- When the fuel tank pressure reaches the targeted pressure during the stage 1 test, the M-MDS sends the stage 2 test signal to the PCM to turn off the purge solenoid valve and maintain the fuel tank pressure.

EVAP Test

FLI	CANP	EVAPCV	TIME	RPM
48 %	0 A	ON	0 s	1240 RPM

The vacuum bleed down and bleed up rate is in range

- The M-MDS detects a small leak if the fuel tank pressure cannot be maintained within the target for the specified period of time.

Stage 3 test (Test for blockage)

- The M-MDS sends the stage 3 test signal to the PCM to turn off the CV solenoid valve and check for blockage in the EVAP system.

EVAP Test

FLI	CANP	EVAPCV	TIME
48 %	0 A	OFF	58 s

The FTP value is in range.

- The M-MDS detects blockage in the CV solenoid valve or air filter if the fuel tank pressure does not reach the target (atmosphere).

EVAP system malfunction determination

- The M-MDS detects small/large leaks or blockage based on the fuel tank pressure at the end of the EVAP test.

The target vacuum was not obtained during the EVAP test. A large leak or blockage is suspect.

・This result means the fuel tank pressure did not reach the target pressure during the stage 1 test.
— Inspect for large leakage or inspect the purge solenoid valve operation and related hoses.
— Repair or replace any malfunctioning parts.

The target vacuum was not maintained during the EVAP test. A small leak is suspect.

・This result means the fuel tank pressure was not maintained at the target pressure during the stage 2 test.
— Run the EVAP test again after retightening the fuel filler cap.
— If a small leak is suspected again, use the leak tester or ultrasonic leak detector to identify the leak point.
— Repair or replace any malfunctioning parts.

Blockage in EVAP system.

・This result means the fuel tank pressure did not return to atmosphere during the stage 3 test.
— Inspect the CV solenoid, air filter, charcoal canister and related hoses for blockage.

No large leaks or blockage were detected in the EVAP system.

・The M-MDS cannot detect "very small leaks".
— To identify the leak point, use a leak tester or ultrasonic leak detector.

A small leak in the purge solenoid valve is suspect.

・This result means the fuel tank pressure decreases to the minus side during the stage 2 test.
— Inspect the purge solenoid valve. Refer to the workshop manual.

Evaporative system test procedure

- Verify that all PIDs are within the following specifications.

Specification

PID	PID Range
BARO	74.9 kPa {0.764 kgf/cm^2, 10.9 psi} or more
FLI	15—85 %
ECT	ECT minus IAT -10—25 °C {14—77 °F}
IAT	

NOTE:

- To successfully perform this procedure, all PIDs must be within specifications before proceeding to the next step.

- Select the following items from the initialization screen of the M-MDS.
  - Select “Powertrain“.
  - Select “Fuel“.
  - Select “EVAP Test“.

- Verify that the ECT and IAT are within specifications on the confirmation screen. To successfully perform this procedure, the ECT and IAT must be within the specification before proceeding to the next step.
- The fuel Level must be maintained within **15 %—85 %**. The PCM will cancel the EVAP test if the fuel level is **lower than 15 %** or **higher than 85 %**.

- Verify the test results described on the M-MDS and follow the instructions.

EVAP system leak inspection using leak tester

1. Perform the following tester (EVAP System Tester 134-01049A) self-test:

NOTE:

- If the tester does not work correctly during the self-test, refer to the tester operation manual for a more detailed self-test procedure.

a. Verify that the control valve on the panel is in the HOLD position, then open the nitrogen bottle valve.

b. Connect the vehicle interface hose (part of tester) to the SELF-TEST port located on the control panel. Hand tighten the fitting (do not overtighten).

c. Turn the control valve to the TEST position.

d. The gauge should read **331—381 mm {13.1—15.0 in}** of water.

- If the gauge is not reading in this range, adjust the pressure by turning the black knob on the low pressure regulator of the nitrogen bottle.

e. Turn the control valve to the HOLD position.

f. Verify that the gauge holds pressure and that the flow meter reads no flow.

1. If there is no drop in pressure and no flow, the tester passes the self-test.
2. If the gauge indication decreases, refer to the tester operation manual.

2. Connect the tester to the vehicle.

a. Verify that the control valve on the panel is in the HOLD position, then open the nitrogen bottle valve.

b. Remove the fuel-filler cap from the vehicle.

- If the fuel-filler cap is not a MAZDA part or equivalent, replace it.

NOTE:

- INSPECT FUEL FILLER CAP AND FILLER NECK
  - Visually inspect for damage, insufficient sealing, rust, cracks or warps of filler cap and filler neck.
  - Repair or replace if necessary.

c. Connect the receiver assembly (tester: 134-01059) to the vehicle cap test hose assembly (part of tester) and the fuel-filler cap from the vehicle.

d. Connect the cap adaptor (tester: 134-01058) to the vehicle cap test hose assembly (part of tester) and to the fuel-filler neck.

e. Connect the vehicle interface hose (part of tester) to the center fitting of the vehicle cap test hose component (part of tester).

3. Connect the M-MDS to the DLC-2.

4. Switch the ignition ON (engine off).

5. Using the M-MDS, request the PCM on-board device control (Mode 08) to close the canister vent valve.

NOTE:

- The canister vent valve is closed for **10 min** unless any of the following actions are done:
  - The engine is started.
  - The ignition is switched off.

6. Make sure the control valve on the 134-01049A is in the HOLD position and that the valve on the cylinder for the nitrogen gas is open.

7. Turn the control valve to the open position and let the system fill. You should note a drop in the gauge pressure along with the flow meter being pegged at maximum flow for several minutes depending on how full or empty the fuel tank is, and how long it takes to completely fill and pressurize the evaporative emissions system hoses.

8. If the gauge and the flow meter do not settle to a measurable level after **2—3 min**, then refer to the Mazda Workshop Manual to verify that the canister vent valve is properly closed. If canister vent valve is properly closed, the EVAP system has a large leakage. Check for leakage and repair if necessary.

9. Verify pressure gauge and flow meter reading to determine if there is an evaporative emissions leak:

NO EVAPORATIVE LEAK:

- The flow meter registers “zero flow” and the pressure gauge returns to the preset pressure of **356 mm {14.0 in}** of water (H2O).

EVAPORATIVE LEAK:

- The pressure does not return to the preset level of **356 mm {14.0 in}** of water (H2O) when measuring the flow. See “SETTING LEAK STANDARD FOR TESTING” (.020 to.040 inch H2O) of the Evaporative Emissions Tester operation manual (134-01067).

NOTE:

1. Turn the control valve to the HOLD position, then disconnect the **tester**.

2014 - Mazda3 - Engine

ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Engine Tune-up Preparation

NOTE:

- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction. The engine speed returns to normal control when the accelerator pedal is released.

1. Connect the M-MDS to the DLC-2.
2. Shift the selector lever (ATX) or shift lever (MTX) to the following position:
    - MTX: Shift lever is in neutral position.
    - ATX: Selector lever is in P or N position.

NOTE:

- The engine coolant temperature and oil temperature can be verified by M-MDS PID “ECT” and “OIL_TEMP”.

3. Run the engine speed at a constant **2,500 to 3,000 rpm** and warm up the engine (engine coolant temperature: **80 °C {176 °F}** or more, oil temperature: **60 °C {140 °F}** or more).
4. Turn off all electrical loads with the engine idling.
5. If the cooling fan is operating, wait until is stops.

Idle Speed Inspection

NOTE:

- The idle speed cannot be adjusted.
- The M-MDS is required to verify the idle speed.

1. Complete the engine tune-up preparation. (See **Engine Tune-up Preparation**.)
2. Verify that the idle speed (M-MDS PID: RPM) is within the specification using the PID/data monitor function of the M-MDS. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If there is a malfunction, refer to “ENGINE SYMPTOM TROUBLESHOOTING”. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

      Idle speed (MTX: Neutral position, ATX: P, N position)

- MTX: 500—600 rpm
- ATX: 550—650 rpm

Ignition Timing Inspection

NOTE:

- The ignition timing cannot be adjusted.
- The M-MDS is required to verify the ignition timing.

1. Complete the engine tune-up preparation. (See **Engine Tune-up Preparation**.)

2. Verify the ignition timing (M-MDS PID: SPARKADV) using the PID/data monitor function of the M-MDS. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Ignition timing [SKYACTIV-G 2.0]

- MTX: Approx. BTDC 14°
- ATX: Approx. BTDC 12°

Ignition timing [SKYACTIV-G 2.5]

- Approx. BTDC 12°

3. Verify that ignition timing advances when the engine speed increases gradually.

- If there is a malfunction, refer to “ENGINE SYMPTOM TROUBLESHOOTING”. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Idle Mixture Inspection

1. Verify that the idle speed and ignition timing are within the specification. (See **Idle Speed Inspection**.) (See **Ignition Timing Inspection**.)

2. Insert an exhaust gas analyzer into the tailpipe.

3. Verify that the CO and HC concentrations are within regulation.

- If there is a malfunction, refer to “ENGINE SYMPTOM TROUBLESHOOTING”. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If no malfunction is detected, replace the catalytic converter. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CO concentration

- Within the regulation

HC concentration

- Within the regulation

Idle-up Speed Control Inspection

NOTE:

- The idle speed cannot be adjusted.
- The M-MDS is required to verify the idle speed.

1. Complete the engine tune-up preparation. (See **Engine Tune-up Preparation**.)

2. Verify that the idle speed according to each load (M-MDS PID: RPM) is within the specification using the PID/data monitor function of the M-MDS (except idle speed decrease after applying load). (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- If the engine speed is not within the specification when a specified load is applied, inspect the related input parts, wiring harnesses, and connectors.

Idle-up speed (MTX: Neutral position, ATX: P, N position)

- A/C on: 650—800 rpm
- Electrical loads on: 600—750 rpm

2014 - Mazda3 - Engine

PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- If the rubber on only one side of the plug hole plate front is lifted up, it could damage the adapter at the location shown in the figure. When removing the plug hole plate, lift up the rubbers at the same time.

Removal

1. Pull up the front part of the plug hole plate at the same time and remove the rubber from the adapter on the engine side.

2. Pull up the plug hole plate in the order shown in the figure and remove the adapter from the rubber on the engine side.

Installation

1. Press the plug hole plate in the order shown in the figure to insert the adapter to the rubber on the engine side.

2. Press the front part of the plug hole plate at the same time to insert the rubber to the adapter on the engine side.

2014 - Mazda3 - Engine

DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Generator Drive Belt

NOTE:

- The generator drive belt deflection/tension inspection is not necessary with the adoption of the drive belt auto tensioner.

1. Verify that the indicator part of the cast hexagon on the drive belt auto tensioner is within the normal range.

- If it exceeds the limit, replace the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Water Pump Drive Belt

NOTE:

- The water pump drive belt deflection/tension inspection is not necessary with the adoption of the stretch-type water pump drive belt.

1. Visually inspect or feel that there is no wear, damage, or cracking on the inside and sides of the entire belt.

    - Even if there is a little wear, damage, or cracking, replace the water pump drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Start the engine to verify that abnormal noise does not occur.

    - If abnormal noise occurs, replace the water pump drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

NOTE:

- Remove/install the drive belt from the underside of the vehicle.

Generator Drive Belt Removal/Installation

CAUTION:

- To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.

1. Remove the splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

2. Insert a wrench onto the cast hexagon on the drive belt auto tensioner and release the tension by slowly turning in the direction shown in the figure.

3. Remove the generator drive belt.

4. Install the generator drive belt.

5. Rotate the crankshaft pulley clockwise approx. halfway and verify that the generator drive belt is installed correctly.

- If the rib of the drive belt and the groove of each pulley are not aligned, remove the drive belt and re-install it.

6. Verify that the indicator part of the cast hexagon on the drive belt auto tensioner is within the normal range.(See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Install the splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

Water Pump Drive Belt

Removal

1. Remove the generator drive belt. (See **Generator Drive Belt Removal/Installation**.)

2. Apply a clean cloth to the water pump drive belt as shown in the figure.

3. Pull the cloth in the direction of the arrow and rotate the crankshaft pulley clockwise.

CAUTION:

- To prevent damaging the drive belt, do not stop rotating the crankshaft pulley while performing the removal procedure (with inserted cloth between drive belt and water pump pulley).

NOTE:

- The rib of the drive belt can be slid from the groove of the water pump pulley by rotating the crankshaft pulley while pulling the cloth in the direction of the arrow.

4. Remove the water pump drive belt.

Installation

1. Set one side of the water pump drive belt into the groove of the crankshaft pulley.

2. Set the other side of the water pump drive belt into the groove of the water pump pulley with the smaller circumference.

CAUTION:

- Be careful not to get a finger caught in between the drive belt and pulley when performing the following procedure.
- Wearing gloves could result in fingers getting caught between the drive belt and pulley. Do not wear cotton gloves when performing the procedure.

3. Press the drive belt up from the smaller circumference pulley into the groove of the larger circumference pulley, and rotate the crankshaft pulley clockwise.

CAUTION:

- To prevent damaging the drive belt, do not stop rotation of the crankshaft pulley while pressing the drive belt up from the height difference of the water pump pulley to the groove of the pulley.

4. After drive belt installation, rotate the crankshaft pulley clockwise approx. halfway and verify that the water pump drive belt is installed correctly.

- If the rib of the drive belt and the groove of the pulley are not aligned, remove the drive belt and re-install it.

5. Install the generator drive belt. (See **Generator Drive Belt Removal/Installation**.)

2014 - Mazda3 - Engine

DRIVE BELT AUTO TENSIONER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- If the rubber part of the drive belt auto tensioner is damaged by a screwdriver or other tool, oil in the hydraulic pressure unit could leak and the tensioner may not operate normally. Be careful not to damage the rubber part of the drive belt auto tensioner.

1. Remove the generator drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, slowly turn it in the direction of the arrow shown in the figure, and fully depress.

NOTE:

- The drive belt auto tensioner is operated in the direction of the arrow by turning the wrench.

3. Verify that the drive belt auto tensioner moves smoothly in the operational direction.

- If it does not move smoothly, air infiltration into the inner hydraulic pressure unit can be considered. Move the drive belt auto tensioner up and down at full stroke three times to bleed the air.

- After bleeding the air, if the drive belt auto tensioner still does not move smoothly when re-inspecting, replace the drive belt auto tensioner. (See **DRIVE BELT AUTO TENSIONER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**).

NOTE:

- By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.

4. Turn the drive belt auto tensioner pulley by hand and verify that it rotates smoothly.

- If it does not move smoothly, replace the drive belt auto tensioner. (See **DRIVE**

BELT AUTO TENSIONER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)

5. Install the generator drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

DRIVE BELT AUTO TENSIONER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the generator drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove in the order indicated in the table.

4. Install in the reverse order of removal.

1	Drive belt auto tensioner (See **Drive Belt Auto Tensioner Installation Note**.)

Drive Belt Auto Tensioner Installation Note

CAUTION:

- To allow the drive belt auto tensioner to function correctly, always bleed the air from the

drive belt auto tensioner using the following procedure after assembling the drive belt auto tensioner.

1. Install the drive belt auto tensioner to the engine.

Tightening torque

- 22—30 N·m {2.3—3.0 kgf·m, 17—22 ft·lbf}

CAUTION:

- To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, move the drive belt auto tensioner up and down at full-stroke three times to bleed the air.

NOTE:

- By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.

2014 - Mazda3 - Engine

COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Hot engines and oil can cause severe burns. Be careful not to burn yourself during removal/installation of each component.
- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1. Verify that the battery is fully charged. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - Recharge it if necessary. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Warm up the engine to the normal operating temperature.
3. Perform “Fuel Line Safety Procedures”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the following parts.

    a. Plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    b. Ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    c. Spark plugs. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    d. Fuel pump relay

    e. Fuel injector relay
5. Measure the compression pressure using the following procedure.

    a. Press a compression gauge into the spark plug hole.

b. Fully depress the accelerator pedal.

c. Crank the engine and measure the compression pressure.

Compression [SKYACTIV-G 2.0]

- Standard: 885 kPa {9.02 kgf/cm^2, 128 psi} [300 rpm]
- Minimum: 708 kPa {7.22 kgf/cm^2, 103 psi} [300 rpm]
- Maximum difference between cylinders: 150 kPa {1.53 kgf/cm^2, 21.8 psi} [300 rpm]

Compression [SKYACTIV-G 2.5]

- Standard: 954 kPa {9.73 kgf/cm^2, 138 psi} [300 rpm]
- Minimum: 763 kPa {7.78 kgf/cm^2, 111 psi} [300 rpm]
- Maximum difference between cylinders: 161 kPa {1.64 kgf/cm^2, 23.4 psi} [300 rpm]

NOTE:

- Because the SKYACTIV-G 2.0 and SKYACTIV-G 2.5 retards the intake valve closing timing, compression pressure is low.

d. Perform Steps (1) to (3) for all cylinders.

e. If the measured value is the threshold or less, or if there is a cylinder which exceeds the specified maximum difference between cylinders, add a small amount of engine oil through the spark plug hole and perform Steps (1) to (3).

- If the pressure increases by adding the engine oil, the piston ring or the cylinder surface is worn, or they are damaged. Perform overhaul servicing.
- If the pressure does not increase, valve seizure, valve attachment malfunction, or pressure leakage from the cylinder head gasket might be occurring. Perform overhaul servicing.

f. If the measured value is high, it is possible that there is an error in the electric variable valve timing system.

6. Remove the compression gauge.

7. Install the following parts.

   a. Fuel injector relay

   b. Fuel pump relay

   c. Spark plugs. (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   d. Ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   e. Plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- Do not disassemble the electric variable valve timing motor/driver because it is a precision unit.
- Do not apply excessive force when rotating the electric variable valve timing motor joint. If it is rotated with excessive force, the electric variable valve timing motor could be damaged.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Rotate the electric variable valve timing motor joint to the left and right by your fingers and verify that it rotates smoothly in **15°** increments.

NOTE:

- Rotate the joint area smoothly using only the tips of your fingers.
- The electric variable valve timing motor joint moves in **15°** increments, and if the joint is moved **24** times, it rotates one full rotation.

ELECTRIC VARIABLE VALVE TIMING MOTOR

If it does not rotate smoothly, replace the electric variable valve timing motor/driver.(See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Install in the reverse order of removal.

2014 - Mazda3 - Engine

ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- Applying excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the electric variable valve timing motor/driver may cause a malfunction. When servicing, be careful not to apply excessive force to the electric variable valve timing motor/driver using other parts or tools.
- Do not disassemble the electric variable valve timing motor/driver because it is a precision unit.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

1	No. 3 engine mount (See **No.3 Engine Mount Removal Note**.) (See **No.3 Engine Mount Installation Note**.)
2	Electric variable valve timing motor/driver connector
3	Electric variable valve timing motor/driver (See **Electric Variable Valve Timing Motor/Driver Installation Note**.)
4	O-ring

No.3 Engine Mount Removal Note

1. Remove the clips shown in the figure and set the ground cable aside.

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

CAUTION:

- To prevent deformation of the oil pan, support the engine using the following methods.
  - When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.
  - When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover and support the oil pan.

3. Before removing the No.3 engine mount, support the engine (oil pan) using a commercially available engine lifter or garage jack.

CAUTION:

- Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.

4. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

NOTE:

- Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

5. Remove the No. 3 engine mount.

Electric Variable Valve Timing Motor/Driver Installation Note

1. Install a new O-ring to the O-ring installation groove of the engine front cover.

CAUTION:

- To prevent damage to the electric variable valve timing motor/driver, do not apply excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the shaded areas shown in the figure.

2. Install the electric variable valve timing motor/driver using the following procedures.

NOTE:

- The eccentric shaft on the electric variable valve timing actuator side can be rotated to the left and right.

- The electric variable valve timing motor/driver can be assembled with the joint groove of the eccentric shaft in any position, and it will not lead to vehicle damage or performance reduction.

a. Before installation, rotate the joint on the end of the electric variable valve timing motor so that it is aligned to the joint groove on the electric variable valve timing actuator side.

b. Engage the joint on the end of the electric variable valve timing motor with the joint groove on the electric variable valve timing actuator side.

c. Attach the seal surface.

d. Tighten the electric variable valve timing motor/driver installation bolts.

Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

No.3 Engine Mount Installation Note

CAUTION:

- If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. When installing the No.3 engine mount, align the alignment mark placed during removal and install it to the original position.

NOTE:

- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.

- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may have loosened.

1. Tighten the engine front cover stud bolts.

Tightening torque

- 7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:

a. Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.

b. Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.

NOTE:

- If the alignment marks are not aligned, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

3. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}

4. Remove the engine lifter or garage jack.

5. Install in the reverse order of removal.

2014 - Mazda3 - Engine

HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- Do not disassemble the hydraulic variable valve timing actuator because it is a precision unit.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the cylinder head cover. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Verify that the notch of the rotor and projection of the cover on the hydraulic variable valve timing actuator are aligned and fitted.

- If the notch of the rotor and projection of the cover are not aligned, rotate the crankshaft in the direction the engine rotates two turns and verify that they are aligned.
    - If the notch of the rotor and projection of the cover are still not aligned, replace the hydraulic variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- If, when turning the crankshaft, there is a slapping noise from the hydraulic variable valve timing actuator each time before the cam reaches its maximum lift, it means that the actuator is not secured. Replace the hydraulic variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Install in the reverse order of removal.

2014 - Mazda3 - Engine

ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- Do not disassemble the electric variable valve timing actuator because it is a precision unit.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Rotate the eccentric shaft of the electric variable valve timing actuator by hand and verify that it rotates smoothly.

- If it does not rotate smoothly, replace the electric variable valve timing actuator. (See **ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

NOTE:

- Hook a finger onto the joint groove of the eccentric shaft to rotate the shaft easily.
- The eccentric shaft stops rotating at the maximum retard position when it is rotated counterclockwise as viewed from the front, and at the maximum advance position when rotated clockwise.
- The eccentric shaft rotates 15.8 turns from the maximum retard position to the maximum advance position.

5. Install in the reverse order of removal.

2014 - Mazda3 - Engine

ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- Do not disassemble the electric variable valve timing actuator and hydraulic variable valve timing actuator because they are precision units.
- If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.
- When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use a wrench on the rear side of the engine as shown in the figure to secure a clearance between the cam.

NOTE:

- Width at the cast hexagon of the camshaft is **22—24 mm {0.87—0.94 in}**.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the cylinder head cover. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

6. Remove the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Remove the vacuum pump. (Only when hydraulic variable valve timing actuator is removed.) (See **VACUUM PUMP REMOVAL/INSTALLATION**.)

8. Remove the high pressure fuel pump and rear housing. (Only when hydraulic variable valve timing actuator is removed.) (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

9. Remove in the order indicated in the table.

10. Install in the reverse order of removal.

11. Start the engine and inspect the following:

- Ignition timing, idle speed and idle mixture. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Oil shower pipe (See **Oil Shower Pipe Installation Note**.)
2	Timing chain (See **Timing Chain Removal Note**.) (See **Timing Chain Installation Note**.)
3	Chain guide (No.1)
4	Electric variable valve timing actuator (See **Electric Variable Valve Timing Actuator Removal Note**.)

	(See **Electric Variable Valve Timing Actuator Installation Note**.)
5	OCV
6	Hydraulic variable valve timing actuator and exhaust camshaft component (See **Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Removal Note**.) (See **Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Installation Note**.)
7	OCV oil filter
8	Hydraulic variable valve timing actuator (See **Hydraulic Variable Valve Timing Actuator Removal Note**.) (See **Hydraulic Variable Valve Timing Actuator Installation Note**.)

Timing Chain Removal Note

1. Release the tension on the timing chain using the following procedure:

NOTE:

- Release the tension on the timing chain by securing the timing chain tensioner arm through the service hole on the engine front cover.

a. Remove the blind plugs (upper and lower) on the engine front cover service holes.

b. Insert an M6 bolt (**35—60 mm {1.4—2.3 in}** length with thread to the end) to the upper service hole and tighten it until it contacts the tensioner arm, then loosen it **approx. 180 degrees** (set the bolt so that it sits slightly in front of the tensioner arm).

NOTE:

- The bolt contacts the tensioner arm when it is inserted **approx. 20 mm {0.79 in}**.
- Hold the exhaust camshaft using a wrench on the cast hexagon and move it back and forth a few times as shown in the figure. This will drain the oil from the chain tensioner and make the following servicing easier.

c. Insert a precision screwdriver into the lower service hole.

d. While moving the exhaust camshaft back and forth in the direction of the arrow using a wrench on the cast hexagon, press down the link plate of the timing chain tensioner using a precision screwdriver and release the plunger lock.

NOTE:

- When moving the exhaust camshaft back and forth, the timing chain pushes the plunger in the chain tensioner making it easier to operate the link plate.

e. With the plunger lock released, rotate the exhaust camshaft clockwise until the timing chain loosens.

f. With the chain loosened, tighten the M6 bolt in the upper service hole so that the bolt is inserted **approx. 5 mm {0.2 in}** additionally to secure the tensioner arm.

- If the bolt cannot be inserted **approx. 5 mm {0.2 in}**, the plunger lock of the chain tensioner may not release, or the chain may not loosen enough. Return the bolt to the original position and restart the procedure from Step (3).

NOTE:

- By rotating the exhaust camshaft clockwise, the timing chain pushes the tensioner arm and the rib position deviates. The entire tensioner arm can be secured by hooking the bolt onto the deviated rib.

g. After securing the tensioner arm, remove the chain guide (No.1).

Electric Variable Valve Timing Actuator Removal Note

CAUTION:

- Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.
- After servicing, always verify the valve timing.

1. Rotate the crankshaft clockwise so that cylinder No.1 is positioned around before top dead center (TDC) as shown in the figure.

NOTE:

- With cylinder No.1 positioned around before top dead center (TDC), there is no large movement (rotation) of the exhaust camshaft when the timing chain is removed. Therefore, installation of the electric variable valve timing actuator to the camshaft will be easier. (If there is a large movement of the exhaust camshaft, installation of the electric variable valve timing actuator to the camshaft must be performed while loosening the chain by rotating the exhaust camshaft.)

2. Mark the timing chain and each actuator so that they can be reassembled in the same condition as before removal.

3. Hold the intake camshaft using a wrench on the cast hexagon and remove the electric variable valve timing actuator installation bolt.

4. Using a screwdriver wrapped in a clean cloth, lightly press the electric variable valve timing actuator to the front and separate the intake camshaft and the actuator.

5. Remove the timing chain from the exhaust and intake camshaft sprockets and set is aside, and remove the electric variable valve timing actuator.

6. Return the timing chain to the exhaust camshaft sprocket, and pull the timing chain up and suspend it using a rope as shown in the figure.

Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Removal Note

CAUTION:

- Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.
- After servicing, always verify the valve timing.

1. Leave the timing chain as it is, which was suspended after electric variable valve timing actuator removal.
2. Temporarily install the cylinder head cover bolt to the position shown in the figure to use it for suspending the timing chain.

3. Loosen the exhaust-side camshaft cap bolts in two or three passes in the order shown in the figure, and remove the camshaft caps.

4. While setting the timing chain aside, remove the hydraulic variable valve timing actuator and the exhaust camshaft as a single unit.

5. Pull up the timing chain and suspend it using a rope as shown in the figure.

Hydraulic Variable Valve Timing Actuator Removal Note

1. Lock the exhaust camshaft against rotation by holding the exhaust camshaft with a vise and securing the cast hexagon with a wrench.

2. Loosen the hydraulic variable valve timing actuator installation bolt and remove the actuator.

Hydraulic Variable Valve Timing Actuator Installation Note

1. When replacing the hydraulic variable valve timing actuator, place a mark at the same position as the one placed before removal.

2. Align the knock pin on the end of the exhaust camshaft with the knock pin installation hole on the actuator side, and temporarily assemble the bolt.

3. Lock the exhaust camshaft against rotation by holding the exhaust camshaft with a vise and securing the cast hexagon with a wrench.

4. Tighten the hydraulic variable valve timing actuator installation bolt.

Tightening torque

- 75—85 N·m {7.7—8.6 kgf·m, 56—62 ft·lbf}

Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Installation Note

1. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area (exhaust side) of each journal of the cylinder head.

CAUTION:

- Apply 0.05 ml {0.05 cc, 0.003 in^3} or less of oil to journal No.6.

2. Apply gear oil (SAE No. 90 or equivalent) or engine oil to the following locations of the exhaust camshaft.

- Thrust surface of front journal

3. Remove the rope suspending the timing chain on the exhaust side.

4. While aligning the mark on the timing chain placed during removal with the one on the hydraulic variable valve timing actuator, place the

exhaust camshaft component on the cylinder head.

5. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the exhaust camshaft.

6. Apply adhesive agent (Loctite 962T) around journal No.6 of the cylinder head or the exhaust-side rear camshaft cap.

CAUTION:

- Verify that there is no adhesive agent on the journal.

  Adhesive agent bead width

- 0.5—1.5 mm {0.02—0.05 in}

7. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.

8. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.

Tightening torque

- Step 1: 3.0—6.0 N·m {31—61 kgf·cm, 27—53 in·lbf}
- Step 2: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

Electric Variable Valve Timing Actuator Installation Note

1. When replacing the electric variable valve timing actuator with a new one, place a mark at the same position as the one placed before removal.

2. Remove the rope suspending the timing chain on the intake side.

3. Remove the timing chain from the exhaust and intake camshaft sprockets and set it aside to the rear, then insert the electric variable valve timing actuator between the engine front cover and the cylinder head.

4. Return the timing chain to the exhaust camshaft sprocket.

5. While aligning the mark on the timing chain placed during removal with the one on the electric variable valve timing actuator, engage the chain with the sprocket.

6. Align the knock pin on the end of the intake camshaft with the notch on the actuator side, then assemble the actuator.

NOTE:

- Adjust the knock pin with the notch while adjusting the knock pin position by rotating the camshaft.

7. Hold the intake camshaft using a wrench on the cast hexagon, and tighten the electric variable valve timing actuator installation bolt.

Tightening torque

- 102—114 N·m {10.5—11.6 kgf·m, 76—84 ft·lbf}

Timing Chain Installation Note

1. Install the chain guide (No.1).
2. Remove the bolt securing the tensioner arm and apply tension to the timing chain.
3. Rotate the crankshaft clockwise two turns and verify that the valve timing is correct.

NOTE:

- The timing mark of SKYACTIV-G 2.5 is not completely parallel with the upper surface of the cylinder head.
- If the valve timing is not correct, remove the engine front cover and reassemble the timing chain to each sprocket. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Install the blind plugs (upper and lower) for the engine front cover service holes.

Tightening torque

- Upper: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}
- Lower: 17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}

2014 - Mazda3 - Engine

OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Coil Resistance Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the OCV connector.

4. Measure the resistance between terminals A and B using an ohmmeter.

OCV coil resistance

- 6.9—7.5 ohms [20°C {68°F}]
- If not as specified, replace the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Install in the reverse order of removal.

Spool Valve Operation Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Verify that the spool valve in the OCV is in the maximum valve timing advance position as indicated in the figure.

- If not as specified, replace the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Verify that the battery is fully charged. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- If not as specified, recharge the battery. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

NOTE:

- When applying battery positive voltage between the OCV terminals, the connection can be either of the following:
  - Positive battery cable to terminal A, negative battery cable to terminal B
  - Positive battery cable to terminal B, negative battery cable to terminal A

5. Apply battery positive voltage between the OCV terminals and verify that the spool valve operates and moves to the maximum valve timing retard position.

- If not as specified, replace the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Stop applying battery positive voltage and verify that the spool valve returns to the maximum valve timing advance position.

- If not as specified, replace the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Install the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the cylinder head cover. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove in the order indicated in the table.

6. Install in the reverse order of removal.

1	OCV installation bolt
2	OCV

OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.
- When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use a wrench on the rear side of the engine as shown in the figure to secure a clearance between the cam.

NOTE:

- Width at the cast hexagon of the camshaft is 22—24 mm {0.87—0.94 in}.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
5. Remove the splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

6. Remove the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Drain the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8. Remove the oil pan. (See **OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Refill with the specified type and amount of the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
12. Start the engine and inspect the following:
    - Leakage of engine oil.
    - Runout and contact of pulley and belt.
    - Ignition timing, idle speed and idle mixture. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Cylinder Head Cover Removal Note

1. Disconnect the OCV connector.
2. Remove the wiring harness clips secured to the cylinder head cover.
3. Remove the wiring harness clip secured to the intake manifold as shown in the figure, and set the wiring harness aside.

4. Disconnect the ventilation hose.
5. Disconnect the brake vacuum hose from the intake manifold and set it aside.
6. Remove the catch tank with the evaporative hose still connected and set it aside. (SKYACTIV-G 2.5) (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Remove the cylinder head cover.

Water Pump Pulley Removal Note

CAUTION:

- Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.

1. Align the water pump pulley hole with the water pump hole as shown in the figure.

2. Insert an appropriate bolt (length **approx. 70 mm {2.8 in}**) into the water pump hole as shown in the figure, and lock the water pump pulley against rotation.

3. Remove the water pump pulley.

4. Remove the bolt used for locking the water pump pulley against rotation.

Crankshaft Pulley Lock Bolt Removal Note

CAUTION:

- To prevent damage to the crankshaft pulley, protect the crankshaft pulley with a clean cloth so that the bar part (205-072) of the **SST** does not contact the crankshaft pulley.
- To prevent damage to the engine front cover, be careful not to allow the tab part (49 B011 105) of the **SST** to get caught between the crankshaft pulley and the engine front cover.

1. Install the **SST** to the crankshaft pulley, and lock the crankshaft against rotation.

2. Remove the crankshaft pulley lock bolt.

No.3 Engine Mount Removal Note

1. Remove the clips shown in the figure and set the ground cable aside.

2. Install the **SST** using **part number 99794 1025** or an **M10 x 1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

CAUTION:

- Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.

3. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

NOTE:

- Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

4. Install the **SST** using the following procedures.

CAUTION:

- Refer to the SST instruction manual for the basic handing procedure.

NOTE:

- Install front foot No. 2 to the left and right front shafts of the **SST**.

a. Protect the positions shown in the figure using tape.

b. As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.

c. As shown in the figure, set the front shafts of the SST to the left and right bolts.

d. Adjust the height of the left and right side bars of the **SST** so that they are leveled, then tighten each part.

e. Apply tension to the chain to hold the engine.

5. Remove the No.3 engine mount.

Engine Front Cover Removal Note

1. Remove the nut shown in the figure and set the cooler hose (LO) aside.

2. Remove the insulator shown in the figure.

3. Set the ground cable and wiring harness bracket shown in the figure aside.

4. Remove the engine front cover installation bolts.

5. Using a screwdriver wrapped in a cloth, peel the sealant away a little at a time, and remove the engine front cover.

CAUTION:

- Do not apply excessive force to the screwdriver. Otherwise, the engine front cover could be damaged.
- Be careful not to scratch or damage the seal surface. Otherwise, it could cause oil leakage.

Timing Chain Removal Note

1. Rotate the crankshaft clockwise to align the timing marks and the key position as shown in the figure, and set cylinder No.1 at top dead center (TDC).

NOTE:

- The timing mark of SKYACTIV-G 2.5 is not completely parallel with the upper surface of the cylinder head.

2. While moving the exhaust camshaft back and forth in the direction of the arrow using a wrench on the cast hexagon, press down the link plate of the timing chain tensioner using a precision screwdriver and release the plunger lock.

NOTE:

- When moving the exhaust camshaft back and forth, the timing chain pushes the plunger in the chain tensioner making it easier to operate the link plate.

3. Push back the plunger slowly in the direction shown in the figure with the link plate still pushed down.

4. Remove the screwdriver from the link plate with the plunger still pushed down.

5. Release the force slightly from the plunger, and move it back and forth **2—3 mm {0.08—0.11 in}**.

6. Insert a wire with an **approx. diameter of 1.5 mm {0.059 in}** or a paper clip where the link plate hole and the tensioner body hole overlap to secure the link plate and lock the plunger.

7. Remove the chain tensioner, tensioner arm, and the chain guide (No.1).
8. Remove the timing chain.

Oil Pump Driven Sprocket Removal Note (SKYACTIV-G 2.0)

1. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.

2. Remove the oil pump driven sprocket.
3. Remove the temporarily assembled crankshaft pulley lock bolt.

Oil Pump Chain Removal Note (SKYACTIV-G 2.5)

1. Verify that the balancer shaft sprocket alignment mark and key are aligned to the positions shown in the figure.

NOTE:

- If they are not in the positions shown in the figure, rotate the crankshaft to set cylinder No.1 to top dead center (TDC).

2. Slightly loosen the balancer shaft sprocket installation bolt using the following procedure:

NOTE:

- At this stage, only loosen the installation bolt, do not remove it. Remove the bolt after removing the oil pump chain tensioner.
- The balancer unit is constructed such that the end of the balancer shaft (No.1) protrudes from the balancer unit case. The balancer shaft (No.1) can be locked against rotation by holding the end using a wrench.

a. Lock the balancer shaft (No.1) against rotation as shown in the figure.

CAUTION:

- To prevent damage to the balancer unit, protect the end of the balancer shaft (No.1) with a rag.

b. Slightly loosen the balancer shaft sprocket installation bolt.

3. Slightly loosen the oil pump driven sprocket installation bolt using the following procedure:

NOTE:

- At this stage, only loosen the installation bolt, do not remove it. Remove the bolt after removing the oil pump chain tensioner.

a. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.

b. Slightly loosen the oil pump driven sprocket installation bolt.

c. Remove the temporarily assembled crankshaft pulley lock bolt.

4. Set a cloth wrapped flathead screwdriver in the gap between the oil pump drive sprocket and the oil pump chain as shown in the figure.

5. Move the screwdriver in the direction of the arrow and press the oil pump chain, and then press on the plunger of the oil pump chain tensioner.

6. Insert a wire with an approx. diameter of 1.4 mm {0.055 in} or a paper clip into the body hole of the oil pump chain tensioner with the plunger pressed.

NOTE:

- The wire or paper clip secures the plunger, and the tension can be released.

7. Remove the oil pump chain tensioner.
8. Remove the oil pump chain and balancer shaft sprocket as a single unit.
9. Remove the oil pump driven sprocket.

Oil Pump Driven Sprocket Installation Note (SKYACTIV-G 2.0)

1. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.

2. Install the oil pump driven sprocket.

   Tightening torque

   - 20—30 N·m {2.1—3.0 kgf·m, 15—22 ft·lbf}

3. Remove the temporarily assembled crankshaft pulley lock bolt.

Oil Pump Chain Installation Note (SKYACTIV-G 2.5)

1. Verify that the key and knock pin are aligned to the positions shown in the figure.

- If they are not in the positions shown in the figure, rotate the crankshaft and balancer shaft (No.1) to set cylinder No.1 to top dead center (TDC).

2. Temporarily assemble the oil pump driven sprocket.

3. Temporarily tighten the oil pump driven sprocket installation bolt.

4. Align the oil pump chain alignment mark with the balancer shaft sprocket alignment mark.

5. Install the oil pump chain and balancer shaft sprocket as a single unit while aligning the alignment marks on each sprocket and oil pump chain as shown in the figure.

6. Temporarily tighten the balancer shaft sprocket installation bolt.

7. Install the oil pump chain tensioner.

CAUTION:

- At this stage, do not remove the wire or paper clip installed to the oil pump chain tensioner.

8. Tighten the oil pump driven sprocket installation bolt using the following procedure:

   a. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.

   b. Tighten the oil pump driven sprocket installation bolt.

      Tightening torque

      - 20—30 N·m {2.1—3.0 kgf·m, 15—22 ft·lbf}

   c. Remove the temporarily assembled crankshaft pulley lock bolt.

9. Tighten the balancer shaft sprocket installation bolt using the following procedure:

NOTE:

- The balancer unit is constructed such that the end of the balancer shaft (No.1) protrudes from the balancer unit case. The balancer shaft (No.1) can be locked against rotation by holding the end using a wrench.

a. Lock the balancer shaft (No.1) against rotation as shown in the figure.

CAUTION:

- To prevent damage to the balancer unit, protect the end of the balancer shaft (No.1) with a rag.

b. Tighten the balancer shaft sprocket installation bolt.

Tightening torque

- 38—46 N·m {3.9—4.6 kgf·m, 29—33 ft·lbf}

10. Remove the wire or paper clip installed to the oil pump chain tensioner and apply tension to the oil pump chain.
    - If a new oil pump chain tensioner is used, remove the installed stopper.

Timing Chain Installation Note

1. Verify that the timing marks and the key are aligned to the position shown in the figure.

NOTE:

- The timing mark of SKYACTIV-G 2.5 is not completely parallel with the upper surface of the cylinder head.
- If they are not in the position shown in the figure, rotate the camshaft and crankshaft to set the cylinder No.1 top dead center (TDC).

2. Install the timing chain while aligning the marks on each sprocket and the timing chain as shown in the figure.

SKYACTIV-G 2.0

SKYACTIV-G 2.5

3. Install the chain guide (No.1).

4. Install the tensioner arm.
5. Install the chain tensioner.
6. After installing the chain tensioner, remove the installed wire or paper clip, and then apply tension to the timing chain.
    - If a new chain tensioner is used, remove the installed stopper.

7. Verify that there is no looseness in the timing chain, and re-verify that each sprocket is in the specified location.
8. Rotate the crankshaft clockwise two turns and inspect the valve timing.

NOTE:

- The timing mark of SKYACTIV-G 2.5 is not completely parallel with the upper surface of the cylinder head.

Engine Front Cover Installation Note

NOTE:

- For a new engine front cover, the positioning pins in the two locations shown in the figure project to the outside of the engine.

1. If the engine front cover is newly replaced, tap the positioning pins in the two locations to the seal surface side.

2. Completely clean and remove oil, dirt, sealant or other foreign matter that may be adhering to the engine front cover, cylinder head, and cylinder block.

3. When reusing an engine front cover installation bolts, remove sealant adhering to the bolts.

CAUTION:

- Apply the silicon sealant in a single, unbroken line.
- To prevent silicone sealant from hardening, adhere the engine front cover and the cylinder block firmly within 10 min. after applying silicone sealant. After adhering them, tighten the installation bolts immediately.
- If a bolt with sealant adhering to it is used, it could result in cracks in the cylinder head and cylinder block.

4. Apply silicone sealant to the engine front cover as shown in the figure.

SKYACTIV-G 2.0

mm {in}

SKYACTIV-G 2.5

mm {in}

Bead thickness

- A: 2—6 mm {0.1—0.2 in}
- B: 4—6 mm {0.16—0.23 in}
- C: 4—8 mm {0.2—0.3 in}

5. Apply silicone sealant to the areas shown in the figure.

CAUTION:

- Apply the silicone sealant so that it goes into the cylinder head gasket.

6. Install the engine front cover to the engine.

NOTE:

- Temporarily install an appropriate bolt to the drive belt auto tensioner installation bolt hole to prevent:
  - A silicone sealant adhesion malfunction in the drive belt auto tensioner installation bolt hole.
  - A bolt mis-installation due to silicone sealant hardening.

7. Prepare an appropriate **M8 x 1.25** bolt (length **40 mm {1.6 in}**).

CAUTION:

- For the number 10 bolt of the tightening order, install the bolt with new washer.

8. Tighten the engine front cover installation bolts in the order shown in the figure.

Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

9. Remove the bolt installed to the drive belt auto tensioner installation bolt hole when installing the drive belt auto tensioner.

10. Install the ground cable and wiring harness bracket shown in the figure.

11. Install the insulator shown in the figure.

12. Install the cooler hose (LO).

Electric Variable Valve Timing Motor/Driver Installation Note

1. Install a new O-ring to the O-ring installation groove of the engine front cover.

CAUTION:

- To prevent damage to the electric variable valve timing motor/driver, do not apply excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the shaded areas shown in the figure.

2. Install the electric variable valve timing motor/driver using the following procedures.

NOTE:

- The eccentric shaft on the electric variable valve timing actuator side can be rotated to the left and right.

- The electric variable valve timing motor/driver can be assembled with the joint groove of the eccentric shaft in any position, and it will not lead to vehicle damage or performance reduction.

a. Before installation, rotate the joint on the end of the electric variable valve timing motor so that it is aligned to the joint groove on the electric variable valve timing actuator side.

b. Engage the joint on the end of the electric variable valve timing motor with the joint groove on the electric variable valve timing actuator side.

c. Attach the seal surface.

d. Tighten the electric variable valve timing motor/driver installation bolts.

Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

No.3 Engine Mount Installation Note

CAUTION:

- If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. When installing the No.3 engine mount, align the alignment mark placed during removal and install it to the original position.

NOTE:

- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.
- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may have loosened.

1. Tighten the engine front cover stud bolts.

Tightening torque

- 7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:

   a. Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.

   b. Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.

NOTE:

- If the alignment marks are not aligned, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

3. Tighten the No.3 engine mount installation bolts and nuts in the order as shown in the figure.

Tightening torque

Installation position	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}

4. Remove the **SST**.

5. Install the clip of ground cable to the No.3 engine mount.

Crankshaft Pulley Lock Bolt Installation Note

CAUTION:

- To prevent damage to the crankshaft pulley, protect the crankshaft pulley with a clean cloth so that the bar part (205-072) of the **SST** does not contact the crankshaft pulley.
- To prevent damage to the engine front cover, be careful not to allow the tab part (49 B011 105) of the **SST** to get caught between the crankshaft pulley and the engine front cover.

1. Install the **SST** on the crankshaft pulley to lock the crankshaft against rotation.

2. Tighten the crankshaft pulley lock bolt in the order shown in the following two steps.

Tightening procedure

- Step 1: 90—110 N·m {9.2—11 kgf·m, 67—81 ft·lbf}
- Step 2: 55—65°

Water Pump Pulley Installation Note

CAUTION:

- Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.

1. Install the water pump pulley to the water pump and temporarily tighten the bolt.
2. Align the water pump pulley hole with the water pump hole as shown in the figure.

3. Insert an appropriate bolt (length **70 mm {2.8 in}**) into the water pump hole shown in the figure and lock the water pump pulley against rotation.

4. Completely tighten the water pump pulley bolt to the specified torque.

   Tightening torque

   - 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

5. Remove the bolt used for locking the water pump pulley against rotation.

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}

Cylinder Head Cover Installation Note

CAUTION:

- To assure the sealing performance of the cylinder head cover, be careful of the following:
  - Verify that the cylinder head cover gasket is inserted into the cylinder head cover groove and install the cylinder head cover.
  - Completely clean and remove oil, dirt, sealant or other foreign matter from the seal surface.
- To prevent silicone sealant from hardening, adhere the cylinder head cover and the cylinder head firmly within 10 min. after applying silicone sealant. After adhering them, tighten the installation bolts immediately.

1. Insert a new cylinder head cover gasket into the cylinder head cover groove.
2. Apply silicone sealant to the areas shown in the figure.

ENGINE FRONT SIDE

ENGINE REAR SIDE

3. Tighten the cylinder cover bolts in the order shown in the figure.

Tightening torque

4.5—7.0 N·m {46—71 kgf·cm, 40—61 in·lbf}

4. Install in the reverse order of removal.

2014 - Mazda3 - Engine

HYDRAULIC LASH ADJUSTER (HLA) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

HLA Troubleshooting

Item	Occurrence	Possible cause	Action
1	After replacing oil, sound occurs when starting engine	Oil shortage in oil passage	• Maintain the engine speed between 2,000 to 3,000 rpm for approx. 2 s and 10 min*, and verify that the sound disappears. ▪ If the sound disappears, the HLA is normal. ▪ If the sound does not disappear, go to item 5.
2	Sound occurs at instant when engine is started on vehicle left for 1 day		
3	Starter cranked for 3 s or more and sound occurs directly after engine is started	HLA oil shortage	
4	Sound occurs directly after engine is started with newly replaced HLA		
5	Sound occurs continuously for 10 min or more	Insufficient oil pressure	• Inspect the oil pressure. (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ If less than the specification, inspect each part of the engine.
		HLA malfunction	• Inspect the HLA. (See **HLA Inspection**.)
6	Sound occurs during idling after high-speed driving	Incorrect engine oil level	• Inspect the engine oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		Engine oil	• Replace the engine oil. (See **ENGINE**

		deterioration	**OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

*

Period of time engine oil flows to the HLA, this value includes tolerance caused by the ambient temperature and the oil used.

HLA Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the cylinder head cover. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Press the rocker arm from above and verify that the HLA does not drop.

- If the HLA drops, replace the HLA. (See **HYDRAULIC LASH ADJUSTER (HLA) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Install in the reverse order of removal.

2014 - Mazda3 - Engine

HYDRAULIC LASH ADJUSTER (HLA) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

CAUTION:

- If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.
- When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use a wrench on the rear side of the engine as shown in the figure to secure a clearance between the cam.

NOTE:

- Width at the cast hexagon of the camshaft is **22—24 mm {0.87—0.94 in}**.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the cylinder head cover. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

6. Remove the electric variable valve timing motor/driver. (See **ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Remove the vacuum pump. (See **VACUUM PUMP REMOVAL/INSTALLATION**.)

8. Remove the high pressure fuel pump and rear housing. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

9. Remove in the order indicated in the table.

10. Install in the reverse order of removal.

11. Start the engine and inspect the following:

- Ignition timing, idle speed and idle mixture. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Oil shower pipe (See **Oil Shower Pipe Installation Note**.)

2	Timing chain (See **Timing Chain Removal Note**.) (See **Timing Chain Installation Note**.)
3	Chain guide (No.1)
4	Electric variable valve timing actuator (See **Electric Variable Valve Timing Actuator Removal Note**.) (See **Electric Variable Valve Timing Actuator Installation Note**.)
5	OCV
6	Camshaft (See **Camshaft Removal Note**.) (See **Camshaft Installation Note**.)
7	OCV oil filter
8	Rocker arm (See **Rocker Arm Removal Note**.) (See **Rocker Arm Installation Note**.)
9	HLA (See **HLA Removal Note**.) (See **HLA Installation Note**.)

Timing Chain Removal Note

1. Release the tension on the timing chain using the following procedure:

NOTE:

- Release the tension on the timing chain by securing the timing chain tensioner arm through the service hole on the engine front cover.

a. Remove the blind plugs (upper and lower) on the engine front cover service holes.

b. Insert an M6 bolt (**35—60 mm {1.4—2.3 in}** length with thread to the end) to the upper service hole and tighten it until it contacts the tensioner arm, then loosen it **approx. 180 degrees** (set the bolt so that it sits slightly in front of the tensioner arm).

NOTE:

- The bolt contacts the tensioner arm when it is inserted **approx. 20 mm {0.79 in}**.
- Hold the exhaust camshaft using a wrench on the cast hexagon and move it back and forth a few times as shown in the figure. This will drain the oil from the chain tensioner and make the following servicing easier.

c. Insert a precision screwdriver into the lower service hole.

d. While moving the exhaust camshaft back and forth in the direction of the arrow using a wrench on the cast hexagon, press down the link plate of the timing chain tensioner using a precision screwdriver and release the plunger lock.

NOTE:

- When moving the exhaust camshaft back and forth, the timing chain pushes the plunger in the chain tensioner making it easier to operate the link plate.

e. With the plunger lock released, rotate the exhaust camshaft clockwise until the timing chain loosens.

f. With the chain loosened, tighten the M6 bolt in the upper service hole so that the bolt is inserted **approx. 5 mm {0.2 in}** additionally to secure the tensioner arm.

- If the bolt cannot be inserted **approx. 5 mm {0.2 in}**, the plunger lock of the chain tensioner may not release, or the chain may not loosen enough. Return the bolt to the original position and restart the procedure from Step (3).

NOTE:

- By rotating the exhaust camshaft clockwise, the timing chain pushes the tensioner arm and the rib position deviates. The entire tensioner arm can be secured by hooking the bolt onto the deviated rib.

g. After securing the tensioner arm, remove the chain guide (No.1).

Electric Variable Valve Timing Actuator Removal Note

CAUTION:

- Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.
- After servicing, always verify the valve timing.

1. Rotate the crankshaft clockwise so that cylinder No.1 is positioned around before top dead center (TDC) as shown in the figure.

NOTE:

- With cylinder No.1 positioned around before top dead center (TDC), there is no large movement (rotation) of the exhaust camshaft when the timing chain is removed. Therefore, installation of the electric variable valve timing actuator to the camshaft will be easier. (If there is a large movement of the exhaust camshaft, installation of the electric variable valve timing actuator to the camshaft must be performed while loosening the chain by rotating the exhaust camshaft.)

2. Mark the timing chain and each actuator so that they can be reassembled in the same condition as before removal.

3. Hold the intake camshaft using a wrench on the cast hexagon and remove the electric variable valve timing actuator installation bolt.

4. Using a screwdriver wrapped in a clean cloth, lightly press the electric variable valve timing actuator to the front and separate the intake camshaft and the actuator.

5. Remove the timing chain from the exhaust and intake camshaft sprockets and set is aside, and remove the electric variable valve timing actuator.

6. Return the timing chain to the exhaust camshaft sprocket, and pull the timing chain up and suspend it using a rope as shown in the figure.

Camshaft Removal Note

CAUTION:

- Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.
- After servicing, always verify the valve timing.

NOTE:

- Remove the exhaust camshaft and the hydraulic variable valve timing actuator as a single unit.

1. Leave the timing chain as it is, which was suspended after electric variable valve timing actuator removal.
2. Temporarily install the cylinder head cover bolt to the position shown in the figure to use it for suspending the timing chain.

3. Loosen the camshaft cap bolts in two or three passes in the order shown in the figure, and remove the camshaft caps.

4. Remove the intake camshaft.
5. While setting the timing chain aside, remove the hydraulic variable valve timing actuator and the exhaust camshaft as a single unit.

6. Pull up the timing chain and suspend it using a rope as shown in the figure.

Rocker Arm Removal Note

1. Keep the rocker arms in the order of removal to enable reassembly in their original positions.

HLA Removal Note

1. Keep the HLAs in the order of removal to enable reassembly in their original positions.

HLA Installation Note

1. Perform HLA air bleeding using the following procedure.

   a. Put the HLA in a container filled with engine oil.

   CAUTION:

   - Do not insert the round bar firmly because the check ball spring force is extremely weak.

   b. While lightly pressing the check ball using a round bar (**approx. 1.0 mm {0.039 in}** diameter), bleed air by moving the plunger up and down.

c. Press the end of the plunger in the oil and verify that there is no rebounding feel.

- If rebounding feel cannot be eliminated, replace the HLA.

2. Visually inspect the HLA surface where it contacts the rocker arm for wear or damage.

- If there is any malfunction, replace the HLA.

3. Assemble the HLAs to their original positions.

Rocker Arm Installation Note

1. Apply engine oil to the HLAs and the end of the valve stems.

2. Install the rocker arms to the same positions as before removal.

Camshaft Installation Note

1. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the cylinder head.

CAUTION:

- Apply 0.05 ml {0.05 cc, 0.003 in^3} or less of oil to journal No.6.

2. Apply gear oil (SAE No. 90 or equivalent) or engine oil to the following locations of each camshaft.

- Thrust surface of front journal

3. As shown in the figure, align the cam position of cylinder No.1 around top dead center (TDC) and place the intake camshaft on the cylinder head.

4. Remove the rope suspending the timing chain on the exhaust side.

5. While aligning the mark on the timing chain placed during removal with the one on the hydraulic variable valve timing actuator, place the exhaust camshaft component on the cylinder head.

6. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the camshaft.

7. Apply adhesive agent (Loctite 962T) around journal No.6 of the cylinder head or the exhaust-side rear camshaft cap.

CAUTION:

- Verify that there is no adhesive agent on the journal.

  Adhesive agent bead width

- 0.5—1.5 mm {0.02—0.05 in}

8. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.

9. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.

Tightening torque

- Step 1: 3.0—6.0 N·m {31—61 kgf·cm, 27—53 in·lbf}
- Step 2: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

Electric Variable Valve Timing Actuator Installation Note

1. Remove the rope suspending the timing chain on the intake side.

2. Remove the timing chain from the exhaust and intake camshaft sprockets and set it aside to the rear, then insert the electric variable valve timing actuator between the engine front cover and the cylinder head.

3. Return the timing chain to the exhaust camshaft sprocket.

4. While aligning the mark on the timing chain placed during removal with the one on the electric variable valve timing actuator, engage the chain with the sprocket.

5. Align the knock pin on the end of the intake camshaft with the notch on the actuator side, then assemble the actuator.

NOTE:

- Adjust the knock pin with the notch while adjusting the knock pin position by rotating the camshaft.

6. Hold the intake camshaft using a wrench on the cast hexagon, and tighten the electric variable valve timing actuator installation bolt.

Tightening torque

- 102—114 N·m {10.5—11.6 kgf·m, 76—84 ft·lbf}

Timing Chain Installation Note

1. Install the chain guide (No.1).
2. Remove the bolt securing the tensioner arm and apply tension to the timing chain.
3. Rotate the crankshaft clockwise two turns and verify that the valve timing is correct.

NOTE:

- The timing mark of SKYACTIV-G 2.5 is not completely parallel with the upper surface of the cylinder head.
- If the valve timing is not correct, remove the engine front cover and reassemble the timing chain to each sprocket. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Install the blind plugs (upper and lower) for the engine front cover service holes.

Tightening torque

- Upper: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}
- Lower: 17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}

2014 - Mazda3 - Engine

CYLINDER HEAD GASKET REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.
- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
5. Remove the splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
6. Remove the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Drain the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
10. Set aside the exhaust manifold to the vehicle rear. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
11. Disconnect the radiator hose (upper, lower).
12. Remove the vacuum pump. (See **VACUUM PUMP REMOVAL/INSTALLATION**.)
13. Remove the high pressure fuel pump and rear housing. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
14. Disconnect the heater hose from the water outlet and water inlet pipe.
15. Remove the oil pan. (See **OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
16. Remove the timing chain and chain guide. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
17. Remove the OCV. (See **OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
18. Remove in the order indicated in the table.
19. Install in the reverse order of removal.
20. Refill with the specified type and amount of the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
21. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
22. Start the engine, and inspect and adjust the following:
    - Leakage of engine oil, engine coolant.
    - Runout and contact of pulley and belt.
    - Ignition timing, idle speed and idle mixture. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - Compression pressure (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Water hose (ATX)
2	Water inlet pipe (See **Water Inlet Pipe Installation Note**.)
3	Camshaft

	(See **Camshaft Removal Note**.) (See **Camshaft Installation Note**.)
4	OCV oil filter
5	Rocker arm (See **Rocker Arm Removal Note**.) (See **Rocker Arm Installation Note**.)
6	Cylinder head (See **Cylinder Head Removal Note**.) (See **Cylinder Head Installation Note**.)
7	Cylinder head gasket

Camshaft Removal Note

1. Loosen the camshaft cap installation bolts in a few passes in the order shown in the figure and remove the camshaft caps.

2. Remove the camshaft.

Rocker Arm Removal Note

1. Keep the rocker arms in the order of removal to enable reassembly in their original positions.

Cylinder Head Removal Note

1. Temporarily install the oil pan to support the engine from under the vehicle.

CAUTION:

- To prevent deformation of the oil pan, support the engine using the following methods.
  - When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.
  - When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover and support the oil pan.

2. Support the engine (oil pan) using a commercially available engine lifter or garage jack.

3. Remove the chain on the **SST** that suspended the engine and set it aside.
4. Loosen the cylinder head installation bolts in two or three passes in the order shown in the figure and remove them.

5. Remove the cylinder head.

Cylinder Head Installation Note

CAUTION:

- If the following condition is met, replace the cylinder head bolts.
  - Length exceeds maximum specification

Cylinder head bolt length L

- 145.2—145.8 mm {5.717—5.740 in}

Cylinder head bolt length L maximum

- 146.5 mm {5.767 in}

1. When a cylinder head bolt is reused, apply engine oil to any part of the following:
   - Bolt seating surface
   - Cylinder head seating surface
2. Tighten the cylinder head bolts in the order shown in the following 4 steps.

Tightening torque

- Step 1: 13—17 N·m {133—173 kgf·cm, 116—150 in·lbf}
- Step 2: 43—47 N·m {4.4—4.7 kgf·m, 32—34 ft·lbf}
- Step 3: 85—95°
- Step 4: 85—95°

3. Install the chain for the **SST** which was set aside and secure the engine.
4. Remove the engine lifter or garage jack.
5. Remove the temporarily assembled oil pan.

Rocker Arm Installation Note

1. Apply engine oil to the HLAs and the end of the valve stems.

2. Install the rocker arms to the same positions as before removal.

Camshaft Installation Note

1. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the cylinder head.

CAUTION:

- Apply 0.05 ml {0.05 cc, 0.003 in^3} or less of oil to journal No.6.

2. Apply gear oil (SAE No. 90 or equivalent) or engine oil to the following locations of each camshaft.

- Thrust surface of front journal

3. Install the camshaft with cylinder No.1 cam aligned to the TDC position as shown in the figure.

SKYACTIV-G 2.0

SKYACTIV-G 2.5

CYLINDER HEAD UPPER SURFACE

NOTE:

- The timing mark of SKYACTIV-G 2.5 is not completely parallel with the upper surface of the cylinder head.

4. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the camshaft.

5. Apply adhesive agent (Loctite 962T) around journal No.6 of the cylinder head or the exhaust-side rear camshaft cap.

CAUTION:

- Verify that there is no adhesive agent on the journal.

  Adhesive agent bead width

- 0.5—1.5 mm {0.02—0.05 in}

6. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.

7. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.

Tightening torque

- Step 1: 3.0—6.0 N·m {31—61 kgf·cm, 27—53 in·lbf}
- Step 2: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

Water Inlet Pipe Installation Note

CAUTION:

- Do not apply oil (such as engine oil, ATF) to the O-ring of the water inlet pipe. Otherwise, the O-ring could swell causing a seal malfunction.

1. Clean away the sealant adhering to the bolt hole on the cylinder block side of the water inlet pipe stay.

2. Apply engine coolant to the O-ring.

3. Install the O-ring to the water inlet pipe.

4. Insert the water inlet pipe into the water pump being careful not to damage the O-ring.

5. Install the water inlet pipe gasket with the gasket projection facing the direction shown in the figure.

6. Tighten the bolts in the order shown in the figure.

2014 - Mazda3 - Engine

FRONT OIL SEAL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
2. Remove the splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
3. Remove the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.

1	Crankshaft pulley lock bolt (See **Crankshaft Pulley Lock Bolt Removal Note**.) (See **Crankshaft Pulley Lock Bolt Installation Note**.)
2	Crankshaft pulley
3	Front oil seal (See **Front Oil Seal Removal Note**.) (See **Front Oil Seal Installation Note**.)

Crankshaft Pulley Lock Bolt Removal Note

CAUTION:

- To prevent damage to the crankshaft pulley, protect the crankshaft pulley with a clean cloth so that the bar part (205-072) of the SST does not contact the crankshaft pulley.
- To prevent damage to the engine front cover, be careful not to allow the tab part (49 B011 105) of the SST to get caught between the crankshaft pulley and the engine front cover.

1. Hold the crankshaft pulley using the **SSTs**.

2. Remove the crankshaft pulley lock bolt.

Front Oil Seal Removal Note

1. Cut the oil seal lip using a utility knife.

2. Remove the oil seal using a flathead screwdriver with the tip protected by a clean cloth to prevent damage to the oil seal sliding part of the crankshaft.

Front Oil Seal Installation Note

1. Apply clean engine oil to the inner surface of a new front oil seal.
2. Insert the front oil seal into the engine front cover by hand.
3. Tap the oil seal in evenly using the **SST** and a hammer.

Front oil seal press on amount

- 0—1.0 mm {0—0.039 in}

Crankshaft Pulley Lock Bolt Installation Note

CAUTION:

- To prevent damage to the crankshaft pulley, protect the crankshaft pulley with a clean cloth so that the bar part (205-072) of the SST does not contact the crankshaft pulley.
- To prevent damage to the engine front cover, be careful not to allow the tab part (49 B011 105) of the SST to get caught between the crankshaft pulley and the engine front cover.

1. Hold the crankshaft pulley using the **SSTs**.

2. Tighten the crankshaft pulley lock bolt in the order shown in the following two steps.

Tightening torque

- Step 1: 90—110 N·m {9.2—11 kgf·m, 67—81 ft·lbf}
- Step 2: 55—65°

2014 - Mazda3 - Engine

REAR OIL SEAL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove the transaxle. (See **MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66M-R]** (MTX).) (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]** (ATX).)

2. Remove the flywheel (MTX) or the drive plate (ATX). (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]** (MTX).) (See **DRIVE PLATE REMOVAL/INSTALLATION [FW6A-EL]** (ATX).)

3. Remove in the order indicated in the table.

4. Install in the reverse order of removal.

1	Rear oil seal (See **Rear Oil Seal Removal Note**.) (See **Rear Oil Seal Installation Note**.)

Rear Oil Seal Removal Note

1. Cut the oil seal lip using a utility knife.

2. Remove the oil seal using a flathead screwdriver with the tip protected by a clean cloth to prevent damage to the oil seal sliding part of the crankshaft.

Rear Oil Seal Installation Note

1. Apply clean engine oil to the inner surface of a new rear oil seal.

2. Insert the rear oil seal into the cylinder block by hand.

3. Tap the oil seal in evenly using the **SST** and a hammer.

SKYACTIV-G 2.0

SKYACTIV-G 2.5

REAR OIL SEAL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Rear oil seal press on amount

- 0—0.5 mm {0—0.019 in}

2014 - Mazda3 - Engine

ENGINE MOUNT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

No.1 Engine Mount

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

1	No.1 engine mount rubber (See **No.1 engine mount rubber removal note**.) (See **No.1 engine mount installation note**.)
2	Bracket plate (See **No.1 engine mount installation note**.)
3	No.1 engine mount bracket (See **No.1 engine mount installation note**.)

No.1 engine mount rubber removal note

1. Loosen the bolts shown in the figure.

NOTE:

- The bracket plate can move slightly by loosening the bolts shown in the figure and the No.1 engine mount rubber can be easily removed.

2. Remove the No.1 engine mount rubber.

No.1 engine mount installation note

1. Install the No.1 engine mount bracket and bracket plate, and temporarily tighten the bolts shown in the figure.

2. Install the No.1 engine mount rubber and temporarily tighten the bolts shown in the figure.

3. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

Tightening torque

- 84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

4. Tighten the No.1 engine mount rubber installation bolts shown in the figure.

Tightening torque

Installation position	Tightening torque
No.1 engine mount bracket side	140—163 N·m {15—16 kgf·m, 104—120 ft·lbf}
Front crossmember side	130—164 N·m {14—16 kgf·m, 96—120 ft·lbf}

No.3 Engine Mount

CAUTION:

- Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.

1. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

1	No.3 engine mount (See **No.3 engine mount removal note**.) (See **No.3 engine mount installation note**.)

No.3 engine mount removal note

1. Remove the clips shown in the figure and set the ground cable aside.

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

CAUTION:

- To prevent deformation of the oil pan, support the engine using the following methods.
  - When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.
  - When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover and support the oil pan.

3. Before removing the No.3 engine mount, support the engine (oil pan) using a commercially available engine lifter or garage jack.

4. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

NOTE:

- Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

5. Remove the No.3 engine mount.

No.3 engine mount installation note

NOTE:

- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.
- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may have loosened.

1. Tighten the engine front cover stud bolts.

Tightening torque

- 7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:

a. Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.

b. Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.

NOTE:

- If the alignment marks are not aligned, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

3. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}

4. Remove the engine lifter or garage jack.

5. Install in the reverse order of removal.

No.4 Engine Mount

CAUTION:

- Slots have been adopted for the No.4 engine mount bracket installation holes. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount bracket, engine noise or vibration could increase. Before removing the No.4

engine mount bracket, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner, air hose and fresh air duct as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the battery tray and PCM component. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove in the order indicated in the table.

5. Install in the reverse order of removal.

1	No.4 engine mount rubber (See **No.4 engine mount rubber removal note**.) (See **No.4 engine mount rubber installation note**.)
2	No.4 engine mount bracket (See **No.4 engine mount bracket removal note**.) (See **No.4 engine mount bracket installation note**.)

No.4 engine mount rubber removal note

1. Remove the bolt and nut shown in the figure and set the relay and fuse block aside.

N·m {kgf·cm, in·lbf}

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

CAUTION:

- To prevent damage to the transaxle, support the transaxle using the following methods.
  - MTX: Support the clutch housing using a batten of appropriate size.

  - ATX: Place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover and support the oil pan.

3. Before removing the No.4 engine mount rubber, support the transaxle using a commercially available engine lifter or garage jack.
4. Remove the No.4 engine mount rubber.

No.4 engine mount bracket removal note

1. Remove the bolt shown in the figure and set the ground cable aside.

2. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

NOTE:

- Paint so that the outline of the nut is framed on the bracket side.

3. Remove the No.4 engine mount bracket.

No.4 engine mount bracket installation note

NOTE:

- When replacing the No.4 engine mount bracket, place a mark at the same position as the one placed before removal.
- If the No.4 engine mount bracket nut is loosened, tighten the transaxle stud bolts because they may have loosened.

1. Tighten the transaxle stud bolts.

Tightening torque

- 15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}

2. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.

3. Tighten the No.4 engine mount bracket installation nuts in the order shown in the figure.

Tightening torque

- 92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}

4. Install the ground cable to the No.4 engine mount bracket.

Tightening torque

- 9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}

No.4 engine mount rubber installation note

1. Install the No.4 engine mount rubber and temporarily tighten the bolts and nut shown in the figure.

2. Tighten the No.4 engine mount rubber installation bolts and nut in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1, 2	131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}
3	54—62 N·m {5.6—6.3 kgf·m, 40—45 ft·lbf}

4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

3. Remove the engine lifter or garage jack.

4. Install in the reverse order of removal.

2014 - Mazda3 - Engine

ENGINE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.
- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.
- Applying excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the electric variable valve timing motor/driver may cause a malfunction. When servicing, be careful not to apply excessive force to the electric variable valve timing motor/driver using other parts or tools.

NOTE:

- Perform the engine and transaxle component removal/installation from below the vehicle.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the air cleaner, air hose and fresh air duct as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the bolts, nut and connector shown in the figure, and set the wiring harness aside.

5. Remove the battery tray and PCM component. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Remove the front under cover No.1 and No.2. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.) (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
7. Remove the splash shield. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
8. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9. Drain the transaxle oil (MTX) or ATF (ATX). (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.) (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
10. Remove the front wheels and tires. (See **GENERAL PROCEDURES (SUSPENSION)**.)

11. Disconnect the selector cable. (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

12. Disconnect the control cable. (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

13. Remove the clutch release cylinder with the pipe still connected. (MTX) (See **CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R]**.)

14. Disconnect the vacuum hose. (See **VACUUM HOSE REMOVAL/INSTALLATION**.)

15. Disconnect evaporative hose No.1 from the engine side. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

16. Disconnect the fuel hose from the engine side. (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

17. Disconnect the upper radiator hose. (See **COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

18. Disconnect the heater hose. (See **A/C UNIT REMOVAL/INSTALLATION**.)

19. Disconnect the lower radiator hose. (See **RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

20. Remove the generator drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

21. Remove the A/C compressor with the cooler hose still connected and secure it using wire or rope so that it is out of the way. (with A/C) (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)

22. Remove the TWC installation nuts (exhaust manifold side) and secure the TWC using wire or rope so that it is out of the way. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

23. Disconnect the drive shaft from the transaxle side and set the drive shaft out of the way. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

24. Remove the bolt and clips, and set the ground cable aside.

25. Remove in the order indicated in the table.

26. Install in the reverse order of removal.

27. Refill the transaxle oil (MTX) or ATF (ATX). (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.) (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

28. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

29. Start the engine, and inspect and adjust the following:

- Front wheel alignment (See **FRONT WHEEL ALIGNMENT**.)
- Leakage of engine oil, engine coolant, ATF (ATX), transaxle oil (MTX), and fuel.
- Runout and contact of pulley and belt.
- Ignition timing, idle speed and idle mixture. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Engine-driven accessories operation.

NOTE:

- If the engine is overhauled and assembled to the vehicle, perform a road test to verify that there is no abnormal vibration and noise.

3	No.1 engine mount bracket (See **Engine Mount Installation Note**.)
4	No.4 engine mount bracket (See **No.3 Engine Mount, No.4 Engine Mount Bracket Removal Note**.) (See **Engine Mount Installation Note**.)
5	No.3 engine mount (See **No.3 Engine Mount, No.4 Engine Mount Bracket Removal Note**.) (See **Engine Mount Installation Note**.)
6	Engine, transaxle

No.1 Engine Mount Rubber, Front Crossmember Component Removal Note

1. Disconnect the service plug. (with i-ELOOP) (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.)
2. Disconnect the generator terminal B cable. (with i-ELOOP) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
3. Remove the clips shown in the figure and set the wiring harness aside. (with i-ELOOP)

4. Loosen the bolts shown in the figure.

NOTE:

- The bracket plate can move slightly by loosening the bolts shown in the figure and the No.1 engine mount rubber can be

easily removed.

5. Remove the No.1 engine mount rubber and the front crossmember component as a single unit. (See **FRONT CROSSMEMBER REMOVAL / INSTALLATION**.)

No.3 Engine Mount, No.4 Engine Mount Bracket Removal Note

CAUTION:

- When supporting the engine and transaxle, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan, transaxle to prevent deformation of the oil pan and damage of the transaxle.

1. Secure the engine and transaxle using a commercially available engine lifter.

2. Remove the No.4 engine mount bracket.
3. Remove the No.3 engine mount.

Engine Mount Installation Note

CAUTION:

- Slots have been adopted for the No.3 engine mount and No.4 engine mount bracket installation holes. Tighten the installation bolts and nuts so that they are centered on the slots. Otherwise, engine noise or vibration could increase.

NOTE:

- Retighten the engine front cover and transaxle stud bolts when the nuts of No.3 engine mount and No.4 engine mount bracket are loosened.

1. Tighten the engine front cover stud bolts.

Tightening torque

- 7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

2. Tighten the transaxle stud bolts.

Tightening torque

- 15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}

CAUTION:

- When supporting the engine and transaxle, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan, transaxle to prevent deformation of the oil pan and damage of the transaxle.

3. Secure the engine and transaxle using a commercially available engine lifter.

4. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:

   a. Temporarily tighten the bolts shown in the figure so that they are centered on the No.3 engine mount slots.

   b. Temporarily tighten the nuts shown in the figure so that the stud bolts of the engine front cover are centered on the No.3 engine mount slots.

NOTE:

- If the stud bolts are deviated from the center of the slots, align the stud bolts with the center of the slots while slightly moving the engine, and temporarily tighten the installation nuts.

5. Temporarily tighten the No.4 engine mount bracket installation bolt and nuts using the following procedure:

a. Temporarily tighten the bolt shown in the figure.

b. Temporarily tighten the nuts shown in the figure so that they are centered on the No.4 engine mount bracket slots.

NOTE:

- If the stud bolts are deviated from the center of the slots, align the stud bolts with the center of the slots while slightly moving the transaxle, and temporarily tighten the installation nuts.

6. Install the No.1 engine mount rubber and the front crossmember component as a single unit. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

7. Install the No.1 engine mount bracket and bracket plate, and temporarily tighten the bolts shown in the figure.

8. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

Tightening torque

- 84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

9. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}

10. Tighten the No.4 engine mount bracket installation bolt and nuts in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

11. Tighten the No.1 engine mount rubber installation bolts shown in the figure.

Tightening torque

Installation position	Tightening torque
No.1 engine mount bracket side	140—163 N·m {15—16 kgf·m, 104—120 ft·lbf}
Front crossmember side	130—164 N·m {14—16 kgf·m, 96—120 ft·lbf}

12. Install the clips shown in the figure. (with i-ELOOP)

13. Connect the generator terminal B cable. (with i-ELOOP) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

14. Connect the service plug. (with i-ELOOP) (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.)

2014 - Mazda3 - Engine

ENGINE DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- When the transaxle is installed, do not suspend the engine. Otherwise, the SST installation area of the cylinder head may be damaged due to excess weight. Only suspend the engine after separating the engine and transaxle.
- Applying excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the electric variable valve timing motor/driver may cause a malfunction. When servicing, be careful not to apply excessive force to the electric variable valve timing motor/driver using other parts or tools.

1. To enable to install the **SST**, disconnect the clip shown in the figure and set the wiring harness aside.

2. Install the **SST** using **part number 99794 1025** or an **M10 x 1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

Engine front side

Engine rear side

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

3. Engage the hooks of the **SST (49 L017 5A0)** to the **SST (49 UN30 3050)**.

4. To ensure the safety of the work (control engine and transaxle sway), set a hoist as shown in the figure.

CAUTION:

- Do not lift up the engine.

5. Remove the insulator shown in the figure.

6. Remove the exhaust system. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Remove the bolts in the order shown in the figure, then remove the exhaust manifold bracket.

MTX

ATX

When installing, tighten the bolts in the reverse order of removal.

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

8. Remove the bracket No.1 (drive shaft bracket). (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

9. Remove the starter. (See **STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Fix the drive plate using the crankshaft pulley lock bolt. (ATX)

11. Remove the torque converter installation nut from the starter installation hole. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

12. Disconnect the engine and transaxle, and lower only the engine from the engine lifter. (See **MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66M-R]** (MTX).) (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]** (ATX).)

13. Remove the generator. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

14. Remove the intake-air system. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

15. Remove the fuel injectors. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

16. Remove the camshaft position (CMP) sensor. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

17. Remove the vacuum pump. (See **VACUUM PUMP REMOVAL/INSTALLATION**.)

18. Remove the high pressure fuel pump and rear housing. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

19. Remove the oil filter. (See **OIL FILTER REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

20. Remove the engine oil solenoid valve. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

21. Remove the crankshaft position (CKP) sensor. (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

22. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

23. Remove the wiring harness bracket shown in the figure.

24. Remove the emission harness.

25. Remove the water pump drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

26. Remove the clutch cover and clutch disc. (MTX) (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

27. Remove in the order indicated in the table

28. Assemble in the reverse order of disassembly.

1	Oil filter body (See **Oil Filter Body Installation Note**.)
2	Exhaust manifold bracket (See **Exhaust Manifold Bracket Installation Note**.)
3	A/C compressor* (without A/C)

* **This is the A/C compressor for vehicles without A/C and it functions as the idler of the drive belt. This does not function as the A/C compressor for vehicles with A/C.**

Exhaust Manifold Bracket Installation Note

1. Temporarily tighten the bolt (3) shown in the figure, insert the exhaust manifold bracket from the side, and temporarily install the exhaust manifold bracket.

2. Temporarily tighten the bolt (1) shown in the figure.
3. Temporarily tighten the bolt (2) shown in the figure.
4. Tighten the bolt in the order shown in the figure.

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

Oil Filter Body Installation Note

NOTE:

- The tightening order of the three bolts is optional.

1. After tightening the three bolts, tighten the first tightened bolt to the specified tightening torque again.

Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

2014 - Mazda3 - Engine

LUBRICATION SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

SKYACTIV-G 2.0

SKYACTIV-G 2.5

1	Dipstick (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Oil pressure switch (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Engine oil solenoid valve (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	Oil pump component (See **OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Oil strainer (See **OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	Oil pan (See **OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	Oil filter (See **OIL FILTER REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Position the vehicle on level ground.
2. Warm up the engine.
3. Stop the engine and allow **at least 5 min** before continuing.
4. Remove the dipstick, wipe it cleanly, and reinstall it fully.
5. Remove the dipstick and verify that the oil level is between the F and L marks on the dipstick.

- If the oil level is below or near the L mark, add engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- If the oil level is above the F mark, penetration of fuel into the engine oil can be considered. Replace the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Insert the oil level gauge completely until it attaches to the cylinder head cover.

2014 - Mazda3 - Engine

ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

CAUTION:

- If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.

1. Position the vehicle on level ground.
2. Remove the oil filler cap.
3. Remove the service hole cover (installed to front under cover No.2) used to drain the engine oil.

4. Remove the oil pan drain plug.

5. Drain the engine oil into a container.

6. Install the oil pan drain plug with a new gasket.

Oil pan drain plug tightening torque

- 30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

NOTE:

- The amount of residual oil in the engine can vary according to factors such as the replacement method and oil temperature. Verify the oil level after engine oil replacement.

7. Refill with the following type and amount of engine oil. **Engine oil specification**

Item	U.S.A., Canada and Puerto Rico	Except U.S.A., Canada and Puerto Rico
Engine		

oil grade	(ILSAC)	API SM or ILSAC
Engine oil viscosity	0W-20	5W-30 (If SAE 5W-30 engine oil is not available, use SAE 5W-20 engine oil.)

Engine oil capacity [SKYACTIV-G 2.0] (approx. quantity)

- Oil replacement: 4.0 L {4.2 US qt, 3.5 Imp qt}
- Oil and oil filter replacement: 4.2 L {4.4 US qt, 3.7 Imp qt}
- Total (dry engine): 4.9 L {5.2 US qt, 4.3 Imp qt}

Engine oil capacity [SKYACTIV-G 2.5] (approx. quantity)

- Oil replacement: 4.3 L {4.5 US qt, 3.8 Imp qt}
- Oil and oil filter replacement: 4.5 L {4.8 US qt, 4.0 Imp qt}
- Total (dry engine): 5.4 L {5.7 US qt, 4.8 Imp qt}

8. Install the oil filler cap.

9. Start the engine and confirm that there is no oil leakage.

- If there is oil leakage, repair or replace the applicable part.

10. Inspect the oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Install the service hole cover.

12. If the engine oil is replaced, perform engine oil data reset. (See **ENGINE OIL DATA RESET [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

OIL FILTER REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

CAUTION:

- If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.

1. Remove the service hole cover (installed to front under cover No.2) used to remove the oil filter.

2. Remove the oil filter using the commercially available, cup-type oil filter wrench (**67 mm {2.6 in} diameter, 14 sided**).

3. Use a clean rag to wipe off the mounting surface.
4. Apply clean engine oil to the O-ring of a new oil filter.
5. Tighten the oil filter according to the instructions on the package or side of the oil filter.

Tightening torque (reference value)

1. 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

6. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
7. Inspect the oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8. Install the service hole cover.

2014 - Mazda3 - Engine

OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

3. Remove the oil pressure switch. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

NOTE:

- Use the following SSTs in this inspection.

  - **49 D019 908 (gauge)**
  - **49 D019 909 (hose)**
  - **49 D019 910 (adapter)**
  - **49 D019 911 (adapter)**

4. Install the **SSTs** to the oil pressure switch installation hole using the following procedure.

a. Assemble **SSTs 49 D019 908**, **49 D019 909**, and **49 D019 911** outside of the engine compartment beforehand.

b. Install **SST 49 D019 910** to the oil pressure switch installation hole.

c. Install **SST 49 D019 911** to the **SST 49 D019 910**.

5. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Warm up the engine to normal operating temperature.

7. Run the engine at the specified speed, and note the gauge readings.

- If not within the specification, inspect for the cause and repair or replace if necessary.

NOTE:

- The oil pressure can vary with oil viscosity, temperature and engine speed.

  Oil pressure (reference value) [coolant temperature: 80—90 °C {176—194 °F}]

- Lo: 110—175 kPa {1.13—1.78 kgf/cm^2, 16.0—25.3 psi} [1,500 rpm]

- Hi: 300—430 kPa {3.06—4.38 kgf/cm^2, 43.6—62.3 psi} [4,500 rpm]

8. Stop the engine and wait until it is cools.

9. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Remove the **SSTs.**

11. Install the oil pressure switch. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

12. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

13. Start the engine and confirm that there is no oil leakage.

- If there is oil leakage, repair or replace the applicable part.

14. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Engine

ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
3. Remove the splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.

1	Engine oil solenoid valve connector
2	Oil pressure switch connector
3	Oil pressure switch (See **Oil Pressure Switch Installation Note**.)
4	Engine oil solenoid valve (See **Engine Oil Solenoid Valve Removal Note**.) (See **Engine Oil Solenoid Valve Installation Note**.)
5	Gasket

Engine Oil Solenoid Valve Removal Note

1. Cover the area around the engine oil solenoid valve with a rag because a small amount of engine oil will leak from the engine oil solenoid valve installation area.

CAUTION:

- Do not let any leaked engine oil contact the adjacent water pump gasket and O-ring of the water inlet pipe. Otherwise, the gasket could swell causing a seal malfunction.

Engine Oil Solenoid Valve Installation Note

1. After tightening the three bolts shown in the figure, tighten the first tightened bolt to the specified tightening torque again.

NOTE:

- The tightening order for the three bolts is optional.

  Tightening torque

- 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

Oil Pressure Switch Installation Note

CAUTION:

- Verify that there is no sealant between 1.7—2.7 mm {0.07—0.10 in} from the end of the oil pressure switch to prevent a possible operation malfunction.

1. Apply silicone sealant to the oil pressure switch threads as shown in the figure.

CAUTION:

- Install the oil pressure switch before the applied sealant starts to harden.

2. Install the oil pressure switch.

Tightening torque

- 12—17 N·m {123—173 kgf·cm, 107—150 in·lbf}

2014 - Mazda3 - Engine

ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Engine Oil Solenoid Valve Operation Inspection

1. Remove the engine oil solenoid valve. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Verify that the battery is fully charged.

3. Connect the battery to the engine oil solenoid valve connector (2 terminals) as shown in the figure.

4. Verify that there is an operation sound from the engine oil solenoid valve when applying battery voltage between engine oil solenoid valve connector terminals A and B.

- If the operation sound cannot be heard, replace the engine oil solenoid valve.

NOTE:

- A click sound is heard when the engine oil solenoid valve operates normally.

5. Install the engine oil solenoid valve. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
2. Drain the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Refill with the specified type and amount of the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
7. Inspect the oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Oil pan (See **Oil Pan Removal Note**.)

(See **Oil Pan Installation Note**.)

Oil Pan Removal Note

1. Remove the oil pan using a separator tool.

Oil Pan Installation Note

1. Completely clean and remove any oil, dirt, sealant or other foreign matter that may be adhering to the cylinder block and oil pan.
2. When reusing the oil pan installation bolts, clean any old sealant from the bolts.

CAUTION:

1. Apply the silicon sealant in a single, unbroken line around the whole perimeter.
2. To prevent silicone sealant from hardening, adhere the oil pan to the cylinder block within 10 min after silicone sealant is applied. Tighten the installation bolts completely soon after adhering.
3. Using bolts with the old seal adhering could cause cracks in the cylinder block.

3. Apply silicone sealant to the oil pan along the inside of the bolt holes as shown in the figure.

SKYACTIV-G 2.0

SKYACTIV-G 2.5

Thickness

1. SKYACTIV-G 2.0: 2.0—6.0 mm {0.08—0.23 in}
2. SKYACTIV-G 2.5: 3.0—7.0 mm {0.12—0.27 in}

4. Install the oil pan using the following procedure:

SKYACTIV-G 2.0

1. Install the oil pan to the cylinder block.
2. Tighten the bolts in the order shown in the figure.

Tightening torque

1. 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

SKYACTIV-G 2.5

1. Install the oil pan to the cylinder block.
2. Temporarily tighten the two bolts shown in the figure.

3. Tighten the bolts in the order shown in the figure.

Tightening torque

1. 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

2014 - Mazda3 - Engine

OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.
- A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.
- Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.

CAUTION:

- If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.
- When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use a wrench on the rear side of the engine as shown in the figure to secure a clearance between the cam.

NOTE:

- Width at the cast hexagon of the camshaft is **22—24 mm {0.87—0.94 in}**.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the ignition coil/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

5. Remove the splash shield. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

6. Remove the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Drain the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

8. Remove the oil pan. (See **OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

9. Remove the engine front cover. (See **TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Remove in the order indicated in the table.

11. Install in the reverse order of removal.

12. Refill with the specified type and amount of the engine oil. (See **ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

13. Start the engine and confirm that there is no oil leakage.

    - If there is oil leakage, repair or replace the applicable part.

14. Inspect the oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

15. Inspect for the ignition timing and idle speed. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

16. Inspect the oil pressure. (See **OIL PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

SKYACTIV-G 2.0

1	Oil strainer
2	Oil pump chain tensioner
3	Oil pump driven sprocket (See **Oil Pump Driven Sprocket Removal Note (SKYACTIV-G 2.0)**.) (See **Oil Pump Driven Sprocket Installation Note (SKYACTIV-G 2.0)**.)
4	Oil pump (See **Oil Pump Installation Note (SKYACTIV-G 2.0)**.)

Oil Pump Driven Sprocket Removal Note (SKYACTIV-G 2.0)

1. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.

2. Remove the oil pump driven sprocket.

Oil Pump Installation Note (SKYACTIV-G 2.0)

1. Install the oil pump using the following procedure:

   a. Temporarily tighten the **three bolts** shown in the figure.

   b. Tighten the **two bolts** shown in the figure to the specified torque.

NOTE:

- The tightening order for the two bolts is optional.

  Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

c. Finally, tighten the bolt shown in the figure to the specified torque.

Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

Oil Pump Driven Sprocket Installation Note (SKYACTIV-G 2.0)

1. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.

2. Install the oil pump driven sprocket.

Tightening torque

- 20—30 N·m {2.1—3.0 kgf·m, 15—22 ft·lbf}

3. Remove the temporarily assembled crankshaft pulley lock bolt.

SKYACTIV-G 2.5

1	Oil pump driven sprocket (See **Oil Pump Driven Sprocket Removal Note (SKYACTIV-G 2.5)**.) (See **Oil Pump Driven Sprocket Installation Note (SKYACTIV-G 2.5)**.)

2	Oil strainer
3	Oil pump (See **Oil Pump Installation Note (SKYACTIV-G 2.5)**.)

Oil Pump Driven Sprocket Removal Note (SKYACTIV-G 2.5)

1. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.

2. Slightly loosen the oil pump driven sprocket installation bolt.

NOTE:

- At this stage, only loosen the oil pump driven sprocket installation bolt, do not remove it. After releasing the tension on the oil pump chain tensioner, completely remove the bolt.

3. Set a cloth wrapped flathead screwdriver in the gap between oil pump drive sprocket and the oil pump chain as shown in the figure.

4. Move the screwdriver in the direction of the arrow and press the oil pump chain, and then press in the plunger of the oil pump chain tensioner.

5. Insert a wire with an **approx. diameter of 1.4 mm {0.055 in}** or a paper clip into the body hole of the oil pump chain tensioner with the plunger pressed.

NOTE:

- The wire or paper clip secures the plunger, and the tension can be released.

6. Remove the oil pump driven sprocket installation bolt and oil pump driven sprocket.
7. Set the oil pump chain aside so that it does not obstruct the oil pump removal work.

Oil Pump Installation Note (SKYACTIV-G 2.5)

1. Install the oil pump using the following procedure:

   a. Temporarily tighten the **three bolts** shown in the figure.

   b. Tighten the **two bolts** shown in the figure to the specified torque.

NOTE:

- The tightening order for the two bolts is optional.

  Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

   c. Finally, tighten the bolt shown in the figure to the specified torque.

Tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

Oil Pump Driven Sprocket Installation Note (SKYACTIV-G 2.5)

1. Rotate the crankshaft clockwise to align the key position as shown in the figure.

2. Align the oil pump chain alignment marks in two locations with the balancer unit sprocket alignment mark and the oil pump drive sprocket alignment mark as shown in the figure, and install the oil pump chain and oil pump driven sprocket.

3. Temporarily tighten the oil pump driven sprocket installation bolt.
4. Lock the oil pump against rotation as shown in the figure.

5. Tighten the oil pump driven sprocket installation bolt.

Tightening torque

- 20—30 N·m {2.1—3.0 kgf·m, 15—22 ft·lbf}

6. Remove the temporarily assembled crankshaft pulley lock bolt.
7. Remove the wire or paper clip installed to the oil pump chain tensioner and apply tension to the oil pump chain.
    - If a new oil pump chain tensioner is used, remove the installed stopper.

2014 - Mazda3 - Engine

COOLING SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1	Coolant reserve tank (See **ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Cooling fan motor No.2 (See **COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **COOLING FAN MOTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Cooling fan motor No.1

	(See **COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **COOLING FAN MOTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	Radiator (See **ENGINE COOLANT PROTECTION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Cooling system cap (See **COOLING SYSTEM CAP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	Water pump (See **WATER PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	Thermostat (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **THERMOSTAT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

COOLING SYSTEM SERVICE WARNINGS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.
- Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.

2014 - Mazda3 - Engine

ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

NOTE:

- If the “FL22” mark is shown on or near the cooling system cap, use Mazda Genuine FL22 engine coolant.

- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

1. Remove the cooling system cap.
2. Verify that the engine coolant is filled close to the top of the radiator filler neck.
    - If the engine coolant level is low, add engine coolant.
3. Verify that the engine coolant level in the coolant reserve tank is between the F and L marks.

- If the engine coolant level is below the L mark, add engine coolant.

2014 - Mazda3 - Engine

ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

CAUTION:

1. Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.
2. The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
3. Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.
4. Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.
5. Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.

NOTE:

- If the “FL22” mark is shown on or near the cooling system cap, use Mazda Genuine FL22 engine coolant.

- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

  Engine coolant capacity (approx. quantity)

SKYACTIV-G 2.0 MTX: 6.3 L {6.7 US qt, 5.5 Imp qt}

- SKYACTIV-G 2.0 ATX: 6.5 L {6.9 US qt, 5.7 Imp qt}
- SKYACTIV-G 2.5 ATX: 6.8 L {7.2 US qt, 6.0 Imp qt}

1. Remove the cooling system cap.

2. Remove the service hole cover (installed to front under cover No.1) used to drain the engine coolant.

3. Loosen the radiator drain plug and drain the engine coolant into a container.

4. Flush the cooling system with water until all traces of color are gone.

5. Let the system drain completely.

6. Tighten the radiator drain plug.

7. Referring to the following chart, select the correct volume percentage of the water and engine coolant. **Antifreeze solution mixture percentage (Except FL22 type engine coolant)**

Engine coolant protection	Volume percentage (%)		Gravity at 20 °C {68 °F}
	Water	Coolant	
Above -16 °C {3 °F}	65	35	1.057
Above -26 °C {-15 °F}	55	45	1.072
Above -40 °C {-40 °F}	45	55	1.086

8. Refill the engine coolant from the radiator filler neck until it is close to the top of the radiator filler neck.

9. Refill the engine coolant into the coolant reserve tank up to the F mark on the tank.

10. Install the cooling system cap.

CAUTION:

- If the high engine coolant temperature warning light flashes, stop the engine to lower the engine coolant temperature and prevent overheating. Then, verify the malfunctioning part and repair or replace it.

11. Start the engine and warm up the engine by idling.

12. After the engine warms up, perform the following steps. At this time, be careful of the engine coolant temperature to prevent overheating.

NOTE:

- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

a. Run the engine at **2,500 rpm** for **5 min**.

b. Maintain the engine speed at **3,000 rpm** for **5 s, and then idle**.

c. Repeat Steps (1), (2) several times.

13. Stop the engine, and inspect the engine coolant level after the engine coolant temperature decreases. If it is low, repeat Steps 8—12.

14. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

15. Install the service hole cover.

ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

ENGINE COOLANT PROTECTION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Measure the engine coolant temperature and specific gravity using a thermometer and a hydrometer.

CAUTION:

- Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.
- The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
- Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.
- Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.
- Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.

NOTE:

- If the "FL22" mark is shown on or near the cooling system cap, use Mazda Genuine FL22 engine coolant.

- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

2. Determine the engine coolant protection level by referring to the graph shown in the figure.

- If the engine coolant protection level is not correct, add water or engine coolant.

2014 - Mazda3 - Engine

ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

1. Inspect the engine coolant level. (See **ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the cooling system cap.

3. Install the radiator cap tester to the radiator filler neck.

4. Apply pressure using the radiator cap tester.

CAUTION:

- Applying more than 122.6 kPa {1.250 kgf/cm^2, 17.78 psi} can damage the hoses, fittings, and other components, and cause leakage.

  Engine coolant leakage inspection pressure

- 122.6 kPa {1.250 kgf/cm^2, 17.78 psi} [1 min]

5. When pressurizing the cooling system, verify that the pressure is maintained.

- If the gauge needle drops, it may indicate water leakage. Repair or replace the applicable part.

ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

COOLING SYSTEM CAP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

1. Clean the cooling system cap and the sealed part.
2. Inspect the cooling system cap for cracks or everted seal.
    - If there is any malfunction, replace the cooling system cap.
3. Attach the cooling system cap to the radiator cap tester.

4. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure is held stable for **10 s.**
    - If the pressure is not held stable, replace the cooling system cap.

    Cooling system cap valve opening pressure

    - 93.2—122.6 kPa {0.951—1.250 kgf/cm^2, 13.6—17.7 psi}

2014 - Mazda3 - Engine

COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

1	Wiring harness
2	Hose
3	Coolant reserve tank (See **Coolant Reserve Tank Removal Note**.)

Coolant Reserve Tank Removal Note

1. Remove the coolant reserve tank from the radiator cowling tabs shown in the figure by lifting them with a flathead screwdriver.

2014 - Mazda3 - Engine

RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

3. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the air cleaner, air hose and fresh air duct component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the coolant reserve tank. (See **COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Remove the cooling fan component. (See **COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

8. Remove in the order indicated in the table.

9. Install in the reverse order of removal.

10. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Lower radiator hose
2	Upper mount rubber bracket (See **Upper Mount Rubber Bracket Removal Note**.)
3	Upper mount rubber
4	ECT sensor No.2 (if equipped) (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Radiator (See **Radiator Removal Note**.)
6	Lower mount rubber

Upper Mount Rubber Bracket Removal Note

CAUTION:

- To prevent damage to the upper mount rubber bracket tab, do not apply excessive force.

1. While pressing down the upper mount rubber bracket tab lightly in the direction of the arrow shown in the figure, pull out the upper mount rubber bracket toward the vehicle rear.

2. Remove the upper mount rubber bracket.

Radiator Removal Note

1. To prevent damage to the radiator core, protect it by covering the radiator surface with cardboard.
2. Lift the radiator and remove it from the radiator installation holes on the shroud panel.
3. Move the radiator and condenser to the engine side. (with A/C)

4. Remove the bolts which secure the condenser to the radiator. (with A/C)

5. Remove the radiator from above the engine compartment.

2014 - Mazda3 - Engine

THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the air cleaner, air hose and fresh air duct component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the battery, battery tray and PCM component. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove in the order indicated in the table.

