is unstable or a malfunction occurs, repair or replace parts if necessary.

2014 - Mazda3 - Engine

ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Main Relay Operation Inspection

1. Verify that the main relay clicks when the ignition is switched ON and then off.
    - If there is no operation sound, inspect the following:
        - Main relay (See **RELAY INSPECTION**.)
        - Wiring harness and connector between battery and main relay terminal A
        - Wiring harness and connector between PCM terminal 2K and main relay terminal E

Intake Manifold Vacuum Inspection

1. Verify the air intake hoses are installed properly.
2. Start the engine and let it idle.
3. Disconnect the vacuum hose between the intake manifold and purge solenoid valve from the intake manifold side.
4. Connect a vacuum gauge to the intake manifold and measure the intake manifold vacuum.
    - If not within specification, inspect the following:

      Specification
    - −60.0 kPa {−450 mmHg, −17.7 inHg}

NOTE:

- Air suction can be located by the engine speed change when lubricant is sprayed on the area where suction is occurring. Check the following places:
    - Air suction at throttle body, charge air cooler, intake manifold and PCV valve installation points
    - Engine compression (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Electric Variable Valve Timing Driver Control System Inspection

1. Connect the M-MDS to the DLC-2.
2. Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Verify that DTC P0010:00 or P1380:00 is not displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If DTC P0010:00 or P1380:00 is displayed, perform the DTC inspection. (See **DTC P0010:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P1380:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See **OBD-II DRIVE MODE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Verify that DTC P0011:00 or P0012:00 is not displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If DTC P0011:00 or P0012:00 is displayed, perform the DTC inspection. (See **DTC P0011:00, P0012:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Access the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - VT IN_ACT
    - VT IN_DES

CAUTION:

- While performing this step, always operate the vehicle in a safe and lawful manner.
- When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.

7. Accelerate and decelerate the vehicle, and drive at normal speed, and verify that the data monitor item VT IN_ACT value changes in conjunction with the VT IN_DES value.

- If this change cannot be verified, replace the electric variable valve timing motor/driver.

  (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
VT IN_ACT	°	Actual intake valve timing	• Displays actual intake valve timing
VT IN_DES	°	Desired intake valve timing	• Displays desired intake valve timing

Engine Oil Solenoid Valve Control System Inspection

1. Connect the M-MDS to the DLC-2.
2. Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Verify that DTC P06DA:00 is not displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - If DTC P06DA:00 is displayed, perform the DTC inspection. (See **DTC P06DA:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Inspect the engine oil pressure. (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - If the engine oil pressure is not as specified, repair or replace the malfunctioning part according to the inspection results:
5. Access the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - OIL_P_SOL
   - RPM
   - ECT
6. With the engine coolant temperature at **98 °C {208 °F}**, increase the engine speed to **4,000 rpm or higher**, and verify that the oil pressure gauge value changes when the data monitor item OIL_P_SOL value is changed from ON to OFF.
   - If the oil pressure gauge value change cannot be verified, inspect the engine oil solenoid valve. (Perform the Engine Oil Solenoid Valve Operation Inspection.)

     (See **ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
OIL_P_SOL	Off/On	Engine oil solenoid valve operation status	• ECT below 98 °C {208 °F} and engine speed below 4,000 rpm: On • ECT above 98 °C {208 °F} or engine speed above 4,000 rpm: Off
RPM	RPM	Engine speed	• Displays engine speed

Drive-by-wire Control System Inspection

Engine coolant temperature compensation inspection

1. Connect the M-MDS to the DLC-2.

2. Select the following PIDs: (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - ECT
   - IAT
   - RPM
3. Verify that the engine is cold, then start the engine.
4. Verify that the engine speed decreases as the engine warms up.
   - If the engine speed does not decrease or decreases slowly, inspect the following:
     - ECT sensor No.1 and related wiring harness (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
     - Throttle body and related wiring harness (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ECT	°C, °F	Engine coolant temperature	• Displays ECT
	V	ECT sensor No.1 voltage	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V
IAT	°C, °F	Intake air temperature (No.1)	• Displays IAT (No.1)
	V	IAT sensor No.1 voltage	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V
RPM	RPM	Engine speed	• Displays engine speed

Load compensation inspection

1. Start the engine and let it idle.
2. Connect the M-MDS to the DLC-2.
3. Verify that DTC P0506:00 or P0507:00 is not displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - If DTC P0506:00 or P0507:00 is displayed, perform the DTC inspection. (See **DTC P0506:00, P151B:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0507:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Select the RPM PID.

