2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT DOOR KEY CYLINDER SWITCH (LH)** • Inspect the front door key cylinder switch (LH). (See **FRONT DOOR KEY CYLINDER SWITCH INSPECTION**.) • Is the front door key cylinder switch (LH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (LH), then go to Step 6. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION**	Yes	Go to the next step.

	• Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FOR SHORT TO GROUND IN FRONT DOOR KEY CYLINDER SWITCH (LH) CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (LH) connectors are disconnected. • Inspect for continuity between front door latch and lock actuator (LH) terminal H (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3H and front door latch and lock actuator (LH) terminal H. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11E9:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	Rear door latch switch (LH) circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the rear door latch switch (LH) circuit with the rear door (LH) closed (rear door latch switch (LH) off).
Fail-safe function	Not applicable
Possible cause	• Rear door latch and lock actuator (LH) connector or terminal malfunction • Rear door latch switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3S and rear door latch and lock actuator (LH) terminal L • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection	Action	
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT REAR DOOR LATCH SWITCH (LH)** • Inspect the rear door latch switch (LH). (See **REAR DOOR LATCH SWITCH INSPECTION**.) • Is the rear door latch switch (LH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (LH), then go to Step 6. (See **REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT FOR SHORT TO GROUND IN REAR DOOR LATCH SWITCH (LH) CIRCUIT** • Verify that the rear body control module (RBCM) and rear door latch and lock actuator (LH) connectors are disconnected. • Inspect for continuity between rear door latch and lock actuator (LH) terminal L (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3S and rear door latch and lock actuator (LH) terminal L. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11EA:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	Rear door latch switch (RH) circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the rear door latch switch (RH) circuit with the rear door (RH) closed (rear door latch switch (RH) off).
Fail-safe function	Not applicable
Possible cause	• Rear door latch and lock actuator (RH) connector or terminal malfunction • Rear door latch switch (RH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3Q and rear door latch and lock actuator (RH) terminal B • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT REAR DOOR LATCH SWITCH (RH)** • Inspect the rear door latch switch (RH). (See **REAR DOOR LATCH SWITCH INSPECTION**.) • Is the rear door latch switch (RH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (RH), then go to Step 6. (See **REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT FOR SHORT TO GROUND IN REAR DOOR LATCH SWITCH (RH) CIRCUIT** • Verify that the rear body control module (RBCM) and rear door latch and lock actuator (RH) connectors are disconnected. • Inspect for continuity between rear door latch and lock actuator (RH) terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3Q and rear door latch and lock actuator (RH) terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1219:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	Trunk lid opener switch (interior) circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in trunk lid opener switch (interior) circuit
Fail-safe function	Not applicable
Possible cause	• Trunk lid opener switch (interior) connector or terminal malfunction • Trunk lid opener switch (interior) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 2D and trunk lid opener switch (interior) terminal A • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT TRUNK LID OPENER SWITCH (INTERIOR) CONNECTOR CONDITION**	Yes	Go to the next step.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the trunk lid opener switch (interior) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 6.
3	**INSPECT TRUNK LID OPENER SWITCH (INTERIOR)** • Inspect the trunk lid opener switch (interior). (See **TRUNK LID OPENER SWITCH INSPECTION**.) • Is the trunk lid opener switch (interior) normal?	Yes	Go to the next step.
		No	Replace the trunk lid opener switch (interior), then go to Step 6. (See **TRUNK LID OPENER SWITCH REMOVAL/INSTALLATION**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FOR SHORT TO GROUND IN TRUNK LID OPENER SWITCH (INTERIOR) CIRCUIT** • Verify that the trunk lid opener switch (interior) and rear body control module (RBCM) connectors are	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 2D and trunk lid opener switch (interior) terminal A. **If there is a common connector:**

	disconnected. • Inspect for continuity between trunk lid opener switch (interior) terminal A (wiring harness-side) and body ground. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting.

			(See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B126A:11 [REAR BODY CONTROL MODULE (RBCM)]

Description	Front door lock-link switch (LH) lock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects a short to ground in the front door lock-link switch (LH) lock circuit with the front door lock-link switch (LH) unlocked.
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (LH) connector or terminal malfunction • Front door lock-link switch (LH) malfunction • Start stop unit connector or terminal malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ Start stop unit terminal 1P—Front door latch and lock actuator (LH) terminal D ▪ Rear body control module (RBCM) terminal 3O—Front door latch and lock actuator (LH) terminal D • Start stop unit malfunction • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY**	Yes	Go to the next step.
		No	Go to Step 9.

	CONTROL MODULE (RBCM)].) • Is the same DTC displayed?		
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT DOOR LOCK-LINK SWITCH (LH)** • Inspect the front door lock-link switch (LH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (LH), then go to Step 8. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
6	**INSPECT FOR SHORT TO GROUND IN FRONT DOOR LOCK-LINK SWITCH (LH) LOCK CIRCUIT** • Verify that the rear body control module (RBCM), start stop unit and front door latch and lock actuator	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 1P—Front door latch and lock actuator (LH) terminal D

	(LH) connectors are disconnected. • Inspect for continuity between front door latch and lock actuator (LH) terminal D (wiring harness-side) and body ground. • Is there continuity?		• Rear body control module (RBCM) terminal 3O—Front door latch and lock actuator (LH) terminal D **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 8.
		No	Go to the next step.
7	**INSPECT START STOP UNIT** • Inspect the start stop unit. (See **START STOP UNIT INSPECTION**.) • Is the start stop unit normal?	Yes	Go to the next step.
		No	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B126A:13 [REAR BODY CONTROL MODULE (RBCM)]

Description	Front door lock-link switch (LH) lock circuit malfunction
Detection condition	• Rear body control module (RBCM) detects an open circuit in the front door lock-link switch (LH) lock circuit with the front door lock-link switch (LH) locked.
Fail-safe function	Not applicable
Possible cause	• Front door latch and lock actuator (LH) connector or terminal malfunction • Open circuit in wiring harness between front door latch and lock actuator (LH) terminal J and body ground • Front door lock-link switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between rear body control module (RBCM) terminal 3O and front door latch and lock actuator (LH) terminal D • Rear body control module (RBCM) malfunction

RBCM
WIRING HARNESS-SIDE CONNECTOR

FRONT DOOR LATCH AND LOCK ACTUATOR (LH)
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (LH) GROUND CIRCUIT** • Verify that the front door latch and lock actuator (LH) connector is disconnected. • Inspect for continuity between front door latch and lock actuator (LH) terminal J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between front door latch and lock actuator (LH) terminal J and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has an open circuit. Go to Step 7.
4	**INSPECT FRONT DOOR LOCK-LINK SWITCH (LH)** • Inspect the front door lock-link switch (LH). (See **FRONT DOOR LOCK-LINK SWITCH INSPECTION**.) • Is the front door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (LH), then go to Step 7. (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (LH) LOCK CIRCUIT** • Verify that the rear body control module (RBCM) and front door latch and lock actuator (LH) connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3O (wiring harness-side) and front door latch and lock actuator (LH) terminal D (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between rear body control module (RBCM) terminal 3O and front door latch and lock actuator (LH) terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS with the front door lock-link switch (LH) locked. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0023:14 [REAR BODY CONTROL MODULE (RBCM)]

Description	Brake light circuit malfunction
Detection condition	• Rear body control module (RBCM) detects any of the following conditions: ▪ Brake lights/high-mount brake light illuminated even though driver or system does not illuminate brake lights/high-mount brake lights. ▪ Brake lights/high-mount brake light not illuminated even though driver depresses brake pedal. ▪ Brake lights/high-mount brake light not illuminated even though system illuminates brake lights/high-mount brake light.
Fail-safe function	Not applicable
Possible cause	• Brake light bulb (LH) malfunction • Brake light bulb (RH) malfunction • High-mount brake light connector or terminal malfunction • Brake light (LH) connector or terminal malfunction • Brake light (RH) connector or terminal malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ Rear body control module (RBCM) terminal 4D—Brake light (LH) terminal C ▪ Rear body control module (RBCM) terminal 4D—Brake light (RH) terminal C ▪ Rear body control module (RBCM) terminal 4D—High-mount brake light terminal B • Short to power supply in wiring harness between the following terminals: ▪ Rear body control module (RBCM) terminal 4D—Brake light (LH) terminal C ▪ Rear body control module (RBCM) terminal 4D—Brake light (RH) terminal C ▪ Rear body control module (RBCM) terminal 4D—High-mount brake light terminal B • Open circuit in wiring harness between the following terminals: ▪ Rear body control module (RBCM) terminal 4D—Brake light (LH) terminal C ▪ Rear body control module (RBCM) terminal 4D—Brake light (RH) terminal C ▪ Rear body control module (RBCM) terminal 4D—High-mount brake light terminal B

	• High-mount brake light malfunction • Brake light (LH) malfunction • Brake light (RH) malfunction • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Depress the brake pedal. • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Brake light (bulb type) • Go to the next step. Brake light (LED type) • Go to Step 4.
		No	Go to Step 17.
2	**INSPECT BRAKE LIGHT BULB (LH)** • Inspect the brake light bulb (LH). • Is the brake light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the brake light bulb (LH), then go to Step 17. (See **BRAKE LIGHT/REAR SIDE MARKER LIGHT/TAILLIGHT BULB REMOVAL/INSTALLATION**.)
3	**INSPECT BRAKE LIGHT BULB (RH)** • Inspect the brake light bulb (RH). • Is the brake light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the brake light bulb (RH), then go to Step 17. (See **BRAKE LIGHT/REAR SIDE MARKER LIGHT/TAILLIGHT BULB REMOVAL/INSTALLATION**.)
4	**INSPECT HIGH-MOUNT BRAKE LIGHT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the high-mount brake light connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 17.

5	**INSPECT BRAKE LIGHT (LH) CONNECTOR CONDITION** • Disconnect the brake light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 17.
6	**INSPECT BRAKE LIGHT (RH) CONNECTOR CONDITION** • Disconnect the brake light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 17.
7	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 17.
8	**INSPECT FOR SHORT TO GROUND IN BRAKE LIGHT CIRCUIT** • Verify that the high-mount brake light, brake light (LH), brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 4D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear body control module (RBCM) terminal 4D —Brake light (LH) terminal C • Rear body control module (RBCM) terminal 4D —Brake light (RH) terminal C • Rear body control module (RBCM) terminal 4D —High-mount brake light terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:**

			• Repair or replace the wiring harness which has a short to ground. Go to Step 17.
		No	Go to the next step.
9	**INSPECT FOR SHORT TO POWER SUPPLY IN BRAKE LIGHT CIRCUIT** • Verify that the high-mount brake light, brake light (LH), brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the rear body control module (RBCM) terminal 4D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear body control module (RBCM) terminal 4D —Brake light (LH) terminal C • Rear body control module (RBCM) terminal 4D —Brake light (RH) terminal C • Rear body control module (RBCM) terminal 4D —High-mount brake light terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 17.
10	**INSPECT FOR OPEN CIRCUIT IN BRAKE LIGHT CIRCUIT** • Verify that the high-mount brake light, brake light (LH), brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between the following terminals (wiring harness-side): ▪ Rear body control module (RBCM) terminal 4D—Brake light (LH)	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Rear body control module (RBCM) terminal 4D —Brake light (LH) terminal C • Rear body control module (RBCM) terminal 4D —Brake light (RH) terminal C • Rear body control module (RBCM) terminal 4D —High-mount brake light terminal B **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has

	terminal C ▪ Rear body control module (RBCM) terminal 4D—Brake light (RH) terminal C ▪ Rear body control module (RBCM) terminal 4D—High-mount brake light terminal B • Is there continuity?		an open circuit. Go to Step 17.
11	**INSPECT FOR SHORT TO GROUND IN HIGH-MOUNT BRAKE LIGHT** • Verify that the high-mount brake light, brake light (LH), brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Reconnect the high-mount brake light connector. • Inspect for continuity between rear body control module (RBCM) terminal 4D (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the high-mount brake light, then go to Step 17. (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)
		No	Go to the next step.
12	**INSPECT FOR SHORT TO POWER SUPPLY IN HIGH-MOUNT BRAKE LIGHT** • Verify that the brake light (LH), brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the rear body control module (RBCM) terminal 4D (wiring harness-side). • Is the voltage **0 V**?	Yes	Brake light (bulb type) • Go to Step 17. Brake light (LED type) • Go to the next step.
		No	Replace the high-mount brake light, then go to Step 17. (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)
13	**INSPECT FOR SHORT TO GROUND IN BRAKE LIGHT (LH)** • Verify that the brake light (LH),	Yes	Replace the rear combination light (LH), then go to Step 17. (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)

	brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Reconnect the brake light (LH) connector. • Inspect for continuity between rear body control module (RBCM) terminal 4D (wiring harness-side) and body ground. • Is there continuity?	No	Go to the next step.
14	**INSPECT FOR SHORT TO POWER SUPPLY IN BRAKE LIGHT (LH)** • Verify that the brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the rear body control module (RBCM) terminal 4D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Replace the rear combination light (LH), then go to Step 17. (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)
15	**INSPECT FOR SHORT TO GROUND IN BRAKE LIGHT (RH)** • Verify that the brake light (RH) and rear body control module (RBCM) connectors are disconnected. • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Reconnect the brake light (RH)	Yes	Replace the rear combination light (RH), then go to Step 17. (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)
		No	Go to the next step.

	connector. • Inspect for continuity between rear body control module (RBCM) terminal 4D (wiring harness-side) and body ground. • Is there continuity?		
16	**INSPECT FOR SHORT TO POWER SUPPLY IN BRAKE LIGHT (RH)** • Verify that the rear body control module (RBCM) connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the rear body control module (RBCM) terminal 4D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Replace the rear combination light (RH), then go to the next step. (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)
17	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Depress the brake pedal. • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
18	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair or replace the malfunctioning part according to the

	• Are any other DTCs displayed?		applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0010:88/U0155:00 [REAR BODY CONTROL MODULE (RBCM)]

Description	• U0010:88
	  ▪ Unit communication error (MS-CAN)
	• U0155:00
	  ▪ Communication error with instrument cluster

Detection condition	• U0010:88
	  ▪ Rear body control module (RBCM) detects a CAN communication line (MS-CAN) error with the ignition switched ON (engine off or on).
	• U0155:00
	  ▪ Rear body control module (RBCM) cannot receive the CAN signals from the instrument cluster for **5 s or more** with the ignition switched ON (engine off or on).

Fail-safe function	Not applicable
Possible cause	• Malfunction in the CAN bus communication line • Malfunction in the CAN line between instrument cluster and rear body control module (RBCM)
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

DTC U0010:88/U0155:00 [REAR BODY CONTROL MODULE (RBCM)]

2014 - Mazda3 - Body and Accessories

DTC U2100:00 [REAR BODY CONTROL MODULE (RBCM)]

Description	Rear body control module (RBCM) configuration error
Detection condition	• Rear body control module (RBCM) configuration error (no configuration) detected.
Fail-safe function	Not applicable
Possible cause	• Rear body control module (RBCM) configuration error • Rear body control module (RBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA)**	Yes	Using the M-MDS, perform the rear body control module (RBCM) configuration (using As-Built data)

	• Using the M-MDS, perform the rear body control module (RBCM) configuration (using As-Built data). (See **REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?		again, then go to the next step. (See **REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

DTC U2100:00 [REAR BODY CONTROL MODULE (RBCM)]

2014 - Mazda3 - Body and Accessories

DTC U3000:49 [REAR BODY CONTROL MODULE (RBCM)]

Description	Rear body control module (RBCM) internal malfunction
Detection condition	• Rear body control module (RBCM) detects the internal malfunction.
Fail-safe function	Not applicable
Possible cause	• Rear body control module (RBCM) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY REAR BODY CONTROL MODULE (RBCM) MALFUNCTION** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [REAR BODY CONTROL MODULE (RBCM)]

Description	Rear body control module (RBCM) power supply voltage low input
Detection condition	• Rear body control module (RBCM) power supply circuit voltage of **5 V or more, less than 9 V** is detected for **10 s or more**.
Fail-safe function	Not applicable
Possible cause	• Battery malfunction • Generator malfunction • Rear body control module (RBCM) connector or terminal malfunction • Rear body control module (RBCM) power supply circuit malfunction • Rear body control module (RBCM) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 7.

2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY REAR BODY CONTROL MODULE (RBCM) POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and rear body control module (RBCM) terminal 2P. **If there is a common connector:**

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display the PID VPWR_B_R using the M-MDS. (See **PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the voltage **5 V or more, less than 9 V**?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness. Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the rear body control module (RBCM) using the M-MDS. (See **CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]**.) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Retrieve the rear body control module (RBCM) DTCs using the M-MDS. (See **DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair or replace the malfunctioning part according

	• Are any other DTCs displayed?		to the applicable DTC troubleshooting. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “R_BCM”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)]

—: Not applicable

PID	Unit/Operation	Data contents	Data read/use method	Module control terminal
AT_DL_IG	Off/On	Auto door lock function (IG) • Off: Door lock actuator does not operate to unlock in conjunction with ignition off. • On: Door lock actuator operates to unlock in conjunction with ignition off.	If the personalization features setting for the auto door lock is set to auto door lock in conjunction with the ignition, displays if the auto door lock set in conjunction with the ignition being switched off is applicable. Operates when the ignition is switched from ON to OFF.	—
AT_DL_SHIFT	Off/On	Auto door lock function (shift) • Off: Door lock actuator does not operate to lock or unlock in conjunction with shifting. • On: Door lock actuator operate to lock or unlock in conjunction with shifting.	If the personalization features setting for the auto door lock is set to auto door lock in conjunction with the AT shifting, displays if the auto door lock set in conjunction with gear shifting is applicable. Operates when the gear is shifted.	—
		Auto door lock function (vehicle speed) • Off: Door lock actuator does not operate to	If the personalization features setting for the auto door lock is set in	

AT_DL_VSPD	Off/On	lock in conjunction with vehicle speed. • On: Door lock actuator operates to lock in conjunction with vehicle speed.	conjunction with the vehicle speed, displays if the auto door lock set in conjunction with the vehicle speed is applicable. Operates at a vehicle speed of **20 km/h {12 mph} or more**.	—
BG_HORN_RLY*1	Off/On	Theft-deterrent horn relay operation output • Off: Theft-deterrent horn relay is off. • On: Theft-deterrent horn relay is on.	—	2F (Theft-deterrent horn relay control)
BRAKE_SW*2	Off/On	Brake switch input signal • Off: Brake switch (No.1 signal) is off (brake pedal is not depressed). • On: Brake switch (No.1 signal) is on (brake pedal is depressed).	—	2J (Brake switch signal)
C_DL_SW_LK	Off/On	Door lock switch (lock side) input signal • Off: Door lock switch is not in lock. • On: Door lock switch is in lock.	—	3F (Door lock switch signal)
C_DL_SW_UNL	Off/On	Door lock switch (unlock side) input signal • Off: Door lock switch is not in unlock.	—	3F (Door lock switch signal)

		• On: Door lock switch is in unlock.		
CNT_S_COMM	—	The rear body control module (RBCM) counts the lock/unlock request signal (serial transmission) received from the start stop unit. **NOTE:** • If number of times **exceeds 15**, display returns to 0.	If the lock/unlock operation is performed by the remote transmitter or request switch, the start stop unit sends the lock/unlock request signal to the rear body control module (RBCM). If the lock/unlock request signal is received normally, the rear body control module (RBCM) increases the counter by one for the PID. When monitoring PID item CNT_S_COMM, switch the ignition off because the start stop unit does not output the lock/unlock signal when the ignition is switched ON.	3B (Serial communication)
DL_MT_A_LK	Off/On	All-door lock motor lock output • Off: All door lock actuators are not operated to lock. • On: All door lock actuators are operated to lock.	—	—
DL_MT_A_UNL	Off/On	All-door lock motor unlock output • Off: All door lock actuators are not operated to unlock.	—	—

		• On: All door lock actuators are operated to unlock.		
DL_MT_D_UNL	Off/On	Driver's door lock motor unlock output • Off: Front door lock actuator (LH) is not operated to unlock. • On: Front door lock actuator (LH) is operated to unlock.	—	—
DL_MT_S-LK	**NOTE:** • Displays in the M-MDS but it does not operate.			
DOOR_ALL	Close/OPEN	Open/closed condition of all doors • Close: All doors are closed. • OPEN: Any door is open.	—	—
DOOR_D	Close/OPEN	Door switch input on driver's door • Close: Front door (LH) is closed. • OPEN: Front door (LH) is open.	—	3W (Front door switch (driver's door) signal)
ELAT_MT_RLY	Off/On	Electric latch motor relay operation output • Off: Trunk lid latch (4SD)/liftgate latch (5HB) is not operated to unlock. • On: Trunk lid	—	4C (Trunk lid release/Liftgate lock actuator control)

		latch (4SD)/liftgate latch (5HB) is operated to unlock.		
ELAT_UNL	Off/On	Electric latch motor (unlock) operation output • Off: Trunk lid latch (4SD)/liftgate latch (5HB) is not operated to unlock. • On: Trunk lid latch (4SD)/liftgate latch (5HB) is operated to unlock.	—	—
FUEL_SEN_M	V	Displays input voltage of fuel gauge sender unit input from rear body control module (RBCM)	If the fuel tank level is low, the rear body control module (RBCM) input voltage increases because the fuel gauge sender unit resistance decreases.	3I (Fuel sensor signal)
FUEL_SEN_S	V	Displays fuel gauge sender unit (SUB) input voltage input from rear body control module (RBCM)	If there is no fuel gauge sender unit (SUB), a constant **5 V** is output.	—
		Displays power voltage supplied to fuel gauge sender unit from rear body control module (RBCM) **CAUTION:** • The battery voltage is supplied to the fuel gauge sender unit from the rear body control module (RBCM),	After switching the ignition off, supply of the battery voltage to the fuel gauge sender unit	

FUEL_SEN_SV	V	however display of the PID item is controlled by the microcomputer and therefore **5 V** is displayed. Accordingly, even if the actual terminal voltage differs from the PID item display, this does not indicate an abnormality.	from the rear body control module (RBCM) continues until the CAN communication is in the sleep mode.	2P (Power supply)
HOOD*1	Close/OPEN	Hood latch switch condition • Close: Hood is closed. • OPEN: Hood is open.	—	3L (Hood latch switch signal)
IG1_SW	Off/On	Displays power input condition of rear body control module (RBCM) • Off: IG1 power is not input to rear body control module (RBCM) • On: IG1 power is input to rear body control module (RBCM)	If there is a malfunction in the IG1 power supply input to the rear body control module (RBCM), the door lock and interior light controls, which the rear body control module (RBCM) controls, do not operate normally because PID item IG1_SW is used for determining ignition on/off for the rear body control module (RBCM).	2I (Ignition power supply)
KC_SW_D_LK	Off/On	Driver's key cylinder switch (lock side) operation condition • Off: Front door key cylinder switch is not in lock. • On: Front door	—	3H (Driver's door key cylinder switch signal)

		key cylinder switch is in lock.		
KC_SW_D_UNL	Off/On	Driver's key cylinder switch (unlock side) operation condition • Off: Front door key cylinder switch is not in unlock. • On: Front door key cylinder switch is in unlock.	—	3H (Driver's door key cylinder switch signal)
LL_P/R*1	Unlock/Other	Passenger/rear door lock link operation condition • Unlock: Front door lock-link switch (RH), rear door lock-link switch (LH), rear door lock-link switch (RH) are in unlock. • Other: Front door lock-link switch (RH), rear door lock-link switch (LH), rear door lock-link switch (RH) are in other than unlock.	—	3J (Lock input (lock-link switch (passenger, rear door)))
LL_SW_D_LK	Off/On	Driver's door lock link switch (lock side) operation condition • Off: Front door lock-link switch (LH) is in unlock. • On: Front door lock-link switch (LH) is in lock.	—	3O (Lock input (front door lock-link switch (driver's door)))
		Driver's door lock link switch (unlock side) operation		

LL_SW_D_UNL	Off/On	condition • Off: Front door lock-link switch (LH) is in lock. • On: Front door lock-link switch (LH) is in unlock.	—	3M (Unlock input (front door lock-link switch (driver's door)))
R_FOG_L_CS	**NOTE:** • Displays in the M-MDS but it does not operate.			
R_FOG_LMP	**NOTE:** • Displays in the M-MDS but it does not operate.			
R_LMP	Off/On	Back-up light operation output signal • Off: Back-up light is turned off. • On: Back-up light is turned on.	—	—
R_LMP_CS	Off/On/Unknown/Fault	Back-up light operation request signal from instrument cluster • Off: Back-up light off signal is received. • On: Back-up light on signal is received. • Unknown: Back-up light control signal not determined • Fault: Communication with instrument cluster is failed.	—	3E, 3G (CAN)
		Rear wiper motor operation output signal		

R_WIP_MT_LO*3	Off/On	Off: Rear wiper motor is not operated. • On: Rear wiper motor is operated.	—	4T (Rear wiper motor control (LO))
ROOM_LMP	Off/On	Interior light output signal • Off: Front map light is turned off. • On: Front map light is turned on.	—	1E (Door unlock control)
SEAT_B_2C*4	Unbuckled/Buckled	Rear seat belt switch condition (center seat) • Unbuckled: Second-row center seat belt is not fastened. • Buckled: Second-row center seat belt is fastened.	—	3V (Rear seat belt (center) switch)
SEAT_B_2L*4	Unbuckled/Buckled	Rear seat belt switch condition (left-side seat) • Unbuckled: Second-row left-side seat belt is not fastened. • Buckled: Second-row left-side seat belt is fastened.	—	3X (Rear seat belt (LH) switch)
SEAT_B_2R*4	Unbuckled/Buckled	Rear seat belt switch condition (right-side seat) • Unbuckled: Second-row right-side seat belt is not fastened.	—	3T (Rear seat belt (RH) switch signal)

		• Buckled: Second-row right-side seat belt is fastened.		
SEAT_B_3C	**NOTE:** • Displays in the M-MDS but it does not operate.			
SEAT_B_3L	**NOTE:** • Displays in the M-MDS but it does not operate.			
SEAT_B_3R	**NOTE:** • Displays in the M-MDS but it does not operate.			
STOP_LMP*2	Off/On	Brake light output control signal • Off: Brake light is turned off. • On: Brake light is turned on.	—	2H (Brake light control)
STOP_LMP_CS*2	Off/On	Brake light on monitor • Off: Brake light off signal is received. • On: Brake light on signal is received.	—	4D (Brake light control)
T_ROOM_LMP	Off/On	Trunk compartment light (4SD)/cargo compartment (5HB) output control condition • Off: Trunk compartment light (4SD)/cargo compartment light (5HB) is turned off. • On: Trunk compartment light (4SD)/cargo compartment light (5HB) is turned on.	—	4P (Trunk compartment light (4SD)/cargo compartment light (5HB) signal)

T_UNL_SW*5	Off/On	Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) input status • Off: Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) is not pressed. • On: Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) is pressed.	—	4M (Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) signal)
T_UNL_SW_IP*6	Off/On	Trunk lid opener switch (interior) condition • Off: Trunk lid opener switch (interior) is not pressed. • On: Trunk lid opener switch (interior) is pressed.	—	2D (Trunk lid opener switch signal (interior))
TRUNK	Close/OPEN	Trunk lid latch switch (4SD)/liftgate latch switch (5HB) input status • Close: Trunk (4SD)/liftgate (5HB) is closed. • OPEN: Trunk (4SD)/liftgate (5HB) is open.	—	4K (Trunk lid/liftgate latch switch signal)
VPWR_B_R	V	Displays voltage at rear body control module (RBCM) terminal 2P (power supply)	—	2P (Power supply)
VPWR_IG1	V	Displays voltage at rear body control module (RBCM) terminal 2I (ignition power supply)	—	2I (Ignition power supply)

*1 **With theft-deterrent system**

*2 **With smart city brake support (SCBS)**

*3 **With rear wiper and washer**

*4 **With rear seat belt reminder system**

*5 **With trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB)**

*6 **With trunk lid opener switch (interior)**

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES INSPECTION [REAR BODY CONTROL MODULE (RBCM)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “R_BCM”.

3. Select the simulation items from the PID table.

4. Perform the active command modes function, inspect the operations for each parts.

    - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES TABLE [REAR BODY CONTROL MODULE (RBCM)]

Simulation item	Unit/Operation	Data contents	Output part name
BG_HORN_RLY*1	Off/On	• Off: Stops theft-deterrent horn. • On: Sounds the theft-deterrent horn.	Rear body control module (RBCM)
DL_MT_A	Lock/Unlock	• Lock: Locks all of the doors. • Unlock: Unlocks all of the doors.	Door lock actuator
ELAT_MT_RLY	Off/On	• Off: Stops the trunk lid latch (4SD)/liftgate latch (5HB) release operation. • On: Releases the trunk lid latch (4SD)/liftgate latch (5HB).	**4SD** • Trunk lid latch and release actuator **5HB** • Liftgate latch and lock actuator
ELAT_UNL	Off/On	• Off: Stops the trunk lid latch (4SD)/liftgate latch (5HB) release operation. • On: Releases the trunk lid latch (4SD)/liftgate latch (5HB).	**4SD** • Trunk lid latch and release actuator **5HB** • Liftgate latch and lock actuator
R_FOG_LMP	**NOTE:**		

	• Displays in the M-MDS but it does not operate.		
R_LMP	Off/On	• Off: Turns off back-up light. • On: Illuminates back-up light.	Back-up light
R_WIP_MT_LO*2	Off/On	• Off: Stops rear wiper motor. • On: Operates rear wiper motor.	Rear wiper motor
STOP_LMP_CS*3	Off/On	• Off: Turns off brake light. • On: Illuminates brake light.	• Brake light • High-mount brake light

*1 **With theft-deterrent horn**

*2 **With rear wiper and washer**

*3 **With smart city brake support (SCBS)**

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [START STOP UNIT]

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [START STOP UNIT]

2014 - Mazda3 - Body and Accessories

FOREWORD [START STOP UNIT]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [START STOP UNIT]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the start stop unit. (See **CLEARING DTC [START STOP UNIT]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “SSU”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the start stop unit. (See **CLEARING DTC [START STOP UNIT]**.)

Snapshot Data

NOTE:

- The start stop unit stores the following two types of snapshot data (vehicle information) when a DTC is detected and displays them in the M-MDS.
  - Vehicle information detected by start stop unit
  - Vehicle information detected by instrument cluster and received by start stop unit via CAN signal
- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data item	Unit	Data contents	Data read/use method	Corresponding data monitor items

AAT	°C	°F	Ambient temperature	—	—
APP_STATUS	Accelerator Pedal Off/Under20%/Over20%/FAIL		Accelerator pedal position status	—	—
CFG_STATUS	Config Complete/Not Configured/Config Error		Instrument cluster configuration status	—	—
ECT_STATUS	Under 0 degrees C/0 - Under 80 degrees C/Over 80 degrees C/FAIL		Engine coolant temperature status	—	—
IC_VPWR	V		Instrument cluster power supply voltage	• The start stop unit constantly receives the power supply voltage value of the instrument cluster sent via CAN signal from the instrument cluster. • If a DTC is detected, the start stop unit records the power supply voltage of the instrument cluster when the DTC was detected, and it is displayed in the M-MDS.	VPWR*1
IG-ON_TIMER	hh:mm:ss*2		Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed time since the ignition was switched ON (engine off or on).	• The start stop unit constantly receives the elapsed time since the ignition was switched ON (engine off or on) sent via CAN signal from the instrument cluster. • If a DTC is detected, the start stop unit records the elapsed time since the ignition was switched ON (engine off or on) when the DTC was detected, and it is displayed in the M-MDS.	—

PWR_MODE_KEY	Key Out/Key Recently Out (Position 0)/Accessory (Position 1)/Post Ignition (Position 2)/Ignition On (Position 2)/Running (Position 2)/Running - Starting	• Key Out: Ignition switched off • Key Recently Out (Position 0): Elapsed time **within 3 s** since ignition was switched off • Accessory (Position 1): Ignition is switched to ACC • Post Ignition (Position 2): Elapsed time **within 3 s** since ignition was switched ON (engine off or on) • Ignition On (Position 2): Ignition switched ON (engine off) • Running (Position 2): Ignition switched ON (engine on) • Running - Starting: Cranking condition	• The start stop unit constantly receives the ignition switch status sent via CAN signal from the instrument cluster. • If a DTC is detected, the start stop unit records the ignition switch status when the DTC was detected, and it is displayed in the M-MDS.	—
			• The start stop unit constantly receives the engine speed	

RPM_STATUS	Engine Stop/Under1500rpm/Over1500rpm/FAIL		Engine speed status	sent via CAN signal from the instrument cluster. • If a DTC is detected, the start stop unit records the engine speed when the DTC was detected, and it is displayed in the M-MDS.	TACHOMTR*1
SHIFT_STATUS	P/N/D/R/FAIL		Selector lever position status	• The start stop unit constantly receives the selector lever position sent via CAN signal from the instrument cluster. • If a DTC is detected, the start stop unit records the selector lever position when the DTC was detected, and it is displayed in the M-MDS.	—
TOTAL_DIST	km	Miles	Accumulated total traveled distance from completion of vehicle until start stop unit detects DTC (Odometer value in instrument cluster)	The total traveled distance from which the start stop unit detects DTCs to the present can be calculated by performing the following procedure. • Verify the odometer value in the instrument cluster. • Verify the snapshot data item TOTAL_DIST. • Subtract 2 from 1.	—
TOTAL_TIME	*2		Accumulated total elapsed time since vehicle completion until start stop unit detects a DTC **NOTE:** • When the ROOM fuse is	The elapsed time from which the start stop unit detects DTCs to the present can be calculated by performing the following procedure. • Verify the instrument cluster PID	*1

	hh:mm:ss	removed, and the ignition is switched off, the time is not included in the elapsed time.	item TOTAL_TIME. • Verify the snapshot data item TOTAL_TIME. • Subtract 2 from 1.	TOTAL_TIME
TRNS_NUM_L	Initial/No.1/No.2/No.3/No.4/No.5/No.6	Registration number of the remote transmitter	If the start stop unit detects DTC B13D3:16 (Low remote transmitter battery voltage), inspect the remote transmitter in which the malfunction is occurring using the following procedure to display the registration number of the remote transmitter that was operated. • Verify the registration number of the remote transmitter in the snapshot data. • Display the start stop unit PID item RF_TRNS_NUM and inspect the battery voltage of the remote transmitter having the same registration number as the recorded remote transmitter registration number.	—
VPWR	V	Start stop unit power supply voltage	—	VPWR_B2
VPWR_B1	V	Start stop unit power supply voltage (ROOM fuse)	—	VPWR_B1
VSPD_STATUS	Stop/0-10km/h/Over10km/h/FAIL	Vehicle speed status	• The start stop unit constantly receives the vehicle speed sent via CAN signal from the instrument cluster. • If a DTC is	SPEEDOMTR*1

			detected, the start stop unit records the vehicle speed when the DTC was detected, and it is displayed in the M-MDS.	

*1

Instrument cluster PID (See PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER].)

*2

The seconds may be indicated after the decimal point.

2014 - Mazda3 - Body and Accessories

CLEARING DTC [START STOP UNIT]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [START STOP UNIT]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “SSU”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [START STOP UNIT]**.)
8. Verify that no DTCs are displayed.

2014 - Mazda3 - Body and Accessories

DTC B108B:23 [START STOP UNIT]

Description	Push button start switch 1 circuit malfunction
Detection condition	• Start stop unit detects that the push button start switch 1 is stuck on for **120 s or more**.
Fail-safe function	• Perform the control with the push button start switch 1 turned off.
Possible cause	• Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1H and push button start terminal C • Push button start switch 1 malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR SHORT TO GROUND IN PUSH BUTTON START SWITCH 1 CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect for continuity between push button start terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1H and push button start terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
4	**INSPECT PUSH BUTTON START SWITCH 1** • Inspect the push button start switch 1. (See **PUSH BUTTON START INSPECTION**.) • Is the push button start switch 1	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)

	normal?		
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **120 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B108B:24 [START STOP UNIT]

Description	Push button start switch 1 circuit malfunction
Detection condition	• Start stop unit detects that the push button start switch 1 is kept in an off condition **5 times or more** even though the push button start switch 2 is on.
Fail-safe function	Not applicable
Possible cause	• Push button start connector or terminal malfunction • Open circuit in wiring harness between push button start terminal G and body ground • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 1H and push button start terminal C • Push button start switch 1 malfunction • Start stop unit malfunction

START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR

PUSH BUTTON START
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT FOR OPEN CIRCUIT IN PUSH BUTTON START SWITCH 1 GROUND CIRCUIT** • Verify that the push button start connector is disconnected. • Inspect for continuity between push button start terminal G (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between push button start terminal G and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR OPEN CIRCUIT IN PUSH BUTTON START SWITCH 1 CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1H and push

	• Inspect for continuity between start stop unit terminal 1H (wiring harness-side) and push button start terminal C (wiring harness-side). • Is there continuity?		button start terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT PUSH BUTTON START SWITCH 1** • Inspect the push button start switch 1. (See **PUSH BUTTON START INSPECTION**.) • Is the push button start switch 1 normal?	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and press the push button start **5 times or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B108C:23 [START STOP UNIT]

Description	Push button start switch 2 circuit malfunction
Detection condition	• Start stop unit detects the push button start switch 2 is stuck on for **120 s or more**.
Fail-safe function	• Perform the control with the push button start switch 2 turned off.
Possible cause	• Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2J and push button start terminal I • Push button start switch 2 malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR SHORT TO GROUND IN PUSH BUTTON START SWITCH 2 CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect for continuity between push button start terminal I (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2J and push button start terminal I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
4	**INSPECT PUSH BUTTON START SWITCH 2** • Inspect push button start switch 2. (See **PUSH BUTTON START INSPECTION**.) • Is push button start switch 2 normal?	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)

5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **120 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B108C:24 [START STOP UNIT]

Description	Push button start switch 2 circuit malfunction
Detection condition	• Start stop unit detects that the push button start switch 2 is kept in an off condition **5 times or more** even though the push button start switch 1 is on.
Fail-safe function	Not applicable
Possible cause	• Push button start connector or terminal malfunction • Open circuit in wiring harness between push button start terminal E and body ground • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 2J and push button start terminal I • Push button start switch 2 malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT FOR OPEN CIRCUIT IN PUSH BUTTON START SWITCH 2 GROUND CIRCUIT** • Verify that the push button start connector is disconnected. • Inspect for continuity between push button start terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between push button start terminal E and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR OPEN CIRCUIT IN PUSH BUTTON START SWITCH 2 CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2J and push

	• Inspect for continuity between start stop unit terminal 2J (wiring harness-side) and push button start terminal I (wiring harness-side). • Is there continuity?		button start terminal I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT PUSH BUTTON START SWITCH 2** • Inspect the push button start switch 2. (See **PUSH BUTTON START INSPECTION**.) • Is the push button start switch 2 normal?	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and press the push button start **5 times or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

DTC B108C:24 [START STOP UNIT]

2014 - Mazda3 - Body and Accessories

DTC B10AC:13 [START STOP UNIT]

Description	Cruise control switch circuit malfunction
Detection condition	• Start stop unit detected an open circuit in the cruise control switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Clock spring connector or terminal malfunction • Clock spring malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between the following terminals: ▪ Start stop unit terminal 1Y—Clock spring (instrument panel harness-side) terminal 1J ▪ Start stop unit terminal 1Z—Clock spring (instrument panel harness-side) terminal 1N • Cruise control switch malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data).	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)

	(See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	No	Go to Step 8.
2	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 7. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	• Is the connector normal?		
5	**INSPECT FOR OPEN CIRCUIT IN CRUISE CONTROL SWITCH CIRCUIT** • Verify that the start stop unit and clock spring connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Start stop unit terminal 1Y—Clock spring (instrument panel harness-side) terminal 1J ▪ Start stop unit terminal 1Z—Clock spring (instrument panel harness-side) terminal 1N • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 1Y—Clock spring (instrument panel harness-side) terminal 1J • Start stop unit terminal 1Z—Clock spring (instrument panel harness-side) terminal 1N **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**INSPECT CRUISE CONTROL SWITCH** • Inspect the cruise control switch. (See **CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the cruise control switch normal?	Yes	Go to the next step.
		No	Replace the cruise control switch, then go to the next step. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10AC:23 [START STOP UNIT]

Description	Cruise control switch circuit malfunction
Detection condition	• Start stop unit detects any cruise control switch stuck on for **2 min or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Instrument cluster configuration error • Clock spring connector or terminal malfunction • Clock spring malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 1Y and clock spring (instrument panel harness-side) terminal 1J • Cruise control switch malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration (using As-Built data).	Yes	Using the M-MDS, perform the instrument cluster configuration (using As-Built data) again, then go to the next step. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)

	(See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	No	Go to Step 8.
2	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 7. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT FOR SHORT TO POWER SUPPLY IN CRUISE CONTROL SWITCH CIRCUIT** • Verify that the start stop unit and clock spring connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the clock spring (instrument panel harness-side) terminal 1J (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1Y and clock spring (instrument panel harness-side) terminal 1J. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 7.
6	**INSPECT CRUISE CONTROL SWITCH** • Inspect the cruise control switch. (See **CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the cruise control switch normal?	Yes	Go to the next step.
		No	Replace the cruise control switch, then go to the next step. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	STOP UNIT].) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10C9:1F [START STOP UNIT]

Description	Keyless antenna (interior, center) circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in the keyless antenna (interior, center) with the ignition switched off.
Fail-safe function	Not applicable

Possible cause	• Keyless antenna (interior, center) connector or terminal malfunction
	• Start stop unit connector or terminal malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Start stop unit terminal 2I—Keyless antenna (interior, center) terminal B
	  ▪ Start stop unit terminal 2K—Keyless antenna (interior, center) terminal A
	• Open circuit in wiring harness between the following terminals:
	  ▪ Start stop unit terminal 2I—Keyless antenna (interior, center) terminal B
	  ▪ Start stop unit terminal 2K—Keyless antenna (interior, center) terminal A
	• Keyless antenna (interior, center) malfunction
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (INTERIOR, CENTER) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless antenna (interior, center) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION**	Yes	Go to the next step.

	• Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN KEYLESS ANTENNA (INTERIOR, CENTER) CIRCUIT** • Verify that the start stop unit and keyless antenna (interior, center) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Keyless antenna (interior, center) terminal B ▪ Keyless antenna (interior, center) terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 2I—Keyless antenna (interior, center) terminal B • Start stop unit terminal 2K—Keyless antenna (interior, center) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN KEYLESS ANTENNA (INTERIOR, CENTER) CIRCUIT** • Verify that the start stop unit and keyless antenna (interior, center) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Start stop unit terminal 2I—Keyless antenna (interior, center) terminal B ▪ Start stop unit terminal	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 2I—Keyless antenna (interior, center) terminal B • Start stop unit terminal 2K—Keyless antenna (interior, center) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	2K—Keyless antenna (interior, center) terminal A • Is there continuity?		Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY KEYLESS ANTENNA (INTERIOR, CENTER) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the keyless antenna (interior, center), then go to the next step. (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10E7:11 [START STOP UNIT]

Description	IG1 relay circuit malfunction
Detection condition	• Start stop unit detects the voltage from the IG1 relay output monitor as **less than 2.5 V** for **0.5 s or more** while the engine is not being cranked with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• IG1 relay malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between IG1 relay terminal A and start stop unit terminal 2S • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IG1 RELAY** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 4.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the IG1 relay. (See **RELAY LOCATION**.) • Inspect the IG1 relay. (See **RELAY INSPECTION**.) • Is the IG1 relay normal?		(See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR SHORT TO GROUND IN IG1 RELAY CIRCUIT** • Verify that the IG1 relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between IG1 relay terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal A and start stop unit terminal 2S. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10E7:12 [START STOP UNIT]

Description	IG1 relay circuit malfunction
Detection condition	• Start stop unit detects the IG1 relay output monitor voltage of **2.5 V or more** for **0.5 s or more** with the ignition switched off or ACC.
Fail-safe function	Not applicable
Possible cause	• IG1 relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between IG1 relay terminal A and start stop unit terminal 2S • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IG1 RELAY** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 4.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the IG1 relay. (See **RELAY LOCATION**.) • Inspect the IG1 relay. (See **RELAY INSPECTION**.) • Is the IG1 relay normal?		(See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN IG1 RELAY CIRCUIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the start stop unit terminal 2S (wiring harness-side). • Is the voltage **2.5 V or more**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal A and start stop unit terminal 2S. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10E7:16 [START STOP UNIT]

Description	IG1 relay circuit malfunction
Detection condition	• Start stop unit detects the IG1 monitor voltage of **less than 2.5 V** for **1 s or more** while the engine is not being cranked with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• IG1 relay malfunction
	• IG1 relay circuit malfunction
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and IG1 relay terminal D
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and IG1 relay terminal D
	• Start stop unit connector or terminal malfunction
	• Wiring harness between IG1 relay terminal C and start stop unit terminal 1B malfunction
	  ▪ Short to ground in wiring harness between IG1 relay terminal C and start stop unit terminal 1B
	  ▪ C/U IG1 15 A fuse malfunction
	• Wiring harness between IG1 relay terminal C and start stop unit terminal 1B malfunction
	  ▪ C/U IG1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between IG1 relay terminal C and start stop unit terminal 1B
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IG1 RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the IG1 relay. (See **RELAY LOCATION**.) • Inspect the IG1 relay. (See **RELAY INSPECTION**.) • Is the IG1 relay normal?	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 6. (See **RELAY LOCATION**.)
2	**INSPECT FOR OPEN CIRCUIT OR SHORT TO GROUND IN IG1 RELAY CIRCUIT** • Verify that the IG1 relay is removed. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the IG1 relay terminal D (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and IG1 relay terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the

			common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and IG1 relay terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR SHORT TO GROUND IN IG1 RELAY CIRCUIT** • Verify that the IG1 relay is removed.	Yes	Inspect the C/U IG1 15 A fuse. • If the fuse is blown:

	• Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ IG1 relay terminal C ▪ Start stop unit terminal 1B • Is there continuity?		Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal C and start stop unit terminal 1B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. Go to Step 6.
		No	Go to the next step.
5	**INSPECT FOR OPEN CIRCUIT IN IG1 RELAY CIRCUIT** • Verify that the IG1 relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between IG1 relay terminal C (wiring harness-side) and start stop unit terminal 1B (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal C and start stop unit terminal 1B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED**	Yes	Repeat the inspection from Step 1.

	• Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		• If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10E7:17 [START STOP UNIT]

Description	IG1 relay circuit malfunction
Detection condition	• Start stop unit detects the IG1 monitor voltage of **2.5 V or more** for **1 s or more** with the ignition switched off or ACC.
Fail-safe function	Not applicable
Possible cause	• IG1 relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between IG1 relay terminal C and start stop unit terminal 1B • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IG1 RELAY** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 4.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the IG1 relay. (See **RELAY LOCATION**.) • Inspect the IG1 relay. (See **RELAY INSPECTION**.) • Is the IG1 relay normal?		(See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN IG1 RELAY CIRCUIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the start stop unit terminal 1B (wiring harness-side). • Is the voltage **2.5 V or more**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay terminal C and start stop unit terminal 1B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B112A:11 [START STOP UNIT]

Description	IG2 relay circuit malfunction
Detection condition	• Start stop unit detects the IG2 relay output monitor voltage of **2.5 V or less** for **0.5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2D and front body control module (FBCM) terminal 2U • Front body control module (FBCM) malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR SHORT TO GROUND IN IG2 RELAY CIRCUIT** • Verify that the start stop unit and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2U (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2D and front body control module (FBCM) terminal 2U. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IG2 RELAY MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable.	Yes	Replace the front body control module (FBCM), then go to the next step. (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B112A:12 [START STOP UNIT]

Description	IG2 relay circuit malfunction
Detection condition	• Start stop unit detects the IG2 relay output monitor voltage of **2.5 V or more** for **0.5 s or more** with the ignition switched off or to ACC.
Fail-safe function	Not applicable
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 2D and front body control module (FBCM) terminal 2U • Front body control module (FBCM) malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN IG2 RELAY CIRCUIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the front body control module (FBCM) terminal 2U (wiring harness-side). • Is the voltage **2.5 V or more**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2D and front body control module (FBCM) terminal 2U. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IG2 RELAY MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS.	Yes	Replace the front body control module (FBCM), then go to the next step. (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)

	(See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B124C:56 [START STOP UNIT]

Description	Turn switch circuit malfunction
Detection condition	• Start stop unit detects that the turn switch LH and RH are turned on simultaneously for **5 s or more**.
Fail-safe function	Not applicable
Possible cause	• Start stop unit configuration error • The installations of the light switch and the wiper and washer switch are reversed. • Turn switch malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the start stop unit configuration (using As-Built data). (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Operate the turn switch to RH	Yes	Using the M-MDS, perform the start stop unit configuration (using As-Built data) again, then go to the next step. (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 5.

	position and wait for **5 s or more**. • Operate the turn switch to LH position and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
2	**VERIFY IF INSTALLATIONS OF LIGHT SWITCH AND WIPER AND WASHER SWITCH ARE REVERSED** • Verify the installation condition of the light switch and the wiper and washer switch. • Are the light switch and the wiper and washer switch installed correctly?	Yes	Go to the next step.
		No	Install the light switch and the wiper and washer switch properly, then go to Step 4. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.) (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)
3	**INSPECT TURN SWITCH** • Inspect the turn switch. (See **LIGHT SWITCH INSPECTION**.) • Is the turn switch normal?	Yes	Go to the next step.
		No	Replace the light switch, then go to the next step. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Operate the turn switch to RH position and wait for **5 s or more**. • Operate the turn switch to LH position and wait for **5 s or more**. • Perform the start stop unit DTC inspection using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13D3:16 [START STOP UNIT]

Description	Low remote transmitter battery voltage
Detection condition	• Start stop unit detects the low remote transmitter battery voltage in any of the programmed transmitters **3 times** continuously.
Vehicle status when DTCs are output	All lock/unlock operations using the advanced keyless entry system, push button start system, and remote transmitter are not possible.
Fail-safe function	Not applicable
Possible cause	• Dirt around remote transmitter battery, or foreign matter adhering • Remote transmitter battery is dead. • Specific remote transmitter is malfunctioning.
System wiring diagram	Not applicable

Diagnostic Procedure

1. Verify the TRANS_NUM_L of the snapshot data item and then the registration number of the remote transmitter in which low battery voltage was detected.

2. Using the M-MDS, display the PID item RF_TRANS_NUM for the start stop unit.

3. Press the unlock button of the remote transmitter to verify the registration numbers of all the programmed remote transmitters.

4. Perform the remote transmitter diagnostic procedure using the remote transmitter corresponding to the registration number of the remote transmitter detected using the snapshot data. (See **Remote Transmitter Diagnostic Procedure**.)

Remote Transmitter Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AREA AROUND REMOTE TRANSMITTER BATTERY** • Inspect the area around the remote transmitter battery. • Is the area around the remote transmitter battery dirty or is there foreign mattering adhering?	Yes	Remove dirt or foreign matter, then go to the next step.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS DEAD REMOTE TRANSMITTER BATTERY** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the remote transmitter battery, then go to the next step. (See **REMOTE TRANSMITTER DISASSEMBLY / ASSEMBLY**.)
		No	Go to Step 4
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the remote transmitter. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13D3:4A [START STOP UNIT]

Description	Remote transmitter assembly malfunction
Detection condition	• Start stop unit detects a remote transmitter different from the one equipped to the vehicle.
Fail-safe function	Not applicable
Possible cause	• Mistaken remote transmitter registration • Start stop unit configuration error • Remote transmitter malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY THAT THE VEHICLE AND REMOTE TRANSMITTER COMBINATION IS CORRECT** • Verify that the vehicle and remote transmitter combination is correct. • Is the combination of the remote transmitters correct?	Yes	Go to the next step.
		No	Re-register using the correct remote transmitters, then go to the Step 4. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)
2	**PERFORM START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the start stop unit configuration (using As-Built data).	Yes	Using the M-MDS, perform the start stop unit configuration (using As-Built data) again, then go to the next step. (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.)

	(See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	No	Go to Step 5.
3	**VERIFY IF MALFUNCTION CAUSE IS SPECIFIC REMOTE TRANSMITTER** **NOTE:** • Perform the following procedure for all of the programmed remote transmitters. • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is there a remote transmitter which indicates the same DTC?	Yes	Replace the remote transmitter which indicates the DTC, then go to the next step. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13D3:97 [START STOP UNIT]

Description	Remote transmitter registration work not completed
Detection condition	• Start stop unit detects that the registration of a remote transmitter has not been completed.
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the immobilizer system. • Start stop unit configuration error • Remote transmitter registration not completed correctly. • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IMMOBILIZER SYSTEM DTCs** • Retrieve the immobilizer system DTCs using the M-MDS. (See **DTC INSPECTION [IMMOBILIZER SYSTEM]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [IMMOBILIZER SYSTEM]**.)
		No	Go to the next step.
2	**PERFORM START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the start stop unit configuration (using As-Built data).	Yes	Using the M-MDS, perform the start stop unit configuration (using As-Built data) again, then go to the next step. (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 5.

	(See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
3	**REGISTER REMOTE TRANSMITTER** • Register the remote transmitter. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting.

			(See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1C53:13 [START STOP UNIT]

Description	Windshield wiper switch circuit malfunction
Detection condition	• Start stop unit detects an open circuit, short to ground, or short to power supply in the windshield wiper switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Start stop unit configuration error • The installations of the light switch and the wiper and washer switch are reversed. • Windshield wiper switch malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the start stop unit configuration (using As-Built data). (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.)	Yes	Using the M-MDS, perform the start stop unit configuration (using As-Built data) again, then go to the next step. (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 5.

	• Switch the INT volume switch to each step at **5 s** intervals. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
2	**VERIFY IF INSTALLATIONS OF LIGHT SWITCH AND WIPER AND WASHER SWITCH ARE REVERSED** • Verify the installation condition of the light switch and the wiper and washer switch. • Are the light switch and the wiper and washer switch installed correctly?	Yes	Go to the next step.
		No	Install the light switch and the wiper and washer switch properly, then go to Step 4. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.) (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)
3	**INSPECT WINDHIELD WIPER SWITCH** • Inspect the windshield wiper switch. (See **WIPER AND WASHER SWITCH INSPECTION**.) • Is the windshield wiper switch normal?	Yes	Go to the next step.
		No	Replace the windshield wiper switch, then go to the next step. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the INT volume switch to each step at **5 s** intervals. • Perform the start stop unit DTC inspection using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)

		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0040:23 [START STOP UNIT]

Description	Brake switch (No.1 signal) circuit malfunction
Detection condition	• Start stop unit detects that the brake switch No.1 signal is in the off condition for **3 s or more** continuously for a continuous **5 times** even though brake switch No.2 signal changes with the ignition switched ON (engine off or on).
Fail-safe function	• Determined by brake switch (No.2 signal) with the brake pedal depressed.

Possible cause	• Brake switch connector or terminal malfunction
	• Brake switch (No.1 signal) malfunction
	• Brake switch (No.1 signal) power supply circuit malfunction
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and brake switch terminal A
	  ▪ STOP 10 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and brake switch terminal A
	• Start stop unit connector or terminal malfunction
	• Short to ground in wiring harness between brake switch terminal D and start stop unit terminal 1C
	• Open circuit in wiring harness between brake switch terminal D and start stop unit terminal 1C
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the brake switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT BRAKE SWITCH (NO.1 SIGNAL)** • Inspect the brake switch (No.1 signal). (See **BRAKE SWITCH INSPECTION**.) • Is the brake switch (No.1 signal) normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to Step 7. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)

3	**INSPECT FOR OPEN CIRCUIT OR SHORT TO GROUND IN BRAKE SWITCH (NO.1 SIGNAL) POWER SUPPLY CIRCUIT** • Verify that the brake switch connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the brake switch terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the STOP 10 A fuse and MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and brake switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and brake switch terminal A.

			If there is a common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT FOR SHORT TO GROUND IN BRAKE SWITCH (NO.1 SIGNAL) CIRCUIT** • Verify that the brake switch and start stop unit connectors are disconnected.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between brake switch terminal D and start stop unit terminal 1C. **If there is a common connector:**

	• Inspect for continuity between brake switch terminal D (wiring harness-side) and body ground. • Is there continuity?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
6	**INSPECT FOR OPEN CIRCUIT IN BRAKE SWITCH (NO.1 SIGNAL) CIRCUIT** • Verify that the brake switch and start stop unit connectors are disconnected. • Inspect for continuity between brake switch terminal D (wiring harness-side) and start stop unit terminal 1C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between brake switch terminal D and start stop unit terminal 1C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Perform the work of depressing the brake pedal for **3 s or more** and then releasing it for **5 times or more** with the ignition	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	switched ON (engine off or on). • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0040:24 [START STOP UNIT]

Description	Brake switch (No.1 signal) circuit malfunction
Detection condition	• Start stop unit detects that the brake switch No.1 signal is in the on condition for **3 s or more** continuously for a continuous **5 times** even though brake switch No.2 signal changes with the ignition switched ON (engine off or on).
Fail-safe function	• Determined by brake switch (No.2 signal) with the brake pedal depressed.
Possible cause	• Brake switch connector or terminal malfunction • Brake switch (No.1 signal) malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between brake switch terminal D and start stop unit terminal 1C • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the brake switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT BRAKE SWITCH (NO.1 SIGNAL)** • Inspect the brake switch (No.1 signal). (See **BRAKE SWITCH INSPECTION**.) • Is the brake switch (No.1 signal) normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to Step 5. (See **BRAKE PEDAL REMOVAL/INSTALLATION**.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN BRAKE SWITCH (NO.1 SIGNAL) CIRCUIT** • Verify that the brake switch and start stop unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltages at brake switch terminal D (wiring harness-	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between brake switch terminal D and start stop unit terminal 1C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:**

	side). • Is the voltage **0 V**?		Repair or replace the wiring harness which has a short to power supply. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Perform the work of depressing the brake pedal for **3 s or more** and then releasing it for **5 times or more** with the ignition switched ON (engine off or on). • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0051:95 [START STOP UNIT]

Description	Steering angle sensor assembly malfunction

Detection condition	• Start stop unit receives the following signals with the ignition switched ON (engine off or on).
	  ▪ Steering angle sensor assembly malfunction from EPS control module for **1 s or more**
	  ▪ Improper assembly of steering angle sensor at **360°**
	  ▪ Steering wheel angle of **720° or more** for **0.048 s or more**

Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the EPS control module. • Improper assembly of steering angle sensor • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Retrieve the EPS control module DTCs using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	**VERIFY STEERING ANGLE SENSOR INSTALLATION CONDITION**	Yes	Go to the next step.

	• Verify the steering angle sensor installation condition. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the steering angle sensor installed correctly?	No	Install the steering angle sensor correctly, then go to the next step. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0051:2F [START STOP UNIT]

Description	Steering angle sensor signal error
Detection condition	• Start stop unit detects the steering angle sensor signal error for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting.

			(See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0052:14 [START STOP UNIT]

Description	Steering angle sensor A signal circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in the steering angle sensor A signal circuit.
Fail-safe function	Not applicable
Possible cause	• Steering angle sensor connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1U and steering angle sensor terminal A • Open circuit in wiring harness between start stop unit terminal 1U and steering angle sensor terminal A • Steering angle sensor malfunction • Start stop unit malfunction

START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR

STEERING ANGLE SENSOR
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the steering angle sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN STEERING ANGLE SENSOR A SIGNAL CIRCUIT** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect for continuity between steering angle sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1U and steering angle sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
	INSPECT FOR OPEN CIRCUIT IN STEERING		

4	**ANGLE SENSOR A SIGNAL CIRCUIT** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 1U (wiring harness-side) and steering angle sensor terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1U and steering angle sensor terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See **STEERING ANGLE SENSOR INSPECTION**.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0052:2F [START STOP UNIT]

Description	Steering angle sensor A signal malfunction
Detection condition	• Start stop unit detected the sudden change in steering angle sensor A signal. • Start stop unit detected that the steering angle sensor A signal is stuck with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Steering angle sensor malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See **STEERING ANGLE SENSOR INSPECTION**.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.)

	STOP UNIT].) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0053:14 [START STOP UNIT]

Description	Steering angle sensor B signal circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in steering angle sensor B signal circuit.
Fail-safe function	Not applicable
Possible cause	• Steering angle sensor connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1W and steering angle sensor terminal C • Open circuit in wiring harness between start stop unit terminal 1W and steering angle sensor terminal C • Steering angle sensor malfunction • Start stop unit malfunction

START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR

STEERING ANGLE SENSOR
WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the steering angle sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN STEERING ANGLE SENSOR B SIGNAL CIRCUIT** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect for continuity between steering angle sensor terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1W and steering angle sensor terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
	INSPECT FOR OPEN CIRCUIT IN STEERING		

4	**ANGLE SENSOR B SIGNAL CIRCUIT** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 1W (wiring harness-side) and steering angle sensor terminal C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1W and steering angle sensor terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See **STEERING ANGLE SENSOR INSPECTION**.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C0053:2F [START STOP UNIT]

Description	Steering angle sensor B signal malfunction
Detection condition	• Start stop unit detects the sudden change in steering angle sensor B signal. • Start stop unit detects that the steering angle sensor B signal is stuck with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• Steering angle sensor malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See **STEERING ANGLE SENSOR INSPECTION**.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.)

	STOP UNIT].) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C2003:13 [START STOP UNIT]

Description	Open circuit in steering switch
Detection condition	• Start stop unit detects an open circuit in the steering switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• Clock spring connector or terminal malfunction
	• Clock spring malfunction
	• Start stop unit connector or terminal malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ Start stop unit terminal 1AA—Clock spring (instrument panel harness-side) terminal 1K
	  ▪ Start stop unit terminal 1AB—Clock spring (instrument panel harness-side) terminal 1C
	• Steering switch malfunction
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See **CLOCK SPRING INSPECTION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 6. (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR OPEN CIRCUIT IN STEERING SWITCH CIRCUIT** • Verify that the clock spring and start stop unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Start stop unit terminal 1AA—Clock spring (instrument panel harness-side) terminal 1K ▪ Start stop unit terminal 1AB—Clock spring (instrument panel harness-side) terminal 1C	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 1AA—Clock spring (instrument panel harness-side) terminal 1K • Start stop unit terminal 1AB—Clock spring (instrument panel harness-side) terminal 1C **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

	• Is there continuity?		Go to Step 6.
5	**INSPECT STEERING SWITCH** • Inspect the steering switch. (See **STEERING SWITCH INSPECTION**.) • Is the steering switch normal?	Yes	Go to the next step.
		No	Replace the steering switch, then go to the next step. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0615:11 [START STOP UNIT]

Description	Starter relay circuit malfunction
Detection condition	• Start stop unit detects that the starter relay monitor circuit voltage of **less than 2.2 V** for **0.2 s or more** with the ignition switched off.
Fail-safe function	Not applicable

Possible cause	• DTCs are stored in the PCM.
	• Starter relay malfunction
	• Start stop unit connector or terminal malfunction
	• PCM connector malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Start stop unit terminal 1D—Starter relay terminal E
	  ▪ Start stop unit terminal 1D—PCM terminal 2AZ
	  ▪ Start stop unit terminal 2V—Starter relay terminal A
	• PCM malfunction
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT STARTER RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the starter relay. (See **RELAY LOCATION**.) • Inspect the starter relay. (See **RELAY INSPECTION**.) • Is the starter relay normal?	Yes	Go to the next step.
		No	Replace the starter relay, then go to Step 7. (See **RELAY LOCATION**.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT FOR SHORT TO GROUND IN STARTER RELAY CIRCUIT** • Verify that the starter relay is removed. • Verify that the start stop unit and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 1D—Starter relay terminal E • Start stop unit terminal 1D—PCM terminal 2AZ • Start stop unit terminal 2V—Starter relay terminal A

	harness-side) and body ground: ▪ Start stop unit terminal 1D ▪ Start stop unit terminal 2V • Is there continuity?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
6	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	• Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0615:12 [START STOP UNIT]

Description	Starter relay circuit malfunction
Detection condition	• Start stop unit detects that the starter relay circuit voltage of specification or more for **0.1 s or more** with the ignition switched off.
Fail-safe function	• Inhibits switching the ignition ON (engine off or on). • Inhibits the engine start.

Possible cause	• DTCs are stored in the PCM.
	• Starter relay malfunction
	• Start stop unit connector or terminal malfunction
	• PCM connector malfunction
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Start stop unit terminal 1D—Starter relay terminal E
	  ▪ Start stop unit terminal 1D—PCM terminal 2AZ
	  ▪ Start stop unit terminal 2V—Starter relay terminal A
	• PCM malfunction
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT STARTER RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the starter relay. (See **RELAY LOCATION**.) • Inspect the starter relay. (See **RELAY INSPECTION**.) • Is the starter relay normal?	Yes	Go to the next step.
		No	Replace the starter relay, then go to Step 7. (See **RELAY LOCATION**.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT FOR SHORT TO POWER SUPPLY IN STARTER RELAY CIRCUIT** • Verify that the starter relay is removed. • Verify that the start stop unit and PCM connectors are disconnected.	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Start stop unit terminal 1D—Starter relay terminal E

	Reconnect the negative battery cable.
	
	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	
	• Measure the voltage at the following terminals (wiring harness-side):
	  ▪ Start stop unit terminal 1D
	  ▪ Start stop unit terminal 2V
	
	• Is the voltage **0 V**?
			• Start stop unit terminal 1D—PCM terminal 2AZ
			• Start stop unit terminal 2V—Starter relay terminal A
			
			If there is a common connector:
			
			• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply.
			• Repair or replace the malfunctioning part.
			
			If there is no common connector:
			
			• Repair or replace the wiring harness which has a short to power supply.
			
			Go to Step 7.

6	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	UNIT].) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0615:13 [START STOP UNIT]

Description	Starter relay circuit malfunction
Detection condition	• Start stop unit detects an open circuit in the starter relay circuit for **0.075 s or more** with the ignition switched off.
Fail-safe function	Not applicable
Possible cause	• Disconnect the start stop unit connector with the battery cables connected. • Starter relay malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between the following terminals: ▪ Starter relay terminal E—Start stop unit terminal 1D ▪ Starter relay terminal A—Start stop unit terminal 2V • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STARTER RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the starter relay. (See **RELAY LOCATION**.) • Inspect the starter relay. (See **RELAY INSPECTION**.) • Is the starter relay normal?	Yes	Go to the next step.
		No	Replace the starter relay, then go to Step 4. (See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR OPEN CIRCUIT IN STARTER RELAY CIRCUIT** • Verify that the starter relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Starter relay terminal E—Start stop unit terminal 1D ▪ Starter relay terminal A—Start stop unit terminal 2V • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • Starter relay terminal E—Start stop unit terminal 1D • Starter relay terminal A—Start stop unit terminal 2V **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	UNIT].) • Is the same DTC displayed?		
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0615:16 [START STOP UNIT]

Description	Starter relay circuit malfunction
Detection condition	• Start stop unit detects that the starter relay circuit voltage that is less than the specification for **0.05 s or more** during cranking.
Fail-safe function	Not applicable
Possible cause	• Starter relay malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between starter relay terminal A and start stop unit terminal 2V • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STARTER RELAY**	Yes	Go to the next step.

	Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the starter relay. (See **RELAY LOCATION**.) • Inspect the starter relay. (See **RELAY INSPECTION**.) • Is the starter relay normal?		
		No	Replace the starter relay, then go to Step 4. (See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR SHORT TO GROUND IN STARTER RELAY CIRCUIT** • Verify that the starter relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between start stop unit terminal 2V (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between starter relay terminal A and start stop unit terminal 2V. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Wait until **1 s or more** have elapsed during cranking. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting.

			(See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0616:23 [START STOP UNIT]

Description	Circuit malfunction on downstream side of starter relay
Detection condition	• Start stop unit detects a short to ground in the starter relay downstream circuit continuously for **0.5 s or more** for a continuous **5 times**.
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the PCM. • Start stop unit connector or terminal malfunction • PCM connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1D and PCM terminal 2AZ • PCM malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR SHORT TO GROUND IN DOWNSTREAM SIDE OF STARTER RELAY CIRCUIT** • Verify that the start stop unit and PCM connectors are disconnected. • Inspect for continuity between start stop unit terminal 1D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1D and PCM terminal 2AZ. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.

