8	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is the evaporator temperature sensor normal?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between evaporator temperature sensor terminal and climate control unit terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin

			disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
		No	Replace the evaporator temperature sensor, then go to Step 15. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)
9	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE** • Does cool air blow out when terminal E of A/C relay connector (A/C control signal) is grounded?	Yes	Release short, then go to the next step.
		No	Go to Step 11.
10*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM)** • Test voltage at the A/C relay control signal terminal of PCM. • Is voltage **approx. 12 V**?	Yes	Inspect the PCM, then go to Step 15. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/C relay terminal and PCM terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.

11*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE** • Inspect the magnetic clutch. (See **MAGNETIC CLUTCH INSPECTION**.) • Is the magnetic clutch normal?	Yes	Go to the next step.
		No	Replace the magnetic clutch, then go to Step 15. (See **MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY**.)
12	**INSPECT FUSE** • Remove the A/C 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the A/C 7.5 A fuse, then go to Step 15. If fuse burns out immediately, go to the next step.
13	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY** • Test voltages at following terminals of A/C relay. ▪ Terminal A (A/C relay control signal) ▪ Terminal C (A/C control signal) • Are voltages **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuse block terminal and A/C relay terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
14	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH)** • Test voltage at the following terminal of A/C relay. ▪ Terminal D (magnetic clutch operation signal)	Yes	Inspect wiring harness between A/C relay and magnetic clutch. • If above wiring harness is normal, go to the next step. • If above wiring harness malfunctions, repair wiring harness, then go to the next step.
		No	Replace the A/C relay, then go to the next step.

	• Is voltage **approx. 12 V**?		(See **RELAY LOCATION**.)
15	**VERIFY THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does cool air discharge from the vents? (Are the results of refrigerant system performance test normal?) (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - HVAC

NOISE WHILE OPERATING A/C SYSTEM [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line
POSSIBLE CAUSE	• Magnetic clutch operation noise • A/C compressor vane noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

*

If there is gas leakage, air enters the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT A/C COMPRESSOR VANE FOR NOISE** • Is there a jingling, popping, beeping, or buzzing sound (A/C compressor vane noise)?	Yes	Go to Step 5.
		No	Go to the next step.
2	**INSPECT A/C COMPRESSOR FOR SLIPPAGE NOISE** • Is there a squeaking or whirling sound (A/C compressor slippage noise)?	Yes	Go to Step 14.
		No	Go to the next step.
3	**INSPECT A/C COMPRESSOR FOR INTERFERENCE NOISE** • Is there a rattling or vibrating	Yes	Go to Step 18.

	sound (interference noise)?	No	Go to the next step.
4	**INSPECT MAGNETIC CLUTCH FOR OPERATION NOISE** • Is there a clicking sound (magnetic clutch operation noise)?	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 19. (See **MAGNETIC CLUTCH ADJUSTMENT**.)
		No	Condition is normal. (Recheck malfunction symptoms.)
5	**INSPECT A/C COMPRESSOR FOR PERIOD NOISE OCCURS** • Is noise heard continuously for **more than 3 s** after A/C compressor turns on?	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for **2—3 s** immediately after A/C compressor turns on.)
6	**INSPECT IDLE SPEED** • Inspect idle speed. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is it normal?	Yes	Go to the next step.
		No	Follow the repair instructions indicated in the “ENGINE” section, then go to Step 19.
7	**INSPECT REFRIGERANT AMOUNT** • Inspect refrigerant amount. (See **REFRIGERANT CHARGING**.) • Is it normal?	Yes	Go to Step 10.
		No	Go to the next step.
8	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. ▪ Is piping free of damage and cracks? ▪ Are piping connections free of oil grime? (Visual inspection) ▪ Are piping connections free of gas leakage? ▪ Are piping installation	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.) (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) (See **RECEIVER/DRIER REMOVAL/INSTALLATION**.)

	points on condenser free of gas leakage? ▪ Are piping installation points on receiver/drier free of gas leakage? ▪ Are piping installation points on A/C compressor free of gas leakage? ▪ Are piping installation points on A/C unit free of gas leakage? ▪ Perform gas leak inspection using gas leak tester. • Are the above items normal?		
9	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage? (See **REFRIGERANT CHARGING**.)	Yes	Adjust refrigerant amount to specified level, then go to Step 19. (See **REFRIGERANT CHARGING**.)
		No	If piping is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.) (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) (See **RECEIVER/DRIER REMOVAL/INSTALLATION**.)
10	**VERIFY IF MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE**	Yes	Go to the next step.

	• Add **20 ml {20 cc, 0.68 fl oz}** of compressor oil. • Is noise heard when racing engine?	No	Troubleshooting completed. Explain repair to customer.
11	**VERIFY IF MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Drain compressor oil. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) • Is it contaminated with metal particles?	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
12	**VERIFY IF MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE** • Is compressor oil whitish and mixed with water?	Yes	Replace entire A/C system (excluding heater), then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.) (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) (See **RECEIVER/DRIER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
13	**INSPECT A/C COMPRESSOR OIL** • Is compressor oil darker than normal and contaminated with aluminum chips?	Yes	Replace A/C compressor and condenser, then go to Step 19. (Since A/C compressor may be worn and receiver/drier may be restricted, replacement of receiver/drier is necessary.) (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.)
		No	Condition is normal. Recheck malfunction symptoms.
14	**VERIFY IF MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Is noise heard immediately after A/C compressor is stopped?	Yes	Replace A/C compressor, then go to Step 19. (A/C compressor discharge valve left open) (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.
15	**INSPECT DRIVE BELT** • Inspect the drive belt. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to the next step.
		No	Replace the drive belt, then go to Step 19.

	2.5].) • Is it normal?		(See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
16	**INSPECT DRIVE BELT CONDITION** • Is drive belt worn? • Does it have foreign matter imbedded in it, or have oil on it?	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 19.
		No	Go to the next step.
17	**INSPECT MAGNETIC CLUTCH** • Inspect the magnetic clutch. (See **MAGNETIC CLUTCH INSPECTION**.) • Is it normal?	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
		No	Replace magnetic clutch, then go to Step 19. (See **MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY**.)
18	**VERIFY IF MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES** • Is noise emitted from A/C compressor?	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
19	**VERIFY THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Has A/C compressor noise stopped?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - HVAC

DUAL A/C CONTROL DOES NOT OPERATE [FULL-AUTO AIR CONDITIONER]

DESCRIPTION	• Driver or passenger side temperature control dial does not operate individually • Temperature control operates normally except for dual A/C control function
POSSIBLE CAUSE	• Air mix door malfunction (driver or passenger-side) • Air mix actuator malfunction (driver or passenger-side) • Open or short circuit in wiring or poor connection between climate control unit and air mix actuator (driver or passenger-side) • Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY SYMPTOM** • Turn on the A/C. • Perform the dual A/C control function for driver and passenger side individually. • Is it either the temperature control on driver side or passenger side?	Yes	Go to the next step.
		No	Go to Step 12.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR MIX DOOR OR ELSEWHERE**	Yes	Go to Step 8.
		No	Go to the next step.

	Turn on the A/C. • Change temperature control on the suspected side while in dual mode. • Does the air mix door on the suspect side move smoothly?		
3	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator on the suspect side. (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is the air mix actuator normal?	Yes	Go to the next step.
		No	Replace the air mix actuator on the suspected side, then go to Step 15. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
4*	**INSPECT AIR MIX ACTUATOR (MOTOR) CIRCUIT FOR SHORT TO GROUND** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Climate control unit terminal 2D (driver-side motor) ▪ Climate control unit terminal 2B (driver-side motor) ▪ Climate control unit terminal 2F (passenger-side motor) ▪ Climate control unit terminal 2H (passenger-side motor)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 15.
		No	Go to the next step.

	• Is there continuity?		
5*	**INSPECT AIR MIX ACTUATOR (MOTOR) CIRCUIT FOR OPEN CIRCUIT** • Air mix actuator and climate control unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal 2D — driver-side air mix actuator terminal B ▪ Climate control unit terminal 2B — driver-side air mix actuator terminal C ▪ Climate control unit terminal 2F— passenger-side air mix actuator terminal C ▪ Climate control unit terminal 2H — passenger-side air mix actuator terminal B • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 15.
6*	**INSPECT AIR MIX ACTUATOR (MOTOR) CIRCUIT FOR SHORT TO POWER SUPPLY** • Air mix actuator and climate control unit connectors are disconnected. • Connect the negative battery cable.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:**

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Climate control unit terminal 2D (driver-side motor) ▪ Climate control unit terminal 2B (driver-side motor) ▪ Climate control unit terminal 2F (passenger-side motor) ▪ Climate control unit terminal 2H (passenger-side motor) • Is the voltage **0 V**?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 15.
7	**INSPECT AIR MIX DOOR** • Inspect the suspect side air mix door. • Is the air mix door normal?	Yes	Replace the climate control unit, then go to Step 15. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Remove the obstruction or replace A/C unit case on the suspected side, then go to Step 15. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)
8*	**INSPECT AIR MIX ACTUATOR POSITION SENSOR** • Inspect the air mix actuator position sensor on the suspected side.	Yes	Go to the next step.
		No	Replace the air mix actuator on the suspected side, then go to Step 15. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION**

	(See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is the air mix actuator position sensor normal?		**[FULL-AUTO AIR CONDITIONER]**.)
9*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO GROUND** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Climate control unit terminal 2G (driver-side position sensor) ▪ Climate control unit terminal 2E (passenger-side position sensor) ▪ Climate control unit terminal 1N (position sensor power supply) ▪ Climate control unit terminal 1J (position sensor ground) • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 15.
		No	Go to the next step.
10*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR OPEN CIRCUIT** • Air mix actuator and climate control unit connectors are	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate

disconnected.

- Inspect for continuity between the following terminals (wiring harness-side):
  - Climate control unit terminal 2G — driver-side air mix actuator terminal F
  - Climate control unit terminal 2E — passenger-side air mix actuator terminal F
  - Climate control unit terminal 1N — driver-side air mix actuator terminal G
  - Climate control unit terminal 1N — passenger-side air mix actuator terminal E
  - Climate control unit terminal 1J — driver-side air mix actuator terminal E
  - Climate control unit terminal 1J — passenger-side air mix actuator terminal G
- Is there continuity?

control unit terminal and air mix actuator terminal.

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.
- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has an open circuit.

Go to Step 15.

11*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO POWER SUPPLY** • Air mix actuator and climate control unit connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Climate control unit terminal 2G (driver-side position sensor) ▪ Climate control unit terminal 2E (passenger-side position sensor) ▪ Climate control unit terminal 1N (position sensor power supply) ▪ Climate control unit terminal 1J (position sensor ground) • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 15.
12*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO GROUND** • Disconnect the climate control	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator.

	unit connector. (See **CLIMATE CONTROL UNIT REMOVAL / INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Climate control unit terminal 1N (position sensor power supply) ▪ Climate control unit terminal 1J (position sensor ground) • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 15.
		No	Go to the next step.
13*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR OPEN CIRCUIT** • Air mix actuator and climate control unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Climate control unit terminal 1N — driver-side air mix actuator terminal G ▪ Climate control unit terminal 1N — passenger-side air mix actuator terminal E ▪ Climate control unit	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 15.

	terminal 1J — driver-side air mix actuator terminal E ▪ Climate control unit terminal 1J — passenger-side air mix actuator terminal G • Is there continuity?		
14*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO POWER SUPPLY** • Air mix actuator and climate control unit connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Climate control unit terminal 1N (position sensor power supply) ▪ Climate control unit terminal 1J (position sensor ground) • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air mix actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
15	**VERIFY THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR**	Yes	Troubleshooting completed. Explain repairs to customer.

	• Can the temperatures for the driver-side and passenger-side be adjusted independently?		
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - HVAC

SYMPTOM TROUBLESHOOTING SYSTEM WIRING DIAGRAM [MANUAL AIR CONDITIONER]

CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR

2014 - Mazda3 - HVAC

FOREWORD [MANUAL AIR CONDITIONER]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction.

- Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - HVAC

TROUBLESHOOTING INDEX [MANUAL AIR CONDITIONER]

TROUBLESHOOTING ITEM	DESCRIPTION
INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [MANUAL AIR CONDITIONER]	• Problem with each vent and/or duct • Airflow mode does not change
AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [MANUAL AIR CONDITIONER]	• Malfunction in blower system
AIR INTAKE MODE DOES NOT CHANGE [MANUAL AIR CONDITIONER]	• Air intake mode does not change when switching REC/FRESH mode
NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [MANUAL AIR CONDITIONER]	• Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system • Malfunction in air mix actuator or related wiring harness
WINDSHIELD FOGGED [MANUAL AIR CONDITIONER]	• A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes
AIR FROM VENTS NOT COLD ENOUGH [MANUAL AIR CONDITIONER]	• Magnetic clutch operates but A/C system malfunctions
NO COOL AIR [MANUAL AIR CONDITIONER]	• Magnetic clutch does not operate
NOISE WHILE OPERATING A/C SYSTEM [MANUAL AIR CONDITIONER]	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line

2014 - Mazda3 - HVAC

INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [MANUAL AIR CONDITIONER]

DESCRIPTION	• Problem with each vent and/or duct • Airflow mode does not change
POSSIBLE CAUSE	• Airflow mode wire malfunction • VENT mode system malfunction • HEAT mode system malfunction • DEFROSTER mode system malfunction • Vent or duct malfunction (clogging, deformation, air leakage, improper operation)

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT A/C UNIT AIRFLOW MODE SYSTEM** • Inspect the A/C unit and/or climate control unit airflow mode links, air airflow mode cranks, air airflow mode rods, and wire clamp. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) ▪ Is there grease on links and cranks? ▪ Are links, cranks, and rods securely	Yes	Go to the next step.
		No	Apply grease or airflow mode the links, cranks, and rods securely in their proper positions, repair or replace the airflow mode wire clamp, then go to Step 9. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

	installed in their proper positions? ▪ Is wire clamp free of deformation? • Are the above items normal?		
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN VENT MODE OR OTHER MODES** • Does air blow out when in the VENT mode?	Yes	Go to Step 5.
		No	Go to the next step.
3	**INSPECT VENT** • Is the vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
4	**VERIFY THAT DUCT IN DASHBOARD IS INSTALLED** • Is the duct in the dashboard properly installed? (See **DASHBOARD REMOVAL**.)(See **DASHBOARD INSTALLATION**.)	Yes	Inspect the duct for clogging, deformation and air leakage, then go to Step 9.
		No	Install the incorrectly installed ducts properly, then go to Step 9. (See **DASHBOARD DISASSEMBLY/ASSEMBLY**.)
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN HEAT MODE OR DEFROSTER MODE** • Does air blow out when in the HEAT mode?	Yes	Go to the next step.
		No	Inspect the vent for clogging, then go to Step 9.
6	**INSPECT DEFROSTER MODE** • Does air blow out when in the DEFROSTER mode?	Yes	Operation is normal. Recheck malfunction symptoms.
		No	Go to the next step.
7	**INSPECT VENT** • Is the vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
8	**VERIFY DUCT INSTALLATION CONDITION** • Are the following ducts installed properly? (See **DASHBOARD REMOVAL**.)(See **DASHBOARD INSTALLATION**.)	Yes	Inspect ducts for restriction, deformity, and air leakage, then go to the next step.
		No	Install the incorrectly installed ducts properly, then go to the next step. (See **DASHBOARD DISASSEMBLY/ASSEMBLY**.)

	▪ Dashboard ducts ▪ Defroster ducts		
9	**CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [MANUAL AIR CONDITIONER]

DESCRIPTION	• Malfunction in blower system
POSSIBLE CAUSE	• HEATER 40 A fuse malfunction • Blower unit malfunction • Open or short circuit in wiring harness between climate control unit and blower relay • Blower relay malfunction • Blower motor malfunction • Blower fan controller malfunction • Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUSE** • Remove the HEATER 40 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for short to GND and replace the fuse. **If the fuse is deterioration:** Replace the fuse. Then go to Step 15.

2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Turn the fan dial clockwise. • Recirculate air inside the vehicle. • Does the blower motor rotate smoothly?	Yes	Go to the next step.
		No	Go to Step 4.
3	**INSPECT BLOWER UNIT INTAKE VENT** • Is blower unit intake vent clogged?	Yes	Remove obstruction, then go to Step 15.
		No	Inspect if there are any obstruction in the A/C unit passage, then go to Step 15.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER RELAY SYSTEM OR BLOWER FAN CONTROLLER SYSTEM** • Switch the ignition ON (engine off or on). • Turn the fan dial clockwise. • Measure the voltage at the following blower motor terminal. ▪ Terminal A (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 8.
		No	Go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN FUSE BLOCK AND BLOWER RELAY) OR ELSEWHERE** • Measure the voltage at the following blower relay terminals. ▪ Terminal A (B+ signal) ▪ Terminal B (B+ signal) • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower relay terminal and HEATER 40 A fuse. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part.

			If there is no common connector: • Repair or replace the wiring harness. Go to Step 15.
6*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND GROUND) OR ELSEWHERE** • Measure the voltage at the following blower relay terminal. ▪ Terminal D (GND signal) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower relay terminal and front body control module (FBCM) terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
7*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND BLOWER FAN CONTROLLER) OR BLOWER RELAY** • Measure the voltage at the following blower relay terminal. ▪ Terminal C (blower motor operation signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness for lack of continuity between the blower relay and blower fan controller, then go to Step 15.
		No	Replace the blower relay, then go to Step 15.
8*	**INSPECT BLOWER MOTOR** • Inspect the blower motor. (See **BLOWER MOTOR INSPECTION**.) • Is the blower motor normal?	Yes	Go to the next step.
		No	Replace the blower motor, then go to Step 15. (See **BLOWER MOTOR REMOVAL/INSTALLATION**.)

9*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER MOTOR AND BLOWER FAN CONTROLLER) OR ELSEWHERE** • Measure the voltage at the following terminal of blower fan controller. ▪ Terminal E (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower motor terminal and blower fan controller terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
10*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER FAN CONTROLLER AND GROUND) OR ELSEWHERE** • Measure the voltage at the following blower fan controller terminal. ▪ Terminal C (GND) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower fan controller terminal and ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
11	**INSPECT BLOWER UNIT** • Inspect the fan in blower unit.	Yes	Go to the next step.
		No	Remove obstruction, repair or replace the

	▪ Is the fan free of interference with the blower unit case? ▪ Is the fan free of foreign material and obstruction? • Is the fan normal?		fan and A/C unit case, then go to Step 15.
12*	**INSPECT BLOWER FAN CONTROLLER** • Inspect the blower fan controller. (See **BLOWER FAN CONTROLLER INSPECTION**.) • Is the blower fan controller normal?	Yes	Go to the next step.
		No	Replace the blower fan controller, then go to Step 15. (See **BLOWER FAN CONTROLLER REMOVAL/INSTALLATION**.)
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER FAN CONTROLLER AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Switch the ignition off. • Disconnect climate control unit connector. • Inspect for continuity at the following terminals between the blower fan controller and climate control unit. ▪ Terminal B—I (blower motor speed control signal) • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower fan controller terminal and climate control unit terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 15.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR WIRING HARNESS (SHORT TO GROUND IN WIRING HARNESS BETWEEN BLOWER FAN CONTROLLER AND CLIMATE CONTROL UNIT)** • Inspect for continuity at the following terminal between the blower fan controller and ground.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between blower fan controller terminal and ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

	Terminal B (blower motor speed control signal)—ground • Is there continuity?		connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Replace the climate control unit, then go to the next step. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
15	**CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

AIR INTAKE MODE DOES NOT CHANGE [MANUAL AIR CONDITIONER]

DESCRIPTION	• Air intake mode does not change when switching REC/FRESH mode
POSSIBLE CAUSE	• Air intake actuator malfunction • Open or short circuit in wiring harness between climate control unit and air intake actuator • Climate control unit malfunction • Air intake link malfunction • Air intake door malfunction • Restriction in blower unit

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

NOTE:

- The climate control unit controls the air intake mode when the airflow mode is in DEFROSTER so that it is fixed at FRESH mode. At this time, the airflow mode cannot be changed from FRESH to RECIRCULATE even if the REC switch is pressed, but this does not indicate a malfunction.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE** • Disconnect the air intake actuator connector. • Switch the ignition ON (engine	Yes	Go to the next step.
		No	Go to Step 3.

	off or on). • Measure the voltages at the following climate control unit terminals. ▪ Terminal E (FRESH motor drive signal) ▪ Terminal C (RECIRCULATE motor drive signal) • Are voltages normal?		
2	**INSPECT AIR INTAKE ACTUATOR** • Inspect air intake actuator. (See **AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the Step 6.
		No	Replace the air intake actuator, then go to Step 8. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
3	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO POWER SUPPLY BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Air intake actuator connector disconnected. • Disconnect the climate control unit connector. • Measure the voltages at the following air intake actuator terminals. ▪ Terminal C (FRESH motor drive signal) ▪ Terminal B (RECIRCULATE motor drive signal) • Are voltages **approx. 0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO**	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between

	GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE • Climate control unit and air intake actuator connectors disconnected. • Switch the ignition off. • Inspect for continuity at the following terminals between the air intake actuator and ground. ▪ Terminal C (FRESH motor drive signal) ▪ Terminal B (RECIRCULATE motor drive signal) • Is there continuity?		climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY OR OPEN BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Climate control unit and air intake actuator connectors disconnected. • Inspect for continuity at the following terminals between the air intake actuator and climate control unit. ▪ Terminal C—E (FRESH motor drive signal) ▪ Terminal B—C (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Replace the climate control unit, then go to Step 8. (See **CLIMATE CONTROL UNIT REMOVAL / INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 8.

6	**INSPECT AIR INTAKE LINK** • Inspect the air intake link. (See **BLOWER UNIT REMOVAL/INSTALLATION**.) ▪ Is there grease on link? ▪ Are the links securely and properly installed? ▪ Are the links free of obstructions and hindrances? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease to the links. If any the links are damaged, replace the air intake actuator, then go to Step 8. (See **BLOWER UNIT DISASSEMBLY/ASSEMBLY**.)
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR** • Inspect the blower unit air intake door. (See **BLOWER UNIT REMOVAL/INSTALLATION**.) ▪ Is the door free of obstructions, cracks, and damage? ▪ Are the doors securely and properly installed? • Are the above items normal?	Yes	Go to the next step.
		No	Remove obstruction, or install the doors in the proper position. If any doors are cracked or damaged, replace them, then go to the next step.
8	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does the air intake mode change smoothly?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [MANUAL AIR CONDITIONER]

DESCRIPTION	• Temperature does not change when operating temperature setting dial • Malfunction in A/C unit and/or climate control unit air mix system
POSSIBLE CAUSE	• Air mix wire malfunction • Air mix link malfunction • Air mix door malfunction • Climate control unit malfunction • Heater hose malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT COOLANT TEMPERATURE** • Is the coolant sufficiently warmed up?	Yes	Go to the next step.
		No	Warm up the engine, then go to Step 8.
2	**INSPECT A/C UNIT AIR MIX SYSTEM** • Inspect the A/C unit air mix links, air mix cranks, and wire clamp. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) ▪ Is there grease on links and cranks?	Yes	Go to the next step.
		No	Apply grease or install the links, cranks, and rods securely in their proper positions, repair or replace the wire clamp, then go to Step 8. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

	▪ Are links and cranks securely installed in their proper positions? ▪ Is wire clamp free of deformation? • Are the above items normal?		
3	**VERIFY THAT AIR MIX WIRE FROM A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is the air mix wire securely installed in the correct position in relation to the A/C unit air mix links? (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)	Yes	Go to the next step.
		No	Adjust the air mix wire or install securely in the correct position, then go to Step 8. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect the climate control unit. (See **CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER]**.) • Is the climate control unit normal?	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 8. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
5	**INSPECT AIR MIX LINK** • Inspect the air mix link. (See **A/C UNIT REMOVAL/INSTALLATION**.) ▪ Is grease on link? ▪ Are links securely and properly installed? ▪ Are links free of obstructions and hindrances?	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged. Replace malfunctioning part. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Then go to Step 8.

	• Are the above items normal?		
6	**INSPECT A/C UNIT** AIR MIX DOOR • Inspect the air mix door. (See **A/C UNIT REMOVAL/INSTALLATION**.) ▪ Is door free of obstructions and damage? ▪ Are doors securely and properly installed? • Are the above items normal?	Yes	Go to the next step.
		No	Remove the obstruction, or install door in proper position. If any door are cracked, replace them. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Then go to the next step.
7	**INSPECT HEATER HOSE** • Inspect the heater hoses for the following: ▪ Is heater hoses free of damage and cracks? ▪ Are heater hoses connections free of engine coolant leakage? ▪ Are heater hoses installation points on A/C unit free of engine coolant leakage? • Are the above items normal?	Yes	Go to the next step.
		No	If heater hoses connections are loose, install securely in the correct position. Repair or replace the heater hoses. (See **HEATER HOSE REMOVAL/INSTALLATION**.) then go to the next step.
8	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the unit operate in every temperature setting?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [MANUAL AIR CONDITIONER]

2014 - Mazda3 - HVAC

WINDSHIELD FOGGED [MANUAL AIR CONDITIONER]

DESCRIPTION	• A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes
POSSIBLE CAUSE	• A/C compressor malfunction • ROOM 15 A fuse malfunction • Air intake link malfunction • Open or short circuit in wiring harness between climate control unit and air intake actuator • Air intake actuator malfunction • Climate control unit malfunction • Blower unit malfunction • Air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**COOL AIR BLOW OUT INSPECTION** • When both the A/C switch and airflow volume control dial in the climate control unit are on, does cool air blow out from the vent?	Yes	Go to the next step.
		No	Go to Step 1 of the following troubleshooting. (See **NO COOL AIR [MANUAL AIR CONDITIONER]**.)

2	**INSPECT FUSE** • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for a short to ground and replace the fuse. **If the fuse is deterioration:** Replace the fuse. Then go to Step 13.
3	**INSPECT AIR INTAKE ACTUATOR LINK** • Inspect the air intake actuator link. (See **BLOWER UNIT REMOVAL/INSTALLATION**.) ▪ Is there grease on the link? ▪ Is the link securely and properly positioned? ▪ Is the link free of obstructions? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or install the link properly and securely, remove obstruction, then go to Step 13. (See **BLOWER UNIT DISASSEMBLY/ASSEMBLY**.)
*4	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY** • Disconnect the climate control unit connector. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at climate control unit terminal J (B+ signal). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuse block terminal and climate control unit terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness.

			Go to Step 13.
5	**VERIFY WHETHER MALFUNCTION IS IN BLOWER UNIT AIR INTAKE DOOR OR ELSEWHERE** • Switch the ignition off. • Connect the climate control unit connector. • Remove the air intake actuator. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) • Switch the ignition ON (engine off or on). • Set the fan switch to on position. • Does the air intake mode (RECIRCULATE, FRESH) change smoothly when the air intake link is operated by hand?	Yes	Go to the next step.
		No	Go to Step 12.
6	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. (See **AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER]**.) • Is it normal?	Yes	Go to the next step.
		No	Replace the air intake actuator, go to Step 13. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
7	**INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT** • Measure the voltage at climate control unit connector terminals C and E. • Is it normal?	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 13. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
*8	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY** • Switch the ignition off. • Is there continuity between the following climate control unit terminals and air intake actuator terminals?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning

	▪ Terminal E (FRESH signal)—Terminal C ▪ Terminal C (RECIRCULATE signal)—Terminal B		part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 13.
*9	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND** • Is there continuity between the following climate control unit terminals and ground? ▪ Terminal E (FRESH signal) ▪ Terminal C (RECIRCULATE signal)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 13.
		No	Go to the next step.
*10	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+** • Switch the ignition ON (engine off or on). • Measure the voltage at the following climate control unit terminals. ▪ Terminal E	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal and air intake actuator terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin

	(FRESH signal) ▪ Terminal C (RECIRCULATE signal) • Is the voltage **approx. 12 V**?		disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 13.
		No	Replace the climate control unit, then go to Step 13. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
11	**INSPECT BLOWER UNIT AIR INTAKE DOOR** • Is there any foreign matter or obstruction in the blower unit air intake door? (See **BLOWER UNIT REMOVAL/INSTALLATION**.)	Yes	Remove obstruction, then go to Step 13.
		No	Go to the next step.
12	**VERIFY THAT BLOWER UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY** • Is the blower unit air intake door securely and properly positioned? (See **BLOWER UNIT REMOVAL/INSTALLATION**.)	Yes	Go to the next step.
		No	Install the air intake door securely in the proper position, then go to the next step. (See **BLOWER UNIT DISASSEMBLY/ASSEMBLY**.)
13	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the malfunction disappear?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

2014 - Mazda3 - HVAC

AIR FROM VENTS NOT COLD ENOUGH [MANUAL AIR CONDITIONER]

DESCRIPTION	• Magnetic clutch operates but A/C system malfunctions
POSSIBLE CAUSE	**NOTE:** • If the engine coolant temperature increases due to a cooling system malfunction, the fail-safe function disables the A/C operation. • Drive belt malfunction • Refrigerant pressure sensor malfunction • Blower unit or condenser malfunction • Cooling fan system malfunction • Condenser or related part malfunction • A/C unit or condenser malfunction • Receiver/drier or expansion valve malfunction (valve closes too much) • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system • Evaporative temperature sensor malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT REFRIGERANT PRESSURE TO LOCATE MALFUNCTION** • Perform refrigerant pressure check. (See **REFRIGERANT PRESSURE CHECK**.)	Yes	Go to the next step.
		No	Record the inspection result. • If the refrigerant high-pressure and low-pressure values are both high, go to

	• Is the refrigerant pressure normal?		Step 5. • If the refrigerant high-pressure and low-pressure values are approximately the same, go to Step 9. • If the refrigerant high-pressure and low-pressure values are both low, go to Step 10. • If there is a vacuum on the low pressure side and extremely low pressure on the high pressure side, go to Step 16. • If there is low pressure on the high pressure side and high pressure on the low pressure side, replace the A/C compressor, then go to Step 20. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) • If the refrigerant pressure is other than above condition, go to Step 18.
2	**INSPECT REFRIGERANT SYSTEM PERFORMANCE** • Perform refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.) • Is the operation normal?	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
3	**INSPECT DRIVE BELT** • Inspect the drive belt. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is it normal?	Yes	Go to the next step.
		No	Adjust or replace the drive belt, then the next step. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.)	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 20.

	• Is it normal?		
5	**INSPECT COOLING FAN OPERATION** • Verify the cooling fan operation. (See **ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the cooling fan operation normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location according to the inspection results. Then go to Step 20.
6	**VISUALLY INSPECT CONDENSER** • Is the condenser fin clogged or obstructed by foreign material?	Yes	Remove the foreign material. Repair the condenser fin. Then go to Step 20.
		No	Go to the next step.
7	**CHECK REFRIGERATION SYSTEM FOR OVERCHARGE OR AIR CONTAMINATION** • Is the low side line hot to the touch?	Yes	Recover refrigerant. Evacuate system for one hour. Refill with correct amount of refrigerant, and go to step 20.
		No	Recover refrigerant, evacuate for **15 minutes,** refill with correct amount and go to step 20.
8	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE** • Compare the refrigerant pressure of the low pressure side with the high pressure side at Step 3. • Is there little difference between the high pressure side and low pressure side readings (refer to graph in REFRIGERANT PRESSURE CHECK procedure)? (See **REFRIGERANT PRESSURE CHECK**.)	Yes	Replace the expansion valve. After performing the following servicing, go to Step 20. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to the next step.
9	**INSPECT AIR MIX DOOR RELATED PART INSTALLATION** • Remove the A/C unit. (See **A/C UNIT REMOVAL/INSTALLATION**.) • Are the air mix link, and air mix crank of the A/C unit correctly and securely installed to their positions?	Yes	Adjust the compressor oil to the specified amount, then go to Step 20. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
		No	• Inspect the air mix link and air mix crank of the A/C unit correctly and securely installed to their positions.

			(See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) • Repair or install correctly for suspect part according to inspection result, then go to Step 20.
10	**INSPECT BLOWER UNIT FOR BLOCKAGE** • Is the blower unit intake and air filter clogged? (See **AIR FILTER INSPECTION**.)	Yes	Remove the cause of the clogging. Replace the air filter if it is clogged. (See **AIR FILTER REMOVAL/INSTALLATION**.) Then go to Step 20.
		No	Go to the next step.
11	**CHECK TO SEE WHETHER MALFUNCTION IS REFRIGERANT LINE LEAKAGE OR ELSEWHERE** • Verify if there is gas leakage from the system hoses using the gas leak tester. • Is there gas leakage?	Yes	• If there is leakage from a system hose connection area, go to Step 13. • If there is leakage other than from a system hose connection area, go to Step 15.
		No	Go to the next step.
12	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the crushed system hose. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) After performing the following servicing, go to Step 20. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to Step 19.
13	**CHECK TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT LINE JOINT LOOSE OR O-RING** • Tighten the system hose connection area to the specified torque. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) • Has the leakage stopped?	Yes	Go to the next step.
		No	Go to Step 15.

14	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the crushed system hose. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) After performing the following servicing, go to Step 20. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Adjust the compressor oil to the specified amount, then go to Step 20. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
15	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the O-ring of the leaking area. Replace the crushed system hose. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) After performing the following servicing, go to Step 20. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Replace the O-ring of the leaking area. After performing the following servicing, go to Step 20. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
16	**CHECK TO SEE WHETHER MALFUNCTION IS WATER IN REFRIGERANT SYSTEM OR ELSEWHERE** • Is there is no refrigerant pressure on the low pressure side, or is it normal?	Yes	Replace the condenser. (Water in refrigerant system) (See **CONDENSER REMOVAL/INSTALLATION**.) Go to Step 20.

		No	Go to the next step.
17	**CHECK TO SEE WHETHER MALFUNCTION IS IN RECEIVER DRYER FILTER OR EXPANSION VALVE** • Remove the expansion valve and verify its condition. (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) • Is there refrigerant leakage or valve clogging?	Yes	**If there is foreign matter clogging the valve:** • Remove the foreign matter. **If there is refrigerant leakage or clogging:** • Replace the expansion valve. Perform discharge, charge with new refrigerant, and then go to Step 20.
		No	Replace the condenser. (Receiver/Dryer filter is clogged.) (See **CONDENSER REMOVAL/INSTALLATION**.) Then go to Step 20.
18	**INSPECT EVAPORATIVE TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) • Is it normal?	Yes	Verify the evaporator temperature sensor position. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) Then go to Step 20.
		No	Replace the evaporator temperature sensor, then go to Step 20. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)
19	**INSPECT AIR MIX DOOR RELATED PART INSTALLATION** • Remove the A/C unit. (See **A/C UNIT REMOVAL/INSTALLATION**.) • Are the air mix link, and air mix crank of the A/C unit correctly and securely installed to their positions?	Yes	Go to the next step.
		No	• Inspect the air mix link and air mix crank of the A/C unit correctly and securely installed to their positions. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.) • Repair or install correctly for suspect part according to inspection result, then go to next Step.
20	**VERIFY THAT MALFUNCTION SYMPTOM DOES OCCURS AFTER REPAIR** • If the refrigerant discharged during inspection has not been recharged, discharge and charge with new refrigerant to the specified level.	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

	• Does cool air blow out? (Are results of refrigerant system performance test normal?)		

2014 - Mazda3 - HVAC

NO COOL AIR [MANUAL AIR CONDITIONER]

DESCRIPTION	• Magnetic clutch does not operate
POSSIBLE CAUSE	• Airflow mode system malfunction • Blower system malfunction • A/C compressor malfunction • CAN communication malfunction • PCM A/C cut control system malfunction • Refrigerant pressure sensor malfunction • Evaporator temperature sensor malfunction • LIN communication malfunction • Magnetic clutch malfunction • A/C 7.5 A fuse malfunction • A/C relay malfunction • Improper refrigerant charging amount

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR BLOW OUT** • Does air blow out?	Yes	Go to the next step.
		No	Go to Step 1 of the following troubleshooting.

			(See **INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [MANUAL AIR CONDITIONER]**.) (See **AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [MANUAL AIR CONDITIONER]**.)
2	**INSPECT A/C COMPRESSOR OPERATION** • Start engine. • Turn A/C switch and fan switch on. • Does A/C compressor operate?	Yes	Go to Step 1 of the following troubleshooting. (See **AIR FROM VENTS NOT COLD ENOUGH [MANUAL AIR CONDITIONER]**.)
		No	Go to the next step.
3	**INSPECT FOR DTCs IN PCM AND FBCM** • Inspect for DTCs related to the PCM and FBCM on-board diagnostic system. (See **FOREWORD [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Are any DTCs displayed?	Yes	Go to appropriate inspection procedure. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	Go to the next step.
4	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR A/C RELAY OPERATIONAL MALFUNCTION** • Access PCM PID ACCS using the M-MDS. (See **OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Start the engine and idle it. • Turn the PID ACCS to ON from OFF using the M-MDS simulation function. • Is the A/C magnetic clutch engaged?	Yes	Go to the next step.
		No	Go to Step 10.
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C PRESSURE SENSOR SIGNAL OR ELSEWHERE** • Access climate control unit PID AC_PRES. (See **OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to Step 7.
		No	Go to the next step.

	2.5].) • Monitor the AC_PRES PID while turning on and off the air conditioner by switching the control panel. • Is the PID normal?		
6	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) • Is the refrigerant pressure sensor normal?	Yes	Inspect the following and repair or replace if necessary. • Refrigerant charging amount • A/C compressor for seizure Then go to Step 16.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 16.
7*	**SIGNAL INSPECTION FROM EVAPORATOR TEMPERATURE SENSOR TO CLIMATE CONTROL UNIT** • Remove the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) • Reconnect the climate control unit connector. • Measure the climate control unit terminal H voltage. (See **CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER]**.) • Is the voltage within the specified?	Yes	Go to Step 10.
		No	Go to the next step.
8	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See **EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) • Is the evaporator temperature sensor normal?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between evaporator temperature sensor terminal and climate control unit terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common

			wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 16.
		No	Replace the evaporator temperature sensor, then go to Step 16. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)
9	**CONTINUITY INSPECTION BETWEEN CLIMATE CONTROL UNIT AND FBCM** • Inspect for open or short circuit between climate control unit terminal K and FBCM terminal 2J. Is there any open or short circuit detected?	Yes	Repair for open or short circuit.
		No	Replace the climate control unit.(A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal.) (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
10	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE** • Does cool air blow out when terminal E of A/C relay connector (A/C control signal) is grounded?	Yes	Release short, then go to the next step.
		No	Go to Step 12.
11*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM)** • Test voltage at the A/C relay control signal terminal of PCM. • Is voltage **approx. 12 V**?	Yes	Inspect PCM, then go to Step 16. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between A/C relay terminal and PCM terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common

			wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 16.
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE** • Inspect the magnetic clutch. (See **MAGNETIC CLUTCH INSPECTION**.) • Is the magnetic clutch normal?	Yes	Go to the next step.
		No	Replace the magnetic clutch, then go to Step 16. (See **MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY**.)
13	**INSPECT FUSE** • Remove the A/C 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the A/C 7.5 A fuse, then go to Step 16. If fuse burns out immediately, go to the next step.
14	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY** • Test voltages at following terminals of A/C relay. ▪ Terminal A (A/C relay control signal) ▪ Terminal C (A/C control signal) • Are voltages **approx. 12 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between fuse block terminal and A/C relay terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to Step 16.
	INSPECT TO SEE WHETHER MALFUNCTION		

15	**IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH)** • Test voltage at the following terminal of A/C relay. ▪ Terminal D (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect wiring harness between A/C relay and magnetic clutch. • If above wiring harness is normal, go to the next step. • If above wiring harness malfunctions, repair wiring harness, then go to the next step.
		No	Replace A/C relay, then go to the next step. (See **RELAY LOCATION**.)
16	**VERIFY THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does cool air discharge from the vents? (Are the results of refrigerant system performance test normal?) (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - HVAC

NOISE WHILE OPERATING A/C SYSTEM [MANUAL AIR CONDITIONER]

DESCRIPTION	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line
POSSIBLE CAUSE	• Magnetic clutch operation noise • A/C compressor vane noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

*

If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT A/C COMPRESSOR VANE FOR NOISE** • Is there a jingling, popping, beeping, or buzzing sound (A/C compressor vane noise)?	Yes	Go to Step 5.
		No	Go to the next step.
2	**INSPECT A/C COMPRESSOR FOR SLIPPAGE NOISE** • Is there a squeaking or whirling sound (A/C compressor slippage noise)?	Yes	Go to Step 14.
		No	Go to the next step.
3	**INSPECT A/C COMPRESSOR FOR INTERFERENCE NOISE** • Is there a rattling or vibrating	Yes	Go to Step 18.

	sound (interference noise)?	No	Go to the next step.
4	**INSPECT MAGNETIC CLUTCH FOR OPERATION NOISE** • Is there a clicking sound (magnetic clutch operation noise)?	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 19. (See **MAGNETIC CLUTCH ADJUSTMENT**.)
		No	Condition is normal. (Recheck malfunction symptoms.)
5	**INSPECT A/C COMPRESSOR FOR PERIOD NOISE OCCURS** • Is noise heard continuously for **more than 3 s** after A/C compressor turns on?	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for **2—3 s** immediately after A/C compressor turns on.)
6	**INSPECT IDLE SPEED** • Inspect idle speed. (See **ENGINE TUNE-UP [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is it normal?	Yes	Go to the next step.
		No	Follow the repair instructions indicated in the “ENGINE” section, then go to Step 19.
7	**INSPECT REFRIGERANT AMOUNT** • Inspect refrigerant amount. (See **REFRIGERANT CHARGING**.) • Is it normal?	Yes	Go to Step 10.
		No	Go to the next step.
8	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. ▪ Is piping free of damage and cracks? ▪ Are piping connections free of oil grime? (Visual inspection) ▪ Are piping connections free of gas leakage? ▪ Are piping installation	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.) (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) (See **RECEIVER/DRIER REMOVAL/INSTALLATION**.)

	points on condenser free of gas leakage? ▪ Are piping installation points on receiver/drier free of gas leakage? ▪ Are piping installation points on A/C compressor free of gas leakage? ▪ Are piping installation points on A/C unit free of gas leakage? ▪ Perform gas leak inspection using gas leak tester. • Are the above items normal?		
9	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage? (See **REFRIGERANT CHARGING**.)	Yes	Adjust refrigerant amount to specified level, then go to Step 19. (See **REFRIGERANT CHARGING**.)
		No	If piping is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.) (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) (See **RECEIVER/DRIER REMOVAL/INSTALLATION**.)
10	**VERIFY IF MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE**	Yes	Go to the next step.

	• Add **20 ml {20 cc, 0.68 fl oz}** of compressor oil. • Is noise heard when racing engine?	No	Troubleshooting completed. Explain repair to customer.
11	**VERIFY IF MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Drain compressor oil. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) • Is it contaminated with metal particles?	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
12	**VERIFY IF MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE** • Is compressor oil whitish and mixed with water?	Yes	Replace entire A/C system (excluding heater), then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.) (See **EXPANSION VALVE REMOVAL/INSTALLATION**.) (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.) (See **RECEIVER/DRIER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
13	**INSPECT A/C COMPRESSOR OIL** • Is compressor oil darker than normal and contaminated with aluminum chips?	Yes	Replace A/C compressor and condenser, then go to Step 19. (Since A/C compressor may be worn and receiver/drier may be restricted, replacement of receiver/drier is necessary.) (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.) (See **CONDENSER REMOVAL/INSTALLATION**.)
		No	Condition is normal. Recheck malfunction symptoms.
14	**VERIFY IF MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Is noise heard immediately after A/C compressor is stopped?	Yes	Replace A/C compressor, then go to Step 19. (A/C compressor discharge valve left open) (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.
15	**INSPECT DRIVE BELT** • Inspect the drive belt. (See **DRIVE BELT INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to the next step.
		No	Replace the drive belt, then go to Step 19.

	2.5].) • Is it normal?		(See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
16	**INSPECT DRIVE BELT CONDITION** • Is drive belt worn? • Does it have foreign matter imbedded in it, or have oil on it?	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 19.
		No	Go to the next step.
17	**INSPECT MAGNETIC CLUTCH** • Inspect the magnetic clutch. (See **MAGNETIC CLUTCH INSPECTION**.) • Is it normal?	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 19. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
		No	Replace magnetic clutch, then go to Step 19. (See **MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY**.)
18	**VERIFY IF MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES** • Is noise emitted from A/C compressor?	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
19	**VERIFY THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Has A/C compressor noise stopped?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - HVAC

REFRIGERANT SYSTEM SERVICE WARNINGS

Handling Refrigerant

- Avoid breathing air conditioning refrigerant or lubricant vapor. Exposure may irritate eyes, nose and throat. Also, due to environmental concerns, we urge use of recovery/recycling/recharging equipment when draining HFC-134a from the air conditioning system. If accidental system discharge occurs, ventilate work area before resuming service.
- Do not perform pressure test or leak test for HFC-134a service equipment and/or vehicle air conditioning system using compressed air. Some mixtures of air and HFC-134a have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.
- Do not allow the refrigerant to leak near fire or any kind of heat. A poisonous gas may be generated if the refrigerant gas contacts fire or heat such as from cigarettes and heaters. When carrying out any operation that can cause refrigerant leakage, extinguish or remove the above mentioned heat sources and maintain adequate ventilation.
- Handling liquid refrigerant is dangerous. A drop of it on the skin can result in localized frostbite. When handling the refrigerant, wear gloves and safety goggles. If refrigerant splashes into the eyes, immediately wash them with clean water and consult a doctor.

Storing Refrigerant

- The refrigerant container is highly pressurized. If it is subjected to high heat, it could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Store the refrigerant at temperatures below 40 °C {104 °F}.

2014 - Mazda3 - HVAC

REFRIGERANT SYSTEM SERVICE CAUTIONS

Handling Insufficient Refrigerant Level

- **If an insufficient refrigerant level is detected at troubleshooting, do not charge (add) the refrigerant. Because an accurate amount of refrigerant cannot be determined from the pressure indicated on the manifold gauge, never charge the refrigerant. If there is too much or too little refrigerant from the refilling, there may be secondary problems such as damage to the refrigerant cycle parts, or a decrease of cooling performance. Therefore, if it is determined that the refrigerant level is insufficient, completely remove refrigerant from the refrigerant cycle and refill with refrigerant to the specified amount.**

Handling Compressor Oil

- **Use only the following specified compressor oil for this vehicle. Using compressor oil (PAG oil) other than specified compressor oil can damage the A/C compressor.**
- FD46XG
- **Do not spill compressor oil on the vehicle. A drop of compressor oil on the vehicle surface can eat away at the paint. If oil gets on the vehicle, wipe it off immediately.**
- **Compressor oil (PAG oil) has a higher moisture absorption efficiency than the previously used mineral oil. If moisture mixes with the compressor oil, the refrigerant system could be damaged. Therefore, install caps immediately after using the compressor oil or removing refrigerant system parts to prevent moisture absorption.**
- **If the refrigerant gas is completely discharged from the system for reasons such as a malfunction during A/C operation, repair or replace the malfunctioning part, charge the refrigerant to the specified amount and always add 60 ml {60 cc, 2.0 fl oz} of compressor. If the compressor oil is not adequately replenished, the A/C compressor may quickly deteriorate, abnormal noise may develop, cooling performance may be affected or, in the worst case, the A/C compressor may seize.**

2014 - Mazda3 - HVAC

REFRIGERANT SYSTEM GENERAL PROCEDURES

1. Fully close the valves of the manifold gauge.
2. Connect the charging hoses to the high and low-pressure side joints of the manifold gauge.

3. Connect the quick couplers to the ends of the charging hoses.
4. Connect the quick couplers to the charging valves.

2014 - Mazda3 - HVAC

REFRIGERANT CHARGING

CAUTION:

- Do not use a different type of refrigerant or charge beyond the specified level. Otherwise, cooling ability will be lowered and the A/C compressor could be damaged.

Adding Compressor Oil

1. Weigh the compressor oil which is exhausted when collecting the refrigerant.

2. When adding refrigerant, add new oil equivalent in weight to the exhausted amount to the refrigerant cycle.

Charging Recycled HFC-134a Refrigerant

1. Connect a HFC-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

Charging Preparation

1. Install the manifold gauge set.

2. Connect the tap pin side of the charging hose to the air purge valve of the manifold gauge.

3. Connect the vacuum pump hose to the center joint of the manifold gauge.
4. Connect the vacuum pump hose to the vacuum pump.
5. Connect the charging hose to the refrigerant tank.
6. Place the refrigerant tank on the scale.

Regular amount of refrigerant (approx. quantity)

- **465—515** g {**16.5—18.1** oz}

Evacuation

1. Open all the valves of the manifold gauge.

CAUTION:

- Close the manifold gauge valve immediately after stopping the vacuum pump. If the valve is left open, the vacuum pump oil will back flow into the refrigeration cycle and cause a decrease in the efficiency of the air conditioner.

2. Start the vacuum pump and let it operate for **15 min**.

3. Verify that high and low-pressure side readings of the manifold gauge are at **–101 kPa {–1.03 kgf/cm^2, –14.6 psi}**. Close each valve of the manifold gauge.

Airtightness Check

1. Stop the vacuum pump and wait for **5 min**.
2. Check the high and low-pressure side readings of the manifold gauge.
   - If the reading has changed, inspect for leakage and go to Evacuation. (See **Charging Preparation**.)
   - If the reading has not changed, go to Charging New R-134a Refrigerant. (See **Airtightness Check**.)

Charging New HFC-134a Refrigerant

1. Open the valve of the refrigerant tank.
2. Weigh the refrigerant tank to charge the suitable amount of refrigerant.

WARNING:

- If the refrigerant system is charged with a large amount of refrigerant when inspecting for gas leakage, and if any leakage should occur, the refrigerant will be released into the atmosphere. In order to prevent the accidental release of refrigerant which can destroy the ozone layer in the stratosphere, follow the proper procedures and charge with only a small amount of refrigerant when inspecting for

gas leakage.

- If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.

3. Open the low-pressure side valve of the manifold gauge.

4. When the high-pressure side reading increases to **0.098 MPa {1.0 kgf/cm^2, 14 psi}**, close the low-pressure side valve of the manifold gauge.

5. Inspect for leakage from the cooler pipe/hose connections using the gas leak tester.

- If there is no leakage, go to Step 7.
- If leakage is found at a loose joint, tighten the joint, then go to next step.

6. Inspect for leakage again.

- If there is no leakage after tightening the joint, go to next step.
- If there is still a leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.

WARNING:

- If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.

7. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of refrigerant tank has decreased **250 g {8.82 oz}** from the amount in Step 2.

8. Close the low-pressure side valve of the manifold gauge.

WARNING:

- If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.

9. Start the engine and actuate the A/C compressor.

10. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of the refrigerant tank has decreased to the regular amount from the amount in Step 2.

11. Close the low-pressure side valve of the manifold gauge and the valve of the refrigerant tank.
12. Stop the engine and A/C compressor.

Leak Test

1. Inspect for leakage using the gas leak tester.
    - If there is no leakage, go to Step 3.
    - If leakage is found at a loose joint, tighten the joint, then go to the next step.
2. Inspect for leakage again.
    - If there is no leakage after tightening the joint, go to the next step.
    - If there is still leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.
3. Disconnect the quick couplers from the charging valves.
4. Install the caps to the charging valves.

2014 - Mazda3 - HVAC

REFRIGERANT RECOVERY

- Connect a HFC-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

2014 - Mazda3 - HVAC

REFRIGERANT PRESSURE CHECK

NOTE:

- Measure the refrigerant pressure after **approx.10 min** have elapsed from engine start.

1. Install the manifold gauge. (See **REFRIGERANT SYSTEM GENERAL PROCEDURES**.)
2. Start the engine and warm it up.
3. Set the fan speed to MAX HI.
4. Turn the A/C switch on.
5. Set to RECIRCULATE mode.
6. Set the temperature control to MAX COLD.
7. Set to VENT mode.
8. Close all the doors and all the windows.
9. Maintain the engine speed at **1,500 rpm**.
10. Measure the ambient temperature and high- and low- pressure side reading of the manifold gauge.
11. Verify that the intersection of the pressure reading of the manifold gauge and ambient temperature is in the shaded zone.

- If there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.

2014 - Mazda3 - HVAC

REFRIGERANT SYSTEM PERFORMANCE TEST

NOTE:

- Measure the air conditioner output temperature after **approx.10 min** have elapsed from engine start.

1. Inspect the refrigerant pressure. (See **REFRIGERANT PRESSURE CHECK**.)
2. Place a dry-bulb thermometer in the driver-side center ventilator outlet.

3. Start the engine and warm it up.
4. Set the fan speed to MAX HI.
5. Turn the A/C switch on.
6. Set to RECIRCULATE mode.
7. Set the temperature control to MAX COLD.
8. Set to VENT mode.
9. Close all the doors and windows.
10. Maintain the engine speed at **1,500 rpm**.
11. Wait until the air conditioner output temperature stabilizes.

    Stabilized condition

    - The A/C compressor repeatedly turns on and off at regular intervals.

12. After the blower air is stabilized, read the dry-bulb thermometer.
13. Verify the ambient temperature.

14. Verify that the temperature reading is in the shaded zone.

- If the there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.

BLOWER UNIT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   c. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   d. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)
   e. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)
   f. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   h. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   i. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)
3. Disconnect the blower motor connector.
4. Disconnect the air intake actuator connector.

5. Remove the blower unit installation nuts.

NUT: 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

6. Remove the blower unit as shown in the figure.

CAUTION:

- When removing the blower unit, move it little by little while verifying that there is no sticking in the surrounding parts or the wiring harness. If the blower unit is removed with excessive force, surrounding parts or the blower unit could be damaged.

7. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

BLOWER UNIT DISASSEMBLY/ASSEMBLY

CAUTION:

- Apply only the specified grease to the link. Otherwise abnormal noise or improper operation may result.

1. Disassemble in the order indicated in the table.

1	Air filter
2	Blower motor
3	Cover

4	Air intake actuator
5	Air intake link
6	Polyurethane (1)
7	Polyurethane (2)
8	Blower case (1)
9	Blower case (2)
10	Air intake door

2. Assemble in the reverse order of disassembly.

2014 - Mazda3 - HVAC

BLOWER MOTOR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the dashboard under cover. (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the screws.

5. Remove the blower motor.

6. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

BLOWER MOTOR INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the dashboard under cover. (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

3. Remove the blower motor. (See **BLOWER MOTOR REMOVAL/INSTALLATION**.)

4. Connect battery positive voltage to blower motor terminal B, connect terminal A to ground, and then verify its operation.

- If there is any malfunction, replace the blower motor. (See **BLOWER MOTOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - HVAC

BLOWER FAN CONTROLLER REMOVAL/INSTALLATION

NOTE:

- When removing the blower fan controller, perform the procedure in the posture shown in the figure.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   b. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)
   c. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)
3. Disconnect the connector.

4. Rotate the blower fan controller (2) while pressing the tab (1).

5. Remove the blower fan controller.

6. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

BLOWER FAN CONTROLLER INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   b. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)
   c. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)
3. Remove the blower fan controller. (See **BLOWER FAN CONTROLLER REMOVAL/INSTALLATION**.)
4. Connect the blower fan controller connector.

5. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Switch the ignition ON (engine off or on).
7. Connect the negative (-) lead of the tester to body ground.
8. Insert the positive (+) lead of the tester into each blower fan controller terminal.
9. Measure the voltage according to the terminal voltage table.
   - If there is any malfunction, inspect the parts under “Inspection item (s)”.
     - If the parts under “Inspection item (s)” are found to be normal, replace the blower fan controller. (See **BLOWER FAN CONTROLLER REMOVAL/INSTALLATION**.)

Terminal Voltage Table (Reference)

BLOWER FAN CONTROLLER INSPECTION

Terminal	Signal name	Connected to	Measurement condition		Voltage (V)	Inspection item (s)
A	Motor operation (-)	Blower motor	Switch the ignition off		1.0 or less	• Blower motor • Related wiring harness
			Fan stopped (Switch the ignition ON (engine off or on))		B+	
			Fan: manual 1st		8.4	
			Fan: manual 3rd		6.8	
			Fan: manual 7th		1.0 or less	
B	Blower fan speed control	Climate control unit	Switch the ignition off		1.0 or less	• Related wiring harness • Climate control unit
			Fan stopped (Switch the ignition ON (engine off or on))		B+	
			• Airflow mode: VENT • Air intake mode: RECIRCULATE	Fan: manual 1st	9.7	
				Fan: manual 3rd	7.1	
				Fan: manual 7th	3.3	
C	GND	Body ground	Under any condition		1.0 or less	• Related wiring harness
D	—	—	—		—	—
E	Motor operation (+)	Blower motor	Switch the ignition off		1.0 or less	• Blower motor • Related wiring harness
			Switch the ignition ON (engine off or on)		B+	
F	B+	Blower relay	Switch the ignition off		1.0 or less	• Related wiring harness • Blower relay
			Switch the ignition ON (engine off or on)		B+	

2014 - Mazda3 - HVAC

AIR FILTER REMOVAL/INSTALLATION

1. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
2. Remove the air filter.

3. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

AIR FILTER INSPECTION

1. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
2. Remove the air filter. (See **AIR FILTER REMOVAL/INSTALLATION**.)
3. Verify that there is no damage, excessive dirt, or abnormal odor on the air filter.
    - If there is any malfunction, replace the air filter. (See **AIR FILTER REMOVAL/INSTALLATION**.)

NOTE:

- The air filter cannot be reused by cleaning it with water or compressed air.

2014 - Mazda3 - HVAC

A/C UNIT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the following parts:

   a. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

   b. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)

   c. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   d. Front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   e. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   f. Driver-side air bag module (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)(See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)(See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

   g. Steering wheel (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

   h. Meter hood (See **METER HOOD REMOVAL/INSTALLATION**.)

   i. Instrument cluster (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

   j. Column cover (See **COLUMN COVER REMOVAL/INSTALLATION**.)

   k. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   l. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   m. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   n. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   o. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   p. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   q. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

r. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

s. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

t. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

u. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

v. Climate control unit (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

w. Center display (See **CENTER DISPLAY REMOVAL/INSTALLATION**.)

x. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

y. Hood release lever (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)

z. Fuel-filler lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)

aa. Driver-side lower panel (See **LOWER PANEL REMOVAL/INSTALLATION**.)

ab. Knee bolster (See **KNEE BOLSTER REMOVAL/INSTALLATION**.)

ac. Joint cover (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

ad. Steering shaft (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

ae. Selector lever component (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

af. Selector lever component (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

ag. Parking brake lever (See **PARKING BRAKE LEVER REMOVAL/INSTALLATION**.)

ah. Passenger-side lower panel (See **LOWER PANEL REMOVAL/INSTALLATION**.)

ai. Dashboard (See **DASHBOARD REMOVAL**.)(See **DASHBOARD INSTALLATION**.)

5. Remove the blower unit. (See **BLOWER UNIT REMOVAL/INSTALLATION**.)

6. Remove the floor insulator. (See **FLOOR INSULATOR REMOVAL/INSTALLATION**.)

7. Disconnect the drain hose.

8. Remove the fastener. (rear heat duct)

9. Remove the bolt, then disconnect the cooler hose (LO) and cooler pipe.

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunctions could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.

10. Disconnect the heater hose.

11. Remove the nut, then remove the A/C unit. Do not allow compressor oil to spill.

12. Install in the reverse order of removal. (See **A/C Unit Installation Note**.)

13. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

14. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

A/C Unit Installation Note

1. When replacing the A/C unit or evaporator, add compressor oil to the refrigerant cycle.

   Supplemental oil amount (approx. quantity)

   - 40 ml {40 cc, 1.4 fl oz}

Drain Hose Installation Note

1. Install the clip as shown in the figure.

ASSEMBLE WITH CLIP
ATTACHMENT AREA POINTED UP.
1
INSERT INTO A/C CASE
WITH NO GAP
ASSEMBLE WITH
CLIP POSITIONED
WITHIN MARKED
AREA
2
ENGAGE CLIP TO TWO OR MORE
TEETH AND CLOSE SECURELY.

2014 - Mazda3 - HVAC

A/C UNIT DISASSEMBLY/ASSEMBLY

Full-auto Air Conditioner

CAUTION:

- If a non-specified grease is used, it may result in abnormal noise or improper operation of the links. Apply only the specified grease to each link.

1. Disassemble in the order indicated in the table.

BOLT: **3.5—5.5 N·m {36—56 kgf·cm, 31—48 in·lbf}**

X: Applicable—: Not applicable

Step	Part name	Disassembly/assembly of main parts		
		Heater core	Evaporator temperature sensor	Evaporator
1	Polyurethane foam	X	—	X
2	Expansion valve	—	—	X
3	Adhesive polyurethane	—	—	—
4	Drain hose	—	—	—

5	Plate (1)	X	—	—
6	Plate (2)	X	—	—
7	Heater core	X	—	—
8	Driver-side air mix actuator (with dual type climate control unit)	—	—	—
9	Driver-side air mix link (with dual type climate control unit)	—	—	—
10	Passenger-side air mix actuator (with dual type climate control unit) Air mix actuator (with single type climate control unit)	—	—	—
11	Passenger-side air mix link (with dual type climate control unit) Air mix link (with single type climate control unit)	—	—	—
12	Airflow mode actuator	—	—	—
13	Airflow mode link set	—	—	—
14	Blower fan controller	—	—	—
15	A/C case (1)	—	X	X
16	A/C case (2)	—	X	X
17	Evaporator temperature sensor (See **Evaporator temperature sensor assembly note**.)	—	X	X
18	Evaporator	—	—	X
19	A/C case (3)			
20	A/C case (4)	—	—	—
21	Door damper	—	—	—

2. Assemble in the reverse order of disassembly.

Evaporator temperature sensor assembly note

1. Assemble the evaporator temperature sensor as shown in the figure.

CAUTION:

- When installing the evaporator temperature sensor without replacing the evaporator, assemble the evaporator temperature sensor with the installation position slid to the left of the previous position by 1 line. If the evaporator temperature sensor is assembled to the previously installed position, it may not function due to poor contact of the fin surface with the sensor detection area caused by fin deformation.

NOTE:

- If an evaporator temperature sensor cannot be correctly positioned on the evaporator, replace the evaporator.

Manual Air Conditioner

CAUTION:

- If a non-specified grease is used, it may result in abnormal noise or improper operation of the links. Apply only the specified grease to each link.

1. Disassemble in the order indicated in the table.

BOLT: **3.5—5.5 N·m {36—56 kgf·cm, 31—48 in·lbf}**

*1 : WITH COOLING SYSTEM
*2 : WITHOUT COOLING SYSTEM

X: Applicable—: Not applicable

Step	Part name	Disassembly/assembly of main parts		
		Heater core	Evaporator temperature sensor	Evaporator
1	Polyurethane foam	X	—	X
2	Expansion valve	—	—	X
3	Adhesive polyurethane	—	—	—
4	Drain hose	—	—	—
5	Plate (1)	X	—	—
6	Plate (2)	X	—	—
7	Heater core	X	—	—
8	Airflow mode link set	X (wire clamp)	—	—
9	Air mix link	—	—	—
10	Blower fan controller	—	—	—
11	A/C case (1)	—	X	X

12	A/C case (2)	—	X	X
13	Evaporator temperature sensor (See **Evaporator temperature sensor assembly note**.)	—	X	X
14	Evaporator (with cooling system)	—	—	X
	Case (without cooling system)	—	—	—
15	A/C case (3)	—	—	—
16	A/C case (4)	—	—	—
17	Door damper	—	—	—

2. Assemble in the reverse order of disassembly.

Evaporator temperature sensor assembly note

1. Assemble the evaporator temperature sensor as shown in the figure.

CAUTION:

- When installing the evaporator temperature sensor without replacing the evaporator, assemble the evaporator temperature sensor with the installation position slid to the left of the previous position by 1 line. If the evaporator temperature sensor is assembled to the previously installed position, it may not function due to poor contact of the fin surface with the sensor detection area caused by fin deformation.

NOTE:

- If an evaporator temperature sensor cannot be correctly positioned on the evaporator, replace the evaporator.

2014 - Mazda3 - HVAC

EXPANSION VALVE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant from the system. (See **REFRIGERANT CHARGING**.)

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign matter out of the cycle.

3. Remove the nut.

4. Remove the clip.

5. Remove the bolt and disconnect the cooler hose (LO) and cooler pipe. Do not allow compressor oil to spill.

6. Remove the bolts.

7. Remove the expansion valve. Do not allow compressor oil to spill.

8. Install in the reverse order of removal.

9. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

2014 - Mazda3 - HVAC

EVAPORATOR INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the dashboard (See **DASHBOARD REMOVAL**.)(See **DASHBOARD INSTALLATION**.)

5. Remove the blower unit. (See **BLOWER UNIT REMOVAL/INSTALLATION**.)

6. Remove the A/C unit. (See **A/C UNIT REMOVAL/INSTALLATION**.)

7. Remove the evaporator. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

8. Inspect the evaporator for damage, cracks, and oil leakage.

    - If there is any malfunction, replace the evaporator. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

9. Visually inspect the fins for bending.

    - If there is any bending, use the end of a flathead screwdriver to straighten the fins.

2014 - Mazda3 - HVAC

HEATER CORE INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the dashboard (See **DASHBOARD REMOVAL**.)(See **DASHBOARD INSTALLATION**.)

5. Remove the blower unit. (See **BLOWER UNIT REMOVAL/INSTALLATION**.)

6. Remove the A/C unit. (See **A/C UNIT REMOVAL/INSTALLATION**.)

7. Remove the heater core. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

8. Inspect the heater core for damage, cracks, and water leakage.

    - If there is any malfunction, replace the heater core. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

9. Visually inspect the fins for bending.

    - If there is any bending, use the end of a flathead screwdriver to straighten the fins.

10. Visually inspect the heater hose for deformation.

    - Repair with pliers if there is deformation. If there is any malfunction, replace the heater core. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

2014 - Mazda3 - HVAC

AIRFLOW MODE MAIN LINK REMOVAL/INSTALLATION

Full-auto Air Conditioner

1. The airflow mode main link is installed to the airflow mode actuator. When removing the airflow mode main link, refer to the airflow mode actuator removal/installation. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

Manual Air Conditioner

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Press the tab down, then slide the wire off the link.

4. Remove the screw, then airflow mode main link.

5. Install in the reverse order of removal. (See **Airflow mode main link installation note**.)

Airflow mode main link installation note

CAUTION:

- Apply only the specified grease to links. Otherwise abnormal noise or improper operation may result.

1. Align the airflow mode main link hole with the airflow mode sub link projection as shown in the figure.

2. Press the airflow mode main link lightly to the A/C unit, then set the projections of each airflow mode sub link into the grooves of the airflow mode main link.

3. Rotate airflow mode main link and verify that each mode is accessed properly.

2014 - Mazda3 - HVAC

FRONT HEAT DUCT REMOVAL/INSTALLATION

Driver-side

1. Remove the side wall (driver-side). (See **SIDE WALL REMOVAL/INSTALLATION**.)
2. Insert a flathead screwdriver in the position shown in the figure, lift it up in the direction of the arrow.

3. Detach the tab while lifting up the front heat duct in the direction of the arrow.

4. Remove the front heat duct.

5. Install in the reverse order of removal.

Passenger-side

1. Remove the following parts:
   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   b. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)
2. Insert a flathead screwdriver in the position shown in the figure, lift it up in the direction of the arrow.

3. Detach the tab while lifting up the front heat duct in the direction of the arrow.

4. Remove the front heat duct.

5. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

REAR HEAT DUCT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Slide the front seat rearward.
3. Remove the fastener.

4. Remove the following parts:
   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   b. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. Front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   d. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   e. Joint cover (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
   f. Accelerator pedal (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Turn the floor covering over.
6. Remove in the order indicated in the table.

1	Fastener
2	Rear heat duct (1)
3	Rear heat duct (2)

7. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

A/C COMPRESSOR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

4. Remove the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Disconnect the connector.

6. Remove bolts A.

CAUTION:

If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunctions could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.

7. Remove the cooler hose (LO). (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.)

8. Remove the cooler hose (HI). (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.)

9. Remove bolts B.

10. Remove the A/C compressor. Do not allow compressor oil to spill. (See **A/C Compressor Installation Note**.)

11. Install in the reverse order of removal.

12. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

A/C Compressor Installation Note

CAUTION:

- Due to the high moisture-absorption characteristics of the compressor oil, it may absorb moisture if left over a long period of time thereby negatively affecting A/C operation. Drain the compressor oil and refill within 10 min. of each other.

1. Rotate the new A/C compressor shaft six to eight revolutions while pouring refrigerant oil into a clean measuring container. Use this refrigerant oil to refill the new compressor. Do not allow refrigerant oil to become contaminated.

2. Rotate the old A/C compressor shaft six to eight revolutions while adding refrigerant oil to a separate, clean measuring container.

3. Compare the oil amounts. The amount of the oil drained from the new A/C compressor should be more than the old one.

4. Add the same amount oil drained from the old A/C compressor back into the new A/C compressor.

A/C compressor oil type

- FD46XG

A/C compressor oil sealed volume (approx. quantity)

- 100 ml {100 cc, 3.38 fl oz}

2014 - Mazda3 - HVAC

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY

Magnetic Clutch is Disassembled/Assembled with A/C Compressor Removed from Vehicle

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)
3. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
4. Remove the drive belt. (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Remove the A/C compressor. (See **A/C COMPRESSOR REMOVAL/INSTALLATION**.)
6. Disassemble in the order indicated in the table.

1	Bolt (See **Bolt removal/installation note**.)
2	Pressure plate
3	Shim (See **Shim installation note**.)
4	Snap ring (See **Snap ring removal/installation note**.)
5	A/C compressor pulley
6	Snap ring (See **Snap ring removal/installation note**.)
7	Stator

8	A/C compressor body

7. Assemble in the reverse order of disassembly.

8. Adjust the magnetic clutch clearance. (See **MAGNETIC CLUTCH ADJUSTMENT**.)

Bolt removal/installation note

1. When removing or installing the bolt, lock the A/C compressor pulley against rotation using the following procedure.

CAUTION:

- When connecting the positive battery cable to the magnetic clutch connector, use a cable with a female terminal of the correct size. Otherwise, load will be applied to the terminal, resulting in deformation or damage, and poor contact. In addition, the positive battery cable could disconnect from the connector resulting in a short circuit.

a. Apply battery positive voltage to the magnetic clutch terminal and connect the A/C compressor body to the ground.

b. Wrap the drive belt, which is no longer of use, tightly around the A/C compressor pulley.

c. Hold the drive belt in place with pliers.

d. Remove/installation the bolt.

Tightening torque

- 10—15 N·m {102 —152 kgf·cm, 89 — 132 in·lbf}

2. When installing a new A/C compressor body, replace the recommended bolt.

Snap ring removal/installation note

1. Remove/install the snap ring using a snap ring pliers.

Shim installation note

1. First, insert the **1mm (0.039 in)** thick shim into the shaft.

Magnetic Clutch is Disassembled/Assembled with A/C Compressor Equipped to Vehicle

WARNING:

- If A/C compressor operation is performed, do not start the engine. Otherwise, the drive belt could get caught and cause an accident.

1. Remove the front tire (RH). (See **GENERAL PROCEDURES (FRONT AND REAR AXLES)**.)
2. Remove the front splash shield No.1 (RH). (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
3. Bend back the front side of the mudguard (RH). (See **MUDGUARD REMOVAL/INSTALLATION**.)
4. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
5. Disassemble in the order indicated in the table.

1	Bolt (See **Bolt removal/installation note**.)
2	Pressure plate
3	Shim (See **Shim installation note**.)
4	Drive belt (See **DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5	Snap ring (See **Snap ring removal/installation note**.)
6	A/C compressor pulley
7	Snap ring (See **Snap ring removal/installation note**.)
8	Stator (See **Stator removal/installation note**.)

6. Assemble in the reverse order of disassembly.
7. Adjust the magnetic clutch clearance. (See **MAGNETIC CLUTCH ADJUSTMENT**.)

Bolt removal/installation note

1. When removing or installing the bolt, lock the A/C compressor pulley against rotation using the following procedure.
    a. Connect the M-MDS to the DLC 2.
    b. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
        1. Select “DataLogger”.
        2. Select “Modules”.
        3. Select “PCM”.

4. Select “ACCS”.

c. Turn the A/C relay on using the "ACCS" simulation function.

2. Secure the crankshaft pulley.

NOTE:

- If the crankshaft pulley is rotated with the magnetic clutch turned on, the magnetic clutch turns off. If the bolt is rotated, fix it so that the crankshaft pulley does not rotate.

3. Remove the bolt with the pressure plate secured.

NOTE:

- When turning the bolt, if the pulley slips with little friction on the drive belt and A/C compressor pulley, attach a wrench to the hexagon of the drive belt auto tensioner, slowly turn the wrench in the direction shown in the figure, and increase the tension on the drive belt.

4. Turn the A/C relay off using the "ACCS" simulation function.

Snap ring removal/installation note

1. Remove/install the snap ring using a snap ring pliers.

Shim installation note

1. First, insert the **1mm (0.039 in)** thick shim into the shaft.

Stator removal/installation note

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the magnetic clutch connector.

3. Remove the bolts A, B and C.

4. Loose bolt D **approx. 2 mm {0.08 in}**.

5. Tilt the A/C compressor centered around bolt D.

6. Remove the screw.

7. Remove the stator.

2014 - Mazda3 - HVAC

MAGNETIC CLUTCH ADJUSTMENT

WARNING:

- If A/C compressor operation is performed, do not start the engine. Otherwise, the drive belt could get caught and cause an accident.

1. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)

2. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.

3. Verify the clearance.

- If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (**0.2 mm {0.008 in}, 0.5 mm {0.02 in}**) or the number of shims. (See **MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY**.)

Magnetic clutch clearance

- 0.35—0.65 mm {0.014—0.025 in}

2014 - Mazda3 - HVAC

MAGNETIC CLUTCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front under cover No.2. (See **FRONT UNDER COVER No.2 REMOVAL/INSTALLATION**.)
3. Connect battery to terminal A of magnetic clutch and ground to A/C compressor body.

4. Verify that the magnetic clutch operates.
   - If there is any malfunction, replace the magnetic clutch. (See **MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY**.)

2014 - Mazda3 - HVAC

CONDENSER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

4. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the following parts:

   a. Plug hole plate (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   b. Air cleaner, air hose and fresh air duct component (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   c. Coolant reserve tank (See **COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   d. Cooling fan component (See **COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   e. Radiator (See **RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the bolts.

7. Disconnect the cooler hose (HI) and cooler pipe. Do not allow remaining compressor oil in the refrigerant line to spill. (See **REFRIGERANT LINE REMOVAL/INSTALLATION**.)

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunctions could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.

8. Remove the condenser, being careful not to allow remaining compressor oil in the condenser to spill. (See **Condenser Installation Note**.)

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunctions could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.

9. Install in the reverse order of removal.

10. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

Condenser Installation Note

1. After replacing the condenser, add compressor oil to the refrigeration cycle.

Supplemental oil amount (approx. quantity)

- 13 ml {13 cc, 0.44 fl oz}

2014 - Mazda3 - HVAC

CONDENSER INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

4. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the radiator. (See **RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the condenser. (See **CONDENSER REMOVAL/INSTALLATION**.)

7. Inspect the condenser for cracks, damage, and oil leakage.

    - If there is any malfunction, replace the condenser. (See **CONDENSER REMOVAL/INSTALLATION**.)

8. Visually inspect for bent fins for restriction or foreign matter.

    - If any fins are restricted, remove the foreign matter.