7. Install in the reverse order of removal.

8. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

9. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Lower radiator hose (Thermostat cover side)
2	Thermostat cover (See **Thermostat Cover Removal Note**.)
3	Thermostat (See **Thermostat Installation Note**.)

Thermostat Cover Removal Note

1. Place rags on the transaxle case around the area under the thermostat cover.

2. Slightly loosen the **three** thermostat cover bolts and use the rags to absorb the draining engine coolant.

CAUTION:

- Do not remove the thermostat cover completely at this time because the engine coolant remaining in the engine will drain out.

3. After the engine coolant stops draining, remove the thermostat cover.

Thermostat Installation Note

CAUTION:

- Do not apply oil (such as engine oil, ATF) to the rubber seal part of the thermostat. Otherwise, the O-ring could swell causing a seal malfunction.

1. Install the thermostat with the jiggle pin aligned with the notch of the water outlet.

2014 - Mazda3 - Engine

THERMOSTAT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove the thermostat. (See **THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Visually check that the thermostat valve is closed.

3. Place the thermostat in water.

WARNING:

- During inspection, the thermostat and water are extremely hot and can cause severe burns. Do not touch the thermostat and water.

4. Heat the water and check the following.

- Opening temperature and valve lift
    - If there is a malfunction, replace the thermostat.

Thermostat initial-opening temperature

- U.S.A. and Canada: 80.5—83.5 °C {177—182 °F}
- Except U.S.A. and Canada: 86.5—89.5 °C {188—193 °F}

Thermostat full-open temperature

- 95 °C {203 °F}

Thermostat full-open lift

- 8.5 mm {0.33 in} or more

2014 - Mazda3 - Engine

WATER PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

NOTE:

- Do not disassemble the water pump because it is a precision unit.
- Remove/install the water pump pulley and water pump from the underside of the vehicle.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
3. Remove the splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
4. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Remove the water pump drive belt with the generator drive belt still installed and set it out of the way. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Water pump pulley

	(See **Water Pump Pulley Removal Note**.) (See **Water Pump Pulley Installation Note**.)
2	Water pump component (See **Water Pump Component Removal Note**.) (See **Water Pump Component Installation Note**.)
3	Gasket
4	O-ring (See **O-ring Installation Note**.)

Water Pump Pulley Removal Note

CAUTION:

- Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.

1. Align the water pump pulley hole with the water pump hole as shown in the figure.

2. Insert an appropriate bolt (**length 70 mm {2.8 in}**) into the water pump hole shown in the figure and lock the water pump pulley against rotation.

3. Remove the bolt used for locking the water pump pulley against rotation.

Water Pump Component Removal Note

1. Remove the water inlet pipe stay bolt.

2. Place a container under the engine to collect the engine coolant remaining in the engine.
3. Slightly loosen the three water pump component bolts shown in the figure and collect the draining engine coolant into a container.

CAUTION:

- Do not remove the water pump component completely at this time because the remaining **approx. 2 L {2 US qt, 2 Imp qt} or less** of engine coolant flowing in the engine will drain out.

4. After the engine coolant stops draining, remove the water pump component.

O-ring Installation Note

CAUTION:

- Do not apply oil (such as engine oil, ATF) to the O-ring of the water inlet pipe. Otherwise, the O-ring could swell causing a seal malfunction.

1. Apply engine coolant to a new O-ring.
2. Install the O-ring to the water inlet pipe.

Water Pump Component Installation Note

CAUTION:

- Assemble the water pump gasket to the correct direction shown in the figure. Otherwise, it could leak engine coolant and damage

the engine.

- Do not apply oil (such as engine oil, ATF) to the water pump gasket. Otherwise, the gasket could swell causing a seal malfunction.

1. Insert a new water pump gasket into the water pump groove.
2. Install the water pump.
3. Tighten the bolts in the order shown in the figure.

Tightening torque

1. 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

4. Clean away the sealant adhering to the bolt hole on the cylinder block side of the water inlet pipe stay. (SKYACTIV-G 2.0)
5. Remove the engine oil solenoid valve to secure a sufficient space for installing the water inlet pipe stay bolt. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Install the water inlet pipe stay bolt.

7. Install the engine oil solenoid valve. (See **ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Water Pump Pulley Installation Note

CAUTION:

- Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.

1. Install the water pump pulley to the water pump and temporarily tighten the bolts.
2. Align the water pump pulley hole with the water pump hole as shown in the figure.

3. Insert an appropriate bolt (**length 70 mm {2.8 in}**) into the water pump hole shown in the figure and lock the water pump pulley against rotation.

4. Completely tighten the water pump pulley bolt to the specified torque.

Tightening torque

1. 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

5. Remove the bolt used for locking the water pump pulley against rotation.

2014 - Mazda3 - Engine

COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.
- Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.
- When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the air cleaner, air hose and fresh air duct component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Remove the coolant reserve tank. (See **COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Cooling fan motor connector
2	ECT sensor No.2 connector (if equipped)
3	Wiring harness
4	Upper radiator hose (See **Upper Radiator Hose Removal Note**.)
5	Cooling fan component (See **Cooling Fan Component Removal Note**.) (See **Cooling Fan Component Installation Note**.)

6	Cooling fan No.1 (See **Cooling Fan Removal Note**.) (See **Cooling Fan Installation Note**.)
7	Cooling fan No.2 (See **Cooling Fan Removal Note**.) (See **Cooling Fan Installation Note**.)
8	Cooling fan motor No.1
9	Cooling fan motor No.2
10	Radiator cowling

Upper Radiator Hose Removal Note

1. Remove the bracket shown in the figure from the throttle body and set the upper radiator hose aside.

Cooling Fan Component Removal Note

1. Remove the cooling fan component from above the engine compartment.

Cooling Fan Removal Note

CAUTION:

- When removing, do not apply excessive force to the clip to prevent damaging the clip.

1. Using a flathead screwdriver wrapped in a rag, slide the clip in the direction of the arrow shown in the figure and remove the clip.

2. Remove the washer.
3. Remove the cooling fan.

Cooling Fan Installation Note

1. Install the washer to the cooling fan.

NOTE:

- Installing the washer to the cooling fan facilitates the alignment of the cooling fan motor shaft end to the washer.
- The washer has no designated installation direction.

2. Install the cooling fan and the washer to the cooling fan motor as a single unit.

NOTE:

- Install the washer to the end of the cooling fan motor shaft while aligning the washer hole.
- Press in the cooling fan to the cooling fan motor to the end.

CAUTION:

- When installing, be careful of the following to prevent damaging the clip.
  - Install the clip in the correct direction.

- Do not apply excessive force to the clip.

3. Using needle-nose pliers, slide the clip in the direction of the arrow shown in the figure and install the clip.

Cooling Fan Component Installation Note

NOTE:

- There are three projections on the cooling fan component.

1. Insert the projections of the cooling fan component to the installation locations on the radiator side shown in the figure.

2. Tighten the cooling fan component installation bolts.

Tightening torque

5.9—7.8 N·m {61—79 kgf·cm, 53—69 in·lbf}

2014 - Mazda3 - Engine

COOLING FAN MOTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Part Inspection

1. Verify that the battery is fully charged. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the cooling fan motor connector (2 terminals).

3. Install a tester and battery to the cooling fan motor connector (2 terminals) as shown in the figure.

4. Verify that each cooling fan motor operates smoothly at the standard current.

- If there is any malfunction, replace the applicable part.

  Cooling fan motor No.1, No.2 standard current

- No.1: 4.3—8.3 A [12 V]
- No.2: 4.1—8.1 A [12 V]

COOLING FAN MOTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

INTAKE-AIR SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1	Intake manifold (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **INTAKE MANIFOLD VACUUM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Air hose (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Check valve (between intake manifold and vacuum pump) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	Vacuum pump (See **VACUUM PUMP REMOVAL/INSTALLATION**.) (See **VACUUM PUMP INSPECTION**.)
5	Check valve (between vacuum pump and power brake unit) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	Air cleaner (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **AIR CLEANER ELEMENT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	Resonance chamber (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	Fresh-air duct (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9	Throttle body (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

INTAKE-AIR SYSTEM DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

INTAKE MANIFOLD VACUUM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the evaporative hose No.3 (purge solenoid valve side) and install the vacuum gauge. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Verify that the intake air hoses are installed securely.

3. Warm up the engine.

4. Measure the intake manifold vacuum while idling (no load) using the vacuum gauge.

- If not within the specification, perform the following inspections.
  - Compression pressure (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
  - Check valve (between intake manifold and vacuum pump) (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
  - Check valve (between vacuum pump and power brake unit) (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
  - Air suction
    - Installation areas of each vacuum hose
    - Installation area of throttle body
    - Installation area of fuel injector
    - Installation area of PCV valve
    - Installation area of intake manifold

Standard

- Approx. –60.0 kPa {–450.0 mmHg, –17.7 inHg}

2014 - Mazda3 - Engine

INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine and intake air system can cause severe burns. Turn off the engine and wait until they are cool before removing the intake air system.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove in the order indicated in the table.

3. Install in the reverse order of removal.

Resonance Chamber Removal Note

1. Remove the MAF sensor/IAT sensor No.1. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts as a single unit:
   - Air hose
   - Air cleaner cover
   - Air cleaner element
   - Air cleaner case
   - Fresh-air duct
   - Resonance chamber
3. Remove the resonance chamber.

Fresh-air Duct Removal Note

1. Pull out the fresh-air duct while pressing the tab shown in the figure.

Vacuum Hose (Between Intake Manifold and Vacuum Pump) Removal Note

1. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the vacuum hose (between intake manifold and vacuum pump).

Intake Manifold Removal Note

1. Disconnect the MAP sensor/IAT sensor No.2 connector. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Disconnect the harness clip from the intake manifold as shown in the figure.

3. Remove the intake manifold.

Vacuum Hose (Between Vacuum Pump and Power Brake Unit) Installation Note

1. Install the vacuum hose (between vacuum pump and power brake unit) as shown in the figure.

Vacuum pump side

Power brake unit side

Evaporative Hose Installation Note

1. Install the evaporative hose as shown in the figure.

Vacuum Hose (Between Intake Manifold and Vacuum Pump) Installation Note

1. Install the vacuum hose (between intake manifold and vacuum pump) as shown in the figure.

Air Cleaner Case Installation Note

1. Install the air cleaner case as shown in the figure.

Fresh-air Duct Installation Note

1. Install the fresh-air duct as shown in the figure.

Air Hose Installation Note

1. Install the air hose as shown in the figure.

Throttle body side

Air cleaner side

Ventilation Hose Installation Note

1. Install the ventilation hose as shown in the figure.

VENTILATION HOSE
BOTTOMED
AIR HOSE

2014 - Mazda3 - Engine

AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove the air cleaner element as shown in the figure.

2. Install in the reverse order of removal.

2014 - Mazda3 - Engine

AIR CLEANER ELEMENT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove the air cleaner element. (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Inspect the following items:

- Has the replacement interval past?
- Is the air cleaner element soiled, damaged, or bent?
- Are the air cleaner case and the air cleaner element correctly sealed?
- Is the correct air cleaner element installed?
    - If there is any abnormality, clean or replace the air cleaner element. (See **AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

THROTTLE BODY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Resistance Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Disconnect the throttle body connector.
3. Measure the resistance between throttle body terminals E and F.

Throttle body resistance

- 0.3—100 ohms [20°C {68 °F}]
- If not as specified, replace the throttle body. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Airflow Inspection

Between intake manifold and vacuum pump

1. Remove the vacuum hose (between intake manifold and vacuum pump). (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Blow air into the vacuum hose (between intake manifold and vacuum pump) using your mouth from the vacuum pump side and verify that the air flows to the intake manifold side, then blow air from the intake manifold side and verify that the air does not flow to the vacuum pump side.

- If there is any malfunction in the check valve (between intake manifold and vacuum pump), replace it with the vacuum hose (between intake manifold and vacuum pump) as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Between vacuum pump and power brake unit

1. Remove the vacuum hose (between vacuum pump and power brake unit). (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Blow air into the vacuum hose (between vacuum pump and power brake unit) using your mouth from the power brake unit side and verify that the air flows to the vacuum pump side, then blow air from the vacuum pump side and verify that the air does not flow to the power brake unit side.

- If there is any malfunction in the check valve (between vacuum pump and power brake unit), replace it with the vacuum hose (between vacuum pump and power brake unit) as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove in the order indicated in the table.

1	APP sensor connector
2	Accelerator pedal

3. Install in the reverse order of removal.

ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

FUEL SYSTEM FLOW DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.
- Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Fuel Line Safety Procedure

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the fuel-filler cap to release the pressure inside the fuel tank.
3. Remove the fuel pump relay.

4. Disconnect the high pressure fuel pump connector.

5. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Start the engine.

7. After the engine stalls, crank the engine 2—3 times.

8. Switch the ignition to off.

9. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Install the fuel pump relay.

11. Connect the high pressure fuel pump connector.

2014 - Mazda3 - Engine

AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. When installing the fuel hose, perform “Fuel Leakage Inspection” described below.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Fuel Leakage Inspection

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).
3. Using the simulation function “FP”, start the fuel pump. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Verify that there is no fuel leakage from the pressurized parts.

   Standard

   - There shall be no leakage after 5 min.
5. In the case of fuel leakage, replace the following components and then recheck using the fuel leakage checking procedure.
   - If there is leakage, replace the fuel hoses and clips.
   - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Without using M-MDS

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the fuel pump relay.

CAUTION:

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

3. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.

4. Connect the negative battery cable and operate the fuel pump. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Verify that there is no fuel leakage from the pressurized parts.

Standard

- There shall be no leakage after 5 min.

6. In the case of fuel leakage, replace the following components and then recheck using the fuel leakage checking procedure.

- If there is leakage, replace the fuel hoses and clips.
- If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

2014 - Mazda3 - Engine

FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.
- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using cloth or soft brush, and make sure that it is free of foreign material.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the quick release connector as shown in the figure. (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Turn the lever of the **SST** parallel to the hose as shown in the figure.

5. Insert the **SST** quick release connector into the fuel pipe until a click is heard.

6. Verify that the quick release connector is firmly connected by pulling it by hand.

7. Start the fuel pump using the following procedure.

Using M-MDS

- Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Connect the M-MDS to the DLC-2.
- Using the simulation function “FP”, start the fuel pump. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Without using M-MDS

- Remove the fuel pump relay.

CAUTION:

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

- Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.

- Connect the negative battery cable and operate the fuel pump. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

8. Operate the fuel pump for **10 s**.

9. Measure the fuel line pressure.

- If not within the specification, inspect the following:

  If it less than the specification:

  - Fuel pump unit
  - Fuel line for restriction or leakage

  If it exceeds the specification:

  - Fuel line restriction

Fuel pressure

- 405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}

10. Stop the fuel pump using the following procedure.

Using M-MDS

- Using the simulation function “FP”, stop the fuel pump. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Without using M-MDS

- Disconnect the negative battery cable to stop the fuel pump. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Measure the fuel hold pressure **after 5 min**.

- If not within the specification, inspect the following:

  - Fuel line leakage

Fuel hold pressure

- 230 kPa {2.35 kgf/cm^2, 33.4 psi} or more

12. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

13. Disconnect the **SST**.

14. Connect the quick release connector. (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

15. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

Fuel Siphoning Procedure Using Fuel Pump

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using cloth or soft brush, and make sure that it is free of foreign material.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the quick release connector as shown in the figure. (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Connect a long hose to the disconnected quick release connector and drain the fuel into a container used for collecting gasoline.

4. Drain the fuel from the fuel tank using the following procedure:

CAUTION:

- The fuel pump could be damaged if it is operated while there is no fuel in the fuel tank. Verify the amount of fuel being discharged from the hose and stop operation of the fuel pump when essentially no fuel is being discharged.

Using M-MDS

- Connect the M-MDS to the DLC-2.
- Using the simulation function “FP”, start the fuel pump. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If the fuel pump cannot be operated, remove the fuel using the procedure in the reference. (See **Fuel Siphoning Procedure Not Using Fuel Pump**.)

Without using M-MDS

- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Remove the fuel pump relay.

CAUTION:

- Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.

- Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.

- Connect the negative battery cable and operate the fuel pump. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

  - If the fuel pump cannot be operated, remove the fuel using the procedure in the reference. (See **Fuel Siphoning Procedure Not**

Using Fuel Pump.)

5. Stop the fuel pump using the following procedure.

Using M-MDS

- Using the simulation function “FP”, stop the fuel pump. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Without using M-MDS

- Remove the jumper wire to stop the fuel pump.
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Fuel Siphoning Procedure Not Using Fuel Pump

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure (1) to (3) if the fuel gauge value is 3/4 or more. If the fuel gauge value is 3/4 or less, go to Step 3.

CAUTION:

- If an excessive length of hose is inserted into the fuel-filler pipe, the hose will push the non-return valve and the hose may enter the fuel tank. If the hose enters the fuel tank, the hose may get stuck on the non-return valve when the hose is pulled and the non-return valve could be damaged. Do not insert the hose more than the specified length.
- When removing the hose from the fuel-filler opening, use a rag to prevent fuel spatter.

NOTE:

- Cut the tip of the hose diagonally so that it can be inserted into the fuel-filler pipe smoothly.
- When inserting the hose into the fuel-filler pipe, the hose may get stuck. In such cases, rotate the hose so that the hose can be inserted easily.
- The pump siphons all the fuel that leaked out of the non-return valve and was trapped in the joint hose, then it suctions the air. After siphoning the fuel, wait several seconds until the air is suctioned out, then resume siphoning.
- Cut the tip of the hose diagonally and place a mark at the position of the specified hose insertion length.

Hose insertion length (specified value)

- **1022 mm {40.24 in}**

Hose type (reference)

- Oil-resistant plastic hose of **10 mm {0.4 in}** outer diam. × **6 mm {0.2 in}** inner diam. or equivalent

- Insert the hose from the fuel-filler opening by rotating it to the marked position.
- Using a pump, siphon the fuel until the fuel gauge value reaches **3/4 or less**.

3. Remove the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Drain the fuel.

5. Remove the hose using a rag.

2014 - Mazda3 - Engine

FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

1. Level the vehicle.
2. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Drain the fuel. (See **FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
5. Remove the service hole cover.

6. Disconnect the following parts:
    - Fuel pump unit connector
    - Quick release connector (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Remove the floor under cover. (See **FLOOR UNDER COVER REMOVAL/INSTALLATION**.)
8. Disconnect the HO2S connector.
9. Remove the TWC and HO2S as a single unit. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
10. Remove in the order indicated in the table.
11. Install in the reverse order of removal.
12. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

U.S.A. and CANADA

FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

N·m {kgf·m, ft·lbf}

4	Fuel tank strap
5	Fuel tank (See **Fuel Tank Removal Note**.)
6	Fuel tank insulator (See **Fuel Tank Insulator Removal Note**.)
7	Breather hose (See **Breather Hose Installation Note**.)
8	Evaporative hose (See **Evaporative Hose Installation Note**.)
9	Fuel pump unit (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Except U.S.A. and CANADA

FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

N·m {kgf·m, ft·lbf}

1	Joint hose (See **Joint Hose Installation Note**.)
2	Breather hose (fuel-filler pipe side) (See **Breather Hose Installation Note**.)
3	Evaporative hose (See **Evaporative Hose Installation Note**.)
4	Fuel tank strap
5	Fuel tank (See **Fuel Tank Removal Note**.)
6	Fuel tank insulator
7	Breather hose (fuel tank side) (See **Breather Hose Installation Note**.)
8	Fuel pump unit (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Fuel Tank Removal Note

U.S.A. and CANADA

1. Remove the following parts as single unit:
    - Breather hose
    - Breather pipe
    - Fuel pump unit
    - Fuel tank insulator
    - Fuel tank
2. Remove the fuel tank.

Except U.S.A. and CANADA

1. Disconnect the breather hose from the fuel-filler pipe side.
2. Disconnect the evaporative hose (between charcoal canister and check valve) from the check valve side.
3. Remove the following parts as single unit:
    - Breather hose
    - Evaporative hose
    - Fuel pump unit
    - Fuel tank insulator
    - Fuel tank
4. Remove the fuel tank.

Fuel Tank Insulator Removal Note

NOTE:

- The fuel tank insulator are installed using rivets.

1. Push out the mandrel using a hammer and punch (**2—2.8 mm {0.08—0.11 in}** diameter).

2. Remove the flange using a drill (**5 mm {0.20 in}** drill bit).

Evaporative Hose Installation Note

1. Install the evaporative hose as shown in the figure.

U.S.A. and CANADA

Except U.S.A. and CANADA

Breather Hose Installation Note

1. Install the breather hose as shown in the figure.

Fuel tank side

- U.S.A. and CANADA

Except U.S.A. and CANADA

Fuel-filler pipe side

•

Joint Hose Installation Note

1. Install the joint hose as shown in the figure.

FUEL TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

NOTE:

- The rollover valve and also fuel tank leakage are inspected in this inspection.

1. Level the vehicle.

2. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Drain the fuel. (See **FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the fuel tank and fuel pump unit as a single unit. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**)

5. Perform the following procedure to verify fuel tank airtightness.

   a. Plug the fuel pump unit pipe, and ports B and C.

U.S.A. and CANADA

Except U.S.A. and CANADA

b. Apply pressure of **5.9 kPa {44 mmHg, 1.7 inHg}** to port A and wait for a while.

c. Verify that there is no change in the pressure and no air leakage from the fuel tank.

- If there is air leakage, replace the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the port C plug

U.S.A. and CANADA

Except U.S.A. and CANADA

7. Place the fuel tank in a level position.

8. Close port A and apply **5.9 kPa {44 mmHg, 1.7 inHg}** of pressure to port C, and leave it in this condition momentarily.

9. Open port A and verify that the pressure decreases from **5.9 kPa {44 mmHg, 1.7 inHg}**.

- If it cannot be verified, replace the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Close port A and apply **-2.0 kPa {-15 mmHg, -0.59 inHg}** vacuum to port C, and leave it in this condition momentarily.

11. Open port A and verify that the **-2.0 kPa {-15 mmHg, -0.59 inHg}** negative pressure condition restores to near positive pressure.

- If it cannot be verified, replace the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

12. Turn the fuel tank upside down.

13. Apply pressure of **5.9 kPa {44 mmHg, 1.7 inHg}** to port A and wait for a while.

U.S.A. and CANADA

Except U.S.A. and CANADA

14. Verify that there is no change in the pressure and no air leakage from the port C.

- If there is air leakage, replace the fuel tank. (See **FUEL TANK**

REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)

2014 - Mazda3 - Engine

FUEL-FILLER PIPE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

1. Level the vehicle.
2. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Drain the fuel. (See **FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Open the fuel-filler lid.
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

U.S.A. and CANADA

1	Fuel-filler cap
2	Dust cover (See **Dust Cover Removal Note**.)
3	Joint hose (See **Joint Hose Installation Note**.)
4	Quick release connector (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Fuel-filler pipe (See **Fuel-filler Pipe Removal Note**.)
6	Fuel-filler pipe protector

Except U.S.A. and CANADA

1	Fuel-filler cap
2	Dust cover (See **Dust Cover Removal Note**.)
3	Breather hose (See **Breather Hose Installation Note**.)
4	Joint hose (See **Joint Hose Installation Note**.)
5	Fuel-filler pipe (See **Fuel-filler Pipe Removal Note**.)
6	Fuel-filler pipe protector

Dust Cover Removal Note

1. Remove the rear mudguard (LH). (See **MUDGUARD REMOVAL/INSTALLATION**.)
2. Release the dust cover tab using a flathead screwdriver as shown in the figure.

3. Remove the dust cover.

Fuel-filler Pipe Removal Note

1. Remove the rear tire (LH). (See **WHEEL AND TIRE SPECIFICATION**.)
2. Remove the rear crossmember. (See **REAR CROSSMEMBER REMOVAL/INSTALLATION**.)
3. Remove the fuel-filler pipe.

Joint Hose Installation Note

1. Install the joint hose as shown in the figure.

U.S.A. and CANADA

Except U.S.A. and CANADA

Breather Hose Installation Note

1. Install the breather hose as shown in the figure.

2014 - Mazda3 - Engine

NON-RETURN VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

4. Remove the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Drain the fuel from the fuel tank to the position where the non-return valve is visible. (See **FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

NOTE:

- Non-return valve is integrated in the fuel tank.
- The non-return valve is normally closed by the spring force.

6. Verify that the non-return valve is closed.

    - If the non-return valve is stuck open and does not open even when pulled up by a finger, replace the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

U.S.A. and CANADA

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Using the following procedure:

CAUTION:

- Because the fuel surface is higher than the fuel pump unit installation surface, if the set plate is removed, it may result in fuel leakage. If the fuel gauge level indicates 1/2 or more, refer to the fuel draining procedure and drain 20 liters of fuel.

  Fuel gauge indicates 3/4 or more

- Drain the fuel. (See **FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

  Fuel gauge indicates less than 3/4

- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
4. Remove the service hole cover.

5. Remove in the order indicated in the table.

1	Fuel pump unit connector
2	Quick release connector (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Set plate
4	Fuel pump unit
5	Packing

6. Install in the reverse order of removal.

7. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Except U.S.A. and CANADA

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Using the following procedure:

CAUTION:

- Because the fuel surface is higher than the fuel pump unit installation surface, if the set plate is removed, it may result in fuel leakage. If the fuel gauge level indicates 1/2 or more, refer to the fuel draining procedure and drain 20 liters of fuel.

  Fuel gauge indicates 3/4 or more

- Drain the fuel. (See **FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

  Fuel gauge indicates less than 3/4

- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

4. Remove the service hole cover.

5. Remove in the order indicated in the table.

1	Fuel pump unit connector
2	Quick release connector (See **QUICK RELEASE CONNECTOR REMOVAL / INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Fuel pump cap (See **Fuel pump cap removal note**.) (See **Fuel pump cap installation note**.)
4	Fuel pump unit
5	Packing

6. Install in the reverse order of removal.

7. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Fuel pump cap removal note

CAUTION:

- The fuel pump cap could be damaged if the SST is used with any gap between the cap and the SST. Securely attach the SST so that there is no gap between the SST tabs and the side of the cap.

1. Remove the fuel pump cap using the **SST**.

Fuel pump cap installation note

NOTE:

- The fuel pump unit will rotate and cannot be secured in the specified position if there is any gasoline on the gasket. Thoroughly wipe away all gasoline from the gasket.

- Make the markings to be easily visible when the fuel pump cap is installed.
- Marks are provided on the fuel pump unit and fuel tank for correct installation of the fuel pump unit.

1. Mark the fuel pump cap and the fuel tank at the point where the threading of each part begins as shown in the figure.

2. Align the fuel tank alignment mark with the fuel pump unit as shown in the figure.

3. Align the fuel tank and fuel pump cap markings.

4. Rotate the fuel pump cap counterclockwise until the cap marking is approx. 15° away from the fuel tank marking as shown in the figure.

5. While keeping the fuel pump unit from rising up, tighten the fuel pump cap by hand 180 ° clockwise.

CAUTION:

- The cap could be damaged if the SST is used with any play between the cap and the SST. Securely install the SST so that there is no gap between the SST tabs and the side of the cap.

6. Set the **SST** as shown in the figure.

NOTE:

- The total rotation angle is 450—495 °if the approx. 180° from Step 5 is included.

7. Using the SST, tighten the fuel pump cap within the specified rotation angle and cap tightening

torque without shifting the fuel tank and fuel pump unit alignment marks.

Rotation angle

- 270—315°

Fuel pump cap tightening torque

- 80—90 N·m {8.2—9.1 kgf·m, 59—66 ft·lbf}

NOTE:

- The total rotation angle is 450—495 ° if the approx.180 ° from Step 5 is included.

- If the specified tightening torque cannot be obtained, replace the fuel pump cap and gasket.
- If the specified tightening torque cannot be obtained after replacement of the fuel pump cap and gasket, replace the fuel tank.

2014 - Mazda3 - Engine

FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disassemble in the order indicated in the table.

4. Assemble in the reverse order of disassembly.

5. Install in the reverse order of removal.

6. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1	Fuel gauge sender unit
2	Fuel filter (low-pressure)
3	Pressure regulator
4	Fuel pump

5	Fuel filter (high-pressure)

2014 - Mazda3 - Engine

FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Continuity Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Disconnect the fuel pump unit connector.
3. Inspect for continuity between fuel pump unit terminals A—B.

- If there is no continuity, replace the fuel pump unit. (See **FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

CAUTION:

- Do not disassemble the high pressure fuel pump.
- Do not damage the sealing surface or the lock part of the fuel pipe.

- Damage or deformation to the end of the high pressure line pipe may cause fuel leakage.
- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the air cleaner and air hose as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Disconnect the harness clip as shown in the figure.

6. Disconnect the hoses as shown in the figure.

7. Disconnect the following parts connectors.

- Purge solenoid valve
- High pressure fuel pump
- Intake CMP sensor

8. Remove the purge solenoid valve and catch tank and purge solenoid valve bracket as a single unit. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

9. Remove in the order indicated in the table.

NOTE:

- Only when the high pressure fuel pump is removed, the rear housing does not have to be removed.

10. Install in the reverse order of removal.

11. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

12. Complete the “Fuel Leakage Inspection After High Pressure Fuel Pump Installation”. (See **Fuel Leakage Inspection After High Pressure Fuel Pump Installation**.)

1	Quick release connector (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	High pressure fuel pipe (See **High Pressure Fuel Pipe Removal Note**.) (See **High Pressure Fuel Pipe Installation Note**.)
3	High pressure fuel pump (See **High Pressure Fuel Pump Installation Note**.)
4	Seal rubber
5	O-ring
6	Tension collar

7	Rear housing (See **Rear Housing Removal Note**.) (See **Rear Housing Installation Note**.)

High Pressure Fuel Pipe Removal Note

CAUTION:

- When removing the high pressure fuel pipe, the end of the high pressure fuel pipe may be damaged because the clearance between the high pressure fuel pump and the high pressure fuel pipe is small. Be very careful when handling the end of the high pressure fuel pipe so as not to damage it.

- If the high pressure fuel pump is removed with the high pressure fuel pipe installed, the high pressure fuel pipe and fuel distributor may be damaged because of the excessive force caused by the spring force of the high pressure fuel pump. The high pressure fuel pipe and fuel distributor must be replaced if they are damaged. Always remove the high pressure fuel pipe before removing the high pressure fuel pump.

1. Remove the high pressure fuel pipe.

Rear Housing Removal Note

1. Remove the vacuum pump. (See **VACUUM PUMP REMOVAL/INSTALLATION**.)
2. Remove the rear housing.

Rear Housing Installation Note

NOTE:

- After applying silicone sealant, install the rear housing within 10 min. and then tighten all bolts within 5 min.

1. Apply silicone sealant to the areas shown in the figure.

Thickness

- 3.0—7.0 mm {0.12—0.27 in}

2. Install the rear housing.

High Pressure Fuel Pump Installation Note

1. Rotate the crankshaft approx. 90 degrees from TDC of cylinder No.1.

2. Insert the high pressure fuel pump into the rear housing.
3. Press in the high pressure fuel pump until the O-ring cannot be seen.
4. Temporarily tighten the high pressure fuel pump installation bolt on one side until its head contacts the high pressure fuel pump.
5. Tighten the high pressure fuel pump installation bolt which is not tightened in Step 4.

High pressure fuel pump installation bolt tightening torque

- 19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

6. Tighten the high pressure fuel pump installation bolt which was tightened in Step 4.

High pressure fuel pump installation bolt tightening torque

- 19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

High Pressure Fuel Pipe Installation Note

CAUTION:

- Damage or deformation to the end of the high pressure fuel pipe may cause fuel leakage. When installing the high pressure fuel pipe to the high pressure fuel pump, be very careful while handling the end of the high pressure fuel pipe.
- If parts are exposed to fuel, their function may be decreased or a fire may occur. Always wipe off any leaked fuel using a clean rag.
- Do not let foreign materials enter into the high pressure fuel pipe.
- Install a new high pressure fuel pipe because it cannot be reused.

1. Temporarily tighten the nuts on both ends.
2. Temporarily tighten the high pressure fuel pipe bracket installation bolt.
3. Tighten the nuts on both ends.

   High pressure fuel pipe tightening torque

   - 24—35 N·m {2.5—3.5 kgf·m, 18—25 ft·lbf}

4. Tighten the high pressure fuel pipe bracket installation bolt.

   High pressure fuel pipe bracket installation bolt tightening torque

   - 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

Fuel Leakage Inspection After High Pressure Fuel Pump Installation

1. Verify that the high pressure fuel pump is assembled securely.
2. Verify that there is no fuel leakage around the high pressure fuel pump.

2014 - Mazda3 - Engine

HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- The following values are indicated by relative pressure from the fuel pressure sensor.

1. Verify that the fuel pressure sensor is normal. (See **FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Connect the M-MDS to the DLC-2.

3. Switch the ignition ON (engine off).

4. Select the “FUEL_PRES”, “LOAD” and “RPM” PIDs on the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- If the engine is run at a high speed, it could be damaged. When racing the engine, be careful not to increase the engine speed suddenly.

5. Is the “FUEL_PRES” PID value **3.0 MPa {31 kgf/cm^2, 435 psi}** or more while idling.

- If not as specified, replace the high pressure fuel pump. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

CAUTION:

- Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.

Quick Release Connector Type

CAUTION:

- Verify the type and location, and install/remove properly.

U.S.A. and CANADA

Except U.S.A. and CANADA

Type A Removal

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Move the retainer upward using a small flathead screwdriver or a similar tool.

3. Pull out the fuel hose straight from the fuel pipe and disconnect it.

4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from getting scratched or dirty.

Type B Removal

CAUTION:

- Be careful not to damage the pipe when unlocking the retainer.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION**

[SKYACTIV-G 2.0, SKYACTIV-G 2.5].)

2. Insert the SST into the quick release connector.

3. Pull the fuel hose straight out from the fuel pipe and disconnect it.

4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from getting scratched or dirty.

Type A Installation

NOTE:

- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
    - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install the quick release connector.

- Insert the fuel pipe straight to the end of the quick release connector.
- Push down the retainer using a finger.
    - If the retainer cannot be pushed down, push the fuel pipe further to the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

5. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Type B Installation

NOTE:

- If the quick release connector O-ring is damaged or has slipped, replace the piping component.
- A checker tab is integrated with the quick release connector for new fuel hoses and fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
    - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install a new retainer to the quick release connector.
4. Reconnect the fuel hose straight to the fuel pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
6. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

CAUTION:

- Touching the end of the fuel injector by hand or pressing it to an object may cause a malfunction. Be very careful when handling the end of the fuel injector.
- When the fuel distributor is removed, air tightness of the fuel injector will be lost. Always replace the stopper ring, O-ring, back-up ring, and teflon seal of the fuel injector with new ones.
- Do not remove the fuel pressure sensor from the fuel distributor.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1	Fuel pressure sensor connector
2	Fuel injector connector
3	Fuel distributor (See **Fuel Distributor Removal Note**.) (See **Fuel Distributor Installation Note**.)
4	Fuel injector (See **Fuel Injector Installation Note**.)
5	Spacer
6	Stopper ring (See **Stopper Ring Removal Note**.) (See **Stopper Ring Installation Note**.)
7	O-ring
8	Back-up ring (See **Back-up Ring Installation Note**.)
9	Teflon seal (See **Teflon Seal Removal Note**.) (See **Teflon Seal Installation Note**.)

Fuel Distributor Removal Note

1. Remove the high pressure fuel pipe. (See **HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the fuel distributor.

Stopper Ring Removal Note

NOTE:

- When removing the stopper ring, do not damage the fuel injector with the tool.

1. Remove the stopper ring as shown in the figure.

Teflon Seal Removal Note

NOTE:

- When stretching the teflon seal, do not damage the fuel injector with the tool.

1. Stretch the teflon seal as shown in the figure.

2. Remove the teflon seal as shown in the figure.

Teflon Seal Installation Note

NOTE:

- 49 D013 102, 49 D013 103, and 49 D013 104 are component parts for 49 D013 1A0.

1. Apply engine oil to the **SST**.

2. Install the **SST** with the mark on the **SST** facing the fuel injector.

3. Insert a new teflon seal onto the **SST**.

4. Install the **SST** equipped with the teflon seal to the end of the fuel injector.

5. Using the **SST**, press on the teflon seal to the fuel injector side.

6. Press on the teflon seal to the position indicated in the figure, then remove the **SST**.

7. Install the teflon seal to the fuel injector by hand and remove the **SST**.

8. Slide the **SST** to the end of the fuel injector.

9. Hold the **SST** at the position shown in the figure and correctly position the teflon seal for more than 30 sec.

Back-up Ring Installation Note

1. Install the back-up ring being, making sure it is installed in the right direction.

2. After installing the back-up ring, verify that it is installed correctly.

BACK-UP RING

Stopper Ring Installation Note

NOTE:

- Do not insert the stopper ring at an angle, and always press it on straight to the SST.

1. Set a new stopper ring on the **SST** as shown in the figure being careful of the stopper ring orientation, and press down the fuel injector until a click sound is heard.

Fuel Injector Installation Note

CAUTION:

- If engine oil is applied to the fuel injector, it could adhere to the injection holes and inhibit the fuel injector function. To prevent this, apply engine oil to the cylinder head side.

1. Apply engine oil to the fuel injector installation holes.
2. Insert the fuel injectors to the installation holes one by one, being careful of the direction the fuel injectors are pointed.

Fuel Distributor Installation Note

1. Install the fuel distributor to the fuel injectors while aligning the projection of the spacer to the notch of the fuel distributor.

2. Temporarily tighten the fuel distributor installation bolts until their heads contact the fuel distributors.
3. Turn the fuel distributor installation bolts a half a turn in the order shown in the figure.

4. Turn the fuel distributor installation bolts another half a turn in the order shown in the figure (one turn including the half turn in Step 3).
5. Tighten the fuel distributor installation bolts in the order shown in the figure.

Fuel distributor installation bolt tightening torque

- 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

2014 - Mazda3 - Engine

FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Resistance Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the fuel injector connector.

4. Inspect the resistance between fuel injector terminals A and B.

Fuel injector resistance

- 1.74—2.04 ohms [20 °C {68 °F}]
- If not within the specification, replace the fuel injector. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL FILTER (HIGH-PRESSURE) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.
- A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.

1. Complete the “BEFORE SERVICE PRECAUTION”. (See **BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

4. Remove the service hole cover.

FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0,

5. Remove the fuel pump unit. (See **SKYACTIV-G 2.5]**.)

6. Remove the fuel filter (high-pressure). (See **FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Install in the reverse order of removal.

8. Complete the “AFTER SERVICE PRECAUTION”. (See **AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Tip the rear seat back (LH). (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)

3. Remove in the order indicated in the table.

1	Fuel pump control module connector
2	Fuel pump control module
3	Fuel pump control module bracket

4. Install in the reverse order of removal.

FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Perform the KOEO self-test. (See **KOEO/KOER SELF TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Verify that a fuel pump control module related DTC is detected. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    - If DTCs are detected, repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If a DTC is not detected, go to the next step.

3. Inspect the following:

    - Fuel pump control module damage
    - Fuel pump control module connector damage or corrosion
        - If there is any malfunction, repair or replace the malfunctioning part.

2014 - Mazda3 - Engine

EXHAUST SYSTEM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Start the engine and inspect each exhaust system component for exhaust gas leakage.
    - If there is leakage, repair or replace the appropriate component. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove in the order indicated in the table.
3. Remove the insulator. (See **Exhaust System Insulator Removal/Installation**.)
4. Install in the reverse order of removal.

Step 1

1	Main silencer
2	Insulator

3	Brace bar (See **Brace Bar Removal Note**.)
4	HO2S (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Tunnel member
6	TWC

Step 2

1	A/F sensor (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Clip
3	Insulator
4	Exhaust manifold insulator (See **Exhaust Manifold Insulator Removal Note**.) (See **Exhaust Manifold Insulator Installation Note**.)
5	Exhaust manifold (WU-TWC) (See **Exhaust Manifold Removal Note**.) (See **Exhaust Manifold Installation Note**.)
6	Exhaust manifold gasket

Exhaust System Insulator Removal/Installation

1. Remove the exhaust system insulator in the order shown in the figure.
2. Install in the reverse order of removal.

1	Insulator (rear) (See **Insulator (rear) removal note**.)
2	Insulator (middle)
3	Insulator (front)

Insulator (rear) removal note

NOTE:

- The insulator (rear) are installed using rivets.

1. Push out the mandrel using a hammer and punch (**2—2.8 mm {0.08—0.11 in}** diameter).

2. Remove the flange using a drill (**5 mm {0.20 in}** drill bit).

Brace Bar Removal Note

1. Remove the floor under cover. (See **FLOOR UNDER COVER REMOVAL/INSTALLATION**.)
2. Remove the brace bar.

Exhaust Manifold Insulator Removal Note

1. Remove the insulator as shown in the figure.

2. Remove the No.1 engine mount rubber. (See **ENGINE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Move the engine.
4. Remove the exhaust manifold insulator.

Exhaust Manifold Removal Note

NOTE:

- When removing the exhaust manifold, the bracket installed under the exhaust manifold does not have to be removed. Remove the exhaust manifold with the bracket installed.

1. Remove the front crossmember. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)
2. Remove the exhaust manifold.

Exhaust Manifold Installation Note

1. Temporarily tighten the exhaust manifold installation nuts (1) and (2) shown in the figure by hand.

2. Tighten the exhaust manifold installation nuts (1) and (2) shown in the figure to **33—53 N·m {3.4—5.4 kgf·m, 25—39 ft·lbf}**.
3. Temporarily tighten the exhaust manifold installation nuts (3) to (5) shown in the figure by hand.

4. Tighten the exhaust manifold installation nuts (3) to (5) shown in the figure.

   Exhaust manifold installation nut tightening torque

   - 43—64 N·m {4.4—6.5 kgf·m, 32—47 ft·lbf}

5. Tighten the exhaust manifold installation nuts (1) and (2) shown in the figure.

   Exhaust manifold installation nut tightening torque

   - 43—64 N·m {4.4—6.5 kgf·m, 32—47 ft·lbf}

6. Temporarily tighten the bolts (6) and (7) shown in the figure.

7. Tighten the bolt (6) shown in the figure.

   Exhaust manifold installation bolt tightening torque

   - 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

8. Tighten the bolt (7) shown in the figure.

   Exhaust manifold installation bolt tightening torque

   - 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

Exhaust Manifold Insulator Installation Note

1. Temporarily tighten the exhaust manifold insulator.
2. Tighten the exhaust manifold insulator in the order shown in the figure.

Exhaust manifold insulator tightening torque

- 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

2014 - Mazda3 - Engine

EMISSION SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Engine Compartment Side

1	Ventilation hose (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Catch tank (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CATCH TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Purge solenoid valve (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	Quick release connector

	(See **QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	PCV valve (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Exhaust System Side

1	WU-TWC (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	TWC (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Fuel Tank Side

U.S.A. and CANADA (4SD)

U.S.A. and CANADA (5HB)

1	Rollover valve

	(See **ROLLOVER VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ROLLOVER VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Evaporative chamber (See **EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **EVAPORATIVE CHAMBER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Charcoal canister (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	Quick release connector (See **QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Fuel-filler cap (See **FUEL-FILLER PIPE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **FUEL-FILLER CAP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6	CV solenoid valve (See **CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CANISTER VENT (CV) SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	Check valve (See **CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	Fuel shut-off valve (See **FUEL SHUT-OFF VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **FUEL SHUT-OFF VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Except U.S.A. and CANADA

1	Rollover valve (See **ROLLOVER VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ROLLOVER VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Check valve (See **CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	Charcoal canister (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	Evaporative chamber (See **EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **EVAPORATIVE CHAMBER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Fuel-filler cap (See **FUEL-FILLER PIPE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

EMISSION SYSTEM DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. And CANADA

Except U.S.A. And CANADA

EMISSION SYSTEM DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

FUEL-FILLER CAP INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Leakage Inspection

1. Perform the following tester (evaporative emission system tester (134-01049A)) self-test:

NOTE:

- If the tester does not work correctly during self-test, refer to the tester operators manual for more detailed procedures.

a. Verify that the gas cylinder valve is closed and the control valve located on the tester is in the TEST position. All tester displays should be off at this time.

b. Connect the long hose (part of tester) to the tester.

c. Connect the manifold assembly (part of tester) to the long hose as shown.

d. Open the gas cylinder valve and verify the gas cylinder regulator left gauge reads **69—82 kPa {0.71—0.83 kgf/cm^2, 10—12 psi}** (preset at factory).

- If not, refer to the tester operators manual to contact tester manufacturer.

e. Press the ON/OFF switch to turn on the **SST** and make sure the left display reads **0.0**.

f. Turn the control valve on the tester to the FILL position.

g. Verify the left display reading is **within 13.9** to **14.0** in of water.

- If not, adjust the pressure using the regulator knob located on the right side of the tester.

h. Turn the control valve to TEST position and press the START switch.

i. After the **2-min** countdown (left display) is completed, the right display shows the total pressure loss for that period. A **0.5** in of water loss is acceptable on the self-test.

- If the loss is **more than tester0.5** in of water, do one or more self-test. If the failed test repeats, check for leak using the ultrasonic leak detector (part of tester).

2. Press the RESET switch to set the left display reading to **0.0.**

3. Connect the fuel cap receiver assembly (part of tester) to the manifold assembly and fuel-filler cap from the vehicle.

- If the fuel-filler cap is not a genuine part, replace it.

4. Turn the control valve to the FILL position.

5. Wait (**maximum 20 s**) until the left display reads **13.9** to **14.0** in of water.

- If the reading is slightly below the specification, adjust it using the regulator knob.
- If the reading is far below, the fuel-filler cap has a leak. Replace it.

6. Turn the control valve to the TEST position and press the START switch.

7. After the **2-min** countdown (left display) is completed, check the test result (the failed/passed light on the tester).

- If the green light turns on, the fuel-filler cap is normal.
- If the red light turns on, the fuel-filler cap has a leak. Replace it.

8. Close the gas cylinder valve.

9. Turn the control valve to the FILL position.

10. Press the ON/OFF switch to turn off the tester.

2014 - Mazda3 - Engine

CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. and CANADA (4SD)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the main silencer. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the rear crossmember. (See **REAR CROSSMEMBER REMOVAL/INSTALLATION**.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.

1	Wiring harness connector
2	CV solenoid valve connector
3	Fuel tank pressure sensor connector
4	Evaporative hose No.1 (See **Evaporative hose No.1 installation note**.)
5	Evaporative hose No.2

	(See **Evaporative hose No.2 installation note**.)
6	Evaporative hose No.3 (See **Evaporative hose No.3 installation note**.)
7	Quick release connector (See **QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	Charcoal canister
9	Charcoal canister bracket No.1
10	Charcoal canister bracket No.2

Evaporative hose No.3 installation note

1. Connect the evaporative hose No.3 as shown in the figure.

Evaporative hose No.2 installation note

1. Connect the evaporative hose No.2 as shown in the figure.

Evaporative hose No.1 installation note

1. Connect the evaporative hose No.1 as shown in the figure.

U.S.A. and CANADA (5HB)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the main silencer. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove in the order indicated in the table.

4. Install in the reverse order of removal.

1	Wiring harness connector
2	Protector
3	Charcoal canister insulator
4	Evaporative hose No.1 (body side) (See **Evaporative hose No.1 installation note**.)
5	Evaporative hose No.2 (pipe side) (See **Evaporative hose No.2 installation note**.)
6	Evaporative hose No.3 (See **Evaporative hose No.3 installation note**.)
7	Charcoal canister bracket No.1 installation bolt
8	Charcoal canister bracket No.2 installation bolt
9	Quick release connector (See **Quick release connector disconnection note**.)
10	Charcoal canister assy (See **Charcoal canister assy removal note**.)

Quick release connector disconnection note

1. Move the charcoal canister.

2. Disconnect the quick release connector. (See **QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Charcoal canister assy removal note

1. Move the charcoal canister assy as shown in the figure.

2. Remove the charcoal canister assy as shown in the figure.

3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

1	Evaporative hose No.2 (charcoal canister side) (See **Evaporative hose No.2 installation note**.)
2	Charcoal canister bracket No.1
3	Wiring harness
4	Evaporative hose No.1 (fuel tank pressure sensor side) (See **Evaporative hose No.1 installation note**.)
5	Charcoal canister bracket No.2
6	Charcoal canister

Evaporative hose No.3 installation note

1. Connect the evaporative hose No.3 as shown in the figure.

Evaporative hose No.2 installation note

1. Connect the evaporative hose No.2 as shown in the figure.

Evaporative hose No.1 installation note

1. Connect the evaporative hose No.1 as shown in the figure.

Except U.S.A. and CANADA

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

1	Protector
2	Evaporative hose No.1 (See **Evaporative hose No.1 installation note**.)
3	Evaporative hose No.2 (See **Evaporative hose No.2 installation note**.)
4	Evaporative hose No.3 (See **Evaporative hose No.3 installation note**.)
5	Charcoal canister (See **Charcoal canister removal note**.)
6	Charcoal canister bracket

Charcoal canister removal note

1. Release the lock as shown in the figure.

2. Remove the charcoal canister.

Evaporative hose No.3 installation note

1. Connect the evaporative hose No.3 as shown in the figure.

Evaporative hose No.2 installation note

1. Connect the evaporative hose No.2 as shown in the figure.

Evaporative hose No.1 installation note

1. Connect the evaporative hose No.1 as shown in the figure.

2014 - Mazda3 - Engine

CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. And CANADA

Leakage inspection

1. Perform the following procedures:
    - Do not operate CV solenoid valve.
    - Assemble the hose used for inspection to port A.
    - Cover ports B and C with the caps.

CAUTION:

- Do not apply a pressure 20 kPa {150 mmHg, 5.91 inHg} or more to the charcoal canister for 1 min. or more. Doing so will damage the charcoal canister.

2. Apply pressure (**19.6 kPa {147 mmHg, 5.79 inHg}**) through the hose, and verify that air does not leak from the charcoal canister.

- If there is airflow, replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- If there is no airflow, perform the following “Airflow Inspection”. (See **Airflow inspection**.)

Airflow inspection

1. Perform the following procedure to verify the charcoal canister airflow.

Between port A and port C

- Plug the port B.

- Apply a pressure of **1.8 kPa {14 mmHg, 0.53 inHg}** to port A.
- Verify that there is airflow from port C.
    - If there is no airflow, replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Between port B and port C

- Plug the port A.

- Apply a pressure of **2.0 kPa {15 mmHg, 0.59 inHg}** to port C.

- Verify that there is airflow from port B.
    - If there is no airflow, replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Except U.S.A. And CANADA

Leakage inspection

1. Perform the following procedures:
    - Assemble the hose used for inspection to port A.
    - Cover ports B and C with the caps.

CAUTION:

- Do not apply a pressure 20 kPa {150 mmHg, 5.91 inHg} or more to the charcoal canister for 1 min. or more. Doing so will damage the charcoal canister.

2. Apply pressure (**19.6 kPa {147 mmHg, 5.79 inHg}**) through the hose, and verify that air does not leak from the charcoal canister.

- If there is airflow, replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- If there is no airflow, perform the following “Airflow Inspection”. (See **Airflow inspection**.)

Airflow inspection

1. Perform the following procedure to verify the charcoal canister airflow.

Between port A and port C

- Plug the port B.

- Apply a pressure of **0.98 kPa {7.4 mmHg, 0.29 inHg}** to port A.
- Verify that there is airflow from port C.
    - If there is no airflow, replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Between port B and port C

- Plug the port A.

- Apply a pressure of **0.98 kPa {7.4 mmHg, 0.29 inHg}** to port C.
- Verify that there is airflow from port B.
    - If there is no airflow, replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the air cleaner and air hose as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Disconnect the high pressure fuel pump connector.

5. Disconnect the harness clip as shown in the figure.

6. Remove in the order indicated in the table.

SKYACTIV-G 2.0

1	Evaporative hose No.1 (See **Evaporative Hose No.1 Installation Note**.)
2	Catch tank
3	Evaporative hose No.2
4	Purge solenoid valve connector
5	Evaporative hose No.3 (See **Evaporative Hose No.3 Installation Note**.)
6	Purge solenoid valve bracket installation bolt
7	Purge solenoid valve (See **Purge Solenoid Valve Installation Note**.)

SKYACTIV-G 2.5

1	Evaporative hose No.1 (See **Evaporative Hose No.1 Installation Note**.)
2	Catch tank
3	Evaporative hose No.2
4	Purge solenoid valve connector
5	Evaporative hose No.3 (See **Evaporative Hose No.3 Installation Note**.)
6	Purge solenoid valve bracket installation bolt
7	Purge solenoid valve (See **Purge Solenoid Valve Installation Note**.)

7. Install in the reverse order of removal.

Purge Solenoid Valve Installation Note

1. Temporarily install the purge solenoid valve to the bracket.
2. Lift up and tighten the purge solenoid valve as shown in the figure.

Evaporative Hose No.3 Installation Note

1. Install the evaporative hose No.3 as shown in the figure.

Evaporative Hose No.1 Installation Note

1. Install the evaporative hose No.1 as shown in the figure.

MARKING AREA
1 mm {0.04 in}
OR LESS

CATCH TANK SIDE

NG

2014 - Mazda3 - Engine

PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Airflow Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the purge solenoid valve. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Inspect airflow between the ports under the following conditions.

Measured condition	Continuity between ports A—B
When voltage is not applied between terminals A and B	No airflow
When voltage is applied between terminals A and B	Airflow detected

- If not as specified, replace the purge solenoid valve. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

CATCH TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove the catch tank. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Plug the purge solenoid valve side into the catch tank.

SKYACTIV-G 2.0

SKYACTIV-G 2.5

3. Inspect for air leakage when blowing air using your mouth into the charcoal canister side.

- If there is air leakage, replace the catch tank. (See **PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**)
2. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

SKYACTIV-G 2.0

1	PCV hose (See **PCV Hose Installation Note**.)
2	Oil separator
3	Retainer (See **Retainer Removal Note**.) (See **Retainer Installation Note**.)
4	PCV valve

SKYACTIV-G 2.5

1	PCV hose (See **PCV Hose Installation Note**.)
2	Oil separator
3	Retainer (See **Retainer Removal Note**.) (See **Retainer Installation Note**.)
4	PCV valve

Retainer Removal Note

CAUTION:

- Be sure to follow the removal procedures below to prevent the leakage of blow-by gas caused by the damage to the tab of the oil separator or the oil separator itself.

1. Insert a flat blade screwdriver with its tip wrapped in a shop rag into the gap between the retainer and the oil separator as shown in the figure.

2. Spread the side surface of the retainer outward to dismount it with attention to the tab.

Retainer Installation Note

CAUTION:

- Be sure to replace the old retainer with a new one to prevent the escape of blow-by gas. Reinstalling the old retainer will reduce airtightness.

1. Make sure that the retainer alignment mark is directed as shown in the left diagram before installing the retainer to the oil separator.

SKYACTIV-G 2.0

SKYACTIV-G 2.5

PCV Hose Installation Note

SKYACTIV-G 2.0

1. Install the end of the PCV hose on the marking side to the PCV valve.

SKYACTIV-G 2.5

1. Install the end of the PCV hose on the marking side to the PCV valve.

2014 - Mazda3 - Engine

POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Airflow Inspection

1. Disconnect the section (A) of ventilation hose shown in the figure.

2. Start the engine and verify that vacuum is applied to the end of the disconnected ventilation hose while the engine is idling.

- If vacuum is not applied to the ventilation hose, perform the procedure from Step 3.

NOTE:

- If the PCV valve is operating normally, vacuum occurs in the ventilation hose, however, if

the PCV valve is not operating normally, vacuum does not occur in the ventilation hose because the blow-by gas is circulated to the air hose from the ventilation hose.

- Verify the ventilation hose vacuum as follows:
    - When the tip of your figure is touching the end of the ventilation hose, the tip of your figure is suctioned by the hose.
    - When a thin scrap of paper is contacting the end of the ventilation hose. the paper is suctioned by the hose.

3. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the PCV valve and the oil separator as a single unit. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Verify that there is no airflow when pressure is applied to port B.

SKYACTIV-G 2.0

SKYACTIV-G 2.5

- If there is airflow, replace the PCV valve and the oil separator as a single unit. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Verify that there is airflow when vacuum is applied to port B.

- If there is no airflow, replace the PCV valve and the oil separator as a single unit. (See **POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. And CANADA

1. Remove the breather pipe. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Except U.S.A. And CANADA

1. Remove in the order indicated in the table.

1	Evaporative hose

2	Check valve

2. Install in the reverse order of removal.

2014 - Mazda3 - Engine

CHECK VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. And CANADA

1. Remove the check valve. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Verify that there is airflow when positive pressure is applied to port A.

- If there is no airflow, replace the breather pipe. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Verify that there is airflow when negative pressure is applied to port A.

- If there is no airflow, replace the breather pipe. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Except U.S.A. And CANADA

1. Remove the check valve. (See **CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Verify that there is no airflow when positive pressure is applied to port A.

- If there is airflow, replace the check valve. (See **CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Verify that there is no airflow when negative pressure is applied to port A.

- If there is no airflow, replace the check valve. (See **CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- Perform the following procedures, DTC P0421:00 is indicated only.

1. Connect the M-MDS to the DLC-2.

2. Start the engine and warm it up to normal operating temperature.

3. Turn off the engine.

4. Verify that the engine compression is within the specification. (See **COMPRESSION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    - If the compression pressure is not within the specification, repair or replace the malfunctioning part.

5. Drive the vehicle for **10 min at 65—96 km/h {40—60 mph}** to allow the WU-TWC to reach normal operating temperature.

6. Stop the vehicle and leave it in a safe space.

7. Access Test ID 10:21:80 on the “Diagnostic Monitoring Test Result” function.

8. Verify that the test result is within specification indicated on the M-MDS.

    - If it is not as specified, replace the exhaust manifold. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ROLLOVER VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- The rollover valve cannot be removed as it is built into the fuel tank.

1. Remove the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ROLLOVER VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- The rollover valve cannot be disassembled and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See **FUEL TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    - If there is any malfunction, replace the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL SHUT-OFF VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. And CANADA

NOTE:

- The fuel shut-off valve cannot be removed as it is built into the fuel tank.

1. Remove the fuel tank. (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL SHUT-OFF VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. And CANADA

NOTE:

- The fuel shut-off valve cannot be removed and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See **FUEL TANK INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - If there is any malfunction, replace the fuel tank (See **FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove in the order indicated in the table.

U.S.A. and CANADA (4SD)

U.S.A. and CANADA (5HB)

Except U.S.A. and CANADA

1	Evaporative hose

2	Evaporative chamber

2. Install in the reverse order of removal.

2014 - Mazda3 - Engine

EVAPORATIVE CHAMBER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Remove the evaporative chamber. (See **EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Blow air flow port A and verify that there is air flow.

- If there is no air flow, replace the evaporative chamber. (See **EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Verify that there is no deformation or cracking of the evaporative chamber.

- If the exterior is no normal, replace the evaporative chamber. (See **EVAPORATIVE CHAMBER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Quick Release Connector Type and Position

CAUTION:

- Verify the type and location, and install/remove properly.

U.S.A. and CANADA

Except U.S.A. and CANADA

Type A Removal

1. Move the retainer upward using a small flathead screwdriver or a similar tool.

2. Pull out the evaporative hose straight from the evaporative pipe and disconnect it.

3. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from getting scratched or dirty.

Type B Removal

CAUTION:

- Be careful not to damage the evaporative pipe when unlocking the retainer.

NOTE:

- If the quick release connector is removed, replace the retainer with a new one.

1. Set the **SST** parallel to the quick release connector.

NOTE:

- The quick release connector can be removed by pushing the center of the retainer tabs.
- The retainer is attached to the evaporative pipe even after the connector is disconnected.

2. Hold the center of the retainer tabs with the finger and press the retainer.
3. Pull the connector side and disconnect the quick release connector.
4. Raise a retainer tab using the SST and remove the retainer.

5. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from getting scratched or dirty.

Type A Installation

NOTE:

- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.
- A checker tab is integrated with the quick release connector for new evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damage and deformation.
    - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the evaporative pipe.
3. Install the quick release connector.

- Insert the evaporative pipe straight to the end of the quick release connector.
- Push down the retainer using a finger.
    - If the retainer cannot be pushed down, push the evaporative pipe further to the quick release connector.

4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

Type B Installation

CAUTION:

- Always replace the retainer with a new one when using SST 49 E042 001, otherwise, evaporative leakage could result.

NOTE:

- If the quick release connector O-ring is damaged or has slipped, replace the piping component.
- A checker tab is integrated with the quick release connector for new evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damage and deformation.
    - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the evaporative pipe.
3. Install a new retainer to the quick release connector.
4. Reconnect the hose straight to the pipe until a click is heard.
5. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

2014 - Mazda3 - Engine

CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. and CANADA

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove in the order indicated in the table.

1	CV solenoid valve connector
2	CV solenoid valve cover
3	CV solenoid valve

4	O-ring

3. Install in the reverse order of removal.

2014 - Mazda3 - Engine

CANISTER VENT (CV) SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

U.S.A. and CANADA

Airflow inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the CV solenoid valve. (See **CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Inspect airflow between the ports under the following conditions.

Measured condition	Continuity between A—B

When voltage is not applied between terminals A and B	Airflow detected
When voltage is applied between terminals A and B	No airflow

- If not as specified, replace the CV solenoid valve. (See **CANISTER VENT (CV) SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Should assume the voltage **12V** (D.C.).
- Terminals A and B is nonpolar.

2014 - Mazda3 - Engine

CHARGING SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]

NOTE:

- For location index of the generator, DC-DC converter, capacitor (i-ELOOP) on vehicles with i-ELOOP, refer to the i-ELOOP section. (See **CHARGING SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

1	Generator (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)
2	Battery (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Operation After Replacing Battery (With i-ELOOP)

NOTE:

- If the battery charge/discharge flow (number of times battery can operate) exceeds the specification, a DTC is recorded and the master warning light turns on. If the battery charge/discharge flow (number of times battery can operate) exceeds the specification, replace the battery with a new one.
- When replacing the battery, perform the following procedure: When replacing the PCM simultaneously, perform the PCM configuration first. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Step	Action
1	Switch the ignition ON (engine off).
2	Shift the selector lever to the N position.
3	Perform the following work with the brake pedal depressed. 1. Depress the accelerator pedal for 5 s or more. 2. Verify that the charging system warning light and the master warning light flash. 3. Depress and release the accelerator pedal 3 times. 4. Verify that the charging system warning light illuminates and the master warning light turns off.
4	Switch the ignition off and disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Battery Removal/Installation

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

1	Negative battery cable (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Positive battery cable
3	Battery clamp
4	Battery box **Battery Box Installation Note**

	(See .)
5	Battery (See **Battery Removal Note**.)
6	PCM cover (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7	PCM connector (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	Battery tray and PCM component (See **Battery Tray and PCM Component Removal Note**.)

Battery Removal Note

CAUTION:

- When removing the battery, do not place the battery on the PCM connector or hit it with the battery. Otherwise, the PCM or PCM connector could be damaged.

Battery Tray and PCM Component Removal Note

1. Remove the air cleaner, air hose and fresh air duct component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the bolt and nut securing the wiring harness protector to the battery tray.

3. Remove the three battery tray bolts so that the battery tray is free to move.
4. Release the wiring harness clips at the three locations shown in the figure and remove the battery tray and PCM component.

5. When replacing the battery tray with a new one, perform the following procedure:

a. Remove the PCM and bracket component.

b. Remove the bracket.

Battery Box Installation Note

1. Install the battery box so that the side with the larger notch is pointed at the engine.

NOTCH
ENGINE
SIDE
FRONT

2014 - Mazda3 - Engine

BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

1. Because battery acid is toxic, be careful when handling the battery.
2. Because battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.
3. If battery acid contacts skin, eyes, or clothing, flush it immediately with running water. If the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.

Using GR8-1291 (Without i-ELOOP):

(See **GR8-1291 INSTANT TRAINING MODULE (VIDEO)**.)

1. Remove the battery filler caps and check the water level. If necessary, add water to the appropriate level. Reinstall the caps.

2. Attach the small red clamp to the positive battery terminal and the small black clamp to the negative terminal.

3. Select the Battery Test icon in the Main Menu, then press the NEXT key.

4. Test the battery by following the on-screen instructions to enter the appropriate information. Refer to the Mazda GR8-1291 Instruction Manual for more information.

5. After the test, the Control Module displays the test results in a series of screens. The analysis includes the battery state of health (SOH) and state of charge (SOC). Before the Battery Test results are displayed, use the keypad on the Control Module to enter the last 5 digits of the vehicle's VIN and press NEXT to continue.

6. The Mazda GR8-1291 will print out the test results and display one of the eight possible results listed below. Review the results and follow the Action Step for the displayed result.

Battery Tester Display	Action Step
GOOD BATTERY	Return the battery to service.
GOOD - RECHARGE	Fully charge the battery and return it to service.

CHARGE & RETEST	Fully charge the battery and retest. Failure to fully charge the battery before retesting may cause false readings. If CHARGE & RETEST appears again after you fully charge the battery, replace the battery.
REPLACE BATTERY	A REPLACE BATTERY result may also mean a poor connection between the battery and the vehicle. If you tested the battery using the System test, disconnect the battery cables and retest using the Battery Test before replacing it.
BAD CELL - REPLACE	Replace the battery. **WARNING:** • Do not charge the battery. Charging a battery with one or more bad cells could cause an explosion and serious harm to the user.
SIDE POST TEST	Test data was inconclusive using the side post. Retest using side post adapters.
JUMP START POST	Data was inconclusive using the jump start post. Retest at the battery terminals.
24 VOLT BATTERY	24-volt battery detected. You are attempting to test both in-vehicle batteries in a 24-volt system. Disconnect the batteries and test them individually.

Using Electrolyte Specific Gravity Method:

Without i-ELOOP

1. Remove the battery filler caps and check the water level.
   - If necessary, add water to the appropriate level.
2. Measure the electrolyte specific gravity using a hydrometer.
   - If it is less than the specification, recharge the battery. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

     Battery electrolyte specific gravity (Without i-ELOOP)

   - 1.22—1.29 [20 °C {68 °F}]

With i-ELOOP

Purpose	Step	Inspection	Results	Action
Battery examination (verification of dendrite short)	1	Using a hydrometer, measure the electrolyte gravity of all the cells and identify the one with the lowest electrolyte gravity value.	1.25 or more	Battery is normal.
			1.17—1.25	Recharge the battery. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
			Less than 1.17	Replace the battery because it can be determined as a dendrite short. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Using Battery Voltage Method (Without i-ELOOP Only):

1. Inspect the battery as follows after removing the battery filler caps, checking the water level, and adding water to the appropriate level if needed:

Step	Inspection	Results	Action
1	Measure the battery positive voltage.	12.4 V or more	Go to Step 3.
		Less than 12.4 V	Go to the next step.
2	Quick charge for **30 min** and recheck voltage.	12.4 V or more	Go to the next step.
		Less than 12.4 V	Replace the battery.
3	Using the battery load tester, apply load current (see battery load test current) and record battery voltage after **15 s**. Is voltage more than the specification?	Yes	Normal
		No	Replace

			the battery.

Battery load test current

- 55D23L (60 A·h/20HR): 180 A
- 75D23L (65 A·h/20HR): 195 A

Standard specification

Battery temp. (°C {°F})	Minimum voltage (V)
4 {39}	9.3
10 {50}	9.4
16 {61}	9.5
21 {70}	9.6

Parasitic Draw Inspection

(See **GR8-1291 PARASITIC DRAW TESTING INSTANT TRAINING (VIDEO)**.)

1. Verify that the ignition is switched off (lock) and all doors, the hood and the trunk/liftgate are closed.

2. If using a series-type ammeter, continue to Step 3. If using the GR8-1291 Battery Maintenance Station with the inductive amp clamp, skip to Step 6.

3. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- Operating electrical loads while the parasitic draw is being measured can damage a series-type ammeter.

4. Connect the meter between the negative battery terminal and negative battery cable. Proceed to Step 10.

5. Select the DMM icon from the main menu.

6. Select the DC Ammeter.

7. Select the 70 AMP MAX range. (measuring milliamps)

8. Connect the amp clamp to the negative battery cable.

9. Monitor the current draw.

NOTE:

- If the battery is not left undisturbed for **10 min or more, but less than 30 min**, the tester will indicate a high value (**approx. 300 mA**).
- If the ignition or any electrical accessory is operated after the tester is connected, the battery must be left undisturbed for **10 min or more, but less than 30 min** from that point.
- For vehicles with the immobilizer system, the system periodically shifts synchronization of the security indicator light flashing. Therefore, **65 mA (0.1 s)** current draw is supplied when the security indicator light is illuminated, and **40 mA (2 s)** current draw is supplied when the security indicator light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **55 mA**.

10. Leave the vehicle electrical system undisturbed for **10 min or more, but less than 30 min**, and then measure the parasitic draw.

- If not within specification, measure the parasitic draw while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.
- Inspect and repair wiring harnesses and connectors of the fuse where the current draw has decreased.

  Parasitic draw (When the ignition is off (lock), all doors and the hood are closed.)

- 40—65 mA

NOTE:

- If the battery is left for **30 min or more**, a battery parasitic draw value of **25—45 mA** is indicated.

2014 - Mazda3 - Engine

BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Using GR8-1291 (Without i-ELOOP):

(See **GR8-1291 INSTANT TRAINING MODULE (VIDEO)**.)

WARNING:

- Keep all flames away from the battery, otherwise evaporated gas from the battery fluid may catch fire and cause serious injury.

CAUTION:

- Do not leave the battery in the vehicle when recharging. Otherwise, damage to under-hood components from electrolyte overflow, misting or gassing, may occur.

1. Remove the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the battery filler caps and check the water level. If necessary, add water to the appropriate level. Reinstall the caps.

3. Attach the large red clamp to the positive battery terminal and the large black clamp to the negative terminal.

4. Select the diagnostic icon in the Main Menu, then press the NEXT key.

5. Follow the on-screen instructions to input the appropriate information. Refer to the Mazda GR8-1291 Instruction Manual for more information.

6. The GR8-1291 will test and charge the battery. Before the diagnostic charging results are displayed, use the keypad on the Control Module to input the last 5 digits of the vehicle's VIN and press NEXT to continue.

7. After the charging is completed, the Mazda GR8-1291 will print out the diagnostic charging results and display one of the following results listed below. Review the results and follow the action step for the displayed result.

Battery Tester Display	Action Step
GOOD BATTERY	Return the battery to service.
REPLACE	Replace the battery.

BATTERY	
BAD CELL - REPLACE	Replace the battery. **WARNING:** • Do not charge the battery. Charging a battery with one or more bad cells could cause an explosion and serious harm to the user.
SIDE POST TEST	Test data was inconclusive using the side post. Retest using side post adapters.
JUMP START POST	Data was inconclusive using the jump start post. Retest at the battery terminals.

Without Using GR8-1291 (Without i-ELOOP):

WARNING:

- Keep all flames away from the battery, otherwise evaporated gas from the battery fluid may catch fire and cause serious injury.
- Remove the battery filler caps when recharging to prevent battery deformation or damage.

CAUTION:

- Do not quick charge for more than 30 min. Otherwise, it will damage the battery.

1. Remove the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the battery filler caps.
3. Connect a battery charger to the battery and adjust the charging current as follows.

Battery slow charge current

- 55D23L (60 A·h/20HR): 4.5—5.5 A

- 75D23L (65 A·h/20HR): 5.0—6.0 A

Battery quick charge current [30 min]

- 55D23L (60 A·h/20HR): 30 A
- 75D23L (65 A·h/20HR): 35 A

4. After the battery is recharged, verify that the voltage is within the specification and remains at the same value for **1 h or more** after the recharging has been completed.

- If not within specification, replace the battery.

Standard voltage

- 12.4 V or more

Without Using GR8-1291 (With i-ELOOP):

WARNING:

- Keep all flames away from the battery and perform the servicing in a well-ventilated area. Otherwise, evaporated gas from the battery could ignite.
- Remove the battery filler caps when recharging to prevent battery deformation or damage.
- Do not perform battery recharging with the battery in the vehicle as it is dangerous.
- When connecting to the battery recharger, make sure the battery cables are connected correctly.

CAUTION:

- After recharging, leave the battery as it is for as long as possible (6 hours or longer recommended) to dissipate the polarization in the battery.

1. Remove the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the battery filler caps.

3. To prevent loss of battery fluid during recharging, verify the battery fluid level.

Battery fluid level is between upper and lower or less

- Add distilled water to the upper level.

Battery fluid level is between upper and lower or more

- Go to the next step.

4. Connect a battery recharger to the battery and adjust the charging current as follows.

Constant current recharger device available

- Apply a constant current charge so that the recharge current is 10 to 15 A. Perform the battery charge time referring to table (1).

Battery recharge time (Table 1)

Cell with lowest electrolyte gravity	1.24 or more	1.23	1.22	1.21	1.20	1.19	1.18	1.17
Charge time (min)	180	200	220	240	270	290	330	360

No constant current recharger device available

- Adjust the voltage so that the recharge current is 10 to 15 A.

  Verify the current after 30 s have elapsed since the measurement was started because the current is not stabilized after the voltage adjustment.

- Charge the battery for 60 min using current in Step (1).
- Readjust the battery recharger so that the recharge current is 10 to 15 A.
- Charge the battery so that the total time for Step (2) is the time in table (1).

5. Measure electrolyte gravity of all cells.

Cell with lowest electrolyte gravity is less than 1.25

- Replace the battery as battery charge could not be restored. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Cell with lowest electrolyte gravity is 1.25 or more

- Battery charge was restored, therefore install the recharged battery into the vehicle. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Before removing the SRS air bag system-related parts, always disconnect the negative battery cable and wait for 1 min. or more to allow the back-up power supply to deplete its stored power. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Required Procedure After Negative Battery Cable Disconnection/Connection

System name	Conditions after disconnecting the negative battery cable	Required procedure		Reference
		Before disconnecting negative battery cable	After connecting negative battery cable	
Power window system	Reset to initial setting and auto-function is disabled.	–	Perform the power window system initial setting.	(See **POWER WINDOW SYSTEM INITIALIZATION PROCEDURE**.)
Sunroof system	Reset to initial setting and function is disabled.	–	Perform the sunroof system initial setting.	(See **SUNROOF SYSTEM INITIALIZATION PROCEDURE**.)
Clock and audio	Clock display and audio system memory are reset.	Verify the setting content.	Set the verified content before disconnecting negative battery cable.	–
Tire pressure monitoring system (TPMS)	The tire pressure monitoring system detection accuracy decreases.	–	Perform the tire pressure monitoring system initialization.	(See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)

Without i-ELOOP

Negative battery cable terminal disconnection

1. Switch the ignition off.
2. Disconnect the negative battery cable terminal.

Negative battery cable terminal connection

CAUTION:

- When tightening the negative battery cable, tighten it to the specified torque. If it is not tightened to the specified torque, the battery charging/discharging may be affected. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

1. Perform services required after connecting the negative battery cable terminal. (See **Required Procedure After Negative Battery Cable Disconnection/Connection**.)

With i-ELOOP

Negative battery cable terminal disconnection

1. Switch the ignition off.

CAUTION:

- If the nut for the current sensor is loosened with the negative battery cable terminal connected to the battery, excessive torque will be applied to the negative battery cable terminal and the battery terminal will be damaged. When removing the negative battery cable terminal and current sensor, be careful not to damage the battery terminal.
- Be careful not to contact the positive battery cable terminal.
- Disconnect the current sensor connector before disconnecting the negative battery cable. If the negative battery cable is disconnected first, the PCM may mistakenly recognize a signal from the current sensor causing interference with engine control.

2. Disconnect the current sensor connector.
3. Disconnect the negative battery cable terminal.

- When disconnecting the plastic deformed negative battery cable, expand the gap of the negative battery terminal using a flathead screwdriver, and remove the nut.

NOTE:

- The negative battery cable nut cannot be removed to prevent it from falling off.

Negative battery cable terminal connection

CAUTION:

- Connect the negative battery cable before connecting the current sensor connector. If the current sensor connector is connected first, the PCM may mistakenly recognize a signal from the current sensor and learn the battery condition incorrectly.
- Verifying the tightness while holding the current sensor may apply excessive force to the terminal and the terminal could loosen, causing poor engine starting. When verifying the tightness of the negative battery cable terminal, only hold the terminal area, not the current sensor.

VERIFICATION OF NEGATIVE BATTERY CABLE TERMINAL TIGHTENING

1. Perform services required after connecting the negative battery cable terminal. (See **Required Procedure After Negative Battery Cable Disconnection/Connection**.)

NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]

WARNING:

- Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.
- When the battery cables are connected, touching the vehicle body with generator terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.

NOTE:

- The i-ELOOP caution label is adhered to the position shown in the figure below on vehicles with i-ELOOP. When determining if a vehicle in for servicing is equipped with i-ELOOP, refer to the i-ELOOP section. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

3. Remove the generator drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the A/C compressor with the cooler hose still connected and secure it using wire or rope so that it is out of the way. (with A/C) (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)

5. Remove in the order indicated in the table.

6. Install in the reverse order of removal.

1	Drive belt auto tensioner (See **Drive Belt Auto Tensioner Installation Note**.)
2	Terminal B cable
3	Generator connector
4	Generator (See **Generator Removal Note**.) (See **Generator Installation Note**.)

Generator Removal Note

1. Fully loosen the generator lower bolt and pull it outward until it contacts the body frame.

NOTE:

- The generator can be removed without fully removing the lower bolt from the engine.

2. Remove the generator upper bolt.
3. Remove the generator together with the lower bolt from the engine.
4. Remove the generator from above the engine compartment.

Generator Installation Note

1. To facilitate the installation of the generator to the engine, grasp the spacer in the bolt installation hole using pliers and push it down to the nut side.

2. Temporarily install the generator to the engine with the bolt C.

3. Align the generator fixing hole with the engine side hole, then temporarily tighten the generator installation bolt B.
4. Securely tighten the generator installation bolts in the order of B, C.

Drive Belt Auto Tensioner Installation Note

CAUTION:

- To allow the drive belt auto tensioner to function correctly, always bleed the air from the drive belt auto tensioner using the following procedure after assembling the drive belt auto tensioner.

1. Install the drive belt auto tensioner to the engine.

CAUTION:

- To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, move the drive belt auto tensioner up and down at full-stroke three times to bleed the air.

NOTE:

- By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.

2014 - Mazda3 - Engine

GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]

CAUTION:

1. Do not apply direct battery positive voltage to generator terminal 2B, otherwise it could cause damage to the internal parts (power transistor) of the generator.

NOTE:

- The i-ELOOP caution label is adhered to the position shown in the figure below on vehicles with i-ELOOP. When determining if a vehicle in for servicing is equipped with i-ELOOP, refer to the i-ELOOP section. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

Charging System Warning Light

1. Verify that the battery is fully charged.

2. Verify that the assembly condition of the drive belt is normal. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Switch the ignition ON (engine off), verify that the charging system warning light illuminates.

    - If it does not illuminate, inspect the charging system warning light and the wiring harness.

1. If the charging system warning light and the wiring harness are normal, inspect the PCM.

4. Verify that the charging system warning light turns off after the engine is started.

- If the charging system warning light does not turn off, perform the DTC inspection, then perform troubleshooting according to the corresponding diagnostic procedure. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Generator

Generator voltage inspection

1. Verify that the battery is fully charged.

2. Verify that the assembly condition of the drive belt is normal. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Turn off all electrical loads.

4. Start the engine.

5. Verify that the generator rotates smoothly without any noise while the engine is running.

- If there is any noise, find the cause and repair or replace the generator.

6. Measure the voltage at each terminal using a tester.

- If not as specified, find the cause and repair or replace the applicable part.

Generator standard voltage [IG-ON]

- Terminal 1A: B+
- Terminal 2A: Approx. 1 V or less
- Terminal 2B: Approx. 0 V

Generator standard voltage [Idle, 20 °C {68 °F}]

- Terminal 1A: 13—15 V
- Terminal 2A: Approx. 3—8 V

- Terminal 2B: Turn the electrical loads (such as headlights, blower motor, rear window defroster, brake lights) on and verify that the voltage reading increases.

Generator current inspection

NOTE:

1. Since the charging current decreases rapidly after starting the engine, carry out the following procedure quickly, and read the maximum current value.

1. Verify that the battery is fully charged.

2. Verify that the assembly condition of the drive belt is normal. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the negative battery cable.

4. Connect a tester, which can read **120 A or more**, between generator terminal B and generator terminal B cable.

5. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Turn off all electrical loads.

7. Start the engine.

8. Increase engine speed to **2,500 rpm.**

NOTE:

1. When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.

2. If the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

9. With the electric loads such as headlights, blower motor, rear window defroster, brake lights turned on, verify that the current increases.

1. If not as specified, replace the generator. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)

Generator generated current minimum value (without i-ELOOP)

- 70% of the nominal output current (nominal output current: 100 A)
- [Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]

Generator Internal Parts

Rotor

1. Measure the resistance between the slip rings using a tester.

- If not within specification, replace the rotor.

  Generator rotor resistance (between slip rings) [20 °C {68 °F}]

- 1.8—2.1 ohms

2. Verify that there is no continuity between the slip ring and core using a tester.

- If there is continuity, replace the rotor.

3. Inspect the slip ring surface condition.

- If the slip ring surface is rough, use a lathe or fine sandpaper to make it smooth.

Stator coil

1. Verify that the continuity is as indicated in the table.

○—○ : Continuity

Terminal					
1	2	3	4	5	6
○—○					
○—○		○			
	○—○				
			○—○		
			○—○		○
				○—○	

- If there is any malfunction, replace the stator.

2. Verify that there is no continuity between the stator coil leads and core using a tester.

- If there is continuity, replace the stator coil.

Brush

1. Inspect brushes for wear.

- If any brush is worn almost to or beyond the limit, replace all of the brushes.

  Generator brush length

- Standard: 22.5 mm {0.886 in}
- Minimum: 5.0 mm {0.20 in}

Brush spring

1. Measure the force of the brush spring using a spring pressure gauge.
2. Read the spring pressure gauge at the brush tip projection of **2 mm {0.08 in}.**

- If not within specification, replace the brush spring.

  Generator brush spring force

- Standard: 4.1—5.3 N {0.42—0.54 kgf, 1.0—1.1 lbf}
- Minimum: 1.7 N {0.17 kgf, 0.38 lbf}

Rectifier (Using an analog circuit tester)

1. Inspect for continuity of the diodes using an analog circuit tester.

- If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes

Rectifier (Using a digital circuit tester)

1. Inspect for continuity of the diodes using a digital circuit tester.

- If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

Bearing

1. Inspect for abnormal noise, looseness, and sticking.

- Replace the bearing if necessary.

2014 - Mazda3 - Engine

GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

1	Rotor component
2	Stator coil component

3	Pulley
4	Rotor
5	Front bearing
6	Rear bearing
7	Front cover
8	Stator coil (See **Stator Coil Disassembly/Assembly Note**.)
9	Rectifier
10	Regulator component
11	Rear cover
12	Terminal B component

Stator Coil Disassembly/Assembly Note

CAUTION:

- Melt the solder quickly, otherwise the diodes (rectifier) and regulator will be damaged by excessive heat.

2014 - Mazda3 - Engine

IGNITION SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

IGNITION SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1	Ignition coil/ion sensor (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **IGNITION COIL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	Spark plug (See **SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove in the order indicated in the table.

4. Install in the reverse order of removal.

1	Connector
2	Ignition coil/ion sensor

IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

IGNITION COIL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Ignition Coil Inspection

1. Perform the spark test and identify the malfunctioning cylinder. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Replace the ignition coil/ion sensor of the malfunctioning cylinder with that of a normal cylinder, and perform the spark test again. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- If the spark is not normal due to a malfunctioning ignition coil/ion sensor, replace that ignition coil/ion sensor.
- It is unlikely that all four ignition coil/ion sensors fail to operate properly. To prevent replacing a normal component, perform the above procedure, identify the malfunctioning ignition coil/ion sensor, and replace it.

2014 - Mazda3 - Engine

SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- If a spark plug that is not as specified is installed, engine performance will be deteriorated. Install only the specified spark plug when replacing.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the ignition coils/ion sensors. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the spark plugs using a plug-wrench.

5. Install in the reverse order of removal.

Tightening torque

- 15—20 N·m {1.6—2.0 kgf·m, 12—14 ft·lbf}

2014 - Mazda3 - Engine

SPARK PLUG INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Specification

Spark plug type

- PE5R-18-110, PE5S-18-110

Plug Gap Inspection

CAUTION:

1. To avoid possible damage to the tip, do not adjust the plug gap.
2. To prevent damaging the tip, use a wire type plug gap gauge when inspecting the plug gap.

1. Measure the spark plug gap using a wire type plug gap gauge.
    1. If not within the standard specification, replace the spark plug.

    Spark plug gap

    - Standard: 1.05—1.40 mm {0.0414—0.0551 in}
    - New spark plug (reference): 1.05—1.15 mm {0.0414—0.0452 in}

Cleaning

CAUTION:

1. Carbon may adhere to the tip of the spark plug during vehicle delivery or repeated short distance driving during the winter time. If there is any malfunction such as rough idling or start difficulty due to carbon adhesion causing plug fouling, burn off the carbon by performing no-load racing of the engine.
2. When performing the no-load racing, apply the side brake and foot brake, move the shift lever to neutral (MTX), or the selector lever to P position (ATX) to prevent an accident and serious injury.
3. To avoid possible damage to the spark plug tip, do not use a wire brush for cleaning.

NOTE:

1. To avoid possible damage to the tip, use gasoline to clean the spark plugs after removing dirt.

2. If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the PCM control operation, which prevents overheating, and it does not indicate a malfunction.

3. Do not perform no-load racing at high engine speed continuously for **10 s or more**.

1. If there is carbon adhering to the spark plug, perform no-load racing at **4,000 rpm** for **2 min**, **2 times**.

Visual Inspection

1. Inspect the following items:

- If any of the following malfunctions are indicated, replace the spark plug.
  - Insulator breakage
  - Worn electrode
  - Damaged gasket
  - Badly burned insulator (sparking side)

Resistance Inspection

1. Measure the resistance of the spark plug using a tester as shown in the figure.

- If not within specification, replace the spark plug.

Spark plug resistance [25°C {77 °F}]

1. 3.0—7.5 kilohms

2014 - Mazda3 - Engine

STARTING SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1	Starter interlock switch (MTX) (See **STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2	Starter (See **STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **STARTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **STARTER DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.
- When the battery cables are connected, touching the vehicle body with starter terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

1	Terminal B cable
2	Terminal S connector
3	Starter (See **Starter Installation Note**.)

Starter Installation Note

CAUTION:

- Do not overlap the starter with the end plate (area A shown in figure) when installing. If the starter is not correctly installed, the nut installed to the drive plate may contact the end plate causing abnormal noise (ATX).

2014 - Mazda3 - Engine

STARTER INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

On-vehicle Inspection

1. Verify that the battery is fully charged.
2. The starter is normal if it rotates smoothly and without any noise when the engine is cranked.
    - If the starter does not operate, inspect the following:
        - Remove the starter, and inspect the starter unit.
        - Inspect the related wiring harnesses, the ignition switch, and the transaxle range switch (ATX) or starter interlock switch (MTX).

No-load Test

1. Verify that the battery is fully charged.
2. Connect the starter, battery, and a tester as shown in the figure.

3. Operate the starter and verify that it rotates smoothly.
    - If the starter does not rotate smoothly, inspect the starter unit.
4. Measure the voltage and current while the starter is operating.
    - If not within specification, replace the starter.

      Starter no-load test voltage

    - 11 V

      Starter no-load test current

- SKYACTIV-G 2.0: 95 A or less
- SKYACTIV-G 2.5: 90 A or less

Magnetic Switch Operation Inspection

Pull-out test

NOTE:

- Depending on the battery charge condition, the starter motor pinion may rotate while in an extended state. This is due to current flowing to the starter motor through the pull-in coil to turn the starter motor, and does not indicate an abnormality.

1. Verify that the starter motor pinion is extended while battery positive voltage is connected to terminal S and the starter body is grounded.

- If the starter motor pinion is not extended, repair or replace the starter.

Return test

1. Disconnect the motor wire from terminal M.
2. Connect battery positive voltage to terminal M and ground the starter body.

3. Pull out the drive pinion with a screwdriver. Verify that it returns to its original position when released.

- If it does not return, repair or replace the starter.

Pinion Gap Inspection

1. Pull out the drive pinion with the battery positive voltage connected to terminal S and the starter body grounded.

CAUTION:

- Applying power for more than 10 s can damage the starter. Do not apply power for more than 10 s.

2. Measure the pinion gap while the drive pinion is extended.

- If not as specified, adjust with an adjustment washer (between drive housing front cover and magnetic switch).

  Starter pinion gap

- 0.5—2.0 mm {0.02—0.07 in}

Starter Inner Parts Inspection

Armature

1. Verify that there is no continuity between the commutator and the core at each segment using a tester.

- If there is continuity, replace the armature.

2. Verify that there is no continuity between the commutator and the shaft using a tester.

- If there is continuity, replace the armature.

3. Place the armature on V-blocks, and measure the runout using a dial indicator.

- If not within specification, replace the armature.

  Starter armature runout

- 0.1 mm {0.004 in} max.

4. Measure the commutator diameter.

- If not within the minimum specification, replace the armature.

Starter commutator diameter

- Standard: 29.4 mm {1.16 in}
- Minimum: 28.8 mm {1.13 in}

5. Measure the segment groove depth of the commutator.

- If not within the minimum specification, undercut the grooves to the standard depth.

Segment groove depth of starter commutator

- Standard: 0.5 mm {0.02 in}
- Minimum: 0.2 mm {0.008 in}

Magnetic switch

1. Inspect for continuity between terminals S and M using a tester.

- If there is no continuity, replace the magnetic switch.

2. Inspect for continuity between terminal S and the body using a tester.

- If there is no continuity, replace the magnetic switch.

3. Verify that there is no continuity between terminals M and B using a tester.

- If there is continuity, replace the magnetic switch.

Brush and brush holder

1. Verify that there is no continuity between each insulated brush and plate using a tester.

- If there is continuity, replace the brush holder.

2. Measure the brush length.

- If any brush is worn almost to or beyond the minimum specification, replace all of the brushes.

  Starter brush length

- Standard: 12.3 mm {0.484 in}
- Minimum: 5.5 mm {0.22 in}

3. Measure the brush spring force using a spring balance.

- If not within the minimum specification, replace the brush and brush holder component.

  Starter brush spring force

- Standard: 15.0—20.4 N {1.53—2.08 kgf, 3.38—4.58 lbf}

- Minimum: 2.75 N {0.280 kgf, 0.618 lbf}

2014 - Mazda3 - Engine

STARTER DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

1	Magnetic switch
2	Adjustment washer
3	Rear housing
4	Brush and brush holder
5	Armature
6	Yoke
7	Planetary gear
8	Front cover
9	Lever

10	Drive pinion
11	Internal gear
12	Gear shaft

2014 - Mazda3 - Engine

STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

1. Do not reuse the starter interlock switch if it is removed from the vehicle even once. Replace with a new starter interlock switch when installing.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the starter interlock switch connector.

3. Verify that the continuity is as indicated in the table using a tester.

○—○ : Continuity

Condition	Terminal	
	A	B
Clutch pedal is depressed	○	○
Clutch pedal is not depressed		

- If the continuity is not as indicated in the table, replace the starter interlock switch.

  (See **CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Engine

CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the driver side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

3. Disconnect the clock spring connector (part wiring harness-side).

4. Measure the resistance between clock spring terminals 3E and 3A (part wiring harness-side) using a tester.

*: PART WIRING HARNESS-SIDE

- If as specified, go to the next step.
- If not as specified, replace the steering switch. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)

Switch condition	Resistance (ohm)

Cruise OFF switch held at on	Continuity
CANCEL switch held at on	Approx. 84.5
SET (−) switch held at on	Approx. 189.5
SET (+) switch held at on	Approx. 326.5
RESUME (RES) switch held at on	Approx. 506.5
Cruise ON switch held at on	Approx. 761.5
Neutral	Approx. 3,311.5

5. Apply battery positive voltage to clock spring terminal 3F (part wiring harness-side), and terminal 3B (part wiring harness-side) to ground.

6. Verify that the LED illuminates.

- If the LED does not illuminate, replace the steering switch. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Engine

DRIVE SELECTION SWITCH INSPECTION [SKYACTIV-G 2.5]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure to remove the selector lever knob.

NOTE:

- If the servicing is difficult, release the shift lock manually and shift the selector lever to the N position.

a. Insert the tool (width: 6 mm or less, thickness: 1 mm or less) as shown in the figure.

b. Move the tool in the direction of arrow (1) in the figure and detach the hook. Move the lock release button cover in the direction of arrow (2) in the figure and remove it.

c. Remove the spring.

d. Remove the selector lever knob.

3. Remove the upper panel. (See **UPPER PANEL REMOVAL**.)

4. Remove the shift panel. (See **SHIFT PANEL REMOVAL / INSTALLATION**.)

5. Disconnect the shift panel component connector.

6. Verify that the continuity between shift panel component terminals F and G

Drive selection switch specification

Test condition	Continuity
Drive selection switch pressed	Continuity
Drive selection switch not pressed	No continuity

2014 - Mazda3 - Engine

CONTROL SYSTEM LOCATION INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Engine Compartment

1	Ion sensor (See **ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ION SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CONTROL SYSTEM WIRING DIAGRAM [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- There are two types of PCM settings. If the incorrect PCM is installed, it could cause interference with engine control.
- When replacing the PCM, verify the first four digits of the part number indicated on the PCM label before replacement, and replace the PCM with one having the same part number.

- If configuration and reprogramming is not performed when the PCM is replaced with a new one, the vehicle specification information and PCM software is not stored in the PCM and the system will not operate normally.
- When performing configuration and reprogramming, it is necessary to read the vehicle specification information from the PCM before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the PCM. The vehicle specification information is temporarily stored in the M-MDS.

NOTE:

- The PCM prior to replacement stores the vehicle specification information.
- A new PCM does not store any vehicle specification information.
- If the vehicle specification information PCM prior to replacement cannot be read, perform

the configuration using As-Built data.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the PCM cover. (See **PCM Cover Installation Note**.)

3. Disconnect the PCM connector. (See **PCM Connector Connection Note**.)

4. Remove the PCM assembly from the battery tray. (See **PCM Assembly Installation Note**.)

5. Remove the PCM from the PCM bracket.

6. Install in the reverse order of removal.

7. When replacing the PCM on the vehicles, perform the following:

NOTE:

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the PCM. (See **PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- (1) Perform the PCM configuration. (See **PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- (2) Perform the immobilizer system-related part programming. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)

PCM Assembly Installation Note

1. Install the PCM assembly shown in the figure.

PCM Cover Installation Note

1. Insert the PCM cover end into area A shown in the figure.

2. Temporarily tighten the two bolts, then completely tighten them.

PCM Connector Connection Note

CAUTION:

- Do not touch the PCM connector terminal. The terminal is extremely thin and can be damaged by touching it.
- If the PCM connector is inserted at an angle and the lever is moved, the connector could be damaged. Verify that the PCM connector is inserted straight.

1. Set the PCM connector to the position shown in the figure.

2. Align the PCM connector straight against the connection surface.

3. Insert the PCM connector straight and press it in until the lever moves up naturally. (Front harness-side connector)

4. Press the PCM connector lever until a click sound is heard.

PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Without Using the M-MDS

NOTE:

- Because the PCM uses a waterproof connector, the inspection for the voltage/wave pattern cannot be performed. The following values are for reference.