		No	Go to the next step.
5	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • With the programmed remote transmitter in the vehicle, switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Depress the clutch pedal and release it. (MTX) ▪ Operate the selector lever to other than P and N position from P or N position and hold for **1 s or more**. (ATX) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • With the programmed remote	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	transmitter in the vehicle, switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Depress the clutch pedal and release it. (MTX) ▪ Operate the selector lever to other than P and N position from P or N position and hold for **1 s or more**. (ATX) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0616:24 [START STOP UNIT]

Description	Circuit malfunction on downstream side of starter relay
Detection condition	• Start stop unit detects an open circuit in the starter relay downstream circuit continuously for **0.5 s or more** for a continuous **5 times**.
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the PCM. • Start stop unit connector or terminal malfunction • PCM connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 1D and PCM terminal 2AZ • PCM malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR OPEN CIRCUIT IN DOWNSTREAM SIDE OF STARTER RELAY CIRCUIT** • Verify that the start stop unit and PCM connectors are disconnected. • Inspect for continuity between start stop unit terminal 1D (wiring harness-side) and PCM terminal 2AZ (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1D and PCM terminal 2AZ. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • With the programmed remote transmitter in the vehicle, switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Depress the clutch pedal. (MTX) ▪ Operate the selector lever to P or N position from other than P and N position and hold for **1 s or more**. (ATX) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • With the programmed remote transmitter in the vehicle, switch	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Depress the clutch pedal. (MTX) ▪ Operate the selector lever to P or N position from other than P and N position and hold for **1 s or more**. (ATX) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0616:29 [START STOP UNIT]

Description	Downstream side of starter relay signal malfunction
Detection condition	• Start stop unit detects that the following signals are unmatched for **0.5 s or more** for a continuous **5 times**. ▪ Transaxle range sensor (ATX) or starter interlock switch (MTX) condition ▪ Starter relay downstream circuit condition ▪ PCM control result ▪ CAN signal condition output from PCM
Fail-safe function	Not applicable
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION**	Yes	Replace the PCM, then go to the next

	• Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • With the programmed remote transmitter in the vehicle, switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Depress the clutch pedal and release it. (MTX) ▪ Operate the selector lever to other than P and N position from P or N position and hold for **1 s or more**. (ATX) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • With the programmed remote transmitter in the vehicle, switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Depress the clutch pedal and release it. (MTX) ▪ Operate the selector lever to other than P and N position from P or N position and hold for **1 s or more**. (ATX) • Retrieve the start stop unit DTCs using	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P081C:23 [START STOP UNIT]

Description	NOT P position switch circuit malfunction
Detection condition	• Start stop unit detects that the NOT P position switch is stuck on for **5 s or more** for a continuous **5 times** with the ignition switched ON (engine off or on).
Fail-safe function	• Perform the NOT P position switch control in a position other than P.
Possible cause	• Selector lever component connector or terminal malfunction • NOT P position switch malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1J and selector lever component terminal B • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action
	INSPECT SELECTOR LEVER COMPONENT	

1	**CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the selector lever component connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT NOT P POSITION SWITCH** • Inspect the NOT P position switch. (See **NOT P POSITION SWITCH INSPECTION**.) • Is the NOT P position switch normal?	Yes	Go to the next step.
		No	Replace the selector lever component, then go to Step 5. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FOR SHORT TO GROUND IN NOT P POSITION SWITCH CIRCUIT** • Verify that the selector lever component and start stop unit connectors are disconnected. • Inspect for continuity between selector lever component terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1J and selector lever component terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.

		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Operate the selector lever to other than P position and hold for **5 s or more**. ▪ Operate the selector lever to P position and hold for **5 s or more**. ▪ Operate the selector lever to other than P position. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P081C:24 [START STOP UNIT]

Description	NOT P position switch circuit malfunction
Detection condition	• Start stop unit detects that the NOT P position switch is stuck off for **5 s or more** for a continuous **5 times** with the ignition switched ON (engine off or on).
Fail-safe function	• Perform the NOT P position switch control in a position other than P.
Possible cause	• Selector lever component connector or terminal malfunction • Open circuit in wiring harness between selector lever component terminal I and body ground • NOT P position switch malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 1J and selector lever component terminal B • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action

1	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the selector lever component connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT FOR OPEN CIRCUIT IN NOT P POSITION SWITCH GROUND CIRCUIT** • Verify that the selector lever component connector is disconnected. • Inspect for continuity between selector lever component terminal I (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between selector lever component terminal I and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
3	**INSPECT NOT P POSITION SWITCH** • Inspect the NOT P position switch. (See **NOT P POSITION SWITCH INSPECTION**.) • Is the NOT P position switch normal?	Yes	Go to the next step.
		No	Replace the selector lever component, then go to Step 6. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Is the connector normal?		
5	**INSPECT FOR OPEN CIRCUIT IN NOT P POSITION SWITCH CIRCUIT** • Verify that the selector lever component and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 1J (wiring harness-side) and selector lever component terminal B (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1J and selector lever component terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Operate the selector lever to P position and hold for **5 s or more**. ▪ Operate the selector lever to other than P position and hold for **5 s or more**. ▪ Operate the selector lever to P position. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	UNIT].) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P081D:29 [START STOP UNIT]

Description	Neutral switch error signal received
Detection condition	• Start stop unit receives the neutral switch signal error signal from the PCM for **1 min or more** with the ignition switched ON (engine off or on).
Fail-safe function	• Perform the control with neutral switch signal turned off.
Possible cause	• DTCs are stored in the PCM. • Neutral switch malfunction • PCM malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT NEUTRAL SWITCH** • Inspect the neutral switch. (See **NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Replace the neutral switch, then go to Step 4. (See **NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

	• Is the neutral switch normal?		
3	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 min or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 min or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P081D:2F [START STOP UNIT]

Description	Neutral switch signal mismatch
Detection condition	• Start stop unit detects that the vehicle speed changes from **0 km/h {0 mph}** to **10 km/h {6.2 mph}** for a continuous **5 times or more** even though the neutral signal from the PCM is being received with the ignition switched ON (engine off or on).
Fail-safe function	• Perform the control with neutral switch signal turned off.
Possible cause	• DTCs are stored in the PCM. • Neutral switch malfunction • PCM malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT NEUTRAL SWITCH** • Inspect the neutral switch. (See **NEUTRAL SWITCH INSPECTION**	Yes	Go to the next step.
		No	Replace the neutral switch, then go to Step 4.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is the neutral switch normal?		(See NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R].)
3	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See CLEARING DTC [START STOP UNIT].) • Perform the following work **5 times or more**. ▪ Drive the vehicle. ▪ Vehicle speed changes from **0 km/h {0 mph}** to **10 km/h {6.2 mph}**. • Retrieve the start stop unit DTCs using the M-MDS. (See DTC INSPECTION [START STOP UNIT].) • Is the same DTC displayed?	Yes	Replace the PCM, then go to the next step. (See PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See CLEARING DTC [START STOP UNIT].) • Perform the following work **5 times or more**. ▪ Drive the vehicle. ▪ Vehicle speed changes from **0 km/h {0 mph}** to **10 km/h {6.2 mph}**. • Retrieve the start stop unit DTCs using the M-MDS. (See DTC INSPECTION [START STOP UNIT].) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See START STOP UNIT REMOVAL/INSTALLATION.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair or replace the malfunctioning part

	• Are any other DTCs displayed?		according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0830:23 [START STOP UNIT]

Description	CPP switch circuit malfunction
Detection condition	• Start stop unit detects that the CPP switch is stuck on for **10 min or more**.
Fail-safe function	• Change to the back-up mode. • Perform the control with CPP switch turned off.

Possible cause	• DTCs are stored in the PCM.
	• CPP switch connector or terminal malfunction
	• CPP switch malfunction
	• Start stop unit connector or terminal malfunction
	• PCM connector or terminal malfunction
	• Short to ground in the wiring harness between the following terminals:
	  ▪ CPP switch terminal A—PCM terminal 2J
	  ▪ CPP switch terminal A—Start stop unit terminal 2E
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST**	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Are any DTCs displayed?	No	Go to the next step.
2	**INSPECT CPP SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the CPP switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See **CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the CPP switch normal?	Yes	Go to the next step.
		No	Replace the CPP switch, then go to the Step 7. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT FOR SHORT TO GROUND IN CPP SWITCH CIRCUIT** • Verify that the CPP switch, start stop unit and PCM connectors are disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and body ground.	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • CPP switch terminal A—PCM terminal 2J • CPP switch terminal A—Start stop unit terminal 2E **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for

	• Is there continuity?		corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **10 min or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0850:23 [START STOP UNIT]

Description	Transaxle range sensor circuit malfunction
Detection condition	• Start stop unit detects that the transaxle range sensor signal is P or N position for **1 s or more** continuously for a continuous **5 times or more** even though the TCM CAN signal is other than P and N position with the ignition switched ON (engine off or on).
Fail-safe function	• Perform control of the internal signal for control of the transaxle range sensor as position other than P, N positions.
Possible cause	• DTCs are stored in the TCM. • Start stop unit connector or terminal malfunction • TCM connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 1F and TCM terminal J • Transaxle range sensor malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY TCM DTCs** • Retrieve the TCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT TCM CONNECTOR CONDITION** • Disconnect the TCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN TRANSAXLE RANGE SENSOR CIRCUIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Operate the selector lever to P or N position. • Measure the voltage at the start stop unit terminal 1F (wiring harness-side). • Is the voltage **1.0 V or less**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1F and TCM terminal J. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY TRANSAXLE RANGE SENSOR MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Operate the selector lever to P or N position and wait for **1 s or more**.	Yes	Replace the TCM, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to Step 7.

	Operate the selector lever to other than P and N position and wait for **1 s or more**. ▪ Operate the selector lever to P or N position. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Operate the selector lever to P or N position and wait for **1 s or more**. ▪ Operate the selector lever to other than P and N position and wait for **1 s or more**. ▪ Operate the selector lever to P or N position. • Retrieve the start stop unit DTCs using the M-MDS. **DTC INSPECTION [START**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(See **STOP UNIT]**.) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0850:24 [START STOP UNIT]

Description	Transaxle range sensor circuit malfunction
Detection condition	• Start stop unit detects that the transaxle range sensor signal is other than P and N position for **1 s or more** continuously for a continuous **5 times or more** even though the TCM CAN signal is in P or N position with the ignition switched ON (engine off or on).
Fail-safe function	• Perform control of the internal signal for control of the transaxle range sensor as position other than P, N positions.
Possible cause	• DTCs are stored in the TCM. • Start stop unit connector or terminal malfunction • TCM connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1F and TCM terminal J • Open circuit in wiring harness between start stop unit terminal 1F and TCM terminal J • Transaxle range sensor malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY TCM DTCs** • Retrieve the TCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL]**.)
		No	Go to the next step.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT TCM CONNECTOR CONDITION** • Disconnect the TCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT FOR SHORT TO GROUND IN TRANSAXLE RANGE SENSOR CIRCUIT** • Verify that the start stop unit and TCM connectors are disconnected. • Inspect for continuity between start stop unit terminal 1F (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1F and TCM terminal J. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
5	**INSPECT FOR OPEN CIRCUIT IN TRANSAXLE RANGE SENSOR CIRCUIT** • Verify that the start stop unit and TCM connectors are disconnected. • Inspect for continuity between start stop unit terminal 1F (wiring harness-side) and TCM terminal J (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1F and TCM terminal J. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

			Go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY TRANSAXLE RANGE SENSOR MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off). • Perform the following work **5 times or more**. ▪ Operate the selector lever to other than P and N position and wait for **1 s or more**. ▪ Operate the selector lever to P or N position and wait for **1 s or more**. ▪ Operate the selector lever to other than P and N position. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Replace the TCM, then go to the next step. (See **CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL]**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	unit using the M-MDS.
	
	(See **CLEARING DTC [START STOP UNIT]**.)
	
	• Switch the ignition ON (engine off).
	
	• Perform the following work **5 times or more**.
	
	  ▪ Operate the selector lever to other than P and N position and wait for **1 s or more**.
	
	  ▪ Operate the selector lever to P or N position and wait for **1 s or more**.
	
	  ▪ Operate the selector lever to other than P and N position.
	
	• Retrieve the start stop unit DTCs using the M-MDS.
	
	(See **DTC INSPECTION [START STOP UNIT]**.)
	
	• Is the same DTC displayed?		

8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P0930:71 [START STOP UNIT]

Description	Shift-lock solenoid circuit malfunction
Detection condition	• Start stop unit detects the shift-lock solenoid is stuck on for **30 min or more** with the ignition switched ON (engine off or on).
Fail-safe function	• Inhibits the shift lock control.

Possible cause	• Selector lever component connector or terminal malfunction
	• Shift-lock solenoid power supply circuit malfunction
	  ▪ Short to ground in wiring harness between ENGINE.IG1 15 A fuse and selector lever component terminal A
	  ▪ ENGINE.IG1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between IG1 relay and selector lever component terminal A
	• Start stop unit connector or terminal malfunction
	• Short to ground in the wiring harness between selector lever component terminal H and start stop unit terminal 2G
	• Open circuit in the wiring harness between selector lever component terminal H and start stop unit terminal 2G
	• Shift-lock solenoid malfunction
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the selector lever component connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT FOR OPEN CIRCUIT OR SHORT TO GROUND IN SHIFT-LOCK SOLENOID POWER SUPPLY CIRCUIT** • Verify that the selector lever component connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION**	Yes	Go to the next step.
		No	Inspect the ENGINE.IG1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ENGINE.IG1 15 A fuse and selector lever component terminal A.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Measure the voltage at the selector lever component terminal A (wiring harness-side). • Is the voltage **B+**?		**If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay and selector lever component terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION**	Yes	Go to the next step.

	• Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 7.
4	**INSPECT FOR SHORT TO GROUND IN SHIFT-LOCK SOLENOID CIRCUIT** • Verify that the selector lever component and start stop unit connectors are disconnected. • Inspect for continuity between selector lever component terminal H (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between selector lever component terminal H and start stop unit terminal 2G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
5	**INSPECT FOR OPEN CIRCUIT IN SHIFT-LOCK SOLENOID CIRCUIT** • Verify that the selector lever component and start stop unit connectors are disconnected. • Inspect for continuity between selector lever component terminal H (wiring harness-side) and start stop unit terminal 2G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between selector lever component terminal H and start stop unit terminal 2G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
6	**INSPECT SHIFT-LOCK SOLENOID** • Inspect the shift-lock solenoid.	Yes	Go to the next step.

	(See **SHIFT-LOCK SYSTEM INSPECTION**.) • Is the shift-lock solenoid normal?	No	Replace the selector lever component, then go to the next step. (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **30 min or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P1708:24 [START STOP UNIT]

Description	Starter interlock switch circuit malfunction
Detection condition	• Start stop unit detects an open circuit in the starter interlock switch circuit for **0.5 s or more** for a continuous **5 times** with the ignition switched ON (engine off or on).
Fail-safe function	• Change to the back-up mode.
Possible cause	• Starter interlock switch connector or terminal malfunction • Open circuit in wiring harness between starter interlock switch terminal B and body ground • Starter interlock switch malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 1F and starter interlock switch terminal A • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection	Action
	INSPECT STARTER INTERLOCK SWITCH	

1	**CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the starter interlock switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT FOR OPEN CIRCUIT IN STARTER INTERLOCK SWITCH GROUND CIRCUIT** • Verify that the starter interlock switch connector is disconnected. • Inspect for continuity between starter interlock switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between starter interlock switch terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
3	**INSPECT STARTER INTERLOCK SWITCH** • Inspect the starter interlock switch. (See **STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the starter interlock switch normal?	Yes	Go to the next step.
		No	Replace the starter interlock switch, then go to Step 6. (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Is the connector normal?		
5	**INSPECT FOR OPEN CIRCUIT IN STARTER INTERLOCK SWITCH CIRCUIT** • Verify that the starter interlock switch and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 1F (wiring harness-side) and starter interlock switch terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1F and starter interlock switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on). • Perform the following work **5 times or more**. ▪ Depress the clutch pedal for **1 s or more**. ▪ Release the clutch pedal for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED**	Yes	Repair or replace the malfunctioning part according to the

	• Are any other DTCs displayed?		applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P1708:29 [START STOP UNIT]

Description	Starter interlock switch circuit or CPP switch circuit malfunction
Detection condition	• Start stop unit detects that the starter interlock switch circuit is stuck on for **0.2 s or more**, or the CPP switch circuit is stuck off for **0.25 s or more**.
Fail-safe function	• Change to the back-up mode. • Perform the control with starter interlock switch turned off. (Starter interlock switch circuit malfunction)
Possible cause	• Starter interlock switch connector or terminal malfunction • Starter interlock switch malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1F and starter interlock switch terminal A • CPP switch connector or terminal malfunction • Open circuit in wiring harness between CPP switch terminal B and body ground • CPP switch malfunction • Open circuit in wiring harness between start stop unit terminal 2E and CPP switch terminal A • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM PID/DATA MONITOR INSPECTION AND DETERMINE MALFUNCTIONING LOCATION** • Display the following PIDs using the M-MDS. (See **PID/DATA MONITOR INSPECTION [START STOP UNIT]**.) ▪ CLUT_CUT_SW (Starter interlock switch) ▪ CLUTCH_SW (CPP switch) • Are all PID values normal? (See **PID/DATA MONITOR TABLE [START STOP UNIT]**.)	Yes	Go to Step 12.
		No	If the PID CLUT_CUT_SW value is not normal: • Go to the next step. If the PID CLUTCH_SW value is not normal: • Go to Step 6. If all PID values are not normal: • Go to Step 11.

2	**INSPECT STARTER INTERLOCK SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the starter interlock switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 12.
3	**INSPECT STARTER INTERLOCK SWITCH** • Inspect the starter interlock switch. (See **STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the starter interlock switch normal?	Yes	Go to the next step.
		No	Replace the starter interlock switch, then go to Step 12. (See **STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 12.
5	**INSPECT FOR SHORT TO GROUND IN STARTER INTERLOCK SWITCH CIRCUIT** • Verify that the start stop unit and starter interlock switch connectors are disconnected. • Inspect for continuity between starter interlock switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1F and starter interlock switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 12.
		No	Go to Step 12.

6	**INSPECT CPP SWITCH CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the CPP switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 12.
7	**INSPECT FOR OPEN CIRCUIT IN CPP SWITCH GROUND CIRCUIT** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between CPP switch terminal B and body ground. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 12.
8	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See **CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the CPP switch normal?	Yes	Go to the next step.
		No	Replace the CPP switch, then go to the Step 12. (See **CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R]**.)
9	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 12.
10	**INSPECT FOR OPEN CIRCUIT IN CPP SWITCH CIRCUIT**	Yes	Go to Step 12.

	• Verify that the CPP switch and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 2E (wiring harness-side) and CPP switch terminal A (wiring harness-side). • Is there continuity?	No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2E and CPP switch terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 12.
11	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to the next step.
12	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on). • Perform the work of depressing and releasing the clutch pedal **3 times**. • Retrieve the start stop unit DTCs using the M-MDS.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
13	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC P1794:16 [START STOP UNIT]

Description	Start stop unit power supply voltage (terminal 2W) low input
Detection condition	• Start stop unit power supply circuit voltage (terminal 2W) of **less than 6.5 V** is detected for **5 s or more**.
Fail-safe function	Not applicable

Possible cause	• DTCs are stored in the PCM.
	• Battery malfunction
	• Generator malfunction
	• Start stop unit connector or terminal malfunction
	• Start stop unit power supply circuit (terminal 2W) malfunction
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and start stop unit terminal 2W
	  ▪ AT 15 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and start stop unit terminal 2W
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY START STOP UNIT POWER SUPPLY VOLTAGE (TERMINAL 2W)** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display PID VPWR_B2 using the M-MDS. (See **PID/DATA MONITOR INSPECTION [START STOP UNIT]**.) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the AT 15 A fuse and MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and start stop unit terminal 2W. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and start stop unit terminal 2W.

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.
- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has an open circuit.

Go to the next step.

VERIFY THAT REPAIRS HAVE BEEN

6	**COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0001:88/U0100:00/U0101:00/U0121:00/U0121:87/U0131:00/U0140:00/U0146:00/U0151:00/U0155:00 [START STOP UNIT]

Description	• U0001:88 ▪ Module communication error (HS-CAN) • U0100:00 ▪ Communication error with PCM • U0101:00 ▪ Communication error with TCM • U0121:00 ▪ Communication error with DSC HU/CM • U0121:87 ▪ Communication error with DSC HU/CM • U0131:00 ▪ Communication error with EPS control module • U0140:00 ▪ Communication error with front body control module (FBCM) • U0146:00 ▪ Communication error with instrument cluster • U0151:00 ▪ Communication error with SAS control module • U0155:00 ▪ Communication error with instrument cluster
	• U0001:88 ▪ Start stop unit detects the CAN bus communication line (HS-CAN) malfunction **10 times** continuously. • U0100:00 ▪ Start stop unit could not receive the CAN signal from the PCM for **1 s or more**. • U0101:00

Detection condition	Start stop unit could not receive the CAN signal from the TCM for **1 s or more**. • U0121:00 ▪ Start stop unit could not receive the CAN signal from the DSC HU/CM for **1 s or more**. • U0121:87 ▪ Start stop unit could not receive the CAN signal from the DSC HU/CM for **10 s or more**. • U0131:00 ▪ Start stop unit could not receive the CAN signal from the EPS control module for **1.2 s or more**. • U0140:00 ▪ Start stop unit could not receive the CAN signal from the front body control module (FBCM) for **5 s or more**. • U0146:00 ▪ Start stop unit cannot receive the CAN signal from the instrument cluster for **5 s or more** with the ignition switched ON (engine off or on). • U0151:00 ▪ Start stop unit could not receive the CAN signal from the SAS control module for **1 s or more**. • U0155:00 ▪ Start stop unit could not receive the CAN signal from the instrument cluster for **5 s or more**.
Fail-safe function	• U0001:88 ▪ Sets to default signal. • U0100:00 ▪ Sets to default signal. • U0101:00 ▪ Sets to default signal. • U0121:00 ▪ Sets to default signal. • U0121:87 ▪ Sets to default signal. • U0131:00 ▪ Sets to default signal. • U0140:00 ▪ Sets to default signal. • U0146:00

	▪ Sets to default signal. • U0151:00 ▪ Sets to default signal. • U0155:00 ▪ Sets to default signal.
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between PCM and start stop unit • Malfunction in CAN line between TCM and start stop unit • Malfunction in CAN line between DSC HU/CM and start stop unit • Malfunction in CAN line between EPS control module and start stop unit • Malfunction in CAN line between front body control module (FBCM) and start stop unit • Malfunction in CAN line between instrument cluster and start stop unit • Malfunction in CAN line between SAS control module and start stop unit
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Body and Accessories

DTC U0028:87 [START STOP UNIT]

Description	Communication error with rear body control module (RBCM)
Detection condition	• Start stop unit detects the communication error with rear body control module (RBCM) **10 times continuously**.
Fail-safe function	Not applicable
Possible cause	• Rear body control module (RBCM) connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1Q and rear body control module (RBCM) terminal 3B • Open circuit in wiring harness between start stop unit terminal 1Q and rear body control module (RBCM) terminal 3B • Rear body control module (RBCM) malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Switch the ignition off.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN REAR BODY CONTROL MODULE AND START STOP UNIT** • Verify that the rear body control module (RBCM) and start stop unit connectors are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3B (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1Q and rear body control module (RBCM) terminal 3B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN REAR BODY CONTROL MODULE AND START STOP UNIT** • Verify that the rear body control module (RBCM) and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 1Q (wiring harness-side) and rear body control module (RBCM) terminal 3B (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 1Q and rear body control module (RBCM) terminal 3B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**PERFORM DTC INSPECTION AND VERIFY REAR BODY CONTROL MODULE (RBCM) MALFUNCTION**	Yes	Replace the rear body control module (RBCM), then go to the next

	• Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		step. (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0447:86 [START STOP UNIT]

Description	Error signal received from instrument cluster
Detection condition	• Start stop unit receives the error signals from the instrument cluster for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• Sets to default signal.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY INSTRUMENT CLUSTER MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U201F:11 [START STOP UNIT]

Description	Keyless receiver circuit malfunction
Detection condition	• Start stop unit detects that the keyless receiver circuit voltage of **less than 3.4 V** for **0.5 s or more**.
Fail-safe function	Not applicable
Possible cause	• Keyless receiver connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2Q and keyless receiver terminal A • Keyless receiver malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS RECEIVER CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless receiver connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR SHORT TO GROUND IN KEYLESS RECEIVER CIRCUIT** • Verify that the keyless receiver and start stop unit connectors are disconnected. • Inspect for continuity between keyless receiver terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2Q and keyless receiver terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 5.
		No	Go to the next step.
4	**INSPECT KEYLESS RECEIVER** • Inspect the keyless receiver. (See **KEYLESS RECEIVER INSPECTION**.) • Is the keyless receiver normal?	Yes	Go to the next step.
		No	Replace the keyless receiver, then go to the next step. (See **KEYLESS RECEIVER REMOVAL/INSTALLATION**.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U201F:12 [START STOP UNIT]

Description	Keyless receiver circuit malfunction
Detection condition	• Start stop unit detects that the keyless receiver circuit voltage of **6.2 V or more** for **0.5 s or more**.
Fail-safe function	Not applicable
Possible cause	• Keyless receiver connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 2Q and keyless receiver terminal A • Keyless receiver malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS RECEIVER CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless receiver connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN KEYLESS RECEIVER CIRCUIT** • Reconnect the start stop unit connector. • Verify that the keyless receiver connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): ▪ Keyless receiver terminal A ▪ Start stop unit terminal 2Q • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2Q and keyless receiver terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to Step 5.
4	**INSPECT KEYLESS RECEIVER** • Inspect the keyless receiver. (See **KEYLESS RECEIVER INSPECTION**.) • Is the keyless receiver normal?	Yes	Go to the next step.
		No	Replace the keyless receiver, then go to the next step. (See **KEYLESS RECEIVER REMOVAL/INSTALLATION**.)
	VERIFY THAT REPAIRS HAVE BEEN		

5	**COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2100:00 [START STOP UNIT]

Description	Start stop unit configuration not completed
Detection condition	• Start stop unit configuration not completed.
Fail-safe function	• Although the engine cannot be started with the ignition switched off or to ACC, if the ignition is switched ON (engine off), the engine can be started. **NOTE:** • If the start stop unit configuration is not completed, the start stop unit setting will be for an ATX vehicle. • For MTX vehicles, if the start stop unit cannot receive the CAN signal, the engine cannot be started because the vehicle cannot be recognized as a MTX vehicle.
Possible cause	• Start stop unit configuration error • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the start stop unit configuration (using As-Built data). (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.)	Yes	Using the M-MDS, perform the start stop unit configuration (using As-Built data) again, then go to the next step. (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2300:00 [START STOP UNIT]

Description	Configuration data not received from instrument cluster
Detection condition	• Start stop unit cannot receive the configuration data from the instrument cluster for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• Secures the correct data received right before the malfunction.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY INSTRUMENT CLUSTER MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:01 [START STOP UNIT]

Description	Start stop unit internal malfunction
Detection condition	• Start stop unit detects the internal malfunction.
Fail-safe function	Not applicable
Possible cause	• Start stop unit internal malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

DTC U3000:01 [START STOP UNIT]

2014 - Mazda3 - Body and Accessories

DTC U3000:49 [START STOP UNIT]

WARNING:

- If this DTC is detected, the system will enter the fail-safe function to ensure safety. If a specified period of time has elapsed or the vehicle has been driven for a specified period of time or more while in fail-safe mode, the ignition will remain stuck in off and the engine cannot be started. Therefore, perform the malfunction diagnosis while the engine can be started. In addition, after having performed the malfunction diagnosis, verify that this DTC is not detected. If the DTC is not detected, the system returns to normal from the fail-safe function.

NOTE:

- If the vehicle is in the following condition while in fail-safe mode, “Keyless system malfunction” is displayed in the center display (With center display) and the KEY warning light (red) illuminates and the push button start indicator light (amber) flashes.
    - Switch the ignition to ACC or ON (engine off or on).
    - Depress the brake pedal (ATX)/clutch pedal (MTX).
- In addition to the normal engine starting operation while cranking the engine in fail-safe mode, it is necessary to press the push button start.

INSTRUMENT CLUSTER

Description	Start stop unit internal malfunction
Detection condition	• Start stop unit detects the internal malfunction.
Fail-safe function	• The system will enter the fail-safe function to ensure safety. If a specified period of time has elapsed or the vehicle has been driven for a specified period of time or more while in fail-safe mode, the ignition will remain stuck in off and the engine cannot be started.
Possible cause	• Start stop unit internal malfunction

System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:96 [START STOP UNIT]

Description	Start stop unit malfunction
Detection condition	• Start stop unit malfunction detected.
Fail-safe function	Not applicable
Possible cause	• Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

DTC U3000:96 [START STOP UNIT]

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [START STOP UNIT]

Description	Start stop unit power supply voltage (terminal 1A) low input
Detection condition	• Start stop unit power supply circuit voltage (terminal 1A) of **5V or more, less than 8.5 V** is detected for **5 s or more**.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system. (With advanced keyless entry system).

Possible cause	• DTCs are stored in the PCM.
	• Battery malfunction
	• Generator malfunction
	• Start stop unit connector or terminal malfunction
	• Start stop unit power supply circuit (terminal 1A) malfunction
	  ▪ Short to ground in the wiring harness between MAIN 200 A fuse and start stop unit terminal 1A
	  ▪ ROOM 15 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and start stop unit terminal 1A
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY START STOP UNIT POWER SUPPLY VOLTAGE (TERMINAL 1A)** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display PID VPWR_B1 using the M-MDS. (See **PID/DATA MONITOR INSPECTION [START STOP UNIT]**.) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ROOM 15 A fuse and MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and start stop unit terminal 1A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and start stop unit terminal 1A.

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.
- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has an open circuit.

Go to the next step.

VERIFY THAT REPAIRS HAVE BEEN

6	**COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3004:11 [START STOP UNIT]

Description	ACC relay circuit malfunction
Detection condition	• Start stop unit detects that the ACC relay output monitor voltage of **less than specification** for **0.05 s or more** with the ignition switched to ACC or ON (engine off or on).
Fail-safe function	Not applicable
Possible cause	• ACC relay malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between ACC relay terminal A and start stop unit terminal 2C • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ACC RELAY** • Switch the ignition off.	Yes	Go to the next step.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the ACC relay. (See **RELAY LOCATION**.) • Inspect the ACC relay. (See **RELAY INSPECTION**.) • Is the ACC relay normal?	No	Replace the ACC relay, then go to Step 4. (See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR SHORT TO GROUND IN ACC RELAY CIRCUIT** • Verify that the ACC relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between ACC relay terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between ACC relay terminal A and start stop unit terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition to ACC or ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.)	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	Is the same DTC displayed?		
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3004:12 [START STOP UNIT]

Description	ACC relay circuit malfunction
Detection condition	• Start stop unit detects that the ACC relay output monitor voltage of **2.5 V or more** for **0.5 s or more** with the ignition switched off.
Fail-safe function	Not applicable
Possible cause	• ACC relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between ACC relay terminal A and start stop unit terminal 2C • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ACC RELAY** • Switch the ignition off.	Yes	Go to the next step.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the ACC relay. (See **RELAY LOCATION**.) • Inspect the ACC relay. (See **RELAY INSPECTION**.) • Is the ACC relay normal?	No	Replace the ACC relay, then go to Step 4. (See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN ACC RELAY CIRCUIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the start stop unit terminal 2C (wiring harness-side). • Is the voltage **2.5 V or more**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between ACC relay terminal A and start stop unit terminal 2C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3004:16 [START STOP UNIT]

Description	ACC relay circuit malfunction
Detection condition	• Start stop unit detects that the ACC monitor voltage of **less than 2.5 V** for **1 s or more** with the ignition switched to ACC or ON (engine off or on).
Fail-safe function	Not applicable

Possible cause	• ACC relay malfunction
	• ACC relay circuit malfunction
	  ▪ Short to ground in wiring harness between MAIN 200 A fuse and ACC relay terminal C
	  ▪ IG2 30 A fuse malfunction
	  ▪ MAIN 200 A fuse malfunction
	  ▪ Open circuit in wiring harness between battery positive terminal and ACC relay terminal C
	• Start stop unit connector or terminal malfunction
	• Short to ground in wiring harness between ACC relay terminal D and start stop unit terminal 1E
	• MIRROR 7.5 A fuse malfunction
	• Open circuit in wiring harness between ACC relay terminal D and start stop unit terminal 1E
	• Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ACC RELAY** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the ACC relay. (See **RELAY LOCATION**.) • Inspect the ACC relay. (See **RELAY INSPECTION**.) • Is the ACC relay normal?	Yes	Go to the next step.
		No	Replace the ACC relay, then go to Step 6. (See **RELAY LOCATION**.)
2	**INSPECT FOR OPEN CIRCUIT OR SHORT TO GROUND IN ACC RELAY CIRCUIT** • Verify that the ACC relay is removed. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the ACC relay terminal C (wiring harness-	Yes	Go to the next step.
		No	Inspect the IG2 30 A and MAIN 200 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between MAIN 200 A fuse and ACC relay terminal C. **If there is a common connector:**

	side). • Is the voltage **B+**?		• Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and ACC relay terminal C. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
	INSPECT FOR SHORT TO GROUND IN ACC		

4	**RELAY CIRCUIT** • Verify that the ACC relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ ACC relay terminal D ▪ Start stop unit terminal 1E • Is there continuity?	Yes	Inspect the MIRROR 7.5 A fuse. • Refer to the wiring diagram and verify whether or not there is a common connector between ACC relay terminal D and start stop unit terminal 1E. **If there is a common connector:** ▪ Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. ▪ Repair or replace the malfunctioning part. **If there is no common connector:** ▪ Repair or replace the wiring harness which has a short to ground. ▪ Replace the fuse. Go to Step 6.
		No	Go to the next step.
5	**INSPECT FOR OPEN CIRCUIT IN ACC RELAY CIRCUIT** • Verify that the ACC relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between ACC relay terminal D (wiring harness-side) and start stop unit terminal 1E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Inspect the MIRROR 7.5 A fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between ACC relay terminal D and start stop unit terminal 1E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition to ACC or ON (engine off or on) and wait for **1 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3004:17 [START STOP UNIT]

Description	ACC relay circuit malfunction
Detection condition	• Start stop unit detects that the ACC monitor voltage of **2.5 V or more** for **5 s or more** with the ignition switched off.
Fail-safe function	Not applicable
Possible cause	• ACC relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between ACC relay terminal D and start stop unit terminal 1E • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ACC RELAY** • Switch the ignition off.	Yes	Go to the next step.

	• Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the ACC relay. (See **RELAY LOCATION**.) • Inspect the ACC relay. (See **RELAY INSPECTION**.) • Is the ACC relay normal?	No	Replace the ACC relay, then go to Step 4. (See **RELAY LOCATION**.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN ACC RELAY CIRCUIT** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the start stop unit terminal 1E (wiring harness-side). • Is the voltage **2.5 V or more**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between ACC relay terminal D and start stop unit terminal 1E. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to power supply. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to power supply. Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the start stop unit using the M-MDS. (See **CLEARING DTC [START STOP UNIT]**.) • Switch the ignition off and wait for **5 s or more**. • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [START STOP UNIT]

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “SSU”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [START STOP UNIT]

—: Not applicable

PID	Unit/Operation	Data contents	Data read/use method	Module control terminal
BRAKE_SW1*1	Off/On	Brake switch (No.1 signal) signal input status • Off: Brake switch (No.1 signal) is off. • On: Brake switch (No.1 signal) is on.	—	1C (Brake switch)
CLUT_CUT_SW*2	Off/On	Starter interlock switch input status • Off: Starter interlock switch is off. • On: Starter interlock switch is on.	—	1F (Starter interlock switch)
CLUTCH_SW*2	Off/On	Clutch switch input status • Off: CPP switch is off. • On: CPP switch is on.	—	2E (Clutch pedal position switch)
COMM_ST_TSP	Off/On	Displays operation condition of the immobilizer system key code read function • Off: Key code read function not performed • On: Code read function is performed and coil antenna reads key code from remote transmitter transponder.	Key code reading function of immobilizer system is performed and when a brake switch, clutch switch, or push button start signal is input, the coil antenna reads the key code from the transponder of the remote transmitter, and displays On while the key code is being sent to the start stop unit.	• 1AC (PATS+) • 1AE (PATS-)

CRU_CON_SW*3	Not_Pressed/On/Off/On/Off/Cancel/Resume/Fault/Set (+)/Set (-)/Distance (+)/Distance (-)	Cruise control switch operation condition • Not_Pressed: Each switch of cruise control switch is not pressed. • On: Cruise ON switch is pressed. • Off: Cruise OFF switch is pressed. • On/Off: — • Cancel: CANCEL switch is pressed. • Resume: RESUME (RES) switch is pressed. • Fault: Cruise control switch has a malfunction. • Set (+): SET (+) switch is pressed. • Set (-): SET (-) switch is pressed. • Distance (+): — • Distance (-): —	—	1Y (Cruise control switch signal)
ES_UL_SW	Not_Unlock/Unlock	**NOTE:** • Displays in the M-MDS but it does not operate.	—	—
ES_UL_SW_M	Not_Unlock/Unlock	**NOTE:** • Displays in the M-MDS but it does not operate.	—	—
ES_ULL_SW	Off/On	**NOTE:** • Displays in the M-MDS but it does not operate.	—	—
		NOTE:		

ES_ULL_SW_M	Off/On	• Displays in the M-MDS but it does not operate.	—	—
F_FOG_SW	Off/On	Front fog light switch operation condition • Off: Fog light switch is not in F.FOG position. • On: Fog light switch is in F.FOG position.	—	—
H/L_SW_HI	Off/On	Headlight switch (HI) operation condition • Off: Light switch is not in HI position. • On: Light switch is in HI position.	—	—
H/L_SW_LOW	Off/On	Displays dimmer switch position of the light switch that is being input to the start stop unit • Off: Dimmer switch of light switch is not in LO position • On: Dimmer switch of light switch is in LO position	Verify if the monitor value switches when the dimmer switch of the light switch is switched between LO and HI positions. If the dimmer switch operation and monitor values do not match, inspect the light switch.	—
H/L_SW_OFF	Off/On	Headlight light switch (OFF) operation condition • Off: Light switch is not in OFF position. • On: Light switch is in OFF position.	—	—
H/L_SW_PASS	Off/On	Headlight switch (PASS) operation condition • Off: Light switch is not in passing position. • On: Light switch is in passing position.	—	—
		Headlight switch (TNS) operation		

		condition • Off: Light switch is not in TNS position. • On: Light switch is in TNS position.	—	—
HAZARD_SW	Off/On	Displays condition of hazard warning switch input to start stop unit • Off: Hazard warning switch is off. • On: Hazard warning switch is on.	—	1G (Hazard warning switch signal)
IG_POSITION	OFF/ACC/ON/CRANK	Displays power status controlled by the start stop unit • OFF: Start stop unit controls ignition switch off • ACC: Start stop unit controls ignition switch ACC • ON: Start stop unit controls ignition switch ON (engine off) • CRANK: Start stop unit controls cranking at ignition switch ON	• When the push button start is operated, the start stop unit performs power source switching and displays the PID value of the power source position in which control was performed. • If the push button start operation and PID value do not match, and a power source status of another unit differs from the PID value, inspect the	—

			input power source of the other unit because the power source control of the start stop unit is normal.	
INFO_SW*4	Off/SW1_On/SW2_On/SW3_On/Unknown/Invalid	Steering switch operation condition • Off: Steering switch UP/DOWN/INFO switch is not pressed. • SW1_On: UP switch is pressed. • SW2_On: DOWN switch is pressed. • SW3_On: INFO switch is pressed. • Unknown: Steering switch UP/DOWN/INFO switch signal is not determined. • Invalid: Steering switch malfunction is received.	Displays INFO switch position of steering switch input to start stop unit. Steering switch signal is input to start stop unit via clock spring.	• 1AA (Steering switch signal) • 1AB (Steering switch ground)
INHIBIT_SW*1	Off/On	Transaxle range switch input status • Off: Selector lever is not in P and N positions. • On: Selector lever is in P or N position.	—	1F (Selector lever position switch)
LG/T_LK_SW*5	Off/On	Request switch (liftgate) operation condition • Off: Request switch (liftgate) is off. • On: Request switch (liftgate) is on.	The request switch (liftgate) input is an input signal to the start stop unit through the LF control unit.	2F (LF control unit communication)

LG/T_UNL_SW	Off/On	Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) operation condition • Off: Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) is off. • On: Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) is on.	Trunk lid opener switch (exterior) (4SD)/liftgate opener switch (5HB) operation signal. The start stop unit and rear body control module (RBCM) transmit signals to perform trunk (4SD)/liftgate (5HB) unlatch operation.	1Q (Rear body control module (RBCM) communication)
LL_SW_D_LK	Off/On	Driver's door lock link switch (lock side) operation condition • Off: Front door lock-link switch (LH) is in unlock. • On: Front door lock-link switch (LH) is in lock.	Driver's door lock link switch lock signal is input to start stop unit. The same signal may also be sent to rear body control module (RBCM).	1P (Lock input)
NUM_TRNSMIT	—	Displays number of the remote transmitters programmed to the start stop unit	—	—
P_RANGE_SW*1	Off/On	P position switch condition • Off: NOT P position switch is off. • On: NOT P position switch is on.	—	1J (P position)
PAD_DOWN_SW*6	Off/On	Steering shift switch (DOWN) condition • Off: DOWN switch of steering shift switch is off. • On: DOWN switch of steering shift switch is on.	—	1N (Steering shift switch (down))
PAD_UP_SW*6	Off/On	Steering shift switch (UP) condition • Off: UP switch of steering shift switch is off. • On: UP switch of	—	1L (Steering shift switch (up))

		steering shift switch is on.		
R_FOG_SW	Off/On	**NOTE:** • Displays in the M-MDS but it does not operate.	—	—
RELAY_ACC	Off/On	ACC relay operation condition • Off: ACC relay drive is off. • On: ACC relay drive is on.	—	2C (ACC relay control)
RELAY_IG1	Off/On	IG1 relay operation condition • Off: IG1 relay drive is off. • On: IG1 relay drive is on.	—	2S (IG1 relay control)
RELAY_IG2	Off/On	IG2 relay operation condition • Off: IG2 relay drive is off. • On: IG2 relay drive is on.	—	2D (IG2 relay control)
RF_RECEP_ST	Initial/Transmitter/RF_Response	Displays radio reception status from the remote transmitter • Initial: Signal from remote transmitter is not received by start stop unit • Transmitter: Signal by button operation on remote transmitter is received by start stop unit • RF_Response: During remote transmitter authorization, response signal from remote transmitter is received by start	When verifying the PID value while operating the remote transmitter buttons, if “Transmitter” is displayed it can be determined that the transmission between the remote transmitter, keyless receiver, and start stop unit is normal.	2R (Keyless receiver communication)

		stop unit		
RF_TRNS_NUM	Initial/No.1/No.2/No.3/No.4/No.5/No.6	When pressing the unlock button of the remote transmitter, the registration number of the remote transmitter sending radio waves to the start stop unit is displayed. • Initial: Registration number of remote transmitter cannot be received • No.1: Registration number No.1 remote transmitter is received • No.2: Registration number No.2 remote transmitter is received • No.3: Registration number No.3 remote transmitter is received • No.4: Registration number No.4 remote transmitter is received • No.5: Registration number No.5 remote transmitter is received • No.6: Registration number No.6 remote transmitter is received	When DTC B13D3:16 (Low remote transmitter battery voltage) is detected, the registration number of the remote transmitter in which the battery voltage has decreased is displayed in the snapshot data item TRNS_NUM_L. Display the registration number of the remote transmitter using the PID, verify the remote transmitter with the low battery voltage, and inspect the battery condition of the target remote transmitter.	2R (Keyless receiver communication)
RQ_SW_LF*5	Off/On	Request switch (LF) operation condition • Off: Request switch (LF) is off. • On: Request switch (LF) is on.	The signal is input to the start stop unit through the LF control unit of the request switch (LF).	2F (LF control unit communication)
RQ_SW_RF*5	Off/On	Request switch (RF) operation condition • Off: Request switch (RF) is off.	The signal is input to the start stop unit through the LF control unit of the	2F (LF control unit communication)

		• On: Request switch (RF) is on.	request switch (RF).	
SECURITY_I	Off/On	Output condition of security indicator • Off: Security indicator light is turned off. • On: Security indicator light is illuminated.	Security indicator on request to instrument cluster	2M, 2O (CAN)
SFT_LK_SOL*1	Off (Lock)/On (Unlock)	Shift lock solenoid operation condition • Off (Lock): Shift-lock is operated. • On (Unlock): Shift-lock is released.	—	2G (Shift lock)
SPD_LIM_SW	Off/On/Unknown	**NOTE:** • Displays in the M-MDS but it does not operate.	—	—
SSB_1	Off/On	Push button start switch 1 input signal • Off: Push button start switch 1 is off. • On: Push button start switch 1 is on.	—	1H (Push button start 1)
SSB_2	Off/On	Push button start switch 2 input signal • Off: Push button start switch 2 is off. • On: Push button start switch 2 is on.	—	2J (Push button start 2)
SSB_AMBER	Off/On	Push button start indicator light (amber) illumination request • Off: Push button start indicator light (amber) is turned off. • On: Push button	—	1M (Push button illumination (amber))

		start indicator light (amber) is illuminated.		
SSB_GREEN	Off/On	Push button start indicator light (green) illumination request • Off: Push button start indicator light (green) is turned off. • On: Push button start indicator light (green) is illuminated.	—	1K (Push button illumination (green))
SSB_ILLMI	Off/On	Push button start illumination request • Off: START/STOP/ENGINE indicator light is turned off. • On: START/STOP/ENGINE indicator light is illuminated.	—	1I (Push button illumination)
START_RLY_1	V	Displays voltage at start stop unit terminal 2V	—	2V (Starter relay)
START_RLY_2	V	Displays voltage at start stop unit terminal 1D	—	1D (Starter monitor)
STR_A_ANG_A*7	° (deg)	Displays steering angle sensor A signal aiming angle	—	—
STR_A_ANG_B*7	° (deg)	Displays steering angle sensor B signal aiming angle	—	—
STR_AB_ANG*7	° (deg)	Displays steering angle signal (absolute angle) • Steering wheel in neutral position: Near **0 degrees** • Steering wheel turned to left: Changes from **0 degrees** to positive • Steering wheel	—	—

		turned to right: Changes from **0 degrees** to negative		
STR_ANG_S*7	Without/With	Vehicle with/without steering angle sensor • Without: Steering angle sensor is not equipped. • With: Steering angle sensor is equipped.	—	—
STR_ANG_S_A*7	V	Displays voltage at the steering angle sensor A signal	—	1U (Steering angle sensor (signal A/D1)) **NOTE:** • (See **STEERING ANGLE SENSOR INSPECTION**.)
STR_ANG_S_B*7	V	Displays voltage at the steering angle sensor B signal	—	1W (Steering angle sensor (signal A/D1)) **NOTE:** • (See **STEERING ANGLE SENSOR INSPECTION**.)
STR_ANG_S_V*7	V	Displays steering angle sensor power supply voltage **NOTE:** • “5 V” is displayed even if the voltage is **5 V or more**.	—	1S (Steering angle sensor power supply)
TURN_SW_L	Off/On	Turn switch (RH) input • Off: Turn switch is in position other than LH. • On: Turn switch is in LH position.	—	—
		Turn switch (LH) input		

TURN_SW_R	Off/On	• Off: Turn switch is in position other than RH. • On: Turn switch is in RH position.	—	—
VPWR_ACC	V	Displays ACC power supply voltage input to start stop unit	If there is a malfunction in the ACC power supply voltage input to the start stop unit, the keyless entry system and push button start system do not operate normally because PID item VPWR_ACC is used for ACC power on/off determination.	1E (ACC monitor)
VPWR_B1	V	Displays B+ power supply (ROOM fuse) voltage input to start stop unit	If there is a malfunction in the B+ power supply (ROOM fuse) voltage input to the start stop unit, the keyless entry system does not operate normally because PID item VPWR_B1 is used for determining whether or not there is a ROOM fuse inserted.	1A (Power supply)
VPWR_B2	V	Displays B+ power supply (AT fuse) voltage input to start stop unit	When the ROOM fuse is removed, the B+ power supply (AT fuse) is the start stop unit power supply. If there is a malfunction in the B+ power supply (AT fuse) voltage input to the start stop unit when the ROOM fuse is removed, the push button start system does not operate normally.	2W (Power supply)
VPWR_B3	V	**NOTE:** • Displays in the M-MDS but it does not operate.	—	—
			If there is a malfunction in the IG1 power supply voltage input to the start stop unit, the keyless entry	

VPWR_IG1	V	Displays IG1 power supply voltage input to start stop unit	system and the push button start system do not operate normally because PID item VPWR_IG1 is used for IG1 power on/off determination.	1B (Power supply)
WASHER_F	Off/On	Windshield washer switch signal input status • Off: Windshield washer switch is in OFF position. • On: Windshield washer switch is in ON position.	—	—
WASHER_R	Off/On	Rear washer switch signal input status • Off: Rear washer switch is not in ON position. • On: Rear washer switch is in ON position.	—	—
WIP_F_INT	Off/On	Windshield wiper switch (INT) signal input status • Off: Windshield wiper switch is not in INT and AUTO positions. • On: Windshield wiper switch is in INT or AUTO position.	—	—
WIP_F_LOW	Off/On	Windshield wiper switch (LO) signal input status • Off: Windshield wiper switch is not in LO position. • On: Windshield wiper switch is in LO position.	—	—
		Wiper INT encoder A signal input status		

WIP_INT_E_A	Low/High	• Low: Windshield wiper switch INT encoder A value is low. • High: Windshield wiper switch INT encoder A value is high.	—	—
WIP_INT_E_B	Low/High	Wiper INT encoder B signal input status • Low: Windshield wiper switch INT encoder B value is low. • High: Windshield wiper switch INT encoder B value is high.	—	—
WIP_INT_E_C	Low/High	Wiper INT encoder C signal input status • Low: Windshield wiper switch INT encoder C value is low. • High: Windshield wiper switch INT encoder C value is high.	—	—
WIP_R_INT	Off/On	Rear wiper switch (INT) signal input status • Off: Rear wiper switch is not in INT position. • On: Rear wiper switch is in INT position.	—	—
WIP_R_ON	Off/On	Rear wiper switch (ON) signal input status • Off: Rear wiper switch is not in ON position. • On: Rear wiper	—	—

		switch is in ON position.

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [ADVANCED KEYLESS ENTRY SYSTEM]

2014 - Mazda3 - Body and Accessories

FOREWORD [ADVANCED KEYLESS ENTRY SYSTEM]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “All CMDTCs”.

3. Verify the DTC according to the directions on the screen.

   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

4. After completion of repairs, clear all DTCs stored in the start stop unit. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

   a. Select “Self Test”.

   b. Select “Modules”.

   c. Select “SSU”.

3. Verify the DTC according to the directions on the screen.

   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.

4. After completion of repairs, clear all DTCs stored in the start stop unit. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.)

2014 - Mazda3 - Body and Accessories

CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “SSU”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.)
8. Verify that no DTCs are displayed.

2014 - Mazda3 - Body and Accessories

DTC B10C6:1F [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Keyless antenna (exterior, rear) circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in the keyless antenna (exterior, rear) circuit with the ignition switched off.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Keyless antenna (exterior, rear) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ LF control unit terminal W—Keyless antenna (exterior, rear) terminal B ▪ LF control unit terminal X—Keyless antenna (exterior, rear) terminal A • Open circuit in wiring harness between the following terminals: ▪ LF control unit terminal W—Keyless antenna (exterior, rear) terminal B ▪ LF control unit terminal X—Keyless antenna (exterior, rear) terminal A • Keyless antenna (exterior, rear) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (EXTERIOR, REAR) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless antenna (exterior, rear) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION**	Yes	Go to the next step.

	• Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN KEYLESS ANTENNA (EXTERIOR, REAR) CIRCUIT** • Verify that the LF control unit and keyless antenna (exterior, rear) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Keyless antenna (exterior, rear) terminal B ▪ Keyless antenna (exterior, rear) terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal W—Keyless antenna (exterior, rear) terminal B • LF control unit terminal X—Keyless antenna (exterior, rear) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN KEYLESS ANTENNA (EXTERIOR, REAR) CIRCUIT** • Verify that the LF control unit and keyless antenna (exterior, rear) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ LF control unit terminal W—Keyless antenna (exterior, rear) terminal B	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal W—Keyless antenna (exterior, rear) terminal B • LF control unit terminal X—Keyless antenna (exterior, rear) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common

	▪ LF control unit terminal X—Keyless antenna (exterior, rear) terminal A • Is there continuity?		wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
5	**PERFORM DTC INSPECTION AND VERIFY KEYLESS ANTENNA (EXTERIOR, REAR) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	Yes	Replace the keyless antenna (exterior, rear), then go to the next step. (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
6	**PERFORM DTC INSPECTION AND VERIFY LF CONTROL UNIT MALFUNCTION**	Yes	Replace the LF control unit, then go to the next step.

	• Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		(See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10C7:1F [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Keyless antenna (interior, rear) circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in the keyless antenna (interior, rear) circuit with the ignition switched off.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Keyless antenna (interior, rear) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ LF control unit terminal V—Keyless antenna (interior, rear) terminal B ▪ LF control unit terminal T—Keyless antenna (interior, rear) terminal A • Open circuit in wiring harness between the following terminals: ▪ LF control unit terminal V—Keyless antenna (interior, rear) terminal B ▪ LF control unit terminal T—Keyless antenna (interior, rear) terminal A • Keyless antenna (interior, rear) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (INTERIOR, REAR) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless antenna (interior, rear) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION**	Yes	Go to the next step.

	• Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN KEYLESS ANTENNA (INTERIOR, REAR) CIRCUIT** • Verify that the LF control unit and keyless antenna (interior, rear) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Keyless antenna (interior, rear) terminal B ▪ Keyless antenna (interior, rear) terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal V—Keyless antenna (interior, rear) terminal B • LF control unit terminal T—Keyless antenna (interior, rear) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN KEYLESS ANTENNA (INTERIOR, REAR) CIRCUIT** • Verify that the LF control unit and keyless antenna (interior, rear) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ LF control unit terminal V—Keyless antenna (interior, rear) terminal B	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal V—Keyless antenna (interior, rear) terminal B • LF control unit terminal T—Keyless antenna (interior, rear) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.

	LF control unit terminal T—Keyless antenna (interior, rear) terminal A • Is there continuity?		• Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
5	**PERFORM DTC INSPECTION AND VERIFY KEYLESS ANTENNA (INTERIOR, REAR) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	Yes	Replace the keyless antenna (interior, rear), then go to the next step. (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
6	**PERFORM DTC INSPECTION AND VERIFY LF CONTROL UNIT MALFUNCTION** • Clear the DTC for the	Yes	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)

	advanced keyless entry system using the M-MDS.
	
	(See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.)
	
	• Perform the following work:
	  ▪ Switch the ignition off.
	  ▪ Open the front door (LH).
	  ▪ Close all the doors and trunk (4SD)/liftgate (5HB).
	
	• Retrieve the advanced keyless entry system DTCs using the M-MDS.
	
	(See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.)
	
	• Is the same DTC displayed?
		No	Go to Step 8.

7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED**
	
	• Always reconnect all disconnected connectors.
	
	• Reconnect the negative battery cable.
	
	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	
	• Clear the DTC for the advanced keyless entry system using the M-MDS.
	
	(See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.)
	
	• Perform the following work:
	  ▪ Switch the ignition off.
	  ▪ Open the front door (LH).
		Yes	Repeat the inspection from Step 1.
			
			• If the malfunction recurs, replace the start stop unit.
			
			(See **START STOP UNIT REMOVAL/INSTALLATION**.)
			
			Go to the next step.

		No	Go to the next step.

	▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10C9:1F [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Keyless antenna (interior, front) circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in the keyless antenna (interior, front) circuit with the ignition switched off.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Keyless antenna (interior, front) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ LF control unit terminal K—Keyless antenna (interior, front) terminal B ▪ LF control unit terminal M—Keyless antenna (interior, front) terminal A • Open circuit in wiring harness between the following terminals: ▪ LF control unit terminal K—Keyless antenna (interior, front) terminal B ▪ LF control unit terminal M—Keyless antenna (interior, front) terminal A • Keyless antenna (interior, front) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (INTERIOR, FRONT) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless antenna (interior, front) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION**	Yes	Go to the next step.

	• Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN KEYLESS ANTENNA (INTERIOR, FRONT) CIRCUIT** • Verify that the LF control unit and keyless antenna (interior, front) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Keyless antenna (interior, front) terminal B ▪ Keyless antenna (interior, front) terminal A • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal K—Keyless antenna (interior, front) terminal B • LF control unit terminal M—Keyless antenna (interior, front) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN KEYLESS ANTENNA (INTERIOR, FRONT) CIRCUIT** • Verify that the LF control unit and keyless antenna (interior, front) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ LF control unit terminal K—Keyless antenna (interior, front) terminal B	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal K—Keyless antenna (interior, front) terminal B • LF control unit terminal M—Keyless antenna (interior, front) terminal A **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or

	▪ LF control unit terminal M—Keyless antenna (interior, front) terminal A • Is there continuity?		pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
5	**PERFORM DTC INSPECTION AND VERIFY KEYLESS ANTENNA (INTERIOR, FRONT) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	Yes	Replace the keyless antenna (interior, front), then go to the next step. (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
6	**PERFORM DTC INSPECTION AND VERIFY**	Yes	Replace the LF control unit, then go to the next step.

	LF CONTROL UNIT MALFUNCTION • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		(See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10D1:23 [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Request switch (LF) circuit malfunction

Detection condition	• Start stop unit detected any of the following conditions at a vehicle speed of **5 km/h {3 mph} or more**.
	  ▪ The request switch (LF) is continuously ON for **2 min or more**.
	  ▪ The request switch (LF) was ON **7 times** before the vehicle speed decreased to **less than 5 km/h {3 mph}**.

Fail-safe function	Not applicable
Possible cause	• Front outer handle (LH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between LF control unit terminal C and front outer handle (LH) terminal D • Request switch (LF) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front outer handle (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit	Yes	Go to the next step.

	connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN REQUEST SWITCH (LF) CIRCUIT** • Verify that the LF control unit and front outer handle (LH) connectors are disconnected. • Inspect for continuity between front outer handle (LH) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between LF control unit terminal C and front outer handle (LH) terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT REQUEST SWITCH (LF)** • Inspect the request switch (LF). (See **REQUEST SWITCH INSPECTION**.) • Is the request switch (LF) normal?	Yes	Go to the next step.
		No	Replace the front outer handle (LH), then go to Step 6. (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See **LF CONTROL UNIT INSPECTION**.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Drive the vehicle at **5 km/h {3 mph} or more** for **2 min or more**. • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B10D3:23 [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Request switch (RF) circuit malfunction

Detection condition	• Start stop unit detected any of the following conditions at a vehicle speed of **5 km/h {3 mph} or more**.
	  ▪ The request switch (RF) is continuously ON for **2 min or more**.
	  ▪ The request switch (RF) was ON **7 times** before the vehicle speed decreased to **less than 5 km/h {3 mph}**.

Fail-safe function	Not applicable
Possible cause	• Front outer handle (RH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between LF control unit terminal A and front outer handle (RH) terminal D • Request switch (RF) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front outer handle (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION**	Yes	Go to the next step.

	Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN REQUEST SWITCH (RF) CIRCUIT** • Verify that the LF control unit and front outer handle (RH) connectors are disconnected. • Inspect for continuity between front outer handle (RH) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between LF control unit terminal A and front outer handle (RH) terminal D. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT REQUEST SWITCH (RF)** • Inspect the request switch (RF). (See **REQUEST SWITCH INSPECTION**.) • Is the request switch (RH) normal?	Yes	Go to the next step.
		No	Replace the front outer handle (RH), then go to Step 6. (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See **LF CONTROL UNIT INSPECTION**.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.)

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Drive the vehicle at **5 km/h {3 mph} or more** for **2 min or more**. • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11C4:23 [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Request switch (liftgate) circuit malfunction

Detection condition	• Start stop unit detected any of the following conditions at a vehicle speed of **5 km/h {3 mph} or more**.
	  ▪ The request switch (liftgate) is continuously ON for **2 min or more**.
	  ▪ The request switch (liftgate) was ON **7 times** before the vehicle speed decreased to **less than 5 km/h {3 mph}**.

Fail-safe function	Not applicable
Possible cause	• Request switch (liftgate) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between LF control unit terminal E and request switch (liftgate) terminal A • Request switch (liftgate) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REQUEST SWITCH (LIFTGATE) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the request switch (liftgate) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

	• Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT FOR SHORT TO GROUND IN REQUEST SWITCH (LIFTGATE) CIRCUIT** • Verify that the LF control unit and request switch (liftgate) connectors are disconnected. • Inspect for continuity between request switch (liftgate) terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between LF control unit terminal E and request switch (liftgate) terminal A. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.
4	**INSPECT REQUEST SWITCH (LIFTGATE)** • Inspect the request switch (liftgate). (See **REQUEST SWITCH INSPECTION**.) • Is the request switch (liftgate) normal?	Yes	Go to the next step.
		No	Replace the request switch (liftgate), then go to Step 6. (See **REQUEST SWITCH REMOVAL/INSTALLATION**.)
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See **LF CONTROL UNIT INSPECTION**.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Drive the vehicle at **5 km/h {3 mph} or more** for **2 min or more**. • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B11FD:1F [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Keyless antenna (exterior, LF) circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in the keyless antenna (exterior, LF) circuit with the ignition switched off.
Fail-safe function	• Inhibits the door lock/unlock using the advanced keyless entry system.
Possible cause	• Front outer handle (LH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ LF control unit terminal O—Front outer handle (LH) terminal B ▪ LF control unit terminal Q—Front outer handle (LH) terminal E • Open circuit in wiring harness between the following terminals: ▪ LF control unit terminal O—Front outer handle (LH) terminal B ▪ LF control unit terminal Q—Front outer handle (LH) terminal E • Keyless antenna (exterior, LF) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (LH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front outer handle (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
	INSPECT LF CONTROL UNIT CONNECTOR		

2	**CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN KEYLESS ANTENNA (EXTERIOR, LF) CIRCUIT** • Verify that the LF control unit and front outer handle (LH) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Front outer handle (LH) terminal B ▪ Front outer handle (LH) terminal E • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal O—Front outer handle (LH) terminal B • LF control unit terminal Q—Front outer handle (LH) terminal E **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN KEYLESS ANTENNA (EXTERIOR, LF) CIRCUIT** • Verify that the LF control unit and front outer handle (LH) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ LF control unit terminal O—Front outer handle (LH) terminal B	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal O—Front outer handle (LH) terminal B • LF control unit terminal Q—Front outer handle (LH) terminal E **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or

	▪ LF control unit terminal Q—Front outer handle (LH) terminal E • Is there continuity?		pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
5	**PERFORM DTC INSPECTION AND VERIFY KEYLESS ANTENNA (EXTERIOR, LF) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	Yes	Replace the front outer handle (LH), then go to the next step. (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
6	**PERFORM DTC INSPECTION AND VERIFY LF CONTROL UNIT MALFUNCTION**	Yes	Replace the LF control unit, then go to the next step.

	• Clear the DTC for the advanced keyless entry system using the M-MDS.
	
	(See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.)
	
	• Perform the following work:
	  ▪ Switch the ignition off.
	  ▪ Open the front door (LH).
	  ▪ Close all the doors and trunk (4SD)/liftgate (5HB).
	
	• Retrieve the advanced keyless entry system DTCs using the M-MDS.
	
	(See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.)
	
	• Is the same DTC displayed?
			(See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)

		No	Go to Step 8.

7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED**
	
	• Always reconnect all disconnected connectors.
	
	• Reconnect the negative battery cable.
	
	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
	
	• Clear the DTC for the advanced keyless entry system using the M-MDS.
	
	(See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.)
	
	• Perform the following work:
	  ▪ Switch the ignition off.
	  ▪ Open the front door
		Yes	Repeat the inspection from Step 1.
			
			• If the malfunction recurs, replace the start stop unit.
			
			(See **START STOP UNIT REMOVAL/INSTALLATION**.)
			
			Go to the next step.

		No	Go to the next step.

	(LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B1210:1F [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Keyless antenna (exterior, RF) circuit malfunction
Detection condition	• Start stop unit detects an open circuit or short to ground in the keyless antenna (exterior, RF) circuit with the ignition switched off.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Front outer handle (RH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: ▪ LF control unit terminal S—Front outer handle (RH) terminal B ▪ LF control unit terminal U—Front outer handle (RH) terminal E • Open circuit in wiring harness between the following terminals: ▪ LF control unit terminal S—Front outer handle (RH) terminal B ▪ LF control unit terminal U—Front outer handle (RH) terminal E • Keyless antenna (exterior, RF) malfunction • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (RH) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the front outer handle (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
	INSPECT LF CONTROL UNIT CONNECTOR		

2	**CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR SHORT TO GROUND IN KEYLESS ANTENNA (EXTERIOR, RF) CIRCUIT** • Verify that the LF control unit and front outer handle (RH) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: ▪ Front outer handle (RH) terminal B ▪ Front outer handle (RH) terminal E • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal S—Front outer handle (RH) terminal B • LF control unit terminal U—Front outer handle (RH) terminal E **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 7.
		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN KEYLESS ANTENNA (EXTERIOR, RF) CIRCUIT** • Verify that the LF control unit and front outer handle (RH) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): ▪ LF control unit terminal S—Front outer handle (RH) terminal B	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between the following terminals: • LF control unit terminal S—Front outer handle (RH) terminal B • LF control unit terminal U—Front outer handle (RH) terminal E **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and

	▪ LF control unit terminal U—Front outer handle (RH) terminal E • Is there continuity?		the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
5	**PERFORM DTC INSPECTION AND VERIFY KEYLESS ANTENNA (EXTERIOR, RF) MALFUNCTION** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	Yes	Replace the front outer handle (RH), then go to the next step. (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
	PERFORM DTC INSPECTION AND VERIFY		

6	**LF CONTROL UNIT MALFUNCTION** • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off. ▪ Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	Yes	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Perform the following work: ▪ Switch the ignition off.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	Open the front door (LH). ▪ Close all the doors and trunk (4SD)/liftgate (5HB). • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13C3:04 [ADVANCED KEYLESS ENTRY SYSTEM]

Description	LF control unit internal malfunction
Detection condition	• Start stop unit detects the LF control unit internal malfunction.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit internal malfunction • Start stop unit malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See **LF CONTROL UNIT INSPECTION**.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Retrieve the advanced keyless entry system DTCs using the M-MDS.	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	(See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13C3:09 [ADVANCED KEYLESS ENTRY SYSTEM]

Description	LF control unit malfunction
Detection condition	• Start stop unit detects that the LF state signal of the LF control unit is low for **5 s or more**. • With the communication between the start stop unit and LF control unit being performed normally, there is no response from the LF control unit even though there is the signal transmission request from the start stop unit to the LF control unit, and the LF state signal becomes low.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2H and LF control unit terminal G • Open circuit in wiring harness between start stop unit terminal 2H and LF control unit terminal G • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN START STOP UNIT AND LF CONTROL UNIT** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect for continuity between LF control unit terminal G (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2H and LF control unit terminal G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.

		No	Go to the next step.
4	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND LF CONTROL UNIT** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 2H (wiring harness-side) and LF control unit terminal G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2H and LF control unit terminal G. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See **LF CONTROL UNIT INSPECTION**.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	SYSTEM].) • Is the same DTC displayed?		
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13C3:16 [ADVANCED KEYLESS ENTRY SYSTEM]

Description	LF control unit power supply voltage low input
Detection condition	• Start stop unit power supply circuit voltage of **8.5 V or more or less than 16.5 V** and LF control unit power supply circuit voltage of **5 V or more or less than 8.5 V** are detected for **5 s or more**.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit connector or terminal malfunction • Malfunction between battery positive terminal and LF control unit terminal B • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.

	CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**VERIFY LF CONTROL UNIT POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the LF control unit terminal B (wiring harness-side). • Is the voltage **5 V or more or less than 8.5 V**?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between battery positive terminal and LF control unit terminal B. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a malfunction. • Repair or replace the malfunctioning part. **If there is no common connector:** • Inspect the wiring harness between battery positive terminal and LF control unit terminal B. ▪ If there is any malfunction: • Repair or replace the wiring harness. ▪ If there is no malfunction: • Replace the LF control unit. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.) Go to Step 4.
		No	Go to the next step.
3	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See **LF CONTROL UNIT INSPECTION**.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G**	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.