9. Visually inspect for bent fins.

    - If any fins are bent, use the end of a flathead screwdriver to straighten fins.

2014 - Mazda3 - HVAC

RECEIVER/DRIER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Remove the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

4. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the following parts:

   a. Plug hole plate (See **PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   b. Air cleaner, air hose and fresh air duct component (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   c. Coolant reserve tank (See **COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   d. Cooling fan component (See **COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

   e. Radiator (See **RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the condenser. (See **CONDENSER REMOVAL/INSTALLATION**.)

7. Disconnect the block joint type pipes by grasping the female side of the block with a hand firmly, then loosen connection bolt A.

8. Remove bolt B.

9. Remove the bracket.

10. Remove the receiver/drier. Do not allow compressor oil to spill.

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign matter out of the cycle.

11. Install in the reverse order of removal.

12. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

13. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

Receiver/drier Installation Note

1. After replacing the receiver/drier, add compressor oil to the refrigeration cycle.

Supplemental oil amount (approx. quantity)

- 2 ml {2 cc, 0.1 fl oz}

2014 - Mazda3 - HVAC

HEATER HOSE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Drain the engine coolant. (See **ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the clips and remove the heater hose.

4. Install in the reverse order of the removal.

5. Inspect for engine coolant leakage. (See **ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - HVAC

REFRIGERANT LINE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Disconnect the refrigerant pressure sensor connector.

4. Remove in the order indicated in the table. Do not allow compressor oil to spill.

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign matter out of the cycle.

A: 8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

1	Cooler hose (LO) (See **Refrigerant Line Installation Note (1)**.) (See **Refrigerant Line Installation Note (2)**.)
2	Cooler pipe (See **Refrigerant Line Installation Note (1)**.) (See **Refrigerant Line Installation Note (2)**.)
3	Cooler hose (HI) (See **Refrigerant Line Installation Note (1)**.)

(See **Refrigerant Line Installation Note (2)**.)

5. Install in the reverse order of removal.

6. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

Refrigerant Line Installation Note (1)

1. Apply compressor oil to the O-rings and connect the joints.

2. Tighten the joint bolt by hand.

3. Connect the block joint type pipes by grasping the female side of the block with pliers or similar tool and holding firmly, then tighten the connection bolt or nut with a torque wrench.

Refrigerant Line Installation Note (2)

1. After replacing the refrigerant line, add compressor oil to the refrigeration cycle.
   - After replacing the cooler hose (HI)

     Supplemental oil amount (approx. quantity)

     - 1 ml {1 cc, 0.03 fl oz}
   - After replacing the cooler hose (LO)

     Supplemental oil amount (approx. quantity)

     - 3 ml {3 cc, 0.1 fl oz}
   - After replacing the cooler pipe

     Supplemental oil amount (approx. quantity)

     - 1 ml {1 cc, 0.03 fl oz}

2014 - Mazda3 - HVAC

HVAC CONTROL SYSTEM LOCATION INDEX [FULL-AUTO AIR CONDITIONER]

1	Passenger compartment temperature sensor (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.)
2	Driver-side air mix actuator (with dual type climate control unit) (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the following parts (with center display)(with Bluetooth® system):

   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   b. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Tuner and amp unit (TAU) (with center display)(See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)

   e. Bluetooth® unit (with Bluetooth® system)(See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)

4. Disconnect the air intake actuator connector.

5. Remove the screws, then remove the air intake actuator.

6. Install in the reverse order of removal.

AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

AIR INTAKE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the following parts (with tuner and amp unit):

   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   b. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Tuner and amp unit (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)

4. Remove the air intake actuator. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

5. Apply battery positive voltage and connect the ground to the air intake actuator terminals as indicated in the table below and verify the operation condition.

B+ Terminal	Ground Terminal	Operation
B	C	FRESH → RECIRCULATE
C	B	RECIRCULATE → FRESH

- If not as indicated in the table, replace the air intake actuator. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

Driver-side (With Dual Type Climate Control Unit)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Side wall (driver-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)
   b. Front heat duct (driver-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)
3. Disconnect the air mix actuator connector.

4. Remove the screws.
5. Remove the driver-side air mix actuator.
6. Install in the reverse order of removal.

Passenger-side

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   c. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)

   d. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)

3. Disconnect the air mix actuator connector.

4. Remove the screws.

5. Remove the passenger-side air mix actuator.

6. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]

CAUTION:

- If the lever position exceeds the operation range shown in the figure, the circuit in the actuator could be damaged. Always perform an actuator operation inspection with the lever movement within the range shown in the figure.

Driver-side (With Dual Type Climate Control Unit)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Side wall (driver-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)

   b. Front heat duct (driver-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)

3. Remove the driver-side air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Apply battery positive voltage and connect the ground to the air mix actuator terminals as indicated in the table below and verify the operation condition.

B+ Terminal	Ground Terminal	Operation
B	C	COLD → HOT
C	B	HOT → COLD

5. Verify that the resistance between terminals F and G, E and F matches the air mix actuator operation as shown in the graph.

- If the operation condition and resistance are not normal, replace the air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

Passenger-side

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   c. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)

   d. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)

3. Remove the passenger-side air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Apply battery positive voltage and connect the ground to the air mix actuator terminals as indicated in the table below and verify the operation condition.

B+ Terminal	Ground Terminal	Operation
B	C	HOT → COLD
C	B	COLD → HOT

5. Verify that the resistance between terminals F and G, E and F matches the air mix actuator operation as shown in the graph.

- If the operation condition and resistance are not normal, replace the air mix actuator. (See **AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Disconnect the airflow mode actuator connector.
4. Remove the screws.

5. Remove the airflow mode actuator.
6. Remove the airflow mode main link.

7. Remove the brackets.

8. Install in the reverse order of removal. (See **Removal**.)

Installation

1. Install the brackets.

2. Align the airflow mode main link and the airflow mode sub link projection as shown in the figure.

3. When lightly pressing the airflow main link to rotate it in the direction of the arrow, verify that the airflow mode door switches to the position for each mode.

4. Align the airflow mode main link installation hole with the shape of the airflow mode actuator shaft, and install while holding the airflow mode main link.

5. Install the airflow mode actuator.

6. Install the screws.

7. Connect the airflow mode actuator connector.

8. Install the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - HVAC

AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER]

CAUTION:

- If the lever position exceeds the operation range shown in the figure, the circuit in the actuator could be damaged. Always perform an actuator operation inspection with the lever movement within the range shown in the figure.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Apply battery positive voltage and connect the ground to the airflow mode actuator terminals as indicated in the table below and verify the operation condition.

B+ Terminal	Ground Terminal	Operation
D	F	DEFROSTER → VENT
F	D	VENT → DEFROSTER

5. Verify that the resistance between terminals B and C, C and A matches the airflow mode actuator

operation as shown in the graph.

- If the operation condition and resistance are not normal, replace the airflow mode actuator. (See **AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

NOTE:

- When removing the solar radiation sensor, perform the procedure in the posture shown in the figure.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   d. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)

   e. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)

   f. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   g. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   h. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

   i. Blower unit (See **BLOWER UNIT REMOVAL/INSTALLATION**.)

3. Press out (1) the tab of the solar radiation sensor from the inside of the dashboard using a flathead screwdriver as shown in the figure.

4. Press (2) the tab using a fastener remover as shown in the figure and press out the solar radiation sensor from the inside of the dashboard.

5. Disconnect the solar radiation sensor connector.

6. Remove the solar radiation sensor.

7. Install in the reverse order of removal. (See **Solar Radiation Sensor Installation Note**.)

Solar Radiation Sensor Installation Note

1. Align the shape of the solar radiation sensor with the shape of the installation hole on the dashboard side, and install as shown in the figure.

SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   c. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)

   d. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   e. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   f. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

   g. Blower unit (See **BLOWER UNIT REMOVAL/INSTALLATION**.)

3. Remove the solar radiation sensor. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Shine a fluorescent light or expose the solar radiation sensor to natural sunlight.

5. Connect the positive (+) lead to terminals B, C and negative (-) lead to terminal A of the solar radiation sensor, and verify that the voltage value is output.

- If the voltage is **0 V**, replace the solar radiation sensor. (See **SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the ambient temperature sensor.

5. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

3. Remove the ambient temperature sensor. (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Measure the temperature around the ambient temperature sensor and measure the resistance between the ambient temperature sensor terminals A and B.

- If the characteristics of the ambient temperature sensor are not as shown in the graph, replace the ambient temperature sensor. (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   f. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   j. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

   k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

   l. Front scuff plate (driver-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   m. Front side trim (driver-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   n. Fuel filer lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)

   o. Hood release lever (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)

   p. Lower panel (driver-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

3. Disconnect the aspirator from the passenger compartment temperature sensor.

4. Disconnect the connector.

5. Remove the screw.

6. Remove the passenger compartment temperature sensor.

7. Remove the aspirator.

8. Install in the reverse order of removal.

PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   f. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   j. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

   k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

   l. Front scuff plate (driver-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   m. Front side trim (driver-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   n. Fuel filer lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)

   o. Hood release lever (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)

   p. Lower panel (driver-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

3. Remove the passenger compartment temperature sensor. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Measure the temperature around the passenger compartment temperature sensor and measure the resistance between passenger compartment temperature sensor terminals A and B.

- If the characteristics of the passenger compartment temperature sensor are not as shown in the graph, replace the passenger compartment temperature sensor. (See **PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL / INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

1. Remove the evaporator temperature sensor from the A/C unit. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

2014 - Mazda3 - HVAC

EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

NOTE:

- Inspect the evaporator temperature sensor when it is installed to the A/C unit.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   b. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)
   c. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)
3. Connect the negative battery cable.
4. Switch the ignition ON (engine on).
5. Set the fan speed to MAX HI.
6. Set the temperature control to MAX COLD.
7. Set to the RECIRCULATE mode.
8. Turn the A/C switch off.
9. Close all doors and windows.
10. Wait for **5 min**.
11. Switch the ignition off.
12. Disconnect the negative battery cable.
13. Disconnect the evaporator temperature sensor connector.

14. Measure the temperature at the blower inlet.

15. Measure the resistance between the evaporator temperature sensor terminals A and B.

- If the resistance is not as shown in the graph, replace the evaporator temperature sensor. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

2014 - Mazda3 - HVAC

REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Disconnect the refrigerant pressure sensor connector.

4. Loosen the refrigerant pressure sensor using two spanners.

Tightening torque

- 10—11 N·m {102—112 kgf·cm, 89—97 in·lbf}

5. Remove the refrigerant pressure sensor.

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign matter out of the cycle.

6. Install in the reverse order of removal. (See **Refrigerant Pressure Sensor Installation Note**.)

7. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

Refrigerant Pressure Sensor Installation Note

1. Apply compressor oil to the O-rings and connect the joints.

2014 - Mazda3 - HVAC

REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

1. Install the manifold gauge. (See **REFRIGERANT SYSTEM GENERAL PROCEDURES**.)
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage at PCM terminal 2BB, 2AX and 2AJ.
4. Using the graph below, measure and verify the terminal voltages at 2AX.
5. Follow the PCM inspection when measuring the other terminal voltages. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - Terminal 2BB: Approx. 5 V (Ignition switch ON)
    - Terminal 2AJ: 1.0 V or less
        - If each voltage is not normal, inspect the related wiring harness.
            - If there is any malfunction, replace the related wiring harness.
            - If the wiring harness is normal, replace the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

REFRIGERANT PRESSURE SENSOR WIRING HARNESS-SIDE CONNECTOR

PCM WIRING HARNESS SIDE CONNECTOR

2014 - Mazda3 - HVAC

CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

NOTE:

- The climate control unit prior to replacement stores the vehicle specification information.
- The new climate control unit does not store any vehicle specification information.
- When the ignition is switched ON after the climate control unit is replaced, the climate control unit reads the vehicle specification information sent via CAN transmission from the instrument cluster, and stores the vehicle specification information.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   c. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)
   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   i. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)
   j. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
3. Remove the screws.

4. Remove the climate control unit. (See **Climate Control Unit Removal Note**.)

5. Disconnect the connector.

6. Install in the reverse order of removal.

7. Switch the ignition ON and perform the climate control unit automatic configuration.

8. Clear the DTCs. (See **CLEARING DTC [FULL-AUTO AIR CONDITIONER]**.)

Climate Control Unit Removal Note

1. The indicator unit can be removed from the climate control unit. Refer to the INDICATOR UNIT REMOVAL/INSTALLATION for the detailed procedure. (See **INDICATOR UNIT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - HVAC

CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER]

Dual Type

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

   j. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

3. Remove the climate control unit with the connector connected. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Connect the negative battery cable.

5. Switch the ignition ON (engine off or on).

6. Connect the negative (-) lead of the tester to body ground.

7. Insert the positive (+) lead of the tester into each climate control unit terminal and measure the voltage according to the terminal voltage table.

   - If there is any malfunction, inspect the parts under “Inspection item (s)”.
     - If the parts under “Inspection item (s)” are found to be normal (except for terminal 1E), replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
     - For terminal 1E, first try replacing the blower fan controller. If there is still any malfunction, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR

Single Type

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

   j. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

3. Remove the climate control unit with the connector connected. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

4. Connect the negative battery cable.

5. Switch the ignition ON (engine off or on).

6. Connect the negative (-) lead of the tester to body ground.

7. Insert the positive (+) lead of the tester into each climate control unit terminal and measure the voltage according to the terminal voltage table.

   - If there is any malfunction, inspect the parts under “Inspection item (s)”.

- If the parts under “Inspection item (s)” are found to be normal (except for terminal Q), replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
- For terminal Q, first try replacing the blower fan controller. If there is still any malfunction, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)

7	A/C relay (See **RELAY LOCATION**.) (See **RELAY INSPECTION**.)

2014 - Mazda3 - HVAC

AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the following parts (with center display)(with Bluetooth® system):

   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   b. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Tuner and amp unit (TAU) (with center display)(See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)

   e. Bluetooth® unit (with Bluetooth® system)(See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)

4. Disconnect the air intake actuator connector.

5. Remove the screws, then remove the air intake actuator.

6. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the following parts (with tuner and amp unit):

   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   b. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Tuner and amp unit (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)

4. Remove the air intake actuator. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

5. Apply battery positive voltage and connect the ground to the air intake actuator terminals as indicated in the table below and verify the operation condition.

B+ Terminal	Ground Terminal	Operation
B	C	FRESH → RECIRCULATE
C	B	RECIRCULATE → FRESH

- If not as indicated in the table, replace the air intake actuator. (See **AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

2014 - Mazda3 - HVAC

AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the ambient temperature sensor.

5. Install in the reverse order of removal.

2014 - Mazda3 - HVAC

AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

3. Remove the ambient temperature sensor. (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

4. Measure the temperature around the ambient temperature sensor and measure the resistance between the ambient temperature sensor terminals A and B.

- If the characteristics of the ambient temperature sensor are not as shown in the graph, replace the ambient temperature sensor.(See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

2014 - Mazda3 - HVAC

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

1. Remove the evaporator temperature sensor from the A/C unit. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

2014 - Mazda3 - HVAC

EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

NOTE:

- Inspect the evaporator temperature sensor when it is installed to the A/C unit.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
   b. Side wall (passenger-side) (See **SIDE WALL REMOVAL/INSTALLATION**.)
   c. Front heat duct (passenger-side) (See **FRONT HEAT DUCT REMOVAL/INSTALLATION**.)
3. Connect the negative battery cable.
4. Switch the ignition ON (engine on).
5. Set the fan speed to MAX HI.
6. Set the temperature control to MAX COLD.
7. Set to the RECIRCULATE mode.
8. Turn the A/C switch off.
9. Close all doors and windows.
10. Wait for **5 min**.
11. Switch the ignition off.
12. Disconnect the negative battery cable.
13. Disconnect the evaporator temperature sensor connector.

14. Measure the temperature at the blower inlet.

15. Measure the resistance between the evaporator temperature sensor terminals A and B.

- If the resistance is not as shown in the graph, replace the evaporator temperature sensor. (See **A/C UNIT DISASSEMBLY/ASSEMBLY**.)

EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

2014 - Mazda3 - HVAC

REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Discharge the refrigerant. (See **REFRIGERANT CHARGING**.)

3. Disconnect the refrigerant pressure sensor connector.

4. Loosen the refrigerant pressure sensor using two spanners.

Tightening torque

- 10—11 N·m {102—112 kgf·cm, 89—97 in·lbf}

5. Remove the refrigerant pressure sensor.

CAUTION:

- If moisture or foreign matter enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign matter out of the cycle.

6. Install in the reverse order of removal. (See **Refrigerant Pressure Sensor Installation Note**.)

7. Perform the refrigerant system performance test. (See **REFRIGERANT SYSTEM PERFORMANCE TEST**.)

Refrigerant Pressure Sensor Installation Note

1. Apply compressor oil to the O-rings and connect the joints.

2014 - Mazda3 - HVAC

REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

1. Install the manifold gauge. (See **REFRIGERANT SYSTEM GENERAL PROCEDURES**.)
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage at PCM terminals 2BB, 2AX and 2AJ.
4. Using the graph below, measure and verify the terminal voltage at 2AX.
5. Follow the PCM inspection when measuring the other terminal voltages. (See **PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - Terminal 2BB: Approx. 5 V (Ignition switch ON)
    - Terminal 2AJ: 1.0 V or less
        - If each voltage is not normal, inspect the related wiring harness.
            - If there is any malfunction, replace the related wiring harness.
            - If the wiring harness is normal, replace the refrigerant pressure sensor. (See **REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

REFRIGERANT PRESSURE SENSOR WIRING HARNESS-SIDE CONNECTOR

PCM WIRING HARNESS SIDE CONNECTOR

2014 - Mazda3 - HVAC

CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   c. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)
   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   i. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)
   j. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
3. Press the tab down, then slide the wire off the link.

4. Remove the wire from the wire clamp.
5. Remove in the order indicated in the table.

1	Screw
2	Climate control unit (See **Climate Control Unit Removal Note**.)
3	Connector

6. Pull out the air mix wire and airflow mode wire from the hole.

7. Install in the reverse order of removal.

8. Verify that the dial operation is correct by fully turning each of the dials from one end to the other.

Climate Control Unit Removal Note

1. The indicator unit can be removed from the climate control unit. Refer to the INDICATOR UNIT

REMOVAL/INSTALLATION for the detailed procedure. (See **INDICATOR UNIT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - HVAC

CLIMATE CONTROL UNIT DISASSEMBLY/ASSEMBLY [MANUAL AIR CONDITIONER]

1. Disassemble in the order indicated in the figure.

1	Dial
2	Airflow mode wire (See **Wire Removal Note**.)
3	Air mix wire (See **Wire Removal Note**.)
4	Climate control unit

2. Assemble in the reverse order of disassembly.

Wire Removal Note

1. Remove in the order indicated in the figure.

AIR MIX WIRE
(1)
(2)
(1)
MODE WIRE

2014 - Mazda3 - HVAC

CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER]

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

   j. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

3. Remove the climate control unit with the connector connected. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

4. Switch the ignition ON (engine off or on).

5. Connect the negative (-) lead of the tester to the body ground.

6. By inserting the positive (+) lead of the tester into the climate control unit connector, measure the voltage according to the terminal voltage table.

   - If there is any malfunction, inspect the parts under “Inspection item (s)”.
     - If the parts under “Inspection item (s)” are found to be normal (except for terminal I), replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)
     - For terminal I, first try replacing the blower fan controller. If there is still any malfunction, replace the climate control unit. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR

Terminal Voltage Table (Reference)

Terminal	Signal name	Connected to	Measurement condition		Voltage (V)	Inspection item(s)
A	TNS signal	Front body control module (FBCM)	TNS OFF		1.0 or less	• Related wiring harness • Front body control module (FBCM)
			TNS ON		B+	
B	Illumination (-)	Instrument cluster	Headlight ON and panel light control MAX		2.0	• Instrument cluster • Related wiring harness
			Headlight ON and panel light control MIN		9.65	
C	Motor operation	Air intake actuator	Switched to RECIRCULATE		B+	• Related wiring harness • Air intake actuator
			Switched to FRESH		1.0 or less	
D	Ground	Body ground	Under any condition		1.0 or less	• Related wiring harness
E	Motor operation (FRESH)	Air intake actuator	Switched to RECIRCULATE		1.0 or less	• Related wiring harness • Air intake actuator
			Switched to FRESH		B+	
F	Sensor GND	Evaporator temperature sensor	Under any condition		1.0 or less	• Related wiring harness • Climate control unit: terminal voltage (H)
G	—	—	—		—	—
H	Evaporator temperature sensor input	Evaporator temperature sensor	Compared with temperature detected by evaporator temperature sensor		Refer to graph 1	• Related wiring harness • Evaporator temperature sensor • Climate control unit: terminal voltage (F)
I	Blower fan speed control	Blower fan controller	Switch the ignition off		1.0 or less	• Related wiring harness • Blower fan controller
			Fan stopped (Switch the ignition ON (engine off or on))		B+	
			• Airflow mode: VENT • Air intake mode: RECIRCULATE	Fan: manual 1st	9.7	
				Fan: manual 3rd	7.1	
				Fan: manual 7th	3.3	
J	B+	ROOM 15 A fuse	Under any condition		B+	• Related wiring harness

					• ROOM 15 A fuse
K	LIN	Front body control module (FBCM)	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.		• Related wiring harness • Front body control module (FBCM)
L	IG2	Front body control module (FBCM)	Switch the ignition to ON	B+	• Related wiring harness • Front body control module (FBCM)
			Switch the ignition off	1.0 or less

2014 - Mazda3 - Restraints

FOREWORD [STANDARD DEPLOYMENT CONTROL SYSTEM]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

*1 **CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW**.

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory.
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

Air Bag System Specification Identification

- Because two types of driver and passenger-side air bag module controls, “Two-step deployment control” and “Standard deployment control”, are available depending on when the vehicle was produced, identify the specification referring to the following identification.

Identification

- In this manual, “Two-step deployment control system” or “Standard deployment control system” is used if the service contents differ depending on the control.
- Control is identified by the following components.

×: Equipped-: Not equipped

Item	Two-step deployment control system	Standard deployment control system
Sophisticated air bag sensor (SAS) control module	×	×
Crash zone sensor	×	×
Side air bag sensor	×	×
Pressure sensor	×	-
Driver-side air bag module	× (Two-step deployment type)	× (Standard deployment type)
Passenger-side air bag module	× (Two-step deployment type)	× (Standard deployment type)
Side air bag module	×	×
Curtain air bag module	×	×
Lap pre-tensioner seat belt	×	-
Pre-tensioner seat belt	×	×
Clock spring	× (Two-step deployment type)	× (Standard deployment type)
Seat weight sensor/control module	×	-

Driver-side buckle switch	×	×
Passenger-side buckle switch	×	-
Air bag system warning light	×	×
PAD indicator	×	-

Outline

- The OBD (on-board diagnostic) system has the following functions:
  - Malfunction detection function: Detects malfunctions in the air bag system and outputs DTCs (Diagnostic Trouble Codes).
  - PID/data monitor function: Reads out specific input/output signals and the system status.
- DTCs can be read/cleared using the M-MDS.

  NOTE:

  - Use the M-MDS to verify DTCs because the DTCs displayed by the air bag system warning light are reference information only.

2014 - Mazda3 - Restraints

FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]

- Use the following flowchart to verify the cause of the trouble.

NOTE:

- When inspecting past malfunction codes, inspect only the DTCs that were indicated before beginning the inspection. A mis-diagnosis could occur as a result of new DTCs being added while performing an inspection by disconnecting related parts or connectors.
- When DTCs of the present malfunction are no longer output after present or past malfunctions or both have been repaired, be sure to clear the past malfunction from memory to prevent repair of malfunctions that have already been repaired.

FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select "Self Test".
   b. Select "All CMDTCs".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select "Self Test".
   b. Select "Modules".
   c. Select "RCM".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Snapshot Data Table

NOTE:

- The SAS control module stores the following two types of information when a DTC is detected and displays snap shot data in the M-MDS.
  - Vehicle information detected by SAS control module
  - Vehicle information detected by instrument cluster and received by SAS control module via CAN signal
- The data for all DTCs currently detected is stored.

Snapshot data item	Unit		Definition	Data read/use method	Corresponding PID data monitor item
AAT	°C	°F	Ambient temperature	—	—
	Accelerator Pedal Off/				

APP_STATUS	Under20%/ Over20%/ FAIL	Accelerator pedal position status	—	—
CFG_STATUS	Config Complete/ Not Configured/ Config Error	Instrument cluster configuration status	—	—
ECT_STATUS	Under 0 degrees C/ 0-Under 80 degrees C/ Over 80 degrees C/ FAIL	Engine coolant temperature status	—	—
FAULT_CNT	—	Number of malfunction detections	—	—
FIRST_DET_IG	hh:mm:ss*1	Time when initial malfunction occurs (IG-ON counter) • Elapsed time from when ignition is switched ON (engine off or on) until SAS control module detects first malfunction*3	—	—
IC_VPWR	V	Instrument cluster power supply voltage	• The SAS control module constantly receives the power supply voltage value of the instrument cluster sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the power supply voltage of the instrument cluster when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	VPWR*2
IG-ON_TIMER	hh:mm:ss*1	Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed time since the ignition was switched ON (engine off or on).	• The SAS control module constantly receives the elapsed time since the ignition was switched ON (engine off or on) sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the elapsed time since the ignition was switched ON (engine off or on) when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	—
LAST_CLR	hh:mm:ss*1	Repair time for last malfunction (B+ counter) • Elapsed time from when battery is connected until SAS control module detects that last malfunction is repaired*3	—	—

LAST_CLR_IG	hh:mm:ss*1	Repair time for last malfunction (IG-ON counter) • Elapsed time from when ignition is switched ON (engine off or on) until SAS control module detects that last malfunction is repaired*3	—	—
LAST_DET	hh:mm:ss*1	Time when last malfunction occurs (B+ counter) • Elapsed time from when battery is connected until SAS control module detects last malfunction*3	—	—
LAST_DET_IG	hh:mm:ss*1	Time when last malfunction occurs (IG-ON counter) • Elapsed time from when ignition is switched ON (engine off or on) until SAS control module detects last malfunction*3	—	—
PWR_MODE_KEY	Key Out/ Key Recently Out (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 2)/ Ignition On (Position 2)/ Running (Position 2)/ Running - Starting	• Key Out: Ignition switched off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was switched off • Accessory (Position 1): Ignition is switched to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since ignition was switched ON (engine off or on) • Ignition On (Position 2): Ignition switched ON (engine off) • Running (Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition	• The SAS control module constantly receives the ignition switch status sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the ignition switch status when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	—
RPM_STATUS	Engine Stop/ Under1500rpm/ Over1500rpm/ FAIL	Engine speed status	• The SAS control module constantly receives the engine speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the engine speed when the DTC was detected, and it is displayed in the Mazda Modular	TACHOMTR*2

				Diagnostic System (M-MDS).	
SHIFT_STATUS	P/N/ D/ R/ FAIL		Selector lever position status	• The SAS control module constantly receives the selector lever position sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the selector lever position when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	—
TOTAL_DIST	km	miles	Accumulated total traveled distance from completion of vehicle until SAS control module detects DTC (Odometer value in instrument cluster)	The total traveled distance from which the SAS control module detects DTCs to the present can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snapshot data item TOTAL_DIST. • Subtract 2 from 1.	—
TOTAL_TIME	hh:mm:ss*1		Accumulated total elapsed time since vehicle completion until SAS control module detects a DTC*3 **NOTE:** • When the ROOM fuse is removed, and the ignition is switched off, the time is not included in the elapsed time.	The elapsed time from which the SAS control module detects DTCs to the present can be calculated by performing the following procedure. • Verify the instrument cluster PID item TOTAL_TIME. • Verify the snapshot data item TOTAL_TIME. • Subtract 2 from 1.	TOTAL_TIME*2
VPWR	V		SAS control module power supply malfunction	—	VPWR_IGA
VSPD_STATUS	Stop/ 0-10km/h/ Over10km/h/ FAIL		Vehicle speed status	• The SAS control module constantly receives the vehicle speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the vehicle speed when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	SPEEDOMTR*2

*1 **The seconds may be indicated after the decimal point.**

*2 **Instrument cluster PID (See PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER].)**

*3 **The snap shot data of the number of stored malfunction detections, B+ counters, or IG ON counters is combined with the DTC detection conditions of the SAS control module, and the point-in-time data in the following table is stored.**

SAS control module DTC detection period	Snapshot data						
	FAULT_CNT (Number of malfunction detections)	TOTAL_TIME	FIRST_DET_IG	LAST_DET	LAST_DET_IG	LAST_CLR	LAST_CLR_IG
	Number of malfunction detections	Time when first malfunction occurs (B+ counter)	Time when initial malfunction occurs (IG-ON counter)	Time when last malfunction occurs (B+ counter)	Time when last malfunction occurs (IG-ON counter)	Repair time for last malfunction (B+ counter)	Repair time for last malfunction (IG-ON counter)
(1)	1	A	G	A	G	-	-
(2)	1	A	G	A	G	B	H

2014 - Mazda3 - Restraints

CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]

CMDTC Self Test

1. Connect the M-MDS to the DLC 2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
8. Verify that no DTCs are displayed.

ODDTC Self Test

1. Connect the M-MDS to the DLC 2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “RCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **11 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
8. Verify that no DTCs are displayed.

CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- When DTCs not shown in the DTC table are displayed, perform the inspection for DTCs not shown in the DTC table. (See **Inspection for DTCs not shown in DTC table**.)

Inspection for DTCs not shown in DTC table

System wiring diagram

SAS CONTROL MODULE WIRING
HARNESS-SIDE CONNECTOR

Diagnostic procedure

Step	Inspection		Action
1	**BATTERY INSPECTION** • Refer to the battery inspection and inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Then go to Step 5.
	FUSE INSPECTION		

2	• Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the SRS1 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the SRS1 7.5 A fuse. Then go to Step 5.
3	**INSPECT WIRING HARNESS BETWEEN SAS CONTROL MODULE AND IG1 RELAY** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and IG1 relay terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit or short to ground. Go to Step 5.

	(See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on).		
3	• Measure the voltage of SAS control module connector terminal 3C (wiring harness-side). **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and IG1 relay. • Is the voltage **8–17.9 V**?		
4	**INSPECT SAS CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness between SAS control module connector terminal 2C, 2F (wiring harness-side) and body ground. **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD**

	• Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0001:11/B0001:12/B0001:13/B0001:19/B0001:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0001:11: Driver-side air bag module circuit short to body ground • B0001:12: Driver-side air bag module circuit short to power supply • B0001:13: Driver-side air bag module circuit open circuit or resistance high • B0001:19: Short circuit to driver-side air bag module and other air bag module circuits • B0001:1A: Driver-side air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.99–6.42 ohms** detected in driver-side air bag module circuit • Wiring harness between driver-side air bag module and SAS control module has malfunction
Fail-safe function	Not applicable
Possible cause	• Clock spring connector malfunction • Clock spring malfunction • Short circuit to power supply or body ground in the wiring harness between the clock spring and SAS control module • Open circuit in the wiring harness between the clock spring and SAS control module • Driver-side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Then go to Step 7.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the driver-side air bag module connector. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the clock spring connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the clock spring connector?		
2	**INSPECT CLOCK SPRING** • Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.) • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Remove the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between clock spring connector terminals 2B—4A and 2A—4B. **NOTE:** • Inspect the clock spring wiring harness for continuity while shaking it. • Is there continuity?	Yes	Go to the next step.
		No	Replace clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Then go to Step 7.
3	**INSPECT DRIVER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:** • Determine the

	(See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3A ▪ SAS control module terminal 3D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?		malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.

4	**INSPECT DRIVER-SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module and clock spring connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Clock spring terminal 2B—SAS control module terminal 3A ▪ Clock spring terminal 2A—SAS control module terminal 3D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 7.
5	**INSPECT DRIVER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • SAS control module and clock spring connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3A ▪ SAS control module terminal 3D **NOTE:** • Measure the voltage while shaking the	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common**

	wiring harness between the SAS control module and clock spring. • Is the voltage **0 V**?		**connector:** • Replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT DRIVER-SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to clock spring connector terminals 4A and 4B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
7	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

	• Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side air bag module connector. (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0001:55/B0010:55 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0001:55: Configuration setting error (driver-side air bag module structural malfunction) • B0010:55: Configuration setting error (passenger-side air bag module structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)**	Yes	Go to the next step.

	• Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	DTC troubleshooting completed.
2	**INSPECT AIR BAG MODULE** • Verify that the driver or passenger-side air bag module is correctly installed. • Is the driver or passenger-side air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0003:53 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Operation (deployment) inhibited due to configuration setting
Detection condition	• The SAS control module configuration has not been set
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration error • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	• Are the same DTCs present?		
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Go to the next step.
		No	DTC troubleshooting completed.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are any other DTCs output?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0010:11/B0010:12/B0010:13/B0010:19/B0010:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0010:11: Passenger-side air bag module circuit short to body ground • B0010:12: Passenger-side air bag module circuit short to power supply • B0010:13: Passenger-side air bag module circuit open circuit or resistance high • B0010:19: Short circuit to passenger-side air bag module and other air bag module circuits • B0010:1A: Passenger-side air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81–6.42 ohms** detected in passenger-side air bag module circuit • Wiring harness between passenger-side air bag module and SAS control module has malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side air bag module and SAS control module • Open circuit in the wiring harness between the passenger-side air bag module and SAS control module • Passenger-side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side air bag module connector?		
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.

	Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3G ▪ SAS control module terminal 3J **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?	No	Go to the next step.
3	**INSPECT PASSENGER-SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side air bag module terminal A—SAS control module terminal 3G ▪ Passenger-side air bag module terminal B—SAS control module terminal 3J **NOTE:**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	• Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?		• Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3G ▪ SAS control module terminal 3J **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT PASSENGER-SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side air bag module connector, reconnect all	Yes	Go to the next step.
		No	Replace the passenger-side air bag module. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **PASSENGER-SIDE AIR BAG MODULE**

	disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on).	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	• Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B0094:11/B0094:13/B0094:87/B0094:96 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0094:11: Crash zone sensor circuit short to body ground • B0094:13: Crash zone sensor circuit open circuit or short to power supply • B0094:87: Signal reception error from crash zone sensor • B0094:96: Crash zone sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the crash zone sensor and SAS control module has a malfunction • Crash zone sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Crash zone sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the crash zone sensor and SAS control module • Open circuit in the wiring harness between the crash zone sensor and SAS control module • Crash zone sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CRASH ZONE SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off.	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	• Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.) • Disconnect the crash zone sensor connector. (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the crash zone sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the crash zone sensor connector?		
2	**INSPECT CRASH ZONE SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and crash zone sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.

	Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3O ▪ SAS control module terminal 3N **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and crash zone sensor. • Is there continuity?		
3	**INSPECT CRASH ZONE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Crash zone sensor and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Crash zone sensor terminal A—SAS control module terminal 3O ▪ Crash zone sensor terminal B—SAS control module	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and crash zone sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin

	terminal 3N **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and crash zone sensor. • Is there continuity?		disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT CRASH ZONE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Crash zone sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3O ▪ SAS control module terminal 3N **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and crash zone sensor. • Is the voltage **0 V**?	Yes	Replace the crash zone sensor, then go to the next step. (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and crash zone sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD**

	• Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0094:55 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Configuration setting error (crash zone sensor structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Crash zone sensor assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module	Yes	Go to the next step.

	configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	DTC troubleshooting completed.
2	**INSPECT CRASH ZONE SENSOR** • Verify that the crash zone sensor is correctly installed. • Is the crash zone sensor correctly installed?	Yes	Go to the next step.
		No	Correctly Install the crash zone sensor. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00D2:01 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Air bag system warning light malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Air bag system warning light malfunction detected
Fail-safe function	Not applicable
Possible cause	• Air bag system warning light malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Action
Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

DTC B00D2:01 [STANDARD DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC B00D2:29 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Invalid signal to air bag system warning light
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Air bag system warning light illumination request sent from SAS control module does not correspond to air bag system warning light illumination status in instrument cluster
Fail-safe function	Not applicable
Possible cause	• Instrument cluster assembly incorrect • Instrument cluster malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DTCs IN SAS CONTROL MODULE** • Clear the DTC for the SAS control module using the M-MDS.	Yes	Perform the applicable DTC inspection.
		No	Go to the next step.

	(See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Is DTC U0001:88 or U0155:00 displayed?		
2	**INSPECT INSTRUMENT CLUSTER** • Verify that the instrument cluster is correctly installed. • Is the instrument cluster correctly installed?	Yes	Go to the next step.
		No	Correctly install the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Then go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform the active command mode inspection for the instrument cluster using the M-MDS. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) ▪ WL+IL (See **ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]**.) • Does the air bag system warning light illuminate?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Then go to the next step.
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	Is DTC B00D2:29 displayed?		

2014 - Mazda3 - Restraints

DTC B1011:95 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• SAS control module connectors are poorly connected
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • No continuity between poorly connected detector bar terminals of the SAS control module
Fail-safe function	Not applicable
Possible cause	• SAS control module connectors are poorly connected • SAS control module connector malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CONTACTS OF SAS CONTROL MODULE CONNECTORS** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are all SAS control module connectors securely connected?	Yes	Go to the next step.
		No	Reconnect the SAS control module connectors properly. Then go to the Step 3.
2	**VERIFY DETECTOR BARS OF SAS CONTROL MODULE CONNECTORS FOR POOR CONNECTION** • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Go to the next step.
		No	Replace the air bag wiring harness.

	• Verify the condition of the detector bars of the SAS control module connectors. (Corrosion, damage, and disconnected pins) • Are the detector bars of the SAS control module connectors normal?		Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B10FD:11/B10FD:13/B10FD:87/B10FD:96 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B10FD:11: Driver-side side air bag sensor circuit short to body ground or power supply • B10FD:13: Driver-side side air bag sensor circuit open circuit or resistance high • B10FD:87: Signal reception error from driver-side side air bag sensor • B10FD:96: Driver-side side air bag sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the driver-side side air bag sensor and SAS control module has a malfunction • Driver-side side air bag sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side side air bag sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side side air bag sensor and SAS control module • Open circuit in the wiring harness between the driver-side side air bag sensor and SAS control module • Driver-side side air bag sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the driver-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver-side side air bag sensor connector. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the driver-side side air bag sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side side air bag sensor connector?		
2	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.

	Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1O ▪ SAS control module terminal 1N **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor. • Is there continuity?	No	Go to the next step.
3	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR OPEN CIRCUIT** • Driver-side side air bag sensor and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side side air	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag sensor terminal. **If there is a common connector:**

	bag sensor terminal A —SAS control module terminal 1O ▪ Driver-side side air bag sensor terminal B —SAS control module terminal 1N **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side side air bag sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1O ▪ SAS control module terminal 1N **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side side air bag sensor. • Is the voltage **0 V**?	Yes	Replace the driver-side side air bag sensor, then go to the next step. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short

			to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B10FD:55/B10FE:55 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B10FD:55: Configuration setting error (driver-side side air bag sensor structural malfunction) • B10FE:55: Configuration setting error (passenger-side side air bag sensor structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side side air bag sensor assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)**	Yes	Go to the next step.

	• Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	DTC troubleshooting completed.
2	**INSPECT SIDE AIR BAG SENSOR** • Verify that the driver or passenger-side side air bag sensor is correctly installed. • Is the driver or passenger-side side air bag sensor correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side side air bag sensor. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B10FE:11/B10FE:13/B10FE:87/B10FE:96 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B10FE:11: Passenger-side side air bag sensor circuit short to body ground or power supply • B10FE:13: Passenger-side side air bag sensor circuit open circuit or resistance high • B10FE:87: Signal reception error from passenger-side side air bag sensor • B10FE:96: Passenger-side side air bag sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the passenger-side side air bag sensor and SAS control module has a malfunction • Passenger-side side air bag sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side side air bag sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side side air bag sensor and SAS control module • Open circuit in the wiring harness between the passenger-side side air bag sensor and SAS control module • Passenger-side side air bag sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the passenger-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the passenger-side side air bag sensor connector. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side side air bag sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side side air bag sensor connector?		
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**). • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground.

	• Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1R ▪ SAS control module terminal 1Q **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor. • Is there continuity?		Go to Step 5.
		No	Go to the next step.
3	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR OPEN CIRCUIT** • Passenger-side side air bag sensor and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side):	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag sensor terminal. **If there is a common**

	▪ Passenger-side side air bag sensor terminal A—SAS control module terminal 1R ▪ Passenger-side side air bag sensor terminal B—SAS control module terminal 1Q **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor. • Is there continuity?		**connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side side air bag sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1R ▪ SAS control module terminal 1Q **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor. • Is the voltage **0 V**?	Yes	Replace the passenger-side side air bag sensor, then go to the next step. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring

			harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1126:11/B1126:12/B1126:13/B1126:19/B1126:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1126:11: Driver-side side air bag module circuit short to body ground • B1126:12: Driver-side side air bag module circuit short to power supply • B1126:13: Driver-side side air bag module circuit open circuit or resistance high • B1126:19: Short circuit to driver-side side air bag module and other air bag module circuits • B1126:1A: Driver-side side air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81–9.85 ohms** is detected in driver-side side air bag module circuit • Wiring harness between the driver-side side air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side side air bag module and SAS control module • Open circuit in the wiring harness between the driver-side side air bag module and SAS control module • Driver-side side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the driver-side side air bag module connector installed to the lower side of the seat cushion of the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Inspect the driver-side side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side side air bag module connector?		
2	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1A ▪ SAS control module terminal 1D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the driver-side side air bag module. • Is there continuity?		
3	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Driver-side side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side side air bag module terminal A—SAS control module terminal 1A	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by

	▪ Driver-side side air bag module terminal B—SAS control module terminal 1D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag module. • Is there continuity?		inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1A ▪ SAS control module terminal 1D **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side side air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable	Yes	Go to the next step.
		No	Replace the driver-side side air bag

	and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		module. (See **SIDE AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side side air bag module connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	• Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1126:55/B1127:55 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1126:55: Configuration setting error (driver-side side air bag module structural malfunction) • B1127:55: Configuration setting error (passenger-side side air bag module structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side side air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)**	Yes	Go to the next step.

	• Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	DTC troubleshooting completed.
2	**INSPECT SIDE AIR BAG MODULE** • Verify that the driver or passenger-side side air bag module is correctly installed. • Is the driver or passenger-side side air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side side air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1127:11/B1127:12/B1127:13/B1127:19/B1127:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1127:11: Passenger-side side air bag module circuit short to body ground • B1127:12: Passenger-side side air bag module circuit short to power supply • B1127:13: Passenger-side side air bag module circuit open circuit or resistance high • B1127:19: Short circuit to passenger-side side air bag module and other air bag module circuits • B1127:1A: Passenger-side side air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81–9.85 ohms** detected in passenger-side side air bag module circuit • Wiring harness between the passenger-side side air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side side air bag module and SAS control module • Open circuit in the wiring harness between the passenger-side side air bag module and SAS control module • Passenger-side side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the passenger-side side air bag module connector installed to the lower side of the seat cushion of the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Inspect the passenger-side side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side side air bag module connector?		
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	• Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1G ▪ SAS control module terminal 1J **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the passenger-side side air bag module. • Is there continuity?		
3	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side side air bag module terminal A—SAS control module	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by

	terminal 1J ▪ Passenger-side side air bag module terminal B—SAS control module terminal 1G **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag module. • Is there continuity?		inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1G ▪ SAS control module terminal 1J **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side side air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE** • Switch the ignition off.	Yes	Go to the next step.
		No	Replace the passenger-side side air bag

	• Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		module. (See **SIDE AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side side air bag module connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION**	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1128:11/B1128:12/B1128:13/B1128:19/B1128:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1128:11: Driver-side curtain air bag module circuit short to body ground • B1128:12: Driver-side curtain air bag module circuit short to power supply • B1128:13: Driver-side curtain air bag module circuit open circuit or resistance high • B1128:19: Short circuit to driver-side curtain air bag module and other air bag module circuits • B1128:1A: Driver-side curtain air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81–6.42 ohms** detected in driver-side curtain air bag module circuit • Wiring harness between the driver-side curtain air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side curtain air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side curtain air bag module and SAS control module • Open circuit in the wiring harness between the driver-side curtain air bag module and SAS control module • Driver-side curtain air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the driver-side curtain air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side curtain air bag module connector?		
2	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.

	side pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1S ▪ SAS control module terminal 1V **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the driver-side curtain air bag module. • Is there continuity?	No	Go to the next step.
3	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Driver-side curtain air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side curtain air bag module terminal A—SAS control module terminal 1S ▪ Driver-side curtain air bag module terminal B—SAS control module terminal 1V **NOTE:**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	• Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side curtain air bag module. • Is there continuity?		• Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side curtain air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1S ▪ SAS control module terminal 1V **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side curtain air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side curtain air	Yes	Go to the next step.
		No	Replace the driver-side curtain air bag module. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.

	bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side curtain air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side curtain air bag module connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	(See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1128:55/B1129:55 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1128:55: Configuration setting error (driver-side curtain air bag module structural malfunction) • B1129:55: Configuration setting error (passenger-side curtain air bag module structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side curtain air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)**	Yes	Go to the next step.

	• Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	DTC troubleshooting completed.
2	**INSPECT CURTAIN AIR BAG MODULE** • Verify that the driver or passenger-side curtain air bag module is correctly installed. • Is the driver or passenger-side curtain air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side curtain air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1129:11/B1129:12/B1129:13/B1129:19/B1129:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1129:11: Passenger-side curtain air bag module circuit short to body ground • B1129:12: Passenger-side curtain air bag module circuit short to power supply • B1129:13: Passenger-side curtain air bag module circuit open circuit or resistance high • B1129:19: Short circuit to passenger-side curtain air bag module and other air bag module circuits • B1129:1A: Passenger-side curtain air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81–6.42 ohms** detected in passenger-side curtain air bag module circuit • Wiring harness between the passenger-side curtain air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side curtain air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side curtain air bag module and SAS control module • Open circuit in the wiring harness between the passenger-side curtain air bag module and SAS control module • Passenger-side curtain air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side curtain air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side curtain air bag module connector?		
2	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.

	Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Disconnect the driver-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1W ▪ SAS control module terminal 1T **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the passenger-side curtain air bag module. • Is there continuity?	No	Go to the next step.
3	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side curtain air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side curtain air bag module terminal A—SAS control module terminal 1W ▪ Passenger-side curtain air bag module terminal B—	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness

	SAS control module terminal 1T **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side curtain air bag module. • Is there continuity?		for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side curtain air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1W ▪ SAS control module terminal 1T **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side curtain air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors.	Yes	Go to the next step.
		No	Replace the passenger-side curtain air bag module. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

	• Except for the passenger-side curtain air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side curtain air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side curtain air bag module connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1193:00 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• SAS control module operation (deployment)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module operates (deploys) (air bag module or pre-tensioner seat belt)
Fail-safe function	Not applicable
Possible cause	• SAS control module operation (deployment) • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

ACTION
• Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

DTC B1193:00 [STANDARD DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC B1206:00/U2107:00 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1206:00: SAS control module operation (deployment) (fuel cut signal output) • U2107:00: SAS control module operation (deployment) signal output
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module operates (deploys) (air bag module or pre-tensioner seat belt)
Fail-safe function	Not applicable
Possible cause	• SAS control module operation (deployment) • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

ACTION
• Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

DTC B1211:11/B1211:12/B1211:13/B1211:19/B1211:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1211:11: Driver-side pre-tensioner seat belt circuit short to body ground • B1211:12: Driver-side pre-tensioner seat belt circuit short to power supply • B1211:13: Driver-side pre-tensioner seat belt circuit open circuit or resistance high • B1211:19: Short circuit to driver-side pre-tensioner seat belt and other air bag module circuits • B1211:1A: Driver-side pre-tensioner seat belt circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance other than **0.81—6.42 ohms** detected in driver-side pre-tensioner seat belt circuit • Wiring harness between the driver-side pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the driver-side pre-tensioner seat belt and SAS control module • Driver-side pre-tensioner seat belt malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the driver-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Inspect the driver-side pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side pre-tensioner seat belt connector?		
2	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the passenger-side B-pillar lower trim.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	(See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 2D ▪ SAS control module terminal 2A **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is there continuity?		
3	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Driver-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side pre-tensioner seat belt terminal A—SAS	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the

	control module terminal 2D ▪ Driver-side pre-tensioner seat belt terminal B—SAS control module terminal 2A **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is there continuity?		malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 2D ▪ SAS control module terminal 2A **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT**	Yes	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side pre-tensioner seat belt connector terminals A–B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	Replace the driver-side pre-tensioner seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side pre-tensioner seat belt connector. • Connect the negative battery cable.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1211:55, B1214:55 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1211:55: Configuration setting error (driver-side pre-tensioner seat belt structural malfunction) • B1214:55: Configuration setting error (passenger-side pre-tensioner seat belt structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side pre-tensioner seat belt assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)**	Yes	Go to the next step.

	• Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	No	DTC troubleshooting completed.
2	**INSPECT PRE-TENSIONER SEAT BELT** • Verify that the driver or passenger-side pre-tensioner seat belt is correctly installed. • Is the driver or passenger-side pre-tensioner seat belt correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side pre-tensioner seat belt. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1214:11/B1214:12/B1214:13/B1214:19/B1214:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1214:11: Passenger-side pre-tensioner seat belt circuit short to body ground • B1214:12: Passenger-side pre-tensioner seat belt circuit short to power supply • B1214:13: Passenger-side pre-tensioner seat belt circuit open circuit or resistance high • B1214:19: Short circuit to passenger-side pre-tensioner seat belt and other air bag module circuits • B1214:1A: Passenger-side pre-tensioner seat belt circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance other than **0.81—6.42 ohms** detected in passenger-side pre-tensioner seat belt circuit • Wiring harness between the passenger-side pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the passenger-side pre-tensioner seat belt and SAS control module • Passenger-side pre-tensioner seat belt malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the passenger-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Inspect the passenger-side pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side pre-tensioner seat belt connector?		
2	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the driver-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver-side pre-tensioner seat belt connector.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	(See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 2G ▪ SAS control module terminal 2J **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is there continuity?		
3	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Passenger-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side pre-tensioner seat belt terminal A—SAS control module terminal 2G ▪ Passenger-side pre-tensioner seat belt terminal B—SAS control module terminal 2J **NOTE:**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is there continuity?		Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 2G ▪ SAS control module terminal 2J **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side pre-tensioner seat belt connector	Yes	Go to the next step.
		No	Replace the passenger-side pre-tensioner seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) Then go to the next step.

	terminals A–B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side pre-tensioner seat belt connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

DTC B1214:11/B1214:12/B1214:13/B1214:19/B1214:1A [STANDARD DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC C0061:29/C0062:29/C0063:29/P0666:29 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• C0061:29: Low-G sensor (lateral-G) in SAS control module (internal circuit disabled) • C0062:29: Low-G sensor (forward-G) in SAS control module (internal circuit disabled) • C0063:29: Yaw rate sensor in SAS control module (internal circuit disabled) • P0666:29: Temperature sensor in SAS control module (internal circuit disabled)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module internal sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**PERFORM SAS CONTROL MODULE DTC INSPECTION**	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE**

	Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC U0001:88/U0155:00 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• U0001:88: Module communication error (HS-CAN) • U0155:00: Communication error with instrument cluster
Detection condition	**U0001:88** • The SAS control module detects a CAN communication line (HS-CAN) error. **U0155:00** • The SAS control module could not receive CAN signal from the instrument cluster for **5 s or more**.
Fail-safe function	Not applicable
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the SAS control module and instrument cluster
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Restraints

DTC U0300:00/U2100:00 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• U0300:00: Configuration setting invalid • U2100:00: Configuration not set
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE**	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM].) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC U2005:68 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• PCM communication error (vehicle speed signal)
Detection condition	• The SAS control module receives vehicle speed signal error from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• PCM malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY SAS CONTROL MODULE DTCs AGAIN** • Clear SAS control module DTCs using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the SAS control module DTC inspection using the M-MDS.(See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC U2005:68 displayed?	Yes	Go to the next step.
		No	Go to Step 5.

2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear SAS control module DTCs using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the SAS control module DTC inspection using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC U2005:68 displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear SAS control module DTCs using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the SAS control module DTC inspection using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC U2005:68 displayed?	Yes	Replace the SAS control module, then go to the next step. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting.
		No	DTC troubleshooting completed.

DTC U2005:68 [STANDARD DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC U3000:49 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	SAS control module internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module internal circuit has a malfunction
Fail-safe function	Not applicable
Possible cause	• SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

ACTION
Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

DTC U3000:49 [STANDARD DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC U3003:16/U3003:17 [STANDARD DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• U3003:16: SAS control module power supply voltage decreases (**less than 8 V**) • U3003:17: SAS control module power supply voltage increases (**18 V or more**)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module power supply voltage is other than **8–17.9 V**
Fail-safe function	Not applicable
Possible cause	• Battery malfunction • SRS1 7.5 A fuse malfunction • Open circuit or short to body ground in wiring harness between IG1 relay and SAS control module • Open circuit in the wiring harness between the SAS control module and body ground • SAS control module malfunction

SAS CONTROL MODULE WIRING
HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**BATTERY INSPECTION** • Refer to the battery inspection and inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Then go to Step 5.
2	**FUSE INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the SRS1 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the SRS1 7.5 A fuse. Then go to Step 5.
3	**INSPECT WIRING HARNESS BETWEEN SAS CONTROL MODULE AND IG1 RELAY** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Install the SRS1 7.5 A fuse. • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and IG1 relay terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit or short to ground. Go to Step 5.

	Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on).		
	• Measure the voltage of SAS control module connector terminal 3C (wiring harness-side). **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and IG1 relay. • Is the voltage **8–17.9 V**?		
4	**INSPECT SAS CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness between SAS control module connector terminal 2C, 2F (wiring harness-side) and body ground. **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD**

	• Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

PID/DATA MONITOR INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “RCM”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

2014 - Mazda3 - Restraints

PID/DATA MONITOR TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]

PID	Unit/Condition	Data contents	SAS control module terminal
AB_WL (Air bag system warning light status)	Lamp_Off/Lamp_On/Plant_Mode/Unknown	• Air bag system warning light off: Lamp_Off • Air bag system warning light on: Lamp_On • Air bag system warning light status: Plant_Mode • Air bag system warning light status: Unknown	3K, 3L
B_SW_P_FLT (Passenger-side buckle switch malfunction status)	**NOTE:** • Displays in the M-MDS but it does not operate.		
OCS_DTC_CLR (Seat weight sensor DTC cleared status)	**NOTE:** • Displays in the M-MDS but it does not operate.		
P_OCS_ST	**NOTE:**		

(Seat weight sensor status)	• Displays in the M-MDS but it does not operate.		
P_WEIGHT (Seat weight sensor measured weight of passenger)	**NOTE:** • Displays in the M-MDS but it does not operate.		
RES_C_AB_D (Driver-side curtain air bag module resistance nominal)	ohm	Continuous: 0.81–6.42 ohms	1S, 1V
RES_C_AB_P (Passenger-side curtain air bag module resistance nominal)	ohm	Continuous: 0.81–6.42 ohms	1W, 1T
RES_F_AB1_D (Driver-side air bag module (inflatorNo.1) resistance nominal)	ohm	Continuous: 0.99–6.42 ohms	3A, 3D
RES_F_AB1_P (Passenger-side air bag module (inflatorNo.1) resistance nominal)	ohm	Continuous: 0.81–6.42 ohms	3G, 3J
RES_F_AB2_D (Driver-side air bag module (inflatorNo.2) resistance nominal)	**NOTE:** • Displays in the M-MDS but it does not operate.		
RES_F_AB2_P (Passenger-side air bag module (inflator No.2) resistance nominal)	**NOTE:** • Displays in the M-MDS but it does not operate.		
RES_PCD_BAR (Poorly connected detector bar terminals resistance nominal (all of SAS control module connectors))	ohm	• Normal connected: 100 ohm or less • Poor connected: 20 kilohm or more	1a, 1b, 2a, 2b, 3a, 3b

RES_S_AB_D (Driver-side side air bag module resistance nominal)	ohm	Continuous: 0.81–9.85 ohms	1A, 1D
RES_S_AB_P (Passenger-side side air bag module resistance nominal)	ohm	Continuous: 0.81–9.85 ohms	1J, 1G
RES_SB_LP_D (Driver-side lap pre-tensioner seat belt resistance nominal)	**NOTE:** • Displays in the M-MDS but it does not operate.		
RES_SB_LP_P (Passenger-side lap pre-tensioner seat belt resistance nominal)	**NOTE:** • Displays in the M-MDS but it does not operate.		
RES_SB_P_D (Driver-side pre-tensioner seat belt resistance nominal)	ohm	Continuous: 0.81–6.42 ohms	2D, 2A
RES_SB_P_P (Passenger-side pre-tensioner seat belt resistance nominal)	ohm	Continuous: 0.81–6.42 ohms	2G, 2J
SEAT_B_D (Driver-side buckle switch status)	Unbuckled/Buckled	• Driver-side front seat belt fastened (Driver-side buckle switch off): Buckled • Driver-side front seat belt not fastened (Driver-side buckle switch on): Unbuckled	2U
SEAT_B_P (Passenger-side buckle	**NOTE:**		

switch status)	• Displays in the M-MDS but it does not operate.		
VPWR_IGA (SAS control module power voltage)	V	Ignition is switched ON: IG1 voltage	3C

2014 - Mazda3 - Restraints

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

FOREWORD [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

*1 **CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW**.

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory.
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

Air Bag System Specification Identification

- Because two types of driver and passenger-side air bag module controls, “Two-step deployment control” and “Standard deployment control”, are available depending on when the vehicle was produced, identify the specification referring to the following identification.

Identification

- In this manual, “Two-step deployment control system” or “Standard deployment control system” is used if the service contents differ depending on the control.
- Control is identified by the following components.

×: Equipped-: Not equipped

Item	Two-step deployment control system	Standard deployment control system
Sophisticated air bag sensor (SAS) control module	×	×
Crash zone sensor	×	×
Side air bag sensor	×	×
Pressure sensor	×	-
Driver-side air bag module	× (Two-step deployment type)	× (Standard deployment type)
Passenger-side air bag module	× (Two-step deployment type)	× (Standard deployment type)
Side air bag module	×	×
Curtain air bag module	×	×
Lap pre-tensioner seat belt	×	-
Pre-tensioner seat belt	×	×
Clock spring	× (Two-step deployment type)	× (Standard deployment type)
Seat weight sensor/control module	×	-

Driver-side buckle switch	×	×
Passenger-side buckle switch	×	-
Air bag system warning light	×	×
PAD indicator	×	-

Outline

- The OBD (on-board diagnostic) system has the following functions:
  - Malfunction detection function: Detects malfunctions in the air bag system and outputs DTCs (Diagnostic Trouble Codes).
  - PID/data monitor function: Reads out specific input/output signals and the system status.
- DTCs can be read/cleared using the M-MDS.

  NOTE:

  - Use the M-MDS to verify DTCs because the DTCs displayed by the air bag system warning light are reference information only.

2014 - Mazda3 - Restraints

FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

- Use the following flowchart to verify the cause of the trouble.

NOTE:

- When inspecting past malfunction codes, inspect only the DTCs that were indicated before beginning the inspection. A mis-diagnosis could occur as a result of new DTCs being added while performing an inspection by disconnecting related parts or connectors.
- When DTCs of the present malfunction are no longer output after present or past malfunctions or both have been repaired, be sure to clear the past malfunction from memory to prevent repair of malfunctions that have already been repaired.

FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

NOTE:

- If the self-test is implemented, the seat weight sensor calibration is performed. Perform the DTC inspection in accordance with the following conditions:
    - Do not place objects on the front seat (passenger side)
    - Do not touch the front seat (passenger side)
    - Fix the slide position of the front seat (passenger side) to the maximum rearward position.
    - Fix the recliner position of the front seat (passenger side) to the maximum forward position.
    - Set cabin vehicle temperature range between the **-10 to 40 °C {14 to 104 °F}**
    - Other than the above conditions, a “Japan only” command is also displayed, however, do not select the command because it is for use in Japan only.

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select "Self Test".
    b. Select "All CMDTCs".
3. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select "Self Test".
    b. Select "Modules".
    c. Select "RCM".
3. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Snapshot Data Table

NOTE:

- The SAS control module stores the following two types of information when a DTC is detected and displays snap shot data in the M-MDS.
    - Vehicle information detected by SAS control module

- Vehicle information detected by instrument cluster and received by SAS control module via CAN signal

- The data for all DTCs currently detected is stored.

Snapshot data item	Unit		Definition	Data read/use method	Corresponding PID data monitor item
AAT	°C	°F	Ambient temperature	—	—
APP_STATUS	Accelerator Pedal Off/ Under20%/ Over20%/ FAIL		Accelerator pedal position status	—	—
CFG_STATUS	Config Complete/ Not Configured/ Config Error		Instrument cluster configuration status	—	—
ECT_STATUS	Under 0 degrees C/ 0-Under 80 degrees C/ Over 80 degrees C/ FAIL		Engine coolant temperature status	—	—
FAULT_CNT	—		Number of malfunction detections	—	—
FIRST_DET_IG	hh:mm:ss*1		Time when initial malfunction occurs (IG-ON counter) • Elapsed time from when ignition is switched ON (engine off or on) until SAS control module detects first malfunction*3	—	—
IC_VPWR	V		Instrument cluster power supply voltage	• The SAS control module constantly receives the power supply voltage value of the instrument cluster sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the power supply voltage of the instrument cluster when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	VPWR*2
IG-ON_TIMER	hh:mm:ss*1		Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed time since	• The SAS control module constantly receives the elapsed time since the ignition was switched ON (engine off or on) sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the elapsed time since	—

		the ignition was switched ON (engine off or on).	the ignition was switched ON (engine off or on) when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	
LAST_CLR	hh:mm:ss*1	Repair time for last malfunction (B+ counter) • Elapsed time from when battery is connected until SAS control module detects that last malfunction is repaired*3	—	—
LAST_CLR_IG	hh:mm:ss*1	Repair time for last malfunction (IG-ON counter) • Elapsed time from when ignition is switched ON (engine off or on) until SAS control module detects that last malfunction is repaired*3	—	—
LAST_DET	hh:mm:ss*1	Time when last malfunction occurs (B+ counter) • Elapsed time from when battery is connected until SAS control module detects last malfunction*3	—	—
LAST_DET_IG	hh:mm:ss*1	Time when last malfunction occurs (IG-ON counter) • Elapsed time from when ignition is switched ON (engine off or on) until SAS control module detects last malfunction*3	—	—
PWR_MODE_KEY	Key Out/ Key Recently Out (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 2)/ Ignition On (Position 2)/ Running (Position 2)/ Running -	• Key Out: Ignition switched off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was switched off • Accessory (Position 1): Ignition is switched to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since ignition was switched ON (engine off or on) • Ignition On (Position 2): Ignition switched ON (engine off)	• The SAS control module constantly receives the ignition switch status sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the ignition switch status when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	—

	Starting		• Running (Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition		
RPM_STATUS	Engine Stop/ Under1500rpm/ Over1500rpm/ FAIL		Engine speed status	• The SAS control module constantly receives the engine speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the engine speed when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	TACHOMTR*2
SHIFT_STATUS	P/N/ D/ R/ FAIL		Selector lever position status	• The SAS control module constantly receives the selector lever position sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the selector lever position when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	—
TOTAL_DIST	km	miles	Accumulated total traveled distance from completion of vehicle until SAS control module detects DTC (Odometer value in instrument cluster)	The total traveled distance from which the SAS control module detects DTCs to the present can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snapshot data item TOTAL_DIST. • Subtract 2 from 1.	—
TOTAL_TIME	hh:mm:ss*1		Accumulated total elapsed time since vehicle completion until SAS control module detects a DTC*3 **NOTE:** • When the ROOM fuse is removed, and the ignition is switched off, the time is not included in the elapsed time.	The elapsed time from which the SAS control module detects DTCs to the present can be calculated by performing the following procedure. • Verify the instrument cluster PID item TOTAL_TIME. • Verify the snapshot data item TOTAL_TIME. • Subtract 2 from 1.	TOTAL_TIME*2
VPWR	V		SAS control module power supply malfunction	—	VPWR_IGA
VSPD_STATUS	Stop/ 0-10km/h/ Over10km/h/ FAIL		Vehicle speed status	• The SAS control module constantly receives the vehicle speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the SAS control module records the vehicle speed when the DTC was detected, and it is displayed in the Mazda Modular Diagnostic System (M-MDS).	SPEEDOMTR*2

*1 **The seconds may be indicated after the decimal point.**

*2 **Instrument cluster PID (See PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER].)**

*3

The snap shot data of the number of stored malfunction detections, B+ counters, or IG ON counters is combined with the DTC detection conditions of the SAS control module, and the point-in-time data in the following table is stored.

SAS control module DTC detection period	Snapshot data						
	FAULT_CNT (Number of malfunction detections)	TOTAL_TIME	FIRST_DET_IG	LAST_DET	LAST_DET_IG	LAST_CLR	LAST_CLR_IG
	Number of malfunction detections	Time when first malfunction occurs (B+ counter)	Time when initial malfunction occurs (IG-ON counter)	Time when last malfunction occurs (B+ counter)	Time when last malfunction occurs (IG-ON counter)	Repair time for last malfunction (B+ counter)	Repair time for last malfunction (IG-ON counter)
(1)	1	A	G	A	G	-	-
(2)	1	A	G	A	G	B	H
(3)	2	A	G	C	I	B	H

(5)	3	A	G	E	K	D	J
(6)	3	A	G	E	K	F	L

2014 - Mazda3 - Restraints

CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

CMDTC Self Test

1. Connect the M-MDS to the DLC 2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
8. Verify that no DTCs are displayed.

ODDTC Self Test

1. Connect the M-MDS to the DLC 2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “RCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **11 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
8. Verify that no DTCs are displayed.

CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- When DTCs not shown in the DTC table are displayed, perform the inspection for DTCs not shown in the DTC table. (See **Inspection for DTCs not shown in DTC table**.)

System wiring diagram

SAS CONTROL MODULE WIRING
HARNESS-SIDE CONNECTOR

Diagnostic procedure

Step	Inspection		Action
1	**BATTERY INSPECTION** • Refer to the battery inspection and inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Then go to Step 5.
2	**FUSE INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the SRS1 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the SRS1 7.5 A fuse. Then go to Step 5.
3	**INSPECT WIRING HARNESS BETWEEN IG1 RELAY AND SAS CONTROL MODULE** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Install the SRS1 7.5 A fuse. • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and IG1 relay terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit or short to ground. Go to Step 5.

	(See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)		
3	• Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage of SAS control module terminal 3C (wiring harness-side). **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and IG1 relay. • Is the voltage between **8–17.9 V**?		
4	**INSPECT SAS CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module connectors are disconnected.	Yes	Go to the next step.

	• Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness between SAS control module connector terminal 2C, 2F (wiring harness-side) and body ground. **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and body ground. • Is there continuity?	No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0001:11/B0001:12/B0001:13/B0001:19/B0001:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0001:11:Driver-side air bag module (inflator No.1) circuit short to body ground • B0001:12:Driver-side air bag module (inflator No.1) circuit short to power supply • B0001:13:Driver-side air bag module (inflator No.1) circuit resistance high • B0001:19:Short circuit to driver-side air bag module (inflator No.1) and other air bag module circuits • B0001:1A:Driver-side air bag module (inflator No.1) circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.99—6.42 ohms** detected in driver-side air bag module (inflator No.1) circuit • Wiring harness between driver-side air bag module (inflator No.1) and SAS control module has malfunction
Fail-safe function	Not applicable
Possible cause	• Clock spring connector malfunction • Clock spring malfunction • Short circuit to power supply or body ground in the wiring harness between the clock spring and SAS control module • Open circuit in the wiring harness between the clock spring and SAS control module • Driver-side air bag module (inflator No.1) malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1) CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to Step 7.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the driver-side air bag module (inflator No.1) connector. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the clock spring connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the clock spring connector?		
2	**INSPECT CLOCK SPRING** • Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.) • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Remove the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between clock spring connector terminals 2B—4A and 2A—4B. **NOTE:** • Inspect the clock spring wiring harness for continuity while shaking it. • Is there continuity?	Yes	Go to the next step.
		No	Replace clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to Step 7.
3	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1) CIRCUIT FOR SHORT TO GROUND** • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.

	(See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3A ▪ SAS control module terminal 3D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?		• Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1) CIRCUIT FOR OPEN CIRCUIT** • Clock spring and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Clock spring terminal 2B —SAS control module	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:**

	terminal 3A ▪ Clock spring terminal 2A —SAS control module terminal 3D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 7.
5	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1) CIRCUIT FOR SHORT TO POWER SUPPLY** • Clock spring and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3A ▪ SAS control module terminal 3D **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and clock spring. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT DRIVER-SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side air bag module	Yes	Go to the next step.
		No	Replace the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT**

	(inflator No.1) connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to clock spring connector terminals 4A and 4B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**CONTROL SYSTEM]**.) Then go to the next step.
7	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side air bag module (inflator No.1) connector. (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	• Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B0001:55/B0010:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0001:55:Configuration setting error (driver-side air bag module (inflator No.1) structural malfunction) • B0010:55:Configuration setting error (passenger-side air bag module (inflator No.1) structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT AIR BAG MODULE** • Verify that the driver or passenger-side air bag module is correctly installed. • Is the driver or passenger-side air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0002:11/B0002:12/B0002:13/B0002:19/B0002:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0002:11:Driver-side air bag module (inflator No.2) circuit short to body ground • B0002:12:Driver-side air bag module (inflator No.2) circuit short to power supply • B0002:13:Driver-side air bag module (inflator No.2) circuit open circuit or resistance high • B0002:19:Short circuit to driver-side air bag module (inflator No.2) and other air bag module circuits • B0002:1A:Driver-side air bag module (inflator No.2) circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance other than **0.99—6.42 ohms** detected in the driver-side air bag module (inflator No.2) circuit • Malfunction in the wiring harness between the driver-side air bag module (inflator No.2) and SAS control module
Fail-safe function	Not applicable
Possible cause	• Clock spring connector malfunction • Clock spring malfunction • Short circuit to power supply or body ground in the wiring harness between the clock spring and SAS control module • Open circuit in the wiring harness between the clock spring and SAS control module • Driver-side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2) CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to Step 7.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the driver-side air bag module (inflator No.2) connector. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the clock spring connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the clock spring connector?		
2	**INSPECT CLOCK SPRING** • Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.) • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Remove the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between clock spring connector terminals 2D—5A and 2C—5B. **NOTE:** • Inspect the clock spring wiring harness for continuity while shaking it. • Is there continuity?	Yes	Go to the next step.
		No	Replace clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to Step 7.
3	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2) CIRCUIT FOR SHORT TO GROUND** • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.

	(See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3S ▪ SAS control module terminal 3V **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?		• Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2) CIRCUIT FOR OPEN CIRCUIT** • Clock spring and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Clock spring terminal 2D —SAS control module	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:**

	terminal 3S ▪ Clock spring terminal 2C —SAS control module terminal 3V **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 7.
5	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2) CIRCUIT FOR SHORT TO POWER SUPPLY** • Clock spring and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3S ▪ SAS control module terminal 3V **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and clock spring. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and clock spring terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT DRIVER-SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side air bag module	Yes	Go to the next step.
		No	Replace the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT**

	(inflator No.2) connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to clock spring connector terminals 5A and 5B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**CONTROL SYSTEM]**.) Then go to the next step.
7	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side air bag module (inflator No.2) connector. (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	• Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B0002:55/B0011:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0002:55:Configuration setting error (driver-side air bag module (inflator No.2) structural malfunction) • B0011:55:Configuration setting error (passenger-side air bag module (inflator No.2) structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT AIR BAG MODULE** • Verify that the driver or passenger-side air bag module is correctly installed. • Is the driver or passenger-side air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0003:53 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Operation (deployment) inhibited due to configuration setting
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • The SAS control module configuration has not been set and other DTCs present
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration error • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE**	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM].) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Go to the next step.
		No	DTC troubleshooting completed.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are any other DTCs output?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0010:11/B0010:12/B0010:13/B0010:19/B0010:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0010:11:Passenger-side air bag module (inflator No.1) circuit short to body ground • B0010:12:Passenger-side air bag module (inflator No.1) circuit short to power supply • B0010:13:Passenger-side air bag module (inflator No.1) circuit open circuit or resistance high • B0010:19:Short circuit to passenger-side air bag module (inflator No.1) and other air bag module circuits • B0010:1A:Passenger-side air bag module (inflator No.1) circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance other than **0.81–6.42 ohms** detected in passenger-side air bag module (inflator No.1) circuit • Wiring harness between passenger-side air bag module (inflator No.1) and SAS control module has malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side air bag module (inflator No.1) connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side air bag module (inflator No.1) and SAS control module • Open circuit in the wiring harness between the passenger-side air bag module (inflator No.1) and SAS control module • Passenger-side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module (inflator No.1) connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side air bag module (inflator No.1) connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side air bag module (inflator No.1) connector?		
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1) CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	(See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3G ▪ SAS control module terminal 3J **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?		
3	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1) CIRCUIT FOR OPEN CIRCUIT** • Passenger-side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side air bag module terminal 1A—SAS control module terminal 3G ▪ Passenger-side air bag module terminal 1B—SAS control module terminal 3J **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1) CIRCUIT FOR SHORT TO POWER**	Yes	Go to the next step.

	SUPPLY • Passenger-side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3G ▪ SAS control module terminal 3J **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is the voltage **0 V**?	No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT PASSENGER-SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side air bag module (inflator No.1) connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side air bag module (inflator No.1) connector terminals 1A and 1B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS.	Yes	Go to the next step.
		No	Replace the passenger-side air bag module. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **PASSENGER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.

	(See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side air bag module (inflator No.1) connector. (See **PASSENGER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0011:11/B0011:12/B0011:13/B0011:19/B0011:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0011:11:Passenger-side air bag module (inflator No.2) circuit short to body ground • B0011:12:Passenger-side air bag module (inflator No.2) circuit short to power supply • B0011:13:Passenger-side air bag module (inflator No.2) circuit open circuit or resistance high • B0011:19:Short circuit to passenger-side air bag module (inflator No.2) and other air bag module circuits • B0011:1A:Passenger-side air bag module (inflator No.2) circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance other than **0.81—6.42 ohms** detected in the passenger-side air bag module (inflator No.2) circuit • Wiring harness between passenger-side air bag module (inflator No.2) and SAS control module has malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side air bag module (inflator No.2) connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side air bag module (inflator No.2) and SAS control module • Open circuit in the wiring harness between the passenger-side air bag module (inflator No.2) and SAS control module • Passenger-side air bag module (inflator No.2) malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module (inflator No.2) connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side air bag module (inflator No.2) connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side air bag module (inflator No.2) connector?		
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2) CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	(See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3T ▪ SAS control module terminal 3W **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?		
3	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2) CIRCUIT FOR OPEN CIRCUIT** • Passenger-side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side air bag module terminal 2A—SAS control module terminal 3T ▪ Passenger-side air bag module terminal 2B—SAS control module terminal 3W **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2) CIRCUIT FOR SHORT TO POWER**	Yes	Go to the next step.

	SUPPLY • Passenger-side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3T ▪ SAS control module terminal 3W **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is the voltage **0 V**?	No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT PASSENGER-SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side air bag module (inflator No.2) connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side air bag module (inflator No.2) connector terminals 2A and 2B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS.	Yes	Go to the next step.
		No	Replace the passenger-side air bag module. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **PASSENGER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.