NOTE:

- Excludes temporary idle speed drop just after the loads are turned on.

5. Verify that the engine speed is within specification under each load condition.
   - If the load condition is not as specified, inspect the following:
     - A/C switch and related wiring harness system (A/C request signal is always on or off) (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
     - Electrical load
     - Charging system (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)

Idle-up speed (MTX: Neutral position, ATX: P, N position)

- No load: 500—600 rpm (MTX), 550—650 rpm (ATX)

- A/C on: 650—800 rpm
- Electrical loads on: 600—750 rpm

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
RPM	RPM	Engine speed	• Displays engine speed

Electronic Control Throttle Operation Inspection

1. Connect the M-MDS to the DLC-2.
2. Perform the KOEO or KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Verify that none of the following DTCs are displayed:
   - P0122:00, P0123:00, P0222:00, P0223:00, P0638:00, P2101:00, P2107:00, P2109:00, P2110:00, P2112:00, P2119:00, P2122:00, P2123:00, P2127:00, P2128:00, P2135:00, P2138:00
     - If any one DTC is displayed, perform the DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Access the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - ETC_ACT
   - ETC_DSD
5. With the accelerator pedal not depressed and with it depressed to the floor, verify that the data monitor item ETC_ACT value changes in conjunction with the ETC_DSD value.
   - If this change cannot be verified, perform the Resistance Inspection for the throttle body.

     (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
ETC_ACT	°	Actual throttle valve opening angle	**Ignition switched ON (engine off)** • Accelerator pedal released: Approx. 12.89 ° • Accelerator pedal fully depressed: Approx. 86.03 ° **Idle (after warm up)** • Accelerator pedal released: Approx. 3.2 °
ETC_DSD	%	Target throttle valve opening angle (percent)	• Displays target TP opening angle (percent)
	°	Target throttle valve opening angle	• Displays target TP opening angle

Brake override system operation inspection

NOTE:

- If the brake override system operates normally after performing the following inspection, the PCM detects DTC P2299:00.

1. Start the engine and let it idle.
2. Verify that the engine speed becomes **less than 1,200 rpm** under the following conditions.
   - Neutral (MTX)
   - N position (ATX)
   - Engine speed of **3,000 rpm or more** with accelerator pedal depressed
   - Brake pedal depressed
     - If the engine speed becomes **approx. 1,200 rpm**, clear the PCM DTC using the M-MDS. (System operation is normal.)
     - If the engine speed does not become **approx. 1,200 rpm**, inspect for the following parts, then repair or

replace the malfunctioning part:

- APP sensor (See **ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Neutral switch (MTX) (See **NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- CPP switch (MTX) (See **CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Brake switch No.1 (See **BRAKE SWITCH INSPECTION**.)
- Brake switch No.2 (See **BRAKE SWITCH INSPECTION**.)
- Communication between PCM and TCM (ATX) (See **FOREWORD**.)

Fuel Injector Operation Inspection

If simulation function of M-MDS is used:

STEP	INSPECTION		ACTION
1	Start the engine and warm it up completely. Access the INJ_1, INJ_2, INJ_3 and INJ_4 PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Turn each fuel injector from on to off using the PIDs for each cylinder. Does the engine speed drop?	Yes	Fuel injectors work properly.
		No	Engine speed does not drop an any cylinder: • Go to the next step. Engine speed drops on some cylinders: • Go to Step 4.
2	Perform the Main Relay Operation Inspection. (See**Main Relay Operation Inspection**.) Does the main relay work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
3	Inspect the fuel injector of the suspected cylinder. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Is there any malfunction?	Yes	Replace the fuel injector. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the fuel injector power and/or ground systems related wiring harness and connectors for the suspected cylinder. • If all items normal: ▪ Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If not: ▪ Repair or replace the malfunctioning part according to the inspection results.
4	Perform the KOER self test using the M-MDS. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Are the DTCs P0201:00, P0202:00, P0203:00 and/or P0204:00 present?	Yes	Go to the appropriate DTC inspection. (See **DTC P0201:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0202:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0203:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0204:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	Inspect the fuel injector of the suspected cylinder. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Is there any malfunction?	Yes	Replace the fuel injector. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect the following for the suspected cylinder:

			• PCM terminals (pulled-out pins, corrosion) • Fuel injector terminals (pulled-out pins, corrosion) • If all items normal: ▪ Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • If not: ▪ Repair or replace the malfunctioning part according to the inspection results.