Terminal voltage table (Reference)

—: Not applicable

Terminal	Signal	Connected to	Test condition	Voltage (V)	inspection item
1A*1	CAN_2H	CAN system related modules	Because this terminal is for CAN, integrity determination by terminal voltage is not possible.		• Related wiring harness
1B*1	CAN_2L	CAN system related modules	Because this terminal is for CAN, integrity determination by terminal voltage is not possible.		• Related wiring harness
1C	—	—	—	—	—
1D	Knocking (–)	KS	Ignition switched ON (engine off) (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)	Approx. 1.65	• KS • Related wiring harness
1E	—	—	—	—	—
1F	—	—	—	—	—

1G	—	—	—	—	—
1H	Knocking (+)	KS	Ignition switched ON (engine off) (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)	Approx. 3.38	• KS • Related wiring harness
1I	GND	Sensor shield	Under any condition	Below 1.0	• Related wiring harness
1J	Electric variable valve timing motor (rotation direction)	Electric variable valve timing motor/driver	(See **Electric variable valve timing motor (rotation direction) signal**.)		• Electric variable valve timing motor/driver • Related wiring harness
1K*2	Neutral position	Neutral switch	Shift lever is at neutral position	Below 1.0	• Neutral switch • Related wiring harness
			Shift lever is not at neutral position	B+	
1L*2	Back-up light	Back-up light switch	Shift lever is at R position	Below 1.0	• Back-up light switch • Related wiring harness
			Shift lever is not at R position	B+	
1M	—	—	—	—	—
1N	—	—	—	—	—
1O	Electric variable valve timing motor (rotation pulse)	Electric variable valve timing motor/driver	(See **Electric variable valve timing motor (rotation pulse) signal**.)		• Electric variable valve timing motor/driver • Related wiring harness
1P	Oil pressure	Oil pressure switch	Ignition switched ON (engine off)	Below 1.0	• Oil pressure switch • Related wiring harness
			Idle (after warm up)	B+	
1Q	—	—	—	—	—
1R	—	—	—	—	—
1S	—	—	—	—	—
1T	Exhaust CMP	Exhaust CMP sensor	(See **Exhaust CMP signal**.)		• Exhaust CMP sensor • Related wiring harness
1U	—	—	—	—	—
1V	—	—	—	—	—

1W	A/F	A/F sensor	Idle (after warm up)	Approx. 4.2	• A/F sensor • Related wiring harness
1X	GND	Exhaust CMP sensor	Under any condition	Below 1.0	• Related wiring harness
1Y	Intake CMP	Intake CMP sensor	(See **Intake CMP signal**.)		• Intake CMP sensor • Related wiring harness
1Z*5	Generator output voltage	Generator	(See **Generator output voltage**.)		• Generator • Related wiring harness
1AA	—	—	—	—	—
1AB	A/F	A/F sensor	Idle (after warm up): 0 mA		• A/F sensor • Related wiring harness
1AC	GND	Intake CMP sensor	Under any condition	Below 1.0	• Related wiring harness
1AD	CKP	CKP sensor	(See **CKP signal**.)		• CKP sensor • Related wiring harness
1AE	Electric variable valve timing driver (diagnostic)	Electric variable valve timing motor/driver	(See **Electric variable valve timing driver (diagnostic) signal**.)		• Electric variable valve timing motor/driver • Related wiring harness
1AF*4	Generator output voltage	Generator	(See **Generator output voltage**.)		• Generator • Related wiring harness
1AG	A/F	A/F sensor	Idle (after warm up)	Approx. 3.48	• A/F sensor • Related wiring harness
1AH	GND	CKP sensor	Under any condition	Below 1.0	• Related wiring harness
1AI	Purge control	Purge solenoid valve	(See **Purge control**.)		• Purge solenoid valve • Related wiring harness

1AJ	IGT4	Ignition coil No.4	(See **IGT1, IGT2, IGT3, IGT4 control**.)			• Ignition coil No.4 • Related wiring harness
1AK	ECT	ECT sensor No.1	Ignition switched ON (engine off)	ECT 20 °C {68 °F}	Approx. 3.10	• ECT sensor No.1 • Related wiring harness
				ECT 40 °C {104 °F}	Approx. 2.16	
				ECT 60 °C {140 °F}	Approx. 1.40	
				ECT 80 °C {176 °F}	Approx. 0.87	
				ECT 100 °C {212 °F}	Approx. 0.54	
1AL	—	—	—		—	—
1AM	GND	ECT sensor No.1	Under any condition		Below 1.0	• Related wiring harness
1AN	Hydraulic variable valve timing control	OCV	(See **Hydraulic variable valve timing control signal**.)			• OCV • Related wiring harness
1AO	IGT3	Ignition coil No.3	(See **IGT1, IGT2, IGT3, IGT4 control**.)			• Ignition coil No.3 • Related wiring harness
1AP	—	—	—		—	—
1AQ	—	—	—		—	—
1AR	—	—	—		—	—
1AS	Engine oil control	Engine oil solenoid valve	(See **Engine oil control signal**.)			• Engine oil solenoid valve • Related wiring harness
1AT	IGT2	Ignition coil No.2	(See **IGT1, IGT2, IGT3, IGT4 control**.)			• Ignition coil No.2 • Related wiring harness
1AU	—	—	—		—	—
1AV	Ion (No.4)	Ion sensor No.4	Idle (after warm up)		Approx.	• Ion sensor No.4

				4.55	• Related wiring harness
1AW	—	—	—	—	—
1AX	—	—	—	—	—
1AY	IGT1	Ignition coil No.1	(See **IGT1, IGT2, IGT3, IGT4 control**.)		• Ignition coil No.1 • Related wiring harness
1AZ	Electric variable valve timing control	Electric variable valve timing motor/driver	(See **Electric variable valve timing control signal**.)		• Electric variable valve timing motor/driver • Related wiring harness
1BA	Ion (No.3)	Ion sensor No.3	Idle (after warm up)	Approx. 4.55	• Ion sensor No.3 • Related wiring harness
1BB	GND	Sensor shield	Under any condition	Below 1.0	• Related wiring harness
1BC	—	—	—	—	—
1BD	—	—	—	—	—
1BE*4	Generator field coil control	Generator	(See **Generator field coil control signal**.)		• Generator • Related wiring harness
1BF	Ion (No.2)	Ion sensor No.2	Idle (after warm up)	Approx. 4.55	• Ion sensor No.2 • Related wiring harness
1BG	GND	Sensor shield	Under any condition	Below 1.0	• Related wiring harness
1BH	—	—	—	—	—
1BI	—	—	—	—	—
1BJ	Constant voltage (Vref)	Fuel pressure sensor	Ignition switched ON (engine off)	Approx. 5.0	• Related wiring harness
1BK	Ion (No.1)	Ion sensor No.1	Idle (after warm up)	Approx. 4.55	• Ion sensor No.1 • Related wiring harness
					• Related

1BL	GND	Sensor shield	Under any condition		Below 1.0	wiring harness
1BM	—	—	—		—	—
1BN	Constant voltage (Vref)	CKP sensor	Ignition switched ON (engine off)		Approx. 5.0	• Related wiring harness
1BO	Constant voltage (Vref)	MAP sensor	Ignition switched ON (engine off)		Approx. 5.0	• Related wiring harness
1BP	TP (No.1)	TP sensor No.1	Ignition switched ON (engine off)	Accelerator pedal released	Approx. 1.11	• TP sensor No.1 • Related wiring harness
				Accelerator pedal fully depressed	Approx. 4.59	
1BQ	GND	TP sensor No.1, TP sensor No.2	Under any condition		Below 1.0	• Related wiring harness
1BR*5	Generator field coil control	Generator	(See **Generator field coil control signal**.)			• Generator • Related wiring harness
1BS	Constant voltage (Vref)	TP sensor No.1, TP sensor No.2	Ignition switched ON (engine off)		Approx. 5.0	• Related wiring harness
1BT	—	—	—		—	—
1BU	TP (No.2)	TP sensor No.2	Ignition switched ON (engine off)	Accelerator pedal released	Approx. 3.92	• TP sensor No.2 • Related wiring harness
				Accelerator pedal fully depressed	Approx. 0.41	
1BV	—	—	—		—	—
1BW	MAP	MAP sensor	Ignition switched ON (engine off)		Approx. 4.07	• MAP sensor • Related wiring harness
			Idle (after warm up)		Approx. 1.34	
			Racing (Engine speed: 2,000 rpm)		Approx. 1.05	
1BX	GND	MAP sensor, IAT sensor No.2	Under any condition		Below 1.0	• Related wiring harness
1BY	A/F sensor heater control	A/F sensor heater	(See **A/F sensor heater control signal**.)			• A/F sensor heater • Related wiring harness
1BZ	GND	GND	Under any condition		Below 1.0	• Related wiring harness

1CA	Fuel pressure	Fuel pressure sensor	Ignition switched ON (engine off)		Approx. 1.22	• Fuel pressure sensor • Related wiring harness
			Idle (after warm up)		Approx. 1.06	
1CB	GND	Fuel pressure sensor	Under any condition		Below 1.0	• Related wiring harness
1CC	Drive-by-wire control (–)	Throttle valve actuator	Ignition switched ON (engine off)		Approx. 10.51	• Throttle valve actuator • Related wiring harness
			Idle (after warm up)		B+	
1CD	—	—	—		—	—
1CE	IAT (No.2)	IAT sensor No.2	Ignition switched ON (engine off)	IAT 20 °C {68 °F}	Approx. 3.57	• IAT sensor No.2 • Related wiring harness

2E	—	—	—		—	—
2F*3	ECT (No.2)	ECT sensor No.2	Ignition switched ON (engine off)	ECT 20 °C {68 °F}	Approx. 3.10	• ECT sensor No.2 • Related wiring harness
				ECT 40 °C {104 °F}	Approx. 2.16	
				ECT 60 °C {140 °F}	Approx. 1.40	
				ECT 80 °C {176 °F}	Approx. 0.87	
				ECT 100 °C {212 °F}	Approx. 0.54	
2G	Brake (No.1)	Brake switch (No.1 signal)	Brake pedal released		Below 1.0	• Brake switch (No.1 signal) • Related wiring harness
			Brake pedal fully depressed		B+	
2H	Ignition (IG1)	IG1 relay	Ignition switched ON (engine off)		B+	• IG1 relay • Related wiring harness

2I	Ambient temperature	Ambient temperature sensor	Ignition switched ON (engine off)	AAT 20 °C {68 °F}	Approx. 2.70	• Ambient temperature sensor • Related wiring harness
				AAT 30 °C {104 °F}	Approx. 1.80	
2J*2	CPP	CPP switch, start stop unit	Clutch pedal fully depressed		Below 1.0	• CPP switch • Start stop unit • Related wiring harness
			Clutch pedal released		B+	
2K	Main relay control	Main relay	Ignition switched ON (engine off)		Approx. 0.8	• Main relay • Related wiring harness
2L*5	DC-DC converter control	DC-DC converter	Idle (after warm up)		0 or B+	• DC-DC converter • Related wiring harness
2M	—	—	—		—	—
2N	—	—	—		—	—
2O	Battery voltage	Battery	Ignition switched ON (engine off)		B+	• Battery • Related wiring harness
2P	—	—	—		—	—
2Q	—	—	—		—	—
2R	Brake (No.2)	Brake switch (No.2 signal)	Brake pedal released		Below 1.0	• Brake switch (No.2 signal) • Related wiring harness
			Brake pedal fully depressed		B+	
2S	Battery voltage	Main relay	Ignition switched ON (engine off)		B+	• Related wiring harness
2T	Battery voltage	Main relay	Ignition switched ON (engine off)		B+	• Related wiring harness
2U	IAT (No.1)	IAT sensor No.1	Ignition switched ON (engine off)	IAT 20 °C {68 °F}	Approx. 2.70	• IAT sensor No.1 • Related wiring harness
				IAT 40 °C {104 °F}	Approx. 1.80	
				IAT 60 °C {140 °F}	Approx. 1.20	
2V	—	—	—		—	—

2W*5	DC-DC converter control	DC-DC converter	Idle (after warm up)	0 or B+	• DC-DC converter • Related wiring harness
2X	—	—	—	—	—
2Y*3	Fuel tank pressure	Fuel tank pressure sensor	Fuel tank pressure is 10 kPa {0.10 kgf/cm2, 1.5 psi} lower than barometric pressure.	Approx. 1.2	• Fuel tank pressure sensor • Related wiring harness
			Fuel tank pressure is equal to barometric pressure.	Approx. 2.6	
			Fuel tank pressure is 6 kPa {0.06 kgf/cm2, 0.9 psi} higher than barometric pressure.	Approx. 3.7	
2Z*5	Active air shutter control (LIN)	Active air shutter	Because this terminal is for LIN, good/no good judgment by terminal voltage is not possible.		• Active air shutter • Related wiring harness
2AA	GND	GND	Under any condition	Below 1.0	• Related wiring harness
2AB	—	—	—	—	—
2AC	—	—	—	—	—
2AD	GND	Sensor shield	Under any condition	Below 1.0	• Related wiring harness
2AE	Fuel pump control	Fuel pump control module	(See **Fuel pump control signal**.)		• Fuel pump control module • Related wiring harness
2AF	A/C cut-off control	A/C relay	A/C relay OFF	B+	• A/C relay • Related wiring harness
			A/C relay ON	Below 1.0	
2AG	HO2S (–)	HO2S	Idle (after warm up)	Approx. 1.65	• HO2S • Related wiring harness
2AH	—	—	—	—	—
2AI	HO2S (+)	HO2S	Idle (after warm up)	Approx. 2.49	• HO2S • Related wiring harness
2AJ	GND	Refrigerant pressure sensor*6, fuel tank pressure sensor, ECT sensor No.2, ambient temperature sensor	Under any condition	Below 1.0	• Related wiring harness

2AK	HS CAN_H	CAN system related modules	Because this terminal is for CAN, integrity determination by terminal voltage is not possible.			• Related wiring harness
2AL	HS CAN_L	CAN system related modules	Because this terminal is for CAN, integrity determination by terminal voltage is not possible.			• Related wiring harness
2AM	Fuel pump control module (diagnostic)	Fuel pump control module	(See **Fuel pump control module (diagnostic) signal**.)			• Fuel pump control module • Related wiring harness
2AN	APP (No.1)	APP sensor No.1	Ignition switched ON (engine off)	Accelerator pedal released	Approx. 0.75	• APP sensor No.1 • Related wiring harness
				Accelerator pedal fully depressed	Approx. 4.1	
2AO	GND	APP sensor No.1	Under any condition		Below 1.0	• Related wiring harness
2AP	—	—	—		—	—
2AQ	Fuel pump control	Fuel pump relay	Ignition switched ON (engine off)		B+	• Fuel pump relay • Related wiring harness
			Idle (after warm up)		Below 1.0	
2AR	Constant voltage (Vref)	APP sensor No.1	Ignition switched ON (engine off)		Approx. 5.0	• Related wiring harness
2AS	APP (No.2)	APP sensor No.2	Ignition switched ON (engine off)	Accelerator pedal released	Approx. 0.38	• APP sensor No.2 • Related wiring harness
				Accelerator pedal fully depressed	Approx. 2.05	
2AT	GND	APP sensor No.2	Under any condition		Below 1.0	• Related wiring harness
2AU	Cooling fan control	Cooling fan relay No.1	Cooling fan operating		Below 1.0	• Cooling fan relay No.1 • Related wiring harness
			Cooling fan not operating		B+	
2AV	Cooling fan control	Cooling fan relay No.2, No.3	Cooling fan operating		Below 1.0	• Cooling fan relay No.2, No.3 • Related wiring harness
			Cooling fan not operating		B+	
2AW	Constant voltage (Vref)	APP sensor No.2	Ignition switched ON (engine off)		Approx. 5.0	• Related wiring harness
			Refrigerant pressure: 1.0 MPa {10 kgf/cm^2, 145 psi}		Approx. 1.58	• Refrigerant pressure

2AX*6	Refrigerant pressure	Refrigerant pressure sensor	Refrigerant pressure: 1.1 MPa {11 kgf/cm^2, 160 psi}		Approx. 1.75	sensor • Related wiring harness
			Refrigerant pressure: 1.2 MPa {12 kgf/cm^2, 174 psi}		Approx. 1.88	
2AY	GND	MAF sensor, IAT sensor No.1	Under any condition		Below 1.0	• Related wiring harness
2AZ	Starter cut-off control	Starter relay, start stop unit	Ignition switched ON (engine off)	**MTX** • Clutch pedal released **ATX** • Selector lever position is not P or N position	B+	• Starter relay • Start stop unit • Related wiring harness
				MTX • Clutch pedal fully depressed **ATX** • Selector lever position is P or N position	Below 1.0	
2BA	—	—	—		—	—
2BB	Constant voltage (Vref)	Refrigerant pressure sensor*6, MAF sensor	Ignition switched ON (engine off)		Approx. 5.0	• Related wiring harness
2BC	MAF	MAF sensor	Ignition switched ON (engine off)		Approx. 0.72	• MAF sensor • Related wiring harness
			Idle (after warm up)		Approx. 0.86	
			Racing (Engine speed: 2,000 rpm)		Approx. 1.07	
2BD	Selector lever position*1	TCM, start stop unit	Selector lever position is not P or N position		B+	• TCM • Start stop unit • Related wiring harness
			Selector lever position is P or N position		Below 1.0	
	Starter interlock*2	Starter interlock switch, start stop unit	Clutch pedal fully depressed		Below 1.0	• Starter interlock switch • Start stop unit • Related wiring harness
			Clutch pedal released		B+	
2BE	—	—	—		—	—
2BF*3	CV solenoid	CV solenoid valve	Ignition switched ON (engine off)		B+	• CV solenoid valve • Related
			Idle (CV solenoid valve not operating)		B+	

	control		Idle (CV solenoid valve operating)	Below 1.0	wiring harness

Inspection Using An Oscilloscope (Reference)

Electric variable valve timing motor (rotation direction) signal

PCM terminals

- 1J(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition

- Idle (after warm up)

Electric variable valve timing motor (rotation pulse) signal

PCM terminals

- 1O(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition

- Idle (after warm up)

Exhaust CMP signal

PCM terminals

- 1T(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition

- Idle (after warm up)

Intake CMP signal

PCM terminals

- 1Y(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition

- Idle (after warm up)

CKP signal

PCM terminals

- 1AD(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition

- Idle (after warm up)

Electric variable valve timing driver (diagnostic) signal

PCM terminals

- 1AE(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 100 ms/DIV (X), DC range

Vehicle condition

- Idle (after warm up)

Generator output voltage

PCM terminals

- 1Z(+)—body ground(–)

- 1AF(+)—body ground(–)

Oscilloscope setting

- 5 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Purge control

PCM terminals

- 1AI(+)—body ground(–)

Oscilloscope setting

- 10 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

IGT1, IGT2, IGT3, IGT4 control

PCM terminals

- IGT1 (ignition coil No.1): 1AY(+)—body ground(–)
- IGT2 (ignition coil No.2): 1AT(+)—body ground(–)
- IGT3 (ignition coil No.3): 1AO(+)—body ground(–)
- IGT4 (ignition coil No.4): 1AJ(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Hydraulic variable valve timing control signal

PCM terminals

- 1AN(+)—body ground(–)

Oscilloscope setting

- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Engine oil control signal

PCM terminals

- 1AS(+)—body ground(–)

Oscilloscope setting

- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Electric variable valve timing control signal

PCM terminals

- 1AZ(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Generator field coil control signal

PCM terminals

- 1BE(+)—body ground(–)
- 1BR(+)—body ground(–)

Oscilloscope setting

- 1 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

A/F sensor heater control signal

PCM terminals

- 1BY(+)—body ground(–)

Oscilloscope setting

- 5 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Drive-by-wire control (+) signal

PCM terminals

- 1CG(+)—body ground(–)

Oscilloscope setting

- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Fuel injection control (-) signal

PCM terminals

- Fuel Injection No.1: 1DO(+)—body ground(–)
- Fuel Injection No.2: 1DW(+)—body ground(–)
- Fuel Injection No.3: 1EA(+)—body ground(–)
- Fuel Injection No.4: 1DS(+)—body ground(–)

Oscilloscope setting

- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Fuel injection control (+) signal

PCM terminals

- Fuel Injection No.1: 1DP(+)—body ground(–)
- Fuel Injection No.2: 1DX(+)—body ground(–)
- Fuel Injection No.3: 1EB(+)—body ground(–)

- Fuel Injection No.4: 1DT(+)—body ground(–)

Oscilloscope setting

- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

High pressure fuel pump control (+) signal

PCM terminals

- 1EE(+)—body ground(–)

Oscilloscope setting

- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

High pressure fuel pump control (-) signal

PCM terminals

- 1EF(+)—body ground(–)

Oscilloscope setting

- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

HO2S heater control signal

PCM terminals

- 2C(+)—body ground(–)

Oscilloscope setting

- 5 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition

- Idle (immediately after starting engine)

Fuel pump control signal

PCM terminals

- 2AE(+)—body ground(–)

Oscilloscope setting

- 5 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Fuel pump control module (diagnostic) signal

PCM terminals

- 2AM(+)—body ground(–)

Oscilloscope setting

- 2 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition

- Idle after warm up

Using The M-MDS

NOTE:

- PIDs for the following parts are not available on this model. Go to the appropriate part inspection page.
  - Intake CMP sensor and exhaust CMP sensor (See **CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
  - Main relay (See **RELAY INSPECTION**.)

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. Measure the PID value.
   - If PID value is not within the specification, follow the instructions in action column.

NOTE:

- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.
- The simulation items that are used in the engine control system operation inspection are as follows.
  - ACCS, AIRSHUT_DSD*, ARPMDES, EVAPCP, EVAPCV, FAN1, FAN3, FP, INJ_1, INJ_2, INJ_3, INJ_4, OIL_P_SOL, Test, VT EX_DES

*

If the active air shutter fully open/closed position learning is not completed, the active air shutter cannot be forcibly operated. When the active air shutter is forcibly operated, perform the active air shutter fully open/closed position learning.

—: Not applicable

Item (definition)	Unit/Condition	Definition	Value type	Condition/Specification (Reference)	PCM terminal
AAT*5	°C, °F	Ambient air temperature	—	• Displays ambient air temperature	2I
AC_PRES*6	KPa {MPa}, mBar {Bar}, psi, in H20	Refrigerant pressure input from refrigerant pressure sensor	Calculation	• Displays refrigerant pressure	2AX
	V	Refrigerant pressure sensor voltage	Input	• Refrigerant pressure is 1.0 MPa {10 kgf/cm^2, 145 psi}: Approx. 1.58 V • Refrigerant pressure is 1.1 MPa {11 kgf/cm^2, 160 psi}: Approx. 1.75 V • Refrigerant pressure is 1.2 MPa {12 kgf/cm^2, 174 psi}: Approx. 1.88 V	
AC_REQ	Off/On	A/C switch status received by PCM via CAN	Input	• A/C switch off: Off • A/C switch on: On	CAN (2AK, 2AL)
ACCS	Off/On	A/C relay status input from A/C relay	Input	• A/C relay off: Off • A/C relay on: On	2AF

AIRSHUT_ACT*1	%	Active air shutter position	Calculation	• Active air shutter position is 0°: 0% • Active air shutter position is 90°: 100%	LIN (2Z)
AIRSHUT_CAL*1	Not Done/Completed	Active air shutter fully open/closed position learning status	Calculation	• Displays active air shutter fully open/closed position learning status	—
ALTF	%	Field coil current control signal output to generator	Calculation	• Ignition switched ON (engine off): 0% • Idle: Approx. 42% • Racing (Engine speed is 2,000 rpm): Approx. 29%	1BR*1, 1BE*2
ALTF_ACT*1	%	Actually measured value of field coil current signal input from generator	Calculation	• Displays actual generator field current control duty value	—
ALTT V*2	V	Generator output voltage	Input	• Idle (no E/L): Approx. 14 V (This is internal calculation value and differs from terminal voltage)	1AF
AMB_TEMP	°C, °F	Actually measured ambient temperature input from ambient temperature sensor	Calculation	• Displays ambient air temperature	2I
APP	%	Accelerator pedal opening angle (relative value) with the fully released status as 0% and fully depressed status as 100%	Calculation	• Accelerator pedal released: Approx. 0% • Accelerator pedal fully depressed: Approx. 100%	—
APP1	%	Accelerator pedal opening angle (absolute value) input from APP sensor No.1	Calculation	• Accelerator pedal released: Approx. 15% • Accelerator pedal fully depressed: Approx. 82%	2AN
	V	APP sensor No.1 voltage	Input	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal fully depressed: Approx. 4.1 V	
	%	Accelerator pedal opening angle (absolute value) input from APP	Calculation	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal fully depressed: Approx. 41%	

APP2		sensor No.2			2AS
	V	APP sensor No.2 voltage	Input	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal fully depressed: Approx. 2.05 V	
ARPMDES	RPM	Target engine speed	Calculation	• Displays target engine speed	—
BARO	KPa {MPa}, mBar {Bar}, psi, in H20	Actually measured barometric pressure input from barometric pressure sensor built into PCM	Calculation	• Displays BARO	—
	V	BARO sensor voltage	Input	• Ignition switched ON (at sea level): Approx. 4.08 V	
BATT_CUR*1	A	Battery current	Calculation	• Displays battery charge/discharge current value	CAN (2AK, 2AL)
BATT_DAY*1	—	Number of days elapsed since current sensor initialization	Calculation	• Displays vehicle battery days in service.	CAN (2AK, 2AL)
BATT_RES*1	—	Battery internal resistance (estimated)	Calculation	• Displays battery inferred internal resistance.	CAN (2AK, 2AL)
BATT_SOC*1	%	Battery charge condition (estimated)	Calculation	• Displays battery estimated state of charge.	CAN (2AK, 2AL)
BATT_TEMP*1	°C, °F	Battery temperature	Calculation	• Displays battery fluid temperature	CAN (2AK, 2AL)
BATT_V*1	V	Battery voltage	Calculation	• Displays battery voltage	CAN (2AK, 2AL)
BOO	High/Low	Brake switch (No.1 signal) input status	Calculation	• Brake pedal released: Low • Brake pedal fully depressed: High	2G
BPA	High/Low	Brake switch (No.2 signal) input status	Calculation	• Brake pedal released: Low • Brake pedal fully depressed: High	2R
CAP_SYS_10*1	Off/On	Open circuit in capacitor (i-ELOOP) (power cannot be supplied from capacitor)	Calculation	• Capacitor internal circuit is not open: Off • Capacitor internal circuit is open: On	—

CAP_SYS 13*1	Off/On	Capacitor (i-ELOOP) capacitance malfunction	Calculation	Capacitor (i-ELOOP) capacitance status is not normal: On • Capacitor (i-ELOOP) capacitance status is normal: Off	—
CAP_SYS 14*1	Off/On	Capacitor (i-ELOOP) capacitance deterioration	Calculation	• Capacitor (i-ELOOP) capacitance status deteriorates: On • Capacitor (i-ELOOP) capacitance status is normal: Off	—
CAP_SYS 15*1	Off/On	Capacitor (i-ELOOP) internal resistance malfunction	Calculation	• Internal resistance status in capacitor (i-ELOOP) is not normal: On • Internal resistance status in capacitor (i-ELOOP) is normal: Off	—
CAP_SYS 16*1	Off/On	Capacitor (i-ELOOP) internal resistance deterioration	Calculation	• Internal resistance status in capacitor (i-ELOOP) deteriorates: On • Internal resistance status in capacitor (i-ELOOP) is normal: Off	—
CATT11_DSD	°C, °F	Estimated catalytic converter temperature	Calculation	• Displays estimated catalytic converter temperature	—
CHRGLP	Off/On	Charging system warning light illumination status	Calculation	• Charging system warning light not illuminated: Off • Charging system warning light illuminated: On	—
CPP*3	Off/On	Clutch pedal position	Calculation	• Clutch pedal fully depressed: On • Clutch pedal released: Off	2J
CPP/PNP*3	Off/On	Shift lever position	Calculation	• Other than neutral: Off • Neutral: On	1K
ECT	°C, °F	Engine coolant temperature	Calculation	• Displays ECT	1AK
	V	ECT sensor No.1 voltage	Input	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V	
				• ECT is 20 °C {68 °F}: Approx. 3.10 V	

ECT2_V*5	V	ECT sensor No.2 voltage	Input	• ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V	2F
EQ_RAT11	—	Excess air factor (estimated value) to theoretical air/fuel ratio (14.7) by fuel feedback control	Calculation	• Idle (after warm up): Approx. 1	—
EQ_RAT11_DSD	—	Target excess air factor (estimated value) to theoretical air/fuel ratio (14.7) by fuel feedback control	Calculation	• Indicate target lambda (Excess air factor = supplied air amount / theoretical air/fuel ratio)	—
ETC_ACT	°	Actual throttle valve opening angle	Calculation	**Ignition switched ON (engine off)** • Accelerator pedal released: Approx. 12.89 ° • Accelerator pedal fully depressed: Approx. 86.03 ° **Idle (after warm up)** • Accelerator pedal released: Approx. 3.2 °	—
ETC_DSD	%	Target throttle valve opening angle (percent)	Calculation	• Displays target TP opening angle (percent)	—
	°	Target throttle valve opening angle	Calculation	• Displays target TP opening angle	
EVAPCP	%	Purge solenoid valve control duty value	Calculation	• Idle (after warm up): Approx. 0% • Racing (Engine speed 2,000 rpm): 4.3—35% • Racing (Engine speed 4,000 rpm): Approx. 66%	1AI
EVAPCV*5	Off/On	CV solenoid valve operation status	Calculation	• Simulation item (EVAPCV) is ON: On	2BF
FAN1	Off/On	Cooling fan relay No.1 operation status	Calculation	• Cooling fan relay No.1 off: Off • Cooling fan relay No.1 on: On	2AU

FAN3	Off/On	Cooling fan relay No.2 and No.3 operation status	Calculation	• Cooling fan relay No.2 and No.3 off: Off • Cooling fan relay No.2 and No.3 on: On	2AV
FCL*5	Off/On	Check fuel cap warning light illumination status	Calculation	• Check fuel cap warning light not illuminated: Off • Check fuel cap warning light illuminated: On	—
FIA	—	Fuel injection amount	Calculation	• Displays fuel injection amount	—
FLI	%	Fuel level	Calculation	• Fuel gauge level F: Approx. 100% • Fuel gauge level E: Approx. 0%	CAN (2AK, 2AL)
FP	Off/On	Fuel pump relay operation status	Calculation	• Ignition switched ON (engine off): Off • Cranking: On • Idle (after warm up): On	2AQ
FP_DUTY	%	Fuel pump control module control duty value	Calculation	• Ignition switched ON (engine off): Approx. 55.74% • Cranking: Approx. 95% • Idle (after warm up): Approx. 55.74%	2AE
FTP*5	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel tank pressure	Calculation	• Displays fuel tank pressure	2Y
	V	Fuel tank pressure sensor voltage	Input	• Fuel tank pressure is equal to barometric pressure: Approx. 2.6 V	
FUEL_P_DSD	KPa {MPa}, mBar {Bar}, psi, in H20	Target fuel pressure (high pressure fuel pump)	Calculation	• Displays target fuel pressure (high pressure fuel pump)	—
FUEL_PRES	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	Calculation	• Displays fuel pressure	1CA
	V	Fuel pressure sensor voltage	Input	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V	
FUELPW	Sec	Fuel injection pulse width (fuel injector energization time) output to fuel injector	Calculation	• Idle (after warm up): Approx. 1.4 ms • Racing (engine speed is 2,000 rpm): Approx. 1.1 ms • Racing (engine speed is 4,000 rpm): Approx. 1.0 ms	No.1:1DO/1DP No.2:1DW/1DX No.3:1EA/1EB No.4:1DS/1DT
		Feedback status of fuel injection control is			

FUELSYS	OL/CL/ OL_Drive/ OL_Fault/ CL_Fault	displayed OL: Feedback control is disabled at cold engine start CL: During feedback control by A/F sensor and HO2S OL_Drive: While feedback control is stopped OL_Fault: Feedback control is disable due to system malfunction CL_Fault: During feedback control with either A/F sensor or HO2S having a malfunction	Calculation	• Idle (after warm up): OL or CL • Racing (engine speed is 2,000 rpm): CL • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): OL-Drive	—
GEAR*4	Unknown/1st/2nd/3rd/4th/5th/6th/Not in P/Park/Neutral/Drive/Reverse	Gear commanded	Calculation	• Selector lever at P position: Park • Selector lever at R position: Reverse • Selector lever at N position: Neutral • Selector lever is in D or M position while vehicle is stopped: 1st	CAN (2AK, 2AL)
HTR11	Off/On	A/F sensor heater operation status	Calculation	• Ignition switched ON (engine off): Off • Idle (after warm up): On	1BY
	%	A/F sensor heater control duty value	Calculation	• Ignition switched ON (engine off): 0% • Idle (after warm up): Approx. 40%	
HTR12	Off/On	HO2S heater operation status	Calculation	• Ignition switched ON (engine off): Off • Idle (after warm up): On	2C
	%	HO2S heater control duty value	Calculation	• Ignition switched ON (engine off): 0% • Idle (after warm up): Approx. 40%	
IAT	°C, °F	Intake air temperature (No.1)	Calculation	• Displays IAT (No.1)	2U
	V	IAT sensor	Input	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}:	

		No.1 voltage		Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V	
IAT2	°C, °F	Intake air temperature (No.2)	Calculation	• Displays IAT (No.2)	1CE
	V	IAT sensor No.2 voltage	Input	• IAT2 is 20 °C {68 °F}: Approx. 3.57 V • IAT2 is 40 °C {104 °F}: Approx. 2.70 V • IAT2 is 60 °C {140 °F}: Approx. 1.87 V	
INGEAR*3	Off/On	Gears are engaged	Calculation	• When the following conditions are satisfied: On ▪ Other than neutral ▪ Clutch pedal released • Except above: Off	CAN (2AK, 2AL)
ISC_FBK	%	ISC feedback value	Calculation	• Displays ISC feedback value	—
ISC_FBK_LRN	%	Learning value for calculating ISC feedback amount	Calculation	• Displays ISC feedback learning value	—
IVS	Off Idle/Idle	CTP condition	Calculation	• Racing: Off Idle • Idle: Idle	—
KNOCKR	°	Camshaft retard amount when knocking determined	Calculation	• Ignition switched ON (engine off): 0 ° • Idle (after warm up): 0 °	—
LOAD	%	Ratio of actual amount of intake air to the maximum air charging amount (mass volume) of cylinder	Calculation	• Idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%	—
LONGFT1	%	Fuel learning correction amount estimated based on A/F sensor signal	Calculation	• Idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%	—
LONGFT12	%	Fuel learning correction amount estimated based on	Calculation	• Idle (after warm up): Approx. 0%	—

		heated oxygen sensor signal			
LOW_OIL	Never Detected/Detected	Engine oil pressure condition Never Detected: Engine oil pressure is high Detected: Engine oil pressure is low	Calculation	• Ignition switched ON (engine off): Detected • Idle (after warm up): Detected • Racing (engine speed is 2,000 rpm): Never Detected	—
M_GEAR*3	Neutral/1st gear/2nd gear/3rd gear/4th gear/5th gear/6th gear/Reverse/Undefined/Auto/In_Progress/YSF/Error	Manual gear position	Calculation	• Displays manual gear position	CAN (2AK, 2AL)
MAF	g/Sec	Mass air flow	Calculation	• Displays MAF	2BC
	V	MAF sensor voltage	Input	• Ignition switched ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V	
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	Calculation	• Displays MAP	1BW
	V	MAP sensor voltage	Input	• Ignition switched ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V	
MF_CAT1	—	Number of misfires in No.1 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	Calculation	• Displays number of misfires corresponding to possible catalytic converter damage (No.1 cylinder)	—
		Number of			

MF_CAT_2	—	misfires in No.2 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	Calculation	• Displays number of misfires corresponding to possible catalytic converter damage (No.2 cylinder)	—
MF_CAT_3	—	Number of misfires in No.3 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	Calculation	• Displays number of misfires corresponding to possible catalytic converter damage (No.3 cylinder)	—
MF_CAT_4	—	Number of misfires in No.4 cylinder leading to catalytic converter temperature increase (catalytic converter temperature increases due to fuel combustion around catalytic converter after misfire)	Calculation	• Displays number of misfires corresponding to possible catalytic converter damage (No.4 cylinder)	—
MF_CAT_FCC	—	Threshold of malfunction determination for number of misfires (total number in all cylinders) leading to catalytic converter temperature increase	Calculation	• Displays number of misfire determinations (for catalytic converter)	—
MF_CAT_TTL	—	Number of misfires (total number in all cylinders) leading to catalytic converter temperature	Calculation	• Displays number of misfires corresponding to possible catalytic converter damage (total)	—

		increase			
MF_EMI1	—	Number of misfires in No.1 cylinder under conditions required by emission regulations	Calculation	• Displays number of misfires possibly affecting emission (No.1 cylinder)	—
MF_EMI_2	—	Number of misfires in No.2 cylinder under conditions required by emission regulations	Calculation	• Displays number of misfires possibly affecting emission (No.2 cylinder)	—
MF_EMI_3	—	Number of misfires in No.3 cylinder under conditions required by emission regulations	Calculation	• Displays number of misfires possibly affecting emission (No.3 cylinder)	—
MF_EMI_4	—	Number of misfires in No.4 cylinder under conditions required by emission regulations	Calculation	• Displays number of misfires possibly affecting emission (No.4 cylinder)	—
MF_EMI_FCC	—	Threshold of malfunction determination for number of misfires (total number in all cylinders) under conditions required by emission regulations	Calculation	• Displays number of misfire determinations (for emission)	—
MF_EMI_TTL	—	Number of misfires (total number in all cylinders) under conditions required by emission regulations	Calculation	• Displays number of misfires possibly affecting emission (total)	—
MIL	Off/On	Check engine light illumination status	Calculation	• Check engine light not illuminated: Off • Check engine light illuminated: On	—
MIL_DIS	km {mph}, ft, mi	Travelled distance since check engine light illuminated	Calculation	• Displays travelled distance since check engine light illuminated	—
				• Idle (after warm up):	

O2S11	µA	A/F sensor current	Input	Approx. -39 µA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA	1AB
O2S12	V	HO2S voltage	Input	• Idle (after warm up): 0 —1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V	2AI/2AG
OIL_P_SOL	Off/On	Engine oil solenoid valve operation status	Calculation	• ECT below 98 °C {208 °F} and engine speed below 4,000 rpm: On • ECT above 98 °C {208 °F} or engine speed above 4,000 rpm: Off	1AS
OIL_TEMP	°C, °F	Estimated engine oil temperature	Calculation	• Displays estimated engine oil temperature	—
PN_SW*4	Open/Closed	Parking/neutral	Calculation	• Selector lever at P position or N position: Closed • Except above: Open	CAN (2AK, 2AL)
PRE_CHG_DIS*1	km, ft {mi}	Distance at pre-charge	Calculation	• Displays distance at pre-charge	—
RO2FT1	%	Fuel correction amount based on HO2S signal including SHRTFT12 and LONGFT12	Calculation	• Idle (after warm up): Approx. 0.5% • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.99%	—
RPM	RPM	Engine speed	Calculation	• Displays engine speed	1AD
SHRTFT1	%	Fuel feedback correction amount estimated based on A/F sensor signal	Calculation	• Idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. -3.12% • Racing (engine speed is 4,000 rpm): Approx. -8.59%	—
SHRTFT12	%	Fuel feedback correction amount estimated based on HO2S signal	Calculation	• Idle (after warm up): Approx. 0%	—
SPARKADV	°	Ignition timing	Calculation	• Displays ignition timing	—
Test	Off/On	Test mode operation condition due to forced override operation	Calculation	• Test mode off: Off • Test mode on: On	—

TH_M*5	—	Thermostat monitor	Calculation	• Indicates heat radiation ratio (heat radiation when thermostat is malfunctioning/heat radiation when thermostat is normal) when thermostat monitoring is finished	—
TH_M_MAX*5	—	Thermostat monitor max	Calculation	• Indicates upper limit of heat radiation ratio (heat radiation when thermostat is malfunctioning/heat radiation when thermostat is normal) for thermostat monitoring execution	—
TH_M_MIN*5	—	Thermostat monitor min	Calculation	• Indicates lower limit of heat radiation ratio (heat radiation when thermostat is malfunctioning/heat radiation when thermostat is normal) for thermostat monitoring execution	—
TP_REL	%	Throttle valve opening angle (relative value) with value at throttle valve fully open timing as the start point	Calculation	• Accelerator pedal released: Approx. 12% • Accelerator pedal fully depressed: Approx. 82%	—
TP1	V	TP sensor No.1 voltage	Input	• Accelerator pedal released: Approx. 1.11 V • Accelerator pedal fully depressed: Approx. 4.59 V	1BP
	%	Throttle valve position No.1	Calculation	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 92%	
TP2	V	TP sensor No.2 voltage	Input	• Accelerator pedal released: Approx. 3.92 V • Accelerator pedal fully depressed: Approx. 0.41 V	1BU
	%	Throttle valve position No.2	Calculation	• Accelerator pedal released: Approx. 22% • Accelerator pedal fully depressed: Approx. 82%	
TPCT	V	TP sensor No.1 voltage at CTP	Calculation	• Ignition switched ON (engine off): Approx. 0.5 V	—
TPCT2	V	TP sensor No.2 voltage at CTP	Calculation	• Ignition switched ON (engine off): Approx. 4.5 V	—
		Battery			

VPWR	V	positive voltage	Input	• Displays battery voltage	2O
VSS	KPH, MPH	Vehicle speed	Calculation	• Displays vehicle speed	CAN (2AK, 2AL)
VT EX_DES	°	Desired exhaust valve timing	Calculation	• Displays desired exhaust valve timing	—
VT IN_ACT	°	Actual intake valve timing	Calculation	• Displays actual intake valve timing	1Y
VT IN_DES	°	Desired intake valve timing	Calculation	• Displays desired intake valve timing	—
VT_EX_ACT	°	Actual exhaust valve timing	Calculation	• Displays actual exhaust valve timing	1T
VT_EX_DUTY	%	OCV control duty value	Calculation	• Idle (after warm up): Approx. 0% • Racing (engine speed is 2,000 rpm): Approx. 46%	1AN

2014 - Mazda3 - Engine

PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- When performing configuration, it is necessary to read the vehicle specification information from the PCM before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the PCM. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    - Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

    - Select “Programmable Module Installation”.
    - Select “PCM”.

4. Perform the configuration according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the PCM and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

    - If any DTC is stored, clear it.
    - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
    - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Engine

PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    - Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

    - Select “As-Built”.
    - Select “PCM”.

4. Perform the configuration according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the PCM and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

    - If any DTC is stored, clear it.
    - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
    - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Engine

CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Continuity Inspection

1. Verify that the CPP switch is installed properly. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the CPP switch connector.

4. Verify that the continuity between CPP switch terminals A and B when the clutch pedal is depressed and when it is released is according to the following table:

Clutch pedal position	Continuity
Clutch pedal released (Rod is pressed.)	No continuity
Clutch pedal depressed (Rod is not pressed.)	Continuity detected

- If not as verified, replace the CPP switch. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Engine

NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Continuity Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the neutral switch. (See **NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
3. Inspect for continuity between neutral switch terminals A and B.

- If not as specified, replace the neutral switch. (See **NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

Specification

Measured condition	Continuity
Rod pushed	Continuity detected
Rod not pushed	No continuity

2014 - Mazda3 - Engine

ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before removing the ECT sensor.

ECT Sensor No.1

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Pull out the evaporative hose No.1 from the catch tank and set it aside.

5. Remove the clip from the bracket and loosen the wiring harness.

6. Set the wiring harness aside.

7. Disconnect the ECT sensor No.1 connector.

8. Remove the ECT sensor No.1 using the **SST**.

9. Install in the reverse order of removal.

10. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

ECT Sensor No.2

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Lift up the vehicle.

3. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

4. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Disconnect the ECT sensor No.2 connector.

6. Remove the ECT sensor No.2 using the **SST**.

7. Install in the reverse order of removal.

8. Refill the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine can cause severe burns. Turn off the engine and wait until it is cool before removing the ECT sensor.

ECT Sensor No.1

Resistance inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Pull out the evaporative hose No.1 from the catch tank and set it aside. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the clip from the bracket and loosen the wiring harness. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Set the wiring harness aside. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Disconnect the ECT sensor No.1 connector.

8. Remove the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

9. Place the ECT sensor No.1 in water with a thermometer, and heat the water gradually.

10. Measure the resistance between ECT sensor No.1 terminals A and B.

- If not as specified, replace the ECT sensor No.1. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

ECT (°C {°F})	Resistance (Kilohms)
20 {68}	Approx. 2.45
80 {176}	Approx. 0.318

ECT Sensor No.2

Resistance inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

3. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Disconnect the ECT sensor No.2 connector. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the ECT sensor No.2. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Place the ECT sensor No.2 in water with a thermometer, and heat the water gradually.

7. Measure the resistance between ECT sensor No.2 terminals A and B.

- If not as specified, replace the ECT sensor No.2. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

ECT (°C {°F})	Resistance (Kilohms)
20 {68}	Approx. 2.45
80 {176}	Approx. 0.318

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- Because the IAT sensor No.1 is integrated in the MAF sensor, replacing the IAT sensor No.1 includes replacement of the MAF sensor/IAT sensor No.1.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the MAF sensor/IAT sensor No.1 connector.

3. Remove the MAF sensor/IAT sensor No.1.

4. Install in the reverse order of removal.

MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2....

2014 - Mazda3 - Engine

MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Visual Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the MAF sensor/IAT sensor No.1 connector.

3. Remove the MAF sensor/IAT sensor No.1. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Visually inspect the MAF sensor for the following:

- Damage, cracks, dirt
- Rusted sensor terminal
- Bent sensor terminal
    - If there is any malfunction, repair or replace the MAF sensor/IAT sensor No.1. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Voltage Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the MAF sensor/IAT sensor No.1 without disconnecting the connector. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Connect the M-MDS to the DLC 2.

5. Switch the ignition ON (engine off).

6. As the air gradually approaches the MAF detection part of the MAF sensor/IAT sensor No.1, verify that the MAF sensor output voltage (PID: MAF) varies. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- If not as specified, replace the MAF sensor/IAT sensor No.1. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

2014 - Mazda3 - Engine

INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

IAT Sensor No.1

Resistance inspection

NOTE:

- Because the IAT sensor No.1 is integrated in the MAF sensor, replacing the IAT sensor No.1 includes replacement of the MAF sensor/IAT sensor No.1.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the MAF sensor/IAT sensor No.1 connector.

3. Measure the resistance between MAF sensor/IAT sensor No.1 terminals A and B.

- If not as specified, replace the MAF sensor/IAT sensor No.1. (See **MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

IAT (°C {°F})	Resistance (Kilohms)
−20 {−4}	13.7—16.6
20 {68}	2.49—2.79
60 {140}	0.622—0.703

IAT Sensor No.2

Resistance inspection

NOTE:

- Because the IAT sensor No.2 is integrated in the MAP sensor, replacing the IAT sensor No.2 includes replacement of the MAP sensor/IAT sensor No.2.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the MAP sensor/IAT sensor No.2 connector.

3. Remove the MAP sensor/IAT sensor No.2. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Measure the resistance between MAP sensor/IAT sensor No.2 terminals A and B.

- If not as specified, replace the MAP sensor/IAT sensor No.2. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

IAT (°C {°F})	Resistance (Kilohms)
0 {32}	Approx. 5.9
20 {68}	Approx. 2.5
80 {176}	Approx. 0.323
130 {266}	Approx. 0.0893

2014 - Mazda3 - Engine

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- Because the IAT sensor No.2 is integrated in the MAP sensor, replacing the IAT sensor No.2 includes replacement of the MAP sensor/IAT sensor No.2.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the MAP sensor/IAT sensor No.2 connector.

3. Remove the MAP sensor/IAT sensor No.2.

4. Install in the reverse order of removal.

2014 - Mazda3 - Engine

MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Voltage Inspection

1. Connect the M-MDS to the DLC 2.
2. Switch the ignition ON (engine off).
3. Verify that the MAP sensor output voltage (PID: MAP) is within the specification. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   - If not within the specification, replace the MAP sensor/IAT sensor No.2. (See **MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

2014 - Mazda3 - Engine

BAROMETRIC PRESSURE (BARO) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- Because the BARO sensor is integrated in the PCM, replacing the BARO sensor includes replacement of the PCM.

1. Remove the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Voltage Inspection

NOTE:

- Because the BARO sensor is integrated in the PCM, replacing the BARO sensor includes replacement of the PCM.

1. Connect the M-MDS to the DLC 2.

2. Switch the ignition ON (engine off).

3. Verify that the BARO sensor output voltage (PID: BARO) is within the specification. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   - If not within the specification, replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

2014 - Mazda3 - Engine

THROTTLE POSITION (TP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- The TP sensor cannot be removed as a single unit. When replacing the TP sensor, replace it together with the throttle body as a single unit.

1. Remove the throttle body. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Voltage Inspection

CAUTION:

- The inspection cannot be performed with this method correctly if there is a malfunction of the APP sensor or throttle valve actuator. Verify that no DTCs related to the APP sensor or throttle valve actuator are stored before the inspection.

NOTE:

- The TP sensor cannot be removed as a single unit. When replacing the TP sensor, replace it together with the throttle body as a single unit.

1. Connect the M-MDS to the DLC 2.

2. Switch the ignition ON (engine off).

3. Verify that the TP sensor output voltage (PID: TP1, TP2) varies according to the accelerator opening angle when the accelerator opening angle is gradually increased. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    - If verified, go to the next step.
    - If it cannot be verified, replace the throttle body. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Verify that the TP sensor output voltage (PID: TP1, TP2) is within the specification when the accelerator pedal is depressed and not depressed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    - If not within the specification, replace the throttle body. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

ACCELERATOR PEDAL POSITION (APP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- Because the APP sensor is integrated in the accelerator pedal, replacing the APP sensor includes replacement of the accelerator pedal.

1. Remove the accelerator pedal. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Voltage Inspection

NOTE:

- Because the APP sensor is integrated in the accelerator pedal, replacing the APP sensor includes replacement of the accelerator pedal.

1. Connect the M-MDS to the DLC 2.

2. Switch the ignition ON (engine off).

3. Verify that the APP sensor output voltage (PID: APP1, APP2) increases according to the increase in the accelerator opening angle when the accelerator opening angle is gradually increased. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    - If verified, go to the next step.
    - If it cannot be verified, replace the accelerator pedal. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Verify that the APP sensor output voltage (PID: APP1, APP2) is within the specification when the accelerator pedal is depressed and not depressed. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

    - If not within the specification, replace the accelerator pedal. (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

2014 - Mazda3 - Engine

FUEL PRESSURE SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- The fuel pressure sensor cannot be removed as a single unit. When replacing the fuel pressure sensor, replace it together with the fuel distributor as a single unit.

1. Remove the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Voltage Inspection

NOTE:

- The fuel pressure sensor cannot be removed as a single unit. When replacing the fuel pressure sensor, replace it together with the fuel distributor as a single unit.

1. Connect the M-MDS to the DLC 2.

2. Switch the ignition ON (engine off).

3. Verify that the fuel pressure sensor output voltage (PID: FUEL_PRES) is within the specification. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   - If not within the specification, replace the fuel distributor. (See **FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Specification (Reference)

2014 - Mazda3 - Engine

AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

CAUTION:

- Do not allow flammable objects such as the taping for bundling a wiring harness to come into contact with the exhaust manifold and silencer.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the A/F sensor connector.

3. Remove the clip from the bracket.

4. Remove the wiring harness from the wire clip A and B. (See **Assembly of Wiring Harness to Wire Clip Note**.)

5. Remove the A/F sensor using the **SST**.

6. Install in the reverse order of removal.

Assembly of Wiring Harness to Wire Clip Note

- Secure the heat shrinkable tube on the wiring harness to wire clip A.

- Secure the wiring harness to wire clip B so that the band on the wiring harness is positioned to the position shown in the figure.

WIRE CLIP B
BAND
WIRING HARNESS

2014 - Mazda3 - Engine

AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

PID/DATA Monitor Inspection (A/F Sensor)

1. Connect the M-MDS to the DLC 2.

2. Start the engine and warm it up completely.

3. Access the following PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   - VSS (Vehicle speed)
   - RPM (Engine speed)
   - O2S11 (A/F sensor output current)

4. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.

5. Verify that the A/F sensor output current (PID: O2S11) is **0.25 mA or more** while decelerating as shown in the figure.

- If not as verified, replace the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Resistance Inspection (A/F Sensor Heater)

WARNING:

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the A/F sensor connector.

3. Measure the resistance between A/F sensor terminals A and E.

- If not as specified, replace the A/F sensor. (See **AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

A/F sensor heater resistance

- 1—10 ohms [normal temperature]

2014 - Mazda3 - Engine

HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

WARNING:

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

CAUTION:

- Do not allow flammable objects such as the taping for bundling a wiring harness to come into contact with the exhaust manifold and silencer.

NOTE:

- If penetrant lubricating spray penetrates the airflow hole of the HO2S, it could cause interference with the HO2S function.
- When removing the HO2S, wrap a rag around the lower position so that penetrant lubricating spray does not get sprayed into the airflow hole.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Lift up the vehicle.

3. Remove the floor under cover. (See **FLOOR UNDER COVER REMOVAL/INSTALLATION**.)

4. Disconnect the HO2S connector.

5. Remove the insulator and brace bar. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the clip C from the body.

7. Remove the clip A and clip B from the catalytic converter.

8. Remove the HO2S using the **SST**.

9. Install in the reverse order of removal.

2014 - Mazda3 - Engine

HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

PID/DATA Monitor Inspection (HO2S)

1. Connect the M-MDS to the DLC 2.

2. Start the engine and warm it up completely.

3. Access the following PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   - VSS (Vehicle speed)
   - RPM (Engine speed)
   - O2S12 (HO2S output voltage)

4. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.

5. Verify that the HO2S output voltage (PID: O2S12) changes as shown in the figure during deceleration. (It outputs **0.6 V or more** once, then **0.3 V or less**.)

- If not as verified, replace the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Resistance Inspection (HO2S Heater)

WARNING:

- A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Lift up the vehicle.
3. Remove the floor under cover. (See **FLOOR UNDER COVER REMOVAL/INSTALLATION**.)
4. Disconnect the HO2S connector.
5. Measure the resistance between HO2S terminals C and D.

- If not as specified, replace the HO2S. (See **HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

HO2S heater resistance

- 2—50 ohms [normal temperature]

2014 - Mazda3 - Engine

CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- When replacing the CKP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.
- Do not assemble the CKP sensor or change the installation position using any method other than the following. Otherwise, it could negatively affect engine control, such as the ignition timing and fuel injection.

1. Turn the steering wheel to full right lock.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Lift up the vehicle.

4. Perform the following procedure for easier access.

   a. Remove the service hole cover (installed to front under cover No.2) used to remove the oil filter. (See **OIL FILTER REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   b. Remove the front splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

5. Disconnect the CKP sensor connector.

6. Remove the CKP sensor.

7. Install in the reverse order of removal.

2014 - Mazda3 - Engine

CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Visual Inspection

CAUTION:

- When replacing the CKP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.

1. Turn the steering wheel to full right lock.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Lift up the vehicle.

4. Perform the following procedure for easier access.

   a. Remove the service hole cover (installed to front under cover No.2) used to remove the oil filter. (See **OIL FILTER REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   b. Remove the front splash shield (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

5. Disconnect the CKP sensor connector.

6. Remove the CKP sensor. (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Verify that there are no metal shavings on the sensor.

   - If there is a malfunction, remove any metal shavings that are adhering.

Voltage Inspection

CAUTION:

- When replacing the CKP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.
- If the wiring harnesses or waterproof connectors are damaged, water penetrating the connector will cause a sensor malfunction. To prevent this, be careful not to damage wiring harnesses or waterproof connectors.

1. Idle the engine.

2. Measure the CKP sensor output voltage using the oscilloscope.

- If not as specified, replace the CKP sensor. (See **CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Terminal	Voltage (V)	Condition
A	Approx. 5.0	Under any condition
B	Below 1.0	Under any condition
C	Above 4.5	High output*
	Below 0.8	Low output*

*

Output voltage varies with crankshaft rotation.

2014 - Mazda3 - Engine

CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- When replacing the CMP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.

Intake CMP Sensor

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Disconnect the intake CMP sensor connector.

5. Remove the intake CMP sensor.

6. Install in the reverse order of removal.

Exhaust CMP Sensor

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the exhaust CMP sensor connector.

3. Remove the exhaust CMP sensor.

4. Install in the reverse order of removal.

2014 - Mazda3 - Engine

CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Intake CMP Sensor

Visual inspection

CAUTION:

- When replacing the CMP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Disconnect the intake CMP sensor connector.

5. Remove the intake CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Verify that there are no metal shavings on the intake CMP sensor.

    - If there is a malfunction, remove any metal shavings that are adhering.

Voltage inspection

CAUTION:

- When replacing the CMP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.
- If the wiring harnesses or waterproof connectors are damaged, water penetrating the connector will cause a sensor malfunction. To prevent this, be careful not to damage wiring harnesses or waterproof connectors.

1. Idle the engine.

2. Measure the intake CMP sensor output voltage using the oscilloscope.

If not as specified, replace the intake CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Terminal	Voltage (V)	Condition
A	Above 4.8	High output*
	Below 0.8	Low output*
B	Below 1.0	Under any condition
C	B+	Under any condition

*

Output voltage varies with camshaft rotation.

Exhaust CMP Sensor

Visual inspection

CAUTION:

- When replacing the CMP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the exhaust CMP sensor connector.

3. Remove the exhaust CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Verify that there are no metal shavings on the exhaust CMP sensor.

    - If there is a malfunction, remove any metal shavings that are adhering.

Voltage inspection

CAUTION:

- When replacing the CMP sensor, make sure there is no foreign matter on it such as metal shavings. If it is installed with foreign matter, the sensor output signal will malfunction resulting from fluctuation in magnetic flux and cause a deterioration in engine control.
- If the wiring harnesses or waterproof connectors are damaged, water penetrating the connector will cause a sensor malfunction. To prevent this, be careful not to damage wiring harnesses or waterproof connectors.

1. Idle the engine.
2. Measure the exhaust CMP sensor output voltage using the oscilloscope.
   - If not as specified, replace the exhaust CMP sensor. (See **CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Terminal	Voltage (V)	Condition
A	Above 4.8	High output*
	Below 0.8	Low output*
B	Below 1.0	Under any condition
C	B+	Under any condition

*

Output voltage varies with camshaft rotation.

2014 - Mazda3 - Engine

KNOCK SENSOR (KS) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Disconnect the KS connector.
5. Remove the KS.

6. Install in the reverse order of removal. (See **KS Installation Note (SKYACTIV-G 2.0)**.) (See **KS Installation Note (SKYACTIV-G 2.5)**.)

KS Installation Note (SKYACTIV-G 2.0)

- Verify that there is no foreign matter caught between the KS unit and cylinder block.
- The direction of the KS connector is within the 90-degree angle range shown in the figure.

KS Installation Note (SKYACTIV-G 2.5)

- Verify that there is no foreign matter caught between the KS unit and cylinder block.
- The direction of the KS connector is within the 60-degree angle range shown in the figure.

2014 - Mazda3 - Engine

KNOCK SENSOR (KS) INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Resistance Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the intake manifold. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Disconnect the KS connector.

5. Remove the KS. (See **KNOCK SENSOR (KS) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Measure the resistance between KS terminals A and B.

- If not as specified, replace the KS. (See **KNOCK SENSOR (KS) REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

  Specification

- 504—616 kilohms [10—30 °C {50—86 °F}]

2014 - Mazda3 - Engine

CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

CAUTION:

- Be careful not to contact the positive battery cable terminal.

Current Sensor Removal

CAUTION:

- If the nut for the current sensor is loosened with the negative battery cable terminal connected to the battery, excessive torque will be applied to the negative battery cable terminal and the battery terminal will be damaged. When removing the negative battery cable terminal and current sensor, be careful not to damage the battery terminal.
- Disconnect the current sensor connector before disconnecting the negative battery cable terminal. If the negative battery cable terminal is disconnected first, the PCM may mistakenly recognize a signal from the current sensor causing interference with engine control.

1. Disconnect the current sensor connector.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Loosen the current sensor nut while fixing the negative battery terminal using a wrench.

4. Remove the current sensor.

Current Sensor Install

CAUTION:

- Connect the negative battery cable before connecting the current sensor connector. If the current sensor connector is connected first, the PCM may mistakenly recognize a signal from the current sensor and learn the battery condition incorrectly.
- Verifying the tightness while holding the current sensor may apply excessive force to the terminal and the terminal could loosen, causing poor engine starting. When verifying the tightness of the negative battery cable terminal, only hold the terminal area, not the current sensor.

1. Temporarily install the negative battery cable and the current sensor.

2. Tighten the current sensor nut to the specified torque while fixing the negative battery cable terminal using a wrench.

3. Connect the negative battery cable.

4. Connect the current sensor connector.

5. Perform services required after connecting the negative battery cable terminal. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC Inspection

1. Connect the M-MDS to the DLC 2.

2. Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- If any DTC related to the current sensor is present, repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Visual Inspection

CAUTION:

- If the nut for the current sensor is loosened with the negative battery cable terminal connected to the battery, excessive torque will be applied to the negative battery cable terminal and the battery terminal will be damaged. When removing the negative battery cable terminal and current sensor, be careful not to damage the battery terminal.
- Be careful not to contact the positive battery cable terminal.
- Disconnect the current sensor connector before disconnecting the negative battery cable terminal. If the negative battery cable terminal is disconnected first, the PCM may mistakenly recognize a signal from the current sensor causing interference with engine control.
- Connect the negative battery cable before connecting the current sensor connector. If the current sensor connector is connected first, the PCM may mistakenly recognize a signal from the current sensor and learn the battery condition incorrectly.
- Verifying the tightness while holding the current sensor may apply excessive force to the terminal and the terminal could loosen, causing poor engine starting. When verifying the tightness of the negative battery cable terminal, only hold the terminal area, not the current sensor.

1. Disconnect the current sensor connector.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the current sensor. (See **CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Verify that there is no damage to the current sensor, and no corrosion and damage to the

connector.

- If there is a malfunction, replace the current sensor. (See **CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL TANK PRESSURE SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- The fuel tank pressure sensor cannot be removed as a single unit. When replacing the fuel tank pressure sensor, replace it together with the charcoal canister as a single unit.

1. Remove the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

FUEL TANK PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Voltage Inspection

NOTE:

- The fuel tank pressure sensor cannot be removed as a single unit. When replacing the fuel tank pressure sensor, replace it together with the charcoal canister as a single unit.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the fuel tank pressure sensor connector. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the quick release connectors and remove the evaporative hose component (fuel tank side). (See **QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Switch the ignition ON (engine off).

5. Plug one end of the charcoal canister and verify that the output voltage from the fuel tank pressure sensor changes when pressure is applied from the other end.

    - If not as specified, replace the charcoal canister. (See **CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ENGINE OIL DATA RESET [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- If the engine oil was replaced with the engine oil maintenance monitor function ON, perform the engine oil data reset to reset the engine oil replacement period calculation data recorded in the PCM regardless of whether or not the wrench mark is illuminated.
- The settings for the engine oil maintenance monitor function can be verified using the M-MDS or the center display (vehicles with center display).

Engine oil data reset procedure

Step	Inspection	Results	Action	Note
1	• Verify the settings for the engine oil maintenance monitor function using the M-MDS. • Is the setting OFF?	Yes	The engine oil data reset is unnecessary.	If the engine oil maintenance monitor function is on, it is necessary to perform the engine oil data reset.
		No	Go to the next step.	
2	• Press and hold the TRIP button with the ignition switched off, then switch it on. • Keep pressing the TRIP button for more than **5 s**. • Does the master warning light flash for a few seconds?	Yes	Engine oil data reset is completed.	The master warning light flashes for a few seconds when the engine oil data reset procedure is completed.
		No	Perform Step 2 again.	

2014 - Mazda3 - Engine

ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

NOTE:

- Because the ion sensor is integrated in the ignition coil, replacing the ion sensor includes replacement of the ignition coil/ion sensor.

1. Remove the ignition coil/ion sensor. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ION SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

DTC Inspection

1. Connect the M-MDS to the DLC 2.

2. Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- If any DTC related to the ignition coil/ion sensor is present, repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Visual Inspection

NOTE:

- Because the ion sensor is integrated in the ignition coil, replacing the ion sensor includes replacement of the ignition coil/ion sensor.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the ignition coil/ion sensor. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Verify that there is no damage to the ignition coil/ion sensor, and no corrosion and damage to the connector.

- If there is a malfunction, replace the ignition coil/ion sensor. (See **IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Engine

ENGINE TECHNICAL DATA [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

Item	Specification
Idle speed (MTX: Neutral position, ATX: P, N position)	MTX: 500—600 rpm ATX: 550—650 rpm
Ignition timing [SKYACTIV-G 2.0]	MTX: Approx. BTDC 14° ATX: Approx. BTDC 12°
Ignition timing [SKYACTIV-G 2.5]	Approx. BTDC 12°
CO concentration	Within the regulation
HC concentration	Within the regulation
Idle-up speed (MTX: Neutral position, ATX: P, N position)	A/C on: 650—800 rpm Electrical loads on: 600—750 rpm
Compression [SKYACTIV-G 2.0]	Standard: 885 kPa {9.02 kgf/cm^2, 128 psi}[300 rpm] Minimum: 708 kPa {7.22 kgf/cm^2, 103 psi}[300 rpm] Maximum difference between cylinders: 150 kPa {1.53 kgf/cm^2, 21.8 psi}[300 rpm]
Compression [SKYACTIV-G 2.5]	Standard: 954 kPa {9.73 kgf/cm^2, 138 psi}[300 rpm] Minimum: 763 kPa {7.78 kgf/cm^2, 111 psi}[300 rpm] Maximum difference between cylinders: 161 kPa {1.64 kgf/cm^2, 23.4 psi}[300 rpm]
OCV coil resistance	6.9—7.5 ohms [20°C {68°F}]
Cylinder head bolt length L	145.2—145.8 mm {5.717—5.740 in}

Cylinder head bolt length L maximum	146.5 mm {5.767 in}
Front oil seal press on amount	0—1.0 mm {0—0.039 in}
Rear oil seal press on amount	0—0.5 mm {0—0.019 in}
Engine oil capacity [SKYACTIV-G 2.0] (approx. quantity)	Oil replacement: 4.0 L {4.2 US qt, 3.5 Imp qt} Oil and oil filter replacement: 4.2 L {4.4 US qt, 3.7 Imp qt} Total (dry engine): 4.9 L {5.2 US qt, 4.3 Imp qt}
Engine oil capacity [SKYACTIV-G 2.5] (approx. quantity)	Oil replacement: 4.3 L {4.5 US qt, 3.8 Imp qt} Oil and oil filter replacement: 4.5 L {4.8 US qt, 4.0 Imp qt} Total (dry engine): 5.4 L {5.7 US qt, 4.8 Imp qt}
Oil pressure (reference value) [coolant temperature: 80—90 °C {176—194 °F}]	Lo: 110—175 kPa {1.13—1.78 kgf/cm^2, 16.0—25.3 psi} [1,500 rpm] Hi: 300—430 kPa {3.06—4.38 kgf/cm^2, 43.6—62.3 psi} [4,500 rpm]
Engine coolant capacity (approx. quantity)	SKYACTIV-G 2.0 MTX: 6.3 L {6.7 US qt, 5.5 Imp qt} SKYACTIV-G 2.0 ATX: 6.5 L {6.9 US qt, 5.7 Imp qt} SKYACTIV-G 2.5 ATX: 6.8 L {7.2 US qt, 6.0 Imp qt}
Cooling system cap valve opening pressure	93.2—122.6 kPa {0.951—1.250 kgf/cm^2, 13.6—17.7 psi}
Thermostat initial-opening temperature	U.S.A. and Canada: 80.5—83.5 °C {177—182 °F} Except U.S.A. and Canada: 86.5—89.5 °C {188—193 °F}
Thermostat full-open temperature	95 °C {203 °F}
Thermostat full-open lift	8.5 mm {0.33 in} or more
Cooling fan motor No.1, No.2 standard current	No.1: 4.3—8.3 A [12 V] No.2: 4.1—8.1 A [12 V]
Throttle body resistance	0.3—100 ohms [20°C {68 °F}]
Fuel pressure	405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}
Fuel hold pressure	230 kPa {2.35 kgf/cm^2, 33.4 psi} or more

Fuel injector resistance	1.74—2.04 ohms [20 °C {68 °F}]
Battery electrolyte specific gravity (without i-ELOOP)	1.22—1.29 [20 °C {68 °F}]
Battery load test current (without i-ELOOP)	55D23L (60 A·h/20HR): 180 A 75D23L (65 A·h/20HR): 195 A
Parasitic draw (When the ignition is off (lock), all doors and the hood are closed.) (without i-ELOOP)	40—65 mA
Battery slow charge current (without i-ELOOP)	55D23L (60 A·h/20HR): 4.5—5.5 A 75D23L (65 A·h/20HR): 5.0—6.0 A
Battery quick charge current [30 min] (without i-ELOOP)	55D23L (60 A·h/20HR): 30 A 75D23L (65 A·h/20HR): 35 A
Generator standard voltage [IG-ON] (without i-ELOOP)	Terminal 1A: B+ Terminal 2A: Approx. 1 V or less Terminal 2B: Approx. 0 V
Generator standard voltage [Idle, 20 °C {68 °F}] (without i-ELOOP)	Terminal 1A: 13—15 V Terminal 2A: Approx. 3—8 V Terminal 2B: Turn the electrical loads (such as headlights, blower motor, rear window defroster, brake lights) on and verify that the voltage reading increases.
Generator generated current minimum value (without i-ELOOP)	70% of the nominal output current (nominal output current: 100 A) [Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]
Generator rotor resistance (between slip rings) [20 °C {68 °F}] (without i-ELOOP)	1.8—2.1 ohms
Generator brush length (without i-ELOOP)	Standard: 22.5 mm {0.886 in} Minimum: 5.0 mm {0.20 in}
Generator brush spring force (without i-ELOOP)	Standard: 4.1—5.3 N {0.42—0.54 kgf, 1.0—1.1 lbf} Minimum: 1.7 N {0.17 kgf, 0.38 lbf}

Firing order	1—3—4—2 (all cylinders independent firing)
	Spark plug type	PE5R-18-110, PE5S-18-110
Spark plug gap	Standard: 1.05—1.40 mm {0.0414—0.0551 in} New spark plug (reference): 1.05—1.15 mm {0.0414—0.0452 in}
Spark plug resistance [25°C {77 °F}]	3.0—7.5 kilohms
Starter no-load test voltage	11 V
Starter no-load test current	SKYACTIV-G 2.0: 95 A or less SKYACTIV-G 2.5: 90 A or less
Starter pinion gap	0.5—2.0 mm {0.02—0.07 in}
Starter armature runout	0.1 mm {0.004 in} max.
Starter commutator diameter	Standard: 29.4 mm {1.16 in} Minimum: 28.8 mm {1.13 in}
Segment groove depth of starter commutator	Standard: 0.5 mm {0.02 in} Minimum: 0.2 mm {0.008 in}
Starter brush length	Standard: 12.3 mm {0.484 in} Minimum: 5.5 mm {0.22 in}
Starter brush spring force	Standard: 15.0—20.4 N {1.53—2.08 kgf, 3.38—4.58 lbf} Minimum: 2.75 N {0.280 kgf, 0.618 lbf}

Engine oil specification

Item	U.S.A., Canada and Puerto Rico	Except U.S.A., Canada and Puerto Rico
Engine oil grade	(ILSAC)	API SERVICE SM SAE 5W-30 ENERGY CONSERVING II (ILSAC)
		API SM or ILSAC
Engine oil viscosity	0W-20	5W-30 (If SAE 5W-30 engine oil is not available, use SAE 5W-20 engine oil.)

2014 - Mazda3 - Suspension

FOREWORD

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Suspension

TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS

- For the tire pressure monitoring system on-board diagnostic system, refer to Section 04 as it is controlled by the DSC CM. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)

2014 - Mazda3 - Suspension

TIRE PRESSURE MONITORING SYSTEM (TPMS) WIRING DIAGRAM

2014 - Mazda3 - Suspension

SYMPTOM TROUBLESHOOTING

No.	Symptom	Description
1	TPMS warning light illuminates.	The tire pressure monitoring system warning light illuminates according to the decrease in a tire air pressure (tire pressure monitoring system is normal).

2014 - Mazda3 - Suspension

NO.1 TPMS WARNING LIGHT ILLUMINATES

CAUTION:

- The tire pressure monitoring system warning light illuminates according to the decrease in a tire air pressure (tire pressure monitoring system is normal).
- The No.1 TPMS WARNING LIGHT ILLUMINATES the diagnostic procedure if the tire pressure monitoring system warning light illuminated due to a decrease in a tire pressure although the tire pressure monitoring system is normal.

Possible malfunction

- The air pressure of a tire has decreased. (Tire pressure monitoring system normal)

Diagnostic Procedure

Step	Inspection	Results	Action
1	TIRE PRESSURE INSPECTION • Inspect tire pressures while the tires are cold. (See **WHEEL AND TIRE SPECIFICATION**.) • Are the tire pressures at the specification?	Yes	Go to the next step.
		No	Adjust the tire pressures to the specification while the tires are cold.

2	TIRE PRESSURE MONITORING SYSTEM INITIALIZATION
	• Perform tire pressure monitoring system initialization.
	• Connect the M-MDS (IDS) to DLC-2.
	• After the vehicle is identified, select the following items from the initial screen of the IDS.
	  ◦ Select "Chassis"
	  ◦ Select "ABS/DSC"
	  ◦ Select "TPMS Reset"
		Yes	Go to the next step.

		No	Perform the tire pressure monitoring system initialization.

	• Was the tire pressure monitoring system initialization performed?		
3	TIRE PRESSURE MONITORNING SYSTEM WARNING LIGHT VERIFICATION • Drive the vehicle for several minutes after the tire pressure monitoring system warning light turns off. • Does the tire pressure monitoring system warning light illuminate?	Yes	Inspect the tires and wheels for air leakage.
		No	The tire pressure monitoring system is normal.

2014 - Mazda3 - Suspension

GENERAL PROCEDURES (SUSPENSION)

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts to the following tightening torque in the order shown in the figure.

Tightening torque

- **108—147 N·m {12—14 kgf·m, 80—108 ft·lbf}**

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them to the specified tightening torque.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Headlight Auto Leveling System Initialization (with discharge headlight system)

1. Initialize the auto leveling sensor, when performing the following services. (See **HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION**.)

- Removing the auto leveling sensor
- Disconnecting the auto leveling sensor link
- Removing the suspension parts related the vehicle height

2014 - Mazda3 - Suspension

WHEEL ALIGNMENT PRE-INSPECTION

1. Park the vehicle on level ground, in an unloaded condition*, with the wheels straight forward.

*: Unloaded condition, fuel tank is full. Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.

2. Inspect the tire pressure.

- Adjust to the recommended pressure if necessary. (See **SUSPENSION TECHNICAL DATA**.)

3. Inspect the wheel bearing play.

- Correct if necessary. (See **WHEEL HUB, STEERING KNUCKLE INSPECTION**.)

4. Inspect the wheel runout.

- Correct if necessary. (See **SUSPENSION TECHNICAL DATA**.)

5. Rock the vehicle, and verify that there is no looseness in the steering wheel joint and suspension ball joint.

6. Rock the vehicle, and verify that the shock absorber operates properly.

7. Measure height H from the center of the wheel to the fender brim.

8. Verify that the difference between the left and right dimension H is within the specification.

- If it exceeds the specification, repeat the Step 2—7.

  Standard specification

- 10 mm {0.39 in} or less

WHEEL ALIGNMENT PRE-INSPECTION

2014 - Mazda3 - Suspension

FRONT WHEEL ALIGNMENT

Front wheel alignment (Unloaded)*1

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Maximum steering angle [Tolerance ±3°]		Inner	39°24′				
		Outer	32°12′				
Total toe-in	Tire [Tolerance ±4 {0.2}]	(mm {in})	2.0 {0.079}				
	Rim inner [Tolerance ±3 {0.1}]		Vehicle equipped with 16 inch wheel: 1.3 {0.051} Vehicle equipped with 18 inch wheel: 1.4 {0.055}				
	(degree)		0°11′±0°20′				
Caster angle*2 (Reference value) [Tolerance ±1°]			6°13′	6°17′	6°21′	6°25′	6°29′
Camber angle*2 (Reference value) [Tolerance ±1°]			-0°11′	-0°11′	-0°11′	-0°11′	-0°12′
Steering axis inclination (Reference value)			13°57′	13°59′	13°59′	13°59′	14°00′

*1 **Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.**

*2 **Difference between left and right must not exceed 1°30′.**

Steering Angle Adjustment

1. Loosen the tie-rod end locknuts.

2. Remove the steering gear boot clamp.

3. Turn the tie rods.

Standard length L

- 8.4—21.4 mm {0.34—0.84 in}

4. Turn the tie rods equally to provide the correct maximum steering angle.

5. Tighten the tie-rod end locknuts.

Tightening torque

- 69—98 N·m {7.1—9.9 kgf·m, 51—72 ft·lbf}

6. Verify that the boot is not twisted, and install the boot clamp.

7. Adjust the toe-in after adjusting the steering angle.

Total Toe-in Adjustment

1. Loosen the locknut of the tie-rod end.

2. Remove the rack boot clamp.

3. Adjust the total toe-in by rotating each tie rod (left and right) in the opposite directions by the same amount respectively.

NOTE:

- If toe-in is measured at the tires, the change on one wheel is **approx. 7 mm {0.3 in}** per one rotation of the tie rod.
- Each tie rod has a right-hand thread. When increasing the toe-in angle, rotate the right tie rod toward the front of the vehicle and rotate the left tie rod toward the rear of the vehicle by the same amount.

4. Tighten the locknut of the tie-rod end.

Tightening torque

- 69—98 N·m {7.1—9.9 kgf·m, 51—72 ft·lbf}

5. Verify that the rack boot does not have any twisting and install the rack boot clamp.

2014 - Mazda3 - Suspension

REAR WHEEL ALIGNMENT

Rear wheel alignment (Unloaded)*1

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Total toe-in	Tire [Tolerance ±4 {0.2}]	(mm {in})	1.9 {0.075}				
	Rim inner [Tolerance ±3 {0.1}]		Vehicle equipped with 16 inch wheel: 1.2 {0.047} Vehicle equipped with 18 inch wheel: 1.3 {0.051}				
	(degree)		0°10′±0°20′				
Camber angle*2 (Reference value) [Tolerance ±1°]			-0°50′	-0°53′	-0°55′	-0°57′	-0°59′
Thrust angle (Reference value) [Tolerance ±0°48′]			0°00′				

*1 **Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.**

*2 **Difference between left and right must not exceed 1°30′.**

Total Toe-in Adjustment

1. Loosen the installation nut of the adjusting cam bolt.
2. Rotate the adjusting cam bolt in either direction to adjust the toe-in.

	Left wheel	Right wheel
Toe-out direction	Clockwise	Counterclockwise
Toe-in direction	Counterclockwise	Clockwise

NOTE:

- The rotation direction of the adjusting cam bolt is indicated as viewed from the front of the vehicle.

3. Tighten the nut.

Tightening torque

- 84—101 N·m {8.6—10 kgf·m, 62—74 ft·lbf}

2014 - Mazda3 - Suspension

WHEEL AND TIRE SPECIFICATION

Standard tire and wheel

Item			Specification		
Wheel	Size		16 × 6 1/2J		18 × 7J
	Inset	(mm {in})	50 {2.0}		
	Pitch circle diameter	(mm {in})	114.3 {4.50}		
	Material		Steel	Aluminum alloy	
Tire	Size		P205/60R16 91H		215/45R18 89W
	Air pressure (kPa {psi})	Front	250 {36}		
		Rear	250 {36}		
	Remaining tread	(mm {in})	1.6 {0.063} min.		
Wheel and tire	Lug nut tightening torque	(N·m {kgf·m, ft·lbf})	108—147 {12—14, 80—108}		
	Wheel and tire runout (mm {in})	Radial direction	1.5 {0.059} max.		
		Lateral direction	2.5 {0.098} max.	2.0 {0.079} max.	
	Wheel imbalance	(g {oz})	Knock-type*2: 9.0 {0.32} max.	Adhesive-type*1: 14 {0.49} max. Knock-type*2: 9 {0.32} max.	Adhesive-type*1: 12 {0.42} max. Knock-type*2: 8.0 {0.28} max.

*1

Do not install three or more weights. Do not affix the weights such that they are parallel to each other or overlapping. The total weight of all the weights is 160 g {5.64 oz} or less.

*2

Do not install three or more weights. One weight is 60 g {2.1 oz} or less and two weights are 100 g {3.53 oz} or less.

Temporary spare tire and wheel

Item			Specification
Wheel	Size		16 × 4T
	Inset	(mm {in})	35 {1.4}
	Pitch circle diameter	(mm {in})	114.3 {4.50}
	Material		Steel
Tire	Size		T125/70D16 96M
	Air pressure	(kPa {psi})	420 {60}
	Remaining tread	(mm {in})	1.6 {0.063} min.
Wheel and tire	Lug nut tightening torque	(N·m {kgf·m, ft·lbf})	108—147 {12—14, 80—108}

2014 - Mazda3 - Suspension

WHEEL BALANCE ADJUSTMENT (ALUMINUM ALLOY WHEEL)

CAUTION:

- Adjust the outer wheel balance first, then the inner wheel balance.
- Be careful not to scratch the wheels.

Adhesive-type Balance Weight (Outer)

1. Remove the old balance weight from the wheel.

2. Remove the double-sided adhesive tape remaining on the wheel, then clean and degrease the bonding area.

3. Set the wheel on a wheel balancer, measure the amount of unbalance and the position with the mode set for knock-type balance weight.

4. Multiply the amount of unbalance by **1.6** to obtain the balance weight value.

5. Select a balance weight closest to the weight value and attach the balance weight on the position (outer) indicated by the wheel balancer.

Example calculation of balance weight value

- Indicated amount of unbalance: 23 g {0.81 oz}

  23 g {0.81 oz}×1.6 = 36.8 g {1.30 oz}

- Selected balance weight value: 35 g {1.24 oz}

NOTE:

- When selecting a balance weight, select one closest to the calculated value.

Example: **32.4 g {1.14 oz} = 30 g {1.06 oz}**

CAUTION:

- Use a genuine balance weight or equivalent (steel).
- When attaching the weight, press the weight with a force of 25 N {2.5 kgf, 5.5 lbf} per 5 g for 2 s or more.

6. If attaching two balance weights, position them so that each is on either side of the position indicated by the wheel balancer.

NO GOOD
(PARALLEL TO EACH OTHER)

NO GOOD
(OVERLAPPING)

CAUTION:

- Do not install three or more weights.
- Do not attach weight balances parallel to each other.
- Do not overlap the balance weights.
- Total weight of all weights is 160 g {5.64 oz} or less.

Knock-type Balance Weight (Inner)

1. Measure the amount of unbalance with a wheel balancer.

2. Attach a weight corresponding to the measured weight value on the position (inner) indicated by the wheel balancer.

CAUTION:

- Do not attach three or more balance weights.
- One balance weight is 60 g {2.1 oz} or less and two balance weights are 100 g {3.53 oz} or less.

Remaining Amount of Unbalance Confirmation

1. After installing the outer and inner balance weights, operate the wheel balancer again.
2. Confirm that the remaining unbalance does not exceed the following on either side.
   - If the remaining unbalance exceeds the specifications, adjust the wheel balance again.

Specifications

	Outer (Adhesive-type)	Inner (Knock-type)
16 inch wheel	14 g {0.49 oz}	9.0 g {0.32 oz}
18 inch wheel	12 g {0.42 oz}	8.0 g {0.28 oz}

2014 - Mazda3 - Suspension

TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE

- Perform the tire pressure monitoring system initialization when the following operations have been performed:
    - Tire pressures have been adjusted
    - Tires or wheels have been replaced
    - Tires have been rotated
    - DSC HU/CM replaced
    - DSC HU/CM connector disconnected
    - Battery replaced
    - Negative battery cable is disconnected

NOTE:

- The tire pressure monitoring system initialization can be performed using two types of procedures. If the procedure using the M-MDS is used, the mis-use prevention logic is disabled.

Using Tire Pressure Monitoring System Set Switch

1. Park the vehicle on safe, level ground.

2. Adjust all four tire pressures to the specification while the tires are cold. (See **WHEEL AND TIRE SPECIFICATION**.)

CAUTION:

- Cold tires means leaving the vehicle for 1 h or, if the vehicle is driven, do so within 1.6 km {0.99 mile}.

3. Switch the ignition ON (engine off or on).

4. Press and hold the tire pressure monitoring system set switch.

5. Press and hold the tire pressure monitoring system set switch until the tire pressure monitoring system warning light flashes 1 or 2 times and the indicator alarm sounds 1 time.

NOTE:

- When the tire pressure monitoring system initialization is performed, learning initiates. Learning is completed by driving the vehicle for approx. 20 min.
- While the tire pressure monitoring system is undergoing learning, its primary functions do not operate.

Using M-MDS

1. Park the vehicle on safe, level ground.

2. Adjust all four tire pressures to the specification while the tires are cold. (See **WHEEL AND TIRE SPECIFICATION**.)

CAUTION:

- Cold tires means leaving the vehicle for 1 h or, if the vehicle is driven, do so within 1.6 km {0.99 mile}.

3. Connect the M-MDS (IDS) to DLC-2.

4. After the vehicle is identified, select the following items from the initial screen of the IDS.

   a. Select “Chassis”

   b. Select “ABS/DSC”

   c. Select “TPMS Reset”

NOTE:

- When the tire pressure monitoring system initialization is performed, learning initiates. Learning is completed by driving the vehicle for approx. 20 min.
- While the tire pressure monitoring system is undergoing learning, its primary functions do not operate.

TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE

2014 - Mazda3 - Suspension

TIRE PRESSURE MONITORING SYSTEM SET SWITCH REMOVAL/INSTALLATION

NOTE:

- The tire pressure monitoring system (TPMS) set switch is integrated with the cluster switch.
- Refer to CLUSTER SWITCH REMOVAL/INSTALLATION to remove the cluster switch.

1. Remove the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)
2. Install in the reverse order of removal.

2014 - Mazda3 - Suspension

TIRE PRESSURE MONITORING SYSTEM SET SWITCH INSPECTION

NOTE:

- The tire pressure monitoring system (TPMS) set switch is integrated with the cluster switch.

1. Remove the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)
2. Verify that the resistance between the cluster switch terminals B and C is as indicated in the table.
    - If not as indicated in the table, replace the cluster switch.

TPMS set switch specification

Terminal	Test condition	Resistance (ohms)
B—C	TPMS set switch pressed	187.61—191.39
	All switches released	1139.99—1163.01

3. Apply battery voltage to cluster switch terminal J, and connect terminal I to ground.
4. Verify that the LED illuminates.
    - If there is any malfunction, replace the cluster switch.

2014 - Mazda3 - Suspension

TIRE PRESSURE MONITORING SYSTEM OPERATION RECORD INSPECTION

Operation record verification procedure

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   a. Operation Record
3. Then, select the following from the screen menu.
   a. Tire Pressure Monitoring System (TPMS)
4. Display the tire pressure monitoring system (TPMS) operation record according to the screen instructions.

Operation record use example

For a customer who states that the tire pressure monitoring warning light was illuminated, verify if the customer knows how to correctly use the tire pressure monitoring system set switch, and give them advice on how to use it if necessary.

Example

Operation record display

TPMS Learning Reset Button Record

	Last time	2nd time ago	3nd time ago
Elapsed Days	65535 days	65535 days	65535 days
Odometer	0m	0m	0m

TPMS Warning Lamp illumination

	Last time	2nd time ago	3nd time ago
Elapsed Days	4 days	65535 days	65535 days
Odometer	403km	0m	0m
Speed	38KPH	0KPH	0KPH
Maximum Vehicle Speed	Not Supported	0KPH	0KPH

The following can be understood from the operation record display indicated above.

- Tire pressure monitoring system set switch operation record (M-MDS display: TPMS Learning Reset Button Record)
  - Elapsed days displayed is 65,535 (displays if operation record is not recorded), and the tire pressure monitoring system set switch has not been pressed even once.

- Tire pressure monitoring system warning light illumination operation record (M-MDS display: TPMS Warning Lamp illumination)
    - The DSC CM detects a low tire pressure four days ago, and the total traveled distance (M-MDS display: Odometer) at that time was 403 km {250 mile}, and the vehicle speed (M-MDS display: Speed) was 38 km/h {24 mph}.

Based on the above information, provide the following advise, as there is the possibility that the customer does not understand how to correctly use the tire pressure monitoring system set switch.

- If the tire pressure monitoring warning light was illuminated, it will be necessary to adjust the tire pressures on all four tires to the specification and initialize the system by pressing the tire pressure monitoring system set switch. (See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)
- If the vehicle is driven at high speed with low tire pressure, there is the danger of a tire rupture occurring.

Reference information regarding operation history of tire pressure monitoring system warning light illumination

The tire pressure monitoring system warning light illumination status and the operation record are as displayed in the table, and if the tire pressure monitoring system warning light is illuminated after flashing due to a system malfunction, the operation record is not recorded.

	TIRE PRESSURE MONITORING SYSTEM WARNING LIGHT	Operation record
Tire pressure decrease	On	Recorded
Tire pressure monitoring system malfunction	Illumination for 1 min after flashing	Not recorded

2014 - Mazda3 - Suspension

FRONT SUSPENSION LOCATION INDEX

1	Front shock absorber and coil spring (See **FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION**.) (See **FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY**.)
2	Front stabilizer control link (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)

	(See **FRONT STABILIZER CONTROL LINK INSPECTION**.)
3	Front stabilizer (See **FRONT STABILIZER REMOVAL/INSTALLATION**.) (See **FRONT STABILIZER CONTROL LINK INSPECTION**.)
4	Front lower arm (See **FRONT LOWER ARM REMOVAL/INSTALLATION**.) (See **FRONT LOWER ARM INSPECTION**.)
5	Front crossmember (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)
6	Front shock absorber (See **FRONT SHOCK ABSORBER INSPECTION**.) (See **FRONT SHOCK ABSORBER DISPOSAL**.)

2014 - Mazda3 - Suspension

FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor wiring harness (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

1. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

2. Remove in the order indicated in the table.

3. Install in the reverse order of removal.

4. Inspect the wheel alignment and adjust it if necessary. (See **FRONT WHEEL ALIGNMENT**.)

1	Front brake hose clip (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.)

2	Front stabilizer control link upper nut (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)
3	Dynamic damper (if equipped)
4	Front shock absorber lower bolt (See **Front Shock Absorber Lower Bolt Installation Note**.)
5	Front shock absorber upper nut
6	Front shock absorber and coil spring

Front Shock Absorber Lower Bolt Installation Note

1. Install the steering knuckle to the front shock absorber, insert the bolts from the direction indicated as follows, then tighten them to the specified torque.

- Vehicle right side: Insert the bolts from the vehicle front.
- Vehicle left side: Insert the bolts from the vehicle rear.

2014 - Mazda3 - Suspension

FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY

WARNING:

- Removing/installing the front shock absorber and coil spring is dangerous. The front shock absorber and coil spring could fly off and cause serious injury or death, and damage the vehicle.

1. Remove the front shock absorber and coil spring. (See **FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION**.)

2. Remove in the order indicated in the table.

3. Install in the reverse order of removal.

FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY

1	Cap

2	Piston rod nut (See **Piston Rod Nut Removal Note**.)
3	Mounting rubber (See **Mounting Rubber Installation Note**.)
4	Bearing
5	Dust boot
6	Bound stopper
7	Lower spring seat
8	Front shock absorber
9	Coil spring (See **Coil Spring Installation Note**.)

Piston Rod Nut Removal Note

WARNING:

- Before removing the piston rod nut, secure the front shock absorber and coil spring in the SST. Otherwise, the coil spring could fly off under tremendous pressure and cause serious injury or death, or damage to vehicle parts.

1. Install the front shock absorber and coil spring to the **SST** according to the following procedures.

NOTE:

- Install the **SST** using a clean rag to prevent the coil spring from being scratched.

a. Set the **SST** attachments (tabs) to the positions shown in the figure.

b. Install the front shock absorber and coil spring to the **SST** so that the coil spring is set to the position shown in the figure.

2. Compress the coil spring using the **SST**.
3. Remove the piston rod nut.

Coil Spring Installation Note

1. Compress the coil spring using the **SST**.

2. Install the front shock absorber so that the lower end of the coil spring is seated on the step of the lower spring seat.

Mounting Rubber Installation Note

1. Install the mounting rubber so that the mounting rubber stud and the front shock absorber bracket are in position A shown in the following figure.

- A: 0°±5°

2014 - Mazda3 - Suspension

FRONT SHOCK ABSORBER INSPECTION

1. Remove the front shock absorber. (See **FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION**.) (See **FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY**.)

2. Inspect for damage and oil leakage.

3. Compress and extend the shock absorber piston rod **at least three times** at a steady rate. **From the fourth** compression stroke, verify that the operational force does not change and that there is no unusual noise.

- If there is any malfunction, replace the front shock absorber.

2014 - Mazda3 - Suspension

FRONT SHOCK ABSORBER DISPOSAL

WARNING:

- Whenever drilling into a front shock absorber, wear protective eye wear. The gas in the front shock absorber is pressurized, and could spray metal chips into the eyes and face when drilling.

1. Place the shock absorber on a level surface or with the piston pointing downwards.
2. Drill a **2—3 mm {0.08—0.11 in}** hole at point A shown in the figure so the gas can escape.

- Point A: **290 mm {11.4 in}**

3. Drill a **2—3 mm {0.08—0.11 in}** hole at the point B shown in the figure to drain the oil.
   - **Point B: 145 mm {5.71 in}**
4. Turn the hole made in Step 3 downwards and drain the oil by pumping the piston rod up and down several times.
5. Cut off the bottom end of the front shock absorber.
6. Dispose of waste oil according to local waste disposal laws.

2014 - Mazda3 - Suspension

FRONT LOWER ARM REMOVAL/INSTALLATION

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See **FRONT WHEEL ALIGNMENT**.)

1	Front lower arm ball joint
2	Front lower arm
3	Front lower arm bushing

(See **Front Lower Arm Bushing Removal Note**.)

(See **Front Lower Arm Bushing Installation Note**.)

Front Lower Arm Bushing Removal Note

1. Cut off the entire circumference of the knob on the rear side of the front lower arm bushing using a hacksaw as shown in the figure.

CAUTION:

- When using a hacksaw to cut off the knob on the rear side of the front lower arm bushing, be careful not to scratch or damage the front lower arm.

2. Remove the front lower arm bushing using the **SSTs**.

CAUTION:

- Set the **SST(49 U034 204)** as shown in the figure and remove the front lower arm bushing.

Front Lower Arm Bushing Installation Note

1. Install the front lower arm bushing using the **SSTs**.

CAUTION:

- Set the **SST(49 U034 204)** as shown in the figure and remove the front lower arm bushing.
- Install the front lower arm bushing so that the projection shown in the figure is pointing toward the front of the vehicle.

NOTE:

- Applying soapy water to the front lower arm bushing facilitates installation.
- If soapy water gets in the inner pipe of the front lower arm bushing, always wipe it off using a cloth.

2. After installing the front lower arm bushing, verify that it is installed to the position shown in the figure.

W: 5.8±0.8 mm {0.23±0.03 in}

2014 - Mazda3 - Suspension

FRONT LOWER ARM INSPECTION

1. Remove the front lower arm. (See **FRONT LOWER ARM REMOVAL/INSTALLATION**.)

2. Inspect the front lower arm for bending or damage, and the front lower arm ball joint for excessive looseness.

- If there is any malfunction, replace the front lower arm.

3. Rotate the front lower arm ball joint stud **5 times**. Install the **SST** to the front lower arm ball joint stud, measure the rotational, starting torque using a torque wrench.

- If not within the specification, replace the front lower arm.

Front lower arm ball joint stud starting torque

- 18 N·m {1.8 kgf·m,13 ft·lbf} max.

Front lower arm ball joint stud rotational torque

- 3.2 N·m {33 kgf·cm,28 in·lbf} max.

2014 - Mazda3 - Suspension

FRONT STABILIZER REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor wiring harness (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

1. Remove the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

2. Disconnect the intermediate shaft from the steering gear and linkage. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

3. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

4. Remove in the order indicated in the table.

5. Install in the reverse order of removal.

6. Inspect the wheel alignment and adjust it if necessary. (See **FRONT WHEEL ALIGNMENT**.)

1	Front stabilizer control link
2	Dynamic damper (if equipped)
3	Front crossmember component (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)
4	Front stabilizer bracket (See **Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note**.)

5	Front stabilizer bushing (See **Front Stabilizer Bracket Removal Note**.) (See **Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note**.)
6	Front stabilizer (See **Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note**.)

Front Stabilizer Bracket Removal Note

1. Secure the front stabilizer bracket flange using a vise.

Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note

1. Install the front stabilizer bushing to the front stabilizer with its slit positioned rearward of the vehicle.

2. Install the front stabilizer bracket to the front stabilizer bushing by hand using the following procedure.
3. If the front stabilizer bracket cannot be installed by hand, install it using a vise.

CAUTION:

- If the front stabilizer bracket is installed using a vise, it could be deformed.
- Set a cylindrically-shaped object as shown in the figure so that pressure is applied to the front stabilizer bracket flange, and install the front stabilizer bracket to the front stabilizer bushing.

4. During front stabilizer bracket installation, keep the deviation in the positions of the front stabilizer bracket and the front stabilizer bushing within the range shown in the figure.

- W^1: 0.5 mm {0.02 in} max.
- W^2: 2 mm {0.08 in} max.

5. After installing the front stabilizer bracket, verify that the positions of the front stabilizer bracket and the front stabilizer bushing are within the range shown in the figure.

- H^1: 13 mm {0.51 in} max.

6. After installing the front stabilizer bracket, verify that the right and left-side positions of the front stabilizer bracket are within the

range shown in the figure.

- H^2: 6 mm {0.2 in} max.

7. Place the front stabilizer component on a level workbench, and verify that it is within the range shown in the figure.

- H^3: 50.4—80.4 mm {1.99—3.16 in}

Front Stabilizer, Front Stabilizer Bushing and Front Stabilizer Bracket Installation Note

1. Temporarily tighten bolts A and B shown in the figure.

2. Tighten bolt B.

Tightening torque

- 25—29 N·m {2.6—2.9kgf·m, 19—21 ft·lbf}

3. Tighten bolt A.

Tightening torque

- 25—29 N·m {2.6—2.9kgf·m, 19—21 ft·lbf}

4. Tighten bolt B.

Tightening torque

- 25—29 N·m {2.6—2.9kgf·m, 19—21 ft·lbf}

2014 - Mazda3 - Suspension

FRONT STABILIZER CONTROL LINK INSPECTION

1. Remove the front stabilizer control link. (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)

2. Inspect for bending or damage. If there is any malfunction, replace the front stabilizer control link.

3. Rotate the front stabilizer control link ball joint stud **10 times** and shake it side to side **10 times**.

4. Measure the front stabilizer control link ball joint rotational torque using an Allen wrench and a torque wrench.

Front stabilizer control link ball joint starting torque

- 0.8—3.5 N·m {8.2—35 kgf·cm, 7.1—30 in·lbf}
- If not within the specification, replace the front stabilizer control link.
- Even when within the specification, if there is excessive play in the front stabilizer control link ball joint, replace the front stabilizer control link.

2014 - Mazda3 - Suspension

FRONT CROSSMEMBER REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

1. Remove the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

2. Disconnect the intermediate shaft from the steering gear and linkage. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

3. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

4. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

5. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

6. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

7. Remove the splash shield. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

8. Set the front mudguard away from the front crossmember and front bumper. (See **MUDGUARD REMOVAL/INSTALLATION**.)

9. Disconnect the front crossmember extension.

10. Disconnect the front stabilizer control link (front stabilizer side). (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)

11. Remove the front crossmember insulator.

12. Disconnect the hanger rubber from the front crossmember and set it aside.

13. Loosen the bolts shown in the figure.

14. Remove the bolt shown in the figure.

15. Remove the tie-rod end locknut.

Tightening torque

- 47—59 N·m {4.8—6.0 kgf·m, 35—43 ft·lbf}

16. Detach the tie-rod end from the steering knuckle using the **SST**.

17. Disconnect the front lower arm ball joint.

18. Remove in the order indicated in the table.

19. Install in the reverse order of removal.

20. Inspect the wheel alignment and adjust it if necessary. (See **FRONT WHEEL ALIGNMENT**.)

1	Front crossmember component

	(See **Front Crossmember Component Removal Note**.) (See **No.1 Engine Mount Rubber and Front Crossmember Component Installation Note**.)
2	Front stabilizer (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)
3	Steering gear and linkage (See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)
4	Front lower arm (See **FRONT LOWER ARM REMOVAL/INSTALLATION**.)
5	No.1 engine mount rubber (See **ENGINE MOUNT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **No.1 Engine Mount Rubber and Front Crossmember Component Installation Note**.)
6	Front crossmember

Front Crossmember Component Removal Note

WARNING:

- Removing the crossmember is dangerous. The crossmember component could fall and cause serious injury or death. Verify that the jack securely supports the crossmember component.