	(See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side air bag module (inflator No.2) connector. (See **PASSENGER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0052:09/B0052:11/B0052:14 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0052:09:Passenger-side buckle switch undefined • B0052:11:Passenger-side buckle switch circuit open or short to power supply • B0052:14:Passenger-side buckle switch circuit short to body ground
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the passenger-side buckle switch and seat weight sensor control module has a malfunction • Passenger-side buckle switch has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side buckle switch connector malfunction • Short circuit to power supply or body ground in the wiring harness between passenger-side buckle switch and SAS control module • Open circuit in the wiring harness between passenger-side buckle switch and SAS control module • Passenger-side buckle switch malfunction • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE BUCKLE SWITCH CONNECTOR** **WARNING:** • Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	• Disconnect the passenger-side buckle switch connector. (See **FRONT BUCKLE REMOVAL/INSTALLATION**.) • Inspect the passenger-side buckle switch connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side buckle switch connector?		
2	**INSPECT PASSENGER-SIDE BUCKLE SWITCH CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Seat weight sensor control module terminal 2F ▪ Seat weight sensor control module terminal 2I **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight sensor control module and passenger-side buckle switch. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and passenger-side buckle switch terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
3	**INSPECT PASSENGER-SIDE BUCKLE SWITCH CIRCUIT FOR OPEN CIRCUIT** • Passenger-side buckle switch and seat weight sensor control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side buckle switch terminal A—seat weight sensor control module 2F ▪ Passenger-side buckle switch terminal B—seat weight sensor control module 2I **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight sensor control module and passenger-side buckle switch. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and passenger-side buckle switch terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT PASSENGER-SIDE BUCKLE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side buckle switch and seat weight sensor control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and passenger-side buckle switch terminal. **If there is a common connector:** • Determine the malfunctioning part by

	• Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Seat weight sensor control module 2F ▪ Seat weight sensor control module 2I **NOTE:** • Measure the voltage while shaking the wiring harness between the seat weight sensor control module and passenger-side buckle switch. • Is the voltage **0 V**?		inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**INSPECT PASSENGER-SIDE BUCKLE SWITCH** • Check the following PID/DATA monitor, using M-MDS. (See **PID/DATA MONITOR TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) ▪ B_SW_P_FLT • Is passenger-side buckle switch normal?	Yes	Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
		No	Replace the passenger-side front buckle. (See **FRONT BUCKLE REMOVAL/INSTALLATION**.) Then go to the next step.
6	**INSPECT SAS CONTROL MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0072:11/B0072:12/B0072:13/B0072:19/B0072:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0072:11:Passenger-side lap pre-tensioner seat belt circuit short to body ground • B0072:12:Passenger-side lap pre-tensioner seat belt circuit short to power supply • B0072:13:Passenger-side lap pre-tensioner seat belt circuit open circuit or resistance high • B0072:19:Short circuit to passenger-side lap pre-tensioner seat belt and other air bag module circuits • B0072:1A:Passenger-side lap pre-tensioner seat belt circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81—6.42 ohms** detected in passenger-side lap pre-tensioner seat belt circuit • Wiring harness between the passenger-side lap pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side lap pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side lap pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the passenger-side lap pre-tensioner seat belt and SAS control module • Passenger-side lap pre-tensioner seat belt malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE LAP PRE-TENSIONER SEAT BELT CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the cover. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Inspect the passenger-side lap pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side lap pre-tensioner seat belt connector?		
2	**INSPECT PASSENGER-SIDE LAP PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver-side lap pre-tensioner seat belt connector.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side lap pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	(See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 2Y ▪ SAS control module terminal 2AB **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side lap pre-tensioner seat belt. • Is there continuity?		
3	**INSPECT PASSENGER-SIDE LAP PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Lap pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side lap pre-tensioner seat belt terminal A—SAS control module terminal 2Y ▪ Passenger-side lap pre-tensioner seat belt terminal B—SAS control module terminal 2AB **NOTE:** • Inspect for continuity while shaking the	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side lap pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning

	wiring harness between the SAS control module and passenger-side lap pre-tensioner seat belt. • Is there continuity?		part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE LAP PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side lap pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 2Y ▪ SAS control module terminal 2AB **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side lap pre-tensioner seat belt. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side lap pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT PASSENGER-SIDE LAP PRE-TENSIONER SEAT BELT** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side lap pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side lap pre-tensioner seat belt connector terminals A–B.	Yes	Go to the next step.
		No	Replace the passenger-side lap pre-tensioner seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) Then go to the next step.

	• Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side lap pre-tensioner seat belt connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

DTC B0072:11/B0072:12/B0072:13/B0072:19/B0072:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC B0072:55/B1228:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0072:55:Configuration setting error (passenger-side lap pre-tensioner seat belt structural malfunction) • B1228:55:Configuration setting error (driver-side lap pre-tensioner seat belt structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side lap pre-tensioner seat belt assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT LAP PRE-TENSIONER SEAT BELT** • Verify that the driver or passenger-side lap pre-tensioner seat belt is correctly installed. • Is the driver or passenger-side lap pre-tensioner seat belt correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side lap pre-tensioner seat belt. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0094:11/B0094:13/B0094:87/B0094:96 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0094:11:Driver-side crash zone sensor circuit short to body ground • B0094:13:Driver-side crash zone sensor circuit open circuit or short to power supply • B0094:87:Signal reception error from driver-side crash zone sensor • B0094:96:Driver-side crash zone sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the driver-side crash zone sensor and SAS control module has a malfunction • Driver-side crash zone sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side crash zone sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side crash zone sensor and SAS control module • Open circuit in the wiring harness between the driver-side crash zone sensor and SAS control module • Driver-side crash zone sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the front combination light. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.) • Disconnect the driver-side crash zone sensor connector. (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the driver-side crash zone sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side crash zone sensor connector?		
2	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side crash zone sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.

	(See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 3O ▪ SAS control module terminal 3N **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side crash zone sensor. • Is there continuity?	No	Go to the next step.
3	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Driver-side crash zone sensor and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side crash zone sensor terminal.

	side): ▪ Driver-side crash zone sensor terminal A—SAS control module terminal 3O ▪ Driver-side crash zone sensor terminal B—SAS control module terminal 3N **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side crash zone sensor. • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side crash zone sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 3O ▪ SAS control module terminal 3N **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side crash zone sensor. • Is the voltage **0 V**?	Yes	Replace the driver-side crash zone sensor, then go to the next step. (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side crash zone sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:**

			• Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B0094:55/B1417:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B0094:55:Configuration setting error (driver-side crash zone sensor structural malfunction) • B1417:55:Configuration setting error (passenger-side crash zone sensor structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side crash zone sensor assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT CRASH ZONE SENSOR** • Verify that the driver or passenger-side crash zone sensor is correctly installed. • Is the driver or passenger-side crash zone sensor correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side crash zone sensor. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00A0:07 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor collision detection
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • The pressure from the seat weight sensor is not within specification
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor deformation or malfunction • Foreign object under seat causing load on or deformation of the seat belt rail • Front passenger-side seat under-bracket or frame deformed • Weight acting on front passenger-side seat during calibration • Front passenger-side seat part improperly installed at time of calibration • Floor deformed where front passenger-side seat attached • Seat weight sensor calibration setting not implemented • Seat weight sensor calibration setting invalid • Seat weight sensor control module malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE FRONT SEAT** • Visually inspect the passenger-side front seat for the following: ▪ Seat under-bracket deformation ▪ Seat frame deformation ▪ Seat weight sensor deformation ▪ Foreign objects stuck under seat • Are any of the parts deformed or are any foreign objects stuck under the seat?	Yes	Replace any deformed parts or remove any foreign objects, then go to the next step.
		No	Go to the next step.
2	**INSPECT FLOOR** • Visually inspect the installation parts of the front passenger-side seat for the following: ▪ Abnormal floor deformation ▪ Installation hole of front passenger-side seat is improperly positioned • Is the floor normal?	Yes	Go to the next step.
		No	Repair floor deformation, then go to the next step.
3	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE** • Install the passenger-side front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	• Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL**

	• Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Perform seat weight sensor calibration. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTCs present?		**SYSTEM]**.) • Perform seat weight sensor calibration. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Go to the next step.
		No	DTC troubleshooting completed.
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	(See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B00A0:09 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor control module internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Seat weight sensor control module internal malfunction
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor control module malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION** • Clear DTCs using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.

	• Verify DTCs using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is DTC B00A0:09 displayed?	No	DTC troubleshooting completed.
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00A0:1C [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor control module circuit open to power supply
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Malfunction in seat weight sensor control module circuit.
Fail-safe function	Not applicable
Possible cause	• SRS2/ESCL 15A fuse malfunction • Seat weight sensor control module connector malfunction • Short circuit to power supply or body ground in the wiring harness between fuse block and seat weight sensor control module • Open circuit in the wiring harness between fuse block and seat weight sensor control module • Seat weight sensor control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FUSE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the SRS2/ESCL 15A fuse.	Yes	Install the fuse, then go to the next step.
		No	Replace the fuse.

	• Is the fuse normal?		
2	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the seat weight sensor control module connector. • Is there any malfunction of the seat weight sensor control module connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Replace the wiring harness.
3	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CIRCUIT FOR SHORT TO GROUND** • Seat weight sensor control module and fuse block connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Seat weight sensor control module terminal 2A **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight sensor control module and fuse block. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and fuse block terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • Seat weight sensor control module and fuse block connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side):	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and fuse block terminal.

	▪ Seat weight sensor control module terminal 2A—fuse block terminal **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight sensor control module and fuse block. • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Seat weight sensor control module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the following terminals (wiring harness-side): ▪ Seat weight sensor control module terminal 2A **NOTE:** • Measure the voltage while shaking the wiring harness between the seat weight sensor control module and fuse block. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and fuse block terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on).	Yes	Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	• Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?		

2014 - Mazda3 - Restraints

DTC B00A0:28 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor calibration setting invalid
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Calibration set value not within valid range
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor deformed or malfunction • Load to or deformation of the seat belt rail • Deformed front passenger-side seat under-bracket or frame • Weight acting on front passenger-side seat during calibration • Improperly installed front passenger-side seat part at time of calibration • Deformed floor where attached to front passenger-side seat • Seat weight sensor control module malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT PASSENGER-SIDE FRONT SEAT** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the passenger-side seat and visually inspect for the following: ▪ Seat under-bracket deformation ▪ Seat frame deformation ▪ Seat weight sensor	Yes	Replace any deformed parts or remove any foreign objects. • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed, go to the next step. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.

	deformation ▪ Foreign objects stuck in seat • Are any of the parts deformed or are any foreign objects stuck in the seat?		
3	**INSPECT FLOOR** • Visually inspect the installation parts of the front passenger-side seat for the following: ▪ Abnormal floor deformation ▪ Installation hole of front passenger-side seat is improperly positioned • Is the floor normal?	Yes	Go to the next step.
		No	Repair floor deformation. • After repair, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the floor has been repaired, go to the next step. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE** • Replace the seat weight sensor. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • After replacement, perform seat weight sensor calibration. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS.	Yes	Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the seat weight sensor control module has been replaced, replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	(See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**) • Is the same DTC present?		

2014 - Mazda3 - Restraints

DTC B00A0:4A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor ID mismatch
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Seat weight sensor ID mismatch
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor control module malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SEAT WEIGHT SENSOR CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-**	Yes	Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step

	STEP DEPLOYMENT CONTROL SYSTEM].) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?		
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present? • Are there other DTCs output?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00A0:54 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor calibration setting not set
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Seat weight sensor calibration setting has not been done correctly
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor calibration setting not implemented • Seat weight sensor calibration setting invalid • Seat weight sensor control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SEAT WEIGHT SENSOR CALIBRATION** • Perform the calibration for the seat weight sensor using the M-MDS.	Yes	Perform the seat weight sensor calibration, then go to the next step. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

	(See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?	No	Go to the next step.
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?	Yes	Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00A0:81/B00A0:87/B00A0:8F [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B00A0:81:Invalid signal to SAS control module • B00A0:87:Error signal from seat weight sensor control module • B00A0:8F:Seat weight sensor communication error
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Error signal is detected between SAS control module and seat weight sensor control module
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the SAS control module and seat weight sensor control module • Open circuit in the wiring harness between the SAS control module and seat weight sensor control module • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	• Disconnect the seat weight sensor control module connector. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is there any malfunction of the seat weight sensor control module connector or seat connector?		
2	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CIRCUIT FOR SHORT TO GROUND** • Seat weight sensor control module and fuse block connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ SAS control module connector terminal 2B **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and seat weight sensor control module. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and seat weight sensor control module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
3	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • Seat weight sensor control module and fuse block connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Seat weight sensor control module terminal 2C—SAS control module connector terminal 2B **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and seat weight sensor control module. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and seat weight sensor control module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Seat weight sensor control module and fuse block connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on).	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and seat weight sensor control module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or

	Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module connector terminal 2B **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and seat weight sensor control module. • Is the voltage **0 V**?		pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are DTCs B00A0:81, B00A0:87 and/or B00A0:8F displayed?	Yes	Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
		No	DTC troubleshooting completed.
6	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTCs using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Verify DTCs using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are DTCs B00A0:81, B00A0:87 and/or B00A0:8F displayed?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00C0:93 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor (LF) communication error
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Seat weight sensor malfunction is detected
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor connector malfunction • Seat weight sensor control module connector malfunction • Short circuit to power supply or body ground in the wiring harness between seat weight sensor control module and seat weight sensor • Open circuit in the wiring harness between seat weight sensor control module and seat weight sensor • Seat weight sensor malfunction • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SEAT WEIGHT SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE**	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the all seat weight sensor connectors. • Inspect the all seat weight sensor connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?		
2	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** • Disconnect seat weight sensor control module connector. • Inspect the seat weight sensor control module connector terminal for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.
3	**INSPECT WIRING HARNESS BETWEEN SEAT WEIGHT SENSOR CONTROL MODULE AND SEAT WEIGHT SENSOR** • Inspect the wiring harness between seat weight sensor control module and seat weight sensor for short to ground, short to power supply, and open circuit: **Seat weight sensor (LF)** ▪ 1A—C ▪ 1B—B ▪ 1J—A **Seat weight sensor (RF)** ▪ 1C—C ▪ 1D—B ▪ 1L—A **Seat weight sensor (LR)** ▪ 1E—C ▪ 1F—B ▪ 1I—A **Seat weight sensor (RR)** ▪ 1G—C ▪ 1H—B ▪ 1K—A **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and seat weight sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness. Go to the next step.

	sensor control module and seat weight sensor. • Is the wiring harness normal?		
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?	Yes	• Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection again. ▪ If the same DTC is displayed, replace the front seat slide adjuster, then go to the next step.
		No	DTC troubleshooting completed.
5	**INSPECT PASSENGER SENSING SYSTEM** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the same DTC present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00C1:93 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor (LR) communication error
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Seat weight sensor (LR) malfunction is detected
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor (LR) connector malfunction • Seat weight sensor control module connector malfunction • Short circuit to power supply or body ground in the wiring harness between seat weight sensor control module and seat weight sensor (LR) • Open circuit in the wiring harness between seat weight sensor control module and seat weight sensor (LR) • Seat weight sensor (LR) malfunction • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SEAT WEIGHT SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE**	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the seat weight sensor (LR) connector. • Inspect the seat weight sensor (LR) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?		
2	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** • Disconnect seat weight sensor control module connector. • Inspect the seat weight sensor control module connector terminal for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.
3	**INSPECT WIRING HARNESS BETWEEN SEAT WEIGHT SENSOR CONTROL MODULE AND SEAT WEIGHT SENSOR** • Inspect the wiring harness between seat weight sensor control module and seat weight sensor for short to ground, short to power supply, and open circuit: **Seat weight sensor (LR)** ▪ 1E—C ▪ 1F—B ▪ 1I—A **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight sensor control module and seat weight sensor. • Is the wiring harness normal?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and seat weight sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness. Go to the next step.
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	• Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection again. ▪ If the same DTC is displayed, replace the front seat slide adjuster, then go to the next step.
		No	DTC troubleshooting completed.

	• Is the DTC B00C0:93 displayed?		
5	**INSPECT PASSENGER SENSING SYSTEM** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC B00C0:93 displayed?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00C2:93 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor (RF) communication error
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Seat weight sensor (RF) malfunction is detected
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor (RF) connector malfunction • Seat weight sensor control module connector malfunction • Short circuit to power supply or body ground in the wiring harness between seat weight sensor control module and seat weight sensor (RF) • Open circuit in the wiring harness between seat weight sensor control module and seat weight sensor (RF) • Seat weight sensor (RF) malfunction • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SEAT WEIGHT SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE**	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the seat weight sensor (RF) connector. • Inspect the seat weight sensor (RF) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?		
2	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** • Disconnect seat weight sensor control module connector. • Inspect the seat weight sensor control module connector terminal for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.
3	**INSPECT WIRING HARNESS BETWEEN SEAT WEIGHT SENSOR CONTROL MODULE AND SEAT WEIGHT SENSOR** • Inspect the wiring harness between seat weight sensor control module and seat weight sensor for short to ground, short to power supply, and open circuit: **Seat weight sensor (RF)** ▪ 1C—C ▪ 1D—B ▪ 1L—A **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight sensor control module and seat weight sensor. • Is the wiring harness normal?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and seat weight sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness. Go to the next step.
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	• Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection again. ▪ If the same DTC is displayed, replace the front seat slide adjuster, then go to the next step.
		No	DTC troubleshooting completed.

	• Is the DTC B00C0:93 displayed?		
5	**INSPECT PASSENGER SENSING SYSTEM** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC B00C0:93 displayed?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00C3:93 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Seat weight sensor (RR) communication error
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Seat weight sensor (RR) malfunction is detected
Fail-safe function	Not applicable
Possible cause	• Seat weight sensor (RR) connector malfunction • Seat weight sensor control module connector malfunction • Short circuit to power supply or body ground in the wiring harness between seat weight sensor control module and seat weight sensor (RR) • Open circuit in the wiring harness between seat weight sensor control module and seat weight sensor (RR) • Seat weight sensor (RR) malfunction • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SEAT WEIGHT SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE**	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the seat weight sensor (RR) connector. • Inspect the seat weight sensor (RR) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?		
2	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** • Disconnect seat weight sensor control module connector. • Inspect the seat weight sensor control module connector terminal for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the malfunctioning part, then go to Step 4.
		No	Go to the next step.
3	**INSPECT WIRING HARNESS BETWEEN SEAT WEIGHT SENSOR CONTROL MODULE AND SEAT WEIGHT SENSOR** • Inspect the wiring harness between seat weight sensor control module and seat weight sensor for short to ground, short to power supply, and open circuit: **Seat weight sensor (RR)** ▪ 1G—C ▪ 1H—B ▪ 1K—A **NOTE:** • Inspect for continuity while shaking the wiring harness between the seat weight sensor control module and seat weight sensor. • Is the wiring harness normal?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between seat weight sensor control module terminal and seat weight sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness. Go to the next step.
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	• Replace the seat weight sensor control module. (See **SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection again. ▪ If the same DTC is displayed, replace the front seat slide adjuster, then go to the next step.
		No	DTC troubleshooting completed.

	• Is the DTC B00C0:93 displayed?		
5	**INSPECT PASSENGER SENSING SYSTEM** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC B00C0:93 displayed?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B00D2:01 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Air bag system warning light malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Air bag system warning light malfunction detected
Fail-safe function	Not applicable
Possible cause	• Air bag system warning light malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Action
Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

DTC B00D2:01 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC B00D2:29 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• Invalid signal to air bag system warning light
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Air bag system warning light illumination request sent from SAS control module does not correspond to air bag system warning light illumination status in instrument cluster
Fail-safe function	Not applicable
Possible cause	• Instrument cluster assembly incorrect • Instrument cluster malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DTCs IN SAS CONTROL MODULE** • Clear the DTC for the SAS control module using the M-MDS.	Yes	Perform the applicable DTC inspection.
		No	Go to the next step.

	(See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is DTC U0001:88 or U0155:00 displayed?		
2	**INSPECT INSTRUMENT CLUSTER** • Verify that the instrument cluster is correctly installed. • Is the instrument cluster correctly installed?	Yes	Go to the next step.
		No	Correctly install the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Then go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform the active command mode inspection for the instrument cluster using the M-MDS. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) ▪ WL+IL (See **ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]**.) • Does the air bag system warning light illuminate?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Then go to the next step.
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	Is DTC B00D2:29 displayed?		

2014 - Mazda3 - Restraints

DTC B00D5:01/B00D5:29 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B00D5:01:PAD indicator circuit open circuit or short to power supply • B00D5:29:PAD indicator communication error
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Malfunction in PAD indicator circuit
Fail-safe function	Not applicable
Possible cause	• Indicator unit malfunction • Instrument cluster malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT INDICATOR UNIT** • Inspect the indicator unit. (See **INDICATOR UNIT INSPECTION**.)	Yes	Go to the next step.
		No	Replace the indicator unit, then go to the next step.

	• Is the indicator unit normal?		(See **INDICATOR UNIT REMOVAL/INSTALLATION**.)
2	**VERIFY DTCs FOR INSTRUMENT CLUSTER** • Verify DTCs for the instrument cluster using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the DTC displayed?	Yes	Perform the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs displayed?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting.
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1011:95 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• SAS control module connectors are poorly connected
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • No continuity between poorly connected detector bar terminals of the SAS control module
Fail-safe function	Not applicable
Possible cause	• SAS control module connectors are poorly connected • SAS control module connector malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CONTACTS OF SAS CONTROL MODULE CONNECTORS** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector.	Yes	Go to the next step.
		No	Reconnect the SAS control module connectors properly. Then go to the Step 3.

	(See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are all SAS control module connectors securely connected?		
2	**VERIFY DETECTOR BARS OF SAS CONTROL MODULE CONNECTORS FOR POOR CONNECTION** • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Verify the condition of the detector bars of the SAS control module connectors. (Corrosion, damage, and disconnected pins) • Are the detector bars of the SAS control module connectors normal?	Yes	Go to the next step.
		No	Replace the air bag wiring harness. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1126:11/B1126:12/B1126:13/B1126:19/B1126:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1126:11:Driver-side side air bag module circuit short to body ground • B1126:12:Driver-side side air bag module circuit short to power supply • B1126:13:Driver-side side air bag module circuit open circuit or resistance high • B1126:19:Short circuit to driver-side side air bag module and other air bag module circuits • B1126:1A:Driver-side side air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81—9.85 ohms** is detected in driver-side side air bag module circuit • Wiring harness between the driver-side side air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side side air bag module and SAS control module • Open circuit in the wiring harness between the driver-side side air bag module and SAS control module • Driver-side side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the driver-side side air bag module connector installed to the lower side of the seat cushion of the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Inspect the driver-side side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side side air bag module connector?		
2	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1A ▪ SAS control module terminal 1D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the driver-side side air bag module. • Is there continuity?		
3	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Driver-side side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side):	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag module terminal. **If there is a common**

	▪ Driver-side side air bag module terminal A—SAS control module terminal 1A ▪ Driver-side side air bag module terminal B—SAS control module terminal 1D **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag module. • Is there continuity?		**connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1A ▪ SAS control module terminal 1D **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side side air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.

5	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the driver-side side air bag module. (See **SIDE AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side side air bag module connector.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1126:55/B1127:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1126:55:Configuration setting error (driver-side side air bag module structural malfunction) • B1127:55:Configuration setting error (passenger-side side air bag module structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side side air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT SIDE AIR BAG MODULE** • Verify that the driver or passenger-side side air bag module is correctly installed. • Is the driver or passenger-side side air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side side air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1127:11/B1127:12/B1127:13/B1127:19/B1127:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1127:11:Passenger-side side air bag module circuit short to body ground • B1127:12:Passenger-side side air bag module circuit short to power supply • B1127:13:Passenger-side side air bag module circuit open circuit or resistance high • B1127:19:Short circuit to passenger-side side air bag module and other air bag module circuits • B1127:1A:Passenger-side side air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81—9.85 ohms** detected in passenger-side side air bag module circuit • Wiring harness between the passenger-side side air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side side air bag module and SAS control module • Open circuit in the wiring harness between the passenger-side side air bag module and SAS control module • Passenger-side side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the passenger-side side air bag module connector installed to the lower side of the seat cushion of the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Inspect the passenger-side side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side side air bag module connector?		
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	• Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1G ▪ SAS control module terminal 1J **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the passenger-side side air bag module. • Is there continuity?		
3	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side):	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag module terminal. **If there is a common**

	▪ Passenger-side side air bag module terminal A—SAS control module terminal 1J ▪ Passenger-side side air bag module terminal B—SAS control module terminal 1G **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag module. • Is there continuity?		**connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1G ▪ SAS control module terminal 1J **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side side air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.

5	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the passenger-side side air bag module. (See **SIDE AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side side air bag module connector.	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	• Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1128:11/B1128:12/B1128:13/B1128:19/B1128:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1128:11:Driver-side curtain air bag module circuit short to body ground • B1128:12:Driver-side curtain air bag module circuit short to power supply • B1128:13:Driver-side curtain air bag module circuit open circuit or resistance high • B1128:19:Short circuit to driver-side curtain air bag module and other air bag module circuits • B1128:1A:Driver-side curtain air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81—6.42 ohms** detected in driver-side curtain air bag module circuit • Wiring harness between the driver-side curtain air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side curtain air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side curtain air bag module and SAS control module • Open circuit in the wiring harness between the driver-side curtain air bag module and SAS control module • Driver-side curtain air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the driver-side curtain air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side curtain air bag module connector?		
2	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.

	side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1S ▪ SAS control module terminal 1V **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the driver-side curtain air bag module. • Is there continuity?	No	Go to the next step.
3	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Driver-side curtain air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side curtain air bag module terminal A—SAS control module terminal 1S ▪ Driver-side curtain air bag module terminal	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion,

	B—SAS control module terminal 1V **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side curtain air bag module. • Is there continuity?		damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side curtain air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1S ▪ SAS control module terminal 1V **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side curtain air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Go to the next step.
		No	Replace the driver-side curtain air bag module. (See **CURTAIN AIR BAG MODULE**

	• Connect the SAS control module connectors. • Except for the driver-side curtain air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side curtain air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side curtain air bag module connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1128:55/B1129:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1128:55:Configuration setting error (driver-side curtain air bag module structural malfunction) • B1129:55:Configuration setting error (passenger-side curtain air bag module structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side curtain air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT CURTAIN AIR BAG MODULE** • Verify that the driver or passenger-side curtain air bag module is correctly installed. • Is the driver or passenger-side curtain air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side curtain air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1129:11/B1129:12/B1129:13/B1129:19/B1129:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1129:11:Passenger-side curtain air bag module circuit short to body ground • B1129:12:Passenger-side curtain air bag module circuit short to power supply • B1129:13:Passenger-side curtain air bag module circuit open circuit or resistance high • B1129:19:Short circuit to passenger-side curtain air bag module and other air bag module circuits • B1129:1A:Passenger-side curtain air bag module circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81—6.42 ohms** detected in passenger-side curtain air bag module circuit • Wiring harness between the passenger-side curtain air bag module and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side curtain air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side curtain air bag module and SAS control module • Open circuit in the wiring harness between the passenger-side curtain air bag module and SAS control module • Passenger-side curtain air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side curtain air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side curtain air bag module connector?		
2	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.

	Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Disconnect the driver-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1W ▪ SAS control module terminal 1T **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and the passenger-side curtain air bag module. • Is there continuity?	No	Go to the next step.
3	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side curtain air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side curtain air bag module terminal A—SAS control module terminal 1W	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the

	▪ Passenger-side curtain air bag module terminal B—SAS control module terminal 1T **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side curtain air bag module. • Is there continuity?		terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side curtain air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1W ▪ SAS control module terminal 1T **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side curtain air bag module. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side curtain air bag module terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Go to the next step.
		No	Replace the passenger-side curtain air bag module.

	• Connect the SAS control module connectors. • Except for the passenger-side curtain air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side curtain air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		(See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) Then go to the next step.
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side curtain air bag module connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

	• Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		

2014 - Mazda3 - Restraints

DTC B1193:00 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• SAS control module operation (deployment)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module operates (deploys) (air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt)
Fail-safe function	Not applicable
Possible cause	• SAS control module operation (deployment) • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

ACTION
• Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

DTC B1193:00 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC B1196:11/B1196:13/B1196:87/B1196:96 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1196:11:Driver-side side air bag sensor circuit short to body ground • B1196:13:Driver-side side air bag sensor circuit open circuit or short to power supply • B1196:87:Signal reception error from driver-side side air bag sensor • B1196:96:Driver-side side air bag sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the driver-side side air bag sensor and SAS control module has a malfunction • Driver-side side air bag sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side side air bag sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side side air bag sensor and SAS control module • Open circuit in the wiring harness between the driver-side side air bag sensor and SAS control module • Driver-side side air bag sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the driver-side tire house trim. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver-side side air bag sensor connector. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the driver-side side air bag sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side side air bag sensor connector?		
2	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.

	Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1I ▪ SAS control module terminal 1H **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor. • Is there continuity?	No	Go to the next step.
3	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR OPEN CIRCUIT** • Driver-side side air bag sensor and SAS control module connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module

	• Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side side air bag sensor terminal A —SAS control module terminal 1I ▪ Driver-side side air bag sensor terminal B —SAS control module terminal 1H **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor. • Is there continuity?		terminal and driver-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side side air bag sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1I ▪ SAS control module terminal 1H **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side side air bag sensor. • Is the voltage **0 V**?	Yes	Replace the driver-side side air bag sensor, then go to the next step. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part.

			If there is no common connector: • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1196:55/B1197:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1196:55:Configuration setting error (driver-side side air bag sensor structural malfunction) • B1197:55:Configuration setting error (passenger-side side air bag sensor structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side side air bag sensor assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT SIDE AIR BAG SENSOR** • Verify that the driver or passenger-side side air bag sensor is correctly installed. • Is the driver or passenger-side side air bag sensor correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side side air bag sensor. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1197:11/B1197:13/B1197:87/B1197:96 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1197:11: Passenger-side side air bag sensor circuit short to body ground • B1197:13: Passenger-side side air bag sensor circuit open circuit or short to power supply • B1197:87: Signal reception error from passenger-side side air bag sensor • B1197:96: Passenger-side side air bag sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the passenger-side side air bag sensor and SAS control module has a malfunction • Passenger-side side air bag sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side side air bag sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side side air bag sensor and SAS control module • Open circuit in the wiring harness between the passenger-side side air bag sensor and SAS control module • Passenger-side side air bag sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the passenger-side tire house trim. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.) • Disconnect the passenger-side side air bag sensor connector. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side side air bag sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side side air bag sensor connector?		
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground.

	• Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1L ▪ SAS control module terminal 1K **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor. • Is there continuity?		Go to Step 5.
		No	Go to the next step.
3	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR OPEN CIRCUIT** • Passenger-side side air bag sensor and SAS control module connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common

	• Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side side air bag sensor terminal A—SAS control module terminal 1L ▪ Passenger-side side air bag sensor terminal B—SAS control module terminal 1K **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor. • Is there continuity?		connector between SAS control module terminal and passenger-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side side air bag sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1L ▪ SAS control module terminal 1K **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor.	Yes	Replace the passenger-side side air bag sensor, then go to the next step. (See **SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side side air bag sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part.

	• Is the voltage **0 V**?		**If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1206:00/U2107:00 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1206:00:SAS control module operation (deployment) (fuel cut signal output) • U2107:00:SAS control module operation (deployment) signal output
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module operates (deploys) (air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt)
Fail-safe function	Not applicable
Possible cause	• SAS control module operation (deployment) • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

ACTION
• Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

DTC B1206:00/U2107:00 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC B1211:11/B1211:12/B1211:13/B1211:19/B1211:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1211:11:Driver-side pre-tensioner seat belt circuit short to body ground • B1211:12:Driver-side pre-tensioner seat belt circuit short to power supply • B1211:13:Driver-side pre-tensioner seat belt circuit open circuit or resistance high • B1211:19:Short circuit to driver-side pre-tensioner seat belt and other air bag module circuits • B1211:1A:Driver-side pre-tensioner seat belt circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance other than **0.81—6.42 ohms** detected in driver-side pre-tensioner seat belt circuit • Wiring harness between the driver-side pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the driver-side pre-tensioner seat belt and SAS control module • Driver-side pre-tensioner seat belt malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the driver-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Inspect the driver-side pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side pre-tensioner seat belt connector?		
2	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the passenger-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the passenger-side pre-tensioner seat belt connector. • Disconnect the driver and passenger-side	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 2D ▪ SAS control module terminal 2A **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is there continuity?		
3	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Driver-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side pre-tensioner seat belt terminal A—SAS control module terminal 2D ▪ Driver-side pre-tensioner seat belt terminal B—SAS control module terminal 2A **NOTE:**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning

	• Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is there continuity?		part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 2D ▪ SAS control module terminal 2A **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side pre-tensioner seat belt connector terminals A–B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**.	Yes	Go to the next step.
		No	Replace the driver-side pre-tensioner seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) Then go to the next step.

	• Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side pre-tensioner seat belt connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1211:55, B1214:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1211:55:Configuration setting error (driver-side pre-tensioner seat belt structural malfunction) • B1214:55:Configuration setting error (passenger-side pre-tensioner seat belt structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side pre-tensioner seat belt assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT PRE-TENSIONER SEAT BELT** • Verify that the driver or passenger-side pre-tensioner seat belt is correctly installed. • Is the driver or passenger-side pre-tensioner seat belt correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side pre-tensioner seat belt. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1214:11/B1214:12/B1214:13/B1214:19/B1214:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1214:11:Passenger-side pre-tensioner seat belt circuit short to body ground • B1214:12:Passenger-side pre-tensioner seat belt circuit short to power supply • B1214:13:Passenger-side pre-tensioner seat belt circuit open circuit or resistance high • B1214:19:Short circuit to passenger-side pre-tensioner seat belt and other air bag module circuits • B1214:1A:Passenger-side pre-tensioner seat belt circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance other than **0.81—6.42 ohms** detected in passenger-side pre-tensioner seat belt circuit • Wiring harness between the passenger-side pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the passenger-side pre-tensioner seat belt and SAS control module • Passenger-side pre-tensioner seat belt malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the passenger-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the passenger-side pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Inspect the passenger-side pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side pre-tensioner seat belt connector?		
2	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the driver-side B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver-side pre-tensioner seat belt connector.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	• Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 2G ▪ SAS control module terminal 2J **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is there continuity?		
3	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Passenger-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side pre-tensioner seat belt terminal A—SAS control module terminal 2G ▪ Passenger-side pre-tensioner seat belt terminal B—SAS control module terminal 2J **NOTE:**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	• Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is there continuity?		• Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 2G ▪ SAS control module terminal 2J **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the passenger-side pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side pre-tensioner seat belt connector terminals A–	Yes	Go to the next step.
		No	Replace the passenger-side pre-tensioner seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) Then go to the next step.

	B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side pre-tensioner seat belt connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

DTC B1214:11/B1214:12/B1214:13/B1214:19/B1214:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC B1226:11/B1226:13/B1226:87/B1226:96 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1226:11:Driver-side pressure sensor circuit short to body ground • B1226:13:Driver-side pressure sensor circuit open circuit or short to power supply • B1226:87:Signal reception error from driver-side pressure sensor • B1226:96:Driver-side pressure sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the driver-side pressure sensor and SAS control module has a malfunction • Driver-side pressure sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side pressure sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side pressure sensor and SAS control module • Open circuit in the wiring harness between the driver-side pressure sensor and SAS control module • Driver-side pressure sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE PRESSURE SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the driver-side front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver-side pressure sensor connector. (See **PRESSURE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the driver-side pressure sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side pressure sensor connector?		
2	**INSPECT DRIVER-SIDE PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pressure sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.

	Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1B ▪ SAS control module terminal 1C **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pressure sensor. • Is there continuity?	No	Go to the next step.
3	**INSPECT DRIVER-SIDE PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Driver-side pressure sensor and SAS control module connectors are disconnected. • Inspect for continuity between the	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pressure sensor

	following terminals (wiring harness-side): ▪ Driver-side pressure sensor terminal A—SAS control module terminal 1B ▪ Driver-side pressure sensor terminal B—SAS control module terminal 1C **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pressure sensor. • Is there continuity?		terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT DRIVER-SIDE PRESSURE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side pressure sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1B ▪ SAS control module terminal 1C **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side pressure sensor. • Is the voltage **0 V**?	Yes	Replace the driver-side pressure sensor, then go to the next step. (See **PRESSURE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side pressure sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common**

			connector: • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1226:55, B1227:55 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1226:55:Configuration setting error (driver-side pressure sensor structural malfunction) • B1227:55:Configuration setting error (passenger-side pressure sensor structural malfunction)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side pressure sensor assembly incorrect • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
	PERFORM SAS CONTROL MODULE CONFIGURATION	

1	**(AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT PRESSURE SENSOR** • Verify that the driver or passenger-side pressure sensor is correctly installed. • Is the driver or passenger-side pressure sensor correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side pressure sensor. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1227:11/B1227:13/B1227:87/B1227:96 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1227:11:Passenger-side pressure sensor circuit short to body ground • B1227:13:Passenger-side pressure sensor circuit open circuit or short to power supply • B1227:87:Signal reception error from passenger-side pressure sensor • B1227:96:Passenger-side pressure sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the passenger-side pressure sensor and SAS control module has a malfunction • Passenger-side pressure sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side pressure sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side pressure sensor and SAS control module • Open circuit in the wiring harness between the passenger-side pressure sensor and SAS control module • Passenger-side pressure sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE PRESSURE SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the passenger-side front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.) • Disconnect the passenger-side pressure sensor connector. (See **PRESSURE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side pressure sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side pressure sensor connector?		
2	**INSPECT PASSENGER-SIDE PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pressure sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground.

	• Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connectors. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 1E ▪ SAS control module terminal 1F **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pressure sensor. • Is there continuity?		Go to Step 5.
		No	Go to the next step.
3	**INSPECT PASSENGER-SIDE PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Passenger-side pressure sensor and SAS control module connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common

	• Inspect for continuity between the following terminals (wiring harness-side): ▪ Passenger-side pressure sensor terminal A—SAS control module terminal 1E ▪ Passenger-side pressure sensor terminal B—SAS control module terminal 1F **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pressure sensor. • Is there continuity?		connector between SAS control module terminal and passenger-side pressure sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT PASSENGER-SIDE PRESSURE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side pressure sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 1E ▪ SAS control module terminal 1F **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side pressure sensor.	Yes	Replace the driver-side pressure sensor, then go to the next step. (See **PRESSURE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side pressure sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part.

	• Is the voltage **0 V**?		**If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1228:11/B1228:12/B1228:13/B1228:19/B1228:1A [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1228:11:Driver-side lap pre-tensioner seat belt circuit short to body ground • B1228:12:Driver-side lap pre-tensioner seat belt circuit short to power supply • B1228:13:Driver-side lap pre-tensioner seat belt circuit open circuit or resistance high • B1228:19:Short circuit to driver-side lap pre-tensioner seat belt and other air bag module circuits • B1228:1A:Driver-side lap pre-tensioner seat belt circuit resistance low
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Resistance **other than 0.81—6.42 ohms** detected in driver-side lap pre-tensioner seat belt circuit • Wiring harness between the driver-side lap pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe function	Not applicable
Possible cause	• Driver-side lap pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side lap pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the driver-side lap pre-tensioner seat belt and SAS control module • Driver-side lap pre-tensioner seat belt malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE LAP PRE-TENSIONER SEAT BELT CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**.	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the driver-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Inspect the driver-side lap pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side lap pre-tensioner seat belt connector?		
2	**INSPECT DRIVER-SIDE LAP PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the passenger-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side lap pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

	(See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 2V ▪ SAS control module terminal 2S **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side lap pre-tensioner seat belt. • Is there continuity?		
3	**INSPECT DRIVER-SIDE LAP PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Driver-side lap pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Driver-side lap pre-tensioner seat belt terminal A—SAS control module terminal 2V ▪ Driver-side lap pre-tensioner seat belt terminal B—SAS control module terminal 2S **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side lap pre-tensioner seat belt. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side lap pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:**

			Replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT DRIVER-SIDE LAP PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side lap pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 2V ▪ SAS control module terminal 2S **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side lap pre-tensioner seat belt. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and driver-side lap pre-tensioner seat belt terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT DRIVER-SIDE LAP PRE-TENSIONER SEAT BELT** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Except for the driver-side lap pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side lap pre-tensioner seat belt connector terminals A–B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable.	Yes	Go to the next step.
		No	Replace the driver-side lap pre-tensioner seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) Then go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side lap pre-tensioner seat belt connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC B1417:11/B1417:13/B1417:87/B1417:96 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• B1417:11:Passenger-side crash zone sensor circuit short to body ground • B1417:13:Passenger-side crash zone sensor circuit open circuit or short to power supply • B1417:87:Signal reception error from passenger-side crash zone sensor • B1417:96:Passenger-side crash zone sensor internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • Wiring harness between the passenger-side crash zone sensor and SAS control module has a malfunction • Passenger-side crash zone sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• Passenger-side crash zone sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side crash zone sensor and SAS control module • Open circuit in the wiring harness between the passenger-side crash zone sensor and SAS control module • Passenger-side crash zone sensor malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CONNECTOR** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the front combination light. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side crash zone sensor connector. (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the passenger-side crash zone sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side crash zone sensor connector?		
2	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side crash zone sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has a short to ground. Go to Step 5.

	Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the passenger-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connector. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ SAS control module terminal 2X ▪ SAS control module terminal 2W **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side crash zone sensor. • Is there continuity?	No	Go to the next step.
3	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Passenger-side crash zone sensor and SAS control module connectors are disconnected. • Inspect for continuity between the	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side crash zone

	following terminals (wiring harness-side): ▪ Passenger-side crash zone sensor terminal A—SAS control module terminal 2X ▪ Passenger-side crash zone sensor terminal B—SAS control module terminal 2W **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side crash zone sensor. • Is there continuity?		sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side crash zone sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ SAS control module terminal 2X ▪ SAS control module terminal 2W **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side crash zone sensor. • Is the voltage **0 V**?	Yes	Replace the Passenger-side crash zone sensor, then go to the next step. (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and passenger-side crash zone sensor terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Replace the malfunctioning part. **If there is no common**

			connector: • Replace the wiring harness which has a short to power supply. Go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC C0061:29/C0062:29/C0063:29/P0666:29 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• C0061:29:Low-G sensor (lateral-G) in SAS control module (internal circuit disabled) • C0062:29:Low-G sensor (forward-G) in SAS control module (internal circuit disabled) • C0063:29:Yaw rate sensor in SAS control module (internal circuit disabled) • P0666:29:Temperature sensor in SAS control module (internal circuit disabled)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection with only detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module internal sensor has a malfunction
Fail-safe function	Not applicable
Possible cause	• SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE DTC INSPECTION**	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE**

	Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		**REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC U0001:88/U0155:00 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• U0001:88: Module communication error (HS-CAN) • U0155:00: Communication error with instrument cluster
Detection condition	**U0001:88** • The SAS control module detects a CAN communication line (HS-CAN) error. **U0155:00** • The SAS control module could not receive CAN signal from the instrument cluster for **5 s** or more.
Fail-safe function	Not applicable
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the SAS control module and instrument cluster
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Restraints

DTC U0300:00/U2100:00 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• U0300:00:Configuration setting invalid • U2100:00:Configuration not set
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module configuration setting has not been done correctly
Fail-safe function	Not applicable
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS.	Yes	Go to the next step.
		No	DTC troubleshooting completed.

	(See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?		
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC U2005:68 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• PCM communication error (vehicle speed signal)
Detection condition	• The SAS control module receives vehicle speed signal error from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• PCM malfunction • SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY SAS CONTROL MODULE DTCs AGAIN** • Clear SAS control module DTCs using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the SAS control module DTC inspection using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL**	Yes	Go to the next step.
		No	Go to Step 5.

	SYSTEM].) • Is the DTC U2005:68 displayed?		
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear SAS control module DTCs using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the SAS control module DTC inspection using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC U2005:68 displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the SAS control module DTC inspection using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the DTC U2005:68 displayed?	Yes	Replace the SAS control module, then go to the next step. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair the malfunctioning part according to the

	• Are any other DTCs displayed?		applicable DTC troubleshooting.
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

DTC U3000:49 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• SAS control module internal malfunction
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module internal circuit has a malfunction
Fail-safe function	Not applicable
Possible cause	• SAS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

ACTION
• Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

DTC U3000:49 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

DTC U3003:16/U3003:17 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

System malfunction location	• U3003:16:SAS control module power supply voltage decreases (**less than 8 V**) • U3003:17:SAS control module power supply voltage increases (**18 V or more**)
Detection condition	**WARNING:** • Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure. • SAS control module power supply voltage is other than **8–17.9 V**
Fail-safe function	Not applicable
Possible cause	• Battery malfunction • SRS1 7.5 A fuse malfunction • Open circuit or short to body ground in wiring harness between IG1 relay and SAS control module • Open circuit in the wiring harness between the SAS control module and body ground • SAS control module malfunction

SAS CONTROL MODULE WIRING
HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**BATTERY INSPECTION** • Refer to the battery inspection and inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) Then go to Step 5.
2	**FUSE INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the SRS1 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the SRS1 7.5 A fuse. Then go to Step 5.
3	**INSPECT WIRING HARNESS BETWEEN IG1 RELAY AND SAS CONTROL MODULE** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Install the SRS1 7.5 A fuse. • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and IG1 relay terminal. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit or short to ground. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit or short to ground. Go to Step 5.

	(See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)		
3	• Disconnect the all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage of SAS control module terminal 3C (wiring harness-side). **NOTE:** • Measure the voltage while shaking the wiring harness between the SAS control module and IG1 relay. • Is the voltage between **8–17.9 V**?		
4	**INSPECT SAS CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable and wait **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness between SAS control module connector terminal 2C, 2F (wiring harness-side) and body ground. **NOTE:** • Inspect for continuity while shaking the wiring harness between the SAS control module and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between SAS control module terminal and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Replace the malfunctioning part. **If there is no common connector:** • Replace the wiring harness which has an open circuit. Go to the next step.

5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Restraints

PID/DATA MONITOR INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “RCM”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

2014 - Mazda3 - Restraints

PID/DATA MONITOR TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

PID	Unit/Condition	Data contents	SAS control module terminal
AB_WL (Air bag system warning light status)	Lamp_Off/Lamp_On/Plant_Mode/Unknown	• Air bag system warning light off: Lamp_Off • Air bag system warning light on: Lamp_On • Air bag system warning light status: Plant_Mode • Air bag system warning light status: Unknown	3K, 3L
B_SW_P_FLT (Passenger-side buckle switch malfunction status)	O.K./FAULT	• Passenger-side buckle switch normal: O.K. • Passenger-side buckle switch abnormal: Fault	2B
OCS_DTC_CLR (Seat weight sensor DTC cleared status)	Starting/ Normal End/ In Process/ OCS Fault	Fault information cleared at seat weight sensor	2B
P_OCS_ST (Seat weight sensor status)	Empty/ SMALL/ Indeterminate/ LARGE	Occupant classification status determined by seat weight sensor	2B

P_WEIGHT (Seat weight sensor measured weight of passenger)	Kg	Display of load (body weight) on passenger-side seat	2B
RES_C_AB_D (Driver-side curtain air bag module resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**	1S, 1V
RES_C_AB_P (Passenger-side curtain air bag module resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**	1W, 1T
RES_F_AB1_D (Driver-side air bag module (inflatorNo.1) resistance nominal)	ohm	Continuous: **0.99–6.42 ohms**	3A, 3D
RES_F_AB1_P (Passenger-side air bag module (inflatorNo.1) resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**	3G, 3J
RES_F_AB2_D (Driver-side air bag module (inflatorNo.2) resistance nominal)	ohm	Continuous: **0.99–6.42 ohms**	3S, 3V
RES_F_AB2_P (Passenger-side air bag module (inflator No.2) resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**	3T, 3W

RES_PCD_BAR (Poorly connected detector bar terminals resistance nominal (all of SAS control module connectors))	ohm	• Normal connected: **100 ohm or less** • Poor connected: **20 kilohm or more**	1a, 1b, 2a, 2b, 3a, 3b
RES_S_AB_D (Driver-side side air bag module resistance nominal)	ohm	Continuous: **0.81–9.85 ohms**	1A, 1D
RES_S_AB_P (Passenger-side side air bag module resistance nominal)	ohm	Continuous: **0.81–9.85 ohms**	1J, 1G
RES_SB_LP_D (Driver-side lap pre-tensioner seat belt resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**	2V, 2S
RES_SB_LP_P (Passenger-side lap pre-tensioner seat belt resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**	2Y, 2AB
RES_SB_P_D (Driver-side pre-tensioner seat belt resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**	2D, 2A
RES_SB_P_P (Passenger-side			

pre-tensioner seat belt resistance nominal)	ohm	Continuous: **0.81–6.42 ohms**		2G, 2J
SEAT_B_D (Driver-side buckle switch status)	Unbuckled/Buckled	• Driver-side front seat belt fastened (Driver-side buckle switch off): Buckled • Driver-side front seat belt not fastened (Driver-side buckle switch on): Unbuckled		2U
SEAT_B_P (Passenger-side buckle switch status)	Unbuckled/Buckled	Occupant seated in passenger-side front seat: On	• Passenger-side front seat belt fastened (Passenger-side buckle switch off): Buckled • Passenger-side front seat belt not fastened (Passenger-side buckle switch on): Unbuckled	2B
VPWR_IGA (SAS control module power voltage)	V	Ignition is switched ON: IG1 voltage		3C

HARNESS-SIDE CONNECTOR

2014 - Mazda3 - Restraints

FOREWORD

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

*1 **CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW**.

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory.
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

Air Bag System Specification Identification

- Because two types of driver and passenger-side air bag module controls, “Two-step deployment control” and “Standard deployment control”, are available depending on when the vehicle was produced, identify the specification referring to the following identification.

Identification

- In this manual, “Two-step deployment control system” or “Standard deployment control system” is used if the service contents differ depending on the control.
- Control is identified by the following components.

×:Equipped-:Not equipped

Item	Two-step deployment control system	Standard deployment control system
Sophisticated air bag sensor (SAS) control module	×	×
Crash zone sensor	×	×
Side air bag sensor	×	×
Pressure sensor	×	-
Driver-side air bag module	× (Two-step deployment type)	× (Standard deployment type)
Passenger-side air bag module	× (Two-step deployment type)	× (Standard deployment type)
Side air bag module	×	×
Curtain air bag module	×	×
Lap pre-tensioner seat belt	×	-
Pre-tensioner seat belt	×	×
Clock spring	× (Two-step deployment type)	× (Standard deployment type)
Seat weight sensor/control module	×	-

Driver-side buckle switch	×	×
Passenger-side buckle switch	×	-
Air bag system warning light	×	×
PAD indicator	×	-

Outline

- The OBD (on-board diagnostic) system has the following functions:
  - Malfunction detection function: Detects malfunctions in the air bag system and outputs DTCs (Diagnostic Trouble Codes).
  - PID/data monitor function: Reads out specific input/output signals and the system status.
- DTCs can be read/cleared using the M-MDS.

  NOTE:

  - Use the M-MDS to verify DTCs because the DTCs displayed by the air bag system warning light are reference information only.

2014 - Mazda3 - Restraints

TROUBLESHOOTING INDEX

- Use the chart below verify the symptoms of the trouble in order to diagnose the appropriate area.

Troubleshooting item	Description
AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE	Air bag system warning light does not illuminate while the air bag system is performing initialization.
AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY	Air bag system warning light is illuminated constantly and remains illuminated after 6 s have elapsed.

2014 - Mazda3 - Restraints

AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE

Description	• Air bag system warning light does not illuminate while the air bag system is performing initialization.
Possible cause	• Air bag system warning light circuit malfunction • Air bag system warning light (LED) malfunction • Instrument cluster malfunction • Communication error between SAS control module and instrument cluster • SAS control module malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT OTHER WARNING AND INDICATOR LIGHTS CIRCUIT IN INSTRUMENT CLUSTER** • Switch the ignition ON (engine off or on). • Do other warning and indicator lights illuminate?	Yes	Go to the next step.
		No	Inspect the instrument cluster power supply system and ground system, then go to Step 3.
2	**INSPECT DTCs IN SAS CONTROL MODULE** • Inspect the DTC for the SAS control module on-board diagnostic system. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection, then go to Step 5. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
3	**VERIFY WHERE MALFUNCTION IS IN WARNING LIGHTS INDICATION CIRCUIT OR ELSEWHERE**	Yes	Go to the next step.

	• Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of simulation function using the M-MDS. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Do other waning and indicator lights illuminate?	No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Then go to Step 5.
4	**INSPECT DTCs IN INSTRUMENT CLUSTER** • Inspect the DTC for the instrument cluster on-board diagnostic system. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection, then go to the next step. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
5	**VERIFY THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Switch the ignition off. • Switch the ignition ON (engine off or on). • Does the air bag system warning light operate properly?	Yes	Verify that there are no DTCs in the memory. If there are no DTCs, the troubleshooting is completed.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - Restraints

AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY

Description	• Air bag system warning light is illuminated constantly and remains illuminated after 6 s have elapsed.
Possible cause	• Weak battery • SAS control module connectors are poorly connected • Instrument cluster connector is poorly connected • SAS control module malfunction • Instrument cluster malfunction • SAS control module power supply circuit malfunction ▪ Short to ground in wiring harness between SRS1 7.5 A fuse and SAS control module terminal 3C ▪ SRS1 7.5 A fuse malfunction ▪ Open circuit in wiring harness between IG1 relay and SAS control module terminal 3C

System Wiring Diagram

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY** • Measure the voltage of battery. • Is the voltage **8 V or more**?	Yes	Go to the next step.
		No	Battery is weak. Inspect charge/discharge system, then go to Step 8. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2	**VERIFY THAT SAS CONTROL MODULE CONNECTOR IS CONNECTED** **WARNING:** • Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the rear console.	Yes	Go to the next step.
		No	Reconnect the connector properly, then go to Step 8.

	(See **REAR CONSOLE REMOVAL/INSTALLATION**.) • Are all SAS control module connectors securely connected?		
3	**VERIFY THAT INSTRUMENT CLUSTER CONNECTOR IS CONNECTED** • Disconnect the instrument cluster connector. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) • Are all instrument cluster connectors securely connected?	Yes	Go to the next step.
		No	Reconnect the connector properly, then go to Step 8.
4	**INSPECT DTCs IN SAS CONTROL MODULE** • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Clear DTCs using the M-MDS. (See **CLEARING DTC [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLEARING DTC [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Inspect the DTC for the SAS control module on-board diagnostic system. (See **DTC INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DTC INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection, then go to Step 8. (See **DTC TABLE [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **DTC TABLE [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.
5	**INSPECT DTCs IN INSTRUMENT CLUSTER** • Inspect the DTC for the instrument cluster on-board diagnostic system. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection, then go to Step 8. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
6	**VERIFY WHERE MALFUNCTION IS IN WARNING LIGHTS INDICATION CIRCUIT OR ELSEWHERE** • Turn on all warning lights and indicator	Yes	Go to the next step.

	lights using the instrument cluster PID WL+IL of simulation function using the M-MDS. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Do other warning and indicator lights illuminate?	No	Repair the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Then go to Step 8.
7	**INSPECT POWER SUPPLY CIRCUIT OF SAS CONTROL MODULE (TERMINAL 3C)** **WARNING:** • Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Switch the ignition off. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.) • Disconnect the clock spring connector. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.) • Disconnect the passenger-side air bag module connector.	Yes	Go to the next step.

		No	Inspect the SRS1 7.5 A fuse.
			
			• If a fuse is burnt out:
			  ▪ Repair or replace the wiring harness which is shorted to ground.
			  ▪ Replace the fuse.
			
			• Replace the fuse.
			  ▪ Replace the fuse.
			
			• If the fuse is normal:
			  ▪ Repair or replace the wiring harness which has an open circuit.
			
			Go to the next step.

	(See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **PASSENGER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **PASSENGER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) • Disconnect the driver and passenger-side front seat connector. (See **FRONT SEAT REMOVAL/INSTALLATION**.) • Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)		
	• Remove the B-pillar lower trim. (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. • Disconnect the driver and passenger-side lap pre-tensioner seat belt connector. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) • Disconnect all SAS control module connectors. (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP**		

	DEPLOYMENT CONTROL SYSTEM].) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at SAS control module at wiring harness-side connector terminal 3C. • Is the voltage **8 V—16 V**?		
8	**VERIFY THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Does the air bag system warning light illuminate for **approx. 6 s** and turn off?	Yes	Complete troubleshooting, then explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

2014 - Mazda3 - Restraints

AIR BAG SYSTEM LOCATION INDEX [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

1	Curtain air bag module (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2	SAS control module (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) 2014 - Mazda3 - Restraints

AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

Air Bag Module Inspection

- **Inspecting an air bag module using a tester can operate (deploy) the air bag module, which may cause serious injury. Do not use a tester to inspect an air bag module. Always use the on-board diagnostic function to diagnose the air bag module for malfunctions.**

Air Bag Module Handling

- **Before removing the air bag module or disconnecting the air bag module connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Handling a live (undeployed) air bag module that is pointed toward your body could result in serious injury if the air bag module were to accidentally operate (deploy). When carrying a live (undeployed) air bag module, point the deployment surface away from your body to lessen the chance of injury in case it operates (deploys).**

- **A live (undeployed) air bag module placed with its deployment surface to the ground is dangerous. If the air bag module were to accidentally operate (deploy), it could cause serious injury. Always place a live (undeployed) air bag module with its deployment surface up.**

Side Air Bag Module Handling

- **Before removing the side air bag module or disconnecting the side air bag module connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **When a side air bag module operates (deploys) due to a collision, the interior of the seat back (pad, frame, trim) may become damaged. If a side air bag does not operate (deploy) normally from a seat back that has been reused, a serious accident may result. After a side air bag has operated (deployed), always replace both the side air bag module and the seat back (pad, frame, trim) with new parts. After servicing, verify that the seat operates normally and that the wiring harness is not caught.**

SAS Control Module Handling

- **When connecting or disconnecting the SAS control module connector, a person**

charged with static electricity could accidentally operate (deploy) each air bag module and pre-tensioner seat belt. Before connecting or disconnecting the SAS control module connector, discharge any charged static electricity from your body.

- **Removing the SAS control module or disconnecting the SAS control module connector with the ignition ON can activate the sensor in the SAS control module and operate (deploy) the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts which may cause serious injury. Before removing the SAS control module or disconnecting the SAS control module connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Connecting the SAS control module connector with the SAS control module not securely fixed to the vehicle is dangerous. The sensor in the SAS control module could send an electrical signal to the air bag modules, pre-tensioner seat belts and lap pre-tensioner seat belts. This will operate (deploy) the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts, which may result in serious injury. Therefore, before connecting the connector, securely fix the SAS control module to the vehicle.**
- **Because a sensor is built into the SAS control module, once the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the SAS control module must be replaced with a new one even if the used one does not have any visible external damage or deformation. The used SAS control module may have been damaged internally, which may cause improper operation. If the SAS control module is reused, the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the SAS control module with a new one. The SAS control module cannot be bench-checked or self-checked.**

Crash Zone Sensor Handling

- **Removing the crash zone sensor or disconnecting the crash zone sensor connector with the ignition ON can activate the crash zone sensor and operate (deploy) the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts which may cause serious injury. Before removing the crash zone sensor or disconnecting the crash zone sensor connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **If the crash zone sensor is subjected to shock or the sensor is disassembled, the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the crash zone sensor to shock or disassemble the sensor.**
- **Because a sensor is built into the crash zone sensor, once the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the crash zone sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the crash zone sensor is reused, the air bags, pre-tensioner seat belts and lap pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the crash zone sensor with a**

new one. The crash zone sensor cannot be bench-checked or self-checked.

Side Air Bag Sensor Handling

- **Removing the side air bag sensor or disconnecting the side air bag sensor connector with the ignition ON can activate the side air bag sensor and operate (deploy) the side air bag, which may cause serious injury. Before removing the side air bag sensor or disconnecting the side air bag sensor connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **If the side air bag sensor is subjected to shock or the sensor is disassembled, the side air bag may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the side air bag sensor to shock or disassemble the sensor.**
- **Because a sensor is built into the side air bag sensor, once the air bag has operated (deployed) due to a collision or other causes, the side air bag sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the side air bag sensor is reused, the side air bag may not operate (deploy) normally, which could result in a serious accident. Always replace the side air bag sensor with a new one. The side air bag sensor cannot be bench-checked or self-checked.**

Pressure Sensor Handling

- **Removing the pressure sensor or disconnecting the pressure sensor connector with the ignition ON can activate the pressure sensor and operate (deploy) the side air bag, which may cause serious injury. Before removing the pressure sensor or disconnecting the pressure sensor connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **If the pressure sensor is subjected to shock or the sensor is disassembled, the side air bag may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the pressure sensor to shock or disassemble the sensor.**
- **Because a sensor is built into the pressure sensor, once the air bag has operated (deployed) due to a collision or other causes, the pressure sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the pressure sensor is reused, the side air bag may not operate (deploy) normally, which could result in a serious accident. Always replace the pressure sensor with a new one. The pressure sensor cannot be bench-checked or self-checked.**

Pre-tensioner Seat Belt Inspection

- **Inspecting a pre-tensioner seat belt using a tester can operate (deploy) the pre-tensioner seat belt, which may cause serious injury. Do not use a tester to**

inspect a pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the pre-tensioner seat belt for malfunctions.

Lap Pre-tensioner Seat Belt Inspection

- **Inspecting a lap pre-tensioner seat belt using a tester can operate (deploy) the lap pre-tensioner seat belt, which may cause serious injury. Do not use a tester to inspect a lap pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the lap pre-tensioner seat belt for malfunctions.**

AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

Air Bag System Component Disassembly

- **Disassembling the air bag system components could cause it to not operate (deploy) normally. Never disassemble any air bag system components.**

Air Bag Module, Pre-tensioner Seat Belt, Lap Pre-tensioner Seat Belt Handling

- **Oil, grease, or water on the air bag modules may cause the air bags to fail to operate (deploy) in an accident. Never allow oil, grease, or water to get on the air bag modules.**
- **Inserting a screwdriver or similar object into the connector of an air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt may damage the connector and cause the air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt to operate (deploy) improperly, which may cause serious injury. Never insert any foreign objects into the air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt connectors.**

Seat Weight Sensor Handling

- **The seat weight sensor has a built-in strain gauge which may operate improperly if the sensor is dropped by itself or when installed to the seat. If it is dropped, replace the seat weight sensor with a new one.**
- **Oil, grease, or water on the seat weight sensor may cause the system to operate (deploy) improperly. Never allow oil, grease, or water to get on the seat weight sensor.**
- **Foreign matter in the seat weight sensor components may cause the system to operate (deploy) improperly. Always make sure that no foreign matter can get into the seat weight sensor.**
- **Disassembling the seat weight sensor, or tightening any of the nuts and bolts installed to the sensor body may cause it to operate (deploy) improperly. Never disassemble the seat weight sensor or tighten any of the nuts or bolts installed to the body of the sensor.**

Air Bag Module, Pre-tensioner Seat Belt, Lap re-tensioner Seat Belt Reuse

- **Even if an air bag module, pre-tensioner seat belt or a lap pre-tensioner seat belt does not operate (deploy) in a collision and does not have any external signs of damage, it may have been damaged internally, which may cause improper operation. Before reusing a live (undeployed) air bag module, pre-tensioner seat belt or a lap pre-tensioner seat belt, always use the on-board diagnostic to diagnose the air bag module, pre-tensioner seat belt or a lap pre-tensioner seat belt to verify that they have no malfunction.**

Air Bag Wiring Harness Repair

- **Incorrectly repairing an air bag wiring harness can accidentally operate (deploy) the air bag modules, pre-tensioner seat belts or a lap pre-tensioner seat belts. If a problem is found in the air bag wiring harness, always replace the wiring harness with a new one.**

2014 - Mazda3 - Restraints

DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- Due to the adoption of 2-step deployment control in the driver-side air bag module, depending on the impact force, it is possible that inflator No.2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No.1 and 2.

NOTE:

- The driver-side air bag module is installed to the steering wheel by the following connections.
  - Driver-side air bag module tab A and steering wheel hook A
  - Driver-side air bag module tab B and steering wheel hook B
  - Driver-side air bag module tab C and steering wheel hook C
  - Spring and steering wheel hook D
  - Spring and steering wheel hook E

DRIVER-SIDE AIR BAG MODULE SIDE

STEERING WHEEL SIDE

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Lower the steering wheel to the bottommost position.

4. Pull the steering wheel to furthest position rearward.

5. Verify the service hole on the back side of the steering wheel.

6. Insert the tool from the service hole.

Recommended tool

- TORX driver (T30 (diam. 6))

7. Insert the tool in the direction of the arrow shown in the figure and disengage driver-side air bag module tab A from steering wheel hook A.

8. Rotate the steering wheel until the service hole can be seen from behind the steering wheel.

9. Insert the tool from the service hole.

10. Insert the tool in the direction of the arrow shown in the figure and disengage driver-side air bag module tab B from steering wheel hook B.

NOTE:

- By moving the tool, the spring is pressed at the same time allowing the spring to be removed from steering wheel hook D.

11. Rotate the steering wheel until the service hole can be seen from behind the steering wheel.

12. Insert the tool from the service hole.

CAUTION:

- The driver-side air bag module could be damaged if it is dropped while it is completely disengaged from the steering wheel. Hold the driver-side air bag module securely with a hand while it is completely disengaged.

13. Insert the tool in the direction of the arrow shown in the figure and disengage driver-side air bag module tab C from steering wheel hook C.

NOTE:

- By moving the tool, the spring is pressed at the same time allowing the spring to be removed from steering wheel hook E.

14. Remove the air bag module from the steering wheel.

15. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

16. Disconnect the air bag module connector.
17. Disconnect the horn switch connector.
18. Remove the driver-side air bag module.

2014 - Mazda3 - Restraints

DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- Due to the adoption of 2-step deployment control in the driver-side air bag module, depending on the impact force, it is possible that inflator No.2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No.1 and 2.

CAUTION:

- If the driver-side air bag module is connected with the air bag module wiring harness and the horn switch wiring harness crossing over each other, the wiring harnesses could become tangled and damaged. When connecting the connectors, be careful that the wiring harnesses are not crossed over each other.

1. Point the upper side of the driver-side air bag module towards the steering wheel and connect the following connectors as shown in the figure.

- Air bag module connector.
- Horn switch connector

2. Rotate the driver-side air bag module counterclockwise 180 degrees.

3. Align the driver-side air bag module pin with the steering wheel hole.

DRIVER-SIDE AIR BAG MODULE SIDE

STEERING WHEEL SIDE

4. Press the pin of the driver-side air bag module until a click sound is heard.

5. Verify that the quick release connector is securely attached by lightly pulling the driver-side air bag module.

6. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Switch the ignition ON (engine off or on).

8. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.

- If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- Due to the adoption of 2-step deployment control in the passenger-side air bag module, depending on the impact force, it is possible that inflator No.2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No.1 and 2.

NOTE:

- When removing the passenger-side air bag module, perform the procedure in the posture shown in the figure.

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL DISASSEMBLY/ASSEMBLY**.)

   c. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   d. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   e. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   f. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

4. Remove the cap.

5. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.
6. Disconnect the passenger-side air bag module connector.
7. Remove the fastener.

8. Remove the nuts.

9. Remove the brackets.

10. Remove the screws.

11. Move the passenger-side air bag module in the direction of arrow (2) shown in the figure and detach guide A from the dashboard while spreading the dashboard in the direction of arrow (1).

12. While avoiding area A shown in the figure, pull the front side of the passenger-side air bag module in the direction of the arrows shown in the figure (3).

13. Move the passenger-side air bag module in the direction of the arrow (4) and detach guides B from the dashboard (5).

14. Remove the passenger-side air bag module (6).

2014 - Mazda3 - Restraints

PASSENGER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- Due to the adoption of 2-step deployment control in the passenger-side air bag module, depending on the impact force, it is possible that inflator No.2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No.1 and 2.

1. Install guide A to the dashboard (1).

2. Press the passenger-side air bag module in the direction of the arrow shown in the figure and attach guides B (2).
3. Install the screws.

4. Install the brackets.

5. Install the nuts.

6. Install the fastener.

7. Connect the passenger-side air bag module connector.

8. Install the cap with the arrow pointing toward the front.

9. Install the following parts:

a. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

b. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

c. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

d. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

e. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

f. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

10. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Switch the ignition ON (engine off or on).

12. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

- If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

SIDE AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- If the side air bag module is installed with debris in the seat back, the foreign material may be scattered when the side air bag module operates (deploys), causing injury. Verify that there is no foreign material in the seat back before installing the side air bag module.

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
4. Remove the seat back trim and the seat back pad. (See **FRONT SEAT BACK TRIM REMOVAL/INSTALLATION**.)
5. Partially peel back the front seat trim and remove the hook.

6. Disconnect the side air bag module connector.

7. Remove the side air bag module wiring harness from the hook.

8. Remove the band.

9. Remove the nuts.

10. Remove the side air bag module.

11. Install in the reverse order of removal.

12. Switch the ignition ON (engine off or on).

13. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

4SD

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Sunroof seaming welt (with sunroof system) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)
   b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   d. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
4. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
5. Remove the following parts:
   a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)
   c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   h. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)
   i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
6. Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)
7. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

BOLT : **9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}**

8. Disconnect the connector.

9. Remove the clip. (See **Clip Removal Note**.)

10. Remove the bolts.

11. Pull guide A, B, C, D and E in the direction shown in the figure and remove it from the body.

12. Remove the curtain air bag module.

13. Install in the reverse order of removal.

14. Switch the ignition ON (engine off or on).

15. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

- If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

5HB

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Sunroof seaming welt (with sunroof system) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)

   b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   d. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

4. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

5. Remove the following parts:

a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

h. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

j. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

k. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

l. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

m. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

n. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

o. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

6. Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)

7. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

BOLT : **9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}**

8. Disconnect the connector.
9. Remove the clip. (See **Clip Removal Note**.)
10. Remove the bolts.
11. Pull guide A, B, C, D and E in the direction shown in the figure and remove it from the body.
12. Remove the curtain air bag module.
13. Install in the reverse order of removal.
14. Switch the ignition ON (engine off or on).
15. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.
    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Clip Removal Note

1. Pull out the pin with flathead screwdriver as shown in the figure.

2. Insert a flathead screwdriver into shown in the figure.

3. While pulling the curtain air bag in the direction of the arrow shown in the figure (1), detach tabs by prying with a flathead screwdriver in the direction of the arrow (2) (3).

4. Remove the clip from the body.

2014 - Mazda3 - Restraints

CRASH ZONE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the crash zone sensor improperly can accidentally deploy the air bags and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the crash zone sensor. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
4. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
5. Remove the front combination light. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
6. Remove the bolt.

BOLT : **8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}**

7. Disconnect the connector. (See **Connector Disconnect Note**.)
8. Remove the crash zone sensor.
9. Remove the bracket.

10. Install in the reverse order of removal.

11. Switch the ignition ON (engine off or on).

12. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Connector Disconnect Note

1. Press the area (1) indicated by the arrow and slide it as shown in the figure (2).

2. Lift up the location shown in the figure using a tape-wrapped flathead screwdriver (3) and disconnect the connector (4).

2014 - Mazda3 - Restraints

SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the SAS control module or air bag module improperly can accidentally deploy the air bag modules, pre-tensioner seat belts and lap pre-tensioner seat belts which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- If the connector is connected and the ignition switch is turned to the ON position with the SAS control module not secured completely using the installation nuts, the SAS control module may detect a degree of impact even when something contacts it lightly, deploying the air bag module, pre-tensioner seat belt and lap pre-tensioner seat belt accidentally.
- If the DSC related parts sensor initialization procedure is not completed, it could result in an unexpected accident due to the DSC being inoperative. Therefore, after the SAS control module is replaced, always perform the DSC related parts sensor initialization procedure to ensure proper DSC operation.
- If configuration is not performed when the SAS control module is replaced with a new one, the vehicle specification information is not stored in the SAS control module and the system will not operate normally.

CAUTION:

- When replacing the SAS control module, always perform the configuration procedure before removing the SAS control module. If the configuration is not performed and the SAS control module is removed, DTC B0003:53 will be displayed.
- When performing configuration, it is necessary to read the vehicle specification information from the SAS control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the SAS control module. The vehicle specification information is temporarily stored in the M-MDS.

NOTE:

- The SAS control module prior to replacement stores the vehicle specification information.
- A new SAS control module does not store any vehicle specification information.
- If the vehicle specification information from the SAS control module prior to replacement cannot be read, perform the configuration using As-Built data.

1. Perform SAS control module configuration when replacing it. (See **SAS CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2. Switch the ignition off.

3. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the following parts:

   a. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   b. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

5. Remove the parking brake lever. (See **PARKING BRAKE LEVER REMOVAL/INSTALLATION**.)

6. Remove the bolts.

BOLT : **19—25 {2.0—2.5, 15—18} N·m {kgf·m, ft·lbf}**

7. Set the bracket out of the way.

8. Remove the nuts.

9. Remove the SAS control module.

10. Disconnect the connectors.

11. Install in the reverse order of removal.

12. Switch the ignition ON (engine off or on).

13. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

- If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

14. Perform the DSC related parts sensor initialization procedure (only when replacing the SAS control module with a new one). (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)

NOTE:

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the SAS control module. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

SAS CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

NOTE:

- When performing configuration, it is necessary to read the vehicle specification information from the SAS control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the SAS control module. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

   a. Select “Programmable Module Installation”.

   b. Select “RCM”.

4. Perform the configuration according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the SAS control module and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Restraints

SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

NOTE:

- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

   a. Select “As-Built”.

   b. Select “RCM”.

4. Perform the as-built according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the SAS control module and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Restraints

SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- When the seat weight sensor control module is replaced with a new one, perform the seat weight sensor calibration using the M MDS. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the connectors.

4. Remove the seat weight sensor control module from the bracket by lifting the tab in the direction of the arrow.

5. Install in the reverse order of removal.

6. Switch the ignition ON (engine off or on).

7. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

SEAT WEIGHT SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- When the seat weight sensor is replaced with a new one, perform the seat weight sensor calibration using the M MDS. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- When replacing the seat weight sensor, replace it together with the passenger-side seat slide adjuster (because seat weight sensor is integrated with passenger-side seat slide adjuster).

  (See **FRONT SEAT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Restraints

SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- If any of the following work is performed, perform the seat weight sensor calibration using the M-MDS.
    - Replacement with a new seat weight sensor
    - Replacement with a new seat weight sensor control module
    - Replacement with new passenger-side seat parts
    - Disassembly of the passenger-side seat
- If any of the following work is performed, perform the seat weight sensor inspection using the M-MDS. (See **SEAT WEIGHT SENSOR INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
    - Removal of the passenger-side seat
    - Loosening and retightening of passenger's seat fixing bolts
    - Or, the vehicle is involved in a collision

NOTE:

- When seat weight sensor calibration is performed causing the SAS control module to detect the DTC, perform the following procedure.

1. Have two **20 kg {44 lb}** weights ready to use.
2. Connect the M-MDS to the DLC-2.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select "Body".
    b. Select "SWS Calibration".
4. Perform calibration following the procedures on the M-MDS screen.