If simulation function of M-MDS is not used:

STEP	INSPECTION		ACTION
1	Perform the KOER self test using the M-MDS. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Are the DTCs P0201:00, P0202:00, P0203:00 and/or P0204:00 present?	Yes	Go to the appropriate DTC inspection. (See **DTC P0201:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0202:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0203:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0204:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	Inspect the fuel injector of the suspected cylinder. (See **FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Is there any malfunction?	Yes	Replace the fuel injector. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	Inspect the following for the suspected cylinder: • Fuel injector power and/or ground system related wiring harnesses and connectors • PCM terminals (pulled-out pins, corrosion) • Fuel injector terminals (pulled-out pins, corrosion) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Fuel Cut Control System Inspection

NOTE:

- This inspection has to be performed after the Fuel Injector Operation Inspection.

If data monitor function of M-MDS is used:

1. Warm up the engine and idle it.
2. Connect the M-MDS to the DLC-2.
3. Select the RPM and the FUELPW PIDs. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Monitor both PIDs while performing the following steps:

   a. Depress the accelerator pedal and increase the RPM PID to **4,000 rpm**.

   b. Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the FUELPW PID is **0 msec**, and **2—5 msec** when the RPM PID drops **below 1,200 rpm**.

   - If not as specified, inspect the following:
     - ECT sensor No.1 and related wiring harness (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
FUELPW	Sec	Fuel injection pulse width (fuel injector energization time) output to fuel injector	• Idle (after warm up): Approx. 1.4 ms • Racing (engine speed is 2,000 rpm): Approx. 1.1 ms • Racing (engine speed is 4,000 rpm): Approx. 1.0 ms
RPM	RPM	Engine speed	• Displays engine speed

If data monitor function of M-MDS is not used:

1. Warm up the engine and idle it.
2. Measure the fuel injector control signal wave profile using the oscilloscope while performing the following steps:
   a. Depress the accelerator pedal and increase the engine speed to **4,000 rpm**.
   b. Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the wave profile constant **B+**, and the wave appears when the engine speed drops **below 1,200 rpm**. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
      - If not as specified, inspect the following:
        - ECT sensor No.1 and related wiring harness (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Fuel Pump (Low-pressure Side) Operation Inspection

1. Connect the M-MDS to the DLC-2.
2. Remove the fuel-filler cap.
3. Switch the ignition ON (engine off).
4. Turn the fuel pump relay from off to on using the FP PID and inspect if the operation sound of the fuel pump is heard. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - If operation sound is heard, fuel pump is normal.
   - If no operation sound is heard, proceed to the next step.
5. Measure the voltage at the wiring harness side fuel pump unit terminal A with the FP PID turned on.
   - If the voltage is as specified, inspect the following:
     - Fuel pump continuity
     - Fuel pump ground
     - Wiring harness between the fuel pump relay and PCM terminal 2AQ
   - If not as specified, inspect the following:
     - Fuel pump relay (See **RELAY INSPECTION**.)
     - Wiring harness connector (Battery—Fuel pump relay—Fuel pump control module—Fuel pump unit)

   Specification

   - 8.0—11.5 V (Ignition switched ON)

Fuel Pump (Low-pressure Side) Control System Inspection

If simulation function of M-MDS is used:

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. Select the FP PID. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Turn the fuel pump relay from off to on and inspect if the operation sound of the fuel pump relay is heard.