1. Support the front crossmember component using a jack.

2. Remove the front crossmember installation bolts.

3. Remove the front crossmember, front stabilizer, front lower arm, and steering gear and linkage as a single unit.

No.1 Engine Mount Rubber and Front Crossmember Component Installation Note

1. When installing the front crossmember component to the vehicle, assemble the dust cover to the body-side installation area correctly to prevent water or foreign matter from penetrating. Install the dust cover carefully

so as not to pinch the dust cover sponge to the body-side installation area or put a fold line on the sponge by contact.

2. Temporarily tighten the bolts shown in the figure.

3. Install the No.1 engine mount rubber and temporarily tighten the bolts shown in the figure.

4. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

Tightening torque

- 84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

5. Tighten the No.1 engine mount rubber installation bolts shown in the figure.

Tightening torque

Installation position	Tightening torque
No.1 engine mount bracket side	140—163 N·m {15—16 kgf·m, 104—120 ft·lbf}
Front crossmember side	130—164 N·m {14—16 kgf·m, 96—120 ft·lbf}

2014 - Mazda3 - Suspension

REAR SUSPENSION LOCATION INDEX

1	Rear shock absorber (See **REAR SHOCK ABSORBER REMOVAL/INSTALLATION**.) (See **REAR SHOCK ABSORBER INSPECTION**.)

	(See **REAR SHOCK ABSORBER DISPOSAL**.)
2	Rear crossmember (See **REAR CROSSMEMBER REMOVAL/INSTALLATION**.)
3	Rear stabilizer (See **REAR STABILIZER REMOVAL/INSTALLATION**.)
4	Rear stabilizer control link (See **REAR STABILIZER CONTROL LINK INSPECTION**.) (See **REAR STABILIZER REMOVAL/INSTALLATION**.)
5	Rear coil spring (See **REAR COIL SPRING REMOVAL/INSTALLATION**.)
6	Rear lower arm (See **REAR LOWER ARM REMOVAL/INSTALLATION**.)
7	Rear lateral link (See **REAR LATERAL LINK REMOVAL/INSTALLATION**.)
8	Rear trailing link (See **REAR TRAILING LINK REMOVAL/INSTALLATION**.)
9	Rear upper arm (See **REAR UPPER ARM REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Suspension

REAR SHOCK ABSORBER REMOVAL/INSTALLATION

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

N·m {kgf·m, ft·lbf}

1	Rear shock absorber upper nut (See **Rear Shock Absorber Upper Nut Installation Note**.)
2	Rear shock absorber lower bolt
3	Washer
4	Stud bolt
5	Rear shock absorber

Rear Shock Absorber Upper Nut Installation Note

1. Lift up the rear lower arm using a jack and install the rear shock absorber upper nuts.

2014 - Mazda3 - Suspension

REAR SHOCK ABSORBER INSPECTION

1. Remove the rear shock absorber. (See **REAR SHOCK ABSORBER REMOVAL/INSTALLATION**.)

2. Inspect for damage and oil leakage.

3. Compress and extend the shock piston at least three times. Verify that the operational force does not change and that there is no unusual noise.

    - If not as specified, replace the rear shock absorber.

2014 - Mazda3 - Suspension

REAR SHOCK ABSORBER DISPOSAL

WARNING:

- Whenever drilling into a rear shock absorber, wear protective eye wear. The gas in the rear shock absorber is pressurized, and could spray metal chips into the eyes and face when drilling.

1. Clamp a rear shock absorber on a flat surface or with the piston pointing downwards.

2. Drill a **2—3 mm {0.08—0.11 in}** hole at a point A from the bottom of the tube, so that the gas can escape.

- **Point A: 40—50 mm {1.6—1.9 in}**

3. Turn the hole downwards.

4. The oil can be collected by moving the piston rod several times up and down and cutting the tube at the end.

5. Dispose of waste oil according to the waste disposal law.

2014 - Mazda3 - Suspension

REAR COIL SPRING REMOVAL/INSTALLATION

WARNING:

- Be careful not to allow the coil spring to fly off when removing/installing the coil spring. Otherwise, the coil spring could fly off and cause serious injury or death, or damage to the vehicle.

1. When working on the left side of the vehicle, disconnect the auto leveling sensor link. (With auto leveling sensor) (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)

2. Remove in the order indicated in the table.

3. Install in the reverse order of removal.

4. Inspect the wheel alignment and adjust it if necessary. (See **REAR WHEEL ALIGNMENT**.)

1	Rear stabilizer control link lower side nut
2	Rear lower arm outer bolt (See **Rear Coil Spring Removal Note**.)

3	Upper spring seat rubber
4	Rear coil spring (See **Rear Coil Spring Installation Note**.)
5	Lower spring seat rubber

Rear Coil Spring Removal Note

1. Support the rear lower arm using a jack.

2. Remove the rear lower arm outer bolt.
3. Remove the rear coil spring.

Rear Coil Spring Installation Note

1. Install the rear coil spring so that the yellow paint is pointed upward of the vehicle.

2. Align the upper end of the rear coil spring with the step of the upper spring seat rubber.
3. Align the lower end of the rear coil spring with the step of the lower spring seat rubber.
4. Position the jack under the rear lower arm and jack up slowly.

5. Install the rear lower arm outer bolt.

2014 - Mazda3 - Suspension

REAR LOWER ARM REMOVAL/INSTALLATION

WARNING:

- Be careful not to allow the coil spring to fly off when removing/installing the coil spring. Otherwise, the coil spring could fly off and cause serious injury or death, or damage to the vehicle.

1. When working on the left side of the vehicle, disconnect the auto leveling sensor link. (With auto leveling sensor) (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)

2. Remove in the order indicated in the table.

3. Install in the reverse order of removal.

4. Inspect the wheel alignment and adjust it if necessary. (See **REAR WHEEL ALIGNMENT**.)

REAR LOWER ARM REMOVAL/INSTALLATION

1	Rear stabilizer control link lower side nut (See **REAR STABILIZER REMOVAL/INSTALLATION**.)
2	Rear lower arm outer bolt (See **Rear Lower Arm Outer Bolt Removal Note**.) (See **Rear Lower Arm Outer Bolt Installation Note**.)
3	Rear coil spring component (See **REAR COIL SPRING REMOVAL/INSTALLATION**.)
4	Rear lower arm inner nut
5	Rear lower arm

Rear Lower Arm Outer Bolt Removal Note

1. Support the rear lower arm using a jack.

2. Remove the rear lower arm outer bolt.

Rear Lower Arm Outer Bolt Installation Note

1. Install the rear coil spring so that the yellow paint is pointed upward of the vehicle.

2. Align the upper end of the rear coil spring with the step of the upper spring seat rubber.

3. Align the lower end of the rear coil spring with the step of the lower spring seat rubber.

4. Position the jack under the rear lower arm and jack up slowly.

5. Install the lower arm outer bolt.

2014 - Mazda3 - Suspension

REAR UPPER ARM REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the rear ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the rear ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.

NOTE:

- Mark the position before removing the rear upper arm.
- Align the rear crossmember and rear upper arm markings when installing the rear upper arm.
- Tighten the rear upper arm inner bolt completely before installing the rear crossmember component to the vehicle.

1. Disconnect the auto leveling sensor link. (With auto leveling sensor) (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)

2. Disconnect the wiring harness clips and connector installed to the rear crossmember. (With auto leveling sensor)

3. Disconnect the rear ABS wheel-speed sensor wiring harness installed to the hub support and set it aside. (See **REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

4. Remove the TWC. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the rear coil spring. (See **REAR COIL SPRING REMOVAL/INSTALLATION**.)

6. Set the bracket aside.

7. Remove in the order indicated in the table.

8. Install in the reverse order of removal.

9. Inspect the wheel alignment and adjust it if necessary. (See **REAR WHEEL ALIGNMENT**.)

1	Rear upper arm (See **Rear Upper Arm Removal Note**.) (See **Rear Upper Arm Installation Note**.)
2	Rear upper arm bushing (See **Rear Upper Arm Bushing Removal Note**.) (See **Rear Upper Arm Bushing Installation Note**.)

Rear Upper Arm Removal Note

1. Jack up the vehicle to the unloaded condition, and support the rear trailing link component using a jack.

2. Align the rear crossmember component and rear upper arm and mark them.

3. Support the rear crossmember component with a jack and remove the rear crossmember installation nuts.

4. Press down on the rear crossmember component slowly until the rear upper arm inside installation bolts can be removed using a jack.

5. Remove the rear upper arm.

Rear Upper Arm Bushing Removal Note

1. Mark the rear upper arm as shown in the figure.

2. Press the rear upper arm bushing out using the **SSTs**.

CAUTION:

- Set using the **SST(49 U027 010)** as shown in the figure to prevent damaging the rear upper arm and rear upper arm bushing and remove the rear upper arm bushing.

Rear Upper Arm Bushing Installation Note

1. Mark the new rear upper arm bushing as shown in the figure.

H^1: 5.0 mm {0.20 in}

2. Align the projection of a new rear upper arm bushing with the marks placed during removal.

3. Press fit the rear upper arm bushing until the marks placed in Step 1 cannot be seen using the SSTs.

CAUTION:

- Set using the **SST(49 U027 010)** as shown in the figure to prevent damaging the rear upper arm and rear upper arm bushing, and install the rear upper arm bushing.

NOTE:

- Be careful when press-fitting the rear upper arm bushing because the bushing height of the inner and outer sides differs.

H^2: 49.5 mm {1.95 in} H^3: 44.5 mm {1.75 in}

4. After installing the rear upper arm bushing, verify that it is installed to the position shown in the figure.

H^4: 25.0±0.6 mm {0.984±0.02 in}

Rear Upper Arm Installation Note

1. Place alignment mark on the new rear upper arm in the same positions as the removed rear upper arm.

2. Install the rear upper arm.
3. Lift up the rear crossmember component using a jack and install the rear crossmember installation nuts.

Tightening torque

- 91—111 N·m {9.3—11 kgf·m, 68—81 ft·lbf}

2014 - Mazda3 - Suspension

REAR TRAILING LINK REMOVAL/INSTALLATION

1. Remove the floor under cover. (See **FLOOR UNDER COVER REMOVAL/INSTALLATION**.)
2. Disconnect the rear parking cable. (See **REAR PARKING BRAKE CABLE REMOVAL/INSTALLATION**.)

3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Inspect the wheel alignment and adjust it if necessary. (See **REAR WHEEL ALIGNMENT**.)

1	Rear trailing link installation nut
2	Rear trailing link installation bolt
3	Rear trailing link (See **Rear Trailing Link Installation Note**.)

Rear Trailing Link Installation Note

1. Install the rear trailing link installation bolts using a jack.

2. Install the rear trailing link installation nut.

2014 - Mazda3 - Suspension

REAR LATERAL LINK REMOVAL/INSTALLATION

1. Disconnect the rear stabilizer control link lower side nut. (See **REAR STABILIZER REMOVAL/INSTALLATION**.)

2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See **REAR WHEEL ALIGNMENT**.)

1	Rear lateral link outer bolt
2	Rear lateral link inner bolt
3	Rear lateral link (See **Rear Lateral Link Removal Note**.)

(See **Rear Lateral Link Installation Note**.)

Rear Lateral Link Removal Note

1. Jack up the vehicle to the unloaded condition, and support the rear trailing link component using a jack.

2. Remove the rear lateral link.

Rear Lateral Link Installation Note

1. Jack up the vehicle to the unloaded condition, and support the rear trailing link component using a jack.

2. Install the rear lateral link.

2014 - Mazda3 - Suspension

REAR STABILIZER REMOVAL/INSTALLATION

1. Remove the rear coil spring. (See **REAR COIL SPRING REMOVAL/INSTALLATION**.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See **REAR WHEEL ALIGNMENT**.)

1	Rear stabilizer control link
2	Rear stabilizer component (See **Rear Stabilizer Component Removal Note**.) (See **Rear Stabilizer Component Installation Note**.)
3	Rear stabilizer bracket

	(See **Rear Stabilizer Bushing, Rear Stabilizer Bracket Installation Note**.)
4	Rear stabilizer bushing (See **Rear Stabilizer Bushing, Rear Stabilizer Bracket Installation Note**.)
5	Rear stabilizer

Rear Stabilizer Component Removal Note

1. Remove the rear stabilizer component from the vehicle through the gap created by the removal of the right rear coil spring.

Rear Stabilizer Bracket Removal Note

1. Secure the rear stabilizer bracket flange using a vise.

Rear Stabilizer Bushing, Rear Stabilizer Bracket Installation Note

1. Install the rear stabilizer bushing with the slit pointing toward the front of the vehicle.

2. Install the rear stabilizer bracket to the front stabilizer bushing by hand using the following procedure.

3. If the rear stabilizer bracket cannot be installed by hand, install it using a vise.

CAUTION:

- If the rear stabilizer bracket is installed using a vise, it could be deformed.
- Set a cylindrically-shaped object as shown in the figure so that pressure is applied to the rear stabilizer bracket flange, and install the rear stabilizer bracket to the rear stabilizer bushing.

4. During rear stabilizer bracket installation, keep the deviation in the positions of the rear stabilizer bracket and the rear stabilizer bushing within the range shown in the figure.

- W^1: 0.5 mm {0.02 in} max.

- W^2: 2 mm {0.08 in} max.

5. After installing the rear stabilizer bracket, verify that the positions of the rear stabilizer bracket and the rear stabilizer bushing are within the range shown in the figure.

- H^1: 13 mm {0.51 in} max.

6. After installing the rear stabilizer bracket, verify that the right and left-side positions of the rear stabilizer bracket are within the range shown in the figure.

- H^2: 3 mm {0.1 in} max.

7. Place the rear stabilizer component on a level workbench, and verify that it is within the range shown in the figure.

- H^3: 71.6—91.6 mm {2.82—3.61 in}

Rear Stabilizer Component Installation Note

1. Install the rear stabilizer component to the vehicle through the gap created by the removal of the right rear coil spring.

2. Temporarily tighten nuts A and B shown in the figure.

3. Tighten nut A.

Tightening torque

- 21—26 N·m {2.2—2.6 kgf·m, 16—19 ft·lbf}

4. Tighten nut B.

Tightening torque

- 21—26 N·m {2.2—2.6 kgf·m, 16—19 ft·lbf}

5. Tighten nut A.

Tightening torque

- 21—26 N·m {2.2—2.6 kgf·m, 16—19 ft·lbf}

2014 - Mazda3 - Suspension

REAR STABILIZER CONTROL LINK INSPECTION

1. Remove the rear stabilizer control link. (See **REAR STABILIZER REMOVAL/INSTALLATION**.)

2. Inspect for bending or damage. If there is any malfunction, replace the rear stabilizer control link.

3. Rotate the ball joint stud **10 times** and shake it side to side **10 times**.

4. Measure the ball-joint rotational torque using an Allen wrench and a torque wrench.

Rear stabilizer control link ball joint starting torque

- 0.8—3.5 N·m {8.2—35 kgf·cm, 7.1—30 in·lbf}
- If not within the specification, replace the rear stabilizer control link.
- Even if within specification, if there is excessive play in the ball joint, replace the rear stabilizer control link.

2014 - Mazda3 - Suspension

REAR CROSSMEMBER REMOVAL/INSTALLATION

WARNING:

1. Verify that the rear crossmember is securely supported by a jack. If the rear crossmember falls off, it can cause serious injury or death, and damage to the vehicle.

CAUTION:

- Performing the following procedures without first removing the rear ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the rear ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.

NOTE:

- Mark the position before removing the rear upper arm.
- Align the rear crossmember and rear upper arm markings when installing the rear upper arm.
- Tighten the rear upper arm inner bolt completely before installing the rear crossmember component to the vehicle.

1. Disconnect the wiring harness clips and connector installed to the rear crossmember. (With auto leveling sensor)

2. Remove the auto leveling sensor. (With auto leveling sensor) (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)

3. Disconnect the rear ABS wheel-speed sensor wiring harness installed to the hub support and set it aside. (See **REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

4. Jack up the vehicle to the unloaded condition, and support the rear trailing link component using a jack.

5. Align the rear crossmember component and rear upper arm and mark them.

6. Remove the TWC. (See **EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Remove the rear lateral link. (See **REAR LATERAL LINK REMOVAL/INSTALLATION**.)

8. Remove the rear coil spring. (See **REAR COIL SPRING REMOVAL/INSTALLATION**.)

9. Remove the rear lower arm. (See **REAR LOWER ARM REMOVAL/INSTALLATION**.)

10. Remove in the order indicated in the table.

11. Install in the reverse order of removal.

12. Inspect the wheel alignment and adjust it if necessary. (See **REAR WHEEL ALIGNMENT**.)

1	Rear crossmember component (See **Rear Crossmember Component Removal Note**.) (See **Rear Crossmember Component Installation Note**.)
2	Rear stabilizer component
	Rear upper arm

3	(See **REAR UPPER ARM REMOVAL/INSTALLATION**.)
4	Rear crossmember mudguard (See **Rear Crossmember Mudguard Installation Note**.)
5	Rear crossmember

Rear Crossmember Component Removal Note

WARNING:

1. Verify that the rear crossmember is securely supported by a jack. If the rear crossmember falls off, it can cause serious injury or death, and damage to the vehicle.

1. Support the rear crossmember with the jack and remove the nuts

2. Remove the rear crossmember component.

Rear Crossmember Mudguard Installation Note

1. Install with the rear crossmember mudguard projection pointed downward.

Rear Crossmember Component Installation Note

WARNING:

1. Verify that the rear crossmember is securely supported by a jack. If the rear crossmember falls off, it can cause serious injury or death, and damage to the vehicle.

1. Support the rear crossmember component and install the rear crossmember.

REAR CROSSMEMBER REMOVAL/INSTALLATION

2014 - Mazda3 - DriveLine/Axle

GENERAL PROCEDURES (FRONT AND REAR AXLES)

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts to the following tightening torque in the order shown in the figure.

Tightening torque

- 108—147 N·m {12—14 kgf·m, 80—108 ft·lbf}

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them to the specified tightening torque.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Next >

2014 - Mazda3 - DriveLine/Axle

FRONT AXLE LOCATION INDEX

1	Wheel hub, steering knuckle (See **WHEEL HUB, STEERING KNUCKLE INSPECTION**.) (See **WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION**.)
2	Wheel hub bolt (See **FRONT WHEEL HUB BOLT REPLACEMENT**.)

FRONT AXLE LOCATION INDEX

2014 - Mazda3 - DriveLine/Axle

WHEEL HUB, STEERING KNUCKLE INSPECTION

Wheel Bearing Excessive Play Inspection

1. Remove the brake caliper component and disc plate. (See **WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION**.)

2. Install the magnetic base and dial gauge as shown in the figure and measure the wheel bearing axial excessive play.

- If it exceeds the maximum specification, replace the wheel hub bearing.

  Front wheel bearing maximum play

- 0.05 mm {0.002 in}

2014 - Mazda3 - DriveLine/Axle

WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, inspect the front wheel alignment and adjust it if necessary. (See **FRONT WHEEL ALIGNMENT**.)

1	ABS wheel-speed sensor
2	Brake hose clip
3	Locknut (See **Locknut Removal Note**.) (See **Locknut Installation Note**.)
4	Brake caliper component (See **Brake Caliper Removal Note**.)

5	Disc plate
6	Dynamic damper (vehicles with dynamic damper)
7	Stabilizer control link (upper side)
8	Tie-rod end ball joint (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)
9	Front lower arm ball joint
10	Front shock absorber bolt (See **Front Shock Absorber Bolt Installation Note**.)
11	Bolt (wheel hub)
12	Wheel hub (See **Wheel Hub Installation Note**.)
13	Dust cover
14	Steering knuckle
15	Wheel hub bolt (See **Wheel Hub Bolt Removal Note**.) (See **Wheel Hub Bolt Installation Note**.)

Locknut Removal Note

1. Remove the locknut.
2. Install a spare nut onto the drive shaft.
3. Tap the nut with a copper hammer and separate the drive shaft from the axle.

4. Separate the drive shaft from the wheel hub.

Brake Caliper Removal Note

1. Remove the brake caliper component from the steering knuckle and suspend it out of the way using a cable.

Wheel Hub Bolt Removal Note

NOTE:

- Remove the wheel hub bolt only if there is any malfunction.

1. Remove the wheel hub bolt using a press.

Wheel Hub Bolt Installation Note

1. Install the new wheel hub bolt using a press.

Wheel Hub Installation Note

1. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).

2. Install the wheel hub.

Front Shock Absorber Bolt Installation Note

1. Install the steering knuckle to the front shock absorber, insert the bolts from the direction indicated as follows, then tighten them to the specified torque.

- Vehicle left side: Insert the bolts from the vehicle rear.
- Vehicle right side: Insert the bolts from the vehicle front.

Locknut Installation Note

1. If dust or grease is on the drive shaft thread area, wipe it off with a cloth.

2. After tightening the locknut once at a torque of **100—150 N·m {11—15 kgf·m, 74—110 ft·lbf}**, loosen it **180 degrees** once, and then retighten it at a torque of **236—274 N·m {25—27 kgf·m, 175—202 ft·lbf}**.

2014 - Mazda3 - DriveLine/Axle

FRONT WHEEL HUB BOLT REPLACEMENT

1. Remove the brake caliper component and disc plate. (See **WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION**.)

2. Remove the wheel hub bolt using the **SST** as shown in the figure.

3. Place a new wheel hub bolt in the wheel hub.

4. Install the wheel hub by placing a proper sized washer on the hub, and tightening the nut as shown in the figure.

2014 - Mazda3 - DriveLine/Axle

REAR AXLE LOCATION INDEX

1	Wheel hub component (See **WHEEL HUB COMPONENT INSPECTION**.) (See **WHEEL HUB COMPONENT REMOVAL/INSTALLATION**.)
2	Wheel hub bolt (See **REAR WHEEL HUB BOLT REPLACEMENT**.)

REAR AXLE LOCATION INDEX

2014 - Mazda3 - DriveLine/Axle

WHEEL HUB COMPONENT INSPECTION

Wheel Bearing Excessive Play Inspection

1. Remove the brake caliper component and disc plate. (See **WHEEL HUB COMPONENT REMOVAL/INSTALLATION**.)

2. Install the magnetic base and dial gauge as shown in the figure and measure the wheel bearing axial excessive play.

- If it exceeds the maximum specification, replace the wheel hub component.

  Rear wheel bearing maximum play

- 0.05 mm {0.002 in}

2014 - Mazda3 - DriveLine/Axle

WHEEL HUB COMPONENT REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the rear ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the rear ABS wheel-speed sensor connector (body side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

1. When working on the left side of the vehicle, remove the auto leveling sensor from the rear lower arm. (With headlight auto leveling system) (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)

2. Remove in the order indicated in the table.

3. Install in the reverse order of removal.

4. Inspect the rear wheel alignment. (See **REAR WHEEL ALIGNMENT**.)

1	Rear ABS wheel-speed sensor
2	Brake hose clip
3	Brake caliper component (See **Brake Caliper Component Removal Note**.)
4	Disc plate
5	Bolt (wheel hub)
6	Wheel hub

7	Dust cover
8	Rear stabilizer control link lower nut
9	Rear lower arm outer bolt (See **Rear Lower Arm Outer Bolt Removal Note**.)
10	Rear coil spring (See **REAR COIL SPRING REMOVAL/INSTALLATION**.)
11	Rear shock absorber lower nut (See **REAR SHOCK ABSORBER REMOVAL/INSTALLATION**.)
12	Stud bolt (See **REAR SHOCK ABSORBER REMOVAL/INSTALLATION**.)
13	Rear lateral link outer bolt (See **REAR LATERAL LINK REMOVAL/INSTALLATION**.)
14	Rear trailing link installation bolt (See **REAR LATERAL LINK REMOVAL/INSTALLATION**.)
15	Rear upper arm outer bolt
16	Hub support
17	Wheel hub bolt (See **Wheel Hub Bolt Removal Note**.) (See **Wheel Hub Bolt Installation Note**.)
18	Hub support bushing (front) (See **Hub Support Bushing (Front) Removal Note**.) (See **Hub Support Bushing (Front) Installation Note**.)
19	Hub support bushing (rear) (See **Hub Support Bushing (Rear) Removal Note**.) (See **Hub Support Bushing (Rear) Installation Note**.)

Brake Caliper Component Removal Note

1. Remove the brake caliper component from the trailing link and suspend it out of the way using a cable.

Rear Lower Arm Outer Bolt Removal Note

1. Support the rear lower arm using a jack.

2. Remove the rear lower arm outer bolt.

Wheel Hub Bolt Removal Note

NOTE:

- Remove the wheel hub bolt only if there is any malfunction.

1. Remove the wheel hub bolt using a press.

Hub Support Bushing (Front) Removal Note

1. Mark the hub support as shown in the figure.

2. Press the rear hub support bushing (front) out using the **SSTs**.

Hub Support Bushing (Rear) Removal Note

1. Mark the hub support as shown in the figure.

2. Press the rear hub support bushing (rear) out using the **SSTs**.

Hub Support Bushing (Rear) Installation Note

1. Align the projection of the bushing with the hub support marking and set a new bushing to the hub support.

2. Install a new hub support bushing (rear) using the **SSTs**.

Hub Support Bushing (Front) Installation Note

1. Align the projection of the bushing with the hub support marking and set a new bushing to the hub support.

2. Install a new hub support bushing (front) using the **SSTs**.

Wheel Hub Bolt Installation Note

1. Install the new wheel hub bolt using a press.

2014 - Mazda3 - DriveLine/Axle

REAR WHEEL HUB BOLT REPLACEMENT

1. Remove the brake caliper component and disc plate. (See **WHEEL HUB COMPONENT REMOVAL/INSTALLATION**.)

2. Remove the wheel hub bolt using the **SST** as shown in the figure.

3. Place a new wheel hub bolt in the wheel hub.

4. Install the wheel hub by placing a proper sized washer on the hub, and tightening the nut as shown in the figure.

2014 - Mazda3 - DriveLine/Axle

DRIVE SHAFT LOCATION INDEX

1	Front drive shaft (See **FRONT DRIVE SHAFT INSPECTION**.) (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.) (See **FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY**.) (See **FRONT DRIVE SHAFT (DOUBLE OFFSET JOINT) DISASSEMBLY/ASSEMBLY**.)

DRIVE SHAFT LOCATION INDEX

2014 - Mazda3 - DriveLine/Axle

FRONT DRIVE SHAFT INSPECTION

1. Inspect the connections for any looseness.

- If there is any malfunction, tighten or replace the applicable part.

2. Inspect the dust boot for damage and cracks.

- If there is any malfunction, replace the applicable part.

3. Move the spline and joint up and down, left and right by hand and verify that there is no excessive play.

- If there is any malfunction, replace the applicable part.

2014 - Mazda3 - DriveLine/Axle

FRONT DRIVE SHAFT REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Remove the splash shield. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

3. Drain the manual transaxle oil or ATF. (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.) (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

4. Remove in the order indicated in the table.

5. Install in the reverse order of removal.

1	ABS wheel-speed sensor
2	Locknut (See **Locknut Installation Note**.)
3	Tie-rod end ball joint (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)
4	Stabilizer control link upper nut

5	Dynamic damper (vehicles with dynamic damper)
6	Brake hose clip
7	Front lower arm ball joint
8	Drive shaft (LH) (See **Drive Shaft Removal Note**.) (See **Drive Shaft (LH) Installation Note**.)
9	Drive shaft clip (See **Drive Shaft Clip Installation Note**.)
10	Bracket No.2 (See **Bracket, Drive Shaft (RH) Installation Note**.)
11	Drive shaft (RH) (See **Bracket, Drive Shaft (RH) Installation Note**.)
12	Bracket No.1 (See **Bracket, Drive Shaft (RH) Installation Note**.)

Drive Shaft Removal Note

1. Install a spare nut onto the drive shaft.
2. Tap the nut with a copper hammer and separate the drive shaft from the axle.

3. Separate the drive shaft from the wheel hub.
4. Separate the drive shaft (LH) from the transaxle using the **SSTs**.

CAUTION:

- The oil seal at the front end of the drive shaft could be damaged. When removing the drive shaft, be careful not to damage the oil seal.

Bracket, Drive Shaft (RH) Installation Note

CAUTION:

- Retighten the bracket No.1 stud bolts when the bracket No.2 nuts are loosened

1. Tighten the bracket No.1 stud bolts.

Tightening torque

- 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

2. Temporarily tighten the bolts A and B.

3. Tighten the bolts A, then tighten the bolt B to the specified torque.

Tightening torque

- 42—62 N·m {4.3—6.3 kgf·m, 31—45 ft·lbf}

4. Insert the drive shaft into the transaxle until the drive shaft bearing contacts the bracket stopper.
5. Temporarily tighten the nuts C, then tighten the nuts C to the specified torque.

Tightening torque

- 22—28 N·m {2.3—2.8 kgf·m, 17—20 ft·lbf}

6. Apply transaxle oil to the oil seal lip.
7. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).

Drive Shaft Clip Installation Note

1. Install a new drive shaft clip to the clip groove at the end of the drive shaft with the clip opening facing upward.

2. After installation, measure the outer diameter.
   - If it exceeds the specification, repeat installation using a new clip.

     Outer diameter
   - SKYACTIV-G 2.0: 31.2 mm {1.23 in}
   - SKYACTIV-G 2.5: 34 mm {1.3 in}

Drive Shaft (LH) Installation Note

CAUTION:

- The sharp edges of the drive shaft can slice or puncture the oil seal. Be careful when installing the drive shaft to the transaxle.

1. Apply transaxle oil to the oil seal lip.
2. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).

3. Insert the drive shaft into the wheel hub.
4. Install the drive shaft to the transaxle.

5. After installation, pull the transaxle side outer ring forward to confirm that the drive shaft is securely held by the clip.

Locknut Installation Note

1. If dust or grease is on the drive shaft thread area, wipe it off with a cloth.

2. After tightening the locknut once at a torque of **100—150 N·m {11—15 kgf·m, 74—110 ft·lbf}**, loosen it **180 degrees** once, and then retighten it at a torque of **236—274 N·m {25—27 kgf·m, 175—202 ft·lbf}**.

2014 - Mazda3 - DriveLine/Axle

FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY

1. Disassemble in the order shown in the figure.
2. Assemble in the reverse order of disassembly.

1	Boot band (transaxle side) (See **Boot Band (Transaxle Side) Disassembly Note**.) (See **Boot Band (Transaxle Side) Assembly Note [SKYACTIV-G 2.0]**.) (See **Boot Band (Transaxle Side) Assembly Note [SKYACTIV-G 2.5]**.)
2	Outer ring (See **Outer Ring Disassembly Note**.) (See **Outer Ring Assembly Note**.)
3	Dust cover (See **Dust Cover Disassembly Note**.) (See **Dust Cover Assembly Note**.)
4	Snap ring
5	Bearing

	(See **Bearing Disassembly Note**.) (See **Bearing Assembly Note**.)
6	Snap ring (See **Snap Ring, Tripod Joint Disassembly Note**.) (See **Tripod Joint, Snap Ring Assembly Note**.)
7	Tripod joint (See **Snap Ring, Tripod Joint Disassembly Note**.) (See **Tripod Joint, Snap Ring Assembly Note**.)
8	Boot (transaxle side) (See **Boot (Transaxle Side) Disassembly Note**.) (See **Boot (Transaxle Side) Assembly Note**.)
9	Boot band (wheel side) (See **Boot Band (Wheel Side) Disassembly Note**.) (See **Boot Band (Wheel Side) Assembly Note**.)
10	Boot (wheel side) (See **Boot (Wheel Side) Disassembly Note**.) (See **Boot (Wheel Side) Assembly Note**.)
11	Shaft and ball joint component

Boot Band (Transaxle Side) Disassembly Note

SKYACTIV-G 2.0

1. Using a screwdriver and hammer, lightly tap the lever of the boot band to disconnect the lock clip.

2. Remove the boot band using pliers.

SKYACTIV-G 2.5

1. Remove the boot band using end clamp pliers.

Outer Ring Disassembly Note

1. Place alignment marks on the shaft and outer ring.

CAUTION:

- To prevent part damage, do not use a punch or similar tool to place alignment marks. Use paint.

2. Secure the shaft in a vise.

3. Lightly tap the outer ring evenly using a hammer and urethane bar or equivalent, and remove the outer ring from the shaft.

CAUTION:

- When tapping the outer ring lightly using a hammer and urethane bar or equivalent, be careful not to scratch the roller area so as to prevent damage to the part.

4. Wipe off grease on the outer ring using a clean rag.

Dust Cover Disassembly Note

1. Remove the dust cover using a press and the **SST**.

Bearing Disassembly Note

1. Remove the bearing using a press and **SST**.

Snap Ring, Tripod Joint Disassembly Note

1. Place alignment marks on the shaft and tripod joint.

CAUTION:

- To prevent damage to parts, do not use a punch or similar tool to place alignment marks. Use paint.

2. Remove the snap ring using snap ring pliers.

3. Remove the tripod joint from the shaft.

CAUTION:

- When using the hammer and urethane bar or equivalent, be careful not to scratch the roller area so as to prevent damage to the part.

NOTE:

- If the tripod joint cannot be removed from the shaft, lightly tap the tripod joint evenly using a hammer and urethane bar or equivalent, and remove the tripod joint from the shaft.

4. Wipe off grease on the shaft and tripod joint using a clean rag.

Boot (Transaxle Side) Disassembly Note

1. Wrap vinyl tape around the spline area of the shaft to prevent damage to the boot.

2. Remove the boot (transaxle side).
3. Wipe off grease on the boot (transaxle side) using a clean rag.

Boot Band (Wheel Side) Disassembly Note

1. Remove the boot band using end clamp pliers.

Boot (Wheel Side) Disassembly Note

1. Wrap vinyl tape around the spline area of the shaft to prevent damage to the boot.

2. Remove the boot (wheel side).
3. Wipe off grease on the boot (wheel side) and ball joint using a clean rag.

Boot (Wheel Side) Assembly Note

NOTE:

- The boot shapes on the wheel side and the transaxle side are different. Do not assemble the wrong boot by mistake.

1. Insert the shaft through the boot (wheel side) with the vinyl tape left wrapped around the spline area of the shaft.
2. Apply the specified grease to the ball joint and boot (wheel side).

NOTE:

- Apply the grease directly from the tube. Do not touch the grease directly with your hand.

Grease amount

- SKYACTIV-G 2.0: 70—90 g {2.5—3.1 oz}
- SKYACTIV-G 2.5: 87—97 g {3.1—3.4 oz}

3. Assemble the boot (wheel side) to the ball joint.

Boot Band (Wheel Side) Assembly Note

1. Adjust opening A of the **SST** to the standard by rotating the adjustment bolt.

Standard A (SKYACTIV-G 2.0)

- Approx. 4.6 mm {0.18 in}

Standard A (SKYACTIV-G 2.5)

- Large diameter side: Approx. 3.8 mm {0.15 in}
- Small diameter side: Approx. 3.1 mm {0.12 in}

2. Crimp the boot band using the **SST**.

Large diameter side

Small diameter side

3. Verify that crimp B of the boot band is within the standard.

Standard B (SKYACTIV-G 2.0)

- 1.2—4.0 mm {0.05—0.15 in}

Standard B (SKYACTIV-G 2.5)

- Large diameter side: 1.8 mm {0.071 in} or less
- Small diameter side: 1.5 mm {0.059 in} or less
- If crimp B exceeds the standard, decrease opening A of the **SST** and crimp the boot band again.

4. Verify that the boot band does not protrude from the band assembly area.
   - If the boot band protrudes from the assembly area, replace it with a new one and repeat Steps 1 to 3.

Boot (Transaxle Side) Assembly Note

NOTE:

- The boot shapes on the wheel side and the transaxle side are different. Do not assemble the wrong boot by mistake.

1. Insert the shaft through the boot (transaxle side) with the vinyl tape left wrapped around the spline area of the shaft.
2. Remove the vinyl tape wrapped around the spline of the shaft.

Tripod Joint, Snap Ring Assembly Note

1. Assemble the tripod joint with the shaft and tripod joint alignment marks aligned.

CAUTION:

- When tapping the outer ring lightly using a hammer and urethane bar or equivalent, be careful not to scratch the roller area so as to prevent damage to the part.

NOTE:

- If the tripod joint cannot be assembled to the shaft, lightly tap the tripod joint evenly using a hammer and urethane bar or equivalent, and assemble the tripod joint to the shaft.

2. Assemble a new snap ring using snap ring pliers.

3. Verify that the snap ring is assembled correctly in the groove of the shaft.

Bearing Assembly Note

1. Assemble the new bearing using the **SST** and the press.

Dust Cover Assembly Note

1. Assemble a new dust cover using the **SST** and the press.

Outer Ring Assembly Note

1. Apply the specified grease to the outer ring and boot (transaxle side).

NOTE:

- Apply the grease from the tube. Do not touch the grease directly with your hand.

  Grease amount

- SKYACTIV-G 2.0: 135—155 g {4.77—5.46 oz}
- SKYACTIV-G 2.5: 124—134 g {4.38—4.72 oz}

2. Secure the outer ring in the vise.

3. After aligning the shaft and outer ring alignment marks, lightly tap the tripod joint evenly using a hammer and urethane bar or equivalent, and insert the outer ring little by little while maintaining the shaft perpendicular.

CAUTION:

- When tapping the outer ring lightly using a hammer and urethane bar or equivalent, be careful not to scratch the roller area so as to prevent damage to the part.
- Be careful that dust and dirt do not get on the inside of the outer ring.

4. Assemble the boot (transaxle side) to the outer ring.

5. Set the drive shaft to the standard length.

Drive shaft full length (standard)

- SKYACTIV-G 2.0 (LH): 660.5—670.5 mm {26.01—26.39 in}
- SKYACTIV-G 2.0 (RH): 1024.9—1034.9 mm {40.351—40.744 in}
- SKYACTIV-G 2.5 (LH): 659.6—669.6 mm {25.97—26.36 in}
- SKYACTIV-G 2.5 (RH): 1021—1031 mm {40.20—40.59 in}

6. Release any trapped air from the boot by carefully lifting up the small end of the boot with a screwdriver wrapped in a clean rag.

NOTE:

- Do not damage the boot. Verify that there is no grease leakage.
- If the boot is deformed, it may not be possible to perform the full-length adjustment of the shaft.

7. Verify that the drive shaft length is within the standard when the inside of the boot is at atmospheric pressure.

- If not within the standard, repeat from Step 5.

Boot Band (Transaxle Side) Assembly Note [SKYACTIV-G 2.0]

WARNING:

- Your hands could be injured while assembling the boot band. Therefore always wear gloves.

1. Apply rust prevention oil to the inside of the boot band.
2. Lock the boot band against rotation using an appropriate tool as shown in the figure.

CAUTION:

- Do not put the boot band back to its original position after bending it using pliers because it will damage the boot band.

3. Using a pair of pliers, grip the lever at the base (fulcrum point) and rotate it in the direction of the arrow.

CAUTION:

- If the lever flips back by reactive force, press it back again a maximum of only three times to prevent damage to the boot band.

4. Hold the rotated lever with a finger and temporarily secure the lock clip by squeezing it with a pair of pliers.

5. Lightly tap the lock clip with a hammer until the gap in the lock clip is **1 mm (0.04 in) or less**.

6. After assembling the boot band, perform the following verification.
    - The boot band does not protrude from the band assembly area.
    - The lever is not deformed.
    - The boot and boot band are not damaged.
    - The gap between the boot band and the boot band lever is **1 mm (0.04 in) or less**.

    - If there is any malfunction, replace with a new part.

Boot Band (Transaxle Side) Assembly Note [SKYACTIV-G 2.5]

1. Adjust opening C of the **SST** to the standard by rotating the adjustment bolt.

Standard C

- Large diameter side: Approx. 3.8 mm {0.15 in}
- Small diameter side: Approx. 3.1 mm {0.12 in}

2. Crimp the boot band using the **SST**.

Large diameter side

Small diameter side

3. Verify that crimp D of the boot band is within the standard.

Standard D

- Large diameter side: 1.8 mm {0.071 in} or less
- Small diameter side: 1.5 mm {0.059 in} or less
- If crimp D exceeds the standard, decrease opening C of the **SST** and crimp the boot band again.

4. Verify that the boot band does not protrude from the band assembly area.
    - If the boot band protrudes from the assembly area, replace it with a new one and repeat Steps 1 to 3.

2014 - Mazda3 - DriveLine/Axle

FRONT DRIVE SHAFT (DOUBLE OFFSET JOINT) DISASSEMBLY/ASSEMBLY

1. Disassemble in the order shown in the figure.
2. Assemble in the reverse order of disassembly.

1	Boot band (transaxle side) (See **Boot Band (Transaxle Side) Disassembly Note**.) (See **Boot Band (Transaxle Side) Assembly Note**.)
2	Clip (See **Clip, Outer Ring Disassembly Note**.) (See **Outer Ring, Clip Assembly Note**.)
3	Outer ring (See **Clip, Outer Ring Disassembly Note**.) (See **Outer Ring, Clip Assembly Note**.)
4	Dust cover (See **Dust Cover Disassembly Note**.)

	(See **Dust Cover Assembly Note**.)
5	Snap ring
6	Bearing (See **Bearing Disassembly Note**.) (See **Bearing Assembly Note**.)
7	Snap ring (See **Snap ring, Ball, Inner Ring, Cage Disassembly Note**.) (See **Ball, Inner Ring, Cage, Snap Ring Assembly Note**.)
8	Ball, inner ring, cage (See **Snap ring, Ball, Inner Ring, Cage Disassembly Note**.) (See **Ball, Inner Ring, Cage, Snap Ring Assembly Note**.)
9	Boot (transaxle side) (See **Boot (Transaxle Side) Disassembly Note**.) (See **Boot (Transaxle Side) Assembly Note**.)
10	Boot band (wheel side) (See **Boot Band (Wheel Side) Disassembly Note**.) (See **Boot Band (Wheel Side) Assembly Note**.)
11	Boot (wheel side) (See **Boot (Wheel Side) Disassembly Note**.) (See **Boot (Wheel Side) Assembly Note**.)
12	Shaft and ball joint component

Boot Band (Transaxle Side) Disassembly Note

1. Using a screwdriver and hammer, lightly tap the lever of the boot band to disconnect the lock clip.

2. Remove the boot band using pliers.

Clip, Outer Ring Disassembly Note

1. Place alignment marks on the shaft and outer ring.

CAUTION:

- To prevent part damage, do not use a punch or similar tool to place alignment marks. Use paint.

2. Remove the clip using a screwdriver.

3. Remove the outer ring from the shaft.
4. Wipe off grease on the outer ring using a clean rag.

Dust Cover Disassembly Note

1. Remove the dust cover using a press and the **SST**.

Bearing Disassembly Note

1. Remove the bearing using a press and the **SST**.

Snap ring, Ball, Inner Ring, Cage Disassembly Note

1. Place alignment marks on the shaft, inner ring, and cage.

CAUTION:

- To prevent part damage, do not use a punch or similar tool to place alignment marks. Use paint.

2. Remove the snap ring using snap ring pliers.

3. Remove the ball, inner ring, and cage from the shaft.

CAUTION:

- When using a hammer and urethane bar or equivalent, be careful not to damage the ball, ball sliding area, and cage.

NOTE:

- If the ball, inner ring, and cage cannot be removed from the shaft, lightly tap the inner ring evenly using a hammer and urethane bar or equivalent, and remove the ball, inner ring, and cage from the shaft.

4. Wipe off grease on the shaft, ball, inner ring, and cage using a clean rag.

Boot (Transaxle Side) Disassembly Note

1. Wrap vinyl tape around the spline area of the shaft to prevent damage to the boot.

2. Remove the boot (transaxle side).
3. Wipe off grease on the boot (transaxle side) using a clean rag.

Boot Band (Wheel Side) Disassembly Note

1. Remove the boot band using end clamp pliers.

Boot (Wheel Side) Disassembly Note

1. Wrap vinyl tape around the spline area of the shaft to prevent damage to the boot.

2. Remove the boot (wheel side).
3. Wipe off grease on the boot (wheel side) and ball joint using a clean rag.

Boot (Wheel Side) Assembly Note

NOTE:

- The boot shapes on the wheel side and the transaxle side are different. Do not assemble the wrong boot by mistake.

1. Insert the shaft through the boot (wheel side) with vinyl tape left wrapped around the spline area of the shaft.
2. Apply the specified grease to the ball joint and boot (wheel side).

NOTE:

- Apply the grease from the tube. Do not touch the grease directly with your hand.

  Grease amount

- 90—110 g {3.2—3.8 oz}

3. Assemble the boot (wheel side) to the ball joint.

Boot Band (Wheel Side) Assembly Note

1. Adjust opening A of the **SST** to the standard by rotating the adjustment bolt.

Standard A

- Approx. 4.6 mm {0.18 in}

2. Crimp the boot band using the **SST**.

Large diameter side

Small diameter side

3. Verify that crimp B of the boot band is within the standard.

Standard B

- 1.2—4.0 mm {0.05—0.15 in}
- If crimp B exceeds the standard, decrease opening A of the **SST** and crimp the boot band again.
- If crimp B is less than the standard, replace the boot band, increase opening A of the **SST**, and crimp the new boot band.

4. Verify that the boot band does not protrude from the boot band assembly area.
   - If the boot band protrudes from the assembly area, replace it with a new one and repeat Steps 1 to 3.

Boot (Transaxle Side) Assembly Note

NOTE:

- The boot shapes on the wheel side and the transaxle side are different. Do not assemble the wrong boot by mistake.

1. Insert the shaft through the boot (transaxle side) with vinyl tape left wrapped around the spline area of the shaft.
2. Remove vinyl tape wrapped around the spline area of the shaft.

Ball, Inner Ring, Cage, Snap Ring Assembly Note

1. Assemble the shaft, inner ring, and cage with the alignment marks aligned.

CAUTION:

- When using the hammer and urethane bar or equivalent, be careful not to damage the ball, ball sliding area, and cage.

NOTE:

- If the ball, inner ring, and cage cannot be assembled to the shaft, lightly tap the inner ring evenly using a hammer and urethane bar or equivalent, and assemble the ball, inner ring, and cage to shaft.

2. Assemble a new snap ring using snap ring pliers.

3. Verify that the snap ring is assembled correctly in the groove of the shaft.

Bearing Assembly Note

1. Assemble a new bearing using the **SST** and a press.

Dust Cover Assembly Note

1. Assemble a new dust cover using the **SST** and a press.

Outer Ring, Clip Assembly Note

1. Apply the specified grease to the outer ring and boot (transaxle side).

NOTE:

- Apply the grease from the tube. Do not touch the grease directly with your hand.

  Grease amount

- 80—100 g {2.9—3.5 oz}

2. Assemble the outer ring with the alignment marks on the shaft and outer ring aligned.

3. Assemble a new clip using a screwdriver.

4. Verify that the clip is assembled correctly in the groove of the outer ring.

5. Assemble the boot (transaxle side) to the outer ring.

6. Set the drive shaft length to the standard.

   Drive shaft full length (standard)

- LH: 661.5—671.5 mm {26.05—26.43 in}
- RH: 1024.5—1034.5 mm {40.335—40.728 in}

7. Release any trapped air from the boot by carefully lifting up the small end of the boot with a screwdriver wrapped in a clean rag.

NOTE:

- Do not damage the boot. Verify that there is no grease leakage.
- If the boot is deformed, it may not be possible to perform the full-length adjustment of the shaft.

8. Verify that the drive shaft length is within the standard when the inside of the boot is at atmospheric pressure.
   - If not within the standard, repeat from Step 6.

Boot Band (Transaxle Side) Assembly Note

WARNING:

- Your hands could be injured while assembling the boot band. Therefore always wear gloves.

1. Apply rust prevention oil to the inside of the boot band.
2. Lock the boot band against rotation using an appropriate tool as shown in the figure.

CAUTION:

- Do not put the boot band back to its original position after bending it using pliers because it will damage the boot band.

3. Using a pair of pliers, grip the lever at the base (fulcrum point) and rotate it in the direction of the arrow.

CAUTION:

- If the lever flips back by reactive force, press it back again a maximum of only three times to prevent damage to the boot band.

4. Hold the rotated lever with a finger and temporarily secure the lock clip by squeezing it with a pair of pliers.

5. Lightly tap the lock clip with a hammer until the gap in the lock clip is **1 mm (0.04 in) or less**.

6. After assembling the boot band, perform the following verification.
   - The boot band does not protrude from the band assembly area.
   - The lever is not deformed.
   - The boot and boot band are not damaged.
   - The gap between the boot band and the boot band lever is **1 mm (0.04 in) or less**.

   - If there is any malfunction, replace with a new part.

2014 - Mazda3 - DriveLine/Axle

DRIVELINE/AXLE TECHNICAL DATA

Item			Specification
Front wheel bearing maximum play			0.05 mm {0.002 in}
Rear wheel bearing maximum play			0.05 mm {0.002 in}

FOREWORD [DYNAMIC STABILITY CONTROL (DSC)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
  - Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.

  - Inspect the female terminals for poor connection.

2014 - Mazda3 - Brakes

ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the DSC and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - Provides a quick inspection of the DSC usually performed at the start of each diagnostic procedure.
  - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - Read/clear diagnostic results, PID/DATA monitor and record, and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the DSC HU/CM memory.

PID/Data monitor and record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

Active command modes

- This function allows you to control devices through the M-MDS.

Reading DTCs Procedure

CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the DSC. (See **Clearing DTCs Procedure**.)

ODDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “ABS”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the DSC. (See **Clearing DTCs Procedure**.)

Clearing DTCs Procedure

CMDTC clearing DTCs procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See **Reading DTCs Procedure**.)
8. Verify that no DTCs are displayed.

ODDTC clearing DTCs procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.

b. Select “Modules”.

c. Select “ABS”.

3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See **Reading DTCs Procedure**.)
8. Verify that no DTCs are displayed.

PID/Data Monitor and Record Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “DataLogger”.
   b. Select “Modules”.
   c. Select “ABS”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID/DATA monitor screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

Active Command Modes Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “DataLogger”.
   b. Select “Modules”.
   c. Select “ABS”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

Snapshot Data Access Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “ABS”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the IDS screen.
4. Retrieve the snapshot data according to the directions on the IDS screen.

NOTE:

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- The snapshot data stores the currently detected DTC data.

*4 **Enabled depending on malfunction content.**

*5 **When power supply voltage is 7.9—9.6 V for 700 ms or more.**

*6 **When power supply voltage is 6.0—7.9 V for 780 ms or more.**

*7 **When power supply voltage is less than 6 V for 50 ms or more.**

PID/DATA Monitor Table

PID name (definition)	Unit/Condition	Operation condition (reference)	Action
BRAKE_SW	Off/On	• Brake pedal released: Off • Brake pedal depressed: On	Inspect the brake switch. (See **BRAKE SWITCH INSPECTION**.)
BRK_F_P_C (Calculated Value) BRK_F_P_R (Raw Value)	Pa, psi	• Brake pedal depressed: Changes according to the brake fluid pressure	Inspect the brake fluid pressure sensor. (See **BRAKE FLUID PRESSURE SENSOR INSPECTION**.)
DDS_MODE	Not_Learned/Learning/Learned	• During initialization: Not_Learned • During learning: Learning • Learning completed*: Learned	Perform the DTC inspection for the DSC HU/CM. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
DSC_OFF_SW	Off/On	• DSC OFF switch is released: Off • DSC OFF switch is depressed: On	Inspect the DSC OFF switch. (See **DSC OFF SWITCH INSPECTION**.)
DSC_ST	Off/On	• During DSC OFF mode: Off	Perform the DTC inspection for the DSC HU/CM.

		• Other than DSC OFF mode: On	(See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
LAT_ACCL_C (Calculated Value) LAT_ACCL_R (Raw Value)	G	• Vehicle stopped or driving at constant speed: **0 G** • Cornering to left: Changes **0 G—positive** • Cornering to right: Changes **0 G—negative**	Perform the DTC inspection for the SAS control module. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
LON_ACCL_C (Calculated Value) LON_ACCL_R (Raw Value)	G	• Vehicle stopped or driving at constant speed: **0 G** • Vehicle is driving at an acceleration: Changes **0 G—positive** • Vehicle is driving at a deceleration: Changes **0 G—negative**	Perform the DTC inspection for the SAS control module. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
P_BRAKE_SW	Off/On	• Parking brake lever released: Off • Parking brake lever pulled: On	Inspect the parking brake switch. (See **PARKING BRAKE SWITCH INSPECTION**.)
PMP_MT PMP_MT_SP	Off/On	• Pump motor not activated: Off • Pump motor activated: On	Inspect the DSC HU/CM. (See **DSC HU/CM INSPECTION**.)
R_GEAR_SW	Off/On	• Except shift/selector lever at R position: Off • Shift/selector lever at R position: On	• Inspect the PCM. (MTX) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the TCM. (ATX) (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)
STR_ANG_C (Calculated Value)	°	• Steering wheel in neutral position (not turned): **0°** • Steering wheel turned to left: Changes **0°—positive** • Steering wheel turned to right: Changes **0°—negative** **NOTE:** • Constantly indicates **0°** until the steering wheel angle neutral position determination by the DSC HU/CM is completed. • The steering wheel angle neutral position determination by the DSC HU/CM is completed when the vehicle is driven in a straight line at a speed of **20 km/h or more** for several seconds.	Perform the DTC inspection for the PCM, DSC HU/CM, and EPS CM. If a DTC is displayed after performing the DTC inspection for the PCM, DSC HU/CM, and EPS CM, repair the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) (See **EPS CONTROL MODULE INSPECTION**.) After performing the DTC inspection, perform the following procedures: • Start the engine and drive the vehicle in a straight line at a speed of **20 km/h or more** for several seconds. If an abnormal value is indicated after verifying the value of the STR_ANG_C again, replace the DSC HU/CM.
STR_ANG_R (Raw Value)		• Steering wheel position when ignition is switched ON (engine off or on): **0°** • Steering wheel turned to left: Changes **0°—positive** • Steering wheel turned to right: Changes **0°—negative** **NOTE:** • The signal displayed in this item is a steering angle (relative angle) signal output from the EPS CM.	Inspect the following PID. • STR_ANG (See **EPS CONTROL MODULE INSPECTION**.)
TPMS_TYPE	No_DDS/DDS+TOM_EU/DDS+TOM_US	• TPMS not equipped: No_DDS • TPMS equipped (Corresponding to European regulations): DDS+TOM_EU • TPMS equipped (Corresponding to U.S. regulations): DDS+TOM_US	Perform the DTC inspection for the DSC HU/CM. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
V_INLET_LF V_INLET_LR V_INLET_RF V_INLET_RR V_OUTLET_LF V_OUTLET_LR V_OUTLET_RF V_OUTLET_RR	Off/On	• Solenoid valve not activated: Off • Solenoid valve activated: On	Inspect the DSC HU/CM. (See **DSC HU/CM INSPECTION**.)
V_STB_LF/RR V_STB_RF/LR	Off/On	• Solenoid valve activated: On • Solenoid valve not activated: Off	Inspect the DSC HU/CM. (See **DSC HU/CM INSPECTION**.)
V_TRC_LF/RR V_TRC_RF/LR	Off/On	• Solenoid valve activated: On • Solenoid valve not activated: Off	Inspect the DSC HU/CM. (See **DSC HU/CM INSPECTION**.)
VPWR_B_SOL	V	• Ignition switched ON (engine off): **Approx. 12.2 V** • Idling: **Approx. 14.1 V**	Inspect power supply circuit. (See **DSC HU/CM INSPECTION**.)
VSPD	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the DSC HU/CM. (See **DSC HU/CM INSPECTION**.)
WSPD_SEN_LF			Inspect the front ABS wheel-speed sensor. (See **FRONT ABS WHEEL-SPEED SENSOR INSPECTION**.)
WSPD_SEN_LR			Inspect the rear ABS wheel-speed sensor.

	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	(See **REAR ABS WHEEL-SPEED SENSOR INSPECTION**.)
WSPD_SEN_RF			Inspect the front ABS wheel-speed sensor. (See **FRONT ABS WHEEL-SPEED SENSOR INSPECTION**.)
WSPD_SEN_RR			Inspect the rear ABS wheel-speed sensor. (See **REAR ABS WHEEL-SPEED SENSOR INSPECTION**.)
YAW_RATE_C (Calculated Value)	°/s	• Vehicle stopped or driving straight: **0 °/s** • Cornering to left: Changes **0 °/s—positive** • Cornering to right: Changes **0 °/s—negative**	Perform the DTC inspection for the SAS control module. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
YAW_RATE_R (Raw Value)			

*
After ignition is switched off, switch it ON (engine off or on) and verify.

Snapshot Data Table

NOTE:

- The DSC HU/CM stores the following two types of information when a DTC is detected and displays snap shot data in the M-MDS.
  - Vehicle information detected by DSC HU/CM
  - Vehicle information detected by instrument cluster and received by start stop unit via CAN signal
- Refer to PID/DATA monitor table for confirm the DSC system operation status while the DSC CM does not store the DTC. (See **PID/DATA Monitor Table**.)
- Snapshot data items are not displayed according to detected DTC.

Snapshot data item	Unit	Data contents	Data read/use method	Corresponding data monitor items
AAT	°C, °F	Ambient air temperature	Not applicable.	Not applicable.
ABS	Inactive/ Active	Antilock braking system	Not applicable.	Not applicable.
APP_STATUS	Accelerator Pedal Off/ Under 20%/ Over 20%/ FAIL	Accelerator pedal position	Not applicable.	Not applicable.
AYC	Inactive/ Active	Active yaw control	Not applicable.	Not applicable.
BRK_F_P_R	Pa, psi	Brake fluid line hydraulic pressure (Raw Value)	BRK_F_P_R	BRK_F_P_R
BTCS	Inactive/ Active	Brake traction control system	Not applicable.	Not applicable.
CFG_STATUS	Config Complete/ Not Configured/ Config Error	Instrument cluster configuration status	Not applicable.	Not applicable.
ECT_STATUS	Under 0 degrees C/ 0 - Under 80 degrees C/ Over 80 degrees C/ FAIL	Engine coolant temperature status	Not applicable.	Not applicable.
EDC	Inactive/ Active	Engine drag control	Not applicable.	Not applicable.
IC_VPWR	V	Instrument cluster power supply	• The DSC HU/CM constantly receives the power supply voltage value of the instrument cluster sent via CAN signal from the instrument cluster. • If a DTC is detected, the DSC HU/CM records the power supply voltage of the instrument cluster when the DTC was detected, and it is displayed in the M-MDS.	VRWR*2
IG-ON_TIMER	hh:mm:ss*1	Elapsed time since ignition was switched ON **NOTE:** • The instrument cluster records the elapsed time since the ignition was switched ON.	• The DSC HU/CM constantly receives the elapsed time since the ignition was switched ON sent via CAN signal from the instrument cluster. • If a DTC is detected, the DSC HU/CM records the elapsed time since the ignition was switched ON when the DTC was detected, and it is displayed in the M-MDS.	Not applicable.
LAT_ACCL_R	G	Lateral acceleration (Raw Value)	LAT_ACCL_R	LAT_ACCL_R
LON_ACCL_R	G	Longitudinal acceleration (Raw Value)	LON_ACCL_R	LON_ACCL_R
PMP_MT	Off/On	Pump motor	PMP_MT	PMP_MT
		• Key Out: Ignition switched to off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was		

PWR_MODE_KEY	Key Out/Key Recently Out (Position 0)/Accessory (Position 1)/Post Ignition (Position 2)/Ignition On (Position 2)/Running (Position 2)/Running - Starting	switched to off • Accessory (Position 1): Ignition is switched to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since ignition was switched ON • Ignition On (Position 2): Ignition switched ON (engine off) • Running (Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition	• When a DTC is detected, the DSC HU/CM receives the ignition switch condition being detected by the instrument cluster via CAN signals and displays it in the M-MDS.	Not applicable.
RPM_STATUS	Engine Stop/ Under 1500rpm/ Over 1500rpm/ FAIL	Engine RPM status	• The DSC HU/CM constantly receives the ignition switch status sent via CAN signal from the instrument cluster. • If a DTC is detected, the DSC HU/CM records the ignition switch status when the DTC was detected, and it is displayed in the M-MDS.	TACHOMTR*2
SHIFT_STATUS	P/N D/ R/ FAIL	Shift position status	• The DSC HU/CM constantly receives the selector lever position sent via CAN signal from the instrument cluster. • If a DTC is detected, the DSC HU/CM records the selector lever position when the DTC was detected, and it is displayed in the M-MDS.	Not applicable.
STR_ANG_C	°	Steering wheel angle (Calculated Value)	STR_ANG_C	STR_ANG_C
TCS	Inactive/ Active	Traction control system	Not applicable.	Not applicable.
TOTAL_DIST	km, ft, mi	Accumulated total traveled distance from completion of vehicle until DSC HU/CM detects DTC (Odometer value in instrument cluster)	The distance traveled when the DSC HU/CM detected a DTC can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snap shot data item TOTAL_DIST. • Subtract 2 from 1.	Not applicable.
TOTAL_TIME	hh:mm:ss*1	Accumulated total elapsed time since vehicle completion until DSC HU/CM detects a DTC **NOTE:** • When the ROOM fuse is removed, and the ignition is switched off, the time is not included in the elapsed time.	The elapsed time when the DSC HU/CM detected a DTC can be calculated by performing the following procedure. • Verify the PID item TOTAL_TIME of the instrument cluster. • Verify the snap shot data item TOTAL_TIME. • Subtract 2 from 1.	Not applicable.
VPWR	V	Power supply	VPWR_B_SOL	VPWR_B_SOL
VSPD	KPH, MPH	Vehicle speed	VSPD	VSPD
VSPD_STATUS	Stop/ 0 - 10km/h/ Over 10km/h/ FAIL	When a DTC is detected, the DSC HU/CM receives the vehicle speed being detected by the instrument cluster via CAN signals and displays it in the M-MDS.	• The DSC HU/CM constantly receives the vehicle speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the DSC HU/CM records the vehicle speed when the DTC was detected, and it is displayed in the M-MDS.	SPEEDOMTR*2
YAW_RATE_R	°/S	Yaw Rate (Raw Value)	YAW_RATE_R	YAW_RATE_R

*1 **Fractions of seconds may be indicated after the decimal point.**

*2 **Instrument cluster PID (See PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER].)**

Active Command Modes Table

N/A: Not applicable

Command name	Output part	Operation	Operating condition
PMP_MT_SP	Pump motor	Off/On	Switch the ignition ON (engine off)
V_INLET_LF	LF inlet solenoid valve		
V_INLET_LR	LR inlet solenoid valve		
V_INLET_RF	RF inlet solenoid valve		
V_INLET_RR	RR inlet solenoid valve		
V_OUTLET_LF	LF outlet solenoid valve		
V_OUTLET_LR	LR outlet solenoid valve		
V_OUTLET_RF	RF outlet solenoid valve		
V_OUTLET_RR	RR outlet solenoid valve		
V_STB_LF/RR	LF/RR stability control solenoid valve	Off/On	Switch the ignition ON (engine off)
V_STB_RF/LR	RF/LR stability control solenoid valve		
V_TRC_LF/RR	LF/RR linear control solenoid valve	Off/On	Switch the ignition ON (engine off)

V_TRC_RF/LR	RF/LR linear control solenoid valve		

2014 - Mazda3 - Brakes

DTC B10DF:46/C1A08:1C/U2007:46/U2007:62/U3000:49 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	B10DF:46, C1A08:1C, U2007:46, U2007:62, U3000:49	DSC HU/CM (internal malfunction)
DETECTION CONDITION	• The DSC CM on-board diagnostic function detects control module internal malfunction.	
FAIL-SAFE FUNCTION	• B10DF:46 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Inhibits the TCS, DSC, brake assist control, hill launch assist (HLA), and smart city brake support (SCBS)*1 controls. • C1A08:1C ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. • U2007:46 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Inhibits the TCS, DSC, brake assist control*3, hill launch assist (HLA), and smart city brake support (SCBS)*1 controls. • U2007:62 ▪ Illuminates the ABS warning light, brake system warning light, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1. ▪ Inhibits the ABS, EBD, TCS, DSC, brake assist control, hill	

	launch assist (HLA), and smart city brake support (SCBS)*1controls. • U3000:49 ▪ Illuminates the ABS warning light, brake system warning light*2, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) ▪ Inhibits the ABS, EBD*3, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1*3, and smart city brake support (SCBS)*1controls. • *1: If equipped. • *2: Not illuminated depending on malfunction content. • *3: Enabled depending on malfunction content.
POSSIBLE CAUSE	• DSC HU/CM internal malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NO DSC HU/CM MALFUNCTION** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **10km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

DTC B10DF:46/C1A08:1C/U2007:46/U2007:62/U3000:49 [DYNAMIC STABILITY CONTROL (DSC)]

2014 - Mazda3 - Brakes

DTC B11D4:08 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	B11D4:08	Laser sensor
DETECTION CONDITION		• Correct signal cannot be received from laser sensor. • DSC HU/CM received excessively-continuous signal from laser sensor.
FAIL-SAFE FUNCTION		• Illuminates the smart city brake support (SCBS) indicator light (amber). • Inhibits the Smart City Brake Support (SCBS) control.
POSSIBLE CAUSE		• Laser sensor malfunction • Brake fluid for restriction or leakage
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**PERFORM LASER SENSOR DTC INSPECTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the laser sensor. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See **LASER SENSOR REMOVAL/INSTALLATION**.)

	• Are the same DTCs present?		
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0001:01/C0002:01/C0003:01/C0004:01/C0010:01/C0011:01/C0014:01/C0015:01/C0018:01/C0019:01/C001C:01/C001D:01 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	**C0001:01, C0002:01**	**Traction control solenoid valve system**
	C0003:01, C0004:01	**Stability control solenoid valve system**
	C0010:01	**LF inlet solenoid valve system**
	C0011:01	**LF outlet solenoid valve system**
	C0014:01	**RF inlet solenoid valve system**
	C0015:01	**RF outlet solenoid valve system**
	C0018:01	**LR inlet solenoid valve system**
	C0019:01	**LR outlet solenoid valve system**
	C001C:01	**RR inlet solenoid valve system**
	C001D:01	**RR outlet solenoid valve system**
DETECTION CONDITION	• Malfunction detected in the DSC HU/CM solenoid valve or internal circuit by the DSC HU/CM on-board diagnostic function	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, brake system warning light, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1. • Inhibits the ABS, EBD, TCS, DSC, brake assist control, hill launch assist (HLA), and smart city brake support (SCBS)*1 controls. • *1: If equipped.	
POSSIBLE CAUSE	• Open or short circuit in the DSC HU/CM internal solenoid valves • Solenoid valve malfunction	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY SOLENOID VALVE OPERATION** • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off).	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)

	• Access the active command mode for the solenoid valve using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Does the solenoid valve operate?		
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Gradually slow down and stop vehicle. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY AFTER REPAIR PROCEDURE** • Are any other DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0020:11/C0020:12/C0020:13/C0020:71 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C0020:11, C0020:12, C0020:13, C0020:71	Pump motor, motor relay

DETECTION CONDITION		• C0020:11
		  ▪ Motor relay signal does not correspond to DSC HU/CM OFF signal.
		• C0020:12
		  ▪ DSC motor monitor signal does not correspond to DSC HU/CM OFF signal.
		  ▪ DSC motor monitor signal does not correspond to DSC HU/CM ON signal.
		• C0020:13
		  ▪ Motor relay signal does not correspond to DSC HU/CM ON signal.
		• C0020:71
		  ▪ DSC HU/CM motor monitor ON signal is not input within specified time limit or more when motor signal is switched from ON to OFF by DSC HU/CM.

FAIL-SAFE FUNCTION		• Illuminates the ABS warning light, TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. • Inhibits the ABS, TCS, DSC, brake assist control, and smart city brake support (SCBS)*1 controls. • *1: If equipped.
POSSIBLE CAUSE		• Fuse (ABS/DSCM 50A) malfunction • Open or short circuit in DSC HU/CM internal motor relay, or stuck motor relay • Open or short circuit in DSC HU/CM internal pump motor, or frozen pump motor • Open circuit or short to ground in the wiring harness between the battery and DSC HU/CM terminal B

	• Open circuit in the wiring harness between DSC HU/CM terminal AL and body ground • Poor connection at connectors (female terminal)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUSE CONDITION** • Is the fuse (ABS/DSCM 50A) normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 6.
2	**VERIFY PUMP MOTOR OPERATION**	Yes	Go to Step 6.

	Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Access PMP_MT_SP active command modes using the M-MDS. • Does the pump motor operate?	No	Go to the next step.
3	**INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT** • Switch the ignition to off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal B (vehicle harness-side) and the positive battery terminal. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between DSC HU/CM terminal B and the positive battery terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT** • Inspect for continuity between DSC HU/CM terminal B (vehicle harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT** • Inspect for continuity between DSC HU/CM terminal AL (vehicle harness-side) and body ground.	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.

	• Is there continuity?		
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0023:62/C0040:64 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C0023:62, C0040:64	Brake switch
DETECTION CONDITION	• C0023:62 ▪ Brake light ON signal is not input even though the brake light request signal is input. ▪ Brake light ON signal is input even though the brake light request signal is not input. ▪ Communication error with brake light is detected in CAN communication via Rear Body Control Module (RBCM). • C0040:64 ▪ Brake switch ON signal is input for **6 min or more** when driving at a vehicle speed of **20 km/h {12 mph} or more**. ▪ A brake switch ON signal is not input when the brake fluid pressure sensor signal reaches the specified value.	
FAIL-SAFE FUNCTION	• C0023:62 ▪ Illuminates the smart city brake support (SCBS) indicator light (amber). ▪ Inhibits the smart city brake support (SCBS) control. • C0040:64 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. • *1: If equipped.	
POSSIBLE CAUSE	• Open or short circuit in wiring harness between the brake switch and PCM terminal 2G • Brake switch malfunction • Poor connection at connectors (female terminal) • Rear Body Control Module (RBCM) malfunction • PCM malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT POWER SUPPLY (SYSTEM) CIRCUIT** • Switch the ignition ON (engine off). • Measure the voltage at the DSC HU/CM connector terminal Q (vehicle harness side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay and DSC HU/CM terminal Q (vehicle harness side). **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
2	**VERIFY OPEN OR SHORT CIRCUIT IN BRAKE SWITCH SIGNAL** • Switch the ignition ON (engine off). • Measure the voltage between the PCM connector terminal 2G (vehicle harness-side) and body ground when the brake pedal is depressed and released. ◦ **Voltage** **Brake pedal depressed: B+** **Brake pedal released: 1 V or less** • Is the voltage normal?	Yes	Go to the Step 8.
		No	If it is **B+** under any condition, then go to the next step. If it is **1 V or less** under any condition, then go to Step 4.
3	**INSPECT BRAKE SWITCH SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT** • Disconnect the brake switch connector. • Measure voltage between the brake switch connector terminal D (vehicle harness-side) and body ground. • Is the voltage **1 V or less**?	Yes	Go to Step 5.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between PCM connector terminal 2G (vehicle harness-side) and brake switch connector terminal D (vehicle harness side). **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
4	**INSPECT BRAKE SWITCH SIGNAL FOR OPEN CIRCUIT**	Yes	Go to the next step.

	• Disconnect the PCM connectors. • Disconnect the brake switch connector. • Inspect continuity between the PCM and brake switch as follows. ▪ PCM connector terminal 2G (vehicle harness-side) and brake switch connector terminal D (vehicle harness-side) • Is there continuity?	No	Refer to the wiring diagram and verify whether or not there is a common connector between PCM connector terminal 2G (vehicle harness-side) and brake switch connector terminal D (vehicle harness side). **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
5	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See **BRAKE SWITCH INSPECTION**.) • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to Step 8. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)
6	**PERFORM REAR BODY CONTROL MODULE (RBCM) DTC INSPECTION** • Reconnect all disconnected connectors. • Using the M-MDS, perform the DTC inspection for the rear body control module (RBCM). (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	Go to the next step.
7	**PERFORM PCM DTC INSPECTION** • Using the M-MDS, perform the DTC inspection for the PCM. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
8	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **20 km/h {12 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
9	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0030:07/C0031:07/C0031:29/C0031:2F/C0031:64/C0033:07/C0034:07/C0034:29/C0034:2F/C0034:64/C0036:07/C0037:07/C0037:29/C0037:2F/C0037:64/C0039:07/C003A:07/C003A:29/C003A:2F/C003A:64 [DYNAMIC STABILITY CONTROL (DSC)]

NOTE:

- When only the driving wheels are rotated while the vehicle is jacked up, DTCs C0037:29 and C003A:29 are input to the memory.

DTC	**C0030:07**	**LF ABS sensor rotor**
	C0031:07, C0031:29, C0031:2F, C0031:64	**LF ABS wheel-speed sensor/ABS sensor rotor**
	C0033:07	**RF ABS sensor rotor**
	C0034:07, C0034:29, C0034:2F, C0034:64	**RF ABS wheel-speed sensor/ABS sensor rotor**
	C0036:07	**LR ABS sensor rotor**
	C0037:07, C0037:29, C0037:2F, C0037:64	**LR ABS wheel-speed sensor/ABS sensor rotor**
	C0039:07	**RR ABS sensor rotor**
	C003A:07, C003A:29, C003A:2F, C003A:64	**RR ABS wheel-speed sensor/ABS sensor rotor**

DETECTION CONDITION	• C0030:07, C0033:07, C0036:07, C0039:07
	  ▪ Periodic abnormality is detected in the signal wave pattern from the ABS wheel-speed sensors.
	• C0031:07, C0034:07, C0037:07, C003A:07
	  ▪ While the vehicle is traveling at a speed of **10 km/h {6.2 mph} or more**, no signal in any of the four wheels or an extremely low vehicle speed signal is detected.
	• C0031:29, C0034:29, C0037:29, C003A:29
	  ▪ The wheel-speed signal is not input or an extremely low wheel-speed signal is detected from any of the four wheels when driving at a vehicle speed of **10 km/h {6.2 mph} or more**
	• C0031:2F, C0034:2F, C0037:2F, C003A:2F
	  ▪ The wheel speed or acceleration speed in any of the 4 wheels is not within the specification.
	  ▪ ABS control continues to operate for **28 s or more**.
	• C0031:64, C0034:64, C0037:64, C003A:64
	  ▪ While the vehicle is traveling at a speed of **20 km/h {12 mph} or more**, an extremely high vehicle speed signal in any of the four wheels is detected.

FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)[*1]. • Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the ABS, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS, and smart city brake support (SCBS)[*1] controls. (Additionally, when any malfunction is detected in two wheels or more, EBD control is inhibited and the brake system warning light is illuminated.) • [*1]: If equipped.
POSSIBLE CAUSE	• ABS sensor rotor malfunction (missing ABS sensor rotor teeth due to foreign material obstruction) • ABS wheel-speed sensor or ABS sensor rotor installation malfunction (If the ABS sensor rotor is installed at an angle, it may cause output of abnormal wave pattern at high speeds.) • Excessive clearance between the ABS wheel-speed sensor and sensor rotor

- ABS wheel-speed sensor malfunction
- Continuous ABS operation

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PID FOR ABS WHEEL-SPEED SENSOR OUTPUT ERROR USING M-MDS** • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Select the following PIDs using the M-MDS: ▪ WSPD_SEN_LF ▪ WSPD_SEN_LR ▪ WSPD_SEN_RF ▪ WSPD_SEN_RR • Drive the vehicle. • Verify that the vehicle speeds detected by the four ABS wheel-speed sensors are approximately the same. • Are the vehicle speeds approximately the same?	Yes	Go to Step 3.
		No	Go to the next step.

2	**INSPECT FOR SHORT TO GROUND BETWEEN ABS WHEEL-SPEED SENSOR CONNECTORS AND GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Inspect for no continuity between the following ABS wheel-speed sensor connector terminals (vehicle harness-side) and body ground: ▪ ABS wheel-speed sensor (RF): A—Body ground ▪ ABS wheel-speed sensor (LF): A—Body ground ▪ ABS wheel-speed sensor (RR): B—Body ground ▪ ABS wheel-speed sensor (LR): B—Body ground • Is the continuity normal?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the DSC HU/CM connector terminals (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: • RF ABS wheel-speed sensor(-): C—A • LF ABS wheel-speed sensor(-): AJ—A • RR ABS wheel-speed sensor(-): X—B • LR ABS wheel-speed sensor(-): O—B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
3	**INSPECT IF MALFUNCTION OCCURRED DUE TO IMPROPER SENSOR CLEARANCE.** • Inspect the clearance between the ABS wheel-speed sensor and the ABS sensor rotor. (See **FRONT ABS WHEEL-SPEED SENSOR INSPECTION**.) (See **REAR ABS WHEEL-SPEED SENSOR INSPECTION**.) • Is the clearance normal?	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to Step 5. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.) (See **REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)
4	**VISUALLY INSPECT ABS SENSOR ROTOR FOR FOREIGN MATERIAL ADHERING OR IMPROPER INSTALLATION** • Is the result normal?	Yes	Go to the next step.
		No	Repair or replace the ABS sensor rotor, then go to the next step. • Front ABS sensor rotor (front wheel hub) (See **WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION**.) • Rear ABS sensor rotor (rear wheel hub) (See **WHEEL HUB COMPONENT REMOVAL/INSTALLATION**.)
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **20 km/h {12 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0031:11/C0031:15/C0034:11/C0034:15/C0037:11/C0037:15/C003A:11/C003A:15 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	**C0031:11, C0031:15**	**LF ABS wheel-speed sensor**
	C0034:11, C0034:15	**RF ABS wheel-speed sensor**
	C0037:11, C0037:15	**LR ABS wheel-speed sensor**
	C003A:11, C003A:15	**RR ABS wheel-speed sensor**

DETECTION CONDITION	• C0031:11, C0034:11, C0037:11, C003A:11
	  ▪ Short to ground has been detected in the ABS wheel-speed sensor wiring harness on any of the four vehicle wheels.
	• C0031:15, C0034:15, C0037:15, C003A:15
	  ▪ Open circuit or short to power supply has been detected in the ABS wheel-speed sensor wiring harness on any of the four vehicle wheels.

FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1. • Tire pressure monitoring system warning light*1 illuminates after flashes. • Inhibits the ABS, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. (Additionally, when any malfunction is detected in two wheels or more, EBD control is inhibited and the brake system warning light is illuminated.) • *1: If equipped.

POSSIBLE CAUSE	• Open circuit or short to ground/power supply in the wiring harness between the following DSC HU/CM terminals and ABS wheel-speed sensor terminals:
	  ▪ DSC HU/CM terminal F—RF ABS wheel-speed sensor terminal B
	  ▪ DSC HU/CM terminal C—RF ABS wheel-speed sensor terminal A
	  ▪ DSC HU/CM terminal AG—LF ABS wheel-speed sensor terminal B
	  ▪ DSC HU/CM terminal AJ—LF ABS wheel-speed sensor terminal A
	  ▪ DSC HU/CM terminal AA—RR ABS wheel-speed sensor terminal A
	  ▪ DSC HU/CM terminal X—RR ABS wheel-speed sensor terminal B
	  ▪ DSC HU/CM terminal L—LR ABS wheel-speed sensor terminal A
	  ▪ DSC HU/CM terminal O—LR ABS wheel-speed sensor terminal B
	• Malfunction in the ABS wheel-speed sensor
	• Poor connection at connectors (female terminal)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS WHEEL-SPEED SENSOR FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the DSC HU/CM connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: ▪ RF ABS wheel-speed sensor (+): F ▪ RF ABS wheel-speed sensor (-): C ▪ LF ABS wheel-speed sensor (+): AG ▪ LF ABS wheel-speed	Yes	Go to the next step.
		No	Go to Step 3.

	sensor (-): AJ ▪ RR ABS wheel-speed sensor (+): AA ▪ RR ABS wheel-speed sensor (-): X ▪ LR ABS wheel-speed sensor (+): L ▪ LR ABS wheel-speed sensor (-): O • Is there continuity?		
2	**INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR SHORT TO GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: ▪ RF ABS wheel-speed sensor (+): F ▪ RF ABS wheel-speed sensor (-): C ▪ LF ABS wheel-speed sensor (+): AG ▪ LF ABS wheel-speed sensor (-): AJ ▪ RR ABS wheel-speed sensor (+): AA ▪ RR ABS wheel-speed sensor (-): X ▪ LR ABS wheel-speed sensor (+): L ▪ LR ABS wheel-speed sensor (-): O • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the DSC HU/CM connector terminals (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: • RF ABS wheel-speed sensor (+): F—B • RF ABS wheel-speed sensor (-): C—A • LF ABS wheel-speed sensor (+): AG—B • LF ABS wheel-speed sensor (-): AJ—A • RR ABS wheel-speed sensor (+): AA—A • RR ABS wheel-speed sensor (-): X—B • LR ABS wheel-speed sensor (+): L—A • LR ABS wheel-speed sensor (-): O—B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Replace the ABS wheel-speed sensor, then go to Step 5. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.) (See **REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)
3	**INSPECT FOR OPEN CIRCUIT IN ABS WHEEL-SPEED SENSOR WIRING HARNESS** • Inspect for continuity between the DSC HU/CM connectors (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: ▪ RF ABS wheel-speed sensor (+): F—B ▪ RF ABS wheel-speed sensor (-): C—A ▪ LF ABS wheel-speed sensor (+): AG—B ▪ LF ABS wheel-speed sensor (-): AJ—A	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the DSC HU/CM connector terminals (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: • RF ABS wheel-speed sensor (+): F—B • RF ABS wheel-speed sensor (-): C—A • LF ABS wheel-speed sensor (+): AG—B • LF ABS wheel-speed sensor (-): AJ—A • RR ABS wheel-speed sensor (+): AA—A • RR ABS wheel-speed sensor (-): X—B

	▪ RR ABS wheel-speed sensor (+): AA—A ▪ RR ABS wheel-speed sensor (-): X—B ▪ LR ABS wheel-speed sensor (+): L—A ▪ LR ABS wheel-speed sensor (-): O—B • Is there continuity?		• LR ABS wheel-speed sensor (+): L—A • LR ABS wheel-speed sensor (-): O—B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the Step 5.
4	**INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR SHORT TO POWER SUPPLY** • Inspect for voltage between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: ▪ RF ABS wheel-speed sensor (+): F ▪ RF ABS wheel-speed sensor (-): C ▪ LF ABS wheel-speed sensor (+): AG ▪ LF ABS wheel-speed sensor (-): AJ ▪ RR ABS wheel-speed sensor (+): AA ▪ RR ABS wheel-speed sensor (-): X ▪ LR ABS wheel-speed sensor (+): L ▪ LR ABS wheel-speed sensor (-): O • Is the voltage **1 V or less**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the DSC HU/CM connector terminals (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: • RF ABS wheel-speed sensor (+): F—B • RF ABS wheel-speed sensor (-): C—A • LF ABS wheel-speed sensor (+): AG—B • LF ABS wheel-speed sensor (-): AJ—A • RR ABS wheel-speed sensor (+): AA—A • RR ABS wheel-speed sensor (-): X—B • LR ABS wheel-speed sensor (+): L—A • LR ABS wheel-speed sensor (-): O—B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0044:28/C0044:47/C0044:49/C0044:51/C0044:54/C0044:64/C0044:8F [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C0044:28, C0044:47, C0044:49, C0044:51, C0044:54, C0044:64, C0044:8F	Brake fluid pressure sensor
DETECTION CONDITION	• C0044:28, C0044:64 ▪ The pressure from the brake fluid pressure sensor is not within specification. • C0044:47, C0044:49 ▪ The voltage value from the brake fluid pressure sensor is not within specification. • C0044:51, C0044:8F ▪ The DSC HU/CM detects the internal brake fluid pressure sensor circuit malfunction. • C0044:54 ▪ The brake fluid pressure sensor detects the initialization procedure has not been perform.	
FAIL-SAFE FUNCTION	• C0044:28, C0044:47, C0044:49, C0044:51, C0044:64, C0044:8F ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. • C0044:54 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.)	

	▪ Inhibits the TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. • *1: If equipped.
POSSIBLE CAUSE	• The initialization procedure for the brake fluid pressure sensor has not been performed. • Brake fluid pressure sensor malfunction • Open or short circuit in the brake fluid pressure sensor circuit in DSC HU/CM
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**PERFORM BRAKE FLUID PRESSURE SENSOR INITIALIZATION PROCEDURE** • Perform the brake fluid pressure sensor initialization procedure using the M-MDS. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.) • Is the brake fluid pressure sensor initialization procedure completed normally?	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
2	**VERIFY NO ABNORMALITY ON BRAKE FLUID PRESSURE SENSOR** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

DTC C0044:28/C0044:47/C0044:49/C0044:51/C0044:54/C0044:64/C0044:8F [DYNAMIC STABILITY CONTROL (DSC)]

2014 - Mazda3 - Brakes

DTC C0051:62/C0051:64/C0051:67/C0051:85 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C0051:62, C0051:64, C0051:67, C0051:85	Steering angle sensor

DETECTION CONDITION		• C0051:62
		  ▪ The difference between the steering angle calculated by each sensor and the steering angle from the steering angle sensor is the specification or more when the vehicle is driven in a straight line.
		• C0051:64
		  ▪ The difference between the steering angle calculated by each sensor and the steering angle from the steering angle sensor exceeds the specification.
		• C0051:67
		  ▪ The neutral position of the steering angle cannot be estimated from the signals from the ABS wheel-speed sensors and the SAS control module.
		  NOTE:
		  • Each time the ignition is switched ON, the DSC HU/CM calculates the steering angle neutral position based on the signals from each sensor and each module.
		  • If the vehicle is driven as follows just after the engine is started, DTC C0051:67 may be output.
		  ▪ Vehicle is accelerated rapidly while being steered right or left
		  ▪ Vehicle is driven on abnormal road surface such as banked road
		  ▪ Vehicle is driven on continuously curved road such as mountain road

	• If the DTC is a past malfunction during DTC inspection, it does not indicate a vehicle malfunction. • C0051:85 ▪ The steering angle sensor detects signal modulation or steering angle that exceeds specification.
FAIL-SAFE FUNCTION	• C0051:62, C0051:64, C0051:85 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, TPMS*1, and smart city brake support (SCBS)*1 controls. • C0051:67 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Inhibits the TCS, DSC, and smart city brake support (SCBS)*1 controls. • *1: If equipped.
POSSIBLE CAUSE	• C0051:62, C0051:64, C0051:67, C0051:85 ▪ Improper installation or positioning of the steering angle sensor ▪ Steering angle sensor malfunction ▪ Connector or terminal malfunction • C0051:67 ▪ Vehicle is accelerated rapidly while being steered right or left ▪ Vehicle is driven on abnormal road surface such as banked road ▪ Vehicle is driven on continuously curved road such as mountain road
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY WHETHER MALFUNCTION IS PAST OR PRESENT** • Switch the ignition ON (engine off or on). • Are the TCS/DSC indicator light and the smart city brake support (SCBS) indicator light (amber)* illuminated?	Yes	Perform DTC inspection and go to the applicable DTC troubleshooting procedure. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) After completing the applicable DTC troubleshooting, go to the next step.
		No	Clear the DTC from the memory and go to the Step 3. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
2	**PERFORM EPS CM DTC INSPECTION** • Perform the EPS CM DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **20 km/h {12 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

*

With smart city brake support (SCBS)

2014 - Mazda3 - Brakes

DTC C0061:28/C0061:64/C0062:28/C0062:64/C0063:28/C0063:64 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C0061:28, C0061:64, C0062:28, C0062:64, C0063:28, C0063:64	SAS control module system
DETECTION CONDITION	**NOTE:** • The low-G sensor and the yaw rate sensor are built into the SAS control module. • C0061:28, C0061:64 ▪ Out-of-specification signal modulation or lateral-G value is detected from the low-G sensor. • C0062:28, C0062:64 ▪ Out-of-specification signal modulation or longitudinal-G value is detected from the low-G sensor. • C0063:28, C0063:64 ▪ Out-of-specification signal modulation or yaw rate value is detected from the yaw rate sensor.	
FAIL-SAFE FUNCTION	• C0061:28, C0061:64, C0063:28, C0063:64 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, TPMS*1, and smart city brake support (SCBS)*1 controls. • C0062:28, C0062:64 ▪ Illuminates the TCS/DSC indicator light. ▪ Inhibits the hill launch assist (HLA) control. • *1: If equipped.	
POSSIBLE	• SAS control module malfunction	

CAUSE	DSC HU/CM malfunction • Poor connection at connectors (female terminal)
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0061:54/C0062:54/C0063:54 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C0061:54, C0062:54, C0063:54	DSC HU/CM system (unperformed initialization procedure)

DETECTION CONDITION		• C0061:54
		  ▪ DSC HU/CM detects that the initialization procedure has not been performed. (Lateral acceleration sensor)
		• C0062:54
		  ▪ DSC HU/CM detects that the initialization procedure has not been performed. (Longitudinal acceleration sensor)
		• C0063:54
		  ▪ DSC HU/CM detects that the initialization procedure has not been performed. (Yaw rate sensor)

FAIL-SAFE FUNCTION		• C0061:54, C0063:54
		  ▪ Illuminates the TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1.
		  ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.)
		  ▪ Inhibits the TCS, DSC, TPMS*1, and smart city brake support (SCBS)*1 controls.
		• C0062:54
		  ▪ Illuminates the TCS/DSC indicator light.
		  ▪ Inhibits the hill launch assist (HLA) control.
		• *1: If equipped.

POSSIBLE CAUSE		• Initialization procedure for the lateral acceleration sensor, longitudinal acceleration sensor or yaw rate sensor not performed • SAS control module malfunction • DSC HU/CM malfunction

SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY INITIALIZATION PROCEDURE** • Was the DSC related parts sensor initialization procedure performed?	Yes	Go to the next step.
		No	Perform the DSC related parts sensor initialization procedure, then go to Step 3. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)
2	**INSPECT SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C0062:76 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C0062:76	SAS control module system
DETECTION CONDITION		• Error is detected in communication with SAS control module by CAN communication.
FAIL-SAFE FUNCTION		• Illuminates the TCS/DSC indicator light. • Inhibits the hill launch assist (HLA) control.
POSSIBLE CAUSE		• Poor SAS control module installation • Low-G sensor malfunction in SAS control module
SYSTEM WIRING DIAGRAM		Not applicable

STEP	INSPECTION		ACTION
1	**VERIFY IF SAS CONTROL MODULE IS CORRECTLY INSTALLED** • Verify the SAS control module installation condition. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the installation condition normal?	Yes	Go to the next step.
		No	Install the SAS control module correctly, then go to the next step.
2	**INSPECT SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module.	Yes	Go to applicable DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) **DTC TABLE [TWO-STEP**

	(See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are any DTCs detected?		(See **DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
3	**PERFORM DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE** • Perform the DSC related parts sensor initialization procedure using the M-MDS. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.) • Is the DSC sensor initialization procedure completed normally?	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C006B:00/C0072:68 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C006B:00, C0072:68	TCS/DSC control system
DETECTION CONDITION	• C006B:00 ▪ DSC control continues for a specified period of time or more • C0072:68 ▪ Due to excessive braking, TCS control using braking is temporarily inhibited.	
FAIL-SAFE FUNCTION	• C006B:00 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, TPMS*1, smart city brake support (SCBS)*1 controls. • C0072:68 ▪ Illuminates the TCS/DSC indicator light. ▪ Inhibits the TCS (brake control) control. • *: If equipped.	
POSSIBLE CAUSE	• This does not indicate a malfunction since constant TCS or DSC control over an extended period of time is inhibited to protect the DSC solenoid valve inside the DSC HU or the engine.	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C1031:35 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C1031:35	Tire pressure monitoring system (TPMS) set switch
DETECTION CONDITION		• Continuous ON signal from the TPMS set switch for **60 s or more** is detected.
FAIL-SAFE FUNCTION		• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.
POSSIBLE CAUSE		• The driver pressed and held the TPMS set switch for **60 s or more**. • TPMS set switch malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTCs FOR INSTRUMENT CLUSTER** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**INSPECT TPMS SET SWITCH** • Inspect the TPMS set switch. (See **TIRE PRESSURE MONITORING SYSTEM SET SWITCH INSPECTION**.)	Yes	Go to the next step.
		No	Replace the TPMS set switch, then go to the next step. (See **TIRE PRESSURE MONITORING SYSTEM SET**

	Is the TPMS set switch normal?		**SWITCH REMOVAL / INSTALLATION**.)
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C1031:41 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C1031:41	Tire pressure monitoring system (TPMS) system
DETECTION CONDITION		• When the DSC HU/CM detects malfunction in the memory for storing a calculated tire pressure value.
FAIL-SAFE FUNCTION		• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.
POSSIBLE CAUSE		• DSC HU/CM internal error • DSC HU/CM malfunction
SYSTEM WIRING DIAGRAM		—

Diagnostic procedure

STEP	INSPECTION		ACTION

1	**INITIALIZE A TPMS MEMORY**
	• Switch the ignition to off.
	• Connect the M-MDS (IDS) to DLC-2.
	• After the vehicle is identified, select the following items from the initial screen of the IDS.
	  ◦ Select “Chassis”.
	  ◦ Select “ABS/DSC”.
	  ◦ Select “TPMS Reset”.
	• Perform the procedure according to the directions on the screen.
	• Is the initialization normally completed?
		Yes	Go to the next step.

		No	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
	VERIFY THAT THE SAME DTC IS NOT PRESENT		

2	• Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C1031:54 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C1031:54	Tire pressure monitoring system (TPMS) system
DETECTION CONDITION		• Detects that tire such as temporary spare tire with outer diameter of considerable difference is installed • There is a large fluctuation in steering angle and acceleration/deceleration speed repeatedly over short intervals.
FAIL-SAFE FUNCTION		• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.
POSSIBLE CAUSE		• Diameter of currently installed tires differs from Mazda recommended tires • There is a large fluctuation in steering angle and acceleration/deceleration speed repeatedly over short intervals. • DSC HU/CM malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE TIRE** • Verify that the currently equipped tire type (size, supplier, and type) conform to the Mazda recommendation. (See **WHEEL AND TIRE SPECIFICATION**.) • Is the tire type as specified?	Yes	Go to the next step.
		No	Replace the tire, then go to Step 3. (See **WHEEL AND TIRE SPECIFICATION**.)
2	**MEASURE THE TIRE PRESSURE** • Measure the tire pressure when the tires are cold. **WHEEL AND TIRE SPECIFICATION**	Yes	Go to the next step.
		No	Adjust the tire pressure to the specification when the tires are cold,

	(See .) • Is the pressure as specified?		then go to the next step. (See **WHEEL AND TIRE SPECIFICATION**.)
3	**INITIALIZE THE TPMS** • Initialize the TPMS. (See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.) • Is the initialization normally completed?	Yes	Go to the next step.
		No	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C1031:68 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C1031:68	Tire pressure monitoring system (TPMS) system
DETECTION CONDITION		• Error is detected in ambient temperature sensor from PCM via CAN communication.
FAIL-SAFE FUNCTION		• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.
POSSIBLE CAUSE		• Ambient temperature sensor malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM		—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTCs FOR PCM** • Switch the ignition to off. • Verify DTCs for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the AMBIENT TEMPERATURE SENSOR. (See **AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.)	Yes	Go to the next step.
		No	Replace the ambient temperature sensor, then go to the next step. (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR**

	(See **AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is the ambient temperature sensor normal?		**CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC C1109:64 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	C1109:64	DSC OFF switch
DETECTION CONDITION		• Continuous ON signal from the DSC OFF switch for **10 s or more** is detected.
FAIL-SAFE FUNCTION		• Permits the control and does not illuminate each warning/indicator light.
POSSIBLE CAUSE		• The driver pressed and held the DSC OFF switch for **10 s or more**. • Short to ground in the wiring harness between the instrument cluster terminal V and DSC OFF switch terminal B • Open circuit in wiring harness between instrument cluster terminal T and DSC OFF switch terminal C • DSC OFF switch malfunction • Poor connection at connectors (female terminal)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**PERFORM INSTRUMENT CLUSTER DTC INSPECTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.