2014 - Mazda3 - Restraints

SEAT WEIGHT SENSOR INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- If any of the following work is performed, perform the seat weight sensor inspection using the M-MDS.
    - Removal of the passenger-side seat
    - Loosening and retightening of passenger's seat fixing bolts
    - Or, the vehicle was involved in a collision
- If any of the following work is performed, perform the seat weight sensor calibration using the M-MDS. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
    - Replacement with a new seat weight sensor
    - Replacement with a new seat weight sensor control module
    - Replacement with new passenger-side seat parts
    - Disassembly of the passenger-side seat

1. Connect the M-MDS to the DLC-2.
2. Verify that SAS control module DTC B00A0:28 is detected using the M-MDS.
    - If DTC B00A0:28 is detected, perform the on-board diagnostic system procedure. (See **DTC B00A0:28 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the side air bag sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the side air bag sensor. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the bolt.

5. Disconnect the connector. (See **Connector Disconnect Note**.)
6. Remove the side air bag sensor.
7. Install in the reverse order of removal.
8. Switch the ignition ON (engine off or on).
9. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Connector Disconnect Note

1. Press the area (1) indicated by the arrow and slide it as shown in the figure (2).

2. Lift up the location shown in the figure using a tape-wrapped flathead screwdriver (3) and disconnect the connector (4).

2014 - Mazda3 - Restraints

PRESSURE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the pressure sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the pressure sensor. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

4. Remove the bolts.

5. Remove the pressure sensor.

6. Disconnect the connector from the pressure sensor by pressing the connector tab and pulling out the lock lever in the direction of the arrow.

- When connecting the pressure sensor connector, insert the lock lever (connector disconnection prevention lever) completely.

7. Install in the reverse order of removal.

8. Switch the ignition ON (engine off or on).

9. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- If the disc on the combination switch is deformed or has foreign matter adhering to it, performance of the steering angle sensor may be reduced, causing abnormal operation. When handling the clock spring, be careful not to deform the disc and make sure there is no foreign matter on it.

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the driver side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)(See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

4. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

5. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

6. Disconnect the clock spring connector.

7. Disconnect the steering angle sensor connector. (with steering angle sensor)

8. Remove the tab direction of the arrow shown in the figure and remove the clock spring.

9. Install in the reverse order of removal. (See **Clock Spring Installation Note**.)

10. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

    - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Clock Spring Installation Note

CAUTION:

- If the clock spring is not adjusted, the spring wire in the clock spring will break due to overtension when the steering wheel is turned. Always adjust the clock spring after installing it.
- Adjust the clock spring after installing it. (See **CLOCK SPRING ADJUSTMENT [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

CLOCK SPRING ADJUSTMENT [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

1. Set the front wheels straight ahead.

CAUTION:

- The clock spring will break if over wound. Do not forcibly turn the clock spring.

2. Turn the clock spring clockwise until it stops.

3. Turn the clock spring counterclockwise **approx. 2 turns**.

4. Align the mark on the clock spring with the mark on the outer housing.

NOTE:

- After adjusting the alignment marks, the guides can be verified in the viewing slots shown

in the figure.

2014 - Mazda3 - Restraints

CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

1. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the driver side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)(See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

3. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

4. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

5. Remove the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

6. Verify that the continuity is as indicated in the table.

   - If not as indicated in the table, replace the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

NOTE:

- When the vehicle-side connector for the clock spring is disconnected, terminals 2A, 2B, 2C and 2D are shorted to prevent unexpected operation (deployment) of the air bag module.

PASSENGER AIR BAG DEACTIVATION (PAD) INDICATOR LIGHT REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

NOTE:

- The PAD indicator light (LED) is built into the indicator unit.

1. Remove the indicator unit. (See **INDICATOR UNIT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Restraints

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- A live (undeployed) air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Do not dispose of a live (undeployed) air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt. If the SSTs (Deployment tool and Adapter harness) are not available, consult the nearest Mazda representative for assistance.
- The lap pre-tensioner seat belt may not have operated (deployed) even if the pre-tensioner seat belt has due to a vehicle collision. A live (non-deployed) pre-tensioner may accidentally operate (deploy) when it is disposed of and cause serious injury. When disposing of the front seat belt, verify that the pre-tensioner seat belt and lap pre-tensioner seat belt have operated (deployed).

CAUTION:

- Deploying the air bag modules, pre-tensioner seat belts or lap pre-tensioner seat belts inside the vehicle may cause damage to the vehicle interior. When the vehicle is not to be scrapped, always deploy the air bag modules, pre-tensioner seat belts or lap pre-tensioner seat belts outside the vehicle.
- If the vehicle is to be scrapped, or when disposing of any air bag modules, pre-tensioner seat belts or lap pre-tensioner seat belts, operate (deploy) them inside the vehicle by following the deployment procedure below and using the **SST (Deployment tool)**.
- When disposing of an operated (deployed) air bag module, pre-tensioner seat belt and lap pre-tensioner seat belt, refer to “AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES”.

Deployment Procedure for Inside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See **INSPECTION OF SST (DEPLOYMENT TOOL) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2. Move the vehicle to an open space, away from strong winds, and close all of the vehicle doors and windows.

3. Switch the ignition off.

4. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Follow the procedure below for operating (deploying) the applicable air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt.

NOTE:

- The connector part of the air bag module and the SST (adapter wiring harness) burns out from the high heat when the inflator is operated (deployed).

Driver-side Air Bag Module

WARNING:

- The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.

NOTE:

- The SSTs, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the driver-side air bag module.

1. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2. Connect the **SST (Adapter harness)** to the driver-side air bag module as shown in the figure.

3. Install the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

4. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

5. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

6. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

8. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and after **3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

WARNING:

- Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 8 again. If a total of two operation (explosive) sounds cannot be verified even though Step 8 is performed again, leave the air bag module alone for 30 min or more before approaching it again.
- The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.

9. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Passenger-side Air Bag Module

WARNING:

- The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.

NOTE:

- The SSTs, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the passenger-side air bag module.

1. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
2. Remove the cap.

3. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.
4. Disconnect the passenger-side air bag module connector.
5. Connect the **SST (Adapter harness)** to the passenger-side air bag module as shown in the figure.

6. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

7. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

8. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

10. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and after **3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

WARNING:

- Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 11 again. If a total of two operation (explosive) sounds cannot be verified even though Step 11 is performed again, leave the air bag module alone for 30 min or more before approaching it again.
- The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Side Air Bag Module

1. Disconnect the front seat connector.

2. Connect the **SST (Adapter harness)** to the front seat connector as shown in the figure.

3. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

4. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

5. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

6. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

7. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

8. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Curtain Air Bag Module

1. Remove the following parts:

   a. Sunroof seaming welt (with sunroof) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)

   b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   d. Front map light (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

l. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

m. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

n. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

2. Peel back the headliner.

3. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

4. Disconnect the curtain air bag module connector.

5. Connect the **SST (Adapter harness)** to the curtain air bag module as shown in the figure.

6. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

7. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

8. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

10. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Pre-tensioner Seat Belt

1. Remove the following parts:
   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
2. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

3. Disconnect the pre-tensioner seat belt connector.
4. Connect the **SST (Adapter harness)** as shown in the figure.
5. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

6. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

7. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

8. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

9. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

WARNING:

- The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.

10. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Lap Pre-tensioner Seat Belt

1. Remove the fastener.

2. Remove the cover.

3. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

4. Disconnect the lap pre-tensioner seat belt connector.

5. Connect the **SST (Adapter harness)** as shown in the figure.

6. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

7. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

8. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

10. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the lap pre-tensioner seat belt.

WARNING:

- The lap pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the lap pre-tensioner seat belt for at least 15 min after deployment.

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Deployment Procedure for Outside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See **INSPECTION OF SST (DEPLOYMENT TOOL) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2. Switch the ignition off.

3. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Follow the procedure below for operating (deploying) the applicable air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt.

NOTE:

- The connector part of the air bag module and the SST (adapter wiring harness) burns out from the high heat when the inflator is operated (deployed).

Driver-side Air Bag Module

WARNING:

- The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.

NOTE:

- The SSTs, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the driver-side air bag module.

1. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

2. Wrap the wiring harness (cross section **1.25 mm^2 {0.002 in^2} or more**) at least four times around the position shown in the figure for the driver-side air bag module.

3. Connect the **SST (Adapter harness)** to the driver-side air bag module.

4. Place the driver-side air bag module on the center of the tire wheel with the padded surface facing up. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the wheel and the bolt installation holes of the air bag module **at least 4 times**.

WARNING:

- If the air bag module is not properly installed to the tire wheel, serious injury may occur when the module is operated (deployed). When installing the air bag module to the tire wheel, make sure the padded surface is facing up.

5. Stack three tires without wheels on top of the tire with the driver-side air bag module, and then stack another tire with a wheel on the very top.

6. Secure the tires with wire.

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

11. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and **after 3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

WARNING:

- Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 12 again. If a total of two operation (explosive) sounds cannot be verified even though Step 12 is performed again, leave the air bag module alone for 30 min or more before approaching it again.
- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Passenger-side Air Bag Module

WARNING:

- The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module,

make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.

NOTE:

- The SSTs, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the passenger-side air bag module.

1. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL / INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL / INSTALLATION**.)

   c. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL / INSTALLATION**.)

   d. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL / INSTALLATION**.)

   e. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL / INSTALLATION**.)

   f. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL / INSTALLATION**.)

2. Remove the passenger-side air bag module. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

3. Connect the **SST (Adapter harness)** to the passenger-side air bag module as shown in the figure.

4. Place the padded surface of the passenger-side air bag module facing the center of the tire as shown in the figure. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

WARNING:

- If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.

5. Stack the tire with the passenger-side air bag module on top of two tires without wheels. Stack a tire

without a wheel on top of the tire with the passenger-side air bag module, and then stack another tire with a wheel on the very top.

6. Secure the tires with wire.

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

11. Press the activation switch on the **SST (Deployment tool)** connected with **49 L066 002** (a yellow connector) of the **SST (Adapter harness)**, and **after 3 s**, press the activation switch on the other **SST (Deployment tool)** to operate (deploy) the air bag module (both inflators).

WARNING:

- Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury if the air bag module operates (deploy) unexpectedly. If the two operation (explosive) sounds are not heard, perform Step 13 again. If a total of two operation (explosive) sounds cannot be verified even though Step 13 is performed again, leave the air bag module alone for 30 min or more before approaching it again.
- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Side Air Bag Module

1. Remove the following parts:

   a. Front seat (See **FRONT SEAT REMOVAL/INSTALLATION**.)

   b. Front seat back trim and pad (See **FRONT SEAT BACK TRIM REMOVAL/INSTALLATION**.)

2. Remove the side air bag module. (See **SIDE AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

3. Install the nuts.

4. Connect the **SST (Adapter harness)** to the side air bag module as shown in the figure.

5. Put the side air bag module inside the tire and secure it to the tire by wrapping a wire (cross section of **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt **at least 4 times**.

WARNING:

- If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.

6. Stack the tire with the side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the side air bag module, and then stack another tire with a wheel on the very top.

7. Secure the tires with wire.

8. Connect the **SST (Deployment tool)** to the **SST (Adapter harness).**

9. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

10. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

11. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

12. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

13. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Curtain Air Bag Module

1. Remove the following parts (4SD):

   a. Sunroof seaming welt (with sunroof system) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)

   b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   d. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

   i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

2. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

3. Remove the following parts:

a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

b. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

h. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

4. Remove the following parts (5HB):

a. Sunroof seaming welt (with sunroof system) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)

b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

d. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

5. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

6. Remove the following parts:

a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

h. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

j. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

k. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

l. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

m. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

n. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

o. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

7. Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)

8. Remove the curtain air bag module. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

9. Cut off the air bag part of the curtain air bag module at the position shown in the figure.

WARNING:

- Never crush the pipe on the side where it is cut. If it is crushed completely, the interior pressure of the pipe will build up and can cause it to explode during air bag module operation (deployment).

10. Disconnect the curtain air bag module connector.

11. Connect the **SST (Adapter harness)** to the curtain air bag module as shown in the figure.

12. Secure the curtain air bag module to the tire, by wrapping a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

WARNING:

- If the air bag module is not properly installed to the tire, serious injury may occur when the module is operated (deployed). Always install the air bag module securely.

13. Stack the tire with the curtain air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the curtain air bag module, and then stack another tire with a wheel on the very top.

14. Secure the tires with wire.

15. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

16. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

17. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

18. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

19. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

20. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Pre-tensioner Seat Belt

1. Remove the following parts:

   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

2. Remove the front seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

3. Connect the **SST (Adapter harness)** as shown in the figure.

4. Put the pre-tensioner seat belt inside the tire and secure it to the tire by wrapping a wire (cross section of **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times**.

WARNING:

- If the pre-tensioner seat belt is not properly installed to the tire, serious injury may occur when the pre-tensioner part is operated (deployed). When installing the pre-tensioner seat belt to the tire, verify that the pre-tensioner part is inside the tire.

5. Stack the tire with the pre-tensioner seat belt on to of two tires without wheels. Stack a tire without a wheel on top of the tire with the pre-tensioner seat belt, and then stack another tire with a wheel on the very top.

6. Secure the tires with wire.

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

11. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

WARNING:

- The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Lap Pre-tensioner Seat Belt

1. Remove the following parts:
   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
2. Remove the front seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
3. Cut off the seat belt part of the lap pre-tensioner seat belt at the position shown in the figure.

4. Connect the **SST (Adapter harness)** as shown in the figure.

5. Secure the lap pre-tensioner seat belt to the vise as shown in the figure. Set the lap pre-tensioner piston so that the ejection end is pointed downward. Place the bottom surface of the housing so that it contacts the upper surface of the vise.

WARNING:

- When the lap pre-tensioner seat belt operates (deploys), the piston ejects from the end of the cylinder. If an object lies in the ejection path within 40 mm of the cylinder end, the piston could hit the object, rebound and hit the lap pre-tensioner seat belt. The force of the piston hitting the lap pre-tensioner seat belt could dislodge it from the vice and cause injury. When securing the lap pre-tensioner in the vice, position it so that there is no obstruction in the ejection path within 40 mm of the cylinder end.

6. Secure the lap pre-tensioner seat belt in the vise with a wire (cross section of **1.25 mm^2 {0.002 in^2} or more**) through the shaft of vice and the lap pre-tensioner seat belt bracket hole **at least 4 times**.

WARNING:

- If the lap pre-tensioner seat belt is not properly installed to the vice, serious injury may occur when the lap pre-tensioner part is operated (deployed). When installing the lap pre-tensioner seat belt to the vice, verify that the lap pre-tensioner part is properly installed to the vise.

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

11. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the lap pre-tensioner seat belt.

WARNING:

- The lap pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the lap pre-tensioner seat belt for at least 15 min after deployment.

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

2014 - Mazda3 - Restraints

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

WARNING:

- A live (undeployed) air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Always refer to the “AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES” and dispose of air bag modules, pre-tensioner seat belts and lap pre-tensioner seat belts in a deployed condition.
- The air bag modules, pre-tensioner seat belts and lap pre-tensioner seat belts are very hot immediately after they are deployed. You can be burned. Do not touch an air bag module, pre-tensioner seat belt and lap pre-tensioner seat belt for at least 15 min after deployment.
- Pouring water on the deployed air bag module, pre-tensioner seat belt and lap pre-tensioner seat belt is dangerous. The water will mix with the residual gases to form a gas that can make breathing difficult. Do not pour water on the deployed air bag module, pre-tensioner seat belt and lap pre-tensioner seat belt.
- The deployed air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt may contain deposits of sodium hydroxide, a caustic byproduct of the gas-generated combustion. If this substance gets into your eyes or on your hands, it can cause irritation and itching. When handling the deployed air bag module, pre-tensioner seat belt and lap pre-tensioner seat belt, wear gloves and safety glasses.

1. Remove the deployed air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt.

2. Put the air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt in a plastic bag, seal the bag, and then dispose of it.

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

2014 - Mazda3 - Restraints

INSPECTION OF SST (DEPLOYMENT TOOL) [TWO-STEP DEPLOYMENT CONTROL SYSTEM]

1. Before using the **SST** (49 H066 002), inspect its operation.

Inspection Procedure

1. Follow the steps below to inspect the **SST** (49 H066 002).

- If not as indicated in the table, replace the **SST** (49 H066 002) because it has a malfunction.

WARNING:

- Do not use a malfunctioning SST (49 H066 002), otherwise it could cause the air bag module, pre-tensioner seat belt or lap pre-tensioner seat belt to accidentally operate (deploy).

CAUTION:

- Because the permissible voltage for the SST (49 H066 002) is 12 V, do not connect a 24 V power source because it will damage the SST. Always connect only a 12 V power source.

Step	Inspection procedure	Light condition	
		Green	Red
1	Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.	On	Off

2	Connect connectors A and B.	Off	On
3	Press the activation switch.	On	Off

2014 - Mazda3 - Restraints

AIR BAG SYSTEM LOCATION INDEX [STANDARD DEPLOYMENT CONTROL SYSTEM]

AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]

Air Bag Module Inspection

- **Inspecting an air bag module using a tester can operate (deploy) the air bag module, which may cause serious injury. Do not use a tester to inspect an air bag module. Always use the on-board diagnostic function to diagnose the air bag module for malfunctions.**

Air Bag Module Handling

- **Before removing the air bag module or disconnecting the air bag module connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Handling a live (undeployed) air bag module that is pointed toward your body could result in serious injury if the air bag module were to accidentally operate (deploy). When carrying a live (undeployed) air bag module, point the deployment surface away from your body to lessen the chance of injury in case it operates (deploys).**

- **A live (undeployed) air bag module placed with its deployment surface to the ground is dangerous. If the air bag module were to accidentally operate (deploy), it could cause serious injury. Always place a live (undeployed) air bag module with its deployment surface up.**

Side Air Bag Module Handling

- **Before removing the side air bag module or disconnecting the side air bag module connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **When a side air bag module operates (deploys) due to a collision, the interior of the seat back (pad, frame, trim) may become damaged. If a side air bag does not operate (deploy) normally from a seat back that has been reused, a serious accident may result. After a side air bag has operated (deployed), always replace both the side air bag module and the seat back (pad, frame, trim) with new parts. After servicing, verify that the seat operates normally and that the wiring harness is not caught.**

SAS Control Module Handling

- **When connecting or disconnecting the SAS control module connector, a person**

charged with static electricity could accidentally operate (deploy) each air bag module. Before connecting or disconnecting the SAS control module connector, discharge any charged static electricity from your body.

- **Removing the SAS control module or disconnecting the SAS control module connector with the ignition ON can activate the sensor in the SAS control module and operate (deploy) the air bags and pre-tensioner seat belts, which may cause serious injury. Before removing the SAS control module or disconnecting the SAS control module connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Connecting the SAS control module connector with the SAS control module not securely fixed to the vehicle is dangerous. The sensor in the SAS control module could send an electrical signal to the air bag modules and pre-tensioner seat belts. This will operate (deploy) the air bags and pre-tensioner seat belts, which may result in serious injury. Therefore, before connecting the connector, securely fix the SAS control module to the vehicle.**
- **Because a sensor is built into the SAS control module, once the air bags and pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the SAS control module must be replaced with a new one even if the used one does not have any visible external damage or deformation. The used SAS control module may have been damaged internally, which may cause improper operation. If the SAS control module is reused, the air bags and pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the SAS control module with a new one. The SAS control module cannot be bench-checked or self-checked.**

Crash Zone Sensor Handling

- **Removing the crash zone sensor or disconnecting the crash zone sensor connector with the ignition ON can activate the crash zone sensor and operate (deploy) the air bags and pre-tensioner seat belts, which may cause serious injury. Before removing the crash zone sensor or disconnecting the crash zone sensor connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **If the crash zone sensor is subjected to shock or the sensor is disassembled, the air bags and pre-tensioner seat belts may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the crash zone sensor to shock or disassemble the sensor.**
- **Because a sensor is built into the crash zone sensor, once the air bags and pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the crash zone sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the crash zone sensor is reused, the air bags and pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the crash zone sensor with a new one. The crash zone sensor cannot be bench-checked or self-checked.**

Side Air Bag Sensor Handling

- **Removing the side air bag sensor or disconnecting the side air bag sensor connector with the ignition ON can activate the side air bag sensor and operate (deploy) the side air bag, which may cause serious injury. Before removing the side air bag sensor or disconnecting the side air bag sensor connector, always switch the ignition off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **If the side air bag sensor is subjected to shock or the sensor is disassembled, the side air bag may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the side air bag sensor to shock or disassemble the sensor.**
- **Because a sensor is built into the side air bag sensor, once the air bag has operated (deployed) due to a collision or other causes, the side air bag sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the side air bag sensor is reused, the side air bag may not operate (deploy) normally, which could result in a serious accident. Always replace the side air bag sensor with a new one. The side air bag sensor cannot be bench-checked or self-checked.**

Pre-tensioner Seat Belt Inspection

- **Inspecting a pre-tensioner seat belt using a tester can operate (deploy) the pre-tensioner seat belt, which may cause serious injury. Do not use a tester to inspect a pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the pre-tensioner seat belt for malfunctions.**

2014 - Mazda3 - Restraints

AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]

Air Bag System Component Disassembly

- **Disassembling the air bag system components could cause it to not operate (deploy) normally. Never disassemble any air bag system components.**

Air Bag Module, Pre-tensioner Seat Belt Handling

- **Oil, grease, or water on the air bag modules may cause the air bags to fail to operate (deploy) in an accident. Never allow oil, grease, or water to get on the air bag modules.**
- **Inserting a screwdriver or similar object into the connector of an air bag module or pre-tensioner seat belt may damage the connector and cause the air bag module or pre-tensioner seat belt to operate (deploy) improperly, which may cause serious injury. Never insert any foreign objects into the air bag module or pre-tensioner seat belt connectors.**

NO GOOD

Air Bag Module, Pre-tensioner Seat Belt Reuse

- **Even if an air bag module or pre-tensioner seat belt does not operate (deploy) in a collision and does not have any external signs of damage, it may have been damaged internally, which may cause improper operation. Before reusing a live (undeployed) air bag module or pre-tensioner seat belt always use the on-board diagnostic to diagnose the air bag module or pre-tensioner seat belt to verify that they have no malfunction.**

Air Bag Wiring Harness Repair

- **Incorrectly repairing an air bag wiring harness can accidentally operate (deploy) the air bag modules or pre-tensioner seat belts. If a problem is found in the air bag wiring harness, always replace the wiring harness with a new one.**

NO GOOD

2014 - Mazda3 - Restraints

DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

NOTE:

- The driver-side air bag module is installed to the steering wheel by the following connections.
  - Driver-side air bag module tab A and steering wheel hook A
  - Driver-side air bag module tab B and steering wheel hook B
  - Driver-side air bag module tab C and steering wheel hook C
  - Spring and steering wheel hook D
  - Spring and steering wheel hook E

DRIVER-SIDE AIR BAG MODULE SIDE

STEERING WHEEL SIDE

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Lower the steering wheel to the bottommost position.

4. Pull the steering wheel to furthest position rearward.

5. Verify the service hole on the back side of the steering wheel.

6. Insert the tool from the service hole.

Recommended tool

- TORX driver (T30 (diam. 6))

7. Insert the tool in the direction of the arrow shown in the figure and disengage driver-side air bag module tab A from steering wheel hook A.

8. Rotate the steering wheel until the service hole can be seen from behind the steering wheel.

9. Insert the tool from the service hole.

10. Insert the tool in the direction of the arrow shown in the figure and disengage driver-side air bag module tab B from steering wheel hook B.

NOTE:

- By moving the tool, the spring is pressed at the same time allowing the spring to be removed from steering wheel hook D.

11. Rotate the steering wheel until the service hole can be seen from behind the steering wheel.

12. Insert the tool from the service hole.

CAUTION:

- The driver-side air bag module could be damaged if it is dropped while it is completely disengaged from the steering wheel. Hold the driver-side air bag module securely with a hand while it is completely disengaged.

13. Insert the tool in the direction of the arrow shown in the figure and disengage driver-side air bag module tab C from steering wheel hook C.

NOTE:

- By moving the tool, the spring is pressed at the same time allowing the spring to be removed from steering wheel hook E.

14. Remove the air bag module from the steering wheel.

15. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

16. Disconnect the air bag module connector.
17. Disconnect the horn switch connector.
18. Remove the driver-side air bag module.

2014 - Mazda3 - Restraints

DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

CAUTION:

- If the driver-side air bag module is connected with the air bag module wiring harness and the horn switch wiring harness crossing over each other, the wiring harnesses could become tangled and damaged. When connecting the connectors, be careful that the wiring harnesses are not crossed over each other.

1. Point the upper side of the driver-side air bag module towards the steering wheel and connect the following connectors as shown in the figure.

- Air bag module connector.

- Horn switch connector

2. Rotate the driver-side air bag module counterclockwise 180 degrees.

3. Align the driver-side air bag module pin with the steering wheel hole.

DRIVER-SIDE AIR BAG MODULE SIDE

STEERING WHEEL SIDE

4. Press the pin of the driver-side air bag module until a click sound is heard.

5. Verify that the quick release connector is securely attached by lightly pulling the driver-side air bag module.

6. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Switch the ignition ON (engine off or on).

8. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.

- If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

NOTE:

- When removing the passenger-side air bag module, perform the procedure in the posture shown in the figure.

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   d. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   e. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   f. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

4. Remove the cap.

5. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.
6. Disconnect the passenger-side air bag module connector.
7. Remove the fastener.

8. Remove the nuts.

9. Remove the brackets.

10. Remove the screws.

11. Move the passenger-side air bag module in the direction of arrow (2) shown in the figure and detach guide A from the dashboard while spreading the dashboard in the direction of arrow (1).

12. While avoiding area A shown in the figure, pull the front side of the passenger-side air bag module in the direction of the arrows shown in the figure (3).

13. Move the passenger-side air bag module in the direction of the arrow (4) and detach guides B from the dashboard (5).

14. Remove the passenger-side air bag module (6).

2014 - Mazda3 - Restraints

PASSENGER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

1. Install guide A to the dashboard (1).

2. Press the passenger-side air bag module in the direction of the arrow shown in the figure and attach guides B (2).
3. Install the screws.

4. Install the brackets.

5. Install the nuts.

6. Install the fastener.

7. Connect the passenger-side air bag module connector.

8. Install the cap with the arrow pointing toward the front.

9. Install the following parts:

a. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

b. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

c. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

d. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

e. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

f. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

10. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Switch the ignition ON (engine off or on).

12. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

- If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

SIDE AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
- If the side air bag module is installed with debris in the seat back, the foreign material may be scattered when the side air bag module operates (deploys), causing injury. Verify that there is no foreign material in the seat back before installing the side air bag module.

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
4. Remove the seat back trim and the seat back pad. (See **FRONT SEAT BACK TRIM REMOVAL/INSTALLATION**.)
5. Partially peel back the trim and remove the hook.

6. Disconnect the side air bag module connector.

7. Remove the side air bag module wiring harness from the hook.

8. Remove the band.

9. Remove the nuts.

10. Remove the side air bag module.

11. Install in the reverse order of removal.

12. Switch the ignition ON (engine off or on).

13. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Sunroof seaming welt (with sunroof system) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)
   b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   d. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
4. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
5. Remove the following parts:
   a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)
   c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   h. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)
   i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
6. Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)
7. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

BOLT : **9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}**

8. Disconnect the connector.
9. Remove the clip. (See **Clip Removal Note**.)
10. Remove the bolts.
11. Pull guide A, B, C, D and E in the direction shown in the figure and remove it from the body.
12. Remove the curtain air bag module.
13. Install in the reverse order of removal.
14. Switch the ignition ON (engine off or on).
15. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.
    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Clip Removal Note

1. Pull out the pin with flathead screwdriver as shown in the figure.

2. Insert a flathead screwdriver into shown in the figure.

3. While pulling the curtain air bag in the direction of the arrow shown in the figure (1), detach tabs by prying with a flathead screwdriver in the direction of the arrow (2) (3).

4. Remove the clip from the body.

2014 - Mazda3 - Restraints

CRASH ZONE SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the crash zone sensor improperly can accidentally deploy the air bags and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the crash zone sensor. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
4. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
5. Remove the nut.

6. Remove the cover.
7. Remove the bolt.

8. Disconnect the connector. (See **Connector Disconnect Note**.)

9. Remove the crash zone sensor.

10. Install in the reverse order of removal.

11. Switch the ignition ON (engine off or on).

12. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

- If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Connector Disconnect Note

1. Press the area (1) indicated by the arrow and slide it as shown in the figure (2).

2. Lift up the location shown in the figure using a tape-wrapped flathead screwdriver (3) and disconnect the connector (4).

2014 - Mazda3 - Restraints

SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the SAS control module or air bag module improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
- If the connector is connected and the ignition switch is turned to the ON position with the SAS control module not secured completely using the installation nuts, the SAS control module may detect a degree of impact even when something contacts it lightly, deploying the air bag module and pre-tensioner seat belt accidentally.
- If the DSC related parts sensor initialization procedure is not completed, it could result in an unexpected accident due to the DSC being inoperative. Therefore, after the SAS control module is replaced, always perform the DSC related parts sensor initialization procedure to ensure proper DSC operation.
- If configuration is not performed when the SAS control module is replaced with a new one, the vehicle specification information is not stored in the SAS control module and the system will not operate normally.

CAUTION:

- When replacing the SAS control module, always perform the configuration procedure before removing the SAS control module. If the configuration is not performed and the SAS control module is removed, DTC B0003:53 will be displayed.
- When performing configuration, it is necessary to read the vehicle specification information from the SAS control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the SAS control module. The vehicle specification information is temporarily stored in the M-MDS.

NOTE:

- The SAS control module prior to replacement stores the vehicle specification information.
- A new SAS control module does not store any vehicle specification information.
- If the vehicle specification information from the SAS control module prior to replacement cannot be read, perform the configuration using As-Built data.

1. Perform SAS control module configuration when replacing it. (See **SAS CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2. Switch the ignition off.

3. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the following parts:

   a. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   b. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

5. Remove the parking brake lever. (See **PARKING BRAKE LEVER REMOVAL/INSTALLATION**.)

6. Remove the bolts.

BOLT : **19—25 {2.0—2.5, 15—18} N·m {kgf·m, ft·lbf}**

7. Set the bracket out of the way.

8. Remove the nuts.

9. Remove the SAS control module.

10. Disconnect the connectors.

11. Install in the reverse order of removal.

12. Switch the ignition ON (engine off or on).

13. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

- If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

14. Perform the DSC related parts sensor initialization procedure (only when replacing the SAS control module with a new one). (See **DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE**.)

NOTE:

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the SAS control module. (See **SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

SAS CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION) [STANDARD DEPLOYMENT CONTROL SYSTEM]

NOTE:

- When performing configuration, it is necessary to read the vehicle specification information from the SAS control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the SAS control module. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

   a. Select “Programmable Module Installation”.

   b. Select “RCM”.

4. Perform the configuration according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the SAS control module and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Restraints

SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA) [STANDARD DEPLOYMENT CONTROL SYSTEM]

NOTE:

- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

   a. Select “As-Built”.

   b. Select “RCM”.

4. Perform the as-built according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the SAS control module and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Restraints

SIDE AIR BAG SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- Handling the side air bag sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the side air bag sensor. (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
4. Remove the bolt.

5. Disconnect the connector. (See **Connector Disconnect Note**.)
6. Remove the side air bag sensor.
7. Install in the reverse order of removal.
8. Switch the ignition ON (engine off or on).
9. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

- If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Connector Disconnect Note

1. Press the area (1) indicated by the arrow and slide it as shown in the figure (2).

2. Lift up the location shown in the figure using a tape-wrapped flathead screwdriver (3) and disconnect the connector (4).

2014 - Mazda3 - Restraints

CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]

CAUTION:

- If the disc on the combination switch is deformed or has foreign matter adhering to it, performance of the steering angle sensor may be reduced, causing abnormal operation. When handling the clock spring, be careful not to deform the disc and make sure there is no foreign matter on it.

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the driver side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

5. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

6. Disconnect the clock spring connector.

7. Disconnect the steering angle sensor connector. (with steering angle sensor)

8. Remove the tab direction of the arrow shown in the figure and remove the clock spring.

9. Install in the reverse order of removal. (See **Clock Spring Installation Note**.)

10. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

    - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Clock Spring Installation Note

CAUTION:

- If the clock spring is not adjusted, the spring wire in the clock spring will break due to overtension when the steering wheel is turned. Always adjust the clock spring after installing it.
- Adjust the clock spring after installing it. (See **CLOCK SPRING ADJUSTMENT [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Restraints

CLOCK SPRING ADJUSTMENT [STANDARD DEPLOYMENT CONTROL SYSTEM]

1. Set the front wheels straight ahead.

CAUTION:

- The clock spring will break if over wound. Do not forcibly turn the clock spring.

2. Turn the clock spring clockwise until it stops.

3. Turn the clock spring counterclockwise **approx. 2 turns**.

4. Align the mark on the clock spring with the mark on the outer housing.

NOTE:

- After adjusting the alignment marks, the guides can be verified in the viewing slots shown

in the figure.

2014 - Mazda3 - Restraints

CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]

1. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the driver side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)(See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

3. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

4. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

5. Remove the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

6. Verify that the continuity is as indicated in the table.

   - If not as indicated in the table, replace the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

NOTE:

- When the vehicle-side connector for the clock spring is disconnected, terminals 2A and 2B are shorted to prevent unexpected operation (deployment) of the air bag module.

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Do not dispose of a live (undeployed) air bag module or pre-tensioner seat belt. If the SSTs (Deployment tool and Adapter harness) are not available, consult the nearest Mazda representative for assistance.

CAUTION:

- Deploying the air bag modules and pre-tensioner seat belts inside the vehicle may cause damage to the vehicle interior. When the vehicle is not to be scrapped, always deploy the air bag modules and pre-tensioner seat belts outside the vehicle.
- If the vehicle is to be scrapped, or when disposing of any air bag modules or pre-tensioner seat belts, operate (deploy) them inside the vehicle by following the deployment procedure below and using the **SST (Deployment tool)**.
- When disposing of an operated (deployed) air bag module and pre-tensioner seat belt, refer to “AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES”.

Deployment Procedure for Inside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See **INSPECTION OF SST (DEPLOYMENT TOOL) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2. Move the vehicle to an open space, away from strong winds, and close all of the vehicle doors and windows.

3. Switch the ignition off.

4. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Follow the procedure below for operating (deploying) the applicable air bag module or pre-tensioner seat belt.

NOTE:

- The connector part of the air bag module and the SST (adapter wiring harness) burns out from the high heat when the inflator is operated (deployed).

Driver-side Air Bag Module

1. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL**

[STANDARD DEPLOYMENT CONTROL SYSTEM].)

2. Connect the **SST (Adapter harness)** to the driver-side air bag module as shown in the figure.

3. Install the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

5. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

6. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

8. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.

9. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Passenger-side Air Bag Module

1. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL / INSTALLATION**.)

2. Remove the cap.

3. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

4. Disconnect the passenger-side air bag module connector.

5. Connect the **SST (Adapter harness)** to the passenger-side air bag module as shown in the figure.

6. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

7. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

8. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

10. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Side Air Bag Module

1. Disconnect the front seat connector.

2. Connect the **SST (Adapter harness)** to the front seat connector as shown in the figure.
3. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

4. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

5. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

6. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

7. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

8. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Curtain Air Bag Module

1. Remove the following parts:

   a. Sunroof seaming welt (with sunroof) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)

   b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

d. Front map light (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

l. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

m. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

n. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

2. Peel back the headliner.

3. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

4. Disconnect the curtain air bag module connector.

5. Connect the **SST (Adapter harness)** to the curtain air bag module as shown in the figure.

6. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

7. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

8. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

10. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Pre-tensioner Seat Belt

1. Remove the following parts:

   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

2. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

3. Disconnect the pre-tensioner seat belt connector.

4. Connect the **SST (Adapter harness)** as shown in the figure.

5. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

6. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

7. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

8. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

9. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

WARNING:

- The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.

10. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Deployment Procedure for Outside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See **INSPECTION OF SST (DEPLOYMENT TOOL) [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2. Switch the ignition off.

3. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Follow the procedure below for operating (deploying) the applicable air bag module or pre-tensioner seat belt.

NOTE:

- The connector part of the air bag module and the SST (adapter wiring harness) burns out from the high heat when the inflator is operated (deployed).

Driver-side Air Bag Module

1. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2. Wrap the wiring harness (cross section **1.25 mm^2 {0.002 in^2} or more**) at least four times around the position shown in the figure for the driver-side air bag module.

3. Connect the **SST (Adapter harness)** to the driver-side air bag module.

4. Place the driver-side air bag module on the center of the tire wheel with the padded surface facing up. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the wheel and the bolt installation holes of the air bag module **at least 4 times**.

WARNING:

- If the air bag module is not properly installed to the tire wheel, serious injury may occur when the module is operated (deployed). When installing the air bag

module to the tire wheel, make sure the padded surface is facing up.

5. Stack three tires without wheels on top of the tire with the driver-side air bag module, and then stack another tire with a wheel on the very top.

6. Secure the tires with wire.

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

11. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Passenger-side Air Bag Module

1. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   d. Front scuff plate (passenger-side) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   e. Front side trim (passenger-side) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   f. Lower panel (passenger-side) (See **LOWER PANEL REMOVAL/INSTALLATION**.)

2. Remove the passenger-side air bag module. (See **PASSENGER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

3. Connect the **SST (Adapter harness)** to the passenger-side air bag module as shown in the figure.

4. Place the padded surface of the passenger-side air bag module facing the center of the tire as shown in the figure. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

WARNING:

- If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.

5. Stack the tire with the passenger-side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the passenger-side air bag module, and then stack another tire with a wheel on the very top.

6. Secure the tires with wire.

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

11. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Side Air Bag Module

1. Remove the following parts:

   a. Front seat (See **FRONT SEAT REMOVAL/INSTALLATION**.)

   b. Front seat back trim and pad (See **FRONT SEAT BACK TRIM REMOVAL/INSTALLATION**.)

2. Remove the side air bag module. (See **SIDE AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

3. Install the nuts.

4. Connect the **SST (Adapter harness)** to the side air bag module as shown in the figure.

5. Put the side air bag module inside the tire and secure it to the tire by wrapping a wire (cross section of **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt **at least 4 times**.

WARNING:

- If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.

6. Stack the tire with the side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the side air bag module, and then stack another tire with a wheel on the very top.

7. Secure the tires with wire.

8. Connect the **SST (Deployment tool)** to the **SST (Adapter harness).**

9. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

10. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

11. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

12. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

13. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Curtain Air Bag Module

1. Remove the following parts:

   a. Sunroof seaming welt (with sunroof system) (See **SUNROOF UNIT REMOVAL/INSTALLATION**.)

   b. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   c. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   d. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   e. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   f. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   h. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

   i. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

   j. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

   k. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

2. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

3. Remove the following parts:

   a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

   b. Upper panel (See **UPPER PANEL REMOVAL**.)(See **UPPER PANEL INSTALLATION**.)

   c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   h. CD player (with CD player) (See **CD PLAYER REMOVAL**.)(See **CD PLAYER INSTALLATION**.)

   i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

4. Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)

5. Remove the curtain air bag module. (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

6. Cut off the air bag part of the curtain air bag module at the position shown in the figure.

WARNING:

- Never crush the pipe on the side where it is cut. If it is crushed completely, the interior pressure of the pipe will build up and can cause it to explode during air bag module operation (deployment).

7. Disconnect the curtain air bag module connector.

8. Connect the **SST (Adapter harness)** to the curtain air bag module as shown in the figure.

9. Secure the curtain air bag module to the tire, by wrapping a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

WARNING:

- If the air bag module is not properly installed to the tire, serious injury may occur when the module is operated (deployed). Always install the air bag module securely.

10. Stack the tire with the curtain air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the curtain air bag module, and then stack another tire with a wheel on the very top.

11. Secure the tires with wire.

12. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

13. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

14. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

15. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

16. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

WARNING:

- The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.

17. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

Pre-tensioner Seat Belt

1. Remove the following parts:

   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

2. Remove the front seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

3. Connect the **SST (Adapter harness)** as shown in the figure.

4. Put the pre-tensioner seat belt inside the tire and secure it to the tire by wrapping a wire (cross section of **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times**.

WARNING:

- If the pre-tensioner seat belt is not properly installed to the tire, serious injury may occur when the pre-tensioner part is operated (deployed). When installing the pre-tensioner seat belt to the tire, verify that the pre-tensioner part is inside the tire.

5. Stack the tire with the pre-tensioner seat belt on to of two tires without wheels. Stack a tire without a wheel on top of the tire with the pre-tensioner seat belt, and then stack another tire with a wheel on the very top.

6. Secure the tires with wire.

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.

8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.

9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.

10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

11. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

WARNING:

- The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

2014 - Mazda3 - Restraints

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES [STANDARD DEPLOYMENT CONTROL SYSTEM]

WARNING:

- A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Always refer to the “AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES” and dispose of air bag modules and pre-tensioner seat belts in a deployed condition.
- The air bag modules and the pre-tensioner seat belts are very hot immediately after they are deployed. You can be burned. Do not touch an air bag module and pre-tensioner seat belt for at least 15 min after deployment.
- Pouring water on the deployed air bag module and pre-tensioner seat belt is dangerous. The water will mix with the residual gases to form a gas that can make breathing difficult. Do not pour water on the deployed air bag module and pre-tensioner seat belt.
- The deployed air bag module or pre-tensioner seat belt may contain deposits of sodium hydroxide, a caustic byproduct of the gas-generated combustion. If this substance gets into your eyes or on your hands, it can cause irritation and itching. When handling the deployed air bag module and pre-tensioner seat belt, wear gloves and safety glasses.

1. Remove the deployed air bag module or pre-tensioner seat belt.

2. Put the air bag module or pre-tensioner seat belt in a plastic bag, seal the bag, and then dispose of it.

2014 - Mazda3 - Restraints

INSPECTION OF SST (DEPLOYMENT TOOL) [STANDARD DEPLOYMENT CONTROL SYSTEM]

1. Before using the **SST** (49 H066 002), inspect its operation.

Inspection Procedure

1. Follow the steps below to inspect the **SST** (49 H066 002).

- If not as indicated in the table, replace the **SST** (49 H066 002) because it has a malfunction.

WARNING:

- Do not use a malfunctioning SST (49 H066 002), otherwise it could cause the air bag module or pre-tensioner seat belt to accidentally operate (deploy).

CAUTION:

- Because the permissible voltage for the SST (49 H066 002) is 12 V, do not connect a 24 V power source because it will damage the SST. Always connect only a 12 V power source.

Step	Inspection procedure	Light condition	
		Green	Red
1	Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.	On	Off
2	Connect connectors A and B.	Off	On

3	Press the activation switch.	On	Off

2014 - Mazda3 - Restraints

SEAT BELT LOCATION INDEX

1	Rear seat belt (See **REAR SEAT BELT REMOVAL/INSTALLATION**.) (See **SEAT BELT INSPECTION**.)
2	Rear center seat belt (See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.) (See **SEAT BELT INSPECTION**.)
3	Adjuster anchor (See **ADJUSTER ANCHOR REMOVAL/INSTALLATION**.)
4	Front seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) (See **SEAT BELT INSPECTION**.)

5	Front buckle (See **FRONT BUCKLE REMOVAL/INSTALLATION**.) (See **BUCKLE SWITCH INSPECTION**.)
6	Rear buckle (See **REAR BUCKLE REMOVAL/INSTALLATION**.) (See **BUCKLE SWITCH INSPECTION**.)

2014 - Mazda3 - Restraints

FRONT SEAT BELT REMOVAL/INSTALLATION

WARNING:

- Handling the front seat belt (pre-tensioner seat belt) improperly can accidentally deploy the pre-tensioner seat belt, which may seriously injure you. Read the air bag system service warnings and cautions before handling the front seat belt.

  (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

  (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

  (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

  (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

- The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable avoiding excessive impact to the lower part of the B-pillar (with side air bag sensor No.1).

CAUTION:

- If the retractor is disassembled, it will not operate correctly due to looseness and excessive play of the internal parts, therefore, do not disassemble the retractor.

Front Seat Belt With Lap Pre-tensioner Seat Belt

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the fastener.

4. Remove the cover.

5. Remove the following parts:

   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

6. Remove the adjuster anchor cover. (See **Adjuster Anchor Cover Removal Note**.)

7. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

8. Disconnect the lap pre-tensioner seat belt connector.

9. Disconnect the pre-tensioner seat belt connector.

10. Remove bolt A.

11. Remove bolt B.

12. Remove the lap pre-tensioner seat belt.

13. Remove the pre-tensioner seat belt.

14. Remove the front seat belt.

15. Install in the reverse order of removal.

16. Switch the ignition ON (engine off or on).

17. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.

    - If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Front Seat Belt Without Lap Pre-tensioner Seat Belt

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

4. Remove the adjuster anchor cover. (See **Adjuster Anchor Cover Removal Note**.)

5. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.

6. Disconnect the pre-tensioner seat belt connector.

7. Remove the cover.

8. Remove bolt A.

9. Remove bolt B.

10. Remove the pre-tensioner seat belt.
11. Remove the front seat belt.
12. Install in the reverse order of removal.
13. Switch the ignition ON (engine off or on).
14. Verify that the air bag system warning light illuminates for **approx. 6 s** and turns off.
    - If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See **FLOWCHART [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Adjuster Anchor Cover Removal Note

- The adjuster anchor cover is installed to the adjuster anchor by engaging the tab.

1. Press the adjuster anchor cover in the directions of arrows (1) shown in the figure and pull it in the direction of arrow (2).

2. Remove the adjuster anchor cover.

2014 - Mazda3 - Restraints

ADJUSTER ANCHOR REMOVAL/INSTALLATION

WARNING:

- The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable or work carefully, avoiding excessive impact to the lower part of the B-pillar (with side air bag sensor No.1).

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Set the adjuster to the lowest position.

4. Remove the adjuster anchor cover. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

5. Remove the following parts:

   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

   d. Front seat belt upper anchor installation bolt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

   e. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

6. Remove bolt A.

7. Remove the bracket.

8. Remove bolt B.

9. Remove the guide.

10. Remove the adjuster anchor.

11. Install in the reverse order of removal.

ADJUSTER ANCHOR REMOVAL/INSTALLATION

2014 - Mazda3 - Restraints

REAR SEAT BELT REMOVAL/INSTALLATION

CAUTION:

- If the retractor is disassembled, it will not operate correctly due to looseness and excessive play of the internal parts, therefore, do not disassemble the retractor.

4SD

1. Remove the rear seat belt from the guide.

2. Remove the following parts:
   a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
   d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   e. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   f. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)
3. Remove the bolts.

BOLT : **38—62 N·m {3.9—6.3 kgf·m, 29—45 ft·lbf}**

4. Remove the rear seat belt in the direction of the arrow.
5. Install in the reverse order of removal.

5HB

1. Remove the rear seat belt from the guide.

2. Remove the following parts:

a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

c. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

d. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

e. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

4. Remove the trunk side upper trim. (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

5. Remove the bolts.

BOLT : **38—62 N·m {3.9—6.3 kgf·m, 29—45 ft·lbf}**

6. Remove the rear seat belt in the direction of the arrow.

7. Install in the reverse order of removal.

2014 - Mazda3 - Restraints

REAR CENTER SEAT BELT REMOVAL/INSTALLATION

CAUTION:

- If the retractor is disassembled, it will not operate correctly due to looseness and excessive play of the internal parts, therefore, do not disassemble the retractor.

4SD (three-point type rear center seat belt)

1. Remove the following parts:
   a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
   d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   e. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   f. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)
2. Remove the bolts.

BOLT : **38—62 N·m {3.9—6.3 kgf·m, 29—45 ft·lbf}**

3. Remove the rear center seat belt with the rear buckle (LH).
4. Install in the reverse order of removal. (See **Rear Center Seat Belt Installation Note**.)

4SD (two-point type rear center seat belt)

1. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
2. Remove the bolt.

BOLT : **38—62 N·m {3.9—6.3 kgf·m, 29—45 ft·lbf}**

3. Remove the rear center seat belt with the rear buckle (LH).
4. Install in the reverse order of removal. (See **Rear Center Seat Belt Installation Note**.)

5HB

NOTE:

- The rear center seat belt is building into the rear seat back.

1. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
2. Remove the bolt.

BOLT : **38—62 N·m {3.9—6.3 kgf·m, 29—45 ft·lbf}**

3. Remove the rear seat back frame. (See **REAR SEAT BACK FRAME REMOVAL/INSTALLATION**.)
4. Remove the rear center seat belt from the rear seat back frame.

5. Install in the reverse order of removal. (See **Rear Center Seat Belt Installation Note**.)

Rear Center Seat Belt Installation Note

1. After installing the rear center seat belt, place it as shown in the figure.

2014 - Mazda3 - Restraints

SEAT BELT INSPECTION

Belt

1. Verify that the belt is installed properly with no twists or kinks.
2. Verify that there is no damage to the seat belt and no deformation of the metal fittings.
    - If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

ELR (Emergency Locking Retractor)

Except rear center seat belt (5HB)

1. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.

    - If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)
2. Verify that the retractor locks when the belt is pulled quickly.
    - If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)
3. Remove the retractor. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT**

REMOVAL/INSTALLATION.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

4. While pulling the seat belt out, verify that the seat belt does not lock when the retractor is tilted slowly up to **15°** from the mounted position and locks when the retractor is tilted **40° or more.**

- If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

Rear center seat belt (5HB)

CAUTION:

- The rear center seat belt ELR only becomes operable after a certain amount of belt webbing is pulled out. For the ELR inspection, fasten the rear center seat belt to the rear buckle (center) and perform the inspection after pulling out the rear center seat belt 130 mm {5.12 in} (ELR operable condition). If the inspection is performed while the ELR is not in an operable condition, the integrity of the system cannot be determined.

1. Fasten the rear center seat belt to the rear buckle (center) and pull out the rear center seat belt **130 mm {5.12 in}**.

2. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.

- If there is any malfunction, replace the rear center seat belt. (See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

3. Verify that the retractor locks when the belt is pulled quickly.

- If there is any malfunction, replace the rear center seat belt. (See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

4. Remove the retractor. (See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

5. While pulling the seat belt out, make sure that the seat belt does not lock when the retractor is tilted slowly up to **15°** from the mounted position and locks when the retractor is tilted **40° or more.**

- If there is any malfunction, replace the rear center seat belt. (See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

ALR (Automatic Locking Retractor)

1. Pull the belt out fully to change the lock mode from ELR to ALR.

2. Verify that the retractor makes a clicking sound as the belt slowly retracts. If no sound is heard, the lock mode has not changed to ALR. If necessary, repeat Step 1.

- If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

3. Verify that the retractor locks when pulled.

- If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

4. Verify that the lock mode changes to ELR when the belt is fully pulled out.

- If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

Load Limiter Retractor

WARNING:

- When the load limiter operates, the belt and anchor rub against each other strongly leaving wear tracks. If the seat belt is used in this state, the seat belt will not function at its full capability and there is the possibility of serious injury to passengers. Always replace the seat belt once the load limiter operates.

1. If the vehicle has been subjected to a shock in an accident, pull the belt from the retractor and confirm that there are no wear tracks (the load limiter has not operated) by visually inspecting and feeling the belt.

- If there is any malfunction, replace the seat belt. (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR SEAT BELT REMOVAL/INSTALLATION**.)(See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)

SEAT BELT INSPECTION

2014 - Mazda3 - Restraints

FRONT BUCKLE REMOVAL/INSTALLATION

Driver-side

1. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

3. Disconnect the front buckle connector.

4. Remove the bolt.

5. Remove the front buckle.

6. Install in the reverse order of removal.

Passenger-side (With Buckle Switch)

1. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

3. Detach the clip.

4. Disconnect the connector.

5. Remove the bolt.

6. Remove the front buckle.

7. Install in the reverse order of removal.

Passenger-side (Without Buckle Switch)

1. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

3. Remove the bolt.

4. Remove the front buckle.

5. Install in the reverse order of removal.

2014 - Mazda3 - Restraints

REAR BUCKLE REMOVAL/INSTALLATION

1. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
2. Remove the bolts.

BOLT : **38—62 N·m {3.9—6.3 kgf·m, 29—45 ft·lbf}**

3. Remove the rear buckle (RH) and rear buckle (LH).
4. Install in the reverse order of removal. (See **Rear Buckle Installation Note**.)

Rear Buckle Installation Note

1. After installing the rear buckle, place it as shown in the figure.

REAR BUCKLE REMOVAL/INSTALLATION

2014 - Mazda3 - Restraints

BUCKLE SWITCH INSPECTION

Driver-side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

4. Remove the front buckle. (See **FRONT BUCKLE REMOVAL/INSTALLATION**.)

5. Inspect for continuity between the buckle switch terminals using a tester.

- If not as indicated in the table, replace the front buckle. (See **FRONT BUCKLE REMOVAL/INSTALLATION**.)

○—○ : Continuity

Seat belt	Terminal	
	A	B
Fastened		
Unfastened	○	○

Passenger-side (with buckle switch)

1. Since the buckle switch cannot be inspected separately, perform air bag DTC inspection.

(See **DTC B0052:09/B0052:11/B0052:14 [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Next >

2014 - Mazda3 - Body and Accessories

FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the AFS control module. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “AFS/ALM”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the AFS control module. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)

Snapshot Data

NOTE:

- The AFS control module stores the following two types of snapshot data (vehicle information) when a DTC is detected and displays them in the M-MDS.
  - Vehicle information detected by AFS control module
  - Vehicle information detected by instrument cluster and received by AFS control module via CAN signal
- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data				Corresponding

item	Unit		Data contents	Data read/use method	data monitor items
AAT	°C	°F	Ambient temperature	—	—
APP_STATUS	Accelerator Pedal Off/Under20%/Over20%/FAIL		Accelerator pedal position status	—	—
CFG_STATUS	Config Complete/Not Configured/Config Error		Instrument cluster configuration status	—	—
ECT_STATUS	Under 0 degrees C/0 - Under 80 degrees C/Over 80 degrees C/FAIL		Engine coolant temperature status	—	—
IC_VPWR	V		Instrument cluster power supply voltage	• The AFS control module constantly receives the power supply voltage value of the instrument cluster sent via CAN signal from the instrument cluster. • If a DTC is detected, the AFS control module records the power supply voltage of the instrument cluster when the DTC was detected, and it is displayed in the M-MDS.	VPWR*1
IG-ON_TIMER	hh:mm:ss*2		Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed	• The AFS control module constantly receives the elapsed time since the ignition was switched ON (engine off or on) sent via CAN signal from the instrument cluster. • If a DTC is	—

		time since the ignition was switched ON (engine off or on).	detected, the AFS control module records the elapsed time since the ignition was switched ON (engine off or on) when the DTC was detected, and it is displayed in the M-MDS.	
PWR_MODE_KEY	Key Out/Key Recently Out (Position 0)/Accessory (Position 1)/Post Ignition (Position 2)/Ignition On (Position 2)/Running (Position 2)/Running - Starting	• Key Out: Ignition switched off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was switched off • Accessory (Position 1): Ignition is switched to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since ignition was switched ON (engine off or on) • Ignition On (Position 2): Ignition switched ON (engine off) • Running	• The AFS control module constantly receives the ignition switch status sent via CAN signal from the instrument cluster. • If a DTC is detected, the AFS control module records the ignition switch status when the DTC was detected, and it is displayed in the M-MDS.	—

		(Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition		
RPM_STATUS	Engine Stop/Under1500rpm/Over1500rpm/FAIL	Engine speed status	• The AFS control module constantly receives the engine speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the AFS control module records the engine speed when the DTC was detected, and it is displayed in the M-MDS.	TACHOMTR*1
SHIFT_STATUS	P/N/D/R/FAIL	Selector lever position status	• The AFS control module constantly receives the selector lever position sent via CAN signal from the instrument cluster. • If a DTC is detected, the AFS control module records the selector lever position when the DTC was detected, and it is displayed in the M-MDS.	—

TOTAL_DIST	km	Miles	Accumulated total traveled distance from completion of vehicle until AFS control module detects DTC (Odometer value in instrument cluster)	The total traveled distance from which the AFS control module detects DTCs to the present can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snapshot data item TOTAL_DIST. • Subtract 2 from 1.	—
TOTAL_TIME	hh:mm:ss*2		Accumulated total elapsed time since vehicle completion until AFS control module detects a DTC **NOTE:** • When the ROOM fuse is removed, and the ignition is switched off, the time is not included in the elapsed time.	The elapsed time from which the AFS control module detects DTCs to the present can be calculated by performing the following procedure. • Verify the instrument cluster PID item TOTAL_TIME. • Verify the snapshot data item TOTAL_TIME. • Subtract 2 from 1.	TOTAL_TIME*1
VPWR	V		AFS control module power supply voltage	—	VPWR_IG
VSPD_STATUS	Stop/0-10km/h/Over10km/h/FAIL		Vehicle speed status	• The AFS control module constantly receives the vehicle speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the AFS control module records the vehicle speed when the DTC was	SPEEDOMTR*1

			detected, and it is displayed in the M-MDS.

The seconds may be indicated after the decimal point.

2014 - Mazda3 - Body and Accessories

CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “AFS/ALM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
8. Verify that no DTCs are displayed.

CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

2014 - Mazda3 - Body and Accessories

DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

NOTE:

- AFS control module flashes the AFS OFF indicator light as follows if there is a malfunction in the system.

×: Applicable—: Not applicable

DTC No.	AFS OFF indicator light	Description	Fail-safe function	Drive cycle	Self test type*1	Memory function	Page
B1041:54	Flash (Pattern 2)	Headlight auto leveling system initialization error	×	—	D	×	(See **DTC B1041:54 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)

C: CMDTC self test, D: ODDTC self test

2014 - Mazda3 - Body and Accessories

DTC B1041:54 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Headlight auto leveling system initialization error
Detection condition	• Headlight auto leveling system initialization is not performed with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• Headlight auto leveling system initialization is not performed. • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION** • Perform the headlight auto leveling system initialization. (See **HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Retrieve the AFS control module DTCs using the M-	Yes	Perform the headlight auto leveling system initialization again, then go to the next step. (See **HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION**.)
		No	Go to Step 3.

	MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1044:01 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Auto leveling sensor circuit malfunction
Detection condition	• AFS control module detected the auto leveling sensor circuit voltage of **0.25 V or less** or **4.75 V or more** for **10 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• Auto leveling sensor connector or terminal malfunction • AFS control module connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ AFS control module terminal I—Auto leveling sensor terminal C ▪ AFS control module terminal K—Auto leveling sensor terminal B ▪ AFS control module terminal C—Auto leveling sensor terminal A • Short to power supply in wiring harness between the following terminals: ▪ AFS control module terminal I—Auto leveling sensor terminal C ▪ AFS control module terminal K—Auto leveling sensor terminal B ▪ AFS control module terminal C—Auto leveling sensor terminal A • Open circuit in wiring harness between the following terminals: ▪ AFS control module terminal I—Auto leveling sensor terminal C ▪ AFS control module terminal K—Auto leveling sensor terminal B ▪ AFS control module terminal C—Auto leveling sensor terminal A • Auto leveling sensor malfunction • AFS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUTO LEVELING SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auto leveling sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

2	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN AUTO LEVELING SENSOR CIRCUIT** • Verify that the auto leveling sensor and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Auto leveling sensor terminal C ▪ Auto leveling sensor terminal B ▪ Auto leveling sensor terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal I—Auto leveling sensor terminal C • AFS control module terminal K—Auto leveling sensor terminal B • AFS control module terminal C—Auto leveling sensor terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN AUTO LEVELING SENSOR CIRCUIT** • Verify that the auto leveling sensor and AFS control module connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals:

	• Reconnect the negative battery cable.
	
	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	
	• Switch the ignition ON (engine off or on).
	
	• Measure the voltage at the following terminals (wiring harness-side):
	  ▪ Auto leveling sensor terminal C
	  ▪ Auto leveling sensor terminal B
	  ▪ Auto leveling sensor terminal A
	
	• Is the voltage **0 V**?
			• AFS control module terminal I—Auto leveling sensor terminal C
			
			• AFS control module terminal K—Auto leveling sensor terminal B
			
			• AFS control module terminal C—Auto leveling sensor terminal A
			
			If there is a common connector:
			
			• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply.
			
			• Repair or replace the malfunctioning part.
			
			If there is no common connector:
			
			• Repair or replace the wiring harness which has a short to power supply.
			
			Go to Step 7.

5	**INSPECT FOR OPEN CIRCUIT IN AUTO LEVELING SENSOR CIRCUIT** • Verify that the auto leveling sensor and AFS control module connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ AFS control module terminal I—Auto leveling sensor terminal C	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal I—Auto leveling sensor terminal C • AFS control module terminal K—Auto leveling sensor terminal B • AFS control module terminal C—Auto leveling sensor terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common**

	▪ AFS control module terminal K—Auto leveling sensor terminal B ▪ AFS control module terminal C—Auto leveling sensor terminal A • Is there continuity?		**connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**INSPECT AUTO LEVELING SENSOR** • Inspect the auto leveling sensor. (See **AUTO LEVELING SENSOR INSPECTION**.) • Is the auto leveling sensor normal?	Yes	Go to the next step.
		No	Replace the auto leveling sensor, then go to the next step. (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	[ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10A3:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Communication error with swivel actuator (LH)
Detection condition	• AFS control module received error signals from the swivel actuator (LH) **three times** continuously with the ignition switched ON (engine off or on). • AFS control module could not receive the signal from the swivel actuator (LH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator (LH) is stopped at the position when the malfunction is determined. • The swivel actuator (RH) is moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned **−0.6°** from where the malfunction is determined.
Possible cause	• Igniter (LH) poor connection • Front combination light (LH) connector or terminal malfunction • AFS control module connector or terminal malfunction • Open circuit in wiring harness between the following terminals: ▪ AFS control module terminal D—Front combination light (LH) terminal K ▪ AFS control module terminal F—Front combination light (LH) terminal J • Swivel actuator (LH) malfunction • AFS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IGNITER (LH) INSTALLATION CONDITION** • Verify the installation condition of the igniter (LH). (See **IGNITER REMOVAL/INSTALLATION**.) • Is the igniter (LH) installed correctly?	Yes	Go to the next step.
		No	Install the igniter (LH) correctly, then go to Step 6. (See **IGNITER REMOVAL/INSTALLATION**.)
2	**INSPECT FRONT COMBINATION LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Disconnect the front combination light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR OPEN CIRCUIT IN SWIVEL ACTUATOR (LH) CIRCUIT** • Verify that the front combination light (LH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ AFS control module terminal D—Front combination light (LH) terminal K ▪ AFS control module terminal F—Front combination light (LH) terminal J • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—Front combination light (LH) terminal K • AFS control module terminal F—Front combination light (LH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY SWIVEL ACTUATOR (LH) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Replace the front combination light (LH), then go to the next step. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10A3:87 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Communication error with swivel actuator (LH)
Detection condition	• AFS control module detected communication error with the swivel actuator (LH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator (LH) is stopped at the position when the malfunction is determined. • The swivel actuator (RH) is moved to the center, or the swivel actuators (LH) and (RH) are moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned **−0.6°** from where the malfunction is determined.
Possible cause	• Front combination light (LH) connector or terminal malfunction • AFS control module connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ AFS control module terminal D—Front combination light (LH) terminal K ▪ AFS control module terminal F—Front combination light (LH) terminal J • Short to power supply in wiring harness between the following terminals: ▪ AFS control module terminal D—Front combination light (LH) terminal K ▪ AFS control module terminal F—Front combination light (LH) terminal J • Open circuit in wiring harness between the following terminals: ▪ AFS control module terminal D—Front combination light (LH) terminal K ▪ AFS control module terminal F—Front combination light (LH) terminal J • Swivel actuator (LH) malfunction • AFS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT COMBINATION LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front combination light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

2	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN SWIVEL ACTUATOR (LH) CIRCUIT** • Verify that the front combination light (LH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Front combination light (LH) terminal K ▪ Front combination light (LH) terminal J • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—Front combination light (LH) terminal K • AFS control module terminal F—Front combination light (LH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN SWIVEL ACTUATOR (LH) CIRCUIT** • Verify that the front combination light (LH) and AFS control module connectors are disconnected. • Reconnect the negative	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—

	battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Front combination light (LH) terminal K ▪ Front combination light (LH) terminal J • Is the voltage **0 V**?		Front combination light (LH) terminal K • AFS control module terminal F—Front combination light (LH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
5	**INSPECT FOR OPEN CIRCUIT IN SWIVEL ACTUATOR (LH) CIRCUIT** • Verify that the front combination light (LH) and AFS control module connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ AFS control module terminal D—Front combination light (LH) terminal K ▪ AFS control	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—Front combination light (LH) terminal K • AFS control module terminal F—Front combination light (LH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

	module terminal F— Front combination light (LH) terminal J • Is there continuity?		Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY SWIVEL ACTUATOR (LH) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Replace the front combination light (LH), then go to the next step. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10A4:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Communication error with swivel actuator (RH)
Detection condition	• AFS control module received error signals from the swivel actuator (RH) **three times** continuously with the ignition switched ON (engine off or on). • AFS control module could not receive the signal from the swivel actuator (RH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator (RH) is stopped at the position when the malfunction is determined. • The swivel actuator (LH) is moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned **−0.6°** from where the malfunction is determined.

Possible cause	• Igniter (RH) poor connection
	• Front combination light (RH) connector or terminal malfunction
	• AFS control module connector or terminal malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ AFS control module terminal D—Front combination light (RH) terminal K
	  ▪ AFS control module terminal F—Front combination light (RH) terminal J
	• Swivel actuator (RH) malfunction
	• AFS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IGNITER (RH) INSTALLATION CONDITION** • Verify the installation condition of the igniter (RH). (See **IGNITER REMOVAL/INSTALLATION**.) • Is the igniter (RH) installed correctly?	Yes	Go to the next step.
		No	Install the igniter (RH) correctly, then go to Step 6. (See **IGNITER REMOVAL/INSTALLATION**.)
2	**INSPECT FRONT COMBINATION LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Disconnect the front combination light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR OPEN CIRCUIT IN SWIVEL ACTUATOR (RH) CIRCUIT** • Verify that the front combination light (RH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ AFS control module terminal D—Front combination light (RH) terminal K ▪ AFS control module terminal F—Front combination light (RH) terminal J • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—Front combination light (RH) terminal K • AFS control module terminal F—Front combination light (RH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY SWIVEL ACTUATOR (RH) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Replace the front combination light (RH), then go to the next step. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10A4:87 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Communication error with swivel actuator (RH)
Detection condition	• AFS control module detected communication error with the swivel actuator (RH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator (RH) is stopped at the position when the malfunction is determined. • The swivel actuator (LH) is moved to the center, or the swivel actuators (LH) and (RH) are moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned **−0.6°** from where the malfunction is determined.
Possible cause	• Front combination light (RH) connector or terminal malfunction • AFS control module connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ AFS control module terminal D—Front combination light (RH) terminal K ▪ AFS control module terminal F—Front combination light (RH) terminal J • Short to power supply in wiring harness between the following terminals: ▪ AFS control module terminal D—Front combination light (RH) terminal K ▪ AFS control module terminal F—Front combination light (RH) terminal J • Open circuit in wiring harness between the following terminals: ▪ AFS control module terminal D—Front combination light (RH) terminal K ▪ AFS control module terminal F—Front combination light (RH) terminal J • Swivel actuator (RH) malfunction • AFS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT COMBINATION LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front combination light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

2	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN SWIVEL ACTUATOR (RH) CIRCUIT** • Verify that the front combination light (RH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Front combination light (RH) terminal K ▪ Front combination light (RH) terminal J • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—Front combination light (RH) terminal K • AFS control module terminal F—Front combination light (RH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN SWIVEL ACTUATOR (RH) CIRCUIT** • Verify that the front combination light (RH) and AFS control module connectors are disconnected. • Reconnect the negative	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—

	battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Front combination light (RH) terminal K ▪ Front combination light (RH) terminal J • Is the voltage **0 V**?		Front combination light (RH) terminal K • AFS control module terminal F—Front combination light (RH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
5	**INSPECT FOR OPEN CIRCUIT IN SWIVEL ACTUATOR (RH) CIRCUIT** • Verify that the front combination light (RH) and AFS control module connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ AFS control module terminal D—Front combination light (RH) terminal K ▪ AFS control	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • AFS control module terminal D—Front combination light (RH) terminal K • AFS control module terminal F—Front combination light (RH) terminal J **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

	module terminal F— Front combination light (RH) terminal J • Is there continuity?		Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY SWIVEL ACTUATOR (RH) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Replace the front combination light (RH), then go to the next step. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0051:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Steering angle error signal received from EPS control module
Detection condition	• Either a condition in which the steering angle sensor has a malfunction and the EPS control module has not performed steering angle neutral position auto learning, or a condition in which the EPS control module has a malfunction is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is moved to the center. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the start stop unit. • DTCs are stored in the EPS control module. • EPS control module malfunction • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.
2	**VERIFY EPS CONTROL MODULE DTCs** • Retrieve the EPS control module DTCs using the M-MDS.	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD**

	(See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs displayed?		**DIAGNOSIS**.)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY EPS CONTROL MODULE MALFUNCTION** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Replace the EPS control module, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting.

			(See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0001:88/U0100:00/U0131:00/U0140:00/U0155:00 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	• U0001:88
	  ▪ Unit communication error (HS-CAN)
	• U0100:00
	  ▪ Communication error with PCM
	• U0131:00
	  ▪ Communication error with EPS control module
	• U0140:00
	  ▪ Communication error with front body control module (FBCM)
	• U0155:00
	  ▪ Communication error with instrument cluster

Detection condition	• U0001:88
	  ▪ AFS control module detected the CAN bus communication line (HS-CAN) malfunction **10 times** continuously.
	• U0100:00
	  ▪ AFS control module could not receive the CAN signal from the PCM for **5 s or more**.
	• U0131:00
	  ▪ AFS control module could not receive the CAN signal from the EPS control module for **5 s or more**.
	• U0140:00
	  ▪ AFS control module could not receive the CAN signal from the front body control module (FBCM) for **5 s or more**.
	• U0155:00
	  ▪ AFS control module could not receive the CAN signal from the instrument cluster for **5 s or more**.

Fail-safe function	• U0001:88 ▪ The swivel actuator is moved to the center. ▪ The headlight leveling actuator is stopped at the position when the malfunction is determined. • U0100:00 ▪ The swivel actuator is moved to the center. ▪ The headlight leveling actuator is stopped at the position when the malfunction is determined. • U0131:00 ▪ The swivel actuator is moved to the center. ▪ Control of the headlight auto leveling system is continued. • U0140:00 ▪ The swivel actuator is moved to the center. ▪ The headlight leveling actuator is stopped at the position when the malfunction is determined. • U0155:00 ▪ The swivel actuator is moved to the center. ▪ Control of the headlight auto leveling system is continued.
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN communication line between PCM and AFS control module • Malfunction in CAN communication line between EPS control module and AFS control module • Malfunction in CAN communication line between front body control module (FBCM) and AFS control module • Malfunction in CAN communication line between instrument cluster and AFS control module
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

DTC U0001:88/U0100:00/U0131:00/U0140:00/U0155:00 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

2014 - Mazda3 - Body and Accessories

DTC U0320:09 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Error signal received from EPS control module
Detection condition	• AFS control module received the error signal from the EPS control module for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is moved to the center. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Retrieve the EPS control module DTCs using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY EPS CONTROL MODULE MALFUNCTION** • Clear the DTC for the AFS control module using the M-MDS.	Yes	Replace the EPS control module, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

	(See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0420:68 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Error signal received from EPS control module
Detection condition	• AFS control module received the error signal from the EPS control module for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is moved to the center. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Retrieve the EPS control module DTCs using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY EPS CONTROL MODULE MALFUNCTION** • Clear the DTC for the AFS control module using the M-MDS.	Yes	Replace the EPS control module, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

	(See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0423:68 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Error signal received from instrument cluster • AFS OFF switch error signal • Ignition switch error signal • Selector lever R position (ATX)/shift lever reverse (MTX) signal error • Selector lever R position (ATX)/shift lever reverse (MTX) signal not determined

Detection condition	• AFS OFF switch error signal
	  ▪ AFS control module received the AFS OFF switch error signal for **5 s or more** with the ignition switched ON (engine off or on).
	• Ignition switch error signal
	  ▪ AFS control module received the ignition switch error signal for **5 s or more** with the ignition switched ON (engine off or on).
	• Selector lever R position (ATX)/shift lever reverse (MTX) signal error
	  ▪ AFS control module received the selector lever R position (ATX)/shift lever reverse (MTX) signal error for **5 s or more** with the ignition switched ON (engine off or on).
	• Selector lever R position (ATX)/shift lever reverse (MTX) signal not determined
	  ▪ AFS control module detected the undetermined selector lever R position (ATX)/shift lever reverse (MTX) signal.

Fail-safe	• AFS OFF switch error signal
	  ▪ Control of the swivel actuator is continued with the AFS OFF switch fixed in the condition when the malfunction is detected.
	  ▪ Control of the headlight auto leveling system is continued.
	• Ignition switch error signal
	  ▪ Control of the AFS is continued with the ignition switched ON (engine on).
	  ▪ Control of the headlight auto leveling system is continued.

function	• Selector lever R position (ATX)/shift lever reverse (MTX) signal error ▪ The swivel actuator is moved to the center. ▪ Control of the headlight auto leveling system is continued. • Selector lever R position (ATX)/shift lever reverse (MTX) signal not determined ▪ Control of the swivel actuator is continued with the transaxle range sensor (ATX)/back-up light switch (MTX) fixed in the condition when the malfunction is determined. ▪ Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY INSTRUMENT CLUSTER MALFUNCTION** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS.	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	(See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2005:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Error signal received from PCM
Detection condition	• AFS control module received the vehicle speed signal error from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the AFS control module using the M-MDS.	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	(See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:54 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Error configuration data received from instrument cluster
Detection condition	• AFS control module received the error configuration data from the instrument cluster for **30 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• Control of the AFS is continued. • Control of the headlight auto leveling system is continued.

Possible cause	• DTCs are stored in the instrument cluster.
	  ▪ Instrument cluster configuration not implemented
	  ▪ Instrument cluster internal memory malfunction
	• Instrument cluster configuration data error
	• AFS control module malfunction

System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**RESET INSTRUMENT CLUSTER CONFIGURATION DATA**	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go

	Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **30 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **30 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM**

			(AFS)].)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:55 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Instrument cluster configuration not implemented
Detection condition	• AFS control module received a signal which indicates the instrument cluster configuration is not performed.
Fail-safe function	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	**NOTE:** • To correctly write the configuration data sent from the instrument cluster to the AFS control module to the AFS control module, **30 s or more** need to have elapsed since the ignition was switched ON (engine off or on). • Instrument cluster configuration is not completed. • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**RESET CONFIGURATION DATA FROM INSTRUMENT CLUSTER TO AFS CONTROL MODULE** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **30 s or**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	more. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:56 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	Configuration data unmatched with instrument cluster
Detection condition	• Configuration data of the AFS control module and instrument cluster are not matched.
Fail-safe function	• Control of the AFS is continued. • Control of the headlight auto leveling system is continued.