- If no operation sound is heard, inspect the fuel pump relay. (See **RELAY INSPECTION**.)
- If the fuel pump relay is normal, inspect the following:
    - Wiring harness and connectors (Ignition switch—Fuel pump relay—PCM terminal 2AQ)

If simulation function of M-MDS is not used:

1. Crank the engine and verify that the fuel pump relay operation sound is heard.
2. If the operation sound is not heard, inspect the following:
    - Fuel pump relay (See **RELAY INSPECTION**.)
    - Wiring harness and connectors (Ignition switch—Fuel pump relay—PCM terminal 2AQ)

Spark Test

1. Disconnect the fuel pump relay and fuel injector relay.
2. Verify that each ignition coil and connector is connected properly.
3. Inspect the ignition system in the following procedure:

WARNING:

- High voltage in the ignition system can cause strong electrical shock which can result in serious injury. Avoid direct contact with the vehicle body during the following spark test.

STEP	INSPECTION		ACTION
1	Disconnect the ignition coils from the spark plugs. Remove the spark plugs. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Verify that the spark plugs do not have carbon deposits. Is there any malfunction?	Yes	Perform no-load racing at **4,000 rpm** for **2 min**, **2 times** to burn off the carbon deposits. Repeat this step.
		No	Go to the next step.
2	Inspect the spark plugs for damage, wear, and proper plug gap. Is there any malfunction?	Yes	Re-gap or replace the spark plugs, then go to the next step. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	Reconnect the spark plugs to the ignition coil. Ground the spark plugs to the engine. Is a strong blue spark visible at each cylinder while cranking the engine?	Yes	Ignition system is normal.
		No	Some cylinders do not spark: • Go to the next step. All cylinders do not spark: • Go to Step 5.
4	Switch the ignition off. Inspect the wiring harness between the following terminals (wiring harness-side) for an open or short circuit: • Ignition coil/ion sensor No.1 terminal B—PCM terminal 1AY • Ignition coil/ion sensor No.2 terminal B—PCM terminal 1AT • Ignition coil/ion sensor No.3 terminal B—PCM terminal 1AO	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Ignition coil/ion sensor No.1 terminal B—PCM terminal 1AY • Ignition coil/ion sensor No.2 terminal B—PCM terminal 1AT • Ignition coil/ion sensor No.3 terminal B—PCM terminal 1AO • Ignition coil/ion sensor No.4 terminal B—PCM terminal 1AJ **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common

	Ignition coil/ion sensor No.4 terminal B—PCM terminal 1AJ Is there any malfunction?		wiring harness for an open or short circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit.
		No	Inspect the ignition coil. (See **IGNITION COIL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Replace the ignition coil/ion sensor. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Switch the ignition off. Disconnect the ignition coil/ion sensor connectors. Switch the ignition ON (engine off). Measure the voltage at each ignition coil/ion sensor terminal A (wiring harness-side). Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect for power supply circuit in wiring harness between ignition switch and ignition coils. Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Main relay terminal D—Ignition coil/ion sensor No.1 terminal A • Main relay terminal D—Ignition coil/ion sensor No.2 terminal A • Main relay terminal D—Ignition coil/ion sensor No.3 terminal A • Main relay terminal D—Ignition coil/ion sensor No.4 terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply.
6	Switch the ignition off. Inspect for continuity between terminal D (wiring harness-side) in each ignition coils and body ground. Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Ignition coil/ion sensor No.1 terminal D—Body ground • Ignition coil/ion sensor No.2 terminal D—Body ground • Ignition coil/ion sensor No.3 terminal D—Body ground • Ignition coil/ion sensor No.4 terminal D—Body ground **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect for the following: ▪ Open circuit between ignition coil/ion sensor No.1 and body ground ▪ Open circuit between ignition coil/ion sensor No.2 and body ground ▪ Open circuit between ignition coil/ion sensor No.3 and body ground ▪ Open circuit between ignition coil/ion sensor No.4 and body ground ▪ Loose or lifting ground point • Repair or replace the malfunctioning part.

			Repeat from Step 1.
7	Inspect the connection of PCM and ignition coil/ion sensor connectors. Are the PCM connector or ignition coil/ion sensor connectors poorly connected?	Yes	Repair or replace the connector. Repeat from Step 1.
		No	Go to the next step.
8	Inspect the CKP sensor and crankshaft pulley. (See **CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Inspect for an open or short circuit in wiring harness and connector of the CKP sensor. Repair or replace the malfunctioning part according to the inspection results.