2	**INSPECT DSC OFF SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect the DSC OFF switch. • Disconnect the instrument cluster connector. • Inspect for continuity between the DSC OFF switch connector terminal B (vehicle harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the DSC OFF switch connector terminal B (vehicle harness-side) and instrument cluster connector terminal V (vehicle harness-side). **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
3	**INSPECT DSC OFF SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the DSC OFF switch connector terminal C (vehicle harness-side) and instrument cluster connector terminal T (vehicle harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the DSC OFF switch connector terminal C (vehicle harness-side) and instrument cluster connector terminal T (vehicle harness-side). **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT DSC OFF SWITCH** • Inspect the DSC OFF switch. (See **DSC OFF SWITCH INSPECTION**.) • Is the DSC OFF switch	Yes	Go to the next step.
		No	Replace the DSC OFF switch, then go to the next step. (See **DSC OFF SWITCH REMOVAL/INSTALLATION**.)

	normal?		
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC P0942:46/P0942:49 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	P0942:46, P0942:49	DSC unit mismatched installation
DETECTION CONDITION	• No match between DSC CM ID and DSC HU ID detected	
FAIL-SAFE FUNCTION	• P0942:46 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1controls. • P0942:49 ▪ Illuminates the ABS warning light*2, brake system warning light*2, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the ABS*3, EBD*3, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1controls. *1: If equipped. *2: Not illuminated depending on malfunction content. *3: Enabled depending on malfunction content.	
POSSIBLE CAUSE	• DSC CM ID and DSC HU ID do not match (DSC HU/CM internal malfunction)	
SYSTEM WIRING	Not applicable	

DIAGRAM	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NO DSC HU/CM MALFUNCTION** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **10km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0001:88/U0100:00/U0101:00/U0131:00/U0151:00/U0155:00/U0235:00 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	U0001:88, U0100:00, U0101:00, U0131:00, U0151:00, U0155:00, U0235:00	CAN line
DETECTION CONDITION	• U0001:88 ▪ Open or short circuit in CAN system wiring harness is detected. • U0100:00 ▪ Communication error with PCM is detected in CAN communication. • U0101:00 ▪ Communication error with TCM is detected in CAN communication. • U0131:00 ▪ Communication error with EPS CM is detected in CAN communication. • U0151:00 ▪ Communication error with SAS control module is detected in CAN communication. • U0155:00 ▪ Communication error with instrument cluster is detected in CAN communication. • U0235:00 ▪ Communication error with laser sensor is detected in CAN communication.	
	• U0001:88 ▪ Illuminates the ABS warning light, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1. *1	

FAIL-SAFE FUNCTION	▪ Tire pressure monitoring system warning light illuminates after flashes. ▪ Inhibits the ABS, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. • U0100:00 ▪ Illuminates the ABS warning light*2, TCS/DSC indicator light*2, and smart city brake support (SCBS) indicator light (amber)*1*2. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) ▪ Inhibits the ABS*3, TCS*3, DSC*3, brake assist control*3, hill launch assist (HLA)*3, TPMS*1*3, and smart city brake support (SCBS)*1*3 controls. • U0101:00 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, hill launch assist (HLA)*3, TPMS*1, and smart city brake support (SCBS)*1 controls. • U0131:00 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TCS, DSC, TPMS*1, and smart city brake support (SCBS)*1 controls. • U0151:00 ▪ Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) ▪ Inhibits the TCS*3, DSC*3, brake assist control*3, hill launch assist (HLA)*3, TPMS*1*3, and smart city brake support (SCBS)*1*3 controls. • U0155:00 ▪ Illuminates the ABS warning light*2, TCS/DSC indicator

	light*2, and smart city brake support (SCBS) indicator light (amber)*1*2. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) ▪ Inhibits the ABS*3, TCS*3, DSC*3, brake assist control*3, hill launch assist (HLA)*3, TPMS*1*3, and smart city brake support (SCBS)*1*3 controls. • U0235:00 ▪ Illuminates the smart city brake support (SCBS) indicator light (amber). ▪ Inhibits the smart city brake support (SCBS) control. *1: If equipped. *2: Not illuminated depending on malfunction content. *3: Control enabled depending on malfunction content.
POSSIBLE CAUSE	• CAN system wiring harness open or short circuit • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with TCM • CAN system wiring harness open or short circuit with EPS CM • CAN system wiring harness open or short circuit with SAS control module • CAN system wiring harness open or short circuit with instrument cluster • CAN system wiring harness open or short circuit with laser sensor • instrument cluster malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

- Inspect according to diagnostic procedure in MULTIPLEX COMMUNICATION SYSTEM. (See **FOREWORD**.)

2014 - Mazda3 - Brakes

DTC U0301:09/U0401:00 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	**U0301:09, U0401:00**	**Abnormal message from PCM**
DETECTION CONDITION	• Correct data cannot be received from PCM	
FAIL-SAFE FUNCTION	• U0301:09 ▪ Permits the control and does not illuminate each warning/indicator light. • U0401:00 ▪ Illuminates the TCS/DSC indicator light*1 and smart city brake support (SCBS) indicator light (amber)*1*2. ▪ Tire pressure monitoring system warning light*2 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) ▪ Inhibits the TCS*3, DSC*3, hill launch assist (HLA)*3, TPMS*2*3, and smart city brake support (SCBS)*2*3 controls. *1: Not illuminated depending on malfunction content. *2: If equipped. *3: Control enabled depending on malfunction content.	
POSSIBLE CAUSE	• PCM malfunction	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**PERFORM PCM DTC INSPECTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the PCM. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0402:00 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	U0402:00	Abnormal message from transmission/transaxle
DETECTION CONDITION		• The DSC HU/CM received error signals from the transmission/transaxle for **1 s or more** with the ignition switched ON (engine off or on).
FAIL-SAFE FUNCTION		• Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. • Tire pressure monitoring system warning light*1 illuminates after flashes. • Inhibits the TCS, DSC, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. • *1: If equipped.
POSSIBLE CAUSE		• The transmission/transaxle could not send a normal signal temporarily. (DTCs are stored in the TCM.) • Transmission/transaxle malfunction • DSC HU/CM malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTCs FOR TCM** • Switch the ignition to off. • Verify DTCs for the TCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.

2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear DTC for the DSC HU/CM using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the TCM, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0420:00 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	U0420:00	Abnormal message from EPS CM
DETECTION CONDITION		• Correct data cannot be received from EPS CM
FAIL-SAFE FUNCTION		• Illuminates the TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. • Tire pressure monitoring system warning light*1 illuminates after flashes. • Inhibits the TCS, DSC, TPMS*1, smart city brake support (SCBS)*1 controls. • *: If equipped.
POSSIBLE CAUSE		• EPS CM malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR EPS CM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the EPS CM. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS**	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step.

	[DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?		(See **STEERING WHEEL AND COLUMN REMOVAL / INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0423:00/U0443:00 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	U0423:00/U0443:00	Abnormal message from instrument cluster
DETECTION CONDITION	• Correct data cannot be received from instrument cluster	
FAIL-SAFE FUNCTION	• U0423:00 ▪ Illuminates the smart city brake support (SCBS) indicator light (amber)*1. ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the TPMS*1 and smart city brake support (SCBS)*1 controls. • U0443:00 ▪ Illuminates the smart city brake support (SCBS) indicator light (amber). ▪ Inhibits the smart city brake support (SCBS) controls. • *: If equipped.	
POSSIBLE CAUSE	• Instrument cluster malfunction	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.

	cluster. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs detected?		
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0433:00 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	U0433:00	Abnormal message from laser sensor
DETECTION CONDITION		• Correct data cannot be received from laser sensor
FAIL-SAFE FUNCTION		• Illuminates the smart city brake support (SCBS) indicator light (amber). • Inhibits the smart city brake support (SCBS) control.
POSSIBLE CAUSE		• Laser sensor malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR LASER SENSOR MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the laser sensor. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See **LASER SENSOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.

3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0452:86 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	U0452:86	Abnormal message from SAS control module
DETECTION CONDITION		• Correct data cannot be received from SAS control module
FAIL-SAFE FUNCTION		• Illuminates the TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1*2. • Tire pressure monitoring system warning light*2 illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) • Inhibits the TCS*3, DSC*3, hill launch assist (HLA)*3, TPMS*2*3, and smart city brake support (SCBS)*2*3 controls. • *1: Not illuminated depending on malfunction content. • *2: If equipped. • *3: Enabled depending on malfunction content.
POSSIBLE CAUSE		• SAS control module malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See **DTC INSPECTION**	Yes	Go to applicable DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.

	[STANDARD DEPLOYMENT CONTROL SYSTEM].) (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are any DTCs detected?		
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the SAS control module, then go to the next step. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U2101:00/U2300:52/U2300:54/U2300:55/U2300:56/U2300:64 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	**U2101:00, U2300:52, U2300:54, U2300:55, U2300:56, U2300:64**	**Configuration data not recorded**
DETECTION CONDITION	• DSC CM detects configuration data not record or data error	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1. • Tire pressure monitoring system warning light*1 illuminates after flashes. • Inhibits the ABS, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. • *1: If equipped.	
POSSIBLE CAUSE	• Module configuration procedure is not done properly • Correct data cannot be received from instrument cluster • Another vehicles control modules been installed	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION	ACTION
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition to off. • Switch the ignition ON (engine off) and wait for **10 s or more**. • Switch the ignition to off and wait for **3 s or more**. • Switch the ignition ON (engine off) and wait	Go to the next step.

	for **3 s or more**.		
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 6.
3	**VERIFY IF PARTS FROM ANOTHER VEHICLE INSTALLED TO INSTRUMENT CLUSTER, PCM OR DSC HU/CM** • Verify if an instrument cluster, PCM or DSC HU/CM from another vehicle is installed. • Has an instrument cluster, PCM, DSC HU/CM or other vehicle part been installed to vehicle?	Yes	Install the correct instrument cluster, PCM or DSC HU/CM, then go to Step 1. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**INSPECT FOR INSTRUMENT CLUSTER/PCM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster and PCM. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U3003:08/U3003:16/U3003:17 [DYNAMIC STABILITY CONTROL (DSC)]

DTC	U3003:08, U3003:16, U3003:17	Power supply system
DETECTION CONDITION		• U3003:08 ▪ While the vehicle is traveling at a speed of **10km/h {6.2 mph} or more**, a CAN signal error caused by low power supply voltage is detected. • U3003:16 ▪ Low ignition voltage (**7.9—9.6 V**) is detected at the voltage monitor of the solenoid valve or motor monitor. (Except engine cranking condition) ▪ Low ignition voltage (**6.0—7.9 V**) is detected at the voltage monitor of the solenoid valve or motor monitor. ▪ Low ignition voltage (**below 6.0 V**) is detected at the voltage monitor of the solenoid valve or motor monitor. • U3003:17 ▪ High ignition voltage (**17 V or more**) is detected at the voltage monitor of the solenoid valve or motor monitor.
FAIL-SAFE FUNCTION		• U3003:08 ▪ Permits the control and does not illuminate each warning/indicator light. • U3003:16 ▪ Illuminates the ABS warning light, TCS/DSC indicator light and smart city brake support (SCBS) indicator light (amber)*1. ▪ Does not illuminate the brake warning light.*2 ▪ Illuminates the brake warning light.*3*4 ▪ Tire pressure monitoring system warning light*1 illuminates after flashes. ▪ Inhibits the ABS, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1 controls. ▪ Permits the EBD control.*2 ▪ Inhibits the EBD control.*3*4

	• U3003:17
	  ▪ Illuminates the ABS warning light, brake system warning light, TCS/DSC indicator light, and smart city brake support (SCBS) indicator light (amber)*1.
	  ▪ Tire pressure monitoring system warning light*1 illuminates after flashes.
	  ▪ Inhibits the ABS, EBD, TCS, DSC, brake assist control, hill launch assist (HLA), TPMS*1, and smart city brake support (SCBS)*1, controls.
	• *1: If equipped.
	• *2: When power supply voltage is **7.9—9.6 V** for **700 ms or more**.
	• *3: When power supply voltage is **6.0—7.9 V** for **780 ms or more**.
	• *4: When power supply voltage is **below 6 V** for **50 ms or more**.

POSSIBLE CAUSE	• Battery deterioration • Generator malfunction • Fuse (SRS1 7.5A, ABS/DSCS 30A, ABS/DSCM 50A) malfunction • Open or short circuit in wiring harness between DSC HU/CM terminal A and battery • Open or short circuit in wiring harness between DSC HU/CM terminal B and battery • Open or short circuit in wiring harness between DSC HU/CM terminal Q and battery • Open circuit in wiring harness between DSC HU/CM terminal AL and body ground • Poor connection at connectors (female terminal)

DSC HU/CM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY VOLTAGE** • Is the battery positive terminal voltage normal?	Yes	Inspect for normal connection of the battery terminals. Go to the next step.
		No	Charge or replace the battery, then go to Step 7. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**INSPECT BATTERY GRAVITY** • Is battery specific gravity as specified?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 7. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3	**INSPECT CHARGING SYSTEM** • Are the generator and the drive belt tensions normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Go to Step 7.
4	**INSPECT FUSE CONDITION** • Inspect the following fuses. ▪ SRS1 7.5A ▪ ABS/DSCS 30A ▪ ABS/DSCM 50A • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 7.
5	**INSPECT DSC HU/CM POWER SUPPLY FOR OPEN CIRCUIT** • Disconnect the DSC HU/CM connectors. • Switch the ignition ON (engine off). • Measure the voltage between following connector terminals of the DSC HU/CM (vehicle harness-side) and body ground: ▪ DSC HU/CM: A—Body ground ▪ DSC HU/CM: B—Body ground ▪ DSC HU/CM: Q—Body ground • Is the voltage **10 V or more**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between following connector terminals of the DSC HU/CM (vehicle harness-side) and positive battery terminal: ▪ DSC HU/CM: A—Positive battery terminal ▪ DSC HU/CM: B—Positive battery terminal ▪ DSC HU/CM: Q—Positive battery terminal **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**INSPECT DSC HU/CM GROUND FOR POOR GROUND OR OPEN CIRCUIT**	Yes	Go to the next step.

	• Switch the ignition to off. • Measure the resistance between the DSC HU/CM terminal AL (vehicle harness-side) and body ground. • Is the resistance **within 0 —1 ohm**?	No	• If there is open circuit: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between DSC HU/CM terminal AL and the body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. ▪ Go to the next step. • If resistance is not within specification: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between DSC HU/CM terminal AL and the body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

			connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for poor ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the poor ground part. ▪ Go to the next step.
7	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Start the engine and drive the vehicle at **20 km/h {12 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

SYSTEM WIRING DIAGRAM [LASER SENSOR]

SYSTEM WIRING DIAGRAM [LASER SENSOR]

2014 - Mazda3 - Brakes

FOREWORD [LASER SENSOR]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

Refer to MULTIPLEX COMMUNICATION SYSTEM. (See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory using the M-MDS. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
  - Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.

  - Inspect the female terminals for poor connection.

2014 - Mazda3 - Brakes

ON-BOARD DIAGNOSIS [LASER SENSOR]

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the laser sensor and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - Provides a quick inspection of the laser sensor usually performed at the start of each diagnostic procedure.
  - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the laser sensor memory.

PID/Data monitor and record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

Reading DTCs Procedure

CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

4. After completion of repairs, clear all DTCs stored in the laser sensor. (See **Clearing DTCs Procedure**.)

NOTE:

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- The data for all DTCs currently detected is stored.

Clearing DTCs Procedure

CMDTC clearing DTCs procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON and wait for **5 s or more**.
7. Perform DTC inspection. (See **Reading DTCs Procedure**.)
8. Verify that no DTCs are displayed.

PID/Data Monitor and Record Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “DataLogger”.
   b. Select “Modules”.
   c. Select “SCBS”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

Snapshot Data Access Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “SCBS”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the IDS screen.
4. Retrieve the snapshot data according to the directions on the IDS screen.

NOTE:

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- The snapshot data stores the currently detected DTC data.

DTC Table

×: Applicable

*

C: CMDTC self-test

PID/DATA Monitor Table

PID name (definition)	Unit/Condition	Operation condition (reference)	Action
DIST_BMP_TGT	m	Changes according to the distance from bumper to target that the laser sensor has detected	Perform the DTC inspection for the laser sensor. (See **Reading DTCs Procedure**.)
VPWR_IG1	V	Module supply voltage (IG1)	Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

			Inspect the push button start. (See **PUSH BUTTON START INSPECTION**.)
VSPD	KPH, MPH	Vehicle speed	Inspect the DSC HU/CM. (See **DSC HU/CM INSPECTION**.)

Snapshot Data Table

NOTE:

- The laser sensor stores the following two types of information when a DTC is detected and displays snap shot data in the M-MDS.
    - Vehicle information detected by laser sensor
    - Vehicle information detected by instrument cluster and received by start stop unit via CAN signal
- Refer to PID monitor table for confirm the laser sensor operation status while the laser sensor does not store the DTC. (See **PID/DATA Monitor Table**.)
- Snapshot data items are not displayed, according to detected DTC.

Snapshot data item	Unit	Data contents	Data read/use method	Corresponding data monitor items
DSC_R_BRK	OK/Error	DSC response against brake request from SCBS module	Not applicable	Not applicable
DSC_R_BRK_C	OK/Error	DSC response against brake assist threshold change from SCBS module	Not applicable	Not applicable
DSC_R_NOREQ	OK/Error	DSC response while no request from SCBS module	Not applicable	Not applicable
DSC_R_PRECH	OK/Error	DSC response against pre-charge request from SCBS module	Not applicable	Not applicable
DSC_SYSTEM	OK/Error	DSC system condition	Not applicable	Not applicable
ECU_IN_TEMP	°C	ECU internal temperature	Not applicable	Not applicable
PCM_R_NOREQ	OK/Error	PCM response while no request from SCBS module	Not applicable	Not applicable

PCM_R_REQ	OK/Error	PCM response against request from SCBS module	Not applicable	Not applicable
PCM_SYSTEM	OK/Error	PCM system condition	Not applicable	Not applicable
TOTAL_DIST	km/miles	Accumulated total traveled distance from completion of vehicle until laser sensor detects DTC (Odometer value in instrument cluster)	The distance traveled when the laser sensor detected a DTC can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snap shot data item TOTAL_DIST. • Subtract 2 from 1.	Not applicable
TOTAL_TIME	hh:mm:ss*1	Accumulated total elapsed time since vehicle completion until laser sensor detects a DTC **NOTE:** • When the ROOM fuse is removed, and the ignition is switched off, the time is not included in the elapsed time.	The elapsed time when the laser sensor detected a DTC can be calculated by performing the following procedure. • Verify the PID item TOTAL_TIME of the instrument cluster. • Verify the snap shot data item TOTAL_TIME. • Subtract 2 from 1.	TOTAL_TIME*2
VPWR	V	Power supply	Not applicable	Not applicable
VSPD	KPH, MPH	Vehicle speed	Not applicable	VSPD

*1 **The seconds may be indicated after the decimal point.**

*2 **Instrument cluster PID (See PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER].)**

2014 - Mazda3 - Brakes

DTC U0001:00/U0100:00/U0121:00/U0131:00/U0155:00 [LASER SENSOR]

DTC	U0001:00, U0100:00, U0121:00, U0131:00, U0155:00	CAN line
DETECTION CONDITION	• U0001:00 ▪ Open or short circuit in CAN system wiring harness is detected. • U0100:00 ▪ Communication error with PCM is detected in CAN communication. • U0121:00 ▪ Communication error with DSC HU/CM is detected in CAN communication. • U0131:00 ▪ Communication error with EPS CM is detected in CAN communication. • U0155:00 ▪ Communication error with instrument cluster is detected in CAN communication.	
FAIL-SAFE FUNCTION	• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)	
POSSIBLE CAUSE	• CAN system wiring harness open or short circuit • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with DSC HU/CM • CAN system wiring harness open or short circuit with EPS CM • CAN system wiring harness open or short circuit with instrument cluster • Instrument cluster malfunction	
SYSTEM		

WIRING DIAGRAM	Not applicable

Diagnostic procedure

- Inspect according to diagnostic procedure in MULTIPLEX COMMUNICATION SYSTEM. (See **FOREWORD**.)

2014 - Mazda3 - Brakes

DTC U0401:68 [LASER SENSOR]

DTC	U0401:68	Abnormal message from PCM
DETECTION CONDITION		• Correct data cannot be received from PCM
FAIL-SAFE FUNCTION		• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)
POSSIBLE CAUSE		• PCM malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR PCM MALFUNCTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the PCM. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0415:68 [LASER SENSOR]

DTC	U0415:68	Abnormal message from DSC HU/CM
DETECTION CONDITION		• Correct data cannot be received from DSC HU/CM
FAIL-SAFE FUNCTION		• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)
POSSIBLE CAUSE		• DSC HU/CM malfunction
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DSC HU/CM MALFUNCTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the DSC HU/CM. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to the next step.

3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0420:68 [LASER SENSOR]

DTC	U0420:68	Abnormal message from EPS control module
DETECTION CONDITION		• Correct data cannot be received from EPS CM
FAIL-SAFE FUNCTION		• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)
POSSIBLE CAUSE		• EPS CM malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR EPS CONTROL MODULE MALFUNCTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the EPS control module. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.

3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U0423:68 [LASER SENSOR]

DTC	U0423:68	Abnormal message from instrument cluster
DETECTION CONDITION		• Correct data cannot be received from instrument cluster
FAIL-SAFE FUNCTION		• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)
POSSIBLE CAUSE		• Instrument cluster malfunction
SYSTEM WIRING DIAGRAM		Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the instrument cluster . (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Configure the instrument cluster, then repeat the inspection from Step 1. (See **INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION)**.) (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)

			If the malfunction recurs, replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U1A14:49 [LASER SENSOR]

DTC	U1A14:49	Laser sensor internal electronic malfunction
DETECTION CONDITION	• Laser sensor detects the internal electronic malfunction when the ignition is switched ON.	
FAIL-SAFE FUNCTION	• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)	
POSSIBLE CAUSE	• Laser sensor malfunction	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RECORD CAR CONFIGURATION DATA** • Switch the ignition to off. • Switch the ignition ON (engine on).		Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See **LASER SENSOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U2300:55/U2300:56 [LASER SENSOR]

DTC	**U2300:55, U2300:56**	Configuration data not recorded
DETECTION CONDITION	• Laser sensor detects configuration data not recorded or data error.	
FAIL-SAFE FUNCTION	• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)	
POSSIBLE CAUSE	• Laser sensor configuration procedure is not done properly • Correct data cannot be received from instrument cluster	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RECORD CAR CONFIGURATION DATA** • Switch the ignition to off. • Switch the ignition ON (engine on).		Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to step 5.
3	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the instrument cluster.	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) After repairing the instrument cluster,

	(See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs detected?		then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Replace the laser sensor. (See **LASER SENSOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U3000:00/U3000:64 [LASER SENSOR]

DTC	**U3000:00, U3000:64**	Laser sensor internal malfunction
DETECTION CONDITION	• Laser sensor detects the internal malfunction when the ignition is switched ON. • Laser sensor detects the invalid output signal.	
FAIL-SAFE FUNCTION	• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)	
POSSIBLE CAUSE	• Laser sensor malfunction	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition off. • Switch the ignition ON (engine on).		Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See **LASER SENSOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT**	Yes	Go to the applicable DTC inspection.

	• Are any other DTCs output?		(See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

DTC U3000:66 [LASER SENSOR]

DTC	**U3000:66**	Laser sensor malfunction
DETECTION CONDITION	• Laser sensor detects a large number of consecutive drive cycles with the Smart City Brake Support (SCBS) system malfunction.	
FAIL-SAFE FUNCTION	• Inhibits the Smart City Brake Support (SCBS) controls. • Illuminates the Smart City Brake Support (SCBS) indicator light (amber)	
POSSIBLE CAUSE	• Laser sensor malfunction • Instrument cluster malfunction	
SYSTEM WIRING DIAGRAM	Not applicable	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition off. • Using the M-MDS, perform the DTC inspection for the DSC HU/CM. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any other DTCs detected?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	Go to the next step.
	VERIFY THAT THE SAME DTC IS NOT PRESENT		

3	• Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor. (See **LASER SENSOR REMOVAL/INSTALLATION**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Brakes

SYSTEM WIRING DIAGRAM [DYNAMIC STABILITY CONTROL (DSC)]

SYSTEM WIRING DIAGRAM [DYNAMIC STABILITY CONTROL (DSC)]

2014 - Mazda3 - Brakes

FOREWORD [DYNAMIC STABILITY CONTROL (DSC)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

Refer to MULTIPLEX COMMUNICATION SYSTEM. (See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
  - Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.

  - Inspect the female terminals for poor connection.

2014 - Mazda3 - Brakes

PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)]

1. The ABS warning light and/or brake system warning light and/or TCS/DSC indicator light and/or DSC OFF indicator light illuminate even when the system is normal.

Warning lights/Indicator lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS and DSC control
• ABS warning light • Brake system warning light • TCS/DSC indicator light	Only the front wheels rotate under the following condition while jacked up, stuck, or on the chassis dynamometer: • Detected **8 times** for a continuous **20 s** while at a vehicle speed of **20 km/h {12 mph} or more**. (One detection period is when ignition is switched from ON to off.)	After turning off the ignition once and then restarting the engine, the vehicle is driven at **10km/h {6.2 mph} or more**, and then normal operation is verified.	• ABS: Cuts control. • EBD: Cuts control. • TCS: Cuts control. • DSC: Cuts control.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire		

	label.)		
	Battery voltage at DSC HU/CM terminal of voltage source drops **below about 9.5 V**.	Battery voltage rises **above about 9.5 V**.	• ABS: Operates control. • EBD: Operates control. • TCS: Operates control. • DSC: Operates control.
Brake system warning light	Brake fluid amount is low.	Brake fluid level is within the specification.	• ABS: Operates control. • EBD: Operates control. • TCS: Operates control. • DSC: Operates control.

2. Precautions during servicing of DSC. The DSC is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.

a. Malfunction in electrical system

- The control module has an on-board diagnostic function. With this function, the ABS warning light and/or brake system warning light and/or TCS/DSC indicator light and/or DSC OFF indicator light will come on when there is a problem in the electrical system.

  Also, past and present malfunctions are recorded in the control module. This function can find malfunction that do not occur during periodic inspections. Connect the M-MDS (IDS) to the DLC-2. The stored malfunctions will be displayed in the order of occurrence. To find out the causes of DSC malfunction, use these on-board diagnostic results.

- If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the harness. The control module usually operates normally. Be careful when searching for the cause of malfunction.

- After repair, it is necessary to clear the DTC from the control module memory. Also, if the DSC related parts have been replaced, verify that the no DTC has been displayed after repairs.
- After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the control module, the ABS warning light may not go off even when the ignition is switched ON. In this case, drive the vehicle at a speed of **more than 10 km/h {6.2 mph}**, make sure the ABS warning light goes off, and then clear the DTC.
- When repairing, if the DSC related connectors are disconnected and the ignition is switched ON, the control module will mistakenly detect a fault and record it as a malfunction.

  CAUTION:

  - When any DSC HU/CM (brake fluid pressure sensor) or SAS control module (yaw rate sensor, low-G sensor) are replaced, always perform the initialization procedure to insure proper DSC operation.
- To protect the control module, make sure the ignition is switched off before connecting or disconnecting the control module connector.

b. Malfunctions in hydraulic system

- Symptoms of a hydraulic system malfunction are similar to those of a conventional brake malfunction. However, it is necessary to determine if the malfunction is in a DSC component or the conventional brake system.
- The hydraulic unit contains delicate mechanical parts. If foreign matter gets into the component, the DSC may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the DSC does not. Make sure foreign matter does not penetrate the hydraulic unit when servicing the DSC (e.g. brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting

Vibration method

- If a malfunction occurs or worsens while driving on a rough road or the engine vibrates, perform the following steps.

NOTE:

- There are several reasons why the vehicle or engine vibration could cause an electrical malfunction. Inspect the vehicles for the following:
  - Connectors not fully seated.
  - Wiring harnesses not having full play.

    - Wires laying across brackets or moving parts.
    - Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause it to become pinched between parts.
- The connector joints, points of vibration, and places where wire harnesses pass through the firewall, and the body panels are the major areas to be checked.

Inspection method for switches, sensor connectors, and wires

1. Connect the M-MDS (IDS) to the DLC-2.
2. Switch the ignition ON (engine off).

NOTE:

- If the engine starts and runs, perform the following steps while idling.

3. Access PIDs for the switch or sensor being inspected.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.

- If the PID value is unstable, inspect for poor connection.

Inspection method for switches and sensors

1. Connect the M-MDS (IDS) to the DLC-2.
2. Switch the ignition ON (engine off).

NOTE:

- If the engine starts and runs, perform the following steps while idling.

3. Access PIDs for the switch or sensor being inspected.
4. Vibrate the sensor slightly with a finger.

- If PID value is unstable or a malfunction occurs, check for a poor connection or poorly mounted sensor.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal check method

1. Check the connection condition of each female terminal.

2. Insert the male terminal; fit male terminal to female terminal and verify if malfunction is in female terminal.

2014 - Mazda3 - Brakes

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Any of the following lights are not illuminated when the ignition is switched ON: • ABS warning light • Brake system warning light • TCS/DSC indicator light • DSC OFF indicator light
2	Any of the following lights remain illuminated: • ABS warning light • TCS/DSC indicator light • DSC OFF indicator light
3	Brake system warning light remains illuminated
4	A malfunction in the system even though the ABS warning light, brake system warning light, TCS/DSC indicator light and DSC OFF indicator light are not illuminated
5	ABS or TCS*1 operates frequently
	TCS does not work correctly
6	DSC*2 operates frequently
	DSC does not work correctly
7	Hill launch assist (HLA) operates even on a down slope
	Hill launch assist (HLA) does not operate on a slope

8	Smart City Brake Support (SCBS) indicator light (amber) stay on

2014 - Mazda3 - Brakes

NO.1 ANY OF THE FOLLOWING LIGHTS ARE NOT ILLUMINATED WITH THE IGNITION SWITCHED ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, TCS/DSC INDICATOR LIGHT AND/OR DSC OFF INDICATOR LIGHT) [DYNAMIC STABILITY CONTROL (DSC)]

1	Any of the following lights are not illuminated with the ignition switched ON: (ABS warning light, brake system warning light, TCS/DSC indicator light and/or DSC OFF indicator light)
POSSIBLE CAUSE	• DSC HU/CM does not operate. • Communication error between DSC HU/CM and instrument cluster • Instrument cluster malfunction • DSC HU/CM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION IS IN WARNING LIGHTS AND INDICATOR LIGHTS' COMMON POWER SUPPLY, OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHTS** • Connect the M-MDS (IDS) to the DLC-2. • Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of active command modes. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Are other warning and indicator lights illuminated?	Yes	Go to Step 5.
		No	If communication error message is displayed on the M-MDS (IDS) screen: • Go to the next step. If communication error message is not displayed: • Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
2	**INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE** • Inspect the instrument cluster ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for a short to ground. Repair or replace the wiring harness for a possible

			short to ground if necessary. Install appropriate amperage fuse.
*3	**VERIFY IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER POWER SUPPLY AND INSTRUMENT CLUSTER FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition ON. • Measure the voltage at instrument cluster terminal S (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between instrument cluster terminal S (wiring harness-side) and ignition switch. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.
*4	**VERIFY IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER AND GROUND FOR CONTINUITY) OR INSTRUMENT CLUSTER** • Switch the ignition off. • Disconnect the instrument cluster connector. • Inspect for continuity between instrument cluster terminal K (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the instrument cluster. (Open circuit in the instrument cluster) (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact at ground point.
5	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	If a communication error message is displayed on the M-MDS (IDS) screen:

			Go to the next step. If a communication error message is not displayed: • Go to Step 9.
6	**INSPECT DSC HU/CM POWER SUPPLY FUSE** • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for a short to ground. Repair or replace the wiring harness for a possible short to ground if necessary. Install appropriate amperage fuse.
*7	**VERIFY IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM POWER SUPPLY AND DSC HU/CM FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition ON. • Measure the voltage at the DSC HU/CM terminal Q (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect for an open circuit between the DSC HU/CM and ignition. Repair or replace the wiring harness for a possible open circuit if necessary.
*8	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM AND GROUND FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal AL (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the DSC HU/CM. (Open circuit in the DSC HU/CM) (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact at ground point.
9	**CONFIRM INSTRUMENT CLUSTER DTC** • Retrieve the instrument cluster DTC using the M-MDS (IDS). (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that connectors, terminals and wiring harnesses are connected correctly and undamaged.

2014 - Mazda3 - Brakes

NO.2 ANY OF THE FOLLOWING LIGHTS REMAIN ILLUMINATED: (ABS WARNING LIGHT, TCS/DSC INDICATOR LIGHT AND/OR DSC OFF INDICATOR LIGHT) [DYNAMIC STABILITY CONTROL (DSC)]

2	Any of the following lights remain illuminated: (ABS warning light, TCS/DSC indicator light and/or DSC OFF indicator light)
POSSIBLE CAUSE	• No connection at DSC HU/CM connector (When DSC HU/CM connector is removed, ABS warning light, brake system warning light, TCS/DSC indicator light, and DSC OFF indicator light are illuminated.) • DSC HU/CM detected malfunction (Input and output device malfunction). • DSC HU/CM detects low voltage in power supply. • DSC HU/CM ground malfunction (When DSC HU/CM ground is not securely connected, ABS warning light, brake system warning light, TCS/DSC indicator light, and DSC OFF indicator light are illuminated but DTCs are not displayed.) • DSC HU/CM does not operate. • PCM detected malfunction. • Error signal input from PCM • Communication error between DSC HU/CM and instrument cluster • Communication error between DSC HU/CM and PCM • Communication error between DSC HU/CM and EPS CM • After replacing SAS control module the low-G sensor and yaw rate sensor initialization have not been performed. • After replacing DSC HU/CM, the brake fluid pressure sensor initialization has not been performed. • Non-completion of module configuration (When module configuration is not performed after replacing DSC HU/CM, ABS warning light remains illuminated.) • DSC HU/CM internal malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION
	CONFIRM DSC HU/CM DTC	

1	• Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	If a communication error message is displayed on the M-MDS (IDS) screen: • Go to the next step. If a communication error message is not displayed: • Go to Step 6.
2	**INSPECT CONNECTION OF DSC HU/CM CONNECTOR** • Inspect connection of the DSC HU/CM connector. • Is the DSC HU/CM connector connected securely?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to Step 6.
3	**INSPECT DSC HU/CM POWER SUPPLY FUSE** • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for a short to ground. Repair or replace the wiring harness for a possible short to ground if necessary. Install appropriate amperage fuse.
*4	**VERIFY IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM POWER SUPPLY AND DSC HU/CM FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition ON. • Measure the voltage at the DSC HU/CM terminal Q (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between DSC HU/CM terminal Q (wiring harness-side) and ignition switch. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has an open circuit.
*5	**VERIFY IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM AND GROUND FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal AL (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the DSC HU/CM. (open circuit in the DSC HU/CM) (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact at the ground point.
6	**CONFIRM PCM DTCs** • Retrieve the PCM DTCs using the M-MDS (IDS). (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
7	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR MODULE NOT PERFORMED** • Verify if the malfunction is caused by initialization procedure for the brake fluid pressure sensor not being performed. • Has the initial setting for the brake fluid pressure sensor been performed after replacing the DSC HU/CM?	Yes	Go to the next step.
		No	Perform the brake fluid pressure sensor initial setting. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)
8	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR LOW-G SENSOR NOT PERFORMED** • Verify if the malfunction is caused by the initialization procedure for the low-G sensor not being performed. • Has the initial setting for the low-G sensor been performed after replacing the DSC HU/CM and the SAS control module?	Yes	Go to the next step.
		No	Perform the low-G sensor initial setting. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)

9	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR YAW RATE SENSOR NOT PERFORMED** • Verify if the malfunction is caused by the initialization procedure for the yaw rate sensor not being performed. • Has the initial setting for the yaw rate sensor been performed after replacing the DSC HU/CM and the SAS control module?	Yes	Go to the next step.
		No	Perform the yaw rate sensor initial setting. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)
10	**VERIFY IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR DSC HU/CM** • Connect the M-MDS (IDS) to the DLC-2. • Turn off and on all warning lights and indicator lights using the instrument cluster PID WL+IL of the active command modes. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Do the ABS warning light, brake system warning light, TCS/DSC indicator light and DSC OFF indicator light turn on and off according to the active command modes?	Yes	Replace the DSC HU/CM. (Internal malfunction) (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that connectors, terminals and wiring harnesses are connected correctly and undamaged.

2014 - Mazda3 - Brakes

NO.3 BRAKE SYSTEM WARNING LIGHT REMAINS ILLUMINATED [DYNAMIC STABILITY CONTROL (DSC)]

3	Brake system warning lights remains illuminated

POSSIBLE CAUSE	• Brake fluid amount is low.
	• Parking brake does not release.
	• Parking brake switch or brake fluid level sensor stuck on.
	• Short to ground in following circuit:
	  ▪ Between parking brake switch and instrument cluster
	  ▪ Between brake fluid level sensor and front body control module (FBCM)
	• No connection at DSC HU/CM connector (When DSC HU/CM connector is removed, ABS warning light, brake system warning light, DSC indicator light, and DSC OFF indicator light are illuminated.)
	• DSC HU/CM detected malfunction. (Input and output device malfunction)
	• DSC HU/CM detects low voltage in power supply.
	• DSC HU/CM ground malfunction (When DSC HU/CM ground is not securely connected, ABS warning light, brake system warning light, DSC indicator light, and DSC OFF indicator light are illuminated but DTCs are not display.)
	• DSC HU/CM does not operate.
	• Front body control module (FBCM) detected malfunction.
	• DSC HU/CM internal malfunction
	• Instrument cluster detected malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID AMOUNT AND VERIFY THAT PARKING BRAKE IS RELEASED** • Inspect the brake fluid amount	Yes	Go to the next step.
		No	Add the brake fluid or release the parking brake lever.

	and verify that the parking brake is released. • Is the brake fluid amount normal? • Is the parking brake lever released?		If the brake fluid amount is less than specification: • Inspect and repair the brake line for leakage.
2	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	If a communication error message is displayed on the M-MDS (IDS) screen: • Go to the next step. If a communication error message is not displayed: • Go to Step 4.
3	**INSPECT CONNECTION OF DSC HU/CM CONNECTOR** • Inspect the connection of the DSC HU/CM connector. • Is the DSC HU/CM connector connected securely?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to the next step.
4	**CONFIRM INSTRUMENT CLUSTER OPERATION RECORD** • Retrieve the warning system operation history using the M-MDS (IDS). (See **INSTRUMENT CLUSTER OPERATION RECORD**.) • Is the brake system warning light illumination history recorded?	Yes	If the Brake Warning Lamp is recorded: • Go to Step 5. If the Brake Warning Lamp (Brake fluid low) is recorded: • Go to Step 6. If the Brake Warning Lamp (Parking Brake ON over 20 km/h or 12.4 mile/h) is recorded: • Go to Step 8.
		No	Go to Step 10.
5	**VERIFY IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR ELSEWHERE** • Connect the M-MDS (IDS) to the DLC-2. • Turn off and on all warning lights and indicator lights using the instrument cluster	Yes	Go to Step 10.
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

	PID WL+IL of active command modes. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Do the ABS warning light, brake system warning light, TCS/DSC indicator light and DSC OFF indicator light turn on and off according to the active command modes?		
6	**VERIFY IF MALFUNCTION IS IN BRAKE FLUID LEVEL SENSOR OR ELSEWHERE** • Inspect the brake fluid level sensor for continuity. (See **BRAKE FLUID LEVEL SENSOR INSPECTION**.) • Is the continuity condition normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part. (See **MASTER CYLINDER REMOVAL/INSTALLATION**.)
*7	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND BRAKE FLUID LEVEL SWITCH** • Inspect for short to ground in the following circuit: ▪ Between brake fluid level switch and front body control module (FBCM) terminal 2Q • Is a short to ground detected?	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Retrieve the front body control module (FBCM) DTC using the M-MDS (IDS). (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) If the DTC remains: • Go to the applicable DTC inspection. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.) If the DTC does not remain: • Replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)
8	**INSPECT WHETHER MALFUNCTION IS IN PARKING BRAKE SWITCH OR ELSEWHERE** • Inspect the following parts for continuity: ▪ Parking brake	Yes	Go to the next step.
		No	Replace the malfunctioning part. (See **PARKING BRAKE LEVER REMOVAL/INSTALLATION**.)

	switch (See **PARKING BRAKE SWITCH INSPECTION**.) • Is the continuity condition normal?		
*9	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN INSTRUMENT CLUSTER AND PARKING BRAKE SWITCH** • Inspect for short to ground in the following circuit: ▪ Between parking brake switch and instrument cluster terminal X • Is the short to ground detected?	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Retrieve the instrument cluster DTC using the M-MDS (IDS). (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) If the DTC remains: • Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) If the DTC does not remain: • Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
10	**INSPECT DSC HU/CM POWER SUPPLY FUSE** • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for short to ground. Repair or replace the wiring harness for a possible short to ground as necessary. Install appropriate amperage fuse.
*11	**VERIFY IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM POWER SUPPLY AND DSC HU/CM FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition ON. • Measure the voltage at the DSC HU/CM terminal Q (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between DSC HU/CM terminal Q (wiring harness-side) and ignition switch. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for

			corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.
*12	**VERIFY IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM AND GROUND FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal AL (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the DSC HU/CM. (open circuit in the DSC HU/CM) (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact in ground point.

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that connectors, terminals and wiring harnesses are connected correctly and undamaged.

2014 - Mazda3 - Brakes

NO.4 A MALFUNCTION IN THE SYSTEM EVEN THOUGH THE ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, TCS/DSC INDICATOR LIGHT AND DSC OFF INDICATOR LIGHT ARE NOT ILLUMINATED [DYNAMIC STABILITY CONTROL (DSC)]

4	A malfunction in the system even though the ABS warning light, brake system warning light, TCS/DSC indicator light and DSC OFF indicator light are not illuminated
POSSIBLE CAUSE	• Mechanical malfunction in system.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
2	**VERIFY SOLENOID VALVE OPERATION** • Switch the ignition off. • Connect the M-MDS (IDS) to the DLC-2. • Switch the ignition ON (engine off). • Access the active command mode for the solenoid valve using the M-MDS (IDS). (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Does the solenoid valve operate?	Yes	Inspect the conventional brake system. If there is a malfunction: • Repair or replace any malfunctioning parts according to the inspection result.
		No	Repair or replace any malfunctioning parts according to the inspection result.

NO.4 A MALFUNCTION IN THE SYSTEM EVEN THOUGH THE ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, TCS/DSC INDICATOR L...

2014 - Mazda3 - Brakes

NO.5 ABS OR TCS*1 OPERATES FREQUENTLY/TCS DOES NOT WORK CORRECTLY *1: DSC SYSTEM FUNCTION CONTAINS TRACTION CONTROL FUNCTION, TCS/DSC INDICATOR LIGHT TURNS ON AND OFF WHILE TCS OPERATES [DYNAMIC STABILITY CONTROL (DSC)]

5	ABS or TCS*1 operates frequently TCS does not work correctly *1: DSC system function contains traction control function, TCS/DSC indicator light turns on and off while TCS operates
POSSIBLE CAUSE	• Difference in size or air pressure between front and rear tires. • Incorrect ABS wheel-speed signal is input to DSC HU/CM. • Malfunction in engine control system. (TCS malfunction)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM AND PCM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Retrieve the PCM DTC using the M-MDS (IDS), if the traction control function has a problem. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect tire size and air pressure. • Is the tire size and air pressure as specified?	Yes	Go to the next step.
		No	Replace with specified tires and adjust tire air pressure.

*3	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT PULSE** • Perform the Voltage Pattern Inspection for each ABS wheel-speed sensor. (See **FRONT ABS WHEEL-SPEED SENSOR INSPECTION**.) (See **REAR ABS WHEEL-SPEED SENSOR INSPECTION**.) • Is the output voltage pattern normal?	Yes	Found malfunctioning part according to the “INTERMITTENT CONCERN TROUBLESHOOTING”. (See **PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	ABS wheel-speed sensor installation inspection: • Inspect the ABS wheel-speed sensor for looseness and confirm it is securely installed. ABS sensor rotor installation inspection: • Inspect the ABS sensor rotor for poor installation. Repair or replace any malfunctioning parts according to the inspection result.

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that connectors, terminals and wiring harnesses are connected correctly and undamaged.

2014 - Mazda3 - Brakes

NO.6 DSC*2 OPERATES FREQUENTLY/DSC DOES NOT WORK CORRECTLY *2: TCS/DSC INDICATOR LIGHT TURNS ON AND OFF WHILE DSC OPERATES [DYNAMIC STABILITY CONTROL (DSC)]

6	DSC*2 operates frequently DSC does not work correctly *2: TCS/DSC indicator light turns on and off while DSC operates
POSSIBLE CAUSE	• DSC HU/CM detected malfunction. (Input and output device malfunction) • There is a difference in size or air pressure between front or rear tires. • Poor installation with SAS control module (yaw rate sensor, low-G sensor) (If SAS control module is poorly installed, DSC may operate intermittently.) • When replacing DSC HU/CM, initialization is not performed. (If initialization is not performed correctly, DSC may not work correctly.) • Incorrect ABS wheel speed sensor is input to DSC HU/CM.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
2	**VERIFY THAT SAS CONTROL MODULE IS INSTALLED** • Verify that each sensor is installed. • Is SAS control module (yaw rate sensor, low-G sensor) securely installed?	Yes	Go to the next step.
		No	Install the malfunctioning sensor securely.
3	**VERIFY THAT BRAKE FLUID PRESSURE SENSOR IS INITIALIZED**	Yes	Go to the next step.

	• Verify that each sensor is initialized. • Has the initialization for the DSC HU/CM been performed after replacing the DSC HU/CM and the SAS control module?	No	Perform the initialization procedure. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)
4	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect tire size and air pressure. • Tire size and air pressure as specified?	Yes	Go to the next step.
		No	Replace with specified tires and adjust tire air pressure.
5*	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT PULSE** • Perform the Voltage Pattern Inspection for each ABS wheel-speed sensor. (See **FRONT ABS WHEEL-SPEED SENSOR INSPECTION**.) (See **REAR ABS WHEEL-SPEED SENSOR INSPECTION**.) • Is the output voltage pattern normal?	Yes	Found malfunctioning part according to the “INTERMITTENT CONCERN TROUBLESHOOTING”. (See **PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	ABS wheel-speed sensor installation inspection: • Inspect the ABS wheel-speed sensor for looseness and confirm it is securely installed. ABS sensor rotor installation inspection: • Inspect the ABS sensor rotor for poor installation. Repair or replace any malfunctioning parts according to the inspection result.

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that connectors, terminals and wiring harnesses are connected correctly and undamaged.

2014 - Mazda3 - Brakes

NO.7 HILL LAUNCH ASSIST (HLA) OPERATES EVEN ON A DOWN SLOPE/HILL LAUNCH ASSIST (HLA) DOES NOT OPERATE ON A SLOPE [DYNAMIC STABILITY CONTROL (DSC)]

8	Hill launch assist (HLA) operates even on a down slope Hill launch assist (HLA) does not operate on a slope
POSSIBLE CAUSE	**NOTE:** • HLA operates on an up slope of **about 3% or more** when the shift lever is in a position other than the reverse (R) position (MTX). • HLA operates on an up slope of **about 6% or more** when selector lever position is in a forward gear (ATX). • HLA operates on a down slope of **about 3% or more** when shift lever is in the reverse (R) position (MTX). • HLA operates on a down slope of **about 6% or more** when selector lever is in the R position (ATX). • HLA operates for a maximum of **2 s** after releasing the brake pedal. • DSC HU/CM detects a malfunction (Input/output device malfunction). • PCM and/or instrument cluster detect a malfunction. • SAS control module installation malfunction (If there is a malfunction resulting from SAS control module removal, HLA may not operate at desired inclination angle). • Tire malfunction (Differing air pressure on four wheels, use of tires with differing conditions of wear) • DSC HU/CM initial setting and low-G sensor initialization have not been performed after replacing DSC HU/CM and SAS control module (If initial setting and initialization are not performed, HLA may not operate at desired inclination angle). • Center point of low-G sensor has deviated. • Input signal malfunction from ABS wheel-speed sensor • Input signal malfunction from PCM (Engine torque signal, engine speed signal, accelerator pedal position signal, reverse gear signal, and clutch pedal signal) • Input signal malfunction from instrument cluster (Parking brake signal) • Input signal malfunction from TCM (Selector lever position signal)

	• Communication error between DSC HU/CM and PCM • Communication error between DSC HU/CM and instrument cluster • Brake (foot brake/parking brake) drag

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC FOR RELATED MODULES** • Retrieve the DSC HU/CM, PCM, TCM (ATX) and instrument cluster DTC using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.) (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**VERIFY IF FALSE DETECTION OF INCLINATION ANGLE CAUSED BY MALFUNCTIONING SAS CONTROL MODULE INSTALLATION** • Inspect the SAS control module installation condition for the following: ▪ Is the module installed with any twisting? ▪ Is the module installed correctly?	Yes	Go to the next step.
		No	Repair the SAS control module installation condition. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
3	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR LOW-G SENSOR NOT PERFORMED** • Verify if the malfunction is caused by the initialization procedure for low-G sensor not being performed. • Has the initialization for the low-G sensor been performed after replacing the DSC HU/CM and the SAS control module?	Yes	Go to the next step.
		No	Perform the initialization procedure. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)
4	**INSPECT FOR TIRE MALFUNCTION**	Yes	Go to the next step.

	Inspect the tire pressure and condition. • Are tire pressures and conditions normal?		
		No	If the pressure is incorrect, adjust the tire pressure to the specification. If the tires are worn, replace the tires.
5	**INSPECT RELATED MODULES FOR MALFUNCTION CAUSED BY FALSE SIGNAL** • Access the following DSC HU/CM, PCM and instrument cluster PIDs using the M-MDS: (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL]**.) (See **PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER]**.) **DSC HU/CM** ▪ BRAKE_SW (Brake signal) ▪ LON_ACCL_C (Low-G sensor (longitudinal G) calculated value signal) ▪ LON_ACCL_R (Low-G sensor (longitudinal G) raw value signal) ▪ BRK_F_P_C (Brake fluid pressure calculated value signal) ▪ BRK_F_P_R (Brake fluid pressure raw value signal) ▪ WSPD_LF (ABS wheel-speed sensor (LF) signal) ▪ WSPD_RF (ABS wheel-speed sensor (RF) signal) ▪ WSPD_LR (ABS wheel-speed sensor (LR) signal) ▪ WSPD_RR (ABS wheel-speed sensor (RR)	Yes	Inspect the following: • Brake (foot brake/parking brake) drag • Engine output malfunction Repair or replace any malfunctioning parts according to the inspection result.
		No	Inspect the related parts and wiring harness. Repair or replace any malfunctioning parts according to the inspection result.

	signal) **PCM** ▪ RPM (Engine speed signal) ▪ APP (APP sensor signal) ▪ CPP (Clutch pedal signal: MTX) ▪ M_GEAR (Manual gear position signal: MTX) ▪ GEAR (Gear commanded signal: ATX) **TCM (ATX)** ▪ TR (Transaxle range sensor signal) **INSTRUMENT CLUSTER** ▪ P_BRAKE_SW (Parking brake signal) • Are all PID values normal?		

2014 - Mazda3 - Brakes

NO.8 SMART CITY BRAKE SUPPORT (SCBS) INDICATOR LIGHT (AMBER) STAY ON [DYNAMIC STABILITY CONTROL (DSC)]

8	Smart City Brake Support (SCBS) indicator light (amber) stay on
POSSIBLE CAUSE	• Laser sensor detects a malfunction. • DSC HU/CM internal malfunction. • DSC HU/CM detected malfunction (input and output device malfunction). • PCM and/or instrument cluster detect a malfunction.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM LASER SENSOR DTC** • Retrieve the DSC HU/CM and laser sensor DTC using the M-MDS. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	Go to the next step.
2	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM and laser sensor DTC using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Retrieve the PCM DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Retrieve the instrument cluster DTC using the

	• Are any DTCs present?		M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • If any DTCs are present, go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) • If there is not a DTC, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Brakes

GENERAL PROCEDURES (BRAKE)

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts to the following tightening torque in the order shown in the figure.

Tightening torque

- 108—147 N·m {12—14 Kgf·m, 80—108 ft·lbf}

Brake Lines Disconnection

1. If any brake line has been disconnected during the procedures, add brake fluid, bleed the brakes, and inspect for leakage after the procedure has been completed.

CAUTION:

- Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. In addition, if there is any brake fluid on the wiring harness, the wire insulation may corrode causing a malfunction such as a short circuit. If brake fluid gets on a painted surface or wiring harness, wash and flush it off completely with water immediately.

Brake Pipe Flare Nut Tightening

1. Tighten the brake pipe flare nut using any commercially available flare nut wrench.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

DSC Related Parts

1. Verify that there are no DTCs in the DSC memory after working on DSC related parts. If there are any DTCs in the memory, clear them. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)

DSC Related Part Sensor Initialization Procedure

WARNING:

- If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, when replacing the following parts, make sure to perform the initialization procedure to insure proper DSC operation.

1. When replacing the following parts, perform the initialization procedure. (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)
    - DSC HU/CM
    - SAS control module

Tire Pressure Monitoring System (TPMS) Initialization Procedure

CAUTION:

- If the TPMS initialization procedure is performed with the tire pressures not to specification, the system may not operate normally. Therefore, always inspect and adjust the tire pressure of all 4 tires before performing the TPMS initialization procedure.

NOTE:

- Perform the TPMS initialization when the following operations have been performed: (See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)
    - Tire pressures have been adjusted
    - Tires or wheels have been replaced
    - Tires have been rotated
    - DSC HU/CM replaced
    - DSC HU/CM connector disconnected
    - Battery is replaced
    - Negative battery cable is disconnected

1. Perform the TPMS initialization procedure when the TPMS warning light illuminates. (See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)

2014 - Mazda3 - Brakes

CONVENTIONAL BRAKE SYSTEM LOCATION INDEX

1	Vacuum line (See **VACUUM LINE INSPECTION**.) (See **VACUUM HOSE REMOVAL/INSTALLATION**.)
2	Brake fluid (See **BRAKE FLUID INSPECTION**.) (See **BRAKE FLUID AIR BLEEDING**.)
3	Master cylinder (See **MASTER CYLINDER REMOVAL/INSTALLATION**.) (See **BRAKE FLUID LEVEL SENSOR INSPECTION**.)
4	Power brake unit

	(See **POWER BRAKE UNIT INSPECTION**.) (See **POWER BRAKE UNIT REMOVAL/INSTALLATION**.)
5	Brake switch (See **BRAKE SWITCH INSPECTION**.)
6	Brake pedal (See **BRAKE PEDAL INSPECTION**.) (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)
7	Front brake (disc) (See **FRONT BRAKE (DISC) INSPECTION**.) (See **FRONT BRAKE (DISC) REMOVAL/INSTALLATION**.) (See **DISC PAD (FRONT) REPLACEMENT**.) (See **CALIPER (FRONT) DISASSEMBLY/ASSEMBLY**.)
8	Front brake hose (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.)
9	Vacuum pump (See **VACUUM PUMP INSPECTION**.) (See **VACUUM PUMP REMOVAL/INSTALLATION**.)

Vehicle rear side

1	Rear brake hose (See **BRAKE HOSE (REAR) REMOVAL/INSTALLATION**.)
2	Rear brake (disc) (See **REAR BRAKE (DISC) INSPECTION**.) (See **REAR BRAKE (DISC) REMOVAL/INSTALLATION**.) (See **DISC PAD (REAR) REPLACEMENT**.) (See **CALIPER (REAR) DISASSEMBLY/ASSEMBLY**.)

2014 - Mazda3 - Brakes

BRAKE FLUID INSPECTION

1. Verify that the brake fluid level in the brake fluid reserve tank is between the MAX and MIN marks.

- If the brake fluid level is below the MIN mark, add brake fluid.

2014 - Mazda3 - Brakes

BRAKE FLUID AIR BLEEDING

CAUTION:

- Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. In addition, if there is any brake fluid on the wiring harness, the wire insulation may corrode causing a malfunction such as a short circuit. If brake fluid gets on a painted surface or wiring harness, wash and flush it off completely with water immediately.

NOTE:

- Keep the fluid level in the brake fluid reserve tank at 3/4 full or more during the air bleeding.
- Begin air bleeding with the brake caliper that is furthest from the master cylinder.

Brake fluid type

- SAE J1703 or FMVSS116 DOT-3

1. Remove the cap from the brake fluid reserve tank and add brake fluid.

2. Remove the bleeder cap on the brake caliper, and attach a vinyl tube to the bleeder screw.

3. Place the other end of the vinyl tube in a clear container and fill the container with fluid during air bleeding.

4. Working with two people, one should pump the brake pedal several times and depress and hold the pedal down.

5. While the brake pedal is depressed, the other person should loosen the bleeder screw using a commercially available flare nut wrench, drain out any fluid containing air bubbles, and tighten the bleeder screw.

Tightening torque

Front: 16—18 N·m {1.7—1.8 kgf·m, 12—13 ft·lbf}

- Rear: 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

6. Repeat Steps 4 and 5 until no air bubbles are seen.

7. Perform air bleeding as described in the above procedures for all brake calipers.

8. After performing normal air bleeding, perform air bleeding again for the right and left rear calipers using the following procedure:

a. Remove the rear caliper installation bolt shown in the figure and lift up the rear caliper.

b. Slowly rotate the piston counterclockwise **approx. 180°** using the **SST**.

c. Loosen the bleeder screw.

d. Rotate the piston clockwise slowly using the **SST** and push the piston inwards completely to bleed air.

e. Tighten the bleeder screw.

Tightening torque

- 12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

f. Repeat the procedure from Steps 1 to 5 until no air bubbles are seen.

g. Place the piston groove in the position shown in the figure using the **SST**.

h. Return the rear caliper to the original position and install the rear caliper

installation bolt.

Tightening torque

- 22—26 N·m {2.3—2.6 kgf·m, 17—19 ft·lbf}

9. Clean the brake calipers.
10. After air bleeding, inspect the following:
    - Brake operation
    - Fluid leakage
    - Fluid level

2014 - Mazda3 - Brakes

VACUUM LINE INSPECTION

1. Remove the vacuum hose. (See **VACUUM HOSE REMOVAL/INSTALLATION**.)

2. Verify that air can be blown from the power brake unit side of the vacuum hose towards the vacuum pump side, and that air cannot be blown in the opposite direction.

- If there is any malfunction of the inner check valve, replace it together with the vacuum hose as a single unit.

2014 - Mazda3 - Brakes

VACUUM HOSE REMOVAL/INSTALLATION

1. Remove the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Pinch open the clamp using pliers and disconnect the vacuum hose.

3. Detach the vacuum hose from the clip.

4. Pinch open the clamp using pliers and disconnect the vacuum hose.

5. Remove the vacuum hose.

6. Install in the reverse order of removal.

2014 - Mazda3 - Brakes

BRAKE PEDAL INSPECTION

Pedal Height Inspection

1. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.

- If not within the specification, inspect the following items and repair or replace the applicable part if there is any malfunction.
    - Power brake unit installation condition
    - Deformation of or damage to the power brake unit fork
    - Brake pedal installation condition
    - Clevis pin wear
- If there is no malfunction in the above items, replace the brake pedal.

  Brake pedal height (reference value)

- 136 mm {5.35 in}

Pedal Play Inspection

1. Pump the pedal several times to release the vacuum in the power brake unit.

2. Gently depress the pedal by hand and measure the pedal play.

- If not within the specification, inspect the wear of the clevis pin. Replace it if there is any malfunction.

Brake pedal play

- 3—5 mm {0.12—0.19 in}

NOTE:

- If there is no malfunction in the clevis pin, there is a possibility that the power brake unit has some malfunction. Verify that there are no malfunctions, and replace it if necessary.

Pedal-to-floor Clearance Inspection

1. Start the engine and depress the brake pedal with a force of **147 N {15.0 kgf, 33.0 lbf}**.

2. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.

- If it is less than the specification, inspect for air in the brake line.

Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})

- 86 mm {3.4 in} or more

BRAKE PEDAL INSPECTION

2014 - Mazda3 - Brakes

BRAKE PEDAL REMOVAL/INSTALLATION

CAUTION:

- The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch is inserted into the installation hole on the brake pedal and rotated to fix in place. If the brake switch is not properly installed, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake pedal is properly installed and fully released before installing the brake switch to the pedal.
- Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

1	Brake switch connector and wiring harness

2	Brake switch (See **Brake Switch Installation Note**.)
3	Spring pin
4	Clevis pin
5	Nut
6	Nut
7	Brake pedal (See **Brake Pedal Removal Note**.)
8	Pedal pad

Brake Pedal Removal Note

1. Move the power brake unit to the vehicle front where the power brake unit fork does not interfere with the brake pedal arm.
2. Remove the brake pedal.

Brake Switch Installation Note

1. Inspect the brake pedal. (See **BRAKE PEDAL INSPECTION**.)
2. With the brake pedal fully released, insert a new brake switch into the installation hole on the brake pedal.
3. Secure the brake switch by turning it counterclockwise **45°**.

2014 - Mazda3 - Brakes

BRAKE SWITCH INSPECTION

CAUTION:

- Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.

1. Remove the column cover. (See **COLUMN COVER REMOVAL / INSTALLATION**.)
2. Disconnect the brake switch connector.
3. Verify that the continuity is as indicated in the table.

- If not as indicated in the table, replace the brake switch. (See **BRAKE PEDAL REMOVAL / INSTALLATION**.)

○—○ : Continuity

Condition	Terminal			
	A	B	C	D
When the brake pedal is depressed	○			○
When the brake pedal is not depressed		○	○	

2014 - Mazda3 - Brakes

MASTER CYLINDER REMOVAL/INSTALLATION

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See **BRAKE FLUID AIR BLEEDING**.)

1	Brake fluid level sensor connector
2	Clutch reserve hose (MTX) (See **Clutch Reserve Hose Removal Note (MTX)**.) (See **Clutch Reserve Hose Installation Note (MTX)**.)

3	Brake pipe
4	Nut
5	Hose holder
6	Wiring harness
7	Bracket
8	Vacuum hose
9	Master cylinder
10	Cap
11	Brake fluid reserve tank
12	Cylinder component

Clutch Reserve Hose Removal Note (MTX)

1. Disconnect the clutch reserve hose in the order shown in the figure.

Clutch Reserve Hose Installation Note (MTX)

1. Insert the clutch reserve hose into the master cylinder.
2. Pull the clutch reserve hose to verify that it does not come off, and reinsert it completely.

2014 - Mazda3 - Brakes

BRAKE FLUID LEVEL SENSOR INSPECTION

1. Disconnect the brake fluid level sensor connector from the master cylinder.
2. Inspect for continuity according to fluid level between the brake fluid level sensor terminals.

- If not as indicated in the table, replace the reserve tank. (See **MASTER CYLINDER REMOVAL/INSTALLATION**.)

○—○: Continuity

Condition	Terminal

2014 - Mazda3 - Brakes

POWER BRAKE UNIT INSPECTION

NOTE:

- The following inspection methods are simple inspection methods to determine the function of the power brake unit.
- If there is any malfunction in the power brake unit, replace the power brake unit as a single unit.

Without Using SST

Operation inspection

1. With the engine stopped, pump the brake pedal a few times.
2. With the brake pedal depressed, start the engine.
3. If the brake pedal moves down slightly immediately after starting the engine, the unit is normal.

Vacuum function inspection

1. Start the engine.
2. Stop the engine after driving the vehicle for **1—2 min**.
3. Depress the brake pedal with normal force.
4. If the first pedal stroke is long and becomes shorter with subsequent strokes, the unit is normal.
    - If a problem is found, inspect for damage to or improper installation of the check valve and vacuum hose. After repairing, inspect again.

Vacuum loss function inspection

1. Start the engine.
2. Depress the brake pedal with normal force.
3. With the brake pedal is depressed, stop the engine.
4. Hold the brake pedal depressed for **approx. 30 s**.

5. If the brake pedal height does not change during this time, the unit is normal.

Using SST

NOTE:

- When performing the inspection using the **SST**, inspect the brake pipe on the left or right front wheel.
- The following procedure and figures show the inspection for the brake pipe on the left front wheel.

Pre-inspection preparation

1. Disconnect the brake pipe from the brake hose.

2. Remove the clip.
3. Remove the brake hose from the bracket.
4. Detach the brake pipe from the pipe holder.
5. Install the **SSTs** to the brake pipe as shown in the figure.

6. Bleed the brake line and the **SSTs** of air. Bleed the air form the **SSTs** using bleeder screw A.

7. Install the pedal force gauge to the brake pedal.

8. Connect the vacuum gauge to the vacuum line.

Vacuum loss inspection

1. Start the engine.

2. Depress the brake pedal with a force of **200 N {20.4 kgf, 45.0 lbf}**.

3. Stop the engine when the vacuum gauge reading reaches **68 kPa {510 mmHg, 20 inHg}** with the brake pedal depressed.

4. With the engine off, observe the vacuum gauge for **15 s**.

5. If the gauge has dropped **3.3 kPa {25 mmHg, 0.97 inHg}** or less, the unit is normal.

Lack of hydraulic pressure inspection

1. If the brake pedal force and fluid pressure correlation is within the specification with the engine stopped and a vacuum amount of **0 kPa {0 mmHg, 0 inHg}**, the system is normal.

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}	
Brake pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	640 kPa {6.53 kgf/cm^2, 92.8 psi} or more

Hydraulic pressure inspection

1. Start the engine. Depress the brake pedal when the vacuum reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.

2. At this time, apply the indicated brake pedal force and if the fluid pressure is within the specification, the unit is normal.

Master cylinder fluid pressure

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Brake pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	7,350 kPa {74.95 kgf/cm^2, 1,066 psi} or more

After-inspection procedure

1. After the inspection, remove the **SSTs**, install the brake hose, clip, and brake pipe to the original positions, and then bleed the air from the brake line. (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.) (See **BRAKE FLUID AIR BLEEDING**.)

2014 - Mazda3 - Brakes

POWER BRAKE UNIT REMOVAL/INSTALLATION

CAUTION:

- Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or performing any procedure that changes the brake pedal stroke.

1. Remove the windshield wiper arm and blade. (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
2. Remove the cowl grille. (See **COWL GRILLE REMOVAL/INSTALLATION**.)
3. Remove the windshield wiper motor and link. (See **WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION**.)
4. Remove the cowl panel. (See **COWL PANEL REMOVAL/INSTALLATION**.)
5. Remove the master cylinder. (See **MASTER CYLINDER REMOVAL/INSTALLATION**.)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See **BRAKE FLUID AIR BLEEDING**.)
9. Remove the brake switch. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)
10. Inspect the brake pedal. (See **BRAKE PEDAL INSPECTION**.)
11. Install a new brake switch. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)

1	Vacuum hose
2	Snap pin
3	Clevis pin
4	Nut
5	Power brake unit
6	Gasket

2014 - Mazda3 - Brakes

VACUUM PUMP INSPECTION

1. Pinch open the clamp using pliers and disconnect the vacuum hose from the vacuum pump. (See **VACUUM HOSE REMOVAL/INSTALLATION**.)

2. Install the vacuum gauge as shown in the figure, then check the vacuum.

3. Warm up the engine.
   - If the pressure is less than the specification, inspect for the following.
     - Malfunction of the vacuum pump
     - Shortage of lubrication oil pressure

Vacuum pump vacuum specification (reference value)

Measurement condition		Specification
Engine speed	Change in vacuum amount	Period of time change in vacuum amount condition met
While idling (520—700 rpm (reference value))	From 60 kPa {450 mmHg, 18 inHg} to 67 kPa {503 mmHg, 20 inHg}	8 s or less

Vacuum pump maximum vacuum specification (reference value)

Measurement condition	Specification
While idling (no time designation)	93.3 kPa {700 mmHg, 27.6 inHg} or more

4. Install in the reverse order of the removal.

2014 - Mazda3 - Brakes

VACUUM PUMP REMOVAL/INSTALLATION

1. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Set the PCM wiring harness out of the way. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Pinch open the clamp using pliers and disconnect the vacuum hose from the vacuum pump. (See **VACUUM HOSE REMOVAL/INSTALLATION**.)
5. Remove in the order shown in the table.
6. Install in the reverse order of removal.

1	Vacuum hose
2	Exhaust CMP sensor connector and wiring harness
3	Bolt

4	Vacuum pump (See **Vacuum Pump Removal Note**.) (See **Vacuum Pump and O-ring Installation Note**.)
5	O-ring (See **Vacuum Pump and O-ring Installation Note**.)

Vacuum Pump Removal Note

1. When removing the vacuum pump, place a rag under the installation surface of the vacuum pump so that engine oil does not get on other parts.
2. Remove the vacuum pump.

Vacuum Pump and O-ring Installation Note

1. Rotate the vacuum pump by hand to drain the remainder of the engine oil in the vacuum pump.
2. Degrease the O-ring installation groove and installation surface.
3. Install the new O-ring to the vacuum pump.
4. Install the vacuum pump.

2014 - Mazda3 - Brakes

FRONT BRAKE (DISC) INSPECTION

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.2—86.9 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.

2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.04 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.

2. If the runout is **less than 0.04 mm {0.002 in}**, uneven wear does not occur.

The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Thickness and friction coefficient of the disc plate change due to corrosion.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.

2. The thickness of the corrosion is uneven and it sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

Inspection and repair procedure

Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.

3. Rotate the disc plate one time and measure the runout.

Front disc plate runout limit

- 0.04 mm {0.002 in}

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).

3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit

- 0.015 mm {0.00059 in}

WARNING:

- Do not exceed minimum disc plate thickness.

Disc Plate Thickness Inspection

CAUTION:

- Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

     Minimum front disc plate thickness

   - 23.0 mm {0.906 in}

     Minimum front disc plate thickness after machining using a brake lathe on-vehicle

   - 23.8 mm {0.937 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

   Minimum front disc pad thickness

   - 2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.

FRONT BRAKE (DISC) INSPECTION

2014 - Mazda3 - Brakes

FRONT BRAKE (DISC) REMOVAL/INSTALLATION

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See **BRAKE FLUID AIR BLEEDING**.)
4. Depress the brake pedal a few times, rotate the wheel by hand, and verify that the brake does not drag.

12	Bushing
13	Dust boot
14	Disc plate

Disc Pad Installation Note

1. Clean the exposed area of the piston.
2. Push the piston in using the commercially available disc brake expand tool.

3. Install the disc pads to the mounting support.

2014 - Mazda3 - Brakes

DISC PAD (FRONT) REPLACEMENT

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, depress the brake pedal a few times, rotate the wheel by hand, and verify that the brake does not drag.

1	Caliper installation bolt (See **Caliper Installation Bolt Removal Note**.) (See **Caliper Installation Bolt Installation Note**.)
2	Disc pad (See **Disc Pad Installation Note**.)
3	Wear indicator

4	Shim
5	Guide plate

Caliper Installation Bolt Removal Note

1. Remove the caliper installation bolt shown in the figure and lift up the caliper.

Disc Pad Installation Note

1. Clean the exposed area of the piston.
2. Push the piston in using the commercially available disc brake expand tool.

3. Install the disc pads to the mounting support.

Caliper Installation Bolt Installation Note

1. Return the caliper to the original position and install the caliper installation bolt.

2014 - Mazda3 - Brakes

CALIPER (FRONT) DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See **Piston Disassembly Note**.)
4	Dust seal

5	Piston seal
6	Caliper body

2. Assemble in the reverse order of removal.

Piston Disassembly Note

WARNING:

- When compressed air is blown into the caliper body, injury to a finger or other part from pinching could result from the piston springing up. When blowing in compressed air, do not place your fingers between the piston and caliper body when performing the work.

CAUTION:

- The piston could be damaged if blown out with great force. Blow the compressed air slowly to prevent the piston from suddenly popping out.

1. Insert a piece of wood in the caliper as shown in the figure and blow compressed air through the hole to remove the piston from the caliper body.

2014 - Mazda3 - Brakes

BRAKE HOSE (FRONT) REMOVAL/INSTALLATION

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See **BRAKE FLUID AIR BLEEDING**.)

1	Brake pipe
2	Clip
3	Clip
4	Bolt

REAR BRAKE (DISC) INSPECTION

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.2—86.9 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.

2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.1 mm {0.004 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.

2. If the runout is **less than 0.1 mm {0.004 in}**, uneven wear does not occur.

The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Thickness and friction coefficient of the disc plate change due to corrosion.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.

2. The thickness of the corrosion is uneven and it sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

Inspection and repair procedure

Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.

3. Rotate the disc plate one time and measure the runout.

Rear disc plate runout limit

- 0.1 mm {0.004 in}

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).

3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit

- 0.015 mm {0.00059 in}

WARNING:

- Do not exceed minimum disc plate thickness.

Disc Plate Thickness Inspection

CAUTION:

- Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

     Minimum rear disc plate thickness

   - 7.0 mm {0.28 in}

     Minimum rear disc plate thickness after machining using a brake lathe on-vehicle

   - 7.8 mm {0.31 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

   Minimum rear disc pad thickness

   - 2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.

REAR BRAKE (DISC) INSPECTION

2014 - Mazda3 - Brakes

REAR BRAKE (DISC) REMOVAL/INSTALLATION

CAUTION:

- The rear brake hose gasket has been established as a specialized part. If a gasket other than the specialized part is used, it could result in brake fluid leakage. Therefore, always use the specialized gasket for the rear brake hose.

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See **BRAKE FLUID AIR BLEEDING**.)
4. Pump the brake pedal a few times and inspect the following:
    - The disc pad projection is securely installed to the piston groove
    - Parking brake lever stroke
    - Brake drag

1	Rear parking brake cable (See **Rear Parking Brake Cable Installation Note**.)
2	Bolt
3	Brake hose
4	Bolt
5	Caliper (See **Caliper Installation Note**.)
6	Disc pad

7	Shim
8	Guide plate
9	Bolt
10	Mounting support
11	Slide pin
12	Dust boot
13	Disc plate

Caliper Installation Note

1. Clean the exposed area of the piston.

2. Rotate the piston clockwise slowly using the **SST** and push the piston completely until the piston grooves are in the position shown in the figure.

3. Install the caliper.

Rear Parking Brake Cable Installation Note

1. Install the rear parking brake cable to the rear caliper.

2. Verify that the outer end tabs of the rear parking brake cable is securely engaged with the bracket.

REAR PARKING BRAKE CABLE
OUTER END
TAB
BRACKET

2014 - Mazda3 - Brakes

DISC PAD (REAR) REPLACEMENT

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, pump the brake pedal a few times and inspect the following:
    - The disc pad projection is securely installed to the piston groove
    - Parking brake lever stroke
    - Brake drag

1	Caliper installation bolt (See **Caliper Installation Bolt Removal Note**.) (See **Caliper Installation Bolt Installation Note**.)

2	Disc pad
3	Shim
4	Guide plate

Caliper Installation Bolt Removal Note

1. Remove the caliper installation bolt shown in the figure and lift up the caliper.

Caliper Installation Bolt Installation Note

1. Clean the exposed area of the piston.

2. Rotate the piston clockwise slowly using the SST and push the piston completely until the piston grooves are in the position shown in the figure.

3. Return the caliper to the original position and install the caliper installation bolt.

DISC PAD (REAR) REPLACEMENT

2014 - Mazda3 - Brakes

CALIPER (REAR) DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Bleeder cap
2	Bleeder screw
3	Piston (See **Piston Disassembly Note**.) (See **Dust Seal, Piston Assembly Note**.)
4	Dust seal

	(See **Dust Seal, Piston Assembly Note**.)
5	Piston seal
6	Caliper body

2. Assemble in the reverse order of removal.

Piston Disassembly Note

1. Rotate the piston counter-clockwise using the **SST**, remove the piston from the caliper body.

Dust Seal, Piston Assembly Note

1. Assemble the dust seal to the piston.

2. Assemble the lip of the dust seal to the groove of the caliper body with the dust seal assembled to the piston as shown in the figure.

3. Rotate the piston clockwise using the **SST** slowly and push the piston inwards completely.

4. Verify that the dust seal is installed into the groove of the piston securely.

2014 - Mazda3 - Brakes

BRAKE HOSE (REAR) REMOVAL/INSTALLATION

CAUTION:

- The rear brake hose gasket has been established as a specialized part. If a gasket other than the specialized part is used, it could result in brake fluid leakage. Therefore, always use the specialized gasket for the rear brake hose.

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See **BRAKE FLUID AIR BLEEDING**.)

PARKING BRAKE LEVER INSPECTION

Stroke Inspection

1. Pump the brake pedal a few times.

2. Pull the parking brake lever two to three times.

3. Inspect the parking brake stroke by slowly pulling at point A **50 mm {2.0 in}** from the end of the parking brake lever with a force of **98 N {10 kgf, 22 lbf}** and counting the number of notches (clicking sound).

- If not within the specification, adjust the parking brake lever.

  Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}

- 3—4 notches

2014 - Mazda3 - Brakes

PARKING BRAKE LEVER ADJUSTMENT

1. Pump the brake pedal a few times.

2. Disconnect the upper panel from the rear console. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

3. Turn the adjusting nut and adjust the parking brake lever.

4. After adjustment, pull the parking brake lever one notch and verify that the parking brake warning light illuminates.

5. Verify that the rear brakes do not drag.

2014 - Mazda3 - Brakes

PARKING BRAKE LEVER REMOVAL/INSTALLATION

1. Remove the upper panel. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
2. Remove in the order indicated in the table.

DSC SYSTEM WIRING DIAGRAM

DSC SYSTEM WIRING DIAGRAM

2014 - Mazda3 - Brakes

DSC HU/CM REMOVAL/INSTALLATION

WARNING:

- If the DSC HU/CM configuration is not completed, it could result in an unexpected accident due to the DSC being inoperative. If the DSC HU/CM is replaced, always use the automatic configuration function so that the DSC operation conditions are correct.
- If the DSC related parts sensor initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing the DSC HU/CM, always perform the DSC related parts sensor initialization procedure to insure proper DSC operation.

CAUTION:

- The internal parts of the DSC HU/CM could be damaged if dropped. Be careful not to drop the DSC HU/CM. Replace the DSC HU/CM if it is subjected to an impact.

NOTE:

- When the ignition is switched to ON or the engine is started after the DSC HU/CM has been replaced, the DSC CM reads data from the instrument cluster via CAN communication to perform automatic configuration.
- The DSC HU/CM prior to replacement stores the vehicle specification information.
- A new DSC HU/CM does not store any vehicle specification information.

1. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the bracket.

3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See **BRAKE FLUID AIR BLEEDING**.)
6. Perform the following procedure to implement the DSC HU/CM automatic configuration.
   a. Switch the ignition ON (engine off) and wait for **10 s or more**.
   b. Switch the ignition off and wait for **3 s or more**.
   c. Switch the ignition ON (engine off) and wait for **3 s or more**.
   d. The automatic configuration procedure is completed.
7. Perform the DSC related parts sensor initialization procedure (only when replacing it with a new one). (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)
8. Perform the TPMS initialization procedure. (Vehicles with TPMS) (See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)
9. Clear the DTCs from the memory. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)

1	Connector (See **Connector Removal Note**.) (See **Connector Installation Note**.)
2	Brake pipe (See **Brake Pipe Removal Note**.) (See **Brake Pipe Installation Note**.)
3	Bolt
4	Nut
5	DSC HU/CM component

1	Bolt
2	DSC HU/CM
3	Mount bolt
4	Mount rubber
5	Bracket

Connector Removal Note

CAUTION:

- If sand or other particles get into the connector, it may be difficult to remove. To prevent damaging the connector, be careful not to use excessive force when disconnecting it.

1. Pull the lock lever down in the direction of the arrow while pressing the tab of the connector cover.

2. Pull the connector toward the vehicle rear and remove it.

Brake Pipe Removal Note

1. Place an alignment mark on the brake pipe and DSC HU/CM.

2. Apply protective tape to the connector to prevent brake fluid from entering.

3. Disconnect the brake pipes.

Brake Pipe Installation Note

1. Align the marks made before removal and install the brake pipe to the DSC HU/CM and brake pipe joint referring to the figure.

2. Tighten the brake pipe to the specified torque using the commercially available flare nut wrench.

Connector Installation Note

1. Connect the connector and pull the lock lever up in the direction of the arrow.

2. After connecting the connector, verify that the connector cover is completely pushed in.

2014 - Mazda3 - Brakes

DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE

WARNING:

- If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing the DSC HU/CM or SAS control module, always perform the initialization procedure to insure proper DSC operation.

1. Inspect the wheel alignment and the tire pressure.
    - If there is any malfunction, adjust the applicable part.
2. Position the vehicle on level ground.
3. Switch the ignition off.
4. Connect the M-MDS (IDS) to DLC-2.
5. After the vehicle is identified, select the following items from the initial screen of the IDS.
    - Select “Chassis”.
    - Select “ABS/DSC”.
    - Select “Sensor Initialization”.
6. Then, select an item from the screen menu.
    - “Brake fluid pressure sensor”
    - “Lateral Acceleration Sensor”
    - “Yaw Rate Sensor”
    - “Longitudinal Acceleration Sensor”
7. Perform the procedure according to the directions on the screen.
8. Drive the vehicle.
9. After **5 min or more** of driving, verify that the DSC system is normal.

2014 - Mazda3 - Brakes

DSC HU/CM INSPECTION

1. Disconnect the DSC HU/CM connector. (See **DSC HU/CM REMOVAL/INSTALLATION**.)

2. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Attach the tester lead to the DSC HU/CM wiring harness-side connector and inspect voltage, continuity, or resistance according to the standard (reference) on the table.

Standard (Reference)

DSC HU/CM WIRING HARNESS-SIDE CONNECTOR

2014 - Mazda3 - Brakes

FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

1. Remove the mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. After installation, verify that there is no twisting in the front ABS wheel-speed sensor.

1	Connector
2	Bolt
3	Front ABS wheel-speed sensor

2014 - Mazda3 - Brakes

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

Sensor Output Value Inspection

CAUTION:

- Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.

1. Switch the ignition off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
    - WSPD_SEN_LF (LF wheel-speed sensor)
    - WSPD_SEN_RF (RF wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
    - If there is any malfunction, replace the ABS wheel-speed sensor.

Installation Visual Inspection

1. Inspect for the following:
    - If there is any malfunction, replace the part.

    a. Excessive play of the ABS wheel-speed sensor

    b. Deformation of the ABS wheel-speed sensor

    c. Deformation or damage of the ABS sensor rotor

Clearance Inspection

Preparation prior to inspection

1. Remove the ABS wheel-speed sensor. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

2. Remove the wheel hub and steering knuckle as a single unit. (See **WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION**.)

3. Install the ABS wheel-speed sensor to the removed wheel hub, steering knuckle component, and tighten to the specified torque.

Tightening torque

- 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

Clearance Inspection

1. Measure the gap between the ABS sensor rotor and ABS wheel-speed sensor using a feeler gauge.

- If not within the specification, verify the following items and repair or replace if necessary.
    - Is there deformation or damage to the ABS sensor rotor?
    - Is there deformation or damage to the ABS wheel speed sensor?
    - Is there foreign matter adhering?

Clearance

- 0.88—1.52 mm {0.035—0.059 in}

Servicing after inspection

1. Remove the ABS wheel-speed sensor from the wheel hub, steering knuckle component.

2. Install the wheel hub, steering knuckle component. (See **WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION**.)

3. Install the ABS wheel-speed sensor. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

4. Inspect the front wheel alignment. (See **FRONT WHEEL ALIGNMENT**.)

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

2014 - Mazda3 - Brakes

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

1. For the 4SD, remove the following parts:
    a. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
2. For the 5HB, remove the following parts:
    a. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
    b. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
    c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
    d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
    e. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
    f. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
3. Pull back the trunk side trim to a position which allows for the removal of the rear ABS wheel-speed sensor. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
4. Disconnect the rear ABS wheel-speed sensor connector.

5. Press the rear ABS wheel-speed sensor tabs and press out the sensor toward the outside of the vehicle.
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. After installation, verify that there is no twisting in the rear ABS wheel-speed sensor.

1	Bolt
2	Rear ABS wheel-speed sensor (See **Rear ABS Wheel-speed Sensor Removal Note**.)

Rear ABS Wheel-speed Sensor Removal Note

1. Pull aside the mudguard and remove the rear ABS wheel-speed sensor.

2014 - Mazda3 - Brakes

REAR ABS WHEEL-SPEED SENSOR INSPECTION

Installation Visual Inspection

1. Inspect the following items:

    - If there is any malfunction, replace the applicable part.

    a. Excessive play or deformation of the ABS wheel-speed sensor

Clearance Inspection

1. Remove the ABS wheel-speed sensor.

2. Measure the distance between the ABS wheel-speed sensor installation surface and the ABS sensor rotor. This is dimension A.

3. Calculate the clearance between the front ABS wheel-speed sensor and the ABS sensor rotor using the following formula:

    - Clearance (mm {in}) = A-14 {0.55}

4. Verify that the clearance between the ABS sensor rotor and the ABS wheel-speed sensor is as indicated below.

    - If there is any malfunction, replace it.

    Clearance

    - 0.47—0.99 mm {0.019—0.038 in}

Sensor Output Value Inspection

1. Switch the ignition off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
    - WSPD_SEN_LR (LR ABS wheel-speed sensor)
    - WSPD_SEN_RR (RR ABS wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
    - If there is any malfunction, replace the ABS wheel-speed sensor.

2014 - Mazda3 - Brakes

BRAKE FLUID PRESSURE SENSOR INSPECTION

1. Switch the ignition off.
2. Disconnect the brake pipe from the LF brake hose.

3. Remove the clip.
4. Remove the LF brake hose from the bracket.
5. Detach the brake pipe from the pipe holder.
6. Install the **SST** to the brake pipe as shown in the figure.

7. Bleed the brake line and the **SSTs** of air. Bleed the air form the **SSTs** using bleeder screw A.

8. Connect the M-MDS to the DLC-2.

9. Select the “BRK_F_P_R” PID.

10. Start the engine.

11. Depress the brake pedal, and confirm that the fluid pressure value of the **SST** (gauge) and the value shown on the M-MDS are equal

- If the fluid pressures are different, replace the DSC HU/CM. (See **DSC HU/CM REMOVAL/INSTALLATION**.)

12. After the inspection, remove the **SSTs**, install the brake hose, clamp, and brake pipe to the original positions, and then bleed the air from the brake line. (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.) (See **BRAKE FLUID AIR BLEEDING**.)

2014 - Mazda3 - Brakes

DSC OFF SWITCH REMOVAL/INSTALLATION

NOTE:

- The DSC OFF switch is integrated with the cluster switch.
- For the DSC OFF switch removal/installation, refer to CLUSTER SWITCH REMOVAL/INSTALLATION. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Brakes

DSC OFF SWITCH INSPECTION

NOTE:

- The DSC OFF switch is integrated with the cluster switch.
- For the DSC OFF switch removal/installation, refer to CLUSTER SWITCH REMOVAL/INSTALLATION. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

Resistance Inspection

1. Remove the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)
2. Measure the resistance between DSC OFF switches B and C under the following conditions:
    - Resistance (standard) with DSC OFF switch pressed and held
        - 0 ohms
    - Resistance (standard) with any switches not pressed
        - 1,139.99—1,163.01 ohms

CIRCUIT WITH DSC OFF SWITCH PRESSED AND HELD

CIRCUIT WITH ANY SWITCHES NOT PRESSED

- If not within the specification, replace the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

LED Illumination Inspection

1. Remove the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)
2. Apply battery positive voltage to cluster switch terminal J, and connect terminal I to ground.

3. Verify that the LED illuminates.
    - If there is any malfunction, replace the cluster switch.

2014 - Mazda3 - Brakes

LASER SENSOR INSPECTION

Simple Inspection

WARNING:

- To prevent eye injury, do not peer directly into the laser sensor using optical instruments with a magnification function such as magnifying glasses or microscopic and objective lenses within a distance of 100 mm {3.94 in} from the sensor.
- Because a simple reflector held with a hand is required, if heavy material such as a steel plate is used, it could be dropped resulting in an accident. Therefore, use light materials such as a plastic plate or cardboard when making the reflector.

CAUTION:

- Perform the work in an area where 6 m or more of space from the front of the vehicle is available.
- Remove cargo from the cabin and trunk compartment so that the vehicle is in an unloaded condition.
- Adjust the air pressure of each tire to the specified value.

1. To make the simple reflector, overlap three pieces of commercially available aluminum foil and adhere them to a plastic plate or piece of cardboard with a length of 50 cm or more on one side.

NOTE:

- If two or fewer pieces of aluminum foil are used, near-infrared reflection may weaken and the M-MDS will be unable to measure the correct distance.
- A reflective material or material which facilitates near-infrared light reflection can be substituted for the aluminum foil.

2. Park the vehicle on level ground.

3. Connect the M-MDS to the DLC-2.

4. After vehicle identification, the following can be selected from the IDS initialization screen.

   a. [Data logger]

   b. [Module]

   c. [SCBS]

5. Select “DIST_BMP_TGT” from PID/DATA Monitor Table.

6. **Stand at the position 6 m {20 ft}** from the front end of the front bumper and hold the simple reflector made in Step 1 at a height of **1.5 m {4.9 ft}** from the ground to verify that the M-MDS screen display is at **6 m**.

7. Then, move to the position **4 m {13 ft}** from the front end of the front bumper and hold the simple reflector at a height of **1 m {3 ft}** from the ground to verify that the M-MDS screen display is at **4 m**.

NOTE:

- The brand emblem of the front bumper indicates the center position at the rear of the vehicle.
- The “DIST_BMP_TGT” monitoring value is displayed in **1 m {3 ft}** increments.

8. If there is a malfunction, verify that there is no damage with the laser sensor tab and in the laser sensor installation area of the windshield. (See **LASER SENSOR REMOVAL/INSTALLATION**.)

- If there is a malfunction with the laser sensor tab, replace the laser sensor. (See **LASER SENSOR REMOVAL/INSTALLATION**.)
- If there is a malfunction in the laser sensor installation area of the windshield, replace the windshield. (See **WINDSHIELD REMOVAL**.) (See **WINDSHIELD INSTALLATION**.)

2014 - Mazda3 - Brakes

LASER SENSOR REMOVAL/INSTALLATION

WARNING:

- A removed laser sensor will not meet the conditions for a class 1M laser under the IEC 60825-1 specification and therefore eye safety cannot be assured.
- To prevent eye injury, do not peer directly into the laser sensor using optical instruments with a magnification function such as magnifying glasses or microscopic and objective lenses within a distance of 100 mm {3.94 in} from the sensor.

CAUTION:

- If the laser sensor is installed at an incorrect angle, the laser sensor cannot detect obstructions correctly which could result in an accident. When installing the laser sensor, verify that there is no damage or deformation to the installation part (bracket) and perform the installation correctly.
- If the laser sensor (windshield) gets hit, the laser sensor angle could change and the obstructions cannot be detected correctly which could result in an accident. If the laser sensor has been hit, always inspect for DTCs and verify that there is no malfunction in the Smart City Brake Support (SCBS) system.
- Do not disassemble the laser sensor because it cannot be disassembled together with the lens. If it has been disassembled, replace the laser sensor.
- The internal parts of the laser sensor could be damaged if dropped. Be careful not to drop the laser sensor. Replace the laser sensor if it is subjected to an impact.

NOTE:

- When the ignition is switched ON, the laser sensor reads the vehicle specification information sent via CAN transmission from the instrument cluster, and stores the vehicle specification information.
- The laser sensor prior to replacement stores the vehicle specification information.
- A new laser sensor does not store any vehicle specification information.

1. Remove the cover A. (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

1	Connector
2	Laser sensor (See **Laser Sensor Removal Note**.) (See **Laser Sensor Installation Note**.)

Laser Sensor Removal Note

1. Remove the laser sensor in the order shown in the figure.

Laser Sensor Installation Note

1. When installing the laser sensor, listen for a click indicating the laser sensor is securely installed.

2. Make sure that the laser sensor tabs are attached correcting.

2014 - Mazda3 - Brakes

BRAKES TECHNICAL DATA

Item	Specification
Brake fluid type	SAE J1703 or FMVSS116 DOT-3
Brake pedal height (reference value)	136 mm {5.35 in}
Brake pedal play	3—5 mm {0.12—0.19 in}
Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})	86 mm {3.4 in} or more
Front disc plate runout limit	0.04 mm {0.002 in}
Minimum front disc plate thickness	23.0 mm {0.906 in}
Minimum front disc plate thickness after machining using a brake lathe on-vehicle	23.8 mm {0.937 in}
Minimum front disc pad thickness	2.0 mm {0.079 in} min.
Rear disc plate runout limit	0.1 mm {0.004 in}
Minimum rear disc plate thickness	7.0 mm {0.28 in}
Minimum rear disc plate thickness after machining using a brake lathe on-vehicle	7.8 mm {0.31 in}
Minimum rear disc pad thickness	2.0 mm {0.079 in} min.
Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}	3—4 notches

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}

Brake pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	640 kPa {6.53 kgf/cm^2, 92.8 psi} or more

Master cylinder fluid pressure

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Brake pedal force	Fluid pressure
200 N {20.4 kgf, 45.0 lbt}	7,350 kPa {74.95 kgf/cm^2, 1,066 psi} or more

Vacuum pump vacuum specification (reference value)

Measurement condition		Specification
Engine speed	Change in vacuum amount	Period of time change in vacuum amount condition met
While idling (520—700 rpm (reference value))	From 60 kPa {450 mmHg, 18 inHg} to 67 kPa {503 mmHg, 20 inHg}	8 s or less

Vacuum pump maximum vacuum specification (reference value)

Measurement condition	Specification
While idling (no time designation)	93.3 kPa {700 mmHg, 27.6 inHg} or more

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that no DTCs are stored. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
- If the malfunction does not recur after the above servicing, explain to the customer that the vehicle is normal.

2014 - Mazda3 - Transmission/Transaxle

ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “Modules”.

   c. Select “TCM”.

NOTE:

- Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

  Freeze frame data

- The freeze frame data consists of data for vehicle and transaxle control system operation conditions when malfunctions in the transaxle control system are detected and stored in the TCM.
- Freeze frame data is stored at the instant the malfunction indicator lamp illuminates, and only a part of the DTC data is stored.

  Snapshot data

- The data for all DTCs currently detected is stored.

  Recorded DTC timing

  - For DTCs with one drive cycle, data is recorded during the malfunction determination period.
  - For DTCs with two drive cycles, data is recorded during non-determination (1st diagnosis) periods.

3. Then, select the “Retrieve CMDTCs” and perform procedures according to the directions on the M-MDS screen.

4. Verify the DTC according to the directions on the screen.

   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

5. After completion of repairs, clear all DTCs stored in the TCM. (See **Freeze frame data item table**.)

Freeze frame data item table

NOTE:

- Refer to PID/DATA monitor table for confirm the transaxle control system operation status while the TCM does not store the DTC. (See **ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL]**.)
- Freeze frame data items are not displayed, according to detected DTC.

—: Not applicable

Freeze frame data item	Unit	Description	Corresponding PID/DATA monitor item
LOAD	%	Calculated engine load	—
ECT	°C {°F}	Engine coolant temperature	ECT
RPM	RPM	Engine speed	RPM
VS	KPH {MPH}	Vehicle speed	VSS
IAT	°C {°F}	Intake air temperature	—
TP	%	Throttle valve position No.1	—
RUNTM	hh:mm:ss	Time from engine start	—
VPWR	V	Module supply voltage	VPWR
APP_D	%	Accelerator pedal position No.1	APP1

Snapshot data item table

NOTE:

- Refer to PID/DATA monitor table for confirm the transaxle control system operation status while the TCM does not store the DTC. (See **ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL]**.)
- Snapshot data items are not displayed, according to detected DTC.

PADDLE_UP	Off/On	Shift up operation using steering shift switch.	PADDLE_UP
PADDLE_DOWN	Off/On	Shift down operation using steering shift switch.	PADDLE_DOWN

Clearing DTCs Procedures

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “Modules”.

   c. Select “TCM”.

   d. Select “Retrieve CMDTCs”.

3. Verify the DTC according to the directions on the screen.

4. Press the clear button on the DTC screen to clear the DTC.

5. Switch the ignition off.

6. Close all of the doors, hood, trunk lid, and liftgate, lock the doors, and wait for **3 min**.

7. Switch the ignition ON (engine off or on) and wait for **5 s or more**.

8. Perform DTC inspection. (See **Reading DTCs Procedure**.)

9. Verify that no DTCs are displayed.

2014 - Mazda3 - Transmission/Transaxle

ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]

Foreword

- The on-board diagnostic mode is used to diagnose a malfunction in the automatic transaxle based on the sensor signal obtained at that time by forcibly operating each solenoid and selecting each gear.
- If a problem with the automatic transaxle is identified, perform the on-board diagnostic.
- When DTCs are displayed by the on-board diagnosis test, perform the instructions in the applicable DTC troubleshooting.

WARNING:

- The on-board diagnosis test forcibly changes gears within the driving shift range while the engine is running. Before implementing the on-board diagnosis test, securely apply the parking brake and set the wheel blocks for both the front and rear wheels. Otherwise, the vehicle will move which could cause injury or property damage.
- Perform the DTC inspection using the M-MDS before performing on-board diagnostic because the DTC is cleared by performing the on-board diagnostic.

NOTE:

- The time required to perform the diagnostic is **2 to 3 min**.
- If unsafe actions such as shift operation and brake pedal release are detected before the shift position indicator light flashes, the on-board diagnostic test mode is canceled and the shift position indicator light flashes 5 times.

1. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
2. Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.)
3. Connect the M-MDS to the DLC-2.
4. Perform vehicle identification using the M-MDS.
5. Start the engine.
6. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Data Logger”.
   b. Select “Modules”.
   c. Select “TCM”.
7. While checking the PID TFT (ATF temperature), warm-up the engine completely and allow the

ATF temperature to reach **55 °C {131 °F} or more**.

8. Select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “Modules”.

   c. Select “TCM”.

   d. Select “Retrieve CMDTCs”.

9. Perform the following steps (1) to (5) with the brake pedal depressed.

NOTE:

- If the on-board diagnosis test is shut down (Shift position indicator light flashes 5 times), resume the procedure from Step 1.

   a. Shift the selector lever to the R position.

   b. Clear DTCs using the M-MDS and verify that the shift position indicator light flashes 2 times. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)

SHIFT POSITION INDICAOR LIGHT

c. Within **5 s** after the shift position indicator light flashes 2 times, shift the selector lever to the N position and verify that the shift position indicator light flashes 2 times.

d. Within **5 s** after the shift position indicator light flashes 2 times, shift the selector lever to the D position and verify that the shift position indicator light flashes 3 times.

NOTE:

- **Approx. 30 s** is required until the shift position indicator light flashes. In addition, shift shock occurs a few times during stand-by.

e. After the shift position indicator light flashes 3 times, shift the selector lever to the P position.