Possible cause	• DTCs are stored in the instrument cluster.
	  ▪ Instrument cluster configuration not implemented
	  ▪ Instrument cluster internal memory malfunction
	• Instrument cluster configuration data error
	• AFS control module malfunction

System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**RESET INSTRUMENT CLUSTER CONFIGURATION DATA** • Using the M-MDS, perform the instrument cluster	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING**

	configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?		**AS-BUILT DATA)**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

DTC U2300:56 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

2014 - Mazda3 - Body and Accessories

DTC U3000:42 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	AFS control module internal malfunction
Detection condition	• AFS control module detects the internal EEPROM malfunction.
Fail-safe function	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• AFS control module internal malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY AFS CONTROL MODULE MALFUNCTION** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair or replace the malfunctioning part according

	• Are any other DTCs displayed?		to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:49 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	AFS control module internal malfunction • RAM/ROM malfunction • AFS function malfunction • CAN hardware malfunction
Detection condition	• RAM/ROM malfunction ▪ AFS control module detected a malfunction in the internal RAM/ROM. • AFS function malfunction ▪ AFS control module detected AFS function malfunction **three times** continuously. • CAN hardware malfunction ▪ AFS control module detected CAN hardware malfunction **three times** continuously.
Fail-safe function	• RAM/ROM malfunction ▪ The swivel actuator is moved to the center. ▪ The headlight leveling actuator is stopped at the position when the malfunction is determined. • AFS function malfunction ▪ Not applicable • CAN hardware malfunction ▪ The swivel actuator is moved to the center. ▪ The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• AFS control module internal malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY AFS CONTROL MODULE MALFUNCTION** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	AFS control module low power supply voltage input
Detection condition	• AFS control module power supply circuit voltage of **9.0 V or less** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is stopped at the position when the malfunction is determined. • The headlight leveling actuator is stopped at the position when the malfunction is determined.

Possible cause	• DTCs are stored in the PCM.
	• Battery malfunction
	• Generator malfunction
	• AFS control module connector or terminal malfunction
	• AFS control module power supply circuit malfunction
	  ▪ Short to ground in wiring harness between METER1 10 A fuse and AFS control module terminal N
	  ▪ METER1 10 A fuse malfunction
	  ▪ Open circuit in wiring harness between IG1 relay and AFS control module terminal N
	• AFS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

	• Is the generator normal?		
4	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY AFS CONTROL MODULE POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display PID VPWR_IG using the M-MDS. (See **PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the METER1 10 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between METER1 10 A fuse and AFS control module terminal N. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the

malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay and AFS control module terminal N.

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.
- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has an open circuit.

Go to the next step.

6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:17 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Description	AFS control module high power supply voltage input
Detection condition	• AFS control module power supply circuit voltage of **18.1 V or more** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• The swivel actuator is stopped at the position when the malfunction is determined. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • AFS control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery.	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4.

	(See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?		(See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the AFS control module using the M-MDS. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the AFS control module DTCs using the M-MDS. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “AFS/ALM”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

PID	Unit/Operation	Data contents	Module control terminal
AFS_ST	Off/On	• Off: AFS is not operated. • On: AFS is operated.	A, B (CAN)
R_HGT_S	V	Displays voltage at auto leveling sensor	C, I, K (Auto leveling sensor output voltage)
R_HGT_S_INI	V	Displays voltage at headlight auto leveling system initial setting	C, I, K (Auto leveling sensor output voltage)
VPWR_IG	V	Displays AFS control module power supply voltage	• N (Power supply) • L (Ground)
VSPD	KPH, MPH	Displays vehicle speed	A, B (CAN)

2014 - Mazda3 - Body and Accessories

HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that AFS OFF indicator light is illuminated for **3 s** and then turned off.

4. Turn on the headlights.
5. After vehicle identification, select in the following order from the M-MDS initial screen.
   a. "Electrical"
   b. "ExteriorLighting"
   c. "Headlamp"
   d. "Auto Leveling Sensor"
   e. "Auto Leveling Actuator Test"
6. Verify that the headlight optical axis lowers from the current position and returns the original position after **2 s**.
   - If the headlight leveling actuator does not operate normally, replace the front combination light. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

2014 - Mazda3 - Body and Accessories

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [IMMOBILIZER SYSTEM]

2014 - Mazda3 - Body and Accessories

FOREWORD [IMMOBILIZER SYSTEM]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.
- Due to the possibility that the engine cannot be started because signal transmission between the remote transmitter and the vehicle is obstructed, do not allow the following items to contact the remote transmitter.
    - Any metallic object
    - Spare keys or other keys for immobilizer system
    - Device such as a mobile phone which generates radio waves.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
REFER TO DTC INSPECTION NOTE.*2
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

*2

(See DTC Inspection Note.)

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

DTC Inspection Note

- When there is a malfunction in the immobilizer system, DTCs are recorded in the start stop unit and PCM.
- The DTCs stored in the start stop unit can be verified using the flashing pattern of the security indicator light and M-MDS.
- If immobilizer system DTCs are not recorded even if the engine cannot be started, perform symptom troubleshooting. (See **NO.3 WILL NOT CRANK [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [IMMOBILIZER SYSTEM]

Verifying DTCs Using Security Indicator Light

NOTE:

- If multiple DTCs are detected, only those having the lowest numbers of those detected will be indicated by the security indicator light.
- A DTC is displayed **10 times** by switching the ignition ON (engine off or on) once.

1. Switch the ignition ON (engine off or on).
2. Wait for **approx. 1 min** until the security indicator light displays a DTC.

NOTE:

- If the following DTCs are detected when the ignition is switched ON (engine off or on), the DTC is displayed after the security indicator light is flashed or illuminated for **approx. 1 min**.
  - If a DTC 16 or below is detected, the security indicator light flashes for **approx. 1 min**.
  - If a DTC 22 or 23 is detected, the security indicator light illuminates for **approx. 1 min**.
- DTC 21 is displayed when the ignition is switched ON (engine off or on) and the security indicator light illumination turns off for **approx. 1 min**.

3. Read DTCs by the number of times the security indicator light flashes as shown in the figure.

Example: DTC 13

4. Repair the malfunctioning part according to the applicable DTC troubleshooting based on the DTC which was verified by the number of times the security indicator light flashed. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)

Detecting DTCs Using M-MDS

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “All CMDTCs”.

3. Verify the DTC according to the directions on the screen.

   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

4. After completion of repairs, clear all DTCs stored in the start stop unit. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.)

2014 - Mazda3 - Body and Accessories

CLEARING DTC [IMMOBILIZER SYSTEM]

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.)
8. Verify that no DTCs are displayed.

2014 - Mazda3 - Body and Accessories

DTC TABLE [IMMOBILIZER SYSTEM]

*1

The letters at the beginning of each DTC are only displayed when using the M-MDS, and refer to the following: B= Body system, P= Powertrain system, U= Network communication system.

*2

C: CMDTC self test, D: ODDTC self test

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 09, DTC: U3000:96/P1260:00 [IMMOBILIZER SYSTEM]

Description	Start stop unit malfunction
Detection condition	• Start stop unit malfunction detected.
Fail-safe function	Not applicable
Possible cause	• Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 09, DTC U3000:96/P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

SECURITY INDICATOR LIGHT: 09, DTC: U3000:96/P1260:00 [IMMOBILIZER SYSTEM]

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 11, DTC: B10D9:87/P1260:00 [IMMOBILIZER SYSTEM]

Description	Coil antenna (built into push button start) error
Detection condition	• Start stop unit detected a malfunction in the coil antenna, and remote transmitter communication is not possible.
Fail-safe function	Not applicable

Possible cause	• Push button start connector or terminal malfunction
	• Start stop unit connector or terminal malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Start stop unit terminal 1AC—Push button start terminal A
	  ▪ Start stop unit terminal 1AE—Push button start terminal B
	• Open circuit in wiring harness between the following terminals:
	  ▪ Start stop unit terminal 1AC—Push button start terminal A
	  ▪ Start stop unit terminal 1AE—Push button start terminal B
	• Coil antenna malfunction
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage,	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT FOR SHORT TO GROUND IN COIL ANTENNA CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Push button start terminal A ▪ Push button start terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 1AC—Push button start terminal A • Start stop unit terminal 1AE—Push button start terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN COIL ANTENNA CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Start stop unit terminal 1AC—Push button start terminal A ▪ Start stop unit terminal 1AE—Push button start terminal B • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 1AC—Push button start terminal A • Start stop unit terminal 1AE—Push button start terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY COIL ANTENNA MALFUNCTION** • Always reconnect all disconnected connectors. • Remove the ROOM 15 A fuse.	Yes	Replace the push button start, then go to the next step. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)
		No	Go to Step 7.

	• Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 11, DTC B10D9:87/P1260:00 displayed?		
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Remove the ROOM 15 A fuse. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 11, DTC B10D9:87/P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

SECURITY INDICATOR LIGHT: 11, DTC: B10D9:87/P1260:00 [IMMOBILIZER SYSTEM]

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 13, DTC: B13D3:05/P1260:00 [IMMOBILIZER SYSTEM]

Description	Remote transmitter program error
Detection condition	• Start stop unit detects a remote transmitter program error.
Fail-safe function	Not applicable
Possible cause	• Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Remote transmitter program error • Start stop unit malfunction **NOTE:** • If any of the following items are touching or near the remote transmitter, signal communication between the remote transmitter and the vehicle is negatively affected, resulting in the engine not starting. ▪ Spare keys ▪ Keys for other vehicles equipped with an immobilizer system ▪ Any metallic object ▪ Any electronic device, or any credit or other card with magnetic strips ▪ Radio wave outputting device nearby
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR**	Yes	Go to the next step.

	CONDITION • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
		No	Repair or replace the connector, then go to Step 4.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**VERIFY IF MALFUNCTION CAUSE IS REMOTE TRANSMITTER** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Re-program key ID number of the remote transmitter. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER**	Yes	Replace the remote transmitter, then go to the next step. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)
		No	Go to Step 5.

	SYSTEM].) • Is the security indicator light: 13, DTC B13D3:05/P1260:00 displayed?		
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Re-program key ID number of the remote transmitter. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 13, DTC B13D3:05/P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 13, DTC: B13D3:94/P1260:00 [IMMOBILIZER SYSTEM]

Description	Communication error with remote transmitter
Detection condition	• Start stop unit could not detect the remote transmitter communication or communication error was detected.
Fail-safe function	Not applicable
Possible cause	• When the ignition is switched ON (engine off or on), it is detected that the remote transmitter is outside of the vehicle. • Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Remote transmitter malfunction • Start stop unit malfunction **NOTE:** • If any of the following items are touching or near the remote transmitter, signal communication between the remote transmitter and the vehicle is negatively affected, resulting in the engine not starting. ▪ Spare keys ▪ Keys for other vehicles equipped with an immobilizer system ▪ Any metallic object ▪ Any electronic device, or any credit or other card with magnetic strips ▪ Radio wave outputting device nearby
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY DTCs WITH REMOTE TRANSMITTER IN DIFFERENT LOCATIONS**
	• Perform the following procedure **3 times** with the remote transmitter inside the cabin with certainty.
	  ◦ Switch the ignition off.
	  ◦ Switch the ignition ON (engine off or on).
	  ◦ Retrieve the immobilizer system DTCs using the M-MDS.
	  (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.)
	  ◦ Move the remote transmitter to a different location.
	• Is the security indicator light: 13, DTC B13D3:94/P1260:00 displayed?
		Yes	Go to the next step.

		No	Go to Step 6.
2	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

	• Is the connector normal?		
4	**VERIFY IF MALFUNCTION CAUSE IS REMOTE TRANSMITTER** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Re-program key ID number of the remote transmitter. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 13, DTC B13D3:94/P1260:00 displayed?	Yes	Replace the remote transmitter, then go to the next step. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the disconnected negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 13, DTC B13D3:94/P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 15, DTC: B13D3:51/P1260:00 [IMMOBILIZER SYSTEM]

Description	Unregistered remote transmitter is detected
Detection condition	• Start stop unit detects that the remote transmitter has not been programmed.
Fail-safe function	Not applicable

Possible cause	• Remote transmitter malfunction
	  ▪ The remote transmitter is not programmed after replacing the start stop unit.
	  ▪ Unprogrammed remote transmitter was used.
	• Start stop unit malfunction

System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IF REMOTE TRANSMITTER BROUGHT INTO VEHICLE IS FOR THAT VEHICLE** • Does the remote transmitter belong to another vehicle?	Yes	Have the correct transmitter for the vehicle ready inside the vehicle, then go to Step 3.
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND DETERMINE WHICH KEY HAS MALFUNCTION** • Perform the following work for each of the programmed remote transmitters: ▪ Clear the DTC for the immobilizer system using the M-MDS.	Yes	Replace the malfunctioning remote transmitter, then go to the next step. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)
		No	Go to Step 4.

	(See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) ▪ Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 15, DTC B13D3:51/P1260:00 displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 15, DTC B13D3:51/P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 16, DTC: U0100:87/P1260:00 [IMMOBILIZER SYSTEM]

Description	Communication error with PCM (no response or data mis-match)
Detection condition	• Start stop unit detects a communication error (no response or immobilizer system cancel not possible) with the PCM.
Fail-safe function	Not applicable
Possible cause	• The immobilizer system-related parts have not been programmed when replacing the PCM or start stop unit. • Start stop unit malfunction • PCM malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM IMMOBILIZER SYSTEM-RELATED PART PROGRAMMING** • Perform the start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER**	Yes	Go to the next step.
		No	Go to Step 4.

	SYSTEM].) • Is the security indicator light: 16, DTC U0100:87/P1260:00 displayed?		
2	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 16, DTC U0100:87/P1260:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 4.
3	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 16, DTC U0100:87/P1260:00 displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 21, DTC: B13D4:00/P1260:00 [IMMOBILIZER SYSTEM]

Description	Insufficient remote transmitter programming number
Detection condition	• Start stop unit detects that the number of programmed remote transmitters is **less than 2**.
Fail-safe function	Not applicable
Possible cause	• Insufficient number of remote transmitters programmed • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY NUMBER OF PROGRAMMED REMOTE TRANSMITTER** • Display PID NUM_TRNSMIT using the M-MDS. (See **PID/DATA MONITOR INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the number of programmed remote transmitters **less than 2**?	Yes	Perform the additional remote transmitter programming, then go to the next step. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)
		No	Go to the next step.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.

	• Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 21, DTC B13D4:00/P1260:00 displayed?		
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 22, DTC: B10DA:51/P1260:00 [IMMOBILIZER SYSTEM]

Description	Communication error with PCM (data received failure)
Detection condition	• Start stop unit detects a communication error (data received failure) with PCM.
Fail-safe function	Not applicable
Possible cause	• The immobilizer system-related part programming has not been performed when replacing the PCM or start stop unit. • Start stop unit malfunction • PCM malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM IMMOBILIZER SYSTEM-RELATED PART PROGRAMMING** • Perform the start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER**	Yes	Go to the next step.
		No	Go to Step 4.

	SYSTEM].) • Is the security indicator light: 22, DTC B10DA:51/P1260:00 displayed?		
2	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 22, DTC B10DA:51/P1260:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 4.
3	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 22, DTC B10DA:51/P1260:00 displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

SECURITY INDICATOR LIGHT: 23, DTC: B10DA:62/P1260:00 [IMMOBILIZER SYSTEM]

Description	Communication error with PCM (code mis-matched)
Detection condition	• Start stop unit detects a communication error (code mis-matched) with the PCM.
Fail-safe function	Not applicable
Possible cause	• The immobilizer system-related part programming has not been performed when replacing the PCM or start stop unit. • PCM malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM IMMOBILIZER SYSTEM-RELATED PART PROGRAMMING** • Perform the start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.)	Yes	Go to the next step.
		No	Go to Step 3.

	• Is the security indicator light: 23, DTC B10DA:62/P1260:00 displayed?		
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the immobilizer system using the M-MDS. (See **CLEARING DTC [IMMOBILIZER SYSTEM]**.) • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Is the security indicator light: 23, DTC B10DA:62/P1260:00 displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [IMMOBILIZER SYSTEM]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Data Logger”.

    b. Select “Modules”.

    c. Select “SSU”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM]

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [INSTRUMENT CLUSTER]

2014 - Mazda3 - Body and Accessories

FOREWORD [INSTRUMENT CLUSTER]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [INSTRUMENT CLUSTER]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the instrument cluster. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “IC”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the instrument cluster. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.)

Snapshot Data

- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data item	Unit		Data contents	Data read/use method	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	—	—
APP_STATUS	Accelerator Pedal Off/Under20%/Over20%/FAIL		Accelerator pedal position status	—	—

CFG_STATUS	Config Complete/Not Configured/Config Error	Instrument cluster configuration status	—	—
ECT_STATUS	Under 0 degrees C/0 - Under 80 degrees C/Over 80 degrees C/FAIL	Engine coolant temperature status	—	—
IC_VPWR	V	Instrument cluster power supply voltage	When DTC is detected, instrument cluster displays power supply voltage value of instrument cluster in M-MDS.	VPWR
IG-ON_TIMER	hh:mm:ss*1	Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed time since the ignition was switched ON (engine off or on).	When DTC is detected, instrument cluster displays elapsed time since ignition was switched ON (engine off or on) in M-MDS.	—
PWR_MODE_KEY	Key Out/Key Recently Out (Position 0)/Accessory (Position 1)/Post Ignition (Position 2)/Ignition On (Position 2)/Running (Position 2)/Running - Starting	• Key Out: Ignition switched off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was switched off • Accessory (Position 1): Ignition is switched to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since	When DTC is detected, instrument cluster displays ignition switch status in M-MDS.	—

			ignition was switched ON (engine off or on) • Ignition On (Position 2): Ignition switched ON (engine off) • Running (Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition		
RPM_STATUS	Engine Stop/Under1500rpm/Over1500rpm/FAIL		Engine speed status	When DTC is detected, instrument cluster displays engine speed in M-MDS.	TACHOMTR
SHIFT_STATUS	P/N/D/R/FAIL		Selector lever position status	When DTC is detected, instrument cluster displays selector lever position in M-MDS.	—
TOTAL_DIST	km	Miles	Accumulated total traveled distance from completion of vehicle until instrument cluster detects DTC (Odometer value in instrument cluster)	The total traveled distance from which the instrument cluster detects DTCs to the present can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snapshot data item TOTAL_DIST. • Subtract 2 from 1.	—
			Accumulated total elapsed time since vehicle completion until instrument cluster detects a DTC **NOTE:**	The elapsed time from which the instrument cluster detects DTCs to the present can be calculated by performing the following procedure.	

TOTAL_TIME	hh:mm:ss*1	• When the ROOM fuse is removed, and the ignition is switched off, the time is not included in the elapsed time.	• Verify the instrument cluster PID item TOTAL_TIME. • Verify the snapshot data item TOTAL_TIME. • Subtract 2 from 1.	TOTAL_TIME
VPWR	V	Instrument cluster power supply voltage	—	VPWR
VSPD_STATUS	Stop/0-10km/h/Over10km/h/FAIL	Vehicle speed status	When DTC is detected, instrument cluster displays vehicle speed in M-MDS.	SPEEDOMTR

*1

The seconds may be indicated after the decimal point.

CLEARING DTC [INSTRUMENT CLUSTER]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “IC”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.)
8. Verify that no DTCs are displayed.

DTC B11D4:53 [INSTRUMENT CLUSTER]

Description	Laser sensor malfunction
Detection condition	• The instrument cluster detects any of the following error signals: ▪ Laser sensor error signal ▪ Smart city brake support related system (laser sensor, DSC HU/CM, PCM) error signal
Fail-safe function	• Inhibits the smart city brake support control. • Warning message related to the smart city brake support is displayed in the center display.
Possible cause	• System related to the smart city brake support stores DTCs. • Laser sensor malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY ALL SYSTEM DTCs** • Switch the ignition off. • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs other than DTC B11D4:53?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting.
		No	Go to the next step.

2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the laser sensor. (See **LASER SENSOR REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0001:88/U0010:88/U0100:00/U0101:00/U0121:00/U0131:00/U0140:00/U0142:00/U0151:00/U0182:00/U0214:00/U0232:00/U0235:00/U023A:00 [INSTRUMENT CLUSTER]

Description	• U0001:88
	  ▪ Module communication error (HS-CAN)
	• U0010:88
	  ▪ Module communication error (MS-CAN)
	• U0100:00
	  ▪ Communication error with PCM
	• U0101:00
	  ▪ Communication error with TCM
	• U0121:00
	  ▪ Communication error with DSC HU/CM
	• U0131:00
	  ▪ Communication error with EPS control module
	• U0140:00
	  ▪ Communication error with front body control module (FBCM)
	• U0142:00
	  ▪ Communication error with rear body control module (RBCM)
	• U0151:00
	  ▪ Communication error with SAS control module
	• U0182:00
	  ▪ Communication error with AFS control module
	• U0214:00
	  ▪ Communication error with start stop unit
	• U0232:00

	Communication error with BSM control module (LH) • U0235:00 ▪ Communication error with laser sensor • U023A:00 ▪ Communication error with forward sensing camera (FSC)
Detection condition	• U0001:88 ▪ Instrument cluster detects a CAN bus communication line (HS-CAN) malfunction. • U0010:88 ▪ Instrument cluster detects a CAN bus communication line (MS-CAN) malfunction. • U0100:00 ▪ Instrument cluster cannot receive the CAN signal from the PCM. • U0101:00 ▪ Instrument cluster cannot receive the CAN signal from the TCM for **1 s or more**. • U0121:00 ▪ Instrument cluster cannot receive the CAN signal from the DSC HU/CM for **1 s or more**. • U0131:00 ▪ Instrument cluster cannot receive the CAN signal from the EPS control module for **1 s or more**. • U0140:00 ▪ Instrument cluster cannot receive the CAN signal from the front body control module (FBCM) for **5 s or more**. • U0142:00 ▪ Instrument cluster cannot receive the CAN signal from the rear body control module (RBCM) for **5 s or more**. • U0151:00 ▪ Instrument cluster cannot receive the CAN signal from the SAS control module for **2 s or more**. • U0182:00 ▪ Instrument cluster cannot receive the CAN signal from the AFS control module for **5 s or more**. • U0214:00 ▪ Instrument cluster cannot receive the CAN signal from the start stop unit for **5 s or more**. • U0232:00 ▪ Instrument cluster cannot receive the CAN signal from the BSM control module (LH) for **1.5 s or more**. • U0235:00

	▪ Instrument cluster cannot receive the CAN signal from the laser sensor for **1 s or more**. • U023A:00 ▪ Instrument cluster cannot receive the CAN signal from the forward sensing camera (FSC) for **1 s or more**.
Fail-safe function	• U0001:88 ▪ Not applicable • U0010:88 ▪ Not applicable • U0100:00 ▪ Not applicable • U0101:00 ▪ Not applicable • U0121:00 ▪ Not applicable • U0131:00 ▪ Not applicable • U0140:00 ▪ Not applicable • U0142:00 ▪ Not applicable • U0151:00 ▪ Not applicable • U0182:00 ▪ Not applicable • U0214:00 ▪ Not applicable • U0232:00 ▪ Not applicable • U0235:00 ▪ Inhibits the smart city brake support control. ▪ Warning message related to the smart city brake support is displayed in the center display. • U023A:00

	▪ Not applicable
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between PCM and instrument cluster • Malfunction in CAN line between TCM and instrument cluster • Malfunction in CAN line between DSC HU/CM and instrument cluster • Malfunction in CAN line between EPS control module and instrument cluster • Malfunction in CAN line between front body control module (FBCM) and instrument cluster • Malfunction in CAN line between rear body control module (RBCM) and instrument cluster • Malfunction in CAN line between SAS control module and instrument cluster • Malfunction in CAN line between AFS control module and instrument cluster • Malfunction in CAN line between start stop unit and instrument cluster • Malfunction in CAN line between BSM control module (LH) and instrument cluster • Malfunction in CAN line between laser sensor and instrument cluster • Malfunction in CAN line between forward sensing camera (FSC) and instrument cluster
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Body and Accessories

DTC U0300:00 [INSTRUMENT CLUSTER]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error (incorrect value write) detected.
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS.	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	(See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0401:68 [INSTRUMENT CLUSTER]

Description	Error signal received from PCM
Detection condition	• Instrument cluster receives the error signals from the PCM with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.)	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 4.

	• Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0402:68 [INSTRUMENT CLUSTER]

Description	Error signal received from transmission/transaxle
Detection condition	• Instrument cluster received the error signals from the transmission/transaxle for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• The transaxle could not send a normal signal temporarily. (DTCs are stored in the TCM.) • TCM malfunction • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY TCM DTCs** • Retrieve the TCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**DRIVE VEHICLE THEN VERIFY DTCs FOR TCM AGAIN**	Yes	Repair or replace the malfunctioning part according to the applicable DTC

	• Drive the vehicle at a vehicle speed of **30 km/h {19 mph} or more** for **100 s or more**. • Retrieve the TCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs displayed?		troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0422:68 [INSTRUMENT CLUSTER]

Description	Error signal received from front body control module (FBCM)
Detection condition	• Instrument cluster receives the error signals from the front body control module (FBCM) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the front body control module (FBCM). • Front body control module (FBCM) malfunction • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs** • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY FRONT BODY CONTROL MODULE (FBCM) MALFUNCTION** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT**	Yes	Replace the front body control module (FBCM), then go to the next step. (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)

	CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0433:00 [INSTRUMENT CLUSTER]

Description	Error signal received from laser sensor

Detection condition	• Instrument cluster detects the following conditions:
	  ▪ The smart city brake support operated normally in the past.
	  ▪ Malfunction of laser sensor or smart city brake support related system (laser sensor, DSC HU/CM, PCM)
	  ▪ Laser sensor control is temporarily inhibited.

Fail-safe function	• Detection condition: The smart city brake support operated normally in the past.
	  ▪ Not applicable
	• Detection condition: Malfunction in laser sensor or smart city brake support related system (laser sensor, DSC HU/CM, PCM)
	  ▪ Inhibits the smart city brake support control.
	  ▪ Warning message related to the smart city brake support is displayed on the center display.
	• Detection condition: Laser sensor control is temporarily inhibited.
	  ▪ Temporarily inhibits the smart city brake support control.

Possible cause	**NOTE:** • Instrument cluster stores DTC U0433:00 as a record that the smart city brake support operated normally. • System related to the smart city brake support stores DTCs. • The laser sensor cannot temporarily function due to dirt on the windshield. • Laser sensor malfunction • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY ALL SYSTEM DTCs** • Switch the ignition off. • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs other than DTC U0433:00 displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**VERIFY DTCs AGAIN** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
3	**VERIFY CENTER DISPLAY** • Verify the center display. • Is the “SCBS Clean front windshield” displayed in the center display?	Yes	Clean the windshield, then go to the next step.
		No	Go to Step 5.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTION CAUSE IS LASER SENSOR** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the laser sensor. (See **LASER SENSOR REMOVAL/INSTALLATION**.) Go to the next step.

	or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0433:68 [INSTRUMENT CLUSTER]

Description	Error signal received from laser sensor
Detection condition	• Instrument cluster receives the error signals from the laser sensor.
Fail-safe function	• Inhibits the smart city brake support control. • Warning message related to the smart city brake support is displayed in the center display.
Possible cause	• DTCs are stored in the laser sensor. • Laser sensor malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY LASER SENSOR DTCs** • Switch the ignition off. • Switch the ignition ON (engine on) and wait for **10 s or more**. • Retrieve the laser sensor DTCs using the M-MDS. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSIS [LASER SENSOR]**.)
		No	Go to the next step.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the laser sensor.

	M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine on) and wait for **10 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		(See **LASER SENSOR REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0515:68 [INSTRUMENT CLUSTER]

Description	Error signal received from start stop unit
Detection condition	• Instrument cluster receives the error signals from the start stop unit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the start stop unit. • Start stop unit malfunction • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U053B:00 [INSTRUMENT CLUSTER]

Description	Error signal received from forward sensing camera (FSC)
Detection condition	• Instrument cluster receives the error signals from the forward sensing camera (FSC) for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the forward sensing camera (FSC). • Forward sensing camera (FSC) malfunction • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FORWARD SENSING CAMERA (FSC) DTCs** • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY FORWARD SENSING CAMERA (FSC) MALFUNCTION** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT**	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

	CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2005:86 [INSTRUMENT CLUSTER]

Description	Error signal received from PCM
Detection condition	• Instrument cluster receives the vehicle speed signal error from the PCM for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.)	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 4.

	• Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2013:13 [INSTRUMENT CLUSTER]

Description	Cluster switch circuit malfunction
Detection condition	• Instrument cluster detects an open circuit in the cluster switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Cluster switch connector or terminal malfunction
	• Instrument cluster connector or terminal malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ Instrument cluster terminal V—Cluster switch terminal B
	  ▪ Instrument cluster terminal T—Cluster switch terminal C
	• Cluster switch malfunction
	• Instrument cluster malfunction

*1 **With tire pressure monitoring system (TPMS)**

*2 **With blind spot monitoring (BSM) system**

*3 **With AFS**

*4 **With lane departure warning system (LDWS)**

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLUSTER SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the cluster switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR OPEN CIRCUIT IN CLUSTER SWITCH CIRCUIT** • Verify that the cluster switch and instrument cluster connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Instrument cluster terminal V—Cluster switch terminal B ▪ Instrument cluster terminal T—Cluster switch terminal C • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Instrument cluster terminal V—Cluster switch terminal B • Instrument cluster terminal T—Cluster switch terminal C **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 5.
4	**INSPECT CLUSTER SWITCH** • Inspect the cluster switch. (See **DSC OFF SWITCH INSPECTION**.)	Yes	Go to the next step.
		No	Replace the cluster switch, then go to the next step. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

	(See **TIRE PRESSURE MONITORING SYSTEM SET SWITCH INSPECTION**.) (See **BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION**.) (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION**.) (See **LDWS SWITCH INSPECTION**.) • Is the cluster switch normal?		
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2100:00 [INSTRUMENT CLUSTER]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error detected as follows: ▪ No configuration of instrument cluster ▪ Instrument cluster configuration has not been correctly performed.
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.)	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:41 [INSTRUMENT CLUSTER]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error (data error) detected.
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.)	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:51 [INSTRUMENT CLUSTER]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error (no configuration) detected.
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS.	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	(See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:56 [INSTRUMENT CLUSTER]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error (incorrect value write) detected.
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS.	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	(See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:57 [INSTRUMENT CLUSTER]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error (data size error) detected.
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.)	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:41 [INSTRUMENT CLUSTER]

Description	Instrument cluster internal malfunction
Detection condition	• Instrument cluster detects the internal malfunction.
Fail-safe function	Not applicable
Possible cause	• Instrument cluster malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY INSTRUMENT CLUSTER MALFUNCTION** • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

DTC U3000:41 [INSTRUMENT CLUSTER]

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [INSTRUMENT CLUSTER]

Description	Low power supply voltage input to instrument cluster
Detection condition	• Instrument cluster power supply circuit voltage of **less than 10 V** is detected.
Fail-safe function	Not applicable

Possible cause	• DTCs are stored in the PCM.
	• Battery malfunction
	• Generator malfunction
	• Instrument cluster connector or terminal malfunction
	• Instrument cluster power supply circuit malfunction
	  ▪ Short to ground in wiring harness between METER1 10 A fuse and instrument cluster terminal S
	  ▪ METER1 10 A fuse malfunction
	  ▪ Open circuit in wiring harness between IG1 relay and instrument cluster terminal S
	• Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
	INSPECT INSTRUMENT CLUSTER		

4	**CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the instrument cluster connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY INSTRUMENT CLUSTER POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display the PID VPWR using the M-MDS. (See **PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER]**.) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the METER1 10 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between METER1 10 A fuse and instrument cluster terminal S. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part.

			If there is no common connector: • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay and instrument cluster terminal S. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED**	Yes	Repeat the inspection from Step 1.

	• Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the instrument cluster using the M-MDS. (See **CLEARING DTC [INSTRUMENT CLUSTER]**.) • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the same DTC displayed?		• If the malfunction recurs, replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “IC”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER]

—: Not applicable

PID	Unit/Operation	Data contents	Module control terminal
AFS_ST*1	Off/On	• Off: AFS not operated • On: AFS operated	B, D (CAN)
AT_MAN_M_SW*2	Off/On/Unknown	• Off: M position switch is off. • On: M position switch is on. • Unknown: M position switch signal is not determined.	H (M position switch signal)
AT_S_DWN_SW*2	Off/On/Unknown	• Off: Down switch is off. • On: Down switch is on. • Unknown: Down switch signal is not determined.	G (Down switch signal)
AT_S_UP_SW*2	Off/On/Unknown	• Off: Up switch is off. • On: Up switch is on. • Unknown: Up switch signal is not determined.	F (UP switch signal)
BSM/RVM_SW*3	Off/On	• Off: BSM OFF switch is off. • On: BSM OFF switch is on.	T, V (BSM OFF switch operation signal)

DSC_OFF_SW	Off/On	• Off: DSC OFF switch is off. • On: DSC OFF switch is on.	T, V (DSC OFF switch operation signal)
FUEL_GAUGE	L	Displays fuel level detected by the fuel gauge	—
FUEL_SEN_M	ohm	Displays fuel gauge sender unit resistance value	—
FUEL_SEN_S	ohm	**NOTE:** • Displays in the M-MDS but it does not operate.	—
I_ILLUMI_M	Off (Day)/On (Night)	• Off (Day): TNS switch is off. • On (Night): TNS switch is on.	B, D (CAN)
I-ST_OFF_SW	Off/On	**NOTE:** • Displays in the M-MDS but it does not operate.	—
LDWS_ON_SW*4	Off/On	• Off: LDWS switch is off. • On: LDWS switch is on.	T, V (LDWS switch operation signal)
MULTI_SW_ST	O.K./FAULT	• O.K.: Cluster switch is normal. • FAULT: Cluster switch is malfunctioning.	T, V (Cluster switch operation signal)
ODO_CNT	km, ft, mi	Displays rolling count of the odometer	—
P_BRAKE_SW	Off/On	• Off: Parking brake not applied • On: Parking brake applied	X (Parking brake switch signal)

R_GEAR_SW	Off/On	**ATX** • Off: Selector lever is in other than R position. • On: Selector lever is in R position. **MTX** • Off: Back-up light switch is off. • On: Back-up light switch is on.	B, D (CAN)
R_LMP	Off/On/Unknown/Fault	• Off: Back-up light is turned off. • On: Back-up light is turned on. • Unknown: Back-up light signal is not determined. • Fault: Back-up light malfunction	B, D (CAN)
SPEEDOMTR	KPH, MPH	Displays vehicle speed (**100 %** = **300 km/h {186 mph}**)	—
TACHOMTR*5	RPM	Displays engine speed (**100 %** = **10,000 rpm**)	—
TOTAL_TIME	hh:mm:ss	Displays cumulative elapsed time since vehicle completion	—
TPMS_CAL_SW*6	Off/On	• Off: Tire pressure monitoring system (TPMS) set switch is off. • On: Tire pressure monitoring system (TPMS) set switch is on.	T, V (Tire pressure monitoring system (TPMS) set switch status signal)
VPWR	V	Displays power supply voltage	S, U (Power supply)

*1

With AFS

*2

ATX

*3

With blind spot monitoring (BSM) system

*4

*5

Type A or type B instrument cluster only

*6

With tire pressure monitoring system (TPMS)

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “IC”.

3. Select the simulation items from the PID table.

4. Perform the active command modes function, inspect the operations for each parts.

    - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]

Simulation item	Unit/Operation	Data contents	Output part name
ALARM	On/Off	• On: Warning alarm sounds. • Off: Warning alarm does not sound.	Warning alarm (instrument cluster)
LCD_SEG	Off/On	• Off: Turns off the LCD. • On: Fully displays LCD.	LCD
SPEEDOMTR*1	Off/60 Km/h/120 Km/h	• Off: Speedometer needle moves to the bottommost position. • 60 Km/h: Speedometer needle moves to **approx. 57—63 km/h {35—40 mph}**. • 120 Km/h: Speedometer needle moves to **approx. 116—124 km/h {72—77 mph}**.	Speedometer (instrument cluster)
TACHOMTR*2	Off/3000 RPM/6000 RPM	• Off: Tachometer needle moves to bottommost position. • 3000 RPM: Tachometer needle moves to **approx. 3,050 rpm**. • 6000 RPM: Tachometer needle moves to **approx. 6,100 rpm**.	Tachometer (instrument cluster)
WL+IL	Off/On	• Off: Turns off all warning lights, indicator lights. • On: Illuminates all warning lights, indicator lights.	Warning lights, indicator lights (instrument cluster)

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [AUDIO]

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [AUDIO]

2014 - Mazda3 - Body and Accessories

FOREWORD [AUDIO]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE THE FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
DIAGNOSTIC ASSIST FUNCTION
THE AUDIO SYSTEM RELATED PARTS ARE FORCIBLY OPERATED USING THE DIAGNOSTIC ASSIST FUNCTION TO ENABLE VERIFICATION OF THE CONNECTION AND OPERATION STATUS OF THE AUDIO SYSTEM RELATED PARTS.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory. (See **DTC INSPECTION [AUDIO]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for occurrence of any malfunction or DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

DTC Inspection Note

The audio system code can be verified using the on-board diagnostic test mode to activate the on-board diagnostic function by operating audio unit. (See **DTC INSPECTION [AUDIO]**.)

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [AUDIO]

NOTE:

- The audio system DTC can be verified using the on-board diagnostic test mode to activate the on-board diagnostic function by operating audio unit.
- All of DTCs displayed by the DTC inspection is recorded in the audio repair order form.
- If an audio unit malfunction is suspected, select For Audio below.
- If a Bluetooth® unit malfunction is suspected, select For Bluetooth® Unit below.
- If a CD player malfunction is suspected, select For CD Player below.

For Audio

1. Switch the ignition to ACC or ON (engine off or on).

2. Turn the audio unit power off.

3. While pressing the POWER/VOLUME button, press the MEDIA/SCAN button and FM/AM/CLOCK button for **3 s or more**.

- If a DTC is displayed, repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)

NOTE:

- A maximum of 3 DTCs are displayed.
- If several DTCs are displayed, press the TUNE button to switch the display.
- If there are no DTCs, "No Err" is displayed.

4. After completion of repairs, clear all DTCs are stored in the audio unit. (See **CLEARING DTC [AUDIO]**.)

For Bluetooth® Unit

1. Switch the ignition to ACC or ON (engine off or on).

2. While pressing the POWER/VOLUME button, press the PRESET 4 button and FOLDER button (down) for **3 s or more**.

- If a DTC is displayed, repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)

NOTE:

- A maximum of 12 DTCs can be displayed.
- If several DTCs are displayed, press the TUNE button to switch the display.
- If there are no DTCs, "No Err" is displayed.
- If the TUNE button (down) is operated while the last DTC is displayed, the software version is displayed.
- If the TUNE button (down) is operated while the software version is displayed, the connected unit information is displayed.

3. After completion of repairs, clear all DTCs stored in the Bluetooth® unit. (See **CLEARING DTC [AUDIO]**.)

CD Player

1. Switch the ignition to ACC or ON (engine off or on).

2. While pressing the AUTO-M button, press the PRESET 5 button for **3 s or more**.

- If a DTC is displayed, repair the malfunctioning location according to the applicable DTC troubleshooting.

NOTE:

- A maximum of 3 DTCs can be displayed.
- If several DTCs are displayed, press the TUNE button to switch the display.
- If there are no DTCs, "No Err" is displayed.
- If the TUNE button (down) is operated while the last DTC or "No Err" is displayed, the software version of the CD player is displayed.

3. After completion of repairs, clear all DTCs stored in the CD player. (See **CLEARING DTC [AUDIO]**.)

2014 - Mazda3 - Body and Accessories

SUPPLIER IDENTIFICATION PROCEDURE [AUDIO]

NOTE:

- The supplier varies depending on the units. When asking the supplier (service center) for repair or replacement, identify the supplier and fill in the Audio Repair Order Form using the following procedures.

Identification with the label

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
4. Remove the audio unit. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
5. Verify the supplier name by referring to the label attached to the unit.

NOTE:

- The supplier varies depending on the units. When asking the supplier (service center) for repair or replacement, identify the supplier and fill in the Audio Repair Order Form using the following procedures.

Verify Using the Diagnostic Assist Function

1. Switch the ignition to ACC or ON (engine off or on).

2. While pressing the POWER/VOLUME button, press PRESET 5 button for **3 s or more**.

3. Identify the supplier code by referring to the display.

Supplier code	Supplier name
01	—
02	Panasonic
03	CLARION
04	PIONEER
05	Visteon
06	DESAY

NOTE:

- DTCs can also be identified from the DTC displays screen.

4. Switch the ignition off to end the diagnostic assist function.

2014 - Mazda3 - Body and Accessories

CLEARING DTC [AUDIO]

NOTE:

- The audio system DTC can be verified using the on-board diagnostic test mode to activate the on-board diagnostic function by operating the audio unit.
- Before clearing the memory, be sure to enter all of the DTCs displayed by the DTC inspection in the Audio Repair Order Form.
- If an audio unit DTC is cleared, select For Audio below.
- If a Bluetooth® unit DTC is cleared, select For Bluetooth® Unit below.
- If a CD player DTC is cleared, select For CD Player below.

For Audio

1. DTCs are displayed. (See **DTC INSPECTION [AUDIO]**.)
2. While pressing the POWER/VOLUME button, press the MENU button for **3 s or more**.

NOTE:

- After clearing the DTCs, "No Err" is displayed and a beep sounds.

3. Switch the ignition off to end the on-board diagnostic test mode.

For Bluetooth® Unit

1. DTCs are displayed. (See **DTC INSPECTION [AUDIO]**.)
2. While pressing the AUTO-M button, press the PRESET 4 button for **3 s or more**.

NOTE:

- After clearing, "No Err" is displayed.

3. Switch the ignition off to end the on-board diagnostic test mode.

CD Player

1. DTCs are displayed. (See **DTC INSPECTION [AUDIO]**.)
2. While pressing the AUTO-M button, press the PRESET6 button for **3 s or more**.

NOTE:

- After clearing the DTCs, "No Err" is displayed.

3. Switch the ignition off to end the diagnostic assist function.

2014 - Mazda3 - Body and Accessories

DTC TABLE [AUDIO]

NOTE:

- "iPod" is a registered trademark of Apple Inc. in the United States and other countries.
- If an audio unit DTC is indicated, refer to For Audio below.
- If a Bluetooth® unit DTC is indicated, refer to For Bluetooth® Unit below.
- If a CD player DTC is indicated, refer to For CD Player below.

2014 - Mazda3 - Body and Accessories

DTC: 16:Er12, 26:Er81 [AUDIO]

Description	CAN system communication error

Detection condition	• 16:Er12
	  ▪ The audio unit cannot receive CAN signal.
	• 26:Er81
	  ▪ The audio unit cannot receive CAN signal from the Bluetooth® unit.

Fail-safe function	• 16:Er12
	  ▪ Not applicable
	• 26:Er81
	  ▪ Not applicable

Possible cause	• Audio unit connector or terminal malfunction
	• Bluetooth® unit connector or terminal malfunction
	• CD player connector or terminal malfunction
	• Connector C-36 connector or terminal malfunction
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Audio unit terminal 1O and Bluetooth® unit terminal Y
	  ▪ Audio unit terminal 1O and CD player terminal G
	• Short to ground in wiring harness between the following terminals:
	  ▪ Audio unit terminal 1Q and Bluetooth® unit terminal Z
	  ▪ Audio unit terminal 1Q and CD player terminal H
	• Short circuit in the following wiring harnesses:
	  ▪ Audio unit terminal 1O and Bluetooth® unit terminal Y
	  ▪ Audio unit terminal 1Q and Bluetooth® unit terminal Z
	  ▪ Audio unit terminal 1O and CD player terminal G
	  ▪ Audio unit terminal 1Q and CD player terminal H
	• Open circuit in wiring harness between the following terminals:
	  ▪ Bluetooth® unit terminal Y and connector C-36
	  ▪ Bluetooth® unit terminal Z and connector C-36
	  ▪ CD player terminal G and connector C-36
	  ▪ CD player terminal H and connector C-36
	  ▪ Audio unit terminal 1O and connector C-36
	  ▪ Audio unit terminal 1Q and connector C-36
	• CD player malfunction
	• Bluetooth® unit malfunction
	• Audio unit malfunction

: INSTRUMENT PANEL HARNESS

AUDIO UNIT
WIRING HARNESS-SIDE CONNECTOR

Bluetooth® UNIT
WIRING HARNESS-SIDE CONNECTOR

CD PLAYER
WIRING HARNESS-SIDE CONNECTOR

CAUTION:

- When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN_H SIDE CIRCUIT OF PRIVATE-CAN** • Measure the voltage between audio unit terminal 1O (PRIVATE-CAN CAN_H side) and body ground. • Is the voltage **B+**? **NOTE:** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in CAN_H side of PRIVATE-CAN has occurred. Go to Step 5.
		No	Go to the next step.
2	**INSPECT FOR SHORT TO GROUND IN CAN_L SIDE CIRCUIT OF PRIVATE-CAN** • Measure the voltage between audio unit terminal 1Q and body ground. • Is the voltage **0 V**?	Yes	A short to ground in CAN_L side of PRIVATE-CAN has occurred. Go to Step 8.
		No	Go to the next step.
3	**INSPECT BETWEEN PRIVATE-CAN_H AND CAN_L SIDES FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity at the following terminals: ▪ Audio unit terminal 1O ▪ Audio unit terminal 1Q • Is there continuity?	Yes	A short between circuits has occurred in PRIVATE-CAN. Go to Step 11.
		No	Go to the next step.
4	**DETERMINE OPEN CIRCUIT LOCATION** • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Are any DTCs of the following displayed? ▪ 16:Er12 ▪ 26:Er81	Yes	16:Er12 is displayed • Go to Step 14. 26:Er81 is displayed • Go to Step 17.
		No	Go to Step 20.
5	**INSPECT WIRING HARNESS FOR SHORT TO POWER SUPPLY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Audio unit ▪ Bluetooth® unit ▪ CD player ▪ Connector C-36	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 19.

	• Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Audio unit terminal 1O ▪ Bluetooth® unit terminal Y ▪ CD player terminal G • Is the voltage **0 V**?		
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to Step 20.
7	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS Bluetooth® UNIT** • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the Bluetooth® unit, then go to Step 19. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 20.
8	**INSPECT WIRING HARNESS FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Audio unit ▪ Bluetooth® unit ▪ CD player ▪ Connector C-36 • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Audio unit terminal 1Q ▪ Bluetooth® unit terminal Z	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 19.
		No	Go to the next step.

	CD player terminal H • Is there continuity?		
9	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to Step 20.
10	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS Bluetooth® UNIT** • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the Bluetooth® unit, then go to Step 19. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 20.
11	**INSPECT WIRING HARNESS FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Audio unit ▪ Bluetooth® unit ▪ CD player ▪ Connector C-36 • Inspect between the following terminals (wiring harness-side) for continuity. ▪ Audio unit terminals 1O and 1Q ▪ Bluetooth® unit terminals Y and Z ▪ CD player terminals G and H • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted between circuits, then go to Step 19.
		No	Go to the next step.
12	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to Step 20.

	Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?		
13	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS Bluetooth® UNIT** • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the Bluetooth® unit, then go to Step 19. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 20.
14	**INSPECT WIRING HARNESS BETWEEN CONNECTOR C-36 AND AUDIO UNIT FOR OPEN CIRCUIT** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Audio unit ▪ Connector C-36 • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Audio unit terminal 1O and connector C-36 ▪ Audio unit terminal 1Q and connector C-36 • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
15	**INSPECT WIRING HARNESS BETWEEN CONNECTOR C-36 AND CD PLAYER FOR OPEN CIRCUIT** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ CD player ▪ Connector C-36 • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ CD player terminal G and connector C-36 ▪ CD player terminal H and connector C-36 • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 19.
16	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors.	Yes	Replace the CD player, then go to Step 20. (See **CD PLAYER REMOVAL**.)

	• Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?		(See **CD PLAYER INSTALLATION**.)
		No	Go to Step 20.
17	**INSPECT WIRING HARNESS BETWEEN Bluetooth® UNIT AND CONNECTOR C-36 FOR OPEN CIRCUIT** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Bluetooth® unit ▪ Connector C-36 • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Bluetooth® unit terminal Y and connector C-36 ▪ Bluetooth® unit terminal Z and connector C-36 • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 19.
18	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS Bluetooth® UNIT** • Always reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the Bluetooth® unit, then go to next step. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 20.
19	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the audio unit DTC inspection.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the audio unit. (See **AUDIO UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?		
20	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 28:Er01, 28:Er09 [AUDIO]

NOTE:

- "iPod" is a registered trademark of Apple Inc. in the United States and other countries.

Description	28:Er01 : USB mechanism malfunction 28:Er09 : No USB playback function file/track
Detection condition	• When USB device/iPod connected, connection error detected • When USB device/iPod connected, audio unit internal malfunction detected • When USB device connected, read error detected
Fail-safe function	Not applicable

Possible cause	• USB device/iPod malfunction
	• Incompatible USB device (format) used
	• Auxiliary jack/USB port connector or terminal malfunction
	• Auxiliary jack/USB port malfunction
	• Audio unit connector or terminal malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD
	  ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC
	  ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA
	  ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB
	• Short to ground in wiring harness between the following terminals:
	  ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD

	Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB • Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT USB DEVICE/iPod** • Connect the USB device/iPod to another vehicle (model/unit). • Is the USB device/iPod connection detected/unit plays back.	Yes	Go to the next step.
		No	System is normal. (USB device/iPod malfunction or incompatible USB device.) Go to Step 7.

2	**INSPECT AUXILIARY JACK/USB PORT CONNECTOR CONDITION** • Disconnect the auxiliary jack/USB port connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
3	**INSPECT AUXILIARY JACK/USB PORT** • Inspect the auxiliary jack/USB port. (See **AUXILIARY JACK/USB PORT INSPECTION**.) • Is there any malfunctioning part?	Yes	Replace the auxiliary jack/USB port, then go to Step 7. (See **AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
5	**INSPECT WIRING HARNESS FOR OPEN**	Yes	Go to the next step.

	CIRCUIT BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT • Verify that the connectors for the audio unit and the auxiliary jack/USB port are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB • Is there continuity?	No	Refer to the wiring diagram and verify if there is a common connector between the following terminals (vehicle wiring harness side). • Audio unit terminal 3A and auxiliary jack/USB port terminal UD • Audio unit terminal 3B and auxiliary jack/USB port terminal UC • Audio unit terminal 3C and auxiliary jack/USB port terminal UA • Audio unit terminal 3D and auxiliary jack/USB port terminal UB If there is a common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. If there is no common connector: • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**INSPECT WIRING HARNESS FOR SHORT TO GROUND BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Auxiliary jack/USB	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals (vehicle wiring harness side). • Auxiliary jack/USB port terminal UD • Auxiliary jack/USB port terminal UC • Auxiliary jack/USB port terminal UA • Auxiliary jack/USB port terminal UB If there is a common connector:

	port terminal UD ▪ Auxiliary jack/USB port terminal UC ▪ Auxiliary jack/USB port terminal UA ▪ Auxiliary jack/USB port terminal UB • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. If there is no common connector: • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

DTC: 28:Er01, 28:Er09 [AUDIO]

2014 - Mazda3 - Body and Accessories

DTC: 29:Er01, 29:Er09 [AUDIO]

NOTE:

- "iPod" is a registered trademark of Apple Inc. in the United States and other countries.

Description	29:Er01 : iPod mechanism malfunction 29:Er09 : No iPod playback file/track
Detection condition	When iPod is connected, audio unit read error is detected
Fail-safe function	Not applicable
Possible cause	• All files in iPod are not playable (including copyright protected files) • No playable file in iPod • iPod malfunction • Audio unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MUSIC FILES IN iPod** • Is there any playable music file in the iPod?	Yes	Go to the next step.
		No	System is normal. (No playable file in USB device/iPod) Go to Step 3.
2	**INSPECT iPod** • Connect the iPod to a same-model vehicle (model/unit).	Yes	Replace the audio unit, then go to Step 3. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)

	Is the iPod connection detected/unit plays back.		
		No	System is normal. (iPod malfunction or incompatible USB device.) Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 09:Er20 [AUDIO]

DESCRIPTION	Low voltage input from battery
DETECTION CONDITION	Audio unit power supply voltage of **less than 10 V** is detected continuously for **10 s**.

POSSIBLE CAUSE	• PCM DTC is stored
	• Battery malfunction
	• Generator malfunction
	• Audio unit connector or terminals malfunction
	• Open circuit or short to ground in audio unit power supply circuit
	  ▪ Short to ground in wiring harness between the following terminal:
	  • Audio unit terminal 1B—Battery positive terminal
	  ▪ MAIN 200 A fuse malfunction
	  ▪ CABIN+B 50 A fuse malfunction
	  ▪ AUDIO1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between the following terminal:
	  • Audio unit terminal 1B—Battery positive terminal
	• Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM PCM DTC INSPECTION** • Perform the PCM DTC inspection using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) • Is there any malfunction?	Yes	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)
		No	Go to the next step.
4	**INSPECT AUDIO UNIT CONNECTOR CONDITION**	Yes	Repair or replace the connector or terminal, then go to Step 6.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the audio unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	No	Go to the next step.
5	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Audio unit connector is disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off). • Measure the voltage at the following terminals (vehicle wiring harness side): ▪ Audio unit terminal 1B • Is the voltage **B+**?	Yes	Go to the next step.
		No	If the audio unit terminal 1B voltage is not **B+**: • Inspect the MAIN 200 A fuse or CABIN+B 50 A fuse or AUDIO1 15 A fuse. ▪ If the fuse is blown: • Repair or replace the wiring harness for a possible short to ground. • Replace the malfunctioning fuse. ▪ If the fuse is damaged: • Replace the malfunctioning fuse. ▪ If the fuse is normal: • Repair or replace the wiring harness for a possible open circuit. Go to the next Step.
6	**VERIFY TROUBLESHOOTING COMPLETED** • Switch the ignition off. • Make sure reconnect the	Yes	Replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
		No	Go to the next step.

	disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC from the audio unit memory. (See **CLEARING DTC [AUDIO]**.) • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC present?		
7	**VERIFY THAT NO OTHER DTCs ARE RECORDED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 09:Er21 [AUDIO]

DESCRIPTION	Audio unit internal malfunction
DETECTION CONDITION	• Audio unit internal ECU (Power amplifier peripheral circuit) is faulted. • Audio unit protection function operates due to short to ground in speaker wiring harness and speaker lead wire
POSSIBLE CAUSE	• Audio unit connector or terminals malfunction • Speaker connector or terminals malfunction • Open circuit in wiring harness between the following terminals: ▪ Audio unit terminal 1A—Front door speaker (LH) terminal C ▪ Audio unit terminal 1C—Front door speaker (LH) terminal B ▪ Audio unit terminal 1D—Front door speaker (RH) terminal C ▪ Audio unit terminal 1F—Front door speaker (RH) terminal B ▪ Audio unit terminal 1S—Rear door speaker (LH) terminal C ▪ Audio unit terminal 1U—Rear door speaker (LH) terminal B ▪ Audio unit terminal 1V—Rear door speaker (RH) terminal C ▪ Audio unit terminal 1X—Rear door speaker (RH) terminal B • Short to ground in wiring harness between the following terminals: ▪ Audio unit terminal 1A—Front door speaker (LH) terminal C ▪ Audio unit terminal 1C—Front door speaker (LH) terminal B ▪ Audio unit terminal 1D—Front door speaker (RH) terminal C ▪ Audio unit terminal 1F—Front door speaker (RH) terminal B ▪ Audio unit terminal 1S—Rear door speaker (LH) terminal C ▪ Audio unit terminal 1U—Rear door speaker (LH) terminal B ▪ Audio unit terminal 1V—Rear door speaker (RH) terminal C ▪ Audio unit terminal 1X—Rear door speaker (RH) terminal B • Speaker malfunction • Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the audio unit connector. • Inspect the connector	Yes	Repair or replace the connector, then go to Step 6.
		No	Go to the next step.

	engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?		
2	**INSPECT SPEAKER CONNECTOR CONDITION** • Disconnect the speaker connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 6.
		No	Go to the next step.
3	**INSPECT SPEAKER CIRCUIT FOR OPEN CIRCUIT** • Audio unit connector and speaker connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Audio unit terminal 1A and front door speaker (LH) terminal C ▪ Audio unit terminal 1C and front door speaker (LH) terminal B ▪ Audio unit terminal 1D and front door speaker (RH) terminal C ▪ Audio unit terminal 1F	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals (vehicle wiring harness side). • Audio unit terminal 1A and front door speaker (LH) terminal C • Audio unit terminal 1C and front door speaker (LH) terminal B • Audio unit terminal 1D and front door speaker (RH) terminal C • Audio unit terminal 1F and front door speaker (RH) terminal B • Audio unit terminal 1S and rear door speaker (LH) terminal C • Audio unit terminal 1U and front door speaker (LH) terminal B • Audio unit terminal 1V and rear door speaker (RH) terminal C • Audio unit terminal 1X and rear door speaker (RH) terminal B If there is a common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	and front door speaker (RH) terminal B ▪ Audio unit terminal 1S and rear door speaker (LH) terminal C ▪ Audio unit terminal 1U and front door speaker (LH) terminal B ▪ Audio unit terminal 1V and rear door speaker (RH) terminal C ▪ Audio unit terminal 1X and rear door speaker (RH) terminal B • Is there continuity?		• Repair or replace the malfunctioning part. If there is no common connector: • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
4	**INSPECT SPEAKER CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Speaker terminal C ▪ Speaker terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals (vehicle wiring harness side). • Speaker terminal C • Speaker terminal B If there is a common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. If there is no common connector: • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

5	**INSPECT SPEAKERS** • Inspect the speakers. (See **FRONT DOOR SPEAKER INSPECTION**.) (See **REAR DOOR SPEAKER INSPECTION**.) • Is there any malfunctioning part?	Yes	Replace the speaker, then go to Step 6. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.) (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO]**.) • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 26:Er82 [AUDIO]

Description	Microphone circuit malfunction
Detection condition	Short to power supply detected in microphone input circuit
Fail-safe function	Not applicable
Possible cause	• Connector or terminal malfunction • Short to power supply in wiring harness between Bluetooth® unit terminal A and microphone terminal A • Microphone malfunction • Bluetooth® unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR**	Yes	Repair or replace the connector, then go to Step 4.

	STATUS • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the microphone connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	No	Go to the next step.
2	**INSPECT Bluetooth® UNIT CONNECTOR CONDITION** • Disconnect the Bluetooth® unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 4.
		No	Go to the next step.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN MICROPHONE INPUT CIRCUIT** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage of Bluetooth® unit terminal A (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between Bluetooth® unit terminal A and microphone terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.

		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS MICROPHONE OR Bluetooth® UNIT** • Perform an inspection of the Bluetooth® unit DTCs. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the microphone, then go to the next step. (See **MICROPHONE REMOVAL / INSTALLATION**.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Perform an inspection of the Bluetooth® unit DTCs. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the Bluetooth® unit, then go to the next step. (See **Bluetooth® UNIT REMOVAL / INSTALLATION**.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 26:Er83 [AUDIO]

DESCRIPTION	Microphone circuit malfunction
DETECTION CONDITION	Short to ground in microphone power supply circuit
Fail-safe function	Not applicable
POSSIBLE CAUSE	• Connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ Bluetooth® unit terminal C and microphone terminal C • Microphone malfunction • Bluetooth® unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR CONDITION**	Yes	Repair or replace the connector or terminal, then go to Step 5.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the microphone connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?		
		No	Go to the next step.
2	**INSPECT Bluetooth® UNIT CONNECTOR CONDITION** • Disconnect the Bluetooth® unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the connector or terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT MICROPHONE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals (vehicle wiring harness) and body ground: ▪ Microphone terminal C • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between Bluetooth® unit terminal C and microphone terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
4	**INSPECT Bluetooth® UNIT POWER SUPPLY CIRCUIT** • Make sure reconnect the disconnected connectors. • Connect the negative battery	Yes	Replace the microphone, then go to the next step. (See **MICROPHONE REMOVAL/INSTALLATION**.)
		No	Go to the next step.

	cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminal (vehicle wiring harness): ▪ Bluetooth® unit terminal C • Is there any voltage?		
5	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the Bluetooth® unit memory. (See **CLEARING DTC [AUDIO]**.) • Perform the Bluetooth® unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the Bluetooth® unit. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCs ARE RECORDED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 26:Er84 [AUDIO]

DESCRIPTION	Microphone circuit malfunction
DETECTION CONDITION	Microphone non-connection signal detected continuously
POSSIBLE CAUSE	• Connector or terminal malfunction • Open circuit in wiring harness between the following terminals: ▪ Bluetooth® unit terminal E and microphone terminal E • Short to ground in wiring harness between the following terminals: ▪ Bluetooth® unit terminal A and microphone terminal A • Microphone malfunction • Bluetooth® unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the microphone connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the connector or terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT Bluetooth® UNIT CONNECTOR CONDITION** • Disconnect the Bluetooth® unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the connector or terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT MICROPHONE CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following terminals (wiring harness-side): ▪ Bluetooth® unit terminal E and microphone terminal E • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between Bluetooth® unit terminal E and microphone terminal E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 5.
4	**INSPECT MICROPHONE INPUT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Bluetooth® unit terminal A and body ground • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between Bluetooth® unit terminal A and microphone terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC from the Bluetooth® unit memory. (See **CLEARING DTC [AUDIO]**.) • Perform the Bluetooth® unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC present?	Yes	Replace the microphone then go to the next step. (See **MICROPHONE REMOVAL/INSTALLATION**.)
		No	Go to Step 7.
6	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the Bluetooth® unit memory. (See **CLEARING DTC [AUDIO]**.) • Perform the Bluetooth® unit DTC inspection. (See **DTC INSPECTION**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the Bluetooth® unit. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.) Go to the next step.

	[AUDIO].) • Is the same DTC present?	No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE RECORDED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 26:Er85 [AUDIO]

DESCRIPTION	Steering switch circuit malfunction
DETECTION CONDITION	Steering switch input signal is detected continuously for **2 min or more**
Fail-safe function	Not applicable
POSSIBLE CAUSE	• Connector or terminal malfunction • Steering switch malfunction • Clock spring malfunction • Short to ground in wiring harness between the following terminals: ▪ Steering switch terminal M and Bluetooth® unit terminal F • Bluetooth® unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STEERING SWITCH CONNECTOR CONDITION**	Yes	Repair or replace the connector or terminal, then go to Step 7.

	Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the steering switch connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	No	Go to the next step.
2	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Disconnect the clock spring connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the connector or terminal, then go to Step 7.
		No	Go to the next step.
3	**INSPECT Bluetooth® UNIT CONNECTOR CONDITION** • Disconnect the Bluetooth® unit connector. • Inspect the connector for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the connector or terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT STEERING SWITCH** • Inspect the steering switch. (See **STEERING SWITCH INSPECTION**.) • Is there any malfunction?	Yes	Replace the steering switch, then go to Step 7. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**INSPECT CLOCK SPRING** • Inspect the crock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)	Yes	Replace the crock spring, then go to Step 7. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
		No	Go to the next step.

	• Is there any malfunction?		
6	**INSPECT STEERING SWITCH INPUT CIRCUIT FOR SHORT TO GROUND** • Make sure reconnect the disconnected connectors. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Bluetooth® unit terminal F • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between Bluetooth® unit terminal F and steering switch terminal M. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Switch the ignition off. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC from the Bluetooth® unit memory. (See **CLEARING DTC [AUDIO]**.) • Perform the Bluetooth® unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the Bluetooth® unit. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE RECORDED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 26:Er86 [AUDIO]

DESCRIPTION	Bluetooth® unit internal malfunction
DETECTION CONDITION	Bluetooth® unit detects the internal malfunction.
Fail-safe function	Not applicable
POSSIBLE CAUSE	• Bluetooth® unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**CONFIRM Bluetooth® UNIT DTC** • Clear the DTC from the Bluetooth® unit memory. (See **CLEARING DTC [AUDIO]**.) • Perform the Bluetooth® unit DTC inspection. (See **DTC INSPECTION [AUDIO]**.) • Is the same DTC present?	Yes	Replace the Bluetooth® unit, then go to the next step. (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCs ARE RECORDED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 30:Er01 [AUDIO]

Description	CD player mechanism malfunction
Detection condition	CD player mechanism malfunction detected.
Fail-safe function	Not applicable
Possible cause	• CD insertion direction mistaken • CD scratching or soiling • Incompatible CD used • Support error • CD player malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CD** • Clear the CD player DTCs. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform CD troubleshooting using the diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform a CD player DTC inspection. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 3.

2	**CD PLAYER SOFTWARE INSPECTION** • Perform a CD software reset using the diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform a CD software update using the diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform a DTC inspection of the CD player. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY OTHER DTCs** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 30:Er07 [AUDIO]

Description	CD player data read error
Detection condition	CD player read error detected.
Fail-safe function	Not applicable
Possible cause	• CD insertion direction mistaken • CD scratching or soiling • Incompatible CD used • Support error • CD player malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CD** • Clear the CD player DTCs. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform CD troubleshooting using the diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform a CD player DTC inspection. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 3.

2	**CD PLAYER SOFTWARE INSPECTION** • Perform a CD software reset using the diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform a CD software update using the diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Perform a DTC inspection of the CD player. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY OTHER DTCs** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC: 30:Er30 [AUDIO]

Description	CD player temperature abnormality
Detection condition	Abnormal temperature in CD player is detected.
Fail-safe function	Not applicable
Possible cause	• Temporary abnormality due to continuous use • CD player malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IF MALFUNCTION CAUSE IS CD PLAYER** • Clear the CD player DTCs. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Turn off the CD player to return it to normal temperature conditions. • Perform a DTC inspection of the CD player. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	• CD player is normal. (Explain to the customer that the CD player malfunction was temporary due to continuous use of the CD player.) ▪ If the malfunction recurs, replace the CD player. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.) • Go to the next step.

2	**VERIFY OTHER DTCs** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DIAGNOSTIC ASSIST FUNCTION [AUDIO]

LCD inspection

1. Switch the ignition to ACC or ON (engine off or on).
2. Turn the audio unit power on.
3. While pressing the POWER/VOLUME button, press the TUNE button (up) for **0.5 s or more**.

4. Inspect according to the following table:

Inspection	Display	Action	
• Verify the displayed screen. • Is the LCD content truncated or faint?	Appended figure	Yes	Replace the audio unit. (See **AUDIO UNIT REMOVAL / INSTALLATION**.)
		No	Display is normal.

Appended figure

5. Switch the audio power supply off or switch the ignition OFF to end the diagnostic assist function.

Button Inspection

1. Switch the ignition to ACC or ON (engine off or on).
2. Turn the audio unit power on.
3. While pressing the POWER/VOLUME button, press the PRESET 3 button for **0.5 s or more**.

4. Inspect according to the following table:

Inspection	Display	Action	
• Operate all of the switches (press). • Does the buzzer sound?	—	Yes	The switch is normal.
		No	Verify the switch.

5. Switch the audio power supply off or switch the ignition OFF to end the diagnostic assist function.

Speaker Inspection

1. Switch the ignition to ACC or ON (engine off or on).
2. Turn the audio unit power on.
3. Tune in the radio.
4. While pressing the POWER/VOLUME button, press the AUTO-M button for **0.5 s or more**.

5. Inspect according to the following table:

Inspection	Display	Action	
• Does each speaker output sound in the following order?: 1. Front door speaker (LH) and tweeter (LH) 2. Front door speaker (RH) and tweeter (RH) 3. Rear door speaker (RH) 4. Rear door speaker (LH)	—	Yes	The speakers and the wiring harness between the audio unit and speakers are normal.
		No	• If no sound is produced from some of the speakers. (See **NO SOUND OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)

6. Switch the audio power supply off or switch the ignition OFF to end the diagnostic assist function.

Radio Reception Condition Inspection

1. Switch the ignition to ACC or ON (engine off or on).

2. Turn the audio unit power on.

3. Tune in the radio.

4. While pressing the POWER/VOLUME button, press the PRESET 2 button for **0.5 s or more**.

5. Inspect according to the following table:

CAUTION:

- Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.
- When performing the inspection, select the best area for receiving radio frequencies.

Inspection	Display	Action
Verify the displayed screen.	LEV 10 — LEV 5	Glass antenna, antenna amplifier, antenna feeder and audio unit are normal.
	LEV 4 — LEV 3	Change frequencies and re-perform the inspection.
		• Inspect the glass antenna, antenna amplifier, and antenna feeder. (See **GLASS ANTENNA INSPECTION**.) (See **ANTENNA AMPLIFIER INSPECTION**.) (See **ANTENNA FEEDER NO.1 INSPECTION**.) (See **ANTENNA FEEDER NO.2 INSPECTION**.) (See **ANTENNA FEEDER NO.3 INSPECTION**.)

	LEV 2 — LEV 0	• If the glass antenna, antenna amplifier, or antenna feeder is not normal, replace the malfunctioning part. (See **FILAMENT REPAIR**.) (See **ANTENNA AMPLIFIER REMOVAL/INSTALLATION**.) (See **ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION**.) (See **ANTENNA FEEDER NO.2 REMOVAL**.) (See **ANTENNA FEEDER NO.2 INSTALLATION**.) (See **ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION**.) • If the glass antenna, antenna amplifier, and antenna feeder are normal, replace the audio unit. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)

6. Switch the audio power supply off or switch the ignition OFF to end the diagnostic assist function.

Antenna control inspection

1. Switch the ignition to ACC or ON (engine off or on).

2. Turn the audio unit power on.

3. Tune in the radio.

4. While pressing the POWER/VOLUME button, press the FM/AM/CLOCK button for **0.5 s or more**.

5. Inspect according to the following table:

Inspection	Display	Action	
• Verify the displayed screen. • Take action according to the audio.	ANT—ON	Good sound quality	System is normal.
		Bad sound quality	• Inspect the glass antenna, antenna amplifier, and antenna feeder. (See **GLASS ANTENNA INSPECTION**.) (See **ANTENNA AMPLIFIER INSPECTION**.) (See **ANTENNA FEEDER NO.1 INSPECTION**.) (See **ANTENNA FEEDER NO.2 INSPECTION**.) (See **ANTENNA FEEDER NO.3 INSPECTION**.) • If the glass antenna, antenna amplifier, or antenna feeder is not normal, replace the malfunctioning part. (See **FILAMENT REPAIR**.) (See **ANTENNA AMPLIFIER REMOVAL/INSTALLATION**.) (See **ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION**.) (See **ANTENNA FEEDER NO.2 REMOVAL**.) (See **ANTENNA FEEDER NO.2 INSTALLATION**.) (See **ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION**.) • If the glass antenna, antenna amplifier, and antenna feeder are normal, replace the audio unit. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
	ANT—OFF	Replace the audio unit. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)	

6. Switch the audio power supply off or switch the ignition OFF to end the diagnostic assist function.

Dial inspection

1. Switch the ignition to ACC or ON (engine off or on).

2. Turn the audio unit power on.

3. While pressing the AUTO-M button, press the PRESET 1 button for **3 s or more**.

4. Inspect according to the following table:

Inspection	Display	Action	
• Turn the POWER/VOLUME button. • Does the switch rotation direction correspond to the direction indicated in the display?	→	Yes	System is normal.
	←	No	Replace the audio unit. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)

5. Switch the audio power supply off or switch the ignition OFF to end the diagnostic assist function.

Audio amplifier specification verification

1. Switch the ignition to ACC or ON (engine off or on).

2. Turn the audio unit power on.

3. While pressing the POWER/VOLUME button, press the TUNE button (down) for **3 s or more**.

4. Inspect according to the following table:

Inspection	Display	Action	
• Verify the audio amplifier specifications. • Are the audio amplifier specifications correct?	**Vehicle without Bose ®** • N (Normal)	Yes	System is normal.
		No	Replace the audio unit. (See **AUDIO UNIT REMOVAL / INSTALLATION**.)

5. Switch the ignition OFF to end the diagnostic assist function.

CD inspection

1. Switch the ignition to ACC or ON (engine off or on).
2. Turn the audio unit power on.
3. While pressing the POWER/VOLUME button, press the PRESET 6 button for **3 s or more**.

4. Verify that LOAD NEW DISC is displayed and insert a CD.

NOTE:

- If TEST REJECTED is displayed, return to the normal mode because an on-market installed CD player cannot transition to the CD troubleshooting mode.

5. CHECKING is displayed and enters troubleshooting status.

6. Inspect according to the following table:

Inspection	Display	Action
Verify the displayed screen.	CD DEFECTIVE	System is normal. CD is malfunctioning.
	CD-DRIVE MALFUNCTION	Replace the audio unit. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)

7. Switch the ignition OFF to end the diagnostic assist function.

Hands-free password clearing

1. Switch the ignition to ACC or ON (engine off or on).

2. While pressing AUTO-M button, press the PRESET 2 button for **3 s or more**.

3. "Cleared" is indicated in the display, and verify that the password is cleared.

4. Switch the ignition OFF to end the diagnostic assist function.

Software reset

1. Switch the ignition to ACC or ON (engine off or on).

2. While pressing the POWER/VOLUME button, press the FOLDER button (down) and TUNE button (up) for **3 s or more**.

NOTE:

- Radio preset is also initialized.

CD software reset

1. Switch the ignition to ACC or ON (engine off or on).

2. While pressing the POWER/VOLUME button, press the FOLDER button (up) and TUNE button (down) for **3 s or more**.

NOTE:

- After resetting, CD RESET is displayed for approx. 5 s.

CD software update

1. Switch the ignition to ACC or ON (engine off or on).

2. Insert the software update disc into the CD player.

NOTE:

- When the update begins, "CD UPDATING" is displayed.

3. After the update is completed, verify that the disc is automatically ejected and the screen returns to the normal display.

CD part number verification

1. Switch the ignition to ACC or ON (engine off or on).

2. While pressing the AUTO-M button, press the PRESET 3 button for **3 s or more**.

NOTE:

- The CD part number is displayed in the audio unit display.

3. Switch the ignition OFF to end the diagnostic assist function.

2014 - Mazda3 - Body and Accessories

FOREWORD [AUDIO AMPLIFIER]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE THE FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
DIAGNOSTIC ASSIST FUNCTION
THE AUDIO SYSTEM RELATED PARTS ARE FORCIBLY OPERATED USING THE DIAGNOSTIC ASSIST FUNCTION TO ENABLE VERIFICATION OF THE CONNECTION AND OPERATION STATUS OF THE AUDIO SYSTEM RELATED PARTS.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory. (See **DTC INSPECTION [AUDIO AMPLIFIER]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for occurrence of any malfunction or DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [AUDIO AMPLIFIER]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Self-test”

    b. Select “All CMDTCs”

3. Verify the DTC according to the directions on the screen.

    - If a DTC is displayed, repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO AMPLIFIER]**.)

2014 - Mazda3 - Body and Accessories

CLEARING DTC [AUDIO AMPLIFIER]

CAUTION:

- If the memory is cleared, past malfunctions may no longer be displayed, therefore before clearing DTCs, record all DTCs displayed in the DTC inspection on the Audio Repair Order Form.

CMDTC Self Test

1. Connect the M-MDS to the DLC 2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”
   b. Select “All CMDTCs”
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [AUDIO AMPLIFIER]**.)
8. Verify that no DTCs are displayed.