Purge Control System Inspection

If simulation function of M-MDS is used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
   - If there is a vacuum, inspect the following:
     - Wiring harness and connectors (Purge solenoid valve—PCM terminal 1AI)
     - Purge solenoid valve (stuck open) (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Connect the M-MDS to the DLC-2 and verify that DTC P0443:00 is displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - Perform the DTC inspection. (See **DTC P0443:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Select the EVAPCP PID.
6. Increase the duty value of the purge solenoid valve to **50 %** and inspect if the operation sound of the valve is heard.
   - If the operation sound is heard, inspect for loose or damaged vacuum hoses. (Intake manifold—Purge solenoid valve—Charcoal canister)
   - If the operation sound is not heard, perform the purge solenoid valve inspection. (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Warm up the engine to normal operating temperature.
8. Monitor the EVAPCP PID using the M-MDS, and drive the vehicle **approx. 2000 rpm** for **30 s or more**. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - If the EVAPCP PID is **0 %**, inspect the following PIDs:
     - MAF, APP1, APP2, TP_REL and LOAD PIDs (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%
	V	APP sensor No.1 voltage	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V
	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.2	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx.

APP2			41%
	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V
EVAPCP	%	Purge solenoid valve control duty value	• Idle (after warm up): Approx. 0% • Racing (Engine speed 2,000 rpm): 4.3—35% • Racing (Engine speed 4,000 rpm): Approx. 66%
MAF	g/Sec	Mass air flow	• Displays MAF
	V	MAF sensor voltage	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%

If simulation function of M-MDS is not used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
   - If there is a vacuum, inspect the following:
     - Wiring harness and connectors (Purge solenoid valve—PCM terminal 1AI)
     - Purge solenoid valve (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Warm up the engine to the normal operating temperature.
5. Stop the engine.
6. Connect the M-MDS to the DLC-2 and verify that DTC P0443:00 is displayed.
   - Perform the DTC inspection. (See **DTC P0443:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Switch the ignition ON (engine off).
8. Select the ECT PID. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9. Verify that the engine coolant temperature is **above 60 °C {140 °F}**.
   - If the M-MDS indicates that the temperature is **below 60 °C {140 °F}**, perform the ECT sensor No.1 inspection. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
10. Set the vehicle on a dynamometer or chassis roller.

WARNING:

- When the dynamometer or chassis roller is operating, there is a possibility that the operator may come into contact with or be caught up in the rotating parts, leading to serious injuries or death. When performing work while the dynamometer or chassis roller is operating, be careful not to contact or be caught up in any of the rotating parts.

11. Drive the vehicle at an engine speed to **approx. 2000 rpm** for **30 s or more**.
12. Put a finger to the purge solenoid valve and verify that there is no vacuum applied during Step 2.

- If there is no vacuum, inspect the following:
  - Wiring harness and connector (Main relay—Purge solenoid valve—PCM terminal 1AI)
  - Purge solenoid valve (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
  - MAF, APP1, APP2, TP_REL and LOAD PIDs (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- If there is vacuum, inspect the following:
  - Vacuum hose (Purge solenoid valve—Charcoal canister)

Related PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%

TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%

A/C Cut-off Control System Inspection

1. Start the engine.
2. Turn the A/C switch and fan switch on.
3. Verify that the A/C compressor magnetic clutch actuates.
   - If it does not actuate, perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY“. (See **NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Fully open the throttle valve and verify that the A/C compressor magnetic clutch does not actuate for **2—5 s**.
   - If it actuates, inspect the following:
     - A/C relay (See **RELAY INSPECTION**.)
     - Open or short to ground in wiring harness and connectors (Front body control module (FBCM)—A/C relay—PCM terminal 2AF)
     - A/C related parts
     - APP1, APP2 PIDs (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Related PIDs

	V	APP sensor No.2 voltage	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V

Cooling Fan Control System Inspection

1. Connect the M-MDS to the DLC-2.
2. Start the engine and warm it up to normal operating temperature.
3. Perform the KOER self test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Verify that DTC P0480:00 or P0482:00 is not shown and the cooling fan operates during the KOER self test.
   - If the DTC P0480:00 or P0482:00 is displayed, perform the DTC inspection. (See **DTC P0480:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P0482:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - If the cooling fans do not operate, proceed to the following:
     - Inspect the following parts in the indicated order in accordance with fan operation conditions.
       - Open circuit between cooling fan relay and battery positive terminal
       - Open circuit between cooling fan relay and ground
       - Poor connection of the cooling fan relay
     - If there is no malfunction:
       - Replace the cooling fan component. (See **COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Hydraulic Variable Valve Timing Control System Operation Inspection