	2.5].) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Switch the ignition ON (engine off) and wait for **5 s or more**. • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?		
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13C3:29 [ADVANCED KEYLESS ENTRY SYSTEM]

Description	Communication error between start stop unit and LF control unit
Detection condition	• Start stop unit detects the communication error with the LF control unit **10 times**.
Fail-safe function	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2F and LF control unit terminal I • Open circuit in wiring harness between start stop unit terminal 2F and LF control unit terminal I • LF control unit malfunction • Start stop unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN START STOP UNIT AND LF CONTROL UNIT** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect for continuity between LF control unit terminal I (wiring harness-side) and body ground. • Is there continuity?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2F and LF control unit terminal I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has a short to ground. Go to Step 6.
		No	Go to the next step.

4	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND LF CONTROL UNIT** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 2F (wiring harness-side) and LF control unit terminal I (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify whether or not there is a common connector between start stop unit terminal 2F and LF control unit terminal I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 6.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See **LF CONTROL UNIT INSPECTION**.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the advanced keyless entry system using the M-MDS. (See **CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Retrieve the advanced keyless entry system DTCs using the M-MDS. (See **DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting.

			(See **DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]

1. Connect the M-MDS to the DLC 2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “SSU”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [ADVANCED KEYLESS ENTRY SYSTEM]

PID	Unit/Operation	Data contents	Data read/use method	Module control terminal
LG/T_LK_SW*1	Off/On	Request switch (liftgate) operation condition • Off: Request switch (liftgate) is off. • On: Request switch (liftgate) is on.	The request switch (liftgate) input is an input signal to the start stop unit through the LF control unit.	2F (LF control unit communication)
RQ_SW_LF	Off/On	Request switch (LF) operation condition • Off: Request switch (LF) is off. • On: Request switch (LF) is on.	The signal is input to the start stop unit through the LF control unit of the request switch (LF).	2F (LF control unit communication)
RQ_SW_RF	Off/On	Request switch (RF) operation condition • Off: Request switch (RF) is off. • On: Request	The signal is input to the start stop unit through the LF control unit of the request switch (RF).	2F (LF control unit communication)

		switch (RF) is on.

5HB

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “SSU”.

3. Select the simulation items from the PID table.

4. Perform the active command modes function, inspect the operations for each parts.

    - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

2014 - Mazda3 - Body and Accessories

ACTIVE COMMAND MODES TABLE [ADVANCED KEYLESS ENTRY SYSTEM]

Simulation item	Unit/Operation	Data contents	Data read/use method	Output part name
BZR_OUT	Off/On	• Off: Keyless beeper does not sound. • On: Keyless beeper sounds.	• When the simulation item BZR_OUT is turned on, a force override signal is sent to the LF control unit from the start stop unit, and the LF control unit drives (sounds) the keyless beeper. • With adoption of a separate excitation buzzer to the keyless beeper, buzzer does not sound normally even if the voltage is applied to the buzzer unit because there is no oscillation circuit. The integrity of the keyless beeper is determined using the simulation item BZR_OUT. • If the keyless buzzer does not sound even though the simulation function BZR_OUT is on, perform diagnosis using the following procedure. ▪ Press the remote transmitter lock/unlock button repeatedly and measure the terminal voltage of the keyless buzzer when the button is pressed. **Voltage is output** • Keyless buzzer malfunction may have occurred. **Voltage is not output** • Related wiring harness, or LF control unit malfunction may have	Keyless beeper

			occurred.	

2014 - Mazda3 - Body and Accessories

ON-BOARD DIAGNOSTIC WIRING DIAGRAM [FORWARD SENSING CAMERA (FSC)]

2014 - Mazda3 - Body and Accessories

FOREWORD [FORWARD SENSING CAMERA (FSC)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the forward sensing camera (FSC). (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   a. Select “Self Test”.
   b. Select “Modules”.
   c. Select “FSC”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the forward sensing camera (FSC). (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)

Snapshot Data

NOTE:

- The forward sensing camera (FSC) stores the following two types of snapshot data (vehicle information) when a DTC is detected and displays them in the M-MDS.
  - Vehicle information detected by forward sensing camera (FSC)
  - Vehicle information detected by instrument cluster and received by forward sensing camera (FSC) via CAN signal

- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data item	Unit		Data contents	Data read/use method	Corresponding data monitor items
ECU_IN_TMP	°C	°F	ECU Internal Temperature	—	—
IG-ON_TIMER	hh:mm:ss*1		Elapsed time since ignition was switched ON (engine off or on) **NOTE:** • The instrument cluster records the elapsed time since the ignition was switched ON (engine off or on).	• The forward sensing camera (FSC) constantly receives the elapsed time since the ignition was switched ON (engine off or on) sent via CAN signal from the instrument cluster. • If a DTC is detected, the forward sensing camera (FSC) records the elapsed time since the ignition was switched ON (engine off or on) when the DTC was detected, and it is displayed in the M-MDS.	—

OPE_MODE	Normal/CALIBRATION/EMERGENCY		Operation Mode	—	—

The seconds may be indicated after the decimal point.

2014 - Mazda3 - Body and Accessories

CLEARING DTC [FORWARD SENSING CAMERA (FSC)]

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    a. Select “Self Test”.
    b. Select “Modules”.
    c. Select “FSC”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.)
8. Verify that no DTCs are displayed.

C: CMDTC self test, D: ODDTC self test

2014 - Mazda3 - Body and Accessories

DTC B115E:54 [FORWARD SENSING CAMERA (FSC)]

Description	Forward sensing camera (FSC) aiming not completed
Detection condition	• Forward sensing camera (FSC) aiming not completed is detected.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• Forward sensing camera (FSC) aiming not performed. • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM FORWARD SENSING CAMERA (FSC) AIMING** • Perform the forward sensing camera (FSC) aiming. (See **FORWARD SENSING CAMERA (FSC) AIMING**.) • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA**	Yes	Perform the forward sensing camera (FSC) aiming again, then go to the next step. (See **FORWARD SENSING CAMERA (FSC) AIMING**.)
		No	Go to Step 3.

	(FSC)].) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC B13A6:11 [FORWARD SENSING CAMERA (FSC)]

Description	LDWS switch circuit malfunction
Detection condition	• Forward sensing camera (FSC) detects that LDWS switch is held pressed for **10 s or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS).
Possible cause	• DTCs are stored in the instrument cluster. • LDWS switch malfunction • Instrument cluster malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**INSPECT LDWS SWITCH** • Inspect the LDWS switch. (See **LDWS SWITCH INSPECTION**.) • Is the LDWS switch normal?	Yes	Go to the next step.
		No	Replace the cluster switch, then go to Step 4. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)
3	**PERFORM DTC INSPECTION AND VERIFY INSTRUMENT CLUSTER MALFUNCTION**	Yes	Replace the instrument cluster, then go to the

	• Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **11.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **11.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C1001:92 [FORWARD SENSING CAMERA (FSC)]

Description	Poor functioning of forward sensing camera (FSC)
Detection condition	• With the LDWS switch on or the high beam control (HBC) system operating, a condition in which the area around the forward sensing camera (FSC) is excessively bright, and the system is inoperable for **10 min or more** is detected.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• Windshield fogging • Forward sensing camera (FSC) lens fogging • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY WINDSHIELD FOGGING** • Verify if the windshield is fogged. • Is the windshield fogged?	Yes	Use the defroster to clear the fogging from the windshield, then go to Step 3.
		No	Go to the next step.
2	**VERIFY FOGGING ON FORWARD SENSING CAMERA (FSC) LENS AREA** • Verify if there is any fogging on the forward sensing camera (FSC) lens. • Is the forward sensing camera (FSC) lens fogged?	Yes	Use the defroster to clear the fogging on the forward sensing camera (FSC) lens, then go to the next step.
		No	Go to the next step.

3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Drive the vehicle at a vehicle speed of **20 km/h {12 mph} or more** for **3 min or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC C1001:97 [FORWARD SENSING CAMERA (FSC)]

Description	Forward sensing camera (FSC) poor visibility
Detection condition	• With the LDWS switch on or the high beam control (HBC) system operating, it is detected that the forward sensing camera (FSC) field of view is obstructed for **10 min or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• Windshield is dirty • Forward sensing camera (FSC) lens is dirty • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY WINDSHIELD DIRT** • Verify if the windshield is dirty. • Is the windshield dirty?	Yes	Clean the windshield, then go to Step 3.
		No	Go to the next step.
2	**VERIFY FORWARD SENSING CAMERA (FSC) LENS DIRT** • Verify if the forward sensing camera (FSC) lens is dirty. • Is the forward sensing camera (FSC) lens dirty?	Yes	Clean the forward sensing camera (FSC) lens, then go to the next step.
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing	Yes	Repeat the inspection from Step 1. • If the malfunction recurs,

	camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Drive the vehicle at a vehicle speed of **20 km/h {12 mph} or more** for **3 min or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0001:88/U0100:00/U0121:00/U0131:00/U0140:00/U0155:00/U0214:00 [FORWARD SENSING CAMERA (FSC)]

Description	• U0001:88
	  ▪ Module communication error (HS-CAN)
	• U0100:00
	  ▪ Communication error with PCM
	• U0121:00
	  ▪ Communication error with DSC HU/CM
	• U0131:00
	  ▪ Communication error with EPS control module
	• U0140:00
	  ▪ Communication error with front body control module (FBCM)
	• U0155:00
	  ▪ Communication error with instrument cluster
	• U0214:00
	  ▪ Communication error with start stop unit

	• U0001:88
	  ▪ Forward sensing camera (FSC) cannot receive the CAN bus communication signal (HS-CAN) for **1 s or more**.
	  ▪ Forward sensing camera (FSC) detects the CAN bus communication line (HS-CAN) malfunction **10 times** continuously.
	• U0100:00
	  ▪ Forward sensing camera (FSC) cannot receive the CAN signal from the PCM for **1 s or more**.
	• U0121:00
	  ▪ Forward sensing camera (FSC) cannot receive the CAN signal from the DSC HU/CM for **1 s or more**.

Detection condition	• U0131:00 ▪ Forward sensing camera (FSC) cannot receive the CAN signal from the EPS control module for **1 s or more**. • U0140:00 ▪ Forward sensing camera (FSC) cannot receive the CAN signal from the front body control module (FBCM) for **5 s or more**. • U0155:00 ▪ Forward sensing camera (FSC) cannot receive the CAN signal from the instrument cluster for **5 s or more**. • U0214:00 ▪ Forward sensing camera (FSC) cannot receive the CAN signal from the start stop unit for **1 s or more**.
Fail-safe function	• U0001:88 ▪ Inhibits the lane departure warning system (LDWS). ▪ Inhibits the high beam control (HBC) system. • U0100:00 ▪ Inhibits the lane departure warning system (LDWS). ▪ Inhibits the high beam control (HBC) system. • U0121:00 ▪ Inhibits the lane departure warning system (LDWS). ▪ Inhibits the high beam control (HBC) system. • U0131:00 ▪ Inhibits the lane departure warning system (LDWS). • U0140:00 ▪ Inhibits the lane departure warning system (LDWS). ▪ Inhibits the high beam control (HBC) system. • U0155:00 ▪ Inhibits the lane departure warning system (LDWS). ▪ Inhibits the high beam control (HBC) system. • U0214:00 ▪ Inhibits the lane departure warning system (LDWS). ▪ Inhibits the high beam control (HBC) system.

Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between PCM and forward sensing camera (FSC) • Malfunction in CAN line between DSC HU/CM and forward sensing camera (FSC) • Malfunction in CAN line between EPS control module and forward sensing camera (FSC) • Malfunction in CAN line between front body control module (FBCM) and forward sensing camera (FSC) • Malfunction in CAN line between instrument cluster and forward sensing camera (FSC) • Malfunction in CAN line between start stop unit and forward sensing camera (FSC)
System wiring diagram	Not applicable

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See **FOREWORD**.)

2014 - Mazda3 - Body and Accessories

DTC U0401:68 [FORWARD SENSING CAMERA (FSC)]

Description	Error signal received from PCM
Detection condition	• Forward sensing camera (FSC) receives the error signal from the PCM for **5 s or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 4.

	• Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0415:68 [FORWARD SENSING CAMERA (FSC)]

Description	Error signal received from DSC HU/CM
Detection condition	• Forward sensing camera (FSC) receives the error signal from the DSC HU/CM for **5 s or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• DTCs are stored in the DSC HU/CM. • DSC HU/CM malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DSC HU/CM DTCs** • Retrieve the DSC HU/CM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY DSC HU/CM MALFUNCTION** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)	Yes	Replace the DSC HU/CM, then go to the next step. (See **DSC HU/CM REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	• Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0420:68 [FORWARD SENSING CAMERA (FSC)]

Description	Error signal received from EPS control module
Detection condition	• Forward sensing camera (FSC) receives the error signal from the EPS control module for **5 s or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS).
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Retrieve the EPS control module DTCs using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY EPS CONTROL MODULE MALFUNCTION** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine	Yes	Replace the EPS control module, then go to the next step. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0423:68 [FORWARD SENSING CAMERA (FSC)]

Description	Error signal received from instrument cluster
Detection condition	• Forward sensing camera (FSC) receives the error signal from the instrument cluster for **5 s or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS).
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Retrieve the instrument cluster DTCs using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY INSTRUMENT CLUSTER MALFUNCTION** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine	Yes	Replace the instrument cluster, then go to the next step. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U0515:68 [FORWARD SENSING CAMERA (FSC)]

Description	Error signal received from start stop unit
Detection condition	• Forward sensing camera (FSC) receives the error signal from the start stop unit for **5 s or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• DTCs are stored in the start stop unit. • Start stop unit malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Retrieve the start stop unit DTCs using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [START STOP UNIT]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY START STOP UNIT MALFUNCTION** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)	Yes	Replace the start stop unit, then go to the next step. (See **START STOP UNIT REMOVAL/INSTALLATION**.)
		No	Go to Step 4.

	Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2005:86 [FORWARD SENSING CAMERA (FSC)]

Description	Error signal received from PCM
Detection condition	• Forward sensing camera (FSC) receives the vehicle speed signal error from the PCM for **5 s or more**.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY PCM MALFUNCTION** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)	Yes	Replace the PCM, then go to the next step. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to Step 4.

	• Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2100:00 [FORWARD SENSING CAMERA (FSC)]

Description	Forward sensing camera (FSC) configuration error
Detection condition	• Forward sensing camera (FSC) configuration not completed is detected.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• Forward sensing camera (FSC) configuration error • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the forward sensing camera (FSC) configuration (using As-Built data). (See **FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)	Yes	Using the M-MDS, perform the forward sensing camera (FSC) configuration (using As-Built data) again, then go to the next step. (See **FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U2101:00 [FORWARD SENSING CAMERA (FSC)]

Description	Forward sensing camera (FSC) configuration error
Detection condition	• Detects that forward sensing camera (FSC) has unsupported configuration data.
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• Forward sensing camera (FSC) configuration error • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the forward sensing camera (FSC) configuration (using As-Built data). (See **FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)**.) • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.)	Yes	Using the M-MDS, perform the forward sensing camera (FSC) configuration (using As-Built data) again, then go to the next step. (See **FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)**.)
		No	Go to Step 3.

	• Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?		
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3000:04/U3000:09/U3000:42/U3000:49 [FORWARD SENSING CAMERA (FSC)]

Description	Forward sensing camera (FSC) internal malfunction

Detection condition	• U3000:04
	  ▪ Forward sensing camera (FSC) detects an error in the image-related circuit in the forward sensing camera (FSC) with the ignition switched ON (engine off or on).
	• U3000:09
	  ▪ Forward sensing camera (FSC) detects an internal temperature sensor malfunction in the forward sensing camera (FSC) with the ignition switched ON (engine off or on).
	• U3000:42
	  ▪ Forward sensing camera (FSC) detects a NVRAM error in the forward sensing camera (FSC) with the ignition switched ON (engine off or on).
	• U3000:49
	  ▪ Forward sensing camera (FSC) detects a malfunction in the forward sensing camera (FSC) with the ignition switched ON (engine off or on).

Fail-safe function	• U3000:04
	  ▪ Inhibits the lane departure warning system (LDWS).
	  ▪ Inhibits the high beam control (HBC) system.
	• U3000:09
	  ▪ Inhibits the lane departure warning system (LDWS).
	  ▪ Inhibits the high beam control (HBC) system.
	• U3000:42
	  ▪ Inhibits the lane departure warning system (LDWS).
	  ▪ Inhibits the high beam control (HBC) system.
	• U3000:49

	▪ Inhibits the lane departure warning system (LDWS). ▪ Inhibits the high beam control (HBC) system.
Possible cause	• Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY FORWARD SENSING CAMERA (FSC) MALFUNCTION** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:16 [FORWARD SENSING CAMERA (FSC)]

Description	Forward sensing camera (FSC) low power supply voltage input
Detection condition	• Forward sensing camera (FSC) power supply circuit voltage of **8.0 ± 0.8 V or less** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.

Possible cause	• DTCs are stored in the PCM.
	• Battery malfunction
	• Generator malfunction
	• Forward sensing camera (FSC) connector or terminal malfunction
	• Forward sensing camera (FSC) power supply circuit malfunction
	  ▪ Short to ground in wiring harness between C/U IG1 15 A fuse and forward sensing camera (FSC) terminal I
	  ▪ C/U IG1 15 A fuse malfunction
	  ▪ Open circuit in wiring harness between IG1 relay and forward sensing camera (FSC) terminal I
	• Forward sensing camera (FSC) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See **BATTERY RECHARGING [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)

	Is the generator normal?		
4	**INSPECT FORWARD SENSING CAMERA (FSC) CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the forward sensing camera (FSC) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY FORWARD SENSING CAMERA (FSC) POWER SUPPLY VOLTAGE** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Display the PID VPWR_IG1 using the M-MDS. (See **PID/DATA MONITOR INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify whether or not there is a common connector between C/U IG1 15 A fuse and forward sensing camera (FSC) terminal I. **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground. • Repair or

replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between IG1 relay and forward sensing camera (FSC) terminal I.

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit.
- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has an open circuit.

			Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Always reconnect all disconnected connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

DTC U3003:17 [FORWARD SENSING CAMERA (FSC)]

Description	Forward sensing camera (FSC) high power supply voltage input
Detection condition	• Forward sensing camera (FSC) power supply circuit voltage of **16.0 ± 0.8 V or more** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe function	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control (HBC) system.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	Not applicable

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Retrieve the PCM DTCs using the M-MDS. (See **ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Are any DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See **BATTERY INSPECTION**	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Is the battery normal?		(See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3	**INSPECT GENERATOR** • Inspect the generator. (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITHOUT i-ELOOP)]**.) (See **GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5 (WITH i-ELOOP)]**.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the forward sensing camera (FSC) using the M-MDS. (See **CLEARING DTC [FORWARD SENSING CAMERA (FSC)]**.) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Retrieve the forward sensing camera (FSC) DTCs using the M-MDS. (See **DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]**.) • Is the same DTC displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC). (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) Go to the next step.
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair or replace the malfunctioning part according to the applicable DTC troubleshooting. (See **DTC TABLE [FORWARD SENSING CAMERA (FSC)]**.)
		No	DTC troubleshooting completed.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR INSPECTION [FORWARD SENSING CAMERA (FSC)]

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    a. Select “DataLogger”.

    b. Select “Modules”.

    c. Select “FSC”.

3. Select the applicable PID from the PID table.

4. Verify the PID data according to the directions on the screen.

NOTE:

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

2014 - Mazda3 - Body and Accessories

PID/DATA MONITOR TABLE [FORWARD SENSING CAMERA (FSC)]

PID	Unit/Operation	Data contents	Module control terminal
A_ANG_PITCH	° (deg)	Displays forward sensing camera (FSC) aiming angle (pitch)	C, E (CAN)
A_ANG_ROLL	° (deg)	Displays forward sensing camera (FSC) aiming angle (roll)	C, E (CAN)
A_ANG_YAW	° (deg)	Displays forward sensing camera (FSC) aiming angle (yaw)	C, E (CAN)
BRAKE_SW	Off/On	• Off: Brake switch (No. 2 signal) is off. (Brake pedal is depressed.) • On: Brake switch (No. 2 signal) is on. (Brake pedal is not depressed.)	C, E (CAN)
DSP_LANE_ST	Off/Dash_Lane/Solid_Lane	• Off: Vehicle lanes not displayed in the active driving display (ADD) • Dash_Lane: Displays broken lines in the active driving display (ADD) • Solid_Lane: Displays actual lanes in the active driving display (ADD)	C, E (CAN)
		• Off: Warning not displayed in the center display • LDWS_Left: Warning related to lane departure on vehicle left	

		side is displayed in the center display. • LDWS_Right: Warning related to lane departure on vehicle right side is displayed in the center display. • LDWS_Fail: Warning related to malfunction in lane departure warning system (LDWS) is displayed in the center display. • HBC_Fail: Warning related to malfunction in high beam control (HBC) system is displayed in the center display. • Camera_BLK: Warning related to dirt of the forward sensing camera (FSC) is displayed in the center display. • FSC_Fail: Warning related to malfunction in forward sensing camera (FSC) is displayed in the center display. • Camera_DRDT: Warning related to fogging of the forward sensing camera (FSC) is displayed in the center display.	
DSP_WRN_ST	Off/LDWS_Left/LDWS_Right/LDWS_Fail/HBC_Fail/Camera_BLK/FSC_Fail/Camera_DRDT		C, E (CAN)
		• Hi_Request: HI beam switch signal received • Low_Request: LO beam	

HBC_H/L_CS	Hi_Request/Low_Request/Invalid	switch signal received • Invalid: Error in HI/LO beam switch request signal	C, E (CAN)
IL_ST_HBC	Off/Green_On/Green_Flash/Amber_On/Amber_Flash	• Off: HBC system indicator light (green) and HBC system warning indicator light (amber) turned off • Green_On: HBC system indicator light (green) is illuminated. • Green_Flash: HBC system indicator light (green) is flashing. • Amber_On: HBC system warning light (amber) is illuminated. • Amber_Flash: HBC system warning light (amber) is flashing.	C, E (CAN)
IL_ST_LDWS	Off/Green_On/Green_Flash/Amber_On/Amber_Flash	• Off: LDWS indicator light (green) and LDWS warning light (amber) turned off • Green_On: LDWS indicator light (green) illuminated • Green_Flash: LDWS indicator light (green) is flashing. • Amber_On: LDWS warning light (amber) is illuminated. • Amber_Flash: LDWS warning light (amber) is flashing.	C, E (CAN)
LDWS_BUZZER	Off/On	• Off: LDWS warning alarm does not sound. • On: LDWS	C, E (CAN)

		warning alarm sounds.	
LDWS_SW	Off/On	• Off: LDWS switch is off. • On: LDWS switch is on.	C, E (CAN)
RS_SOUND_CS	Off/Left/Right	• Off: Rumble strip sound is not heard. • Left: Left side rumble strip sound heard. • Right: Right side rumble strip sound heard.	C, E (CAN)
VPWR_IG1	V	Displays forward sensing camera (FSC) power supply voltage	I (Power supply)
VSPD	KPH, MPH	Displays vehicle speed	C, E (CAN)

2014 - Mazda3 - Body and Accessories

POWER WINDOW SYSTEM WIRING DIAGRAM [POWER WINDOW SYSTEM]

2014 - Mazda3 - Body and Accessories

FOREWORD [POWER WINDOW SYSTEM]

- Always perform basic power window system inspection before troubleshooting.

Troubleshooting Procedure

- Slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions.

CAUTION:

- If any of the following conditions continues indefinitely, the power window motor will heat up causing the protection circuit (integrated in power window motor) to operate. If this occurs, the operation of the power window motor protection circuit temporarily disables the power windows.
    - Continuous up and down operation of the power window.
    - Continuously pulling up the power window switch while the window glass is fully closed.
    - Continuously pressing the power window switch while the window glass fully opened.
- If the power window motor has a temporary malfunction and the power window main switch is operated, the power window system transfers to malfunction mode by the power window control module.
- While the power window system is in malfunction mode, the power windows cannot be operated using the auto open/close function.
- The power window system reverts to normal operation after performing the Power Window Initialization Procedure.

NOTE:

- If the following operations have been performed, initial setting is reset, and auto up/down operation is disabled. Therefore, performing the initial setting is necessary.
    - Negative battery cable disconnected
    - Power window main switch connector disconnected
    - Power window system power supply fuse removed

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
    - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as power window main switch and power window motor circuit voltage) at that time, and detect the malfunction cause.
    - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction.

    - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

Power Window System Initialization Procedure

1. Switch the ignition ON (engine off or on).

2. Press the driver-side power window main switch and fully open the driver-side front door glass.

3. Pull up the driver-side power window main switch to the manual-up position to fully close the driver-side front door glass, and keep holding the switch up at the position for **approx. 2 s**.

2014 - Mazda3 - Body and Accessories

SYMPTOM TROUBLESHOOTING CHART [POWER WINDOW SYSTEM]

Troubleshooting item
DRIVER-SIDE DOOR GLASS CAN BE OPERATED MANUALLY BUT CANNOT BE OPERATED AUTOMATICALLY (See **DRIVER-SIDE DOOR GLASS CAN BE OPERATED MANUALLY BUT CANNOT BE OPERATED AUTOMATICALLY [POWER WINDOW SYSTEM]**.)
DRIVER-SIDE DOOR GLASS CANNOT BE OPERATED MANUALLY OR AUTOMATICALLY (See **DRIVER-SIDE DOOR GLASS CANNOT BE OPERATED MANUALLY OR AUTOMATICALLY [POWER WINDOW SYSTEM]**.)
DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING EACH SUBSWITCH BUT CAN BE OPERATED USING POWER WINDOW MAIN SWITCH) (See **DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING EACH SUBSWITCH BUT CAN BE OPERATED USING POWER WINDOW MAIN SWITCH) [POWER WINDOW SYSTEM]**.)
DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING POWER WINDOW MAIN SWITCH BUT CAN BE OPERATED USING EACH SUBSWITCH) (See **DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING POWER WINDOW MAIN SWITCH BUT CAN BE OPERATED USING EACH SUBSWITCH) [POWER WINDOW SYSTEM]**.)
DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING POWER WINDOW MAIN SWITCH OR EACH SUBSWITCH) (See **DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING POWER WINDOW MAIN SWITCH OR EACH SUBSWITCH) [POWER WINDOW SYSTEM]**.)
DRIVER-SIDE DOOR GLASS REVERSE OPENS DURING AUTO-CLOSE (MANUAL-CLOSE) OPERATION (MIS REVERSE OPEN) (See **DRIVER-SIDE DOOR GLASS REVERSE OPENS DURING AUTO-CLOSE (MANUAL-CLOSE) OPERATION (MIS REVERSE OPEN) [POWER WINDOW SYSTEM]**.)
ABNORMAL SOUND DURING DOOR GLASS OPENING/CLOSING (See **ABNORMAL SOUND DURING DOOR GLASS OPENING/CLOSING [POWER WINDOW SYSTEM]**.)

SYMPTOM TROUBLESHOOTING CHART [POWER WINDOW SYSTEM]

2014 - Mazda3 - Body and Accessories

POWER WINDOW SYSTEM TROUBLESHOOTING QUESTIONNAIRE [POWER WINDOW SYSTEM]

Date :

When did the malfunction first occur ?				
Weather conditions	☐ Fair weather ☐ Cloudy ☐ Rain ☐ Snow ☐ Other ( )		Outside temperature	Approx. F°
Driving conditions	☐ Driving ☐ Stopped (Engine is : ☐ Running ☐ Stopped)			
Duplicate symptom?	☐ YES ☐ NO	Frequency	☐ Always ☐ Sometimes (times/month)	
Road conditions	☐ City ☐ Outer city ☐ Freeway ☐ Other ( ) / ☐ Paved ☐ Dirt road			

*Follow the appropriate diagnostic procedures shown below or perform the basic troubleshooting flow.

☐ Driver-side door glass can be operated manually but cannot be operated automatically.

☐ Driver-side door glass cannot be operated manually or automatically.

☐ Door glass other than driver's door cannot be operated.
(Cannot be operated using each subswitch but can be operated using power window main switch)

☐ Door glass other than driver's door cannot be operated.
(Cannot be operated using power window main switch but can be operated using each subswitch)

☐ Door glass other than driver's door cannot be operated.
(Cannot be operated using power window main switch or each subswitch)

☐ Driver-side door glass reverse opens during auto-close (manual-close) operation (mis reverse open).

Please clarify the position where the driver side front door glass opens automatically. ☐ Completely closed position
☐ Approx. ( )mm lower than completely closed position ☐ Approx. ( )mm upper than the completely open position.

☐ Abnormal sound during door glass opening/closing.

☐ Other (Describe the symptom below if the symptom does not appear in the above list.)

Please describe the conditions when the malfunction occurs.
(Example) : When the outer mirrors are operated

Please describe the conditions under which the system returns to normal operation after malfunctioning.
(Example) : The ignition switch is turned to the ON position after inserting the ignition key into the key cylinder

2014 - Mazda3 - Body and Accessories

BASIC POWER WINDOW SYSTEM INSPECTION [POWER WINDOW SYSTEM]

Manual Open/close Function Inspection

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Operate the power window using the manual open/close function on the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	• Inspect the power window main switch and the wiring harness. • Repair or replace malfunctioning parts.
2	• Set the power cut switch to the UNLOCK (contact point: Close) position. • Operate the power window using the power window subswitch. • Does the power window operate properly?	Yes	Go to the next step.
		No	• Inspect the power window subswitch and the wiring harness. • Repair or replace malfunctioning parts.
3	• Set the power cut switch to the LOCK (contact point: Open) position. • Operate all power windows other than the driver-side. • Does the power window operate properly?	Yes	• Inspect the power cut switch and the wiring harness. • Replace the power window main switch.
		No	• Manual open/close function is normal. • Perform the auto open/close function inspection.

Auto Open/close Function (Driver-side) Inspection

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Operate the power window using the auto open /close function on the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	**If the power window automatically opens during the closing operation:** • Go to **DRIVER-SIDE DOOR GLASS REVERSE OPENS DURING AUTO-CLOSE (MANUAL-CLOSE) OPERATION (MIS REVERSE OPEN) [POWER WINDOW SYSTEM]**. **Others:** • Go to **DRIVER-SIDE DOOR GLASS CAN BE OPERATED MANUALLY BUT CANNOT BE OPERATED AUTOMATICALLY [POWER WINDOW SYSTEM]**.
2	• Operate the power window main switch to the close position while the power window is opening. • Does the power window operation stop?	Yes	Go to the next step.
		No	Replace the power window main switch (power window control unit is malfunctioning.)
3	• Operate the power window main switch to the open position while the power window is closing. • Does the power window operation stop?	Yes	• Auto open/close function is normal. • Perform the IG-OFF timer function inspection.
		No	Replace the power window main switch (power window control unit is malfunctioning.)

IG-OFF Timer Function Inspection

STEP	INSPECTION		ACTION
1	• Close all doors.	Yes	Go to the next step.

	Switch the ignition from ON (engine off or on) to off. • Operate the power window main switch **within 40 s** after switching the ignition to off. • Does the power window operate?	No	• Inspect the door switches and related wiring harness. • If above parts are okay, replace the power window main switch, then go to the next step. • If above parts are incorrect repair or replace malfunction part (s), then go to the next step.
2	• Open any door. • Switch the ignition from ON (engine off or on) to off. • Operate the power window main switch **within 40 s** after switching the ignition to off. • Does the power window operate?	Yes	• Inspect the door switches and related wiring harness. • If above parts are okay, replace the power window main switch, then go to the next step. • If above parts are incorrect repair or replace malfunction part (s), then go to the next step.
		No	Go to the next step.
3	• Close all doors. • Switch the ignition from ON (engine off or on) to off. • Operate the power window main switch **within 60 s** after switching the ignition to off. • Does the power window operate?	Yes	Replace the power window main switch (power window control unit is malfunctioning.)
		No	• IG-OFF timer function operation is normal. • Perform the auto reverse pinch protection function inspection.

Auto Reverse Pinch Protection Function Inspection

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Fully open the driver-side power window. • Set the hammer (thickness: **10 mm**	Yes	Auto reverse pinch protection function is normal.
		No	Go to the next step.

	{0.39 in} or more) as shown below. Then, close the power window. • Verify that the power window opens approx. **200 mm {2.87 in}** after contacting the hammer and the operation stops. • Does auto reverse pinch protection function operate properly?		
2	• Does power window open before contacting the hammer?	Yes	Go to **DRIVER-SIDE DOOR GLASS REVERSE OPENS DURING AUTO-CLOSE (MANUAL-CLOSE) OPERATION (MIS REVERSE OPEN) [POWER WINDOW SYSTEM]**.
		No	Initialize the power window main switch. **NOTE:** • Before initializing the power window main switch, cut off the power supply to the power window main switch for approx. **60 s**. Then, reconnect it again after **approx. 60 s**: ▪ Disconnect the negative battery cable. ▪ Disconnect the power window main switch connector. ▪ Remove the fuse for the power window system.

BASIC POWER WINDOW SYSTEM INSPECTION [POWER WINDOW SYSTEM]

2014 - Mazda3 - Body and Accessories

DRIVER-SIDE DOOR GLASS CAN BE OPERATED MANUALLY BUT CANNOT BE OPERATED AUTOMATICALLY [POWER WINDOW SYSTEM]

Description	**Driver-side door glass cannot be operated automatically but can be operated manually using power window main switch**
Possible Causes	• Power window main switch malfunction • Power window motor malfunction • Open circuit in wiring harness between the following terminals: ▪ Power window main switch terminal 2D and power window motor terminal B ▪ Power window main switch terminal 2B and power window motor terminal A ▪ Power window main switch terminal 2F and power window motor terminal C ▪ Power window main switch terminal 2N and power window motor terminal D • Short to ground in wiring harness between the following terminals: ▪ Power window main switch terminal 2D and power window motor terminal B ▪ Power window main switch terminal 2F and power window motor terminal C ▪ Power window main switch terminal 2N and power window motor terminal D • Short to power supply in wiring harness between the following terminals: ▪ Power window main switch terminal 2D and power window motor terminal B ▪ Power window main switch terminal 2F and power window motor terminal C • Connector poor contact or terminal damage

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IF MALFUNCTION CAUSE IS OPERATION UNDER OPERATION PERMISSION CONDITION** • Perform the power window system initialization procedure. • Does the driver-side door glass operate automatically using the power window main switch?	Yes	System is normal. (Tell the customer about power window system initialization procedure.)
		No	Go to the next step.
2	**POWER WINDOW MAIN SWITCH CONNECTOR INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power window main switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**POWER WINDOW MOTOR CONNECTOR INSPECTION** • Disconnect the power window motor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
4	**POWER WINDOW MOTOR TERMINAL D INSPECTION** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the power window motor terminal D (vehicle wiring harness side). • Is the voltage B+?	Yes	Go to Step 6.
		No	Go to the next step.
5	**POWER WINDOW MAIN SWITCH TERMINAL 2N**	Yes	Refer to the wiring diagram and verify if there is a common connector between power window main

	INSPECTION • Measure the voltage at power window main switch terminal 2N (vehicle wiring harness side). • Is the voltage B+?		switch terminal 2N and power window motor terminal D. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open or short circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit. Go to Step 10.
		No	Replace the power window main switch, then go to Step 10. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)
6	**DETERMINE IF MALFUNCTION CAUSE IS POWER WINDOW MAIN SWITCH INTERNAL GROUND SYSTEM** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect for continuity between power window motor terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to Step 8.
		No	Go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN POWER WINDOW MAIN SWITCH**	Yes	Replace the power window main switch, then go to Step 10. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)

	AND POWER WINDOW MOTOR • Disconnect the power window main switch connector and power window motor connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Power window main switch terminal 2B and power window motor terminal A • Is there continuity?	No	Refer to the wiring diagram and verify if there is a common connector between power window main switch terminal 2B and power window motor terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 10.
8	**POWER WINDOW MAIN SWITCH TERMINALS 2F AND 2D INSPECTION** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the pulse at power window main switch terminals 2F and 2D. (See **Inspection Using an Oscilloscope**.) • Is the pulse normal?	Yes	Replace the power window main switch, then go to Step 10. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)
		No	Go to the next step.
9	**POWER WINDOW MOTOR TERMINALS B AND C INSPECTION** • Measure the pulse at power window motor terminals B and	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Power window main switch terminal 2D and power window

	C. (See **Inspection Using an Oscilloscope**.) • Is the pulse normal?		motor terminal B • Power window main switch terminal 2F and power window motor terminal C **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open or short circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit. Go to the next step.
		No	Replace the power window motor, then go to the next step. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)
10	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Does the power window system operate normally?	Yes	Troubleshooting completed. (Explain the problem to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

Inspection Using an Oscilloscope

- Power window main switch: 2D, 2F (+) ↔ ground (-)
- Power window motor: B, C (+) ↔ ground (-)
- Oscilloscope setting: 2 V/DIV (Y), 1 ms/DIV (X), DC range

2014 - Mazda3 - Body and Accessories

DRIVER-SIDE DOOR GLASS CANNOT BE OPERATED MANUALLY OR AUTOMATICALLY [POWER WINDOW SYSTEM]

Description	**Driver-side door glass cannot be operated manually or automatically using power window main switch**

Possible Causes	• Power window main switch malfunction
	• Power window motor malfunction
	• Malfunction in power window main switch power supply circuit
	  ▪ Short to ground in wiring harness between P.WINDOW1 30A fuse and power window main switch terminal 1K
	  ▪ Short to ground in wiring harness between P.WINDOW2 25A fuse and power window main switch terminal 1L
	  ▪ P.WINDOW1 30A fuse malfunction
	  ▪ P.WINDOW2 25A fuse malfunction
	  ▪ Open circuit in wiring harness between P.WINDOW1 30A fuse and power window main switch terminal 1K
	  ▪ Open circuit in wiring harness between P.WINDOW2 25A fuse and power window main switch terminal 1L
	• Malfunction in wiring harness between power window main switch terminals and power window motor terminals
	  ▪ Open circuit in wiring harness between power window main switch terminal 1J and power window motor terminal E
	  ▪ Open circuit in wiring harness between power window main switch terminal 1H and power window motor terminal F
	  ▪ Short to ground in wiring harness between power window main switch terminal 1J and power window motor terminal E
	  ▪ Short to ground in wiring harness between power window main switch terminal 1H and power window motor terminal F
	• Open circuit in wiring harness between power window main switch terminal 2A and body ground
	• Connector poor contact or terminal damage

Diagnostic Procedure

Step	Inspection		Action
1	**POWER WINDOW MAIN SWITCH CONNECTOR INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power window main switch connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**POWER WINDOW MOTOR CONNECTOR INSPECTION** • Disconnect the power window motor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**VERIFY IF MALFUNCTION CAUSE IS POWER WINDOW MAIN SWITCH POWER SUPPLY CIRCUIT** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Power window main switch terminal 1K ▪ Power window main switch terminal 1L • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the P.WINDOW1 30A fuse and P.WINDOW2 25A fuse. • If any fuse is damaged: ▪ Replace the fuse. • If the fuses are normal: **Refer to the wiring diagram and verify if there is a common connector between the following terminals.** ▪ P.WINDOW1 30A fuse and power window main switch terminal 1K ▪ P.WINDOW2 25A fuse and power window main switch terminal 1L **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or

			replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 7.
4	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN POWER WINDOW MAIN SWITCH AND BODY GROUND** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power window main switch connector. • Inspect for continuity between power window main switch terminal 2A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between power window main switch terminal 2A and body ground. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. Go to Step 7.
5	**POWER WINDOW MOTOR TERMINALS E AND F INSPECTION** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at power window motor terminals E and F while operating the power window main switch. ▪ Terminal E during close operation ▪ Terminal F during open operation	Yes	Replace the power window motor, then go to Step 7. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.

	• Is the voltage B+?		
6	**POWER WINDOW MAIN SWITCH TERMINALS 1J AND 1H INSPECTION** • Measure the voltage at power window main switch terminals 1J and 1H. (See **POWER WINDOW MAIN SWITCH INSPECTION**.) • Is the power window main switch normal?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Power window main switch terminal 1J and power window motor terminal E • Power window main switch terminal 1H and power window motor terminal F **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open or short circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit. Go to the next step.
		No	Replace the power window main switch, then go to the next step. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)
7	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Does the power window system operate normally?	Yes	Troubleshooting completed. (Explain the problem to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

2014 - Mazda3 - Body and Accessories

DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING EACH SUBSWITCH BUT CAN BE OPERATED USING POWER WINDOW MAIN SWITCH) [POWER WINDOW SYSTEM]

Description	**Door glass other than driver's door cannot be operated using subswitches but can be operated using power window main switch**

Possible Causes	• Power window subswitch malfunction
	• Malfunction in power window subswitch power supply circuit
	  ▪ Short to ground in wiring harness between P.WINDOW1 30A fuse and power window subswitch terminal C
	  ▪ Open circuit in wiring harness between P.WINDOW1 30A fuse and power window subswitch terminal C
	• Connector poor contact or terminal damage
	• Customer mis-operation or misunderstanding

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IF MALFUNCTION CAUSE IS OPERATION UNDER OPERATION PERMISSION CONDITION** • Turn the power-cut switch off (contact point: closed) and perform open/close operation. • Does the power window system operate normally?	Yes	System is normal. (Tell the customer about the power-cut switch.)
		No	Go to the next step.
2	**POWER WINDOW SUBSWITCH CONNECTOR INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power window subswitch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**VERIFY IF MALFUNCTION CAUSE IS POWER WINDOW SUBSWITCH POWER SUPPLY CIRCUIT** • Connect the power window subswitch connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at power window subswitch terminal C (vehicle wiring harness side). • Is the voltage B+?	Yes	Replace the power window subswitch, then go to the next step. (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)
		No	Inspect the P.WINDOW1 30A fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify if there is a common connector between P.WINDOW1 30A fuse and power window subswitch terminal C. **If there is a common connector:**

			• Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for open or short circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit. Go to the next step.
4	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Does the power window system operate normally?	Yes	Troubleshooting completed. (Explain the problem to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

2014 - Mazda3 - Body and Accessories

DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING POWER WINDOW MAIN SWITCH BUT CAN BE OPERATED USING EACH SUBSWITCH) [POWER WINDOW SYSTEM]

Description	Door glass other than driver's door can be operated using subswitches but cannot be operated using power window main switch
Possible Causes	• Power window main switch malfunction • Short to ground in wiring harness between the following terminals: ▪ Power window main switch terminal 1D and power window subswitch (RF) terminal E ▪ Power window main switch terminal 1B and power window subswitch (RF) terminal B ▪ Power window main switch terminal 1I and power window subswitch (LR) terminal E ▪ Power window main switch terminal 1G and power window subswitch (LR) terminal B ▪ Power window main switch terminal 1C and power window subswitch (RR) terminal E ▪ Power window main switch terminal 1A and power window subswitch (RR) terminal B • Open circuit in wiring harness between the following terminals: ▪ Power window main switch terminal 1D and power window subswitch (RF) terminal E ▪ Power window main switch terminal 1B and power window subswitch (RF) terminal B ▪ Power window main switch terminal 1I and power window subswitch (LR) terminal E ▪ Power window main switch terminal 1G and power window subswitch (LR) terminal B ▪ Power window main switch terminal 1C and power window subswitch (RR) terminal E ▪ Power window main switch terminal 1A and power window subswitch (RR) terminal B

	• Connector poor contact or terminal damage

Diagnostic Procedure

Step	Inspection		Action
1	**POWER WINDOW MAIN SWITCH CONNECTOR INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power window main switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**POWER WINDOW SUBSWITCH CONNECTOR INSPECTION** • Disconnect the power window subswitch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**POWER WINDOW MAIN SWITCH INSPECTION** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the following power window main switch terminals (vehicle wiring harness). (See **POWER WINDOW MAIN SWITCH INSPECTION**.) ▪ Terminals 1B	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Power window main switch terminal 1D and power window subswitch (RF) terminal E • Power window main switch terminal 1B and power window subswitch (RF) terminal B • Power window main switch terminal 1I and power window subswitch (LR) terminal E • Power window main switch terminal 1G and power window subswitch (LR) terminal B • Power window main switch terminal 1C and power window subswitch (RR) terminal E • Power window main switch

	and 1D if door glass (RF) does not operate ▪ Terminals 1G and 1I if door glass (LR) does not operate ▪ Terminals 1A and 1C if door glass (RR) does not operate • Is the power window main switch normal?		terminal 1A and power window subswitch (RR) terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open or short circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit. Go to the next step.
		No	Replace the power window main switch, then go to the next step. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)
4	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Does the power window system operate normally?	Yes	Troubleshooting completed. (Explain the problem to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

2014 - Mazda3 - Body and Accessories

DOOR GLASS OTHER THAN DRIVER'S DOOR CANNOT BE OPERATED (CANNOT BE OPERATED USING POWER WINDOW MAIN SWITCH OR EACH SUBSWITCH) [POWER WINDOW SYSTEM]

Description	**Door glass other than driver's door cannot be operated using power window main switch or power window subswitch**

Possible Causes	• Power window subswitch malfunction
	• Power window motor malfunction
	• Short to ground in wiring harness between the following terminals:
	  ▪ Power window subswitch terminal A and power window motor terminal F
	  ▪ Power window subswitch terminal D and power window motor terminal E
	• Open circuit in wiring harness between the following terminals:
	  ▪ Power window subswitch terminal A and power window motor terminal F
	  ▪ Power window subswitch terminal D and power window motor terminal E
	• Connector poor contact or terminal damage

Diagnostic Procedure

Step	Inspection		Action
1	**POWER WINDOW MOTOR CONNECTOR INSPECTION** • Switch the ignition off. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the power window motor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage,	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	deformation, corrosion, or disconnection. • Is the connector normal?		
2	**POWER WINDOW SUBSWITCH CONNECTOR INSPECTION** • Disconnect the power window subswitch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**POWER WINDOW MOTOR TERMINALS E AND F INSPECTION** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at power window motor terminals E and F while operating the power window subswitch. ▪ Terminal E during close operation ▪ Terminal F during open operation • Is the voltage B+?	Yes	Replace the power window motor, then go to Step 5. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.) (See **REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)
		No	Go to the next step.
4	**POWER WINDOW SUBSWITCH INSPECTION** • Inspect the power window subswitch.	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • Power window subswitch terminal A and power window motor terminal F

	(See **POWER WINDOW SUBSWITCH INSPECTION**.) • Is the power window subswitch normal?		• Power window subswitch terminal D and power window motor terminal E **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open or short circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit. Go to the next step.
		No	Replace the power window subswitch, then go to the next step. (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)
5	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Does the power window system operate normally?	Yes	Troubleshooting completed. (Explain the problem to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

2014 - Mazda3 - Body and Accessories

DRIVER-SIDE DOOR GLASS REVERSE OPENS DURING AUTO-CLOSE (MANUAL-CLOSE) OPERATION (MIS REVERSE OPEN) [POWER WINDOW SYSTEM]

NOTE:

- Perform the following inspection for the power window system component parts of windows where the door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

Description	**Driver-side door glass reverse opens during auto-close**

Possible Causes	• Extreme change in the sliding resistance of the glass while the door glass is closing.
	  ▪ Improper installation of the acrylic door visor.
	  ▪ Power window motor malfunction.
	  ▪ Object caught between the glass run channel and the door glass.
	  ▪ Insufficient tightening of the door glass to the carrier plate.
	  ▪ Glass run channel malfunction.
	  ▪ Glass guide related malfunction.
	NOTE:
	• The auto-reverse pinch protection function is a mechanism that automatically reverses (opens) the door glass while it is closing when the power window main switch detects the signal from the power window motor indicating that an object is obstructing the door glass movement.
	• The auto-reverse pinch protection function may operate if the sliding resistance of the door glass increases causing the closing speed to decrease.
	• If the door glass closing speed has changed, concentrate the inspection on the following locations: (Slip occurrence)
	  ▪ If the door glass is slipping forward, inspect the front side of the glass guide or glass run channel.
	  ▪ If the door glass is slipping rearward, inspect the rear side of the glass guide or glass run channel.

Diagnostic procedure

STEP	INSPECTION		ACTION

1	• Inspect malfunction symptom.
	• Does the malfunction symptom occur only under the following special conditions?:
	  ▪ Driving over railroad tracks.
	  ▪ Driving on bumpy roads.
	  ▪ Opening/closing the door.
		Yes	The system is normal.
			(Explain to the customer that this does not indicate a malfunction because the system is designed to reverse the door glass while it is closing if it receives vibration when the vehicle is crossing railroad tracks, driving on a bumpy road, or when the door is opened/closed.)

		No	Go to the next step.

2	• Inspect acrylic door visor installation condition. • Is the acrylic door visor normal?	Yes	Go to the next step.
		No	Install the side visor properly, then go to the next step.
3	• Inspect door glass closing speed. • Affix tape to the rear edge of the door glass as shown in the figure for placing marks. (to facilitate seeing the door glass movement) • Start the engine and idle it (to ensure a stabilized operational voltage). • Does the door glass hesitate only once while its closing?	Yes	Mark the point where the door glass closing speed changed, then go to Step 5.
		No	Go to the next step.
4	• Reinspect door glass closing speed. • Does the door glass hesitate periodically while it is closing?	Yes	Replace the power window motor, then go to Step 8. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.) (See **REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)
		No	Go to Step 8.
5	• Inspect glass run channel and door glass sliding surface. • Visually inspect the sliding surface of the glass run channel and door glass. • Is there dirt, foreign matter, or roughness on the sliding surface of the glass run channel and door glass?	Yes	**Dirt on the sliding surface of the glass run channel and door glass:** • Clean the glass run channel and door glass. **Object is caught between glass run channel and door glass:** • Remove the object. **Roughness on the sliding surface (rubber surface):** • Replace the glass run channel. After performing one of the above actions, reinspect. If the malfunction is not corrected, go to Step 3.
		No	Go to the next step.
6	• Inspect tightening of door glass to carrier plate. • Is it normal?	Yes	Go to the next step.
		No	After tightening correctly, reinspect. If the malfunction is not corrected, go to Step 3.
7	• Inspect condition of glass run channel and door glass. • Is it normal?	Yes	Go to the next step.
		No	Assemble the glass run channel and door glass securely, and reinspect. If the malfunction is not corrected, go to Step 3.
8	• Inspect door glass closing speed. • Does the door glass hesitate at any location?	Yes	Repeat the inspection from Step 3.
		No	Troubleshooting completed.

DRIVER-SIDE DOOR GLASS REVERSE OPENS DURING AUTO-CLOSE (MANUAL-CLOSE) OPERATION (MIS REVERSE OPEN) [POWER WINDOW SYSTEM]

2014 - Mazda3 - Body and Accessories

ABNORMAL SOUND DURING DOOR GLASS OPENING/CLOSING [POWER WINDOW SYSTEM]

Description	**Abnormal sound during door glass opening/closing**

Possible Causes	• Installation screw is loose between the door glass and carrier plate.
	• Deformity in the power window regulator plastic part due to use.
	  ▪ Scratching, wear marks to the power window regulator resin part due to twisting of the cable.
	  ▪ Gear deformity in the power window motor.
	NOTE:
	• Identify the location of the noise using a stethoscope or similar device.

Diagnostic procedure

Noise type	Time of occurrence	Possible cause	Location of noise	Action
Clanking noise	Door glass begins to move	Insufficiently tightened installation screw between the door glass and carrier plate.	Between door glass lower edge and carrier plate.	Securely tighten the installation screw.
Groaning noise (Sound increases due to use)	While door glass is operating	Vibration caused by wear on the resin part from cable twisting due to use of the power window regulator. **NOTE:** • Noise does not occur if a roller is equipped to power window regulator resin part.	Power window regulator	Replace the power window regulator (See **FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION**.) (See **REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION**.)
Whining noise Clicking noise		Gear inside power window motor is deformed due to use.	Gear in power window motor	Replace the power window motor (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

(Periodic noise)				(See **REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

FOREWORD [INSTRUMENT CLUSTER]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

Troubleshooting item
FUEL GAUGE READING IS NOT CORRECT (See **FUEL GAUGE READING IS NOT CORRECT [INSTRUMENT CLUSTER]**.)
LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY (See **LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER]**.)
ACTIVE DRIVING DISPLAY DOES NOT DISPLAY (See **ACTIVE DRIVING DISPLAY DOES NOT DISPLAY [INSTRUMENT CLUSTER]**.)
ACTIVE DRIVING DISPLAY DOES NOT OPERATE (See **ACTIVE DRIVING DISPLAY DOES NOT OPERATE [INSTRUMENT CLUSTER]**.)
ACTIVE DRIVING DISPLAY DOES NOT DIM AUTOMATICALLY (See **ACTIVE DRIVING DISPLAY DOES NOT DIM AUTOMATICALLY [INSTRUMENT CLUSTER]**.)

2014 - Mazda3 - Body and Accessories

FUEL GAUGE READING IS NOT CORRECT [INSTRUMENT CLUSTER]

Possible cause

- Instrument cluster malfunction
- Rear body control module (RBCM) malfunction
- Fuel gauge sender unit malfunction
- Open or short circuit in wiring harness between fuel gauge sensor unit and rear body control module (RBCM)

Diagnostic Procedure

Step	Inspection	Action	
1	**PERFORM CAN MALFUNCTION DIAGNOSIS AND DTC INSPECTION** • Perform the CAN malfunction diagnosis according to the recommendation of **FOREWORD [INSTRUMENT CLUSTER]** malfunction diagnosis, and if there is no CAN malfunction, perform inspection for DTCs. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the DTC displayed?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**INSPECTION OF INSTRUMENT CLUSTER** • Perform inspection of the fuel gauge/LCD display referring to the instrument cluster inspection. (See **INSTRUMENT CLUSTER INSPECTION**.)	Yes	Go to the next step.
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

	• Is the display normal?		
3	**DETERMINE IF MALFUNCTION CAUSE IS FUEL GAUGE SENDER** • Display the following rear body control module (RBCM) PIDs using the M-MDS. ▪ FUEL_SEN_M • Verify the voltage in the display monitor while shaking the vehicle. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 5.
4	**DETERMINE IF MALFUNCTION CAUSE IS REAR BODY CONTROL MODULE (RBCM)** • Display the following instrument cluster PIDs using the M-MDS. ▪ FUEL_SEN_M • Verify the resistance in the display monitor while shaking the vehicle. • Does the resistance change?	Yes	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Replace the rear body control module (RBCM). (See **REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION**.)
5	**INSPECT FUEL GAUGE SENDER UNIT** • Switch the ignition off. • Inspect the fuel gauge sender unit. (See **FUEL GAUGE SENDER UNIT INSPECTION**.) • Is the fuel gauge sender unit normal?	Yes	Refer to the wiring diagram and verify whether or not there is a common connector between the fuel gauge sender unit and the rear body control module (RBCM). **If there is a common connector:** • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the mid-wiring harness for a short to power supply. • Repair or replace the wiring harness which has a malfunction. **If there is no common connector:** • Repair or replace the wiring harness which has a malfunction.

		No	Replace the fuel gauge sender unit. (See **FUEL GAUGE SENDER UNIT REMOVAL / INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER]

Possible cause

- ECT sensor malfunction
- Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Action	
1	**PERFORM CAN MALFUNCTION DIAGNOSIS AND DTC INSPECTION** • Perform the CAN malfunction diagnosis according to the recommendation of **FOREWORD [INSTRUMENT CLUSTER]** malfunction diagnosis, and if there is no CAN malfunction, perform inspection for DTCs. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) • Is the DTC displayed?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.)
		No	Go to the next step.
2	**VERIFY THE MALFUNCTION SYMPTOM** • Cool down the engine. • When the ignition is switched ON, does the engine coolant temperature warning light illuminate or flash?	Yes	Go to Step 4.
		No	Go to the next step.
3	**VERIFY ILLUMINATION OF LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT** • Start the engine. • Monitor the PID ECT using the M-MDS.	Yes	Go to the next step.
		No	The system is operating normally.

	Verify that the low engine coolant temperature indicator light illuminates when the ECT monitor value is **55 °C {131 °F} or more**. • Does the low engine coolant temperature indicator light illuminate?		
4	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the ECT sensor normal?	Yes	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Replace the ECT sensor. (See **ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

ACTIVE DRIVING DISPLAY DOES NOT DISPLAY [INSTRUMENT CLUSTER]

NOTE:

- If there is any vehicle malfunction complaint lodged by a customer, perform FOREWORD [INSTRUMENT CLUSTER] malfunction diagnosis according to the troubleshooting procedure. (See **FOREWORD [INSTRUMENT CLUSTER]**.)

Possible Cause

- Active driving display malfunction
- Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Action	
1	**VISUALLY INSPECT ACTIVE DRIVING DISPLAY** • Switch the ignition ON (engine on). • Visually inspect the active driving display for damage, dust, or dirt. • Is there damage, foreign matter penetration, or dirt on the active driving display?	Yes	Go to the next step.
		No	**If the active driving display is damaged:** • Replace the active driving display. (See **ACTIVE DRIVING DISPLAY REMOVAL/INSTALLATION**.) **If there is foreign matter penetration or dirt on the active driving display:** • Remove foreign matter or dirt on the active driving display.
2	**INSPECT ACTIVE DRIVING DISPLAY** • Inspect the active driving display.	Yes	Go to the next step.
		No	Replace the active driving display. (See **ACTIVE DRIVING DISPLAY REMOVAL/INSTALLATION**.)

	(See **ACTIVE DRIVING DISPLAY INSPECTION**.) • Is the active driving display normal?		
3	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Is the active driving display operating normally?	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

ACTIVE DRIVING DISPLAY DOES NOT OPERATE [INSTRUMENT CLUSTER]

NOTE:

- If there is any vehicle malfunction complaint lodged by a customer, perform FOREWORD [INSTRUMENT CLUSTER] malfunction diagnosis according to the troubleshooting procedure. (See **FOREWORD [INSTRUMENT CLUSTER]**.)

Possible Cause

- Active driving display not set
- Active driving display malfunction
- Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Action	
1	**VERIFY ACTIVE DRIVING DISPLAY SETTING** • Verify the "Active Driving Display" setting for the active driving display using the center display. • Is the setting ON?	Yes	Go to the next step.
		No	Switch the setting to ON.
2	**VISUALLY INSPECT COMBINER** • Visually inspect around the combiner bearing for foreign matter penetration or dirt. • Is there foreign matter or dirt around the combiner bearing?	Yes	Go to the next step.
		No	Remove foreign matter or dirt around the combiner bearing.
3	**VISUALLY INSPECT ACTIVE DRIVING DISPLAY** • Visually inspect the active driving display	Yes	Go to the next step.
		No	Replace the active driving display.

	for damage. • Is the active driving display normal?		(See **ACTIVE DRIVING DISPLAY REMOVAL/INSTALLATION**.)
4	**DETERMINE IF MALFUNCTION CAUSE IS ACTIVE DRIVING DISPLAY** • Disconnect the negative battery cable and connect the negative battery cable after approx. 1 min. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Is the active driving display operating normally?	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Go to the next step.
5	**INSPECT ACTIVE DRIVING DISPLAY** • Inspect the active driving display. (See **ACTIVE DRIVING DISPLAY INSPECTION**.) • Is the active driving display operating normally?	Yes	Go to the next step.
		No	Replace the active driving display. (See **ACTIVE DRIVING DISPLAY REMOVAL/INSTALLATION**.)
6	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Is the active driving display operating normally?	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

ACTIVE DRIVING DISPLAY DOES NOT DIM AUTOMATICALLY [INSTRUMENT CLUSTER]

NOTE:

- If there is any vehicle malfunction complaint lodged by a customer, perform FOREWORD [INSTRUMENT CLUSTER] malfunction diagnosis according to the troubleshooting procedure. (See **FOREWORD [INSTRUMENT CLUSTER]**.)

Possible Cause

- Active driving display not set
- Active driving display malfunction

Diagnostic Procedure

Step	Inspection	Action	
1	**VERIFY ACTIVE DRIVING DISPLAY SETTING** • Verify the "Brightness Control" setting for the active driving display using the center display. • The "Brightness Control" is set automatically.	Yes	Go to the next step.
		No	Switch the setting to automatic.
2	**VISUALLY INSPECT ACTIVE DRIVING DISPLAY** • Switch the ignition ON (engine on). • Visually inspect the display device or the reflection part of the active driving display for dust or dirt. • Is there any dust or dirt on the active driving display?	Yes	Go to the next step.
		No	Remove any dust or dirt on the active driving display.

3	**VISUALLY INSPECT PHOTO SENSOR** • Switch the ignition off. • Visually inspect the photo sensor part for dust or dirt. • Is there any dust or dirt on the photo sensor part?	Yes	Go to the next step.
		No	Remove any dust or dirt on the photo sensor part.
4	**DETERMINE IF MALFUNCTION CAUSE IS PHOTO SENSOR** • Shine light on the photo sensor part of the active driving display and inspect. • Does the active driving display dim automatically?	Yes	Go to the next step.
		No	Replace the active driving display. (See **ACTIVE DRIVING DISPLAY REMOVAL / INSTALLATION**.)
5	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Is the active driving display operating normally?	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

2014 - Mazda3 - Body and Accessories

FOREWORD [BLIND SPOT MONITORING (BSM)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

  - When the BSM OFF indicator light is flashing (BSM malfunction is detected by its on-board diagnostic function), perform the On-board Diagnostic Inspection. To inspect the DTC, follow the DTC Inspection steps. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)
  - Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To inspect the DTC, follow the DTC Inspection steps. (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)
  - The Blind Spot Monitoring (BSM) System is a warning device which monitors the vehicle's rear on both sides for approaching vehicles using radar emitted from the BSM control module the radar reflects off a vehicle that enters a warning zone and is then transmitted back to the BSM control module.

WARNING:

- The BSM is not a substitute for the driver in confirming safety. The driver is responsible for assuring the safety of lane changes and other maneuvers. Do not rely completely on the BSM and always confirm the safety around the vehicle visually before changing lanes.
- Dirt, ice or snow adhering to the areas near the BSM control module could obstruct the radar and prevent the system from adequately or completely detecting a target vehicle. Always pay attention to the direction in which the vehicle is traveling and the vehicle’s surroundings.
- Do not block the area around the BSM control module on the rear bumper with foreign matter (such as bumper stickers) so as not to affect the BSM’s functions.
- Always have the BSM control module inspected at an Authorized Mazda Dealer if any shock or impact has occurred in

the rear bumper area, even that from a minor accident. Otherwise, the BSM may not operate correctly.

- The BSM may not operate normally under the following conditions:
    - Dirt, ice or snow is adhering to the rear bumper surface.
    - The vehicle is driven in heavy rain or snowfall, or under conditions where water on the road is sprayed by the vehicle.
    - The vehicle accelerates from a standing-start with a target vehicle alongside.
    - A target vehicle moves laterally from a lane two lanes over to the adjacent lane.
    - The difference in vehicle speed between the vehicle and a target vehicle is higher with the target vehicle passing through the alert area in a very short period.
    - On a steep incline, or if there is a difference in height between lanes.
- Although the system may detect objects on the road side such as parked vehicles or guardrails and operate the warning light/beep, it does not indicate a malfunction.
- The BSM control module may not detect all types of vehicles. In particular, detection of the following types of vehicles may not occur:
    - A vehicle driving at a low speed
    - Small vehicles such as motorcycles
    - Vehicles with body shapes that may not reflect radar such as unloaded trailers
    - Vehicles with lower body height
- On a road with a narrower lane width, the system could detect vehicles on a lane next to the adjacent lane and cause the warning light/beep to operate. On a road with a wider lane width, the system may not detect vehicles on the adjacent lane and may not operate the warning light/beep.

2014 - Mazda3 - Body and Accessories

TROUBLESHOOTING INDEX [BLIND SPOT MONITORING (BSM)]

Troubleshooting item	Description
BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION IS SWITCHED TO ON (See **BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION IS SWITCHED TO ON [BLIND SPOT MONITORING (BSM)]**.)	• The BSM OFF indicator light does not illuminate when the ignition is switched to ON. • The BSM control module does not communicate with the M-MDS.
BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHILE BSM SYSTEM IS OFF (See **BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHILE BSM SYSTEM IS OFF [BLIND SPOT MONITORING (BSM)]**.)	• The BSM OFF indicator light does not illuminate after the BSM OFF switch turns off the system when the ignition is switched to ON.
BSM OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY (See **BSM OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [BLIND SPOT MONITORING (BSM)]**.)	• The BSM OFF indicator light illuminates for 4 s or more without the BSM OFF switch turning off the system when the ignition is switched to ON.
BSM INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER LIGHT-ILLUMINATION CONDITIONS (See **BSM INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]**.)	• The BSM indicator light illuminates, but the conditions to illuminate the BSM indicator light are not satisfied (vehicle speed **10 km/h {6.2 mph} or more**, turn signals off, and vehicle in warning zone).
BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS (See **BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]**.)	• The BSM indicator light does not illuminate despite satisfying the conditions to illuminate the BSM indicator light (vehicle speed **10 km/h {6.2 mph} or more**, turn signals off, and vehicle in warning zone).
BSM INDICATOR LIGHT FLASHES WHILE NOT	• The BSM indicator light flashes despite

UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (NO LIGHT SWITCH OPERATION (TURN SIGNAL SWITCH)) (See **BSM INDICATOR LIGHT FLASHES WHILE NOT UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (NO LIGHT SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]**.)	not satisfying the BSM indicator light flashing conditions (vehicle speed **10 km/h {6.2 mph} or more**, turn signal on, and vehicle in warning zone). • The BSM indicator light flashes, but the turn signals are off.
BSM INDICATOR LIGHT DOES NOT FLASH WHILE UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (WITH LIGHT SWITCH OPERATION (TURN SIGNAL SWITCH)) (See **BSM INDICATOR LIGHT DOES NOT FLASH WHILE UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (WITH LIGHT SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]**.)	• The BSM indicator light does not flash or illuminate continuously, but the conditions to flash the BSM indicator light are satisfied (vehicle speed **10 km/h {6.2 mph} or more**, turn signal on, and vehicle in warning zone). • The BSM indicator light does not flash or illuminate continuously, but turn signals are on.
THE BSM INDICATOR LIGHT DOES NOT FLASH OR ILLUMINATE CONTINUOUSLY, BUT A TURN SIGNAL IS ON (See **THE BSM INDICATOR LIGHT DOES NOT FLASH OR ILLUMINATE CONTINUOUSLY, BUT A TURN SIGNAL IS ON [BLIND SPOT MONITORING (BSM)]**.)	• The BSM warning alarm sounds but BSM indicator light does not flash. • The BSM warning alarm is triggered on the side opposite to the direction in which the turn signal is operated.
BSM WARNING ALARM DOES NOT SOUND WHILE BSM INDICATOR LIGHT FLASHES (See **BSM WARNING ALARM DOES NOT SOUND WHILE BSM INDICATOR LIGHT FLASHES [BLIND SPOT MONITORING (BSM)]**.)	• The BSM control module recognizes that a vehicle is in the warning zone on the side in which the turn signal is operated, but the BSM warning alarm does not sound despite the BSM indicator light flashing.

2014 - Mazda3 - Body and Accessories

BLIND SPOT MONITORING (BSM) WIRING DIAGRAM [BLIND SPOT MONITORING (BSM)]

BLIND SPOT MONITORING (BSM) WIRING DIAGRAM [BLIND SPOT MONITORING (BSM)]

2014 - Mazda3 - Body and Accessories

BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION IS SWITCHED TO ON [BLIND SPOT MONITORING (BSM)]

Description	**BSM OFF indicator light does not illuminate when the ignition is switched to ON**
	• BSM OFF indicator light does not illuminate when the ignition is switched to ON. • The BSM control module does not communicate with the M-MDS.

Possible Causes	• BSM control module (LH) does not initiate
	  ▪ Open or short circuit in BSM control module (LH) power supply circuit (open or short to power supply circuit in wiring harness between C/U IG1 15A fuse and BSM control module (LH) terminal I)
	  ▪ Open circuit in BSM control module (LH) ground circuit (open circuit in wiring harness between BSM control module (LH) and ground, poor contact at ground point)
	  ▪ BSM control module (LH) malfunction
	• Instrument cluster does not illuminate BSM OFF indicator light
	  ▪ Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT BSM CONTROL MODULE (LH) POWER SUPPLY VOLTAGE** • Switch the ignition ON (engine off or on). • Measure the voltage at BSM control module (LH) terminal I.	Yes	Go to the next step.