2014 - Mazda3 - Body and Accessories

C: CMDTC self test

2014 - Mazda3 - Body and Accessories

DTC U0001:88 [AUDIO AMPLIFIER]

Description	Module communication error (HS-CAN)
Detection condition	The audio amplifier detects a CAN bus communication line (HS-CAN) malfunction.
Fail-safe function	Not applicable
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the audio amplifier and instrument cluster
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [AUDIO AMPLIFIER]

Description	Voltage decrease input from battery
Detection condition	With the ignition switched to ACC or ON, the audio amplifier detects voltage from the battery of 10 V or less for 5 s or more.
Fail-safe function	Not applicable

Possible cause	• Battery malfunction
	• Generator malfunction
	• Audio amplifier connector or terminal malfunction
	• Audio amplifier power supply circuit malfunction
	  ▪ Short to ground in the wiring harness between audio amplifier terminal 3A and battery (+) terminal.
	  ▪ Short to ground in wiring harness between audio amplifier terminal 2D and ACC RELAY
	  ▪ BOSE 25A fuse malfunction
	  ▪ AUDIO2 7.5 A fuse malfunction
	  ▪ Open circuit in wiring harness between audio amplifier terminal 2D and ACC RELAY
	  ▪ CABIN+B 50 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between audio amplifier terminal 3A and battery (+) terminal
	• Audio amplifier malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunctioning part?	Yes	Recharge or replace the battery, then go to Step 8. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

		No	Go to the next step.
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) • Is there any malfunctioning part?	Yes	Replace the generator, then go to Step 8. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)
		No	Go to the next step.
4	**INSPECT AUDIO AMPLIFIER CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the audio amplifier connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 8.
		No	Go to the next step.
5	**INSPECT POWER SUPPLY CIRCUIT OF AUDIO AMPLIFIER FOR MALFUNCTION** • Verify that the following audio amplifier connectors are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC (engine off). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Audio amplifier terminal 3A ▪ Audio amplifier	Yes	Go to Step 8.
		No	• Terminal 3A voltage is not B+ ▪ Go to Step 7. • Terminal 2D voltage is not B+ ▪ Go to the next step.

	terminal 2D • Is the voltage B+?		
6	**INSPECT THE AUDIO2 7.5 A FUSE** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the AUDIO2 7.5 A fuse. • Is there any malfunctioning part?	Yes	• If a fuse is blown: ▪ Repair or replace the wiring harness which is shorted to ground. ▪ Replace the malfunctioning fuse. • If a fuse is damaged: ▪ Replace the malfunctioning fuse. Go to Step 8.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT THE CABIN+B 50 A FUSE, BOSE 25 A FUSE AND MAIN 200 A FUSE** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the CABIN+B 50 A fuse, BOSE 25 A fuse and MAIN 200 A fuse. • Is there any malfunctioning part?	Yes	• If a fuse is blown: ▪ Repair or replace the wiring harness which is shorted to ground. ▪ Replace the malfunctioning fuse. • If a fuse is damaged: ▪ Replace the malfunctioning fuse. Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, go to the next step.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Switch the ignition off. • Reconnect all the disconnected	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio amplifier, then go to the next step.

	connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio amplifier DTCs. (See **CLEARING DTC [AUDIO AMPLIFIER]**.) • Perform the audio amplifier DTC inspection. (See **DTC INSPECTION [AUDIO AMPLIFIER]**.) • Is the same DTC displayed?		(See **AUDIO AMPLIFIER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Verify if other DTCs are displayed. • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO AMPLIFIER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:17 [AUDIO AMPLIFIER]

Description	Audio amplifier high power supply voltage input
Detection condition	Larger value than audio amplifier power supply circuit voltage of 16 V is detected with ignition switched ON (engine off or on)
Fail-safe function	Not applicable
Possible cause	• Battery malfunction • Generator malfunction • Audio amplifier malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is there any malfunctioning part?	Yes	Recharge or replace the battery, then go to Step 4. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.

3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) • Is there any malfunctioning part?	Yes	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Switch the ignition off. • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the audio unit DTCs. (See **CLEARING DTC [AUDIO AMPLIFIER]**.) • Perform the audio unit DTC inspection. (See **DTC INSPECTION [AUDIO AMPLIFIER]**.) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio amplifier, then go to the next step. (See **AUDIO AMPLIFIER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Verify if other DTCs are displayed. • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO AMPLIFIER]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:49 [AUDIO AMPLIFIER]

Description	Audio amplifier internal malfunction
Detection condition	Audio amplifier internal malfunction detected
Fail-safe function	Not applicable
Possible cause	Audio amplifier malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSPECTION OF AUDIO AMPLIFIER DTCs** • Clear the DTC from the audio amplifier memory. Perform an inspection of the audio amplifier DTCs. (See **DTC INSPECTION [AUDIO AMPLIFIER]**.) • Is the same DTC displayed?	Yes	Replace the audio amplifier, then go to the next step. (See **AUDIO AMPLIFIER REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [AUDIO AMPLIFIER]**.)
		No	DTC troubleshooting completed.

DTC U3000:49 [AUDIO AMPLIFIER]

2014 - Mazda3 - Body and Accessories

DTC U2300:54/U2300:55/U2300:56/U2300:64 [AUDIO AMPLIFIER]

Description	• U2300:54: Configuration error (data not received) • U2300:55: Configuration error (not configured) • U2300:56: Configuration error (ineffective/non-interchangeable data read) • U2300:64: Configuration error (error value read)
Detection condition	• Audio amplifier detects configuration data not record or data error
Fail-safe function	Not applicable
Possible cause	• Module configuration procedure was not completed properly • Correct data cannot be received from instrument cluster • Audio amplifier malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection	Action
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition ON (engine off) and wait for 6 s or more. • Switch the ignition off. • Switch the ignition ON (engine off).	Go to the next step.

2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **CLEARING DTC [AUDIO AMPLIFIER]**.) • Perform the audio amplifier DTC inspection using the M-MDS. (See **DTC INSPECTION [AUDIO AMPLIFIER]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 5.
3	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition off. • Perform the instrument cluster DTC inspection using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs present?	Yes	Go to applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) After repairing the instrument cluster, perform the instrument cluster configuration. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) Then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See **CLEARING DTC [AUDIO AMPLIFIER]**.) • Perform the audio amplifier DTC inspection using the M-MDS. (See **DTC INSPECTION [AUDIO AMPLIFIER]**.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the audio amplifier. (See **AUDIO AMPLIFIER REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed.	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

	• Are any other DTCs output?		

2014 - Mazda3 - Body and Accessories

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [BLIND SPOT MONITORING (BSM)]

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [BLIND SPOT MONITORING (BSM)]

2014 - Mazda3 - Body and Accessories

FOREWORD [BLIND SPOT MONITORING (BSM)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [BLIND SPOT MONITORING (BSM)]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the BSM control module (LH) or (RH). (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “BSML” or “BSMR”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the BSM control module (LH) or (RH). (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.)

Snapshot Data

NOTE:

- The BSM control module (LH) or (RH) stores the following two types of snapshot data (vehicle information) when a DTC is detected and displays them in the M-MDS.
  - Vehicle information detected by BSM control module (LH) or (RH)
  - Vehicle information detected by instrument cluster and received by BSM control module (LH) or (RH) via CAN signal
- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data				Corresponding

CLEARING DTC [BLIND SPOT MONITORING (BSM)]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “BSML” or “BSMR”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)
8. Verify that no DTCs are displayed.

2014 - Mazda3 - Body and Accessories

DTC B118C:11 [BLIND SPOT MONITORING (BSM)]

Description	BSM indicator light (LH) circuit malfunction
Detection condition	• BSM control module (LH) performs measurement at **0.01 s** intervals and a short to ground in the BSM indicator light (LH) circuit is detected **48 times** continuously.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Power outer mirror (LH) connector or terminal malfunction • BSM control module (LH) connector or terminal malfunction • Short to ground in wiring harness between BSM control module (LH) terminal G and power outer mirror (LH) terminal D • Power outer mirror (LH) malfunction • BSM indicator light (LH) malfunction • BSM control module (LH) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	disconnection. • Is the connector normal?		
2	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN BSM INDICATOR LIGHT (LH) CIRCUIT** • Verify that the BSM control module (LH) and power outer mirror (LH) connectors are disconnected. • Inspect for continuity between power outer mirror (LH) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between BSM control module (LH) terminal G and power outer mirror (LH) terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT POWER OUTER MIRROR (LH)** • Inspect the power outer mirror (LH). (See **POWER OUTER MIRROR INSPECTION**.) • Is the power outer mirror (LH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (LH), then go to Step 6. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

5	**INSPECT BSM INDICATOR LIGHT (LH)** • Inspect the BSM indicator light (LH). (See **OUTER MIRROR GLASS INSPECTION**.) • Is the BSM indicator light (LH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (LH), then go to the next step. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the BSM control module (LH) DTCs using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module (LH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (LH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B118C:15 [BLIND SPOT MONITORING (BSM)]

Description	BSM indicator light (LH) circuit malfunction
Detection condition	• BSM control module (LH) performs measurement at **0.01 s** intervals and an open circuit or short to power supply in the BSM indicator light (LH) circuit is detected **48 times** continuously.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Power outer mirror (LH) connector or terminal malfunction • Open circuit in wiring harness between power outer mirror (LH) terminal G and body ground • BSM control module (LH) connector or terminal malfunction • Short to power supply in wiring harness between BSM control module (LH) terminal G and power outer mirror (LH) terminal D • Power outer mirror (LH) malfunction • BSM indicator light (LH) malfunction • Open circuit in wiring harness between BSM control module (LH) terminal G and power outer mirror (LH) terminal D • BSM control module (LH) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

	disconnection. • Is the connector normal?		
2	**INSPECT FOR OPEN CIRCUIT IN BSM INDICATOR LIGHT (LH) GROUND CIRCUIT** • Verify that the power outer mirror (LH) connector is disconnected. • Inspect for continuity between power outer mirror (LH) terminal G (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between power outer mirror (LH) terminal G and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
3	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN BSM INDICATOR LIGHT (LH) SIGNAL CIRCUIT** • Verify that the BSM control module (LH) and power outer mirror (LH) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between BSM control module (LH) terminal G and power outer mirror (LH) terminal D. **If there is a common connector:** • Determine the malfunctioning part

	CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Measure the voltage at the power outer mirror (LH) terminal D (wiring harness-side). • Is the voltage **0 V**?		by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
5	**INSPECT POWER OUTER MIRROR (LH)** • Inspect the power outer mirror (LH). (See **POWER OUTER MIRROR INSPECTION**.) • Is the power outer mirror (LH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (LH), then go to Step 8. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)
6	**INSPECT BSM INDICATOR LIGHT (LH)** • Inspect the BSM indicator light (LH). (See **OUTER MIRROR GLASS INSPECTION**.) • Is the BSM indicator light (LH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (LH), then go to Step 8. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)
7	**INSPECT FOR OPEN CIRCUIT IN BSM INDICATOR LIGHT (LH) SIGNAL CIRCUIT** • Verify that the BSM control module (LH) and power outer mirror (LH) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between BSM control module (LH) terminal G and power outer mirror (LH) terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the

	between BSM control module (LH) terminal G (wiring harness-side) and power outer mirror (LH) terminal D (wiring harness-side). • Is there continuity?		malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the BSM control module (LH) DTCs using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module (LH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (LH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B118D:11 [BLIND SPOT MONITORING (BSM)]

Description	BSM indicator light (RH) circuit malfunction
Detection condition	• BSM control module (RH) performs measurement at **0.01 s** intervals and a short to ground in the BSM indicator light (RH) circuit is detected **48 times** continuously.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Power outer mirror (RH) connector or terminal malfunction • BSM control module (RH) connector or terminal malfunction • Short to ground in wiring harness between BSM control module (RH) terminal G and power outer mirror (RH) terminal D • Power outer mirror (RH) malfunction • BSM indicator light (RH) malfunction • BSM control module (RH) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	disconnection. • Is the connector normal?		
2	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN BSM INDICATOR LIGHT (RH) CIRCUIT** • Verify that the BSM control module (RH) and power outer mirror (RH) connectors are disconnected. • Inspect for continuity between power outer mirror (RH) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between BSM control module (RH) terminal G and power outer mirror (RH) terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT POWER OUTER MIRROR (RH)** • Inspect the power outer mirror (RH). (See **POWER OUTER MIRROR INSPECTION**.) • Is the power outer mirror (RH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (RH), then go to Step 6. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

5	**INSPECT BSM INDICATOR LIGHT (RH)** • Inspect the BSM indicator light (RH). (See **OUTER MIRROR GLASS INSPECTION**.) • Is the BSM indicator light (RH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (RH), then go to the next step. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the BSM control module (RH) DTCs using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module (RH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (RH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B118D:15 [BLIND SPOT MONITORING (BSM)]

Description	BSM indicator light (RH) circuit malfunction
Detection condition	• BSM control module (RH) performs measurement at **0.01 s** intervals and an open circuit or short to power supply in the BSM indicator light (RH) circuit is detected **48 times** continuously.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Power outer mirror (RH) connector or terminal malfunction • Open circuit in wiring harness between power outer mirror (RH) terminal G and body ground • BSM control module (RH) connector or terminal malfunction • Short to power supply in wiring harness between BSM control module (RH) terminal G and power outer mirror (RH) terminal D • Power outer mirror (RH) malfunction • BSM indicator light (RH) malfunction • Open circuit in wiring harness between BSM control module (RH) terminal G and power outer mirror (RH) terminal D • BSM control module (RH) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

	disconnection. • Is the connector normal?		
2	**INSPECT FOR OPEN CIRCUIT IN BSM INDICATOR LIGHT (RH) GROUND CIRCUIT** • Verify that the power outer mirror (RH) connector is disconnected. • Inspect for continuity between power outer mirror (RH) terminal G (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between power outer mirror (RH) terminal G and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
3	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN BSM INDICATOR LIGHT (RH) SIGNAL CIRCUIT** • Verify that the BSM control module (RH) and power outer mirror (RH) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between BSM control module (RH) terminal G and power outer mirror (RH) terminal D. **If there is a common connector:** • Determine the malfunctioning part

	CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Measure the voltage at the power outer mirror (RH) terminal D (wiring harness-side). • Is the voltage **0 V**?		by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
5	**INSPECT POWER OUTER MIRROR (RH)** • Inspect the power outer mirror (RH). (See **POWER OUTER MIRROR INSPECTION**.) • Is the power outer mirror (RH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (RH), then go to Step 8. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)
6	**INSPECT BSM INDICATOR LIGHT (RH)** • Inspect the BSM indicator light (RH). (See **OUTER MIRROR GLASS INSPECTION**.) • Is the BSM indicator light (RH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (RH), then go to Step 8. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)
7	**INSPECT FOR OPEN CIRCUIT IN BSM INDICATOR LIGHT (RH) SIGNAL CIRCUIT** • Verify that the BSM control module (RH) and power outer mirror (RH) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between BSM control module (RH) terminal G and power outer mirror (RH) terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the

	between BSM control module (RH) terminal G (wiring harness-side) and power outer mirror (RH) terminal D (wiring harness-side). • Is there continuity?		malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the BSM control module (RH) DTCs using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module (RH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (RH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0001:88/U0100:00/U0131:00/U0155:00/U0214:00 [BLIND SPOT MONITORING (BSM)]

Description	• U0001:88
	  ▪ Module communication error (HS-CAN)
	• U0100:00
	  ▪ Communication error with PCM
	• U0131:00
	  ▪ Communication error with EPS control module
	• U0155:00
	  ▪ Communication error with instrument cluster
	• U0214:00
	  ▪ Communication error with start stop unit

Detection condition	• U0001:88
	  ▪ BSM control module detected a CAN bus communication line (HS-CAN) malfunction for **0.4 s or more**.
	• U0100:00
	  ▪ BSM control module cannot receive a CAN signal from the PCM for **1.5 s or more**.
	• U0131:00
	  ▪ BSM control module cannot receive a CAN signal from the EPS control module for **1.5 s or more**.
	• U0155:00
	  ▪ BSM control module cannot receive a CAN signal from the instrument cluster.
	• U0214:00
	  ▪ BSM control module cannot receive a CAN signal from the start stop unit for **1.5 s or more**.

	• U0001:88

Fail-safe function	Blind spot monitoring (BSM) system is stopped. • U0100:00 ▪ Blind spot monitoring (BSM) system is stopped. • U0131:00 ▪ Blind spot monitoring (BSM) system is stopped. • U0155:00 ▪ Blind spot monitoring (BSM) system is stopped. • U0214:00 ▪ Blind spot monitoring (BSM) system is stopped.
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN communication line between PCM and BSM control module • Malfunction in CAN communication line between EPS control module and BSM control module • Malfunction in CAN communication line between instrument cluster and BSM control module • Malfunction in CAN communication line between start stop unit and BSM control module
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Body and Accessories

DTC U0232:00 [BLIND SPOT MONITORING (BSM)]

Description	Communication error with BSM control module (LH)
Detection condition	• No communication between BSM control module (LH) and (RH) for **1 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• BSM control module (LH) connector or terminal malfunction • BSM control module (RH) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ BSM control module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • Short to power supply in wiring harness between the following terminals: ▪ BSM control module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • Open circuit in wiring harness between the following terminals: ▪ BSM control module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • BSM control module (LH) malfunction • BSM control module (RH) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	disconnection. • Is the connector normal?		
2	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN CAN COMMUNICATION CIRCUIT BETWEEN BSM CONTROL MODULE (LH) AND (RH)** • Verify that the BSM control module (LH) and (RH) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ BSM control module (LH) terminal A ▪ BSM control module (LH) terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • BSM control module (LH) terminal A—BSM control module (RH) terminal A • BSM control module (LH) terminal B—BSM control module (RH) terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN COMMUNICATION CIRCUIT BETWEEN BSM CONTROL MODULE (LH)**	Yes	Go to the next step.

	AND (RH) • Verify that the BSM control module (LH) and (RH) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ BSM control module (LH) terminal A ▪ BSM control module (LH) terminal B • Is the voltage **0 V**?	No	Refer to the wiring diagram and verify whether or not there is a common connector between following terminals: • BSM control module (LH) terminal A—BSM control module (RH) terminal A • BSM control module (LH) terminal B—BSM control module (RH) terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT FOR OPEN CIRCUIT IN CAN COMMUNICATION CIRCUIT BETWEEN BSM CONTROL MODULE (LH) AND (RH)** • Verify that the BSM control module (LH) and (RH) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ BSM control	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • BSM control module (LH) terminal A—BSM control module (RH) terminal A • BSM control module (LH) terminal B—BSM control module (RH) terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • Is there continuity?		• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**PERFORM DTC INSPECTION AND VERIFY BSM CONTROL MODULE (LH) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the BSM control module (RH) using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module (RH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (LH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY BSM CONTROL MODULE (RH) MALFUNCTION** • Clear the DTC for the BSM control module (RH) using the M-MDS. (See **CLEARING DTC [BLIND**	Yes	Replace the BSM control module (RH), then go to the next step. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Go to the next step.

	SPOT MONITORING (BSM)].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module (RH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0233:00 [BLIND SPOT MONITORING (BSM)]

Description	Communication error with BSM control module (RH)
Detection condition	• No communication between BSM control module (LH) and (RH) for **1 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• BSM control module (RH) connector or terminal malfunction • BSM control module (LH) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ BSM control module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • Short to power supply in wiring harness between the following terminals: ▪ BSM control module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • Open circuit in wiring harness between the following terminals: ▪ BSM control module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • BSM control module (RH) malfunction • BSM control module (LH) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	disconnection. • Is the connector normal?		
2	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN CAN COMMUNICATION CIRCUIT BETWEEN BSM CONTROL MODULE (LH) AND (RH)** • Verify that the BSM control module (LH) and (RH) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ BSM control module (RH) terminal A ▪ BSM control module (RH) terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • BSM control module (LH) terminal A—BSM control module (RH) terminal A • BSM control module (LH) terminal B—BSM control module (RH) terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN COMMUNICATION CIRCUIT BETWEEN BSM CONTROL MODULE (LH)**	Yes	Go to the next step.

	AND (RH) • Verify that the BSM control module (LH) and (RH) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ BSM control module (RH) terminal A ▪ BSM control module (RH) terminal B • Is the voltage **0 V**?	No	Refer to the wiring diagram and verify whether or not there is a common connector between following terminals: • BSM control module (LH) terminal A—BSM control module (RH) terminal A • BSM control module (LH) terminal B—BSM control module (RH) terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 6.
5	**INSPECT FOR OPEN CIRCUIT IN CAN COMMUNICATION CIRCUIT BETWEEN BSM CONTROL MODULE (LH) AND (RH)** • Verify that the BSM control module (LH) and (RH) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ BSM control	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • BSM control module (LH) terminal A—BSM control module (RH) terminal A • BSM control module (LH) terminal B—BSM control module (RH) terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	module (LH) terminal A—BSM control module (RH) terminal A ▪ BSM control module (LH) terminal B—BSM control module (RH) terminal B • Is there continuity?		• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**PERFORM DTC INSPECTION AND VERIFY BSM CONTROL MODULE (RH) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the BSM control module (LH) using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module (LH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (RH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY BSM CONTROL MODULE (LH) MALFUNCTION** • Clear the DTC for the BSM control module (LH) using the M-MDS. (See **CLEARING DTC [BLIND**	Yes	Replace the BSM control module (LH), then go to the next step. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Go to the next step.

	SPOT MONITORING (BSM)].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module (LH) DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0401:68 [BLIND SPOT MONITORING (BSM)]

Description	Error signal received from PCM
Detection condition	• BSM control module receives the error signal from the PCM for **1 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 4.

	(engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0420:68 [BLIND SPOT MONITORING (BSM)]

Description	Error signal received from EPS control module
Detection condition	• BSM control module receives the error signal from the EPS control module for **1 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Retrieve the EPS control module DTCs using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY EPS CONTROL MODULE MALFUNCTION** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.)	Yes	Replace the EPS control module, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	• Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0423:68 [BLIND SPOT MONITORING (BSM)]

Description	Error signal received from instrument cluster
Detection condition	• BSM control module receives the error signal from the instrument cluster for **1 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY INSTRUMENT CLUSTER MALFUNCTION** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	off or on) and wait for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0515:68 [BLIND SPOT MONITORING (BSM)]

Description	Error signal received from start stop unit
Detection condition	• BSM control module receives the error signal from the start stop unit for **1 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• DTCs are stored in the start stop unit. • Start stop unit malfunction • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:54 [BLIND SPOT MONITORING (BSM)]

Description	Configuration signal not received
Detection condition	• BSM control module cannot receive the configuration signal it is supposed to receive.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Instrument cluster configuration error • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS.	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	(See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:56 [BLIND SPOT MONITORING (BSM)]

Description	Configuration data unmatched with instrument cluster
Detection condition	• Configuration data of the BSM control module and instrument cluster are not matched.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.

Possible cause	• DTCs are stored in the instrument cluster.
	  ▪ Instrument cluster configuration not implemented
	  ▪ Instrument cluster internal memory malfunction
	• Instrument cluster configuration data error
	• BSM control module malfunction

System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**RESET INSTRUMENT CLUSTER CONFIGURATION DATA** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data).	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)

	(See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **30 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **30 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

DTC U2300:56 [BLIND SPOT MONITORING (BSM)]

2014 - Mazda3 - Body and Accessories

DTC U2300:64 [BLIND SPOT MONITORING (BSM)]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error (signal error) detected.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Instrument cluster configuration error • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:01 [BLIND SPOT MONITORING (BSM)]

Description	Electrical malfunction inside BSM control module
Detection condition	• BSM control module is detected an electrical malfunction inside.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY BSM CONTROL MODULE MALFUNCTION** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Replace the BSM control module, then go to the next step. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

DTC U3000:01 [BLIND SPOT MONITORING (BSM)]

2014 - Mazda3 - Body and Accessories

DTC U3000:09 [BLIND SPOT MONITORING (BSM)]

Description	BSM control module internal malfunction
Detection condition	• BSM control module detected a malfunction inside the voltage control oscillator.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY BSM CONTROL MODULE MALFUNCTION** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Replace the BSM control module, then go to the next step. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:54 [BLIND SPOT MONITORING (BSM)]

Description	Radar performance malfunction
Detection condition	• BSM control module detected malfunction in misalignment.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Rear bumper dirt or foreign matter (reflective object) is adhered. • Dirt or foreign matter (reflective object) on BSM control module. • Blind spot monitoring (BSM) radar test was not performed. • Deviation of blind spot monitoring (BSM) radar sensor axis • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR BUMPER SURFACE** • Visually inspect the rear bumper surface for the following: ▪ Dirt ▪ Adhered foreign matter (reflective object) • Is the rear bumper normal?	Yes	Go to the next step.
		No	Remove dirt or foreign matter (reflective object), then go to Step 5.
2	**INSPECT AREA AROUND BSM CONTROL MODULE**	Yes	Go to the next step.

	Visually inspect the area around the BSM control module for the following: ▪ Dirt ▪ Adhered foreign matter (reflective object) • Is the area around the BSM control module normal?	No	Remove dirt or foreign matter (reflective object), then go to Step 5.
3	**VERIFY CONTROL MODULE INSTALLATION CONDITION** • Inspect the following: ▪ Deformation of body or bracket around BSM control module ▪ BSM control module installation condition • Is the BSM control module installed correctly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part, then go to Step 5.
4	**PERFORM BLIND SPOT MONITORING (BSM) RADAR TEST** • Perform the blind spot monitoring (BSM) radar test. (See **BLIND SPOT MONITORING (BSM) RADAR TEST**.) • Drive the vehicle. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Perform the blind spot monitoring (BSM) radar test. (See **BLIND SPOT MONITORING (BSM) RADAR TEST**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)

	• Drive the vehicle. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?		Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:97 [BLIND SPOT MONITORING (BSM)]

Description	Radar performance malfunction
Detection condition	• BSM control module internal radar sensor sensitivity is decreased. • BSM control module internal radar sensor axis is deviated.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Rear bumper malfunction (Dirt or foreign matter (reflective object) is adhered.) • BSM control module malfunction (Dirt or foreign matter (reflective object) is adhered.) • Concavity and convexity on the surface of the repaired rear bumper • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR BUMPER SURFACE** • Visually inspect the rear bumper surface for the following: ▪ Dirt ▪ Adhered foreign matter (reflective object) • Is the rear bumper normal?	Yes	Go to the next step.
		No	Remove dirt or foreign matter (reflective object), then go to Step 4.
2	**INSPECT AREA AROUND BSM CONTROL MODULE**	Yes	Go to the next step.

	• Visually inspect the area around the BSM control module for the following:
	  ▪ Dirt
	  ▪ Adhered foreign matter (reflective object)
	• Is the area around the BSM control module normal?
		No	Remove dirt or foreign matter (reflective object), then go to Step 4.

3	**VERIFY REAR BUMPER REPAIR HISTORY** • Verify if the rear bumper had been repaired or repainted before. • Is the paint Mazda genuine?	Yes	Go to the next step.
		No	Replace the rear bumper, then go to the next step. (See **REAR BUMPER REMOVAL/INSTALLATION**.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:04 [BLIND SPOT MONITORING (BSM)]

Description	Instrument cluster configuration error
Detection condition	• Instrument cluster configuration error detected.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• Instrument cluster configuration error • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data). (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [BLIND SPOT MONITORING (BSM)]

Description	BSM control module low power supply voltage input (**less than 8.2 V**)
Detection condition	• BSM control module power supply voltage of **less than 8.2 V** is detected for **2 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • BSM control module (LH) connector or terminal malfunction • BSM control module (RH) connector or terminal malfunction • BSM control module power supply circuit malfunction ▪ Short to ground in wiring harness between C/U IG1 15 A fuse and BSM control module terminal I ▪ C/U IG1 15 A fuse malfunction ▪ Open circuit in wiring harness between IG1 relay and BSM control module terminal I • BSM control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery.	Yes	Go to the next step.

	(See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	No	Recharge or replace the battery, then go to Step 7. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 7. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
4	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**VERIFY BSM CONTROL MODULE POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors.	Yes	Go to the next step.
		No	Inspect the C/U IG1 15A fuse.

- Reconnect the negative battery cable.

  (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Display PID VPWR_IG1 using the M-MDS.

  (See **PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)]**.)

- Is the voltage **B+**?

- If the fuse is blown:
  - Refer to the wiring diagram and verify whether or not there is a common connector between C/U IG1 15A fuse and BSM control module terminal I.

    If there is a common connector:

    - Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.
    - Repair or replace the malfunctioning part.

    If there is no common connector:

    - Repair or replace the wiring harness which has a short to ground.
    - Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.

- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay and BSM control module terminal I.

    If there is a common connector:

    - Determine the malfunctioning

			part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:17 [BLIND SPOT MONITORING (BSM)]

Description	BSM control module high power supply voltage input (**16.8 V or more**)
Detection condition	• BSM control module power supply voltage of **16.8 V or more** is detected for **2 s or more**.
Fail-safe function	• Blind spot monitoring (BSM) system is stopped.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • BSM control module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the BSM control module using the M-MDS. (See **CLEARING DTC [BLIND SPOT MONITORING (BSM)]**.) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Retrieve the BSM control module DTCs using the M-MDS. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “BSML” or “BSMR”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [BLIND SPOT MONITORING (BSM)]

BSM Control Module (LH)

—: Not applicable

PID	Unit/Operation	Data contents	Module control terminal
DTC_CNT	—	Displays number of DTCs stored in the BSM control module (LH)	—
IL_MODE	Off/On	• Off: BSM OFF indicator light is illuminated in night mode. • On: BSM OFF indicator light is illuminated in daytime mode.	C, D (CAN)
RCTA_BUZZER	Off/On	• Off: RCTA warning alarm does not sound. • On: RCTA warning alarm sounds.	C, D (CAN)
RCTA_OFF_IL	Off/On	• Off: BSM OFF indicator light is not illuminated. • On: BSM OFF indicator light is illuminated.	C, D (CAN)
RCTA_WARN	Off/On	• Off: BSM indicator lights are not illuminated. • On: BSM indicator lights are illuminated.	C, D (CAN)
SHIFT_R	Not_R/R	**ATX** • Not_R: Selector lever is in position other than R. • R: Selector lever is in R position. **MTX**	C, D (CAN)

		• Not_R: Shift lever is in position other than reverse. • R: Shift lever is in reverse position.	
SWA_POS	° (deg)	Displays steering angle signal (estimated absolute angle) • Steering wheel in neutral position: Near **0 degrees** • Steering wheel turned to left: Changes from **0 degrees** to positive • Steering wheel turned to right: Changes from **0 degrees** to negative	C, D (CAN)
VPWR_IG1	V	Displays BSM control module (LH) power supply voltage	I (Power supply)
VSPD	KPH, MPH	Displays vehicle speed	C, D (CAN)
WRN_IND_L	Off/On	• Off: BSM indicator light (LH) is not illuminated. • On: BSM indicator light (LH) is illuminated.	• G (BSM indicator light (LH) signal) • J (Ground)

BSM Control Module (RH)

—: Not applicable

PID	Unit/Operation	Data contents	Module control terminal
DTC_CNT	—	Displays number of DTCs stored in the BSM control module (RH)	—
IL_MODE	Off/On	• Off: BSM OFF indicator light is illuminated in night mode. • On: BSM OFF indicator light is illuminated in daytime mode.	A, B (CAN)
RCTA_OFF_IL	Off/On	• Off: BSM OFF indicator light is not illuminated.	A, B (CAN)

		• On: BSM OFF indicator light is illuminated.	
SHIFT_R	Not_R/R	**ATX** • Not_R: Selector lever is in position other than R. • R: Selector lever is in R position. **MTX** • Not_R: Shift lever is in position other than reverse. • R: Shift lever is in reverse position.	A, B (CAN)
SWA_POS	° (deg)	Displays steering angle signal (estimated absolute angle) • Steering wheel in neutral position: Near **0 degrees** • Steering wheel turned to left: Changes from **0 degrees** to positive • Steering wheel turned to right: Changes from **0 degrees** to negative	A, B (CAN)
VPWR_IG1	V	Displays BSM control module (RH) power supply voltage	I (Power supply)
VSPD	KPH, MPH	Displays vehicle speed	A, B (CAN)
WRN_IND_R	Off/On	• Off: BSM indicator light (RH) is not illuminated. • On: BSM indicator light (RH) is illuminated.	• G (BSM indicator light (RH) signal) • J (Ground)

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES INSPECTION [BLIND SPOT MONITORING (BSM)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “BSML” or “BSMR”.

3. Select the simulation items from the PID table.

4. Perform the active command modes function, inspect the operations for each parts.

    - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES TABLE [BLIND SPOT MONITORING (BSM)]

BSM Control Module (LH)

Simulation item	Unit/Operation	Data contents	Output part name
BSM_OFF_IL	On/Off	• On: Illuminates BSM OFF indicator light. • Off: Turns off BSM OFF indicator light.	BSM OFF indicator light (Instrument cluster)
Buzzer	On/Off	• On: Operates BSM warning alarm. • Off: Stops BSM warning alarm.	BSM warning alarm (Instrument cluster)
IL_MODE	Off/On	• Off: Illuminates BSM OFF indicator light in night mode. • On: Illuminates BSM OFF indicator light in daytime mode.	BSM OFF indicator light (Instrument cluster)
RCTA_BUZZER	Off/On	• Off: RCTA warning alarm does not sound. • On: RCTA warning alarm sounds.	RCTA warning alarm (Instrument cluster)
VSPD	OFF/ON	• OFF: Does not input vehicle speed. • ON: Inputs vehicle speed of **34 km/h {21 mph}**.	BSM control module (LH)
WRN_IND_L	Off/On	• Off: Turns off BSM indicator light (LH). • On: Illuminates BSM	BSM indicator light (LH) (Power outer mirror (LH))

		indicator light (LH).	

BSM Control Module (RH)

Simulation item	Unit/Operation	Data contents	Output part name
IL_MODE	Off/On	• Off: Illuminates BSM OFF indicator light in night mode. • On: Illuminates BSM OFF indicator light in daytime mode.	BSM OFF indicator light (Instrument cluster)
RCTA_BUZZER	Off/On	• Off: RCTA warning alarm does not sound. • On: RCTA warning alarm sounds.	RCTA warning alarm (Instrument cluster)
VSPD	OFF/ON	• OFF: Does not input vehicle speed. • ON: Inputs vehicle speed of **34 km/h {21 mph}**.	BSM control module (RH)
WRN_IND_R	Off/On	• Off: Turns off BSM indicator light (RH). • On: Illuminates BSM indicator light (RH).	BSM indicator light (RH) (Power outer mirror (RH))

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [CONNECTIVITY MASTER UNIT]

2014 - Mazda3 - Body and Accessories

FOREWORD [CONNECTIVITY MASTER UNIT]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to troubleshooting procedure. (See **Troubleshooting Procedure**.)

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
REFER TO DTC INSPECTION NOTE.*2
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
DIAGNOSTIC ASSIST FUNCTION
USE CONNECTIVITY MASTER UNIT DIAGNOSTIC ASSIST FUNCTION TO VERIFY THE CONNECTION AND OPERATION STATUS OF THE ENTERTAINMENT SYSTEM RELATED PARTS.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

*2

(See DTC Inspection Note.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for occurrence of any malfunction or DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

DTC Inspection Note

DTCs for the connectivity master unit can be verified using the M-MDS or the on-board diagnostic test mode in which the on-board diagnostic function can be launched by operating the commander switch or center display.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [CONNECTIVITY MASTER UNIT]

When using M-MDS

CMDTC self test

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Self Test”.

    b. Select “All CMDTCs”.

3. Verify the DTC according to the directions on the screen.

    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

4. After completion of repairs, clear all DTCs stored in the connectivity master unit. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.)

ODDTC self test

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “Self Test”.

    b. Select “Modules”.

    c. Select “CMU”.

3. Verify the DTC according to the directions on the screen.

    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

4. After completion of repairs, clear all DTCs stored in the connectivity master unit. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.)

When using Diagnostic Assist Function

DTC inspection can also be performed by launching the diagnostic assist function of the connectivity master unit. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.)

2014 - Mazda3 - Body and Accessories

CLEARING DTC [CONNECTIVITY MASTER UNIT]

When using M-MDS

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “CMU”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.

7. Perform DTC inspection. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.)

8. Verify that no DTCs are displayed.

When using Diagnostic Assist Function

Clearing DTC can also be performed by launching the diagnostic assist function of the connectivity master unit. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.)

2014 - Mazda3 - Body and Accessories

DTC TABLE [CONNECTIVITY MASTER UNIT]

×: Applicable—: Not applicable

DTC No.	Diagnostic assist code*1	Warning/indicator lights	Description	Fail-safe function	Drive cycle	Self test type*2	Memory function	Page

2014 - Mazda3 - Body and Accessories

DTC B1087:87 [CONNECTIVITY MASTER UNIT]

Description	Communication error with commander switch
Detection condition	• The connectivity master unit cannot receive a LIN signal from the commander switch for **5 s or more** with the ignition switched ACC or ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Commander switch connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 2K and commander switch terminal E • Short to power supply in wiring harness between connectivity master unit terminal 2K and commander switch terminal E • Open circuit in wiring harness between connectivity master unit terminal 2K and commander switch terminal E • Commander switch malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT COMMANDER SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the commander switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT COMMANDER SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the commander switch and connectivity master unit connectors are disconnected. • Inspect for continuity between commander switch terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 2K and commander switch terminal E. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT COMMANDER SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the commander switch and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at commander switch terminal E (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 2K and commander switch terminal E. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to power supply. Go to Step 7.
5	**INSPECT COMMANDER SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the commander switch and connectivity master unit connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 2K and commander switch terminal E. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location.

	Inspect the wiring harness for continuity between connectivity master unit terminal 2K (wiring harness-side) and commander switch terminal E (wiring harness-side). • Is there continuity?		• Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS COMMANDER SWITCH** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the commander switch, then go to the next step. (See **COMMANDER SWITCH REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
	VERIFY IF OTHER DTCs DISPLAYED		

8	• Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B108E:04 [CONNECTIVITY MASTER UNIT]

Description	Center display internal malfunction
Detection condition	• The connectivity master unit detected a center display internal malfunction for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Center display internal malfunction • Connectivity master unit malfunction
System wiring diagram	Not applicable

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CENTER DISPLAY** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the center display, then go to the next step. (See **CENTER DISPLAY REMOVAL/INSTALLATION**.)
		No	Go to Step 3.
	VERIFY THAT REPAIRS HAVE BEEN COMPLETED		

2	• Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B108E:06 [CONNECTIVITY MASTER UNIT]

Description	HDCP authorization error
Detection condition	• The connectivity master unit detected an HDCP authorization error with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Center display connector or terminal malfunction
	• Connectivity master unit connector or terminal malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 3B and center display terminal 2B
	  ▪ Connectivity master unit terminal 3D and center display terminal 2D
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 3B and center display terminal 2B
	  ▪ Connectivity master unit terminal 3D and center display terminal 2D
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 3B and center display terminal 2B
	  ▪ Connectivity master unit terminal 3D and center display terminal 2D
	• Center display malfunction
	  ▪ Incorrect display is equipped
	  ▪ Display is malfunctioning
	• Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CENTER DISPLAY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the center display connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CENTER DISPLAY CIRCUIT FOR SHORT TO GROUND** • Verify that the center display and connectivity master unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Center display terminal 2B ▪ Center display terminal 2D • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 3B and center display terminal 2B • Connectivity master unit terminal 3D and center display terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT CENTER DISPLAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the center display and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 3B and center display terminal 2B • Connectivity master unit terminal 3D and center display terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location.

	harness-side). ▪ Center display terminal 2B ▪ Center display terminal 2D • Is the voltage **0 V**?		• Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT CENTER DISPLAY CIRCUIT FOR OPEN CIRCUIT** • Verify that the center display and connectivity master unit connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 3B and center display terminal 2B ▪ Connectivity master unit terminal 3D and center display terminal 2D • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 3B and center display terminal 2B • Connectivity master unit terminal 3D and center display terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CENTER DISPLAY** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using	Yes	Replace the center display, then go to the next step. (See **CENTER DISPLAY REMOVAL/INSTALLATION**.)
		No	Go to Step 8.

	the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

DTC B108E:06 [CONNECTIVITY MASTER UNIT]

2014 - Mazda3 - Body and Accessories

DTC B108E:1C [CONNECTIVITY MASTER UNIT]

Description	Low power supply voltage input to center display
Detection condition	• The connectivity master unit detected any of the following conditions for **5 s or more** with the ignition switched ON (engine off or on). ▪ TFT LCD driver voltage **3.8 V or less** ▪ LED drive voltage **14.0 V or less** ▪ Touch panel IC voltage **3.9 V or less**
Fail-safe function	• Stops operation of the center display.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Center display connector or terminal malfunction • Center display B+ power supply circuit malfunction ▪ Short to ground in wiring harness between MAIN 200 A fuse and center display terminal 1H ▪ ROOM 15 A fuse malfunction ▪ MAIN 200 A fuse malfunction ▪ Open circuit in wiring harness between battery and center display terminal 1H • Center display ACC power supply circuit malfunction ▪ Short to ground in wiring harness between MIRROR 7.5 A fuse and center display terminal 1G ▪ MIRROR 7.5 A fuse malfunction ▪ Open circuit in wiring harness between ACC relay and center display terminal 1G • Center display malfunction • Connectivity master unit malfunction

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a DTC displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 8. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	INSPECT GENERATOR		

3	• Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 8. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
4	**INSPECT CENTER DISPLAY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the center display connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
5	**VERIFY CENTER DISPLAY B+ POWER SUPPLY VOLTAGE** • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at center display terminal 1H (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Install the ROOM 15 A fuse and MAIN 200 A fuse. • If any fuse is blown: ▪ Refer to the wiring diagram and verify if there is a common connector between MAIN 200 A fuse and center display terminal 1H. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring

harnesses for short to ground to determine the malfunctioning location.

- Repair or replace the malfunctioning location.

If there is no common connector:

- Repair or replace the wiring harness which is shorted to ground.
- Replace the fuse.

- If any fuse is damaged:
  - Replace the fuse.
- If the fuses are normal:
  - Refer to the wiring diagram and verify if there is a common connector between positive battery terminal and center display terminal 1H.

If there is a common connector:

- Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location.
- Repair or replace the malfunctioning location.

If there is no common

			connector: • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
6	**VERIFY CENTER DISPLAY ACC POWER SUPPLY VOLTAGE** • Measure the voltage at center display terminal 1G (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MIRROR 7.5 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify if there is a common connector between MIRROR 7.5 A fuse and center display terminal 1G. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Replace the fuse. • If the fuse is damaged:

			Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify if there is a common connector between ACC relay and center display terminal 1G. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CENTER DISPLAY** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master	Yes	Replace the center display, then go to the next step. (See **CENTER DISPLAY REMOVAL/INSTALLATION**.)
		No	Go to Step 9.

	unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B108E:87 [CONNECTIVITY MASTER UNIT]

Description	Center display circuit malfunction
Detection condition	• The connectivity master unit cannot receive a signal from the center display for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Center display connector or terminal malfunction
	• Connectivity master unit connector or terminal malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 3B and center display terminal 2B
	  ▪ Connectivity master unit terminal 3D and center display terminal 2D
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 3B and center display terminal 2B
	  ▪ Connectivity master unit terminal 3D and center display terminal 2D
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 3B and center display terminal 2B
	  ▪ Connectivity master unit terminal 3D and center display terminal 2D
	• Center display malfunction
	• Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CENTER DISPLAY CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the center display connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CENTER DISPLAY CIRCUIT FOR SHORT TO GROUND** • Verify that the center display and connectivity master unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Center display terminal 2B ▪ Center display terminal 2D • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 3B and center display terminal 2B • Connectivity master unit terminal 3D and center display terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT CENTER DISPLAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the center display and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 3B and center display terminal 2B • Connectivity master unit terminal 3D and center display terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location.

	harness-side). ▪ Center display terminal 2B ▪ Center display terminal 2D • Is the voltage **0 V**?		• Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT CENTER DISPLAY CIRCUIT FOR OPEN CIRCUIT** • Verify that the center display and connectivity master unit connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 3B and center display terminal 2B ▪ Connectivity master unit terminal 3D and center display terminal 2D • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 3B and center display terminal 2B • Connectivity master unit terminal 3D and center display terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CENTER DISPLAY** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using	Yes	Replace the center display, then go to the next step. (See **CENTER DISPLAY REMOVAL/INSTALLATION**.)
		No	Go to Step 8.

	the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

DTC B108E:87 [CONNECTIVITY MASTER UNIT]

2014 - Mazda3 - Body and Accessories

DTC B116A:11 [CONNECTIVITY MASTER UNIT]

Description	Microphone circuit malfunction
Detection condition	• The connectivity master unit detected a short to ground in the microphone circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Microphone connector or terminal malfunction
	• Connectivity master unit connector or terminal malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 1S and microphone terminal A
	  ▪ Connectivity master unit terminal 1T and microphone terminal B
	• Microphone malfunction
	• Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the microphone connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master	Yes	Go to the next step.

	unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 5.
3	**INSPECT MICROPHONE CIRCUIT FOR SHORT TO GROUND** • Verify that the microphone and connectivity master unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Connectivity master unit terminal 1S ▪ Connectivity master unit terminal 1T • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 1S and microphone terminal A • Connectivity master unit terminal 1T and microphone terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS MICROPHONE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the microphone, then go to the next step. (See **MICROPHONE REMOVAL/INSTALLATION**.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected	Yes	Repeat the inspection from Step 1.

	connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		• If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B116A:12 [CONNECTIVITY MASTER UNIT]

Description	Microphone circuit malfunction
Detection condition	• The connectivity master unit detected a short to power supply in the microphone circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Microphone connector or terminal malfunction
	• Connectivity master unit connector or terminal malfunction
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 1S and microphone terminal A
	  ▪ Connectivity master unit terminal 1T and microphone terminal B
	• Microphone malfunction
	• Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the microphone connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master	Yes	Go to the next step.

	unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 5.
3	**INSPECT MICROPHONE CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the microphone and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Microphone terminal A ▪ Microphone terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 1S and microphone terminal A • Connectivity master unit terminal 1T and microphone terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 5.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS MICROPHONE** • Always reconnect all disconnected connectors. • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the microphone, then go to the next step. (See **MICROPHONE REMOVAL/INSTALLATION**.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B116A:92 [CONNECTIVITY MASTER UNIT]

Description	Microphone circuit malfunction
Detection condition	• The connectivity master unit detected microphone circuit voltage of **less than 7.7 V** or **more than 8.6 V** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Microphone connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 1Q and microphone terminal C • Short to power supply in wiring harness between connectivity master unit terminal 1Q and microphone terminal C • Open circuit in wiring harness between connectivity master unit terminal 1Q and microphone terminal C • Microphone malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the microphone connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT MICROPHONE CIRCUIT FOR SHORT TO GROUND** • Verify that the microphone and connectivity master unit connectors are disconnected. • Inspect for continuity between connectivity master unit terminal 1Q (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1Q and microphone terminal C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT MICROPHONE CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the microphone and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at microphone terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1Q and microphone terminal C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT MICROPHONE CIRCUIT FOR OPEN CIRCUIT** • Verify that the microphone and connectivity master unit connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between connectivity master unit terminal 1Q (wiring harness-side)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1Q and microphone terminal C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:**

	and microphone terminal C (wiring harness-side). • Is there continuity?		• Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS MICROPHONE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the microphone, then go to the next step. (See **MICROPHONE REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

DTC B116A:92 [CONNECTIVITY MASTER UNIT]

2014 - Mazda3 - Body and Accessories

DTC B119F:11 [CONNECTIVITY MASTER UNIT]

Description	GPS antenna circuit malfunction
Detection condition	• Connectivity master unit detects GPS antenna circuit voltage of **4.45 V or less** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• GPS antenna connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 5A and GPS antenna terminal A • GPS antenna malfunction • Connectivity master unit malfunction

Step	Inspection		Action
1	**INSPECT GPS ANTENNA CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the GPS antenna connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT GPS ANTENNA CIRCUIT FOR SHORT TO GROUND** • Verify that the GPS antenna and connectivity master unit connectors are disconnected. • Inspect for continuity between GPS antenna terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 5A and GPS antenna terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF GPS ANTENNA IS MALFUNCTIONING PART** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the GPS antenna, then go to the next step. (See **GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 6.

	• Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair the malfunctioning location according to the

	• Are any other DTCs displayed?		applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B119F:13 [CONNECTIVITY MASTER UNIT]

Description	GPS antenna circuit malfunction
Detection condition	• The connectivity master unit detects an open circuit in the GPS antenna circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• GPS antenna connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Open circuit in wiring harness between connectivity master unit terminal 5A and GPS antenna terminal A • GPS antenna malfunction • Connectivity master unit malfunction

Step	Inspection		Action
1	**INSPECT GPS ANTENNA CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the GPS antenna connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
	INSPECT CONNECTIVITY MASTER UNIT		

2	**CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT GPS ANTENNA CIRCUIT FOR OPEN CIRCUIT** • Verify that the GPS antenna and connectivity master unit connectors are disconnected. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between connectivity master unit terminal 5A (wiring harness-side) and GPS antenna terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 5A and GPS antenna terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 5.
4	**PERFORM DTC INSPECTION AND VERIFY IF GPS ANTENNA IS MALFUNCTIONING PART** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using	Yes	Replace the GPS antenna, then go to the next step. (See **GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 6.

	the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B119F:1D [CONNECTIVITY MASTER UNIT]

Description	GPS antenna circuit malfunction
Detection condition	• The connectivity master unit detects a current value in the GPS antenna circuit of (**31 mA or more**) with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• GPS antenna connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 5A and GPS antenna terminal A • GPS antenna malfunction • Connectivity master unit malfunction

Step	Inspection		Action
1	**INSPECT GPS ANTENNA CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the GPS antenna connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT GPS ANTENNA CIRCUIT FOR SHORT TO GROUND** • Verify that the GPS antenna and connectivity master unit connectors are disconnected. • Inspect for continuity between GPS antenna terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 5A and GPS antenna terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF GPS ANTENNA IS MALFUNCTIONING PART** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Replace the GPS antenna, then go to the next step. (See **GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 6.

	• Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair the malfunctioning location according to the

	• Are any other DTCs displayed?		applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B119F:92 [CONNECTIVITY MASTER UNIT]

Description	GPS antenna circuit malfunction
Detection condition	• The connectivity master unit cannot receive signals from the GPS antenna for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• GPS antenna connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in the wiring harness between connectivity master unit terminal 5A and GPS antenna terminal A • Short to power supply in the wiring harness between connectivity master unit terminal 5A and GPS antenna terminal A • Open circuit in wiring harness between connectivity master unit terminal 5A and GPS antenna terminal A • GPS antenna malfunction • Connectivity master unit malfunction

Step	Inspection		Action
1	**INSPECT GPS ANTENNA CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the GPS antenna connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT GPS ANTENNA CIRCUIT FOR SHORT TO GROUND** • Verify that the GPS antenna and connectivity master unit connectors are disconnected. • Inspect for continuity between GPS antenna terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and confirm if there is a common connector between connectivity master unit terminal 5A and GPS antenna terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT GPS ANTENNA CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the GPS antenna and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Refer to the wiring diagram and confirm if there is a common connector between connectivity master unit terminal 5A and GPS antenna terminal A. **If there is a common connector:** • Perform an inspection of the common connector and terminals for corrosion, damage or loss, and the common wiring harness for a short to power supply to determine

	• Switch the ignition ON (engine off or on). • Measure the voltage at GPS antenna terminal A (wiring harness-side). • Is the voltage **0 V**?		the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT GPS ANTENNA CIRCUIT FOR OPEN CIRCUIT** • Verify that the GPS antenna and connectivity master unit connectors are disconnected. • Inspect the wiring harness for continuity between connectivity master unit terminal 5A (wiring harness-side) and GPS antenna terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and confirm if there is a common connector between connectivity master unit terminal 5A and GPS antenna terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
6	**PERFORM DTC INSPECTION AND VERIFY IF GPS ANTENNA IS MALFUNCTIONING PART** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using	Yes	Replace the GPS antenna, then go to the next step. (See **GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 7.

	the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting.

			(See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11BA:11 [CONNECTIVITY MASTER UNIT]

Description	Steering switch circuit malfunction
Detection condition	• The connectivity master unit detected a short to ground in the steering switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Clock spring connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Clock spring malfunction • Short to ground in wiring harness between connectivity master unit terminal 1M and clock spring (instrument panel harness-side) terminal 1G • Steering switch malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 6. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4	**INSPECT STEERING SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the clock spring and connectivity master unit connectors are disconnected. • Inspect for continuity between clock spring (instrument panel harness-side) terminal 1G (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1M and clock spring (instrument panel harness-side) terminal 1G. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 6.
		No	Go to the next step.
5	**INSPECT STEERING SWITCH** • Inspect the steering switch. (See **STEERING SWITCH INSPECTION**.) • Is the steering switch normal?	Yes	Go to the next step.
		No	Replace the steering switch, then go to the next step. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)

6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11BA:15 [CONNECTIVITY MASTER UNIT]

Description	Steering switch circuit malfunction
Detection condition	• The connectivity master unit detected an open circuit in the steering switch circuit or a short to the power supply for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Clock spring connector or terminal malfunction
	• Connectivity master unit connector or terminal malfunction
	• Clock spring malfunction
	• Short to power supply in wiring harness between connectivity master unit terminal 1M and clock spring (instrument panel harness-side) terminal 1G
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 1M and clock spring (instrument panel harness-side) terminal 1G
	  ▪ Connectivity master unit terminal 1N and clock spring (instrument panel harness-side) terminal 1E
	• Steering switch malfunction
	• Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	2.5].) • Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 7. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4	**INSPECT STEERING SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the clock spring and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at clock spring (instrument panel harness-side) terminal 1G (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1M and clock spring (instrument panel harness-side) terminal 1G. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT STEERING SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the clock spring and connectivity master unit	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals.

	connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 1M and clock spring (instrument panel harness-side) terminal 1G ▪ Connectivity master unit terminal 1N and clock spring (instrument panel harness-side) terminal 1E • Is there continuity?		• Connectivity master unit terminal 1M and clock spring (instrument panel harness-side) terminal 1G • Connectivity master unit terminal 1N and clock spring (instrument panel harness-side) terminal 1E **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**INSPECT STEERING SWITCH** • Inspect the steering switch. (See **STEERING SWITCH INSPECTION**.) • Is the steering switch normal?	Yes	Go to the next step.
		No	Replace the steering switch, then go to the next step. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	[CONNECTIVITY MASTER UNIT].) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1201:11 [CONNECTIVITY MASTER UNIT]

Description	Steering switch circuit malfunction
Detection condition	• The connectivity master unit detected a short to ground in the steering switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Clock spring connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Clock spring malfunction • Short to ground in wiring harness between connectivity master unit terminal 1O and clock spring (instrument panel harness-side) terminal 1B • Steering switch malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 6. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4	**INSPECT STEERING SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the clock spring and connectivity master unit connectors are disconnected. • Inspect for continuity between clock spring (instrument panel harness-side) terminal 1B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1O and clock spring (instrument panel harness-side) terminal 1B. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 6.
		No	Go to the next step.
5	**INSPECT STEERING SWITCH** • Inspect the steering switch. (See **STEERING SWITCH INSPECTION**.) • Is the steering switch normal?	Yes	Go to the next step.
		No	Replace the steering switch, then go to the next step. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)

6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1201:15 [CONNECTIVITY MASTER UNIT]

Description	Steering switch circuit malfunction
Detection condition	• The connectivity master unit detected an open circuit in the steering switch circuit or a short to the power supply for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Clock spring connector or terminal malfunction
	• Connectivity master unit connector or terminal malfunction
	• Clock spring malfunction
	• Short to power supply in wiring harness between connectivity master unit terminal 1O and clock spring (instrument panel harness-side) terminal 1B
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 1O and clock spring (instrument panel harness-side) terminal 1B
	  ▪ Connectivity master unit terminal 1N and clock spring (instrument panel harness-side) terminal 1E
	• Steering switch malfunction
	• Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	2.5].) • Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 7. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4	**INSPECT STEERING SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the clock spring and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at clock spring (instrument panel harness-side) terminal 1B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1O and clock spring (instrument panel harness-side) terminal 1B. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT STEERING SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the clock spring and connectivity master unit	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals.

	connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 1O and clock spring (instrument panel harness-side) terminal 1B ▪ Connectivity master unit terminal 1N and clock spring (instrument panel harness-side) terminal 1E • Is there continuity?		• Connectivity master unit terminal 1O and clock spring (instrument panel harness-side) terminal 1B • Connectivity master unit terminal 1N and clock spring (instrument panel harness-side) terminal 1E **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**INSPECT STEERING SWITCH** • Inspect the steering switch. (See **STEERING SWITCH INSPECTION**.) • Is the steering switch normal?	Yes	Go to the next step.
		No	Replace the steering switch, then go to the next step. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	[CONNECTIVITY MASTER UNIT].) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1238:01 [CONNECTIVITY MASTER UNIT]

Without Bose®

Description	Speaker circuit malfunction
Detection condition	• The connectivity master unit detected a short to ground or short to power supply in the speaker circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Tuner and amp unit connector or terminal malfunction • Front door speaker (LH) connector or terminal malfunction • Tweeter (LH) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ Tuner and amp unit terminal 2A and front door speaker (LH) terminal C ▪ Tuner and amp unit terminal 2C and front door speaker (LH) terminal B ▪ Tuner and amp unit terminal 2A and tweeter (LH) terminal B ▪ Tuner and amp unit terminal 2C and tweeter (LH) terminal A • Short to power supply in wiring harness between the following terminals: ▪ Tuner and amp unit terminal 2A and front door speaker (LH) terminal C ▪ Tuner and amp unit terminal 2C and front door speaker (LH) terminal B ▪ Tuner and amp unit terminal 2A and tweeter (LH) terminal B ▪ Tuner and amp unit terminal 2C and tweeter (LH) terminal A • Front door speaker (LH) malfunction • Tweeter (LH) malfunction • Front door speaker (RH) connector or terminal malfunction • Tweeter (RH) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ Tuner and amp unit terminal 2D and front door speaker (RH) terminal C ▪ Tuner and amp unit terminal 2F and front door speaker (RH) terminal B ▪ Tuner and amp unit terminal 2D and tweeter (RH) terminal B ▪ Tuner and amp unit terminal 2F and tweeter (RH) terminal A • Short to power supply in wiring harness between the following terminals: ▪ Tuner and amp unit terminal 2D and front door speaker (RH) terminal C ▪ Tuner and amp unit terminal 2F and front door speaker (RH) terminal B ▪ Tuner and amp unit terminal 2D and tweeter (RH) terminal B

Tuner and amp unit terminal 2F and tweeter (RH) terminal A

- Front door speaker (RH) malfunction
- Tweeter (RH) malfunction
- Rear door speaker (LH) connector or terminal malfunction
- Short to ground in wiring harness between the following terminals:
  - Tuner and amp unit terminal 2S and rear door speaker (LH) terminal C
  - Tuner and amp unit terminal 2U and rear door speaker (LH) terminal B
- Short to power supply in wiring harness between the following terminals:
  - Tuner and amp unit terminal 2S and rear door speaker (LH) terminal C
  - Tuner and amp unit terminal 2U and rear door speaker (LH) terminal B
- Rear door speaker (LH) malfunction
- Rear door speaker (RH) connector or terminal malfunction
- Short to ground in wiring harness between the following terminals:
  - Tuner and amp unit terminal 2V and rear door speaker (RH) terminal C
  - Tuner and amp unit terminal 2X and rear door speaker (RH) terminal B
- Short to power supply in wiring harness between the following terminals:
  - Tuner and amp unit terminal 2V and rear door speaker (RH) terminal C
  - Tuner and amp unit terminal 2X and rear door speaker (RH) terminal B
- Rear door speaker (RH) malfunction
- Tuner and amp unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE MALFUNCTIONING SPEAKER** • Perform diagnostic assist code “94” speaker inspection. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Is audio produced from each speaker in order?	Yes	Go to Step 27.
		No	No audio produced from front door speaker (LH) and tweeter (LH) • Go to the next step. No audio produced from front door speaker (RH) and tweeter (RH) • Go to Step 9. No sound produced from rear door speaker (LH) • Go to Step 16. No audio produced from rear door speaker (RH) • Go to Step 21. No audio produced from all speakers. • Go to Step 26.
2	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.
3	**INSPECT FRONT DOOR SPEAKER (LH) CONNECTOR CONDITION** • Disconnect the front door speaker (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.
4	**INSPECT TWEETER (LH) CONNECTOR CONDITION** • Disconnect the tweeter (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.
5	**INSPECT FRONT DOOR SPEAKER (LH) CIRCUIT FOR SHORT TO GROUND** • Verify that the following connectors are disconnected. ▪ Tuner and amp unit ▪ Front door speaker	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2A and front door speaker (LH) terminal C • Tuner and amp unit terminal 2C and front door speaker (LH) terminal B

	(LH) ▪ Tweeter (LH) • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Front door speaker (LH) terminal C ▪ Front door speaker (LH) terminal B • Is there continuity?		• Tuner and amp unit terminal 2A and tweeter (LH) terminal B • Tuner and amp unit terminal 2C and tweeter (LH) terminal A **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 27.
		No	Go to the next step.
6	**INSPECT FRONT DOOR SPEAKER (LH) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the following connectors are disconnected. ▪ Tuner and amp unit ▪ Front door speaker (LH) ▪ Tweeter (LH) • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Front door speaker (LH) terminal C ▪ Front door speaker (LH) terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2A and front door speaker (LH) terminal C • Tuner and amp unit terminal 2C and front door speaker (LH) terminal B • Tuner and amp unit terminal 2A and tweeter (LH) terminal B • Tuner and amp unit terminal 2C and tweeter (LH) terminal A **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 27.
7	**INSPECT FRONT DOOR SPEAKER (LH)** • Inspect the front door speaker (LH). (See **FRONT DOOR SPEAKER INSPECTION**.) • Is the front door speaker (LH) normal?	Yes	Go to the next step.
		No	Replace the front door speaker (LH), then go to Step 27. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)
8	**INSPECT TWEETER (LH)** • Inspect the tweeter (LH) (See **TWEETER INSPECTION**.) • Is the tweeter (LH) normal?	Yes	Go to Step 27.
		No	Replace the tweeter (LH), then go to Step 27. (See **TWEETER REMOVAL/INSTALLATION**.)
9	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION**	Yes	Go to the next step.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 27.
10	**INSPECT FRONT DOOR SPEAKER (RH) CONNECTOR CONDITION** • Disconnect the front door speaker (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.
11	**INSPECT TWEETER (RH) CONNECTOR CONDITION** • Disconnect the tweeter (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.

12	**INSPECT FRONT DOOR SPEAKER (RH) CIRCUIT FOR SHORT TO GROUND**
	• Verify that the following connectors are disconnected.
	  ▪ Tuner and amp unit
	  ▪ Front door speaker (RH)
	  ▪ Tweeter (RH)
	• Inspect for continuity between the following terminals (wiring harness-side) and body ground.
	  ▪ Front door speaker (RH) terminal C
	  ▪ Front door speaker (RH) terminal B
	• Is there continuity?
		Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals.
			• Tuner and amp unit terminal 2D and front door speaker (RH) terminal C
			• Tuner and amp unit terminal 2F and front door speaker (RH) terminal B
			• Tuner and amp unit terminal 2D and tweeter (RH) terminal B
			• Tuner and amp unit terminal 2F and tweeter (RH) terminal A
			If there is a common connector:
			• Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location.
			• Repair or replace the malfunctioning location.
			If there is no common connector:
			• Repair or replace the wiring harness which is shorted to ground.
			Go to Step 27.

		No	Go to the next step.
13	**INSPECT FRONT DOOR SPEAKER (RH) CIRCUIT FOR SHORT TO POWER SUPPLY**	Yes	Go to the next step.

	• Verify that the following connectors are disconnected.
	  ▪ Tuner and amp unit
	  ▪ Front door speaker (RH)
	  ▪ Tweeter (RH)
	• Reconnect the negative battery cable.
	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	• Switch the ignition ON (engine off or on).
	• Measure the voltage at the following terminals (wiring harness-side).
	  ▪ Front door speaker (RH) terminal C
	  ▪ Front door speaker (RH) terminal B
	• Is the voltage **0 V**?
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals.
			• Tuner and amp unit terminal 2D and front door speaker (RH) terminal C
			• Tuner and amp unit terminal 2F and front door speaker (RH) terminal B
			• Tuner and amp unit terminal 2D and tweeter (RH) terminal B
			• Tuner and amp unit terminal 2F and tweeter (RH) terminal A
			If there is a common connector:
			• Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location.
			• Repair or replace the malfunctioning location.
			If there is no common connector:
			• Repair or replace the wiring harness which is shorted to the power supply.
			Go to Step 27.

14	**INSPECT FRONT DOOR SPEAKER (RH)** • Inspect the front door speaker (RH). (See **FRONT DOOR SPEAKER INSPECTION**.) • Is the front door speaker (RH) normal?	Yes	Go to the next step.
		No	Replace the front door speaker (RH), then go to Step 27. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)
15	**INSPECT TWEETER (RH)** • Inspect the tweeter (RH). (See **TWEETER INSPECTION**.) • Is the tweeter (RH) normal?	Yes	Go to Step 27.
		No	Replace the tweeter (RH), then go to Step 27. (See **TWEETER REMOVAL/INSTALLATION**.)
16	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.
17	**INSPECT REAR DOOR SPEAKER (LH) CONNECTOR CONDITION** • Disconnect the rear door speaker (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.

	• Is the connector normal?		
18	**INSPECT REAR DOOR SPEAKER (LH) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear door speaker (LH) and tuner and amp unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Rear door speaker (LH) terminal C ▪ Rear door speaker (LH) terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2S and rear door speaker (LH) terminal C • Tuner and amp unit terminal 2U and rear door speaker (LH) terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 27.
		No	Go to the next step.
19	**INSPECT REAR DOOR SPEAKER (LH) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the rear door speaker (LH) and tuner and amp unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Rear door speaker (LH) terminal C ▪ Rear door speaker (LH) terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2S and rear door speaker (LH) terminal C • Tuner and amp unit terminal 2U and rear door speaker (LH) terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 27.
20	**INSPECT REAR DOOR SPEAKER (LH)** • Inspect the rear door speaker (LH). (See **REAR DOOR SPEAKER INSPECTION**.) • Is the rear door speaker (LH) normal?	Yes	Go to Step 27.
		No	Replace the rear door speaker (LH), then go to Step 27. (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)
21	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.

	connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
22	**INSPECT REAR DOOR SPEAKER (RH) CONNECTOR CONDITION** • Disconnect the rear door speaker (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 27.
23	**INSPECT REAR DOOR SPEAKER (RH) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear door speaker (RH) and tuner and amp unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Rear door speaker (RH) terminal C ▪ Rear door speaker (RH) terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2V and rear door speaker (RH) terminal C • Tuner and amp unit terminal 2X and rear door speaker (RH) terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 27.
		No	Go to the next step.
24	**INSPECT REAR DOOR SPEAKER (RH) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the rear door speaker (RH) and tuner and amp unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Rear door speaker (RH) terminal C ▪ Rear door speaker (RH) terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2V and rear door speaker (RH) terminal C • Tuner and amp unit terminal 2X and rear door speaker (RH) terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 27.

25	**INSPECT REAR DOOR SPEAKER (RH)** • Inspect the rear door speaker (RH). (See **REAR DOOR SPEAKER INSPECTION**.) • Is the rear door speaker (RH) normal?	Yes	Go to Step 27.
		No	Replace the rear door speaker (RH), then go to Step 27. (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)
26	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to the next step.
27	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the tuner and amp unit. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
28	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

With Bose®

Description	Audio amplifier circuit malfunction
Detection	• The connectivity master unit detected a short to ground or short to power supply in the audio amplifier

condition	circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Audio amplifier connector or terminal malfunction • Tuner and amp unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ Tuner and amp unit terminal 2A and audio amplifier terminal 1O ▪ Tuner and amp unit terminal 2C and audio amplifier terminal 1P ▪ Tuner and amp unit terminal 2D and audio amplifier terminal 1M ▪ Tuner and amp unit terminal 2F and audio amplifier terminal 1N ▪ Tuner and amp unit terminal 2J and audio amplifier terminal 2F ▪ Tuner and amp unit terminal 2S and audio amplifier terminal 1K ▪ Tuner and amp unit terminal 2T and audio amplifier terminal 2H ▪ Tuner and amp unit terminal 2U and audio amplifier terminal 1L ▪ Tuner and amp unit terminal 2V and audio amplifier terminal 1I ▪ Tuner and amp unit terminal 2X and audio amplifier terminal 1J • Short to power supply in wiring harness between the following terminals: ▪ Tuner and amp unit terminal 2A and audio amplifier terminal 1O ▪ Tuner and amp unit terminal 2C and audio amplifier terminal 1P ▪ Tuner and amp unit terminal 2D and audio amplifier terminal 1M ▪ Tuner and amp unit terminal 2F and audio amplifier terminal 1N ▪ Tuner and amp unit terminal 2J and audio amplifier terminal 2F ▪ Tuner and amp unit terminal 2S and audio amplifier terminal 1K ▪ Tuner and amp unit terminal 2T and audio amplifier terminal 2H ▪ Tuner and amp unit terminal 2U and audio amplifier terminal 1L ▪ Tuner and amp unit terminal 2V and audio amplifier terminal 1I ▪ Tuner and amp unit terminal 2X and audio amplifier terminal 1J • Audio amplifier malfunction • Tuner and amp unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUDIO AMPLIFIER CONNECTOR CONDITION** • Switch the ignition off.	Yes	Go to the next step.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the audio amplifier connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 6.
2	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT AUDIO AMPLIFIER CIRCUIT FOR SHORT TO GROUND** • Verify that the audio amplifier and tuner and amp unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Audio amplifier terminal 1O ▪ Audio amplifier terminal 1P ▪ Audio amplifier terminal 1M ▪ Audio amplifier terminal 1N ▪ Audio amplifier terminal 2F ▪ Audio amplifier terminal 1K ▪ Audio amplifier terminal 2H ▪ Audio amplifier terminal 1L ▪ Audio amplifier terminal 1I ▪ Audio amplifier terminal 1J • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2A and audio amplifier terminal 1O • Tuner and amp unit terminal 2C and audio amplifier terminal 1P • Tuner and amp unit terminal 2D and audio amplifier terminal 1M • Tuner and amp unit terminal 2F and audio amplifier terminal 1N • Tuner and amp unit terminal 2J and audio amplifier terminal 2F • Tuner and amp unit terminal 2S and audio amplifier terminal 1K • Tuner and amp unit terminal 2T and audio amplifier terminal 2H • Tuner and amp unit terminal 2U and audio amplifier terminal 1L • Tuner and amp unit terminal 2V and audio amplifier terminal 1I • Tuner and amp unit terminal 2X and audio amplifier terminal 1J **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 6.

		No	Go to the next step.
4	**INSPECT AUDIO AMPLIFIER CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the audio amplifier and tuner and amp unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Audio amplifier terminal 1O ▪ Audio amplifier terminal 1P ▪ Audio amplifier terminal 1M ▪ Audio amplifier terminal 1N ▪ Audio amplifier terminal 2F ▪ Audio amplifier terminal 1K ▪ Audio amplifier terminal 2H ▪ Audio amplifier terminal 1L ▪ Audio amplifier terminal 1I ▪ Audio amplifier terminal 1J • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Tuner and amp unit terminal 2A and audio amplifier terminal 1O • Tuner and amp unit terminal 2C and audio amplifier terminal 1P • Tuner and amp unit terminal 2D and audio amplifier terminal 1M • Tuner and amp unit terminal 2F and audio amplifier terminal 1N • Tuner and amp unit terminal 2J and audio amplifier terminal 2F • Tuner and amp unit terminal 2S and audio amplifier terminal 1K • Tuner and amp unit terminal 2T and audio amplifier terminal 2H • Tuner and amp unit terminal 2U and audio amplifier terminal 1L • Tuner and amp unit terminal 2V and audio amplifier terminal 1I • Tuner and amp unit terminal 2X and audio amplifier terminal 1J **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AUDIO AMPLIFIER** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-	Yes	Replace the audio amplifier, then go to the next step. (See **AUDIO AMPLIFIER REMOVAL/INSTALLATION**.)
		No	Go to Step 7.

	MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the tuner and amp unit. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1238:16 [CONNECTIVITY MASTER UNIT]

Description	Tuner and amp unit low power supply voltage input
Detection condition	• Connectivity master unit detects power supply circuit voltage for tuner and amp unit of **less than 10 V** for **10 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• DTCs are stored in the PCM.
	• Battery malfunction
	• Generator malfunction
	• Tuner and amp unit connector or terminal malfunction
	• Tuner and amp unit power supply circuit malfunction
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and tuner and amp unit terminal 2B
	  ▪ AUDIO1 15 A fuse malfunction
	  ▪ CABIN+B 50 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and tuner and amp unit terminal 2B
	• Tuner and amp unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a DTC displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

	2.5 (WITH i-ELOOP)].) • Is the generator normal?		
4	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY TUNER AND AMP UNIT POWER SUPPLY VOLTAGE** • Verify that the tuner and amp unit connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at tuner and amp unit terminal 2B (wiring harness-side). • Is the voltage **10 V or more**?	Yes	Go to the next step.
		No	Inspect the AUDIO1 15 A fuse, CABIN+B 50A fuse and MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify if there is a common connector between MAIN 200 A fuse and tuner and amp unit terminal 2B. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or

replace the malfunctioning location.

If there is no common connector:

- Repair or replace the wiring harness which is shorted to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify if there is a common connector between battery positive terminal and the tuner and amp unit terminal 2B.

If there is a common connector:

- Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location.
- Repair or replace the malfunctioning location.

If there is no common connector:

- Repair or replace the wiring harness which has an open circuit.

			Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **17 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the tuner and amp unit. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1238:87 [CONNECTIVITY MASTER UNIT]

Description	HD image transfer circuit error
Detection condition	• The connectivity master unit detects a communication error in the HD image transfer circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Tuner and amp unit connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ Connectivity master unit terminal 2O and tuner and amp unit terminal 1W ▪ Connectivity master unit terminal 2P and tuner and amp unit terminal 1X • Short to power supply in wiring harness between the following terminals: ▪ Connectivity master unit terminal 2O and tuner and amp unit terminal 1W ▪ Connectivity master unit terminal 2P and tuner and amp unit terminal 1X • Open circuit in wiring harness between the following terminals: ▪ Connectivity master unit terminal 2O and tuner and amp unit terminal 1W ▪ Connectivity master unit terminal 2P and tuner and amp unit terminal 1X • Tuner and amp unit malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	disconnection. • Is the connector normal?		
3	**INSPECT HD IMAGE TRANSFER CIRCUIT FOR SHORT TO GROUND** • Verify that the tuner and amp unit and connectivity master unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Tuner and amp unit terminal 1W ▪ Tuner and amp unit terminal 1X • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 2O and tuner and amp unit terminal 1W • Connectivity master unit terminal 2P and tuner and amp unit terminal 1X **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT HD IMAGE TRANSFER CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the tuner and amp unit and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Tuner and amp unit terminal 1W ▪ Tuner and amp unit terminal 1X • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 2O and tuner and amp unit terminal 1W • Connectivity master unit terminal 2P and tuner and amp unit terminal 1X **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT HD IMAGE TRANSFER CIRCUIT FOR OPEN CIRCUIT** • Verify that the tuner and amp unit and connectivity master unit connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 2O and tuner and amp unit terminal 1W • Connectivity master unit terminal 2P and tuner and amp unit terminal 1X **If there is a common connector:**

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 2O and tuner and amp unit terminal 1W ▪ Connectivity master unit terminal 2P and tuner and amp unit terminal 1X • Is there continuity?		• Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS TUNER AND AMP UNIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the connectivity master unit using the M-MDS. (See CLEARING DTC [CONNECTIVITY MASTER UNIT].) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See DTC INSPECTION [CONNECTIVITY MASTER UNIT].) • Is the same DTC displayed?	Yes	Replace the tuner and amp unit, then go to the next step. (See TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the connectivity master unit using the M-MDS. (See CLEARING DTC [CONNECTIVITY MASTER UNIT].) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION.) Go to the next step.
		No	Go to the next step.