10. Release the brake pedal.

11. Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)

- If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

DTC P0218:00 [FW6A-EL]

DTC P0218:00	Automatic transaxle protection control

DETECTION CONDITION	• Under the following conditions, the ATF temperature is **135 °C {275 °F} or more** for **10 s**:
	  ▪ Engine is running.
	  ▪ TFT sensor related DTC is not recorded.
	Diagnostic support note
	• The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil cooler malfunction • ATF is more than specified value
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 5. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Go to the next step.
4	**INSPECT OIL COOLER** • Visually inspect the oil cooler. • Is there any malfunction?	Yes	Replace the oil cooler, then go to the next step. (See **OIL COOLER REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine and wait for **10 s or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0500:00 [FW6A-EL]

DTC P0500:00	Vehicle speed signal circuit malfunction

DETECTION CONDITION	• Under the following conditions, the vehicle speed signal input from DSC HU/CM is incorrect for **10 s**:
	  ▪ Engine is running.
	  ▪ The vehicle is driven in D position or R position.
	  ▪ Output shaft speed sensor related DTC is not recorded
	  ▪ There is no difference between vehicle speed signal from DSC HU/CM and turbine/input shaft speed sensor signal.
	Diagnostic support note
	• The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• The automatic transaxle warning light does not illuminate.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• DSC HU/CM DTC is stored. ▪ ABS wheel-speed sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN DSC HU/CM** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Drive the vehicle for **10 s or more** under the following conditions: • Battery voltage: **8 V or more** • Vehicle speed: **45 km/h {28 mph} or more** • Perform the DTC inspection using the M-MDS.	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0666:00 [FW6A-EL]

DTC P0666:00	ECU internal temperature sensor circuit malfunction
DETECTION CONDITION	• Under the following condition, there is malfunction in circuit of ECU internal temperature sensor: ▪ Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control.
POSSIBLE CAUSE	• Control valve body malfunction ▪ ECU internal temperature sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION
	VERIFY FREEZE FRAME DATA/SNAPSHOT	

1	**DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0667:00 [FW6A-EL]

DTC P0667:00	ECU internal temperature sensor/performance problem
DETECTION CONDITION	• Under the following conditions, the difference between ECU internal temperatures of three ECU internal temperature sensors are **15 °C {27 °F} or more**: ▪ Engine is running. ▪ Soaked for **6 hours or more**. ▪ No malfunction in ECU internal temperature sensor circuit **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control.
POSSIBLE CAUSE	• Control valve body malfunction ▪ ECU internal temperature sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Soak for **6 hours or more**. ◦ Start the engine, and warm it up until the ATF temperature is **60 °C {140 °F} or more**, and the engine coolant temperature is **80 °C {176 °F} or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P06B8:00 [FW6A-EL]

DTC P06B8:00	NVRAM malfunction
DETECTION CONDITION	• Under the following condition, TCM internal NVRAM data retention/read/write disabled: ▪ Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• TCM initial learning error • Control valve body malfunction ▪ TCM internal NVRAM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.

2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**PERFORM INITIAL LEARNING** • Perform the initial learning. (See **INITIAL LEARNING [FW6A-EL]**.) • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the DTC P06B8:00 also present?	Yes	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	DTC troubleshooting completed.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS.	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0706:00 [FW6A-EL]

DTC P0706:00	Transaxle range sensor range/performance problem
DETECTION CONDITION	• Under the following condition, pattern identification error in switch condition of transaxle range sensors 1 to 4: ▪ Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Transaxle range sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED**	Yes	Go to the next step.

	• Has the freeze frame data/snapshot data been recorded on the repair order?	No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0707:00 [FW6A-EL]

DTC P0707:00	Transaxle range sensor circuit low input
DETECTION CONDITION	• Under the following condition, incorrect voltage in any one of transaxle range sensors 1 to 4: ▪ Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Transaxle range sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED**	Yes	Go to the next step.

	• Has the freeze frame data/snapshot data been recorded on the repair order?	No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0708:00 [FW6A-EL]

DTC P0708:00	Transaxle range sensor circuit high input
DETECTION CONDITION	• Under the following condition, incorrect voltage in any one of transaxle range sensors 1 to 4: ▪ Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Transaxle range sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED**	Yes	Go to the next step.

	• Has the freeze frame data/snapshot data been recorded on the repair order?	No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0711:00 [FW6A-EL]

DTC P0711:00	TFT sensor range/performance problem

DETECTION CONDITION	• Under the following conditions, the ATF temperature is **40 °C {104 °F} or less**:
	  ▪ Certain period has elapsed since engine start.
	  ▪ ECU internal temperature sensor related DTC is not recorded.
	  ▪ Soaked for **6 hours or more**.
	  ▪ ECU internal temperature is **60 °C {140 °F} or more**.
	• Under the following conditions, the ATF temperature is **120 °C {248 °F} or more**:
	  ▪ Certain period has elapsed since engine start.
	  ▪ ECU internal temperature sensor related DTC is not recorded.
	  ▪ Soaked for **6 hours or more**.
	  ▪ ECU internal temperature is **95 °C {203 °F} or less**.
	Diagnostic support note
	• The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM.
	• The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control.

POSSIBLE CAUSE	• TFT sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the coupler component. (See **COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the coupler component, then go to the next step. (See **COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Soak for **6 hours or more**. ◦ Idle the engine. • Perform the DTC inspection using the M-MDS.	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0712:00 [FW6A-EL]

DTC P0712:00	TFT sensor circuit low input
DETECTION CONDITION	• Under the following condition, the TFT sensor voltage is **0.12 V or less** for **5 s**: ▪ Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control.
POSSIBLE CAUSE	• TFT sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.

2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the coupler component. (See **COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the coupler component, then go to the next step. (See **COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0713:00 [FW6A-EL]

DTC P0713:00	TFT sensor circuit high input
DETECTION CONDITION	• Under the following conditions, the ATF temperature is **−40 °C {−40 °F} or less** for **5 s**: ▪ Battery voltage is **8 V or more**. ▪ IAT is **−25 °C {−13 °F} or more**. ▪ IAT sensor related DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control.
POSSIBLE CAUSE	• TFT sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY IAT SENSOR PENDING CODE/DTC** • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are IAT sensor pending codes/DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the coupler component. (See **COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the coupler component, then go to the next step. (See **COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL]**.)
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on) and wait for **5 s or more**. ◦ Verify that the IAT is **−25 °C {−13 °F} or more**. • Perform the DTC inspection using	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0715:00 [FW6A-EL]

DTC P0715:00	Turbine/input shaft speed sensor/sensor output range malfunction
DETECTION CONDITION	• Under the following conditions, the difference between engine speed signal and turbine/input shaft speed signal is **400 rpm or more** for **1 s**: ▪ Engine is running. ▪ Turbine/input shaft speed sensor is **9,000 rpm or less**. ▪ The gear shift position is in the neutral condition. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• Turbine/input shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **30 km/h {19 mph} or more** • Perform the DTC inspection using the M-MDS.	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **16 km/h {9.9 mph}**	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	or more • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0720:00 [FW6A-EL]

DTC P0720:00	Output shaft speed sensor range/performance problem

DETECTION CONDITION	• Under the following conditions, there is difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal for **1 s**:
	  ▪ Engine is running.
	  ▪ The vehicle is driven in D position or R position.
	  ▪ Vehicle speed signal related DTC is not recorded.
	  ▪ There is no difference between vehicle speed signal from DSC HU/CM and turbine/input shaft speed sensor signal.
	  ▪ Output shaft speed sensor signal is input.
	  ▪ Forward: Output shaft speed is **13,560rpm or less**.
	  ▪ Reverse: Output shaft speed is **2,000 rpm or less**.
	Diagnostic support note
	• The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Output shaft speed sensor malfunction

SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DSC HU/CM DTC** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
2	**VERIFY INSTRUMENT CLUSTER REPAIR HISTORY** • Does the instrument cluster have a record of replacement?	Yes	Perform the instrument cluster configuration, then go to Step 6. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to the next step.
3	**VERIFY AUTOMATIC TRANSMISSION REPAIR HISTORY** • Does the automatic transmission (with control valve body) have a record of replacement?	Yes	Perform the TCM configuration. (See **TCM CONFIGURATION [FW6A-EL]**.)
		No	Go to the next step.
4	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
5	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.

		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **30 km/h {19 mph} or more** • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0721:00 [FW6A-EL]

DTC P0721:00	Output shaft speed sensor/sensor output range malfunction
DETECTION CONDITION	• Under the following condition, the output shaft speed is **13,560 rpm or more** in forward or **2,000 rpm or more** in reverse for a continuous **1 s**: ▪ Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Output shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DSC HU/CM DTC** • Perform the DSC HU/CM DTC inspection	Yes	Go to the applicable DTC inspection.

	using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs present?		(See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
2	**VERIFY INSTRUMENT CLUSTER REPAIR HISTORY** • Does the instrument cluster have a record of replacement?	Yes	Perform the instrument cluster configuration, then go to Step 6. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to the next step.
3	**VERIFY AUTOMATIC TRANSMISSION REPAIR HISTORY** • Does the automatic transmission (with control valve body) have a record of replacement?	Yes	Perform the TCM configuration. (See **TCM CONFIGURATION [FW6A-EL]**.)
		No	Go to the next step.
4	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
5	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Drive the vehicle for **1 s or more** under the following condition:
	  • Vehicle speed: **30 km/h {19 mph} or more**
	• Perform the DTC inspection using the M-MDS.
	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)
	• Are any DTCs present?
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0722:00 [FW6A-EL]

DTC P0722:00	Open circuit in output shaft speed sensor circuit

DETECTION CONDITION	• Under the following conditions, the output shaft speed sensor signal is not input for **1 s**:
	  ▪ Engine is running.
	  ▪ Vehicle speed signal related DTC is not recorded.
	  ▪ Vehicle speed is **16 km/h {9.9 mph} or more**.
	  ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal.
	  ▪ DTC U0121:00 is not recorded.
	Diagnostic support note
	• The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Output shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **16 km/h {9.9 mph} or more** • Perform the DTC inspection using the M-MDS.	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0729:00 [FW6A-EL]

DTC P0729:00	6GR incorrect ratio

DETECTION CONDITION	• In D position, 6GR, the following phenomenon occurs:
	  ▪ There is difference between turbine/input shaft speed and output shaft speed sensor speed for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up.
	  ▪ There is difference between turbine/input shaft speed and output shaft speed sensor speed for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting.
	Diagnostic support note
	• The check engine light does not illuminate.
	• The automatic transaxle warning light does not illuminate.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is not available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction

SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Are any the following DTCs displayed? ▪ P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **NOTE:** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

2014 - Mazda3 - Transmission/Transaxle

DTC P0731:00 [FW6A-EL]

DTC P0731:00	1GR incorrect ratio
DETECTION CONDITION	• In D position, 1GR, the following phenomenon occurs: ▪ Speed ratio is **0.75 to 1.2** for **2,000 ms** while vehicle is stopped in D position. ▪ There is difference between turbine/input shaft speed and output shaft speed sensor speed for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. ▪ There is difference between turbine/input shaft speed and output shaft speed sensor speed for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction

	ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Are any the following DTCs displayed? ▪ P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **NOTE:** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 2: • Drive the vehicle to

			check it, and if there is no problem then the DTC troubleshooting is complete.

2014 - Mazda3 - Transmission/Transaxle

DTC P0732:00 [FW6A-EL]

DTC P0732:00	2GR incorrect ratio

DETECTION CONDITION	• In D position, 2GR, the following phenomenon occurs:
	  ▪ There is difference between turbine/input shaft speed and output shaft speed sensor speed for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up.
	  ▪ There is difference between turbine/input shaft speed and output shaft speed sensor speed for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting.
	Diagnostic support note
	• The check engine light does not illuminate.
	• The automatic transaxle warning light does not illuminate.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is not available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction

SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Are any the following DTCs displayed? ▪ P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **NOTE:** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0735:00 [FW6A-EL]

2014 - Mazda3 - Transmission/Transaxle

DTC P0736:00 [FW6A-EL]

DTC P0736:00	Gear reverse incorrect ratio
DETECTION CONDITION	• Speed ratio is **0.75 to 1.2** for **2,000 ms** while vehicle is stopped in R position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION
	VERIFY DTC OUTPUT STATUS	

1	• Are any the following DTCs displayed? ▪ P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **NOTE:** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

2014 - Mazda3 - Transmission/Transaxle

DTC P073D:00 [FW6A-EL]

DTC P073D:00	Neutral incorrect ratio
DETECTION CONDITION	• In P or N position, the following phenomenon occurs: ▪ Speed ratio is **0.5 or less** for **2 s** while vehicle is stopped in P or N position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Clutch stuck • Turbine/input shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Are any the following DTCs displayed? ▪ P0705:00, P0706:00, P0715:00, P0716:00,	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Replace the automatic transaxle.(See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

	P0717:00		

2014 - Mazda3 - Transmission/Transaxle

DTC P0741:00 [FW6A-EL]

DTC P0741:00	TCC control solenoid stuck off
DETECTION CONDITION	• Under the following conditions, difference in slip amount **over 5 s** compared to target slip amount is **200 rpm or more**, and TCC feedback hydraulic pressure is **200 kPa {2.04 kgf/cm^2, 29.0 psi} or more** occurs: ▪ Selector lever position is D position. ▪ No electrical malfunction in TCC control solenoid ▪ During TCC or TCC feedback ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Engine is running. ▪ ATF temperature is **−25 °C {−13 °F} or more**. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control.

	• Inhibits AAS.
POSSIBLE CAUSE	• TCC control solenoid malfunction • ATF leakage from clutch circuit • TCC clutch burnt • Control valve body malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the automatic transaxle, then go to the next step. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Drive the vehicle for **5 s**	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	or more under the following conditions: • Selector lever position: D position • During TCC or TCC feedback • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0743:00 [FW6A-EL]

DTC P0743:00	TCC control solenoid circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the TCC control solenoid circuit malfunction: ▪ Battery voltage is **10.5 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in TCC control solenoid circuit • TCC control solenoid malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0746:00 [FW6A-EL]

DTC P0746:00	Pressure control solenoid stuck off
DETECTION CONDITION	• Under the following conditions, pressure control solenoid stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
	• ATF is less than specified value

POSSIBLE CAUSE	• Pressure control solenoid malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine.	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is

	◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?		complete.

2014 - Mazda3 - Transmission/Transaxle

DTC P0748:00 [FW6A-EL]

DTC P0748:00	Pressure control solenoid circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the pressure control solenoid circuit malfunction: ▪ Battery voltage is **10.5 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in pressure control solenoid circuit • Pressure control solenoid malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0751:00 [FW6A-EL]

DTC P0751:00	Shift solenoid No.1 stuck off
DETECTION CONDITION	• Under the following conditions, shift solenoid No.1 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
	• ATF is less than specified value

POSSIBLE CAUSE	• Shift solenoid No.1 malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved:	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it,

	◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any the following DTCs displayed? ▪ P0751:00, P0843:00		and if there is no problem then the DTC troubleshooting is complete. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**)
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0752:00 [FW6A-EL]

DTC P0752:00	Shift solenoid No.1 stuck on
DETECTION CONDITION	• Under the following conditions, shift solenoid No.1 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE	

CAUSE	Shift solenoid No.1 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

4	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board diagnostic test.
	(See **ON-BOARD DIAGNOSTIC**
		Yes	Replace the control valve body, then go to the next step.
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**)

		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC**

	TEST MODE [FW6A-EL].) • Are P0752:00 present?		**SYSTEM DTC TABLE [FW6A-EL]**)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0753:00 [FW6A-EL]

DTC P0753:00	Shift solenoid No.1 circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.1 circuit malfunction: ▪ Battery voltage is **10.5 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.1 circuit • Shift solenoid No.1 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0756:00 [FW6A-EL]

DTC P0756:00	Shift solenoid No.2 stuck off
DETECTION CONDITION	• Under the following conditions, shift solenoid No.2 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
	• ATF is less than specified value

POSSIBLE CAUSE	• Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved:	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the

	◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any the following DTCs displayed? ▪ P0756:00, P0848:00		DTC troubleshooting is complete. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**)
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. 		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0757:00 [FW6A-EL]

DTC P0757:00	Shift solenoid No.2 stuck on
DETECTION CONDITION	• Under the following conditions, shift solenoid No.2 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE	

CAUSE	Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

4	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board diagnostic test.
	(See **ON-BOARD DIAGNOSTIC**
		Yes	Replace the control valve body, then go to the next step.
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**)

		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC**

	TEST MODE [FW6A-EL].) • Are P0757:00 present?		**SYSTEM DTC TABLE [FW6A-EL]**)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0758:00 [FW6A-EL]

DTC P0758:00	Shift solenoid No.2 circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.2 circuit malfunction: ▪ Battery voltage is **10.5 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.2 circuit • Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0761:00 [FW6A-EL]

DTC P0761:00	Shift solenoid No.3 stuck off
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE	

CAUSE	Shift solenoid No.3 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

4	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board diagnostic test.
	(See **ON-BOARD DIAGNOSTIC**
		Yes	Replace the control valve body, then go to the next step.
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**)

		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC**

	TEST MODE [FW6A-EL].) • Are P0761:00 present?		**SYSTEM DTC TABLE [FW6A-EL]**)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0762:00 [FW6A-EL]

DTC P0762:00	Shift solenoid No.3 stuck on
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
	• ATF is less than specified value

POSSIBLE CAUSE	• Shift solenoid No.3 malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved:	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it,

	◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any the following DTCs displayed? ▪ P0762:00, P0873:00		and if there is no problem then the DTC troubleshooting is complete. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**)
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0763:00 [FW6A-EL]

DTC P0763:00	Shift solenoid No.3 circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.3 circuit malfunction: ▪ Battery voltage is **10.5 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.3 circuit • Shift solenoid No.3 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0766:00 [FW6A-EL]

DTC P0766:00	Shift solenoid No.4 stuck off
DETECTION CONDITION	• Under the following conditions, shift solenoid No.4 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE	

CAUSE	Shift solenoid No.4 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

4	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board diagnostic test.
	(See **ON-BOARD DIAGNOSTIC**
		Yes	Replace the control valve body, then go to the next step.
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**)

		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC**

	TEST MODE [FW6A-EL].) • Are P0766:00 present?		**SYSTEM DTC TABLE [FW6A-EL]**)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0767:00 [FW6A-EL]

DTC P0767:00	Shift solenoid No.4 stuck on
DETECTION CONDITION	• Under the following conditions, shift solenoid No.4 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
	• ATF is less than specified value

4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the on/off solenoid, then go to the next step. (See **ON/OFF SOLENOID REMOVAL/INSTALLATION [FW6A-EL]**.)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved:	Yes	ATF amount in Step 4 is correct • Replace the automatic transaxle, then drive the vehicle to check it,

	◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?		and if there is no problem then the DTC troubleshooting is complete. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0773:00 [FW6A-EL]

DTC P0773:00	On/off solenoid circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the on/off solenoid circuit malfunction: ▪ Battery voltage is **10.5 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in on/off solenoid circuit • On/off solenoid malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, replace the on/off solenoid. (See **ON/OFF SOLENOID REMOVAL/INSTALLATION [FW6A-EL]**.) Go to the next step.
		No	Replace the on/off solenoid, then go to the next step. (See **ON/OFF SOLENOID REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0780:00 [FW6A-EL]

DTC P0780:00	Gear shifting malfunction
DETECTION CONDITION	• Under the following condition, the gear shifting inhibited: ▪ Engine is running. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • On/off solenoid malfunction • Pressure control solenoid malfunction • Shift solenoid malfunction • Oil pressure switch circuit malfunction • Oil pressure switch malfunction • Clutch slippage • ATF leakage from clutch circuit

	• Control valve body malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Are any the following DTCs displayed? ▪ P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **NOTE:** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	ATF amount in Step 2 is correct: • Replace the oil pressure switch A and oil pressure switch B. (See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**.) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is

			no problem then the DTC troubleshooting is complete.

2014 - Mazda3 - Transmission/Transaxle

DTC P0819:00 [FW6A-EL]

DTC P0819:00	M position switch/Up switch/Down switch signal error
DETECTION CONDITION	• Under the following conditions, any of (1) to (4) conditions occurs for **1 s**: ▪ Engine is running. ▪ Battery voltage is **8 V or more**. ▪ Transaxle range sensor related DTC is not recorded. ▪ (1) M position switch signal is on even though forward oil pressure switch is on in any position other than D position. ▪ (2) M position switch signal is off even though up or down switch signal is on in D position. ▪ (3) Up switch signal is on even though M position switch signal is off in any position other than D position. ▪ (4) Down switch signal is on even though M position switch signal is off in any position other than D position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits manual mode.
POSSIBLE CAUSE	• Instrument cluster DTC is stored. • Selector lever component connector or terminals malfunction • Selector lever component malfunction ▪ M position switch malfunction ▪ Up switch malfunction ▪ Down switch malfunction • Open circuit in wiring harness between selector lever component terminal J and body ground • Instrument cluster connector or terminals malfunction • Short to ground in wiring harness between the following terminals: ▪ Selector lever component terminal E—Instrument cluster terminal H ▪ Selector lever component terminal C—Instrument cluster terminal F

	Selector lever component terminal D—Instrument cluster terminal G • Short to power supply in wiring harness between the following terminals: ▪ Selector lever component terminal E—Instrument cluster terminal H ▪ Selector lever component terminal C—Instrument cluster terminal F ▪ Selector lever component terminal D—Instrument cluster terminal G • Open circuit in wiring harness between the following terminals: ▪ Selector lever component terminal E—Instrument cluster terminal H ▪ Selector lever component terminal C—Instrument cluster terminal F ▪ Selector lever component terminal D—Instrument cluster terminal G • Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY INSTRUMENT CLUSTER DTC** • Perform the instrument cluster DTC inspection using the M-MDS.	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)

	(See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	No	Go to the next step.
3	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the selector lever component connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT SELECTOR LEVER COMPONENT** • Inspect the M position switch, up switch and down switch. (See **M POSITION SWITCH INSPECTION [FW6A-EL]**.) (See **UP SWITCH INSPECTION [FW6A-EL]**.) (See **DOWN SWITCH INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Replace the selector lever component, then go to Step 11. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL / INSTALLATION**.)
		No	Go to the next step.
5	**INSPECT SELECTOR LEVER COMPONENT GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component connector is disconnected. • Inspect for continuity between selector lever component terminal J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between selector lever component terminal J and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
6	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
7	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR SHORT TO GROUND** • Verify that the selector lever component and instrument cluster connectors are	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Selector lever component terminal E—

	disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Selector lever component terminal E ▪ Selector lever component terminal C ▪ Selector lever component terminal D • Is there continuity?		Instrument cluster terminal H • Selector lever component terminal C—Instrument cluster terminal F • Selector lever component terminal D—Instrument cluster terminal G **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 11.
		No	Go to the next step.
8	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Switch the ignition ON (engine on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Selector lever component terminal E ▪ Selector lever component terminal C ▪ Selector lever component terminal D • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Selector lever component terminal E—Instrument cluster terminal H • Selector lever component terminal C—Instrument cluster terminal F • Selector lever component terminal D—Instrument cluster terminal G **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 11.
9	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Switch the ignition off. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Selector lever component terminal E—Instrument	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Selector lever component terminal E—Instrument cluster terminal H • Selector lever component terminal C—Instrument cluster terminal F • Selector lever component terminal D—

	cluster terminal H ▪ Selector lever component terminal C—Instrument cluster terminal F ▪ Selector lever component terminal D—Instrument cluster terminal G • Is there continuity?		Instrument cluster terminal G **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
10	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ∘ Verify that the battery voltage is **8 V or more**. ∘ Drive the vehicle for **1 s or more** under the following condition: • Selector lever position: Except D position ∘ Drive the vehicle for **1 s or more** under the following conditions: • Selector lever position: D position • Up switch: On ∘ Drive the vehicle for **1 s or more** under the following conditions: • Selector	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	lever position: D position • Down switch: On • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0842:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.1 is built into oil pressure switch B.
- If there is a malfunction in oil pressure switch No.1, replace oil pressure switch B.

DTC P0842:00	Oil pressure switch No.1 (Oil pressure switch B) stuck on
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control.

	• Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.1 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board	Yes	Replace the oil pressure switch No.1, then go to the next step. (See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC

	diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are P0842:00 present?		inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	Go to the applicable DTC inspection.
			
			(See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0843:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.1 is built into oil pressure switch B.
- If there is a malfunction in oil pressure switch No.1, replace oil pressure switch B.

DTC P0843:00	Oil pressure switch No.1 (Oil pressure switch B) stuck off
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode.

	• Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.1 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine.	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	◦ Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the DTC P0843:00 or P0878:00 present?		
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	DTC P0843:00 and P0878:00 are displayed in Step 4: • Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch A. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness.

			• Go to Step 7. Only DTC P0843:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH A CONNECTOR AND OIL PRESSURE SWITCH NO.1 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to the next step.
		No	Replace the oil pressure switch A, then go to the next step. (See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**.)

7	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	
	  ◦ Start the engine.
	
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	ATF amount in Step 5 is correct
			
			• Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
			
			(See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
			
			ATF amount adjusted in Step 5:
			
			• Replace the control valve body, then go to the next step.
			
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0847:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.2 is built into oil pressure switch A.
- If there is a malfunction in oil pressure switch No.2, replace oil pressure switch A.

DTC P0847:00	Oil pressure switch No.2 (Oil pressure switch A) stuck on
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.2 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control.

	• Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.2 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

4	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board
		Yes	Replace the oil pressure switch No.2, then go to the next step.
			(See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**)

		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC

	diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are P0847:00 present?		inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	Go to the applicable DTC inspection.
			
			(See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0848:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.2 is built into oil pressure switch A.
- If there is a malfunction in oil pressure switch No.2, replace oil pressure switch A.

DTC P0848:00	Oil pressure switch No.2 (Oil pressure switch A) stuck off
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.2 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode.

	• Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.2 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine.	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	◦ Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the DTC P0848:00 or P0873:00 present?		
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	DTC P0848:00 and P0873:00 are displayed in Step 4: • Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch B. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness.

			• Go to Step 7. Only DTC P0848:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH B CONNECTOR AND OIL PRESSURE SWITCH NO.2 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to the next step.
		No	Replace the oil pressure switch B, then go to the next step. (See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**.)

7	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	
	  ◦ Start the engine.
	
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	ATF amount in Step 5 is correct
			
			• Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
			
			(See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
			
			ATF amount adjusted in Step 5:
			
			• Replace the control valve body, then go to the next step.
			
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board diagnostic test.
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	• Are any DTCs present?
		Yes	Go to the applicable DTC inspection.
			(See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0872:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.3 is built into oil pressure switch A.
- If there is a malfunction in oil pressure switch No.3, replace oil pressure switch A.

DTC P0872:00	Oil pressure switch No.3 (Oil pressure switch A) stuck on
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.3 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control.

	• Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.3 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

4	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board
		Yes	Replace the oil pressure switch No.3, then go to the next step.
			(See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**)

		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC

	diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are P0872:00 present?		inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	Go to the applicable DTC inspection.
			
			(See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0873:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.3 is built into oil pressure switch A.
- If there is a malfunction in oil pressure switch No.3, replace oil pressure switch A.

DTC P0873:00	Oil pressure switch No.3 (Oil pressure switch A) stuck off
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.3 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode.

	• Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.3 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine.	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	◦ Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the DTC P0848:00 or P0873:00 present?		
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	DTC P0848:00 and P0873:00 are displayed in Step 4: • Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch B. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness.

			• Go to Step 7. Only DTC P0873:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH B CONNECTOR AND OIL PRESSURE SWITCH NO.3 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to the next step.
		No	Replace the oil pressure switch B, then go to the next step. (See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**.)

7	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	
	  ◦ Start the engine.
	
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	ATF amount in Step 5 is correct
			
			• Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
			
			(See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
			
			ATF amount adjusted in Step 5:
			
			• Replace the control valve body, then go to the next step.
			
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board diagnostic test.
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	• Are any DTCs present?
		Yes	Go to the applicable DTC inspection.
			(See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0877:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.4 is built into oil pressure switch B.
- If there is a malfunction in oil pressure switch No.4, replace oil pressure switch B.

DTC P0877:00	Oil pressure switch No.4 (Oil pressure switch B) stuck on
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.4 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control.

	• Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.4 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine. ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board	Yes	Replace the oil pressure switch No.4, then go to the next step. (See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC

	diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are P0877:00 present?		inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	Go to the applicable DTC inspection.
			
			(See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P0878:00 [FW6A-EL]

NOTE:

- Oil pressure switch No.4 is built into oil pressure switch B.
- If there is a malfunction in oil pressure switch No.4, replace oil pressure switch B.

DTC P0878:00	Oil pressure switch No.4 (Oil pressure switch B) stuck off
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.4 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode.

	• Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.4 malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See **DTC P1738:00 [FW6A-EL]**.)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine.	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	◦ Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the DTC P0843:00 or P0878:00 present?		
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	DTC P0843:00 and P0878:00 are displayed in Step 4: • Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch A. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness.

			• Go to Step 7. Only DTC P0878:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH A CONNECTOR AND OIL PRESSURE SWITCH NO.4 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between TCM and oil pressure switch A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to the next step.
		No	Replace the oil pressure switch A, then go to the next step. (See **OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]**.)

7	**PERFORM ON-BOARD DIAGNOSTIC TEST**
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	
	  ◦ Start the engine.
	
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	
	• Perform the on-board diagnostic test.
	
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	
	• Are any DTCs present?
		Yes	ATF amount in Step 5 is correct
			
			• Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
			
			(See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
			
			ATF amount adjusted in Step 5:
			
			• Replace the control valve body, then go to the next step.
			
			(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST**
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Start the engine.
	  ◦ Verify that the ATF temperature is **55 °C {131 °F} or more**.
	• Perform the on-board diagnostic test.
	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)
	• Are any DTCs present?
		Yes	Go to the applicable DTC inspection.
			(See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission / Transaxle

DTC P0882:00 [FW6A-EL]

DTC P0882:00	TCM power supply voltage low

DETECTION CONDITION	• Under the following conditions, the TCM power supply voltage is **8—10.5 V or less** (varies with ATF temperature):
	  ▪ **5 s or more** has elapsed or battery voltage exceeds **11 V or more** for **0.2 s** since engine speed increases **−200 rpm or more** of target idle speed.
	  ▪ Selector lever position is D or R position.
	Diagnostic support note
	• The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle.
	• The automatic transaxle warning light does not illuminate.
	• PENDING CODE is available.
	• FREEZE FRAME DATA is available.
	• DTC is stored in the TCM memory.

FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.

POSSIBLE CAUSE	• PCM DTC is stored.
	• Battery malfunction
	• Generator malfunction
	• TCM connector or terminals malfunction
	• TCM power supply circuit malfunction
	  ▪ Short to ground in wiring harness between AT 15 A fuse and TCM terminal A
	  ▪ AT 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and TCM terminal A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT BATTERY** • Inspect the battery.	Yes	Recharge or replace the battery, then go to Step 8. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?		(See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to Step 8. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
		No	Go to the next step.
6	**INSPECT TCM CONNECTOR AND TERMINALS** • Switch the ignition off. • Disconnect the TCM connector. • Visually inspect the TCM connector and terminals. • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TCM POWER SUPPLY CIRCUIT** • Always reconnect all disconnected connectors. • Access the PID VPWR using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL]**.) • Is the PID value **B+**?	Yes	Go to the next step.
		No	Inspect the AT 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between AT 15 A fuse and TCM terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is deteriorated: ▪ Replace the malfunctioning fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and TCM terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Always reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved:	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	◦ Drive the vehicle for **5 s or more** under the following condition: • Selector lever position: D or R position • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P0883:00 [FW6A-EL]

DTC P0883:00	TCM power supply voltage high
DETECTION CONDITION	• TCM power supply voltage is **18 V or more** for **5 s**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• PCM DTC is stored. • Battery malfunction • Generator malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED**	Yes	Go to the next step.

	• Has the freeze frame data/snapshot data been recorded on the repair order?	No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Replace the battery, then go to Step 6. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
5	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved:	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

	◦ Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		

2014 - Mazda3 - Transmission/Transaxle

DTC P1728:00 [FW6A-EL]

DTC P1728:00	Clutch slippage
DETECTION CONDITION	• Under the following conditions, turbine/input shaft speed suddenly increases **300 rpm or more** for **1,450 ms**: ▪ Engine is running. ▪ Vehicle speed is **5 km/h {3 mph} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Not shifting ▪ Selector lever position is D position. ▪ Turbine/input shaft speed is **1,200 rpm or more**. ▪ Oil pressure switch pattern (1st—6th) is normal. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Maximizes the line pressure. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE	• ATF is less than specified value

CAUSE	• Clutch slippage
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the automatic transaxle, then go to the next step. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Drive the vehicle without shifting for **20 min or more** under the following conditions: • Vehicle speed: **5 km/h {3 mph} or more** • Selector	Yes	ATF amount in Step 2 is correct • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.) ATF amount adjusted in Step 2: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

	lever position: D position • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?		
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P1738:00 [FW6A-EL]

DTC P1738:00	Automatic transaxle internal malfunction
DETECTION CONDITION	• Malfunction location cannot be determined based on combination of gear ratio malfunction and oil pressure switch pattern malfunction. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Automatic transaxle internal malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ATF LEVEL** • Inspect the ATF level.	Yes	Go to Step 4.

	(See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	No	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL]**.)
2	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **NOTE:** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?	Yes	DTC P1738:00 is displayed: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) DTC other than P1738:00 is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
3	**DRIVE VEHICLE AND VERIFY DTCs** • Stop the engine. • Drive the vehicle for **5 min or more** after the engine restarts. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	DTC P1738:00 is displayed: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) DTC other than P1738:00 is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	No DTCs are displayed: • DTC troubleshooting completed.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the on-board diagnostic test. (See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.)	Yes	DTC P1738:00 is displayed: • Replace the automatic transaxle. (See **AUTOMATIC**

	• Are any DTCs present?		**TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) DTC other than P1738:00 is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
5	**DRIVE VEHICLE AND VERIFY DTCs** • Stop the engine. • Drive the vehicle for **5 min or more** after the engine restarts. • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	DTC P1738:00 is displayed: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.) DTC other than P1738:00 is displayed: • Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

DTC P1784:00 [FW6A-EL]

DTC P1784:00	Hi cut valve stuck off/R-3-5 cut valve stuck on
DETECTION CONDITION	• Under the following conditions, hi cut valve stuck-off or R-3-5 cut valve stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: ▪ Engine is running. ▪ ATF temperature is **20 °C {68 °F} or more**. ▪ There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. ▪ Turbine/input shaft speed sensor and output shaft speed sensor DTC is not recorded. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits neutral idle control.
POSSIBLE CAUSE	• ATF is less than specified value • Hi cut valve malfunction • R-3-5 cut valve malfunction • Clutch burnt

SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
3	**PERFORM STALL TEST TO VERIFY DTCs** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the stall test in the reverse (R) position. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.) • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the on-board diagnostic test.	Yes	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE**

	(See **ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL]**.) • Are any DTCs present?		**REMOVAL / INSTALLATION [FW6A-EL]**.)
		No	Drive the vehicle for **10 min or more**. DTCs are displayed: • Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL / INSTALLATION [FW6A-EL]**.) No DTCs are displayed: • DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P2530:00 [FW6A-EL]

DTC P2530:00	Ignition switch stuck off
DETECTION CONDITION	• If the IG ON time count of the instrument cluster proceeds **5 s** under the following condition: ▪ Ignition switch signal off **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	Not applicable

POSSIBLE CAUSE	• Start stop unit malfunction
	  ▪ Ignition switch signal output stuck off
	• Wiring harness malfunction
	  ▪ Short or open signal in ignition switch
	  ▪ Ignition switch signal terminal (start stop unit terminal 2S) malfunction
	• Control valve body malfunction
	  ▪ Ignition switch signal terminal (start stop unit terminal 2S) pin deformity

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN START STOP UNIT** • Perform the start stop unit DTC inspection using the M-MDS.	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.

	(See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs present?		
4	**INSPECT IGNITION CIRCUIT FOR OPEN CIRCUIT** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors. ▪ IG1 relay ▪ Start stop unit • Inspect for continuity between the following terminals (wiring harness-side): ▪ IG1 relay terminal A—Start stop unit terminal 2S • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal A and start stop unit terminal 2S. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**VERIFY ENGINE START** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Does the engine start normally?	Yes	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE**

	MDS.
	
	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)
	
	• Perform the following procedure to ensure that the DTC has been resolved:
	  ◦ Switch the ignition ON (engine off or on) and wait for **10 s or more**.
	  ◦ Switch the ignition off.
	
	• Perform the DTC inspection using the M-MDS.
	
	(See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)
	
	• Are any DTCs present?
			[FW6A-EL].)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC P2855:00 [FW6A-EL]

DTC P2855:00	Low clutch hydraulic circuit/sealing malfunction
DETECTION CONDITION	• Slow engaging after operating selector lever from N to D position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	Not applicable
POSSIBLE CAUSE	• Low clutch piston sealing malfunction • Seal ring poor functioning • ATF is less than specified value
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Replace the automatic transaxle.

			(See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Perform the following procedure to ensure that the DTC has been resolved: ◦ Verify that the ATF temperature is **30 °C {86 °F} or more**. ◦ Perform the following operation **20 times**. ▪ Operate the selector lever from N to D position and wait for **5 s or more**. ▪ Operate the selector lever from D to N position and wait for **5 s or more**. • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the DTC P2855:00 also present?	Yes	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC U0073:00, U0100:00, U0121:00, U0131:00, U0155:00 [FW6A-EL]

DTC U0073:00	CAN system communication error (HS CAN)
DETECTION CONDITION	• Under the following condition, a communication error (HS CAN) occurs: ▪ Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN bus communication line malfunction (HS CAN) • TCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0100:00	Communication error to PCM (HS CAN)
	• Under the following condition, the TCM cannot receive the signal from PCM (HS CAN): ▪ Battery voltage is **10 V or more**. **Diagnostic support note**

DETECTION CONDITION	• The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN communication line malfunction between PCM and TCM (HS CAN) • TCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0121:00	Communication error to DSC HU/CM
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from DSC HU/CM: ▪ Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN communication line malfunction between TCM and DSC HU/CM • TCM malfunction

SYSTEM WIRING DIAGRAM	Not applicable

DTC U0131:00	Communication error to EPS control module
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from EPS control module: ▪ Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control.
POSSIBLE CAUSE	• CAN communication line malfunction between TCM and EPS control module • TCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

DTC U0155:00	Communication error to instrument cluster
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from instrument cluster: ▪ Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available.

	• FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control.
POSSIBLE CAUSE	• CAN communication line malfunction between TCM and instrument cluster • TCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic Procedure

- Inspect according to the diagnostic procedure in ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]. (See **FOREWORD**.)

2014 - Mazda3 - Transmission/Transaxle

DTC U0074:00 [FW6A-EL]

DTC U0074:00	CAN system communication error (local CAN between TCM and PCM)
DETECTION CONDITION	• Under the following condition, a communication error (local CAN between TCM and PCM) occurs: ▪ Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• CAN communication line malfunction between TCM and PCM (local CAN between TCM and PCM) • PCM DTC is stored. • TCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	DTC U0074:00 is displayed: • CAN communication line can be considered the cause. ▪ Refer to the wiring diagram and verify whether or not there is a common connector between TCM and PCM. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. • Go to the next step. DTC other than U0074:00 is displayed: • Go to the applicable DTC inspection.

			(See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ▪ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Is the same DTC present?	Yes	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to the next step.
4	**VERIFY NO DTC IS PRESENT** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC U0115:00 [FW6A-EL]

DTC U0115:00	Communication error to PCM (local CAN between TCM and PCM)
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from PCM (local CAN between TCM and PCM): ▪ Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• PCM DTC is stored. • PCM malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	PCM can be considered the cause. • Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ▪ Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)	Yes	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to the next step.

	• Is the same DTC present?		
5	**VERIFY NO DTC IS PRESENT** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

DTC U0442:00 [FW6A-EL]

DTC U0442:00	Invalid data received from PCM (local CAN between TCM and PCM)
DETECTION CONDITION	• Under the following condition, the TCM detects the invalid PCM signal for **0.5 s**: ▪ Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• PCM DTC is stored.
SYSTEM WIRING DIAGRAM	Not applicable

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY**	Yes	Perform repair or diagnosis according to the available repair information.

	• Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?		• If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Perform the following procedure to ensure that the DTC has been resolved: ◦ Start the engine and warm it up completely. ◦ Drive the vehicle for a while under the following conditions: • Selector lever position: D position • Perform the DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Transmission/Transaxle

ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL]

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Data Logger”.
   b. Select “Modules”.
   c. Select “TCM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output components is not within the specification, it is necessary to inspect the monitored value of input components corresponding to the applicable output component control. In addition, because the system does not display an output component malfunction as an abnormality in the monitored value, it is necessary to inspect the output components individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA monitor item table (Reference)—: Not applicable

Item	Unit/Condition	Test condition	Specification (Reference)	Output part name
APP	%	Accelerator pedal released	Approx. 0 %	APP sensor
		Accelerator pedal fully depressed	Approx. 100 %	
APP1	%	Accelerator pedal released	Approx. 15 %	APP sensor No.1
		Accelerator pedal fully depressed	Approx. 82 %	
DGP_DIS_1	km {mile}	Displays traveled distance since the differential protection control operated due to excessive rotation difference between left/right drive wheels		—
DGP_DIS_2	km {mile}	Displays traveled distance since the DGP_MAX_DIF is updated		—
		Displays maximum rotation difference since the differential		

DGP_MAX_DIF	RPM	protection control operated due to excessive rotation difference between left/right drive wheels		—
DGP_SPD	KPH {MPH}	Displays vehicle speed with trailing wheels since the differential protection control operated due to excessive rotation difference between left/right drive wheels		—
ECT	°C {°F}	Displays ECT		ECT sensor
ECU_A	°C {°F}	Displays ECU internal temperature A		ECU internal temperature sensor A
ECU_B	°C {°F}	Displays ECU internal temperature B		ECU internal temperature sensor B
ECU_C	°C {°F}	Displays ECU internal temperature C		ECU internal temperature sensor C
GEAR_RA	Ratio	Selector lever in 1GR at D position	Approx. 3.5526	• Shift solenoid No.1 • Shift solenoid No.2 • Shift solenoid No.3 • Shift solenoid No.4
		Selector lever in 2GR at D position	Approx. 2.0228	
		Selector lever in 3GR at D position	Approx. 1.4522	
		Selector lever in 4GR at D position	Approx. 1.0000	
		Selector lever in 5GR at D position	Approx. 0.7084	
		Selector lever in 6GR at D position	Approx. 0.5993	
GEAR_SEL	1/2/3/4/5/6	Selector lever in 1GR at D position	1	• Shift solenoid No.1 • Shift solenoid No.2 • Shift solenoid No.3
		Selector lever in 2GR at D position	2	
		Selector lever in 3GR at D position	3	
		Selector lever in 4GR at D position	4	

		Selector lever in 5GR at D position	5	Shift solenoid No.4
		Selector lever in 6GR at D position	6	
HI_TEMP	—	Displays ATF high temperature mode determination amount (ATF temperature 132 °C {270 °F} or more)		—
HTM_CNT	—	Displays ATF high temperature mode determination amount (ATF temperature 132 °C {270 °F} or more)		—
HTM_DIS	km {mile}	Displays traveled distance after determining the ATF high temperature mode (ATF temperature 132 °C {270 °F} or more)		—
LINEDES	kPa {kgf/cm^2, psi}	Idle at P position after warm-up	Approx. 500 kPa {5.10 kgf/cm^2, 72.5 psi}	—
LN_C_CLUTCH	kPa {kgf/cm^2, psi}	Displays hydraulic control learning value data		—
LN_O_CLUTCH	kPa {kgf/cm^2, psi}	Displays hydraulic control learning value data		—
LN_OV_SCOPE	—	Displays hydraulic control learning value data		—
LN_T_CLUTCH	kPa {kgf/cm^2, psi}	Displays hydraulic control learning value data		—
LOCK_UP	OFF/SLIP/ON	OFF: • Except below SLIP: • "SLIP" is displayed during TCC control with the difference between the engine speed and turbine shaft speed less than the control value. • Resets while TCC control is stopped or if the difference between the engine speed and turbine/shaft speed is the specification or more. ON: • "ON" is displayed during TCC control and there is almost no difference between the engine speed and turbine shaft speed*. • Resets while TCC control is stopped or if the difference between the engine speed and turbine shaft speed is the specification or		—

		more. *: The TCC controls the TCC hydraulic pressure to suppress hydraulic pressure loss and transaxle vibration due to TCC clutch engagement. Therefore, normally, there is a difference between the engine speed and turbine shaft speed. Because the TCC hydraulic pressure is increased by the fail-safe and TCC is performed while the ATF is hot, there is almost no difference.		
LONGI_ACCEL	—	Displays acceleration calculated from the drive wheels		—

ON-BOARD DIAGNOSTIC SYSTEM SIMULATION INSPECTION [FW6A-EL]

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Data Logger”.
    b. Select “Modules”.
    c. Select “TCM”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each part.
    - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

Simulation item table

Item	Description	Unit/Condition	Operation condition
SS_ON-OFF	On/off solenoid condition	Off/On	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS1_C	Shift solenoid No.1 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS2_C	Shift solenoid No.2 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS3_C	Shift solenoid No.3 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position

SS4_C	Shift solenoid No.4 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SSLU_C	TCC control solenoid target current	A	Under the following conditions: • ATF temperature (PID: TFT) is 20 °C {68 °F} or more. • Output shaft speed (PID: OSS) is 10 rpm or more. • Turbine/input shaft speed (PID: TSS) is 1,000 rpm or more. • Brake pedal released
SSP_C	Pressure control solenoid target current	A	Idling at P or N position

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that no DTCs are stored. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
- If the malfunction does not recur after the above servicing, explain to the customer that the vehicle is normal.

2014 - Mazda3 - Transmission/Transaxle

SYMPTOM TROUBLESHOOTING ITEM TABLE [FW6A-EL]

- Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

NOTE:

- If a tire with a different diameter than the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Troubleshooting item	Description	Page
Vehicle does not move in D, M or R position	• Vehicle does not move when accelerator pedal is depressed. • The engine revs up but the vehicle does not move even though the accelerator pedal is depressed. • Tires are locked and do not move even though the accelerator pedal is depressed.	(See **VEHICLE DOES NOT MOVE IN D, M OR R POSITION [FW6A-EL]**.)
Vehicle moves in P position, or parking gear does not disengage when P is disengaged	• Vehicle rolls when on a downward slope in P position. • Vehicle does not move in D, M and R position when accelerator pedal is depressed, and engine remains in stalled condition.	(See **VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FW6A-EL]**.)
Excessive creep	• Vehicle accelerates in D and R position when accelerator pedal is not depressed.	(See **EXCESSIVE CREEP [FW6A-EL]**.)
No creep at all	• Vehicle does not move in D, M or R position when idling on flat paved road.	(See **NO CREEP AT ALL [FW6A-EL]**.)
Low maximum speed and poor acceleration	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed	(See **LOW MAXIMUM SPEED AND POOR ACCELERATION [FW6A-EL]**.)

	while driving.	
No shifting	• Single shift position only. • Sometimes shifts correctly.	(See **NO SHIFTING [FW6A-EL]**.)
Does not shift to 5GR or 6GR	• Vehicle does not upshift from 4GR to 5GR or 5GR to 6GR even though vehicle speed is increased. • At a vehicle speed range where the transaxle should shift up to 5GR and 6GR gears in D position based on the shift pattern, the transaxle does not shift to 5GR and 6GR gears by gradually releasing the accelerator pedal.	(See **DOES NOT SHIFT TO 5GR OR 6GR [FW6A-EL]**.)
Abnormal shifting	• Shifts incorrectly (incorrect shift pattern).	(See **ABNORMAL SHIFTING [FW6A-EL]**.)
Frequent shifting	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D position.	(See **FREQUENT SHIFTING [FW6A-EL]**.)
Shift point is high or low	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs suddenly when accelerating and engine speed does not increase.	(See **SHIFT POINT IS HIGH OR LOW [FW6A-EL]**.)
No kickdown	• Does not downshift when accelerator pedal is fully depressed within kickdown range.	(See **NO KICKDOWN [FW6A-EL]**.)
Engine flares up or slips when upshifting or downshifting	• When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.	(See **ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FW6A-EL]**.)
Judder upon torque converter clutch (TCC) operation	• Vehicle jolts when TCC is engaged.	(See **JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FW6A-EL]**.)
Excessive shift shock	• Strong shock is felt when shifting	(See **EXCESSIVE SHIFT SHOCK**

from N to D or N to R position	from N to D or N to R position at idle.	**FROM N TO D OR N TO R POSITION [FW6A-EL]**.)
Slow engaging after operating selector lever from N to D position	• When depressing the accelerator pedal just after operating the selector lever from N to D position with the ATF temperature at **60 °C {140 °F} or more**, it takes **3 s or more** to engage. • Malfunction symptom only occurs once when accelerating from a standstill. • Engagement after operating the selector lever from N to R position is normal.	(See **SLOW ENGAGING AFTER OPERATING SELECTOR LEVER FROM N TO D POSITION [FW6A-EL]**.)
Excessive shift shock is felt when upshifting and downshifting	• Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.	(See **EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FW6A-EL]**.)
Excessive shift shock on torque converter clutch (TCC)	• Strong shock is felt when TCC is engaged.	(See **EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FW6A-EL]**.)
Noise occurs at idle when vehicle is stopped in all positions	• Transaxle is noisy in all positions when vehicle idling.	(See **NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS [FW6A-EL]**.)
Noise occurs at idle when vehicle is stopped in D, M or R position	• Transaxle is noisy in driving positions when vehicle is idling.	(See **NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M OR R POSITION [FW6A-EL]**.)
Transaxle overheats	• Burnt smell emitted from the transaxle. • Smoke is emitted from the transaxle.	(See **TRANSAXLE OVERHEATS [FW6A-EL]**.)
Engine stalls when shifted to D, M or R position	• Engine stalls when shifting from N or P position to D, M or R position at idle.	(See **ENGINE STALLS WHEN SHIFTED TO D, M OR R POSITION [FW6A-EL]**.)
Starter does not work	• Starter does not work even when in P or N position.	(See **STARTER DOES NOT WORK [FW6A-EL]**.)

Gear position indicator does not illuminate in M position	Gear position indicator in instrument cluster does not illuminate in M position with the ignition switched ON (engine off or on).	(See **GEAR POSITION INDICATOR DOES NOT ILLUMINATE IN M POSITION [FW6A-EL]**.)
Gear position indicator illuminates in P, R, N and D positions	• Gear position indicator in instrument cluster illuminates in P, R, N and D positions with the ignition switched ON (engine off or on).	(See **GEAR POSITION INDICATOR ILLUMINATES IN P, R, N AND D POSITIONS [FW6A-EL]**.)
M position indicator light does not illuminate in M position/M position indicator light illuminates in D position	• M position indicator light in instrument cluster does not illuminate in M position or M position indicator light in instrument cluster in P, R, N and D positions with the ignition switched ON (engine off or on).	(See **M POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M POSITION/M POSITION INDICATOR LIGHT ILLUMINATES IN D POSITION [FW6A-EL]**.)
ATF seeping from automatic transaxle	• ATF is seeping from the automatic transaxle case. • Foreign matter mixed with ATF is in the automatic transaxle case.	(See **ATF SEEPING FROM AUTOMATIC TRANSAXLE [FW6A-EL]**.)

2014 - Mazda3 - Transmission / Transaxle

2014 - Mazda3 - Transmission/Transaxle

VEHICLE DOES NOT MOVE IN D, M OR R POSITION [FW6A-EL]

TROUBLESHOOTING ITEM	Vehicle does not move in D, M or R position
DESCRIPTION	• Vehicle does not move when accelerator pedal is depressed. • The engine revs up but the vehicle does not move even though the accelerator pedal is depressed. • Tires are locked and do not move even though the accelerator pedal is depressed.
POSSIBLE CAUSE	• Improper operation of parking mechanism • Manual shaft (manual valve) stuck • Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PARKING MECHANISM FOR MALFUNCTION** • When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (In D, N or R position with the brake pedal released.)	Yes	Go to the next step.
		No	Replace the parking mechanism. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
2	**VERIFY IF MALFUNCTION CAUSE IS MANUAL SHAFT OR TORQUE CONVERTER** • Move the vehicle to a level surface and apply the parking brake. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Replace the control valve

- Remove the battery component (ex: battery, battery tray and PCM component).

  (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Remove the air cleaner component.

  (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Can the manual shaft be rotated by hand?

body.

(See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FW6A-EL]

TROUBLESHOOTING ITEM	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	• Vehicle rolls when on a downward slope in P position. • Vehicle does not move in D, M and R position when accelerator pedal is depressed, and engine remains in stalled condition.
POSSIBLE CAUSE	• Parking mechanism malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PARKING MECHANISM FOR MALFUNCTION** • When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (In D, N or R position with the brake pedal released.)	Yes	Symptom troubleshooting is completed.
		No	Replace the parking mechanism. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

EXCESSIVE CREEP [FW6A-EL]

TROUBLESHOOTING ITEM	Excessive creep
DESCRIPTION	• Vehicle accelerates in D and R position when accelerator pedal is not depressed.
POSSIBLE CAUSE	• Not within idle speed specification

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See **NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

NO CREEP AT ALL [FW6A-EL]

TROUBLESHOOTING ITEM	No creep at all
DESCRIPTION	• Vehicle does not move in D, M or R position when idling on flat paved road.
POSSIBLE CAUSE	• Not within idle speed specification

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See **NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS TORQUE CONVERTER** • Is the malfunction symptom at same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

LOW MAXIMUM SPEED AND POOR ACCELERATION [FW6A-EL]

TROUBLESHOOTING ITEM	Low maximum speed and poor acceleration
DESCRIPTION	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.

POSSIBLE CAUSE	• Engine control system malfunction
	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ CKP sensor malfunction
	  ▪ MAF sensor malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PCM PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP	%	Accelerator pedal position	• Accelerator pedal released: Approx. 0% • Accelerator pedal depressed: Approx. 100%
MAF	g/Sec	Mass air flow	• Displays MAF
	V		• Switch ignition ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73

			g/s {0.626 lb/min}): Approx. 1.07 V
RPM	RPM	Engine speed	• Displays engine speed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE”. (See **NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP (APP sensor) ▪ MAF (MAF sensor) ▪ RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Explain to the customer that the vehicle is not malfunctioning and they should keep an eye on it.

2014 - Mazda3 - Transmission/Transaxle

NO SHIFTING [FW6A-EL]

TROUBLESHOOTING ITEM	No shifting
DESCRIPTION	• Single shift position only. • Sometimes shifts correctly.

POSSIBLE CAUSE	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ BARO sensor malfunction
	  ▪ Brake switch malfunction
	  ▪ CKP sensor malfunction
	  ▪ IAT sensor No.1 malfunction
	  ▪ MAF sensor malfunction
	• Low-G (XY) sensor (built into SAS control module) malfunction
	NOTE:
	• If a tire with a different diameter than the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.
	• When SPORT mode is selected, a gear lower than NORMAL mode is selected, and the gear is maintained for a longer period of time. (with drive selection switch)

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

DOES NOT SHIFT TO 5GR OR 6GR [FW6A-EL]

TROUBLESHOOTING ITEM	Does not shift to 5GR or 6GR
DESCRIPTION	• Vehicle does not upshift from 4GR to 5GR or 5GR to 6GR even though vehicle speed is increased. • At a vehicle speed range where the transaxle should shift up to 5GR and 6GR gears in D position based on the shift pattern, the transaxle does not shift to 5GR and 6GR gears by gradually releasing the accelerator pedal.

POSSIBLE CAUSE	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ BARO sensor malfunction
	  ▪ CKP sensor malfunction
	  ▪ IAT sensor No.1 malfunction
	  ▪ MAF sensor malfunction
	• Low-G (XY) sensor (built into SAS control module) malfunction
	NOTE:
	• If a tire with a different diameter than the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.
	• When SPORT mode is selected, a gear lower than NORMAL mode is selected, and the gear is maintained for a longer period of time. (with drive selection switch)

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

2014 - Mazda3 - Transmission/Transaxle

SHIFT POINT IS HIGH OR LOW [FW6A-EL]

TROUBLESHOOTING ITEM	Shift point is high or low
DESCRIPTION	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs suddenly when accelerating and engine speed does not increase.

POSSIBLE CAUSE	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ BARO sensor malfunction
	  ▪ Brake switch malfunction
	  ▪ ECT sensor No.1 malfunction
	  ▪ IAT sensor No.1 malfunction
	• Low-G (XY) sensor (built into SAS control module) malfunction
	NOTE:
	• If a tire with a different diameter than the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.
	• When SPORT mode is selected, a gear lower than NORMAL mode is selected, and the gear is maintained for a longer period of time. (with drive selection switch)

CAUTION:

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP (APP sensor)	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

	• Is there any malfunction?		

2014 - Mazda3 - Transmission/Transaxle

ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FW6A-EL]

TROUBLESHOOTING ITEM	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	• When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.
POSSIBLE CAUSE	• Insufficient TCM learning • Signal malfunction ▪ APP sensor malfunction ▪ CKP sensor malfunction ▪ MAF sensor malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PCM PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP	%	Accelerator pedal position	• Accelerator pedal released: Approx. 0% • Accelerator pedal depressed: Approx. 100%
MAF	g/Sec	Mass air flow	• Displays MAF
	V		• Switch ignition ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V

			• Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V
RPM	RPM	Engine speed	• Displays engine speed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**PERFORM INITIAL LEARNING** • Perform the initial learning. (See **INITIAL LEARNING [FW6A-EL]**.) • Does the symptom disappear?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
3	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP (APP sensor) ▪ MAF (MAF sensor) ▪ RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FW6A-EL]

TROUBLESHOOTING ITEM	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	• Vehicle jolts when TCC is engaged.

POSSIBLE CAUSE	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ CKP sensor malfunction
	• Torque converter malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PCM PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP	%	Accelerator pedal position	• Accelerator pedal released: Approx. 0% • Accelerator pedal depressed: Approx. 100%
RPM	RPM	Engine speed	• Displays engine speed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.

2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP (APP sensor) ▪ RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION [FW6A-EL]

TROUBLESHOOTING ITEM	Excessive shift shock from N to D or N to R position
DESCRIPTION	• Strong shock is felt when shifting from N to D or N to R position at idle.

POSSIBLE CAUSE	• Insufficient TCM learning (Insufficient learning in N to D position or N to R position)
	• Not within idle speed specification
	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ CKP sensor malfunction
	• Poor installation or worn of engine mount, suspension

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PCM PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP	%	Accelerator pedal position	• Accelerator pedal released: Approx. 0% • Accelerator pedal depressed: Approx. 100%
RPM	RPM	Engine speed	• Displays engine speed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom (shift shock/shifting time) at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**PERFORM ON-BOARD DIAGNOSTIC TO VERIFY HYDRAULIC PRESSURE SWITCH OPERATION PRESSURE** • Is the operation pressure normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See **CONTROL VALVE BODY REMOVAL / INSTALLATION [FW6A-EL]**.)
3	**PERFORM INITIAL LEARNING, N TO D POSITION LEARNING, AND N TO R POSITION LEARNING** • Perform the Initial Learning. (See **INITIAL LEARNING [FW6A-EL]**.) • Perform N to D position learning using the following procedure: ◦ (1) The ATF temperature is **30 °C {86 °F} or more**. ◦ (2) Shift the selector lever from P position to N position. ◦ (3) Shift the selector lever from N position to D position and wait for **5 s or more** while holding the lever in the D position. ◦ (4) Shift the selector lever from D position to N position and wait for **5 s or more** while holding the lever in the N position. ◦ (5) Perform the procedures (3) to (4) above ten times. • Perform N to R position leaning using the following procedure: ◦ (1) The ATF temperature is **60 °C {140 °F} or more**. ◦ (2) Shift the selector lever from P position to N position. ◦ (3) Shift the selector lever from N position to R position and wait for **5 s or more** while holding the lever in the R position.	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.

	◦ (4) Shift the selector lever from R position to N position and wait for **5 s or more** while holding the lever in the N position. ◦ (5) Perform the procedures (3) to (4) above ten times. • Does the symptom disappear?		
4	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See **NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
5	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP (APP sensor) ▪ RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
6	**INSPECT ENGINE MOUNT/SUSPENSION FOR POOR TIGHTENING** • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See **ENGINE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

SLOW ENGAGING AFTER OPERATING SELECTOR LEVER FROM N TO D POSITION [FW6A-EL]

TROUBLESHOOTING ITEM	Slow engaging after operating selector lever from N to D position
DESCRIPTION	• When depressing the accelerator pedal just after operating the selector lever from N to D position with the ATF temperature at **60 °C {140 °F} or more**, it takes **3 s or more** to engage. • Malfunction symptom only occurs once when accelerating from a standstill. • Engagement after operating the selector lever from N to R position is normal.
POSSIBLE CAUSE	• Low clutch piston malfunction • Low clutch hydraulic system sealing malfunction

Diagnostic Procedure

Step	Inspection	Results	Action
1	**VERIFY DTCs** • Are any DTCs detected?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**PERFORM INITIAL LEARNING AND N TO D RANGE LEARNING** • Perform the initial learning. (See **INITIAL LEARNING [FW6A-EL]**.) • Perform the N to D position learning	Yes	Complete the symptom troubleshooting.
		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

using the following procedure:

- (1) Set the ATF temperature to **30 °C {86 °F} or more**.
- (2) Shift the selector lever to N position.
- (3) Shift the selector lever to D position and wait for **5 s or more**.
- (4) Shift the selector lever to N position and wait for **5 s or more**.
- (5) Perform steps (3) to (4) **10 times**.

- Has the malfunction symptom been eliminated?

2014 - Mazda3 - Transmission/Transaxle

EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FW6A-EL]

TROUBLESHOOTING ITEM	Excessive shift shock is felt when upshifting and downshifting
DESCRIPTION	• Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.
POSSIBLE CAUSE	• Insufficient TCM learning • Signal malfunction ▪ APP sensor malfunction • Poor installation or worn of engine mount, suspension

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PCM PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP	%	Accelerator pedal position	• Accelerator pedal released: Approx. 0% • Accelerator pedal depressed: Approx. 100%

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom (shift	Yes	Symptom troubleshooting is completed.

	shock/shifting time) at the same level compared to a vehicle of the same model?	No	Go to the next step.
2	**PERFORM INITIAL LEARNING** • Perform the initial learning. (See **INITIAL LEARNING [FW6A-EL]**.) • Does the symptom disappear?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TO VERIFY HYDRAULIC PRESSURE SWITCH OPERATION PRESSURE** • Is the operation pressure normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
4	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP (APP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
5	**INSPECT ENGINE MOUNT/SUSPENSION FOR POOR TIGHTENING** • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FW6A-EL]

TROUBLESHOOTING ITEM	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	• Strong shock is felt when TCC is engaged.

POSSIBLE CAUSE	• Insufficient TCM learning (Insufficient TCC learning)
	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ CKP sensor malfunction
	• Torque converter malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Related PCM PIDs

Item (definition)	Unit/Condition	Definition	Condition/Specification (Reference)
APP	%	Accelerator pedal position	• Accelerator pedal released: Approx. 0% • Accelerator pedal depressed: Approx. 100%
RPM	RPM	Engine speed	• Displays engine speed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**PERFORM INITIAL LEARNING AND TCC LEARNING** • Perform the initial learning.	Yes	Symptom troubleshooting is completed.

	(See **INITIAL LEARNING [FW6A-EL]**.)
	• Perform TCC learning using the following procedure:
	  ◦ (1) The ATF temperature is **20 °C {68 °F} or more**.
	  ◦ (2) Constantly maintain the accelerator pedal opening angle between **20 %** to **60 %**.
	  ◦ (3) Accelerate the vehicle from a stop to 1st gear and from 1st to 2nd gear.
	  ◦ (4) Perform the shifting above (3) ten times.
	• Does the symptom disappear?
		No	Go to the next step.

2	**INSPECT SIGNAL PARTS FOR MALFUNCTION**
	• Inspect the value at the following PCM PIDs using the M-MDS.
	(See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	  ▪ APP (APP sensor)
	  ▪ RPM (CKP sensor)
	• Is there any malfunction?
		Yes	Repair or replace any malfunctioning parts according to the inspection result.

		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS [FW6A-EL]

TROUBLESHOOTING ITEM	Noise occurs at idle when vehicle is stopped in all positions
DESCRIPTION	• Transaxle is noisy in all positions when vehicle idling.
POSSIBLE CAUSE	• Engine control system malfunction • Automatic transaxle internal parts malfunction ▪ Oil pump malfunction ▪ Torque converter internal parts malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Inspect the engine condition. • Is there any malfunction?	Yes	Go to the appropriate symptom troubleshooting. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M OR R POSITION [FW6A-EL]

TROUBLESHOOTING ITEM	Noise occurs at idle when vehicle is stopped in D, M or R position
DESCRIPTION	• Transaxle is noisy in driving positions when vehicle is idling.
POSSIBLE CAUSE	• Engine control system malfunction • Automatic transaxle internal parts malfunction ▪ Torque converter internal parts malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Inspect the engine condition. • Is there any malfunction?	Yes	Go to the appropriate symptom troubleshooting. (See **SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

TRANSAXLE OVERHEATS [FW6A-EL]

TROUBLESHOOTING ITEM	Transaxle overheats
DESCRIPTION	• Burnt smell emitted from the transaxle. • Smoke is emitted from the transaxle.

POSSIBLE CAUSE	• Signal malfunction
	  ▪ APP sensor malfunction
	  ▪ Brake switch malfunction
	  ▪ CKP sensor malfunction
	  ▪ ECT sensor No.1 malfunction
	• ATF malfunction
	• Oil cooler malfunction
	• Control valve body malfunction

CAUTION:

- Verify the malfunction symptom according to not only the PID value but also the symptom troubleshooting.

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ APP (APP sensor) ▪ BOO (Brake switch) ▪ ECT (ECT sensor No.1) ▪ RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.) • Is there any malfunction?	Yes	Adjust the ATF level to the specification. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
		No	Go to the next step.
3	**VISUALLY INSPECT OIL COOLER** • Visually inspect the oil cooler. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See **OIL COOLER REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to the next step.
4	**VERIFY IF MALFUNCTION CAUSE IS CONTROL VALVE BODY** • Inspect the value at the following TCM PIDs using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL]**.) ▪ ECU_A ▪ ECU_B ▪ ECU_C ▪ GEAR_SEL ▪ LINEDES ▪ OP_SW1 ▪ OP_SW2 ▪ OP_SW3 ▪ OP_SW4 ▪ OSS	Yes	Replace the control valve body, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Symptom troubleshooting is completed.

	▪ SS1 ▪ SS2 ▪ SS3 ▪ SS4 ▪ SSLU ▪ SSLU_PRES ▪ SSP ▪ SSP_PRES ▪ TR ▪ TSS ▪ VSS • Is there any malfunction?		

2014 - Mazda3 - Transmission/Transaxle

ENGINE STALLS WHEN SHIFTED TO D, M OR R POSITION [FW6A-EL]

TROUBLESHOOTING ITEM	Engine stalls when shifted to D, M or R position
DESCRIPTION	• Engine stalls when shifting from N or P position to D, M or R position at idle.

POSSIBLE CAUSE	• Not within idle speed specification
	• TCC piston malfunction (solenoid drive circuit, hydraulic passage blockage, poor operation)
	  ▪ Output solenoid valve malfunction (stuck)
	  • TCC control solenoid
	• Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Perform the symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE” and “NO.10 LOW IDLE/STALLS DURING DECELERATION”. (See **NO.5 ENGINE STALLS-AFTER START/AT IDLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **NO.10 LOW IDLE/STALLS DURING DECELERATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

STARTER DOES NOT WORK [FW6A-EL]

TROUBLESHOOTING ITEM	Starter does not work
DESCRIPTION	• Starter does not work even when in P or N position.
POSSIBLE CAUSE	• Wiring harness between TCM terminal J and PCM terminal 2BD malfunction • Wiring harness between TCM terminal J and start stop unit terminal 1F malfunction • Wiring harness between start stop unit terminal 2H and LF control unit terminal G malfunction (With advanced keyless entry system) • Immobilizer system operating or system malfunction • Engine control system malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN TCM AND PCM** • Switch the ignition off. • Disconnect the PCM connector and TCM connector. • Visually inspect for pin deformity, open circuit, or wiring harness non-insulation between TCM terminal J and PCM terminal 2BD. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**INSPECT WIRING HARNESS BETWEEN TCM AND START STOP UNIT** • Disconnect the start stop unit connector. • Visually inspect for pin deformity, open circuit, or wiring harness non-insulation between TCM terminal J and start stop unit terminal 1F. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Without advanced keyless entry system:

			Go to step 4. With advanced keyless entry system: • Go to the next step.
3	**INSPECT WIRING HARNESS BETWEEN TCM AND LF CONTROL UNIT** • Disconnect the LF control unit connector. • Visually inspect for pin deformity, open circuit, or wiring harness non-insulation between start stop unit terminal 2H and LF control unit terminal G. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
4	**INSPECT IMMOBILIZER SYSTEM AND ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.3 WILL NOT CRANK”. (See **NO.3 WILL NOT CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

GEAR POSITION INDICATOR DOES NOT ILLUMINATE IN M POSITION [FW6A-EL]

TROUBLESHOOTING ITEM	Gear position indicator does not illuminate in M position
DESCRIPTION	• Gear position indicator in instrument cluster does not illuminate in M position with the ignition switched ON (engine off or on).
POSSIBLE CAUSE	• Instrument cluster malfunction **NOTE:** • When the ATF temperature is **132 °C {270 °F} or more**, gear fixing is inhibited, the gear position indicator is turned off, and the control is changed to the automatic shift control.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

GEAR POSITION INDICATOR ILLUMINATES IN P, R, N AND D POSITIONS [FW6A-EL]

TROUBLESHOOTING ITEM	Gear position indicator illuminates in P, R, N and D positions
DESCRIPTION	• Gear position indicator in instrument cluster illuminates in P, R, N and D positions with the ignition switched ON (engine off or on).
POSSIBLE CAUSE	• Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

M POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M POSITION/M POSITION INDICATOR LIGHT ILLUMINATES IN D POSITION [FW6A-EL]

TROUBLESHOOTING ITEM	M position indicator light does not illuminate in M position/M position indicator light illuminates in D position
DESCRIPTION	• M position indicator light in instrument cluster does not illuminate in M position or M position indicator light in instrument cluster in P, R, N and D positions with the ignition switched ON (engine off or on).
POSSIBLE CAUSE	• Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See **INSTRUMENT CLUSTER INSPECTION**.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

ATF SEEPING FROM AUTOMATIC TRANSAXLE [FW6A-EL]

TROUBLESHOOTING ITEM	ATF seeping from automatic transaxle
DESCRIPTION	• ATF is seeping from the automatic transaxle case. • Foreign matter mixed with ATF is in the automatic transaxle case.
POSSIBLE CAUSE	**NOTE:** • ATF seeping radiates from ATF leak source. • Identify the type of seeping oil referring to “SERVICE CAUTIONS, Oil Leakage Inspection” in the general information. (See **SERVICE CAUTIONS**.) • To prevent misdiagnosis, remove any grease or dirt from the seep location and verify the location of the seeping after driving the vehicle. • ATF leakage from the following locations ▪ Oil pan (Part of drain plug etc.) ▪ Converter housing (Part of torque converter etc.) ▪ End cover ▪ Oil cooler ▪ Oil seal (differential) ▪ Oil seal (control valve body) ▪ Oil seal (manual shaft) ▪ Dipstick ▪ Line pressure detection port ▪ Air breather

Diagnostic procedure

STEP	INSPECTION	ACTION
	VERIFY IF THE MALFUNCTION CAUSE	

1	**IS ATF LEAKAGE FROM THE FOLLOWING LOCATIONS** • Verify if ATF is leaking from the locations described above. • Is there ATF seeping from a location?	Yes	Verify the installation and damage condition of the part at the location where the ATF is seeping and repair or replace the malfunctioning part.
		No	Symptom troubleshooting is completed.

2014 - Mazda3 - Transmission/Transaxle

CLUTCH LOCATION INDEX [C66M-R]

1	Reserve tank (See **CLUTCH FLUID INSPECTION [C66M-R]**.) (See **CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R]**.)
2	Clutch master cylinder (See **CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R]**.)
3	Clutch pedal (See **CLUTCH PEDAL INSPECTION [C66M-R]**.) (See **CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R]**.) (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.) (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

4	Clutch pipe and hose (See **CLUTCH FLUID LEAKAGE INSPECTION [C66M-R]**.) (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)
5	Clutch release cylinder (See **CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R]**.)
6	Clutch unit (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)
7	Clutch release collar (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.) (See **CLUTCH RELEASE COLLAR INSPECTION [C66M-R]**.)
8	Clutch cover (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.) (See **CLUTCH COVER INSPECTION [C66M-R]**.)
9	Clutch disc (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.) (See **CLUTCH DISC INSPECTION [C66M-R]**.)
10	Pilot bearing (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.) (See **PILOT BEARING INSPECTION [C66M-R]**.)
11	Flywheel (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.) (See **FLYWHEEL INSPECTION [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

CLUTCH FLUID INSPECTION [C66M-R]

NOTE:

- A common reserve tank is used for the clutch system and brake system.

1. Verify that the clutch fluid is between the MIN mark and the MAX mark.

- If fluid level is lower than MIN mark, perform the following procedure:
  - Verify that there is no fluid leakage. (See **CLUTCH FLUID LEAKAGE INSPECTION [C66M-R]**.)
  - Add fluid to the level between MIN mark and the MAX mark.

Clutch fluid

- SAE J1703 or FMVSS116 DOT-3

2014 - Mazda3 - Transmission/Transaxle

CLUTCH FLUID LEAKAGE INSPECTION [C66M-R]

CAUTION:

- Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, rinse with water immediately, then wipe the area dry.

1. Verify reserve tank cap is on tight.
2. Pump the clutch pedal a few times.
3. Inspect for the clutch fluid leakage at the points indicated in the figure.

NOTE:

- If there is clutch fluid leakage from the piston in the clutch release cylinder, there is clutch fluid in the boot of clutch release cylinder.
- If there is clutch fluid leakage, repair or replace the malfunctioning location.

2014 - Mazda3 - Transmission/Transaxle

CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R]

CAUTION:

- Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, rinse with water immediately, then wipe the area dry.
- Do not mix different types of clutch fluid, otherwise the clutch may not operate normally.
- Do not reuse old clutch fluid, otherwise the clutch may not operate normally.

NOTE:

- A common reserve tank is used for the clutch system and brake system.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Remove the reserve tank cap.

3. Drain the clutch fluid from bleeder screw.

4. Add new clutch fluid to the MAX mark of the reserve tank.

Clutch fluid

- SAE J1703 or FMVSS116 DOT-3

5. Bleed the air from the clutch system.

CAUTION:

- Keep the clutch fluid level in the reserve tank at 3/4 full or more during air bleeding.

a. Connect a vinyl tube to the bleeder screw.

b. Place the other end of the vinyl tube in a clear container, and fill clutch fluid in the container during air bleeding.

c. Working with two people, one should depress the clutch pedal a few times and then depress and hold the pedal down.

d. While the clutch pedal is being held down, the other person should loosen the bleeder screw, and bleed any fluid containing air bubbles. Once completed, tighten the bleeder screw.

e. Continue to perform Steps 4 and 5 until no air comes from the vinyl tube.

f. Fill the reserve tank to MAX mark with the clutch fluid.

Clutch fluid

- SAE J1703 or FMVSS116 DOT-3

6. Install the reserve tank cap.

7. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

CLUTCH PEDAL INSPECTION [C66M-R]

NOTE:

- For the clutch pedal inspection, note the following and measure each inspection location.
  - Measure the center of the upper surface of the pedal pad for each inspection.
  - If the distance from the pedal pad to the floor covering is measured, measure the shortest distance from the center of the upper surface of the pedal pad to the floor covering.

Pedal Inspection Preparation

1. Verify that the clutch fluid is between the MIN mark and the MAX mark.

2. Verify that there is no clutch fluid leakage. (See **CLUTCH FLUID LEAKAGE INSPECTION [C66M-R]**.)

Pedal Height Inspection

1. Perform “Pedal Inspection Preparation”. (See **Pedal Inspection Preparation**.)
2. Measure the pedal height with the clutch pedal released as shown in the figure.

Pedal height (reference value)

- 156 mm {6.14 in}
- If it is not the specification, replace the clutch pedal. (See **CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R]**.)

Pedal Free Play Inspection

1. Perform “Pedal Inspection Preparation”. (See **Pedal Inspection Preparation**.)

2. Depress the clutch pedal by hand until clutch resistance is felt, and measure the pedal free play as shown in the figure.

Pedal free play (reference value)

- 10 mm {0.39 in} or less
- If it exceeds the specification, replace the clutch pedal. (See **CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R]**.)

Pedal Full Stroke Inspection

1. Perform “Pedal Inspection Preparation”. (See **Pedal Inspection Preparation**.)

2. Depress the clutch pedal from the released condition to the full depression position, and measure the pedal full stroke as shown in the figure.

Pedal full stroke (reference value)

- 141 mm {5.55 in}
- If it is not the specification, replace the clutch pedal. (See **CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R]**.)

Clutch Disengagement Point Inspection

WARNING:

- When performing the following procedure, make sure that the area around the vehicle is free of people or objects as the vehicle might move suddenly.

1. Perform “Pedal Inspection Preparation”. (See **Pedal Inspection Preparation**.)

2. Verify that the pedal height is normal. (See **Pedal Height Inspection**.)

3. Verify that the pedal free play is normal. (See **Pedal Free Play Inspection**.)

4. Verify that the pedal full stroke is normal. (See **Pedal Full Stroke Inspection**.)

5. Apply the parking brake and fix the front and rear wheels with wheel chocks.

6. Start the engine.

7. With the clutch pedal depressed, move the shift lever to the position just before engaging the reverse gear. (Do not shift completely to reverse position)

8. Gradually release the clutch pedal and then hold it at the point where the sound of gear-

grinding begins (clutch disengagement point).

9. Measure distance A as shown in the figure when the clutch pedal is at the clutch disengagement point.

Distance A (reference value)

- 63 mm {2.5 in} or more
- If it is less than the specification, bleed the air from the clutch system. (See **CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R]

CAUTION:

- Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, rinse with water immediately, then wipe the area dry.

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the clutch pedal position switch. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

5. Remove the starter interlock switch. (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

6. Remove the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

7. Disconnect the clutch reserve hose from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

8. Disconnect the clutch pipe and hose No.1 from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

9. Remove in the order indicated in the table.

1	Nut
2	Clutch master cylinder (See **CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R]**.)
3	Clutch pedal
4	Pedal pad

Installation

1. Install in the order indicated in the table.

1	Pedal pad
2	Clutch pedal
3	Clutch master cylinder (See **CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R]**.)
4	Nut

2. Connect the clutch pipe and hose No.1 to clutch master cylinder. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

3. Connect the clutch reserve hose to clutch master cylinder. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

4. Install the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

5. Bleed the air from the clutch system. (See **CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R]**.)

6. Inspect the clutch pedal height, and verify that the clutch pedal is installed correctly. (See **CLUTCH PEDAL INSPECTION [C66M-R]**.)

7. Install a new starter interlock switch. (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

8. Install a new clutch pedal position switch. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

9. Install the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Install the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

12. Fully depress the clutch pedal, and verify that the engine starts.

2014 - Mazda3 - Transmission/Transaxle

CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the clutch pedal position switch connector.

3. Rotate the clutch pedal position switch 45° counterclockwise.

CLUTCH PEDAL POSITION SWITCH R

4. Remove the clutch pedal position switch from the clutch pedal.

5. Insert a new clutch pedal position switch into the clutch pedal hole until the switch stops.

6. Rotate the clutch pedal position switch 45° clockwise.

7. Verify that the clutch pedal position switch is locked securely.

8. Install in the reverse order of removal.

2014 - Mazda3 - Transmission/Transaxle

STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the starter interlock switch connector.

3. Remove the starter interlock switch using the following procedure:

   a. Detach hook A in the direction of the arrow shown in the figure.

   b. Slide the starter interlock switch in the direction of the arrow shown in the figure.

c. Remove the starter interlock switch from the clutch pedal.

4. Install the starter interlock switch using the following procedure:

    a. Insert hook B of a new starter interlock switch into the clutch pedal hole.

b. While pressing the starter interlock switch against the clutch pedal, slide the starter interlock switch until hook A is locked in the direction of the arrow shown in the figure.

5. Fully depress the clutch pedal in the direction of arrow, and verify that a click sound from the starter interlock switch is heard.

6. Install in the reverse order of removal.

7. Fully depress the clutch pedal, and verify that the engine starts.

2014 - Mazda3 - Transmission/Transaxle

CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R]

CAUTION:

- Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, rinse with water immediately, then wipe the area dry.

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the clutch pedal position switch. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

5. Remove the starter interlock switch. (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

6. Remove the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

7. Disconnect the clutch reserve hose from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

8. Disconnect the clutch pipe and hose No.1 from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

9. Remove the clutch master cylinder using the following procedure:

    a. Remove the clutch pedal and the clutch master cylinder as a single unit.

b. Rotate the clutch master cylinder in the direction of the arrow shown in the figure to disconnect the clutch master cylinder (body) and clutch pedal.

c. Disengage the tabs of the push rod and remove the master cylinder.

Installation

1. Install the clutch master cylinder using the following procedure:

    a. Engage the tabs of the push rod with the clutch pedal as shown in the figure.

b. Rotate the clutch master cylinder in the direction shown until it stops.

c. Install the clutch pedal and the clutch master cylinder as a single unit.

2. Connect the clutch pipe and hose No.1 to clutch master cylinder. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

3. Connect the clutch reserve hose to clutch master cylinder. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

4. Install the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

5. Bleed the air from the clutch system. (See **CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R]**.)

6. Inspect the clutch pedal height, and verify that the clutch pedal is installed correctly. (See **CLUTCH PEDAL INSPECTION [C66M-R]**.)

7. Install a new starter interlock switch. (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

8. Install a new clutch pedal position switch. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

9. Install the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Install the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

12. Fully depress the clutch pedal, and verify that the engine starts.

2014 - Mazda3 - Transmission/Transaxle

CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]

CAUTION:

- Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, rinse with water immediately, then wipe the area dry.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the clutch reserve hose while pressing the point indicated by the arrow in the figure.

5. Remove the clutch pipe and hose using the following procedure:

a. Lift the connector clip.

b. Pull out the clutch pipe and hose connector straight to detach it.

c. Remove the clutch pipe and hose.

6. Verify that the seal ring is installed to the clutch pipe and hose connector.

CAUTION:

- When removing the clutch pipe and hose, the seal ring for the clutch pipe and hose could remain on the receiving area of the connector. If the clutch pipe and hose is assembled under this condition, it could cause clutch fluid leakage from the connector.

7. Install the clutch pipe and hose.

   a. Press in the connector clip.

   b. Insert the clutch pipe and hose connector straight.

   NOTE:

   - When the connector is engaged, a click sound is heard.

   c. Install the clutch pipe and hose.

8. Insert the clutch reserve hose connector straight.

NOTE:

- When the connector is engaged, a click sound is heard.

9. Pull each engagement of the clutch reserve hose and clutch pipe and hose, verify that they are engaged, and then press all of them again.

10. Install in the reverse order of removal.

11. Bleed the air from the clutch system. (See **CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R]

CAUTION:

- Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, rinse with water immediately, then wipe the area dry.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Disconnect the clutch pipe and hose No.2 from clutch release cylinder, and plug it to avoid clutch fluid leakage. (See **CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R]**.)

3. Remove the clutch release cylinder.

4. Install in the reverse order of removal.

5. Bleed the air from the clutch system. (See **CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the MTX. (See **MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66M-R]**.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Add the specified amount of specified transaxle oil. (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.)

9	Flywheel (See **Flywheel Removal Note**.) (See **Flywheel Installation Note**.)

Clutch Cover and Disc Removal Note

1. Hold the clutch unit using the **SST**.

2. Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
3. Remove the clutch cover and disc.

Pilot Bearing Removal Note

NOTE:

- The pilot bearing does not need to be removed unless you are replacing it.

1. Use the **SST** to remove the pilot bearing.

Flywheel Removal Note

1. Hold the flywheel using the **SST**.

2. Remove the lock bolts, and remove the plate and the flywheel.
3. Inspect for oil leakage from the crankshaft rear oil seal.
   - If there is any malfunction, replace the crankshaft rear oil seal. (See **REAR OIL SEAL REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Flywheel Installation Note

1. Clean the crankshaft thread holes.
2. Install the flywheel and the plate to the crankshaft, and temporarily tighten a new lock bolts.
3. Hold the flywheel using the **SST**.

4. Tighten the lock bolts completely in the order shown in the figure in the following 3 steps.

   Tightening torque

- Step 1: 46—54 N·m {4.7—5.5 kgf·m, 34—39 ft·lbf}
- Step 2: 76—84 N·m {7.8—8.5 kgf·m, 57—61 ft·lbf}
- Step 3: 108—116 N·m {11.1—11.8 kgf·m, 80—85 ft·lbf}

Pilot Bearing Installation Note

1. Install new pilot bearing to the specified position using the following tools.

Tool

- Snap-on brand millimeter size bushing driver set (A160M) adapter A160M7 (20—22 mm)
- Use the adapter with the 20 mm side of the A160M7 (20—22 mm) facing the pilot bearing side.

Substitution tool

- Outer diameter: 21 mm {0.83 in}
- Inner diameter: 19 mm {0.75 in}

Standard position

- Distance A of pilot bearing from crankshaft end: 1.5—2.5 mm {0.060—0.098 in}

Clutch Disc and Cover Installation Note

1. Hold the clutch disc position using the **SST**.

2. Hold the clutch unit using the **SST**.

3. Tighten the bolts in Min. 2 stages.

   a. Temporarily tighten the bolts in the order shown in the figure.

   b. Tighten the bolts completely in two or three steps in the order shown in the figure and install the clutch disc and cover.

Tightening torque

- 25—33 N·m {2.6—3.3 kgf·m, 19—24 ft·lbf}

4. Remove the **SST**s.

2014 - Mazda3 - Transmission/Transaxle

CLUTCH RELEASE COLLAR INSPECTION [C66M-R]

CAUTION:

- Do not clean the clutch release collar with cleaning fluids or a steam cleaner because it is filled with grease.

Operation Inspection

1. Turn the collar while applying force in the axial direction, and inspect for sticking, excessive resistance, and an abnormal noise.

- If there is any malfunction, replace the clutch release collar. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

CLUTCH COVER INSPECTION [C66M-R]

1. Remove the clutch cover. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)
2. Perform the following procedures to inspect the clutch cover.
   - If it exceeds the maximum specification, replace the clutch cover. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

a. Measure the wear of the diaphragm spring fingers.

Clutch cover diaphragm spring fingers maximum depth

- 0.6 mm {0.02 in}

b. Measure the flatness of the pressure plate with a straight edge and a feeler gauge.

Maximum clearance of flatness of the pressure plate

- 0.3 mm {0.01 in}

c. Inspect the diaphragm spring fingers for the degree of uniformity in their height.

i. Install the clutch cover. (See **CLUTCH UNIT REMOVAL / INSTALLATION [C66M-R]**.)

ii. When checking the diaphragm spring fingers, mount a dial gauge on the cylinder block.

iii. Rotate the flywheel and check for misaligned diaphragm spring fingers.

Clutch cover diaphragm spring fingers maximum height difference

- 1.0 mm {0.039 in}

2014 - Mazda3 - Transmission/Transaxle

CLUTCH DISC INSPECTION [C66M-R]

1. Inspect the lining surface for discoloration and grease adhesion.
2. Inspect the torsion spring for weakness and the rivets for looseness.
3. Using a vernier caliper, measure the depth between the lining surface and the rivet head.

Minimum clutch disc thickness

- 0.3 mm {0.01 in}
- If it is less than the minimum specification, replace the clutch disc. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

4. Measure the clutch disc runout using a dial gauge.

Maximum clutch disc runout

- 0.7 mm {0.03 in}
- If it exceeds the maximum specification, replace the clutch disc. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

PILOT BEARING INSPECTION [C66M-R]

1. Without removing the pilot bearing, turn the bearing while applying force in the axial direction.

- If there is any malfunction, replace the pilot bearing. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

FLYWHEEL INSPECTION [C66M-R]

1. Remove the flywheel. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)
2. Perform the following procedures to inspect the flywheel.
   - If there is any malfunction or it exceeds the maximum specification, replace the flywheel. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

   a. Inspect the surface that contacts the clutch disc for scratches, nicks, and discoloration.

   - Correct slight scratches and discoloration using sandpaper.

   b. Inspect the ring gear teeth for damage and wear.

   c. Inspect the runout of the surface that contacts the clutch disc.

   i. Install the flywheel. (See **CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R]**.)

ii. Measure the runout of the surface that contacts the clutch disc using a dial gauge.

Flywheel maximum runout

- 0.1 mm {0.004 in}

2014 - Mazda3 - Transmission/Transaxle

MANUAL TRANSAXLE LOCATION INDEX [C66M-R]

1	Manual transaxle (See **MANUAL TRANSAXLE OIL INSPECTION [C66M-R]**.) (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.) (See **MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66M-R]**.) (See **INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [C66M-R]**.)
2	Oil seal (differential) (See **OIL SEAL (DIFFERENTIAL) REPLACEMENT [C66M-R]**.)

3	Back-up light switch (See **BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
4	Neutral switch (See **NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
5	Shift control module (See **SHIFT CONTROL MODULE REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

MANUAL TRANSAXLE OIL INSPECTION [C66M-R]

1. Park the vehicle on level ground.

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

3. Remove the oil level plug and gasket.

4. Verify that the manual transaxle oil is near the brim of the plug port.

   - When the manual transaxle oil level is lower than the lower limit, add manual transaxle oil.

     Manual transaxle oil grade

   - API service GL-4

     Manual transaxle oil viscosity

   - SAE 75W-80

5. Install a new gasket and the oil level plug.

     Tightening torque

   - 39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

6. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]

1. Park the vehicle on level ground.

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

3. Remove the drain plug and gasket, and drain the manual transaxle oil.

4. Install a new gasket and the drain plug.

Tightening torque

- 39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

5. Remove the oil level plug and gasket.

6. Add the specified manual transaxle oil through the oil level plug port.

Manual transaxle oil grade

- API service GL-4

Manual transaxle oil viscosity

- SAE 75W-80

Manual transaxle oil capacity (approx. quantity)

- 1.70 L {1.80 US qt, 1.50 Imp qt}

7. Install a new gasket and the oil level plug.

Tightening torque

- 39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

8. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove in the order indicated in the table.

4. Install in the reverse order of removal.

1	Neutral switch connector
2	Neutral switch
3	Gasket

NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]

2014 - Mazda3 - Transmission/Transaxle

BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove in the order indicated in the table.

4. Install in the reverse order of removal.

1	Back-up light switch connector
2	Back-up light switch
3	Gasket

BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R]

2014 - Mazda3 - Transmission/Transaxle

MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66M-R]

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
4. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)
5. Remove the splash shield. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
6. Drain the manual transaxle oil. (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.)
7. Disconnect and/or remove the following parts in the engine compartment.

   a. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   b. Remove the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   c. Disconnect the control cable from MTX. (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   d. Remove the control cable bracket from MTX.

   e. Remove the bolt shown in the figure, and set the ground cable aside.

   f. Remove the bracket from the MTX and the exhaust manifold.

g. Disconnect the neutral switch connector from MTX. (See **NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

h. Disconnect the back-up light switch connector from MTX. (See **BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

i. Disconnect the lower radiator hose clip and the brackets from the MTX, and set the wiring harness aside.

8. Disconnect and/or remove the following parts related to the suspension and axle.

a. Remove the front tires. (See **GENERAL PROCEDURES (FRONT AND REAR AXLES)**.)

b. Disconnect the clip securing the brake hose from the shock absorber. (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.)

c. Disconnect the ABS wheel-speed sensors from the steering knuckles. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

d. Disconnect the tie-rod end ball joints from the steering knuckles. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

e. Disconnect the stabilizer control links from the shock absorber. (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)

f. Disconnect the front lower arms from the steering knuckles. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

g. Disconnect the drive shaft (LH) from the MTX. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

h. Disconnect the drive shaft (RH) from the MTX. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

9. Disconnect and/or remove the following parts from the underside of the vehicle.

a. Remove the clutch release cylinder with the clutch pipe still connected and set it out of the way. (See **CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R]**.)

b. Remove the starter. (See **STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

c. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

d. Remove the bracket plate and No.1 engine mount bracket from the MTX.

10. Install the **SST** using the following procedure.

CAUTION:

- Refer to the SST instruction manual for the basic handing procedure.

a. Install one front foot No.2 to each of the left and right front shafts of the **SST**.

b. Protect the positions shown in the figure using tape.

c. To enable to install the **SST**, disconnect the clip shown in the figure and set the wiring harness aside.

d. Install the **SST** using **part number 99794 1025** or an **M10 × 1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

Engine front side

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

e. As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.

f. As shown in the figure, set the front shafts of the **SST** to the left and right bolts.

g. Install the **SST (49 L017 5A0)** to the **SST (49 C017 5A0)** as shown in the figure.

h. Install the **SST (49 L017 5A0)** to the **SST (49 UN30 3050)** with the hook of the **SST (49 L017 5A0)** facing outward.

i. Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.

j. Apply tension to the chain to secure the engine.

11. Remove in the order indicated in the table.

1	Transaxle mounting bolt (upper side)
2	No.4 engine mount bracket (See **No.4 engine mount bracket removal note**.)
3	Transaxle mounting bolt (lower side) (See **Transaxle mounting bolt removal note**.)
4	MTX

No.4 engine mount bracket removal note

CAUTION:

- A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

NOTE:

- Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

Transaxle mounting bolt removal note

WARNING:

- Remove the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.

1. Adjust the **SST** and lean the engine toward the MTX.

2. Support the MTX on a jack.

3. Remove the transaxle mounting bolts (lower side).

4. Remove the MTX.

Installation

WARNING:

- Install the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.

1. Set the MTX on a jack and lift into place.

2. Install the MTX to the engine, and tighten the Transaxle mounting bolts.

Tightening torque

- 38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}

3. Tighten the stud bolts for the MTX.

NOTE:

- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the MTX because they may be loosened.

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.

5. Pull up the MTX using the **SST**s, pass the MTX stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.

6. Install the No.1 engine mount bracket and bracket plate to the MTX, and temporarily tighten the installation bolts.

7. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

8. Temporarily tighten the No.1 engine mount rubber installation bolts.

9. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.

10. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

11. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

Tightening torque

- 84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

12. Remove the **SSTs (49 C017 5A0, 49 L017 5A0)**.
13. Tighten the No.1 engine mount rubber installation bolts.

14. Connect and/or Install the following parts to the underside of the vehicle.
    a. Install the starter. (See **STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    b. Install the clutch release cylinder to the MTX. (See **CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R]**.)
15. Connect and/or Install the following parts related to the suspension and axle.
    a. Connect the drive shaft (RH) to the MTX. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)
    b. Connect the drive shaft (LH) to the MTX. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)
    c. Connect the front lower arms to the steering knuckles. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)
    d. Connect the stabilizer control links to the shock absorber. (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)
    e. Connect the tie-rod end ball joints to the steering knuckles. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)
    f. Connect the ABS wheel-speed sensors to the steering knuckles. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)
    g. Connect the clip securing the brake hose to the shock absorber. (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.)
    h. Install the front tires. (See **GENERAL PROCEDURES (FRONT AND REAR AXLES)**.)
16. Connect and/or install the following parts in the engine compartment.
    a. Connect the clip shown in the figure.

    b. Install the lower radiator hose clip and bracket to the MTX.

c. Connect the back-up light switch connector.(See **BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

d. Connect the neutral switch connector. (See **NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

e. Install the bracket to the MTX and the exhaust manifold using the following procedure:

i. Tighten the bolt A.

Tightening torque

- 19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

ii. Temporarily tighten the bolt B and C.

iii. Tighten the bolt B.

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

iv. Tighten the bolt C.

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

f. Connect the ground cable to the No.4 engine mount bracket.

g. Install the control cable bracket to the MTX.

h. Connect the control cable to the MTX. (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

i. Install the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

j. Install the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

17. Install the splash shield. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

18. Install the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

19. Add the specified amount of specified transaxle oil. (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.)

20. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

21. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

22. Install the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

23. If the MTX is overhauled, perform the “INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL”. (See **INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [C66M-R]

1. After warming up the engine, drive the vehicle and inspect the following items:
    a. No abnormal noise in each shift position.
    b. Smooth shift operation when shifting gears.
    c. No gear slip-out after shifting gears.
    d. Back-up light switch operates correctly.

2014 - Mazda3 - Transmission/Transaxle

OIL SEAL (DIFFERENTIAL) REPLACEMENT [C66M-R]

CAUTION:

- The sharp edges of the drive shaft can slice or puncture the oil seal. Be careful when installing the drive shaft to the transaxle.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Drain the manual transaxle oil. (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.)

3. Disconnect the drive shaft (LH) from the MTX. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

4. Disconnect the drive shaft (RH) from the MTX. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

5. Remove the oil seal (LH).

6. Remove the oil seal (RH).

7. Using the **SST**s and a hammer, tap a new oil seal (LH) in evenly until the **SST**s contacts the transaxle case.

8. Using the **SST**s and a hammer, tap a new oil seal (RH) in evenly until the **SST**s contacts the transaxle case.

9. Coat the lip of each oil seal with transaxle oil.

10. Install in the reverse order of removal.

11. Add the specified amount of specified transaxle oil. (See **MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

SHIFT CONTROL MODULE REMOVAL/INSTALLATION [C66M-R]

Removal

1. Shift the shift lever to the neutral position.

2. Remove the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the air cleaner and air hose as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the battery and battery tray. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Disconnect the control cable from the transaxle.

   a. Pull the lock pin in the direction of the arrow shown in the figure and release the control cable end lock.

   b. Press the tabs on the control cable and disconnect the control cable from the bracket on the transaxle.

7. Remove the neutral switch in the order shown in the figure

1	Connector
2	Neutral switch
3	Gasket

8. Remove the detent ball pin in the order shown in the figure

1	Plug
2	Gasket
3	Spring
4	Detent ball pin

9. Remove the back-up light switch in the order shown in the figure

1	Connector
2	Back-up light switch
3	Gasket

10. Remove the shift control module in the order shown in the figure

1	Breather
2	Shift control module
3	O-ring

Installation

1. Verify that the shift control module is in the neutral position.

NOTE:

- If the shift control module is in the neutral position, the shift lever with the weight can be moved up and down to a large extent.