		No	Inspect the C/U IG1 15A fuse.
			• If the fuse is damaged:
			  ▪ Replace the fuse.
			• If the fuse is normal:
			  ▪ Refer to the wiring diagram and verify if there is a common connector between

	• Is the voltage B+?		C/U IG1 15A fuse and BSM control module (LH) terminal I. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for open or short circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open or short circuit. Go to the next step.
2	**INSPECT BSM CONTROL MODULE (LH) GROUND CIRCUIT** • Switch the ignition off. • Verify that there is continuity between the BSM control module (LH) terminal J and ground. • Is there	Yes	Go to the next step.
		No	Inspect and repair the ground point. Repair or replace for an open circuit between the BSM control module (LH) and ground.

	continuity?		
3	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR BSM CONTROL MODULE (LH)** • Turn off the BSM OFF indicator light using the M-MDS instrument cluster active command modes WL+IL. (See **ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]**.) • Does the BSM OFF indicator light turn on according to the active command modes?	Yes	Replace the BSM control module (LH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHILE BSM SYSTEM IS OFF [BLIND SPOT MONITORING (BSM)]

Description	**BSM OFF indicator light does not illuminate while BSM system is off**
	• BSM OFF indicator light does not illuminate even though BSM OFF switch turns off the system after the ignition is switched ON.
Possible Causes	• Malfunction in BSM OFF switch related parts ▪ BSM OFF switch malfunction (stuck at off) • Instrument cluster does not illuminate BSM OFF indicator light ▪ BSM control module (LH) malfunction ▪ Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT BSM OFF SWITCH** • Inspect the BSM OFF switch. (See **BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION**.) • Is the BSM OFF switch normal?	Yes	Go to the next step.
		No	Replace the BSM OFF switch. (See **BLIND SPOT MONITORING (BSM) OFF SWITCH REMOVAL/INSTALLATION**.)
2	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR BSM CONTROL MODULE (LH)** • Turn on the BSM OFF indicator light using the M-MDS instrument cluster active command modes WL+IL. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Does the BSM OFF indicator light illuminate according to the active	Yes	Replace the BSM control module (LH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

	command modes?		

2014 - Mazda3 - Body and Accessories

BSM OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [BLIND SPOT MONITORING (BSM)]

Description	**BSM OFF indicator light illuminates continuously**
	• The BSM OFF indicator light illuminates for 4 s or more without the BSM OFF switch turning off after the ignition is switched ON.
Possible Causes	• Malfunction in BSM OFF switch related parts ▪ BSM OFF switch malfunction (stuck at on) • Instrument cluster does not turn off BSM indicator light ▪ BSM control module (LH) malfunction ▪ Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT BSM OFF SWITCH** • Inspect the BSM OFF switch. (See **BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION**.) • Is the BSM OFF switch normal?	Yes	Go to the next step.
		No	Replace the BSM OFF switch. (See **BLIND SPOT MONITORING (BSM) OFF SWITCH REMOVAL/INSTALLATION**.)
2	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR BSM CONTROL MODULE (LH)** • Turn off the BSM OFF indicator light using the M-MDS instrument cluster active command modes WL+IL. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Does the BSM OFF indicator light turn off according to the active command modes?	Yes	Replace the BSM control module (LH). (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

BSM OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [BLIND SPOT MONITORING (BSM)]

2014 - Mazda3 - Body and Accessories

BSM INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]

Description	**BSM indicator light illuminates while not under light-illumination conditions**
	• The BSM indicator light illuminates, but the conditions to illuminate the BSM indicator light are not satisfied (vehicle speed **10 km/h {6.2 mph} or more**, turn signals off, and vehicle in warning zone).
Possible Causes	• The BSM control module recognizes a vehicle as being inside the warning zone when it is actually outside of it. ▪ Radar (BSM control module integrated) is emitted outside of warning zone (deviates from warning zone) • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts) • Malfunction in steering angle signal (instrument cluster or EPS control module malfunction) • Problem with rear bumper such as dirt on radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. ▪ After-market electrical parts interfere with BSM system • Malfunction in BSM indicator light related parts ▪ Short to power supply circuit in wiring harness between BSM control module and BSM indicator light

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT IF MALFUNCTION IS IN INPUT SIGNAL OR BSM CONTROL MODULE** • Monitor the following PIDs on the	Yes	Go to Step 3.
		No	Go to the next step.

	suspected side of the BSM control module using the M-MDS. (See **PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)]**.) ▪ SWA_POS • Are the monitoring values normal?		
2	**INSPECT STEERING ANGLE SIGNAL** • Monitor the PID STR_ANG for the EPS control module using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the monitoring value normal?	Yes	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Replace the EPS control module. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
3	**INSPECT REAR BUMPER** • Inspect the rear bumper at the BSM installation area for the following: ▪ Installation condition ▪ Sticker adhesion ▪ Excessive dirt ▪ Repairs using putty • Is the rear bumper condition normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts, or replace the rear bumper. (See **REAR BUMPER REMOVAL/INSTALLATION**.)
4	**VERIFY THE CONDITION OF THE BSM CONTROL MODULE** • Remove the rear bumper. (See **REAR BUMPER REMOVAL/INSTALLATION**.) • Inspect the BSM control module for the following: ▪ Looseness ▪ Damage or deformity to the bracket ▪ Distortion at vehicle installation surface • Is the BSM control module installation condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
5	**VERIFY IF CAUSE OF TROUBLE IS IN**	Yes	Go to the next step.

	AFTER-MARKET ELECTRICAL PRODUCT OR ELSEWHERE • Remove the after-market electrical product. • Verify that the malfunction symptom recurs as stated by the customer. • Does the malfunction symptom recur?		
		No	The after-market electrical product is causing the malfunction.
6	**INSPECT BSM CONTROL MODULE (RADAR)** • Perform the BSM radar test. (See **BLIND SPOT MONITORING (BSM) RADAR TEST**.) • Is “TEST PASSED” displayed?	Yes	Temporary malfunction with the radar echo-back. If the same symptom recurs repeatedly, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Repair or replace malfunctioning part according to inspection result. (See **BLIND SPOT MONITORING (BSM) RADAR TEST**.)

2014 - Mazda3 - Body and Accessories

BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]

Description	**BSM indicator light does not illuminate while under BSM indicator light-illumination conditions**
	• The BSM indicator light does not illuminate despite satisfying the conditions to illuminate the BSM indicator light (vehicle speed **10 km/h {6.2 mph} or more**, turn signals off, and vehicle in warning zone).

Possible Causes	• The BSM control module mistakenly recognizes a vehicle as being outside of the warning zone when it actually inside of it.
	  ▪ Radar (BSM control module integrated) is not emitted inside of warning zone (unable to emit radar inside warning zone)
	  • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts)
	  • Malfunction in steering angle sensor (instrument cluster or EPS control module malfunction)
	  • Problem with rear bumper such as dirt on radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application.
	  ▪ BSM control module does not receive echo-back correctly
	• BSM control module (radar) malfunction
	• Problem with rear bumper such as dirt on radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application.
	NOTE:
	  • Rear bumper problem such defective installation of rear bumper, excessive dirt on the radar emitting/receiving area, sticker adhesion (including transparent types), repairs to rear bumper using putty
	  • Non-genuine bumper, paint, or installation of after-market parts negatively affecting radar echo-back ability

	After-market electrical parts interfere with BSM system • Malfunction in BSM indicator light related parts ▪ Open circuit in wiring harness between BSM indicator light and BSM control module ▪ Open circuit in wiring harness or poor ground between BSM control module and ground ▪ BSM indicator light malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT IF MALFUNCTION IS IN INPUT SIGNAL OR BSM CONTROL MODULE** • Monitor the following PIDs on the suspected side of the BSM control module using the M-MDS. (See **PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)]**.) ▪ SWA_POS • Are the monitoring values normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT STEERING ANGLE SIGNAL** • Monitor the PID STR_ANG for the EPS control module using the M-MDS. (See **ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS**.) • Is the monitoring value normal?	Yes	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
		No	Replace the EPS control module. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
3	**INSPECT REAR BUMPER** • Inspect the rear bumper at the BSM installation area for the following: ▪ Installation condition ▪ Sticker adhesion ▪ Excessive dirt ▪ Repairs using putty • Is the rear bumper condition normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts, or replace the rear bumper. (See **REAR BUMPER REMOVAL/INSTALLATION**.)

4	**VERIFY THE CONDITION OF THE BSM CONTROL MODULE** • Remove the rear bumper. (See **REAR BUMPER REMOVAL/INSTALLATION**.) • Inspect the BSM control module for the following: ▪ Looseness ▪ Damage or deformity to the bracket ▪ Distortion at vehicle installation surface • Is the BSM control module installation condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
5	**VERIFY IF CAUSE OF MALFUNCTION IS IN AFTER-MARKET ELECTRICAL PRODUCT OR ELSEWHERE** • Remove the after-market electrical product. • Verify that the malfunction symptom recurs as stated by the customer. • Does the malfunction symptom recur?	Yes	Go to the next step.
		No	The after-market electrical product is causing the malfunction.
6	**INSPECT BSM CONTROL MODULE (RADAR)** • Perform the BSM radar test. (See **BLIND SPOT MONITORING (BSM) RADAR TEST**.) • Is “TEST PASSED” displayed?	Yes	Temporary malfunction with the radar echo-back. If the same symptom recurs repeatedly, replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Repair or replace malfunctioning part according to inspection result. (See **BLIND SPOT MONITORING (BSM) RADAR TEST**.)

2014 - Mazda3 - Body and Accessories

BSM INDICATOR LIGHT FLASHES WHILE NOT UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (NO LIGHT SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]

Description	**BSM indicator light flashes while not under BSM indicator light-flashing conditions (no combination switch operation (turn signal switch)** • The BSM indicator light flashes despite not satisfying the BSM indicator light flashing conditions (vehicle speed **10 km/h {6.2 mph} or more**, turn signal on, and vehicle in warning zone)). • The BSM indicator light flashes, but the turn signals are off.
Possible Causes	**NOTE:** • This malfunction symptom is basically the same as symptom “BSM indicator light while not under BSM indicator light-illumination conditions”. • BSM control module recognizes a vehicle as being inside the warning zone when it is actually outside of it. ▪ Radar (BSM control module integrated) is emitted outside of warning zone (deviates from warning zone) • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts). • Malfunction in steering angle signal (communication error between start stop unit and BSM control module, or EPS control module malfunction). • Problem with rear bumper such as dirt on radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. ▪ After-market electrical parts interfere with BSM system • BSM does not recognize vehicle speed correctly (BSM control module mistakenly recognizes vehicle speed as being **10 km/h {6.2 mph} or more** ▪ PCM communication error with BSM control module ▪ Malfunction in ABS wheel speed sensor related parts • BSM control module mistakenly recognizes that turn signals have been

	operated ▪ Short to ground circuit in wiring harness between combination switch (turn signal switch) and start stop unit ▪ Communication error between start stop unit and BSM control module ▪ BSM control module malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**VERIFY MALFUNCTION SYMPTOM** • BSM indicator light illuminates while under light-off conditions.	Yes	Go to the symptom troubleshooting procedure, “ BSM indicator light illuminates while not under BSM indicator light-off conditions”. (See **BSM INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]**.)
		No	Go to the next step.
2	**INSPECT IF MALFUNCTION IS IN START STOP UNIT INPUT SIGNAL OR BSM CONTROL MODULE** • Monitor the following PIDs on the suspected side of the start stop unit using the M-MDS. (See **PID/DATA MONITOR TABLE [START STOP UNIT]**.) ▪ TURN_SW_L ▪ TURN_SW_R • Are the monitoring values normal?	Yes	Replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Retrieve DTCs from the start stop unit, instrument cluster, and BSM control module using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)

2014 - Mazda3 - Body and Accessories

BSM INDICATOR LIGHT DOES NOT FLASH WHILE UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (WITH LIGHT SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]

Description	**BSM indicator light does not flash while under BSM indicator light-flashing conditions (with combination switch operation (turn signal switch))**
	• The BSM indicator light does not flash or illuminate continuously, but the conditions to flash the BSM indicator light are satisfied (vehicle speed **10 km/h {6.2 mph} or more**, turn signal on, and vehicle in warning zone). • BSM indicator light does not flash or illuminate continuously, but turn signals are on.
	NOTE: • This malfunction symptom is basically the same as symptom “BSM indicator light does not illuminate while under BSM indicator light-illumination conditions”. • The BSM control module mistakenly recognizes a vehicle as being outside of the warning zone when it is actually inside of it. ▪ Radar (BSM control module integrated) is not emitted inside of warning zone (unable to emit radar inside warning zone) • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts). • Malfunction in steering angle signal (communication error between start stop unit and BSM control module, or EPS control module malfunction). • Problem with rear bumper such as dirt on radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. ▪ BSM control module does not receive echo-back correctly • BSM control module (radar) malfunction • Problem with rear bumper such as dirt on radar emitting/receiving area, application of stickers (including transparent types),

Possible Causes	repairs using putty application. **NOTE:** • Rear bumper problems such defective installation of rear bumper, excessive dirt on radar emitting/receiving area, sticker adhesion (including transparent types), repairs to rear bumper using putty • Non-genuine bumper or paint, or installation of after-market parts negatively affecting radar echo-back ability ▪ After-market electrical parts interfere with BSM system • BSM does not recognize vehicle speed correctly (BSM control module mistakenly recognizes vehicle speed as being **within 10 km/h {6.2 mph} or more** ▪ PCM communication error with BSM control module ▪ Malfunction in ABS wheel speed sensor related parts • Malfunction in BSM indicator light related parts ▪ Open circuit in wiring harness between BSM indicator light and BSM control module ▪ Open circuit in wiring harness or poor ground between BSM control module and ground ▪ BSM indicator light malfunction • Signal is not input for turn signal ▪ Combination switch (turn signal switch) malfunction ▪ Open circuit in wiring harness between combination switch (turn signal switch) and start stop unit ▪ Communication error between start stop unit and BSM control module ▪ BSM control module malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**VERIFY MALFUNCTION SYMPTOM**	Yes	Go to the next step.
		No	Go to the symptom troubleshooting procedure,

	BSM indicator light illuminates while under light-off conditions.		”BSM indicator light does not illuminate while under BSM indicator light-illumination conditions”. (See **BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]**.)
2	**INSPECT IF MALFUNCTION IS IN START STOP UNIT INPUT SIGNAL OR BSM CONTROL MODULE** • Monitor the following PIDs on the suspected side of the start stop unit using the M-MDS. (See **PID/DATA MONITOR TABLE [START STOP UNIT]**.) ▪ TURN_SW_L ▪ TURN_SW_R • Are the monitoring values normal?	Yes	Replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Retrieve DTCs from the start stop unit, instrument cluster, and BSM control module using the M-MDS. (See **DTC INSPECTION [START STOP UNIT]**.) (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) (See **DTC INSPECTION [BLIND SPOT MONITORING (BSM)]**.)

2014 - Mazda3 - Body and Accessories

THE BSM INDICATOR LIGHT DOES NOT FLASH OR ILLUMINATE CONTINUOUSLY, BUT A TURN SIGNAL IS ON [BLIND SPOT MONITORING (BSM)]

Description	**The BSM indicator light does not flash or illuminate continuously, but a turn signal is ON**
	• The BSM warning alarm sounds but BSM indicator light does not flash • The BSM warning alarm is triggered on side opposite to the direction in which turn signal is operated

Possible Causes	• Instrument cluster receives incorrect BSM warning alarm request signal
	  ▪ Communication error between BSM control module and instrument cluster
	  ▪ Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT BSM WARNING ALARM** • Turn off the BSM using the M-MDS instrument cluster active command modes ALARM. (See **ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]**.) • Does the BSM turn off according to the active command models?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)
2	**VERIFY DTCs** • Retrieve DTCs from the BSM control module and instrument cluster using the M-MDS. (See **DTC INSPECTION [INSTRUMENT CLUSTER]**.) (See **DTC INSPECTION [BLIND SPOT**	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [INSTRUMENT CLUSTER]**.) (See **DTC TABLE [BLIND SPOT MONITORING (BSM)]**.)
		No	Go to the next step.

	MONITORING (BSM)].) • Are any DTCs displayed?		
3	**VERIFY BSM INDICATOR LIGHT CONDITION** • Verify the BSM indicator light illumination condition while under the BSM indicator light-illumination conditions (vehicle speed **10 km/h {6.2 mph} or more**, turn signals off, and vehicle in warning zone). • Does the BSM indicator light illuminate normally?	Yes	Replace the BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Go to the symptom troubleshooting procedure, ”BSM indicator light does not illuminate while under BSM indicator light-illumination conditions”. (See **BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]**.)

2014 - Mazda3 - Body and Accessories

BSM WARNING ALARM DOES NOT SOUND WHILE BSM INDICATOR LIGHT FLASHES [BLIND SPOT MONITORING (BSM)]

Description	**BSM warning alarm does not sound while BSM indicator light flashes**
	• The BSM control module recognizes that vehicle is in warning zone on side in which turn signal is operated, but BSM warning alarm does not sound despite BSM indicator light flashing.
Possible Causes	• Instrument cluster receives incorrect BSM warning alarm request signal ▪ Instrument cluster malfunction ▪ BSM control module malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT BSM WARNING ALARM** • Turn off the BSM using the M-MDS instrument cluster active command modes ALARM. (See **ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]**.) • Does the BSM turn off according to the active command models?	Yes	Replace the applicable BSM control module. (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

FOREWORD [SECURITY AND LOCKS]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as rear body control module (RBCM) and start stop unit circuit voltage) at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

DOOR LOCK DOES NOT OPERATE [SECURITY AND LOCKS]

Description

- Door cannot be locked/unlocked using the front door key cylinder.
- All doors cannot be locked/unlocked using the door lock switch.

Possible cause

- Door latch switch malfunction
- Door lock actuator malfunction
- Front door key cylinder switch malfunction
- Open circuit in wiring harness between the following terminals:
    - Front door latch and lock actuator terminal H and rear body control module (RBCM) terminal 3H
    - Power window main switch terminal 2M and rear body control module (RBCM) terminal 3F
    - Door lock switch (passenger's side) terminal C and rear body control module (RBCM) terminal 3F

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DOOR LATCH SWITCH STUCK OFF OR OPEN CIRCUIT** • Open each door and verify that the door ajar warning light in the instrument cluster illuminates. • Does the door ajar warning light illuminate?	Yes	Go to the next step.
		No	• Inspect the door latch switch on the door in which the ajar warning light did not illuminate and for an open circuit in the wiring harness between the rear body control module (RBCM) and ground.

			(See **FRONT DOOR LATCH SWITCH INSPECTION**.) (See **REAR DOOR LATCH SWITCH INSPECTION**.) • After inspection, go to Step 7.
2	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LOCK ACTUATOR** • Perform the lock/unlock operation using lock knob for each door. • Is door locked/unlocked?	Yes	Go to the next step.
		No	• Inspect the door lock actuator for the door which could not lock/unlock. (See **FRONT DOOR LOCK ACTUATOR INSPECTION**.) (See **REAR DOOR LOCK ACTUATOR INSPECTION**.) • After inspection, go to Step 7.
3	**DETERMINE IF MALFUNCTION CAUSE IS DOOR KEY CYLINDER** • Insert the auxiliary key into the door key cylinder and perform the lock/unlock operation using the auxiliary key. • Is door locked/unlocked?	Yes	Go to the next step.
		No	• Inspect the front door key cylinder switch. (See **FRONT DOOR KEY CYLINDER SWITCH INSPECTION**.) • After inspection, go to Step 7.
4	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN FRONT DOOR KEY CYLINDER SWITCH AND REAR BODY CONTROL MODULE (RBCM)** • Disconnect the negative battery cable. • Disconnect the front door latch and lock actuator connector. • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Front door latch and lock actuator terminal H and	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 7.

	rear body control module (RBCM) terminal 3H • Is there continuity?		
5	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN DOOR LOCK SWITCH AND REAR BODY CONTROL MODULE (RBCM)** • Disconnect the door lock switch connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Power window main switch terminal 2M and rear body control module (RBCM) terminal 3F ▪ Door lock switch (passenger's side) terminal C and rear body control module (RBCM) terminal 3F • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 7.
6	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LOCK SWITCH** • Perform the lock/unlock operation using the door lock switch. • Does the lock knob switch between lock and unlock?	Yes	Go to the next step.
		No	• Inspect the door lock switch. (See **DOOR LOCK SWITCH INSPECTION**.) • After inspection, go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Has the malfunction symptom been eliminated?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the applicable other malfunction diagnosis.

			(See **SYMPTOM TROUBLESHOOTING ITEM TABLE [SECURITY AND LOCKS]**.)

2014 - Mazda3 - Body and Accessories

ADVANCED KEYLESS ENTRY SYSTEM DOES NOT OPERATE [SECURITY AND LOCKS]

Description

- The door locking operation using the door request switch is not possible.
- The liftgate/trunk lid cannot be open using the liftgate/trunk lid opener switch.

Possible cause

- Liftgate/trunk lid opener switch malfunction
- Open circuit in wiring harness between the following terminals:
    - Rear body control module (RBCM) terminal 4M and liftgate/trunk lid opener switch terminal C
    - LF control unit terminal C and request switch (LF) terminal D
    - LF control unit terminal A and request switch (RF) terminal D
    - LF control unit terminal E and request switch (liftgate) terminal A (5HB)
    - Start stop unit terminal 1P and door lock link switch (driver's side) terminal D
    - Start stop unit terminal 1AF and ground
    - Start stop unit terminal 2B and ground
- Short to ground in wiring harness between start stop unit terminal 1P and door lock link switch (driver's side) terminal D
- Connector poor contact or terminal damage
- Customer's mis-operation or misunderstanding

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION**	Yes	Troubleshooting completed. (Explain the

	CAUSE IS DOOR LOCK • Refer to “door lock does not operate” symptom troubleshooting and perform the inspection. (See **DOOR LOCK DOES NOT OPERATE [SECURITY AND LOCKS]**.) • Is the advanced keyless entry system operating normally?		contents of the servicing to the customer.)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS OPERATION OTHER THAN OPERATION PERMISSION CONDITION** • Verify the advanced keyless operation by operating each request switch and the liftgate/trunk lid opener switch with all the following conditions met. ▪ All doors and liftgate/trunk lid closed ▪ Ignition switched off ▪ Remote transmitter is within reception area (80 cm radius from driver's door, front passenger's door, and liftgate/trunk lid) • Is the advanced keyless entry system operating normally?	Yes	System is normal. (Explain to customer about operation range of advanced keyless entry system)
		No	Go to the next step.
3	**VERIFY MALFUNCTION SYMPTOM** • Does the liftgate/trunk lid open using the liftgate/trunk lid opener switch operation?	Yes	Go to Step 6.
		No	Go to the next step.
4	**DETERMINE IF MALFUNCTION CAUSE IS LIFTGATE/TRUNK LID OPENER SWITCH** • Measure the voltage at rear body control module (RBCM) terminal	Yes	Go to Step 11.
		No	Go to the next step.

	4M. • Is the voltage normal? **Specification** ○ Liftgate/trunk lid opener switch pressed: **1.0 V or less** ○ Except above: **4.5 V**		
5	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN REAR BODY CONTROL MODULE (RBCM) AND LIFTGATE/TRUNK LID OPENER SWITCH** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear body control module (RBCM) and liftgate/trunk lid opener switch connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Liftgate/trunk lid opener switch terminal C and rear body control module (RBCM) terminal 4M • Is there continuity?	Yes	• Inspect the liftgate/trunk lid opener switch. If there is any malfunction, replace it. (See **LIFTGATE OPENER SWITCH INSPECTION**.) (See **TRUNK LID OPENER SWITCH INSPECTION**.) • If the liftgate/trunk lid opener switch inspection is normal, inspect or repair the following: ▪ Liftgate latch and actuator (5HB) (See **LIFTGATE LATCH AND LOCK ACTUATOR INSPECTION**.) ▪ Trunk lid latch and release actuator (4SD) (See **TRUNK LID LATCH AND RELEASE ACTUATOR INSPECTION**.) • After repair procedure, go to Step 11.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 11.

6	**VERIFY MALFUNCTION SYMPTOM** • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Verify the lock/unlock operation for all doors and liftgate/trunk lid using the request switch operation. • Is door locked/unlocked?	Yes	Go to Step 11.
		No	Go to the next step.
7	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND DOOR LOCK LINK SWITCH (DRIVER-SIDE)** • Disconnect the start stop unit and the front door latch and lock actuator (driver's side) connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Start stop unit terminal 1P and front door lock link switch terminal D • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 11.
8	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO GROUND IN WIRING HARNESS BETWEEN START STOP UNIT AND DOOR LOCK LINK SWITCH (DRIVER-SIDE)** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Start stop unit	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 11.

	terminal 1P and ground • Is there continuity?		
9	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Start stop unit terminal 1AF and ground ▪ Start stop unit terminal 2B and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to Step 11.
10	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN REQUEST SWITCH AND LF CONTROL UNIT** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the LF control unit and request switch connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Request switch (LF) terminal D and LF control unit terminal C ▪ Request switch (RF) terminal D and LF control unit terminal A	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.

	▪ Request switch (liftgate) terminal A and LF control unit terminal E (5HB) • Is there continuity?		
11	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Does the advanced keyless entry system operate normally?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

2014 - Mazda3 - Body and Accessories

LOCK/UNLOCK OPERATION NOT POSSIBLE USING REMOTE TRANSMITTER [SECURITY AND LOCKS]

Description

- The door lock/unlock operation using the remote transmitter button is not possible.

Possible cause

- Keyless receiver malfunction
- Remote transmitter malfunction
- Faulty remote transmitter battery
- Open circuit in wiring harness between the following terminals:
    - Keyless receiver terminal A and start stop unit terminal 2Q
    - Keyless receiver terminal B and start stop unit terminal 2R
    - Start stop unit terminal 1AF and ground
    - Start stop unit terminal 2B and ground
- Connector poor contact or terminal damage
- Customer's mis-operation or misunderstanding
- Effect of non-standard equipment (any control unit with built-in micro computer such as radio set, mobile telephone, and TV)

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LOCK** • Refer to “door lock does not operate” malfunction diagnosis and perform the inspection.	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Go to the next step.

	(See **DOOR LOCK DOES NOT OPERATE [SECURITY AND LOCKS]**.) • Is the lock/unlock operation performed using the remote transmitter?		
2	**VERIFY IF MALFUNCTION CAUSE IS EXTERNAL NOISE** • Ask the customer malfunction condition. • Does the malfunction occur at the specified place where external noise is received such as a TV tower, electric power station, or a broadcast station?	Yes	System is normal. (Explain the customer that external noise affected the operation.)
		No	Go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE IS OPERATION OTHER THAN OPERATION PERMISSION CONDITION** • Did the customer operate the remote transmitter with all the following conditions met? ▪ All doors and liftgate are closed. ▪ Ignition switched off	Yes	Go to the next step.
		No	System is normal. (Explain the customer operation condition.)
4	**DETERMINE IF MALFUNCTION CAUSE IS NON-STANDARD EQUIPMENT** • Did the malfunction occur after installing the following non-standard equipment? ▪ Mobile telephone or radio set ▪ Part with built-in micro computer ▪ Remote engine starter ▪ TV	Yes	Go to the next step.
		No	Go to Step 6.
5	**DETERMINE IF MALFUNCTION CAUSE IS NON-STANDARD EQUIPMENT** • Disconnect the connector for non-standard equipment. • Perform the lock/unlock operation using the remote transmitter. • Does it operate normally?	Yes	System is normal. (Explain to the customer that noise from the non-standard equipment affected the operation.)
		No	Go to the next step.
6	**VERIFY REMOTE TRANSMITTER**	Yes	**Battery insertion**

	BATTERY CONDITION • Visually inspect the remote transmitter battery for the following: ▪ Method of battery insertion (polarity) ▪ Battery type (CR2025) ▪ Corrosion, soiling, deformation of battery terminals (plus/minus terminals). ▪ Contact malfunction between the battery terminal and battery when battery is inserted • Is there any malfunction?		**direction, battery type is incorrect:** • Properly install the battery or replace the battery with a specified one (CR2025), then go to the next step. **Battery terminal malfunction:** • Clean corrosion and soiling, or repair or replace the terminal, then go to the next step.
		No	Go to Step 8.
7	**VERIFY REMOTE TRANSMITTER OPERATION** • Perform the lock/unlock operation using the remote transmitter. • Is the lock/unlock operation performed normally?	Yes	Troubleshooting completed.
		No	Go to the next step.
8	**DETERMINE IF MALFUNCTION CAUSE IS REMOTE TRANSMITTER** **NOTE:** • For a monitor battery, use a new battery or one which operates normally on another vehicle. • Replace the battery in all the remote transmitters with a monitor-use battery. (See **REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY**.) • For each remote transmitter, verify that the remote transmitter operation indicator light (LED) illuminates when a button is operated. • Does operation indicator light (LED) for each remote transmitter operate?	Yes	Go to the next step.
		No	If the operation indicator light (LED) does not illuminate, replace the remote transmitter, then go to the Step 12.
9	**DETERMINE IF MALFUNCTION CAUSE IS BATTERY** **NOTE:** • Inspect for all remote transmitters. • Inspect while the batteries for all of the remote transmitters are replaced with	Yes	Replace the battery, then go to Step 12. (See **REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY**.)

	monitor-use batteries. • Perform the lock/unlock operation using all the remote transmitters. • Is the lock/unlock operation performed normally?	No	Go to the next step.
10	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Start stop unit terminal 1AF and ground ▪ Start stop unit terminal 2B and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to Step 12.
11	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN KEYLESS RECEIVER AND START STOP UNIT OR KEYLESS RECEIVER** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless receiver and start stop unit connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Keyless receiver terminal A and start stop unit terminal 2Q ▪ Keyless receiver terminal B and start stop unit terminal 2R • Is there continuity?	Yes	• Inspect the keyless receiver. If there is any malfunction, replace it. (See **KEYLESS RECEIVER INSPECTION**.) • After repair, go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.
12	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED**	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)

	Perform the lock/unlock operation using all the remote transmitters. • Is the lock/unlock operation performed normally?		
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

2014 - Mazda3 - Body and Accessories

ANSWER-BACK BUZZER DOES NOT SOUND [SECURITY AND LOCKS]

Description

- The keyless beeper does not sound when door lock/unlock operation is performed using the remote transmitter button.

Possible cause

- Keyless beeper malfunction
- Short to power supply in wiring harness between the following terminals:
  - Keyless beeper terminal A and LF control unit terminal H
  - Keyless beeper terminal B and LF control unit terminal J
- Short to ground in wiring harness between the following terminals:
  - Keyless beeper terminal A and LF control unit terminal H
  - Keyless beeper terminal B and LF control unit terminal J
- Open circuit in wiring harness between the following terminals:
  - Keyless beeper terminal A and LF control unit terminal H
  - Keyless beeper terminal B and LF control unit terminal J
  - Start stop unit terminal 1AF and ground
  - Start stop unit terminal 2B and ground
- Personalization feature not set

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PERSONALIZATION FEATURES SETTING** • Verify the volume of the keyless	Yes	Set the volume so that the keyless beeper sounds and verify the operation. **Operation is verified:**

	beeper for the personalization features. (See **SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE**.) • Has the volume of the keyless beeper been set to off?		• Troubleshooting completed. (Explain the servicing contents to the customer.) **Operation is not verified:** • Go to the next step.
		No	Go to the next step.
2	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO GROUND IN WIRING HARNESS BETWEEN KEYLESS BEEPER AND LF CONTROL UNIT** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the LF control unit connector. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ LF control unit terminal H and ground ▪ LF control unit terminal J and ground • Is there continuity?	Yes	• Repair or replace the wiring harness which is shorted to ground. • After repair procedure, go to Step 6.
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO POWER SUPPLY IN WIRING HARNESS BETWEEN KEYLESS BEEPER AND LF CONTROL UNIT** • Verify that the LF control unit connector is disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the following terminals (vehicle wiring harness). ▪ LF control unit	Yes	• Repair or replace the wiring harness which is shorted to power supply. • After repair procedure, go to Step 6.
		No	Go to the next step.

	terminal H ▪ LF control unit terminal J • Is there any voltage?		
4	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Start stop unit terminal 1AF and ground ▪ Start stop unit terminal 2B and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to Step 6.
5	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN KEYLESS BEEPER AND LF CONTROL UNIT OR KEYLESS BEEPER** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the keyless beeper connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Keyless beeper terminal A and LF control unit terminal H ▪ Keyless beeper terminal B and LF control unit terminal J • Is there continuity?	Yes	• Replace the keyless beeper. (See **KEYLESS BEEPER REMOVAL/INSTALLATION**.) • After replacement, go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.

6	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Does the keyless beeper sound?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

2014 - Mazda3 - Body and Accessories

PUSH BUTTON START SYSTEM DOES NOT OPERATE [SECURITY AND LOCKS]

Description

- When the push button start is pressed, the ignition cannot be switched to ACC or ON (engine off).

Possible cause

- Open circuit in wiring harness between the following terminals:
    - Start stop unit terminal 1H and push button start terminal C
    - Start stop unit terminal 2J and push button start terminal I
    - Start stop unit terminal 1AF and ground
    - Start stop unit terminal 2B and ground

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND PUSH BUTTON START** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the start stop unit and push button start connector. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Start stop unit terminal 1H and push button start terminal C	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 3.

	▪ Start stop unit terminal 2J and push button start terminal I • Is there continuity?		
2	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). ▪ Start stop unit terminal 1AF and ground ▪ Start stop unit terminal 2B and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Does the push button start button operate correctly?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

2014 - Mazda3 - Body and Accessories

FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

SYSTEM WIRING DIAGRAM [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

2014 - Mazda3 - Body and Accessories

SYMPTOM TROUBLESHOOTING [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Troubleshooting item	Description
AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY (See **AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)	• Inspect the AFS OFF indicator light with the ignition switched ON (engine off or on) and the AFS OFF indicator light illumination off (AFS operating).
ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OPERATES EVEN THOUGH THE AFS OFF SWITCH IS TURNED ON (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OPERATES EVEN THOUGH THE AFS OFF SWITCH IS TURNED ON [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)	• AFS operates with the AFS OFF switch on (system stopped condition).
THE HEADLIGHT AUTO LEVELING SYSTEM DOES NOT OPERATE IN RESPONSE TO VEHICLE POSTURE (See **THE HEADLIGHT AUTO LEVELING SYSTEM DOES NOT OPERATE IN RESPONSE TO VEHICLE POSTURE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)	• The headlight auto leveling system does operate in response to the number of occupants, cargo load in trunk, and the fuel level. • One side of the headlight leveling actuator does not operate.

2014 - Mazda3 - Body and Accessories

AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

NOTE:

- If there is any vehicle malfunction complaint lodged by a customer, perform **FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]** malfunction diagnosis according to the troubleshooting procedure.

Description

- Inspect the AFS OFF indicator light with the ignition switched ON (engine off or on) and the AFS OFF indicator light illumination off (AFS operating).

Possible malfunction

- AFS OFF switch malfunction (stuck on)
- AFS control module malfunction
- Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION LOCATION IS AFS OFF SWITCH** • Display the following AFS control module AFS_ST PIDs using the M-MDS. (See **PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Inspect the PID display when the AFS OFF switch is turned on/off. • Does the PID display switch normally in conjunction with the AFS OFF switch being turned on/off?	Yes	Go to Step 3.
		No	Go to the next step.

2	**PERFORM AFS OFF SWITCH INSPECTION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the AFS OFF switch. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION**.) • Inspect the AFS OFF switch. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION**.) • Is the AFS OFF switch normal?	Yes	Replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**.)
		No	Replace the AFS OFF switch. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION**.)
3	**VERIFY AFS OFF INDICATOR LIGHT ILLUMINATION** • Display the following instrument cluster WL+IL simulation items using the M-MDS. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Does the AFS OFF indicator light illumination turn off when the warning light, indicator light illumination is operated to off?	Yes	The system is operating normally.
		No	Replace the instrument cluster. (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OPERATES EVEN THOUGH THE AFS OFF SWITCH IS TURNED ON [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

NOTE:

- If there is any vehicle malfunction complaint lodged by a customer, perform **FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]** malfunction diagnosis according to the troubleshooting procedure.

Description

- AFS operates with the AFS OFF switch on (system stopped condition).

Possible malfunction

- AFS OFF switch malfunction (stuck off)
- AFS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY AFS OFF INDICATOR LIGHT ILLUMINATION** • Display the following instrument cluster WL+IL simulation items using the M-MDS. (See **ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]**.) • Does the AFS OFF indicator light illumination turn off when the warning light, indicator light illumination is operated to off?	Yes	Go to the next step.
		No	Perform inspection referring to the AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY item. (See **AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
2	**DETERMINE IF MALFUNCTION LOCATION IS AFS OFF SWITCH** • Display the following AFS control module AFS_ST PIDs using the M-MDS.	Yes	Replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE**

	(See **PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.) • Inspect the PID display when the AFS OFF switch is turned on/off. • Does the PID display switch normally in conjunction with the AFS OFF switch being turned on/off?		**REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**PERFORM AFS OFF SWITCH INSPECTION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the AFS OFF switch. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION**.) • Inspect the AFS OFF switch. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION**.) • Is the AFS OFF switch normal?	Yes	The system is operating normally.
		No	Replace the AFS OFF switch. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

THE HEADLIGHT AUTO LEVELING SYSTEM DOES NOT OPERATE IN RESPONSE TO VEHICLE POSTURE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

NOTE:

- If there is any vehicle malfunction complaint lodged by a customer, perform **FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]** malfunction diagnosis according to the troubleshooting procedure.

Description

- The headlight auto leveling system does operate in response to the number of occupants, cargo load in trunk, and the fuel level.
- One side of the headlight leveling actuator does not operate.

Possible malfunction

- Open circuit in wiring harness between AFS control module terminal O and headlight leveling actuator (LH)/(RH) terminal F
- Short to ground in wiring harness between AFS control module terminal O and headlight leveling actuator (LH)/(RH) terminal F
- Headlight leveling actuator malfunction
- AFS control module malfunction
- Open circuit in wiring harness between the following terminals:
    - AFS control module terminal P—Headlight leveling actuator (LH)/(RH) terminal I
    - AFS control module terminal M—Headlight leveling actuator (LH)/(RH) terminal L
- Short to ground in wiring harness between the following terminals:
    - AFS control module terminal P—Headlight leveling actuator (LH)/(RH) terminal I
    - AFS control module terminal M—Headlight leveling actuator (LH)/(RH) terminal L
- Poor installation of the auto leveling sensor
- Auto leveling sensor malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTIONING LOCATION IS AUTO LEVELING SENSOR** • Verify the malfunction symptom. • Do both sides of the headlight auto leveling system not operate?	Yes	Go to Step 6.
		No	Go to the next step.
2	**LEVELING OPERATION SIGNAL INSPECTION** • Using the M-MDS, perform the headlight leveling actuator operation check mode. (See **HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**) • Does the headlight leveling actuator operate normally?	Yes	Go to Step 8.
		No	Go to the next step.
3	**INSPECT LEVELING OPERATION SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect the wiring harness for continuity between the AFS control module and headlight leveling actuator on the side in which the auto leveling system does not operate. ▪ AFS control module terminal O —Headlight leveling actuator (LH)/(RH) terminal F • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between AFS control module terminal O and headlight leveling actuator (LH)/(RH) terminal F. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.

4	**INSPECT LEVELING OPERATION SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the ground and the wiring harness between the AFS control module and headlight leveling actuator on the side in which the auto leveling system does not operate. ▪ AFS control module terminal O —Body ground • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between AFS control module terminal O and headlight leveling actuator (LH)/(RH) terminal F. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground.
		No	Go to the next step.
5	**HEADLIGHT LEVELING INSPECTION** • Replace the front combination light in which the auto leveling system does not operate. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**) • Does the auto leveling system operate correctly?	Yes	Troubleshooting completed.
		No	Replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**)
6	**INSPECT WIRING HARNESS BETWEEN HEADLIGHT LEVELING ACTUATOR AND AFS CONTROL MODULE FOR OPEN CIRCUIT** • Inspect for continuity in the wiring harness between the following terminals: ▪ AFS control module terminal P —Headlight leveling actuator (LH)/(RH) terminal I ▪ AFS control module terminal O —Headlight	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • AFS control module terminal P—Headlight leveling actuator (LH)/(RH) terminal I • AFS control module terminal O—Headlight leveling actuator (LH)/(RH) terminal F • AFS control module terminal M—Headlight leveling actuator (LH)/(RH) terminal L

	leveling actuator (LH)/(RH) terminal F ▪ AFS control module terminal M—Headlight leveling actuator (LH)/(RH) terminal L • Is there continuity?		**If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.
7	**INSPECT WIRING HARNESS BETWEEN HEADLIGHT LEVELING ACTUATOR AND AFS CONTROL MODULE FOR SHORT TO GROUND** • Inspect for continuity between body ground and the following terminals. ▪ AFS control module terminal P ▪ AFS control module terminal O ▪ AFS control module terminal M • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. • AFS control module terminal P—Headlight leveling actuator (LH)/(RH) terminal I • AFS control module terminal O—Headlight leveling actuator (LH)/(RH) terminal F • AFS control module terminal M—Headlight leveling actuator (LH)/(RH) terminal L **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground.

		No	Go to the next step.
8	**VERIFY AUTO LEVELING SENSOR INSTALLATION** • Verify the auto leveling sensor installation condition. • Is a bracket bent, is there damage, or is a link disconnected?	Yes	Repair or replace the malfunctioning location.
		No	Go to the next step.
9	**AUTO LEVELING SENSOR INSPECTION** • Inspect the auto leveling sensor. (See **AUTO LEVELING SENSOR INSPECTION**) • Is the auto leveling sensor normal?	Yes	Replace the AFS control module. (See **ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION**)
		No	Replace the auto leveling sensor. (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**)

2014 - Mazda3 - Body and Accessories

FOREWORD [THEFT-DETERRENT SYSTEM]

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY TECHNICAL SERVICE BULLETINS.
VERIFY RELATED SERVICE BULLETINS AND/OR ON-LINE REPAIR INFORMATION AVAILABILITY.
IS ANY RELATED REPAIR INFORMATION AVAILABLE?
YES
PERFORM REPAIR OR DIAGNOSIS ACCORDING TO THE AVAILABLE REPAIR INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
INSPECT FOR ANY DTCs USING M-MDS.
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE M-MDS FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1

(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as rear body control module (RBCM) circuit voltage) at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

THEFT-DETERRENT SYSTEM [THEFT-DETERRENT SYSTEM]

Description

- Theft-deterrent horn sounded.

Possible cause

- Wiring harness malfunction
- Malfunction in switch which triggers system
- Rear body control module (RBCM) malfunction
- Customer's mis-operation or misunderstanding

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DTCs** • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.) • Are any DTCs displayed?	Yes	Go to the applicable DTC inspection. (See **DTC TABLE [REAR BODY CONTROL MODULE (RBCM)]**.)
		No	Go to the next step.
2	**VERIFY OPERATION RECORD** • Has the operation record been stored? (See **THEFT-DETERRENT SYSTEM OPERATION RECORD**.)	Yes	Go to the next step.
		No	Diagnosis completed (theft-deterrent system does not operate).
3	**VERIFY CONDITION DURING THEFT-DETERRENT SYSTEM OPERATION**	Yes	Go to the next step.
		No	Inspect the rear body control

	Is the condition during theft-deterrent operation “Alarm” or “Arming”?		module (RBCM). If there is any malfunction, replace it. (See **REAR BODY CONTROL MODULE (RBCM) INSPECTION**.)
4	**DETERMINE IF MALFUNCTION CAUSE IS SYSTEM** • Verify what triggered the theft-deterrent system according to the trigger record, and inspect the switch which triggered the system and the related wiring harness. • Is the switch or related wiring harness normal?	Yes	System is normal (explain to the customer that the cause is customer's mis-operation).
		No	Replace the malfunctioning part.

2014 - Mazda3 - Body and Accessories

FOREWORD [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
REFER TO DTC INSPECTION NOTE.*2
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE THE FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
PID/DATA MONITOR INSPECTION
USE M-MDS DATA MONITOR FUNCTION TO PERFORM INSPECTION WHILE MONITORING INPUT/OUTPUT SIGNALS.
ACTIVE COMMAND MODES INSPECTION
USE M-MDS SIMULATION FUNCTION TO INSPECT FOR INCOMPLETE ELECTRICAL CIRCUIT OR VALVE STICKING WHILE OPERATING EACH OUTPUT PART WITH THE IGNITION SWITCHED ON.
DIAGNOSTIC ASSIST FUNCTION
USE CONNECTIVITY MASTER UNIT (CMU) DIAGNOSTIC ASSIST FUNCTION TO VERIFY THE CONNECTION AND OPERATION STATUS OF THE ENTERTAINMENT SYSTEM RELATED PARTS.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1
(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)
*2
(See DTC Inspection Note.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.

  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.
  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.

DTC Inspection Note

- DTCs for the entertainment system [with center display] can be verified using the M-MDS or the on-board diagnostic test mode in which the on-board diagnostic function can be launched by operating the commander switch or the center display. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.) (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.)

2014 - Mazda3 - Body and Accessories

SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Troubleshooting item	Description
IMAGE NOT OUTPUT IN ALL MODES (See **IMAGE NOT OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Image is not output in center display even if any mode is selected
NAVIGATION IMAGE NOT OUTPUT (See **NAVIGATION IMAGE NOT OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Rear mount camera image is output, however, navigation image only is not output
REAR MOUNT CAMERA IMAGE NOT OUTPUT (See **REAR MOUNT CAMERA IMAGE NOT OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Navigation image is output, however, rear mount camera image is not output
NO SOUND OUTPUT IN ALL MODES (See **NO SOUND OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Sound is not output from speakers even if any mode is selected
NO SOUND OUTPUT IN MULTIPLE MODES (See **NO SOUND OUTPUT IN MULTIPLE MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Radio, CD, AUX audio is output, but no Bluetooth® audio, Internet radio, USB audio, and guidance voice
NO Bluetooth® AUDIO AND INTERNET RADIO SOUND (See **NO Bluetooth® AUDIO AND INTERNET RADIO SOUND [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Radio, CD, AUX/USB audio, guidance audio is output, but no Bluetooth® audio, Internet radio audio
NO USB AUDIO SOUND OUTPUT	• Radio, CD, AUX audio, Bluetooth® audio, Internet radio, and guidance audio is

(See **NO USB AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	output, but not USB audio
NO NAVIGATION GUIDANCE VOICE OUTPUT (See **NO NAVIGATION GUIDANCE VOICE OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Radio, CD, AUX/USB audio, Bluetooth® audio, and Internet radio audio is output, but no navigation guidance audio
NO VOICE RECOGNITION GUIDANCE VOICE OUTPUT (See **NO VOICE RECOGNITION GUIDANCE VOICE OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Radio, CD, AUX/USB audio, Bluetooth® audio, and Internet radio audio is output, but not voice recognition guidance voice
NO CD SOUND OUTPUT (See **NO CD SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Radio, AUX audio, Bluetooth® audio, Internet radio, USB audio and guidance voice is output, but not CD sound
NO AUX AUDIO SOUND OUTPUT (See **NO AUX AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Radio, CD audio, Bluetooth® audio, Internet radio, and guidance audio is output, but not AUX audio
VOICE OPERATION NOT POSSIBLE (See **VOICE OPERATION NOT POSSIBLE [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Voice operation of audio function, communication function, and navigation function is not possible
Bluetooth® PAIRING NOT POSSIBLE (See **Bluetooth® PAIRING NOT POSSIBLE [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Bluetooth® enabled device cannot be paired to connectivity master unit (CMU)
AUTOMATIC Bluetooth® CONNECTION NOT POSSIBLE (See **AUTOMATIC Bluetooth® CONNECTION NOT POSSIBLE [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Bluetooth® pairing setting is possible, however, automatic Bluetooth® connection is not possible
REAL TIME TRAFFIC FUNCTION INFORMATION NOT DISPLAYED (See **REAL TIME TRAFFIC FUNCTION INFORMATION NOT DISPLAYED [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)	• Information such as gas prices, weather, and nearest restaurant is not output in navigation mode

SYSTEM WIRING DIAGRAM [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

2014 - Mazda3 - Body and Accessories

IMAGE NOT OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**IMAGE NOT OUTPUT IN ALL MODES**
	Image is not output in center display even if any mode is selected
Possible Causes	• Center display setting is off • Connector poor contact or terminal damage • Open circuit in wiring harness between center display terminal 1B and body ground • Center display malfunction • Connectivity master unit (CMU) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CENTER DISPLAY CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the center display connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

2	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN CENTER DISPLAY AND BODY GROUND** • Verify that the center display connector is disconnected. • Inspect the wiring harness for continuity between center display terminal 1B and body ground (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between center display terminal 1B and body ground. **If there is a common connector:** ▪ Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. ▪ Repair or replace the malfunctioning location. **If there is no common connector:** ▪ Repair or replace the wiring harness which has an open circuit. • Go to Step 6.
4	**VERIFY IF MALFUNCTION CAUSE IS CENTER DISPLAY**	Yes	Go to the next step.

	• Replace the center display. (See **CENTER DISPLAY REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Is image output in the center display?	No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
5	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Switch the ignition to ACC or ON (engine off or on). • Select each mode by operating the center display or the commander switch. • Is image in each mode output?	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

NAVIGATION IMAGE NOT OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NAVIGATION IMAGE NOT OUTPUT**
	Rear mount camera image is output, however, navigation image only is not output

Possible Causes	• SD card malfunction
	• Connector poor contact or terminal damage
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit (CMU) terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A
	• Short to ground in wiring harness between the following terminals:
	  ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B
	  ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D
	• Short to power supply in wiring harness between the following terminals:
	  ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A
	  ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B
	  ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D
	• Auxiliary jack/USB port/SD card slot hub malfunction
	• Global positioning system (GPS) antenna malfunction
	• CMU malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VISUALLY INSPECT SD CARD** • Switch the ignition OFF. • Visually inspect the SD card for looseness or damage.	Yes	System is normal. (explain to the customer that there is a malfunction in SD card)
		No	Go to the next step.

	Is the SD card normal?		
2	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CONNECTOR** • Disconnect the auxiliary jack/USB port/SD card slot hub connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
3	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
4	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the CMU and the auxiliary jack/USB port/SD card slot hub connector are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning

			location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 9.
5	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the CMU and the auxiliary jack/USB port/SD card slot hub connector are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Auxiliary jack/USB port/SD card slot hub terminal 2B ▪ Auxiliary jack/USB port/SD card slot hub terminal 2D • Is there continuity?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is

			shorted to ground. • Go to Step 9.
		No	Go to the next step.
6	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the CMU and the auxiliary jack/USB port/SD card slot hub connector are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Auxiliary jack/USB port/SD card slot hub terminal 2A ▪ Auxiliary jack/USB port/SD card slot hub terminal 2B ▪ Auxiliary jack/USB port/SD card slot hub terminal 2D • Is the voltage **B+**?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to Step 9.
		No	Go to the next step.

7	**VERIFY IF MALFUNCTION CAUSE IS AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Replace the auxiliary jack/USB port/SD card slot hub. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the SD card when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select navigation by operating the center display or the commander switch. • Is a navigation image output?	Yes	Go to Step 9.
		No	Go to the next step.
8	**VERIFY IF MALFUNCTION CAUSE IS GPS ANTENNA** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the GPS antenna. (See **GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

	Insert the SD card when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select navigation by operating the center display or the commander switch. • Is a navigation image output?		
9	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the SD card when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select navigation by operating the center display or the commander switch. • Is a navigation image output?	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

REAR MOUNT CAMERA IMAGE NOT OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**REAR MOUNT CAMERA IMAGE NOT OUTPUT**
	Navigation image is output, however, rear mount camera image is not output

Possible Causes	• Connector poor contact or terminal damage
	• Rear mount camera malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit (CMU) terminal 1B and rear mount camera terminal D
	  ▪ CMU terminal 1C and rear mount camera terminal A
	  ▪ CMU terminal 1D and rear mount camera terminal E
	• Short to power supply in wiring harness between the following terminals:
	  ▪ CMU terminal 1B and rear mount camera terminal D
	  ▪ CMU terminal 1C and rear mount camera terminal A
	  ▪ CMU terminal 1D and rear mount camera terminal E
	• CMU malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR MOUNT CAMERA CONDITION** • Is the rear mount camera lens soiled by dust or dirt?	Yes	Clean the rear mount camera lens, then go to Step 8.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS REAR MOUNT CAMERA** • Are there any scratches or damage on the rear mount camera lens?	Yes	Replace the rear mount camera lens, then go to Step 8. (See **REAR MOUNT CAMERA REMOVAL/INSTALLATION**.)
		No	Go to the next step.
3	**INSPECT REAR MOUNT CAMERA CONNECTOR**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

	Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the rear mount camera connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
4	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
5	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN CMU AND REAR MOUNT CAMERA** • Verify that the rear mount camera and CMU connectors are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ CMU terminal 1B and rear mount camera terminal D ▪ CMU terminal 1C and rear mount camera terminal A ▪ CMU terminal 1D and rear	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1B and rear mount camera terminal D ▪ CMU terminal 1C and rear mount camera terminal A ▪ CMU terminal 1D and rear mount camera terminal E **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring

	mount camera terminal E • Is there continuity?		harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 8.
6	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN CMU AND REAR MOUNT CAMERA** • Verify that the rear mount camera and CMU connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Rear mount camera terminal D ▪ Rear mount camera terminal A ▪ Rear mount camera terminal E • Is the voltage **B+**?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1B and rear mount camera terminal D ▪ CMU terminal 1C and rear mount camera terminal A ▪ CMU terminal 1D and rear mount camera terminal E **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is**

			no common connector: • Repair or replace the wiring harness which is shorted to the power supply. • Go to Step 8.
		No	Go to the next step.
7	**DETERMINE IF MALFUNCTION CAUSE IS REAR MOUNT CAMERA** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the rear mount camera. (See **REAR MOUNT CAMERA REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Apply the parking brake. • Switch the ignition to ACC or ON (engine off or on). • Shift to the R position. • Is rear mount camera image output normally?	Yes	Go to the next step.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
8	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	.) • Apply the parking brake. • Switch the ignition to ACC or ON (engine off or on). • Shift to the R position. • Is rear mount camera image output normally?		

2014 - Mazda3 - Body and Accessories

NO SOUND OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

With Bose ®

Description	NO SOUND OUTPUT IN ALL MODES
	Sound is not output from speakers even if any mode is selected

Possible	• Connector poor contact or terminal damage
	• Tuner and amp unit (TAU) ACC power supply circuit malfunction
	  ▪ Short circuit to ground in wiring harness between TAU terminal 2R and AUDIO2 7.5 A fuse
	  ▪ AUDIO2 7.5A fuse malfunction
	  ▪ Open circuit in wiring harness between TAU terminal 2R and AUDIO2 7.5 A fuse
	• Open circuit in wiring harness between the following terminals:
	  ▪ TAU terminal 2W and body ground
	  ▪ Audio amplifier terminal 2J and body ground
	  ▪ Audio amplifier terminal 3B and body ground
	• TAU malfunction
	• Connectivity master unit (CMU) malfunction
	• Speaker malfunction
	  ▪ Speaker malfunction
	  • Front door speaker (LH) malfunction
	  • Front door speaker (RH) malfunction
	  • Rear door speaker (LH) malfunction
	  • Rear door speaker (RH) malfunction
	  • Front side speaker (LH) malfunction
	  • Front side speaker (RH) malfunction
	  • Front center speaker malfunction
	  • Rear speaker (LH) malfunction
	  • Rear speaker (RH) malfunction
	  ▪ Open circuit, or short to ground in wiring harness between the following terminals:
	  • Audio amplifier terminal 3C and front door speaker (LH) terminal C

Causes	• Audio amplifier terminal 3D and front door speaker (LH) terminal B • Audio amplifier terminal 3E and front door speaker (RH) terminal C • Audio amplifier terminal 3F and front door speaker (RH) terminal B • Audio amplifier terminal 3G and rear door speaker (LH) terminal B • Audio amplifier terminal 3H and rear door speaker (LH) terminal C • Audio amplifier terminal 2A and rear door speaker (RH) terminal C • Audio amplifier terminal 2B and rear door speaker (RH) terminal B • Audio amplifier terminal 2C and front side speaker (LH) terminal A • Audio amplifier terminal 2E and front side speaker (LH) terminal B • Audio amplifier terminal 2K and front side speaker (RH) terminal A • Audio amplifier terminal 2M and front side speaker (RH) terminal B • Audio amplifier terminal 2G and front center speaker terminal B • Audio amplifier terminal 2I and front center speaker terminal A • Audio amplifier terminal 2O and rear speaker (LH) terminal B • Audio amplifier terminal 2P and rear speaker (LH) terminal A • Audio amplifier terminal 2O and rear speaker (RH) terminal B • Audio amplifier terminal 2P and rear speaker (RH) terminal A

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY**	Yes	• System is normal. • Due to the possibility that sound is not output in some modes, verify the malfunction in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **NO SOUND OUTPUT IN MULTIPLE MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	MASTER UNIT].) • Select assist code “94”. • Press the [ENTER] and verify that the sound is output from each speaker. • Is sound output from each speaker in the order?	No	**No sound is produced from all speakers** • Go to the next step. **No sound is produced from some speakers** • Go to Step 10.
2	**INSPECT TAU CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the TAU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
3	**INSPECT AUDIO AMPLIFIER CONNECTOR** • Disconnect the audio amplifier connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
4	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
5	**INSPECT TAU ACC POWER SUPPLY VOLTAGE**	Yes	Go to the next step.

	• Verify that the TAU connector is disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at TAU terminal 2R (vehicle wiring harness side). • Is the voltage **B+**?	No	Inspect the AUDIO2 7.5A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify if there is a common connector between AUDIO2 7.5A fuse and the TAU terminal 2R. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Replace the fuse. • If the fuse is damaged: ▪ Replace the fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify if there is a common connector between ACC relay and the TAU terminal 2R. **If there is a common connector:** • Inspect the common

			connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 13.
6	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN TAU AND BODY GROUND** • Verify that the TAU connector is disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ TAU terminal 2W and body ground • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 2W and body ground **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the

			malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 13.
7	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN AUDIO AMPLIFIER AND BODY GROUND** • Verify that the audio amplifier connectors are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ Audio amplifier terminal 2J and body ground ▪ Audio amplifier terminal 3B and body ground • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio amplifier terminal 2J and body ground ▪ Audio amplifier terminal 3B and body ground **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 13.

8	**DETERMINE IF MALFUNCTION CAUSE IS AUDIO AMPLIFIER** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the audio amplifier. (See **AUDIO AMPLIFIER REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Select assist code “94”. • Press the [ENTER] and verify that the sound is output from each speaker. • Is sound output from each speaker in the order?	Yes	Go to Step 13.
		No	Go to the next step.
9	**DETERMINE IF MALFUNCTION CAUSE IS TAU** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the TAU. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)	Yes	Go to Step 13.
		No	Replace the CMU, then go to Step 13. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

	Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Select assist code “94”. • Press the [ENTER] and verify that the sound is output from each speaker. • Is sound output from each speaker in the order?		
10	**INSPECT SPEAKERS** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the malfunctioning speaker. (See **FRONT DOOR SPEAKER INSPECTION**.) (See **REAR DOOR SPEAKER INSPECTION**.) (See **FRONT SIDE SPEAKER INSPECTION**.) (See **FRONT CENTER SPEAKER INSPECTION**.) (See **REAR SPEAKER INSPECTION**.) • Is the speaker resistance normal?	Yes	Go to the next step.
		No	Replace the malfunctioning speaker, then go to Step 13. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.) (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.) (See **FRONT SIDE SPEAKER REMOVAL/INSTALLATION**.) (See **FRONT CENTER SPEAKER REMOVAL/INSTALLATION**.) (See **REAR SPEAKER REMOVAL/INSTALLATION**.)
11	**INSPECT SPEAKER CIRCUIT FOR OPEN CIRCUIT** • Disconnect the connector of the malfunctioning speaker	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following

and the audio amplifier connector.

- Verify the continuity of the wiring harness between the following terminals (vehicle wiring harness side) of the speakers which are malfunctioning.
  - Audio amplifier terminal 3C and front door speaker (LH) terminal C
  - Audio amplifier terminal 3D and front door speaker (LH) terminal B
  - Audio amplifier terminal 3E and front door speaker (RH) terminal C
  - Audio amplifier terminal 3F and front door speaker (RH) terminal B
  - Audio amplifier terminal 3G and rear door speaker (LH) terminal B
  - Audio amplifier terminal 3H and rear door speaker (LH) terminal C
  - Audio amplifier terminal 2A and rear door speaker (RH) terminal C
  - Audio amplifier terminal 2B

terminals.

- Audio amplifier terminal 3C and front door speaker (LH) terminal C
- Audio amplifier terminal 3D and front door speaker (LH) terminal B
- Audio amplifier terminal 3E and front door speaker (RH) terminal C
- Audio amplifier terminal 3F and front door speaker (RH) terminal B
- Audio amplifier terminal 3G and rear door speaker (LH) terminal B
- Audio amplifier terminal 3H and rear door speaker (LH) terminal C
- Audio amplifier terminal 2A and rear door speaker (RH) terminal C
- Audio amplifier terminal 2B and rear door speaker (RH) terminal B
- Audio amplifier terminal 2C and front side speaker (LH) terminal A
- Audio amplifier terminal 2E and front side speaker (LH) terminal B
- Audio amplifier terminal 2K and front side speaker (RH) terminal A
- Audio amplifier terminal 2M and front side speaker (RH) terminal B
- Audio amplifier terminal 2G and front center speaker terminal B
- Audio amplifier terminal 2I and front center speaker terminal A
- Audio amplifier terminal 2O and rear speaker (LH) terminal B
- Audio amplifier terminal 2P and rear speaker (LH) terminal A
- Audio amplifier terminal 2O and rear speaker (RH) terminal B
- Audio amplifier terminal 2P and rear speaker (RH) terminal A

and rear door speaker (RH) terminal B

- Audio amplifier terminal 2C and front side speaker (LH) terminal A
- Audio amplifier terminal 2E and front side speaker (LH) terminal B
- Audio amplifier terminal 2K and front side speaker (RH) terminal A
- Audio amplifier terminal 2M and front side speaker (RH) terminal B
- Audio amplifier terminal 2G and front center speaker terminal B
- Audio amplifier terminal 2I and front center speaker terminal A
- Audio amplifier terminal 2O and rear speaker (LH) terminal B
- Audio amplifier terminal 2P and rear speaker (LH) terminal A
- Audio amplifier terminal 2O

If there is a common connector:

- Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location.
- Repair or replace the malfunctioning location.

Repair or replace the malfunctioning location.

- Repair or replace the wiring harness which has an open circuit.

- Go to Step 13.

	and rear speaker (RH) terminal B ▪ Audio amplifier terminal 2P and rear speaker (RH) terminal A • Is there continuity?		
12	**INSPECT SPEAKER CIRCUIT FOR SHORT TO GROUND** • Verify that the connector of the malfunctioning speaker and the audio amplifier connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) of the speakers which are malfunctioning and body ground. ▪ Front door speaker (LH) terminal C ▪ Front door speaker (LH) terminal B ▪ Front door speaker (RH) terminal C ▪ Front door speaker (RH) terminal B ▪ Rear door speaker (LH) terminal B ▪ Rear door speaker (LH) terminal C ▪ Rear door speaker (RH) terminal C ▪ Rear door speaker (RH) terminal B ▪ Front side speaker (LH) terminal A ▪ Front side speaker (LH)	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Front door speaker (LH) terminal C ▪ Front door speaker (LH) terminal B ▪ Front door speaker (RH) terminal C ▪ Front door speaker (RH) terminal B ▪ Rear door speaker (LH) terminal B ▪ Rear door speaker (LH) terminal C ▪ Rear door speaker (RH) terminal C ▪ Rear door speaker (RH) terminal B ▪ Front side speaker (LH) terminal A ▪ Front side speaker (LH) terminal B ▪ Front side speaker (RH) terminal A ▪ Front side speaker (RH) terminal B ▪ Front center speaker terminal B ▪ Front center speaker terminal A ▪ Rear speaker (LH) terminal B ▪ Rear speaker (LH) terminal A ▪ Rear speaker (RH) terminal B ▪ Rear speaker (RH) terminal A **If there is a common connector:**

	terminal B ▪ Front side speaker (RH) terminal A ▪ Front side speaker (RH) terminal B ▪ Front center speaker terminal B ▪ Front center speaker terminal A ▪ Rear speaker (LH) terminal B ▪ Rear speaker (LH) terminal A ▪ Rear speaker (RH) terminal B ▪ Rear speaker (RH) terminal A • Is there continuity?		Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. ▪ Repair or replace the malfunctioning location. **Repair or replace the malfunctioning location.** ▪ Repair or replace the wiring harness which is shorted to ground. • Go to the next step.
		No	Go to the next step.
13	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY**	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	MASTER UNIT].) • Select assist code “94”. • Press the [ENTER] and verify that the sound is output from each speaker. • Is sound output from each speaker in the order?		

Without Bose®

Description	NO SOUND OUTPUT IN ALL MODES
	Sound is not output from speakers even if any mode is selected

Possible Causes	• Connector poor contact or terminal damage
	• Tuner and amp unit (TAU) ACC power supply circuit malfunction
	  ▪ Short circuit to ground in wiring harness between TAU terminal 2R and AUDIO2 7.5 A fuse
	  ▪ AUDIO2 7.5A fuse malfunction
	  ▪ Open circuit in wiring harness between TAU terminal 2R and AUDIO2 7.5 A fuse
	• Open circuit in wiring harness between the following terminals:
	  ▪ TAU terminal 2W and body ground
	• TAU malfunction
	• Connectivity master unit (CMU) malfunction
	• Open circuit in wiring harness between the following terminals:
	  ▪ TAU terminal 2A and front door speaker (LH) terminal C
	  ▪ TAU terminal 2C and front door speaker (LH) terminal B
	  ▪ TAU terminal 2A and tweeter (LH) terminal B
	  ▪ TAU terminal 2C and tweeter (LH) terminal A
	  ▪ TAU terminal 2D and front door speaker (RH) terminal C
	  ▪ TAU terminal 2F and front door speaker (RH) terminal B
	  ▪ TAU terminal 2D and tweeter (RH) terminal B
	  ▪ TAU terminal 2F and tweeter (RH) terminal A
	  ▪ TAU terminal 2S and rear door speaker (LH) terminal C
	  ▪ TAU terminal 2U and rear door speaker (LH) terminal B
	  ▪ TAU terminal 2V and rear door speaker (RH) terminal C
	  ▪ TAU terminal 2X and rear door speaker (RH) terminal B

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Select assist code “94”. • Press the [ENTER] and verify that the sound is output from each speaker. • Is sound output from each speaker in the order?	Yes	• System is normal. • Due to the possibility that sound is not output in some modes, verify the malfunction in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **NO SOUND OUTPUT IN MULTIPLE MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)
		No	• No sound is produced from all speakers ▪ Go to the next step. • No sound is produced from some speakers ▪ Go to Step 7.
2	**INSPECT TAU CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the TAU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
3	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
4	**INSPECT TAU ACC POWER SUPPLY VOLTAGE** • Verify that the TAU connector	Yes	Go to the next step.
		No	Inspect the AUDIO2 7.5A fuse.

is disconnected.

- Reconnect the negative battery cable.

  (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Switch the ignition to ACC or ON (engine off or on).
- Measure the voltage at TAU terminal 2R (vehicle wiring harness side).
- Is the voltage **B+**?

- If the fuse is blown:
  - Refer to the wiring diagram and verify if there is a common connector between AUDIO2 7.5A fuse and the TAU terminal 2R.

    If there is a common connector:

    - Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location.
    - Repair or replace the malfunctioning location.

    If there is no common connector:

    - Repair or replace the wiring harness which is shorted to ground.
    - Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify if there is a common connector between ACC relay and the TAU terminal 2R.