	M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1252:09 [CONNECTIVITY MASTER UNIT]

Description	Auxiliary jack/USB port/SD card slot hub circuit malfunction
Detection condition	• With the ignition switched ON (engine off or on), the connectivity master unit detects a voltage value for the auxiliary jack/USB port/SD card slot hub circuit of **within 4.8 V** or **exceeding 5.2 V**.
Fail-safe function	Not applicable
Possible cause	• Auxiliary jack/USB port/SD card slot hub connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 4C and auxiliary jack/USB port/SD card slot hub terminal 2C • Short to power supply in wiring harness between connectivity master unit terminal 4C and auxiliary jack/USB port/SD card slot hub terminal 2C • Open circuit in wiring harness between connectivity master unit terminal 4C and auxiliary jack/USB port/SD card slot hub terminal 2C • Auxiliary jack/USB port/SD card slot hub malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auxiliary jack/USB port/SD card slot hub connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CIRCUIT FOR SHORT TO GROUND** • Verify that the auxiliary jack/USB port/SD card slot hub connector and the connectivity master unit connector are disconnected. • Inspect for continuity between auxiliary jack/USB port/SD card slot hub terminal 2C (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 4C and auxiliary jack/USB port/SD card slot hub terminal 2C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the auxiliary jack/USB port/SD card slot hub connector and the connectivity master unit connector are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the auxiliary jack/USB port/SD card slot hub terminal 2C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between auxiliary jack/USB port/SD card slot hub terminal 2C and connectivity master unit terminal 4C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CIRCUIT FOR OPEN CIRCUIT** • Verify that the auxiliary jack/USB port/SD card slot hub connector and the connectivity master unit connector are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 4C and auxiliary jack/USB port/SD card slot hub terminal 2C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring

	• Inspect for continuity in the wiring harness between connectivity master unit terminal 4C (wiring harness-side) and auxiliary jack/USB port/SD card slot hub terminal 2C (wiring harness-side). • Is there continuity?		harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the auxiliary jack/USB port/SD card slot hub, then go to the next step. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting.

			(See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1252:1D [CONNECTIVITY MASTER UNIT]

Description	Auxiliary jack/USB port/SD card slot hub circuit malfunction
Detection condition	• The connectivity master unit detects over-current (**550 mA or more**) in auxiliary jack/USB port/SD card slot hub circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Auxiliary jack/USB port/SD card slot hub connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 4C and auxiliary jack/USB port/SD card slot hub terminal 2C • Auxiliary jack/USB port/SD card slot hub malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auxiliary jack/USB port/SD card slot hub connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CIRCUIT FOR SHORT TO GROUND** • Verify that the auxiliary jack/USB port/SD card slot hub connector and the connectivity master unit connector are disconnected. • Inspect for continuity between auxiliary jack/USB port/SD card slot hub terminal 2C (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 4C and auxiliary jack/USB port/SD card slot hub terminal 2C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the auxiliary jack/USB port/SD card slot hub, then go to the next step. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1252:87 [CONNECTIVITY MASTER UNIT]

Description	Communication error with auxiliary jack/USB port/SD card slot hub
Detection condition	• With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a signal from the auxiliary jack/USB port/SD card slot hub.
Fail-safe function	Not applicable

Possible cause	• Auxiliary jack/USB port/SD card slot hub connector or terminal malfunction
	• Connectivity master unit connector or terminal malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B
	  ▪ Connectivity master unit terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D
	• Software error
	  ▪ USB driver malfunction
	• Auxiliary jack/USB port/SD card slot hub malfunction
	• Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auxiliary jack/USB port/SD card slot hub connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CIRCUIT FOR OPEN CIRCUIT** • Verify that the auxiliary jack/USB port/SD card slot hub connector and the connectivity master unit connector are disconnected. • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B ▪ Connectivity master unit terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Connectivity master unit terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B • Connectivity master unit terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
4	**PERFORM SOFTWARE RESET** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Perform diagnostic assist code “08” software reset. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.)	Yes	Go to the next step.
		No	Go to Step 7.

	• Is the same DTC displayed?		
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the auxiliary jack/USB port/SD card slot hub, then go to the next step. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B12BD:11 [CONNECTIVITY MASTER UNIT]

Description	Rear mount camera circuit malfunction
Detection condition	• The connectivity master unit detects a voltage value for the rear mount camera circuit of **within 5.8 V** or **exceeding 6.2 V** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Rear mount camera connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 1C and rear mount camera terminal A • Rear mount camera malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR MOUNT CAMERA CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear mount camera connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT REAR MOUNT CAMERA CIRCUIT FOR SHORT TO GROUND** • Verify that the rear mount camera and connectivity master unit connectors are disconnected. • Inspect for continuity between rear mount camera terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1C and rear mount camera terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF REAR MOUNT CAMERA IS MALFUNCTIONING** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the rear mount camera, then go to the next step. (See **REAR MOUNT CAMERA REMOVAL/INSTALLATION**.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B12BD:87 [CONNECTIVITY MASTER UNIT]

Description	Rear mount camera transmission error
Detection condition	• The connectivity master unit cannot receive a signal from the rear mount camera for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Rear mount camera connector or terminal malfunction • Connectivity master unit connector or terminal malfunction • Short to ground in wiring harness between connectivity master unit terminal 1A and rear mount camera terminal C • Short to power supply in wiring harness between connectivity master unit terminal 1A and rear mount camera terminal C • Open circuit in wiring harness between connectivity master unit terminal 1A and rear mount camera terminal C • Rear mount camera malfunction • Connectivity master unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR MOUNT CAMERA CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear mount camera connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Disconnect the connectivity master unit connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT REAR MOUNT CAMERA CIRCUIT FOR SHORT TO GROUND** • Verify that the rear mount camera and connectivity master unit connectors are disconnected. • Inspect for continuity between rear mount camera terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1A and rear mount camera terminal C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT REAR MOUNT CAMERA CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the rear mount camera and connectivity master unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at rear mount camera terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between rear camera terminal C and connectivity master unit terminal 1A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to power supply to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. Go to Step 7.
5	**INSPECT REAR MOUNT CAMERA CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear mount camera and connectivity master unit connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between connectivity master unit terminal 1A (wiring harness-side) and rear mount camera terminal C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between connectivity master unit terminal 1A and rear mount camera terminal C. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS REAR MOUNT CAMERA** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the rear mount camera, then go to the next step. (See **REAR MOUNT CAMERA REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1A89:13 [CONNECTIVITY MASTER UNIT]

Description	SiriusXM satellite radio antenna feeder malfunction
Detection condition	• The connectivity master unit detects an open circuit in SiriusXM satellite radio antenna feeder with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Tuner and amp unit connector or terminal malfunction • Antenna feeder No.1 connector or terminal malfunction • Open circuit in antenna feeder No.1 • Antenna feeder No.2 connector or terminal malfunction • Open circuit in antenna feeder No.2 • Antenna feeder No.3 connector or terminal malfunction (5HB) • Open circuit in antenna feeder No.3 (5HB) • Center roof antenna malfunction ▪ SiriusXM satellite radio antenna feeder malfunction • Tuner and amp unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TUNER AND AMP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the tuner and amp unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT ANTENNA FEEDER NO.1 CONNECTOR CONDITION** • Disconnect the antenna feeder No.1 connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
3	**INSPECT ANTENNA FEEDER NO.1** • Inspect antenna feeder No.1. (See **ANTENNA FEEDER NO.1 INSPECTION**.) • Is antenna feeder No.1 normal?	Yes	Go to the next step.
		No	Replace antenna feeder No.1, then go to Step 9. (See **ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION**.)
4	**INSPECT ANTENNA FEEDER NO.2 CONNECTOR CONDITION** • Disconnect the antenna feeder No.1 connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
5	**INSPECT ANTENNA FEEDER NO.2** • Inspect antenna feeder No.2. (See **ANTENNA FEEDER NO.2 INSPECTION**.) • Is antenna feeder No.2 normal?	Yes	**4SD** • Go to Step 8. **5HB** • Go to the next step.
		No	Replace antenna feeder No.2, then go to Step 9.

			(See **ANTENNA FEEDER NO.2 REMOVAL**.) (See **ANTENNA FEEDER NO.2 INSTALLATION**.)
6	**INSPECT ANTENNA FEEDER NO.3 CONNECTOR CONDITION** • Disconnect the antenna feeder No.3 connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
7	**INSPECT ANTENNA FEEDER NO.3** • Inspect antenna feeder No.3. (See **ANTENNA FEEDER NO.3 INSPECTION**.) • Is antenna feeder No.3 normal?	Yes	Go to the next step.
		No	Replace antenna feeder No.3, then go to Step 9. (See **ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION**.)
8	**INSPECT SIRIUSXM SATELLITE RADIO ANTENNA FEEDER** • Inspect the SiriusXM satellite radio antenna feeder. (See **CENTER ROOF ANTENNA INSPECTION**.) • Is the SiriusXM satellite radio antenna feeder normal?	Yes	Go to the next step.
		No	Replace the center roof antenna, then go to the next step. (See **CENTER ROOF ANTENNA REMOVAL/INSTALLATION**.)
9	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the tuner and amp unit. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
10	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1A89:42 [CONNECTIVITY MASTER UNIT]

Description	Tuner and amp unit internal malfunction
Detection condition	• The connectivity master unit detects an XM module malfunction in the tuner and amp unit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Tuner and amp unit malfunction ▪ XM module malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF TUNER AND AMP UNIT IS MALFUNCTIONING PART** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the tuner and amp unit. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1D19:64 [CONNECTIVITY MASTER UNIT]

Description	Incompatible disc inserted
Detection condition	• With the ignition switched ON (engine on or off), the connectivity master unit (CMU) detects a disc having a data format that is incompatible with the CD player.
Fail-safe function	Eject a disc.
Possible cause	• Use of incompatible disc ▪ Data format other than music data (CD-DA)/MP3/WMA (Windows Media Audio)/ACC (Advance Audio Coding) is stored in the disc. • Use of blank disc • Disc insertion direction mistaken • Disc scratched or dirty • CD player internal malfunction
System wiring diagram	Not applicable

Step	Inspection		Action
1	**INSPECT CD PLAYER** • Clear the DTC for the connectivity master unit (CMU) using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Perform diagnostic assist code “01” CD player inspection.	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to the next step.

	(See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Perform the DTC inspection for the connectivity master unit (CMU) using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
2	**VERIFY OTHER DTCs** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1D19:79 [CONNECTIVITY MASTER UNIT]

Description	CD player disc read error
Detection condition	• With the ignition switched ON (engine off or on), the connectivity master unit (CMU) detects a disc read error.
Fail-safe function	Eject a disc.
Possible cause	**CAUTION:** • An unexpected load is applied to the CD player causing the output of a DTC due to the way the user uses the CD player, such as intentionally holding onto a disc when inserting it. The orientation of the disc should be checked before inserting it and it should be released from the fingers as soon as the disc begins to be read. • Use of incompatible disc • CD player internal malfunction
System wiring diagram	Not applicable

Step	Inspection		Action
1	**INSPECT CD PLAYER** • Clear the DTC for the connectivity master unit (CMU) using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Perform diagnostic assist code “01” CD player inspection. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.)	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to the next step.

	• Perform the DTC inspection for the connectivity master unit (CMU) using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
2	**VERIFY OTHER DTCs** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1D19:98 [CONNECTIVITY MASTER UNIT]

Description	Abnormal CD player temperature
Detection condition	• With the ignition switched ON (engine off or on), the connectivity master unit (CMU) detects an abnormally high temperature condition in the CD player.
Fail-safe function	CD playback stopped.
Possible cause	**CAUTION:** • If the CD player is used for long periods in a hot environment, the temperature of the CD player will increase and a DTC may be output. The CD player should not be used continuously for long periods with the cabin under high temperature conditions from being left under direct sunlight. • Temperature increase due to continuous use for long periods. • CD player malfunction
System wiring diagram	Not applicable

Step	Inspection		Action
1	**VERIFY IF CD PLAYER TEMPERATURE WAS TEMPORARILY HIGH** • Clear the DTC for the connectivity master unit (CMU) using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit (CMU) using the M-MDS.	Yes	Leave the vehicle in a cool location for **30 min** or more, then go to the next step.
		No	Go to Step 3.

	(See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the connectivity master unit (CMU) using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit (CMU) using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY OTHER DTCs** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0001:88/U0100:00/U0101:00/U0121:00/U0131:00/U0140:00/U0151:00/U0155:00/U0182:00/U0214:00/U0235:00/U023A:00 [CONNECTIVITY MASTER UNIT]

Description	• U0001:88 ▪ Module communication error (HS-CAN) • U0100:00 ▪ Communication error with PCM • U0101:00 ▪ Communication error with TCM • U0121:00 ▪ Communication error with DSC HU/CM • U0131:00 ▪ Communication error with EPS control module • U0140:00 ▪ Communication error with front body control module (FBCM) • U0151:00 ▪ Communication error with SAS control module • U0155:00 ▪ Communication error with instrument cluster • U0182:00 ▪ Communication error with AFS control module • U0214:00 ▪ Communication error with start stop unit • U0235:00 ▪ Communication error with laser sensor • U023A:00 ▪ Communication error with forward sensing camera (FSC)
	• U0001:88 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot detect a CAN bus communication line (HS-CAN) signal for **1 s or more**. ▪ With the ignition switched ON (engine off or on), the connectivity master unit detects malfunction in the CAN bus communication line (HS-CAN) **10 times** continuously. • U0100:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the PCM for **5 s or more**. • U0101:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the TCM for **5 s or more**.

Detection condition	U0121:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the DSC HU/CM for **5 s or more**. • U0131:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the EPS control module for **5 s or more**. • U0140:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the front body control module (FBCM) for **5 s or more**. • U0151:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the SAS control module for **5 s or more**. • U0155:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the instrument cluster for **5 s or more**. • U0182:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the AFS control module for **5 s or more**. • U0214:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the start stop unit for **5 s or more**. • U0235:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the laser sensor for **5 s or more**. • U023A:00 ▪ With the ignition switched ON (engine off or on), the connectivity master unit cannot receive a CAN signal from the forward sensing camera (FSC) for **5 s or more**.
Fail-safe function	• U0001:88 ▪ Not applicable • U0100:00 ▪ Not applicable • U0101:00 ▪ Not applicable • U0121:00 ▪ Not applicable • U0131:00 ▪ Not applicable • U0140:00 ▪ Not applicable • U0151:00 ▪ Not applicable • U0155:00 ▪ Not applicable • U0182:00 ▪ Not applicable • U0214:00

	▪ Not applicable • U0235:00 ▪ Not applicable • U023A:00 ▪ Not applicable
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN communication line between the PCM and connectivity master unit • Malfunction in CAN communication line between the TCM and connectivity master unit • Malfunction in CAN communication line between the DSC HU/CM and connectivity master unit • Malfunction in CAN communication line between the EPS control module and connectivity master unit • Malfunction in CAN communication line between the front body control module (FBCM) and connectivity master unit • Malfunction in CAN communication line between the SAS control module and connectivity master unit • Malfunction in CAN communication line between the instrument cluster and connectivity master unit • Malfunction in CAN communication line between the AFS control module and connectivity master unit • Malfunction in CAN communication line between the start stop unit and connectivity master unit • Malfunction in CAN communication line between the laser sensor and connectivity master unit • Malfunction in CAN communication line between the forward sensing camera (FSC) and connectivity master unit
System wiring diagram	Not applicable

Diagnostic procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Body and Accessories

DTC U0028:88 [CONNECTIVITY MASTER UNIT]

Description	Unit communication error (PRIVATE-CAN)
Detection condition	• The connectivity master unit detects CAN bus communication line (PRIVATE-CAN) malfunction **10 times** continuously.
Fail-safe function	• Not applicable
Possible cause	• Malfunction in CAN bus communication line • Connectivity master unit malfunction ▪ Malfunction in CAN bus communication line
System wiring diagram	• Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IF OTHER DTCs DISPLAYED FOR CONNECTIVITY MASTER UNIT** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is DTC U00184:00 or U0187:00 displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	Go to the next step.

2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CONNECTIVITY MASTER UNIT** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the connectivity master unit, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0184:00/U0187:00 [CONNECTIVITY MASTER UNIT]

Description	• U0184:00
	  ▪ Communication error with tuner and amp unit
	• U0187:00
	  ▪ Communication error with CD player

Detection condition	• U0184:00
	  ▪ The connectivity master unit cannot receive CAN signal from the tuner and amp unit for **5 s or more**.
	• U0187:00
	  ▪ The connectivity master unit cannot receive CAN signal from the CD player for **5 s or more**.

Fail-safe function	• U0184:00
	  ▪ Not applicable
	• U0187:00
	  ▪ Not applicable

Possible cause	• Connectivity master unit connector or terminal malfunction
	• Tuner and amp unit connector or terminal malfunction
	• CD player connector or terminal malfunction
	• Connector C-36 connector or terminal malfunction
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 2I and tuner and amp unit terminal 2O
	  ▪ Connectivity master unit terminal 2I and CD player terminal G
	• Short to ground in wiring harness between the following terminals:
	  ▪ Connectivity master unit terminal 2J and tuner and amp unit terminal 2Q
	  ▪ Connectivity master unit terminal 2J and CD player terminal H
	• Short circuit in the following wiring harnesses:
	  ▪ Connectivity master unit terminal 2I and tuner and amp unit terminal 2O
	  ▪ Connectivity master unit terminal 2J and tuner and amp unit terminal 2Q
	  ▪ Connectivity master unit terminal 2I and CD player terminal G
	  ▪ Connectivity master unit terminal 2J and CD player terminal H
	• Open circuit in wiring harness between the following terminals:
	  ▪ Tuner and amp unit terminal 2O and connector C-36
	  ▪ Tuner and amp unit terminal 2Q and connector C-36
	  ▪ CD player terminal G and connector C-36
	  ▪ CD player terminal H and connector C-36
	  ▪ Connectivity master unit terminal 2I and connector C-36

	▪ Connectivity master unit terminal 2J and connector C-36 • CD player malfunction • Tuner and amp unit malfunction • Connectivity master unit malfunction

CONNECTIVITY MASTER UNIT
WIRING HARNESS-SIDE CONNECTOR

TUNER AND AMP UNIT
WIRING HARNESS-SIDE CONNECTOR

CD PLAYER
WIRING HARNESS-SIDE CONNECTOR

CAUTION:

- When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN_H SIDE CIRCUIT OF PRIVATE-CAN** • Measure the voltage between connectivity master unit terminal 2I (PRIVATE-CAN CAN_H side) and body ground. • Is the voltage **B+**? **NOTE:** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in CAN_H side of PRIVATE-CAN has occurred. Go to Step 5.
		No	Go to the next step.
2	**INSPECT FOR SHORT TO GROUND IN CAN_L SIDE CIRCUIT OF PRIVATE-CAN** • Measure the voltage between connectivity master unit terminal 2J and body ground. • Is the voltage **0 V**?	Yes	A short to ground in CAN_L side of PRIVATE-CAN has occurred. Go to Step 8.
		No	Go to the next step.
3	**INSPECT BETWEEN PRIVATE-CAN_H AND CAN_L SIDES FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity at the following terminals: ▪ Connectivity master unit terminal 2I ▪ Connectivity master unit terminal 2J • Is there continuity?	Yes	A short between circuits has occurred in PRIVATE-CAN. Go to Step 11.
		No	Go to the next step.
4	**DETERMINE OPEN CIRCUIT LOCATION** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Are any DTCs of the following displayed? ▪ U0184:00 ▪ U0187:00	Yes	Only U0184:00 is displayed • Go to Step 14. Only U0187:00 is displayed • Go to Step 16. All DTCs are displayed • Go to Step 18.
		No	Go to Step 20.
5	**INSPECT WIRING HARNESS FOR SHORT TO POWER SUPPLY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Connectivity master unit ▪ Tuner and amp unit ▪ CD player ▪ Connector C-36	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 19.

	• Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 2I ▪ Tuner and amp unit terminal 2O ▪ CD player terminal G • Is the voltage **0 V**?		
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to Step 20.
7	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS TUNER AND AMP UNIT** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the tuner and amp unit, then go to Step 19. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)
		No	Go to Step 20.
8	**INSPECT WIRING HARNESS FOR SHORT TO GROUND** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Connectivity master unit ▪ Tuner and amp unit ▪ CD player ▪ Connector C-36 • Inspect for continuity between the following terminals (wiring harness-side) and body ground. ▪ Connectivity master unit terminal 2J	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 19.
		No	Go to the next step.

	▪ Tuner and amp unit terminal 2Q ▪ CD player terminal H • Is there continuity?		
9	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to Step 20.
10	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS TUNER AND AMP UNIT** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the tuner and amp unit, then go to Step 19. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)
		No	Go to Step 20.
11	**INSPECT WIRING HARNESS FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Connectivity master unit ▪ Tuner and amp unit ▪ CD player ▪ Connector C-36 • Inspect between the following terminals (wiring harness-side) for continuity. ▪ Connectivity master unit terminals 2I and 2J ▪ Tuner and amp unit terminals 2O and 2Q ▪ CD player terminals G and H • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted between circuits, then go to Step 19.
		No	Go to the next step.
12	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable.	Yes	Replace the CD player, then go to the next step. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	No	Go to Step 20.
13	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS TUNER AND AMP UNIT** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the tuner and amp unit, then go to Step 19. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)
		No	Go to Step 20.
14	**INSPECT WIRING HARNESS BETWEEN TUNER AND AMP UNIT AND CONNECTOR C-36 FOR OPEN CIRCUIT** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Tuner and amp unit ▪ Connector C-36 • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Tuner and amp unit terminal 2O and connector C-36 ▪ Tuner and amp unit terminal 2Q and connector C-36 • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 19.
15	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS TUNER AND AMP UNIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.)	Yes	Replace the tuner and amp unit, then go to Step 19. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)
		No	Go to Step 20.

	• Is the same DTC displayed?		
16	**INSPECT WIRING HARNESS BETWEEN CONNECTOR C-36 AND CD PLAYER FOR OPEN CIRCUIT** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ CD player ▪ Connector C-36 • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ CD player terminal G and connector C-36 ▪ CD player terminal H and connector C-36 • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 19.
17	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CD PLAYER** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Replace the CD player, then go to Step 20. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to Step 20.
18	**INSPECT WIRING HARNESS BETWEEN CONNECTOR C-36 AND CONNECTIVITY MASTER UNIT FOR OPEN CIRCUIT** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the following connectors: ▪ Connectivity master unit ▪ Connector C-36 • Inspect the wiring harness for continuity between the following terminals (wiring harness-side). ▪ Connectivity master unit terminal 2I and connector C-36 ▪ Connectivity master unit terminal 2J and connector C-36 • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
19	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **12 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		(See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
20	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:54 [CONNECTIVITY MASTER UNIT]

Description	Configuration data not received from instrument cluster
Detection condition	• The connectivity master unit cannot receive the configuration data from the instrument cluster for **30 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• DTCs are stored in the instrument cluster.
	  ▪ Instrument cluster configuration not implemented
	  ▪ Instrument cluster internal memory malfunction
	• Instrument cluster configuration data error
	• Connectivity master unit malfunction

System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is a DTC displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**RESET INSTRUMENT CLUSTER CONFIGURATION DATA** • Using the M-MDS, perform the	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step.

	instrument cluster configuration with the As-Built data. (See **INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION)**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **37 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		(See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **37 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:55 [CONNECTIVITY MASTER UNIT]

Description	Instrument cluster configuration not implemented
Detection condition	• The connectivity master unit detected any of the following conditions with the ignition switched to ACC or ON (engine off or on). ▪ Instrument cluster configuration not read ▪ Configuration data cannot be written to connectivity master unit memory.
Fail-safe function	Not applicable
Possible cause	**NOTE:** • To correctly write the configuration data, which is sent from the instrument cluster to the connectivity master unit, to the connectivity master unit, **3 s or more** must have elapsed since the ignition was switched ON (engine off or on). • Instrument cluster configuration is not completed. • Connectivity master unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**RESET CONFIGURATION DATA FROM INSTRUMENT CLUSTER TO CONNECTIVITY MASTER UNIT** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See **INSTRUMENT CLUSTER**	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3

	CONFIGURATION (USING READ/WRITE FUNCTION).) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

DTC U2300:55 [CONNECTIVITY MASTER UNIT]

2014 - Mazda3 - Body and Accessories

DTC U3000:42 [CONNECTIVITY MASTER UNIT]

Description	Connectivity master unit internal malfunction (poor data read-outs)
Detection condition	• The connectivity master unit cannot read data from the NVRAM in the connectivity master unit with the ignition switched to ACC or ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Connectivity master unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING LOCATION IS CONNECTIVITY MASTER UNIT** • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **7 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [CONNECTIVITY MASTER UNIT]

Description	Low ACC power supply voltage input to connectivity master unit
Detection condition	• The connectivity master unit detects ACC power supply circuit voltage of **8.0 ± 0.8 V or less** for **10 s or more** with the ignition switched to ACC or ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• DTCs are stored in the PCM.
	• Battery malfunction
	• Generator malfunction
	• Connectivity master unit connector or terminal malfunction
	• Connectivity master unit ACC power supply circuit malfunction
	  ▪ Short to ground in wiring harness between MIRROR 7.5 A fuse and connectivity master unit terminal 2Q
	  ▪ MIRROR 7.5 A fuse malfunction
	  ▪ Open circuit in wiring harness between ACC relay and connectivity master unit terminal 2Q
	• Connectivity master unit malfunction

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is a DTC displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.)

	(See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?		(See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
4	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY CONNECTIVITY MASTER UNIT ACC POWER SUPPLY VOLTAGE** • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at connectivity master unit terminal 2Q (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MIRROR 7.5 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify if there is a common connector between MIRROR 7.5 A fuse and connectivity master unit terminal 2Q. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning

location.

- Repair or replace the malfunctioning location.

If there is no common connector:

- Repair or replace the wiring harness which is shorted to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify if there is a common connector between ACC relay and connectivity master unit terminal 2Q.

If there is a common connector:

- Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location.
- Repair or replace the malfunctioning location.

If there is no common connector:

- Repair or replace the wiring harness

			which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the connectivity master unit using the M-MDS. (See **CLEARING DTC [CONNECTIVITY MASTER UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **17 s or more**. • Perform the DTC inspection for the connectivity master unit using the M-MDS. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the connectivity master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]

Activation Procedure

Using commander switch

1. Switch the ignition to ACC or ON (engine off or on).
2. Press the following buttons simultaneously for **2 s or more**.
   - Volume dial
   - AUDIO button
   - FAVORITE button

Using center display

1. Switch the ignition to ACC or ON (engine off or on).
2. Display the display setting screen in the center display.
   - Select [Settings] on the center display.
   - Select [Display] on the center display.
3. Operate the center display in the following order.

Touch the right upper area of the screen (area A in figure) for **5 s or more**.

- Touch the left upper area of the screen (area B in figure) for **5 s or more**.

Diagnostic Assist Code Input Procedure

Diagnostic assist code input screen

No.	Name	Content/function
1	Diagnostic assist code display screen	Displays the diagnostic assist code.
2	Diagnostic assist code input switch	Inputs the diagnostic assist code.
3	DEL switch	Clears the diagnostic assist code.
4	Diagnostic content display screen	Displays the diagnostic content.
5	Diagnostic results display screen	Displays the diagnostic results.
6	EXIT switch*1/END switch*2	Cancels the diagnostic assist function./Stops the diagnostic assist function being performed.
7	CLEAR switch	Clears the diagnostic result display
8	ENTER switch	Transfers to the diagnostic assist function.

*1 **Displayed while the diagnostic assist function is not performed.**

*2 **Displayed while the diagnostic assist function is being performed.**

Using commander switch

1. Input the diagnostic assist code by rotating the commander knob.

2. Press the commander knob.
3. Perform inspection according to diagnostic assist code list. (See **Diagnostic assist code list**.)

CAUTION:

- If [- REJECTED] is displayed, the inspection cannot be performed because communication is not enabled between the related parts, or the conditions are not met even if communication is enabled.

Using center display

1. Input the diagnostic assist code by pressing the “Diagnostic assist code input switch”.
2. Press “ENTER”.
3. Perform inspection according to diagnostic assist code list. (See **Diagnostic assist code list**.)

CAUTION:

- If [- REJECTED] is displayed, the inspection cannot be performed because communication is not enabled between the related parts, or the conditions are not met even if communication is enabled.

Ending Procedure

1. When the inspection is being performed, press “END” to return to the diagnostic assist code input screen.

NOTE:

- The diagnostic assist function cannot be canceled while the diagnostic assist function is being inspected.

2. Cancel the diagnostic assist function by pressing the “EXIT”.

NOTE:

- When the diagnostic assist function is canceled, it returns to a different screen depending on the way in which the diagnostic assist function was launched.
    - If launched using the commander switch: The previous screen before launching the diagnostic assist function
    - If launched not using the commander switch: The setting screen

Diagnostic assist code list

No.	Center display (diagnostic content)	Content/function
01	CD Test	(See **Diagnostic Assist Code “01” CD Player Inspection**.)
02	Clear DTC	(See **Diagnostic Assist Code “02” DTC Clear**.)
03	Read AVC DTC	(See **Diagnostic Assist Code “03/04/05/06” DTC Inspection**.)
04	Read CMU DTC	(See **Diagnostic Assist Code “03/04/05/06” DTC Inspection**.)
05	Read TAU DTC	(See **Diagnostic Assist Code “03/04/05/06” DTC Inspection**.)
06	Read CD DTC	(See **Diagnostic Assist Code “03/04/05/06” DTC Inspection**.)
07	Read DTV DTC	**CAUTION:** • Do not operate because not equipped to vehicle.

85	Part Number Readout TAU	(See **Diagnostic Assist Code "10/85" Part Number Verification**.)
87	HD Certification (Main Tuner)	**CAUTION:** • Do not operate because item is for manufacturer use.
88	HD Certification (Sub Tuner)	**CAUTION:** • Do not operate because item is for manufacturer use.
89	XM Certification	**CAUTION:** • Do not operate because item is for manufacturer use.
90	AM Reception Sensitivity Level Test	(See **Diagnostic Assist Code "90" Radio Reception Condition Inspection**.)
91	Radio Test Mode (Main)	**CAUTION:** • Do not operate because item is for manufacturer use.
92	Radio Test Mode (Sub)	**CAUTION:** • Do not operate because item is for manufacturer use.
93	Software Version Display (TAU)	(See **Diagnostic Assist Code "09/53/57/68/69/93" Software Version Verification**.)
94	Speaker Cyclic Test	(See **Diagnostic Assist Code "94" Speaker Inspection**.)
95	Vehicle Info Display (TAU)	**CAUTION:** • Do not operate because item is for manufacturer use.
96	XM Serial Number	(See **Diagnostic Assist Code "96" XM tuner Unique Number Verification**.)
97	Radio Electric Field Strength (AM)	(See **Diagnostic Assist Code "97" AM Radio Field Strength Verification**.)
98	Radio Electric Field Strength (FM)	(See **Diagnostic Assist Code "98" FM Radio Field Strength Verification**.)
99	Software Update	**CAUTION:** • Do not operate because item is for manufacturer use.

Diagnostic Assist Code “01” CD Player Inspection

1. Input diagnostic assist code “01” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. After inputting diagnostic assist code, insert the CD into the CD player **within 10 s**.

Inspection	Display of center display	Action
• Launch the CD player inspection mode. • Verify the inspection results.	CD OK	CD player is normal.
	CD Mechanical Linkage Failure	Verify if CD is damaged or deformed. **If there is a malfunction:** • Re-perform the inspection using a normal disc. **If there is no malfunction:** • Replace the CD player. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
	CD Signal Plausibility Failure	Replace with a CD that does not include data types other than Music data (CD-DA)/MP3/WMA (Windows Media Audio)/AAC (Advanced Audio Coding).

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “02” DTC Clear

1. Input diagnostic assist code “02” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify that all DTCs are cleared.

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “03/04/05/06” DTC Inspection

1. Verify the module to be inspected for DTCs referring to the chart, then input diagnostic assist code according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

NOTE:

- Combination of DTC and diagnostic assist code can be verified in the DTC table. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
- Detection of DTCs is limited if the ignition is in the ACC position.

×: Applicable—: Not applicable

Diagnostic assist code	Modules which can be verified for DTC		
	Connectivity master unit (CMU)	Tuner and amp unit (TAU)	CD player

03	×	×	×
04	×	—	—
05	—	×	—
06	—	—	×

2. If a DTC is displayed, repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “08” Software Reset

1. Input diagnostic assist code “08” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. The software is automatically reset.

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “09/53/57/68/69/93” Software Version Verification

1. Verify the module to be inspected for the software version referring to the chart, then input the diagnostic assist code according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

Diagnostic assist code	Software version to be verified
09	CD player
53	Connectivity master unit (overall entertainment system)
57	Connectivity master unit (overall communication system between vehicle)
68	Center display (TFT LCD screen control system)
69	Center display (Touch panel control system)
93	Tuner and amp unit

2. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “10/85” Part Number Verification

1. Verify the module to be inspected for the part number referring to the chart, then input diagnostic assist code according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

Diagnostic assist code	Module to be verified for part number
10	CD player

85	Tuner and amp unit

2. Verify the part number.

NOTE:

- Only upper 4 digits of the part number are displayed.

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “25” Antenna Control Output Condition Inspection

1. Input diagnostic assist code “25” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Inspect the malfunctioning location according to the following table:

CAUTION:

- Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.
- When performing the inspection, select the best area for receiving radio frequencies.

Inspection	Display of center display	Action	
• Verify that the launched antenna control output condition inspection mode is displayed on the screen.	ANT-ON	Good sound quality	System is normal.
		Bad sound quality	Inspect the glass antenna, antenna amplifier (4SD)/center roof antenna (5HB), and antenna feeder. (See **GLASS ANTENNA INSPECTION**.) (See **ANTENNA AMPLIFIER INSPECTION**.) (See **CENTER ROOF ANTENNA INSPECTION**.) (See **ANTENNA FEEDER NO.1 INSPECTION**.) (See **ANTENNA FEEDER NO.2 INSPECTION**.) (See **ANTENNA FEEDER NO.3 INSPECTION**.) • If the glass antenna, antenna amplifier (4SD)/center roof antenna (5HB), or antenna feeder is malfunctioning: ▪ Replace the malfunctioning part. (See **FILAMENT REPAIR**.) (See **ANTENNA AMPLIFIER REMOVAL/INSTALLATION**.) (See **CENTER ROOF ANTENNA REMOVAL/INSTALLATION**.) (See **ANTENNA FEEDER NO.1**

			REMOVAL/INSTALLATION.) (See **ANTENNA FEEDER NO.2 REMOVAL**.) (See **ANTENNA FEEDER NO.2 INSTALLATION**.) (See **ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION**.) • If the glass antenna, antenna amplifier (4SD)/center roof antenna (5HB), and antenna feeder are normal: ▪ Replace the tuner and amp unit (TAU). (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)
	ANT-OFF	Replace the tuner and amp unit (TAU). (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)	

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “58” Configuration Information Verification

1. Input diagnostic assist code “58” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the configuration information.

Display of center display	Content
Destination	Destination information
CMU Types	Recognition condition whether connectivity master unit is equipped or not

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “59” Individual Number Verification

1. Input diagnostic assist code “59” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the individual number of the connectivity master unit.

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “61” Vehicle Signal Verification

1. Input diagnostic assist code “61” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the vehicle signal.

Display of center display	Content
ST-SW	Steering switch signal input condition
Commander	Commander switch signal input condition
GPS	GPS antenna signal input condition
Microphone	Microphone signal input condition
HUB1	HUB1 signal input condition
HUB2	HUB2 signal input condition
RS-485	RS-485 signal input condition
NAVI (SD)	SD card insertion condition
CD/DVD	CD or DVD equipment recognition condition
DTV	DVD equipment recognition condition

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “65” Switch Inspection

1. Input diagnostic assist code “65” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Perform the steering switch inspection or commander switch inspection.

NOTE:

- When the switch is operated, the switch operation content detected by the connectivity master unit is displayed in the center display.
- If the switch operation content previously detected is being displayed in the center display, newly detected content is added over it.

Steering switch inspection

Inspection	Display of center display	Action	
• Launch the switch inspection mode. • Operate each switch of the steering switch. • Does the display in the center display correspond	• ST-SW Talk Button Pressed: TALK switch is pressed • ST-SW Talk Button Released: TALK switch is released	Yes	The steering switch is normal.
			Inspect the steering switch. (See **STEERING SWITCH INSPECTION**.) • If there is a malfunction: ▪ Replace the steering switch. (See **STEERING SWITCH REMOVAL/INSTALLATION**.) • If the steering switch is normal: ▪ Replace the connectivity

to each switch operation?	ST-SW Pick-Up Button Pressed: Pick-Up switch is pressed • ST-SW Pick-Up Button Released: Pick-Up switch is released • ST-SW Hang-Up Button Pressed: Hang-Up switch is pressed • ST-SW Hang-Up Button Released: Hang-Up switch is released • ST-SW Volume + Button Pressed: VOLUME (+) switch is pressed • ST-SW Volume + Button Released: VOLUME (+) switch is released • ST-SW Volume - Button Pressed: VOLUME (-) switch is pressed • ST-SW Volume - Button Released: VOLUME (-) switch is released • ST-SW Seek + Button Pressed: Seek (+) switch is pressed	No	master unit. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

	• ST-SW Seek + Button Released: SEEK (+) switch is released • ST-SW Seek - Button Pressed: Seek (-) switch is pressed • ST-SW Seek - Button Released: Seek (-) switch is released		

Commander switch inspection

Inspection	Display of center display	Action	
• Launch the switch inspection mode. • Operate each button and knob of the commander switch. • Does the display in the center display correspond to each operation?	• Home Button Pressed: HOME button is pressed • Home Button Released: HOME button is released • Navi Button Pressed: NAV button is pressed • Navi Button Released: NAV button is released • Audio Button Pressed: AUDIO button is pressed • Audio Button Released: AUDIO button is released • Favorites Button Pressed: FAVORITE button is pressed • Favorites Button Released: FAVORITE button is released • Back Button Pressed: BACK button is pressed • Back Button Released: BACK button is released • Commander Pushed In: Commander knob is pressed • Commander Released: Commander knob is released • Tilt Up Pressed: Commander knob is tilted up • Tilt Up Released: Commander knob is released from tilted up condition	Yes	Commander switch is normal.
			Replace the commander switch. (See **COMMANDER SWITCH REMOVAL / INSTALLATION**.)

	• Tilt Right Pressed: Commander knob is tilted to the right • Tilt Right Released: Commander knob is released from tilted right condition • Tilt Down Pressed: Commander knob is tilted down • Tilt Down Released: Commander knob is released from tilted down condition • Tilt Left Pressed: Commander knob is tilted to the left • Tilt Left Released: Commander knob is released from tilted left condition • Commander Turned Clockwise: Commander knob is turned clockwise • Commander Turned Counter Clockwise: Commander knob is turned counterclockwise • Volume Knob Pushed In: Volume dial is pressed • Volume Knob Released: Volume dial is released • Volume Knob Turned Clockwise: Volume dial is turned clockwise • Volume Knob Turned Counter Clockwise: Volume dial is turned counterclockwise	No	

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “70” Display/Touch Panel Inspection

1. Input diagnostic assist code “70” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

NOTE:

- The display/touch panel inspection is repeated periodically until a same location in the center display is touched for **10 s or more**.

Inspection	Display of center display	Action	
• Launch the display/touch panel inspection mode. • Verify the center display.	If normal, [+] cursor is displayed centering around the touched area, and at the same time, the display switches in the following order. • Unicolor screen in the following colors ▪ White→Black→Red→Green→Blue • Horizontal-striped screen in black and the	Yes	Center display is normal.
			Replace the center display. (See **CENTER DISPLAY REMOVAL/INSTALLATION**.)

• Does the center display normally?	following colors ▪ Red→Green→Blue • Vertical-striped screen in black and the following colors ▪ Red→Green→Blue • Checkered screen in black and the following colors ▪ Red→Green→Blue • Returns to 1.	No	

2. Continuously touch the same location for **10 s or more**.

NOTE:

- When the display/touch panel inspection is finished, the diagnostic assist function is canceled without returning to the diagnostic assist code input screen.
- When the diagnostic assist function is canceled, it returns to a different screen depending on the way in which the diagnostic assist function was launched.
  - If launched using the commander switch: The previous screen before launching the diagnostic assist function
  - If launched not using the commander switch: The setting screen

Diagnostic Assist Code “72” GPS Information Verification

1. Input diagnostic assist code “72” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the GPS information.

NOTE:

- GPS reception signal is updated **every 1 s**.

Display of center display	Content
Longitude (X)	Degree of longitude in GPS information of the current location
Latitude (Y)	Degree of latitude in GPS information of the current location
Absolute Time (Z)	Date and time information (GMT)
Number of Satellites	Number of satellites being receipt

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “84” Manufacturer Name Verification

1. Input diagnostic assist code “84” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the manufacturer name.

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “90” Radio Reception Condition Inspection

1. Tune in the radio.

2. Input diagnostic assist code “90” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

3. Inspect the malfunctioning location according to the following table:

CAUTION:

- Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.
- When performing the inspection, select a frequency (radio station) with optimum reception in the area.

Inspection	Display of center display	Action
• Start the radio reception condition inspection mode. • Select frequency (radio station) by operating the commander knob. • Verify the inspection results.	TAU AM Reception Level Test Result:10—5	Glass antenna, antenna amplifier (4SD)/center roof antenna (5HB), antenna feeder and tuner and amp unit are normal.
	TAU AM Reception Level Test Result:4—3	Change frequencies and re-perform the inspection.
	TAU AM Reception Level Test Result:2—0	Inspect the glass antenna, antenna amplifier (4SD)/center roof antenna (5HB), and antenna feeder. (See **GLASS ANTENNA INSPECTION**.) (See **ANTENNA AMPLIFIER INSPECTION**.) (See **CENTER ROOF ANTENNA INSPECTION**.) (See **ANTENNA FEEDER NO.1 INSPECTION**.) (See **ANTENNA FEEDER NO.2 INSPECTION**.) (See **ANTENNA FEEDER NO.3 INSPECTION**.) • If the glass antenna, antenna amplifier (4SD)/center roof antenna (5HB), or antenna feeder is malfunctioning: ▪ Replace the malfunctioning part. (See **FILAMENT REPAIR**.) (See **ANTENNA AMPLIFIER REMOVAL/INSTALLATION**.) (See **CENTER ROOF ANTENNA REMOVAL/INSTALLATION**.) (See **ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION**.) (See **ANTENNA FEEDER NO.2 REMOVAL**.)

		(See **ANTENNA FEEDER NO.2 INSTALLATION**.) (See **ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION**.) • If the glass antenna, antenna amplifier (4SD)/center roof antenna (5HB), and antenna feeder are normal: ▪ Replace the tuner and amp unit. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)

4. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “94” Speaker Inspection

1. Input diagnostic assist code “94” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

Inspection	Display of center display	Action	
• Launch the speaker inspection mode. • Does each speaker output sound in the following order?: **Without Bose®** 1. Front door speaker (LH) and tweeter (LH) 2. Front door speaker (RH) and tweeter (RH) 3. Rear door speaker (RH) 4. Rear door speaker (LH) **With**		Yes	**Without Bose®** • The speaker tuner and amp unit, and the wiring harness between the tuner and amp unit and speaker are normal. **With Bose®** • The speaker tuner and amp unit, audio amplifier, wiring harness between audio amplifier and speaker, and wiring harness between tuner and amp unit and audio amplifier are normal.
			Refer to the symptom troubleshooting. (See **NO SOUND OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

Bose® 1. Front door speaker (LH), front side speaker (LH) and front center speaker 2. Front door speaker (RH), front side speaker (RH) and front center speaker 3. Rear door speaker (RH) ,rear speaker (LH) and rear speaker (RH) 4. Rear door speaker (LH) ,rear speaker (LH) and rear speaker (RH)	—	No	

2. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “96” XM tuner Unique Number Verification

1. Input diagnostic assist code “96” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the unique number of the XM tuner inside the tuner and amp unit.

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “97” AM Radio Field Strength Verification

1. Input diagnostic assist code “97” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the AM radio field strength.

- Frequencies can be changed by turning the commander knob.

Display of center display	Content
AM Frequency	AM radio station frequency (kHz) being received
Strength	Frequency field strength (dBuV)

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

Diagnostic Assist Code “98” FM Radio Field Strength Verification

1. Input diagnostic assist code “98” according to diagnostic assist code input procedure. (See **Diagnostic Assist Code Input Procedure**.)

2. Verify the FM radio field strength.

- Frequencies can be changed by turning the commander knob.

Display of center display	Content
FM Frequency	FM radio station frequency (MHz) being received
Strength	Frequency field strength (dBuV)

3. Cancel the diagnostic assist function according to ending procedure. (See **Ending Procedure**.)

2014 - Mazda3 - Body and Accessories

FOREWORD [FRONT BODY CONTROL MODULE (FBCM)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
    - All the switches are turned off (except the ignition switch).
    - All the doors, hood, and trunk (4SD)/liftgate (5HB) are closed.
    - All the doors, and trunk (4SD)/liftgate (5HB) are unlocked.
    - All the seat belts are unbuckled.
    - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
4. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
5. After completion of repairs, clear all DTCs stored in the front body control module (FBCM). (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
    - All the switches are turned off (except the ignition switch).
    - All the doors, hood, and trunk (4SD)/liftgate (5HB) are closed.
    - All the doors, and trunk (4SD)/liftgate (5HB) are unlocked.
    - All the seat belts are unbuckled.
    - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “F_BCM”.
4. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.

CLEARING DTC

5. After completion of repairs, clear all DTCs stored in the front body control module (FBCM). (See **[FRONT BODY CONTROL MODULE (FBCM)]**.)

Snapshot Data

NOTE:

- The front body control module (FBCM) stores the following two types of snapshot data (vehicle information) when a DTC is detected and displays them in the M-MDS.
  - Vehicle information detected by front body control module (FBCM)
  - Vehicle information detected by instrument cluster and received by front body control module (FBCM) via CAN signal
- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data item	Unit		Data contents	Data read/use method	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	—	—
APP_STATUS	Accelerator Pedal Off/Under20%/Over20%/FAIL		Accelerator pedal position status	—	—
CFG_STATUS	Config Complete/Not Configured/Config Error		Instrument cluster configuration status	—	—
ECT_STATUS	Under 0 degrees C/0 - Under 80 degrees C/Over 80 degrees C/FAIL		Engine coolant temperature status	—	—
IC_VPWR	V		Instrument cluster power supply voltage	• The front body control module (FBCM) constantly receives the power supply voltage value of the instrument cluster sent via CAN signal from the instrument cluster. • If a DTC is detected, the front body control module (FBCM) records the power supply voltage of the instrument cluster when	VPWR*1

			the DTC was detected, and it is displayed in the M-MDS.	
IG-ON_TIMER	hh:mm:ss*2	Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed time since the ignition was switched ON (engine off or on).	• The front body control module (FBCM) constantly receives the elapsed time since the ignition was switched ON (engine off or on) sent via CAN signal from the instrument cluster. • If a DTC is detected, the front body control module (FBCM) records the elapsed time since the ignition was switched ON (engine off or on) when the DTC was detected, and it is displayed in the M-MDS.	—
		• Key Out: Ignition switched off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was switched off • Accessory (Position 1): Ignition is switched	• The front body control module (FBCM) constantly receives the ignition	

PWR_MODE_KEY	Key Out/Key Recently Out (Position 0)/Accessory (Position 1)/Post Ignition (Position 2)/Ignition On (Position 2)/Running (Position 2)/Running - Starting	to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since ignition was switched ON (engine off or on) • Ignition On (Position 2): Ignition switched ON (engine off) • Running (Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition	switch status sent via CAN signal from the instrument cluster. • If a DTC is detected, the front body control module (FBCM) records the ignition switch status when the DTC was detected, and it is displayed in the M-MDS.	—
RPM_STATUS	Engine Stop/Under1500rpm/Over1500rpm/FAIL	Engine speed status	• The front body control module (FBCM) constantly receives the engine speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the front body control module (FBCM) records the engine speed when the DTC was detected, and it is displayed in the M-MDS.	TACHOMTR*1

SHIFT_STATUS	P/N/D/R/FAIL		Selector lever position status	• The front body control module (FBCM) constantly receives the selector lever position sent via CAN signal from the instrument cluster. • If a DTC is detected, the front body control module (FBCM) records the selector lever position when the DTC was detected, and it is displayed in the M-MDS.	—
TOTAL_DIST	km	Miles	Accumulated total traveled distance from completion of vehicle until front body control module (FBCM) detects DTC (Odometer value in instrument cluster)	The total traveled distance from which the front body control module (FBCM) detects DTCs to the present can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snapshot data item TOTAL_DIST. • Subtract 2 from 1.	—
TOTAL_TIME	hh:mm:ss*2		Accumulated total elapsed time since vehicle completion until front body control module (FBCM) detects a DTC **NOTE:** • When the ROOM fuse is removed, and the	The elapsed time from which the front body control module (FBCM) detects DTCs to the present can be calculated by performing the following procedure. • Verify the instrument cluster PID item TOTAL_TIME.	TOTAL_TIME*1

		ignition is switched off, the time is not included in the elapsed time.	• Verify the snapshot data item TOTAL_TIME. • Subtract 2 from 1.	
VPWR	V	Front body control module (FBCM) power supply voltage	—	VPWR_B
VSPD_STATUS	Stop/0-10km/h/Over10km/h/FAIL	Vehicle speed status	• The front body control module (FBCM) constantly receives the vehicle speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the front body control module (FBCM) records the vehicle speed when the DTC was detected, and it is displayed in the M-MDS.	SPEEDOMTR*1

*2 **The seconds may be indicated after the decimal point.**

2014 - Mazda3 - Body and Accessories

CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “F_BCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.)
8. Verify that no DTCs are displayed.

DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]

2014 - Mazda3 - Body and Accessories

DTC B1008:02 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Windshield wiper control signal mismatch
Detection condition	• Front body control module (FBCM) receives the error signals from the start stop unit with the ignition switched ON (engine off or on).
Fail-safe function	• If the front body control module (FBCM) cannot receive a windshield wiper switch position signal because of a malfunction in the start stop unit or a CAN communication error between the start stop unit, or if it detects an error in the windshield wiper switch position signal, it continues the control before detecting the malfunction. However, if the driver operates the wiper and washer switch, it controls as follows: ▪ When the front body control module (FBCM) detects LO/HI ON using the LO/HI detection function: The windshield wipers are operated at low speed. ▪ When the front body control module (FBCM) detects LO/HI OFF using the LO/HI detection function: The windshield wipers are stopped at the park position.
Possible cause	• Start stop unit malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.)	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 3.

	• Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the front body control module (FBCM) DTCs using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1008:62 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Windshield wiper LO switch signal mismatch
Detection condition	• The condition in which the CAN and module signals are compared and no match is detected between the signals for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• If the windshield wiper switch position which is monitored by the LO/HI detection function of the front body control module (FBCM) does not match the one which is sent from the start stop unit as a CAN signal, the windshield wipers are controlled according to the CAN signal for a certain period of time. After a certain period of time has elapsed, they are controlled as follows: ▪ When the front body control module (FBCM) detects LO/HI ON using the LO/HI detection function: The windshield wipers are operated at low speed. ▪ When the front body control module (FBCM) detects LO/HI OFF using the LO/HI detection function: The windshield wipers are stopped at the park position.
Possible cause	• Start stop unit malfunction • Windshield wiper switch malfunction • Short to ground in wiring harness between start stop unit terminal 1V and front body control module (FBCM) terminal 2Y • Short to power supply in wiring harness between start stop unit terminal 1V and front body control module (FBCM) terminal 2Y • Open circuit in wiring harness between start stop unit terminal 1V and front body control module (FBCM) terminal 2Y • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IF MALFUNCTION CAUSE IS START STOP UNIT OR FRONT BODY CONTROL MODULE (FBCM)** • Display the start stop unit PID WIP_F_LOW using the M-MDS. (See **PID/DATA MONITOR INSPECTION [START STOP UNIT]**.) • Verify the PID while operating	Yes	Go to Step 3.
		No	Go to the next step.

	the windshield wiper switch. • Is the PID displayed normally?		
2	**INSPECT WINDSHIELD WIPER SWITCH** • Inspect the windshield wiper switch. (See **WIPER AND WASHER SWITCH INSPECTION**.) • Is the windshield wiper switch normal?	Yes	Replace the start stop unit, then go to Step 7. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Replace the wiper and washer switch, then go to Step 7. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)
3	**INSPECT IF MALFUNCTION CAUSE IS FRONT BODY CONTROL MODULE (FBCM) OR WIRING HARNESS** • Display the front body control module (FBCM) PID WIP_F using the M-MDS. (See **PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Verify the PID while operating the windshield wiper switch. • Is the PID displayed normally?	Yes	Go to the next step.
		No	Perform the CAN malfunction diagnosis flow and inspect the CAN for a malfunction. (See **CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW**.) • If there is no malfunction in the CAN, replace the front body control module (FBCM), then go to Step 7. (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)
4	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN START STOP UNIT AND FRONT BODY CONTROL MODULE (FBCM)** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Disconnect the start stop unit connector. • Inspect for continuity between front body control module (FBCM) terminal 2Y	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1V and front body control module (FBCM) terminal 2Y. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground.

	(wiring harness-side) and body ground. • Is there continuity?		Go to Step 7.
		No	Go to the next step.
5	**INSPECT FOR SHORT TO POWER SUPPLY IN WIRING HARNESS BETWEEN START STOP UNIT AND FRONT BODY CONTROL MODULE (FBCM)** • Verify that the front body control module (FBCM) and start stop unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 2Y (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1V and front body control module (FBCM) terminal 2Y. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND FRONT BODY CONTROL MODULE (FBCM)** • Verify that the front body control module (FBCM) and start stop unit connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between start stop unit	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1V and front body control module (FBCM) terminal 2Y. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common**

	terminal 1V (wiring harness-side) and front body control module (FBCM) terminal 2Y (wiring harness-side). • Is there continuity?		**connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the front body control module (FBCM) DTCs using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1048:7B [FRONT BODY CONTROL MODULE (FBCM)]

Description	Brake fluid level sensor circuit malfunction
Detection condition	• Front body control module (FBCM) detected that the brake fluid level is less than MIN with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Insufficient brake fluid level • Brake fluid level sensor connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between brake fluid level sensor terminal A and front body control module (FBCM) terminal 2Q • Brake fluid level sensor malfunction • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT BRAKE FLUID LEVEL** • Inspect the brake fluid level. (See **BRAKE FLUID INSPECTION**.) • Is the brake fluid level normal?	Yes	Go to the next step.
		No	Add genuine brake fluid, then go to Step 7.
3	**INSPECT BRAKE FLUID LEVEL SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the brake fluid level sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT FOR SHORT TO GROUND IN BRAKE FLUID LEVEL SENSOR SIGNAL CIRCUIT** • Verify that the brake fluid level sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2Q (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between brake fluid level sensor terminal A and front body control module (FBCM) terminal 2Q. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
6	**INSPECT BRAKE FLUID LEVEL SENSOR** • Inspect the brake fluid level sensor. (See **BRAKE FLUID LEVEL SENSOR INSPECTION**.) • Is the brake fluid level sensor normal?	Yes	Go to the next step.
		No	Replace the brake fluid level sensor, then go to the next step. (See **MASTER CYLINDER REMOVAL/INSTALLATION**.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(FBCM)].) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1087:88 [FRONT BODY CONTROL MODULE (FBCM)]

Description	LIN communication error
Detection condition	• LIN bus communication line malfunction detected for **1 s or more**
Fail-safe function	Not applicable
Possible cause	• Malfunction in LIN bus communication line ▪ Current sensor terminal B—Front body control module (FBCM) terminal 2E (With i-ELOOP) • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC	Yes	LIN communication line can be considered the cause. • Refer to the wiring diagram and verify whether or not there is a common connector between following terminals:

	for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		▪ Current sensor terminal B—Front body control module (FBCM) terminal 2E (With i-ELOOP) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. • Go to the next step.
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(FBCM)].) • Is the same DTC displayed?		
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1088:88 [FRONT BODY CONTROL MODULE (FBCM)]

Description	LIN communication error
Detection condition	• LIN bus communication line malfunction detected for **1 s or more**
Fail-safe function	Not applicable

Possible cause	• Malfunction in LIN bus communication line
	  ▪ Auto light sensor/rain sensor terminal A—Front body control module (FBCM) terminal 2G (With auto light sensor/rain sensor)
	  ▪ Climate control unit terminal K—Front body control module (FBCM) terminal 2J (With manual A/C)
	• Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-	Yes	LIN communication line can be considered the cause. • Refer to the wiring diagram and verify whether or not there is a common connector between following terminals: ▪ Auto light sensor/rain sensor terminal A—Front body control module (FBCM) terminal 2G (With auto light sensor/rain sensor)

	MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		▪ Climate control unit terminal K—Front body control module (FBCM) terminal 2J (With manual A/C) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. • Go to the next step.
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1092:11 [FRONT BODY CONTROL MODULE (FBCM)]

Description	DRL relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to ground in the DRL relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DRL relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between DRL relay terminal A and front body control module (FBCM) terminal 2C • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT DRL RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the DRL relay. (See **RELAY LOCATION**.) • Inspect the DRL relay. (See **RELAY INSPECTION**.) • Is the DRL relay normal?	Yes	Go to the next step.
		No	Replace the DRL relay, then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO GROUND IN DRL RELAY CONTROL CIRCUIT** • Verify that the DRL relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2C (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between DRL relay terminal A and front body control module (FBCM) terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.

		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B109A:12 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Headlight HI relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to power supply in the headlight HI relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Headlight HI relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight HI relay terminal E and front body control module (FBCM) terminal 2X • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position and the dimmer switch to the HI position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT HI RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headlight HI relay. (See **RELAY LOCATION**.) • Inspect the headlight HI relay. (See **RELAY INSPECTION**.) • Is the headlight HI relay normal?	Yes	Go to the next step.
		No	Replace the headlight HI relay, then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN HEADLIGHT HI RELAY CONTROL CIRCUIT** • Verify that the headlight HI relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between headlight HI relay terminal E and front body control module (FBCM) terminal 2X. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:**

	on). • Measure the voltage at the front body control module (FBCM) terminal 2X (wiring harness-side). • Is the voltage **0 V**?		• Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position and the dimmer switch to the HI position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B109A:14 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Headlight HI relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects an open circuit or short to ground in the headlight HI relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Headlight HI relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between headlight HI relay terminal E and front body control module (FBCM) terminal 2X • Open circuit in wiring harness between headlight HI relay terminal E and front body control module (FBCM) terminal 2X • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT HEADLIGHT HI RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headlight HI relay. (See **RELAY LOCATION**.) • Inspect the headlight HI relay. (See **RELAY INSPECTION**.) • Is the headlight HI relay normal?	Yes	Go to the next step.
		No	Replace the headlight HI relay, then go to Step 6. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR SHORT TO GROUND IN HEADLIGHT HI RELAY CONTROL CIRCUIT** • Verify that the headlight HI relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2X (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between headlight HI relay terminal E and front body control module (FBCM) terminal 2X. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

5	**INSPECT FOR OPEN CIRCUIT IN HEADLIGHT HI RELAY CONTROL CIRCUIT** • Verify that the headlight HI relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between headlight HI relay terminal E (wiring harness-side) and front body control module (FBCM) terminal 2X (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between headlight HI relay terminal E and front body control module (FBCM) terminal 2X. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10A6:64 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Light switch error signal received
Detection condition	• Front body control module (FBCM) receives the error signals from the start stop unit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• If DTC B10A6:64 is detected when the ignition is switched ON (engine off or on), the headlight LO and the TNS are illuminated. • If DTC B10A6:64 is cleared, the headlight LO and the TNS are turned off, and the operation returns to normal.
Possible cause	• Start stop unit malfunction • Light switch malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS.	Yes	Go to the next step.
		No	Go to Step 4.

	(See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
2	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See **LIGHT SWITCH INSPECTION**.) • Is the light switch normal?	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Replace the light switch, then go to the next step. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10A8:12 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Headlight LO relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to power supply in the headlight LO relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Headlight LO relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight LO relay terminal A and front body control module (FBCM) terminal 1M • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT LO RELAY** • Switch the ignition off. • Disconnect the negative battery	Yes	Go to the next step.
		No	Replace the headlight LO relay, then go to Step 5.

	cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headlight LO relay. (See **RELAY LOCATION**.) • Inspect the headlight LO relay. (See **RELAY INSPECTION**.) • Is the headlight LO relay normal?		(See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN HEADLIGHT LO RELAY CONTROL CIRCUIT** • Verify that the headlight LO relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 1M (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between headlight LO relay terminal A and front body control module (FBCM) terminal 1M. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM)**

	cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		**REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10AD:86 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Error signal received from auto light sensor/rain sensor
Detection condition	• Front body control module (FBCM) receives the error signals from the auto light sensor/rain sensor **10 times** continuously with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Auto light sensor/rain sensor malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY AUTO LIGHT SENSOR/RAIN SENSOR MALFUNCTION** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Replace the auto light sensor/rain sensor, then go to the next step. (See **RAIN SENSOR REMOVAL/INSTALLATION**.)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED**	Yes	Repeat the inspection from Step 1.

	• Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		• If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10AF:12 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Blower relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to power supply in the blower relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Blower relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between blower relay terminal D and the front body control module (FBCM) terminal 2Z • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT BLOWER RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the blower relay. (See **RELAY LOCATION**.) • Inspect the blower relay. (See **RELAY INSPECTION**.) • Is the blower relay normal?	Yes	Go to the next step.
		No	Replace the blower relay, then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN BLOWER RELAY CONTROL CIRCUIT** • Verify that the blower relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between blower relay terminal D and the front body control module (FBCM) terminal 2Z. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply.

	terminal 2Z (wiring harness-side). • Is the voltage **0 V**?		Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1142:13 [FRONT BODY CONTROL MODULE (FBCM)]

Description	IG1 relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects an open circuit in the IG1 relay circuit for **2 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• IG1 relay malfunction
	• Front body control module (FBCM) connector or terminal malfunction
	• IG1 relay circuit malfunction
	  ▪ C/U IG1 15 A fuse malfunction
	  ▪ Open circuit in the wiring harness between IG1 relay terminal C and front body control module (FBCM) terminal 2M
	• Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT IG1 RELAY** • Switch the ignition off.	Yes	Go to the next step.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the IG1 relay. (See **RELAY LOCATION**.) • Inspect the IG1 relay. (See **RELAY INSPECTION**.) • Is the IG1 relay normal?	No	Replace the IG1 relay, then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) POWER SUPPLY VOLTAGE (IGNITION POWER SUPPLY) INPUT CIRCUIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 2M (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal C and front body control module (FBCM) terminal 2M. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or

			pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1143:13 [FRONT BODY CONTROL MODULE (FBCM)]

Description	IG2 relay control circuit malfunction
Detection condition	• Front body control module (FBCM) detects an open circuit in the IG2 relay control circuit for **2 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Start stop unit connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Open circuit in the wiring harness between start stop unit terminal 2D and front body control module (FBCM) terminal 2U • Start stop unit malfunction • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN**	Yes	Go to the next step.

	• Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	No	Go to Step 7.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR OPEN CIRCUIT IN IG2 RELAY CONTROL CIRCUIT** • Verify that the start stop unit and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between start stop unit terminal 2D (wiring harness-side) and front body control module (FBCM) terminal 2U (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2D and front body control module (FBCM) terminal 2U. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 6.
5	**INSPECT START STOP UNIT** • Inspect the start stop unit. (See **START STOP UNIT INSPECTION**.) • Is the start stop unit normal?	Yes	Go to the next step.
		No	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11DB:86 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Error signal received from current sensor
Detection condition	• Front body control module (FBCM) receives the error signals from the current sensor for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Current sensor connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Short to power supply in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Open circuit in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Current sensor malfunction • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT CURRENT SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the current sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT FOR SHORT TO GROUND IN CURRENT SENSOR CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2E (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between current sensor terminal B and front body control module (FBCM) terminal 2E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.

			• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
5	**INSPECT FOR SHORT TO POWER SUPPLY IN CURRENT SENSOR CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 2E (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between current sensor terminal B and front body control module (FBCM) terminal 2E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
6	**INSPECT FOR OPEN CIRCUIT IN CURRENT SENSOR CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between current sensor terminal B (wiring harness-side) and front body control module (FBCM) terminal 2E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between current sensor terminal B and front body control module (FBCM) terminal 2E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**INSPECT CURRENT SENSOR** • Inspect the current sensor. (See **CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the current sensor normal?	Yes	Go to the next step.
		No	Replace the current sensor, then go to the next step. (See **CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected	Yes	Repeat the inspection from Step 1.

	connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		• If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1314:11 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Illumination output circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to ground in the illumination output circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Illuminations malfunction • Short to ground in front body control module (FBCM) illumination output circuit • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT FOR SHORT TO GROUND IN FRONT BODY CONTROL MODULE (FBCM) ILLUMINATION OUTPUT CIRCUIT** • Verify that the front body control module (FBCM) connector is disconnected. • Turn the light switch to the TNS position. • Inspect for continuity between front body control module (FBCM) terminal 3J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT ILLUMINATIONS** • Inspect the following parts: ▪ Hazard warning switch (See **HAZARD WARNING SWITCH INSPECTION**.) ▪ Steering switch (See **STEERING SWITCH**	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between following: • Hazard warning switch—Front body control module (FBCM) terminal 3J • Steering switch—Front body control module (FBCM) terminal 3J • Cruise control switch—Front body control module (FBCM) terminal 3J (With cruise control switch) • Cluster switch—Front body control module (FBCM) terminal 3J

	INSPECTION.) ▪ Cruise control switch (With cruise control switch) (See **CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) ▪ Cluster switch (See **DSC OFF SWITCH INSPECTION**.) ▪ Trunk lid opener switch (interior) (With trunk lid opener switch (interior)) (See **TRUNK LID OPENER SWITCH INSPECTION**.) • Are all parts normal?		Trunk lid opener switch (interior)—Front body control module (FBCM) terminal 3J (With trunk lid opener switch (interior)) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Repair or replace the malfunctioning part, then go to the next step. (See **HAZARD WARNING SWITCH REMOVAL/INSTALLATION**.) (See **STEERING SWITCH REMOVAL/INSTALLATION**.) (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.) (See **TRUNK LID OPENER SWITCH REMOVAL/INSTALLATION**.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B134D:02 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Headlight control signal error
Detection condition	• Front body control module (FBCM) receives the error signal from the start stop unit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• If DTC B134D:02 is detected when the ignition is switched ON (engine off or on), the headlight LO and the TNS are illuminated. • If DTC B134D:02 is cleared, the headlight LO and the TNS are turned off, and the operation returns to normal.
Possible cause	• DTCs are stored in the start stop unit. • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE**	Yes	Go to the next step.
		No	Go to Step 4.

	(FBCM)].) • Is the same DTC displayed?		
2	**VERIFY START STOP UNIT DTCs** • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13CF:19 [FRONT BODY CONTROL MODULE (FBCM)]

Description	IG2 power supply output circuit malfunction
Detection condition	• Front body control module (FBCM) detects over-current in the IG2 power supply output circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Short to ground in front body control module (FBCM) IG2 power supply output circuit • IG2 power supply output circuit related parts malfunction • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION**	Yes	Go to the next step.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR SHORT TO GROUND IN FRONT BODY CONTROL MODULE (FBCM) IG2 POWER SUPPLY OUTPUT CIRCUIT** • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1C (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT IG2 POWER SUPPLY OUTPUT CIRCUIT RELATED PARTS** • Inspect the following parts: ▪ Climate control unit (See **CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER]**.) (See **CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER]**.) ▪ A/C relay	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following: • Climate control unit—Front body control module (FBCM) terminal 1C • A/C relay—Front body control module (FBCM) terminal 1C • Seat warmer control unit—Front body control module (FBCM) terminal 1C (With seat warmer) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for

	(See **RELAY INSPECTION**.) ▪ Seat warmer control unit (With seat warmer) (See **SEAT WARMER FUNCTION IS INOPERATIVE [SEAT WARMER SYSTEM]**.) • Are all parts normal?		corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Repair or replace the malfunctioning part, then go to the next step. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.) (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **RELAY LOCATION**.) (See **FRONT SEAT REMOVAL/INSTALLATION**.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(FBCM)].) • Is the same DTC displayed?		
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13D0:11 [FRONT BODY CONTROL MODULE (FBCM)]

Description	TNS circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to ground in the TNS relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• TNS relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between TNS relay terminal A and front body control module (FBCM) terminal 1I • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the TNS position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT TNS RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the TNS relay. (See **RELAY LOCATION**.) • Inspect the TNS relay. (See **RELAY INSPECTION**.) • Is the TNS relay normal?	Yes	Go to the next step.
		No	Replace the TNS relay, then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO GROUND IN TNS RELAY CONTROL CIRCUIT** • Verify that the TNS relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1I (wiring harness-side)	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between TNS relay terminal A and front body control module (FBCM) terminal 1I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part.

	and body ground. • Is there continuity?		**If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the TNS position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13D2:12 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front fog light relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to power supply in the front fog light relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Front fog light relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in wiring harness between front fog light relay terminal E and front body control module (FBCM) terminal 2AB • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position and the fog light switch to the F.FOG position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT FRONT FOG LIGHT RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the front fog light relay. (See **RELAY LOCATION**.) • Inspect the front fog light relay. (See **RELAY INSPECTION**.) • Is the front fog light relay normal?	Yes	Go to the next step.
		No	Replace the front fog light relay, then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN FRONT FOG LIGHT RELAY CONTROL CIRCUIT** • Verify that the front fog light relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front fog light relay terminal E and front body control module (FBCM) terminal 2AB. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:**

	on). • Measure the voltage at the front body control module (FBCM) terminal 2AB (wiring harness-side). • Is the voltage **0 V**?		• Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position and the fog light switch to the F.FOG position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13FE:12 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Headlight LO relay (RH) circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to power supply in the headlight LO relay (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Headlight LO relay (RH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT LO RELAY (RH)** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headlight LO relay (RH). (See **RELAY LOCATION**.) • Inspect the headlight LO relay (RH). (See **RELAY INSPECTION**.) • Is the headlight LO relay (RH) normal?	Yes	Go to the next step.
		No	Replace the headlight LO relay (RH), then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN HEADLIGHT LO RELAY (RH) CONTROL CIRCUIT** • Verify that the headlight LO relay (RH) is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:**

	on). • Measure the voltage at the front body control module (FBCM) terminal 2V (wiring harness-side). • Is the voltage **0 V**?		• Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13FE:14 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Headlight LO relay (RH) circuit malfunction
Detection condition	• Front body control module (FBCM) detects an open circuit or short to ground in the headlight LO relay (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Headlight LO relay (RH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in the wiring harness between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V • Open circuit in the wiring harness between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the OFF position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT HEADLIGHT LO RELAY (RH)** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headlight LO relay (RH). (See **RELAY LOCATION**.) • Inspect the headlight LO relay (RH). (See **RELAY INSPECTION**.) • Is the headlight LO relay (RH) normal?	Yes	Go to the next step.
		No	Replace the headlight LO relay (RH), then go to Step 6. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR SHORT TO GROUND IN HEADLIGHT LO RELAY (RH) CONTROL CIRCUIT** • Verify that the headlight LO relay (RH) is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2V (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.

		No	Go to the next step.
5	**INSPECT FOR OPEN CIRCUIT IN HEADLIGHT LO RELAY (RH) CONTROL CIRCUIT** • Verify that the headlight LO relay (RH) is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect the wiring harness for continuity between headlight LO relay (RH) terminal E (wiring harness-side) and front body control module (FBCM) terminal 2V (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the OFF position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B141E:12 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Headlight LO relay (LH) circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to power supply in the headlight LO relay (LH) circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Headlight LO relay (LH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight LO relay (LH) terminal A and front body control module (FBCM) terminal 1M • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT LO RELAY (LH)** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the headlight LO relay (LH). (See **RELAY LOCATION**.) • Inspect the headlight LO relay (LH). (See **RELAY INSPECTION**.) • Is the headlight LO relay (LH) normal?	Yes	Go to the next step.
		No	Replace the headlight LO relay (LH), then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN HEADLIGHT LO RELAY (LH) CONTROL CIRCUIT** • Verify that the headlight LO relay (LH) is removed. • Verify that the front body control module (FBCM) connector is disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between headlight LO relay (LH) terminal A and front body control module (FBCM) terminal 1M. **If there is a common connector:**

	• Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 1M (wiring harness-side). • Is the voltage **0 V**?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the light switch to the HEAD position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1C84:12 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Rear window defroster relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to power supply in the rear window defroster relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Rear window defroster relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in wiring harness between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the rear window defroster by pushing the rear window defroster switch. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT REAR WINDOW DEFROSTER RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the rear window defroster relay. (See **RELAY LOCATION**.) • Inspect the rear window defroster relay. (See **RELAY INSPECTION**.) • Is the rear window defroster relay normal?	Yes	Go to the next step.
		No	Replace the rear window defroster relay, then go to Step 5. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT** • Verify that the rear window defroster relay is removed. • Verify that the front body control module (FBCM) connector is	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P. **If there is a common connector:**

	disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 1P (wiring harness-side). • Is the voltage **0 V**?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the rear window defroster by pushing the rear window defroster switch. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1C84:14 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Rear window defroster relay circuit malfunction
Detection condition	• Front body control module (FBCM) detects an open circuit or short to ground in the rear window defroster relay circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Rear window defroster relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P • Open circuit in wiring harness between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT REAR WINDOW DEFROSTER RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the rear window defroster relay. (See **RELAY LOCATION**.) • Inspect the rear window defroster relay. (See **RELAY INSPECTION**.) • Is the rear window defroster relay normal?	Yes	Go to the next step.
		No	Replace the rear window defroster relay, then go to Step 6. (See **RELAY LOCATION**.)
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR SHORT TO GROUND IN REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT** • Verify that the rear window defroster relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1P (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
5	**INSPECT FOR OPEN CIRCUIT IN REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT** • Verify that the rear window defroster relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between rear window defroster relay terminal E (wiring harness-side) and front body control module (FBCM) terminal 1P (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1D06:11 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Turn light (LH) circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to ground in the turn light (LH) circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Front body control module (FBCM) connector or terminal malfunction
	• Front turn light bulb (LH) malfunction
	• Front turn light (LH) connector or terminal malfunction
	• Short to ground in wiring harness between front turn light (LH) terminal A and front body control module (FBCM) terminal 2B
	• Rear turn light bulb (LH) malfunction
	• Rear turn light (LH) connector or terminal malfunction
	• Power outer mirror (LH) connector or terminal malfunction (With side turn light)
	• Side turn light (LH) malfunction (With side turn light)
	• Short to ground in wiring harness between the following terminals:
	  ▪ Rear turn light (LH) terminal A—Front body control module (FBCM) terminal 2D
	  ▪ Power outer mirror (LH) terminal E—Front body control module (FBCM) terminal 2D (With side turn light)
	• Front body control module (FBCM) malfunction

FRONT TURN LIGHT (LH)
WIRING HARNESS-SIDE CONNECTOR

POWER OUTER MIRROR (LH)
WIRING HARNESS-SIDE CONNECTOR

FBCM
WIRING HARNESS-SIDE CONNECTOR

REAR TURN LIGHT (LH)
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the turn switch to the LH position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 15.
2	**DETERMINE MALFUNCTIONING LIGHT** • Operate the turn switch to the LH position. • Are there any lights among the following which do not flash? ▪ Front turn light (LH) ▪ Side turn light (LH) (With side turn light) ▪ Rear turn light (LH)	Yes	All lights do not flash: • Go to the next step. Front turn light (LH) do not flash: • Go to Step 4. Side turn light (LH) (With side turn light) and rear turn light (LH) do not flash: • Go to Step 8.
		No	Go to Step 14.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to Step 14.
		No	Repair or replace the connector, then go to Step 14.

	• Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
4	**INSPECT FRONT TURN LIGHT BULB (LH)** • Inspect the front turn light bulb (LH). • Is the bulb normal?	Yes	Go to the next step.
		No	Replace the bulb, then go to Step 14. (See **FRONT TURN LIGHT BULB REMOVAL/INSTALLATION**.)
5	**INSPECT FRONT TURN LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front turn light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.
6	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.

	• Is the connector normal?		
7	**INSPECT FOR SHORT TO GROUND IN FRONT TURN LIGHT (LH) CONTROL CIRCUIT** • Verify that the front turn light (LH) and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (LH) terminal A and front body control module (FBCM) terminal 2B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 14.
		No	Go to Step 14.
8	**INSPECT REAR TURN LIGHT BULB (LH)** • Inspect the rear turn light bulb (LH). • Is the rear turn light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (LH), then go to Step 14. (See **REAR TURN LIGHT BULB REMOVAL/INSTALLATION**.)
9	**INSPECT REAR TURN LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear turn light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	With side turn light • Go to the next step. Without side turn light • Go to Step 13.
		No	Repair or replace the connector, then go to Step 14.

	• Is the connector normal?		
10	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.
11	**INSPECT SIDE TURN LIGHT (LH)** • Inspect the side turn light (LH). (See **SIDE TURN LIGHT INSPECTION**.) • Is the side turn light (LH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (LH), then go to Step 14. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.) (See **SIDE TURN LIGHT REMOVAL/INSTALLATION**.)
12	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.
13	**INSPECT FOR SHORT TO GROUND IN TURN LIGHT (LH) CONTROL CIRCUIT** • Verify that the power outer mirror (LH) (With side turn light), rear turn light (LH) and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear turn light (LH) terminal A—Front body control module (FBCM) terminal 2D • Power outer mirror (LH) terminal E—Front body control module (FBCM) terminal 2D (With side turn light) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage,

			or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
14	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the turn switch to the LH position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
15	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

DTC B1D06:11 [FRONT BODY CONTROL MODULE (FBCM)]

2014 - Mazda3 - Body and Accessories

DTC B1D06:13 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Turn light (LH) circuit malfunction
Detection condition	• Front body control module (FBCM) detects an open circuit or short to power supply in the turn light (LH) circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Front body control module (FBCM) connector or terminal malfunction
	• Front turn light bulb (LH) malfunction
	• Front turn light (LH) connector or terminal malfunction
	• Open circuit in wiring harness between front turn light (LH) terminal B and body ground
	• Short to power supply in wiring harness between front turn light (LH) terminal A and front body control module (FBCM) terminal 2B
	• Open circuit in wiring harness between front turn light (LH) terminal A and front body control module (FBCM) terminal 2B
	• Rear turn light bulb (LH) malfunction
	• Rear turn light (LH) connector or terminal malfunction
	• Open circuit in wiring harness between rear turn light (LH) terminal B and body ground
	• Power outer mirror (LH) connector or terminal malfunction (With side turn light)
	• Side turn light (LH) malfunction (With side turn light)
	• Open circuit in wiring harness between power outer mirror (LH) terminal G and body ground (With side turn light)
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Rear turn light (LH) terminal A—Front body control module (FBCM) terminal 2D
	  ▪ Power outer mirror (LH) terminal E—Front body control module (FBCM) terminal 2D (With side turn light)
	• Open circuit in wiring harness between the following terminals:

	▪ Rear turn light (LH) terminal A—Front body control module (FBCM) terminal 2D ▪ Power outer mirror (LH) terminal E—Front body control module (FBCM) terminal 2D (With side turn light) • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 20.
2	**DETERMINE MALFUNCTIONING LIGHT** • Operate the turn switch to the LH position. • Are there any lights among the following which do not flash or continue to be illuminated? ▪ Front turn light (LH) ▪ Side turn light (LH) (With side turn light) ▪ Rear turn light (LH)	Yes	All lights do not flash or continue to be illuminated: • Go to the next step. Front turn light (LH) do not flash or continue to be illuminated: • Go to Step 4. Side turn light (LH) (With side turn light) and rear turn light (LH) do not flash or continue to be illuminated: • Go to Step 10.
		No	Go to Step 19.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body	Yes	Go to Step 19.
		No	Repair or replace the connector, then go to Step 19.

	control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
4	**INSPECT FRONT TURN LIGHT BULB (LH)** • Inspect the front turn light bulb (LH). • Is the bulb normal?	Yes	Go to the next step.
		No	Replace the bulb, then go to Step 19. (See **FRONT TURN LIGHT BULB REMOVAL/INSTALLATION**.)
5	**INSPECT FRONT TURN LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front turn light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
6	**INSPECT FOR OPEN CIRCUIT IN FRONT TURN LIGHT (LH) GROUND CIRCUIT** • Verify that the front turn light (LH) connector is disconnected. • Inspect for continuity between front turn light (LH) terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (LH) terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

			• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
7	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
8	**INSPECT FOR SHORT TO POWER SUPPLY IN FRONT TURN LIGHT (LH) CONTROL CIRCUIT** • Verify that the front turn light (LH) and front body control module (FBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 2B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (LH) terminal A and front body control module (FBCM) terminal 2B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 19.
9	**INSPECT FOR OPEN CIRCUIT IN FRONT TURN LIGHT (LH) CONTROL CIRCUIT** • Verify that the front turn light (LH) and front body control module (FBCM) connectors are disconnected.	Yes	Go to Step 19.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (LH) terminal A and front body control module (FBCM) terminal 2B.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between front turn light (LH) terminal A (wiring harness-side) and front body control module (FBCM) terminal 2B. • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
10	**INSPECT REAR TURN LIGHT BULB (LH)** • Inspect the rear turn light bulb (LH). • Is the rear turn light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (LH), then go to Step 19. (See **REAR TURN LIGHT BULB REMOVAL/INSTALLATION**.)
11	**INSPECT REAR TURN LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear turn light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
12	**INSPECT FOR OPEN CIRCUIT IN REAR TURN LIGHT (LH) GROUND CIRCUIT** • Verify that the rear turn light (LH) connector is disconnected.	Yes	With side turn light • Go to the next step. Without side turn light • Go to Step 16.

	Inspect for continuity between rear turn light (LH) terminal B (wiring harness-side) and body ground. • Is there continuity?		
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear turn light (LH) terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
13	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
14	**INSPECT SIDE TURN LIGHT (LH)** • Inspect the side turn light (LH). (See **SIDE TURN LIGHT INSPECTION**.) • Is the side turn light (LH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (LH), then go to Step 19. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.) (See **SIDE TURN LIGHT REMOVAL/INSTALLATION**.)
15	**INSPECT FOR OPEN CIRCUIT IN SIDE TURN LIGHT (LH) GROUND CIRCUIT** • Verify that the power outer mirror (LH) connector is disconnected. • Inspect for continuity between power outer mirror (LH) terminal G (wiring harness-side) and body ground.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between power outer mirror (LH) terminal G and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and

	• Is there continuity?		the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
16	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
17	**INSPECT FOR SHORT TO POWER SUPPLY IN TURN LIGHT (LH) CONTROL CIRCUIT** • Verify that the side turn light (LH) (With side turn light), rear turn light (LH) and front body control module (FBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 2D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear turn light (LH) terminal A—Front body control module (FBCM) terminal 2D • Power outer mirror (LH) terminal E—Front body control module (FBCM) terminal 2D (With side turn light) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply.

			Go to Step 19.
18	**INSPECT FOR OPEN CIRCUIT IN TURN LIGHT (LH) CONTROL CIRCUIT** • Verify that the side turn light (LH) (With side turn light), rear turn light (LH) and front body control module (FBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Rear turn light (LH) terminal A—Front body control module (FBCM) terminal 2D ▪ Power outer mirror (LH) terminal E—Front body control module (FBCM) terminal 2D (With side turn light) • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear turn light (LH) terminal A—Front body control module (FBCM) terminal 2D • Power outer mirror (LH) terminal E—Front body control module (FBCM) terminal 2D (With side turn light) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
19	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
20	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1D07:11 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Turn light (RH) circuit malfunction
Detection condition	• Front body control module (FBCM) detects a short to ground in the turn light (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Front body control module (FBCM) connector or terminal malfunction
	• Front turn light bulb (RH) malfunction
	• Front turn light (RH) connector or terminal malfunction
	• Short to ground in wiring harness between front turn light (RH) terminal A and front body control module (FBCM) terminal 1G
	• Rear turn light bulb (RH) malfunction
	• Rear turn light (RH) connector or terminal malfunction
	• Power outer mirror (RH) connector or terminal malfunction (With side turn light)
	• Side turn light (RH) malfunction (With side turn light)
	• Short to ground in wiring harness between the following terminals:
	  ▪ Rear turn light (RH) terminal A—Front body control module (FBCM) terminal 1E
	  ▪ Power outer mirror (RH) terminal E—Front body control module (FBCM) terminal 1E (With side turn light)
	• Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the turn switch to the RH position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 15.
2	**DETERMINE MALFUNCTIONING LIGHT** • Operate the turn switch to the RH position. • Are there any lights among the following which do not flash? ▪ Front turn light (RH) ▪ Side turn light (RH) (With side turn light) ▪ Rear turn light (RH)	Yes	All lights do not flash: • Go to the next step. Front turn light (RH) do not flash: • Go to Step 4. Side turn light (RH) (With side turn light) and rear turn light (RH) do not flash: • Go to Step 8.
		No	Go to Step 14.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector.	Yes	Go to Step 14.
		No	Repair or replace the connector, then go to Step 14.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
4	**INSPECT FRONT TURN LIGHT BULB (RH)** • Inspect the front turn light bulb (RH). • Is the bulb normal?	Yes	Go to the next step.
		No	Replace the bulb, then go to Step 14. (See **FRONT TURN LIGHT BULB REMOVAL/INSTALLATION**.)
5	**INSPECT FRONT TURN LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front turn light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.
6	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.

7	**INSPECT FOR SHORT TO GROUND IN FRONT TURN LIGHT (RH) CONTROL CIRCUIT** • Verify that the front turn light (RH) and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1G (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (RH) terminal A and front body control module (FBCM) terminal 1G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 14.
		No	Go to Step 14.
8	**INSPECT REAR TURN LIGHT BULB (RH)** • Inspect the rear turn light bulb (RH). • Is the rear turn light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (RH), then go to Step 14. (See **REAR TURN LIGHT BULB REMOVAL/INSTALLATION**.)
9	**INSPECT REAR TURN LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear turn light (RH) connector. • Inspect the connector engagement and connection	Yes	With side turn light • Go to the next step. Without side turn light • Go to Step 13.
		No	Repair or replace the connector, then go to Step 14.

	condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
10	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION** • Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.
11	**INSPECT SIDE TURN LIGHT (RH)** • Inspect the side turn light (RH). (See **SIDE TURN LIGHT INSPECTION**.) • Is the side turn light (RH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (RH), then go to Step 14. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.) (See **SIDE TURN LIGHT REMOVAL/INSTALLATION**.)
12	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 14.
13	**INSPECT FOR SHORT TO GROUND IN TURN LIGHT (RH) CONTROL CIRCUIT** • Verify that the power outer mirror (RH) (With side turn light), rear turn light (RH) and front body control module (FBCM) connectors are disconnected. • Inspect for continuity	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear turn light (RH) terminal A—Front body control module (FBCM) terminal 1E • Power outer mirror (RH) terminal E—Front body control module

	between front body control module (FBCM) terminal 1E (wiring harness-side) and body ground. • Is there continuity?		(FBCM) terminal 1E (With side turn light) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
14	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Operate the turn switch to the RH position. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(FBCM)].) • Is the same DTC displayed?		
15	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1D07:13 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Turn light (RH) circuit malfunction
Detection condition	• Front body control module (FBCM) detects an open circuit or short to power supply in the turn light (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Front body control module (FBCM) connector or terminal malfunction
	• Front turn light bulb (RH) malfunction
	• Front turn light (RH) connector or terminal malfunction
	• Open circuit in wiring harness between front turn light (RH) terminal B and body ground
	• Short to power supply in wiring harness between front turn light (RH) terminal A and front body control module (FBCM) terminal 1G
	• Open circuit in wiring harness between front turn light (RH) terminal A and front body control module (FBCM) terminal 1G
	• Rear turn light bulb (RH) malfunction
	• Rear turn light (RH) connector or terminal malfunction
	• Open circuit in wiring harness between rear turn light (RH) terminal B and body ground
	• Power outer mirror (RH) connector or terminal malfunction (With side turn light)
	• Side turn light (RH) malfunction (With side turn light)
	• Open circuit in wiring harness between power outer mirror (RH) terminal G and body ground (With side turn light)
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Rear turn light (RH) terminal A—Front body control module (FBCM) terminal 1E
	  ▪ Power outer mirror (RH) terminal E—Front body control module (FBCM) terminal 1E (With side turn light)

	• Open circuit in wiring harness between the following terminals:
	  ▪ Rear turn light (RH) terminal A—Front body control module (FBCM) terminal 1E
	  ▪ Power outer mirror (RH) terminal E—Front body control module (FBCM) terminal 1E (With side turn light)
	• Front body control module (FBCM) malfunction

FRONT TURN LIGHT (RH)
WIRING HARNESS-SIDE CONNECTOR

POWER OUTER MIRROR (RH)
WIRING HARNESS-SIDE CONNECTOR

FBCM
WIRING HARNESS-SIDE CONNECTOR

REAR TURN LIGHT (RH)
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 20.
2	**DETERMINE MALFUNCTIONING LIGHT** • Operate the turn switch to the RH position. • Are there any lights among the following which do not flash or continue to be illuminated? ▪ Front turn light (RH) ▪ Side turn light (RH) (With side turn light) ▪ Rear turn	Yes	All lights do not flash or continue to be illuminated: • Go to the next step. Front turn light (RH) do not flash or continue to be illuminated: • Go to Step 4. Side turn light (RH) (With side turn light) and rear turn light (RH) do not flash or continue to be illuminated: • Go to Step 10.
		No	Go to Step 19.

	light (RH)		
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to Step 19.
		No	Repair or replace the connector, then go to Step 19.
4	**INSPECT FRONT TURN LIGHT BULB (RH)** • Inspect the front turn light bulb (RH). • Is the bulb normal?	Yes	Go to the next step.
		No	Replace the bulb, then go to Step 19. (See **FRONT TURN LIGHT BULB REMOVAL/INSTALLATION**.)
5	**INSPECT FRONT TURN LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front turn light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.

	• Is the connector normal?		
6	**INSPECT FOR OPEN CIRCUIT IN FRONT TURN LIGHT (RH) GROUND CIRCUIT** • Verify that the front turn light (RH) connector is disconnected. • Inspect for continuity between front turn light (RH) terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (RH) terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
7	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
8	**INSPECT FOR SHORT TO POWER SUPPLY IN FRONT TURN LIGHT (RH) CONTROL CIRCUIT** • Verify that the front turn light (RH) and front body control module (FBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY**	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (RH) terminal A and front body control module (FBCM) terminal 1G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common

	CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 1G (wiring harness-side). • Is the voltage **0 V**?		connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 19.
9	**INSPECT FOR OPEN CIRCUIT IN FRONT TURN LIGHT (RH) CONTROL CIRCUIT** • Verify that the front turn light (RH) and front body control module (FBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between front turn light (RH) terminal A (wiring harness-side) and front body control module (FBCM) terminal 1G. • Is there continuity?	Yes	Go to Step 19.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front turn light (RH) terminal A and front body control module (FBCM) terminal 1G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
10	**INSPECT REAR TURN LIGHT BULB (RH)** • Inspect the rear turn light bulb (RH). • Is the rear turn light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (RH), then go to Step 19. (See **REAR TURN LIGHT BULB REMOVAL/INSTALLATION**.)
11	**INSPECT REAR TURN LIGHT (RH) CONNECTOR CONDITION**	Yes	Go to the next step.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear turn light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 19.
12	**INSPECT FOR OPEN CIRCUIT IN REAR TURN LIGHT (RH) GROUND CIRCUIT** • Verify that the rear turn light (RH) connector is disconnected. • Inspect for continuity between rear turn light (RH) terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	With side turn light • Go to the next step. Without side turn light • Go to Step 16.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear turn light (RH) terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
13	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION**	Yes	Go to the next step.

	Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 19.
14	**INSPECT SIDE TURN LIGHT (RH)** • Inspect the side turn light (RH). (See **SIDE TURN LIGHT INSPECTION**.) • Is the side turn light (RH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (RH), then go to Step 19. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.) (See **SIDE TURN LIGHT REMOVAL/INSTALLATION**.)
15	**INSPECT FOR OPEN CIRCUIT IN SIDE TURN LIGHT (RH) GROUND CIRCUIT** • Verify that the power outer mirror (RH) connector is disconnected. • Inspect for continuity between power outer mirror (RH) terminal G (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between power outer mirror (RH) terminal G and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 19.
16	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.

	engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
17	**INSPECT FOR SHORT TO POWER SUPPLY IN TURN LIGHT (RH) CONTROL CIRCUIT** • Verify that the side turn light (RH) (With side turn light), rear turn light (RH) and front body control module (FBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 1E (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear turn light (RH) terminal A—Front body control module (FBCM) terminal 1E • Power outer mirror (RH) terminal E—Front body control module (FBCM) terminal 1E (With side turn light) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 19.
18	**INSPECT FOR OPEN CIRCUIT IN TURN LIGHT (RH) CONTROL CIRCUIT** • Verify that the side turn light (RH) (With side turn light), rear turn light (RH) and front body control module (FBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear turn light (RH) terminal A—Front body control module (FBCM) terminal 1E • Power outer mirror (RH) terminal E

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Rear turn light (RH) terminal A—Front body control module (FBCM) terminal 1E ▪ Power outer mirror (RH) terminal E—Front body control module (FBCM) terminal 1E (With side turn light) • Is there continuity?		—Front body control module (FBCM) terminal 1E (With side turn light) **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
19	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
20	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0001:88/U0100:00/U0101:00/U0151:00/U0155:00/U0214:00/U023A:00 [FRONT BODY CONTROL MODULE (FBCM)]

Description	• U0001:88
	  ▪ Module communication error (HS-CAN)
	• U0100:00
	  ▪ Communication error with PCM
	• U0101:00
	  ▪ Communication error with TCM
	• U0151:00
	  ▪ Communication error with SAS control module
	• U0155:00
	  ▪ Communication error with instrument cluster
	• U0214:00
	  ▪ Communication error with start stop unit
	• U023A:00
	  ▪ Communication error with forward sensing camera (FSC)

Detection condition	• U0001:88
	  ▪ Front body control module (FBCM) detects a CAN bus communication line (HS-CAN) malfunction **10 times** continuously.
	• U0100:00
	  ▪ Front body control module (FBCM) could not receive the CAN signal from the PCM for **5 s or more**.
	• U0101:00
	  ▪ Front body control module (FBCM) could not receive the CAN signal from the TCM for **5 s or more**.
	• U0151:00
	  ▪ Front body control module (FBCM) could not receive the

	CAN signal from the SAS control module for **5 s or more**. • U0155:00 ▪ Front body control module (FBCM) could not receive the CAN signal from the instrument cluster for **5 s or more**. • U0214:00 ▪ Front body control module (FBCM) could not receive the CAN signal from the start stop unit for **5 s or more**. • U023A:00 ▪ Front body control module (FBCM) could not receive the CAN signal from the forward sensing camera (FSC) for **5 s or more**.
Fail-safe function	• U0001:88 ▪ Control at the default signal value after holding the previous value for **5 s**. • U0100:00 ▪ Control at the default signal value after holding the previous value for **5 s**. • U0101:00 ▪ Control at the default signal value after holding the previous value for **5 s**. • U0151:00 ▪ Control at the default signal value after holding the previous value for **5 s**. • U0155:00 ▪ Control at the default signal value after holding the previous value for **5 s**. • U0214:00 ▪ Control at the default signal value after holding the previous value for **5 s**. • U023A:00 ▪ Control at the default signal value after holding the previous value for **5 s**.
	• Malfunction in CAN bus communication line • Malfunction in CAN line between the PCM and front body control module (FBCM) • Malfunction in CAN line between the TCM and front body control module (FBCM)

Possible cause	• Malfunction in CAN line between the SAS control module and front body control module (FBCM) • Malfunction in CAN line between the instrument cluster and front body control module (FBCM) • Malfunction in CAN line between the start stop unit and front body control module (FBCM) • Malfunction in CAN line between the forward sensing camera (FSC) and front body control module (FBCM)
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Body and Accessories

DTC U0164:68 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Communication error with climate control unit
Detection condition	• Front body control module (FBCM) could not receive signals from the climate control unit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Climate control unit connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between climate control unit terminal K and front body control module (FBCM) terminal 2J • Short to power supply in wiring harness between climate control unit terminal K and front body control module (FBCM) terminal 2J • Open circuit in wiring harness between climate control unit terminal K and front body control module (FBCM) terminal 2J • Climate control unit malfunction • Front body control module (FBCM) malfunction

CLIMATE CONTROL UNIT
WIRING HARNESS-SIDE CONNECTOR

FBCM
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the climate control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND FRONT BODY CONTROL MODULE (FBCM)** • Verify that the climate control unit and front body control module (FBCM) connectors are disconnected.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal K and front body control module (FBCM) terminal 2J. **If there is a common connector:** • Determine the malfunctioning part by

	• Inspect for continuity between front body control module (FBCM) terminal 2J (wiring harness-side) and body ground. • Is there continuity?		inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
5	**INSPECT FOR SHORT TO POWER SUPPLY IN WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND FRONT BODY CONTROL MODULE (FBCM)** • Verify that the climate control unit and front body control module (FBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 2J (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal K and front body control module (FBCM) terminal 2J. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
6	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND FRONT BODY CONTROL MODULE (FBCM)** • Verify that the climate control unit and front body control module (FBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between climate control unit terminal K (wiring harness-side) and front body control module (FBCM) terminal 2J (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between climate control unit terminal K and front body control module (FBCM) terminal 2J. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS CLIMATE CONTROL UNIT** • Always reconnect all disconnected	Yes	Replace the climate control unit, then go to the next step. (See **CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]**.)

	connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	No	Go to Step 9.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0231:68 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Communication error with auto light sensor/rain sensor
Detection condition	• Front body control module (FBCM) could not receive the signals from the auto light sensor/rain sensor for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Auto light sensor/rain sensor connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between auto light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G • Short to power supply in wiring harness between auto light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G • Open circuit in wiring harness between auto light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G • Auto light sensor/rain sensor malfunction • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT AUTO LIGHT SENSOR/RAIN SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auto light sensor/rain sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT FOR SHORT TO GROUND IN AUTO LIGHT SENSOR/RAIN SENSOR CIRCUIT** • Verify that the auto light sensor/rain sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2G (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between auto light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.

			• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
5	**INSPECT FOR SHORT TO POWER SUPPLY IN AUTO LIGHT SENSOR/RAIN SENSOR CIRCUIT** • Verify that the auto light sensor/rain sensor and front body control module (FBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the front body control module (FBCM) terminal 2G (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between auto light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 8.
6	**INSPECT FOR OPEN CIRCUIT IN AUTO LIGHT SENSOR/RAIN SENSOR CIRCUIT** • Verify that the auto light sensor/rain sensor and front body control module (FBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the wiring harness for continuity between auto light sensor/rain sensor terminal A (wiring harness-side) and front body control module (FBCM) terminal 2G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between auto light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY AUTO LIGHT SENSOR/RAIN SENSOR MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Replace the auto light sensor/rain sensor, then go to the next step. (See **RAIN SENSOR REMOVAL/INSTALLATION**.)
		No	Go to Step 9.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0338:09 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Error light switch signal received from start stop unit
Detection condition	• Front body control module (FBCM) receives the CAN error signals from the start stop unit **3 times** continuously with the ignition switched ON (engine off or on).
Fail-safe function	• If DTC U0338:09 is detected when the ignition is switched ON (engine off or on), the headlight LO and the TNS are illuminated. • If DTC U0338:09 is cleared, the headlight LO and the TNS are turned off, and the operation returns to normal.
Possible cause	• Light switch malfunction • Start stop unit malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE**	Yes	Go to the next step.
		No	Go to Step 6.

	(FBCM)].) • Is the same DTC displayed?		
2	**VERIFY START STOP UNIT DTCs** • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See **LIGHT SWITCH INSPECTION**.) • Is the light switch normal?	Yes	Go to the next step.
		No	Replace the light switch, then go to Step 5. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
4	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	Is the same DTC displayed?		
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0401:68 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Error signal received from PCM
Detection condition	• Front body control module (FBCM) receives the error ECT sensor or ambient temperature sensor signals from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• ECT sensor malfunction • Ambient temperature sensor malfunction • PCM malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS.	Yes	Go to the next step.
		No	Go to Step 7.

	(See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
2	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the ECT sensor normal?	Yes	Go to the next step.
		No	Replace the ECT sensor, then go to Step 6. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See **AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]**.) • Is the ambient temperature sensor normal?	Yes	Go to the next step.
		No	Replace the ambient temperature sensor, then go to Step 6. (See **AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.)
5	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT**	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 7.

	BODY CONTROL MODULE (FBCM)].) • Is the same DTC displayed?		
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U053B:68 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Error signal received from forward sensing camera (FSC)
Detection condition	• Front body control module (FBCM) receives the error signals from the forward sensing camera (FSC) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Forward sensing camera (FSC) malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 5.

2	**VERIFY FORWARD SENSING CAMERA (FSC) DTCs** • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY FORWARD SENSING CAMERA (FSC) MALFUNCTION** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL**

			MODULE (FBCM)].)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U1007:68 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Communication error with current sensor
Detection condition	• Front body control module (FBCM) could not receive signals from the current sensor for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Current sensor connector or terminal malfunction
	• Current sensor power supply circuit malfunction
	  ▪ Short to ground in wiring harness between ENG+B 7.5 A fuse and current sensor terminal A
	  ▪ ENG+B 7.5 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and current sensor terminal A
	• Front body control module (FBCM) connector or terminal malfunction
	• Short to ground in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E
	• Open circuit in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E
	• Current sensor malfunction
	• Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT CURRENT SENSOR CONNECTOR CONDITION** **NOTE:** • Always disconnect current sensor connector before disconnecting the negative battery cable.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

	• Switch the ignition off. • Disconnect the current sensor connector. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT FOR OPEN CIRCUIT OR SHORT TO GROUND IN CURRENT SENSOR POWER SUPPLY CIRCUIT** • Verify that the current sensor connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the current sensor terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENG+B 7.5 A fuse and MAIN 200A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENG+B 7.5 A fuse and current sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or

			replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and current sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT FOR SHORT TO GROUND IN CURRENT SENSOR LIN COMMUNICATION CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between current sensor terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between current sensor terminal B and front body control module (FBCM) terminal 2E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
6	**INSPECT FOR OPEN CIRCUIT IN CURRENT SENSOR LIN COMMUNICATION CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect the wiring harness for continuity between current sensor terminal B (wiring harness-side) and front body control module (FBCM) terminal 2E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between current sensor terminal B and front body control module (FBCM) terminal 2E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
7	**INSPECT CURRENT SENSOR** • Inspect the current sensor.	Yes	Go to the next step.

	(See **CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the current sensor normal?	No	Replace the current sensor, then go to the next step. (See **CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2005:68 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Error vehicle speed signal received from PCM
Detection condition	• Front body control module (FBCM) receives the vehicle speed signal error from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• ABS wheel-speed sensor malfunction • PCM malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE**	Yes	Go to the next step.
		No	Go to Step 7.

	(FBCM)].) • Is the same DTC displayed?		
2	**VERIFY DSC HU/CM DTCs** • Retrieve the DSC HU/CM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
3	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
4	**INSPECT ABS WHEEL-SPEED SENSOR** • Inspect the ABS wheel-speed sensor (LF), (RF), (LR) and (RR). (See **FRONT ABS WHEEL-SPEED SENSOR INSPECTION**.) (See **REAR ABS WHEEL-SPEED SENSOR INSPECTION**.) • Are ABS wheel-speed sensor (LF), (RF), (LR) and (RR) normal?	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to Step 6. (See **FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.) (See **REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION**.)
5	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.)	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 7.

	• Is the same DTC displayed?		
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2100:00 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front body control module (FBCM) configuration error
Detection condition	• Front body control module (FBCM) configuration error (no configuration) detected.
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) configuration error • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)**	Yes	Using the M-MDS, perform the front body control module (FBCM) configuration (using As-Built data)

	• Using the M-MDS, perform the front body control module (FBCM) configuration (using As-Built data). (See **FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		again, then go to the next step. (See **FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

DTC U2100:00 [FRONT BODY CONTROL MODULE (FBCM)]

2014 - Mazda3 - Body and Accessories

DTC U2101:00 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front body control module (FBCM) configuration error
Detection condition	• Front body control module (FBCM) configuration error detected.
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) configuration error • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the	Yes	Using the M-MDS, perform the front body control module (FBCM) configuration (using As-Built data) again, then go to the next step.

	front body control module (FBCM) configuration (using As-Built data). (See **FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		(See **FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

DTC U2101:00 [FRONT BODY CONTROL MODULE (FBCM)]

2014 - Mazda3 - Body and Accessories

DTC U3000:49 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front body control module (FBCM) internal malfunction
Detection condition	• Front body control module (FBCM) detects the internal malfunction.
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY FRONT BODY CONTROL MODULE (FBCM) MALFUNCTION** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:56 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front body control module (FBCM) configuration error
Detection condition	• Front body control module (FBCM) configuration error detected.
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) configuration error • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the	Yes	Using the M-MDS, perform the front body control module (FBCM) configuration (using As-Built data) again, then go to the next step.

	front body control module (FBCM) configuration (using As-Built data). (See **FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		(See **FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

DTC U3000:56 [FRONT BODY CONTROL MODULE (FBCM)]

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front body control module (FBCM) power supply voltage (+B power supply) low input
Detection condition	• Front body control module (FBCM) power supply circuit voltage of **8.8 V or less** is detected for **10 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Front body control module (FBCM) connector or terminal malfunction • Front body control module (FBCM) power supply circuit malfunction ▪ Short to ground in the wiring harness between the following: • MAIN 200 A fuse—Front body control module (FBCM) terminal 2A • MAIN 200 A fuse—Front body control module (FBCM) terminal 1A • MAIN 200 A fuse—Front body control module (FBCM) terminal 1B • MAIN 200 A fuse—Front body control module (FBCM) terminal 3K • MAIN 200 A fuse—Front body control module (FBCM) terminal 3L ▪ ROOM 15 A fuse malfunction ▪ HAZARD 25 A fuse malfunction ▪ MAIN 200 A fuse malfunction ▪ Open circuit in wiring harness between the following terminals: • Battery positive terminal—Front body control module (FBCM) terminal 2A • Battery positive terminal—Front body control module (FBCM) terminal 1A • Battery positive terminal—Front body control module (FBCM) terminal 1B • Battery positive terminal—Front body control module (FBCM) terminal 3K • Battery positive terminal—Front body control module (FBCM)

	terminal 3L • Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE**	Yes	Go to the next step.
		No	Go to Step 8.

	(FBCM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
2	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 7. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 7. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
5	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Inspect the connector	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
6	**VERIFY FRONT BODY CONTROL MODULE (FBCM) POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display the PID VPWR_B using the M-MDS. (See **PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ROOM 15 A fuse, HAZARD 25 A fuse and MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between the following: • MAIN 200 A fuse—Front body control module (FBCM) terminal 2A • MAIN 200 A fuse—Front body control module (FBCM) terminal 1A • MAIN 200 A fuse—Front body control module (FBCM) terminal 1B • MAIN 200 A fuse—Front body control module (FBCM) terminal 3K • MAIN 200 A fuse—Front body control module (FBCM) terminal 3L **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no**

common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between the following:
    - Battery positive terminal—Front body control module (FBCM) terminal 2A
    - Battery positive terminal—Front body control module (FBCM) terminal 1A
    - Battery positive terminal—Front body control module (FBCM) terminal 1B
    - Battery positive terminal—Front body control module (FBCM) terminal 3K
    - Battery positive terminal—Front body control module (FBCM) terminal 3L

    If there is a common connector:

    - Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.
    - Repair or replace

			the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:17 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front body control module (FBCM) power supply voltage high input
Detection condition	• Front body control module (FBCM) power supply circuit voltage of **14.2 V or more** is detected for **10 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Front body control module (FBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS.	Yes	Go to the next step.
		No	Go to Step 6.

	(See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
2	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
3	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 5. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3006:62 [FRONT BODY CONTROL MODULE (FBCM)]

Description	Front body control module (FBCM) power supply voltage mismatch
Detection condition	• Front body control module (FBCM) terminal 1A, 1B, 3K, and 3L voltages of **2 V or more** lower than the voltage of terminal 2A are detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Front body control module (FBCM) connector or terminal malfunction
	• Front body control module (FBCM) power supply circuit malfunction
	  ▪ Short to ground in the wiring harness between the following:
	  • MAIN 200 A fuse—Front body control module (FBCM) terminal 2A
	  • MAIN 200 A fuse—Front body control module (FBCM) terminal 1A
	  • MAIN 200 A fuse—Front body control module (FBCM) terminal 1B
	  • MAIN 200 A fuse—Front body control module (FBCM) terminal 3K
	  • MAIN 200 A fuse—Front body control module (FBCM) terminal 3L
	  ▪ ROOM 15 A fuse malfunction
	  ▪ HAZARD 25 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between the following terminals:
	  • Battery positive terminal—Front body control module (FBCM) terminal 2A
	  • Battery positive terminal—Front body control module (FBCM) terminal 1A
	  • Battery positive terminal—Front body control module (FBCM) terminal 1B
	  • Battery positive terminal—Front body control module (FBCM) terminal 3K
	  • Battery positive terminal—Front body control module (FBCM) terminal 3L
	• Front body control module (FBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**.	Yes	Go to the next step.
		No	Go to Step 5.

	• Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
2	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**VERIFY FRONT BODY CONTROL MODULE (FBCM) POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display the PID VPWR_B using the M-MDS. (See **PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ROOM 15A fuse, HAZARD 25 A fuse and MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between the following: • MAIN 200 A fuse—Front body control module (FBCM) terminal 2A • MAIN 200 A fuse—Front body control module (FBCM) terminal 1A • MAIN 200 A fuse—Front body control module (FBCM) terminal 1B • MAIN 200 A fuse—Front body control module (FBCM)

terminal 3K

- MAIN 200 A fuse—Front body control module (FBCM) terminal 3L

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.
- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between the following:
    - Battery positive terminal—Front body control module (FBCM) terminal 2A
    - Battery positive terminal—Front body control module (FBCM) terminal 1A
    - Battery positive terminal—Front body control module (FBCM) terminal 1B
    - Battery positive

			terminal—Front body control module (FBCM) terminal 3K • Battery positive terminal—Front body control module (FBCM) terminal 3L **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the front body control module (FBCM) using the M-MDS. (See **CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Retrieve the front body control module (FBCM) DTCs using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is the same DTC displayed?		
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “F_BCM”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [FRONT BODY CONTROL MODULE (FBCM)]

—: Not applicable

PID	Unit/Operation	Data contents	Data read/use method	Module control terminal
ABK_CS_BG*1	Off/On	Theft-deterrent system answer-back signal input status • Off: Theft-deterrent system answer-back signal is not received. • On: Theft-deterrent system answer-back signal is received.	Theft-deterrent system answer-back request signal input from rear body control module (RBCM) **NOTE:** • Operates only if the ignition is switched off.	2I, 2K (CAN)
ABK_CS_KEY	Off/On	Keyless entry system answer-back signal input status • Off: Keyless entry system answer-back signal is not received. • On: Keyless entry system answer-back signal is received.	Answer-back request signal input for keyless entry system from rear body control module (RBCM)	2I, 2K (CAN)
ABK_HD_CS_R	Off/On	**NOTE:** • It is displayed, however, if an accessory part is installed, it cannot be used.	—	—
ABK_HN_CS_R	Off/On	**NOTE:** • It is displayed, however, if an accessory part is installed, it cannot be used.	—	—
		Keyless entry system horn answer-back signal input status • Off: Keyless		

ABK_HN_KEY	Off/On	entry system horn answer-back signal is not received. • On: Keyless entry system horn answer-back signal is received.	Keyless entry system horn answer-back request signal input from rear body control module (RBCM)	2I, 2K (CAN)
BAT_TMP	°C, °F	Displays battery temperature (estimated).	Estimated battery temperature transmitted by LIN communication from current sensor	2E (LIN)
BG_ALARM_CS*1	Off/On	Theft-deterrent system alarm signal input status • Off: Hazard warning light flashing request signal is not received • On: Hazard warning light flashing request signal is received	Theft-deterrent system alarm request signal input from rear body control module (RBCM) **NOTE:** • Operates only if the ignition is switched off.	2I, 2K (CAN)
BLWR_MT_RY	Off/On	Blower motor relay output signal status • Off: Blower relay is off. • On: Blower relay is on.	—	2Z (Blower motor relay control)
BRAKE_SW	Off/On	Brake switch operation status • Off: Brake switch (No. 2 signal) is off. (Brake pedal is depressed.) • On: Brake switch (No. 2 signal) is on. (Brake pedal is not depressed.)	Brake switch signal status detected by PCM	2N, 2P (CAN)
BRK_F_L_SW	Normal/Low/Unknown	Brake fluid level condition • Normal: Brake fluid level is between MAX and MIN. • Low: Brake fluid level is lower than MIN. • Unknown: Brake fluid level is not determined.	—	2Q (Brake fluid level switch signal)

DCDC_CVT_ST	**NOTE:** • Displays in the M-MDS but it does not operate.			
DCDC_VLT_I	**NOTE:** • Displays in the M-MDS but it does not operate.			
DCDC_VLT_O	**NOTE:** • Displays in the M-MDS but it does not operate.			
DEFOG_F_CS	Off/On	**NOTE:** • It is displayed, however, if an accessory part is installed, it cannot be used.	—	—
DEFOG_R_CS	Off/On	Rear defroster operation request signal from heater control unit • Off: Rear window defroster control signal is not received. • On: Rear window defroster control signal is received.	For manual A/C vehicles, request signal transmission is via LIN communication.	2I, 2K (CAN)
ENG_C_TMP	°C, °F	Displays the engine coolant temperature value from the PCM.	—	2N, 2P (CAN)
ESS_ST	**NOTE:** • Displays in the M-MDS but it does not operate.			
F_FOG_LMP*2	Off/On	Front fog light control signal • Off: Front fog light is turned off. • On: Front fog light is turned on.	—	—
F_FOG_SW*2	Off/On	Front fog light switch input signal from start stop unit • Off: Front fog light switch F.FOG signal is not received. • On: Front fog light switch F.FOG signal is received.	—	2I, 2K (CAN)

H/L	OFF/DRL/TNS/H/L_LOW/H/L_HI	Headlight control signal • OFF: Headlight is turned off. • DRL: DRL is turned on. • TNS: TNS is turned on. • H/L_LOW: Headlight (LO) is turned on. • H/L_HI: Headlight (HI) is turned on.	—	—
H/L_CLN_RY	**NOTE:** • Displays in the M-MDS but it does not operate.			
H/L_CS_RLS*3	Off/TNS_On/TNS+H/L_On	Headlight control input signal from auto light sensor/rain sensor • Off: TNS and headlight on request signal is not received from auto light sensor. • TNS_On: TNS on signal is received from auto light sensor. • TNS+H/L_On: TNS and headlight LO on signal is received from auto light sensor.	—	2G (LIN)
H/L_HI	Off/On	Headlight HI beams • Off: Headlight HI is turned off. • On: Headlight HI is turned on.	—	—
H/L_SW_HI	Off/On	Light switch position (HI) condition via CAN signal from start stop unit • Off: Light switch HI signal is not received. • On: Light switch HI signal is received.	—	2I, 2K (CAN)

H/L_SW_LOW1	Off/On	Displays dimmer switch position of light switch sent from start stop unit via CAN signal • Off: Other than dimmer switch LO position of light switch is received • On: Dimmer switch LO position of light switch is received	Verify if the monitor value switches when the dimmer switch of the light switch is switched between LO and HI positions. If the dimmer switch operation and monitor values do not match, inspect the start stop unit or CAN communication.	2I, 2K (CAN)
H/L_SW_OFF	Off/On	Light switch position (OFF) condition via CAN signal from start stop unit • Off: Light switch OFF signal is not received. • On: Light switch OFF signal is received.	—	2I, 2K (CAN)
H/L_SW_PASS	Off/On	Light switch position (PASS) condition via CAN signal from start stop unit • Off: Light switch FLASH-TO-PASS signal is not received. • On: Light switch FLASH-TO-PASS signal is received.	—	2I, 2K (CAN)
H/L_SW_TNS	Off/On	Light switch position (TNS) status via CAN signal from start stop unit • Off: Light switch TNS signal is not received. • On: Light switch TNS signal is received.	—	2I, 2K (CAN)
H/L_TNS	Off/On	Light switch (TNS) output signal • Off: TNS is turned off. • On: TNS is turned on.	—	—
		Hazard light output signal • Off: Hazard		

HAZARD_LMP	Off/On	light is turned off. • On: Hazard light is turned on.	—	—
HAZARD_SW	Off/On/Unknown	Hazard switch input signal from start stop unit • Off: Hazard warning switch is not pressed. • On: Hazard warning switch is pressed. • Unknown: Hazard warning switch on/off is not determined.	—	2I, 2K (CAN)
HBC_CS*4	Off/On/Invalid	High beam control (HBC) system control signal input from forward sensing camera (FSC) • Off: High beam control (HBC) system signal is not received. • On: High beam control (HBC) system signal is received. • Invalid: High beam control (HBC) system signal has error.	—	2I, 2K (CAN)
HBC_ST*4	Off/On	Operation status of high beam control (HBC) system • Off: High beam control (HBC) system is not operated. • On: High beam control (HBC) system is operated.	Control status of high beam control (HBC) system of front body control module (FBCM) by signal from forward sensing camera (FSC)	2I, 2K (CAN)
HEAT_CS_R	**NOTE:** • Displays in the M-MDS but it does not operate.			
IG_ST	Off/On	Ignition switch status • Off: IG1 is off. • On: IG1 is on.	—	2I, 2K (CAN)
		Operation status of lights off function by auto-light function		

L_OFF_AUTO	Off/On	Off: TNS or headlight off control by auto light off system is not operated. • On: TNS or headlight off control by auto light off system is operated.	If the lights are turned off by the auto-light function (ignition is switched off), the value becomes On.	—
L_OFF_BS	**NOTE:** • Displays in the M-MDS but it does not operate.			
OIL_P_SW	**NOTE:** • Displays in the M-MDS but it does not operate.			
OUT_CAR_TMP	°C, °F	Displays the ambient temperature value input from the PCM.	—	2N, 2P (CAN)
P_BRAKE_SW	Off/On	Parking brake switch status having input from instrument cluster • Off: Parking brake switch is off. (Parking brake lever is not pulled.) • On: Parking brake switch is on. (Parking brake lever is pulled.)	—	2I, 2K (CAN)
PNC_CS	Off/On	Panic signal input from rear body control module (RBCM) • Off: Panic control signal is not received. • On: Panic control signal is received.	—	2I, 2K (CAN)
PNC_HD_CS_R	Off/On	**NOTE:** • It is displayed, however, if an accessory part is installed, it cannot be used.	—	—
PNC_HN_CS_R	Off/On	**NOTE:** • It is displayed, however, if an accessory part is installed, it cannot be used.	—	—

PTC_HEAT_CS	**NOTE:** • Displays in the M-MDS but it does not operate.			
R_FOG_LMP	**NOTE:** • Displays in the M-MDS but it does not operate.			
R_FOG_SW	**NOTE:** • Displays in the M-MDS but it does not operate.			
RES_CS	Off/On	**NOTE:** • It is displayed, however, if an accessory part is installed, it cannot be used.	—	—
RLS_FLT*3	O.K./FAULT	Fail determination signal of auto light sensor/rain sensor • O.K.: Rain sensor is normal. • FAULT: Rain sensor has a malfunction.	If normal, the value is O.K.. If abnormal, FAULT.	2G (LIN)
S_HT_CUT*5	No_Request/Cut	Seat warmer cut status • No_Request: Except below • Cut: Seat warmer is turned off or lowered.	—	—
SHIFT_L_POS*6	Between/P/R/N/D/S(2)/L(1)	Selector lever position signal from TCM • Between: Selector lever is between two positions. • P: Selector lever is in P position. • R: Selector lever is in R position. • N: Selector lever is in N position. • D: Selector lever is in D position. • S(2): Selector lever is in D position 2nd gear.	—	2I, 2K (CAN)

		• L(1): Selector lever is in D position 1st gear.		
TURN_L_L	Off/On	Turn light (LH) output signal • Off: Turn light (LH) is turned off. • On: Turn light (LH) is turned on.	—	—
TURN_L_R	Off/On	Turn light (RH) output signal • Off: Turn light (RH) is turned off. • On: Turn light (RH) is turned on.	—	—
TURN_SW	Off/Turn_R_On/Turn_L_On/Unknown	Turn switch signal input from start stop unit • Off: Turn switch is in OFF position. • Turn_R_On: Turn switch is in RH position. • Turn_L_On: Turn switch is in LH position. • Unknown: Turn switch position is not determined.	—	2I, 2K (CAN)
VPWR_B	V	Displays front body control module (FBCM) power supply voltage	—	2A, 3K, 3L (Power supply)
VSPD	KPH, MPH	Displays the vehicle speed signal from the PCM.	—	2N, 2P (CAN)
WAS_FLUID_L*7	Normal/Low/Unknown	Washer fluid level • Normal: Washer fluid level is normal. • Low: Washer fluid level is low. • Unknown: Washer fluid level is not determined.	—	2S (Washer level switch signal)
		Windshield washer motor relay operation signal • Off: Windshield		3F

WAS_MT_RY_F	Off/On	washer motor relay is off. • On: Windshield washer motor relay is on.	—	(Windshield washer motor control)
WAS_MT_RY_R*8	Off/On	Rear washer motor relay operation signal • Off: Rear washer motor relay is off. • On: Rear washer motor relay is on.	—	3H (Rear window washer motor control)
WASHER_F	Off/On	Windshield washer switch input signal from start stop unit • Off: Windshield washer switch is off. • On: Windshield washer switch is on.	—	2I, 2K (CAN)
WASHER_R*8	Off/On	Rear washer switch input signal from start stop unit • Off: Rear wiper and washer switch is not in rear washer position. • On: Rear wiper and washer switch is in rear washer position.	—	2I, 2K (CAN)
WIP_CS_RLS*3	Off/Single_Wipe/F_Wiper_LOW/F_Wiper_HI/Failure	Auto wiper input signal from auto light sensor/rain sensor • Off: Wiper operation signal is not received from rain sensor. • Single_Wipe: Signal to operate wiper once is received from rain sensor. • F_Wiper_LOW: Signal to operate wiper at low speed is received from rain sensor. • F_Wiper_HI: Signal to operate wiper at high speed is received	—	2G (LIN)

		from rain sensor. • Failure: Communication with rain sensor is failed.		
WIP_F	OFF/LOW/HI/INT / AUTO	Windshield wiper switch input signal from start stop unit • OFF: Windshield wiper switch is in OFF position. • LOW: Windshield wiper switch is in LO position. • HI: Windshield wiper switch is in HI position. • INT / AUTO: Windshield wiper switch is in INT or AUTO position.	—	2I, 2K (CAN)
WIP_F_INT_L	%	Displays the windshield wiper intermittent interval time input signal from start stop unit.	—	2I, 2K (CAN)
WIP_F_LOW	Off/On	Windshield wiper LO switch input status • Off: Windshield wiper switch is not in LO position. • On: Windshield wiper switch is in LO position.	—	2Y (Windshield wiper (LO) switch signal)
WIP_F_MST	Stop/Move	Windshield wiper stop position signal input • Stop: Windshield wipers stop at normal position • Move: Windshield wipers do not stop at normal position	If windshield wipers are operating, Move-Stop is repeated.	2AA (Autostop switch signal)
WIP_F_RY_HI	Off/On	Windshield wiper HI relay output signal • Off: Windshield wiper HI relay is off.	—	3C, 3E (Windshield wiper motor (HI) control)

		On: Windshield wiper HI relay is on.		
WIP_F_RY_LO	Off/On	Windshield wiper relay LO output signal • Off: Windshield wiper LO relay is off. • On: Windshield wiper LO relay is on.	—	3G, 3I (Windshield wiper motor (LOW) control)
WIP_R*8	OFF/LOW/INT	Rear wiper operation condition input signal from start stop unit • OFF: Rear wiper switch is in OFF position. • LOW: Rear wiper switch is in ON position. • INT: Rear wiper switch is in INT position.	—	2I, 2K (CAN)
WIP_R_RY*8	Off/On	Rear wiper relay drive signal • Off: Rear wiper motor is not operated. • On: Rear wiper motor is operated.	—	2I, 2K (CAN)

*1 **With theft-deterrent system**

*2 **With front fog light**

*3 **With auto light sensor/rain sensor**

*4 **With high beam control (HBC) system**

*5 **With seat warmer**

*6 **ATX**

*7 **With washer fluid-level sensor**

*8 **With rear wiper and washer**

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “F_BCM”.

3. Select the simulation items from the PID table.

4. Perform the active command modes function, inspect the operations for each parts.

    - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES TABLE [FRONT BODY CONTROL MODULE (FBCM)]

Simulation item	Unit/Operation	Data contents	Output part name
DEFOG_R_ST	Off/On	• Off: Stops rear window defroster. • On: Operates rear window defroster.	Filament
ESS_ST	**NOTE:** • Displays in the M-MDS but it does not operate.		
F_FOG_LMP*1	Off/On	• Off: Turns off front fog light. • On: Illuminates front fog light.	Front fog light
H/L	OFF/DRL/TNS/H/L_LOW/H/L_HI	• Off: Turns off headlight. • DRL: Illuminates DRL. • TNS: Illuminates TNS. • H/L_LOW: Illuminates headlight LO. • H/L_HI: Illuminates headlight HI.	• Headlight LO/HI • Parking light • Taillight • License plate light • DRL
H/L_CLN_RY	**NOTE:** • Displays in the M-MDS but it does not operate.		

HAZARD_LMP	Off/On	• Off: Turns off hazard warning light. • On: Flashes hazard warning light.	• Front turn light • Side turn light*3 • Rear turn light
PTC_HEAT_ST	**NOTE:** • Displays in the M-MDS but it does not operate.		
WAS_MT_RY_F	Off/On	• Off: Turns front washer motor relay off. • On: Turns front washer motor relay on.	Front body control module (FBCM)
WAS_MT_RY_R*2	Off/On	• Off: Turns rear washer motor relay off. • On: Turns rear washer motor relay on.	Front body control module (FBCM)

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [REAR BODY CONTROL MODULE (RBCM)]

2014 - Mazda3 - Body and Accessories

FOREWORD [REAR BODY CONTROL MODULE (RBCM)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
    - All the switches are turned off (except the ignition switch).
    - All the doors, hood, and trunk (4SD)/liftgate (5HB) are closed.
    - All the doors, and trunk (4SD)/liftgate (5HB) are unlocked.
    - All the seat belts are unbuckled.
    - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
4. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
5. After completion of repairs, clear all DTCs stored in the rear body control module (RBCM). (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
    - All the switches are turned off (except the ignition switch).
    - All the doors, hood, and trunk (4SD)/liftgate (5HB) are closed.
    - All the doors, and trunk (4SD)/liftgate (5HB) are unlocked.
    - All the seat belts are unbuckled.
    - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “R_BCM”.
4. Verify the DTC according to the directions on the screen.
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.

CLEARING DTC

5. After completion of repairs, clear all DTCs stored in the rear body control module (RBCM). (See **[REAR BODY CONTROL MODULE (RBCM)]**.)

Snapshot Data

NOTE:

- The rear body control module (RBCM) stores the following two types of snapshot data (vehicle information) when a DTC is detected and displays them in the M-MDS.
  - Vehicle information detected by rear body control module (RBCM)
  - Vehicle information detected by instrument cluster and received by rear body control module (RBCM) via CAN signal
- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data item	Unit		Data contents	Data read/use method	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	—	—
APP_STATUS	Accelerator Pedal Off/Under20%/Over20%/FAIL		Accelerator pedal position status	—	—
CFG_STATUS	Config Complete/Not Configured/Config Error		Instrument cluster configuration status	—	—
ECT_STATUS	Under 0 degrees C/0 - Under 80 degrees C/Over 80 degrees C/FAIL		Engine coolant temperature status	—	—
IC_VPWR	V		Instrument cluster power supply voltage	• The rear body control module (RBCM) constantly receives the power supply voltage value of the instrument cluster sent via CAN signal from the instrument cluster. • If a DTC is detected, the rear body control module (RBCM) records the power supply voltage of the instrument cluster when	VPWR*1

			the DTC was detected, and it is displayed in the M-MDS.	
IG-ON_TIMER	hh:mm:ss*2	Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed time since the ignition was switched ON (engine off or on).	• The rear body control module (RBCM) constantly receives the elapsed time since the ignition was switched ON (engine off or on) sent via CAN signal from the instrument cluster. • If a DTC is detected, the rear body control module (RBCM) records the elapsed time since the ignition was switched ON (engine off or on) when the DTC was detected, and it is displayed in the M-MDS.	—
		• Key Out: Ignition switched off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was switched off • Accessory (Position 1): Ignition is switched	• The rear body control module (RBCM) constantly receives the ignition	

PWR_MODE_KEY	Key Out/Key Recently Out (Position 0)/Accessory (Position 1)/Post Ignition (Position 2)/Ignition On (Position 2)/Running (Position 2)/Running - Starting	to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since ignition was switched ON (engine off or on) • Ignition On (Position 2): Ignition switched ON (engine off) • Running (Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition	switch status sent via CAN signal from the instrument cluster. • If a DTC is detected, the rear body control module (RBCM) records the ignition switch status when the DTC was detected, and it is displayed in the M-MDS.	—
RPM_STATUS	Engine Stop/Under1500rpm/Over1500rpm/FAIL	Engine speed status	• The rear body control module (RBCM) constantly receives the engine speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the rear body control module (RBCM) records the engine speed when the DTC was detected, and it is displayed in the M-MDS.	TACHOMTR*1

SHIFT_STATUS	P/N/D/R/FAIL		Selector lever position status	• The rear body control module (RBCM) constantly receives the selector lever position sent via CAN signal from the instrument cluster. • If a DTC is detected, the rear body control module (RBCM) records the selector lever position when the DTC was detected, and it is displayed in the M-MDS.	—
TOTAL_DIST	km	Miles	Accumulated total traveled distance from completion of vehicle until rear body control module (RBCM) detects DTC (Odometer value in instrument cluster)	The total traveled distance from which the rear body control module (RBCM) detects DTCs to the present can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snapshot data item TOTAL_DIST. • Subtract 2 from 1.	—
TOTAL_TIME	hh:mm:ss*2		Accumulated total elapsed time since vehicle completion until rear body control module (RBCM) detects a DTC **NOTE:** • When the ROOM fuse is removed, and the	The elapsed time from which the rear body control module (RBCM) detects DTCs to the present can be calculated by performing the following procedure. • Verify the instrument cluster PID item TOTAL_TIME.	TOTAL_TIME*1

		ignition is switched off, the time is not included in the elapsed time.	• Verify the snapshot data item TOTAL_TIME. • Subtract 2 from 1.	
VPWR	V	Rear body control module (RBCM) power supply voltage	—	VPWR_IG1
VSPD_STATUS	Stop/0-10km/h/Over10km/h/FAIL	Vehicle speed status	• The rear body control module (RBCM) constantly receives the vehicle speed sent via CAN signal from the instrument cluster. • If a DTC is detected, the rear body control module (RBCM) records the vehicle speed when the DTC was detected, and it is displayed in the M-MDS.	SPEEDOMTR*1

*1 **Instrument cluster PID (See PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER].)**

CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “R_BCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.)
8. Verify that no DTCs are displayed.

2014 - Mazda3 - Body and Accessories

DTC B1079:13 [REAR BODY CONTROL MODULE (RBCM)]

Description	Hood latch switch circuit malfunction
Detection condition	• Rear body control module (RBCM) detects an open circuit in hood latch switch circuit.
Fail-safe function	Not applicable
Possible cause	• Hood latch switch connector or terminal malfunction • Open circuit in wiring harness between hood latch switch terminal B and body ground • Hood latch switch malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between rear body control module (RBCM) terminal 3L and hood latch switch terminal A • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT HOOD LATCH SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the hood latch switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR OPEN CIRCUIT IN HOOD LATCH SWITCH GROUND CIRCUIT** • Verify that the hood latch switch connector is disconnected. • Inspect for continuity between hood latch switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between hood latch switch terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 7.
4	**INSPECT HOOD LATCH SWITCH** • Inspect the hood latch switch. (See **HOOD LATCH SWITCH INSPECTION**.) • Is the hood latch switch normal?	Yes	Go to the next step.
		No	Replace the hood latch switch, then go to Step 7. (See **HOOD LATCH REMOVAL/INSTALLATION**.)
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT FOR OPEN CIRCUIT IN HOOD LATCH SWITCH CIRCUIT** • Verify that the hood latch switch and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3L (wiring harness-side) and hood latch switch terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3L and hood latch switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B108F:16 [REAR BODY CONTROL MODULE (RBCM)]

Description	Door lock switch circuit malfunction
Detection condition	• With the door lock switch off, the rear body control module (RBCM) detects door lock switch circuit voltage of **4 V or less**.
Fail-safe function	Not applicable

Possible cause	• Power window main switch connector or terminal malfunction
	• Door lock switch (LH) malfunction
	• Door lock switch (RH) connector or terminal malfunction
	• Door lock switch (RH) malfunction
	• Rear body control module (RBCM) connector or terminal malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Rear body control module (RBCM) terminal 3F—Power window main switch terminal 2M
	  ▪ Rear body control module (RBCM) terminal 3F—Door lock switch (RH) terminal C
	• Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT POWER WINDOW MAIN SWITCH CONNECTOR CONDITION** • Switch the ignition off.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

	Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power window main switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT DOOR LOCK SWITCH (LH)** • Inspect the door lock switch (LH). (See **DOOR LOCK SWITCH INSPECTION**.) • Is the door lock switch (LH) normal?	Yes	Go to the next step.
		No	Replace the power window main switch, then go to Step 8. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)
4	**INSPECT DOOR LOCK SWITCH (RH) CONNECTOR CONDITION** • Disconnect the door lock switch (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
5	**INSPECT DOOR LOCK SWITCH (RH)** • Inspect the door lock switch (RH). (See **DOOR LOCK SWITCH INSPECTION**.) • Is the door lock switch (RH) normal?	Yes	Go to the next step.
		No	Replace the door lock switch (RH), then go to Step 8. (See **DOOR LOCK SWITCH REMOVAL/INSTALLATION**.)
6	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
7	**INSPECT FOR SHORT TO GROUND IN DOOR LOCK SWITCH CIRCUIT** • Verify that the power window main switch, door lock switch (LH) and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3F (wiring harness-side) and body	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear body control module (RBCM) terminal 3F—Power window main switch terminal 2M • Rear body control module (RBCM) terminal 3F—Door lock switch (RH) terminal C **If there is a common connector:**

	ground. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B109E:87 [REAR BODY CONTROL MODULE (RBCM)]

Description	Communication error with start stop unit
Detection condition	• Rear body control module (RBCM) detects a communication error with the start stop unit for **10 times continuously**.
Fail-safe function	Not applicable
Possible cause	• Start stop unit connector or terminal malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3B and start stop unit terminal 1Q • Open circuit in wiring harness between rear body control module (RBCM) terminal 3B and start stop unit terminal 1Q • Start stop unit malfunction • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN**	Yes	Go to the next step.

	• Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	No	Go to Step 8.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN START STOP UNIT AND REAR BODY CONTROL MODULE (RBCM)** • Verify that the rear body control module (RBCM) and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 1Q (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3B and start stop unit terminal 1Q. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
5	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND REAR BODY CONTROL MODULE (RBCM)**	Yes	Go to the next step.

	• Verify that the rear body control module (RBCM) and start stop unit connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3B (wiring harness-side) and start stop unit terminal 1Q (wiring harness-side). • Is there continuity?	No	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3B and start stop unit terminal 1Q. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B113E:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	**4SD** • Trunk lid opener switch (exterior) circuit malfunction **5HB** • Liftgate opener switch circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) circuit
Fail-safe function	Not applicable
Possible cause	• Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) connector or terminal malfunction • Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 4M and trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) terminal C • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT TRUNK LID OPENER SWITCH (EXTERIOR) (4SD)/LIFTGATE OPENER SWITCH (5HB) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT TRUNK LID OPENER SWITCH (EXTERIOR) (4SD)/LIFTGATE OPENER SWITCH (5HB)** • Inspect the trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB). (See **TRUNK LID OPENER SWITCH INSPECTION**.) (See **LIFTGATE OPENER SWITCH INSPECTION**.) • Is the trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) normal?	Yes	Go to the next step.
		No	Replace the trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB), then go to Step 6. (See **TRUNK LID OPENER SWITCH REMOVAL/INSTALLATION**.) (See **LIFTGATE OPENER SWITCH REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FOR SHORT TO GROUND IN TRUNK LID OPENER SWITCH (EXTERIOR) (4SD)/LIFTGATE OPENER SWITCH (5HB) CIRCUIT** • Verify that the trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) and rear body control module (RBCM) connectors are disconnected.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 4M and trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring

	• Inspect for continuity between trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) terminal C (wiring harness-side) and body ground. • Is there continuity?		harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1172:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	Front door lock-link switch (LH) unlock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the front door lock-link switch (LH) unlock circuit with the front door lock-link switch (LH) locked.
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (LH) connector or terminal malfunction • Front door lock-link switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is DTC B126A:11 or B126A:13 displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
4	**INSPECT FRONT DOOR LOCK-LINK SWITCH (LH)** • Inspect the front door lock-link switch (LH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (LH), then go to Step 7. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT FOR SHORT TO GROUND IN FRONT DOOR LOCK-LINK SWITCH (LH) UNLOCK CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (LH) connectors are disconnected. • Inspect for continuity between front door latch and lock actuator (LH) terminal B and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?		
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1172:13 [REAR BODY CONTROL MODULE (RBCM)]

Description	Front door lock-link switch (LH) unlock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects an open circuit in the front door lock-link switch (LH) unlock circuit with the front door lock-link switch (LH) unlocked.
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (LH) connector or terminal malfunction • Open circuit in wiring harness between front door latch and lock actuator (LH) terminal J and body ground • Front door lock-link switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is DTC B126A:11 or B126A:13 displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

	disconnection. • Is the connector normal?		
4	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (LH) GROUND CIRCUIT** • Verify that the front door latch and lock actuator (LH) connector is disconnected. • Inspect for continuity between front door latch and lock actuator (LH) terminal J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front door latch and lock actuator (LH) terminal J and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 8.
5	**INSPECT FRONT DOOR LOCK-LINK SWITCH (LH)** • Inspect the front door lock-link switch (LH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (LH), then go to Step 8. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
6	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
7	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (LH) UNLOCK CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (LH) connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B (wiring harness-side).	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin

	• Is there continuity?		disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1174:11 [REAR BODY CONTROL MODULE (RBCM)]

Without Theft-Deterrent System

Description	Front door lock-link switch (RH) unlock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the front door lock-link switch (RH) unlock circuit with the front door lock-link switch (RH) not unlocked.
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (RH) connector or terminal malfunction • Front door lock-link switch (RH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3J and front door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (RH) not unlocked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT FRONT DOOR LOCK-LINK SWITCH (RH)** • Inspect the front door lock-link switch (RH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (RH), then go to Step 6. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FOR SHORT TO GROUND IN FRONT DOOR LOCK-LINK SWITCH (RH) UNLOCK CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (RH) connectors are disconnected. • Inspect for continuity between front door latch and lock actuator (RH) terminal L (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3J and front door latch and lock actuator (RH) terminal L. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.

		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (RH) not unlocked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

With Theft-Deterrent System

Description	Door lock-link switch unlock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the door lock-link switch unlock circuit with the front door lock-link switch (RH)/rear door lock-link switch (LH)/(RH) not unlocked.
Fail-safe function	Not applicable
	• Front door latch and lock actuator (RH) connector or terminal malfunction • Front door lock-link switch (RH) malfunction • Rear door latch and lock actuator (LH) connector or terminal malfunction

Possible cause	• Rear door lock-link switch (LH) malfunction
	• Rear door latch and lock actuator (RH) connector or terminal malfunction
	• Rear door lock-link switch (RH) malfunction
	• Rear body control module (RBCM) connector or terminal malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Rear body control module (RBCM) terminal 3J—Front door latch and lock actuator (RH) terminal L
	  ▪ Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (LH) terminal B
	  ▪ Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (RH) terminal L
	• Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control	Yes	Go to the next step.
		No	Go to Step 11.

	module (RBCM) DTCs using the M-MDS with the front door lock-link switch (RH), rear door lock-link switch (LH) and (RH) not unlocked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?		
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
3	**INSPECT FRONT DOOR LOCK-LINK SWITCH (RH)** • Inspect the front door lock-link switch (RH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (RH), then go to Step 10. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR DOOR LATCH ACTUATOR (LH) CONNECTOR CONDITION** • Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
5	**INSPECT REAR DOOR LOCK-LINK SWITCH (LH)** • Inspect the rear door lock-link switch (LH). (See **REAR DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the rear door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (LH), then go to Step 10. (See **REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)

6	**INSPECT REAR DOOR LATCH ACTUATOR (RH) CONNECTOR CONDITION** • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
7	**INSPECT REAR DOOR LOCK-LINK SWITCH (RH)** • Inspect the rear door lock-link switch (RH). (See **REAR DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the rear door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (RH), then go to Step 10. (See **REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
8	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
9	**INSPECT FOR SHORT TO GROUND IN DOOR LOCK-LINK SWITCH UNLOCK CIRCUIT** • Verify that the rear body control module (RBCM), front door latch and lock actuator (RH), rear door latch and lock actuator (LH) and (RH) connectors are disconnected. • Inspect for continuity between front door latch and lock actuator (RH) terminal L (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear body control module (RBCM) terminal 3J—Front door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (LH) terminal B • Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (RH) terminal L **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness

			which has a short to ground. Go to the next step.
		No	Go to the next step.
10	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (RH), rear door lock-link switch (LH) and (RH) not unlocked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
11	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1174:13 [REAR BODY CONTROL MODULE (RBCM)]

Without Theft-Deterrent System

Description	Front door lock-link switch (RH) unlock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects an open circuit in the front door lock-link switch (RH) unlock circuit with the front door lock-link switch (RH) unlocked.
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (RH) connector or terminal malfunction • Open circuit in wiring harness between front door latch and lock actuator (RH) terminal D and body ground. • Front door lock-link switch (RH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between rear body control module (RBCM) terminal 3J and front door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (RH) GROUND CIRCUIT** • Verify that the front door latch and lock actuator (RH) connector is disconnected. • Inspect for continuity between front door latch and lock actuator (RH) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front door latch and lock actuator (RH) terminal D and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
4	**INSPECT FRONT DOOR LOCK-LINK SWITCH (RH)** • Inspect the front door lock-link switch (RH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (RH), then go to Step 7. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (RH) UNLOCK CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (RH) connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3J and front door latch and lock actuator (RH) terminal L. **If there is a common connector:**

	3J (wiring harness-side) and front door latch and lock actuator (RH) terminal L (wiring harness-side). • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

With Theft-Deterrent System

Description	Door lock-link switch unlock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects an open circuit in the door lock-link switch unlock circuit with the front door lock-link switch (RH)/rear door lock-link switch (LH)/(RH) unlocked.
Fail-safe function	Not applicable

Possible cause	• Front door latch and lock actuator (RH) connector or terminal malfunction
	• Open circuit in wiring harness between front door latch and lock actuator (RH) terminal D and body ground.
	• Front door lock-link switch (RH) malfunction
	• Rear door latch and lock actuator (LH) connector or terminal malfunction
	• Open circuit in wiring harness between rear door latch and lock actuator (LH) terminal J and body ground
	• Rear door lock-link switch (LH) malfunction
	• Rear door latch and lock actuator (RH) connector or terminal malfunction
	• Open circuit in wiring harness between rear door latch and lock actuator (RH) terminal D and body ground
	• Rear door lock-link switch (RH) malfunction
	• Rear body control module (RBCM) connector or terminal malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ Rear body control module (RBCM) terminal 3J—Front door latch and lock actuator (RH) terminal L
	  ▪ Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (LH) terminal B
	  ▪ Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (RH) terminal L
	• Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module	Yes	Go to the next step.
		No	Go to Step 14.

	(RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?		
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
3	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (RH) GROUND CIRCUIT** • Verify that the front door latch and lock actuator (RH) connector is disconnected. • Inspect for continuity between front door latch and lock actuator (RH) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front door latch and lock actuator (RH) terminal D and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 13.
4	**INSPECT FRONT DOOR LOCK-LINK SWITCH (RH)** • Inspect the front door lock-link switch (RH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (RH), then go to Step 13. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
5	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION**	Yes	Go to the next step.

	• Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 13.
6	**INSPECT FOR OPEN CIRCUIT IN REAR DOOR LOCK-LINK SWITCH (LH) GROUND CIRCUIT** • Verify that the rear door latch and lock actuator (LH) connector is disconnected. • Inspect for continuity between rear door latch and lock actuator (LH) terminal J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear door latch and lock actuator (LH) terminal J and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 13.
7	**INSPECT REAR DOOR LOCK-LINK SWITCH (LH)** • Inspect the rear door lock-link switch (LH). (See **REAR DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the rear door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (LH), then go to Step 13. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
8	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR CONDITION** • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
9	**INSPECT FOR OPEN CIRCUIT IN REAR DOOR LOCK-LINK SWITCH (RH) GROUND CIRCUIT** • Verify that the rear door latch and lock actuator (RH) connector is disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear door latch and lock actuator (RH) terminal D and body ground.

	• Inspect for continuity between rear door latch and lock actuator (RH) terminal D (wiring harness-side) and body ground. • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 13.
10	**INSPECT REAR DOOR LOCK-LINK SWITCH (RH)** • Inspect the rear door lock-link switch (RH). (See **REAR DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the rear door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (RH), then go to Step 13. (See **REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
11	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
12	**INSPECT FOR OPEN CIRCUIT IN DOOR LOCK-LINK SWITCH UNLOCK CIRCUIT** • Verify that the rear body control module (RBCM), front door latch and lock actuator (RH), rear door latch and lock actuator (LH) and (RH) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Rear body control module (RBCM) terminal 3J—Front door latch and lock actuator (RH) terminal L ▪ Rear body control module (RBCM) terminal 3J—Rear door latch and lock	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear body control module (RBCM) terminal 3J—Front door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (LH) terminal B • Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (RH) terminal L **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or

	actuator (LH) terminal B ▪ Rear body control module (RBCM) terminal 3J—Rear door latch and lock actuator (RH) terminal L • Is there continuity?		pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
13	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
14	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1175:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	Front door latch switch (LH) circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the front door latch switch (LH) circuit with the front door (LH) closed (front door latch switch (LH) off).
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (LH) connector or terminal malfunction • Front door latch switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3W and front door latch and lock actuator (LH) terminal L • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT DOOR LATCH SWITCH (LH)** • Inspect the front door latch switch (LH). (See **FRONT DOOR LATCH SWITCH INSPECTION**.) • Is the front door latch switch (LH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (LH), then go to Step 6. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT FOR SHORT TO GROUND IN FRONT DOOR LATCH SWITCH (LH) CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (LH) connectors are disconnected. • Inspect for continuity between front door latch and lock actuator (LH) terminal L (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3W and front door latch and lock actuator (LH) terminal L. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1176:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	Front door latch switch (RH) circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the front door latch switch (RH) circuit with the front door (RH) closed (front door latch switch (RH) off).
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (RH) connector or terminal malfunction • Front door latch switch (RH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3U and front door latch and lock actuator (RH) terminal B. • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT DOOR LATCH SWITCH (RH)** • Inspect the front door latch switch (RH). (See **FRONT DOOR LATCH SWITCH INSPECTION**.) • Is the front door latch switch (RH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (RH), then go to Step 6. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT FOR SHORT TO GROUND IN FRONT DOOR LATCH SWITCH (RH) CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (RH) connectors are disconnected. • Inspect for continuity between front door latch and lock actuator (RH) terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3U and front door latch and lock actuator (RH) terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1178:11 [REAR BODY CONTROL MODULE (RBCM)]

4SD

Description	Trunk lid latch switch circuit malfunction
Detection condition	• Rear body control module (RBCM) detects short to ground in trunk lid latch switch circuit with the trunk closed (trunk lid latch switch off).
Fail-safe function	Not applicable
Possible cause	• Trunk lid latch and release actuator connector or terminal malfunction • Trunk lid latch switch malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 4K and trunk lid latch and release actuator terminal C • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT TRUNK LID LATCH AND RELEASE ACTUATOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the trunk lid latch and release actuator connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT TRUNK LID LATCH SWITCH** • Inspect the trunk lid latch switch. (See **TRUNK LID LATCH SWITCH INSPECTION**.) • Is the trunk lid latch switch normal?	Yes	Go to the next step.
		No	Replace the trunk lid latch and release actuator, then go to Step 6. (See **TRUNK LID LATCH AND RELEASE ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FOR SHORT TO GROUND IN TRUNK LID LATCH SWITCH CIRCUIT** • Verify that the rear body control module (RBCM) and trunk lid latch and release actuator connectors are disconnected. • Inspect for continuity between trunk lid latch and release actuator terminal C (wiring harness) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 4K and trunk lid latch and release actuator terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.

		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

5HB

Description	Liftgate latch switch circuit malfunction
Detection condition	• Rear body control module (RBCM) detects short to ground in liftgate latch switch circuit with the liftgate closed (liftgate latch switch off).
Fail-safe function	Not applicable
Possible cause	• Liftgate latch and lock actuator connector or terminal malfunction • Liftgate latch switch malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal

	4K and liftgate latch and lock actuator terminal C • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT LIFTGATE LATCH AND LOCK ACTUATOR CONNECTOR CONDITION** • Switch the ignition off.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the liftgate latch and lock actuator connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT LIFTGATE LATCH SWITCH** • Inspect the liftgate latch switch. (See **LIFTGATE LATCH SWITCH INSPECTION**.) • Is the liftgate latch switch normal?	Yes	Go to the next step.
		No	Replace the liftgate latch and lock actuator, then go to Step 6. (See **LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FOR SHORT TO GROUND IN LIFTGATE LATCH SWITCH CIRCUIT** • Verify that the rear body control module (RBCM) and liftgate latch and lock actuator connectors are disconnected. • Inspect for continuity between liftgate latch and lock actuator terminal C (wiring harness) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 4K and liftgate latch and lock actuator terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground.

			Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11DA:16 [REAR BODY CONTROL MODULE (RBCM)]

Description	Front door key cylinder switch (LH) circuit malfunction
Detection condition	• Rear body control module (RBCM) detects the front door key cylinder switch (LH) circuit voltage of **4 V or less** with the front door key cylinder switch (LH) off.
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (LH) connector or terminal malfunction • Front door key cylinder switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3H and front door latch and lock actuator (LH) terminal H. • Rear body control module (RBCM) malfunction

RBCM
WIRING HARNESS-SIDE CONNECTOR

FRONT DOOR LATCH AND LOCK ACTUATOR (LH)
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