2. Install the shift control module in the order shown in the figure

1	O-ring
2	Shift control module
3	Breather

3. Install the back-up light switch in the order shown in the figure

1	Gasket
2	Back-up light switch
3	Connector

4. Install the detent ball pin in the order shown in the figure

1	Detent ball pin
2	Spring
3	Gasket
4	Plug

5. Install the neutral switch in the order shown in the figure

1	Gasket
2	Neutral switch
3	Connector

6. Connect the control cable to the transaxle.

7. Make sure that the shift lever can be shifted smoothly.

8. Install the battery tray and battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

9. Install the air cleaner and air hose as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

10. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Install the plug hole plate. (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Transmission/Transaxle

MANUAL TRANSAXLE SHIFT MECHANISM LOCATION INDEX [C66M-R]

1	Shift lever (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
2	Control cable (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Transmission/Transaxle

MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the shift lever using the following procedure:

   a. Remove the upper panel. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   b. Remove the shift lever knob.

   c. Remove the shift panel. (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   d. Remove the front console box. (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   e. Remove the side wall. (See **SIDE WALL REMOVAL/INSTALLATION**.)

   f. Remove the rear console. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   g. Press the tabs on the control cable as shown in the figure and disconnect the shift lever from the control cable.

h. Disconnect the control cable end (shift side) from shift lever as shown in the figure.

i. Disconnect the control cable end (select side) from the shift lever using the following procedure:

i. Press down the safety lock in the direction shown in the figure.

ii. Push out the lock piece in the direction shown in the figure.

iii. Disconnect the control cable end (select side) from the shift lever.

j. Disconnect the connector from shift lever as shown in the figure.

k. Remove the shift lever.

3. Remove the control cable using the following procedure:

a. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

b. Remove the battery component. (ex: battery, battery tray and PCM component) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

c. Remove the control cable end from the MTX.

i. Pull the lock pin in the direction of the arrow shown in the figure and release the control cable end (MTX side) lock.

ii. Remove the control cable end from the MTX.

d. Press the tabs on the control cable and disconnect the control cable from the bracket.

e. Remove the fastening nut for the control cable.

f. Remove the fastening nuts for the grommet.

g. Remove the control cable.

4. Make sure that the shift lever (transaxle side) is in neutral position.

5. Install in the reverse order of removal.

2014 - Mazda3 - Transmission / Transaxle

AUTOMATIC TRANSAXLE LOCATION INDEX [FW6A-EL]

2014 - Mazda3 - Transmission/Transaxle

MECHANICAL SYSTEM TEST [FW6A-EL]

Mechanical system test preparation

1. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
2. Inspect the engine coolant level. (See **ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Inspect the engine oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.)
5. Inspect the ignition timing. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Inspect the idle speed. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Verify that no DTCs are stored.

Line pressure test

1. Perform the mechanical system test preparation. (See **Mechanical system test preparation**.)
2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
3. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

4. Disconnect the wiring harness clip from the harness bracket.

5. Remove the splash shield. (LH) (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

6. Remove the harness bracket installation bolts from the transaxle and set it aside.

7. Remove the pressure detection square head plug.

WARNING:

- Do not remove the square head plug when the ATF temperature is high. Otherwise, ATF could overflow and cause severe burns or serious injury. Remove the square head plug when the transaxle and ATF temperatures are low.

NOTE:

- Use a suitable oil pressure gauge that corresponds to the line pressure because the maximum scale value differs depending on the oil pressure gauge.

8. Install **SSTs (49 D019 908, 49 D019 909, 49 D019 910,** 49 D019 911, 49 D019 913) to the line pressure detection port as shown in the figure.

9. Start the engine.

10. Warm up the engine until the ATF temperature is **60—70 °C {140—158 °F}**.

11. Shift the selector lever to the D position.

12. Measure the line pressure while idling in D position.

13. Measure the line pressures while idling in the M (1st gear) and R positions using the same procedure.

14. Stop the engine.

15. Change the low-pressure gauge (49 D019 908) to the high-pressure gauge (49 D019 907).

16. Start the engine.

17. Measure the line pressure while stalling in D position.

    a. Strongly depress the brake pedal with the left foot.

    b. Shift the selector lever to the D position.

    CAUTION:

    - To prevent damage to the transaxle, measure the line pressure while stalling (Step (3)—(4)) within 5 s.

    c. Slowly depress the accelerator pedal fully with the right foot all the way down.

    d. Read the line pressure quickly while stalling, and remove the right foot from the accelerator pedal.

    e. Shift the selector lever to the N position and idle for **1 min or more**.

18. Measure the line pressure while stalling for positions other than D in the same procedure.

    - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause
Lower than specification	Lower in R, D, and M (1GR) position	• Oil pump wear • ATF leakage from oil pump, control valve body, and transaxle case • Pressure regulator valve sticking • Pressure control solenoid malfunction • Solenoid reducing valve sticking
	Lower in D and M (1GR) position	• ATF leakage from low clutch hydraulic circuit
	Lower in R and M (1GR) position	• ATF leakage from low and reverse brake hydraulic circuit
	Lower in R position	• ATF leakage from R-3-5 brake hydraulic circuit
Higher than specification	Higher in R, D, and M (1GR) position	• Pressure regulator valve sticking • Pressure control solenoid malfunction

Line pressure

Measurement conditions		Specification (kPa {kgf/cm^2, psi})
Idling	R position	**500—700 {5.10—7.13, 72.6—101.0}**
	D and M (1GR) position	**330—470 {3.37—4.79, 47.9—68.1}**
Stalling	R position	**1,790—2,100 {18.26—21.41, 259.7—304.5}**
	D and M (1GR) position	**970—1,170 {9.90—11.93, 141.0—169.6}**

19. Stop the engine.

20. Remove the **SSTs**.

WARNING:

- If the SST is removed when the ATF temperature is high, ATF could overflow and cause severe burns or serious injury. Remove the SST when the transaxle and ATF temperatures are low.

21. Install a new square head plug.

NOTE:

- Do not reuse the square head plug because a sealant coating has been applied.

Tightening torque

- 7.2—9.8 N·m {74—99 kgf·cm, 64—86 in·lbf}

22. Install the harness bracket installation bolts.

Tightening torque

- 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

23. Install the splash shield. (LH) (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

24. Connect the wiring harness clip to the harness bracket.

25. Disconnect the wiring harness to the front crossmember. (Vehicle with i-ELOOP)

26. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

Stall test

1. Perform the mechanical system test preparation. (See **Mechanical system test preparation**.)
2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Start the engine.
4. Measure the stall speed in the D position.
   a. Strongly depress the brake pedal with the left foot.
   b. Shift the selector lever to the D position.

CAUTION:

- To prevent damage to the transaxle, measure the stall speed (Step (3)—(4)) within 5 s.

c. Slowly depress the accelerator pedal fully with the right foot all the way down.

d. Read the engine speed quickly when the speed is stabilized, and remove the right foot from the accelerator pedal.

e. Shift the selector lever to the N position and idle for **1 min or more**.

5. Measure the stall speed in the M (1st gear) and R positions using the same procedure.

- If there is any malfunction, one of the following causes may have occurred:

<table>
<tr><th colspan="2">Condition</th><th colspan="2">Possible cause</th></tr>
<tr><td rowspan="4">Higher than specification</td><td rowspan="2">Higher in R, D, and M (1GR) position</td><td>Line pressure is low</td><td>• Oil pump wear
• ATF leakage from oil pump, control valve body, and transaxle case
• Pressure regulator valve sticking
• TR control valve sticking
• Pressure control solenoid operation malfunction</td></tr>
<tr><td colspan="2">• Low and reverse brake slippage, and damage of one-way clutch</td></tr>
<tr><td>Higher in D and M (1GR) position</td><td colspan="2">• Low clutch slippage
• One-way clutch damage</td></tr>
<tr><td>Higher in R position</td><td colspan="2">Perform road test to determine whether problem is in R-3-5 brake or low and reverse brake
• Engine brake operates in M (1GR) position
▪ R-3-5 brake slippage
• Engine braking does not operate in M (1GR) position
▪ Low and reverse brake slippage</td></tr>
<tr><td>Lower than specification</td><td>Lower in R, D, and M (1GR) position</td><td colspan="2">• Engine malfunction

</table>

		converter

Stall speed

Measurement conditions	Standard value (rpm)
R position	1,700—2,200
D position	1,900—2,600
M position	

Time lag test

1. Perform the mechanical system test preparation. (See **Mechanical system test preparation**.)
2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Start the engine.
4. Measure the time lag from the N position to the D position.
   a. Shift the selector lever from the N position to the D position with the brake pedal depressed.
   b. Measure the time until the shift shock is felt firmly after shifting.
5. Measure the time lag from the N position to the R position using the same procedure.
   - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause
N to D selected	Longer than specification	• Line pressure is low • Low clutch slippage • ATF leakage from low clutch hydraulic circuit • ATF leakage from low and reverse brake hydraulic circuit • Shift solenoid No.1 operation malfunction • Shift solenoid No.4 operation malfunction
		• Line pressure is high • N-D accumulator operation malfunction

	Shorter than specification	• Shift solenoid No.1 operation malfunction • Shift solenoid No.4 operation malfunction
N to R selected	Longer than specification	• Line pressure is low • Low and Reverse brake slippage • R-3-5 brake slippage • ATF leakage from R-3-5 brake hydraulic circuit • ATF leakage from low and reverse brake hydraulic circuit • Shift solenoid No.3 operation malfunction • Shift solenoid No.4 operation malfunction
	Shorter than specification	• Line pressure is high • N-R accumulator operation malfunction • Shift solenoid No.3 operation malfunction • Shift solenoid No.4 operation malfunction

Time lag

Measurement conditions	Specification (s)
N to D selected	0.4—0.7
N to R selected	

2014 - Mazda3 - Transmission/Transaxle

ROAD TEST [FW6A-EL]

WARNING:

- When performing a road test, always verify the safety of the surrounding area before performing the test.

NOTE:

- When performing a road test requiring speeds which exceed the legal speed limit, use a dynamometer.

Road test preparation

1. Inspect the engine coolant level. (See **ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Inspect the engine oil level. (See **ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.)

4. Inspect the ignition timing. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Inspect the idle speed. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Verify that no DTCs are stored.

D position test

1. Perform road test preparations. (See **Road test preparation**.)

2. Warm up the transaxle.

3. Select D position.

4. Inspect the shift point for the D position in normal mode.

    - If there is any malfunction, refer to symptom troubleshooting and verify the malfunction symptom.

    a. Depress the accelerator pedal and start the vehicle, and verify that the gears shift from 1st to 2nd, 2nd to 3rd, 3rd to 4th, 4th to 5th, and 5th to 6th. In addition, verify that the vehicle speed corresponds to the shift point when shifting.

    b. Release the accelerator pedal while driving in 6th gear, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed corresponds to the shift point when shifting.

NOTE:

- When the accelerator pedal is fully released quickly, shifting is not performed according to the shift pattern because the gear being used may be maintained.
- When decelerating by strongly depressing the brake pedal, shifting is not performed according to the shift pattern because the shift-down point may be at high vehicle speed.

c. Kickdown while driving in 6th, 5th, 4th, 3rd, and 2nd gears, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed limit for kickdown corresponds to the shift point.

d. Verify that the shift shock is minimal, shifting is smooth and timely, and there is no abnormal noise or slip.

e. Verify that the TCC is engaged.

Shift point

SKYACTIV-G 2.0

Position/mode		Accelerator pedal depression amount	Shift	Vehicle speed (km/h {mph})
D	NORMAL	8/8	$D_1 \rightarrow D_2$	53—64 {33—39}
			$D_2 \rightarrow D_3$	93—113 {58.0—70.2}
			$D_3 \rightarrow D_4$	130—158 {80.8—98.1}
			$D_4 \rightarrow D_5$	186—227 {116—141}
		25% (APP)	$D_1 \rightarrow D_2$	15—18 {9.4—11.0}
			$D_2 \rightarrow D_3$	29—34 {19—21}
			$D_3 \rightarrow D_4$	39—46 {25—28}
			$D_4 \rightarrow D_5$	60—72 {38—44}
			$D_5 \rightarrow D_6$	80—96 {50—59}
			$D_6 \rightarrow D_5$	60—73 {38—45}

			$D_4 \rightarrow D_3$	32—38 {20—23}
			$D_3 \rightarrow D_2$	14—16 {8.7—9.9}
			$D_2 \rightarrow D_1$	6.9—8.3 {4.3—5.1}

M position test

1. Perform road test preparations. (See **Road test preparation**.)
2. Warm up the transaxle.
3. Select the M position.
4. Inspect the shift point for the M position.
   - If there is any malfunction, refer to symptom troubleshooting and verify the malfunction symptom.

   a. Perform the shift operation while driving and verify that the gears can be shifted.

   b. Release the accelerator pedal while driving in 6th gear, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed corresponds to the shift point when shifting.

   c. Release the accelerator pedal while driving and verify that the engine braking operates in all gears.

   d. Verify that the shift shock is minimal, shifting is smooth and timely, and there is no abnormal noise or slip.

Shift point

SKYACTIV-G 2.0

Position/mode	Accelerator pedal depression amount	Shift	Vehicle speed (km/h {mph})
M	0/8	$M_6 \rightarrow M_5$	60—73 {38—45}
		$M_5 \rightarrow M_4$	45—54 {28—33}
		$M_4 \rightarrow M_3$	30—35 {19—21}
		$M_3 \rightarrow M_2$	13—15 {8.1—9.3}
		$M_2 \rightarrow M_1$	6.5—7.9 {4.1—4.9}

SKYACTIV-G 2.5

Position/mode	Accelerator pedal depression amount	Shift	Vehicle speed (km/h {mph})
M	0/8	$M_6 \rightarrow M_5$	61—73 {38—45}
		$M_5 \rightarrow M_4$	45—53 {28—32}
		$M_4 \rightarrow M_3$	32—38 {20—23}

		$M_3 \rightarrow M_2$	14—16 {8.7—9.9}
		$M_2 \rightarrow M_1$	6.9—8.3 {4.3—5.1}

5. Inspect 2nd gear fixed mode.

   a. While the vehicle is stopped or the vehicle speed is **10 km/h {6.2 mph} or less**, operate the selector lever toward + to shift to 2nd gear.

   b. Verify that the gear is fixed in 2nd gear.

   c. Release the accelerator pedal while driving and verify that the engine braking operates.

   d. Perform the shift operation while driving and verify that the gears can be shifted.

P position test

1. Park the vehicle on a gentle slope and shift the selector lever to the P position.
2. Release the brake and verify that the vehicle does not move.
   - If there is any malfunction, inspect the parking mechanism in the transaxle.

2014 - Mazda3 - Transmission/Transaxle

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]

CAUTION:

- If the ATF level is not within the specification or ATF is not adhering to the dipstick after warming up the engine, do not drive the vehicle. Otherwise, the transaxle could be damaged.

ATF level inspection

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
2. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

3. Remove the dipstick securing bolt.
4. Connect the M-MDS to the DLC-2 and display the PID TFT.
5. Warm up the engine until the ATF temperature is 50 °C {122 °F}.
6. Remove the dipstick and wipe ATF off using a nylon cloth while leaving the engine idling.

WARNING:

- Keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury, or damage to the cooling fan.
- Do not touch parts which have become heated. Otherwise, it could cause severe burns or serious injury.

7. Insert the dipstick and pull it out again.

8. Verify that the ATF is adhering between L and F on the dipstick.

- If ATF is not adhering between L and F on the dipstick, adjust the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL]**.)

NOTE:

- The ATF color is blue.
- Only use ATF FZ for the FW6A-EL.

  ATF type

- ATF FZ

9. Insert the dipstick and install the securing bolt.

   Tightening torque

- 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

10. Connect the wiring harness to the front crossmember. (Vehicle with i-ELOOP)

11. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]

WARNING:

- Do not perform the servicing while the ATF is hot. Otherwise, it could cause severe burns or serious injury.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

3. Remove the dipstick securing bolt.

4. Remove the dipstick.

5. Remove the drain plug and washer, and drain the ATF.

6. Install a new washer and drain plug.

Tightening torque

- 30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

7. Add ATF from the dipstick installation hole.

NOTE:

- The ATF color is blue.
- Only use ATF FZ for the FW6A-EL.

ATF type

- ATF FZ

Resupply amount (Reference)

- ATF is drained from drain plug: 3.5—4.9 L {3.7—5.1 US qt, 3.1—4.3 Imp qt}

8. Adjust the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL]**.)

9. Insert the dipstick and install the securing bolt.

Tightening torque

- 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

10. Connect the wiring harness to the front crossmember. (Vehicle with i-ELOOP)

11. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL]

CAUTION:

- Only adjust the ATF level when the ATF temperature is 45—55 °C {113—131 °F}. If the ATF level is incorrect, it could damage the transaxle.
- Do not add ATF over the specification. Otherwise, the transaxle performance could be reduced and ATF could leak.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

3. Remove the dipstick securing bolt.

4. Remove the dipstick.

5. Adjust the ATF level.

a. Connect the M-MDS to the DLC-2 and display the PID TFT.

b. Warm up the engine until the ATF temperature is **50 °C {122 °F}**.

c. Remove the dipstick and wipe the ATF off using a rag while leaving the engine idling.

WARNING:

- Keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury, or damage to the cooling fan.
- Do not touch parts which have become heated. Otherwise, it could cause severe burns or serious injury.

d. Insert the dipstick and pull it out again.

e. Verify that ATF is adhering to the central marker area on the dipstick.

- If ATF is not adhering to the central marker area on the dipstick, adjust the ATF level to the central marker area.

NOTE:

- The ATF color is blue.
- Only use ATF FZ for the FW6A-EL.

ATF type

- ATF FZ

6. Insert the dipstick and install the securing bolt.

Tightening torque

- 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

7. Connect the wiring harness to the front crossmember. (Vehicle with i-ELOOP)

8. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

M POSITION SWITCH INSPECTION [FW6A-EL]

Continuity Inspection

NOTE:

- The M position switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure to remove the selector lever knob.

NOTE:

- If the servicing is difficult, release the shift lock manually and shift the selector lever to the N position.

a. Insert the tool (width: **6 mm {0.2 in} or less**, thickness: **1 mm {0.04} or less**) as shown in the figure.

b. Move the tool in the direction of arrow (1) in the figure and detach the hook. Move the lock release button cover in the direction of arrow (2) in the figure and remove it.

c. Remove the spring.

d. Remove the selector lever knob.

3. Remove the front console. (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)

4. Disconnect the selector lever component connector.

5. Verify that the continuity between selector lever component terminals E and J.

- If not as verified, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL / INSTALLATION**.)

M position switch specification

Test condition	Continuity
Selector lever is in the M position.	Continuity
Selector lever is not in the M position.	No continuity

2014 - Mazda3 - Transmission/Transaxle

M POSITION SWITCH REMOVAL/INSTALLATION [FW6A-EL]

NOTE:

- The M position switch is built into the selector lever component.

1. If the M position switch is replaced, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

UP SWITCH INSPECTION [FW6A-EL]

Continuity Inspection

NOTE:

- The up switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure to remove the selector lever knob.

NOTE:

- If the servicing is difficult, release the shift lock manually and shift the selector lever to the N position.

a. Insert the tool (width: **6 mm {0.2 in} or less**, thickness: **1 mm {0.04} or less**) as shown in the figure.

b. Move the tool in the direction of arrow (1) in the figure and detach the hook. Move the lock release button cover in the direction of arrow (2) in the figure and remove it.

c. Remove the spring.

d. Remove the selector lever knob.

3. Remove the front console. (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)

4. Disconnect the selector lever component connector.

5. Verify that the continuity between selector lever component terminals C and J.

- If not as verified, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

Up switch specification

Test condition	Continuity
Selector lever is in the M position (+) side position.	Continuity
Selector lever is not in the M position (+) side position.	No continuity

2014 - Mazda3 - Transmission/Transaxle

UP SWITCH REMOVAL/INSTALLATION [FW6A-EL]

NOTE:

- The up switch is built into the selector lever component.

1. If the up switch is replaced, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

DOWN SWITCH INSPECTION [FW6A-EL]

Continuity Inspection

NOTE:

- The down switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure to remove the selector lever knob.

NOTE:

- If the servicing is difficult, release the shift lock manually and shift the selector lever to the N position.

a. Insert the tool (width: **6 mm {0.2 in} or less**, thickness: **1 mm {0.04} or less**) as shown in the figure.

b. Move the tool in the direction of arrow (1) in the figure and detach the hook. Move the lock release button cover in the direction of arrow (2) in the figure and remove it.

c. Remove the spring.

d. Remove the selector lever knob.

3. Remove the front console. (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)

4. Disconnect the selector lever component connector.

5. Verify that the continuity between selector lever component terminals D and J.

- If not as verified, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL / INSTALLATION**.)

Down switch specification

Test condition	Continuity
Selector lever is in the M position (−) side position.	Continuity
Selector lever is not in the M position (−) side position.	No continuity

2014 - Mazda3 - Transmission/Transaxle

DOWN SWITCH REMOVAL/INSTALLATION [FW6A-EL]

NOTE:

- The down switch is built into the selector lever component.

1. If the down switch is replaced, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

STEERING SHIFT SWITCH INSPECTION [FW6A-EL]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

3. Disconnect the steering shift switch wiring harness connector.

4. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

5. Using a precision flathead screwdriver, release the tab.

6. Measure the continuity between steering shift switch wiring harness connector terminals A—B

and terminals D—E.

Up switch

Down switch

Switch	Terminal	Test condition	Continuity
Up switch	A—B	Up switch is operated (up switch is pulled outward)	Continuity
		Up switch is not operated (up switch is not pulled outward)	No continuity
Down switch	D—E	Down switch is operated (down switch is pulled outward)	Continuity
		Down switch is not operated (down switch is not pulled outward)	No continuity

- If there is any malfunction, replace the steering shift switch. (See **STEERING SHIFT SWITCH REMOVAL/INSTALLATION [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

STEERING SHIFT SWITCH REMOVAL/INSTALLATION [FW6A-EL]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove in the order indicated in the table.

1	Driver-side air bag module (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
2	Steering wheel (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
3	Steering shift switch component (See **Steering Shift Switch Component Removal Note**.)

3. Install in the reverse order of removal.

Steering Shift Switch Component Removal Note

1. Disconnect the steering shift switch wiring harness connector.

2. Detach the tabs of the cover in the area circled by a dashed line and open the cover.

3. Using a precision flathead screwdriver, release the tab.

4. Remove the steering shift switch component from the gap in the opening of the cover.

5. Install in the reverse order of removal.

2014 - Mazda3 - Transmission/Transaxle

COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL]

WARNING:

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.
- Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or sludge could spatter and get into the eyes.

CAUTION:

- Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.

1. Select the selector lever to P position.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Remove the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
7. Remove the oil seal (control valve body). (See **OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL]**.)
8. Disconnect the coupler component connectors.

CAUTION:

- Do not scratch the shift solenoid, shift solenoid connector, oil pressure switch, and oil pressure switch connector with the precision flathead screwdriver.
- When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.

CONNECTOR A: ON/OFF SOLENOID
CONNECTOR B: SHIFT SOLENOID / OIL PRESSURE SWITCH
CONNECTOR C: TCM

a. Disconnect connector A and connector C by pressing the connector tab with your fingers.

b. Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect connector B as shown in the figure.

9. Remove the coupler component.

CAUTION:

- Because there are solenoid valve securing pins in the areas circled with a dotted line shown in the figure. Always verify that the solenoid valve securing pins are on the control valve body when installing the coupler component.

10. Temporarily install the coupler component so that the oil strainer installation bolt hole does not deviate.

11. After verifying that the oil strainer installation bolt hole is not deviated, install the coupler component.

CAUTION:

- After assembling the coupler component, verify that shift solenoids No.1, 2, 3, 4, the pressure control solenoid, and the TCC control solenoid cannot be pulled out from the control valve body.

Tightening torque

- 9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

12. Connect the coupler component connectors.

13. Install the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

14. Install the oil seal (control valve body). (See **OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL]**.)

15. Install the hose clamp. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

16. Connect the control valve body connector. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.
- Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.
- Insert the connector straight as the connector terminal could be damaged.
- Rotate the connector lever until a click is heard.

17. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

18. Install the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

19. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

20. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)

21. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]

WARNING:

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.
- Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or sludge could spatter and get into the eyes.

CAUTION:

- If the oil pressure switch has been replaced, perform initial learning. (See **INITIAL LEARNING [FW6A-EL]**.)
- Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.

Oil Pressure Switch A

1. Select the selector lever to P position.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.

5. Remove the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

7. Remove the oil seal (control valve body). (See **OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL]**.)

8. Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect the oil pressure switch A connector as shown in the figure.

CAUTION:

- Do not scratch the oil pressure switch A and oil pressure switch connector A with the precision flathead screwdriver.
- When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.

9. Remove the oil pressure switch A fitting bolts.

10. Detach tab shown in the figure and remove the oil pressure switch A from the control valve body.

11. Install the oil pressure switch A to the control valve body.

12. Verify that the tab is attached correctly.

13. Install the oil pressure switch A fitting bolts.

Tightening torque

- 9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

14. Connect the oil pressure switch A connector.

15. Install the control valve body. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

16. Install the oil seal (control valve body). (See **OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL]**.)

17. Install the hose clamp. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

18. Connect the control valve body connector. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.

- Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.
- Insert the connector straight as the connector terminal could be damaged.
- Rotate the connector lever until a click is heard.

19. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

20. Install the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

21. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

22. Perform the “Initial Learning” (oil pressure switch A Replacement). (See **INITIAL LEARNING [FW6A-EL]**.)

23. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)

24. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

Oil Pressure Switch B

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

3. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.

4. Drain the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

5. Remove the oil pan.

CAUTION:

- To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.
- If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.

NOTE:

- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

6. Remove the oil strainer. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

7. Remove the oil strainer O-rings. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

8. Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect the oil pressure switch B connector as shown in the figure.

CAUTION:

- Do not scratch the oil pressure switch B and oil pressure switch connector B with the precision flathead screwdriver.
- When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.

9. Remove the oil pressure switch B.

10. Install the oil pressure switch B.

Tightening torque

- 9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

11. Connect the oil pressure switch B connector.

12. Install the oil strainer O-rings. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

NOTE:

- If there is a large amount of foreign material at the bottom of the oil pan, replace the oil strainer with a new one.

13. Install the oil strainer. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)

14. Apply a light coat of silicone sealant (TB1217E or equivalent) to the contact surfaces of the oil pan and transaxle case.

CAUTION:

- Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.

15. Install the oil pan with new bolts before the applied sealant starts to harden.

Tightening torque

- 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

16. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

17. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

18. Perform the “Initial Learning” (oil pressure switch B Replacement). (See **INITIAL LEARNING [FW6A-EL]**.)

19. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)

20. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL]

2014 - Mazda3 - Transmission/Transaxle

ON/OFF SOLENOID REMOVAL/INSTALLATION [FW6A-EL]

WARNING:

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.
- Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or sludge could spatter and get into the eyes.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

3. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.

4. Drain the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

5. Remove the oil pan.

CAUTION:

- To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.
- If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.

NOTE:

- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

6. Disconnect the ON/OFF solenoid connector.

NOTE:

- Disconnect the ON/OFF solenoid connector by pressing the connector tab with your fingers.

7. Remove the ON/OFF solenoid.

8. Install the ON/OFF solenoid.

Tightening torque

- 9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

9. Connect the ON/OFF solenoid connector.

10. Apply a light coat of silicone sealant (TB1217E or equivalent) to the contact surfaces of the oil pan and transaxle case.

CAUTION:

- Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.

11. Install the oil pan with new bolts before the applied sealant starts to harden.

Tightening torque

- 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

12. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

13. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

14. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)

15. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]

CAUTION:

- If the automatic transaxle has been replaced, perform initial learning. (See **INITIAL LEARNING [FW6A-EL]**.)
- Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the air cleaner and air hose as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the battery tray and PCM component. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Disconnect the wiring harness clip from the transaxle.

5. Remove the splash shield (LH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
6. Disconnect the control valve body connector.

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.
- Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.

7. Remove the bracket from the transaxle.

8. Disconnect the ground cable.

9. Disconnect the selector cable from the transaxle.

10. Remove the selector cable bracket.

11. Remove the bracket.

12. Disconnect the breather hose from the transaxle.

13. Remove the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

14. Disconnect the intermediate shaft from the steering gear and linkage. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

15. Remove the front tires. (See **GENERAL PROCEDURES (SUSPENSION)**.)

16. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

17. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

18. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

19. Drain the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

20. Disconnect the oil cooler from the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See **OIL COOLER REMOVAL/INSTALLATION [FW6A-EL]**.)

21. Disconnect the water hose from the oil cooler. (Automatic Transaxle Replacement) (See **OIL COOLER REMOVAL/INSTALLATION [FW6A-EL]**.)

22. Remove the starter. (See **STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

23. Remove the blind cover.

24. Hold the crankshaft pulley to prevent drive plate from rotating.

25. Remove the torque converter nuts from the starter installation hole.

26. Disconnect the front ABS wheel-speed sensors from the steering knuckles. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

27. Disconnect the clips securing the brake hose from the front shock absorbers. (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.)

28. Disconnect the tie-rod end ball joints from the steering knuckles. (See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)

29. Disconnect the front lower arms from the steering knuckles. (See **FRONT LOWER ARM REMOVAL/INSTALLATION**.)

30. Disconnect the front stabilizer control links from the front stabilizer. (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)

31. Disconnect the front drive shaft (LH) from the transaxle. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

32. Disconnect the front drive shaft (RH) from the transaxle. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

33. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

34. Remove the bracket plate and No.1 engine mount bracket from the transaxle.

35. Install the **SST** using the following procedures.

CAUTION:

- Refer to the SST instruction manual for the basic handing procedure.

a. Install one front foot No.2 to each of the left and right front shafts of the **SST**.

b. Protect the positions shown in the area using tape.

c. To enable to install the **SST**, disconnect the clip shown in the figure and set the wiring harness aside.

d. Install the **SST** using **part number 99794 1025** or an **M10—1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

Engine front side

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

Tightening torque

- 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

e. As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.

f. As shown in the figure, set the front shafts of the **SST** to the left and right bolts.

g. Install the **SST** (49 L017 5A0) to the **SST** (49 C017 5A0) as shown in the figure.

h. Install the **SST** (49 L017 5A0) to the **SST** (49 UN30 3050) with the hook of the **SST** (49 L017 5A0) facing outward.

i. Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.

j. Apply tension to the chain to secure the engine.

36. Remove in the order shown in the table.

WARNING:

- Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.

CAUTION:

- To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.

1	Transaxle mounting bolts (upper side)
2	No.4 engine mount bracket (See **No.4 engine mount bracket removal note**.)

3	Transaxle mounting bolts (lower side) (See **Transaxle mounting bolt removal note**.)
4	Transaxle (See **No.4 engine mount bracket removal note**.) (See **Transaxle mounting bolt removal note**.)

No.4 engine mount bracket removal note

CAUTION:

- A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

NOTE:

- Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

Transaxle mounting bolt removal note

WARNING:

- Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.

1. Adjust the **SST** and lean the engine toward the transaxle.

2. Support the transaxle on a jack.

3. Remove the transaxle mounting bolts (lower side).
4. Remove the transaxle.

Installation

CAUTION:

- Verify that the torque converter stud bolts are inserted into the drive plate bolt holes, and install the transaxle installation bolts. Otherwise, the drive plate could be damaged.

1. Verify that the torque converter stud bolts are inserted into the drive plate bolt holes from the starter installation hole.

2. Install the transaxle mounting bolts.

Tightening torque

- 38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}

3. Tighten the stud bolts for the transaxle.

NOTE:

- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the transaxle because they may be loosened.

  Tightening torque

- 15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.

5. Pull up the transaxle using the **SSTs**, pass the transaxle stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.

6. Install the No.1 engine mount bracket and the bracket plate to the transaxle, and temporarily tighten the installation bolts.

7. Install the bracket to the transaxle and the exhaust manifold and tighten the bolts in the order shown in the figure.

NOTE:

- When installing bolt B, be careful that the wave washer does not get caught in the bracket.

Tightening procedure

- Tighten the bolt A.
  - 38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}
- Tighten the bolt B.
  - 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}
- Tighten the bolt C.
  - 5—10 N·m {51—101 kgf·cm, 45—88 in·lbf}
- Loosen the bolt B 90°—180°

8. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

9. Temporarily tighten the No.1 engine mount rubber installation bolts.

10. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.

11. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 69—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

12. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

Tightening torque

- 84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

13. Remove the **SST (49 C017 5A0, 49 L017 5A0)**.
14. Tighten the No.1 engine mount rubber installation bolts.

15. Fix the crankshaft pulley to lock the torque converter against rotation.

CAUTION:

- After temporarily tightening the torque converter installation nut uniformly, tighten it to the specified torque.

16. Tighten the torque converter installation nuts.

Tightening torque

- 41—54 N·m {4.2—5.5 kgf·m, 31—39 ft·lbf}

17. Install the blind cover.

18. Install the starter. (See **STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

19. Install the front drive shaft (RH) to the transaxle. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

20. Install the front drive shaft (LH) to the transaxle. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

21. Install the front stabilizer control links to the front stabilizer. (See **FRONT STABILIZER REMOVAL/INSTALLATION**.)

22. Install the front lower arms to the steering knuckles. (See **FRONT LOWER ARM REMOVAL/INSTALLATION**.)

23. Install the tie-rod end ball joints to the steering knuckles. (See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)

24. Install the clips securing the brake hose to the front shock absorbers. (See **BRAKE HOSE (FRONT) REMOVAL/INSTALLATION**.)

25. Install the front ABS wheel-speed sensors to the steering knuckles. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

26. Connect the water hose to the oil cooler. (Automatic Transaxle Replacement) (See **OIL COOLER REMOVAL/INSTALLATION [FW6A-EL]**.)

27. Install the oil cooler to the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See **OIL COOLER REMOVAL/INSTALLATION [FW6A-EL]**.)

28. Install the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

29. Install the front tires. (See **GENERAL PROCEDURES (SUSPENSION)**.)

30. Install the intermediate shaft to the steering gear and linkage. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

31. Install the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

32. Connect the breather hose to the transaxle.

33. Install the selector cable bracket.

34. Connect the selector cable to the transaxle.

35. Install the ground cable.

36. Install the bracket to the transaxle.

37. Connect the control valve body connector.

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.
- Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.
- Insert the connector straight as the connector terminal could be damaged.
- Rotate the connector lever until a click is heard.

38. Install the splash shield (LH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

39. Connect the wiring harness from the transaxle.

40. Install the battery tray and PCM component. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
41. Install the air cleaner and air hose as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
42. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
43. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
44. Perform the “Initial Learning” (automatic transaxle Replacement). (See **INITIAL LEARNING [FW6A-EL]**.)
45. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)
46. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

DRIVE PLATE REMOVAL/INSTALLATION [FW6A-EL]

1. Remove the transaxle. (See **AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]**.)
2. Remove in the order indicated in the table.

1	Drive plate installation bolts (See **Drive Plate Installation Bolts Removal Note**.) (See **Drive Plate Installation Bolts Installation Note**.)
2	Backing plate
3	Drive plate

3. Install in the reverse order of removal.

Drive Plate Installation Bolts Removal Note

1. Set the **SST** against the drive plate.

2. Loosen the drive plate installation bolts uniformly in two or three steps in the order shown in the figure, then remove the bolts and the drive plate.

Drive Plate Installation Bolts Installation Note

1. Set the **SST** against the drive plate.

2. Tighten the new drive plate installation bolts uniformly in two or three steps in the order shown in the figure.

Tightening torque

- 108—116 N·m {11.1—11.8 kgf·m, 80—85 ft·lbf}

2014 - Mazda3 - Transmission/Transaxle

OIL SEAL (DIFFERENTIAL) REPLACEMENT [FW6A-EL]

Transaxle Case Side

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Drain the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

3. Disconnect the front drive shaft (LH) from the transaxle. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

4. Remove the oil seal using a flathead screwdriver.

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.

6. Coat the lip of the oil seal with ATF.

CAUTION:

- The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.

7. Install the front drive shaft (LH) to the transaxle. (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

8. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

9. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)

10. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

Converter housing Side

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Drain the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

3. Disconnect the front drive shaft (RH). (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

4. Remove the oil seal using a flathead screwdriver.

FLATHEAD SCREWDRIVER

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.

6. Coat the lip of the oil seal with ATF.

CAUTION:

- The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.

7. Install the front drive shaft (RH). (See **FRONT DRIVE SHAFT REMOVAL/INSTALLATION**.)

8. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

9. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)

10. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

OIL SEAL (DIFFERENTIAL) REPLACEMENT [FW6A-EL]

2014 - Mazda3 - Transmission/Transaxle

OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the control valve body connector.

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.
- Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.

4. Remove the hose clamp.

5. Cut the oil seal using a utility knife as shown in the following illustration.

CAUTION:

- Do not damage the transaxle case.
- Do not damage the control valve body coupler connector.
- To prevent foreign matter penetration, clean the oil seal area thoroughly and cut the oil seal so as not to leave cutting fragments.

6. Using a tape-wrapped flathead screwdriver, remove the oil seal from the transaxle case.

NOTE:

- Remove the oil seal by tapping the tip of a tape-wrapped flathead screwdriver on the inner circumference surface A area of the oil seal.

7. Temporarily install the oil seal (control valve body) by hand.

8. Using the **SSTs** and a hammer, install the oil seal (control valve body) so that it is not tilted and there is no height difference between the transaxle case surface and the end surface of the oil seal.

CAUTION:

- When installing the oil seal (control valve body), do not mistakenly hit the control valve body connector with the hammer. Otherwise the control valve body connector could be damaged making it no longer waterproof.

9. Install a new hose clamp to the position shown in the figure.

CAUTION:

- If the hose clamp is reused it could cause ATF leakage, therefore use a new hose clamp.
- Install the hose clamp tab to within the range shown in the figure.

A: 210°

- Install the hose clamp so that it does not interfere with the top and bottom flanges of the oil seal to maintain the waterproofing integrity.

10. Connect the control valve body connector.

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.
- Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.
- Insert the connector straight as the connector terminal could be damaged.
- Rotate the connector lever until a click is heard.

11. Install the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

12. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Transmission/Transaxle

OIL COOLER REMOVAL/INSTALLATION [FW6A-EL]

Water Hose

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner and air hose as a single unit. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the battery tray and PCM component. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the front under cover No.2. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

5. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

6. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Remove in the order indicated in the table.

1	Water hose component (See **Water Hose No.1 and No.2 (oil cooler side) Installation Note**.) (See **Water Hose No.1 (outlet case side) Installation Note**.)
2	Hose clip No.1
3	Hose clip No.2
4	Water hose No.1 (See **Water Hose No.1 and No.2 (oil cooler side) Installation Note**.) (See **Water Hose No.1 (outlet case side) Installation Note**.)
5	Water hose No.2 (See **Water Hose No.1 and No.2 (oil cooler side) Installation Note**.) (See **Water Hose No.2 (bypass pipe side) Installation Note**.)

8. Install in the reverse order of removal.

9. Add the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Water Hose No.1 and No.2 (oil cooler side) Installation Note

1. Install the water hose to the oil cooler as shown in the figure with the hose clamp expanded.

NOTE:

- A new water hose and hose clamp are attached.

2. Install the hose clamp so that center A of the hose clamp tab is within the range shown in the figure.

- Verify that the installation angle of the hose clamp is within the range shown in the figure.

3. Verify that the hose clamp does not interfere with any other components.

Water Hose No.1 (outlet case side) Installation Note

1. Install the water hose No.1 to the outlet case as shown in the figure with the hose clamp expanded.

NOTE:

- A new water hose No.1 and hose clamp are attached.

2. Install the hose clamp so that center A of the hose clamp tab is within the range shown in the figure.

- Verify that the installation angle of the hose clamp is within the range shown in the figure.

3. Verify that the hose clamp does not interfere with any other components.

Water Hose No.2 (bypass pipe side) Installation Note

1. Install the water hose No.2 to the bypass pipe as shown in the figure with the hose clamp expanded.

NOTE:

- A new water hose No.2 and hose clamp are attached.

2. Install the hose clamp so that center A of the hose clamp tab is within the range shown in the figure.

- Verify that the installation angle of the hose clamp is within the range shown in the figure.

3. Verify that the hose clamp does not interfere with any other components.

Oil Cooler

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

3. Drain the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

4. Disconnect the wiring harness from the front crossmember. (Vehicle with i-ELOOP)

5. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove in the order indicated in the table.

1	Water hose No.1 (See **Water Hose No.1 and No.2 (oil cooler side) Installation Note**.)
2	Water hose No.2 (See **Water Hose No.1 and No.2 (oil cooler side) Installation Note**.)
3	Water-cooled oil cooler
4	O-rings

7. Install in the reverse order of removal.
8. Add the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
9. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)
10. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]

On-Vehicle Removal

WARNING:

- A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.
- Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyeglasses whenever using compressed air.

CAUTION:

- If the control valve body has been replaced, perform initial learning. (See **INITIAL LEARNING [FW6A-EL]**.)
- If the control valve body has been replaced, perform TCM configuration. (See **TCM CONFIGURATION [FW6A-EL]**.)
- Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.

1. Select the selector lever to P position.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Disconnect the control valve body connector.

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.
- Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.

7. Remove the hose clamp.

8. Drain the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

9. Remove the oil pan.

CAUTION:

- To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.
- If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.

NOTE:

- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

10. Remove the oil strainer.

11. Remove the oil strainer O-rings.

12. Remove the control valve body.

CAUTION:

- Remove the control valve body directly from underneath so that force is not applied to the control valve body connector in the lateral direction.

13. Remove the oil seal (control valve body). (See **OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL]**.)

14. Remove the gasket from the transaxle case.

On-Vehicle Installation

1. Install the gasket to the transaxle case.

2. Install the dowel pin to the control valve body.

NOTE:

- If the dowel pin remains in the transaxle case, remove the dowel pin from the transaxle case and install the dowel pin to the control valve body.

3. Install the control valve body so that the parking assist lever component is engaged in the gap between the two surfaces of the spool part of the manual valve.

CAUTION:

- Install the control valve body so that the turbine/input shaft speed sensor, output shaft speed sensor, and control valve body connector do not contact the transaxle case.

Tightening torque

- 9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

4. Move the manual valve in both directions of the arrow and verify that the manual valve is correctly connected to the parking assist lever component and the slider pin for the range sensor.

NOTE:

- If the manual valve only moves in the gap between the parking assist lever component surface and the manual valve surface, the manual valve and the parking assist lever component are correctly engaged.

5. Install the oil strainer O-rings.

NOTE:

- If there is a large amount of foreign material at the bottom of the oil pan, replace the oil strainer with a new one.

6. Install the oil strainer.

Tightening torque

- 9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

7. Apply a light coat of silicone sealant (TB1217E or equivalent) to the contact surfaces of the oil pan and transaxle case.

CAUTION:

- Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.

8. Install the oil pan with new bolts before the applied sealant starts to harden.

Tightening torque

- 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

9. Install the oil seal (control valve body). (See **OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL]**.)

10. Install a new hose clamp to the position shown in the figure.

CAUTION:

- If the hose clamp is reused it could cause ATF leakage, therefore use a new hose clamp.
- Install the hose clamp tab to within the range shown in the figure.

A: 210°

- Install the hose clamp so that it does not interfere with the top and bottom flanges of the oil seal to maintain the waterproofing integrity.

11. Connect the control valve body connector.

CAUTION:

- Make sure that your hand does not touch the terminal as the connector terminal could be damaged.
- Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.
- Insert the connector straight as the connector terminal could be damaged.
- Rotate the connector lever until a click is heard.

12. Add the ATF. (See **AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL]**.)

13. Install the air cleaner component. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

14. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

15. Perform the “TCM configuration” (Control valve body Replacement). (See **TCM CONFIGURATION [FW6A-EL]**.)
16. Perform the “Initial Learning” (Control valve body Replacement). (See **INITIAL LEARNING [FW6A-EL]**.)
17. Perform the “Mechanical System Test”. (See **MECHANICAL SYSTEM TEST [FW6A-EL]**.)
18. Install the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
19. Perform the “Road Test”. (See **ROAD TEST [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

INITIAL LEARNING [FW6A-EL]

Introduction

- If the control valve body, oil pressure switch, and automatic transaxle are replaced, always perform the initial learning. If the initial learning is not completed, engine rev-up may occur or shift shock may increase. DTC P06B8:00 is displayed while the initial learning has not been implemented.
- The procedure for the initial learning has a procedure which uses the M-MDS and one which does not. The initial learning can be activated easily using the M-MDS.

WARNING:

- The initial learning forcibly changes gears within the driving shift range while the engine is running. Before implementing the initial learning, securely apply the parking brake and set the wheel blocks for both the front and rear wheels. Otherwise, the vehicle will move which could cause injury or property damage.

Using M-MDS

Preparation before servicing

1. Verify initial learning implementation necessity for replacement parts.

Replacement part	Initial learning necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Necessary
Automatic transaxle replacement	Necessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.

3. Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.)

4. Bring the M-MDS inside the vehicle and connect it to the DLC-2.

5. Perform vehicle identification using the M-MDS.

6. Start the engine.

7. After the vehicle is identified, select the following items from initialization of the M-MDS.

   a. Select “Data logger”.

   b. Select “Module”.

   c. Select “TCM”.

8. While checking the PID TFT (ATF temperature), warm-up the engine and allow the ATF temperature to reach **60—110 °C {140—230 °F}**.

Starting procedure for initial learning

1. After the vehicle is identified, select the following items from initialization of the M-MDS.

   a. Select “Self-test”

   b. Select “Module”

   c. Select “TCM”

   d. Select “Retrieve CMDTCs”

NOTE:

- DTC P06B8:00 is displayed while the initial learning has not been implemented.

2. Start the engine and wait for **30 s or more**.

3. Perform the following steps (1) to (4) with the brake pedal depressed.

CAUTION:

- When the brake fluid pressure sensor value is the specification or less, shut down the initial learning to assure safety. Accordingly, be careful of the following when performing the initial learning:

  - Strongly depress the brake pedal while performing the initial learning.

- Do not depress the brake pedal again. Otherwise, the brake booster pressure will decrease and the brake force will weaken.

a. Shift the selector lever from P position to D position and click the DTC clear button for the M-MDS.

b. When the M-MDS screen returns to the DTC display screen, shift the selector lever from D position to M position within **10 s** and verify that the engine speed increases from idling.

NOTE:

- The initial learning implements after idle speed starts increasing. If idle speed does not start increasing, repeat the procedure from Step 2.
- The shift position indicator light does not turn off while the initial learning is being implemented.
- If the initial learning is shut down for any reason while performing the learning, shift position indicator light does not flash. If shift position indicator light does not flash, repeat the procedure from Step 2.

c. Verify that the engine speed returns to idle and shift position indicator light flashes **two times**.

SHIFT POSITION INDICATOR LIGHT

d. Verify that M1 is displayed after the shift position indicator light flashes **two times**, shift the selector lever to the P position, and turn off the engine.

NOTE:

- Be careful not to miss looking at shift position indicator light because the light flashes only **one time**.

4. Release the brake pedal.

5. Switch the ignition to KOEO and verify the DTC.

   - If DTC P06B8:00 is displayed, repeat the procedure from Step 2. If any other DTCs are displayed, perform the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

Not Using of M-MDS

Preparation before servicing

1. Verify initial learning implementation necessity for replacement parts.

Replacement part	Initial learning necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Necessary
Automatic transaxle replacement	Necessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Inspect the ATF level. (See **AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL]**.)
4. Start the engine.
5. Warm-up the engine and allow the ATF temperature to reach **60—110 °C {140—230 °F}**.

Starting procedure for initial learning

1. Start the engine and wait for **30 s or more**.
2. Perform the following steps (1) to (7) with the brake pedal depressed.

CAUTION:

- When the brake fluid pressure sensor value is the specification or less, shut down the initial learning to assure safety. Accordingly, be careful of the following when performing the initial learning:
  - Strongly depress the brake pedal while performing the initial learning.
  - Do not depress the brake pedal again. Otherwise, the brake booster pressure will decrease and the brake force will weaken.

a. Shift the selector lever from P position to N position, press the push button start **one time**, and stop the engine.

b. Shift the selector lever from N position to M- position, press the push button start **one time** while holding the lever in the M- position, and wait for **5 s or more** (ignition switch ON (engine on)).

c. Shift the selector lever from M- position to N position, press the push button start **one time**, and start the engine.

d. Shift the selector lever from N position to M+ position and wait for **5 s or more** while holding the lever in the M+ position.

e. Select the selector lever from M+ position to M- position and wait for **5 s or more** while holding the lever in the M- position.

f. When idle increase starts, shift the selector lever to the M position (manual position), and verify that M1 is displayed after the shift position indicator light flashes **two times**.

NOTE:

- The initial learning implements after idle speed starts increasing. If idle speed does not start increasing, repeat the procedure from Step 1 "Start the engine and wait for **30 s or more**.".
- The shift position indicator light does not turn off while the initial learning is being implemented.

g. After shift position indicator light flashes twice, shift the selector lever from M position to P position and stop the engine.

NOTE:

- Be careful not to miss looking at shift position indicator light because the light flashes only **one time**.

3. Release the brake pedal.

4. Clear the DTC using the M-MDS and switch the ignition to off. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)

5. Switch the ignition ON (engine off or on) and verify that DTC P06B8:00 is not recorded using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

- If the DTC P06B8:00 is displayed, repeat the procedure from Step 1.

2014 - Mazda3 - Transmission/Transaxle

TCM CONFIGURATION [FW6A-EL]

NOTE:

- The TCM is built into the control valve body.

1. Verify TCM configuration implementation necessity for replacement parts.

Replacement part	Configuration necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Unnecessary
Automatic transaxle replacement	Unnecessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Connect the M-MDS to the DLC-2.
3. After vehicle identification, the following can be selected from the M-MDS initialization screen.
    - Select “Module Programming”
4. Then, select the following from the screen menu.
    - Select “Programmable Module Installation”
    - Select “TCM”
5. Perform the configuration following the instructions on the screen.
6. Verify that no DTCs are stored. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)

NOTE:

- If any DTC (U code) is output, the system is normal.

7. Delete the U code and verify that no DTC is output. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.)
    - If any DTC other than U code is output, repair the malfunctioning location according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)

2014 - Mazda3 - Transmission/Transaxle

AUTOMATIC TRANSAXLE SHIFT MECHANISM LOCATION INDEX

1	Selector cable (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
2	Selector lever component (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.) (See **SELECTOR LEVER INSPECTION**.) (See **SHIFT-LOCK SYSTEM INSPECTION**.) (See **NOT P POSITION SWITCH INSPECTION**.)

2014 - Mazda3 - Transmission/Transaxle

AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION

Selector Lever Removal/Installation

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure to remove the selector lever knob.

NOTE:

- If the servicing is difficult, release the shift lock manually and shift the selector lever to the N position.

a. Insert the tool (width: **6 mm {0.2 in} or less**, thickness: **1 mm {0.04 in} or less**) as shown in the figure.

b. Move the tool in the direction of arrow (1) in the figure and detach the hook. Move the lock release button cover in the direction of arrow (2) in the figure and remove it.

c. Remove the spring.

d. Remove the selector lever knob.

3. Remove the front console. (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)

4. Disconnect the selector lever component connector.

5. Remove the selector cable (selector lever side). (See **Selector Cable Removal/Installation**.)

6. Remove the nuts from the selector lever.

7. Remove the selector lever.

8. Install the selector lever.

9. Install the nuts from the selector lever.

10. Install the selector cable (selector lever side). (See **Selector Cable Removal / Installation**.)
11. Connect the selector lever component connector.

12. Install the front console. (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)
13. Perform the following procedure to install the selector lever knob.
    a. Install the spring to the selector lever knob.

    CAUTION:

    - Install the spring so that it is stopped by the stopper.

b. Install the selector lever knob to the selector lever component.

c. Install the lock release button cover so that it engages with the hook of the selector lever knob.

14. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Indicator Removal/Installation

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the upper panel. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
3. Remove the selector lever knob. (See **Selector Lever Removal/Installation**.)
4. Remove the shift panel. (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

1	Connector
2	Indicator panel
3	Indicator (See **Indicator Removal Note**.)

Indicator Removal Note

1. Detach tabs shown in the figure and remove the indicator.

Selector Cable Removal/Installation

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the selector lever knob. (See **Selector Lever Removal/Installation**.)

3. Perform the following procedure to remove the selector cable (selector lever side).

   a. Remove the front console. (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

   b. Pull out the safety lock in the direction of the arrow (1) shown in the figure, pull out the lock piece in the direction of the arrow (2) shown in the figure, and release the lock. (See **Selector Cable (Selector Lever Side) Installation Note**.)

c. While pressing the cable outer end tab (selector lever side) in the direction of the arrow (3) shown in the figure, lift up cable outer end (selector lever side) in the direction of the arrow (4) shown in the figure to detach the cable outer end tab (selector lever side) from the bracket.

d. Remove the cable outer end (selector lever side) from the bracket.

e. Remove the selector cable end (selector lever side) from the selector lever.

4. Perform the following procedure to remove the selector cable (transaxle side).

a. Remove the air cleaner case. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

b. Remove the battery tray. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

c. While pressing the bracket tab in the direction of the arrow (5) shown in the figure, lift up the cable outer end (transaxle side) in the direction of the arrow (6) shown in the figure to detach the bracket tab from the cable outer end (transaxle side).

d. Remove the cable outer end (transaxle side) from the bracket. (See **Cable Outer End (Transaxle Side) Installation Note**.)

e. Remove the clip from the selector cable end (transaxle side).

f. Remove the selector cable end (transaxle side) from the manual shaft lever.

5. Remove the side wall. (See **SIDE WALL REMOVAL/INSTALLATION**.)

6. Remove the clip as shown in the figure and remove the nut.

7. Remove the front console. (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

8. Remove the grommet as shown in the figure and remove the nuts.

9. Install in the reverse order of removal.

Selector Cable Adjustment

1. Disconnect the negative battery cable. (See **2.0, SKYACTIV-G 2.5]**.)

2. Remove the upper panel. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

3. Remove the selector lever knob. (See **Selector Lever Removal/Installation**.)

4. Remove the shift panel. (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

5. Shift the selector lever to the P position.

6. Pull out the safety lock in the direction of the arrow (1) shown in the figure, pull out the lock piece in the direction of the arrow (2) shown in the figure, and release the lock. (See **Selector Cable (Selector Lever Side) Installation Note**.)

7. Set the manual shaft to the P position.

8. Press in the lock piece in the direction of the arrow (1) shown in the figure, press in the safety lock in the direction of the arrow (2) shown in the figure, and lock it.

9. Perform the procedure in the reverse order of Step 1 to 4 to install the removed part.

10. Perform the selector lever inspection. (See **SELECTOR LEVER INSPECTION**.)

Selector Cable (Selector Lever Side) Installation Note

1. Verify that the selector lever is in the P position.
2. Verify that the manual shaft is in the P position.

3. Press in the lock piece in the direction of the arrow (1) shown in the figure, press in the safety lock in the direction of the arrow (2) shown in the figure, and lock it.

Cable Outer End (Transaxle Side) Installation Note

1. Assemble the cable outer end (transaxle side) to the bracket so that the marking is in the area of the arrow shown in the figure.

2014 - Mazda3 - Transmission/Transaxle

SELECTOR LEVER INSPECTION

1. Switch the ignition ON (engine off or on).
2. Perform the following procedures to inspect the selector lever.
   - If there is any malfunction, adjust the selector cable. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   a. Verify that the selector lever can be operated as shown in the figure.

   b. Verify that the selector lever can be operated smoothly and moderately.

2014 - Mazda3 - Transmission/Transaxle

SHIFT-LOCK SYSTEM INSPECTION

Shift-Lock System Inspection

1. Switch the ignition ON (engine off).
2. Shift the selector lever to the P position.
3. Verify that the selector lever cannot be shifted from P to R position when the brake pedal is released.
    - If it can be verified, go to the next step.
    - If not as verified, inspect the following parts:
        - Shift-lock solenoid (See **Shift-Lock System Inspection**.)
        - Not P position switch (See **NOT P POSITION SWITCH INSPECTION**.)
        - Brake switch (See **BRAKE PEDAL INSPECTION**.)
        - Start stop unit (See **START STOP UNIT INSPECTION**.)
        - PCM (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Verify that the selector lever can be shifted from P to R position when the brake pedal is depressed.
    - If it can be verified, go to the next step.
    - If not as verified, inspect the following parts:
        - Shift-lock solenoid (See **Shift-Lock System Inspection**.)
        - Not P position switch (See **NOT P POSITION SWITCH INSPECTION**.)
        - Brake switch (See **BRAKE PEDAL INSPECTION**.)
        - Start stop unit (See **START STOP UNIT INSPECTION**.)
        - PCM (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Shift-Lock Solenoid Inspection

NOTE:

- The shift-lock solenoid is built into the selector lever component.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure to remove the selector lever knob.

NOTE:

- If the servicing is difficult, release the shift lock manually and shift the selector lever to the N position.

a. Insert the tool (width: **6 mm {0.2 in} or less**, thickness: **1 mm {0.04 in} or less**) as shown in the figure.

b. Move the tool in the direction of arrow (1) in the figure and detach the hook. Move the lock release button cover in the direction of arrow (2) in the figure and remove it.

c. Remove the spring.

d. Remove the selector lever knob.

3. Remove the front console. (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

4. Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Verify that the voltages of each of the selector lever component terminals are as indicated in the table.

Shift-lock solenoid specification

Terminal	Connected to	Test condition	Voltage (V)
A	IG1 relay	Ignition switched ON (engine on)	B+
		Except above	Below 1.0
H	Start stop unit	Under any condition	Below 1.0

- If the voltage is not as indicated in the table, repair or replace the related wiring harness.
- If the voltage can be verified as indicated in the table, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

Shift-lock Override Button Inspection

1. Switch the ignition to off.

2. Verify that the selector lever is in the P position.

3. Without the brake pedal depressed, verify that the selector lever cannot be shifted from the P position.

4. Remove the emergency override hole cover using a tape-wrapped flathead screwdriver.

5. Insert the flathead screwdriver into the emergency override hole and push it down.

6. Verify that the selector lever can be shifted from the P position.

- If not as verified, replace the selector lever. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Transmission/Transaxle

NOT P POSITION SWITCH INSPECTION

NOTE:

- The not P position switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure to remove the selector lever knob.

NOTE:

- If the servicing is difficult, release the shift lock manually and shift the selector lever to the N position.

a. Insert the tool (width: **6 mm {0.2 in} or less**, thickness: **1 mm {0.04 in} or less**) as shown in the figure.

b. Move the tool in the direction of arrow (1) in the figure and detach the hook. Move

the lock release button cover in the direction of arrow (2) in the figure and remove it.

c. Remove the spring.

d. Remove the selector lever knob.

3. Remove the front console. (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)

4. Disconnect the selector lever component connector.

5. Verify that the continuity between selector lever component terminals B and I.

- If not as verified, replace the selector lever component. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

Not P position switch specification

Test condition	Continuity
Selector lever is in the P position.	No continuity
Selector lever is not in the P position.	Continuity

2014 - Mazda3 - Transmission/Transaxle

TRANSMISSION/TRANSAXLE TECHNICAL DATA

Clutch [C66M-R]

Item	Specification
Clutch fluid	SAE J1703 or FMVSS116 DOT-3
Clutch pedal height (reference value)	156 mm {6.14 in}
Clutch pedal free play (reference value)	10 mm {0.39 in} or less
Clutch pedal full stroke (reference value)	141 mm {5.55 in}
Distance A, from clutch disengagement point to floor covering (reference value)	63 mm {2.5 in} or more
Clutch cover diaphragm spring fingers maximum depth	0.6 mm {0.02 in}
Maximum clearance of flatness of the pressure plate	0.3 mm {0.01 in}
Clutch cover diaphragm spring fingers maximum height difference	1.0 mm {0.039 in}
Minimum clutch disc thickness	0.3 mm {0.01 in}
Maximum clutch disc runout	0.7 mm {0.03 in}
Flywheel maximum runout	0.1 mm {0.004 in}

Manual Transaxle [C66M-R]

Item		Specification
Manual transaxle oil	Grade	API service GL-4
	Viscosity	SAE 75W-80
	Capacity (approx. quantity)	1.70 L {1.80 US qt, 1.50 Imp qt}

Automatic Transaxle [FW6A-EL]

Item		Specification
ATF	Type	ATF FZ
	Capacity (approx. quantity)	7.8 L {8.2 US qt, 6.9 Imp qt}
	Added amount if ATF is drained from drain plug (approx. quantity)	3.5—4.9 L {3.7—5.1 US qt, 3.1—4.3 Imp qt}

Line pressure

Measurement conditions		Specification (kPa {kgf/cm^2, psi})
Idling	R position	500—700 {5.10—7.13, 72.6—101.0}
	D and M (1GR) position	330—470 {3.37—4.79, 47.9—68.1}
Stalling	R position	1,790—2,100 {18.26—21.41, 259.7—304.5}
	D and M (1GR) position	970—1,170 {9.90—11.93, 141.0—169.6}

Stall speed

Measurement conditions	Specification (rpm)
R position	1,700—2,200
D position	1,900—2,600
M position	

Time lag

Measurement conditions	Specification (s)
N to D selected	0.4—0.7
N to R selected

ELECTRIC POWER STEERING (EPS) SYSTEM WIRING DIAGRAM

ELECTRIC POWER STEERING (EPS) SYSTEM WIRING DIAGRAM

Next >

2014 - Mazda3 - Steering

FOREWORD

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

Refer to MULTIPLEX COMMUNICATION SYSTEM. (See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:

1. Verify that a DTC has been recorded in the memory using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)

2. Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.

3. Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.

4. Inspect the female terminals for poor connection.

2014 - Mazda3 - Steering

ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the EPS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
    - Provides a quick inspection of the EPS usually performed at the start of each diagnostic procedure.
    - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 2 tests:
    - Read/clear diagnostic results, PID monitor and record.

Read/clear diagnostic results

- This function allows reading or clearing of DTCs in the EPS CM memory.

PID/Data monitor and record

- This function allows access of certain data values, input signals, calculated values, and system status information.

Reading DTCs Procedure

CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the EPS. (See **Clearing DTCs Procedure**.)

ODDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “EPS”.
3. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the EPS. (See **Clearing DTCs Procedure**.)

Snapshot Data Access Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “EPS”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the IDS screen.
4. Retrieve the freeze frame PID data according to the directions on the IDS screen.

NOTE:

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- Snapshot data stores the currently detected DTC data.

Clearing DTCs Procedure

CMDTC clearing procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition OFF.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.

7. Perform DTC inspection. (See **Reading DTCs Procedure**.)
8. Verify that no DTCs are displayed.

ODDTC clearing procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “EPS”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition OFF.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See **Reading DTCs Procedure**.)
8. Verify that no DTCs are displayed.

PID/Data Monitor and Record Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   a. Select “DataLogger”.
   b. Select “Modules”.
   c. Select “EPS”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

DTC Table

×: Applicable

—: Not applicable

DTC M-MDS	Power steering malfunction indicator light illumination status	Diagnosis system component	Fail-safe	Drive cycle	Self test type*1	Memory function	Page
C200B:02	Illuminated	Torque sensor	×	—	C, D	×	(See **DTC C200B:02/C200B:16/C200B:62/C200B:64/C200B:85**.)

U3000:96	Illuminated	EPS CM	×	—	C, D	×	
U3003:16	Illuminated	Battery power supply	×	—	C, D	×	(See **DTC U3003:16**.)
U3003:17	Illuminated	Battery power supply	×	—	C, D	×	(See **DTC U3003:17**.)

*1 **C: CMDTC self test, D: ODDTC self test**

*2 **If the EPS CM detects an internal circuit malfunction in the resolver sensor, it flashes the power steering malfunction indicator light. At this time, if EPS system internal temperature increases, the assist force gradually weakens. Then if assist force decreases above the specified value, the power steering malfunction indicator light switches from flashing to illumination.**

*3 **If the EPS CM detects the signal that a engine speed is below the specified value, it illuminates the power steering malfunction indicator light.**

Fail-safe Function Table

DTC M-MDS	Fail-safe control status
C200B:02	Control disabled
C200B:16	Control disabled
C200B:1C	Control disabled

C200B:62	Control disabled
C200B:64	Control is maintained in the backup control
C200B:85	Control disabled
C200C:1C	Control disabled
C200D:1C	Control is maintained in the backup control and the power steering warning buzzer is sounded ▪ If EPS system internal temperature increases above the specified value, the EPS CM disables assistance and stops the power steering warning buzzer is sounded
C200D:64	Control disabled
U0001:88	Control enabled
U0100:00	Control is maintained by gradually changing the controlled vehicle speed and setting it to **100 km/h {62.1 mph}**
U0121:00	Control enabled
U0155:00	Control enabled
U0214:00	Control enabled
U0338:00	Control enabled
U0401:00	• Vehicle speed signal malfunction ▪ Control is maintained by gradually changing the controlled vehicle speed and setting it to **100 km/h {62.1 mph}** • Engine speed signal malfunction ▪ Control enabled
U0415:00	Control enabled
U0423:00	Control enabled ▪ If the EPS CM detects the signal that a engine speed is below the specified value, it disables assistance
U0515:00	Control enabled
U2011:19	Control disabled
U2011:1C	Control disabled
U2011:62	Control disabled

U2011:72	• An open circuit malfunction is detected in the one phase of the three-phase stator in the EPS motor ▪ Control is maintained in the backup control • Other malfunction detected in EPS motor internal circuit ▪ Control disabled
U2011:92	Control disabled
U2300:54	Control enabled
U2300:55	Control enabled
U2300:56	Control enabled
U3000:16	Control disabled
U3000:1C	Control disabled
U3000:28	Control disabled
U3000:41	Control disabled
U3000:46	Control is maintained in fail mode
U3000:47	Control disabled
U3000:49	Control disabled
U3000:4B	Control is maintained in fail mode
U3000:61	Control disabled
U3000:73	Control disabled
U3000:96	Control disabled
U3003:16	Control is maintained by gradually decreasing the motor control current However, control is inhibited if the power supply voltage is the specified value of less.
U3003:17	Control disabled

PID/DATA Monitor Table

NOTE:

- If the PID/data monitor value “STR_ANG” is inspected, perform the following procedure before inspecting.
    - Switch the ignition to OFF, and maintain this condition for **approx. 3 s**.
    - Set the vehicle wheels in the straight-ahead position.
    - Switch the ignition ON (engine off or on).

PID name (definition) M-MDS display	Unit/Operation	Operation Status (Reference)	Inspection item(s)	EPS control module terminal
CEN_TRQ_S	Nm	• Torque sensor neutral position: Near 0 Nm	• Steering column replacement (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)	—
ECU_IN_TMP	°C, °F	• Displays temperature of board in EPS control module: -40°C—+215°C {-40°F—419°F}	• EPS CM replacement (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)	—
ENG_RPM	RPM	• Engine stopped: 0 RPM • Engine rotating at **3,000 RPM**: 3,000 RPM	• PCM inspection (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—
MT_CURRENT	A	• When not steered: Near 0 A • Steered: Changes to positive or negative	• EPS CM replacement (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)	—
OH_CR_C	Yes/No	• Is the overheating prevention control (Complete) operating?	—	—
OH_CR_M	Yes/No	• Is the overheating prevention control (Middle) operating?	—	—
OH_HIST_C	Yes/No	• Has the overheating prevention control (Complete) operated before?	—	—
OH_HIST_M	Yes/No	• Has the overheating prevention control (Middle) operated before?	—	—
OH_IG_CNT_C	—	• History of overheating prevention control (Complete) • Number of times vehicle is driven (ignition switched ON (engine off or on)) after overheating prevention control operates	—	—

OH_IG_CNT_M	—	• History of overheating prevention control (Middle) • Number of times vehicle is driven (ignition switched ON (engine off or on)) after overheating prevention control operates	—	—
STR_AB_EST	°	• Steering wheel in neutral position (not turned): **0°** • Steered left: Changes to **0°—Positive** • Steered right: Changes to **0°—Negative** **NOTE:** • The signal displayed in this item is a estimated absolute steering angle signal output.	Perform the DTC inspection for the PCM, DSC HU/CM, and EPS CM. If a DTC is displayed after performing the DTC inspection for the PCM, DSC HU/CM, and EPS CM, repair the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) (See **EPS CONTROL MODULE INSPECTION**.) After performing the DTC inspection, perform the following procedures: • Switch the ignition off and maintain condition for approx. **3 s**. • Set the vehicle wheels straight-ahead. • Switch the ignition ON (engine off or on). If an abnormal value is indicated after verifying the value of the STR_ANG again, replace the EPS CM.	—
STR_ANG	°	• Steering wheel position when ignition is switched ON (engine off or on): **0°** • Steered left: Changes to **0°—Positive** • Steered right: Changes to **0°—Negative** **NOTE:** • The signal displayed in this item is a steering angle (relative angle) signal.		—
STR_ROT_SPD	°/s	• Not steered: Near 0 °/s • Steered: Changes according to steering speed	• EPS CM replacement (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)	—
STR_TRQ_S_M	Nm	• Not steered: Near 0 Nm • Steered left: Changes to 0 Nm—Positive • Steered right: Changes to 0 Nm—Negative	• EPS CM replacement (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)	—
STR_TRQ_S_S	Nm	• Not steered: Near 0 Nm • Steered left: Changes to 0 Nm—Positive • Steered right: Changes to 0 Nm—Negative	• EPS CM replacement (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)	—
VPWR	V	• Engine stopped: Approx. **12 V** • Idling: Approx. **14 V**	• Battery inspection (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Power supply circuit inspection (ignition switch, fuses)	1B

VSPD	KPH, MPH	• Vehicle stopped: 0 KPH, 0 MPH • Vehicle speed **20 km/h {12 mph}**: 20 KPH, 12 MPH	• PCM inspection (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	—

Snapshot Data Table

NOTE:

- Refer to PID monitor table for confirm the EPS system operation status while the EPS does not store the DTC. (See **PID/DATA Monitor Table**.)
- Snapshot data items are not displayed, according to detected DTC.

—: Not applicable

Snapshot data item	Unit	Data contents	Data read/use method	Corresponding data monitor items
AAT	°C, °F	Ambient air temperature	—	—

2014 - Mazda3 - Steering

DTC C200B:02/C200B:16/C200B:62/C200B:64/C200B:85

DTC C200B:02, C200B:16, C200B:62, C200B:64	Torque sensor

DETECTION CONDITION	• C200B:02
	  ▪ Signal error detected in torque sensor signal
	• C200B:16
	  ▪ Open or short circuit is detected in torque sensor circuit
	• C200B:62
	  ▪ Difference occurs between the torque sensor signal 1 and the torque sensor signal 2 from torque sensor
	• C200B:64
	  ▪ Signal error detected in torque sensor signal
	• C200B:85
	  ▪ Torque sensor signal is out of the specified range

FAIL-SAFE FUNCTION	• C200B:02/C200B:16/C200B:62/C200:85
	  ▪ Control disabled
	  ▪ Power steering malfunction indicator light: Illuminated
	• C200B:64
	  ▪ Control is maintained in the backup control
	  ▪ Power steering malfunction indicator light: Illuminated

POSSIBLE CAUSE	• Torque sensor malfunction • EPS CM malfunction

SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TORQUE SENSOR USING M-MDS** • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Access “STR_TRQ_S_M” and ”STR_TRQ_S_S” PIDs. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Verify that the data monitor value changes when the steering wheel is turned. ▪ Left: 0—positive ▪ Right: 0— negative • Do the torque sensor signal values change in the same way?	Yes	Go to the next step.
		No	Replace the steering column (torque sensor), then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC C200B:1C/C200C:1C

DTC C200B:1C, C200C:1C	**Torque sensor**
DETECTION CONDITION	• Open or short circuit is detected in torque sensor circuit
FAIL-SAFE FUNCTION	• Control disabled • Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Open or short circuit in wiring harness between the EPS CM terminals and torque sensor. • Poor connection at connectors • Torque sensor malfunction • EPS CM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TORQUE SENSOR USING M-MDS** • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Access “STR_TRQ_S_M” and ”STR_TRQ_S_S” PIDs. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Malfunction may be temporary. Go to step 3.
		No	Go to the next step.

	• Verify that the data monitor value changes when the steering wheel is turned.
	  ▪ Left: 0—positive
	  ▪ Right: 0— negative
	• Do the torque sensor signal values change in the same way?		

2	**INSPECT TORQUE SENSOR CONNECTOR AND TORQUE SENSOR WIRING HARNESS** • Switch the ignition OFF. • Disconnect the torque sensor connector. • Are the connector connection, connector pins, and wiring harness normal?	Yes	Replace the steering column (torque sensor), then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Repair or replace the connector or wiring harness, then go to the next step.
3	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC C200D:1C/C200D:64/U2011:19/U2011:1C/U2011:62/U2011:72/U2011:92

DTC C200D:1C, C200D:64, U2011:19, U2011:1C, U2011:62, U2011:72, U2011:92	EPS motor

DETECTION CONDITION	• C200D:1C
	  ▪ Malfunction detected in resolver sensor internal circuit
	• C200D:64
	  ▪ Signal error detected in resolver sensor signal
	• U2011:19, U2011:1C, U2011:62, U2011:72
	  ▪ Malfunction detected in EPS motor internal circuit
	• U2011:92
	  ▪ Malfunction detected in EPS motor internal circuit in the backup control

	• C200D:1C
	  ▪ Control is maintained in the backup control (if EPS system internal temperature increases, the assist force gradually weakens)
	  ▪ Power steering malfunction indicator light: Flashes (**0.5 Hz**)
	  ▪ Power steering warning buzzer: sounds intermittently (**0.5 Hz**)
	  • If EPS system internal temperature increases above the specified value, the flashing interval for the power steering malfunction indicator light and the power steering warning buzzer sound interval are shortened (from **0.5 Hz** to **2.0 Hz**)

FAIL-SAFE FUNCTION	• If EPS system internal temperature increases further, the power steering malfunction indicator light switches from flashing to illumination and the power steering warning buzzer sounds continuously • If EPS system overheating continues, the EPC CM disables assistance and stops the power steering warning buzzer (the power steering malfunction indicator light remains illuminated) • C200D:64, U2011:19, U2011:1C, U2011:62 ▪ Control disabled ▪ Power steering malfunction indicator light: Illuminated • U2011:72 ▪ An open circuit malfunction is detected in the one phase of the three-phase stator in the EPS motor • Control is maintained in the backup control ▪ Other malfunction detected in EPS motor internal circuit • Control disabled ▪ Power steering malfunction indicator light: Illuminated • U2011:92 ▪ Control disabled ▪ Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Malfunction in internal steering column, EPS motor
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DTC** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Verify if any DTCs are displayed. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present?	Yes	Replace the EPS CM (EPS motor). (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC U0001:88/U0100:00/U0121:00/U0155:00/U0214:00

DTC	**U0001:88**	**CAN system Communication error**
	U0100:00	**Communication error to PCM**
	U0121:00	**Communication error to DSC HU/CM**
	U0155:00	**Communication error to instrument cluster**
	U0214:00	**Communication error to start stop unit**

DETECTION CONDITION		• U0001:88
		  ▪ Error detected in line between CAN connection module and CAN bus communication line
		• U0100:00
		  ▪ Communication error to PCM is detected in CAN communication
		• U0121:00
		  ▪ Communication error to DSC CM is detected in CAN communication
		• U0155:00
		  ▪ Communication error to instrument cluster is detected in CAN communication
		• U0214:00
		  ▪ Communication error to start stop unit is detected in CAN communication

		• U0001:88
		  ▪ Control enabled
		  ▪ Power steering malfunction indicator light: Illuminated
		• U0100:00
		  ▪ Control is maintained by gradually changing the

FAIL-SAFE FUNCTION	controlled vehicle speed and setting it to **100 km/h {62.1 mph}** ▪ Power steering malfunction indicator light: Illuminated • U0121:00, U0155:00 ▪ Control enabled ▪ Power steering malfunction indicator light: Not illuminated • U0214:00 ▪ Control enabled ▪ Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with DSC HU/CM • CAN system wiring harness open or short circuit with instrument cluster • CAN system wiring harness open or short circuit with start stop unit • Poor connection at connectors
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

- Perform inspection according to the diagnostic procedure in MULTIPLEX COMMUNICATION SYSTEM. (See **FOREWORD**.)

2014 - Mazda3 - Steering

DTC U0338:00/U0515:00

DTC U0338:00, U0515:00	**CAN system communication error**
DETECTION CONDITION	• Error detected in signal from the start stop unit via CAN communication
FAIL-SAFE FUNCTION	• Control enabled • Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• Start stop unit malfunction • Mis-assembly of the steering angle sensor
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR THE START STOP UNIT MALFUNCTION** • Using the M-MDS, perform the DTC inspection for the start stop unit. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [START STOP UNIT]**.) DTC troubleshooting completed, then go to the next step.
		No	Go to the next step.
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.)

	• Is the same DTC present? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC U0401:00

DTC U0401:00	**CAN system communication error**
DETECTION CONDITION	• Error detected in signal from PCM via CAN communication
FAIL-SAFE FUNCTION	• Vehicle speed signal malfunction ▪ Control is maintained by gradually changing the controlled vehicle speed and setting it to **100 km/h {62.1 mph}** ▪ Power steering malfunction indicator light: Illuminated • Engine speed signal malfunction ▪ Control enabled ▪ Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR PCM MALFUNCTION** • Using the M-MDS, perform the DTC inspection for the PCM. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) DTC troubleshooting completed, then go to

	• Are any DTCs detected?		the next step.
		No	Go to the next step.
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Replace the PCM. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC U0415:00

DTC U0415:00	CAN system communication error
DETECTION CONDITION	• Error detected in signal from DSC HU/CM via CAN communication
FAIL-SAFE FUNCTION	• Control enabled • Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• DSC HU/CM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR DSC HU/CM MALFUNCTION** • Using the M-MDS, perform the DTC inspection for the DSC HU/CM. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) DTC troubleshooting completed, then go to the next step.
		No	Go to the next step.
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present?	Yes	Replace the DSC HU/CM. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

	(See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)		

2014 - Mazda3 - Steering

DTC U0423:00

DTC U0423:00	**CAN system communication error**
DETECTION CONDITION	• Error detected in signal from instrument cluster via CAN communication

FAIL-SAFE FUNCTION	• Control enabled
	  ▪ If the EPS CM detects the signal that a engine speed is below the specified value, it disables assistance
	• Power steering malfunction indicator light: Not illuminated
	  ▪ If the EPS CM detects the signal that a engine speed is below the specified value, it illuminates the power steering malfunction indicator light

POSSIBLE CAUSE	• EPS CM detects the signal that a engine speed is below the specified value • Abnormal engine switch status is detected • PCM malfunction • Instrument cluster malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Using the M-MDS, perform the DTC inspection for the	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)

	instrument cluster. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs detected?		DTC troubleshooting completed, then go to the next step.
		No	Go to the next step.
2	**VERIFY EPS STATUS** • Start the engine. • Turn the steering wheel to the right and left. • Is the assist force generated?	Yes	Go to the Step 3.
		No	Using the M-MDS, perform the tachometer inspection. (See **INSTRUMENT CLUSTER INSPECTION**.) If the tachometer is abnormal, inspect for the PCM malfunction and the related wiring harnesses. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) If the PCM and related wiring harnesses are normal, replace the instrument cluster (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Inspection/replacement completed, then go to the next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC U2300:54/U2300:55/U2300:56

DTC U2300:54, U2300:55, U2300:56	EPS configuration
DETECTION CONDITION	• EPS CM detects configuration data not read or data error
FAIL-SAFE FUNCTION	• U2300:54 ▪ Control enabled ▪ Power steering malfunction indicator light: Not illuminated • U2300:55 ▪ Control enabled ▪ Power steering malfunction indicator light: Illuminated • U2300:56 ▪ Control enabled ▪ Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• Module configuration procedure is not done properly • Correct data cannot be received from instrument cluster
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection	Action
1	**RECORD THE CAR CONFIGURATION DATA**	Go to the next step.

	Switch the ignition OFF. • Switch the ignition ON (engine off or on), and maintain this condition for **approx. 1 min**. • Switch the ignition OFF, and maintain this condition for **approx. 3 s**. • Switch the ignition ON (engine off or on).		
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 5.
3	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition OFF. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) After repairing the instrument cluster, perform the “INSTRUMENT CLUSTER CONFIGURATION”, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION)**.) (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD**	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)

	DIAGNOSIS.)	No	DTC troubleshooting completed.

DETECTION CONDITION	• The on-board diagnostic function detects control module malfunction

FAIL-SAFE FUNCTION	• U3000:16, U3000:1C, U3000:28, C3000:41, U3000:47, U3000:49, U3000:61, U3000:73, U3000:96
	  • Control disabled
	  • Power steering malfunction indicator light: Illuminated
	• U3000:46
	  • Control is maintained in fail mode
	  • Power steering malfunction indicator light: Not illuminated

POSSIBLE CAUSE	• Internal malfunction of EPS CM
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DTC** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Verify if any DTCs are displayed.	Yes	Replace the EPS CM. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.

	(See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present?		
2	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC U3000:4B

WARNING:

- The EPS CM temperature could become high and may cause a burn. Before performing the work, verify that the steering column is cold.

DTC U3000:4B	**EPS CM**
DETECTION CONDITION	• Abnormal temperature in EPS CM is detected
FAIL-SAFE FUNCTION	• Control is maintained in fail mode • Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• Due to the continuously static steering, being turned to the lock end, or other causes, the internal temperature of the EPS CM is more than the specified value. • EPS CM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**SWITCH THE IGNITION TO OFF AND ALLOW EPS CONTROL MODULE TO COOL DOWN.**		
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM.

	• Is the same DTC present? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)		(See **STEERING WHEEL AND COLUMN REMOVAL / INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC U3003:16

DTC U3003:16	**Battery power supply**
DETECTION CONDITION	• Voltage of 8 V or less detected by EPS CM internal ignition voltage observation.
FAIL-SAFE FUNCTION	• Control is maintained by gradually decreasing the motor control current ▪ However, control is inhibited if the power supply voltage is the specified value of less. • Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Battery and/or generator malfunction • EPS 60A fuse malfunction • Malfunction in the wiring harness between EPS CM terminal 1B and battery • Open circuit in the wiring harness between EPS CM terminal 1A and body ground
SYSTEM WIRING DIAGRAM	

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BATTERY VOLTAGE** • Is the battery terminal voltage normal? (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Make sure that battery terminal connection is okay. Go to the next step.
		No	Charge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**INSPECT BATTERY GRAVITY** • Is the battery specific gravity as specified? (See **BATTERY INSPECTION**	Yes	Go to the next step.
		No	Replace the battery, then go to Step 6. **BATTERY REMOVAL/INSTALLATION**

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].)		(See **[SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT CHARGING SYSTEM** • Are the generator and drive belt tension normal? (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. Go to step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**INSPECT FUSE CONDITION** • Is the fuse (EPS 60A) normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 7.
5	**INSPECT EPS CM POWER SUPPLY CIRCUIT FOR OPEN OR SHORT CIRCUIT** • Start the engine. • Measure the voltage between following EPS CM terminal (wiring harness-side) and ground. ▪ EPS CM: 1B—ground • Is the voltage **8 V or more**?	Yes	Go to the next Step.
		No	Repair or replace the wiring harness (including fuse) between the EPS CM and ground, then go to Step 6.
6	**INSPECT EPS CM GROUND CIRCUIT FOR POOR GROUND OR OPEN CIRCUIT** • Switch the ignition OFF. • Inspect for continuity between EPS control module terminal 1A and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between terminal 1A and body ground, then go to the next step.
7	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory.	Yes	Replace the steering column, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

	(See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present?	No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Steering

DTC U3003:17

DTC U3003:17	**Battery power supply**
DETECTION CONDITION	• Voltage of 17.5 V or more detected by EPS CM internal battery voltage observation.
FAIL-SAFE FUNCTION	• Control disabled • Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Generator malfunction • Poor connection at connectors
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CHARGING SYSTEM** • Are the generator and drive belt tension normal? (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. Go to step 3. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**INSPECT WHETHER MALFUNCTION IS CAUSED BY POOR CONNECTION OF EPS CM OR PIN**	Yes	Go to the next step.

	DEFORMATION • Switch the ignition OFF. • Inspect connection of the EPS CM and wiring harness. • Disconnect the EPS CM connector. • Inspect whether malfunction is caused by bent or poorly connected EPS CM connector pin. • Are the connector connection, connector pins, and wiring harness normal?	No	Repair or replace the faulty connector wiring harness, then go to the next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the same DTC present?	Yes	Replace the EPS CM, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	DTC troubleshooting completed.

ELECTRIC POWER STEERING (EPS) SYSTEM WIRING DIAGRAM

ELECTRIC POWER STEERING (EPS) SYSTEM WIRING DIAGRAM

2014 - Mazda3 - Steering

FOREWORD

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

Refer to MULTIPLEX COMMUNICATION SYSTEM. (See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:

1. Verify that a DTC has been recorded in the memory using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)

2. Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.

3. Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.

4. Inspect the female terminals for poor connection.

2014 - Mazda3 - Steering

PRECAUTION

Intermittent Concern Troubleshooting

Vibration method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the following steps.

NOTE:

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Inspect the following:
    - Connectors not fully seated.
    - Wiring harnesses not having full play.
    - Wires laying across brackets or moving parts.
    - Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels and other panels are the major areas to be inspected.

Inspection method for switch and/or sensor connectors or wires

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

NOTE:

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.

- If the PID value is unstable, inspect for poor connection.

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

NOTE:

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or a malfunction occurs, inspect for poor connection and/or poorly mounted sensor.

Connector terminal inspection method

1. Inspect the connection of each female terminal.
2. Insert the male terminal to the female terminal and inspect the female terminal for looseness.

PRECAUTION

2014 - Mazda3 - Steering

SYMPTOM TROUBLESHOOTING

- Verify the symptom, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Power steering malfunction indicator light does not illuminate with ignition switched ON
2	Power steering malfunction indicator light illuminates/flashes even though engine has started
3	Power assist differs between right and left turns

2014 - Mazda3 - Steering

NO.1 POWER STEERING MALFUNCTION INDICATOR LIGHT DOES NOT ILLUMINATE WITH IGNITION SWITCHED ON

1	**Power steering malfunction indicator light does not illuminate with ignition switched ON.**

TROUBLESHOOTING HINTS

- Power steering malfunction indicator light circuit malfunction in the instrument cluster.
- An error originates from the EPS CM, and the off signal is generated.
    - EPS CM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn on the power steering malfunction indicator light at instrument cluster using the “WL+IL” of the M-MDS active command modes function. • Does the power steering malfunction indicator light turn on?	Yes	EPS CM malfunction. Replace the EPS CM. (See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)
		No	Perform the instrument cluster configuration, then repeat the inspection from Step 1. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Steering

NO.2 POWER STEERING MALFUNCTION INDICATOR LIGHT ILLUMINATES/FLASES EVEN THOUGH ENGINE HAS STARTED

2	**Power steering malfunction indicator light illuminates/flashes even though engine has started.**

TROUBLESHOOTING HINTS

- EPS system malfunction.
  - Wiring harness malfunction
  - Connector condition malfunction
  - Torque sensor malfunction
  - Resolver sensor malfunction

    NOTE:

    - If the EPS CM detects an internal circuit malfunction in the resolver sensor, the power steering malfunction indicator light flashes.
  - EPS motor malfunction
  - Fuse malfunction
  - EPS CM malfunction
- EPS CM detects an EPS system malfunction even though the EPS system is normal.
- CAN communication line and/or CAN signal malfunction.
  - Vehicle speed signal error
  - Engine speed signal error
  - CAN wiring harness malfunction
- EPS warning light circuit malfunction in the instrument cluster.
- CAN wiring harness malfunction.
  - Malfunction in wiring harness between EPS CM and instrument cluster
- Instrument cluster configuration procedure was not completed properly.

Diagnostic procedure

NO.2 POWER STEERING MALFUNCTION INDICATOR LIGHT ILLUMINATES/FLASES EVEN THOUGH ENGINE HAS STARTED

STEP	INSPECTION		ACTION
1	• Switch the ignition to off and maintain this condition **approx. 1 minute**. • Switch the ignition ON (engine on). • Perform the DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	• Turn off the EPS warning light at instrument cluster using the “WL+IL” of the M-MDS active command modes function. • Does the EPS warning light turn off?	Yes	EPS CM malfunction. Replace the EPS CM. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Perform the instrument cluster configuration, then repeat the inspection from Step 1. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Steering

NO.3 POWER ASSIST DIFFERS BETWEEN RIGHT AND LEFT TURNS

3	**Power assist differs between right and left turns.**

TROUBLESHOOTING HINTS

- Steering gear and linkage malfunction.
- EPS CM malfunction.
- Poor connection of EPS CM connector, terminal damage.
- The steering wheel angle neutral position automatic learning function has not been operated.

NOTE:

- If the right and left wheels are rotated freely at the same speed with the vehicle jacked up, the EPS CM may learn the steering angle incorrectly.
- The steering angle learned by the EPS CM is cleared when **1 min. or more** has elapsed after the ignition was switched off.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Have DTCs been recorded in the memory?	Yes	Perform inspection using the appropriate DTC.
		No	Go to the next step.
2	• Switch the ignition to off and maintain this condition **1 min. or more**. • Switch the ignition ON (engine on). • Drive **10 m {33 ft} or above** in a straight line at **more than 10 km/h {6.2 mph}**. • Is there recurrence of malfunction?	Yes	Go to the next step.
		No	Temporary error occurred while learning steering wheel angle neutral position. There is not malfunction in the EPS system.
3	• Inspect the connection of the EPS CM connector.	Yes	Replace the steering gear and linkage.

	• Disconnect the EPS CM connector. • Inspect both the EPS CM and wiring harness-side connector for poor connection (such as damage/pulled-out pins, corrosion). • Are all the pins normal?		(See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)
		No	**If poor connection of EPS CM connector:** • Securely connect the EPS CM connector. **If the EPS CM side connector is wrong:** • Replace the EPS CM. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector. • Recheck malfunction symptoms, then replace the steering gear and linkage. (See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Steering

GENERAL PROCEDURES (STEERING)

WARNING:

- Always inspect the steering component carefully for any shock or impact which may have occurred during a collision or servicing operation. If a damaged part or a part suspected of being damaged is used, it could result in an unexpected accident due to the steering mechanism being inoperative. Always replace the damaged part or part suspected of being damaged.
- If the steering mechanism is turned from lock to lock continuously or the steering rack terminal limit is reached repeatedly, such high-load steering action increases the temperature of the steering column (to approx. 85 °C {185°F}), causing severe burns. Be careful when handling the steering column.
- If the steering column is dropped, the EPS CM could be damaged internally causing the steering mechanism to become inoperative, which could result in an unexpected accident. Always replace the steering column if it has been subjected to an impact.

CAUTION:

- If the steering column is stored in a humid place, the EPS system may not operate properly when installed to the vehicle. Store the steering column in a suitable place.
- Be careful when handling the steering column because it weighs approximately 10 kg {22 lb} and it could fall off and be damaged while servicing.
- If the intermediate shaft is connected to the steering gear (pinion) before installing the steering column to the dashboard member, the weight of the steering column could cause damage to the intermediate shaft slider/bush/yoke. Always follow the procedure in the Workshop Manual.
- The universal joint could be damaged if subjected to an impact when the intermediate shaft (pinion) is disconnected. Perform the servicing carefully avoiding impact when disconnecting the intermediate shaft from the steering gear (pinion).
- Do not release the lock of the adjusting lever when handling the steering column unless it is securely installed to the dashboard member. If the adjusting lever is unlocked with the steering column not securely installed, the steering column and other parts could be damaged.
- A new steering column is shipped in a pre-set condition. Maintain this condition until the steering column is completely installed to the dashboard member so as to avoid damage during transportation and installation.
- When removing/installing the steering column, keep the wiring harness away from the steering column installation area so as to prevent the steering column from being caught in the wiring harness and damaged.

NOTE:

- If the vehicle is driven in a straight line at a vehicle speed of approx. **10 km/h {6.2**

mph} or more, the EPS CM detects the steering wheel straight ahead position automatically. Until the self-learning of the steering wheel straight ahead position is finished, the EPS CM performs assist control based on the steering angle recognized when the ignition is switched ON.

- When installing a replacement part, be careful not to rotate the steering shaft until the installation has been completed.
- In order to completely interrupt the EPS system power supply, do not disconnect the battery for **20 s** or more after the ignition switch is turned off.
- Do not replace the steering column (EPS system) with that of another vehicle even if they are the same model.

Wheel And Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts to the following tightening torque in the order shown in the figure.

Tightening Torque

- 108—147 N·m {12—14 kgf·m, 80—108 ft·lbf}

Connectors disconnection

1. Disconnect the negative battery terminal before performing any work that requires handling of connectors. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Suspension Links Removal/Installation

NOTE:

- To prevent the bushings from being twisted or pinched, perform the procedures with no passengers or luggage aboard the vehicle.

1. For the joint sections with rubber bushings, raise the vehicle using a lift and temporarily tighten the installation nuts and bolts. Afterwards, tighten to the specified torque with the wheels on the ground.

EPS Related Parts

CAUTION:

- If the EPS CM configuration is not completed, the EPS will not operate properly. If the steering column component or EPS CM is replaced, always carry out the automatic configuration so that the EPS operates properly.

1. Make sure that there are no DTCs in the EPS memory after working on EPS related parts. If there are any DTCs in the memory, go to the applicable DTC diagnostic procedure. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)

2014 - Mazda3 - Steering

STEERING LOCATION INDEX

1	Steering wheel and column (See **STEERING WHEEL AND COLUMN INSPECTION**.) (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.) (See **STEERING SHAFT INSPECTION**.)
2	EPS CM, EPS motor (See **EPS CONTROL MODULE INSPECTION**.)
3	Intermediate shaft (See **INTERMEDIATE SHAFT REMOVAL/INSTALLATION**.) (See **STEERING SHAFT INSPECTION**.)
4	Steering gear and linkage (See **TIE-ROD END REPLACEMENT**.)

(See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)

(See **STEERING GEAR AND LINKAGE INSPECTION**.)

(See **STEERING GEAR AND LINKAGE ASSEMBLY**.)

2014 - Mazda3 - Steering

ELECTRIC POWER STEERING (EPS) SYSTEM WIRING DIAGRAM

ELECTRIC POWER STEERING (EPS) SYSTEM WIRING DIAGRAM

2014 - Mazda3 - Steering

STEERING WHEEL AND COLUMN INSPECTION

Play inspection

1. With the wheels in the straight-ahead position, start the engine.

2. Turn the steering wheel to the left and right gently, then verify that the steering wheel play is within the specification.

Steering wheel play

- 0—30 mm {0—1.1 in}

Looseness, Excessive Play Inspection

1. Inspect the steering wheel for looseness or excessive play in the axial direction of the shaft and four locations around the steering wheel.

- If there is any malfunction, inspect the following, and repair or replace the applicable part.
    - Column bearing wear
    - Looseness of the steering wheel installation part
    - Looseness of the column installation area
    - Excessive play in the intermediate shaft joint
    - Excessive play in the steering gear

Steering Force Inspection

1. Verify that the equipped tire size and tire air pressure is as specified.

2. With the vehicle on a hard, level surface, put the wheels in the straight-ahead position.

3. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

WARNING:

- Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Start the engine and idle it.

5. Verify that the power steering malfunction indicator light is not illuminated or flashing.

6. Inspect the steering torque using a torque wrench.

- If it exceeds the reference value, inspect the steering gear and linkage. (See **STEERING GEAR AND LINKAGE INSPECTION**.)

  Steering wheel steering force (reference)

- 7.8 N·m {80 kgf·cm, 69 in·lbf} or less

NOTE:

- Comparing another vehicle of the same model under the same conditions is an acceptable inspection method.
- The steering torque varies with the conditions indicated below.
  - Road conditions: Such as dry, wet, asphalt, or concrete
  - Tire condition: Such as brand, wear, and tire pressure

STEERING WHEEL AND COLUMN INSPECTION

2014 - Mazda3 - Steering

STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION

WARNING:

- Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
- The steering column (EPS motor) temperature increases directly after continuous turning of the steering mechanism which could cause burns if it is touched. Before performing any servicing, verify that the steering column has cooled off.

CAUTION:

- If the EPS CM configuration is not completed, the EPS will not operate properly. If the EPS CM is replaced, always use the automatic configuration function so that the EPS operation conditions are correct.
- If the EPS column is dropped it could result in internal damage to the EPS CM, therefore be careful not to drop it. Replace the EPS CM if it is subjected to an impact.

NOTE:

- When the ignition is switched ON or the engine is started after the EPS CM has been replaced, the EPS CM reads data from the instrument cluster via CAN communication to perform automatic configuration.
- The EPS CM prior to replacement stores the vehicle specification information.
- A new EPS CM does not store any vehicle specification information.

1. Remove the upper panel. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
2. Remove the rear console. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
3. Remove the shift lever knob (MTX). (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
4. Remove the selector lever knob (ATX). (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
5. Remove the shift panel. (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
6. Remove the front console box. (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
7. Remove the CD player (with CD player). (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
8. Remove the side wall. (See **SIDE WALL REMOVAL/INSTALLATION**.)
9. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
10. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
11. Remove the front console. (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
12. Remove the driver-side front scuff plate. (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
13. Remove the driver-side front side trim. (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
14. Remove the hood release lever. (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)
15. Remove the fuel-filler lid opener lever. (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)
16. Remove the lower panel. (See **LOWER PANEL REMOVAL/INSTALLATION**.)
17. Remove the knee bolster. (See **KNEE BOLSTER REMOVAL/INSTALLATION**.)
18. Remove the AudioPilot®2 microphone (with Bose®). (See **AudioPilot®2 MICROPHONE REMOVAL/INSTALLATION**.)
19. Detach the harness clips shown in the figure.

20. Remove in the order indicated in the table.

21. Install in the reverse order of removal.

22. If the EPS CM is replaced, perform the following procedure.

    a. After installation, switch the ignition ON or start the engine, and maintain this condition for **approx. 1 min** to allow the EPS CM automatic configuration to be performed.

    b. Switch the ignition OFF, and maintain this condition for **approx. 3 s**

    c. Switch the ignition ON (engine on or off) to allow the EPS CM automatic configuration to be performed.

    d. Clear the DTC from the memory. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)

1	Driver-side air bag module (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
2	Lockbolt
3	Steering wheel (See **Steering Wheel Removal Note**.) (See **Steering Wheel Installation Note**.)

4	Column cover (See **COLUMN COVER REMOVAL/INSTALLATION**.)
5	Clock spring (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
6	Light switch, wiper and washer switch (See **LIGHT SWITCH REMOVAL/INSTALLATION**.) (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)
7	Start stop unit (See **START STOP UNIT REMOVAL/INSTALLATION**.)
8	Joint cover
9	Joint bolt
10	Steering column component (See **Steering Column Component Removal Note**.) (See **Steering Column Component Installation Note**.)