When idling cannot be continued

1. Connect the M-MDS to the DLC-2 and verify that DTC P2090:00 or P2091:00 is displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - Perform the DTC inspection. (See **DTC P2090:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the OCV and verify that the spool valve is at maximum advanced position. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Connect the OCV.
4. Switch the ignition ON (engine off).
5. Verify that the spool valve is at the maximum advanced position.
    - If the spool valve is stuck in the retard direction, inspect for the following:
        - Short circuit in wiring harnesses or connectors between OCV and PCM
6. Inspect the hydraulic variable valve timing actuator. (See **HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

When idling can be continued

If simulation function of M-MDS is used:

- Warm up the engine to normal operating temperature.
- Connect the M-MDS to the DLC-2.
- Verify that DTC P2090:00 or P2091:00 is displayed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - Perform the DTC inspection. (See **DTC P2090:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Start the engine and let it idle.
- Select the VT EX_DES PID. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Increase the OCV duty value and verify that the engine idles rough or stalls.
    - If as specified, inspect the timing belt component (valve timing deviation). (See **HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If not as specified, go to the next step.
- Remove the OCV while the connector is connected. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Switch the ignition ON (engine off).
- Select the VT EX_DES PID. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Increase the OCV duty value and verify that the spool valve operates in the retard direction.
    - If as specified, inspect the following hydraulic passage for restriction and/or leakage:
        - Oil pressure switch—OCV
        - OCV—Exhaust camshaft
        - Exhaust camshaft internal passage
    - If not as specified, inspect the following:
        - OCV operation (See **OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- If they are normal, replace the exhaust camshaft sprocket. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

If simulation function of M-MDS is not used:

- Connect the M-MDS to the DLC-2 and verify that DTC P2090:00 or P2091:00 is displayed.
    - Perform the DTC inspection. (See **DTC P2090:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC P2091:00 [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Disconnect the OCV connector.
- Warm up the engine and idle it.

- Apply the battery voltage to the OCV and verify that the engine idles rough or stalls.
    - If the engine idles rough or stalls, inspect the timing belt component (valve timing deviation).
    - If the engine does not idle rough or stalls, go to the next step.
- Remove the OCV and perform the spool valve operation inspection. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If not as specified, inspect the following:
        - OCV (See **OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
        - Harnesses and connectors between OCV and PCM have an open or short circuit
    - If as specified, inspect the following hydraulic passages for restriction or leakage or both:
        - Oil pressure switch—OCV
        - OCV—Exhaust camshaft
        - Exhaust camshaft internal passage
- If they are normal, replace the exhaust camshaft sprocket. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Evaporative Emission (EVAP) System Leak Inspection

- To verify that the problem has been fixed properly after repairs, the run drive cycle or EVAP system leak inspection must be performed.

EVAP system leak inspection using the M-MDS

EVAP system test outline

- The EVAP system test, which can be substituted for the run drive cycle as an EVAP control system repair confirmation method, can detect the small/large leak or blockage without run-drive cycle.

NOTE:

- The M-MDS cannot detect “very small leaks”. To identify the leak point, use the leak tester or ultrasonic leak detector.

EVAP system test description

- The EVAP system test finds gas leaks or blockage in the EVAP system using changes in the fuel tank pressure.
    - This test starts after an on-demand test signal is sent from the M-MDS to the PCM.
    - This test consists of three stages, and each stage is performed automatically as follows:

Stage 1 test (Test for large leaks or blockage)

- The M-MDS sends the stage 1 test start signal to the PCM.

- The PCM controls the CV solenoid valve and the purge solenoid valve to control the fuel tank pressure to the targeted value.
- The M-MDS detects large leaks or purge line blockage if the fuel tank pressure does not arrive at the target vacuum in a specified period of time.

Stage 2 test (Test for small leaks)