    If there is a common connector:

    - Inspect the common connector and terminals for corrosion, damage, or

			disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
5	**INSPECT WIRING HARNESS BETWEEN TAU AND BODY GROUND FOR OPEN CIRCUIT** • Verify that the TAU connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. ▪ TAU terminal 2W • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals and body ground. ▪ TAU terminal 2W **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **Repair or replace the malfunctioning location.** • Repair or replace the

			wiring harness which has an open circuit. • Go to Step 9.
6	**DETERMINE IF MALFUNCTION CAUSE IS TAU** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the TAU. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Select assist code “94”. • Press the [ENTER] and verify that the sound is output from each speaker. • Is sound output from each speaker in the order?	Yes	Go to Step 9.
		No	Replace the CMU, then go to Step 9. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
7	**INSPECT SPEAKERS** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Inspect the malfunctioning	Yes	Go to the next step.
		No	Replace the malfunctioning speaker, then go to Step 9. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.) (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.) (See **TWEETER REMOVAL/INSTALLATION**.)

	speaker. (See **FRONT DOOR SPEAKER INSPECTION**.) (See **REAR DOOR SPEAKER INSPECTION**.) (See **TWEETER INSPECTION**.) • Is the speaker resistance normal?		
8	**INSPECT SPEAKER CIRCUIT FOR OPEN CIRCUIT** • Disconnect the connector of the malfunctioning speaker and the TAU connector. • Verify the continuity of the wiring harness between the following terminals (vehicle wiring harness side) of the speakers which are malfunctioning. ▪ TAU terminal 2A and front door speaker (LH) terminal C ▪ TAU terminal 2C and front door speaker (LH) terminal B ▪ TAU terminal 2A and tweeter (LH) terminal B ▪ TAU terminal 2C and tweeter (LH) terminal A ▪ TAU terminal 2D and front door speaker (RH) terminal C ▪ TAU terminal 2F and front door speaker (RH) terminal B ▪ TAU terminal 2D and tweeter (RH) terminal B	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 2A and front door speaker (LH) terminal C ▪ TAU terminal 2C and front door speaker (LH) terminal B ▪ TAU terminal 2A and tweeter (LH) terminal B ▪ TAU terminal 2C and tweeter (LH) terminal A ▪ TAU terminal 2D and front door speaker (RH) terminal C ▪ TAU terminal 2F and front door speaker (RH) terminal B ▪ TAU terminal 2D and tweeter (RH) terminal B ▪ TAU terminal 2F and tweeter (RH) terminal A ▪ TAU terminal 2S and rear door speaker (LH) terminal C ▪ TAU terminal 2U and rear door speaker (LH) terminal B ▪ TAU terminal 2V and rear door speaker (RH) terminal C ▪ TAU terminal 2X and rear door speaker (RH) terminal B **If there is a common connector:** ▪ Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. ▪ Repair or replace the malfunctioning location.

	▪ TAU terminal 2F and tweeter (RH) terminal A ▪ TAU terminal 2S and rear door speaker (LH) terminal C ▪ TAU terminal 2U and rear door speaker (LH) terminal B ▪ TAU terminal 2V and rear door speaker (RH) terminal C ▪ TAU terminal 2X and rear door speaker (RH) terminal B • Is there continuity?		**Repair or replace the malfunctioning location.** ▪ Repair or replace the wiring harness which has an open circuit. • Go to the next step.
9	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Select assist code “94”. • Press the [ENTER] and verify	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	that the sound is output from each speaker. • Is sound output from each speaker in the order?		

2014 - Mazda3 - Body and Accessories

NO SOUND OUTPUT IN MULTIPLE MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NO SOUND OUTPUT IN MULTIPLE MODES**
	Radio, CD, AUX audio is output, but no Bluetooth® audio, Internet radio, USB audio, and guidance voice

Possible Causes	• Connector poor contact or terminal damage
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit (CMU) terminal 1Y and tuner and amp unit (TAU) terminal 1Q
	  ▪ CMU terminal 1Z and TAU terminal 1R
	  ▪ CMU terminal 1AA and TAU terminal 1S
	  ▪ CMU terminal 1AB and TAU terminal 1T
	• Short to ground in wiring harness between the following terminals:
	  ▪ CMU terminal 1Y and TAU terminal 1Q
	  ▪ CMU terminal 1Z and TAU terminal 1R
	  ▪ CMU terminal 1AA and TAU terminal 1S
	  ▪ CMU terminal 1AB and TAU terminal 1T
	• Short to power supply in wiring harness between the following terminals:
	  ▪ CMU terminal 1Y and TAU terminal 1Q
	  ▪ CMU terminal 1Z and TAU terminal 1R
	  ▪ CMU terminal 1AA and TAU terminal 1S
	  ▪ CMU terminal 1AB and TAU terminal 1T
	• TAU malfunction
	• CMU malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TAU CONNECTOR** • Disconnect the negative battery cable.	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the TAU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
2	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN CMU AND TAU** • Verify that the CMU and TAU connectors are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ CMU terminal 1Y and TAU terminal 1Q ▪ CMU terminal 1Z and TAU terminal 1R ▪ CMU terminal 1AA and TAU terminal 1S ▪ CMU terminal 1AB and TAU terminal 1T • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1Y and TAU terminal 1Q ▪ CMU terminal 1Z and TAU terminal 1R ▪ CMU terminal 1AA and TAU terminal 1S ▪ CMU terminal 1AB and TAU terminal 1T **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring

			harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 7.
4	**VERIFY IF MALFUNCTION CAUSE IS SHORT TO GROUND IN WIRING HARNESS BETWEEN CMU AND TAU** • Verify that the CMU and TAU connectors are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ TAU terminal 1Q ▪ TAU terminal 1R ▪ TAU terminal 1S ▪ TAU terminal 1T • Is there continuity?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1Y and TAU terminal 1Q ▪ CMU terminal 1Z and TAU terminal 1R ▪ CMU terminal 1AA and TAU terminal 1S ▪ CMU terminal 1AB and TAU terminal 1T **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location.

			If there is no common connector: • Repair or replace the wiring harness which is shorted to ground. • Go to Step 7.
		No	Go to the next step.
5	**VERIFY IF MALFUNCTION CAUSE IS SHORT TO POWER SUPPLY IN WIRING HARNESS BETWEEN CMU AND TAU** • Verify that the CMU and TAU connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ TAU terminal 1Q ▪ TAU terminal 1R ▪ TAU terminal 1S ▪ TAU terminal 1T • Is the voltage **B+**?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1Y and TAU terminal 1Q ▪ CMU terminal 1Z and TAU terminal 1R ▪ CMU terminal 1AA and TAU terminal 1S ▪ CMU terminal 1AB and TAU terminal 1T **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness

			which is shorted to the power supply. • Go to Step 7.
		No	Go to the next step.
6	**DETERMINE IF MALFUNCTION CAUSE IS TAU** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the TAU. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Select the mode when the malfunction occurred by operating the center display or the commander switch. • Is audio output normally?	Yes	Go to the next step.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
7	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable.	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	(See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Select the mode when the malfunction occurred by operating the center display or the commander switch. • Is audio output normally?		

2014 - Mazda3 - Body and Accessories

NO Bluetooth® AUDIO AND INTERNET RADIO SOUND [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NO Bluetooth® AUDIO AND INTERNET RADIO SOUND**
	Radio, CD, AUX/USB audio, guidance audio is output, but no Bluetooth® audio, Internet radio audio
Possible Causes	• Connector poor contact or terminal damage • Mobile device such as Smartphone, or Bluetooth® enabled device malfunction • Connectivity master unit (CMU) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Switch the ignition to ACC or ON (engine off or on). • After obtaining the customer's consent, use another mobile device such as a Smartphone or Bluetooth® enabled device and select Bluetooth® audio or Internet radio. • Is Bluetooth® audio or Internet radio audio output?	Yes	Explain to the customer that there is a malfunction in the mobile device such as a Smartphone or a Bluetooth® enabled device.
		No	Go to the next step.
2	**INSPECT CMU CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the CMU connector. • Inspect the connector engagement and	Yes	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
		No	Repair or replace the connector, then go to the next step.

	connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Connect the CMU connector. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Using the mobile device such as a Smartphone or the Bluetooth® enabled device when the malfunction occurred, select Bluetooth® audio or Internet radio. • Is Bluetooth® audio or Internet radio audio output?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

NO USB AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NO USB AUDIO SOUND OUTPUT**
	Radio, CD, AUX audio, Bluetooth® audio, Internet radio, and guidance audio is output, but not USB audio

Possible Causes	• USB media malfunction
	• Connector poor contact or terminal damage
	• Open circuit in wiring harness between the following terminals:
	  ▪ Connectivity master unit (CMU) terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A
	• Short to ground in wiring harness between the following terminals:
	  ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B
	  ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D
	• Short to power supply in wiring harness between the following terminals:
	  ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A
	  ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B
	  ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D
	• Auxiliary jack/USB port/SD card slot hub malfunction
	• CMU malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS USB MEDIA** • Switch the ignition off. • After obtaining the customer's consent, replace with a USB media that was not used	Yes	System is normal. (Explain to the customer that the USB media or internal data has a malfunction)
		No	Go to the next step.

	when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select the USB audio mode by operating the commander switch or the center display. • Is sound from the USB audio output?		
2	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auxiliary jack/USB port/SD card slot hub connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the CMU and the auxiliary jack/USB port/SD card slot hub connector are disconnected.	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A

	• Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A • Is there continuity?		**If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 8.

5	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB**
	• Verify that the CMU and the auxiliary jack/USB port/SD card slot hub connector are disconnected.
	• Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground.
	  ▪ Auxiliary jack/USB port/SD card slot hub terminal 2B
	  ▪ Auxiliary
		Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals.
			  ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B
			  ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D
			If there is a common connector:
			• Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring

	jack/USB port/SD card slot hub terminal 2D • Is there continuity?		harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Go to Step 8.
		No	Go to the next step.
6	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the CMU and the auxiliary jack/USB port/SD card slot hub connector are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Auxiliary jack/USB port/SD card slot hub terminal 2A ▪ Auxiliary jack/USB	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location.

	port/SD card slot hub terminal 2B ▪ Auxiliary jack/USB port/SD card slot hub terminal 2D • Is the voltage **B+**?		• Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to Step 8.
		No	Go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE IS AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the auxiliary jack/USB port/SD card slot hub. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the USB disc when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select the USB audio mode by operating the commander switch or the center display. • Is sound from the USB audio output?	Yes	Go to the next step.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

8	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the USB disc when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select the USB audio mode by operating the commander switch or the center display. • Is sound from the USB audio output?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

NO NAVIGATION GUIDANCE VOICE OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NO NAVIGATION GUIDANCE VOICE OUTPUT**
	Radio, CD, AUX/USB audio, Bluetooth® audio, and Internet radio audio is output, but no navigation guidance audio
Possible Causes	• SD card malfunction • Connector poor contact or terminal damage • Auxiliary jack/USB port/SD card slot hub malfunction • Global positioning system (GPS) antenna malfunction • CMU malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY VOLUME SETTING** • Switch the ignition to ACC or ON (engine off or on). • Select the navigation mode by operating the commander switch or the center display. • Operate the navigation guidance audio by operating the commander switch or the steering switch. • Is navigation guidance audio output according to the operation?	Yes	System is normal.
		No	Go to the next step.
2	**VISUALLY INSPECT SD CARD** • Switch the ignition OFF. • Visually inspect the SD card for looseness or damage.	Yes	Go to the next step.
		No	System is normal. (explain to the customer that there is a malfunction in SD card.)

	• Is the SD card normal?		
3	**INSPECT GPS ANTENNA CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the GPS antenna connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Replace the auxiliary jack/USB port/SD card slot hub, then go to the next step. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.)
		No	Repair or replace the connector, then go to Step 5.
4	**VERIFY IF MALFUNCTION CAUSE IS GPS ANTENNA** • Replace the GPS antenna. (See **GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the SD card when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select navigation by operating the center display or the commander switch. • Set to an optional destination and operate the navigation function. • Is navigation guidance audio output according to the operation?	Yes	Go to the next step.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
5	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the SD card when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select navigation by operating the center display or the commander switch. • Set to an optional destination and operate the navigation function. • Is navigation guidance audio output according to the operation?		perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

NO VOICE RECOGNITION GUIDANCE VOICE OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NO VOICE RECOGNITION GUIDANCE VOICE OUTPUT**
	Radio, CD, AUX/USB audio, Bluetooth® audio, and Internet radio audio is output, but not voice recognition guidance voice
Possible Causes	Connectivity master unit (CMU) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Switch the ignition to ACC or ON (engine off or on). • Press the TALK button on the steering switch. • Is voice recognition guidance voice output?	Yes	System is normal.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
2	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Press the TALK button on the steering switch. • Is voice recognition	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	guidance voice output?		

2014 - Mazda3 - Body and Accessories

NO CD SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NO CD SOUND OUTPUT**
	Radio, AUX audio, Bluetooth® audio, Internet radio, USB audio and guidance voice is output, but not CD sound
Possible Causes	• CD disc malfunction • Connector poor contact or terminal damage • Open circuit in wiring harness between the following terminals: ▪ Tuner and amp unit (TAU) terminal 1M and CD player terminal L ▪ TAU terminal 1N and CD player terminal N ▪ TAU terminal 1O and CD player terminal P ▪ TAU terminal 1P and CD player terminal R • Short to ground in wiring harness between the following terminals: ▪ TAU terminal 1M and CD player terminal L ▪ TAU terminal 1N and CD player terminal N ▪ TAU terminal 1O and CD player terminal P ▪ TAU terminal 1P and CD player terminal R • Short to power supply in wiring harness between the following terminals: ▪ TAU terminal 1M and CD player terminal L ▪ TAU terminal 1N and CD player terminal N ▪ TAU terminal 1O and CD player terminal P ▪ TAU terminal 1P and CD player terminal R • Center display malfunction • TAU malfunction • Connectivity master unit (CMU) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY CD DISC CONDITION**	Yes	• Remove dirt on the CD disc or replace with a CD disc that is not scratched or damaged.

	• Verify the CD disc condition when the malfunction occurred. • Is there any dirt or scratches on the CD disc?		• Go to Step 10.
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS CD DISC** • After obtaining the customer's consent, replace with a CD that was not used when the malfunction occurred. • Is CD sound produced?	Yes	Go to the next step.
		No	Go to Step 4.
3	**VERIFY IF DATA TYPE OTHER THAN CDDA/MP3/WMA/AAC IS MIXED IN CD DISC** • Verify the CD disc data content when the malfunction occurred. • Is there data other than CDDA/MP3/WMA/AAC data mixed in?	Yes	• Replace with a CD disc containing only CDDA/MP3/WMA/AAC data and verify the malfunction symptom. **If the malfunction symptom is eliminated** ▪ System is normal (explain to the customer that the cause was a CD disc containing data other than CDDA/MP3/WMA/AAC). **If the malfunction symptom is not eliminated** ▪ Replace the CD player, then go to Step 10. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to the next step.
4	**INSPECT CD PLAYER CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the CD player connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage,	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.

	deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT CONNECTIVITY MASTER UNIT CONNECTOR** • Disconnect the connectivity master unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
6	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN TAU AND CD PLAYER** • Verify that the CD player and the TAU connector are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ TAU terminal 1M and CD player terminal L ▪ TAU terminal 1N and CD player terminal N ▪ TAU terminal 1O and CD player terminal P ▪ TAU terminal 1P and CD player terminal R • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 1M and CD player terminal L ▪ TAU terminal 1N and CD player terminal N ▪ TAU terminal 1O and CD player terminal P ▪ TAU terminal 1P and CD player terminal R **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location.

			If there is no common connector: • Repair or replace the wiring harness which has an open circuit. • Go to Step 10.
7	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN TAU AND CD PLAYER** • Verify that the CD player and the TAU connector are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ CD player terminal L ▪ CD player terminal N ▪ CD player terminal P ▪ CD player terminal R • Is there continuity?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 1M and CD player terminal L ▪ TAU terminal 1N and CD player terminal N ▪ TAU terminal 1O and CD player terminal P ▪ TAU terminal 1P and CD player terminal R **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground.

			• Go to Step 10.
		No	Go to the next step.
8	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN TAU AND CD UNIT** • Verify that the CD player and the TAU connector are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ CD player terminal L ▪ CD player terminal N ▪ CD player terminal P ▪ CD player terminal R • Is the voltage **B+**?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 1M and CD player terminal L ▪ TAU terminal 1N and CD player terminal N ▪ TAU terminal 1O and CD player terminal P ▪ TAU terminal 1P and CD player terminal R **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to Step 10.
		No	Go to the next step.
9	**DETERMINE IF MALFUNCTION CAUSE IS**	Yes	Go to the next step.

	CD PLAYER • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the CD player. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Insert the CD disc when the malfunction occurred. • Is CD sound produced?	No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
10	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Switch the ignition to ACC or ON (engine off or on). • Insert the CD disc when the malfunction occurred. • Is CD sound produced?	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

NO AUX AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**NO AUX AUDIO SOUND OUTPUT** Radio, CD audio, Bluetooth® audio, Internet radio, and guidance audio is output, but not AUX audio

Possible Causes	• External device malfunction
	• Connector poor contact or terminal damage
	• Open circuit in wiring harness between the following terminals:
	  ▪ Tuner and amp unit (TAU) terminal 1L and auxiliary jack/USB port/SD card slot hub terminal 1C
	  ▪ TAU terminal 1I and auxiliary jack/USB port/SD card slot hub terminal 1E
	  ▪ TAU terminal 1K and auxiliary jack/USB port/SD card slot hub terminal 1G
	  ▪ TAU terminal 1J and auxiliary jack/USB port/SD card slot hub terminal 1H
	• Short to ground in wiring harness between the following terminals:
	  ▪ TAU terminal 1L and auxiliary jack/USB port/SD card slot hub terminal 1C
	  ▪ TAU terminal 1I and auxiliary jack/USB port/SD card slot hub terminal 1E
	  ▪ TAU terminal 1K and auxiliary jack/USB port/SD card slot hub terminal 1G
	  ▪ TAU terminal 1J and auxiliary jack/USB port/SD card slot hub terminal 1H
	• Short to power supply in wiring harness between the following terminals:
	  ▪ TAU terminal 1L and auxiliary jack/USB port/SD card slot hub terminal 1C
	  ▪ TAU terminal 1I and auxiliary jack/USB port/SD card slot hub terminal 1E
	  ▪ TAU terminal 1K and auxiliary jack/USB port/SD card slot hub terminal 1G
	  ▪ TAU terminal 1J and auxiliary jack/USB port/SD card slot hub terminal 1H
	• Auxiliary jack/USB port/SD card slot hub malfunction
	• TAU malfunction

	• Connectivity master unit (CMU) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS EXTERNAL DEVICE** • Switch the ignition OFF. • After obtaining the customer's consent, replace with an external media that was not used when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select the AUX audio mode by operating the commander switch or the center display. • Is sound from the AUX audio output?	Yes	System is normal. (Explain to the customer that the external device or internal data has a malfunction)
		No	Go to the next step.
2	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auxiliary jack/USB port/SD card slot hub connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
3	**INSPECT TAU CONNECTOR** • Disconnect the TAU connector. • Inspect the connector engagement and connection condition and inspect the	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.

	terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
4	**INSPECT CMU CONNECTOR** • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
5	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN TAU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the TAU and the auxiliary jack/USB port/SD card slot hub connector are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ TAU terminal 1L and auxiliary jack/USB port/SD card slot hub terminal 1C ▪ TAU terminal 1I and auxiliary jack/USB port/SD card slot hub terminal 1E ▪ TAU terminal 1K and auxiliary jack/USB port/SD card slot hub terminal 1G ▪ TAU terminal 1J and auxiliary	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 1L and auxiliary jack/USB port/SD card slot hub terminal 1C ▪ TAU terminal 1I and auxiliary jack/USB port/SD card slot hub terminal 1E ▪ TAU terminal 1K and auxiliary jack/USB port/SD card slot hub terminal 1G ▪ TAU terminal 1J and auxiliary jack/USB port/SD card slot hub terminal 1H **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or

	jack/USB port/SD card slot hub terminal 1H • Is there continuity?		replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 10.
6	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN TAU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the TAU and the auxiliary jack/USB port/SD card slot hub connector are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Auxiliary jack/USB port/SD card slot hub terminal 1C ▪ Auxiliary jack/USB port/SD card slot hub terminal 1E ▪ Auxiliary jack/USB port/SD card slot hub terminal 1G ▪ Auxiliary jack/USB port/SD card slot hub terminal 1H • Is there continuity?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 1L and auxiliary jack/USB port/SD card slot hub terminal 1C ▪ TAU terminal 1I and auxiliary jack/USB port/SD card slot hub terminal 1E ▪ TAU terminal 1K and auxiliary jack/USB port/SD card slot hub terminal 1G ▪ TAU terminal 1J and auxiliary jack/USB port/SD card slot hub terminal 1H **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common**

			connector: • Repair or replace the wiring harness which is shorted to ground. • Go to Step 10.
		No	Go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN TAU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the TAU and the auxiliary jack/USB port/SD card slot hub connector are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Auxiliary jack/USB port/SD card slot hub terminal 1C ▪ Auxiliary jack/USB port/SD card slot hub terminal 1E ▪ Auxiliary jack/USB port/SD card slot hub terminal 1G ▪ Auxiliary jack/USB port/SD card slot hub	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ TAU terminal 1L and auxiliary jack/USB port/SD card slot hub terminal 1C ▪ TAU terminal 1I and auxiliary jack/USB port/SD card slot hub terminal 1E ▪ TAU terminal 1K and auxiliary jack/USB port/SD card slot hub terminal 1G ▪ TAU terminal 1J and auxiliary jack/USB port/SD card slot hub terminal 1H **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or

	terminal 1H • Is the voltage **B+**?		replace the wiring harness which is shorted to the power supply. • Go to Step 10.
		No	Go to the next step.
8	**VERIFY IF MALFUNCTION CAUSE IS AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the auxiliary jack/USB port/SD card slot hub. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect the external device when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select the AUX audio mode by operating the commander switch or the center display. • Is sound from the AUX audio output?	Yes	Go to Step 10.
		No	Go to the next step.
9	**VERIFY IF MALFUNCTION CAUSE IS TAU** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY**	Yes	Go to the next step.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

	CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Replace the TAU. (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect the external device when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Select the AUX audio mode by operating the commander switch or the center display. • Is sound from the AUX audio output?		
10	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect the external device when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on).	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	Select the AUX audio mode by operating the commander switch or the center display. • Is sound from the AUX audio output?		

2014 - Mazda3 - Body and Accessories

VOICE OPERATION NOT POSSIBLE [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**VOICE OPERATION NOT POSSIBLE**
	
	Voice operation of audio function, communication function, and navigation function is not possible
	
	NOTE:
	• The following applicable voice operations are not possible.
	  ▪ Voice operation of audio function
	  • Except for USB audio mode, voice operation for specifying, artist name, and album name is not possible
	  • If the USB device audio file does not contain song information (artist name, album name), the song information cannot be specified.
	  ▪ Hands-free telephone (HF/TEL) voice operation
	  • If the connectivity master unit (CMU) cannot read the telephone book, voice operation is not possible.
	  • If “Mr./Mrs.” is added to a person's name when speaking, normal voice operation is not possible (non-match to name registered in telephone book)
	  • If there are several names with similar pronunciation to the name registered in the telephone book, normal voice operation is not possible (John Smith/ Juan Smith)
	  • If the person's name that is spoken is short, normal voice operation is not possible (Ma/Pa)

	• Malfunction due to conditions of use
	  ▪ Abnormally slow speech
	  ▪ Loud speech
	  ▪ Difference between language set in the CMU and language used in voice operation
	• Malfunction due to effects of surrounding environment
	  ▪ Air from A/C is blown against the microphone
	  ▪ Loud road noise, A/C operation sound, external noise
	• Speaker malfunction
	• Audio amplifier unit malfunction (with Bose®)
	• Tuner and amp unit (TAU) malfunction
	• Connector poor contact or terminal damage

Possible Causes	• Microphone malfunction
	  ▪ Open circuit in wiring harness between the following terminals
	  • CMU terminal 1P and microphone terminal E
	  • CMU terminal 1R and microphone terminal D
	  • CMU terminal 1S and microphone terminal A
	  • CMU terminal 1T and microphone terminal B
	  ▪ Short to ground in wiring harness between the following terminals
	  • CMU terminal 1P and microphone terminal E
	  ▪ Short to power supply in wiring harness between the following terminals
	  • CMU terminal 1P and microphone terminal E
	  • CMU terminal 1R and microphone terminal D
	  ▪ Microphone internal malfunction
	• CMU internal malfunction

Diagnostic Procedure

Step	Inspection		Action

1	**VERIFY IF MALFUNCTION DUE TO LANGUAGE SETTING OF CMU**
	• Switch the ignition to ACC or ON (engine off or on).
	• Select the following by operating the commander switch or the center display.
	  ▪ Settings
	  ▪ System
	  ▪ Language
	• Does the language set to the CMU match the language used in voice operations?
		Yes	Go to the next step.

		No	Select the language used for voice operations, then go to Step 12.
2	**VERIFY IF MALFUNCTION DUE TO CUSTOMER USE METHOD** • Switch the ignition to ACC or ON (engine off or on). • Press the TALK button on the steering switch. • After the voice guidance instructs the user to speak after the beep, say, “Current position” into the microphone in a normal or slightly loud voice.	Yes	System is normal. (Explain the contents of the servicing to the customer)
		No	Go to the next step.

	• Is the current position displayed in the center display? **Determination criteria** ▪ The current position can be determined to have been displayed if the current position is displayed one time out of 10 voice command trials.		
3	**VERIFY IF MALFUNCTION DUE TO EFFECTS OF SURROUNDING ENVIRONMENT** • Verify if air from the A/C is being blown against the microphone. • Move the vehicle to a location with little external noise. • Press the TALK button on the steering switch. • After the voice guidance instructs the user to speak after the beep, say, “Current position” into the microphone in a normal or slightly loud voice. • Is the current position displayed in the center display? **Determination criteria** ▪ The current position can be determined to have been displayed if the current position is displayed one time out of 10 voice command trials.	Yes	System is normal. (Explain the contents of the servicing to the customer)
		No	Go to the next step.
4	**DETERMINE IF MALFUNCTION IS SPEAKER, AUDIO AMPLIFIER RELATED** • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic	Yes	Go to the next step.
		No	Perform malfunction diagnosis according to NO SOUND OUTPUT IN ALL MODES. (See **NO SOUND OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Select assist code “94”. • Press the [ENTER] and verify that the sound is output from each speaker. • Is sound output from each speaker?		
5	**DETERMINE IF MALFUNCTION IS TAU** • Switch the ignition to ACC or ON (engine off or on). • Operate the command switch or center display and verify if sound is output from the following modes. ▪ Bluetooth® audio ▪ Internet radio ▪ USB audio • Is sound output?	Yes	TAU is normal. Go to the next step.
		No	Perform malfunction diagnosis according to NO SOUND OUTPUT IN MULTIPLE MODES. (See **NO SOUND OUTPUT IN MULTIPLE MODES [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)
6	**DETERMINE IF MALFUNCTION IS MICROPHONE RELATED** • Switch the ignition to ACC or ON (engine off or on). • Launch the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [CONNECTIVITY MASTER UNIT]**.) • Select assist code “61”. • Press ENTER. • Say, “Current position” into the microphone in a normal or slightly loud voice. • When speaking, verify if the “Microphone” item is displayed. • Is the “Microphone” item displayed?	Yes	The microphone is normal. Go to Step 11.
		No	Go to the next step.
7	**MICROPHONE CONNECTOR INSPECTION** • Disconnect the negative battery	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 12.

	cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the microphone connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
8	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN CMU AND MICROPHONE** • Disconnect the CMU connector. • Verify that the microphone connector is disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ CMU terminal 1P and microphone terminal E ▪ CMU terminal 1R and microphone terminal D ▪ CMU terminal 1S and microphone terminal A ▪ CMU terminal 1T and microphone terminal B • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1P and microphone terminal E ▪ CMU terminal 1R and microphone terminal D ▪ CMU terminal 1S and microphone terminal A ▪ CMU terminal 1T and microphone terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:**

			• Repair or replace the wiring harness which has an open circuit. • Go to Step 12.
9	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN CMU AND MICROPHONE** • Verify that the CMU and microphone connectors are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Microphone terminal E • Is there continuity?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1P and microphone terminal E **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Go to Step 12.
		No	Go to the next step.
10	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN CMU AND MICROPHONE** • Verify that the CMU and microphone connectors are	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 1P and microphone terminal E ▪ CMU terminal 1R and

	disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Microphone terminal E ▪ Microphone terminal D • Is the voltage **B+**?		microphone terminal D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to Step 12.
		No	Replace the microphone, then go to Step 12. (See **MICROPHONE REMOVAL/INSTALLATION**.)
11	**INSPECT CMU CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
		No	Repair or replace the connector, then go to the next step.

12	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Move the vehicle to a location with little external noise. • Press the TALK button on the steering switch. • After the voice guidance instructs the user to speak after the beep, say, “Current position” into the microphone in a normal or slightly loud voice. • Is the current position displayed in the center display? **Determination criteria** ▪ The current position can be determined to have been displayed if the current position is displayed one time out of 10 voice command trials.	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

Bluetooth® PAIRING NOT POSSIBLE [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**Bluetooth® PAIRING NOT POSSIBLE** Bluetooth® enabled device cannot be paired to connectivity master unit (CMU) **NOTE:** • The Bluetooth® pairing procedure differs depending on the version of the Bluetooth®-enabled device. Ask the customer in advance what the Bluetooth®-enabled device's version was when the Bluetooth® pairing was performed. • If the Bluetooth®-enabled device has an access limitation, the pairing setting cannot be performed. Ask the customer in advance if the Bluetooth®-enabled device has an access limitation. • A maximum of seven Bluetooth®-enabled devices can be programmed to one vehicle.

Possible Causes	• Customer's Bluetooth®-enabled device malfunction
	  ▪ Incompatible Bluetooth®-enabled device is used
	  ▪ Bluetooth® setting is off
	  ▪ Radio wave transmission setting including Bluetooth® radio wave is off
	  ▪ If the Bluetooth® pairing has been previously performed, it will be necessary to clear the vehicle data stored in the Bluetooth®-enabled device and re-program.
	  ▪ Bluetooth®-enabled device internal malfunction
	• Connector poor contact or terminal damage
	• Connectivity master unit (CMU) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM**	Yes	Go to the next step.

	• Select the following by using the center display or the commander switch. ▪ Settings ▪ Devices ▪ Bluetooth • Verify if the customer's Bluetooth®-enabled device is registered/selected. • Is the customer's Bluetooth®-enabled device registered/selected to the CMU?		
		No	Register/select the customer's Bluetooth®-enabled device. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the malfunction is not eliminated, go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS Bluetooth®-ENABLED DEVICE SPECIFICATION** • Verify if the customer's Bluetooth®-enabled device is compatible according to the "Available Bluetooth®-enabled Devices". (See **Available Bluetooth®-Enabled Devices**.) • Is the customer's Bluetooth device compatible?	Yes	Go to the next step.
		No	Explain to the customer that the malfunction cause is an incompatible Bluetooth®-enabled device.
3	**VERIFY IF MALFUNCTION CAUSE IS Bluetooth®-ENABLED DEVICE SETTING** • After obtaining the customer's consent, verify that the Bluetooth®-enabled device setting is turned on. • Is the Bluetooth®-enabled device setting turned on?	Yes	Go to the next step.
		No	Turn it on and perform the Bluetooth® pairing. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the malfunction is not eliminated, go to the next step.
4	**VERIFY IF MALFUNCTION CAUSE IS RADIO WAVE TRANSMISSION SETTING FOR Bluetooth®-ENABLED DEVICE** • After obtaining the customer's consent, verify that the radio wave transmission setting for the Bluetooth®-enabled device is turned on.	Yes	Go to the next step.
		No	Turn it on and perform the Bluetooth® pairing. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the

	• Is the radio wave transmission setting for the Bluetooth®-enabled device turned on?		malfunction is not eliminated, go to the next step.
5	**VERIFY IF MALFUNCTION CAUSE IS Bluetooth®-ENABLED DEVICE RESETTING** • After obtaining the customer's consent, verify that the Bluetooth®-enabled device stores the customer's vehicle data. • Does the Bluetooth®-enabled device store the customer's vehicle data?	Yes	After obtaining the customer's consent, delete the vehicle data on the Bluetooth®-enabled device and re-perform the Bluetooth® pairing. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the malfunction is not eliminated, go to the next step.
		No	Perform the Bluetooth® pairing. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the malfunction is not eliminated, go to the next step.
6	**DETERMINE IF MALFUNCTION CAUSE IS Bluetooth®-ENABLED DEVICE** • After obtaining the customer's consent, perform the Bluetooth® pairing using other Bluetooth®-enabled device. (See **Bluetooth® PAIRING PROCEDURE**.) • Is the Bluetooth® pairing completed normally?	Yes	Explain to the customer that the malfunction cause is the Bluetooth®-enabled device.
		No	Go to the next step.
7	**INSPECT CMU CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect	Yes	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
		No	Repair or replace the connector, then go to the next step.

	the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
8	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • After obtaining the customer's consent, perform the Bluetooth® pairing using the malfunctioning Bluetooth®-enabled device. (See **Bluetooth® PAIRING PROCEDURE**.) • Is the Bluetooth® pairing completed normally?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

Available Bluetooth®-Enabled Devices

Item		Content
Profile	A2DP 1.0/1.2 (Advanced audio distribution profile)	A2DP is a profile for transmitting high quality audio data by means of a Bluetooth® device and wireless transmission technology.
	AVRCP 1.0/1.3/1.4 (Audio/video remote control profile)	AVRCP is a profile which provides a standard interface which controls television and audio devices. The function differs depending on the version.

Bluetooth® PAIRING NOT POSSIBLE [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

2014 - Mazda3 - Body and Accessories

AUTOMATIC Bluetooth® CONNECTION NOT POSSIBLE [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**AUTOMATIC Bluetooth® CONNECTION NOT POSSIBLE** Bluetooth® pairing setting is possible, however, automatic Bluetooth® connection is not possible **NOTE:** • The Bluetooth® pairing procedure differs depending on the version of the Bluetooth®-enabled device. Ask the customer in advance what the Bluetooth®-enabled device's version was when the Bluetooth® pairing was performed. • If the Bluetooth®-enabled device has an access limitation, the automatic Bluetooth® connection cannot be performed. Ask the customer in advance if the Bluetooth®-enabled device has an access limitation. • A maximum of seven Bluetooth®-enabled devices can be programmed to one vehicle.

Possible Causes	• Customer's Bluetooth®-enabled device malfunction
	  ▪ Bluetooth® setting is off
	  ▪ Radio wave transmission setting including Bluetooth® radio wave is off
	  ▪ Bluetooth®-enabled device information has been changed (such as OS update), therefore, Bluetooth®-enabled device information programmed to vehicle is incompatible
	  ▪ Bluetooth®-enabled device internal malfunction
	• Connector poor contact or terminal damage
	• Connectivity master unit (CMU) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM**	Yes	Go to the next step.

	• Select the following by operating the center display or the commander switch. ▪ Settings ▪ Devices ▪ Bluetooth • Verify if the customer's Bluetooth®-enabled device is registered/selected. • Is the customer's Bluetooth®-enabled device registered/selected to the CMU?	No	Register/select the customer's Bluetooth®-enabled device. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the malfunction is not eliminated, go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS Bluetooth®-ENABLED DEVICE SETTING** • After obtaining the customer's consent, verify that the Bluetooth®-enabled device setting is turned on. • Is the Bluetooth®-enabled device setting turned on?	Yes	Go to the next step.
		No	Turn it on and perform the Bluetooth® pairing. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the malfunction is not eliminated, go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE IS RADIO WAVE TRANSMISSION SETTING FOR Bluetooth®-ENABLED DEVICE** • After obtaining the customer's consent, verify that the radio wave transmission setting for the Bluetooth®-enabled device is turned on. • Is the radio wave transmission setting for the Bluetooth®-enabled device turned on?	Yes	Go to the next step.
		No	Turn it on and perform the Bluetooth® pairing. (See **Bluetooth® PAIRING PROCEDURE**.) • Verify the malfunction symptom again, and if the malfunction is not eliminated, go to the next step.
4	**VERIFY IF MALFUNCTION CAUSE IS OS UPDATE FOR Bluetooth®-ENABLED DEVICE** • After obtaining the customer's consent, re-perform the Bluetooth® pairing. (See **Bluetooth® PAIRING PROCEDURE**.) • Switch the ignition OFF. • Bring the malfunctioning Bluetooth®-enabled device into the vehicle.	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Go to the next step.

	• Switch the ignition to ACC or ON (engine off or on). • Is the Bluetooth® connection automatically?		
5	**DETERMINE IF MALFUNCTION CAUSE IS Bluetooth®-ENABLED DEVICE** • Switch the ignition to ACC or ON (engine off or on). • After obtaining the customer's consent, perform the Bluetooth® pairing using other Bluetooth®-enabled device. (See **Bluetooth® PAIRING PROCEDURE**.) • Switch the ignition OFF. • Bring the Bluetooth®-enabled device into the vehicle. • Switch the ignition to ACC or ON (engine off or on). • Is the Bluetooth® connected automatically?	Yes	Explain to the customer that the malfunction cause is the Bluetooth®-enabled device.
		No	Go to the next step.
6	**INSPECT CMU CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)
		No	Repair or replace the connector, then go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Switch the ignition to ACC or ON (engine off or on). • After obtaining the customer's consent, perform the Bluetooth® pairing using the malfunctioning Bluetooth®-enabled device.	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER**

	(See **Bluetooth® PAIRING PROCEDURE**.) • Switch the ignition off. • Bring the Bluetooth®-enabled device into the vehicle. • Switch the ignition to ACC or ON (engine off or on). • Is the Bluetooth® connected automatically?		**DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

REAL TIME TRAFFIC FUNCTION INFORMATION NOT DISPLAYED [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]

Description	**REAL TIME TRAFFIC FUNCTION INFORMATION NOT DISPLAYED** Information such as gas prices, weather, and nearest restaurant is not output in navigation mode

Possible Causes	• SD card malfunction
	• Malfunction due to effects of surrounding environment
	  ▪ Mobile device such as Smartphone is placed where radio waves cannot be received
	• Mobile device such as customer's Smartphone malfunction
	  ▪ Wi-Fi™ connection setting is off
	  ▪ Mobile device internal malfunction such as Smartphone
	• Connector poor contact or terminal damage
	• Connectivity master unit (CMU) malfunction
	  ▪ Wi-Fi™ connection setting is off
	  ▪ CMU internal malfunction
	• Auxiliary jack/USB port/SD card slot hub malfunction
	  ▪ Open circuit in wiring harness between the following terminals:
	  • CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A
	  ▪ Short to ground in wiring harness between the following terminals:
	  • CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A
	  • CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B
	  • CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D
	  ▪ Short to power supply in wiring harness between the following terminals:
	  • CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A
	  • CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B

	CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D ▪ Auxiliary jack/USB port/SD card slot hub malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VISUALLY INSPECT SD CARD** • Visually inspect the SD card for looseness or damage. • Is the SD card normal?	Yes	System is normal. (explain to the customer that there is a malfunction in SD card)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS MOBILE DEVICE SETTING SUCH AS SMARTPHONE** • After obtaining the customer's consent, verify that the Wi-Fi™ connection setting for the mobile device such as a Smartphone is turned on. • Is the Wi-Fi™ connection setting turned on?	Yes	Go to the next step.
		No	Turn on the Wi-Fi™ connection setting for the mobile device, then go to Step 12.
3	**VERIFY IF MALFUNCTION CAUSE IS CMU SETTING** • Verify that the CMU Wi-Fi™ connection setting is turned on. • Is the CMU Wi-Fi™ connection setting turned on?	Yes	Go to the next step.
		No	Turn on the CMU Wi-Fi™ connection setting, then go to Step 12.
4	**VERIFY IF MALFUNCTION CAUSE IS OBSTRUCTION SUCH AS BUILDING** • Set the mobile device such as a Smartphone and the CMU Wi-Fi™ connection setting to on when the malfunction occurred. • Select the navigation mode by operating the center display or the commander switch. • Move the vehicle to an area where the mobile device such as a Smartphone can receive radio waves.	Yes	System is normal (explain to the customer that Wi-Fi™ communication could not be received normally due to driving in an area with tunnels or obstructions).
		No	Go to the next step.

	• Is information such as gas prices, weather, and the nearest restaurant displayed?		
5	**DETERMINE IF MALFUNCTION CAUSE IS MOBILE DEVICE SUCH AS SMARTPHONE** • After obtaining the customer's consent, set the CMU Wi-Fi™ connection setting using a mobile device such as a Smartphone not used when the malfunction occurred. • Select the navigation mode by operating the center display or the commander switch. • Move the vehicle to an area where the mobile device such as a Smartphone can receive radio waves. • Is information such as gas prices, weather, and the nearest restaurant displayed?	Yes	System is normal (explain to customer that the cause is mobile device malfunction such as Smartphone).
		No	Go to the next step.
6	**INSPECT AUXILIARY JACK/USB PORT/SD CARD SLOT HUB CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the auxiliary jack/USB port/SD card slot hub connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 12.
7	**INSPECT CMU CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION**	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 12.

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the CMU connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
8	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the auxiliary jack/USB port/SD card slot hub and the CMU connector are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 12.

9	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Verify that the auxiliary jack/USB port/SD card slot hub and the CMU connector are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Auxiliary jack/USB port/SD card slot hub terminal 2A ▪ Auxiliary jack/USB port/SD card slot hub terminal 2B ▪ Auxiliary jack/USB port/SD card slot hub terminal 2D • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A ▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Go to Step 12.
		No	Go to the next step.
10	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN CMU AND AUXILIARY JACK/USB PORT/SD CARD SLOT HUB**	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ CMU terminal 4A and auxiliary jack/USB port/SD card slot hub terminal 2A

	• Verify that the auxiliary jack/USB port/SD card slot hub and the CMU connector are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Auxiliary jack/USB port/SD card slot hub terminal 2A ▪ Auxiliary jack/USB port/SD card slot hub terminal 2B ▪ Auxiliary jack/USB port/SD card slot hub terminal 2D • Is the voltage **B+**?		▪ CMU terminal 4B and auxiliary jack/USB port/SD card slot hub terminal 2B ▪ CMU terminal 4D and auxiliary jack/USB port/SD card slot hub terminal 2D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to Step 12.
		No	Go to the next step.
11	**DETERMINE IF MALFUNCTION CAUSE IS AUXILIARY JACK/USB PORT/SD CARD SLOT HUB** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Replace the CMU, then go to the next step. (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

	Replace the auxiliary jack/USB port/SD card slot hub. (See **AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Set the mobile device such as a Smartphone and the CMU Wi-Fi™ connection setting to on when the malfunction occurred. • Select the navigation mode by operating the center display or the commander switch. • Move the vehicle to an area where the mobile device such as a Smartphone can receive radio waves. • Is information such as gas price, wether, nearest restaurant displayed?		
12	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Switch the ignition to ACC or ON (engine off or on). • Set the mobile device such as a Smartphone and the CMU Wi-Fi™ connection setting to on when the malfunction occurred. • Select the navigation mode by operating the center display or the commander switch. • Move the vehicle to an area where the mobile device such as a Smartphone can receive radio waves. • Is information such as gas	Yes	Troubleshooting completed (explain the contents of the servicing to the customer).
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

	price, wether, nearest restaurant displayed?		

2014 - Mazda3 - Body and Accessories

FOREWORD [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

Troubleshooting Procedure

MALFUNCTIONING VEHICLE ARRIVES
VERIFY REPAIR ORDER AND SYMPTOM.
ACCURATELY VERIFY CUSTOMER COMPLAINT IN REPAIR ORDER FORM.
VERIFY SERVICE INFORMATION.
BROWSE TECHNICAL INFORMATION AND SEARCH SERVICE INFORMATION.
DOES ANY SERVICE INFORMATION MATCH SYMPTOM AND CAUSE?
YES
VERIFY MALFUNCTION USING MALFUNCTION VERIFICATION PROCEDURE IN SERVICE INFORMATION, AND REPAIR ACCORDING TO SERVICE INFORMATION.
NO
DOES MALFUNCTION RECUR?
NO
SEE ACTION FOR NON-REPEATABLE MALFUNCTION.
YES
VERIFY MALFUNCTION SYMPTOM.
VERIFY MALFUNCTION SYMPTOM ON ACTUAL VEHICLE.
PERFORM CAN MALFUNCTION DIAGNOSIS.
SEE "CAN MALFUNCTION DIAGNOSIS FLOW"*1 AND PERFORM DIAGNOSIS FOR CAN RELATED MALFUNCTION.
PERFORM DTC INSPECTION.
REFER TO DTC INSPECTION NOTE.*2
ARE ANY DTCs OUTPUT?
YES
SEE ON-BOARD DIAGNOSIS SYSTEM AND PERFORM DTC TROUBLESHOOTING.
NO
SYMPTOM TROUBLESHOOTING
USE THE FUNCTIONS ON THE RIGHT TO PERFORM DIAGNOSIS EFFICIENTLY.
DIAGNOSTIC ASSIST FUNCTION
USE AUDIO UNIT DIAGNOSTIC ASSIST FUNCTION TO VERIFY THE CONNECTION AND OPERATION STATUS OF THE ENTERTAINMENT SYSTEM RELATED PARTS.
VERIFY MALFUNCTION IS REPAIRED.
SERVICE COMPLETED

*1
(See CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW.)
*2
(See DTC Inspection Note.)

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Verify that a DTC has been recorded in the memory. (See **DTC INSPECTION [AUDIO]**.)
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.

  - Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any malfunctions or occurrence of any DTCs.

DTC Inspection Note

- The entertainment system [without center display] DTCs can be verified using the on-board diagnostic test mode to activate the on-board diagnostic function by operating the audio unit. (See **DTC INSPECTION [AUDIO]**.)

2014 - Mazda3 - Body and Accessories

SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

Troubleshooting item	Description
NO SOUND OUTPUT IN ALL MODES (See **NO SOUND OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)	• Sound is not output from speakers even if any mode is selected
NO USB AUDIO SOUND OUTPUT (See **NO USB AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)	• Radio, CD, AUX audio, Bluetooth® audio is output, but no USB sound
NO CD SOUND OUTPUT (See **NO CD SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)	• Radio, AUX audio, Bluetooth® audio, and USB audio is output, but no CD sound
NO AUX AUDIO SOUND OUTPUT (See **NO AUX AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)	• Radio, CD, USB audio, Bluetooth® audio is produced, but no AUX audio
AUDIO UNIT DISPLAY NOT DISPLAYED (See **AUDIO UNIT DISPLAY NOT DISPLAYED [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)	• Does not display even with the audio unit power turned on

2014 - Mazda3 - Body and Accessories

SYSTEM WIRING DIAGRAM [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

SYSTEM WIRING DIAGRAM [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

2014 - Mazda3 - Body and Accessories

NO SOUND OUTPUT IN ALL MODES [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

Description	**NO SOUND OUTPUT IN ALL MODES** Sound is not output from speakers even if any mode is selected

Possible Causes	• Connector poor contact or terminal damage
	• Speaker malfunction
	  ▪ Malfunction in each speaker
	  ▪ Open circuit in wiring harness between the following terminals:
	  • Audio unit terminal 1A and front speaker (LH) terminal C
	  • Audio unit terminal 1C and front speaker (LH) terminal B
	  • Audio unit terminal 1D and front speaker (RH) terminal C
	  • Audio unit terminal 1F and front speaker (RH) terminal B
	  • Audio unit terminal 1S and rear speaker (LH) terminal C
	  • Audio unit terminal 1U and rear speaker (LH) terminal B
	  • Audio unit terminal 1V and rear speaker (RH) terminal C
	  • Audio unit terminal 1X and rear speaker (RH) terminal B
	  ▪ Short to ground in wiring harness between the following terminals:
	  • Audio unit terminal 1A and front speaker (LH) terminal C
	  • Audio unit terminal 1C and front speaker (LH) terminal B

	Audio unit terminal 1D and front speaker (RH) terminal C • Audio unit terminal 1F and front speaker (RH) terminal B • Audio unit terminal 1S and rear speaker (LH) terminal C • Audio unit terminal 1U and rear speaker (LH) terminal B • Audio unit terminal 1V and rear speaker (RH) terminal C • Audio unit terminal 1X and rear speaker (RH) terminal B • Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • The ignition is switched to ACC or ON (engine off or on). • Launch the “Speaker Inspection” of the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.) • Is sound output from each speaker?	Yes	• System is normal. • Due to the possibility that sound is not output in some modes, verify the malfunction in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)
		No	**No sound is produced from all speakers** • Go to the next step. **No sound is produced from some speakers** • Go to Step 3.
2	**INSPECT AUDIO UNIT CONNECTOR** • Switch the ignition OFF. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**	Yes	Replace the audio unit, then go to Step 7. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
		No	Repair or replace the connector, then go to Step 7.

	DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
3	**INSPECT SPEAKER CONNECTIONS** • Switch the ignition OFF. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the connector of the speaker which is malfunctioning. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**SPEAKER INSPECTION** • Inspect the malfunctioning speaker. (See **FRONT DOOR SPEAKER INSPECTION**.) (See **REAR DOOR SPEAKER INSPECTION**.) • Is the speaker resistance normal?	Yes	Go to the next step.
		No	Replace the malfunctioning speaker, then go to Step 7. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.) (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)
5	**INSPECT SPEAKER**	Yes	Go to the next step.

CIRCUIT FOR OPEN CIRCUIT

- Disconnect the connector the audio unit connector.
- Verify the continuity of the wiring harness between the following terminals (vehicle wiring harness side) of the speakers which are malfunctioning.
  - Audio unit terminal 1A and front speaker (LH) terminal C
  - Audio unit terminal 1C and front speaker (LH) terminal B
  - Audio unit terminal 1D and front speaker (RH) terminal C
  - Audio unit terminal 1F and front speaker (RH) terminal B
  - Audio unit terminal 1S and rear speaker (LH) terminal C
  - Audio unit terminal 1U and rear speaker (LH) terminal B
  - Audio unit terminal 1V and rear speaker (RH) terminal C
  - Audio unit terminal 1X and rear speaker (RH)

No

- Refer to the wiring diagram and verify if there is a common connector between the following terminals.
  - Audio unit terminal 1A and front speaker (LH) terminal C
  - Audio unit terminal 1C and front speaker (LH) terminal B
  - Audio unit terminal 1D and front speaker (RH) terminal C
  - Audio unit terminal 1F and front speaker (RH) terminal B
  - Audio unit terminal 1S and rear speaker (LH) terminal C
  - Audio unit terminal 1U and rear speaker (LH) terminal B
  - Audio unit terminal 1V and rear speaker (RH) terminal C
  - Audio unit terminal 1X and rear speaker (RH) terminal B

  If there is a common connector:

  - Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses

	terminal B • Is there continuity?		for an open circuit to determine the malfunctioning location. ▪ Repair or replace the malfunctioning location. **If there is no common connector:** ▪ Repair or replace the wiring harness which has an open circuit. • Go to Step 7.
6	**INSPECT SPEAKER CIRCUIT FOR SHORT TO GROUND** • Verify that the connector of the malfunctioning speaker and the audio unit connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) of the speakers which are malfunctioning and body ground. ▪ Front speaker (LH) terminal C ▪ Front speaker (LH) terminal B ▪ Front speaker (RH) terminal C ▪ Front speaker (RH) terminal B ▪ Rear speaker (LH) terminal C ▪ Rear speaker (LH) terminal	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 1A and front speaker (LH) terminal C ▪ Audio unit terminal 1C and front speaker (LH) terminal B ▪ Audio unit terminal 1D and front speaker (RH) terminal C ▪ Audio unit terminal 1F and front speaker (RH) terminal B ▪ Audio unit terminal 1S and rear speaker (LH) terminal C ▪ Audio unit terminal 1U and rear speaker (LH) terminal B ▪ Audio unit terminal 1V and rear speaker (RH)

	B ▪ Rear speaker (RH) terminal C ▪ Rear speaker (RH) terminal B • Is there continuity?		terminal C ▪ Audio unit terminal 1X and rear speaker (RH) terminal B **If there is a common connector:** ▪ Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. ▪ Repair or replace the malfunctioning location. **If there is no common connector:** ▪ Repair or replace the wiring harness which is shorted to ground. • Go to the next step.
		No	Replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
7	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Switch the ignition to ACC or ON (engine off or on). • Launch the “Speaker Inspection” of the on-board diagnostic assist function. (See **DIAGNOSTIC ASSIST FUNCTION [AUDIO]**.)	Yes	Troubleshooting completed. (explain the contents of the servicing to the customer)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)

	• Is sound output from each speaker?		

2014 - Mazda3 - Body and Accessories

NO USB AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

Description	**NO USB AUDIO SOUND OUTPUT**
	Radio, CD, AUX audio, Bluetooth® audio is output, but no USB sound
Possible Causes	• USB media malfunction • Connector poor contact or terminal damage • Auxiliary jack/USB port malfunction • Open circuit in wiring harness between the following terminals: ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD • Short to ground in wiring harness between the following terminals: ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD • Short to power supply in wiring harness between the following terminals: ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD • Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS USB MEDIA** • Switch the ignition OFF.	Yes	System is normal. (Explain to the customer that the USB media or internal data has a malfunction)
		No	Go to the next step.

	• After obtaining the customer's consent, replace with a USB media that was not used when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Operate the audio unit and select the USB media. • Is sound from the USB audio output?		
2	**AUXILIARY JACK/USB PORT CONNECTOR INSPECTION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the connector of the auxiliary jack/USB port. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT AUDIO UNIT CONNECTOR** • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**AUXILIARY JACK/USB PORT INSPECTION** • Inspect the auxiliary jack/USB port. (See **AUXILIARY JACK/USB PORT INSPECTION**.)	Yes	Go to the next step.
		No	Replace the auxiliary jack/USB port, then go to Step 8. (See **AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION**.)

	• Is the auxiliary jack/USB port normal?		
5	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectivity audio unit and the auxiliary jack/USB port connectors are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 8.

6	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectivity audio unit and the auxiliary jack/USB port connectors are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Auxiliary jack/USB port terminal UA ▪ Auxiliary jack/USB port terminal UB ▪ Auxiliary jack/USB port terminal UC ▪ Auxiliary jack/USB port terminal UD • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Go to Step 8.
		No	Go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN**	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals.

	WIRING HARNESS BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT • Verify that the connectivity audio unit and the auxiliary jack/USB port connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Auxiliary jack/USB port terminal E ▪ Auxiliary jack/USB port terminal C ▪ Auxiliary jack/USB port terminal B ▪ Auxiliary jack/USB port terminal D • Is the voltage **B+**?		▪ Audio unit terminal 3C and auxiliary jack/USB port terminal UA ▪ Audio unit terminal 3D and auxiliary jack/USB port terminal UB ▪ Audio unit terminal 3B and auxiliary jack/USB port terminal UC ▪ Audio unit terminal 3A and auxiliary jack/USB port terminal UD **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to the next step.
		No	Replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
8	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative	Yes	Troubleshooting completed. (explain the contents of the servicing to the customer)
		No	Verify the malfunction symptom in the symptom troubleshooting

	battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the USB disc when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Operate the audio unit and select the USB media. • Is sound from the USB audio output?		chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

NO CD SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

Description	**NO CD SOUND OUTPUT**
	Radio, AUX audio, Bluetooth® audio, and USB audio is output, but no CD sound

Possible Causes	• CD disc malfunction
	• Connector poor contact or terminal damage
	• Open circuit in wiring harness between the following terminals:
	  ▪ Audio unit terminal 2M and CD player terminal L
	  ▪ Audio unit terminal 2N and CD player terminal N
	  ▪ Audio unit terminal 2O and CD player terminal P
	  ▪ Audio unit terminal 2P and CD player terminal R
	  ▪ Audio unit terminal 1O and CD player terminal G
	  ▪ Audio unit terminal 1Q and CD player terminal H
	• Short to ground in wiring harness between the following terminals:
	  ▪ Audio unit terminal 2M and CD player terminal L
	  ▪ Audio unit terminal 2N and CD player terminal N
	  ▪ Audio unit terminal 2O and CD player terminal P
	  ▪ Audio unit terminal 2P and CD player terminal R
	  ▪ Audio unit terminal 1O and CD player terminal G
	  ▪ Audio unit terminal 1Q and CD player terminal H
	• Short to power supply in wiring harness between the following terminals:
	  ▪ Audio unit terminal 2M and CD player terminal L
	  ▪ Audio unit terminal 2N and CD player terminal N
	  ▪ Audio unit terminal 2O and CD player terminal P
	  ▪ Audio unit terminal 2P and CD player terminal R
	  ▪ Audio unit terminal 1O and CD player terminal G
	  ▪ Audio unit terminal 1Q and CD player terminal H
	• CD player malfunction
	• Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY CD DISC CONDITION** • Verify the CD disc condition when the malfunction occurred. • Is there any dirt or scratches on the CD disc?	Yes	• Remove dirt on the CD disc or replace with a CD disc that is not scratched or damaged. • Go to Step 10.
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS CD DISC** • After obtaining the customer's consent, replace with a CD that was not used when the malfunction occurred. • Is CD sound produced?	Yes	Go to the next step.
		No	Go to Step 4.
3	**VERIFY IF DATA TYPE OTHER THAN CDDA/MP3/WMA/AAC IS MIXED IN CD DISC** • Verify the CD disc data content when the malfunction occurred. • Is there data other than CDDA/MP3/WMA/AAC data mixed in?	Yes	• Replace with a CD disc containing only CDDA/MP3/WMA/AAC data and verify the malfunction symptom. **If the malfunction symptom is eliminated** ▪ System is normal (explain to the customer that the cause was a CD disc containing data other than CDDA/MP3/WMA/AAC). **If the malfunction symptom is not eliminated** ▪ Replace the CD player, then go to Step 10. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
		No	Go to the next step.
4	**INSPECT CD PLAYER CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.

	• Disconnect the CD player connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?		
5	**INSPECT AUDIO UNIT CONNECTOR** • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
6	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN AUDIO UNIT AND CD PLAYER** • Verify that the CD player and the audio unit connectors are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ Audio unit terminal 2M and CD player terminal L ▪ Audio unit terminal 2N and CD player terminal N ▪ Audio unit terminal 2O and CD player terminal P ▪ Audio unit terminal 2P and CD player	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 2M and CD player terminal L ▪ Audio unit terminal 2N and CD player terminal N ▪ Audio unit terminal 2O and CD player terminal P ▪ Audio unit terminal 2P and CD player terminal R ▪ Audio unit terminal 1O and CD player terminal G ▪ Audio unit terminal 1Q and CD player terminal H **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the

	terminal R ▪ Audio unit terminal 1O and CD player terminal G ▪ Audio unit terminal 1Q and CD player terminal H • Is there continuity?		common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 10.
7	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN AUDIO UNIT AND CD PLAYER** • Verify that the CD player and the audio unit connectors are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ CD player terminal L ▪ CD player terminal N ▪ CD player terminal P ▪ CD player terminal R ▪ CD player terminal G ▪ CD player terminal H • Is there continuity?	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 2M and CD player terminal L ▪ Audio unit terminal 2N and CD player terminal N ▪ Audio unit terminal 2O and CD player terminal P ▪ Audio unit terminal 2P and CD player terminal R ▪ Audio unit terminal 1O and CD player terminal G ▪ Audio unit terminal 1Q and CD player terminal H **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to

			determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Go to Step 10.
		No	Go to the next step.
8	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN WIRING HARNESS BETWEEN AUDIO UNIT AND CD UNIT** • Verify that the CD player and the audio unit connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ CD player terminal L ▪ CD player terminal N ▪ CD player terminal P ▪ CD player terminal R ▪ CD player terminal G	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 2M and CD player terminal L ▪ Audio unit terminal 2N and CD player terminal N ▪ Audio unit terminal 2O and CD player terminal P ▪ Audio unit terminal 2P and CD player terminal R ▪ Audio unit terminal 1O and CD player terminal G ▪ Audio unit terminal 1Q and CD player terminal H **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the

	▪ CD player terminal H • Is the voltage **B+**?		malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to Step 10.
		No	Go to the next step.
9	**DETERMINE IF MALFUNCTION CAUSE IS CD PLAYER** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Replace the CD player. (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Insert the CD disc when the malfunction occurred. • Is CD sound produced?	Yes	Go to the next step.
		No	Replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
10	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED**	Yes	Troubleshooting completed. (explain the contents of the servicing to the customer)

	• Switch the ignition to ACC or ON (engine off or on). • Insert the CD disc when the malfunction occurred. • Is CD sound produced?	No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

NO AUX AUDIO SOUND OUTPUT [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

Description	**NO AUX AUDIO SOUND OUTPUT**
	Radio, CD, USB audio, Bluetooth® audio is produced, but no AUX audio
Possible Causes	• External device malfunction • Connector poor contact or terminal damage • Auxiliary jack/USB port malfunction • Open circuit in wiring harness between the following terminals: ▪ Audio unit terminal 2L and auxiliary jack/USB port terminal E ▪ Audio unit terminal 2K and auxiliary jack/USB port terminal D ▪ Audio unit terminal 2J and auxiliary jack/USB port terminal C ▪ Audio unit terminal 2I and auxiliary jack/USB port terminal B • Short to ground in wiring harness between the following terminals: ▪ Audio unit terminal 2L and auxiliary jack/USB port terminal E ▪ Audio unit terminal 2K and auxiliary jack/USB port terminal D ▪ Audio unit terminal 2J and auxiliary jack/USB port terminal C ▪ Audio unit terminal 2I and auxiliary jack/USB port terminal B • Short to power supply in wiring harness between the following terminals: ▪ Audio unit terminal 2L and auxiliary jack/USB port terminal E ▪ Audio unit terminal 2K and auxiliary jack/USB port terminal D ▪ Audio unit terminal 2J and auxiliary jack/USB port terminal C ▪ Audio unit terminal 2I and auxiliary jack/USB port terminal B • Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS EXTERNAL DEVICE** • Switch the ignition OFF.	Yes	System is normal. (Explain to the customer that the external device or internal data has a malfunction)
		No	Go to the next step.

	• After obtaining the customer's consent, replace with an external media that was not used when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Operate the audio unit and select the AUX audio. • Is sound from the AUX audio output?		
2	**AUXILIARY JACK/USB PORT CONNECTOR INSPECTION** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the connector of the auxiliary jack/USB port. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT AUDIO UNIT CONNECTOR** • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**AUXILIARY JACK/USB PORT INSPECTION** • Inspect the auxiliary jack/USB port. (See **AUXILIARY JACK/USB PORT INSPECTION**.)	Yes	Go to the next step.
		No	Replace the auxiliary jack/USB port, then go to Step 8. (See **AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION**.)

	• Is the auxiliary jack/USB port normal?		
5	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectivity audio unit and the auxiliary jack/USB port connectors are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). ▪ Audio unit terminal 2L and auxiliary jack/USB port terminal E ▪ Audio unit terminal 2K and auxiliary jack/USB port terminal D ▪ Audio unit terminal 2J and auxiliary jack/USB port terminal C ▪ Audio unit terminal 2I and auxiliary jack/USB port terminal B • Is there continuity?	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 2L and auxiliary jack/USB port terminal E ▪ Audio unit terminal 2K and auxiliary jack/USB port terminal D ▪ Audio unit terminal 2J and auxiliary jack/USB port terminal C ▪ Audio unit terminal 2I and auxiliary jack/USB port terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 8.

6	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO GROUND IN WIRING HARNESS BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectivity audio unit and the auxiliary jack/USB port connectors are disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. ▪ Auxiliary jack/USB port terminal E ▪ Auxiliary jack/USB port terminal D ▪ Auxiliary jack/USB port terminal C ▪ Auxiliary jack/USB port terminal B • Is there continuity?	Yes	Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Audio unit terminal 2L and auxiliary jack/USB port terminal E ▪ Audio unit terminal 2K and auxiliary jack/USB port terminal D ▪ Audio unit terminal 2J and auxiliary jack/USB port terminal C ▪ Audio unit terminal 2I and auxiliary jack/USB port terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Go to Step 8.
		No	Go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT TO POWER SUPPLY IN**	Yes	• Refer to the wiring diagram and verify if there is a common connector between the following terminals.

	WIRING HARNESS BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT • Verify that the connectivity audio unit and the auxiliary jack/USB port connectors are disconnected. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). ▪ Auxiliary jack/USB port terminal E ▪ Auxiliary jack/USB port terminal D ▪ Auxiliary jack/USB port terminal C ▪ Auxiliary jack/USB port terminal B • Is the voltage **B+**?		▪ Audio unit terminal 2L and auxiliary jack/USB port terminal E ▪ Audio unit terminal 2K and auxiliary jack/USB port terminal D ▪ Audio unit terminal 2J and auxiliary jack/USB port terminal C ▪ Audio unit terminal 2I and auxiliary jack/USB port terminal B **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to the power supply. • Go to the next step.
		No	Replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
8	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Disconnect the negative	Yes	Troubleshooting completed. (explain the contents of the servicing to the customer)
		No	Verify the malfunction symptom in the symptom troubleshooting

	battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Connect all the connectors. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Insert the external device when the malfunction occurred. • Switch the ignition to ACC or ON (engine off or on). • Operate the audio unit and select the AUX audio. • Is sound from the AUX audio output?		chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

AUDIO UNIT DISPLAY NOT DISPLAYED [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]

Description	**AUDIO UNIT DISPLAY NOT DISPLAYED**
	Does not display even with the audio unit power turned on
Possible Causes	• Connector poor contact or terminal damage • Open circuit in wiring harness between audio unit terminal 1W and body ground • Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUDIO UNIT CONNECTOR** • Switch the ignition OFF. • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 3.

2	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN AUDIO UNIT AND BODY GROUND** • Verify that the audio unit connectors are disconnected. • Inspect the wiring harness for continuity between audio unit terminal 1W and body ground (vehicle wiring harness side). • Is there continuity?	Yes	Replace the audio unit, then go to the next step. (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
		No	• Refer to the wiring diagram and verify if there is a common connector between audio unit terminal 1W and body ground. **If there is a common connector:** ▪ Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. ▪ Repair or replace the malfunctioning location. **If there is no common connector:** ▪ Repair or replace the wiring harness which has an open circuit. • Go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Connect the audio unit connector. • Reconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition to ACC or	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITHOUT CENTER DISPLAY]]**.)

	ON (engine off or on). • Press the POWER/VOLUME button to turn on the audio unit power. • Does the display of the audio unit display images?		

2014 - Mazda3 - Body and Accessories

FOREWORD [SEAT WARMER SYSTEM]

WARNING:

- Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
- If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.

CAUTION:

- If the slide lever is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slide lever.
- Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or dirty the seat.
- When the passenger's seat is removed, perform the seat weight sensor inspection using the M-MDS after installing the passenger's seat. (See **SEAT WEIGHT SENSOR INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- When the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Troubleshooting Procedure

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.

- Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

2014 - Mazda3 - Body and Accessories

SYMPTOM TROUBLESHOOTING [SEAT WARMER SYSTEM]

Troubleshooting item	Description
Seat warmer function is inoperative (See **SEAT WARMER FUNCTION IS INOPERATIVE [SEAT WARMER SYSTEM]**.)	• Seat warmer does not warm seat even though seat warmer switch is on
Seat warmer operates constantly (See **SEAT WARMER OPERATES CONSTANTLY [SEAT WARMER SYSTEM]**.)	• Seat warmer warms seat even though seat warmer switch is off
Temperature of seat warmer cannot be adjusted (See **TEMPERATURE OF SEAT WARMER CANNOT BE ADJUSTED [SEAT WARMER SYSTEM]**.)	• Seat warmer does not adjust temperature even though seat warmer Lo/Mid/Hi switch is switched between low and high • Seat warmer temperature continues to rise

2014 - Mazda3 - Body and Accessories

SYSTEM WIRING DIAGRAM [SEAT WARMER SYSTEM]

SYSTEM WIRING DIAGRAM [SEAT WARMER SYSTEM]

SYSTEM WIRING DIAGRAM [SEAT WARMER SYSTEM]

2014 - Mazda3 - Body and Accessories

SEAT WARMER FUNCTION IS INOPERATIVE [SEAT WARMER SYSTEM]

Description	Seat warmer does not warm seat even though seat warmer switch is on
Possible Causes	**The power supply is not supplied to filament of seat warmer** • Open circuit in seat warmer control unit power supply circuit: ▪ Seat warmer control unit terminal O and battery positive terminal ▪ Seat warmer control unit terminal M and battery positive terminal • SEAT WARM 20 A fuse malfunction (Blown fuse): • Poor connect the connector: ▪ Driver-side seat warmer unit connector and seat warmer control unit connector ▪ Passenger-side seat warmer unit connector and seat warmer control unit connector • Open circuit in wiring harness between the following terminal: ▪ Driver-side seat warmer unit terminal P and driver-side seat warmer unit terminal A ▪ Passenger-side seat warmer unit terminal N and passenger-side seat warmer unit terminal B **Seat warmer control unit not operation** • Open circuit or short to ground in wiring harness between the following terminal: ▪ FBCM terminal 1C and seat warmer control unit terminal K ▪ Seat warmer control unit terminal H and body ground ▪ Seat warmer control unit terminal G and body ground **Seat warmer control unit cannot control filament on** • Seat warmer control unit malfunction **Seat warmer filament does not generate heat** • Driver-side seat warmer unit (seat cushion side) malfunction • Driver-side seat warmer unit (seat back side) malfunction • Passenger-side seat warmer unit (seat cushion side) malfunction • Passenger-side seat warmer unit (seat back side) malfunction **Seat warmer control unit cannot receive operation signal** • Indicator unit malfunction

	• Seat warmer control unit malfunction • Open circuit or short to ground in wiring harness between the following terminal: ▪ Seat warmer control unit terminal I and indicator unit terminal D

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**DETERMINE IF THE MALFUNCTION CAUSE IS THE SEAT WARMER SWITCH** • Select either Low, Mid, or High on the seat warmer switch. • Does the seat warmer switch LED illuminate?	Yes	Go to the next step.
		No	Inspect the indicator unit. (See **INDICATOR UNIT INSPECTION**.)
2	**DETERMINE MALFUNCTIONING SYSTEM** • Are the seat warmers on both sides not operating?	Yes	Go to Step 8.
		No	Go to the next step.
3	**INSPECT SEAT WARMER CONTROL UNIT CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the seat warmer control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
4	**SEAT WARMER CONTROL UNIT POWER SUPPLY CIRCUIT INSPECTION** • Verify that the seat warmer control unit connector are disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY**	Yes	Go to the next step.
		No	Inspect the SEAT WARM 20 A fuse. **If the fuse is blown:** • Refer to the wiring diagram and verify if there is a common connector between the following terminals.

CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)

- Switch the ignition ON (engine off or ON).
- Measure the voltage at the following terminal (wiring harness-side):
  - Seat warmer control unit terminal O
  - Seat warmer control unit terminal M
- Is the voltage **B+**?
  - SEAT WARM 20 A fuse and seat warmer control unit terminal O
  - SEAT WARM 20 A fuse and seat warmer control unit terminal M

If there is a common connector:

- Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.
- Repair or replace the malfunctioning part.

If there is no common connector:

- Repair or replace the wiring harness which has a short to ground.
- Replace the fuse.

If the fuse is damaged:

- Replace the fuse.

If the fuse is normal:

- Refer to the wiring diagram and verify if there is a common connector between the following terminals.
  - SEAT WARM 20 A fuse and seat warmer control unit terminal O
  - SEAT WARM 20 A fuse and seat warmer control unit terminal M

			If there is a common connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 11.
5	**SEAT WARMER CONTROL UNIT POWER SUPPLY CIRCUIT INSPECTION** • Verify that the seat warmer control unit connector are disconnected. • Measure the voltage at the following terminal (wiring harness-side): ▪ Seat warmer control unit terminal K • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the Front body control module (FBCM) terminal 1C. (See **FRONT BODY CONTROL MODULE (FBCM) INSPECTION**.)
6	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN SEAT WARMER CONTROL UNIT AND BODY GROUND** • Verify that the seat warmer control unit connector are disconnected. • Inspect for continuity between the following	Yes	Go to the next step.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Seat warmer control unit terminal on the side that is not operating H and body ground

	terminals (wiring harness-side): ▪ Seat warmer control unit terminal on the side that is not operating H and body ground ▪ Seat warmer control unit terminal on the side that is not operating G and body ground • Is there continuity?		▪ Seat warmer control unit terminal on the side that is not operating G and body ground **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 11.
7	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN SEAT WARMER CONTROL UNIT AND INDICATOR UNIT** • Verify that the seat warmer control unit connector are disconnected. • Disconnect the indicator unit connector. • Inspect for continuity between the following terminals (wiring harness-side): ▪ Seat warmer control unit terminal I and indicator unit terminal D	Yes	Go to Step 10.
		No	• Refer to the wiring diagram and verify if there is a common connector between the following terminals. ▪ Seat warmer control unit terminal I and indicator unit terminal D **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the

	• Is there continuity?		common wiring harnesses for an open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. • Go to Step 11.
8	**INSPECT SEAT WARMER CONTROL UNIT AND SEAT WARMER UNIT CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the seat warmer control unit and seat warmer unit connector on the side not operating. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
9	**SEAT WARMER UNIT INSPECTION** • Inspect the seat warmer unit. (See **SEAT WARMER UNIT INSPECTION**.) • Is the seat warmer unit normal?	Yes	Go to the next step.
		No	Replace the front seat which is malfunctioning, then go to Step 11. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
10	**DETERMINE IF THE MALFUNCTION CAUSE IS SEAT WARMER CONTROL UNIT** • Replace the indicator unit.	Yes	Go to the next step.
		No	Replace the passenger's front seat, then go to the next step.

	(See **INDICATOR UNIT REMOVAL / INSTALLATION**.) • Does the seat warmer system operate?		(See **FRONT SEAT REMOVAL / INSTALLATION**.)
11	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED** • Does the seat warmer system operate?	Yes	Troubleshooting completed. (Explain the problem to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

2014 - Mazda3 - Body and Accessories

SEAT WARMER OPERATES CONSTANTLY [SEAT WARMER SYSTEM]

Description	Seat warmer warms seat even though seat warmer switch is off
Possible Causes	**Seat warmer switch is always on** • Seat warmer switch malfunction **Seat warmer control unit falsely detects seat warmer switch as on** • Short circuit in wiring harness between the following terminal: ▪ Seat warmer control unit terminal I and indicator unit terminal D • Seat warmer control unit malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**DETERMINE IF THE MALFUNCTION CAUSE IS THE SEAT WARMER SWITCH** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the indicator unit connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION**	Yes	Go to the next step.
		No	Replace the indicator unit, then go to Step 3. (See **INDICATOR UNIT REMOVAL/INSTALLATION**.)

	[SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • Switch the ignition ON (engine off or on). • Is the seat warmer system operating?		
2	**DETERMINE IF THE MALFUNCTION CAUSE IS THE SEAT WARMER COTROL UNIT** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the seat warmer control unit connector. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Measure the voltage at the following terminal (wiring harness-side): ▪ Seat warmer control unit terminal I • Is the voltage **1.0 or more**?	Yes	• Refer to the wiring diagram and verify if there is a common connector between seat warmer control unit terminal I and indicator unit terminal D. **If there is a common connector:** ▪ Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for an open or short circuit to determine the malfunctioning location. ▪ Repair or replace the malfunctioning location. **If there is no common connector:** ▪ Repair or replace the wiring harness which has an open or short circuit. • Go to the next step.
		No	Replace the passenger's front seat, then go to the next step. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
3	**VERIFY IF MALFUNCTION CAUSE IS CORRECTED**	Yes	Troubleshooting completed. (Explain the problem to

	• Does the seat warmer system operate?		the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

2014 - Mazda3 - Body and Accessories

TEMPERATURE OF SEAT WARMER CANNOT BE ADJUSTED [SEAT WARMER SYSTEM]

Description	• Seat warmer does not adjust temperature even though seat warmer Lo/Mid/Hi switch is switched between low and high • Seat warmer temperature continues to rise
Possible Causes	**Seat warmer control unit cannot control seat warmer unit** • Seat warmer switch malfunction • Thermostat (Built-in seat warmer unit) malfunction • Seat warmer control unit malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**DETERMINE IF THE MALFUNCTION CAUSE IS THE SEAT WARMER SWITCH** • Select either Low, Mid, or High on the seat warmer switch. • Does the seat warmer switch LED illuminate?	Yes	Go to the next step.
		No	Inspect the indicator unit. (See **INDICATOR UNIT INSPECTION**.)
2	**SEAT WARMER UNIT INSPECTION** • Inspect the seat warmer unit. (See **SEAT WARMER UNIT INSPECTION**.) • Is the seat warmer unit normal?	Yes	Replace the front seat which is malfunctioning, then go to the next step. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
		No	Replace the passenger's front seat, then go to the next step. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
	VERIFY IF MALFUNCTION CAUSE		

3	**IS CORRECTED** • Does the seat warmer system operate?	Yes	Troubleshooting completed. (Explain the problem to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the other applicable malfunction diagnosis.

20	Trunk lid (See **TRUNK LID REMOVAL/INSTALLATION**.) (See **TRUNK LID ADJUSTMENT**.) (See **BALANCE SPRING REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

TRUNK LID REMOVAL/INSTALLATION

WARNING:

- Always perform the following procedure with at least one other person to prevent the trunk lid from falling. Otherwise, it may fall and cause injury.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Set the trunk side trim aside. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
3. Disconnect the rear wiring harness connector and remove the rear wiring harness clips securing the vehicle body.

4. Remove the rear wiring harness clips securing the trunk lid hinge.

5. Remove the bolts, then remove the trunk lid.

BOLT: **8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}**

6. Remove the following parts:

a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

c. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

d. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

e. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**)

f. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)

g. Balance spring (See **BALANCE SPRING REMOVAL/INSTALLATION**.)

7. Affix protective tape to the positions shown in the figure and remove the nuts.

8. Remove the trunk lid hinge.

9. Install in the reverse order of removal.

10. Adjust the trunk lid. (See **TRUNK LID ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

BALANCE SPRING REMOVAL/INSTALLATION

WARNING:

- If the balance spring is removed without supporting the trunk lid, the trunk lid may fall off and cause injury. When removing the balance spring, always use two persons to perform the work.

1. Using a crescent wrench, remove the balance spring in the direction of the arrow shown in the figure from the trunk lid hinge.

2. Remove the LH side balance spring shown in the figure from the hooks.

3. Remove the RH side balance spring shown in the figure from the hooks.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK LID ADJUSTMENT

Gap Adjustment

1. Measure the gap difference between the trunk lid and the body.

Standard Clearance

- a: 2.3—4.3 mm {0.10—0.16 in}
- b: 2.0—6.0 mm {0.08—0.23 in}
- c: 4.1—8.1 mm {0.17—0.31 in}
- If the measured value exceeds the standard clearance, adjust the trunk lid using the following procedure:

2. Loosen the bolts, and reposition the trunk lid. (See **TRUNK LID REMOVAL/INSTALLATION**)

3. Tighten the bolts. (See **TRUNK LID REMOVAL/INSTALLATION**)

4. Spray or pour water on the trunk lid and surrounding area using a hose or high pressure water pressure car wash and verify that there is no water leakage.

Height Difference Adjustment

1. Measure the height difference between the trunk lid and the body.

Standard Clearance

- a: –1.3—0.7 mm {–0.05—0.02 in}
- b: –3.0—1.0 mm {–0.11—0.03 in}
- If the height difference is out of the standard clearance or the trunk lid does not open/close smoothly, loosen the trunk lid lock striker installation bolts and adjust the trunk lid.

2. Loosen the bolts, and reposition the trunk lid lock striker. (See **TRUNK LID LOCK STRIKER REMOVAL/INSTALLATION**)

3. Tighten the bolts. (See **TRUNK LID LOCK STRIKER REMOVAL/INSTALLATION**)

4. Spray or pour water on the trunk lid and surrounding area using a hose or high pressure water pressure car wash and verify that there is no water leakage.

2014 - Mazda3 - Body and Accessories

FUEL-FILLER LID REMOVAL/INSTALLATION

1. Remove the bolts shown in the figure.

2. Remove the fastener.
3. Remove the fuel-filler lid.
4. Install in the reverse order of removal.
5. Adjust the fuel-filler lid. (See **FUEL-FILLER LID ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

HOOD REMOVAL/INSTALLATION

WARNING:

- Always perform the procedure with at least another person to prevent the hood from falling. Otherwise, the hood may fall and cause injury.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the bolts shown in the figure and remove the hood.

BOLT: **20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}**

3. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Front fender panel (See **FRONT FENDER PANEL REMOVAL/INSTALLATION**.)

4. Remove the bolts shown in the figure and remove the hood hinge.

5. Install in the reverse order of removal.

6. Perform the hood adjustment. (See **HOOD ADJUSTMENT**.)

7. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

8. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

FUEL-FILLER LID ADJUSTMENT

1. Verify that the gap and height difference between the fuel-filler lid and body.

Standard clearance

- a: 1.7—3.7 mm {0.07—0.14 in}
- b: –1.5—0.5 mm {–0.05—0.01 in}
- If the measured value exceeds the standard clearance, adjust the fuel-filler lid using the following procedure:

2. Loosen the bolts and adjust the fuel-filler lid.
3. Tighten the bolts. (See **FUEL-FILLER LID REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

HOOD DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Shroud seal weatherstrip
2	Parting seal weatherstrip
3	Stopper rubber
4	Hood component

2. Assemble in the reverse order of disassembly.

2014 - Mazda3 - Body and Accessories

HOOD ADJUSTMENT

Gap Adjustment

1. Verify that the gap between the hood and the body is within the specification.

Standard clearance

- a: 1.7—5.3 mm {0.07—0.20 in}
- b: 2.5—4.5 mm {0.10—0.17 in}
- If the measured value exceeds the standard clearance, adjust the hood using the following procedure.

2. Loosen the bolts and adjust the hood.

3. Tighten the bolts. (See **HOOD REMOVAL/INSTALLATION**.)

Height Difference Adjustment

1. Verify that the height difference between the hood and the body is within the specification.

Standard clearance

- a: –2.0—2.0 mm {–0.078—0.078 in}
- b: –1.4—0.6 mm {–0.05—0.02 in}
- If the measured value exceeds the standard clearance, adjust the hood using the following procedure.

2. Turn the stopper rubber to adjust the height of the hood.

2014 - Mazda3 - Body and Accessories

FRONT BUMPER REMOVAL/INSTALLATION

CAUTION:

- Affix the protective tape to the position (vehicle body side) shown in the figure to prevent scratches and damage.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the screws shown in the figure.

3. Remove the fasteners shown in the figure and slightly bend back the front mudguard.

4. Remove the screw which can be verified at the position where the front mudguard was bent back.

5. Remove the screws and fasteners shown in the figure.

6. Remove the fasteners which can be verified at the position where front under cover No.1 was pulled back.

7. Remove the fresh-air duct installation bolts. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

8. Remove the fastener which can be verified at the position where the fresh-air-duct was pulled back.

9. Remove the screws and fasteners shown in the figure.

10. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)

11. Grasp the front bumper end, move it in the direction of the arrow shown in the figure, and remove the front bumper from the grommet.

CAUTION:

- The front bumper and front bumper slider are engaged firmly. If they are disengaged forcibly the bumper could fall and be damaged. Perform the servicing carefully when disengaging the front bumper from the front bumper slider.
- When disengaging the front bumper from the front bumper slider, the front bumper could fall and be damaged. Support the front bumper so that it does not fall.

12. Pull the rear end of the front bumper in the direction of the arrow shown in the figure and detach the front bumper from the front bumper slider while removing the tabs.

13. Hold locations A and B shown in the figure by hand, pull the front bumper in the direction of the arrows shown in the figure, and remove the front bumper from the guides.

14. Disconnect the connectors and wiring harness clips shown in the figure.

15. Install in the reverse order of removal.

16. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

FRONT FOG LIGHT BEZEL REMOVAL/INSTALLATION

Front Fog Light Bezel No.1

Front fog light bezel No.1 removal

1. Slightly bend back the front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)
2. To prevent scratches or damage, apply protective tape to the position shown in the figure

3. Insert the remover tool into the front fog light bezel No.1 service hole at the position shown in the figure.
4. Insert a hand through the position where the front mudguard was bent back, and while pressing area A of front fog light bezel No.1 in the direction of arrow (1) shown in the figure, move the remover tool in the direction of arrow (2) and detach the front fog light bezel No.1 tabs from the front bumper.

5. Remove front fog light bezel No.1.

CAUTION:

- For vehicles with front fog light bezel No.2, if front fog light bezel No.2 is pulled strongly, the tab could be damaged. Hold and remove front fog light bezel No.1 from the front bumper.

Front fog light bezel No.1 installation

1. Press in area B of front fog light bezel No.1 and detach the front fog light bezel No.1 tabs from the front bumper.

Front Fog Light Bezel No.2 (with front fog light bezel No.2)

1. Remove front fog light bezel No.1. (See **Front fog light bezel No.1 removal**.)(See **Front fog light bezel No.1 installation**.)
2. While pressing the front fog light bezel No.2 tabs in the direction of arrow (1) shown in the figure, press it out in the direction of

arrow (2) and detach the front fog light bezel No.2 tabs from front fog light bezel No.1

3. Detach all the front fog light bezel No.2 tabs from front fog light bezel No.1 and remove front fog light bezel No.2.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Intake air guide (See **INTAKE AIR GUIDE REMOVAL/INSTALLATION**.)

   e. Front energy-absorbing foam (See **ENERGY-ABSORBING FOAM REMOVAL/INSTALLATION**.)

   f. Front under cover No.1 (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

   g. Bumper stiffener lower (See **BUMPER STIFFENER LOWER REMOVAL/INSTALLATION**.)

CAUTION:

- The front bumper reinforcement supports the shroud panel. After removing the front bumper reinforcement, an excessive load applied to the shroud panel could result in damage. When removing the front bumper reinforcement, always use a floor jack to support the shroud panel.

3. Support the shroud panel using a floor jack.

4. Remove the bolts shown in the figure.

CAUTION:

- Removing the front bumper reinforcement without supporting it could cause the front bumper reinforcement to fall and cause serious injury. Always perform the procedure with at least another person to prevent the front bumper reinforcement from falling.

5. Remove the bolts shown in the figure and remove the front bumper reinforcement.

6. Install in the reverse order of removal.

7. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

8. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

ENERGY-ABSORBING FOAM REMOVAL/INSTALLATION

Front Energy-absorbing Foam

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)

3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

4. Insert a remover tool in the position shown in the figure, press out the areas where the pins are located on the fasteners in the direction of the arrow, and remove them.

CAUTION:

- When removing the energy-absorbing foam, hold the area around the guide and pull the energy-absorbing foam straight out from the front bumper reinforcement. Otherwise, the guide may be damaged.

5. Pull the front energy-absorbing foam in the direction of the arrow shown in the figure while detaching guides

6. Install in the reverse order of removal.

7. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

Rear Energy-absorbing Foam

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear combination light (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**)

   b. Rear splash shield (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

   c. Rear bumper (See **REAR BUMPER REMOVAL/INSTALLATION**.)

3. Insert a precision flathead screwdriver into the position shown in the figure, pull out the center pins of the fasteners, and remove the fasteners.

CAUTION:

- When removing the energy-absorbing foam, hold the area around the guide and pull the energy-absorbing foam straight out from the rear bumper reinforcement. Otherwise, the guide may be damaged.

4. Pull the energy-absorbing foam in the direction of the arrow shown in the figure while detaching guides.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

BUMPER STIFFENER LOWER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)
   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
3. Remove the screws shown in the figure.

Without i-ELOOP

With i-ELOOP

4. Remove the bolts shown in the figure.

7. Install in the reverse order of removal.

8. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

SEAL PLATE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
4. Remove the fasteners shown in the figure.

5. Remove the seal plate toward the vehicle front while lifting up the tab using a remover tool.

6. Install in the reverse order of removal.

7. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

FRONT BUMPER DISASSEMBLY/ASSEMBLY

1. Remove the front fog light bezel No.1 and front fog lights. (with front fog lights) (See **FRONT FOG LIGHT BEZEL REMOVAL/INSTALLATION**.)

2. Disassemble in the order indicated in the table.

1	Locator pin
2	Locator pin bracket
3	Radiator grille (See **RADIATOR GRILLE REMOVAL/INSTALLATION**.)
4	Front turn lamp
5	Bracket

6	Towing hook cover
7	Front bumper cover
8	Hole cover (without front fog lights)
9	Front bumper face

3. Assemble in the reverse order of disassembly.

2014 - Mazda3 - Body and Accessories

BUMPER SLIDER REMOVAL/INSTALLATION

Front Bumper Slider

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
4. Remove the bolts shown in the figure.

5. Remove the tabs shown in the figure and detach the front fender panel from the front bumper slider.

6. Pull the front bumper slider in the direction of the arrow shown in the figure while detaching the pin.

7. Install in the reverse order of removal.

8. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

Rear Bumper Slider

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear combination light (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   b. Rear splash shield (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)

   c. Rear bumper (See **REAR BUMPER REMOVAL/INSTALLATION**.)

   d. Trunk side trim (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

3. Remove the screws and nut shown in the figure.

REAR BUMPER REINFORCEMENT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear combination light (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)
   b. Rear splash shield (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
   c. Rear bumper (See **REAR BUMPER REMOVAL/INSTALLATION**.)
   d. Rear energy-absorbing foam (See **ENERGY-ABSORBING FOAM REMOVAL/INSTALLATION**.)
3. Remove the hanger rubbers shown in the figure.

CAUTION:

- Removing the rear bumper reinforcement without supporting it could cause the rear bumper reinforcement to fall and cause serious injury. Always perform the procedure with at least another person to prevent the rear bumper reinforcement from falling.

4. Remove the nuts shown in the figure.

5. Remove the rear bumper reinforcement in the direction of the arrow shown in the figure.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT FENDER PANEL REMOVAL/INSTALLATION

CAUTION:

- Overlap and adhere the protective tape to the position shown in the figure to prevent damage to the front fender panel and front door.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Front bumper slider (See **BUMPER SLIDER REMOVAL/INSTALLATION**.)

   e. Front fender molding (See **FRONT FENDER MOLDING REMOVAL/INSTALLATION**.)

3. Remove the fasteners.

4. Remove the front fender upper in the direction of the arrow shown in the figure.

5. Remove the fasteners.

6. Partially peel back the front mudguard.

7. Remove the bolts shown in the figure.

8. Remove the front fender panel.

9. Install in the reverse order of removal.

10. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

11. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

FRONT FENDER STAY REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)
   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
   d. Washer tank (See **WASHER TANK REMOVAL/INSTALLATION**.)
3. Remove the bolt shown in the figure and then remove body ground.

4. Remove the bolts shown in the figure.

5. Remove the bolts shown in the figure and then remove the front fender stay.

8—10 N·m {82—101 kgf·cm,71—88 in·lbf}

6. Install in the reverse order of removal. (See **Front Fender Stay Newly Replace Note**.)

7. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

8. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

Front Fender Stay Newly Replace Note

CAUTION:

- If the bolt contact area is painted when the front fender stay is newly replaced, it could cause a malfunction in the PCM. Before painting a newly replaced part, protect the bolt contact areas with masking tape.

1. Before painting a newly replaced part, affix masking tape to the shaded areas shown in the figure.

NOTE:

- After installing the bolt, apply touch-up paint to the exposed base material area of the front fender stay.

FRONT FENDER INSULATOR No.1 REMOVAL/INSTALLATION

1. Remove the front mudguard.(See **MUDGUARD REMOVAL/INSTALLATION**.)
2. Remove the front fender insulator No.1 boss area from the hole of the cowl side reinforcement.

3. Pull out front fender insulator No.1 from the cowl side reinforcement flange area.
4. Remove front fender insulator No.1.
5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT FENDER INSULATOR No.2 REMOVAL

CAUTION:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

1. Remove the front mudguard.(See **MUDGUARD REMOVAL/INSTALLATION**.)

2. Cut off the double-sided adhesive tape in the position shown in the figure using a utility knife and remove front fender insulator No.2 from the body.

FRONT FENDER INSULATOR No.2 REMOVAL

2014 - Mazda3 - Body and Accessories

FRONT FENDER INSULATOR No.2 INSTALLATION

CAUTION:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

1. If front fender insulator No.2 is to be reused, perform the following procedure.
   a. Remove the remaining double-sided adhesive tape on the body side.
   b. Remove the double-sided adhesive tape remaining on front fender insulator No.2.
   c. Clean and degrease the double-sided adhesive tape application area.
   d. Apply double-sided adhesive tape to the position shown in the figure.

2. If front fender insulator No.2 is to be newly replaced, perform the following procedure.
   a. Remove the remaining double-sided adhesive tape on the body side.
   b. Clean and degrease the double-sided adhesive tape application area on the body side.
3. Peel off the paper backing of the double-sided adhesive tape from front fender insulator No.2.
4. Press front fender insulator No.2 into the grooves in the body in the order of the upper, lower, and middle parts without allowing the double-sided adhesive tape to contact the body.
5. Align the front fender insulator No.2 marking with the installation position on the body shown in the figure.

6. Press front fender insulator No.2 to adhere the double-sided adhesive tape to the body, and install front fender insulator No.2.

7. Install the front mudguard.(See MUDGUARD REMOVAL/INSTALLATION.)

2014 - Mazda3 - Body and Accessories

SHROUD PANEL REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Active air shutter (with i-ELOOP) (See **ACTIVE AIR SHUTTER REMOVAL/INSTALLATION**.)

   e. Shroud upper member (See **SHROUD UPPER MEMBER REMOVAL/INSTALLATION**.)

   f. Hood lock (See **HOOD LATCH REMOVAL/INSTALLATION**.)

   g. Intake air guide (See **INTAKE AIR GUIDE REMOVAL/INSTALLATION**.)

   h. Seal plate (See **SEAL PLATE REMOVAL/INSTALLATION**.)

   i. Front under cover No.1 (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)

   j. Bumper stiffener lower (See **BUMPER STIFFENER LOWER REMOVAL/INSTALLATION**.)

CAUTION:

- The front bumper reinforcement supports the shroud panel. After removing the front bumper reinforcement, an excessive load applied to the shroud panel could result in damage. When removing the front bumper reinforcement, always use a floor jack to support the shroud panel.

3. Support the shroud panel using a floor jack.

4. Remove the following parts:

   a. Front bumper reinforcement (See **FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION**.)

   b. Ambient temperature sensor (See **AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]**.) (See **AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]**.)

   c. Crash zone sensor (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

5. Remove the wiring harness clips secured to the shroud panel.

WARNING:

- Secure the hood stay using packing tape so that it does not detach. Otherwise, the hood may fall and cause injury.

6. Relocate the hood stay to the position shown in the figure.

CAUTION:

- Remove the radiator from the shroud panel using two people. Otherwise, the radiator may fall and cause injury.

7. Remove the floor jack which has supported the shroud panel.

8. Press down the tabs shown in the figure in the direction of the arrow, pull out the upper mount rubber bracket toward the vehicle rear, and remove it.

9. Hold the upper part of the radiator by hand and tilt the shroud panel toward the vehicle front.

10. Move the shroud panel to the lower side with the radiator held by hand, detach it from the radiator mount guide, and remove the shroud panel toward the vehicle front.

11. Support the radiator using a floor jack at the position shown in the figure.

12. Install in the reverse order of removal.

13. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

14. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

SHROUD UPPER MEMBER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)
   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
   d. Horn (See **HORN REMOVAL/INSTALLATION**.)
3. Remove the wiring harness clip shown in the figure. (with DSC)

4. Remove the bolt shown in the figure and set the body ground aside.

5. Remove the bolts shown in the figure and remove the shroud upper member in the direction of the arrow.

6. Install in the reverse order of removal.

7. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

8. If a front fog light is removed from the front bumper, perform the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

COWL PANEL REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
   b. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)
   c. Windshield wiper motor (See **WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION**.)
   d. Keyless beeper (with advanced keyless entry system) (See **KEYLESS BEEPER REMOVAL/INSTALLATION**.)
3. Remove the wiring harness clips secured to the cowl panel.
4. Remove the bolts shown in the figure.

BOLT : **22—30 N·m {2.3—3.0 kgf·m, 17—22 ft·lbf}**

5. Remove the cowl panel in the direction of the arrow shown in the figure.
6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DOOR AND LIFTGATE LOCATION INDEX

1	Front door hinge (See **FRONT DOOR HINGE REMOVAL / INSTALLATION**.)
2	Front door checker (See **FRONT DOOR CHECKER REMOVAL / INSTALLATION**.)
3	Front door (See **FRONT DOOR REMOVAL / INSTALLATION**.) (See **DOOR ADJUSTMENT**.)

4	Rear door hinge (See **REAR DOOR HINGE REMOVAL/INSTALLATION**.)
5	Rear door checker (See **REAR DOOR CHECKER REMOVAL/INSTALLATION**.)
6	Rear door (See **REAR DOOR REMOVAL/INSTALLATION**.) (See **DOOR ADJUSTMENT**.)
7	Front door module panel (See **FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION**.)
8	Rear door module panel (See **REAR DOOR MODULE PANEL REMOVAL/INSTALLATION**.)
9	Stay damper (See **STAY DAMPER DISPOSAL**.)
10	Liftgate hinge (See **LIFTGATE HINGE REMOVAL/INSTALLATION**.)
11	Liftgate (See **LIFTGATE REMOVAL/INSTALLATION**.) (See **LIFTGATE ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

FRONT DOOR REMOVAL/INSTALLATION

WARNING:

- Removing the front door without supporting it could cause the front door to fall and cause serious injury. Always perform the procedure with at least one other person to prevent the front door from falling.

CAUTION:

- When the front door checker securing bolts are removed, the front door may open until it contacts the front fender panel causing the front door and the front fender panel to be damaged. Before removing the front door, overlap and adhere the protective tape to the position shown in the figure and be careful not to damage the front door and the front fender panel.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the bolt A shown in the figure.

3. Remove the connector.

4. Remove the bolts B.

5. Remove the front door.

6. Install in the reverse order of removal.

7. Adjust the front door. (See **DOOR ADJUSTMENT**.)

Connector Removal Note

1. Partially peel back the rubber boot in the direction of arrow shown in the figure and remove it from the connector.

2. Using a remover tool, press tabs in the directions of arrows (1) and (2) shown in the figure and remove the upper part of the connector from the body in the direction of arrow (3).

3. Using a remover tool, press tabs in the directions of arrows (1) and (2) shown in the figure and remove the connector from the body in the direction of arrow (3).

4. Release the lever lock by pressing the connector tab shown in the figure and tilt the lever in the direction of the arrow.

5. Disconnect the connector.

2014 - Mazda3 - Body and Accessories

FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION

1. Perform the front door glass preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)
   b. Front door speaker (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)
   c. Front power window motor. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)
   d. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

NOTE:

- After removing the front door trim, secure the inner handle using screws so that the procedure is performed smoothly.

4. Disconnect the connectors shown in the figure.

5. Remove the bolt and screws shown in the figure.

6. Remove the fastener shown in the figure.

CAUTION:

- If the protector does not come out easily from the front door inner panel, pulling the front door module panel forcibly may cause the front door module panel to deform. If the protector does not come out easily, remove the front door module panel while gradually removing the protector.
- When removing, move the front door module panel straight out from the front door so as not to damage the front door module panel pin.

7. Pull the front door module panel in the direction of arrow shown in the figure and remove the protector and pin from the front door inner panel.

8. Remove the clips shown in the figure and set the front door wiring harness aside.

NOTE:

- The clip removal is easier if the work is performed from the backside of the front door module panel.

CAUTION:

- If the front power window regulator contacts the front door inner panel during the front door module panel removal, the coating film on the front door inner panel may get scratched, and the front door module panel and front power window regulator could be damaged. Remove the front door module panel while verifying that the front power window regulator and the front door inner panel do not contact each other.

9. Move the front door module panel in the direction of arrow shown in the figure so that the upper part of the front power window regulator does not contact the front door inner panel, and remove the front door module panel and the front power window regulator as a single unit.

10. Remove the pressure sensor. (If equipped) (See **PRESSURE SENSOR REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

11. Remove the front power window regulator. (See **FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION**.)

12. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR CHECKER REMOVAL/INSTALLATION

CAUTION:

- When the front door checker securing bolts are removed, the front door may open until it contacts the front fender panel causing the front door and the front fender panel to be damaged. Before removing the front door, overlap and adhere the protective tape to the position shown in the figure and be careful not to damage the front door and the front fender panel.

1. Fully close the front door glass.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front door speaker (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)

4. Remove the bolt shown in the figure.

5. Remove the bolts shown in the figure.

6. Pull out the front door checker from the front speaker installation hole.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR HINGE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Front fender panel (See **FRONT FENDER PANEL REMOVAL/INSTALLATION**.)

   e. Front door (See **FRONT DOOR REMOVAL/INSTALLATION**.)

3. Remove the bolts shown in the figure.

4. Remove the front door hinge.

5. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

6. Adjust the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

7. Adjust the front door. (See **DOOR ADJUSTMENT**.)

FRONT DOOR HINGE REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

REAR DOOR REMOVAL/INSTALLATION

WARNING:

- Removing the rear door without supporting it could cause the rear door to fall and cause serious injury. Always perform the procedure with at least one other person to prevent the rear door from falling.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the bolt A shown in the figure.

3. Remove connector. (See **Connector Removal Note**.)

4. Remove the bolt B.

5. Remove the rear door.

6. Install in the reverse order of removal.

7. Adjust the rear door. (See **DOOR ADJUSTMENT**.)

Connector Removal Note

1. While pressing tab in the direction of arrow (1), disconnect the connector in the direction of arrow (2).

2014 - Mazda3 - Body and Accessories

REAR DOOR MODULE PANEL REMOVAL/INSTALLATION

1. Fully lower the rear door glass.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Rear door trim (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Rear door speaker (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)

   c. Rear door quarter glass (See **REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION**.)

   d. Rear power window motor (See **REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

   e. Rear door glass (See **REAR DOOR GLASS REMOVAL/INSTALLATION**.)

   NOTE:

   - After removing the rear door trim, secure the inner handle using screws so that the procedure is performed smoothly.

4. Remove the connector and clips shown in the figure and set the rear door wiring harness aside.

NOTE:

- The clip removal is easier if your hand is inserted into the service hole and the rear door speaker installation hole.

5. Remove the screws shown in the figure.

6. Remove the fastener shown in the figure.

CAUTION:

- If the protector does not come out easily from the rear door inner panel, pulling the rear door module panel forcibly may cause the rear door module panel to deform. If the protector does not come out easily, remove the rear door module panel while gradually removing the protector.
- When removing, move the rear door module panel straight out from the rear door so as not to damage the rear door module panel pin.

7. Pull the rear door module panel in the direction of arrow shown in the figure and remove the pin from the rear door inner panel.

CAUTION:

- If the rear power window regulator contacts the rear door inner panel during the rear door module panel removal, the coating film on the rear door inner panel may get scratched, and the rear door module panel and rear power window regulator could be damaged. Remove the rear door module panel while verifying that the rear power window regulator and the rear door inner panel do not contact each other.

8. Move the rear door module panel in the direction of arrow shown in the figure so that the upper part of the rear power window regulator does not contact the rear door inner panel, and remove the rear door module panel and the rear power window regulator as a single unit.

9. Remove the rear power window regulator. (See **REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION**.)

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR DOOR CHECKER REMOVAL/INSTALLATION

1. Fully close the rear door glass.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Rear door trim (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Rear door speaker (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)

4. Remove the bolt shown in the figure.

5. Remove the bolts shown in the figure.

6. Pull out the rear door checker from the rear speaker installation hole.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR DOOR HINGE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear door (See **REAR DOOR REMOVAL/INSTALLATION**.)

   b. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   d. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

3. Remove the bolts shown in the figure.

4. Remove the nut.

5. Remove the rear door hinge.

6. Install in the reverse order of removal.
7. Adjust the rear door. (See **DOOR ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

LIFTGATE REMOVAL/INSTALLATION

WARNING:

- Removing the stay damper, liftgate hinge securing bolt, or liftgate without supporting the liftgate may cause the liftgate to fall off and injure you. When removing the stay damper, liftgate hinge, or liftgate, always use two persons to perform the work.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the liftgate upper trim. (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connectors and rear washer hose shown in the figure.

4. Remove the wiring harness clip shown in the figure.

5. Partially peel the liftgate grommet in the direction of arrow shown in the figure, and remove the liftgate grommet from the liftgate grommet inner.

6. Using a remover tool, press the liftgate grommet inner tabs in the directions of arrows (1) and (2) shown in the figure and remove the liftgate grommet inner from the liftgate in the direction of arrow (3).

7. Remove the rear washer hose and wiring harness from the liftgate and set them aside.

8. Using a remover tool, remove the stay damper securing band in the direction of arrow shown in the figure.

9. Remove the bolts shown in the figure and remove the stay damper.

10. Remove the bolts shown in the figure and remove the liftgate.

11. Remove the stud balls.

12. Install in the reverse order of removal. (See **Liftgate Grommet Installation Note**.)

13. Adjust the liftgate. (See **LIFTGATE ADJUSTMENT**.)

Liftgate Grommet Installation Note

1. Engage a new liftgate grommet inner.

CAUTION:

- Install the liftgate grommet inner so that there is no gap between the liftgate grommet and the liftgate grommet inner. Otherwise, it may cause water leakage.

2. Install the liftgate grommet inner to the liftgate grommet.

CAUTION:

- After installing the liftgate, shake the liftgate grommet inner to verify that the tabs are securely engaged. If there is gap between the liftgate grommet and the liftgate, it may cause water leakage.

3. Press the liftgate grommet inner into the liftgate side as shown in the figure and engage the tabs of the liftgate grommet inner with the liftgate side.

LIFTGATE

LIFTGATE GROMMET INNER
TAB
TAB
LIFTGATE
LIFTGATE GROMMET

2014 - Mazda3 - Body and Accessories

LIFTGATE HINGE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

   b. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

   d. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   e. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   f. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   g. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

   h. Trunk side trim (LH) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

   i. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   j. Assist handle (Rear side) (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   k. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

   l. Liftgate (See **LIFTGATE REMOVAL/INSTALLATION**.)

3. Remove the fasteners shown in the figure.

CAUTION:

- Peeling back the headliner without supporting it may cause the headliner to bend excessively and create a fold seam. Peel back the headliner while supporting it.

4. While partially peeling back the rear part of the headliner, remove the nuts shown in the figure.

5. Remove the liftgate hinges.

6. Install in the reverse order of removal.

7. Adjust the liftgate. (See **LIFTGATE ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

STAY DAMPER DISPOSAL

NOTE:

- The stay damper contains colorless, odorless, nontoxic gas.

1. Wear protective eye wear.

CAUTION:

- When cutting the stay damper, wear protective eye wear to prevent the gas or oil from getting into your eyes. Otherwise, the force of the gas and oil spraying out could lead to injury.

2. Position the stay damper horizontally.

3. Drain gas and oil by cutting the position indicated in the figure to a **2—3 mm {0.08—0.11 in}** depth using a metal saw.

4. Verify that the gas and oil is drained completely by pulling and pushing the piston rod several times with the cut position facing downward.

5. Cut off the bottom of the stay damper.

6. Dispose of the stay damper.

2014 - Mazda3 - Body and Accessories

DOOR ADJUSTMENT

1. Measure the gap and height difference between the door and the body.
    - If the measured value exceeds the standard clearance, adjust the door using the following procedure:
2. Loosen the door hinge installation bolts and adjust the door.

Standard clearance

- a: 2.5—4.3 mm {0.10—0.16 in}
- b: –1.0—1.0 mm {–0.039—0.039 in}
- c: 2.5—4.3 mm {0.10—0.16 in}
- d: –1.0—1.0 mm {–0.039—0.039 in}
- e: 2.5—4.3 mm {0.10—0.16 in}
- f: –1.0—1.0 mm {–0.039—0.039 in}

3. Tighten the door hinge installation bolts. (See **FRONT DOOR REMOVAL/INSTALLATION**.) (See **REAR DOOR REMOVAL/INSTALLATION**.)

4. If the door does not open/close smoothly, adjust it by loosening the door lock striker installation screw. (See **DOOR LOCK STRIKER REMOVAL/INSTALLATION**.)

5. Spray or pour water on the door and surrounding area using a hose or high pressure water pressure car wash and verify that there is no water leakage.

2014 - Mazda3 - Body and Accessories

LIFTGATE ADJUSTMENT

1. Measure the gap and height difference between the liftgate and the body.
    - If the measured value exceeds the standard clearance, adjust the liftgate using the following procedure:
2. Loosen the liftgate hinge installation bolts and adjust the liftgate.

SEC. A—A

SEC. B—B

SEC. C—C

Standard clearance

- a: 5.1—7.1 mm {0.21—0.27 in}
- b: –2.0—0.0 mm {–0.078—0.000 in}
- c: 2.6—5.0 mm {0.11—0.19 in}
- d: –1.9—0.5 mm {–0.07—0.01 in}
- e: 4.3—8.3 mm {0.17—0.32 in}

3. Tighten the liftgate hinge installation bolts. (See **LIFTGATE REMOVAL/INSTALLATION**.)

4. If the liftgate does not open/close smoothly, adjust it by loosening the liftgate lock striker installation screw. (See **LIFTGATE LOCK STRIKER REMOVAL/INSTALLATION**.)

5. Spray or pour water on the door and surrounding area using a hose or high pressure water pressure car wash and verify that there is no water leakage.

2014 - Mazda3 - Body and Accessories

GLASS/WINDOWS/MIRRORS LOCATION INDEX

16	Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

FRONT DOOR GLASS REMOVAL/INSTALLATION

1. Perform the front door glass preparation. (See **Front Door Glass Preparation**.)

NOTE:

- Before removing the front door glass, the removal procedure for the front door glass installation bolt can be facilitated by adjusting the top of the front door glass to the position **approx. 70 mm {2.8 in}** away from the upper part of the front beltline molding.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front door speaker (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)

4. Press the center of the service hole cover in the direction of arrow (1) shown in the figure.

5. Remove the service hole cover by holding its rib and partially peeling it back in the direction of arrow (2) shown in the figure.

6. Apply protective tape to the edge part of the front door speaker installation hole to prevent injury.

7. Remove bolts.

BOLT : **8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}**

CAUTION:

- If the bolts are removed without supporting the front door glass, the front door glass may fall off and be damaged. Remove the bolts while inserting your hand into the front door speaker installation hole to support the front door glass.

8. Lift up the front door glass, tilt it in the direction of arrow (3) shown in the figure, then remove it in the direction of arrow (4).

9. Install in the reverse order of removal.

Front Door Glass Preparation

- Perform the adjusting the top of the front door glass to the position **approx. 70 mm {2.8 in}** away from the front beltline molding.

2014 - Mazda3 - Body and Accessories

REAR DOOR GLASS REMOVAL/INSTALLATION

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Rear door trim (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)
   b. Rear door speaker (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)
   c. Rear power window motor (See **REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)
   d. Rear door quarter glass (See **REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION**.)
4. Press the center of the service hole cover in the direction of arrow (1) shown in the figure.

5. Remove the service hole cover by holding its rib and partially peeling it back in the direction of arrow (2) shown in the figure.
6. Apply protective tape to the edge part of the rear door speaker installation hole to prevent injury.

7. Remove the bolt.

CAUTION:

- If the bolts are removed without supporting the rear door glass, the rear door glass may fall off and be damaged. Remove the bolts while inserting your hand into the rear door speaker installation hole to support the rear door glass.

BOLT : **4.5—6.5 N·m {46—66 kgf·cm, 40—57 in·lbf}**

8. Lift the rear door glass up and remove while tilting it.

9. Lift up the rear door glass, tilt it in the direction of arrow (3) shown in the figure.

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)
4. Remove the service hole cover arrow (1) shown in the figure.

CAUTION:

- When removing service hole cover, remove it while gradually stripping the butyl rubber. Otherwise service hole cover may be deformed.

5. Partially peel back rear door weather strip.

6. Remove screw.
7. Remove bolts.

BOLT : **8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}**

8. Partially peel back the rear door glass run channel. (See **Rear Door Glass Run Channel Installation Note**.)

9. Pull the glass guide in the direction of the arrow (2) shown in the figure, then remove the glass guide direction of the arrow (3) shown in the figure. (See **Glass Guide Installation Note**.)

10. Pull the rear door glass run channel in the direction of the arrow (4) then remove the rear door glass run channel. (See **Rear Door Glass Run Channel Installation Note**.)

11. Slide the rear door quarter glass and rear door quarter glass guide as a single unit in the direction of the arrow (5) shown in the figure.

12. Remove the rear door quarter glass and rear door quarter glass guide as a single unit in the direction of the arrow (6) shown in the figure.

13. Pull the rear door quarter glass guide in the direction of the arrow (7) and remove the rear door quarter glass.

14. Install in the reverse order of removal.

Rear Door Glass Run Channel Installation Note

- Install the rear door glass run channel so that the glass guide is aligned with the top of the rear door glass run channel.

- Install the rear door glass run channel to the rear door panel by pressing the rear door glass run channel along the entire perimeter in the directions of the arrows.

Glass Guide Installation Note

1. Set the glass guide in the direction shown in the figure, and insert the bolt installation hole in the direction of arrow (1) until it reaches area A.

2. When the bolt installation hole of the glass guide reaches area A, rotate the glass guide in the direction of arrow (2) shown in the figure.

3. Move the glass guide in the direction of arrow (3) shown in the figure to adjust the position of the front door inner panel and the bolt installation holes of the glass guide.

4. Move the glass guide in the direction of arrow (4) shown in the figure and while aligning it to the screw installation hole in the rear door inner panel, set it to the rear door quarter glass and the rear door glass.

2014 - Mazda3 - Body and Accessories

WINDSHIELD REMOVAL

Reusing Windshield

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
   b. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)
   c. Front fender molding (See **FRONT FENDER MOLDING REMOVAL/INSTALLATION**.)
   d. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   e. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   f. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   g. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   h. Cover (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)
3. Disconnect the rain sensor connector. (with auto light/wiper system) (See **RAIN SENSOR REMOVAL/INSTALLATION**.)
4. Disconnect the forward sensing camera (FSC) connector (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)
5. Disconnect the auto-dimming mirror connector (with auto-dimming mirror) (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)
6. Disconnect the laser sensor connector (with smart city brake support (SCBS)) (See **LASER SENSOR REMOVAL/INSTALLATION**.)
7. Set the headliner out of the way.
8. Apply protective tape along the edge of the body.

NOTE:

- Overlap and adhere the protective tape to the corners to prevent damage.

9. Remove the windshield molding by pulling it outward.

NOTE:

- If the windshield molding is difficult to remove, warm the windshield molding using a hot air blower.

SEC. A—A

10. Cut the tip of the piano wire diagonally.

11. Pass the piano wire through from the cabin side.

12. Wind each end of piano wire around a bar.

NOTE:

- Use a long sawing action to spread the work over the whole length of piano wire to prevent it from breaking due to localized heating.

13. Secure the piano wire on the cabin side, and pull the wire on the other side (vehicle exterior) in the direction of the arrow shown in the figure to cut the windshield sealant.

14. When reaching the pin, pull the piano wire out to go around the pin, then pass the piano wire through from the cabin side again.

15. Secure one end of piano wire, and while pulling the other end, cut the sealant around the windshield.
16. Pinch the pin from the inside of the vehicle and detach it.
17. Remove the windshield.
18. If the pin is damaged, remove the pin.

NOTE:

- Before removing the pin from the windshield glass, place an alignment mark on the windshield.

Not Reusing Windshield

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
   b. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)
   c. Front fender molding (See **FRONT FENDER MOLDING REMOVAL/INSTALLATION**.)
   d. Forward sensing camera (FSC) short-cord (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION**.)
   e. Forward sensing camera (FSC) (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)
   f. Forward sensing camera (FSC) clip (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) CLIP REMOVAL/INSTALLATION**.)
   g. Rain sensor (with auto light/wiper system) (See **RAIN SENSOR REMOVAL/INSTALLATION**.)
   h. Laser sensor (with smart city brake support (SCBS)) (See **LASER SENSOR REMOVAL/INSTALLATION**.)
   i. Auto-dimming mirror (with auto-dimming mirror) (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)
   j. Rearview mirror (without auto-dimming mirror) (See **REARVIEW MIRROR REMOVAL/INSTALLATION**.)
   k. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   l. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   m. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   n. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   o. Cover (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)
3. Set the headliner out of the way.
4. Apply protective tape along the edge of the body.

NOTE:

- Overlap and adhere the protective tape to the corners to prevent damage.

5. Remove the windshield molding by pulling it outward.

NOTE:

- If the windshield molding is difficult to remove, warm the windshield molding using a hot air blower.

6. Cut out the sealant all around the glass using a sealant remover.

NOTE:

- If it is difficult to cut sealant, use piano wire and follow the procedure under “Reusing Windshield”.

7. Remove the windshield.

2014 - Mazda3 - Body and Accessories

WINDSHIELD INSTALLATION

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

CAUTION:

- If a door is opened or closed when all the window glass is closed, the resulting change in air pressure could cause the sealant to crack preventing the proper installation of the windshield. Keep the door glass opened until the windshield installation is completed.

Reusing Windshield

1. Remove the sealant along the perimeter of the glass using a utility knife.
2. Clean and degrease an **approx. 50 mm {2.0 in}** wide strip along the perimeter of the windshield.
3. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.
4. Align the alignment marks made before removal and install the pin to the windshield referring to the figure.

5. Install the windshield molding.

6. Apply primer to the area of the glass shown in the figure.
   - Follow the primer product instructions for the drying time.

CAUTION:

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

NOTE:

- Apply primer to the hollowed marks in the ceramic coating.

7. Cut away the old sealant using a utility knife so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

8. Clean and degrease along the perimeter of the bonding area on the body.

9. Apply primer to the area of the body shown in the figure.

- Follow the primer product instructions for the drying time.

CAUTION:

- Using the dowel for applying primer, apply primer to the area shown in the figure.

10. Apply sealant to the area of the glass surface as shown in the figure.

11. Insert the positioning pins to the body and install the windshield.

12. Verify that the clearance between the A-pillar and the roof is within the range shown in the figure, and press along the perimeter of the glass.

13. Connect the laser sensor connector (with smart city brake support (SCBS)) (See **LASER SENSOR REMOVAL/INSTALLATION**.)

14. Connect the auto-dimming mirror connector (with auto-dimming mirror) (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)

15. Connect the forward sensing camera (FSC) connector (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

16. Connect the rain sensor connector. (with auto light/wiper system) (See **RAIN SENSOR REMOVAL/INSTALLATION**.)

17. Install the following parts:

    a. Cover (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

    b. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

    d. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

    e. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

    f. Front fender molding (See **FRONT FENDER MOLDING REMOVAL/INSTALLATION**.)

    g. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)

    h. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

18. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

19. Allow the sealant to harden completely. Reference for sealant hardening time: 24 h

NOTE:

- Follow the product instructions for the sealant hardening time.

20. Adjust the forward sensing camera (FSC) aiming. (See **FORWARD SENSING CAMERA (FSC) AIMING**.)

21. If the rain sensor is replaced, perform the sensitivity setting procedure for the auto lights. (See **RAIN SENSOR REMOVAL/INSTALLATION**.)

Not Reusing Windshield

1. Clean and degrease an **approx. 50 mm {2.0 in}** wide strip along the perimeter of the windshield.

2. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.

3. Install the windshield molding.

4. Apply primer to the area of the glass shown in the figure.

- Follow the primer product instructions for the drying time.

CAUTION:

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

NOTE:

- Apply primer to the hollowed marks in the ceramic coating.

5. Cut away the old sealant using a utility knife so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

6. Clean and degrease along the perimeter of the bonding area on the body.
7. Apply primer to the area of the body shown in the figure.
    - Follow the primer product instructions for the drying time.

CAUTION:

- Using the dowel for applying primer, apply primer to the area shown in the figure.

8. Apply sealant to the area of the glass surface as shown in the figure.

9. Insert the positioning pins to the body and install the windshield.

10. Verify that the clearance between the A-pillar and the roof is within the range shown in the figure, and press along the perimeter of the glass.

11. Install the following parts:

    a. Rearview mirror (without auto-dimming mirror) (See **REARVIEW MIRROR REMOVAL/INSTALLATION**.)

    b. Auto-dimming mirror (with auto-dimming mirror) (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)

    c. Laser sensor (with smart city brake support (SCBS)) (See **LASER SENSOR REMOVAL/INSTALLATION**.)

    d. Rain sensor (with auto light/wiper system) (See **RAIN SENSOR REMOVAL/INSTALLATION**.)

    e. Forward sensing camera (FSC) clip (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) CLIP REMOVAL/INSTALLATION**.)

    f. Forward sensing camera (FSC) (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

    g. Forward sensing camera (FSC) short-cord (with high beam control (HBC) system) (See **FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION**.)

    h. Cover (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

    i. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

    j. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

    k. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

    l. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

    m. Front fender molding (See **FRONT FENDER MOLDING REMOVAL/INSTALLATION**.)

    n. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)

    o. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

12. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

13. Allow the sealant to harden completely. Reference for sealant hardening time: 24 h

NOTE:

- Follow the product instructions for the sealant hardening time.

14. Adjust the forward sensing camera (FSC) aiming. (See **FORWARD SENSING CAMERA (FSC) AIMING**.)

15. If the rain sensor is replaced, perform the sensitivity setting procedure for the auto lights. (See **RAIN SENSOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR WINDOW GLASS REMOVAL

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   b. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   c. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

   d. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)

   e. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the filament connectors in the direction of the arrow in the order of (1), (2) shown in the figure.

4. Apply protective tape along the edge of the body.

NOTE:

- Overlap and adhere the protective tape to the corners to prevent damage.

5. Avoiding the pin on the inside of the vehicle, insert piano wire which has been cut to sufficient length.

WARNING:

1. Using piano wire with bare hands can cause injury. Always wear gloves when using piano wire.

NOTE:

- Before removing the rear window glass from the body, mark the position of the glass by affixing tape to the glass and body panel.

6. Wind each end of piano wire around a bar.

NOTE:

- Use a long sawing action to spread the work over the whole length of piano wire to prevent it from breaking due to localized heating.

7. Secure one end of piano wire, and while pulling the other end, cut the sealant around the rear window glass.

8. Pinch pins from the inside of the vehicle and detach it.

9. Remove the rear window glass.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   b. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   d. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   e. Rear spoiler (See **REAR SPOILER REMOVAL**.)

   f. Rear wiper arm and blade (See **REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

   g. Rear wiper motor (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

   h. Outer bushing (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

3. Disconnect the antenna feeder No.3 connector. (with RDS (radio data system))

4. Disconnect the filament connectors in the direction of the arrow in the order of (1), (2) shown in the figure.

5. Apply protective tape along the edge of the body.

NOTE:

- Overlap and adhere the protective tape to the corners to prevent damage.

6. Avoiding the pin on the inside of the vehicle, insert piano wire which has been cut to sufficient length.

WARNING:

1. Using piano wire with bare hands can cause injury. Always wear gloves when using piano wire.

NOTE:

- Before removing the rear window glass from the body, mark the position of the glass by affixing tape to the glass and body panel.

7. Wind each end of piano wire around a bar.

NOTE:

- Use a long sawing action to spread the work over the whole length of piano wire to prevent it from breaking due to localized heating.

8. Secure one end of piano wire, and while pulling the other end, cut the sealant around the rear window glass.

9. Pinch pins from the inside of the vehicle and detach it.

10. Remove the rear window glass.

2014 - Mazda3 - Body and Accessories

REAR WINDOW GLASS INSTALLATION

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

CAUTION:

- Proper installation of the glass may be difficult if sealant is cracked or the glass is pushed out by air pressure when a door is opened/closed with all the window glass closed. Keep the door glass open until the rear window glass installation is completed.

4SD

1. Remove sealant along the perimeter of the glass using a utility knife or scraper. (When reusing the glass)
2. Clean and degrease an **approx. 50 mm {2.0 in}** wide strip along the perimeter of the glass.
3. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.
4. Install spacer and pins to the glass as shown in the figure.

NOTE:

- When reusing the glass, align it with the alignment mark placed before the glass was removed.

5. Apply primer to the area of the glass shown in the figure.

- Follow the primer product instructions for the drying time.

CAUTION:

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

NOTE:

- Apply primer to the hollowed marks in the ceramic coating.

mm {in}

6. Cut away the old sealant using a utility knife or scraper so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

7. Clean and degrease along the perimeter of the bonding area on the body.

8. Apply primer to the area of the body shown in the figure.

- Follow the primer product instructions for the drying time.

CAUTION:

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

9. Apply sealant to the area of the glass surface as shown in the figure.

10. Install the rear window glass.

11. Verify that the gap at the upper and lower parts of the glass is within the specification shown in the figure, then press along the perimeter of the glass.

12. Connect the filament connectors in the direction of the arrow in the order of (1), (2) shown in the figure.

13. Install the following parts:

a. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)

b. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)

c. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

e. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

14. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

15. Allow the sealant to harden completely. Reference for sealant hardening time: 24 h

NOTE:

- Follow the product instructions for the sealant hardening time.

5HB

1. Remove sealant along the perimeter of the glass using a utility knife or scraper. (When reusing the glass)

2. Clean and degrease an **approx. 50 mm {2.0 in}** wide strip along the perimeter of the glass.

3. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.

4. Install spacers, pins and fastener to the glass as shown in the figure.

NOTE:

- When reusing the glass, align it with the alignment mark placed before the glass was removed.

5. Apply primer to the area of the glass shown in the figure.

- Follow the primer product instructions for the drying time.

CAUTION:

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

NOTE:

- Apply primer to the hollowed marks in the ceramic coating.

6. Cut away the old sealant using a utility knife or scraper so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

7. Clean and degrease along the perimeter of the bonding area on the body.

8. Apply primer to the area of the body shown in the figure.

    - Follow the primer product instructions for the drying time.

CAUTION:

- To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.

9. Apply sealant to the area of the glass surface as shown in the figure.

10. Install the rear window glass.

11. Verify that the gap at the upper and lower parts of the glass is within the specification shown in the figure, then press along the perimeter of the glass.

12. Connect the filament connectors in the direction of the arrow in the order of (1), (2) shown in the figure.

13. Connect the antenna feeder No.3 connector.

14. Install the following parts:

    a. Outer bushing (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

b. Rear wiper motor (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

c. Rear wiper arm and blade (See **REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

d. Rear spoiler (See **REAR SPOILER INSTALLATION**.)

e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

f. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

g. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

h. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

15. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

16. Allow the sealant to harden completely. Reference for sealant hardening time: 24 h

NOTE:

- Follow the product instructions for the sealant hardening time.

2014 - Mazda3 - Body and Accessories

FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION

1. Perform the front door glass preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)
   b. Front door speaker (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)
   c. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)
   d. Front power window motor (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)
4. Remove the bolt.

BOLT, NUT : **8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}**

5. Remove nuts.
6. Insert your hand through the front door speaker installation hole and support the drum housing.

7. Move the clip tabs in the direction of arrow (1) shown in the figure to detach the tabs, and move the clip in the direction of arrow (2) to remove.

8. Remove the front power window regulator through the speaker installation hole.

CAUTION:

- When removing the front power window regulator, the front power window regulator may contact the front door speaker installation hole, and the coating film of the front door inner panel and the front power window regulator could be damaged. Remove the front power window regulator while verifying that the front power window regulator and the front door speaker installation hole do not contact each other.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION

1. Fully lower the rear door glass.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Rear door trim (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Rear door quarter glass (See **REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION**.)

   c. Rear door speaker (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)

   d. Rear power window motor (See **REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

   e. Rear door glass (See **REAR DOOR GLASS REMOVAL/INSTALLATION**.)

4. Remove bolts.

BOLT : **8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}**

5. Insert your hand through the rear door speaker installation hole and support the drum housing.

6. Move the clip tabs in the direction of arrow (1) shown in the figure to detach the tabs, and move the clip in the direction of arrow (2) to remove.

7. Remove the rear power window regulator through the speaker installation hole.

CAUTION:

- When removing the rear power window regulator, the rear power window regulator may contact the rear door speaker installation hole, and the coating film of the rear door inner panel and the rear power window regulator could be damaged. Remove the rear power window regulator while verifying that the rear power window regulator and the rear door speaker installation hole do not contact each other.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION

1. Fully lower the front door glass.

CAUTION:

- If the front power window motor is removed with the front door glass fully closed, the front door glass may fall off and be damaged.
- If the front door glass cannot be fully opened by operating the power window main switch or the power window subswitch, remove the front power window motor while inserting your hand through the front door speaker installation hole to support the front door glass.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)
4. Remove the front door speaker. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)
5. Disconnect the front power window motor connector.

BOLT (1), (2), (3) : **5.2—7.2 N·m {54—73 kgf·cm, 47—63 in·lbf}**

6. Remove the bolt (1).
7. Remove the bolt (2).
8. Remove the bolt (3).
9. Remove the front power window motor.
10. Install in the reverse order of removal. (See **Front Power Window Motor Installation Note**.)

Front Power Window Motor Installation Note

CAUTION:

- If the front power window motor is installed without securing the front power window regulator drum housing, the drum housing may detach from the front door module panel and the front power window motor may not install correctly. When installing the front power window motor, insert your hand through the front door speaker installation hole and secure the drum housing so that the clip shown in the figure does not detach.

DRUM HOUSING
CLIP

2014 - Mazda3 - Body and Accessories

FRONT POWER WINDOW MOTOR INSPECTION

Driver-side

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front door trim. (Driver- side) (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the front power window motor connector.

4. Apply battery positive voltage and connect the ground to front power window motor terminals E and F, and then inspect the front power window motor operation.

B+ Terminal	Ground Terminal	Operation
E	F	Close
F	E	Open

- If the front power window motor does not operate as indicated in the table, replace it. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

5. Connect the battery positive voltage to front power window motor terminal D and connect terminal C to ground.

6. Operate the front power window motor and verify the wave patterns for terminals A and B.

- Terminal:

  A, B(+) ↔ ground (-)
- Oscilloscope setting: 2 V/DIV (Y), 1 ms/DIV (X), DC range
- If the malfunction, replace the front power window motor. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

Passenger-side

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front door trim. (Passenger- side) (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the front power window motor connector.

4. Apply battery positive voltage and connect the ground to front power window motor terminals E and F, and then inspect the front power window motor operation.

B+ Terminal	Ground Terminal	Operation
E	F	Close
F	E	Open

- If the front power window motor does not operate as indicated in the table, replace it. (See **FRONT POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

FRONT POWER WINDOW MOTOR INSPECTION

2014 - Mazda3 - Body and Accessories

REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION

1. Fully lower the front door glass.

CAUTION:

- If the rear power window motor is removed with the rear door glass fully closed, the rear door glass may fall off and be damaged.
- If the rear door glass cannot be fully opened by operating the power window subswitch, remove the rear power window motor while inserting your hand through the rear door speaker installation hole to support the rear door glass.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

4. Remove the rear door speaker. (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)

5. Disconnect the rear power window motor connector.

BOLT (1), (2) : **5.2—7.2 N·m {54—73 kgf·cm, 47—63 in·lbf}**

6. Remove the bolt (1).

7. Remove the bolt (2).

8. Remove the rear power window motor.

9. Install in the reverse order of removal. (See **Rear Power Window Motor Installation Note**.)

Rear Power Window Motor Installation Note

CAUTION:

- If the rear power window motor is installed without securing the rear power window regulator drum housing, the drum housing may detach from the rear door module panel and the rear power window motor may not install correctly. When installing the rear power window motor, insert your hand through the rear door speaker installation hole and secure the drum housing so that the clip shown in the figure does not detach.

DRUM HOUSING
CLIP

2014 - Mazda3 - Body and Accessories

REAR POWER WINDOW MOTOR INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the front power window motor connector.

4. Apply battery positive voltage and connect the ground to front power window motor terminals E and F, and then inspect the front power window motor operation.

B+ Terminal	Ground Terminal	Operation
E	F	Close
F	E	Open

- If the rear power window motor does not operate as indicated in the table, replace it. (See **REAR POWER WINDOW MOTOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the cover.

3. Insert a remover tool shown in the figure and remove the tab A in the direction of arrow (1).

4. Slide the power window main switch in the direction of the arrow (2) shown in the figure and remove the tab B.

5. Disconnect the power window main switch connector.

6. Pull the edge of power window main switch cover in the direction of the arrow in the order of (4), (5) while detaching tab C.

7. Pull the edge of power window main switch cover in the direction of the arrow in the order of (6), (7) while detaching tab C.

8. Pull the edge of power window main switch cover in the direction of the arrow in the order of (8), (9) while detaching tab C.

9. Remove the power window main switch in the direction of the arrow (10) shown in the figure.

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

POWER WINDOW MAIN SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the power window main switch (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)

3. Connect the power window main switch connector.

4. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Measure the voltage at each terminal.

- If the voltage is not as specified in the terminal voltage table, inspect the parts under Inspection item (s) and related wiring harnesses.
  - If the system does not work normally even though the inspection items or related wiring harnesses do not have any malfunction, replace the power window main switch. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)

Terminal Voltage Table (Reference)

Terminal	Signal name	Connected to	Measurement condition	Voltage (V)	Inspection item (s)
1A	Rear right side window	Power window motor (rear	Door glass (rear right side) opening	B+	• Power window motor (rear

	open signal	right side)	Other	1.0 or less	right side)

  2D, 2F(+) ↔ ground (-)
- Oscilloscope setting: 2 V/DIV (Y), 1 ms/DIV (X), DC range

2014 - Mazda3 - Body and Accessories

POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the cover in the direction of arrow (1).

3. Insert a remover tool shown in the figure and remove the tab A in the direction of arrow (2).

4. Slide the power window subswitch in the direction of the arrow (2) shown in the figure and remove the tab B.

5. Disconnect the power window subswitch connector.

6. Pull the edge of power window subswitch cover in the direction of the arrow in the order of (3), (4) while detaching tab C.

7. Pull the edge of power window subswitch cover in the direction of the arrow in the order of (5), (6) while detaching tab C.

8. Remove the power window subswitch in the direction of arrow (7) shown in the figure.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

POWER WINDOW SUBSWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the power window subswitch. (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)

3. Verify that the continuity is as indicated in the table using a tester.

○—○ : Continuity

Switch position	Terminal				
	A	B	C	D	E
CLOSE	○—○		○—○		
OFF	○—○			○—○	
OPEN	○—	——	—○	○—○	

POWER WINDOW SUBSWITCH CONNECTOR

- If not as indicated in the table, replace the power window subswitch. (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

POWER OUTER MIRROR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)
3. Remove the front door speaker. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)
4. Disconnect the connector.

5. Insert your hand through the front door speaker installation hole and remove hooks.
6. Remove the service hole cover.
7. Remove bolts.

BOLT : **8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}**

8. Pull the power outer mirror in the direction of the arrow while remove clips, pins.

CAUTION:

- If clip of the power outer mirror is detached, the power outer mirror may fall off and be damaged. When detaching clip of the power outer mirror, hold the power outer mirror by hand during the servicing.

9. Remove the power outer mirror.

10. Install in the reverse order of removal. (See **Power Outer Mirror Installation Note**.)

Power Outer Mirror Installation Note

1. If a wiring harness is mistakenly routed when installing a power outer mirror, it will interfere with the front door glass when opening/closing the front door glass, and could result in an open circuit. When routing the wiring harness, route it behind the glass guide.

POWER OUTER MIRROR
GLASS GUIDE
HARNESS

2014 - Mazda3 - Body and Accessories

POWER OUTER MIRROR INSPECTION

Mirror Glass Adjustment

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front door speaker (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)

   c. Power outer mirror (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

3. Apply battery positive voltage and connect the ground to the power outer mirror terminals and inspect the power outer mirror operation.

Operation	B+ terminal	Ground terminal
Up	C	F
Down	F	C
Left	I	F
Right	F	I

- If the power outer mirror does not operate as indicated in the table, replace the power outer mirror. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

Heated Outer Mirror Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Outer mirror glass (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)

3. Verify that the continuity between heated outer mirror connector terminals is as indicated in the table.

Continuity

Test condition	Terminal			
	A	G	J	K
Under any condition	○			○
		○	○	

- If not as indicated in the table, replace the power outer mirror. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

BSM Indicator Light Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Outer mirror glass (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)

3. Verify that the continuity between BSM indicator light connector terminals is as indicated in the table.

Continuity

Test condition	Terminal			
	G	H	J	K
Under any condition	○	———	○	
		○	———	○

- If not as indicated in the table, replace the power outer mirror. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

OUTER MIRROR GLASS REMOVAL

NOTE:

- Removal of the outer mirror glass can be facilitated by warming the back of the glass to approx. **50°C {90°F} to 60° {108°F}** degrees using a drier.
- Be careful not to overheat the outer mirror, as temperatures higher than **60°C {108°F}** degrees could deform it.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. To facilitate removal of the outer mirror glass, orient the outer mirror in the direction of arrow (1) shown in the figure.

3. Move the outer mirror glass in the direction of arrow (2) shown in the figure to secure a space for inserting your fingers.

4. Insert your fingers into the location shown in the figure, move the outer mirror glass in the direction of arrow (3), and using the projection as the fulcrum point, disengage pin A.

CAUTION:

- When moving the outer mirror glass, if only the mirror glass is moved, the mirror glass could separate from the outer mirror glass holder. Move the outer mirror glass holder together with the mirror glass when moving the outer mirror glass.

5. Insert your fingers behind the glass in the same manner as Step 4 and disengage the remaining pins B and C.

6. Remove the wiring harness for hooks.

7. Disconnect the mirror heater connectors. (with heated outer mirror)

8. Insert a tape-wrapped flathead screwdriver to the position shown in the figure, remove the BSM indicator light connector (with blind spot monitoring system).