N·m {kgf·m, ft·lbf}

1	Harness bracket

2*	Bracket (MTX vehicles) (See **Bracket Installation Note**.)
3	Intermediate shaft (See **INTERMEDIATE SHAFT REMOVAL/INSTALLATION**.)
4	Steering column

* **Except U.S.A. and Canada**

Steering Wheel Removal Note

CAUTION:

- Do not try to remove the steering wheel by hitting the shaft with a hammer. The steering column will be damaged.

1. Set the vehicle wheels in the straight-ahead position.
2. Remove the steering wheel using any commercially available puller.

Steering Column Component Removal Note

CAUTION:

- Always lock the adjusting lever to prevent damage to the steering column. In addition, do not unlock the adjusting lever until the steering column installation is completed.
- If the steering column is removed, remove it according to the procedure to prevent damage to intermediate shaft that could result if the steering column is removed in the incorrect order.

1. Lock the adjusting lever.
2. Place alignment marks on the steering gear (pinion) and the intermediate shaft as shown in the figure.

3. Remove the bolt, disconnect the intermediate shaft from the steering gear (pinion shaft).
4. Remove the nut, and then remove the steering column component from the dashboard member.

Bracket Installation Note

1. Insert the bracket bolt into the steering column and install the projecting part of the bracket to the installation area of the steering column.

2. Verify that the projection on the steering column is inserted into the hole in the bracket as shown in the figure and tighten the nut to the specified torque.

Steering Column Component Installation Note

CAUTION:

- If the steering column is installed, install it according to the procedure to prevent damage to intermediate shaft that could result if the steering column is installed in the incorrect order.
- Do not unlock the adjusting lever until the steering column installation is completed to prevent damage to the steering column.

1. Temporarily install the steering column component to the dashboard member using nuts A and B.

2. Tilt the steering column component towards the temporarily installed nut B and temporarily install the steering column component to the instrument panel member using nut A

3. Tighten the nuts in the order of nut A and nut B.

4. Align the alignment marks on the steering column and the steering gear (pinion), which were placed before removing the intermediate shaft, and install the intermediate shaft.

5. Tighten a new joint bolt.

NOTE:

- Verify that joint bolt is installed to the groove of the steering gear (pinion).

Steering Wheel Installation Note

1. Set the vehicle wheels in the straight-ahead position, and install the steering wheel using a new lockbolt.

2014 - Mazda3 - Steering

INTERMEDIATE SHAFT REMOVAL/INSTALLATION

WARNING:

- The steering column (EPS motor) temperature increases directly after continuous turning of the steering mechanism which could cause burns if it is touched. Before performing any servicing, verify that the steering column has cooled off.

1. Rotate the steering wheel until the joint bolt is in a position in which it can be removed.

CAUTION:

- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the intermediate shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

2. Lock the adjusting lever.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

1	Joint cover
2	Intermediate shaft (See **Intermediate Shaft Removal Note**.) (See **Intermediate Shaft Installation Note**.)

Intermediate Shaft Removal Note

1. Place an alignment mark across the break between the steering column and the yoke for the

intermediate shaft as shown in the figure.

2. Place alignment marks on the steering gear (pinion) and the intermediate shaft as shown in the figure.

3. Remove joint bolt A, then joint bolt B.

4. Remove the intermediate shaft.

Intermediate Shaft Installation Note

1. Place alignment marks on the new intermediate shaft in the same positions as the removed intermediate shaft.

2. Align the alignment marks on the steering column and the steering gear (pinion), which were placed before removing the intermediate shaft, and install the intermediate shaft.

NOTE:

- Install joint bolt B, then joint bolt A.

3. Verify that the joint bolt B flange is seated in the specified position.

4. Verify that joint bolt A is installed to the groove of the steering gear (pinion).

2014 - Mazda3 - Steering

STEERING SHAFT INSPECTION

1. Inspect the steering column for excessive play and damage.

2. Verify that the clearance between the projection on the steering column shown in the figure and the bracket is less than **2.0 mm {0.079 in}**.

- If the clearance between the projection and bracket is **2.0 mm {0.079 in}** or more, replace the steering column component.

NOTE:

- If the clearance between the projection and bracket is **2.0 mm {0.079 in}** or more, the impact absorbing mechanism of the steering column will operate, therefore it is necessary to replace the steering column component.

3. Inspect the tilt/telescope mechanism operation for the following:

a. The adjusting lever moves smoothly from the lock to the unlock position.

b. The steering shaft is fixed firmly when the adjusting lever is locked.

- If there is any malfunction, replace the steering column.

2014 - Mazda3 - Steering

TIE-ROD END REPLACEMENT

1. Remove the snap pin.

2. Loosen the tie-rod end locknut.
3. Detach the tie-rod end from the steering knuckle using the **SST**.

4. Remove the tie-rod end locknut.
5. Place alignment marks as shown in the figure for proper installation.

6. Remove the tie-rod end.

7. Align the alignment marks made before removing the tie-rod end, and then install a new tie-rod end to the tie rod.

NOTE:

- "R" is inscribed on the right side of the tie-rod end and "L" is inscribed on the left side of the tie-rod end. Verify if the part is for the left or right side before installation because the left and right parts of the tie-rod end have different shapes.

- If there are no alignment marks, go to the following procedure.

8. Adjust dimension A shown in the figure to the standard, and assemble.

Standard Dimension A

- 8.4—21.4 mm {0.34—0.84 in}

9. Install the tie-rod end to the steering knuckle.

10. Install a new snap pin.

11. After installation, inspect the front wheel alignment and adjust it if necessary. (See **FRONT WHEEL ALIGNMENT**.)

2014 - Mazda3 - Steering

STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION

CAUTION:

- Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.
- Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.

1. Remove the joint cover. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

2. Disconnect the intermediate shaft from the steering gear and linkage. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

3. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)

4. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

5. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

6. Remove the splash shield. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

7. Remove the front crossmember component. (See **FRONT CROSSMEMBER REMOVAL/INSTALLATION**.)

8. Remove in the order indicated in the table.

9. Install in the reverse order of removal.

10. After installation, inspect the front wheel alignment. (See **FRONT WHEEL ALIGNMENT**.)

1	Steering gear and linkage installation bolt
2	Steering gear and linkage (See **Steering Gear and Linkage Removal Note**.)

Steering Gear and Linkage Removal Note

1. Remove the steering gear and linkage installation bolts, move the steering gear and linkage in the direction and order of the arrows shown in the figure, and then remove it.

2014 - Mazda3 - Steering

STEERING GEAR AND LINKAGE INSPECTION

1. Remove the steering gear and linkage. (See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)

2. Remove the tie-rod end and boot. (See **STEERING GEAR AND LINKAGE DISASSEMBLY**.)

3. Measure the rotation torque of the pinion shaft using a crescent wrench and pull scale. (speed measurement reference **10—15 rpm**)

a. Install the crescent wrench to the steering gear.

b. Measure the length from the pinion shaft center to the crescent wrench end (application point of pull scale) as shown in the figure. This is dimension A.

c. The rotation torque of the pinion shaft can be calculated using the following formula Measured value using pull scale (N {kgf, lbf}) = rotation torque of the pinion shaft (N·m {kgf·cm, in·lbf})/length A (m {cm, in})

Pinion shaft rotation torque (center of rack ± 180°)

- 1.2—1.8 N·m {13—18 kgf·cm, 11—15 in·lbf} [Pull scale reading: 1.2—1.8 N·m {13—18 kgf·cm, 11—15 in·lbf}/A (m {cm, in})]
- If not within the specification, replace the steering gear. (See **STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Steering

STEERING GEAR AND LINKAGE DISASSEMBLY

CAUTION:

- To prevent damage to the steering gear, secure it to the vise using a copper plate or clean cloth.

1. Disassemble in the order indicated in the figure.

1	Dust cover
2	Tie-rod end (See **Tie-rod End Disassembly Note**.)
3	Locknut
4	Boot clamp
5	Boot band (See **Boot Band Disassembly Note** .)
6	Boot
7	Tie rod (See **Tie Rod Disassembly Note**.)
8	Mounting rubber (See **Mounting Rubber Disassembly Note**.)
9	Steering gear

Tie-rod End Disassembly Note

1. Place alignment marks as shown in the figure for proper installation.

2. Remove the tie-rod end.

Boot Band Disassembly Note

1. Insert a flathead screwdriver into the boot band as shown in the figure, then press the caulked area outward to remove the boot band.

Tie Rod Disassembly Note

1. Lock the steering rack end (pinion gear side) against rotation with a suitable wrench and remove the tie rod using another one.

Mounting Rubber Disassembly Note

1. Remove the mounting rubber from the gear housing using the **SSTs** and a press.

2014 - Mazda3 - Steering

TIE-ROD END INSPECTION

1. Inspect the tie-rod end for damage and the boot for cracks.
    - If there is any malfunction, replace the tie-rod end.
2. Inspect for excessive play.
    - If there is any malfunction, replace the tie-rod end.
3. Rotate the tie-rod end five times.
4. Install two nuts to the ball joint and measure the tie-rod end rotational torque using a torque wrench.

- If not within the specification, replace the tie-rod end.

  Tie-rod end rotational torque

- 0.6—3.0 N·m {6.2—30 kgf·cm, 5.4—26 in·lbf}

2014 - Mazda3 - Steering

TIE ROD INSPECTION

1. Inspect for bending and damage.
    - If there is any malfunction, replace the tie rod.
2. Inspect for excessive play.
    - If there is any malfunction, replace the tie rod.
3. Swing the tie rod five times.
4. Measure the swing torque of the tie rod using a pull scale.

- If not within the specification, replace the tie rod.

Tie rod swing torque

- 0.4—4.0 N·m {4.1—40 kgf·cm, 3.6—35 in·lbf} [Pull scale reading: 2.6—26.0 N {0.3—2.6 kgf, 0.6—5.8 lbf}]

2014 - Mazda3 - Steering

STEERING GEAR AND LINKAGE ASSEMBLY

CAUTION:

- To prevent damage to the steering gear, secure it to the vise using a copper plate or clean cloth.

1. Assemble in the order shown in the figure.

1	Steering gear
2	Mounting rubber (See **Mounting Rubber Assembly Note**.)
3	Tie rod (See **Tie Rod Assembly Note** .)
4	Boot
5	Boot band (See **Boot Band Assembly Note** .)
6	Boot clamp
7	Locknut

8	Tie-rod end (See **Tie-rod End Assembly Note**.)
9	Dust cover

Mounting Rubber Assembly Note

1. Apply soapy water to the rubber part of the mounting rubber.

2. Press fit the ear portion of the mounting rubber (lower side) using the SSTs until it projects from the gear housing as shown in the figure.

NOTE:

- Press fit the ear portion of the mounting rubber (upper side) until it partially enters the gear housing.

3. Reverse the gear housing, then press fit the mounting rubber using the SSTs and the press until the mounting rubber ear portion (upper side) contacts the gear housing.

4. Verify that both mounting rubber ears are correctly assembled with no gaps between them and the gear housing as shown in the figure.

- If there are gaps, readjust their positions using the **SSTs** and the press.

Tie Rod Assembly Note

1. Lock the steering rack end (pinion gear side) against rotation with a suitable wrench and install the tie rod using another one.

2. Combine the **SST** with the torque wrench, then measure A and L as shown in the figure.

- A: Length from the center of the tie rod to the grip.
- L: Length of the torque wrench.

3. Recalculate the torque by using torque formulas, then tighten the tie rod using the **SST**.

CAUTION:

- When installing a torque wrench to the SST (49 E032 308), install it perpendicular to the SST as shown in the figure. If installed incorrectly, the SST could separate from the tie rod, which could cause damage to the tie rod.

  Tightening Torque

- 69—98 N·m {7.1—9.9 kgf·m, 51—72 ft·lbf}

Torque formula

Torque unit	Formula
N·m	N·m × [L/A]
kgf·m	kgf·m × [L/A]
ft·lbf	ft·lbf × [L/A]

Boot Band Assembly Note

1. Assemble the boot band to the boot.
2. Crimp the boot band using the **SST**.

3. Verify that the crimping clearance A is within the specification.
   - If crimping clearance A exceeds the specification, reduce **SST** clearance, and crimp the boot band again.
   - If crimping clearance A is less than the specification, increase **SST** clearance, and crimp a new boot band.

     Standard clearance A
   - 2.5—3.0 mm {0.10—0.11 in}
4. Rotate the boot by hand and verify that it is securely installed to the boot band.

Tie-rod End Assembly Note

1. Align the alignment marks made before removal and assemble the tie-rod end to the tie rod.

NOTE:

- "R" is inscribed on the right side of the tie-rod end and "L" is inscribed on the left side of the tie-rod end. Verify if the part is for the left or right side before installation because the left and right parts of the tie-rod end have different shapes.

- If there are no alignment marks, go to the next step.

2. Adjust dimension A shown in the figure to the standard, then assemble the tie-rod end.

Standard Dimension A

- 8.4—21.4 mm {0.34—0.84 in}

2014 - Mazda3 - Steering

EPS CONTROL MODULE INSPECTION

1. Remove the upper panel. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

2. Remove the rear console. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. Remove the shift lever knob (MTX). (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

4. Remove the selector lever knob (ATX). (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

5. Remove the shift panel. (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

6. Remove the front console box. (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

7. Remove the CD player (with CD player). (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

8. Remove the side wall. (See **SIDE WALL REMOVAL/INSTALLATION**.)

9. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

10. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

11. Remove the front console. (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

12. Remove the driver-side front scuff plate. (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

13. Remove the driver-side front side trim. (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

14. Remove the hood release lever. (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)

15. Remove the fuel-filler lid opener lever. (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)

16. Remove the lower panel. (See **LOWER PANEL REMOVAL/INSTALLATION**.)

17. Attach the tester lead to the underside of the EPS CM connector and inspect the voltage according to the terminal voltage table (reference).

Terminal Voltage Table (Reference)

EPS CONTROL MODULE HARNESS-SIDE CONNECTOR

Terminal	Signal name	Connected to	Measured item	Measured terminal (measurement condition)	Voltage (V)	Inspection item(s)
1A	Ground	Ground point	Voltage	Under any condition	1 or less	• Wiring harness (1A—ground point)
1B	Battery power supply	Battery	Voltage	Under any condition	B+	• Wiring harness (1B—battery) • Fuse (EPS 60A)
2A	Ignition power supply	IG1 relay	Voltage	Ignition ON (engine off or on)	B+	• Wiring harness (2A—IG1 relay—battery) • Fuse (SRS1 7.5A)
				Ignition OFF (LOCK)	1 or less	
2B	CAN_H	—	Perform DTC inspection			—
2C	—	—	—	—	—	—
2D	CAN_L	—	Perform DTC inspection			—

2014 - Mazda3 - Steering

STEERING TECHNICAL DATA

Item	Specification
Steering wheel play	0—30 mm {0—1.1 in}
Steering wheel steering force (reference)	7.8 N·m {80 kgf·cm, 69 in·lbf} or less
Pinion shaft rotation torque (center of rack ± 180°)	1.2—1.8 N·m {13—18 kgf·cm, 11—15 in·lbf} [Pull scale reading: 1.2—1.8 N·m {13—18 kgf·cm, 11—15 in·lbf}/A (m {cm, in})] A: Length from the pinion shaft center to application point of pull scale
Tie-rod end rotational torque	0.6—3.0 N·m {6.2—30 kgf·cm, 5.4—26 in·lbf}
Tie rod swing torque	0.4—4.0 N·m {4.1—40 kgf·cm, 3.6—35 in·lbf} [Pull scale reading: 2.6—26 N {0.3—2.6 kgf, 0.6—5.8 lbf}]

FOREWORD [FULL-AUTO AIR CONDITIONER]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
A/C OPERATION CHECK MODE INSPECTION
USE M-MDS A/C OPERATION CHECK MODE FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - HVAC

FLOWCHART [FULL-AUTO AIR CONDITIONER]

- Use the following flowchart to verify the cause of the problem.

NOTE:

- When inspecting past malfunction codes, inspect only the DTCs that were indicated before beginning the inspection. A mis-diagnosis could occur as a result of new DTCs being added while performing an inspection by disconnecting related parts or connectors.
- When DTCs of the present malfunction are no longer output after present or past malfunctions or both have been repaired, always clear the past malfunction from memory to prevent repair of malfunctions that have already been repaired.

FLOWCHART [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

DTC DISPLAY [FULL-AUTO AIR CONDITIONER]

NOTE:

- If power from the battery is interrupted, the climate control unit will go into a non-configured state because the memory for the configuration information is erased. If the ignition is switched ON (engine off) at this time, DTC U2300:55 is detected.
- Normally, the configuration is re-performed within **6 s** after the ignition is switched ON (engine off).
- After performing the configuration, DTC U2300:55 will be cleared if the ignition is switched ON (engine off) after the ignition is switched off.

CMDTC Self Test

1. Switch the ignition off.
2. Switch the ignition ON (engine off) and wait for **6 s or more**.
3. Switch the ignition off.
4. Connect the M-MDS to the DLC-2.
5. Expose the solar radiation sensor to natural sunlight.

NOTE:

- If natural sunlight is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates DTC “B1A63:13, B1A64:13”.

6. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
7. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
8. After completion of repairs, clear all DTCs stored in the climate control unit. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.)

ODDTC Self Test

1. Switch the ignition off.

2. Switch the ignition ON (engine off) and wait for **6 s or more**.

3. Switch the ignition off.

4. Connect the M-MDS to the DLC-2.

5. Expose the solar radiation sensor to natural sunlight.

NOTE:

- If natural sunlight is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates DTC “B1A63:13, B1A64:13”.

6. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

a. Select “Self Test”.

b. Select “Modules”.

c. Select “EATC”.

7. Verify the DTC according to the directions on the screen.

- If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

8. After completion of repairs, clear all DTCs stored in the climate control unit. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

CLEARING DTC [FULL-AUTO AIR CONDITIONER]

CMDTC Clearing DTC Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more.**
7. Perform DTC inspection. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.)
8. Verify that no DTCs are displayed.

ODDTC Clearing DTC Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “EATC”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more.**
7. Perform DTC inspection. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.)
8. Verify that no DTCs are displayed.

CLEARING DTC [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

DTC TABLE [FULL-AUTO AIR CONDITIONER]

X: Applicable—: Not applicable

DTC No.	Warning/indicator light	System malfunction location	Fail-safe function	Drive cycle	Self test type*1	Memory function	Page
B1081:71*2	—	Driver-side air mix actuator motor lock	X	—	C	X	(See **DTC B1081:71, B1082:71 [FULL-AUTO AIR CONDITIONER]**.)
B1082:71*2	—	Passenger-side air mix actuator motor lock	X	—	C	X	
B1086:71	—	Airflow mode actuator motor lock	X	—	C	X	(See **DTC B1086:71 [FULL-AUTO AIR CONDITIONER]**.)
B13AA:71*3	—	Air mix actuator motor lock	X	—	C	X	(See **DTC B13AA:71 [FULL-AUTO AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

DTC B1081:71, B1082:71 [FULL-AUTO AIR CONDITIONER]

System malfunction location	• B1081:71: Driver-side air mix actuator motor lock • B1082:71: Passenger-side air mix actuator motor lock
Detection condition	• Air mix actuator motor lock
Fail-safe function	**Malfunction determined when ignition switched ON** • Air mix actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Twenty seconds after the ignition is switched ON, the air mix actuator drive signal is output normally again. Afterwards, motor output is stopped during malfunction determination.
Possible cause	• Connector or terminal malfunction • Air mix actuator malfunction • A/C unit (air mix link and air mix crank) malfunction • Open circuit in wiring harness between climate control unit and air mix actuator • Short to ground in wiring harness between climate control unit and air mix actuator • Climate control unit malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR MIX ACTUATOR CONNECTOR**	Yes	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator. (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIR MIX LINK OPERATION** • Operate the air mix link manually. • Does the air mix link operate smoothly?	Yes	Reconnect the disconnected connectors, then go to the next step.
		No	Replace the air mix link and the air mix crank. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Go to the next step.
4	**INSPECT AIR MIX ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Apply battery positive voltage and connect the ground to the climate control unit terminal 2D and 2B, and then inspect the air mix actuator. (Driver-side) • Apply battery positive voltage and connect the ground to the climate control unit terminal 2F and 2H, and then inspect the air mix actuator. (Passenger-side) • Does the air mix actuator operate?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit or short to ground. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors.	Yes	Repeat the inspection from Step 1.

	• Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1081:71 or B1082:71 output?		If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC B1086:71 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• Airflow mode actuator motor lock
Detection condition	• Airflow mode actuator motor lock
Fail-safe function	**Malfunction determined when ignition switched ON** • Airflow mode actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Nine seconds after the ignition is switched ON, the airflow mode actuator drive signal is output normally again. Afterwards, motor output is stopped during malfunction determination.
Possible cause	• Connector or terminal malfunction • Airflow mode actuator malfunction • A/C unit (airflow mode link and airflow mode crank) malfunction • Open circuit in wiring harness between climate control unit and airflow mode actuator • Short to ground in wiring harness between climate control unit and airflow mode actuator • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the airflow mode actuator connector. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT AIRFLOW MODE ACTUATOR**	Yes	Go to the next step.

	• Inspect the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?		
		No	Replace the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIRFLOW MODE MAIN LINK OPERATION** • Operate the airflow mode main link manually. • Does the airflow mode main link operate smoothly?	Yes	Reconnect the disconnected connector, then go to the next step.
		No	Replace the airflow mode main link, airflow mode sub link, and the airflow mode crank. (See **AIRFLOW MODE MAIN LINK REMOVAL/INSTALLATION**.) (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Go to the next step.
4	**INSPECT AIRFLOW MODE ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Apply battery positive voltage and connect the ground to the climate control unit connector terminals 2K and 2I, and then inspect the airflow mode actuator. • Does the airflow mode actuator operate?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit or short to ground. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR**	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.

	CONDITIONER].) • Is DTC B1086:71 output?		
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

With Single Type Climate Control Unit

System malfunction location	• Airflow mode actuator motor lock
Detection condition	• Airflow mode actuator motor lock
Fail-safe function	**Malfunction determined when ignition switched ON** • Airflow mode actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Nine seconds after the ignition is switched ON, the airflow mode actuator drive signal is output normally again. Afterwards, motor output is stopped during malfunction determination.
Possible cause	• Connector or terminal malfunction • Airflow mode actuator malfunction • A/C unit (airflow mode link and airflow mode crank) malfunction • Open circuit in wiring harness between climate control unit and airflow mode actuator • Short to ground in wiring harness between climate control unit and airflow mode actuator • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the airflow mode actuator connector. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

2	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIRFLOW MODE MAIN LINK OPERATION** • Operate the airflow mode main link manually. • Does the airflow mode main link operate smoothly?	Yes	Reconnect the disconnected connector, then go to the next step.
		No	Replace the airflow mode main link, airflow mode sub link, and the airflow mode crank. (See **AIRFLOW MODE MAIN LINK REMOVAL/INSTALLATION**.) (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Go to the next step.
4	**INSPECT AIRFLOW MODE ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Apply battery positive voltage and connect the ground to the climate control unit connector terminals V and T, and then inspect the airflow mode actuator. • Does the airflow mode actuator operate?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit or short to ground. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs.	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.

	(See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1086:71 output?		
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC B13AA:71 [FULL-AUTO AIR CONDITIONER]

System malfunction location	• Air mix actuator motor lock
Detection condition	• Air mix actuator motor lock
Fail-safe function	**Malfunction determined when ignition switched ON** • Air mix actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Twenty seconds after the ignition is switched ON, the air mix actuator drive signal is output normally again. Afterwards, motor output is stopped during malfunction determination.
Possible cause	• Connector or terminal malfunction • Air mix actuator malfunction • A/C unit (air mix link and air mix crank) malfunction • Open circuit in wiring harness between climate control unit and air mix actuator • Short to ground in wiring harness between climate control unit and air mix actuator • Climate control unit malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR MIX ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection).	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	• Are the connector and terminals normal?		
2	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator. (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIR MIX LINK OPERATION** • Operate the air mix link manually. • Does the air mix link operate smoothly?	Yes	Reconnect the disconnected connector, then go to the next step.
		No	Replace the air mix link and the air mix crank. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Go to the next step.
4	**INSPECT AIR MIX ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Apply battery positive voltage and connect the ground to the climate control unit terminal X and W, and then inspect the air mix actuator. • Does the air mix actuator operate?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit or short to ground. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

	• Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B13AA:71 output?		Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC B13AB:12, B13AB:13 [FULL-AUTO AIR CONDITIONER]

System malfunction location	• B13AB:12: Air mix actuator (potentiometer) circuit short to power supply • B13AB:13: Air mix actuator (potentiometer) circuit open
Detection condition	• Malfunction in wiring harness between air mix actuator and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • Air mix actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Control based on ambient temperature.
Possible cause	• Connector or terminal malfunction • Air mix actuator malfunction • Open circuit in wiring harness between climate control unit and air mix actuator • Short to power supply in wiring harness between climate control unit and air mix actuator • Climate control unit malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR MIX ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
2	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator. (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIR MIX ACTUATOR (POTENTIOMETER) CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal H—air mix actuator terminal E ▪ Climate control unit terminal G—air mix actuator terminal F ▪ Climate control unit terminal E—air mix actuator terminal G • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**INSPECT AIR MIX ACTUATOR (POTENTIOMETER) CIRCUIT FOR SHORT TO POWER SUPPLY** • Connect the negative battery	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix

	cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Climate control unit terminal H ▪ Climate control unit terminal G ▪ Climate control unit terminal E • Is the voltage **0 V**?		actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B13AB:12, B13AB:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT**	Yes	Perform the corresponding DTC inspection.

	• Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?		(See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC B1A61:11, B1A61:13 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• B1A61:11: Passenger compartment temperature sensor circuit short to ground • B1A61:13: Passenger compartment temperature sensor circuit open
Detection condition	• Malfunction in wiring harness between passenger compartment temperature sensor and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • Passenger compartment temperature sensor input value is fixed at the value right before the malfunction. **Malfunction already exists when ignition switched ON** • Passenger compartment temperature sensor input value is fixed at **25 °C {77 °F}.**
Possible cause	• Connector or terminal malfunction • Passenger compartment temperature sensor malfunction • Open circuit in wiring harness between climate control unit and passenger compartment temperature sensor • Short to ground in wiring harness between climate control unit and passenger compartment temperature sensor • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the passenger	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	compartment temperature sensor connector. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
2	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR** • Inspect the passenger compartment temperature sensor. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the passenger compartment temperature sensor. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the passenger compartment temperature sensor connector. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal 1H —passenger	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and passenger compartment temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.

	compartment temperature sensor terminal A ▪ Climate control unit terminal 1J—passenger compartment temperature sensor terminal B • Is there continuity?		
4	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal (wiring harness-side) and body ground: ▪ Climate control unit terminal 1H • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and passenger compartment temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Connect the climate control unit connector, then go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CIRCUIT** • Connect the climate control unit connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY**	Yes	The system is normal at present. Go to the next step.
		No	Go to the next step.

	CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Inspect the voltage at the following climate control unit terminal (wiring harness-side). ▪ Terminal 1H (passenger compartment temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)		
7	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Switch the ignition off. • Disconnect the negative battery cable. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1A61:11 or B1A61:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.)	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

	• Are any other DTCs output?		

With Single Type Climate Control Unit

System malfunction location	• B1A61:11: Passenger compartment temperature sensor circuit short to ground • B1A61:13: Passenger compartment temperature sensor circuit open
Detection condition	• Malfunction in wiring harness between passenger compartment temperature sensor and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • Passenger compartment temperature sensor input value is fixed at the value right before the malfunction. **Malfunction already exists when ignition switched ON** • Passenger compartment temperature sensor input value is fixed at **25 °C {77 °F}.**
Possible cause	• Connector or terminal malfunction • Passenger compartment temperature sensor malfunction • Open circuit in wiring harness between climate control unit and passenger compartment temperature sensor • Short to ground in wiring harness between climate control unit and passenger compartment temperature sensor • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the passenger compartment temperature	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	sensor connector. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
2	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR** • Inspect the passenger compartment temperature sensor. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the passenger compartment temperature sensor. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the passenger compartment temperature sensor connector. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal F—passenger compartment	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and passenger compartment temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.

	temperature sensor terminal A ▪ Climate control unit terminal E—passenger compartment temperature sensor terminal B • Is there continuity?		
4	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal (wiring harness-side) and body ground: ▪ Climate control unit terminal F • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and passenger compartment temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Connect the climate control unit connector, then go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**INSPECT PASSENGER COMPARTMENT TEMPERATURE SENSOR CIRCUIT** • Connect the climate control unit connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	The system is normal at present. Go to the next step.
		No	Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Inspect the voltage at the following climate control unit terminal (wiring harness-side). ▪ Terminal F (passenger compartment temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)		
7	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Switch the ignition off. • Disconnect the negative battery cable. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1A61:11 or B1A61:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.)	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

	Are any other DTCs output?		

2014 - Mazda3 - HVAC

DTC B1A63:12, B1A63:13, B1A64:12, B1A64:13 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• B1A63:12: Solar radiation sensor (RH) circuit short to power supply • B1A63:13: Solar radiation sensor (RH) circuit open • B1A64:12: Solar radiation sensor (LH) circuit short to power supply • B1A64:13: Solar radiation sensor (LH) circuit open
Detection condition	• Malfunction in wiring harness between solar radiation sensor and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • The solar radiation sensor input value is fixed at the value directly before the malfunction only when the valve is **1,450 W/m^2 or more**. **Malfunction already exists when ignition switched ON** • Solar radiation sensor value is fixed at **0 W/m^2**.
Possible cause	• Connector or terminal malfunction • Light amount shone on the solar radiation sensor is insufficient (Circuit is normal) • Solar radiation sensor malfunction • Open circuit in wiring harness between climate control unit and solar radiation sensor • Short to power supply in wiring harness between climate control unit and solar radiation sensor • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SOLAR RADIATION SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the solar radiation sensor connector. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage,	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	pin disconnection). • Are the connector and terminals normal?		
2	**INSPECT SOLAR RADIATION SENSOR** • Inspect the solar radiation sensor. (See **SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the solar radiation sensor. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT SOLAR RADIATION SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the solar radiation sensor connector. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal 1N—solar radiation sensor terminal A ▪ Climate control unit terminal 1M—solar radiation sensor terminal C ▪ Climate control unit terminal 1O—solar radiation sensor terminal B • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and solar radiation sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**INSPECT SOLAR RADIATION SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and solar radiation sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin

	2.5].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Climate control unit terminal 1N ▪ Climate control unit terminal 1M ▪ Climate control unit terminal 1O • Is the voltage **0 V**?		disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1A63:12, B1A63:13, B1A64:12 or B1A64:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed.	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)

	(See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	No	DTC troubleshooting completed.

With Single Type Climate Control Unit

System malfunction location	• B1A63:12: Solar radiation sensor (RH) circuit short to power supply • B1A63:13: Solar radiation sensor (RH) circuit open • B1A64:12: Solar radiation sensor (LH) circuit short to power supply • B1A64:13: Solar radiation sensor (LH) circuit open
Detection condition	• Malfunction in wiring harness between solar radiation sensor and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • The solar radiation sensor input value is fixed at the value directly before the malfunction only when the valve is **1,450 W/m^2 or more**. **Malfunction already exists when ignition switched ON** • Solar radiation sensor value is fixed at **0 W/m^2**.
Possible cause	• Connector or terminal malfunction • Light amount shone on the solar radiation sensor is insufficient (Circuit is normal) • Solar radiation sensor malfunction • Open circuit in wiring harness between climate control unit and solar radiation sensor • Short to power supply in wiring harness between climate control unit and solar radiation sensor • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SOLAR RADIATION SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the solar radiation sensor connector. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection).	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	• Are the connector and terminals normal?		
2	**INSPECT SOLAR RADIATION SENSOR** • Inspect the solar radiation sensor. (See **SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the solar radiation sensor. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT SOLAR RADIATION SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the solar radiation sensor connector. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal H—solar radiation sensor terminal A ▪ Climate control unit terminal M—solar radiation sensor terminal C ▪ Climate control unit terminal K—solar radiation sensor terminal B • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and solar radiation sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**INSPECT SOLAR RADIATION SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and solar radiation sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply.

	Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Climate control unit terminal H ▪ Climate control unit terminal M ▪ Climate control unit terminal K • Is the voltage **0 V**?		• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1A63:12, B1A63:13, B1A64:12 or B1A64:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.)	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

	• Are any other DTCs output?		

2014 - Mazda3 - HVAC

DTC B1B71:11, B1B71:13 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• B1B71:11: Evaporator temperature sensor circuit short to ground • B1B71:13: Evaporator temperature sensor circuit open
Detection condition	• Malfunction in wiring harness between evaporator temperature sensor and climate control unit
Fail-safe function	• A/C output OFF is controlled when the evaporator temperature sensor input value is at **0 °C {32 °F}**.
Possible cause	• Connector or terminal malfunction • Evaporator temperature sensor malfunction • Open circuit in wiring harness between climate control unit and evaporator temperature sensor • Short to ground in wiring harness between climate control unit and evaporator temperature sensor • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT EVAPORATOR TEMPERATURE SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the evaporator temperature sensor connector. (See **EVAPORATOR TEMPERATURE SENSOR**	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	INSPECTION [FULL-AUTO AIR CONDITIONER].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
2	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the evaporator temperature sensor. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Go to the next step.
3	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the evaporator temperature sensor connector. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal 1J—evaporator temperature sensor terminal A ▪ Climate control unit terminal 1L—evaporator temperature sensor terminal B • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and evaporator temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.

4	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal (wiring harness-side) and body ground: ▪ Climate control unit terminal 1L • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and evaporator temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Connect the climate control unit connector, then go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT** • Connect the climate control unit connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Inspect the voltage at the following climate control unit terminal (wiring harness-side). ▪ Terminal 1L (evaporator temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)	Yes	The system is normal at present. Go to the next step.
		No	Go to the next step.

7	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Switch the ignition off. • Disconnect the negative battery cable. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1B71:11 or B1B71:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

With Single Type Climate Control Unit

System malfunction location	• B1B71:11: Evaporator temperature sensor circuit short to ground • B1B71:13: Evaporator temperature sensor circuit open
Detection condition	• Malfunction in wiring harness between evaporator temperature sensor and climate control unit
Fail-safe function	• A/C output OFF is controlled when the evaporator temperature sensor input value is at **0 °C {32 °F}**.
	• Connector or terminal malfunction • Evaporator temperature sensor malfunction • Open circuit in wiring harness between climate control unit and evaporator

Possible cause	temperature sensor • Short to ground in wiring harness between climate control unit and evaporator temperature sensor • Climate control unit malfunction

EVAPORATOR TEMPERATURE SENSOR WIRING HARNESS SIDE CONNECTOR

CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT EVAPORATOR TEMPERATURE SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	2.5].) • Disconnect the evaporator temperature sensor connector. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
2	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the evaporator temperature sensor. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Go to the next step.
3	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the evaporator temperature sensor connector. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal E—evaporator temperature sensor terminal A ▪ Climate control unit	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and evaporator temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.

	terminal J—evaporator temperature sensor terminal B • Is there continuity?		
4	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal (wiring harness-side) and body ground: ▪ Climate control unit terminal J • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and evaporator temperature sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Connect the climate control unit connector, then go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT** • Connect the climate control unit connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Inspect the voltage at the following climate control unit terminal (wiring harness-side).	Yes	The system is normal at present. Go to the next step.
		No	Go to the next step.

	▪ Terminal J (evaporator temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)		
7	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Switch the ignition off. • Disconnect the negative battery cable. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1B71:11 or B1B71:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC B1C1A:11, B1C1A:13, B1C1B:11, B1C1B:13 [FULL-AUTO AIR CONDITIONER]

System malfunction location	• B1C1A:11: Driver-side air mix actuator (potentiometer) circuit short to ground • B1C1A:13: Driver-side air mix actuator (potentiometer) circuit open • B1C1B:11: Passenger-side air mix actuator (potentiometer) circuit short to ground • B1C1B:13: Passenger-side air mix actuator (potentiometer) circuit open
Detection condition	• Malfunction in wiring harness between air mix actuator and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • Air mix actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Control based on ambient temperature.
Possible cause	• Connector or terminal malfunction • Air mix actuator malfunction • Open circuit in wiring harness between climate control unit and air mix actuator • Short to power supply in wiring harness between climate control unit and air mix actuator • Climate control unit malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR MIX ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
2	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator. (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIR MIX ACTUATOR (POTENTIOMETER) CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): **Driver-side** ▪ Climate control unit terminal 1N—air mix actuator terminal G ▪ Climate control unit terminal 2G—air mix actuator terminal F ▪ Climate control unit terminal 1J—	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.

	air mix actuator terminal E **Passenger-side** ▪ Climate control unit terminal 1N—air mix actuator terminal E ▪ Climate control unit terminal 2E—air mix actuator terminal F ▪ Climate control unit terminal 1J—air mix actuator terminal G • Is there continuity?		
4	**INSPECT AIR MIX ACTUATOR (POTENTIOMETER) SHORT TO GROUND** • Inspect for continuity between the following terminals (wiring harness-side) and body ground: **Driver-side** ▪ Climate control unit 2G **Passenger-side** ▪ Climate control unit 2E • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.

	2.5].) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1C1A:11, B1C1A:13, B1C1B:11, B1C1B:13 output?		
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC B1C1C:11, B1C1C:12, B1C1C:13 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• B1C1C:11: Airflow mode actuator (potentiometer) circuit short to ground • B1C1C:13: Airflow mode actuator (potentiometer) circuit open
Detection condition	• Malfunction in wiring harness between airflow mode actuator and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • Airflow mode actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Control based on ambient temperature.
Possible cause	• Connector or terminal malfunction • Airflow mode actuator malfunction • Open circuit in wiring harness between climate control unit and airflow mode actuator • Short to power supply in wiring harness between climate control unit and airflow mode actuator • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the airflow mode actuator connector. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection).	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	• Are the connector and terminals normal?		
2	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the airflow mode actuator connector. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal 1N—airflow mode actuator terminal B ▪ Climate control unit terminal 2A—airflow mode actuator terminal C ▪ Climate control unit terminal 1J—airflow mode actuator terminal A • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal (wiring harness-side) and body ground:	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage,

	▪ Climate control unit terminal 2A • Is there continuity?		or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1C1C:11, B1C1C:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

With Single Type Climate Control Unit

System malfunction location	• B1C1C:12: Airflow mode actuator (potentiometer) circuit short to power supply • B1C1C:13: Airflow mode actuator (potentiometer) circuit open

Detection condition	• Malfunction in wiring harness between airflow mode actuator and climate control unit
Fail-safe function	**Malfunction determined when ignition switched ON** • Airflow mode actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when ignition switched ON** • Control based on ambient temperature.
Possible cause	• Connector or terminal malfunction • Airflow mode actuator malfunction • Open circuit in wiring harness between climate control unit and airflow mode actuator • Short to power supply in wiring harness between climate control unit and airflow mode actuator • Climate control unit malfunction

AIRFLOW MODE ACTUATOR WIRING HARNESS SIDE CONNECTOR

CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR CONNECTOR**	Yes	Go to the next step.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the airflow mode actuator connector. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
3	**INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the airflow mode actuator connector. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal H—airflow mode actuator terminal B ▪ Climate control unit terminal I—	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.

	airflow mode actuator terminal C ▪ Climate control unit terminal E—airflow mode actuator terminal A • Is there continuity?		
4	**INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) CIRCUIT FOR SHORT TO POWER SUPPLY** • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Climate control unit terminal H ▪ Climate control unit terminal I ▪ Climate control unit terminal E • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory.	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.

	(See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC B1C1C:12, B1C1C:13 output?		
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC U0010:88, U0155:00 [FULL-AUTO AIR CONDITIONER]

System malfunction location	• U0010:88: Unit communication error (MS-CAN) • U0155:00: Communication error with instrument cluster
Detection condition	**U0010:88** • The climate control unit detects a CAN bus communication line (MS-CAN) malfunction. **U0155:00** • The climate control unit could not receive CAN signal from the instrument cluster for **5 s or more**.
Fail-safe function	Not applicable
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the climate control unit and instrument cluster
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - HVAC

DTC U0423:68 [FULL-AUTO AIR CONDITIONER]

System malfunction location	• Invalid data received from instrument cluster
Detection condition	• The climate control unit receives error signals from the Instrument cluster
Fail-safe function	Not applicable
Possible cause	• Instrument cluster malfunction • Climate control unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER DTC INSPECTION** • Perform the instrument cluster DTC inspection using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**PERFORM CLIMATE CONTROL UNIT DTC INSPECTION** • Clear the DTC from the climate control unit memory using the M-MDS. (See **CLEARING DTC [FULL-**	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

	AUTO AIR CONDITIONER.) • Perform the climate control unit DTC inspection using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is the same DTC present?	No	Go to the next step.
3	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the climate control unit memory using the M-MDS. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Perform the climate control unit DTC inspection using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC U200D:11 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• Climate control unit circuit voltage (+5V) circuit short to ground
Detection condition	• Malfunction in wiring harness between climate control unit circuit voltage (+5V) and each sensor/actuator
Fail-safe function	Not applicable
Possible cause	• Connector or terminal malfunction • Each sensor/actuator malfunction • Short to ground in wiring harness between climate control unit and air mix actuator • Short to ground in wiring harness between climate control unit and airflow mode actuator • Short to ground in wiring harness between climate control unit and solar radiation sensor • Short to ground in wiring harness between climate control unit and evaporator temperature sensor • Short to ground in wiring harness between climate control unit and passenger compartment temperature sensor • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the climate control unit connectors. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		After repair procedure, go to the next step.
2	**VERIFY CONNECTOR CONDITION** • Disconnect the following each sensor/actuator connectors. ▪ Air mix actuator (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Airflow mode actuator (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Solar radiation sensor (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Evaporator temperature sensor (See **EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Passenger compartment temperature sensor (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) After replace procedure, go to the next step.
3	**INSPECT EACH SENSOR/ACTUATOR** • Inspect the following each sensor/actuator. ▪ Air mix actuator (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) ▪ Airflow mode actuator	Yes	Go to the next step.
		No	Replace the malfunctioning sensor/actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR**

	(See **AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) ▪ Solar radiation sensor (See **SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) ▪ Evaporator temperature sensor (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) ▪ Passenger compartment temperature sensor (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?		**CONDITIONER]**.) (See **EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) After replace procedure, go to the next step.
4	**INSPECT EACH SENSOR/ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal (wiring harness-side) and body ground: ▪ Climate control unit terminal 1N • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal 1N and each sensor/actuator terminals. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the past malfunction from memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Verify DTCs. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Is DTC U200D:11 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR**	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)

	CONDITIONER].) • Are any other DTCs output?	No	DTC troubleshooting completed.

With Single Type Climate Control Unit

System malfunction location	• Climate control unit circuit voltage (+5V) circuit short to ground
Detection condition	• Malfunction in wiring harness between climate control unit circuit voltage (+5V) and each sensor/actuator
Fail-safe function	Not applicable
Possible cause	• Connector or terminal malfunction • Each sensor/actuator malfunction • Short to ground in wiring harness between climate control unit and air mix actuator • Short to ground in wiring harness between climate control unit and airflow mode actuator • Short to ground in wiring harness between climate control unit and solar radiation sensor • Short to ground in wiring harness between climate control unit and evaporator temperature sensor • Short to ground in wiring harness between climate control unit and passenger compartment temperature sensor • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION**	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the climate control unit connectors. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
2	**VERIFY CONNECTOR CONDITION** • Disconnect the following each sensor/actuator connectors. ▪ Air mix actuator (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Airflow mode actuator (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Solar radiation sensor (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Evaporator temperature sensor (See **EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) ▪ Passenger compartment temperature sensor (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) After replace procedure, go to the next step.
3	**INSPECT EACH SENSOR/ACTUATOR** • Inspect the following each sensor/actuator. ▪ Air mix actuator (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) ▪ Airflow mode actuator (See **AIRFLOW MODE ACTUATOR INSPECTION**	Yes	Go to the next step.
		No	Replace the malfunctioning sensor/actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

	[FULL-AUTO AIR CONDITIONER].) ▪ Solar radiation sensor (See SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) ▪ Evaporator temperature sensor (See EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) ▪ Passenger compartment temperature sensor (See PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?		(See EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) After replace procedure, go to the next step.
4	**INSPECT EACH SENSOR/ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal (wiring harness-side) and body ground: ▪ Climate control unit terminal H • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal H and each sensor/actuator terminals. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the past malfunction from memory. (See CLEARING DTC [FULL-AUTO AIR CONDITIONER].) • Verify DTCs. (See DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Is DTC U200D:11 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See DTC DISPLAY [FULL-AUTO AIR CONDITIONER].)	Yes	Perform the corresponding DTC inspection. (See DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	DTC troubleshooting completed.

	• Are any other DTCs output?		

2014 - Mazda3 - HVAC

DTC U2300:54, U2300:55, U2300:56, U2300:64 [FULL-AUTO AIR CONDITIONER]

System malfunction location	• U2300:54: Configuration error (data not received) • U2300:55: Configuration error (not configured) • U2300:56: Configuration error (ineffective/non-interchangeable data read) • U2300:64: Configuration error (error value read)
Detection condition	• Climate control unit detects configuration data not record or data error

Fail-safe function	• Sets the configuration value to the following fixed value
	  ▪ Country destination: North_America
	  ▪ PTC heater: Not_Equipped

Possible cause	**NOTE:** • If power from the battery is interrupted, the climate control unit will go into a non-configured state because the memory for the configuration information is erased. If the ignition is switched ON (engine off) at this time, DTC U2300:55 is detected. • Normally, the configuration is re-performed within **6 s** after the ignition is switched ON (engine off). • After performing the configuration, DTC U2300:55 will be cleared if the ignition is switched ON (engine off) after the ignition is switched off. • Module configuration procedure was not completed properly • Correct data cannot be received from instrument cluster • Climate control unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**RECORD CAR CONFIGURATION DATA** • Switch the ignition ON (engine off) and wait for **6 s or more**. • Switch the ignition off. • Switch the ignition ON (engine off).		Go to the next step.
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Perform the climate control unit DTC inspection using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 5.
3	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition off. • Perform the instrument cluster DTC inspection using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) After repairing the instrument cluster, perform the instrument cluster configuration. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) Then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Perform the climate control unit DTC inspection using the M-MDS.	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

	(See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are the same DTCs present?		Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC U3003:16, U3003:17 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• U3003:16: Climate control unit power supply circuit voltage below threshold **(9.98 V or less)** • U3003:17: Climate control unit power supply circuit voltage above threshold **(16.21 V or more)**
Detection condition	• Climate control unit power supply voltage is other than **9.99—16.20 V**
Fail-safe function	Not applicable
Possible cause	• Generator system malfunction • ROOM 15 A fuse malfunction • Battery malfunction • Climate control unit connector malfunction • Open or short circuit to ground in wiring harness between battery positive terminal and climate control unit terminal • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PCM DTC (INSPECT GENERATOR CIRCUIT)** • Switch the ignition off. • Connect the M-MDS to the DLC-2. • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT FUSE** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Install the ROOM 15 A fuse, then go to the next step.
		No	Replace the ROOM 15 A fuse, then go to the next step.
3	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Then go to the next step.
4	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
5	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between climate control unit terminal 1B and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal 1B and battery positive terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part.

			If there is no common connector: • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
6	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between climate control unit terminal 1B and battery positive terminal. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal 1B and battery positive terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**INSPECT CLIMATE CONTROL UNIT** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear DTCs using the M-MDS. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Perform the climate control unit DTC inspection using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are DTCs U3003:16 or U3003:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

With Single Type Climate Control Unit

System malfunction	• U3003:16: Climate control unit power supply circuit voltage below threshold **(10.00 V or less)**

location	• U3003:17: Climate control unit power supply circuit voltage above threshold **(17.30 V or more)**
Detection condition	• Climate control unit power supply voltage is other than **10.00—17.29 V**
Fail-safe function	Not applicable
Possible cause	• Generator system malfunction • ROOM 15 A fuse malfunction • Battery malfunction • Climate control unit connector malfunction • Open or short circuit to ground in wiring harness between battery positive terminal and climate control unit terminal • Open or short circuit to ground in wiring harness between front body control module (FBCM) terminal and climate control unit terminal • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION	ACTION

1	**INSPECT PCM DTC (INSPECT GENERATOR CIRCUIT)** • Switch the ignition off. • Connect the M-MDS to the DLC-2. • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT FUSE** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Install the ROOM 15 A fuse, then go to the next step.
		No	Replace the ROOM 15 A fuse, then go to the next step.
3	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Then go to the next step.
4	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
5	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between climate control unit terminal L and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and battery positive terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.

		No	Go to the next step.
6	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between climate control unit terminal L and battery positive terminal. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and battery positive terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
7	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between climate control unit terminal N and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and front body control module (FBCM) terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.
8	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between climate control unit terminal N and front body control module (FBCM) terminal 1C. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and front body control module (FBCM) terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
9	**INSPECT CLIMATE CONTROL UNIT** • Reconnect the disconnected connectors. • Connect the negative battery cable.	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear DTCs using the M-MDS. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.) • Perform the climate control unit DTC inspection using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are DTCs U3003:16 or U3003:17 displayed?		(See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
10	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

DTC U300E:13 [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

System malfunction location	• Climate control unit power supply circuit open (IG1 or IG2)
Detection condition	• Malfunction in wiring harness between climate control unit and IG1 relay • Malfunction in wiring harness between climate control unit and front body control module (FBCM)
Fail-safe function	Not applicable
Possible cause	• C/U IG1 15 A fuse malfunction • IG1 relay malfunction • Climate control unit connector malfunction • Front body control module (FBCM) connector malfunction • Open circuit in wiring harness between battery positive terminal and climate control unit terminal • Open circuit in wiring harness between front body control module (FBCM) terminal and climate control unit terminal • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUSE** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the C/U IG1 15 A fuse. • Is the fuse normal?	Yes	Install the C/U IG1 15 A fuse, then go to the next step.
		No	Replace the C/U IG1 15 A fuse, then go to Step 5.
2	**INSPECT IG1 RELAY FOR MALFUNCTION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the IG1 relay. (See **RELAY LOCATION**.) • Inspect the IG1 relay.	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 5. (See **RELAY LOCATION**.)

	(See **RELAY INSPECTION**.) • Is the IG1 relay normal?		
3	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
4	**VERIFY FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
5	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between climate control unit terminal 1D and C/U IG1 15 A fuse. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and C/U IG1 15 A fuse. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between climate control unit terminal 1F and front body control module (FBCM) terminal 1C. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and front body control module (FBCM) terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**INSPECT CLIMATE CONTROL UNIT** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear DTCs using the M-MDS. • Perform the climate control unit DTC inspection using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are DTCs U300E:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

With Single Type Climate Control Unit

System malfunction location	• Climate control unit power supply circuit open (IG2)
Detection condition	• Malfunction in wiring harness between climate control unit and front body control module (FBCM)
Fail-safe function	Not applicable
Possible cause	• Climate control unit connector malfunction • Front body control module (FBCM) connector malfunction • Open circuit in wiring harness between front body control module (FBCM) terminal and climate control unit terminal • Climate control unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**VERIFY FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector.	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.

	(See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?		
3	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between climate control unit terminal N and front body control module (FBCM) terminal 1C. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and front body control module (FBCM) terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**INSPECT CLIMATE CONTROL UNIT** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear DTCs using the M-MDS. • Perform the climate control unit DTC inspection using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are DTCs U300E:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - HVAC

PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER]

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “EATC”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

2014 - Mazda3 - HVAC

PID/DATA MONITOR TABLE [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

PID	Unit/Condition	Data contents	Climate control unit terminal
A/C_SW	Off/On	• Off: A/C switch is off. • On: A/C switch is on.	—
AUTO_SW	Off/On	• Off: AUTO switch is off. • On: AUTO switch is on.	—
B_MT_RLY_CS	Off/On	• Off: Blower relay is off. • On: Blower relay is on.	1S, 1U (CAN)

A/C OPERATION CHECK MODE [FULL-AUTO AIR CONDITIONER]

With Dual Type Climate Control Unit

- The A/C operation check mode forcibly operates the output devices as shown in the operation check table regardless of the signals input to the climate control unit.
- During an A/C operation check mode operation, indication in the display panel and the illumination of the indicator light on the switches are automatically controlled.
- Determine the malfunctioning part by visual inspection, listening to the operation sound, placing a hand on the air vents, or checking that each transition is as indicated in the operation check table.

M-MDS display	Target part	Reference
Air Mix Actuator	• Air mix actuator • Air mix door	(See **Air mix actuator**)
Air conditioning compressor	• A/C compressor	(See **A/C compressor**)
Air Intake Actuator	• Air intake actuator • Air intake door	(See **Air intake actuator**)
Blower Motor Speed	• Blower motor	(See **Blower motor**)
Air Flow Mode Actuator	• Airflow mode actuator • Airflow mode door	(See **Airflow mode actuator**)
Illumination of All Indicator Lights	• Climate control unit	(See **Indicator light**)

Air mix actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).

3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   a. Select the “Body”.
   b. Select the “EATC Operation Check”.
4. Select the “Air Mix Actuator” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**0 %**	VENT	3rd	ON	FRESH
2	**50 %**				
3	**100 %**				
4	**50 %**				

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	**20.0 {68}**			Displayed	Not illuminated	Illuminated
2	**20.5 {68.9}**					
3	**21.0 {70}**					
4	**20.5 {68.9}**					

NOTE:

- After **approx. 4 s** have elapsed, the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

A/C compressor

1. Connect the M-MDS to the DLC-2.

2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
    a. Select the “Body”.
    b. Select the “EATC Operation Check”.
4. Select the “Air conditioning compressor” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**0 %**	VENT	5th	ON	FRESH
2				OFF	

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	**8 {46}**			Displayed	Not illuminated	Illuminated
2				Not displayed		

NOTE:

- After the following times have elapsed, the operation step moves to the next step.
    - Step 1: **Approx. 5 s**
    - Step 2: **Approx. 25 s**
- When the last step is finished, the operation is repeated from Step 1.

Air intake actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
    a. Select the “Body”.

b. Select the “EATC Operation Check”.

4. Select the “Air Intake Actuator” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**0 %**	VENT	3rd	ON	FRESH
2					RECIRCULATE
3				OFF	FRESH
4					RECIRCULATE

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	**4 {39}**			Displayed	Not illuminated	Illuminated
2					Illuminated	Not illuminated
3				Not displayed	Not illuminated	Illuminated
4					Illuminated	Not illuminated

NOTE:

- After **approx. 4 s** have elapsed, the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

Blower motor

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.

a. Select the “Body”.

b. Select the “EATC Operation Check”.

4. Select the “Blower Motor Speed” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**50 %**	VENT	OFF	OFF	FRESH
2			1st	ON	
3			3rd		
4			5th		
5			7th		

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	**1 {34}**		Not displayed	Not displayed	Not illuminated	Illuminated
2				Displayed		
3						
4						
5						

NOTE:

- After **approx. 4 s** have elapsed, the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

Airflow mode actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   a. Select the “Body”.
   b. Select the “EATC Operation Check”.
4. Select the “Airflow Mode Actuator” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**50 %**	VENT	3rd	ON	FRESH
2		BI-LEVEL			
3		HEAT			
4		DEF/HEAT			
5		DEFROSTER			

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light

2						
3						
4						
5						

NOTE:

- After **approx. 4 s** have elapsed, the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

Indicator light

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   a. Select the “Body”.
   b. Select the “EATC Operation Check”.
4. Select the “Illumination Of All Indicator Lights” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
—	**50 %**	VENT	OFF	OFF	FRESH

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
—	All indicator displayed				Illuminated	Illuminated

A/C operation check stop

1. If "Stop" is selected while the A/C operation check is operating, the A/C stops at the conditions shown in the table.

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator

—	**50 %**	VENT	OFF	OFF	FRESH

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
—	**0 {32}**		Not displayed	Not displayed	Not illuminated	Illuminated

With Single Type Climate Control Unit

- The A/C operation check mode forcibly operates the output devices as shown in the operation check table regardless of the signals input to the climate control unit.
- During an A/C operation check mode operation, indication in the display panel and the illumination of the indicator light on the switches are automatically controlled.
- Determine the malfunctioning part by visual inspection, listening to the operation sound, placing a hand on the air vents, or checking that each transition is as indicated in the operation check table.

M-MDS display	Target part	Reference
Air Mix Actuator	• Air mix actuator • Air mix door	(See **Air mix actuator**)
Air conditioning compressor	• A/C compressor	(See **A/C compressor**)
Air Intake Actuator	• Air intake actuator • Air intake door	(See **Air intake actuator**)
Blower Motor Speed	• Blower motor	(See **Blower motor**)
Air Flow Mode Actuator	• Airflow mode actuator • Airflow mode door	(See **Airflow mode actuator**)
Illumination of All Indicator Lights	• Climate control unit	(See **Indicator light**)

Air mix actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
    a. Select the “Body”.
    b. Select the “EATC Operation Check”.
4. Select the “Air Mix Actuator” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**0 %**	VENT	5th	ON	FRESH
2	**100 %**				

Indicator light

Step	Recirculate switch indicator light	Rear window defroster switch indicator light	A/C switch indicator light
1	Illuminated	Not illuminated	Illuminated
2			

NOTE:

- After **approx. 22 s** have elapsed, the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

A/C compressor

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
    a. Select the “Body”.
    b. Select the “EATC Operation Check”.

4. Select the “Air conditioning compressor” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**0 %**	VENT	5th	ON	FRESH
2				OFF	

Indicator light

Step	Recirculate switch indicator light	Rear window defroster switch indicator light	A/C switch indicator light
1	Not illuminated	Not illuminated	Illuminated
2			Not illuminated

NOTE:

- After the following times have elapsed, the operation step moves to the next step.
  - Step 1: **Approx. 5 s**
  - Step 2: **Approx. 25 s**
- When the last step is finished, the operation is repeated from Step 1.

Air intake actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   a. Select the “Body”.
   b. Select the “EATC Operation Check”.
4. Select the “Air Intake Actuator” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**0 %**	VENT	5th	ON	FRESH
2					RECIRCULATE
3				OFF	FRESH
4					RECIRCULATE

Indicator light

Step	Recirculate switch indicator light	Rear window defroster switch indicator light	A/C switch indicator light
1	Not illuminated	Not illuminated	Illuminated
2	Illuminated		
3	Not illuminated		Not illuminated
4	Illuminated		

NOTE:

- After **approx. 11 s** have elapsed, the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

Blower motor

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   a. Select the “Body”.
   b. Select the “EATC Operation Check”.
4. Select the “Blower Motor Speed” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**50 %**	VENT	OFF	OFF	FRESH
2			1st	ON	
3			3rd		
4			5th		
5			7th		

Indicator light

Step	Recirculate switch indicator light	Rear window defroster switch indicator light	A/C switch indicator light
1	Not illuminated	Not illuminated	Not illuminated
2			Illuminated
3			
4			
5			

NOTE:

- After **approx. 4 s** have elapsed, the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

Airflow mode actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   a. Select the “Body”.
   b. Select the “EATC Operation Check”.

4. Select the “Airflow Mode Actuator” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See **A/C operation check stop**.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	**50 %**	VENT	5th	ON	FRESH
2		BI-LEVEL			
3		HEAT			
4		DEF/HEAT			
5		DEFROSTER			

Indicator light

FOREWORD [FULL-AUTO AIR CONDITIONER]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
A/C OPERATION CHECK MODE INSPECTION
USE M-MDS A/C OPERATION CHECK MODE FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - HVAC

TROUBLESHOOTING INDEX [FULL-AUTO AIR CONDITIONER]

TROUBLESHOOTING ITEM	DESCRIPTION
INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [FULL-AUTO AIR CONDITIONER]	• Problem with each vent and/or duct • Airflow mode does not change
AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]	• Malfunction in blower system
AIR INTAKE MODE DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]	• Air intake mode does not change when switching REC/FRESH mode
NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [FULL-AUTO AIR CONDITIONER]	• Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system • Malfunction in driver and/or passenger side air mix actuator or related wiring harness
WINDSHIELD FOGGED [FULL-AUTO AIR CONDITIONER]	• A/C compressor does not operate while airflow mode is in DEFROSTER or DEF/HEAT modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or DEF/HEAT modes
AIR FROM VENTS NOT COLD ENOUGH [FULL-AUTO AIR CONDITIONER]	• Magnetic clutch operates but A/C system malfunctions
NO COOL AIR [FULL-AUTO AIR CONDITIONER]	• Magnetic clutch does not operate
NOISE WHILE OPERATING A/C SYSTEM [FULL-AUTO AIR CONDITIONER]	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line
DUAL A/C CONTROL DOES NOT OPERATE [FULL-AUTO AIR CONDITIONER] (with dual type climate control	• Driver or passenger side temperature control dial does not operate

unit)	individually • Temperature control operates normally expect for dual A/C control function

2014 - Mazda3 - HVAC

INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Problem with each vent and/or duct • Airflow mode does not change
POSSIBLE CAUSE	• ROOM 15 A fuse malfunction • Open or short circuit in wiring harness between battery positive terminal and climate control unit • Open or short circuit in wiring harness between climate control unit and airflow mode actuator / air mix actuator • Airflow mode actuator malfunction • Airflow mode link malfunction • Airflow mode door malfunction • Vent or duct malfunction (clogging, deformation, air leakage, improper operation)

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions.

  If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUSE** • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for short to ground and replace the fuse.

			If the fuse is deterioration: Replace the fuse. Then go to Step 14.
2*	**INSPECT TO SEE WHETHER MALFUNCTION (OPEN CIRCUIT) IS IN B+ SIGNAL WIRING HARNESS (BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Switch the ignition ON (engine off or on). • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 1B **With single type climate control unit:** ▪ Terminal L • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and fuse block terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the Step 19.
3*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR AIRFLOW MODE ACTUATOR** • Switch the ignition ON (engine off or on). • Measure voltage at the following terminal of climate control unit when airflow mode at VENT and DEFROSTER. **With dual type climate control unit:** ▪ Terminal 2A **With single type climate control unit:** ▪ Terminal I	Yes	Go to Step 15.
		No	Go to the next step.

	• Is voltage normal?		
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN POSITION SENSOR OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at the following terminals of climate control unit when temperature setting to MAX HOT and MAX COLD. **With dual type climate control unit:** ▪ Terminal 2G ▪ Terminal 2E **With single type climate control unit:** ▪ Terminal G • Is voltage normal?	Yes	Go to Step 7.
		No	Go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR SHORT TO POWER SUPPLY OR GROUND) IS IN POSITION SENSOR POWER SUPPLY OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 1N **With single type climate control unit:** ▪ Terminal H • Is voltage **approx. 5 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator / air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 19.

6*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR OPEN CIRCUIT) IS IN POSITION SENSOR GROUND OR ELSEWHERE** • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 1J **With single type climate control unit:** ▪ Terminal E • Is voltage **below 1.0 V**?	Yes	Go to Step 11.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator / air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 19.
7*	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO POWER SUPPLY) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR ELSEWHERE** • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 2A **With single type climate control unit:** ▪ Terminal I • Is voltage **approx. 12 V**, at Step 4?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the Step 19.

		No	Go to the next step.
8*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR ELSEWHERE** • Switch the ignition off. • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the airflow mode actuator connector. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Verify continuity at following terminals between climate control unit and airflow mode actuator. **With dual type climate control unit:** ▪ Climate control unit terminal 2A — airflow mode actuator terminal C **With single type climate control unit:** ▪ Climate control unit terminal I — airflow mode actuator terminal C • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 19.
9*	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO GROUND) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR POSITION SENSOR COMMON (POWER SUPPLY OR GROUND) HARNESS** • Verify continuity at the following terminals between climate control unit and ground. **With dual type climate control**	Yes	Repair wiring harness between climate control unit terminal and airflow mode actuator terminal. Then go to Step 19.
		No	Inspection and repair for open circuit following: • Between airflow mode

	unit: ▪ Terminal 2A **With single type climate control unit:** ▪ Terminal I • Is there continuity?		actuator terminal B and junction point to each air mix actuator (position sensor power supply). • Between airflow mode actuator terminal A and junction point to each air mix actuator (position sensor ground). Then go to Step 19.
10*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIRFLOW MODE ACTUATOR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIRFLOW MODE ACTUATOR) OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at the following terminals of climate control unit. **With dual type climate control unit:** ▪ Terminal 2K (DEFROSTER mode motor drive signal) ▪ Terminal 2I (VENT mode motor drive signal) **With single type climate control unit:** ▪ Terminal V (DEFROSTER mode motor drive signal) ▪ Terminal T (VENT mode motor drive signal) • Is voltage normal?	Yes	Go to the next step.
		No	Go to Step 12.
11*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIRFLOW MODE ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIRFLOW MODE ACTUATOR)** • Verify continuity at following terminals between airflow mode actuator and climate control unit.	Yes	Go to Step 16.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common**

	With dual type climate control unit: ▪ Climate control unit terminal 2K — airflow mode actuator terminal F (DEFROSTER mode motor drive signal) ▪ Climate control unit terminal 2I — airflow mode actuator terminal D (VENT mode motor drive signal) **With single type climate control unit:** ▪ Climate control unit terminal V — airflow mode actuator terminal F (DEFROSTER mode motor drive signal) ▪ Climate control unit terminal T — airflow mode actuator terminal D (VENT mode motor drive signal) • Is there continuity?		**connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 19.
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIRFLOW MODE ACTUATOR OR ELSEWHERE** • Airflow mode actuator and climate control unit connectors disconnected. • Measure voltage at the following terminals of climate control unit. **With dual type climate control unit:** ▪ Terminal 2K (DEFROSTER mode motor drive signal) ▪ Terminal 2I (VENT mode motor drive signal)	Yes	Go to Step 15.
		No	Go to the next step.

	With single type climate control unit: ▪ Terminal V (DEFROSTER mode motor drive signal) ▪ Terminal T (VENT mode motor drive signal) • Is voltage normal?		
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIRFLOW MODE ACTUATOR) OR ELSEWHERE** • Measure voltage at the following terminals of the climate control unit harness-side connector. **With dual type climate control unit:** ▪ Terminal 2K (DEFROSTER mode motor drive signal) ▪ Terminal 2I (VENT mode motor drive signal) **With single type climate control unit:** ▪ Terminal V (DEFROSTER mode motor drive signal) ▪ Terminal T (VENT mode motor drive signal) • Are voltages **approx. 0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the Step 19.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIRFLOW MODE ACTUATOR) OR ELSEWHERE** • Switch the ignition off. • Verify that continuity at the following harness-side connector terminals between climate control unit and ground.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and airflow mode actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by

	With dual type climate control unit: ▪ Terminal 2K (DEFROSTER mode motor drive signal) ▪ Terminal 2I (VENT mode motor drive signal) **With single type climate control unit:** ▪ Terminal V (DEFROSTER mode motor drive signal) ▪ Terminal T (VENT mode motor drive signal) • Is there continuity?		inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the Step 19.
		No	Go to the next step.
15	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect airflow mode actuator. (See **AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is airflow mode actuator normal?	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Then go to the Step 19.
16	**INSPECT AIRFLOW MODE LINK** • Inspect airflow mode links. (See **AIRFLOW MODE MAIN LINK REMOVAL/INSTALLATION**.) ▪ Is grease on link? ▪ Are links securely and properly installed? ▪ Are links free of obstructions and hindrances? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged, replace malfunctioning part. Then go to the Step 19.
17	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIRFLOW MODE DOOR**	Yes	Go to the next step.

	• Inspect A/C unit airflow mode door. (See **A/C UNIT REMOVAL/INSTALLATION**.) ▪ Is door free of obstructions, cracks and damage? ▪ Are door securely and properly installed? • Are the above items normal?	No	Remove the obstruction, or install door in proper position. If any doors are cracked or damaged, replace them. Then go to the Step 19. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)
18	**VERIFY DUCT INSTALLATION CONDITION** • Are the following ducts installed properly? (See **DASHBOARD REMOVAL**.)(See **DASHBOARD INSTALLATION**.) ▪ Dashboard ducts ▪ Defroster ducts	Yes	Inspect ducts for restriction, deformity, and air leakage, then go to the next step.
		No	Install the incorrectly installed ducts properly, then go to the next step. (See **DASHBOARD DISASSEMBLY/ASSEMBLY**.)
19	**VERIFY THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Malfunction in blower system
POSSIBLE CAUSE	• HEATER 40 A fuse malfunction • Blower unit malfunction • Open or short circuit in wiring harness between climate control unit and blower relay • Blower relay malfunction • Blower motor malfunction • Blower fan controller malfunction • Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUSE** • Remove the HEATER 40 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for short to ground and replace the fuse. **If the fuse is deterioration:** Replace the fuse. Then go to Step 15.

2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Turn the fan dial clockwise. • Recirculate air inside the vehicle. • Does the blower motor rotate smoothly?	Yes	Go to the next step.
		No	Go to Step 4.
3	**INSPECT BLOWER UNIT INTAKE VENT** • Is blower unit intake vent restricted?	Yes	Remove obstruction, then go to Step 15.
		No	Inspect if there are any obstruction in the A/C unit passage, then go to Step 15.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER RELAY SYSTEM OR BLOWER FAN CONTROLLER SYSTEM** • Switch the ignition ON (engine off or on). • Turn the fan dial clockwise. • Measure the voltage at the following blower motor terminal. ▪ Terminal A (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 8.
		No	Go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN FUSE BLOCK AND BLOWER RELAY) OR ELSEWHERE** • Measure the voltage at the following blower relay terminals. ▪ Terminal A (B+ signal) ▪ Terminal B (B+ signal) • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower relay terminal and HEATER 40 A fuse. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common**

			connector: • Repair or replace the wiring harness. Go to Step 15.
6*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND GROUND) OR ELSEWHERE** • Measure the voltage at the following blower relay terminal. ▪ Terminal D (ground) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower relay terminal and front body control module (FBCM) terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
7*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND BLOWER FAN CONTROLLER) OR BLOWER RELAY** • Switch the ignition ON (engine off or on). • Measure the voltage at the following blower relay terminal. ▪ Terminal C (blower motor operation signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness for lack of continuity between the blower relay and blower fan controller, then go to Step 15.
		No	Replace the blower relay, then go to Step 15. (See **RELAY LOCATION**.)
8*	**INSPECT BLOWER MOTOR** • Inspect the blower motor. (See **BLOWER MOTOR INSPECTION**.)	Yes	Go to the next step.
		No	Replace the blower motor, then go to Step 15.

	• Is the blower motor normal?		(See **BLOWER MOTOR REMOVAL/INSTALLATION**.)
9*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER MOTOR AND BLOWER FAN CONTROLLER) OR ELSEWHERE** • Measure the voltage at the following terminal of blower fan controller. ▪ Terminal E (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower motor terminal and blower fan controller terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
10*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER FAN CONTROLLER AND GROUND) OR ELSEWHERE** • Measure the voltage at the following blower fan controller terminal. ▪ Terminal C (ground) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower fan controller terminal and ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring

			harness. Go to Step 15.
11	**INSPECT BLOWER UNIT** • Inspect the fan in blower unit. ▪ Is the fan free of interference with the blower unit case? ▪ Is the fan free of foreign matter and obstructions? • Is the fan normal?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace the fan and blower unit case, then go to Step 15.
12*	**INSPECT BLOWER FAN CONTROLLER** • Inspect the blower fan controller. (See **BLOWER FAN CONTROLLER INSPECTION**.) • Is the blower fan controller normal?	Yes	Go to the next step.
		No	Replace the blower fan controller, then go to Step 15. (See **BLOWER FAN CONTROLLER REMOVAL/INSTALLATION**.)
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER FAN CONTROLLER AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Switch the ignition off. • Disconnect climate control unit connector. • Inspect for continuity at the following terminals between the blower fan controller and climate control unit. **With dual type climate control unit:** ▪ Terminal B—1E (blower motor speed control signal) **With single type climate control unit:** ▪ Terminal B—Q (blower motor speed control signal)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower fan controller terminal and climate control unit terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.

	• Is there continuity?		
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR WIRING HARNESS (SHORT TO GROUND IN WIRING HARNESS BETWEEN BLOWER FAN CONTROLLER AND CLIMATE CONTROL UNIT)** • Inspect for continuity at the following terminal between the blower fan controller and ground. ▪ Terminal B (blower motor control signal)—ground • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between blower fan controller terminal and ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Replace the climate control unit, then go to the next step. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
15	**VERIFY THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

AIR INTAKE MODE DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Air intake mode does not change when switching REC/FRESH mode
POSSIBLE CAUSE	• Air intake actuator malfunction • Open or short circuit in wiring harness between climate control unit and air intake actuator • Climate control unit malfunction • Air intake link malfunction • Air intake door malfunction • Restriction in blower unit

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR INTAKE ACTUATOR** • Inspect the following item using the M-MDS A/C operation check mode function. (See **A/C OPERATION CHECK MODE [FULL-AUTO AIR CONDITIONER]**.) ▪ Air Intake Actuator • Does the air intake actuator operate?	Yes	Go to Step 7.
		No	Go to the next step.

2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE** • Disconnect the air intake actuator connector. • Switch the ignition ON (engine off or on). (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Measure the voltages at the following climate control unit terminals. **With dual type climate control unit** ▪ Terminal 2J (FRESH motor drive signal) ▪ Terminal 2L (RECIRCULATE motor drive signal) **With single type climate control unit** ▪ Terminal U (FRESH motor drive signal) ▪ Terminal S (RECIRCULATE motor drive signal) • Are voltages normal?	Yes	Go to the next step.
		No	Go to Step 4.
3	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. (See **AIR INTAKE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is the air intake actuator normal?	Yes	Go to Step 7.
		No	Replace the air intake actuator. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) Then go to Step 9.
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR**	Yes	Go to the next step.

	INTAKE ACTUATOR) OR ELSEWHERE • Air intake actuator connector disconnected. • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Measure the voltages at the following air intake actuator terminals. ▪ Terminal C (FRESH motor drive signal) ▪ Terminal B (RECIRCULATE motor drive signal) • Are voltages **approx. 0 V**?	No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 9.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Climate control unit and air intake actuator connectors disconnected. • Switch the ignition off. • Inspect for continuity at the following terminals between the air intake actuator and ground. ▪ Terminal C (FRESH motor drive signal) ▪ Terminal B (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 9.
		No	Go to the next step.

6	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY OR OPEN BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Climate control unit and air intake actuator connectors disconnected. • Inspect for continuity at the following terminals between the air intake actuator and climate control unit. **With dual type climate control unit** ▪ Terminal C—2J (FRESH motor drive signal) ▪ Terminal B—2L (RECIRCULATE motor drive signal) **With single type climate control unit** ▪ Terminal C—U (FRESH motor drive signal) ▪ Terminal B—S (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Replace the climate control unit, then go to Step 9. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 9.
7	**INSPECT AIR INTAKE LINK** • Inspect the air intake link. (See **BLOWER UNIT REMOVAL/INSTALLATION**.) ▪ Is there grease on link? ▪ Are the links securely and properly installed? ▪ Are the links free of	Yes	Go to the next step.
		No	Apply grease to the links. If any the links are damaged, replace the air intake actuator, then go to Step 9. (See **BLOWER UNIT DISASSEMBLY/ASSEMBLY**.)

	obstructions and hindrances? • Are the above items normal?		
8	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR** • Inspect the blower unit air intake door. (See **BLOWER UNIT REMOVAL/INSTALLATION**.) ▪ Is the door free of obstructions, cracks, and damage? ▪ Are the doors securely and properly installed? • Are the above items normal?	Yes	Go to the next step.
		No	Remove obstruction, or install the doors in the proper position. If any doors are cracked or damaged, replace them, then go to the next step. (See **BLOWER UNIT DISASSEMBLY/ASSEMBLY**.)
9	**VERIFY THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does the air intake mode change smoothly?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system • Malfunction in driver and/or passenger side air mix actuator or related wiring harness
POSSIBLE CAUSE	• ROOM 15 A fuse malfunction • Open or short circuit in wiring harness between fuse block and climate control unit • Open or short circuit in wiring harness between climate control unit and air mix actuator • Air mix actuator malfunction • Air mix link malfunction • Air mix door malfunction • Climate control unit malfunction • Heater hose malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT COOLANT TEMPERATURE** • Is the coolant sufficiently warmed up?	Yes	Go to the next step.
		No	Warm up the engine, then go to Step 19.
2*	**INSPECT FUSE** • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for short to

			ground and replace the fuse. **If the fuse is deterioration:** Replace the fuse. Then go to Step 19.
3*	**INSPECT TO SEE WHETHER MALFUNCTION (OPEN CIRCUIT) IS IN B+ SIGNAL WIRING HARNESS (BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Switch the ignition ON (engine off or on). • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 1B **With single type climate control unit:** ▪ Terminal L • Is the voltage **approx. 12 V?**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuse block terminal and climate control unit terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR MIX ACTUATOR** • Reconnect the disconnected climate control unit connector. • Switch the ignition ON (engine off or on). • Measure voltage at the following terminals of climate control unit when temperature setting to MAX HOT and MAX COLD. **With dual type climate control unit:** ▪ Terminal 2G	Yes	Go to Step 15.
		No	Go to the next step.

	Terminal 2E **With single type climate control unit:** ▪ Terminal G • Is voltage normal?		
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN POSITION SENSOR OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at the following terminal of climate control unit when airflow mode at VENT and DEFROSTER. **With dual type climate control unit:** ▪ Terminal 2A **With single type climate control unit:** ▪ Terminal I • Is voltage normal?	Yes	Go to Step 9.
		No	Go to the next step.
6*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR SHORT TO BATTERY POWER OR GROUND) IS IN POSITION SENSOR POWER SUPPLY OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 1N **With single type climate control unit:** ▪ Terminal H • Is voltage **approx. 5 V?**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:**

			Repair or replace the wiring harness. Go to Step 19.
7*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR OPEN) IS IN POSITION SENSOR GROUND OR ELSEWHERE** • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 1J **With single type climate control unit:** ▪ Terminal E • Is the voltage **below. 1.0 V?**	Yes	Go to Step 12.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 19.
8	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO POWER SUPPLY) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR ELSEWHERE** • Measure voltage at the following terminals of climate control unit. **With dual type climate control unit:** ▪ Terminal 2G ▪ Terminal 2E **With single type climate control unit:** ▪ Terminal G • Is the voltage **approx. 12V,** at Step 5?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring

			harness which has a short to power supply. Go to Step 19.
		No	Go to the next step.
9*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR ELSEWHERE** • Switch the ignition off. • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Verify continuity at following terminals between climate control unit and air mix actuator. **With dual type climate control unit:** ▪ Climate control unit terminal 2G —driver-side air mix actuator terminal F ▪ Climate control unit terminal 2E —passenger-side air mix actuator terminal F **With single type climate control unit:** ▪ Climate control unit terminal G —air mix actuator terminal F • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and each side air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 19.

10*	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO GROUND) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR POSITION SENSOR COMMON (POWER SUPPLY OR GROUND) HARNESS** • Climate control unit and air mix actuator connectors disconnected. • Verify continuity at the following terminals between climate control unit and ground. **With dual type climate control unit:** ▪ Terminal 2G ▪ Terminal 2E **With single type climate control unit:** ▪ Terminal G • Is there continuity?	Yes	Repair wiring harness for short to ground between climate control unit and air mix actuator. Then go to Step 19.
		No	Inspect and repair for open circuit following: • Between driver side air mix actuator terminal G and junction point to airflow mode actuator (position sensor power supply). • Between passenger side air mix actuator terminal E and junction point to airflow mode actuator (position sensor power supply). • Between driver side air mix actuator terminal E and junction point to airflow mode actuator (position sensor ground). • Between passenger side air mix actuator terminal G and junction point to airflow mode actuator (position sensor ground). Then go to Step 19.
11*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR MIX ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR)** • Disconnect the air mix actuator connector. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Measure voltage at the following terminals of air mix actuator. **With dual type climate control unit:** ▪ Terminal C (driver-side)/B (passenger-side) (COLD motor	Yes	Go to Step 16.
		No	Go to the next step.

	drive signal) ▪ Terminal B (driver-side)/C (passenger-side) (HOT motor drive signal) **With single type climate control unit:** ▪ Terminal B (COLD motor drive signal) ▪ Terminal C (HOT motor drive signal) • Are voltage s as shown below? ▪ COLD motor drive signal: **approx. 10 V** during COLD and **approx. 0.5 V** during HOT ▪ HOT motor drive signal: **approx. 0.5 V** during COLD and **approx. 10 V** during HOT		
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE** • Air mix actuator connectors disconnected. • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Measure voltage at the following terminals of the climate control unit harness-side connector. **With dual type climate control unit (driver-side):**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part.

	▪ Terminal 2B (COLD motor drive signal) ▪ Terminal 2D (HOT motor drive signal) **With dual type climate control unit (passenger-side):** ▪ Terminal 2H (COLD motor drive signal) ▪ Terminal 2F (HOT motor drive signal) **With single type climate control unit:** ▪ Terminal W (COLD motor drive signal) ▪ Terminal X (HOT motor drive signal) • Are voltages **approx. 0 V?**		**If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 19.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE** • Air mix actuator connectors disconnected. • Switch the ignition off. • Verify that continuity at the following harness-side connector terminals between climate control unit and ground. **With dual type climate control unit (driver-side):** ▪ Terminal 2B(COLD motor drive signal)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring

	▪ Terminal 2D (HOT motor drive signal) **With dual type climate control unit (passenger-side):** ▪ Terminal 2H (COLD motor drive signal) ▪ Terminal 2F (HOT motor drive signal) **With single type climate control unit:** ▪ Terminal W (COLD motor drive signal) ▪ Terminal X (HOT motor drive signal) • Is there continuity?		harness which has a short to ground. Go to Step 19.
		No	Go to the next step.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY OR OPEN BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE** • Air mix actuator connectors disconnected. • Switch the ignition off. • Verify that continuity at the following harness-side connector terminals between climate control unit and each air mix actuator. **With dual type climate control unit (driver-side):** • Terminal C—climate control unit terminal 2B (COLD motor drive signal) • Terminal B—climate control unit terminal 2D (HOT motor drive signal) **With dual type climate control unit (passenger-side):**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness.

	• Terminal B—climate control unit terminal 2H (COLD motor drive signal) • Terminal C—climate control unit terminal 2F (HOT motor drive signal) **With single type climate control unit:** • Terminal B—climate control unit terminal W (COLD motor drive signal) • Terminal C—climate control unit terminal X (HOT motor drive signal) • Is there continuity?		Go to Step 19.
15	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator. (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is air mix actuator normal?	Yes	Go to the next step.
		No	Replace the suspected side air mix actuator. Then go to 19. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
16	**INSPECT AIR MIX LINK** • Inspect the air mix links for each-side. (See **A/C UNIT REMOVAL/INSTALLATION**.) ▪ Is grease on link? ▪ Are links securely and properly installed? ▪ Are links free of obstructions and hindrances? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged. Replace malfunctioning part. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Then go to Step 19.
17	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR MIX DOOR ELSEWHERE** • Inspect the A/C unit and each-side air mix door.	Yes	Go to the next step.
		No	Remove the obstruction, or install door in proper position. If any door are cracked, replace them.

	(See **A/C UNIT REMOVAL/INSTALLATION**.) ▪ Is door free of obstructions and damage? ▪ Are doors securely and properly installed? • Are the above items normal?		(See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Then go to the next step.
18	**INSPECT HEATER HOSE** • Inspect the heater hoses for the following: ▪ Is heater hoses free of damage and cracks? ▪ Are heater hoses connections free of engine coolant leakage? ▪ Are heater hoses installation points on A/C unit free of engine coolant leakage? • Are the above items normal?	Yes	Replace the climate control unit. Then go to the next step. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	If heater hoses connections are loose, install securely in the correct position. Repair or replace the heater hoses. (See **HEATER HOSE REMOVAL/INSTALLATION**.) then go to the next step.
19	**VERIFY THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Does the unit operate at every temperature setting?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step1 if the malfunction recurs.

2014 - Mazda3 - HVAC

WINDSHIELD FOGGED [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• A/C compressor does not operate while airflow mode is in DEFROSTER or DEF/HEAT modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or DEF/HEAT modes
POSSIBLE CAUSE	• A/C compressor malfunction • ROOM 15 A fuse malfunction • Air intake link malfunction • Open or short circuit in wiring harness between climate control unit and air intake actuator • Air intake actuator malfunction • Climate control unit malfunction • Blower unit malfunction • Air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**COOL AIR BLOW OUT INSPECTION** • When both the A/C switch and airflow volume control dial in the climate control unit are on, does cool air blow out from the vent?	Yes	Go to the next step.
		No	Go to Step 1 of the following troubleshooting. **NO COOL AIR [FULL-AUTO AIR CONDITIONER]**

2	**INSPECT FUSE** • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for a short to ground and replace the fuse. **If the fuse is deterioration:** Replace the fuse. Then go to Step 13.
3	**INSPECT AIR INTAKE ACTUATOR LINK** • Inspect the air intake actuator link. (See **BLOWER UNIT REMOVAL/INSTALLATION**.) ▪ Is there grease on the link? ▪ Is the link securely and properly positioned? ▪ Is the link free of obstructions? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or install the link properly and securely, remove obstruction, then go to Step 13. (See **BLOWER UNIT DISASSEMBLY/ASSEMBLY**.)
4*	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Switch the ignition ON (engine off or on). • Measure voltage at the following terminal of climate control unit. **With dual type climate control unit:** ▪ Terminal 1B	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuse block terminal and climate control unit terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:**

	With single type climate control unit: ▪ Terminal L • Is the voltage **approx. 12 V**?		• Repair or replace the wiring harness. Go to Step 13.
5	**VERIFY WHETHER MALFUNCTION IS IN A/C UNIT AIR INTAKE DOOR OR ELSEWHERE** • Switch the ignition off. • Connect the climate control unit connector. • Remove the air intake actuator. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Switch the ignition ON (engine off or on). • Set the airflow volume control dial to MAX position. • Does the air intake mode (RECIRCULATE, FRESH) change smoothly when the air intake link is operated by hand?	Yes	Go to the next step.
		No	Go to Step 11.
6	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. (See **AIR INTAKE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air intake actuator, go to Step 13. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
7	**INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT** • Measure voltage at the following terminals of climate control unit. **With dual type climate control unit:** ▪ Terminal 2J (FRESH signal)	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 13. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

	▪ Terminal 2L (RECIRCULATE signal) **With single type climate control unit:** ▪ Terminal U (FRESH signal) ▪ Terminal S (RECIRCULATE signal) • Is voltage normal?		
8*	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY** • Switch the ignition off. • Is there continuity between the following climate control unit terminals and air intake actuator terminals? **With dual type climate control unit:** ▪ Terminal 2J — Terminal C (FRESH signal) ▪ Terminal 2L — Terminal B (RECIRCULATE signal) **With single type climate control unit:** ▪ Terminal U — Terminal C (FRESH signal) ▪ Terminal S — Terminal B (RECIRCULATE signal)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 13.
9*	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND**	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate

	• Is there continuity between the following climate control unit terminals and ground? **With dual type climate control unit:** ▪ Terminal 2J (FRESH signal) ▪ Terminal 2L (RECIRCULATE signal) **With single type climate control unit:** ▪ Terminal U (FRESH signal) ▪ Terminal S (RECIRCULATE signal)		control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 13.
		No	Go to the next step.
10*	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+** • Switch the ignition ON (engine off or on). • Measure the voltage at the following climate control unit terminals. **With dual type climate control unit:** ▪ Terminal 2J (FRESH signal) ▪ Terminal 2L (RECIRCULATE signal) **With single type climate control unit:** ▪ Terminal U (FRESH signal)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 13.
		No	Replace the climate control unit, then go to Step

	Terminal S (RECIRCULATE signal) • Is the voltage **approx. 12 V**?		13. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
11	**INSPECT BLOWER UNIT AIR INTAKE DOOR** • Is there any foreign matter or obstruction in the blower unit air intake door? (See **BLOWER UNIT REMOVAL/INSTALLATION**.)	Yes	Remove obstruction, then go to Step 13.
		No	Go to the next step.
12	**VERIFY THAT BLOWER UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY** • Is the blower unit air intake door securely and properly positioned? (See **BLOWER UNIT REMOVAL/INSTALLATION**.)	Yes	Go to the next step.
		No	Install the air intake door securely in the proper position, then go to the next step. (See **BLOWER UNIT DISASSEMBLY/ASSEMBLY**.)
13	**VERIFY THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Does the malfunction disappear?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

AIR FROM VENTS NOT COLD ENOUGH [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Magnetic clutch operates but A/C system malfunctions
POSSIBLE CAUSE	**NOTE:** • If the engine coolant temperature increases due to a cooling system malfunction, the fail-safe function disables the A/C operation. • Drive belt malfunction • Refrigerant pressure sensor malfunction • Blower unit or condenser malfunction • Cooling fan system malfunction • Condenser or related part malfunction • A/C unit or condenser malfunction • Receiver/drier or expansion valve malfunction (valve closes too much) • Refrigerant lines malfunction • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system • Evaporative temperature sensor malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT CLIMATE CONTROL UNIT FOR DTC** • Retrieve the climate control unit DTC using the M-MDS. (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.)	Yes	Go to the applicable DTC troubleshooting procedures. (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.)

	• Are there DTC displayed?	No	Go to the next step.
2	**INSPECT REFRIGERANT PRESSURE TO LOCATE MALFUNCTION** • Perform refrigerant pressure check. (See **REFRIGERANT PRESSURE CHECK**.) • Is the refrigerant pressure normal?	Yes	Go to the next step.
		No	Record the inspection result. • If the refrigerant high-pressure and low-pressure values are both high, go to Step 6. • If the refrigerant high-pressure and low-pressure values are approximately the same, go to Step 9. • If the refrigerant high-pressure and low-pressure values are both low, go to Step 11. • If there is a vacuum on the low pressure side and extremely low pressure on the high pressure side, go to Step 17. • If there is low pressure on the high pressure side and high pressure on the low pressure side, replace the A/C compressor, then go to Step 21. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) • If the refrigerant pressure is other than above condition, go to Step 19.
3	**INSPECT REFRIGERANT SYSTEM PERFORMANCE** • Perform refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.) • Is the operation normal?	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
4	**INSPECT DRIVE BELT** • Inspect the drive belt. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Adjust or replace the drive belt, then go to the next step.

	• Is it normal?		(See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 21.
6	**INSPECT COOLING FAN OPERATION** • Verify the cooling fan operation. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the cooling fan operation normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location according to the inspection results. Then go to Step 21.
7	**VISUALLY INSPECT CONDENSER** • Is the condenser fin clogged or obstructed by foreign matter?	Yes	Remove the foreign matter. Repair the condenser fin. Then go to Step 21.
		No	Go to the next step.
8	**CHECK REFRIGERATION SYSTEM FOR OVERCHARGE OR AIR CONTAMINATION** • Is the low side line hot to the touch?	Yes	Recover refrigerant. Evacuate system for one hour. Refill with correct amount of refrigerant, and go to Step 21.
		No	Recover refrigerant, evacuate for **15 minutes,** refill with correct amount and go to Step 21.
9	**VERIFY IF WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE** • Compare the refrigerant pressure of the low pressure side with the high pressure side at Step 3. • Is there little difference between the high pressure side and low pressure side readings (refer to graph in REFRIGERANT PRESSURE CHECK procedure)? (See **REFRIGERANT PRESSURE CHECK**.)	Yes	Replace the expansion valve. After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to the next step.
	INSPECT AIR MIX DOOR RELATED PART		

10	**INSTALLATION** • Measure the voltages at the following climate control unit terminals when the temperature control dials are set to MAX COLD and MAX HOT. **With dual type climate control unit:** ▪ Terminal 2G ▪ Terminal 2E **With single type climate control unit:** ▪ Terminal G • Are voltages normal?	Yes	Adjust the compressor oil to the specified amount, then go to Step 21. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
		No	• Inspect the air mix link, air mix crank, and air mix rod of the A/C unit correctly and securely installed to their positions. (See **A/C UNIT REMOVAL/INSTALLATION**.) • Repair or install the suspect part correctly according to inspection result, then go to Step 21.
11	**INSPECT BLOWER UNIT FOR BLOCKAGE** • Is the blower unit intake and air filter clogged? (See **AIR FILTER INSPECTION**.)	Yes	Remove the cause of the restriction. Replace the air filter if it is restricted. (See **AIR FILTER REMOVAL/INSTALLATION**.) Then go to Step 21.
		No	Go to the next step.
12	**VERIFY IF WHETHER MALFUNCTION IS REFRIGERANT LINE LEAKAGE OR ELSEWHERE** • Verify if there is gas leakage from the system hoses using the gas leak tester. • Is there gas leakage?	Yes	• If there is leakage from a system hose connection area, go to Step 14. • If there is leakage other than from a system hose connection area, go to Step 16.
		No	Go to the next step.
13	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the crushed system hose. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the

			specified level.
		No	Go to Step 20.
14	**VERIFY IF MALFUNCTION IS IN REFRIGERANT LINE JOINT LOOSE OR O-RING** • Tighten the system hose connection area to the specified torque. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) • Has the leakage stopped?	Yes	Go to the next step.
		No	Go to Step 16.
15	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the crushed system hose. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Adjust the compressor oil to the specified amount, then go to Step 21. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
16	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the O-ring of the leaking area. Replace the crushed system hose. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Replace the O-ring of the leaking area. After performing the following servicing, go to

			Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
17	**VERIFY IF MALFUNCTION IS WATER IN REFRIGERANT SYSTEM OR ELSEWHERE** • Is there is no refrigerant pressure on the low pressure side, or is it normal? (See **REFRIGERANT PRESSURE CHECK**.)	Yes	Replace the condenser. (Water in refrigerant system) (See **CONDENSER REMOVAL/INSTALLATION**.) Go to Step 21.
		No	Go to the next step.
18	**VERIFY IF MALFUNCTION IS IN RECEIVER DRYER FILTER OR EXPANSION VALVE** • Remove the expansion valve and verify its condition. (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) • Is there refrigerant leakage or valve restriction?	Yes	**If there is foreign matter restricting the valve:** • Remove the foreign matter. **If there is refrigerant leakage or restriction:** • Replace the expansion valve. Perform discharge, charge with new refrigerant, and then go to Step 21.
		No	Replace the condenser. (Receiver/Dryer filter is clogged.) (See **CONDENSER REMOVAL/INSTALLATION**.) Then go to Step 21.
19	**INSPECT EVAPORATIVE TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is it normal?	Yes	Verify the evaporator temperature sensor position. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Then go to Step 21.
		No	Replace the evaporator temperature sensor, then go to Step 21. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)
20	**INSPECT AIR MIX DOOR RELATED PART INSTALLATION** • Measure the voltages at the following climate control unit terminals when the temperature control dials are set to MAX COLD	Yes	Go to the next step.
		No	• Inspect the air mix link, air mix crank, and verify that the air mix rod of the A/C unit is

	and MAX HOT. **With dual type climate control unit:** ▪ Terminal 2G ▪ Terminal 2E **With single type climate control unit:** ▪ Terminal G • Are voltages normal?		correctly and securely installed to their positions. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) • Repair or install the suspect part correctly according to the inspection result, then go to the next step.
21	**VERIFY THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • If the refrigerant discharged during inspection has not been recharged, charge with new refrigerant to the specified level. • Does cool air discharge from the vents? (Are results of refrigerant system performance test normal?) (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - HVAC

NO COOL AIR [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Magnetic clutch does not operate
POSSIBLE CAUSE	• Airflow mode system malfunction • Blower system malfunction • A/C compressor malfunction • CAN communication malfunction • PCM A/C cut control system malfunction • Refrigerant pressure sensor malfunction • Evaporator temperature sensor malfunction • Magnetic clutch malfunction • A/C 7.5 A fuse malfunction • A/C relay malfunction • Improper refrigerant charging amount

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR BLOW OUT** • Does air blow out?	Yes	Go to the next step.
		No	Go to Step 1 of the following troubleshooting. **INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [FULL-AUTO AIR CONDITIONER]**

			AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]
2	**INSPECT A/C COMPRESSOR OPERATION** • Start engine. • Turn A/C switch and fan switch on. • Does A/C compressor operate?	Yes	Go to Step 1 of the following troubleshooting. **AIR FROM VENTS NOT COLD ENOUGH [FULL-AUTO AIR CONDITIONER]**
		No	Go to the next step.
3	**INSPECT FOR DTCs IN PCM, CLIMATE CONTROL UNIT, AND INSTRUMENT CLUSTER** • Inspect for DTCs related to the PCM, climate control unit, and instrument cluster on-board diagnostic system. (See **FOREWORD [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC DISPLAY [FULL-AUTO AIR CONDITIONER]**.) (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Go to appropriate inspection procedure. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [FULL-AUTO AIR CONDITIONER]**.) (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
4	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR A/C RELAY OPERATIONAL MALFUNCTION** • Access PCM PID ACCS using the M-MDS. (See **OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and idle it. • Turn the PID ACCS to ON from OFF using the M-MDS simulation function. • Is the A/C magnetic clutch engaged?	Yes	Go to the next step.
		No	Go to Step 9.
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C PRESSURE SENSOR SIGNAL OR ELSEWHERE** • Access climate control unit PID AC_PRES.	Yes	Go to Step 7.
		No	Go to the next step.

	(See **OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Monitor the AC_PRES PID while turning on and off the air conditioner by switching the control panel. • Is the PID normal?		
6	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is the refrigerant pressure sensor normal?	Yes	Inspect the following and repair or replace if necessary. • Refrigerant charging amount • A/C compressor for seizure Then go to Step 15.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 15.
7	**DETERMINE IF MALFUNCTION CAUSE IS EVAPORATOR TEMPERATURE SENSOR OPERATIONAL SIGNAL OR ELSEWHERE** • Access climate control unit PID EVA_TMP_SEN. (See **PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER]**.) • Monitor the EVA_TMP_SEN PID while turning on and off the air conditioner by switching the control panel. (See **PID/DATA MONITOR TABLE [FULL-AUTO AIR CONDITIONER]**.) • Is the PID normal?	Yes	Go to Step 9.
		No	Go to the next step.