CAUTION:

- The connector can be easily deformed, therefore do not apply excessive force.

9. Remove the mirror glass holder and the outer mirror glass as a single unit.

2014 - Mazda3 - Body and Accessories

OUTER MIRROR GLASS INSTALLATION

NOTE:

- Installation of the outer mirror glass can be facilitated by heating the outer mirror glass holder to approx. **50°C {90°F} to 60°C {108°F}** degrees using a drier.
- Be careful not to overheat the outer mirror, as temperatures higher than **60°C {108°F}** degrees could deform it.

1. To facilitate installation of the outer mirror glass, orient the outer mirror in the direction of arrow (1) shown in the figure.

2. Connect the mirror heater connectors. (with heated outer mirror)

3. Connect the BSM indicator light connector (with blind spot monitoring system).

CAUTION:

- Lightly pull the BSM indicator light connector and verify that the BSM indicator light housing cannot be pulled off. If the connection is poor, insert a tape-wrapped flathead screwdriver into position A shown in the figure and engage the connector. (with blind spot monitoring system)

4. Press in outer mirror pins B and C in the direction of arrows (2) shown in the figure.

5. Align the outer mirror glass with the outer mirror in the direction of arrow (3) shown in the figure and while pressing in the direction of arrow (4), install pin A.

CAUTION:

- If the outer mirror moves when installing the outer mirror glass, the stay could be damaged. When installing the outer mirror glass, use both hands to press together the outer mirror glass and outer mirror.

6. Install pins B and C in the same way as in Step 5.

7. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

OUTER MIRROR GLASS INSPECTION

Heated Outer Mirror Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the outer mirror glass. (See **OUTER MIRROR GLASS REMOVAL**.)(See **OUTER MIRROR GLASS INSTALLATION**.)
3. Inspect the resistance between outer mirror glass terminals.

Outer mirror glass resistance (standard)

- 9.0—13.5 ohms

- If not within the specification, replace the outer mirror glass. (See **OUTER MIRROR GLASS REMOVAL**.)(See **OUTER MIRROR GLASS INSTALLATION**.)

BSM Indicator Light

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the outer mirror glass. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)
3. Connect the battery voltage as shown in the figure.

- If the BSM indicator light does not illuminate, replace the outer mirror glass. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

OUTER MIRROR GARNISH REMOVAL/INSTALLATION

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the outer mirror glass. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)

3. Insert a tape-wrapped flathead screwdriver into the upper outer mirror garnish and remove tab A in the direction of arrow (1).

4. Insert a tape-wrapped flathead screwdriver into the upper outer mirror garnish and remove tab B in the direction of arrow (2).

Installation

1. Press the upper outer mirror garnish in the direction of the arrow shown in the figure and install tabs A and B.

2. Install the outer mirror glass. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)

3. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

POWER OUTER MIRROR SWITCH REMOVAL/INSTALLATION

NOTE:

- The power outer mirror switch is integrated with the power window main switch.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the power window main switch. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

POWER OUTER MIRROR SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the power outer mirror switch. (See **POWER OUTER MIRROR SWITCH REMOVAL/INSTALLATION**.)
3. Verify that the continuity between the power outer mirror switch terminals is as indicated in the table.

○—○ : Continuity

Operation		2C	2E	2G	2H	2I	2J	2K
LH	UP	○	○	○				○
	DOWN	○	○			○		○
	LEFT	○	○				○	○
	RIGHT	○	○				○	○
RH	UP		○		○			○
	DOWN		○		○	○		○
	LEFT		○			○		○
	RIGHT		○		○	○		○

POWER OUTER MIRROR SWITCH WIRING HARNESS SIDE CONNECTOR

- If not as indicated in the table, replace the power outer mirror switch. (See **POWER OUTER MIRROR SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR WINDOW DEFROSTER SYSTEM INSPECTION

With Full-auto Air Conditioner System

System wiring diagram

Inspection

1. Switch the ignition ON.
2. Verify that the rear window defroster switch LED illuminates using the rear window defroster switch.
3. Verify that the heated outer mirrors and rear window defroster warm up.
   - If the heated outer mirrors and the rear window defroster do not warm up, perform diagnosis for a possible CAN malfunction according to the CAN malfunction diagnosis flow. (See **FOREWORD**.)
     - If a CAN malfunction has occurred, repair the malfunctioning location according to the diagnostic procedure of the CAN malfunction diagnosis flow. (See **CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW**.)
     - If a CAN malfunction has not occurred, perform inspection of the each related part.

Rear window defroster switch inspection

- Use the heater, ventilation and air conditioning PID/data monitor inspection R/DEF_SW to inspect the rear window defroster switch. (See **PID/DATA MONITOR**

DISPLAY [FULL-AUTO AIR CONDITIONER].) (See PID/DATA MONITOR TABLE [FULL-AUTO AIR CONDITIONER].)

Inspection of rear window defroster control signal transmission condition for climate control unit

- Use the heater, ventilation and air conditioning PID/data monitor inspection R/DEF_CS to inspect the rear window defroster control signal transmission condition. (See PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER].) (See PID/DATA MONITOR TABLE [FULL-AUTO AIR CONDITIONER].)

Inspection of rear window defroster control signal reception condition for front body control module (FBCM)

- Use the front body control module (FBCM) PID/data monitor inspection DEFOG_R_CS to inspect the rear window defroster control signal reception condition. (See PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) (See PID/DATA MONITOR TABLE [FRONT BODY CONTROL MODULE (FBCM)].)

Rear window defroster relay ON/OFF control inspection

- Measure the terminal voltage at the front body control module (FBCM) terminal 1P. (See FRONT BODY CONTROL MODULE (FBCM) INSPECTION.)

Rear window defroster relay inspection

- Inspect the rear window defroster relay. (See RELAY INSPECTION.)

Rear window defroster inspection

- Inspect the rear window defroster. (See REAR WINDOW DEFROSTER INSPECTION.)

Heated outer mirror inspection

- Inspect the heated outer mirrors. (See OUTER MIRROR GLASS INSPECTION.)

With Manual Air Conditioner System

System wiring diagram

Inspection

1. Switch the ignition ON.
2. Verify that the rear window defroster switch LED illuminates using the rear window defroster switch.
3. Verify that the heated outer mirrors and rear window defroster warm up.
   - If the heated outer mirror and rear defroster do not warm up, perform an inspection of each related part.

     Inspection of rear window defroster control signal reception condition for front body control module (FBCM)

     - Use the front body control module (FBCM) PID/data monitor inspection DEFOG_R_CS to inspect the rear window defroster control signal reception condition. (See **PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) (See **PID/DATA MONITOR TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)

     Rear window defroster relay ON/OFF control inspection

     - Measure the terminal voltage at the front body control module (FBCM) terminal 1P. (See **FRONT BODY CONTROL MODULE (FBCM) INSPECTION**.)

     Rear window defroster relay inspection

     - Inspect the rear window defroster relay. (See **RELAY INSPECTION**.)

     Rear window defroster inspection

     - Inspect the rear window defroster. (See **REAR WINDOW DEFROSTER INSPECTION**.)

     Heated outer mirror inspection

     - Inspect the heated outer mirrors. (See **OUTER MIRROR GLASS INSPECTION**.)

2014 - Mazda3 - Body and Accessories

REAR WINDOW DEFROSTER INSPECTION

1. Switch the ignition ON (engine off).

2. Turn the rear window defroster switch on.

CAUTION:

- Directly touching the rear window defroster with the lead of the tester could damage it. Wrap aluminum foil around the end of the lead and inspect the rear window defroster by touching it with the aluminum foil.

3. Connect the positive lead of the tester to the positive side of each rear window defroster and the negative lead to ground.

4. Gradually slide the positive lead from the positive side to the negative side and verify that the voltage decreases accordingly.

- If the voltage changes rapidly, the rear window defroster has a malfunction. Repair the rear window defroster. (See **REAR WINDOW DEFROSTER/GLASS ANTENNA REPAIR**.)

Measured part	Voltage (Reference)
(1) to (2)	Approx. 11 V to 0 V

2014 - Mazda3 - Body and Accessories

REAR WINDOW DEFROSTER/GLASS ANTENNA REPAIR

1. Clean the rear window defroster/glass antenna using isopropyl alcohol.
2. Attach tape to both sides of the rear window defroster/glass antenna.

3. Using a small brush or marking pen, apply silver paint.
4. After **2—3 min,** carefully remove the tape without damaging the applied area.

CAUTION:

- Do not operate the rear window defroster until the paint is completely dry. It may cause other malfunctions if it is used before the paint is dry.

5. Dry the repaired part according to the following procedure.
   - When the room temperature is **25 °C {77 °F},** leave it as it is for **24 h.**
   - When a hot air blower is used, dry with the **150 °C {302 °F}** air for **30 min.**

2014 - Mazda3 - Body and Accessories

AUTO-DIMMING MIRROR REMOVAL/INSTALLATION

With Forward Sensing Camera (FSC) Or Smart City Brake Support (SCBS)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the cover. (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)
3. Disconnect the auto-dimming mirror connector.

4. Remove screw A.

5. Remove the auto-dimming mirror in the direction of the arrow shown in the figure.

6. Install in the reverse order of removal.

Without Forward Sensing Camera (FSC) Or Smart City Brake Support (SCBS)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the screw B.

3. Remove the auto-dimming mirror in the direction of the arrow (1) shown in the figure.

4. Detach tabs while pressing cover No.2 in the direction of the arrow (2) shown in the figure, then remove cover No.2 in the direction of the arrow (3).

5. Disconnect the auto-dimming mirror connector.

6. Remove the auto-dimming mirror in the direction of arrow (4) from the mirror base.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

AUTO-DIMMING MIRROR INSPECTION

Type A

Operational Inspection

1. Switch the ignition ON (engine off or on).
2. Move the vehicle to a place with a showroom level of brightness.
3. Verify that the indicator light is illuminated.

4. Verify that the indicator light switches when the auto-dimming mirror on switch and auto-dimming mirror off switch is pressed.
5. While the indicator light is illuminated, verify that the mirror surface brightens.
6. Cover the front light sensor with a hand and verify that the mirror surface darkens when light is shone on the rear light sensor.
7. Remove your hand covering the front light sensor and verify that the mirror surface brightens.

- If the auto-dimming mirror does not operate, inspect the terminal voltage. (See **Operational Inspection**.)

Terminal Voltage Table (Reference)

1. Measure the voltage at each terminal.
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item (s)" and related wiring harnesses.
     - If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, replace the auto-dimming mirror. (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)

AUTO-DIMMING MIRROR
WIRING HARNESS-SIDE CONNECTOR

Terminal	Signal name	Connected to	Measured condition	Voltage (V)	Inspection item(s)
A	—	—	—	—	—
B	IG1	C/U IG1 15A fuse	Switch the ignition ON (engine on or off)	B+	• C/U IG1 15A fuse
			Switch the ignition off	1.0 or less	
C	—	—	—	—	—
D	R position signal	Rear body control module (RBCM)	R position	B+	• Rear body control module (RBCM)
			Other than R position	1.0 or less	
E	—	—	—	—	—
F	GND	Body ground	Under any condition	1.0 or less	• Body ground
G	—	—	—	—	—
H	—	—	—	—	—
I	—	—	—	—	—
J	Power supply	ROOM 15 A fuse	Under any condition	B+	• ROOM 15 A fuse

Type B

Operational Inspection

1. Switch the ignition ON (engine off or on).
2. Move the vehicle to a place with a showroom level of brightness.
3. Verify that the indicator light is illuminated.

4. Verify that the indicator light switches when the auto-dimming mirror on switch/off switch is pressed.
5. While the indicator light is illuminated, verify that the mirror surface brightens.
6. Cover the front light sensor with a hand and verify that the mirror surface darkens when light is shone on the rear light sensor.
7. Remove your hand covering the front light sensor and verify that the mirror surface brightens.
    - If the auto-dimming mirror does not operate, inspect the terminal voltage. (See **Operational Inspection**.)

Terminal Voltage Table (Reference)

1. Measure the voltage at each terminal.
    - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under “Inspection item (s)” and related wiring harnesses.
        - If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, replace the auto-dimming mirror. (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REARVIEW MIRROR REMOVAL/INSTALLATION

1. Remove the screw.

2. Pull the rearview mirror in the direction of the arrow (1) shown in the figure
3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

MIRROR BASE REMOVAL

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rearview mirror (without auto-dimming mirror) (See **REARVIEW MIRROR REMOVAL/INSTALLATION**.)

   b. Cover (with forward sensing camera) (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

   c. Auto-dimming mirror (with auto-dimming mirror) (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)

3. Wind each end of a wire around a bar.

WARNING:

- Using the piano wire with bare hands can cause injury. Always wear gloves when using the piano wire.

NOTE:

- Use a long sawing action to spread the work over the whole length of the piano wire to prevent it from breaking.

4. Fix one end of the piano wire, and while pulling the other end, cut the sealant to remove the base.

2014 - Mazda3 - Body and Accessories

MIRROR BASE INSTALLATION

1. Cut away all of the original sealant using a razor.

WARNING:

- Using a razor with bare hands can cause injury. Always wear gloves when using a razor.

2. Clean and degrease the ceramic coating on the glass and the base.

CAUTION:

- Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass.

3. Apply primer to the bonding area of the glass and the base.

4. Use only glass primer on the glass, and body primer on the base. Allow the primer to dry for **approx. 30 min.**

5. Apply **3.0 mm {0.12 in}** layer of sealant to the base.

6. Center the base in the ceramic coating and press it onto the glass.

7. Use isopropyl alcohol to remove any excess repair sealant. **Hardening time of sealant**

Temperature	Surface hardening time	Time required until car can be put into service
5 °C {41 °F}	Approx. 1.5 h	Approx. 12 h
20 °C {68 °F}	Approx. 1 h	Approx. 4 h
35 °C {95 °F}	Approx. 10 min	Approx. 2 h

8. Install the rearview mirror. (without auto-dimming mirror) (See **REARVIEW MIRROR REMOVAL/INSTALLATION**.)

9. Install the auto-dimming mirror. (with auto-dimming mirror) (See **AUTO-DIMMING MIRROR REMOVAL/INSTALLATION**.)

10. Install the cover (with forward sensing camera) (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

11. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

POWER WINDOW SYSTEM INITIALIZATION PROCEDURE

NOTE:

- If the following operations have been performed, the initial setting is reset, and auto up/down operation are disabled. Therefore, performing the initial setting is necessary.
    - Negative battery cable is disconnected.
    - Power window main switch connector is disconnected.
    - Power window system power supply fuse is removed.

1. Switch the ignition ON (engine on or off).

2. Press the driver's seat switch to fully open the door glass.

3. Pull up the driver's seat switch to the manual-up position to fully close the door glass and keep holding the switch up at the position for **approx. 2 s**.

2014 - Mazda3 - Body and Accessories

SEATS LOCATION INDEX

Front Seat

FRONT SEAT

1	Front seat (See **FRONT SEAT REMOVAL / INSTALLATION**.)
2	Front seat back (See **FRONT SEAT BACK TRIM REMOVAL / INSTALLATION**.)
3	Seat warmer unit (See **SEAT WARMER UNIT INSPECTION**.)

4	Seat warmer switch (See **SEAT WARMER SWITCH REMOVAL/INSTALLATION**.)

Rear Seat

1	Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
2	Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
3	Rear seat hinge (See **REAR SEAT HINGE REMOVAL/INSTALLATION**.)
4	Child-restraint seat anchor (See **CHILD-RESTRAINT SEAT ANCHOR REMOVAL/INSTALLATION**.)

5	Rear seat cushion lock (See **REAR SEAT CUSHION LOCK REMOVAL/INSTALLATION**.)
6	Remote handle lever (See **REMOTE HANDLE LEVER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

FRONT SEAT REMOVAL/INSTALLATION

WARNING:

- Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
- If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.

CAUTION:

- If the slide lever is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slide lever.
- Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or dirty the seat.
- When the passenger's seat is removed, perform the seat weight sensor inspection using the M-MDS after installing the passenger's seat. (See **SEAT WEIGHT SENSOR INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- When the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

NOTE:

- When removing the front seat from the vehicle or putting it back in, it can be performed smoothly by removing the head restraint.

1. Remove the head restraint.
2. Remove the bolts in the order of (1), (2), (3), (4) shown in the figure.

3. Switch the ignition off.
4. Disconnect the negative battery cable and wait for **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Press part A in the direction of the arrow (1) shown in the figure and disengage tabs, move the lever in the direction of the arrow

(2) and disconnect the connector A in the direction of the arrow (3).

6. Remove the front seat.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT SEAT BACK TRIM REMOVAL/INSTALLATION

WARNING:

- Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
- If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.

CAUTION:

- If the slide lever is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slide lever.
- Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or dirty the seat.
- When the passenger's seat is removed, perform the seat weight sensor inspection using the M-MDS after installing the passenger's seat. (See **SEAT WEIGHT SENSOR INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- When the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Driver-side

1. Switch the ignition off.
2. Disconnect the negative battery cable and wait for **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the head restraint.
4. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
5. Remove fasteners and set the front seat cushion trim aside. (with power seat system)

6. Slide hook in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside. (without power seat system)

7. Disconnect the side air bag module connector.

8. Set hooks aside in the direction of the arrow (4) shown in the figure.

9. Remove clip in the direction of the arrow (5) shown in the figure and remove the lumbar support lever in the direction of the arrow (6). (with manual lumbar support)

10. Slide hook A in the order of arrows (7), (8), (9) shown in the figure and disconnect them from hook B.

11. Open fasteners.

Leather type

Cloth type

12. Partially peel back the front seat back trim and remove the hook from the seat back frame.

13. Partially peel back the front seat back trim, and while pressing the tabs in the direction of arrows (10) shown in the figure, remove the pole guides in the direction of arrow (11).

14. Remove the nut and washer.

15. Pull the side air bag module securing belt in the direction of arrows (12) and (13) and remove it from the front seat back frame stud bolt.

16. Pull out the front seat back pad and front seat back trim towards the front of the front seat.

17. Lift up the front seat back trim and front seat back pad in the direction of the arrow (14) as a single unit and remove it from the front seat back frame.

18. Install in the reverse order of removal.

Passenger-side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the head restraint.

4. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

5. Slide hook in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside.

6. Disconnect the side air bag module connector.

7. Set hook aside in the direction of the arrow (4) shown in the figure.

8. Slide hook A in the order of arrows (5), (6), (7) shown in the figure and disconnect them from hook B.

9. Open fasteners.

Leather type

Cloth type

10. Partially peel back the front seat back trim and remove the hook from the seat back frame.

11. Partially peal back the front seat back trim, and while pressing the tabs in the direction of arrows (8), remove the pole guides in the direction of arrow (9).

12. Remove the nut and washer.

13. Pull the side air bag module securing belt in the direction of arrows (10) and (11) shown in the figure and remove it from the front seat back frame stud bolt.

14. Pull out the front seat back pad and front seat back trim towards the front of the front seat.

15. Lift up the front seat back trim and front seat back pad in the direction of the arrow (12) as a single unit and remove it from the front seat back frame.

16. Install in the reverse order of removal.

FRONT SEAT BACK TRIM REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

REAR SEAT BACK REMOVAL/INSTALLATION

CAUTION:

- When performing the procedure with a rear seat back removed from the vehicle, perform the procedure on a clean cloth so as not to damage or dirty the seat.

NOTE:

- When removing the rear seat back from the vehicle or putting it back in, it can be performed easier by removing the head restraint.

6:4 Split Type

1. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
2. Remove the rear center seat belt anchor. (See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)
3. Fold the rear seat back.
4. Partially peal back the rear seat back trim and remove the bolts.

5. After moving the rear seat in the direction of the arrow (1) shown in the figure, remove the pins while moving the side hinge/center hinge in the direction of the arrow (2).

6. Remove the rear seat back.

7. Install in the reverse order of removal.

Single Type

1. Fold the rear seat back.

2. Partially peal back the rear seat back trim and remove the bolts.

3. After moving the rear seat in the direction of the arrow (1) shown in the figure, remove the pins while moving the side hinge/center hinge in the direction of the arrow (2).

4. Remove the rear seat back.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR SEAT BACK FRAME REMOVAL/INSTALLATION

CAUTION:

- When performing the procedure with a rear seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or dirty the seat.

6:4 Split Type

1. Remove the headrest.
2. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
3. Remove the rear center seat belt anchor. (See **REAR CENTER SEAT BELT REMOVAL/INSTALLATION**.)
4. Remove the rear seat back. (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
5. Remove screw.

6. Remove the center armrest hinge cover in the direction of the arrow (1) shown in the figure. (with center armrest)
7. Remove bolt. (with center armrest)

8. Remove the clip in the direction of the arrow (2) shown in the figure. (with center armrest)

9. Remove the center armrest in the direction of the arrow (3) shown in the figure while setting pins aside. (with center armrest)

10. Open fasteners.

11. Slide hooks in the order of the arrows (4) and (5) shown in the figure, and set the rear seat back frames aside.

12. Release tabs in the direction of the arrow (6) shown in the figure and remove the top tether anchor cover in the direction of the arrow (7).

13. Release tabs in the direction of the arrow (8) shown in the figure and remove the seat belt cover in the direction of the arrow (9).

14. Remove screw.

15. Partially peel back the rear seat back pad, release tabs in the direction of the arrow (10) shown in the figure and pull out the pins in the direction of the arrow (11).

16. Remove the push knob cover.

17. Partially peel the rear seat back trim, and remove fasteners.

18. Partially peel back the rear seat back pad, release tabs in the direction of the arrow (12) shown in the figure and pull out the pole guide in the direction of the arrow (13).

19. Pull the rear seat back frame in the direction of the arrow (14) shown in the figure, and remove it from the rear set back pad.

20. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR SEAT CUSHION REMOVAL/INSTALLATION

CAUTION:

- When performing the procedure with a rear seat cushion removed from the vehicle, perform the procedure on a clean cloth so as not to damage or dirty the seat.

NOTE:

- When removing the rear seat cushion, perform the procedure in the posture shown in the figure.

1. Move the lever in the direction of arrow (1) shown in the figure, and lift up the rear seat cushion in the direction of arrow (2) shown in the figure while releasing the lock.

2. Fold the rear seat back (RH). (6:4 Split Type)

3. Fold the rear seat back. (Single Type)

4. Move the hook in the direction of arrow (4) shown in the figure, and set it aside from the center hinge while moving the rear seat cushion in the direction of arrow (3) shown in the figure.

5. Remove the rear seat cushion in the direction of arrow (5) shown in the figure.
6. Install in the reverse order of removal. (See **Rear Seat Cushion Installation Note**.)

Rear Seat Cushion Installation Note

- After installing the rear seat cushion, place the rear buckle as shown in the figure.

REAR BUCKLE (RH)
REAR CENTER
SEAT BELT
REAR BUCKLE (LH)

2014 - Mazda3 - Body and Accessories

POWER SEAT SYSTEM INSPECTION

WARNING:

- Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Terminal layout

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER SEAT CONNECTOR** • Disconnect the power seat connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	• Repair or replace the connector. • After repair or replacement, go to Step 4.
2	**POWER SEAT POWER SUPPLY CIRCUIT INSPECTION** • Verify that the power seat	Yes	Go to the next step.
		No	Inspect the P.SEAT D 30 A fuse.

connector is disconnected.

- Connect the negative battery cable.

  (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

- Switch the ignition ON (engine off).
- Measure the voltage at power seat terminal 6A (vehicle wiring harness side).
- Is the voltage **B+**?

- If the fuse is blown:
  - Refer to the wiring diagram and verify whether or not there is a common connector between P.SEAT D 30 A fuse and power seat connector terminal 6A.

    If there is a common connector:

    - Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for a short to ground.
    - Repair or replace the malfunctioning part.

    If there is no common connector:

    - Repair or replace the wiring harness which has a short to ground.
    - Replace the fuse.

- If the fuse is damaged:
  - Replace the fuse.
- If the fuse is normal:
  - Refer to the wiring diagram and verify whether or not there is a common connector between P.SEAT D 30 A and power seat connector terminal 6A.

    If there is a common

			connector: • Determine the malfunctioning part by inspecting the common connector and the terminal for corrosion, damage, or pin disconnection, and the common wiring harness for an open circuit. • Repair or replace the malfunctioning part. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit. Go to Step 4.
3	**INSPECT POWER SEAT GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the power seat connector is disconnected. • Inspect for continuity between power seat terminal 6B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)
		No	• Repair or replace the wiring harness which has an open circuit. • After repair or replacement, go to Step 4.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Switch the ignition ON (engine off).	Yes	The power seat system inspection is completed.
		No	Repeat the inspection from Step 1.

	• Operate the power switch. • Does the power seat operate normally.		

2014 - Mazda3 - Body and Accessories

SEAT WARMER SWITCH REMOVAL/INSTALLATION

NOTE:

- The seat warmer switches are integrated into the indicator unit.
- For the seat warmer switch removal/installation, refer to the indicator unit removal/installation. (See **INDICATOR UNIT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

SEAT WARMER UNIT INSPECTION

WARNING:

- Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)
- If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.

CAUTION:

- If the slide lever is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slide lever.
- Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.
- When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or dirty the seat.
- When the passenger's seat is removed, perform the seat weight sensor inspection using the M-MDS after installing the passenger's seat. (See **SEAT WEIGHT SENSOR INSPECTION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)
- When the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the M-MDS. (See **SEAT WEIGHT SENSOR CALIBRATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

Driver-Side

Seat cushion side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

4. Inspect for continuity between the seat warmer unit connector terminal 5C and 5D.

:Continuity

Status	Terminal	
	5C	**5D**
Under any condition	○	○

- If not as specified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

5. Measure the temperature around the thermistor.

NOTE:

- To produce a normal temperature around the thermistor, leave the seat warmer turned off for **30 minutes or more**.

6. Measure the resistance between the seat warmer unit connector terminals 5A and 5B, records with the surrounding temperature of the thermistor measured beforehand.

7. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

8. Connect the seat warmer unit connector.

9. Switch the seat warmer switch to the Lo position and warm the seat.

10. Measure the resistance between the seat warmer unit connector terminals 5A and 5B, and

record it.

11. Switch the seat warmer switch to the High position and warm the seat.

12. Measure the resistance between the seat warmer unit connector terminals 5A and 5B, it is confirmed that there is a change from the resistance recorded beforehand.

- If the change in resistance cannot be verified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

Seat back side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

4. Inspect for continuity between the seat warmer unit connector (short code) terminals A and B.

- If not as specified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

○—○ :Continuity

Status	Terminal	
	A	**B**
Under any condition	○	○

Passenger-Side (leather type)

Seat cushion side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait **1 min. or more**. (See **NEGATIVE BATTERY**

CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)

3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

4. Inspect for continuity between the seat warmer unit connector (short code) terminals A and G.

○—○:Continuity

Status	Terminal	
	A	G
Under any condition	○	○

- If not as specified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

5. Measure the temperature around the thermistor.

NOTE:

- To produce a normal temperature around the thermistor, leave the seat warmer turned off for **30 minutes or more**.

6. Measure the resistance between the seat warmer unit connector terminals B and D, records with the surrounding temperature of the thermistor measured beforehand.

7. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE**

DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)

8. Connect the seat warmer unit connector.

9. Switch the seat warmer switch to the Lo position and warm the seat.

10. Measure the resistance between the seat warmer unit connector terminals B and D, and record it.

11. Switch the seat warmer switch to the High position and warm the seat.

12. Measure the resistance between the seat warmer unit connector terminals B and D, it is confirmed that there is a change from the resistance recorded beforehand.

- If the change in resistance cannot be verified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

Seat back side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

4. Inspect for continuity between the seat warmer unit connector (short code) terminals A and B.

- If not as specified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

○—○ :Continuity

Status	Terminal	
	A	**B**
Under any condition	○	○

Passenger-Side (cloth type)

Seat cushion side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

4. Inspect for continuity between the seat warmer unit connector (short code) terminals A and F.

○—○ :Continuity

Status	Terminal	
	A	F
Under any condition	○	○

- If not as specified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

5. Measure the temperature around the thermistor.

NOTE:

- To produce a normal temperature around the thermistor, leave the seat

warmer turned off for **30 minutes or more**.

6. Measure the resistance between the seat warmer unit connector terminals B and C, records with the surrounding temperature of the thermistor measured beforehand.

7. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

8. Connect the seat warmer unit connector.

9. Switch the seat warmer switch to the Lo position and warm the seat.

10. Measure the resistance between the seat warmer unit connector terminals B and C, and record it.

11. Switch the seat warmer switch to the High position and warm the seat.

12. Measure the resistance between the seat warmer unit connector terminals B and C, it is confirmed that there is a change from the resistance recorded beforehand.

- If the change in resistance cannot be verified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

Seat back side

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait **1 min. or more**. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

4. Inspect for continuity between the seat warmer unit connector (short code) terminals A and B.

- If not as specified, replace the front seat. (See **FRONT SEAT REMOVAL/INSTALLATION**.)

○—○ :Continuity

Status	Terminal	
	A	**B**
Under any condition	○	○

SEAT WARMER UNIT INSPECTION

2014 - Mazda3 - Body and Accessories

REAR SEAT HINGE REMOVAL/INSTALLATION

Side Hinge

1. Remove the following parts:
    a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
    b. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
    c. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    d. Tire house trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
2. Remove bolt A.

BOLT : **37—54 N·m {3.8—5.5 kgf·m, 28—39 ft·lbf}**

3. Remove bolt B.
4. Remove the side hinge.
5. Install in the reverse order of removal.

Center Hinge

1. Remove the following parts:
   a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   b. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
2. Remove bolt A.

3. Remove bolt B.
4. Remove the center hinge.
5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CHILD-RESTRAINT SEAT ANCHOR REMOVAL/INSTALLATION

Top Tether Anchor

4SD

NOTE:

- When removing the top tether anchor from the vehicle or putting it back in, it can be performed easier by removing the head restraint

1. Open the cover.

2. Remove the bolts.
3. Remove the top tether anchors.
4. Install in the reverse order of removal.

5HB

NOTE:

- The top tether anchors are integrated into the rear seat back frame.
- For the top tether anchor removal/installation, refer to the rear seat back frame removal/installation. (See **REAR SEAT BACK FRAME REMOVAL/INSTALLATION**.)

ISOFIX Anchor

4SD

NOTE:

- The ISOFIX anchor shown in figure A is integrated with the rear seat hinge (center).

- ISOFIX anchors other than shown in figure A are integrated with the body.
- For the ISOFIX anchor removal/installation, refer to the rear seat hinge removal/installation. (See **REAR SEAT HINGE REMOVAL/INSTALLATION**.)

5HB

NOTE:

- The ISOFIX anchor shown in figure A is integrated with the rear seat hinge (center).

- ISOFIX anchors other than shown in figure A are integrated with the body.
- For the ISOFIX anchor removal/installation, refer to the rear seat hinge removal/installation. (See **REAR SEAT HINGE REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR SEAT CUSHION LOCK REMOVAL/INSTALLATION

1. Remove the rear seat cushion. (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

2. Move the remover tool in the direction of the arrow (1) shown in the figure and disengage the tab.

3. Remove the rear seat cushion lock in the direction of the arrow (2) shown in the figure.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REMOTE HANDLE LEVER REMOVAL/INSTALLATION

6:4 Split Type

1. Open the trunk lid.
2. Fold the rear seat back.
3. Move the remover tool in the direction of the arrow (1) shown in the figure and disengage tab.

4. Remove the remote handle lever while pulling the hook in the direction of the arrow (2) shown in the figure.
5. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
6. Remove the following parts:
   a. Rear scuff plate (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   b. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
   c. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   d. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   e. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)
   f. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)
7. Remove the nuts.

8. Remove the remote handle lever in the direction of the arrow (3) shown in the figure.
9. Install in the reverse order of removal.

Single Type

1. Open the trunk lid.
2. Fold the rear seat back.
3. Move the remover tool in the direction of the arrow (1) shown in the figure and disengage tab.

4. Remove the remote handle lever while pulling the hook in the direction of the arrow (2) shown in the figure.

5. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

6. Remove the following parts:

   a. Rear scuff plate (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   b. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)

   c. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   d. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

   e. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)

   f. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)

7. Remove the nuts.

8. Remove the plate from the stud bolts. (See **Plate installation note**.)

9. Remove the remote handle levers in the direction of arrow (3) shown in the figure, and pull them in the direction of arrow (4) to pull out the cable from the rear package tray.

10. Install in the reverse order of removal.

Plate installation note

1. Install the plate with the arrow mark facing the vehicle front.

2014 - Mazda3 - Body and Accessories

SECURITY AND LOCKS LOCATION INDEX

Locks and Openers

1	Hood latch (See **HOOD LATCH REMOVAL/INSTALLATION**.)
2	Hood release cable (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)
3	Front outer handle (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)
4	Front door key cylinder (See **FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION**.) (See **FRONT DOOR KEY CYLINDER SWITCH INSPECTION**.)
5	Rear outer handle (See **REAR OUTER HANDLE REMOVAL/INSTALLATION**.)

5	Keyless antenna (exterior, RF) (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
6	Keyless antenna (exterior, rear) (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
7	Request switch (liftgate) (See **REQUEST SWITCH REMOVAL/INSTALLATION**.) (See **REQUEST SWITCH INSPECTION**.)
8	Start stop unit (See **START STOP UNIT REMOVAL/INSTALLATION**.) (See **START STOP UNIT INSPECTION**.) (See **START STOP UNIT CONFIGURATION (USING READ/WRITE FUNCTION)**.) (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.) (See **SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE**.)
9	Push button start (See **PUSH BUTTON START REMOVAL/INSTALLATION**.) (See **PUSH BUTTON START INSPECTION**.)
10	Remote transmitter (See **REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY**.) (See **REMOTE TRANSMITTER ID CODE REGISTRATION**.) (See **CLEARING REMOTE TRANSMITTER**.) (See **REMOTE TRANSMITTER BATTERY VOLTAGE INSPECTION**.)
11	Keyless antenna (interior, front) (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
12	Keyless antenna (interior, rear) (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
13	Keyless receiver (See **KEYLESS RECEIVER REMOVAL/INSTALLATION**.) (See **KEYLESS RECEIVER INSPECTION**.)
14	LF control unit (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.) (See **LF CONTROL UNIT INSPECTION**.)

Keyless entry system / Push Button Start System / Immobilizer system

1	Start stop unit (See **START STOP UNIT REMOVAL/INSTALLATION**.) (See **START STOP UNIT INSPECTION**.) (See **START STOP UNIT CONFIGURATION (USING READ/WRITE FUNCTION)**.) (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.) (See **SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE**.)
2	Push button start (See **PUSH BUTTON START REMOVAL/INSTALLATION**.) (See **PUSH BUTTON START INSPECTION**.)
3	Remote transmitter (See **REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY**.) (See **REMOTE TRANSMITTER ID CODE REGISTRATION**.) (See **CLEARING REMOTE TRANSMITTER**.) (See **REMOTE TRANSMITTER BATTERY VOLTAGE INSPECTION**.)
4	Keyless antenna (center) (See **KEYLESS ANTENNA REMOVAL/INSTALLATION**.)
5	Keyless receiver (See **KEYLESS RECEIVER REMOVAL/INSTALLATION**.) (See **KEYLESS RECEIVER INSPECTION**.)

Theft-deterrent System

1	Hood latch switch (See **HOOD LATCH SWITCH INSPECTION**.)
2	Theft-deterrent horn (See **THEFT-DETERRENT HORN REMOVAL/INSTALLATION**.) (See **THEFT-DETERRENT HORN INSPECTION**.)

2014 - Mazda3 - Body and Accessories

FRONT OUTER HANDLE REMOVAL/INSTALLATION

1. Perform the front door glass preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

   c. Front door module panel (See **FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION**.)

   d. Front door key cylinder (See **FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION**.)

4. Disconnect the keyless antenna connector (With advanced keyless entry system).

5. While pulling the front outer handle bracket pin in the direction of arrow (1) shown in the figure, pull the front outer handle in the direction of arrow (2) to detach the front outer handle bracket pin and the front outer handle.

6. Remove the front outer handle in the direction of the arrow shown in the figure.

7. While pressing the tabs of the clip in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the connector tabs from the front outer handle bracket (With advanced keyless entry system).

8. Loosen the screw securing the front outer handle bracket.

NOTE:

- The screw cannot be removed because the front outer handle bracket has a stopper which prevents the screw from falling.

9. Pull the front outer handle bracket in the direction of arrow (1) shown in the figure and detach the front outer handle bracket hooks from the body.

10. Lift the front outer handle bracket in the direction of arrow (2) shown in the figure to pull the rod out of the rod holder. (See **Front Outer Handle Bracket Installation Note**.)

11. Remove the front outer handle bracket.

12. Remove the handle seat from the body.

13. Install in the reverse order of removal.

Front Outer Handle Bracket Installation Note

- To assure that the rod is inserted into the rod holder hole, verify that the there is no excessive play.

2014 - Mazda3 - Body and Accessories

REAR OUTER HANDLE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

3. Remove service hole cover No. 1 in the direction of the arrow shown in the figure.

CAUTION:

- When removing service hole cover No.1, remove it while gradually stripping the butyl rubber. Otherwise service hole cover No.1 may be deformed.

4. Remove the service hole cover.

5. Loosen the screw from the rear outer handle bracket.

NOTE:

- The screw cannot be removed because the rear outer handle bracket has a stopper which prevents the screw from falling.

6. While pressing the rear outer handle bracket tab in the direction of arrow (1) shown in the figure, pull the outer handle garnish in the direction of arrow (2) to detach the rear outer handle bracket from the outer handle garnish.

7. Remove the outer handle garnish from the rear outer handle bracket.

8. While pulling the rear outer handle bracket pin in the direction of arrow (3) shown in the figure, pull the rear outer handle in the direction of arrow (4) to detach the rear outer handle bracket pin from the rear outer handle.

9. Remove the rear outer handle in the direction of the arrow shown in the figure.

10. Loosen the screw from the rear outer handle bracket.

NOTE:

- The screw cannot be removed because the rear outer handle bracket has a stopper which prevents the screw from falling.

11. Pull the rear outer handle bracket in the direction of arrow (5) shown in the figure and detach the rear outer handle bracket hooks from the body.

12. Lift the rear outer handle bracket in the direction of arrow (6) shown in the figure to pull the rod out of the rod holder. (See **Rear Outer Handle Bracket Installation Note**.)

13. Remove the rear outer handle bracket.
14. Remove the handle seat from the body.

15. Install in the reverse order of removal.

Rear Outer Handle Bracket Installation Note

- To assure that the rod is inserted into the rod holder hole, verify that the there is no excessive play.

2014 - Mazda3 - Body and Accessories

INNER HANDLE REMOVAL/INSTALLATION

Front Inner Handle

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)
3. Disconnect the door lock knob cable and the inner handle cable from the front inner handle.

4. Install in the reverse order of removal.

Rear Inner Handle

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)
3. Disconnect the door lock knob cable and the inner handle cable from the rear inner handle.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DOOR LOCK SWITCH REMOVAL/INSTALLATION

Driver's Side

NOTE:

- The driver's side door lock switch cannot be removed as a single unit because it is built into the power window main switch. If the driver's side door lock switch is replaced, replace the power window main switch. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)

Passenger's Side

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the power window subswitch cover. (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)

3. While pulling the power window subswitch cover in the direction of arrow (1) shown in the figure, pull the door lock switch in the direction of arrow (2) shown in the figure, and detach the door lock switch tabs from the power window subswitch cover.

4. Detach all of the door lock switch tabs from the power window switch cover and remove the door lock switch.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DOOR LOCK SWITCH INSPECTION

Driver's Side

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the door lock switch. (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)
3. Verify that the continuity is as indicated in the table.

○—○ : Continuity ○-/\/\/-○ : Resistance

Position	Terminal	
	2A	2M
Lock	○—R—○	
Unlock	○———	———○

R: **950—1,050 ohms**

- If the continuity is not as indicated in the table, replace the door lock switch.

Passenger's Side

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the power window subswitch cover. (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)

3. Remove the door lock switch. (See **DOOR LOCK SWITCH REMOVAL/INSTALLATION**.)

4. Verify that the continuity is as indicated in the table.

: Continuity : Resistance

Position	Terminal	
	C	D
Lock	R	
Unlock		

R: **950—1,050 ohms**

- If not as indicated in the table, replace the door lock switch.

2014 - Mazda3 - Body and Accessories

HOOD LATCH REMOVAL/INSTALLATION

1. Open the hood.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Shroud upper member (See **SHROUD UPPER MEMBER REMOVAL/INSTALLATION**.)

   e. Crash zone sensor cover (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.

5. Move the tape-wrapped flathead screwdriver in the direction of arrow (1) shown in the figure to press the hood latch protector tab, and lift the tab up in the direction of arrow (2) and detach its tab from the hood latch.

6. Detach all the hood latch protector tabs from the hood latch and remove the hood latch protector.

7. While pressing the tabs of the clip in the direction of arrow (3) shown in the figure, press it in the direction of arrow (4) to detach the connector tabs from the body.

8. Remove the connector antenna from the body.

9. Disconnect the connector.

10. Disconnect the hood release cable.

11. Remove the bolts.

12. Remove the hood latch.

13. Install in the reverse order of removal.

14. Adjust the hood. (See **HOOD ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION

Hood Release Lever

1. While pulling the hood release lever, insert a tape-wrapped flathead screwdriver into the position shown in the figure.

2. Move the tape-wrapped flathead screwdriver in the direction of arrow (1) shown in the figure to press the tab, and pull the hood release cable in the direction of arrow (2) to detach the hood release lever from the lower panel.

CAUTION:

- Remove the hood release lever while being careful not to damage the hood release cable with the flathead screwdriver.

3. Pull the hood release lever to remove it from the lower panel.

4. Disconnect the hood release cable from the hood release lever.

5. Install in the reverse order of removal.

Hood Release Cable

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Shroud upper member (See **SHROUD UPPER MEMBER REMOVAL/INSTALLATION**.)

   e. Front mudguard (Driver's side) (See **MUDGUARD REMOVAL/INSTALLATION**.)

   f. Front fender insulator No.1 (See **FRONT FENDER INSULATOR No.1 REMOVAL/INSTALLATION**.)

   g. Hood release lever (See **Hood Release Lever**.)

3. Remove the hood latch protector. (See **HOOD LATCH REMOVAL/INSTALLATION**.)

4. Disconnect the hood release cable from the hood latch.

5. Remove the hood release cable from clip.

6. Press the grommet into the cabin side.
7. Remove the hood release cable from the cabin side.
8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

HOOD LATCH SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Set plate (See **SET PLATE REMOVAL/INSTALLATION**.)

   b. Front bumper (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

   c. Front combination light (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

   d. Shroud upper member (See **SHROUD UPPER MEMBER REMOVAL/INSTALLATION**.)

   e. Crash zone sensor cover (See **CRASH ZONE SENSOR REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

3. Disconnect the hood latch switch connector. (See **HOOD LATCH REMOVAL/INSTALLATION**.)

4. Verify that the continuity is as indicated in the table.

NOTE:

- Inspect the continuity when the hood is open and closed.

○—○ :Continuity

Hood latch switch (hood condition)	Terminal	
	A	B
Latch (close)	○	○
Unlatch (open)		

- If the operation as indicated in the table cannot be verified, replace the hood latch.

2014 - Mazda3 - Body and Accessories

FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION

Fuel-filler Lid Opener

4SD

1. Pull back the trunk side trim (LH) to a position which allows for the removal of the fuel-filler lid opener. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

2. Open the fuel-filler lid.

3. Remove the nut.

4. While pressing the tabs of the stopper bracket in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach it from the body.

5. Detach all the stopper bracket tabs from the body and remove the stopper bracket.

6. Remove the fuel-filler lid opener in the direction of the arrow.

7. Disconnect the fuel-filler lid opener cable from the fuel-filler lid opener.

8. Install in the reverse order of removal.

1. Remove the following parts:

   a. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

   b. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

   d. Tire house trim (LH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   e. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   f. Trunk side upper trim (LH) (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

2. Pull back the trunk side trim (LH) to a position which allows for the removal of the fuel-filler lid opener. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

3. Open the fuel-filler lid.

4. Remove the nut.

5. While pressing the tabs of the stopper bracket in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach it from the body.

6. Detach all the stopper bracket tabs from the body and remove the stopper bracket.

7. Remove the fuel-filler lid opener in the direction of the arrow.

8. Disconnect the fuel-filler lid opener cable from the fuel-filler lid opener.

9. Install in the reverse order of removal.

Fuel-filler Lid Opener Lever

1. While pulling the fuel-filler lid opener lever, insert a tape-wrapped flathead screwdriver into the position shown in the figure.

2. Move the tape-wrapped flathead screwdriver in the direction of arrow (1) shown in the figure to press the tab, and pull the fuel-filler lid opener cable in the direction of arrow (2) to detach the fuel-filler lid opener lever from the lower panel.

CAUTION:

- Remove the fuel-filler lid opener lever while being careful not to damage the fuel-filler lid opener cable with the flathead screwdriver.

3. Pull the fuel-filler lid opener lever to remove it from the lower panel.

4. Disconnect the fuel-filler lid opener cable from the fuel-filler lid opener lever.
5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FUEL-FILLER LID OPENER CABLE REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Front scuff plate (LH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Front side trim (LH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   c. Rear scuff plate (LH) (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   d. B-pillar lower trim (LH) (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   e. Lap pre-tensioner seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) (With lap pre-tensioner seat belt.)
   f. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   g. Tire house trim (LH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   h. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   i. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
   j. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
   k. Trunk side trim (LH) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
   l. Fuel-filler lid opener (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)
   m. Fuel-filler lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)
3. Remove the fuel-filler lid opener cable from clips A and B.

4. Remove the fuel-filler lid opener cable from clips C and D.

5. Remove the fuel-filler lid opener cable from clip E.

6. Pull the fuel-filler lid opener cable from the crossmember.

7. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Front scuff plate (LH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Front side trim (LH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Rear scuff plate (LH) (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   d. B-pillar lower trim (LH) (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

   e. Lap pre-tensioner seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.) (With lap pre-tensioner seat belt.)

   f. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   g. Tire house trim (LH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   h. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

i. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

j. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

k. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

l. Trunk side upper trim (LH) (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

m. Trunk side trim (LH) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

n. Fuel-filler lid opener (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)

o. Fuel-filler lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)

3. Remove the fuel-filler lid opener cable from clips A, B, and C.

4. Remove the fuel-filler lid opener cable from clips D and E.

5. Remove the fuel-filler lid opener cable from clip F.

6. Pull the fuel-filler lid opener cable from the crossmember.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION

1. Remove the service hole cover.

2. Loosen the screw from the front door key cylinder.

NOTE:

- The screw cannot be removed because the front outer handle bracket has a stopper which prevents the screw from falling.

3. While pressing the outer handle bracket tab in the direction of arrow (1) shown in the figure, pull the front door key cylinder in the direction of arrow (2) to detach the outer handle bracket and the front door key cylinder.

4. Remove the front door key cylinder from the outer handle bracket.

5. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.

6. Move the tape-wrapped flathead screwdriver in the direction of the arrow shown in the figure to lift up the collar cap, and detach the collar cap from the front door key cylinder tab.

7. Remove the collar cap from the front door key cylinder.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR KEY CYLINDER SWITCH INSPECTION

1. Perform the front door glass preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front inner handle (See **INNER HANDLE REMOVAL/INSTALLATION**.)

   c. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

   d. Front door module panel (See **FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION**.)

   e. Front door key cylinder (See **FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION**.)

   f. Front door latch and lock actuator (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)

Front Door Key Cylinder Switch Lock-Side Inspection

1. Press in the latch lever of the front door latch and lock actuator using a flathead screwdriver, and set it to the latched condition.

2. Rotate the front door key cylinder in the direction of the arrow until it stops to set the front door key cylinder switch to the locked condition.

3. To verify that the switch is in the locked position, press down the rod holder in the direction of the arrow and verify that the latch lever does not move.

NOTE:

- If the latch lever moves, the front door key cylinder switch is not in the locked position. Repeat the procedure from Step 1.

4. Inspect the resistance between front door latch and lock actuator terminals J and H.

Front door latch and lock actuator resistance

- 1 kilohm

- If not as indicated in the table, replace the front door latch and lock actuator.

Front Door Key Cylinder Switch Unlock-Side Inspection

1. Press in the latch lever of the front door latch and lock actuator using a flathead screwdriver, and set it to the latched condition.

2. Rotate the front door key cylinder in the direction of the arrow until it stops to set the front door key cylinder switch to the unlocked condition.

3. To verify that the switch is in the unlocked position, press down the rod holder in the direction of the arrow and verify that the latch lever moves.

NOTE:

- If the latch lever does not move, the front door key cylinder switch is not in the unlocked position. Repeat the procedure from Step 2.

4. Verify that the continuity of the front door latch and lock actuator is as indicated in the table.

○—○ : Continuity

Front door latch and lock actuator	Terminal	
	J	H
Unlock	○	○

- If not as indicated in the table, replace the front door latch and lock actuator.

2014 - Mazda3 - Body and Accessories

FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

1. Perform the front door glass preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front inner handle (See **INNER HANDLE REMOVAL/INSTALLATION**.)

   c. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

   d. Front door module panel (See **FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION**.)

   e. Front door key cylinder (See **FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION**.)

4. Disconnect the keyless antenna connector (With advanced keyless entry system).

5. While pressing the tabs of the clip in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the connector tabs from the front outer handle bracket (With advanced keyless entry system).

6. Remove the door lock knob cable and inner handle cable from the clip.

7. Remove the screws.

8. Tilt the front door latch and lock actuator in the direction of arrow (1) shown in the figure and lift it in the direction of arrow (2) to detach the hook of the front door latch and lock actuator.

9. Move the front door latch and lock actuator down in the direction of arrow (3) shown in the figure to remove the rod from the rod holder.

10. Remove the front door latch and lock actuator.

11. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION

- The following actuator and switches are integrated with the front door latch and lock actuator.
- From the actuator/switch name and operation in the following table, select the actuator or switch to be inspected, and perform the inspection following the inspection procedure described in the reference.

Actuator/Switch name	Operation	Reference
Front door lock actuator	Electrically switches the lock/unlock of the front doors.	**FRONT DOOR LOCK ACTUATOR INSPECTION**
Front door lock-link switch	Turns on/off in conjunction with the lock/unlock so that the lock/unlock condition is detected.	**FRONT DOOR LOCK-LINK SWITCH INSPECTION**
Front door latch switch	Turns on/off in conjunction with the latch lever operation so that the front door open/closed condition is detected.	**FRONT DOOR LATCH SWITCH INSPECTION**
Front door key cylinder switch	Turns on/off in conjunction with the lock/unlock of the front door key cylinder so that the key cylinder operation condition is detected.	**FRONT DOOR KEY CYLINDER SWITCH INSPECTION**

2014 - Mazda3 - Body and Accessories

FRONT DOOR LOCK ACTUATOR INSPECTION

LH

1. Perform the front door glass removal preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front inner handle (See **INNER HANDLE REMOVAL/INSTALLATION**.)

   c. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

   d. Front door module panel (See **FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION**.)

   e. Front door key cylinder (See **FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION**.)

   f. Front door latch and lock actuator (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)

4. Apply battery positive voltage and connect the ground to the front door lock actuator terminals as indicated in the table below and verify the operation condition.

B+ Terminal	Ground Terminal	Operation

A	G	Lock
G	A	Unlock

- If not as indicated in the table, replace the front door latch and lock actuator.

RH

1. Perform the front door glass removal preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   b. Front inner handle (See **INNER HANDLE REMOVAL/INSTALLATION**.)

   c. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)

   d. Front door module panel (See **FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION**.)

   e. Front door latch and lock actuator (See **FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)

4. Apply battery positive voltage and connect the ground to the front door lock actuator terminals as indicated in the table below and verify the operation condition.

B+ Terminal	Ground Terminal	Operation
K	E	Lock

E	K	Unlock

- If not as indicated in the table, replace the front door latch and lock actuator.

TRUNK LID OPENER SWITCH REMOVAL/INSTALLATION

Vehicle Interior

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. While pressing the trunk lid opener switch tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the trunk lid opener switch tab from the driver-side lower panel.

3. Remove the trunk lid opener switch from the driver-side lower panel.

4. Disconnect the connector from the trunk lid opener switch.

5. Install in the reverse order of removal.

Vehicle Exterior

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the trunk lid recess. (See **TRUNK LID RECESS REMOVAL/INSTALLATION**.)
3. Remove the trunk lid trim. (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)
4. Disconnect the connector.

5. While pressing the trunk lid opener switch tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the trunk lid opener switch tab from the trunk lid.

6. Remove the trunk lid opener switch from the trunk lid.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK LID OPENER SWITCH INSPECTION

Vehicle Interior

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the trunk lid opener switch (See **TRUNK LID OPENER SWITCH REMOVAL/INSTALLATION**.)

3. Verify the continuity of trunk lid opener switch terminals A and D.

○—○ : Continuity

Switch position	Terminal	
	A	D
On (push)	○	○
Off (release)		

- If not as indicated in the table, replace the trunk lid opener switch.

Vehicle Exterior

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Trunk lid recess (See **TRUNK LID RECESS REMOVAL/INSTALLATION**.)

   b. Trunk lid trim (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)

   c. Trunk lid opener switch (See **TRUNK LID OPENER SWITCH REMOVAL/INSTALLATION**.)

3. Verify the continuity of trunk lid opener switch terminals A and C.

- If not as indicated in the table, replace the trunk lid opener switch.

○—○ : Continuity

Switch position	Terminal	
	A	C
On (push)	○	○
Off (release)		

2014 - Mazda3 - Body and Accessories

LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)
   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)
   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)
   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)
3. Disconnect the connector.

4. Remove the bolts.

5. Remove the liftgate latch and lock actuator from the liftgate.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE LATCH AND LOCK ACTUATOR INSPECTION

- The following actuator and switch are integrated with the liftgate latch and lock actuator.
- From the actuator/switch name and operation in the following table, select the actuator or switch to be inspected, and perform the inspection following the inspection procedure described in the reference.

Actuator/Switch name	Operation	Reference
Liftgate lock actuator	Electrically unlatches the liftgate based on the signal from the rear body control module (RBCM).	**LIFTGATE LOCK ACTUATOR INSPECTION**
Liftgate latch switch	Turns on/off in conjunction with the latch lever rotation so that the liftgate open/closed condition is detected.	**LIFTGATE LATCH SWITCH INSPECTION**

2014 - Mazda3 - Body and Accessories

LIFTGATE LOCK ACTUATOR INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   f. Liftgate latch and lock actuator (See **LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)

3. Press in the latch lever of the liftgate latch and lock actuator using a flathead screwdriver, and set it to the latched condition.

4. Connect terminal D to the positive battery voltage, connect terminal B to the ground, and verify that the latch lever is released and the condition changes to the unlatch condition.

- If the operation cannot be verified, replace the liftgate latch and lock actuator.

2014 - Mazda3 - Body and Accessories

LIFTGATE LATCH SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   f. Liftgate latch and lock actuator (See **LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION**.)

3. Verify that the continuity is as indicated in the table.

○—○ : Continuity

Liftgate latch switch	Terminal	
	A	C
Latch (liftgate close)		
Unlatch (liftgate open)	○	○

- If not as indicated in the table, replace the liftgate latch and lock actuator.

NOTE:

- When inspecting the latch condition of the liftgate latch switch, press in the latch lever using a flathead screwdriver and set it to the latched position.

LIFTGATE LATCH SWITCH INSPECTION

2014 - Mazda3 - Body and Accessories

LIFTGATE LOCK STRIKER REMOVAL/INSTALLATION

1. Remove the lock bezel on the trunk end trim. (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

2. Remove the bolts, then remove the liftgate lock striker.

3. Install in the reverse order of removal.

4. Adjust the liftgate. (See **LIFTGATE ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

LIFTGATE OPENER SWITCH REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   f. Liftgate garnish (See **LIFTGATE GARNISH REMOVAL/INSTALLATION**.)

3. While pulling the protector tabs in the direction of arrow (1) shown in the figure, pull the protector in the direction of arrow (2) shown in the figure, and detach the protector tabs from the liftgate opener switch.

4. Remove the protector from the liftgate opener switch.

5. Disconnect the connector.

6. While pressing the liftgate opener switch tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the liftgate opener switch tab from the liftgate.

7. Remove the liftgate opener switch from the liftgate.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE OPENER SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   f. Liftgate garnish (See **LIFTGATE GARNISH REMOVAL/INSTALLATION**.)

   g. Liftgate opener switch (See **LIFTGATE OPENER SWITCH REMOVAL/INSTALLATION**.)

3. Verify the continuity of liftgate opener switch terminals A and C.

○—○ : Continuity

Switch position	Terminal	
	A	C
On (push)	○	○
Off (release)		

- If not as indicated in the table, replace the liftgate opener switch.

2014 - Mazda3 - Body and Accessories

START STOP UNIT REMOVAL/INSTALLATION

CAUTION:

- Never remove bolts and screws other than the bolt in Steps 8 and 9. Otherwise, it will cause internal damage and the steering lock cannot be unlocked, resulting in the inability to perform the start-stop unit removal/installation.
- If configuration is not performed when the start stop unit is replaced with a new one, the vehicle specification information is not stored in the start stop unit and the system will not operate normally.
- When performing configuration, it is necessary to read the vehicle specification information from the start stop unit before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the start stop unit. The vehicle specification information is temporarily stored in the M-MDS.

NOTE:

- The start stop unit prior to replacement stores the vehicle specification information.
- A new start stop unit does not store any vehicle specification information.
- If the vehicle specification information from the start stop unit prior to replacement cannot be read, perform the configuration using As-Built data.

1. When replacing the start stop unit, perform the configuration. (See **START STOP UNIT CONFIGURATION (USING READ/WRITE FUNCTION)**.)

2. Switch the ignition off.

NOTE:

- If the ignition is switched off from ON (engine off or on) with the driver's door open, the steering lock operation can be temporarily released.

3. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Remove the following parts:

   a. Driver-side air bag module (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

   b. Steering wheel (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

   c. Clock spring (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]** .) (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]** .)

d. Column cover (See **COLUMN COVER REMOVAL/INSTALLATION**.)

e. Wiper and washer switch (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)

f. Light switch (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)

5. Disconnect the connector.

6. While pressing the tabs of the clip in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the connector tabs from the start stop unit.

7. Remove the wiring harness clip from the start stop unit.

8. Make a groove on the bolt head by punching it with a chisel using a hammer, and remove the bolts by rotating them counterclockwise.

9. Remove the bolts.

10. Remove the start stop unit from the steering shaft by pulling it in the direction of the arrow shown in the figure.

11. Install in the reverse order of removal. (See **Start Stop Unit Installation Note**.)

12. Perform the following when replacing the start stop unit.

- Start stop unit configuration. (See **START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)**.)

  NOTE:

  - If configuration cannot be performed by reading/writing of the

vehicle specification information, perform the configuration using As-Built information after replacing the start stop unit.

- Immobilizer system-related parts programming. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)

Start Stop Unit Installation Note

1. Temporarily install the start stop unit to the steering shaft using new start stop unit installation bolts.

2. Tighten the start stop unit installation bolts until the heads break off.

2014 - Mazda3 - Body and Accessories

START STOP UNIT INSPECTION

NOTE:

- Because the start stop unit terminals 3A—3L and 4A—4L are inside the start stop unit and not exposed, the terminal voltage cannot be measured.
- Terminals with terminal voltage that cannot be measured are not indicated in the terminal voltage table (reference).

1. Remove the following parts:

   a. Column cover (See **COLUMN COVER REMOVAL/INSTALLATION**.)

2. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s) and related wiring harnesses.
     - If the system does not work normally even though the inspection items or related wiring harnesses do not have any malfunction, replace the start stop unit.

Terminal Voltage Table (Reference)

START STOP UNIT
WIRING HARNESS SIDE CONNECTOR

START STOP UNIT
WIRING HARNESS SIDE CONNECTOR

START STOP UNIT
INTERNAL CONNECTOR

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
1A	Power supply	ROOM 15 A fuse	Under any condition	B+	• ROOM 15 A fuse • Battery

1B	Power supply	C/U IG1 15 A fuse	Ignition switched ON (engine off)		B+	• C/U IG1 15 A fuse • Battery
			Ignition switched off or at ACC		1.0 or less

2014 - Mazda3 - Body and Accessories

START STOP UNIT CONFIGURATION (USING READ/WRITE FUNCTION)

NOTE:

- When performing configuration, it is necessary to read the vehicle specification information from the start stop unit before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the start stop unit. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    - Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

    - Select “Programmable Module Installation”.
    - Select “SSU”.

4. Perform the configuration according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the start stop unit and control module connected to the CAN line is cut temporarily, and a communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear them if any are detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

    - If any DTC is stored, clear it.
    - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
    - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Body and Accessories

START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)

NOTE:

- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.
- If the ignition cannot be switched ON (engine off), switch it ON (engine off) using the forced ignition ON function of the M-MDS. (See **FORCED IGNITION ON**.)

1. Connect the M-MDS to the DLC-2.

2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.

    - Select “Module Programming”.

3. Then, select items from the screen menu in the following order.

    - Select “As-Built”.
    - Select “SSU”.

4. Perform the configuration according to the directions on the screen.

CAUTION:

- When the configuration is performed, CAN communication between the start stop unit and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear them if any are detected.

5. Verify the DTCs for all of the control modules connected to the CAN line.

    - If any DTC is stored, clear it.
    - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
    - If the DTC remains, perform troubleshooting according to the DTC.

2014 - Mazda3 - Body and Accessories

LF CONTROL UNIT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the service hole cover on the front side trim.

3. Disconnect the connector.

4. Pull the LF control unit in the direction of the arrow (2) shown in the figure and remove it while pressing the tab in the direction of the arrow (1).

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LF CONTROL UNIT INSPECTION

1. Remove the service hole cover on the front side trim. (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)

2. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).

- If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s).
  - If the system does not work normally even though the inspection items are normal, replace the LF control unit.

Terminal Voltage Table (Reference)

LF CONTROL UNIT WIRING HARNESS SIDE CONNECTOR

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item (s)
A	Request switch signal (Passenger's side)	Request switch (RF)	When passenger's side request switch is pressed	1.0 or less	• Front outer handle (passenger's side) • Related wiring harness
			When passenger's side request switch is not pressed	5.0	
			Under any condition		• ROOM 15 A fuse

B	Power supply	ROOM 15 A fuse		B+	• Battery • Related wiring harness
C	Request switch signal (Driver's side)	Request switch (LF)	When driver's side request switch is pressed	1.0 or less	• Front outer handle (driver's side) • Related wiring harness
			When driver's side request switch is not pressed	5.0	
E	Request switch signal (liftgate)	Request switch (Liftgate)	When liftgate request switch is pressed	1.0 or less	• Request switch (Liftgate) • Related wiring harness
			When liftgate request switch is not pressed	5.0	
G	Start stop unit signal	Start stop unit	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
H	Keyless beeper power supply	Keyless beeper	When lock button on remote transmitter is pressed	Wave pattern (See **Pattern 1**.)	• Related wiring harness • Keyless beeper
			Except above	1.0 or less	
I	Start stop unit signal	Start stop unit	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
J	GROUND	Keyless beeper	Under any condition	1.0 or less	• Related wiring harness • Keyless beeper
K	Keyless antenna (interior, front)	Keyless antenna (interior, front)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
L	GROUND	Body ground	Under any condition	1.0 or less	Body ground
M	Keyless antenna	Keyless antenna (interior,	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		

	(interior, front)	front)			
N	GROUND	Shield ground	Under any condition	1.0 or less	Body ground
O	Keyless antenna (exterior, LF)	Keyless antenna (exterior, LF)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
Q	Keyless antenna (exterior, LF)	Keyless antenna (exterior, LF)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
S	Keyless antenna (exterior, RF)	Keyless antenna (exterior, RF)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
T	Keyless antenna (interior, rear)	Keyless antenna (interior, rear)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
U	Keyless antenna (exterior, RF)	Keyless antenna (exterior, RF)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
V	Keyless antenna (interior, rear)	Keyless antenna (interior, rear)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
W	Keyless antenna (exterior, rear)	Keyless antenna (exterior, rear)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		
X	Keyless antenna (exterior, rear)	Keyless antenna (exterior, rear)	Because this terminal is for communication, integrity determination using terminal voltage inspection is not possible.		

Inspection Using an Oscilloscope (Reference)

Pattern 1

- LF control unit: H (+) ↔ body ground (-)
- Oscilloscope setting: 2 V/DIV (Y), 100 ms/DIV (X), DC range

2014 - Mazda3 - Body and Accessories

SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE

Advanced Keyless Entry System

Using M-MDS

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
    - Select the “Module Programming”.
    - Select “Programmable Parameters”.
3. Select menu in the SSU.
4. Select an item name, and then select option.

M-MDS display	Function	Initial setting	Setting contents	Control unit
Advanced keyless function.*1	The advanced keyless entry system and push button start system functions can be disabled.	Enabled.	Enabled. / Disabled.	Start stop unit
Walk Away Lock.	The out-of-area (reception area) type auto lock function can be set.	OFF	Not Adopted. / OFF / ON	Start stop unit
Auto Re-lock Time.	The operation start time of the auto re-lock function can be changed.	60 seconds	Not Adopted. / 30 seconds / 60 seconds / 90 seconds	Start stop unit
Lock Beep Volume.	The keyless beeper volume can be adjusted.	Medium	Not Adopted. / Off / Low / Medium / High	Start stop unit

*1

Because the push button start system function has been disabled, to start the engine press the upper part of the remote transmitter against the center of the push button start.

Using center display

- (See **CENTER DISPLAY PERSONALIZATION FEATURES SETTING PROCEDURE**.)

Keyless Entry System

Using M-MDS

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
    - Select the “Module Programming”.
    - Select “Programmable Parameters”.
3. Select menu in the SSU.
4. Select an item name, and then select option.

M-MDS display	Function	Initial setting	Setting contents	Control unit
Advanced keyless function.*1	The keyless entry system and push button start system functions can be disabled.	Enabled.	Enabled. / Disabled.	Start stop unit
Auto Re-lock Time.	The operation start time of the auto re-lock function can be changed.	60 seconds	Not Adopted. / 30 seconds / 60 seconds / 90 seconds	Start stop unit

*1 **Because the push button start system function has been disabled, to start the engine press the upper part of the remote transmitter against the center of the push button start.**

Using center display

- (See **CENTER DISPLAY PERSONALIZATION FEATURES SETTING PROCEDURE**.)

Power Door Lock System

Using M-MDS

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
    - Select the “Module Programming”.
    - Select “Programmable Parameters”.
3. Select menu in the SSU.
4. Select an item name, and then select option.

M-MDS display	Function	Initial setting	Setting contents	Control unit
Unlock Mode (Without Touch Sensor)	2-step unlocking system can be set.	Once: Driver's, Twice: All Doors.	Not Adopted. / Touch Once: All Doors. / Once: Driver's, Twice: All Doors.	Start stop unit

- For the auto door lock function, refer to the personalization features for the RBCM. (See **CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE**.)

Using center display

- (See **CENTER DISPLAY PERSONALIZATION FEATURES SETTING PROCEDURE**.)

2014 - Mazda3 - Body and Accessories

REQUEST SWITCH REMOVAL/INSTALLATION

Driver's Door/Passenger's Door

NOTE:

- The request switch cannot be removed as a single unit because it is built into the front outer handle. If the request switch is replaced, replace the front outer handle. (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)

Liftgate

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   f. Liftgate garnish (See **LIFTGATE GARNISH REMOVAL/INSTALLATION**.)

3. Push out the request switch in the direction of the arrow (2) shown in the figure while pressing the request switch tab in the direction of the arrow (1) shown in the figure, detach the request switch tab and liftgate garnish, and then remove the request switch from the liftgate garnish.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REQUEST SWITCH INSPECTION

Driver's Door/Passenger's Door

1. Perform the front door glass preparation. (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Remove the following parts:
   a. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)
   b. Front door glass (See **FRONT DOOR GLASS REMOVAL/INSTALLATION**.)
   c. Front door module panel (See **FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION**.)
   d. Front door key cylinder (driver's side) (See **FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION**.)
   e. Front outer handle (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)
4. Verify that the continuity is as indicated in the table.

○—○ : Continuity

Request switch (request switch condition)	Terminal	
	A	D
On (pressed)	○	○
Off (not pressed)		

- If not as indicated in the table, replace the front outer handle.

Liftgate

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL / INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL / INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL / INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL / INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL / INSTALLATION**.)

   f. Liftgate garnish (See **LIFTGATE GARNISH REMOVAL / INSTALLATION**.)

   g. Request switch (liftgate) (See **REQUEST SWITCH REMOVAL / INSTALLATION**.)

3. Verify that the continuity is as indicated in the table.

○—○ : Continuity

Request switch (request switch condition)	**Terminal**	
	A	**B**
On (pressed)	○	○
Off (not pressed)		

- If not as indicated in the table, replace the request switch.

2014 - Mazda3 - Body and Accessories

KEYLESS ANTENNA REMOVAL/INSTALLATION

With Advanced Keyless Entry System

Vehicle interior, front

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   b. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   c. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   d. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   e. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   f. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   g. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   h. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   i. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   j. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
3. While pressing the keyless antenna bracket tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the keyless antenna bracket tab from the instrument panel.

4. Remove the keyless antenna from the instrument panel.
5. Disconnect the connector from the keyless antenna.

6. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.

7. Move the tape-wrapped flathead screwdriver in the direction of arrow (3) shown in the figure to press the keyless antenna bracket tab, and pull it in the direction of arrow (4) to detach the keyless antenna bracket from the keyless antenna.

8. Remove the keyless antenna bracket from the keyless antenna.

9. Install in the reverse order of removal.

Vehicle interior, rear

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the trunk covering. (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

3. Remove the trunk board. (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

4. Disconnect the connector from the keyless antenna.

CAUTION:

- Disconnect the connector while holding the keyless antenna, otherwise the keyless antenna bracket could be damaged.

5. While pressing the keyless antenna bracket tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the keyless antenna bracket tab from the body.

6. Remove the keyless antenna from the body.

7. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.

8. Move the tape-wrapped flathead screwdriver in the direction of arrow (3) shown in the figure to press the keyless antenna bracket tab, and pull it in the direction of arrow (4) to detach the keyless antenna bracket from the keyless antenna.

9. Remove the keyless antenna bracket from the keyless antenna.

10. Install in the reverse order of removal.

Vehicle exterior, rear

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the connector from the keyless antenna.

CAUTION:

- Disconnect the connector while holding the keyless antenna, otherwise the keyless antenna bracket could be

damaged.

3. While pressing the keyless antenna bracket tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the keyless antenna bracket tab from the bracket.

4. Remove the keyless antenna from the bracket.

5. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.

6. Move the tape-wrapped flathead screwdriver in the direction of arrow (3) shown in the figure to press the keyless antenna bracket tab, and pull it in the direction of arrow (4) to detach the keyless antenna bracket from the keyless antenna.

7. Remove the keyless antenna bracket from the keyless antenna.

8. Install in the reverse order of removal.

Vehicle exterior, driver's side / passenger's side

NOTE:

- The keyless antenna (vehicle exterior, driver's side/passenger's side) cannot be removed as a single unit because it is built into the front outer handle. To replace the keyless antenna (vehicle exterior, driver's side/passenger's side), replace the front outer handle. (See **FRONT OUTER HANDLE REMOVAL/INSTALLATION**.)

With Keyless Entry System

Vehicle interior, center

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   b. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. Disconnect the connector from the keyless antenna.

CAUTION:

- Disconnect the connector while holding the keyless antenna, otherwise the keyless antenna bracket could be damaged.

4. While pressing the keyless antenna bracket tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the keyless antenna bracket tab from the bracket.

5. Remove the keyless antenna from the bracket.

6. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.

7. Move the tape-wrapped flathead screwdriver in the direction of arrow (3) shown in the figure to press the keyless antenna bracket tab, and pull it in the direction of arrow (4) to detach the keyless antenna bracket from the keyless antenna.

8. Remove the keyless antenna bracket from the keyless antenna.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

KEYLESS BEEPER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the cowl grille. (See **COWL GRILLE REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Pull the keyless beeper in the direction of the arrow (2) shown in the figure while pressing the keyless beeper tabs in the direction of the arrow (1) shown in the figure, detach the keyless beeper tabs and bracket, and then remove the keyless beeper from the bracket.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

KEYLESS BEEPER INSPECTION

- Because no oscillation circuit is integrated in the keyless beeper, a beep sound is not heard by applying rated voltage to the keyless beeper itself. To inspect the keyless beeper, refer to symptom troubleshooting. (See **ANSWER-BACK BUZZER DOES NOT SOUND [SECURITY AND LOCKS]**.)

2014 - Mazda3 - Body and Accessories

KEYLESS RECEIVER REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (RH) (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. Tire house trim (RH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   d. C-pillar trim (RH) (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
3. Disconnect the connector.

4. Remove the bolt.
5. Remove the keyless receiver.
6. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:

a. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

b. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

d. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

e. Rear scuff plate (RH) (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

f. Tire house trim (RH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

g. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

h. Trunk side upper trim (RH) (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

i. C-pillar trim (RH) (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the bolt.

5. Remove the keyless receiver.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

KEYLESS RECEIVER INSPECTION

4SD

1. Remove the following parts:
   a. Rear scuff plate (RH) (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   c. Tire house trim (RH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   d. C-pillar trim (RH) (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
2. Remove the keyless receiver with the connector still connected. (See **KEYLESS RECEIVER REMOVAL/INSTALLATION**.)
3. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s) and related wiring harnesses.
     - If the system does not operate normally even though the parts under Inspection Item(s) and related wiring harnesses do not have any malfunction, replace the keyless receiver.

Terminal Voltage Table (Reference)

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
A	Power supply	Start stop unit	Under any condition	Approx. 5	Start stop unit

B	DATA	Start stop unit	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		Start stop unit
D	GND	Body ground	Under any condition	1.0 or less	Ground

5HB

1. Remove the following parts:

   a. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

   b. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

   d. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   e. Rear scuff plate (RH) (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   f. Tire house trim (RH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   g. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   h. Trunk side upper trim (RH) (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

   i. C-pillar trim (RH) (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

2. Remove the keyless receiver with the connector still connected. (See **KEYLESS RECEIVER REMOVAL/INSTALLATION**.)

3. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).

   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s) and related wiring harnesses.

     - If the system does not operate normally even though the parts under Inspection Item(s) and related wiring harnesses do not have any malfunction, replace the keyless receiver.

Terminal Voltage Table (Reference)

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
A	Power supply	Start stop unit	Under any condition	Approx. 5	Start stop unit
B	DATA	Start stop unit	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		Start stop unit
D	GND	Body ground	Under any condition	1.0 or less	Ground

2014 - Mazda3 - Body and Accessories

PUSH BUTTON START REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the upper column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Remove the meter hood. (See **METER HOOD REMOVAL/INSTALLATION**.)

4. While pressing the push button start tabs in the direction of the arrows (1) shown in the figure, and push out the push button start in the direction of the arrow (2) shown in the figure to detach the push button start tabs from the meter hood.

5. Remove the push button start.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

PUSH BUTTON START INSPECTION

Resistance Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the upper column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Remove the meter hood. (See **METER HOOD REMOVAL/INSTALLATION**.)

4. Remove the push button start. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)

5. Verify that the continuity between the push button start terminals is as indicated in the table.

○—○ : Continuity

Test condition	Terminal			
	C	E	G	I
Button pressed	○		○	
		○		○
Button released				

- If not as indicated in the table, replace the push button start. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)

LED Illumination Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the upper column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Remove the meter hood. (See **METER HOOD REMOVAL/INSTALLATION**.)

4. Remove the push button start. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)

5. Apply battery positive voltage and connect the ground to the push button start terminals and verify that the LED illuminates as indicated in the table.

B+ terminal	Ground terminal	Illumination positions (Color)
J	D	START/STOP/ENGINE indicator light (Amber)
	F	Push button start indicator light (Amber)
	H	Push button start indicator light (Green)

- If the LED does not illuminate as indicated in the table, replace the push button start. (See **PUSH BUTTON START REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY

Disassembly

1. Press the knob on the remote transmitter and pull the auxiliary key out.

2. Insert a tape-wrapped flathead screwdriver into the notch on the remote transmitter and turn it in the direction of the arrow shown in the figure to detach tabs A from the remote transmitter.

3. Insert a tape-wrapped flathead screwdriver between the remote transmitter and the cover

and slide it in the direction of arrow (1) shown in the figure.

4. Turn the screwdriver in the direction of arrow (2) shown in the figure to detach tabs B of the cover from the remote transmitter.

5. Remove the cover.

6. Remove the cap and the battery from the remote transmitter.

Assembly

1. Verify that the O-ring is installed to the remote transmitter.

NOTE:

- If the O-ring is removed, install it before installing the battery.

2. Install a new battery (CR2025) in the direction of the arrow shown in the figure with the negative pole facing down.

3. Install the cap.

4. Align the cover to the transmitter from its end and press it in the direction of the arrow shown in the figure to engage the tabs of the cover with the remote transmitter.

5. Insert the auxiliary key.

AUXILIARY
KEY

2014 - Mazda3 - Body and Accessories

REMOTE TRANSMITTER ID CODE REGISTRATION

- When the remote transmitter is replaced or an additional remote transmitter is programmed, the remote transmitter has to be programmed to the immobilizer system-related parts. When replacing or adding a remote transmitter, refer to immobilizer system-related parts programming and perform the remote transmitter programming. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)

2014 - Mazda3 - Body and Accessories

CLEARING REMOTE TRANSMITTER

- The remote transmitter clearing procedure clears remote transmitters from the immobilizer system-related parts, and after the clearing procedure is implemented, all transmitters that were programmed can no longer be used.
- For the remote transmitter clearing procedure, refer to clearing of remote transmitters in programming of immobilizer system- related parts. (See **IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING**.)

2014 - Mazda3 - Body and Accessories

REMOTE TRANSMITTER BATTERY VOLTAGE INSPECTION

NOTE:

- Because the remote transmitter battery power cannot be determined using the battery itself, determine by the remote transmitter battery low warning operation conditions.

Operation procedure for remote transmitter battery low warning

1. Place the remote transmitter inside the vehicle and close all of the doors.
2. Switch the ignition ON (engine off) and wait **approx. 30 s**.
3. With the brake pedal not depressed, switch the ignition off.
4. Verify that the KEY indicator light (green) in the instrument panel is not flashing.

- KEY indicator light (green) flashes for **approx. 30 s**:

  Replace the remote transmitter battery because the remote transmitter battery power is depleted. (See **REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY**.)

2014 - Mazda3 - Body and Accessories

IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING

Foreword

- When replacing immobilizer system-related parts or programming an additional remote transmitter, or clearing a remote transmitter, program the immobilizer system-related parts so that the system operates normally. For immobilizer system-related parts programming, select the programming procedures according to the service. (See **Selection of Procedure for Immobilizer System-Related Parts Programming**.)

CAUTION:

- The engine cannot be started if any step or procedure for each service operation is skipped. Perform all procedures in the order of the steps.
- If any metallic or magnetic object is near the remote transmitter, communication between the remote transmitter and the vehicle may be obstructed, resulting in a failure to program the immobilizer system-related parts. Remove any metallic or magnetic objects, such as key holders, from the remote transmitter when programming immobilizer system-related parts.
- If any of the following devices are inside the vehicle, programming of immobilizer system-related parts may fail. Do not bring any of the following devices or similar products inside the vehicle when programming immobilizer system-related parts.
    - M-MDS
    - Personal computer
    - Devices that can send/receive radio waves
- If the engine is started during immobilizer system-related parts programming, the programming mode cancels. Therefore, do not start the engine unless indicated in the procedure. Repeat the procedure from the beginning if the engine is started during the immobilizer system-related parts programming.
- If a remote transmitter is near the vehicle during immobilizer system-related parts programming, it may be programmed mistakenly. Keep the remote transmitter 1 m away from the vehicle unless indicated in the procedure.
- The SSU in the procedure indicates the start stop unit. In addition, the advanced key indicates the remote transmitter.

NOTE:

- Two or more remote transmitters must be programmed for the engine to start.
- A maximum of six remote transmitters can be programmed to one vehicle.
- The number of programmed key ID numbers can be verified using the M-MDS.

- Do not select any screen menu other than the ones indicated in the procedure during M-MDS operation.
- When programming the immobilizer system-related parts, the incode must be searched.

Selection of Procedure for Immobilizer System-Related Parts Programming

1. Verify that the ROOM fuse, AT fuse, and SRS2/ESCL fuse are installed.
2. Select the applicable programming procedure from the service content of the immobilizer system-related parts.

Immobilizer System-Related Parts Service and Programming Procedure Table

No.	Service		Programming procedure
1	Additional remote transmitter programming	Have remote transmitter that can start engine	(See **No.1 Additional Remote Transmitter Programming Procedure (Using the M-MDS)**.)
2	Programming due to PCM replacement		(See **No.2 Programming Procedure After PCM Replacement**.)
3	Start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM		(See **No.3 Start stop unit replacement and programming procedure due to simultaneous replacement of start stop unit/PCM**.)
4	Remote transmitter replacement or clearing		(See **No.4 Remote transmitter replacement or remote transmitter clearing**.)

M-MDS Connecting Procedure

NOTE:

- Do not place the M-MDS in the vehicle while programming the immobilizer system.

1. Fully lower the door glass.
2. Connect the M-MDS to the DLC-2.
3. Place the M-MDS outside the vehicle.

CAUTION:

- Cover the vehicle body with a rag so as not to damage the vehicle body with the cable.

Procedure for communication between coil antenna and remote transmitter

- While the push button start indicator light (green) is flashing, press the top part of the remote transmitter against the center of the push button start.

NOTE:

- The coil antenna is integrated with the push button start.

No.1 Additional Remote Transmitter Programming Procedure (Using the M-MDS)

CAUTION:

- The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.

Vehicle condition

- There is a remote transmitter that can start the engine.

NOTE:

- If a remote transmitter cannot be programmed, verify the number of programmed remote transmitter using the M-MDS.
- Perform the DTC inspection for the start stop unit using the M-MDS.

Procedure

VALID REMOTE TRANSMITTER	 REMOTE TRANSMITTER 1
REMOTE TRANSMITTER TO BE PROGRAMMED	 REMOTE TRANSMITTER 2

Step	Procedure	Action after procedure	
1	**VERIFY THAT REMOTE TRANSMITTER WHICH CAN START ENGINE IS REMOTE TRANSMITTER 1** • Switch the ignition ON (engine off) using remote transmitter 1. • Verify that the security light illuminates for approx. 3 s, and then turns off. • Switch the ignition off.	Go to the next step.	
2	**PERFORM ADDITIONAL PROGRAMMING OF REMOTE TRANSMITTER 2** • Connect the M-MDS to the DLC-2. (See **M-MDS Connecting Procedure**.) • Switch the ignition ON (engine off) using remote transmitter 1. • After vehicle identification, select the following from the M-MDS initial screen. ◦ “Body” ◦ “Security” ◦ “PATS (immobilizer) function” • Then, select the following from the screen menu. • Additional advanced key programming	Yes	Change the remote transmitter and repeat Step 2.

	• Input the start stop unit incode and cancel the security access according to the directions on the M-MDS screen. **NOTE:** • "Security access permitted" is displayed on the M-MDS screen. • Depress the clutch (MTX) or the brakes (ATX) according to the instructions on the M-MDS, and press remote transmitter 2 against the push button start while the push button start indicator light (green) is flashing. (See **Procedure for communication between coil antenna and remote transmitter**.) • Verify that the remote transmitter 2 programming is completed on the M-MDS screen, and release the clutch (MTX) or brake (ATX) pedal. • Are there other remote transmitters to be programmed?	No	Switch the ignition off, then go to the next step.
3	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION** **NOTE:** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. • Depress the clutch (MTX)/brake (ATX) pedal. • After pressing remote transmitter 2 against the push button start, press the push button start to start the engine. (See **Procedure for communication between coil antenna and remote transmitter**.) • Are there other remote transmitters to be programmed?	Yes	Change the key and repeat Step 3.
		No	Go to the next step.
4	**VERIFY THAT REMOTE TRANSMITTER IS PROGRAMMED** Place only the programmed remote transmitter on the passenger seat and verify that the engine can be started with the programmed key.	Go to the next step.	
5	**M-MDS COMPLETION** • Wait for 5 s or more after the M-MDS is completed and switch the ignition off.	Procedure is completed.	

No.2 Programming Procedure After PCM Replacement

CAUTION:

- The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.

  Vehicle condition

- There is a remote transmitter that can start the engine.

Procedure

VALID REMOTE TRANSMITTER	 REMOTE TRANSMITTER

Step	Procedure	Action after procedure
1	**REPLACE PCM** Refer to PCM REMOVAL/INSTALLATION to perform PCM replacement. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Go to the next step.
2	**PERFORM PARAMETER RESET** • Connect the M-MDS to the DLC-2. (See **M-MDS Connecting Procedure**.) • Switch the ignition ON (engine off). **NOTE:** • Although the security indicator light illuminates for approx. 3 s and then turns off or flashes, continue to perform the procedure as indicated. • After vehicle identification, select the following from the M-MDS initial screen. ○ “Body” ○ “Security” ○ “PATS (immobilizer) function” • Then, select the following from the screen menu. • “Parameter reset” • Input the start stop unit and PCM incode and cancel the security access according to the directions on the M-MDS screen. **NOTE:** • “Security access permitted” is displayed on the M-MDS screen. • Perform the operation according to the directions on	Go to the next step.

	the M-MDS screen. **NOTE:** • "Parameter reset completed" is displayed on the M-MDS screen. • Select "No" according to the directions on the M-MDS. **CAUTION:** • Because the procedure switches to the procedure for key ID number clearing, if "Yes" is selected on the M-MDS screen, select "No".		
3	**M-MDS COMPLETION** • Wait for 5 s or more after the M-MDS is completed and switch the ignition off.	Go to the next step.	
4	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION** • Bring each remote transmitter into the vehicle one at a time and switch the ignition ON (engine off). • Verify that the security indicator light illuminates, and switch the ignition off. • Are there other remote transmitters to be programmed?	Yes	Change the key and repeat Step 4.
		No	Go to the next step.
5	**VERIFY PARAMETER RESET IS COMPLETED** **NOTE:** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. • Place only the programmed remote transmitter on the passenger seat and verify that the engine starts. • Does engine start?	Yes	Procedure is completed.
		No	Perform the related DTC inspection to repair the malfunctioning part.

No.3 Start stop unit replacement and programming procedure due to simultaneous replacement of start stop unit/PCM

CAUTION:

- The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.
- Because it is necessary to program two or more remote transmitters to the immobilizer system-related parts to start the engine, perform the remote transmitter programming after clearing the remote transmitter.

NOTE:

Before beginning the procedure, verify that the customer has provided all of the remote transmitters for the vehicle.

- The engine cannot be started unless two or more remote transmitters are programmed after the replacement.

Vehicle condition

- Have two or more remote transmitters to be programmed after the replacement.

Procedure

REMOTE TRANSMITTER TO BE PROGRAMMED	 REMOTE TRANSMITTER 1	 REMOTE TRANSMITTER 2

Step	Procedure	Action after procedure
1	**REPLACE START STOP UNIT AND REPLACE START STOP UNIT/PCM SIMULTANEOUSLY** Refer to START STOP UNIT REMOVAL/INSTALLATION to perform start stop unit replacement. (See **START STOP UNIT REMOVAL/INSTALLATION**.) Refer to PCM REMOVAL/INSTALLATION to perform PCM replacement. (See **PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)	Go to the next step.
2	**PERFORM PARAMETER RESET** • Connect the M-MDS to the DLC-2. (See **M-MDS Connecting Procedure**.) • Remove the remote transmitter from the vehicle (keep them 1 m or more from the vehicle) and switch the ignition ON (engine off) according to the directions on the M-MDS screen. • Select the following from the M-MDS initial screen. ○ “Body” ○ “Forced ignition ON”	

	• Press the push button start and switch the ignition ON (engine off) according to the instructions on the M-MDS.
	• Select the following from the M-MDS initial screen.
	  ◦ “Body”
	  ◦ “Security”
	  ◦ “PATS (immobilizer) function”
	• Then, select the following from the screen menu.
	  • “Parameter reset”
	• Input the start stop unit and PCM incode and cancel the security access according to the directions on the M-MDS screen.
	NOTE:
	  • “Security access permitted” is displayed on the M-MDS screen.
	• Perform the operation according to the directions on the M-MDS screen.
	NOTE:
	  • “Parameter reset completed” is displayed on the M-MDS screen.
	• Select “Yes” according to the directions on the M-MDS.
	CAUTION:
	  • Because the procedure will not switch to the procedure for key ID number clearing, if “No” is selected on the M-MDS screen, select “Yes”.
		Go to the next step.

3	**PERFORM KEY ID NUMBER CLEARING** • Perform the key ID number clearing and switch the ignition off according to the directions on the M-MDS screen.	Go to the next step.
4	**PERFORM REMOTE TRANSMITTER 1 PROGRAMMING** • Switch the ignition ON (engine off). **NOTE:** • Although the security indicator light illuminates for approx. 10 s and then turns off or flashes, continue to perform the procedure as indicated. • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.)	Switch the ignition off, then go to the next step.

	• Verify that remote transmitter 1 programming is completed on the M-MDS screen. **NOTE:** • When the programming is completed, the security indicator light turns off and DTC 21 is displayed after approx. 1 min. • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min.		
5	**PERFORM REMOTE TRANSMITTER 2 PROGRAMMING** • Switch the ignition ON (engine off). • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.) • Verify that the remote transmitter 2 programming is completed on the M-MDS screen. **NOTE:** • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min. • Are there other remote transmitters to be programmed?	Yes	If other remote transmitters are programmed, repeat Step 5.
		No	Go to the next step.
6	**M-MDS COMPLETION** • Wait for 5 s or more after the M-MDS is completed and switch the ignition off.	Go to the next step.	
7	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 1)** **NOTE:** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. • Depress the clutch (MTX)/brake (ATX) pedal. • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.) • After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.	Switch the ignition off, then go to the next step.	
8	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 2)** **NOTE:**	Yes	If there are other remote transmitters to be programmed,

	• Each remote transmitter is brought inside the vehicle one at a time to start the engine. • Depress the clutch (MTX)/brake (ATX) pedal. • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.) • After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.		repeat Step 7.
		No	Go to the next step.
9	**VERIFY THAT REMOTE TRANSMITTER IS PROGRAMMED** **NOTE:** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. • Place only the programmed remote transmitter on the passenger seat and verify that the engine starts. • Does engine start?	Yes	Procedure is completed.
		No	Perform the related DTC inspection to repair the malfunctioning part.

No.4 Remote transmitter replacement or remote transmitter clearing

CAUTION:

- The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.
- Because it is necessary to program two or more remote transmitters to the immobilizer system-related parts to start the engine, perform the remote transmitter programming after clearing the remote transmitter.

Vehicle condition

- Have two remote transmitters to be programmed.

Procedure

VALID REMOTE TRANSMITTER	 REMOTE TRANSMITTER 1	 REMOTE TRANSMITTER 2

Step	Procedure	Action after procedure
1	**PERFORM KEY ID NUMBER CLEARING** • Connect the M-MDS to the DLC-2. (See **M-MDS Connecting Procedure**.) • Switch the ignition ON (engine off). • After vehicle identification, select the following from the M-MDS initial screen. ◦ “Body” ◦ “Security” ◦ “PATS (immobilizer) function” • Then, select the following from the screen menu. • “Advanced key clearing” • Input the start stop unit incode and cancel the security access according to the directions on the M-MDS screen. **NOTE:** • “Security access permitted” is displayed on the M-MDS screen. • Perform the remote transmitter clearing according to the directions on the M-MDS. **NOTE:** • “Advanced key clearing completed” is displayed on the M-MDS screen.	Switch the ignition off, then go to the next step.
2	**PERFORM REMOTE TRANSMITTER 1 PROGRAMMING** • Switch the ignition ON (engine off). **NOTE:** • Although the security indicator light	

	illuminates for approx. 10 s and then turns off or flashes, continue to perform the procedure as indicated. • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.) • Verify that the remote transmitter 1 programming is completed on the M-MDS screen. **NOTE:** • When the programming is completed, the security indicator light turns off and DTC 21 is displayed after approx. 1 min. • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min.	Switch the ignition off, then go to the next step.	
3	**PERFORM REMOTE TRANSMITTER 2 PROGRAMMING** • Switch the ignition ON (engine off). **NOTE:** • Although the security indicator light illuminates for approx. 10 s and then turns off or flashes, continue to perform the procedure as indicated. • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.) • Verify that the remote transmitter 2 programming is completed on the M-MDS screen. **NOTE:** • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min. • Are there other remote transmitters to be programmed?	Yes	Change the key and repeat Step 3.
		No	Go to the next step.
4	**M-MDS COMPLETION** • Wait for 5 s or more after the M-MDS is completed and switch the ignition off.	Go to the next step.	
5	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 1)** **NOTE:** • Each remote transmitter is brought inside the vehicle one at a time to start the engine.		

	• Depress the clutch (MTX)/brake (ATX) pedal. • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.) • After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.	Switch the ignition off, then go to the next step.	
6	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 2)** **NOTE:** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. • Depress the clutch (MTX)/brake (ATX) pedal. • While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See **Procedure for communication between coil antenna and remote transmitter**.) • After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.	Yes	If there are other remote transmitters to be programmed, repeat Step 5.
		No	Go to the next step.
7	**VERIFY THAT REMOTE TRANSMITTER IS PROGRAMMED** **NOTE:** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. • Place only the programmed remote transmitter on the passenger seat and verify that the engine starts. • Does engine start?	Yes	Procedure is completed.
		No	Perform the related DTC inspection to repair the malfunctioning part.

2014 - Mazda3 - Body and Accessories

THEFT-DETERRENT HORN REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Pull back the trunk side trim (RH) to a position which allows for the removal of the theft-deterrent horn. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the bolt.

5. Remove the theft-deterrent horn.

6. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the service hole cover.

3. Remove the jack.

4. Disconnect the connector.

5. Remove the bolt.

6. Remove the theft-deterrent horn.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

THEFT-DETERRENT HORN INSPECTION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Pull back the trunk side trim (RH) to a position which allows for the removal of the theft-deterrent horn. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

3. Remove the theft-deterrent horn. (See **THEFT-DETERRENT HORN REMOVAL/INSTALLATION**.)

4. Apply battery positive voltage to horn terminal A, and connect the horn retaining bolt to ground as shown in the figure, and then verify that the horn sounds.

- If the horn does not sound, replace the horn.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the theft-deterrent horn. (See **THEFT-DETERRENT HORN REMOVAL/INSTALLATION**.)

3. Apply battery positive voltage to horn terminal A, and connect the horn retaining bolt to ground as shown in the figure, and then verify that the horn sounds.

- If the horn does not sound, replace the horn.

2014 - Mazda3 - Body and Accessories

THEFT-DETERRENT SYSTEM OPERATION RECORD

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initial screen.
    - “Operational Record”
3. Then, select the following from the screen menu.
    - “Burglar Alarm System”
4. Display the theft-deterrent system operation history according to the screen instructions.

2014 - Mazda3 - Body and Accessories

SUNROOF LOCATION INDEX

1	Sunroof switch (See **SUNROOF SWITCH REMOVAL/INSTALLATION**.) (See **SUNROOF SWITCH INSPECTION**.) (See **SUNROOF SYSTEM INITIALIZATION PROCEDURE**.)
2	Sunroof motor (See **SUNROOF MOTOR REMOVAL/INSTALLATION**.) (See **SUNROOF MOTOR INSPECTION**.)
3	Glass panel (See **GLASS PANEL REMOVAL/INSTALLATION**.) (See **GLASS PANEL ADJUSTMENT**.)
4	Sunroof unit

	(See **SUNROOF UNIT REMOVAL/INSTALLATION**.) (See **SUNROOF UNIT DISASSEMBLY/ASSEMBLY**.)
5	Deflector (See **DEFLECTOR REMOVAL/INSTALLATION**.)
6	Rear drain hose (See **REAR DRAIN HOSE REMOVAL/INSTALLATION**.)
7	Front drain hose (See **FRONT DRAIN HOSE REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

DEFLECTOR REMOVAL/INSTALLATION

1. Fully open the glass panel.

2. Rotate a tape-wrapped flathead screwdriver in the direction of the arrow (1) shown in the figure and remove the spring in the direction of the arrow (2) shown in the figure from hooks.

CAUTION:

- If the spring is removed forcefully, hooks located at the spring installation area may be damaged. Carefully remove the spring so as not to damage hooks.

3. Remove the deflector while lifting it up in the direction of arrow (3) shown in the figure and moving it in the direction of arrow (4).

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

GLASS PANEL REMOVAL/INSTALLATION

1. Fully open the sunshade.
2. Fully close the glass panel.
3. Remove screws.

4. Remove the glass panel in the direction of the arrow (1) from sunroof unit.

5. Move the glass panel in the order of arrows (2) and (3) shown in the figure and remove it from the cabin.
6. Peel the weatherstrip off the glass panel. (See **Weatherstrip Installation Note**.)
7. Install in the reverse order of removal.

Weatherstrip Installation Note

1. Install the weatherstrip to the glass panel with the joint part of the weatherstrip assembled to the vehicle rear side.

WEATHERSTRIP

2014 - Mazda3 - Body and Accessories

GLASS PANEL ADJUSTMENT

1. Fully close the glass panel.
2. Measure the gap and height between the glass panel and body.
3. Loosen the installation screws and adjust the glass panel.

SEC. A—A

SEC. B—B

SEC. C—C

SEC. D—D

Standard clearance

- a: –2.6—0 mm {–0.10—0.00 in}
- b: –2.4—0.2 mm {–0.094—0.007 in}
- c: –2.2—0.4 mm {–0.08—0.01 in}
- d: –2.4—0.2 mm {–0.094—0.007 in}

4. Tighten the installation screws. (See **GLASS PANEL REMOVAL / INSTALLATION**.)

5. When inserting the plastic card between the weatherstrip and the body, and moving the plastic card in the direction of the arrows shown in the figure, verify that the plastic card has resistance.

- If the sunroof is not shut tightly, readjust by performing Steps 3 and 4.

2014 - Mazda3 - Body and Accessories

SUNROOF UNIT REMOVAL/INSTALLATION

4SD

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
    a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
    a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
    m. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
8. Disconnect the front drain hose and rear drain hose from the sunroof frame in the direction of the arrow shown in the figure.

9. Remove nuts (1) shown in the figure.

10. Remove bolts shown in the figure.

11. Remove nuts (2) shown in the figure.

CAUTION:

- Support the sunroof unit before removing nut (2) and always perform the procedure with at least one other person to prevent the sunroof unit from falling. Otherwise, it may fall and cause injury.

12. Remove the sunroof unit.

13. Take the sunroof unit off from the front driver-side door or front passenger-side door opening.

14. Install in the reverse order of removal.

5HB

1. Set the wheel blocks for both the front and rear wheels.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Shift the selector lever from the P position to the D position (ATX).

4. Remove the sunroof seaming welt. (with sunroof system)

5. Remove the following parts:

   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

7. Remove the following parts:

a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

h. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

j. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

k. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

l. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

m. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

n. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

o. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

s. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

8. Disconnect the front drain hose and rear drain hose from the sunroof frame in the direction of the arrow shown in the figure.

9. Remove nuts (1) shown in the figure.

10. Remove bolts shown in the figure.

11. Remove nuts (2) shown in the figure.

CAUTION:

- Support the sunroof unit before removing nut (2) and always perform the procedure with at least one other person to prevent the sunroof unit from falling. Otherwise, it may fall and cause injury.

12. Remove the sunroof unit.

13. Take the sunroof unit off from the front driver-side door or front passenger-side door opening.

14. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SUNROOF UNIT DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Screw
2	Sunroof motor
3	Screen
4	Rear stopper
5	Screw
6	Drip rail
7	Sunshade (See **Sunshade Disassembly Note**.)
8	Front guide (See **Front Guide Disassembly Note**.)
9	Decoration link (See **Decoration Link Assembly Note**.)
10	Deflector
11	Screw

12	Front stopper
13	Screw
14	Set plate
15	Sunroof frame

2. Assemble in the reverse order of disassembly.

Sunshade Disassembly Note

1. To prevent scratches or damage, affix protective tape to the position shown in the figure of the sunshade.

2. Pull the sunshade in the direction of the arrow in the order of (1), (2) and remove it.

CAUTION:

- The sunshade may contact the sunroof frame and the handle area may be damaged. Remove the sunshade by sliding it in the direction of arrow (2) shown in the figure while lifting it in the direction of arrow (1).

Front Guide Disassembly Note

1. Perform mark the position shown in the figure for correct positioning.

CAUTION:

- If the front guide is assembled to a wrong position, the glass panel may stop at the wrong position and may be damaged. Before removing the front guide, mark the position shown in the figure for correct positioning.

Decoration Link Assembly Note

1. To prevent the wire shown in the figure from coming off the rail, install while aligning the wire in the rail.

FRONT DRAIN HOSE REMOVAL/INSTALLATION

4SD

Driver-side

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
   a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
   m. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
8. Remove bolts.

BOLT, NUT: 19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

9. Set the dashboard lower insulator aside.

10. Remove nuts.

11. Remove the dash gusset.

12. Disconnect the front drain hose from the sunroof frame.

13. Pull the front drain hose in the direction of the arrow in the order of (1), (2) and remove it while detaching hook A.

14. Remove the front drain hose in the direction of the arrow (3) from hooks B.
15. Remove the front drain hose in the direction of the arrow (4) from grommet.

16. Remove the grommet in the direction of the arrow (5), (6) shown in the figure.

17. Pull the front drain hose out from the A-pillar side.

18. Install in the reverse order of removal.

Passenger-side

1. Set the wheel blocks for both the front and rear wheels.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Shift the selector lever from the P position to the D position (ATX).

4. Remove the sunroof seaming welt. (with sunroof system)

5. Remove the following parts:

   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

   h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

   i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

   j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

7. Remove the following parts:

   a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

   b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

m. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

8. Disconnect the front drain hose from the sunroof frame.

9. Pull the front drain hose in the direction of the arrow in the order of (1), (2) and remove it while detaching hook A.

10. Remove the front drain hose in the direction of the arrow (3) from hooks B.
11. Remove the front drain hose in the direction of the arrow (4) from grommet.

12. Remove the grommet in the direction of the arrow (5), (6) shown in the figure.
13. Pull the front drain hose out from the A-pillar side.

14. Install in the reverse order of removal.

5HB

Driver-side

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
    a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
    a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
    b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
    c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

h. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

s. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

8. Remove bolts.

BOLT, NUT: 19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

9. Set the dashboard lower insulator aside.

10. Remove nuts.

11. Remove the dash gusset.

12. Disconnect the front drain hose from the sunroof frame.

13. Pull the front drain hose in the direction of the arrow in the order of (1), (2) and remove it while detaching hook A.

14. Remove the front drain hose in the direction of the arrow (3) from hooks B.

15. Remove the front drain hose in the direction of the arrow (4) from grommet.

16. Remove the grommet in the direction of the arrow (5), (6) shown in the figure.

17. Pull the front drain hose out from the A-pillar side.

18. Install in the reverse order of removal.

Passenger-side

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
   d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
   e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
   f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
   g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   h. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   n. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   o. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
   s. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
8. Disconnect the front drain hose from the sunroof frame.

9. Pull the front drain hose in the direction of the arrow in the order of (1), (2) and remove it while detaching hook A.

HOOK A

HOOK B

10. Remove the front drain hose in the direction of the arrow (3) from hooks B.

11. Remove the front drain hose in the direction of the arrow (4) from grommet.

12. Remove the grommet in the direction of the arrow (5), (6) shown in the figure.

13. Pull the front drain hose out from the A-pillar side.

14. Install in the reverse order of removal.

FRONT DRAIN HOSE REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

REAR DRAIN HOSE REMOVAL/INSTALLATION

4SD

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
    a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
    a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
    m. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
8. Set the trunk side trim aside.
9. Disconnect the rear drain hose from the sunroof frame.

10. Pull the rear drain hose in the direction of the arrow in the order of (1), (2) shown in the figure from hooks.

HOOK

11. Insert a tape-wrapped flathead screwdriver into the position shown in the figure, then remove the grommet in the direction of the arrow (3).

12. Remove the rear drain hose.

13. Install in the reverse order of removal.

5HB

1. Set the wheel blocks for both the front and rear wheels.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
    a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
    a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
    b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
    c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
    d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
    e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
    f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
    g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    h. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    j. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    k. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    l. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    m. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    n. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    o. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
    s. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
8. Set the trunk side trim aside. (RH only)
9. Disconnect the rear drain hose from the sunroof frame.

10. Pull the rear drain hose in the direction of the arrow in the order of (1), (2) shown in the figure from hooks A.

11. Pull the rear drain hose in the direction of the arrow in the order of (3), (4) shown in the figure from hook B.

12. Insert a tape-wrapped flathead screwdriver into the position shown in the figure, then remove the grommet in the direction of the

arrow (5).

13. Remove the rear drain hose.

14. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SUNROOF MOTOR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front map light. (with sunglasses holder) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
3. Disconnect the connector.

4. Remove screws.
5. Remove the sunroof motor.
6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SUNROOF MOTOR INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front map light. (with sunglasses holder) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

3. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. Measure the voltage at each terminal.

- If the voltage is not as specified in the terminal voltage table, inspect the parts under Inspection item (s) and related wiring harnesses.
  - If the system does not work normally even though the inspection items or related wiring harnesses do not have any malfunction, replace the sunroof motor. (See **SUNROOF MOTOR REMOVAL/INSTALLATION**.)

Terminal Voltage Table (Reference)

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item
A	Slide open	Sunroof switch	Sunroof is opening	B+	• Sunroof switch
			Other	1.0 or	

				less	
B	Slide close/tilt down	Sunroof switch	Sunroof is closing / tilting down	B+	• Sunroof switch
			Other	1.0 or less	
C	Tilt up	Sunroof switch	Sunroof is tilting up	B+	• Sunroof switch
			Other	1.0 or less	
E	IG1	C/U IG1 15A fuse	Switch the ignition ON (engine on or off)	B+	• C/U IG1 15A fuse
			Other	1.0 or less	
G	GND	GND	Under any condition	1.0 or less	• Body ground
J	Power supply	SUNROOF 10A fuse	Under any condition	B+	• SUNROOF 10A fuse

2014 - Mazda3 - Body and Accessories

SUNROOF SWITCH REMOVAL/INSTALLATION

NOTE:

- The sunroof switch is together with the front map light.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front map light. (with sunglasses holder) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SUNROOF SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front map light. (with sunglasses holder) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

3. Verify that the continuity between the sunroof switch terminals is as indicated in the table.

○—○:continuity

Switch position	Terminal			
	A	B	C	D
SLIDE OPEN	○			○
SLIDE CLOSE / TILT DOWN		○		○
TILT UP			○	○

- If not as indicated in the table, replace the sunroof switch. (See **SUNROOF SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

SUNROOF SYSTEM INITIALIZATION PROCEDURE

- If the following operations have been performed, the initial setting is reset, and operations except for tilt up are disabled. Therefore, performing initial setting is necessary.
    - Negative battery cable is disconnected. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
    - Sunroof switch connector is disconnected.
    - Sunroof system power supply fuse is removed.

1. Switch the ignition ON (engine off or on).
2. Press the tilt up switch continuously until the glass panel stops at the tilt up position.

2014 - Mazda3 - Body and Accessories

2014 - Mazda3 - Body and Accessories

COWL GRILLE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the windshield wiper arm and blade. (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
3. Disconnect the joint pipe A of the windshield washer hose. (See **WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION**.)
4. Remove the clips and fasteners shown in the figure.

5. Pull the cowl grille in the direction of the arrow in the order of (1), (2), (3), (4), (5) and remove it while detaching the tabs.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

RADIATOR GRILLE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
4. Remove the locator pin brackets. (See **FRONT BUMPER DISASSEMBLY/ASSEMBLY**.)
5. Remove the fasteners shown in the figure.

6. Detach the hooks of the front bumper fascia and remove the radiator grille.

7. Install in the reverse order of removal.

8. Adjust the front fog light aiming. (with front fog lights) (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

RADIATOR GRILLE DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Front bumper upper face
2	Grille bracket
3	Ornament

4	Grille lower molding (RH)
5	Grille lower molding (LH)
6	Radiator grille reinforcement

2. Assemble in the reverse order of disassembly.

Rivet Removal Note

CAUTION:

- Use the following drill diameter. If an inappropriate drill diameter is used, the front bumper upper face and the radiator grille reinforcement may be damaged.
  - Drill diameter: **4.5 mm**

1. Secure the rivet pin from the radiator grille reinforcement side using needle-nose pliers.

2. Remove the rivet flange using a drill and remove the rivet.

3. Remove any rivet shavings from the front bumper upper face and the radiator grille reinforcement.

2014 - Mazda3 - Body and Accessories

SAIL GARNISH REMOVAL/INSTALLATION

1. Fully open the front door glass.

2. Insert a remover tool, move it in the direction of the arrow shown in the figure, and remove the clip.

3. Insert a remover tool, move it in the direction of the arrow shown in the figure, remove the clips, and remove the sail garnish.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

EXTRACTOR CHAMBER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear splash shield (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
   b. Rear combination light (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)
   c. Rear bumper (See **REAR BUMPER REMOVAL/INSTALLATION**.)
3. Insert a remover tool in the position shown in the figure.

4. Move the remover tool in the direction of arrow (1) shown in the figure and detach the extractor chamber from the body.
5. Remove the extractor chamber in the direction of arrow (2) shown in the figure.
6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT BELTLINE MOLDING REMOVAL/INSTALLATION

CAUTION:

- Before servicing, affix protective tape on the front door outer panel when detaching the front beltline molding clips from the front door outer panel. Otherwise, the front door outer panel could interfere with the remover tool and be damaged.

1. Fully open the front door glass.

2. Insert a remover tool into the position shown in the figure, move it in the direction of arrows (1), and detach the front beltline molding clip from the door panel.

3. Pull the front beltline molding up in the direction of arrow (2).

4. Insert a remover tool into the position shown in the figure, move it in the direction of arrows (1), and detach the front beltline molding clip from the door panel.

5. Pull the front beltline molding up in the direction of arrow (2).

6. Rotate the front beltline molding in the direction of the arrow shown in the figure and remove it while detaching the front beltline

molding tabs from the door panel.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR BELTLINE MOLDING REMOVAL/INSTALLATION

Black molding type

CAUTION:

- Before servicing, affix protective tape on the rear door outer panel when detaching the rear beltline molding clips from the rear door outer panel. Otherwise, the rear door outer panel could interfere with the remover tool and be damaged.

1. Fully open the rear door glass.

2. Insert a remover tool into the position shown in the figure, move it in the direction of arrows (1), detach the rear beltline molding clip from the door panel.

3. Pull the rear beltline molding up in the direction of arrow (2).

4. Insert a remover tool into the position shown in the figure, move it in the direction of arrows (1), and detach the rear beltline molding clip from the door panel.

5. Pull the rear beltline molding up in the direction of arrow (2).

6. Rotate the rear beltline molding in the direction of the arrow shown in the figure remove it while detaching the rear beltline molding tabs from the door panel.

7. Install in the reverse order of removal.

Bright molding type

CAUTION:

- Before servicing, affix protective tape on the rear door outer panel when detaching the rear beltline molding clips from the rear door outer panel. Otherwise, the rear door outer panel could interfere with the remover tool and be damaged.

1. Fully open the rear door glass.

2. Insert a remover tool into the position shown in the figure, move it in the direction of arrows (1), detach the rear beltline molding clip from the door panel.

3. Pull the rear beltline molding up in the direction of arrow (2).

4. Insert a remover tool into the position shown in the figure, move it in the direction of arrows (1), and detach the rear beltline molding clip from the door panel.

5. Pull the rear beltline molding up in the direction of arrow (2).

6. Insert a remover tool into the position shown in the figure, move it in the direction of arrows (1), and move the rear beltline molding in the direction of arrows (2), and detach the rear beltline molding clip from the door panel.

7. Pull the rear beltline molding up in the direction of arrow (3).

8. Rotate the rear beltline molding in the direction of the arrow shown in the figure remove it while detaching the rear beltline molding tabs from the door panel.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

ROOF MOLDING REMOVAL

1. Insert a remover tool into the position shown in the figure.

2. Move the remover tool in the direction of the arrows shown in the figure and detach the front T-stud from the roof molding.

3. Rotate the roof molding in the direction of arrows shown in the figure and remove it starting from the clips at the front of the vehicle.

4. Insert a remover tool in the position shown in the figure.

5. Move the remover tool in the direction of the arrows shown in the figure, detach the rear T-stud from the roof molding, and remove the roof molding.

2014 - Mazda3 - Body and Accessories

ROOF MOLDING INSTALLATION

1. Press the roof molding in the direction of arrow (1) shown in the figure and install it to the front T-stud.

2. Hook the roof molding to clips A and install it while pressing it in the direction of arrow (2) shown in the figure.
3. Press the roof molding in the direction of arrow (3) shown in the figure and install it to the rear T-stud.
4. Press the roof molding in the direction of arrow (4) shown in the figure and install it to the clips B.

2014 - Mazda3 - Body and Accessories

MUDGUARD REMOVAL/INSTALLATION

Front Mudguard

1. Slightly bend back the front under cover No.1. (See **FRONT UNDER COVER No.1 REMOVAL/INSTALLATION**.)
2. Remove the front splash shield No.2. (See **SPLASH SHIELD REMOVAL/INSTALLATION**.)
3. Remove the screws and fasteners shown in the figure.

4. Pull the front mudguard in the direction of the arrow shown in the figure.

5. Install in the reverse order of removal.

Rear Mudguard

1. Remove the cap nuts and fastener shown in the figure.

ROOF CARRIER BRACKET REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

4SD

- A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
- Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
- Front map light (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
- Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
- Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
- Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
- B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
- Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
- Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
- B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
- Upper panel (See **UPPER PANEL REMOVAL**.)
- Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
- Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
- Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
- Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
- Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
- CD player (with CD player) (See **CD PLAYER REMOVAL**.)
- Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
- Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
- Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
- Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
- Set the selector lever component aside. (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
- Set the shift lever component aside. (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
- Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
- Curtain air bag module (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

5HB

- A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
- Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
- Front map light (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
- Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

FRONT SCUFF PLATE REMOVAL/INSTALLATION

Front scuff plate (See .)

- Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
- B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
- Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
- Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
- B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
- Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

- Curtain air bag module (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

3. Remove the nuts shown in the figure.

4. Remove the roof carrier brackets.
5. Install in the reverse order of removal.

NOTE:

- Install the roof carrier brackets so that the arrow on it faces inward.

ROOF CARRIER BRACKET REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

REAR SPOILER REMOVAL

4SD

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

1. Remove the trunk lid recess. (See **TRUNK LID RECESS REMOVAL/INSTALLATION**.)
2. Remove the trunk lid trim. (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)
3. Remove the bolts shown in the figure.

CAUTION:

- Be careful not to damage the vehicle's paint during tape removal.

4. Using a utility knife, carefully remove the double-sided adhesive tape in the locations shown below.

5. While holding the rear spoiler by hand, press the tabs of the clips in the direction of the arrows shown in the figure, and disengage the clips from the trunk lid in the order of (1), (2), and (3).

6. Remove the rear spoiler from the trunk lid.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the liftgate upper trim. (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the high-mount brake light connector and remove the wiring harness from the hook.

4. Remove the caps and nuts shown in the figure.

NUT: **4.0—5.8 N·m {41—59 kgf·cm, 36—51 in·lbf}**

5. Insert a remover tool in the position shown in the figure.

6. Move the remover tool in the direction of the arrow shown in the figure and disengage the side spoilers from the liftgate T-studs.

7. Insert a remover tool in the position shown in the figure.

8. Move the remover tool in the direction of the arrow shown in the figure and disengage the side spoiler clip from the liftgate.

9. Pull the rear spoiler in the direction of the arrows and remove it while detaching the pins.

10. While holding the rear spoiler by hand, press the tabs of the grommet from the underside of the liftgate shown in the figure, and disengage the grommet tabs from the liftgate.

11. Remove the rear spoiler while pulling out the wiring harness.

12. Insert a remover tool into the position shown in the figure, move it in the direction of the arrow shown in the figure, and remove the side spoiler from the rear spoiler.

REAR SPOILER REMOVAL

2014 - Mazda3 - Body and Accessories

REAR SPOILER INSTALLATION

4SD

1. When a rear spoiler is to be reused, perform the following procedure:
   a. Remove the packing and double-sided adhesive tape remaining on the rear spoiler after removal.
   b. Remove any grease and dirt from the packing and double-sided adhesive tape affixing area.
   c. Affix a new packing and new double-sided adhesive tape to the position shown in the figure.

   d. If the protector is damaged, replace the part that is damaged with a new protector.

2. Peel off the paper backing from the double-sided adhesive tape and install the rear spoiler clips in the order of arrows (1), (2), and (3) shown in the figure.

3. Install the bolts shown in the figure.

4. Install the trunk lid trim. (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)
5. Install the trunk lid recess. (See **TRUNK LID RECESS REMOVAL/INSTALLATION**.)

5HB

1. Install the side spoiler to the rear spoiler.

2. When a rear spoiler is to be reused, perform the following procedure:
   a. Remove the packing remaining on the rear spoiler after removal.
   b. Remove any grease and dirt from the packing affixing area.
   c. Affix a new packing to the position shown in the figure.

d. If the protector is damaged, replace the part that is damaged with a new protector.

3. Install the grommet of the high-mount brake light wiring harness.

4. Push the rear spoiler and side spoiler in the direction of the arrows in the order of (1), (2), (3), (4), (5) and install the rear spoiler and side spoiler.

5. Install the nuts shown in the figure, and install the rear spoiler.

NUT: **4.0—5.8 N·m {41—59 kgf·cm, 36—51 in·lbf}**

6. Install the caps shown in the figure.

7. Connect the high-mount brake light connector and install the wiring harness to the hook.

8. Install the liftgate upper trim. (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

9. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

SIDE SPOILER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the liftgate upper trim. (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

3. Remove the rear spoiler. (See **REAR SPOILER REMOVAL**.)

4. Insert a remover tool into the position shown in the figure, move it in the direction of the arrow shown in the figure, and remove the side spoiler from the rear spoiler.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR DOOR GARNISH REMOVAL/INSTALLATION

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

Front

1. Remove the rear beltline molding. (See **REAR BELTLINE MOLDING REMOVAL/INSTALLATION**.)
2. Using a remover tool, remove the clips in the direction of arrow (1), (2) shown in the figure.

3. Remove the double-sided adhesive tape in the position shown in the figure using a utility knife, remove the rear door garnish from the rear door sash.
4. Install in the reverse order of removal. (See **Rear Door Garnish Installation Note**.)

Rear

1. Remove the rear beltline molding. (See **REAR BELTLINE MOLDING REMOVAL/INSTALLATION**.)
2. Using a remover tool, remove the clips in the direction of arrow (1), (2) shown in the figure.

3. Remove the double-sided adhesive tape in the position shown in the figure using a utility knife, remove the rear door garnish from the rear door sash.

4. Install in the reverse order of removal. (See **Rear Door Garnish Installation Note**.)

Rear Door Garnish Installation Note

1. When installing a new rear door garnish, perform the following procedure:

   a. Remove the double-sided adhesive tape on the rear door sash.

   b. Remove any grease or dirt from the affixing surface of the rear door sash.

2014 - Mazda3 - Body and Accessories

FRONT FENDER MOLDING REMOVAL/INSTALLATION

1. Pull the front fender molding in the direction of the arrow shown in the figure and remove the hook from the front fender panel.

2. Move the front fender molding in the direction of the arrow shown in the figure and remove the hook from the front fender panel.

3. Remove the front fender molding while pulling it in the direction of the arrow shown in the figure.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR GARNISH REMOVAL/INSTALLATION

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

1. Remove the front beltline molding. (See **FRONT BELTLINE MOLDING REMOVAL/INSTALLATION**.)
2. Using a remover tool, remove the clips in the direction of the arrow (1), (2) shown in the figure.

3. Remove the double-sided adhesive tape in the position shown in the figure using a utility knife, remove the front door garnish from the body.
4. Install in the reverse order of removal. (See **Front Door Garnish Installation Note**.)

Front Door Garnish Installation Note

1. When installing a new front door garnish, perform the following procedure:
   a. Remove the double-sided adhesive tape on the front door sash.
   b. Remove any grease or dirt from the affixing surface of the front door sash.

2014 - Mazda3 - Body and Accessories

FRONT UNDER COVER No.1 REMOVAL/INSTALLATION

1. Remove the bolts, screws and fasteners shown in the figure.

2. Remove the front under cover No.1 in the direction of the arrow shown in the figure while detaching the guide.

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT UNDER COVER No.2 REMOVAL/INSTALLATION

1. Lift up the vehicle.
2. Remove the bolts and fasteners shown in the figure.

3. Remove the front under cover No.2.
4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FLOOR UNDER COVER REMOVAL/INSTALLATION

Floor Under Cover No.1

1. Lift up the vehicle.
2. Remove the bolts shown in the figure.

3. Remove the nuts
4. Remove the fasteners A.
5. Remove the cap nuts.
6. Remove the floor under cover No.1.
7. Remove the Fasteners B.
8. Install in the reverse order of removal.

Floor Under Cover No.2

1. Lift up the vehicle.
2. Remove the fasteners and bolts shown in the figure.

3. Remove the floor under cover No.2.
4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SPLASH SHIELD REMOVAL/INSTALLATION

Front

Front splash shield No.1

1. Remove the fastener shown in the figure and slightly bend back the front mudguard.

2. Remove the fasteners shown in the figure.

3. Remove the front splash shield No.1.
4. Install in the reverse order of removal.

Front splash shield No.2

1. Remove the fasteners and screw shown in the figure.

2. Remove the front splash shield No.2 in the direction of the arrow shown in the figure while detaching the hooks.

3. Install in the reverse order of removal.

Rear splash shield

1. Remove the screws, fasteners and cap nut shown the figure.

2. Remove the rear splash shield.

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE GARNISH REMOVAL/INSTALLATION

Without advanced keyless entry system

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)
   b. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)
   c. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)
   d. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)
3. Attach a piece of wire between the liftgate striker and liftgate latch to hold the liftgate in the half-opened position as shown below.

4. Remove the cap using a remover tool.

5. Remove the liftgate garnish bolt.

6. Remove the positioning pin from the liftgate garnish.

7. Remove the fasteners from the liftgate garnish in the order of the pins, guides shown in the figure.

8. Remove the liftgate garnish installation nuts in the order of (1), (2), (3), and (4) shown in the figure.

NUT: **6.9—9.8 N·m {71—99 kgf·cm, 62—86 in·lbf}**

9. Insert a remover tool in the position shown in the figure.

10. Move the remover tool in the direction shown in the figure and disengage the liftgate garnish clips from the liftgate side T-studs.

11. Insert a remover tool in the position shown in the figure.

12. Move the remover tool in the direction of the arrow shown in the figure and remove the clips from the liftgate, and then remove the liftgate garnish.

13. Install in the reverse order removal.

With advanced keyless entry system

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

a. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

b. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

c. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

d. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

3. Attach a piece of wire between the liftgate striker and liftgate latch to hold the liftgate in the half-opened position as shown below.

4. Remove the cap using a remover tool.

5. Remove the bolt from the liftgate garnish.

6. Remove the positioning pin from the liftgate garnish.

7. Remove the fasteners from the liftgate garnish in the order of the pins, guides shown in the figure.

8. Remove the liftgate garnish installation nuts in the order of (1), (2), (3) and (4) shown in the figure.

9. Insert a remover tool in the position shown in the figure.

10. Move the remover tool in the direction of the arrow shown in the figure and disengage the liftgate garnish clips from the T-studs on the liftgate side.

11. Disconnect the request switch connector.

12. Insert a remover tool in the position shown in the figure.

13. Move the remover tool in the direction of the arrow shown in the figure, remove the clips from the liftgate, and then lift up the liftgate garnish.

14. Press the tabs in the direction of the arrows shown in the figure and remove the request switch grommet.

15. Remove the liftgate garnish.

16. Install in the reverse order removal.

2014 - Mazda3 - Body and Accessories

FRONT SASH MOLDING REMOVAL

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

1. Remove the following parts:
   a. Sail garnish (See **SAIL GARNISH REMOVAL/INSTALLATION**.)
   b. Front beltline molding (See **FRONT BELTLINE MOLDING REMOVAL/INSTALLATION**.)
   c. Front door garnish (See **FRONT DOOR GARNISH REMOVAL/INSTALLATION**.)

CAUTION:

- When removing the double-sided adhesive tape, be careful not to damage the clip.

2. Using a utility knife, carefully remove the double-sided adhesive tape in the locations shown in the figure.

3. Insert a remover tool into the position shown in the figure, move it in the direction of the arrow, and remove the protector.

4. Insert a remover tool into the position shown in the figure, move it in the direction of the arrow, and remove the clip.

5. Pull the front sash molding in the direction of the arrows in the order of (1), (2), and (3) shown in the figure and remove it.

FRONT SASH MOLDING REMOVAL

2014 - Mazda3 - Body and Accessories

FRONT SASH MOLDING INSTALLATION

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

NOTE:

- Double-sided adhesive tape has already been attached to the new front sash molding.

1. Carefully remove the adhesive remaining on the body using a razor blade.
2. Remove any grease or dirt from the adhesion surface of the body.
3. Peel off the backing of the double-sided adhesive tape.
4. Hook the tab to the body in the position where the clip aligns with the sash hole.

CAUTION:

- Do not press the front sash molding in any place other than the rubber areas.

5. Press the front sash molding in the direction of the arrow and install the clip to the body.

6. Press the front sash molding from the vehicle rear in the direction of the arrow and install the tab.

NOTE:

- After installing the front sash molding, verify that the tabs are connected properly to the body.

2014 - Mazda3 - Body and Accessories

REAR SASH MOLDING REMOVAL

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

1. Remove the following parts:
   a. Rear beltline molding (See **REAR BELTLINE MOLDING REMOVAL/INSTALLATION**.)
   b. Rear door garnish (See **REAR DOOR GARNISH REMOVAL/INSTALLATION**.)

CAUTION:

- When removing the double-sided adhesive tape, be careful not to damage the clip.

2. Using a utility knife, carefully remove the double-sided adhesive tape in the locations shown in the figure.

3. Insert a remover tool into the position shown in the figure, move it in the direction of the arrow, and remove the protector.

4. Insert a remover tool into the position shown in the figure, move it in the direction of the arrow, and remove the clip.

5. Pull the rear sash molding in the direction of the arrows in the order of (1) and (2) shown in the figure, and remove the rear sash molding from the rear door panel.

REAR SASH MOLDING REMOVAL

2014 - Mazda3 - Body and Accessories

REAR SASH MOLDING INSTALLATION

WARNING:

- Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.

NOTE:

- Double-sided adhesive tape has already been attached to the new rear sash molding.

1. Carefully remove the adhesive remaining on the body using a razor blade.
2. Remove any grease or dirt from the adhesion surface of the body.
3. Peel off the backing of the double-sided adhesive tape.
4. Hook the tab to the body in the position where the clip aligns with the sash hole.

CAUTION:

- Do not press the rear sash molding in any place other than the rubber areas.

5. Press the rear sash molding in the direction of the arrow and install the clip to the body.

6. Press the rear sash molding from the vehicle front in the direction of the arrow and install the tab.

NOTE:

After installing the rear sash molding, verify that the tabs are connected properly to the body.

   aa. Audio unit (without center display) (See **AUDIO UNIT REMOVAL/INSTALLATION**.)

   ab. Hood release lever (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)

   ac. Fuel-filler lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)

   ad. Driver-side lower panel (See **LOWER PANEL REMOVAL/INSTALLATION**.)

   ae. Knee bolster (See **KNEE BOLSTER REMOVAL/INSTALLATION**.)

   af. Joint cover (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

ag. Steering shaft (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

ah. Shift lever component (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

ai. Selector lever component (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

5. Remove nuts.

6. Remove the front console bracket.

7. Remove bolts.

8. Remove the parking brake lever component.

9. Disconnect the dashboard harness connectors and remove the wiring harness clip.

10. Remove the bolts and nuts shown in the figure.

11. Remove the dashboard bracket.

12. To prevent scratches or damage, affix protective tape to the position shown in the figure of the windshield.

13. Remove bolts.

14. Remove the caps, then remove bolts.

15. Move the dashboard in the direction of the arrow in the order of (1), (2) shown in the figure, then remove the guide pin.

16. Turn the dashboard 90° in the direction of the arrow (3) shown in the figure.

17. Take the dashboard off from the front driver-side door or front passenger-side door opening.

2014 - Mazda3 - Body and Accessories

DASHBOARD INSTALLATION

1. Rotate the plate nuts by hand in the direction of the arrow shown in the figure until they are seated.

CAUTION:

- After removing the dashboard, the plate nuts of the member junctions will have lifted. If the dashboard is removed with the plate nuts lifted, the plate nuts may contact the vehicle body, causing a dent or damage to the coating film, and the dashboard installation will be difficult. Before inserting the dashboard into the cabin, adjust the plate nuts of the member junctions.
- If the plate nuts are tightened completely when installing bolts, the plate nuts may not move resulting in damage to the member junction tab and the vehicle body. After seating the plate nuts, verify that they can be rotated by hand.

NOTE:

- If the plate nuts cannot be rotated by hand, loosen the plate nuts using a hexagonal wrench.

2. Insert the dashboard from the front driver-side door or front passenger-side door opening.

CAUTION:

- If the member junction tabs become disengaged from the dashboard when inserting the dashboard into the cabin, the member junction could be damaged. Before inserting the dashboard. into the cabin, verify that the member junction tabs are engaged with the dashboard.

3. Move the dashboard in the direction of the arrow shown in the figure, align it with the guide pins on the vehicle body sides, and set it.

4. Insert bolts on the passenger-side.

NOTE:

- Tighten bolts to the specified toque after the member junction position of bolts is positioned.

5. Tighten bolts on the driver-side until they are seated.

NOTE:

- Do not use a tool to tighten bolts, and instead hand tighten them until they feel sufficiently tight.

6. Tighten bolts on the passenger-side until they are seated.

NOTE:

- After bolts are seated, rotate the plate nuts of the member junctions and visually inspect them from the lower side of the dashboard on the passenger-side to verify that they emerge in the direction of the body panels.

7. Verify that the member junction hole of bolt and the through-hole of bolt on the vehicle side are aligned.

NOTE:

- If the member junction hole of bolt is not aligned with the through-hole of bolt on the vehicle side, remove bolts on the driver-side and the front passenger-side, then resume the procedure from Step 5.

8. Seated bolts.

CAUTION:

- If bolts are reused, the plate nuts of the member junctions may not move causing damage to the member junction tabs and the vehicle body. Always replace bolts with new ones.

9. Completely tighten bolts on the driver-side and passenger-side to the specified torque.

10. Completely tighten bolts to the specified torque.

BOLT : **8—12 N·m {82—122 kgf·cm, 71—106 in·lbf}**

11. Install the caps.

12. Install the dashboard bracket.
13. Install nuts.
14. Install bolts.

BOLT, NUT : **18—26 N·m {1.9—2.6 kgf·m, 14—19 ft·lbf}**

15. Install nuts.
16. Install the rear console bracket.
17. Connect the dashboard harness connectors and install the wiring harness clip.
18. Install the parking brake lever component.

19. Install the front console bracket.

20. Install nuts.
21. Install the following parts:
    a. Selector lever component (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    b. Shift lever component (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    c. Steering shaft (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
    d. Joint cover (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

(See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.)

ae. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

af. Front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

ag. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

ah. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)

ai. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

22. Shift the selector lever from the D position to the P position (ATX).
23. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
24. Remove the wheel blocks on the front and rear wheels.

2014 - Mazda3 - Body and Accessories

SPEAKER GRILLE REMOVAL/INSTALLATION

CAUTION:

- If work using protective tape is performed in an area where the temperature can increase drastically or the protective tape is left adhered for a long period of time, tape adhesive could remain area where the protective tape was applied when the it is peeled off. When applying protective tape, avoid areas where the temperature of the tape can increase drastically and peel off the protective tape soon after the work is completed.

Center Speaker Grille

1. To prevent scratches or damage, affix protective tape to the position shown in the figure of the dashboard.

2. To detach clip (1) from the dashboard, insert the remover tool into the clearance between the center speaker grille and dashboard.

3. Move the remover tool in the direction of arrow (1) shown in the figure and detach clip (1), clip (2) from the dashboard.

4. Slide the remover tool to the position shown in the figure.

5. Move the remover tool in the direction of arrow (2) shown in the figure to detach clip (3) from the dashboard.

6. Slide the remover tool to the position shown in the figure.

7. Move the remover tool in the direction of arrow (3) shown in the figure to detach clip (4) from the dashboard.

8. Hold the shaded area of the center speaker grille, move the center speaker grille in the direction of the arrow (4), and remove the center speaker grille while detaching clips (5).

9. Install in the reverse order of removal.

Side Speaker Grille

1. To prevent scratches or damage, affix protective tape to the position shown in the figure of the dashboard.

2. To detach clip (1) from the dashboard, insert the remover tool into the clearance between the side speaker grille and dashboard.

3. Move the remover tool in the direction of arrow (1) shown in the figure and detach clip (1) from the dashboard.

4. Slide the remover tool to the position shown in the figure.

5. Move the remover tool in the direction of arrow (2) shown in the figure and detach clip (2) from the dashboard.

6. Slide the remover tool to the position shown in the figure.

7. Move the remover tool in the direction of arrow (3) shown in the figure and detach clip (3) from the dashboard.

8. Slide the remover tool to the position shown in the figure.

9. Move the remover tool in the direction of arrow (4) shown in the figure and detach clip (4) from the dashboard.

10. Hold the shaded area of the side speaker grille, move the side speaker grille in the direction of the arrow (5), and remove the side speaker grille while detaching guides.

11. Remove the side speaker grille in the direction of arrow (6) from the dashboard.

12. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DEMISTER GRILLE REMOVAL/INSTALLATION

CAUTION:

- If work using protective tape is performed in an area where the temperature can increase drastically or the protective tape is left adhered for a long period of time, tape adhesive could remain area where the protective tape was applied when the it is peeled off. When applying protective tape, avoid areas where the temperature of the tape can increase drastically and peel off the protective tape soon after the work is completed.

1. To prevent scratches or damage, affix protective tape to the position shown in the figure of the dashboard.

2. To detach the clip from the dashboard, insert the remover tool into the clearance between the demister grille and dashboard.

3. Move the remover tool in the direction of arrow (1) shown in the figure and detach the clip from the dashboard.

4. Slide the remover tool in the direction of the arrow shown in the figure.

5. Move the remover tool in the direction of arrow (2) shown in the figure and detach the tab from the dashboard.

6. Hold the demister grille in the shaded areas, move the demister grille in the direction of arrow (3), and detach the tabs from the dashboard.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT CONSOLE REMOVAL/INSTALLATION

CAUTION:

- If work using protective tape is performed in an area where the temperature can increase drastically or the protective tape is left adhered for a long period of time, tape adhesive could remain area where the protective tape was applied when the it is peeled off. When applying protective tape, avoid areas where the temperature of the tape can increase drastically and peel off the protective tape soon after the work is completed.

1. Affix protective tape to the position shown in the figure.

2. Set the wheel blocks for both the front and rear wheels.
3. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
4. Shift the selector lever from the P position to the D position (ATX).
5. Remove the following parts:
   a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   b. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   c. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   d. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   e. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   f. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   g. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   h. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
6. Remove fasteners.

7. Pull the front console in the direction of the arrow in the order of (1), (2), (3), (4) and remove it while detaching clips A, clips B.

CLIP A

CLIP B

8. Operate the parking lever, move the front console in the direction of arrow (5), and remove the front console while setting the parking brake lever aside.

9. Disconnect the auxiliary jack/USB port connector. (without center display and without CD player)

10. Disconnect the front accessory socket connector. (without center display and without CD player)

11. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CLUSTER SWITCH REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

3. Remove the front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

4. Remove bolt.

5. Pull the driver-side lower panel in the direction of the arrow in the order of (1), (2) while detaching clips, hooks and pin.

6. Set the driver-side lower panel aside.

7. Insert the remover tools into the positions shown in the figure, move the remover tools in the direction of arrow (3), move the cluster switch in the direction of arrow (4) while pressing hooks (1), and then disconnect cluster switch hooks (1) from the instrument panel.

8. Insert the remover tools into the positions shown in the figure, move the remover tools in the direction of arrow (5), move the cluster switch in the direction of arrow (6) while pressing hooks (2), and then disconnect cluster switch hooks (2) from the instrument panel.

9. Remove the cluster switch in the direction of the arrow (7) shown in the figure.

CAUTION:

- If the driver's side lower panel is left uninstalled it could be damaged. If the cluster switch is not to be installed for the time being during the cluster switch inspection, temporarily install the driver's side lower panel in the direction of the arrows shown in the figure.

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK COVERING REMOVAL/INSTALLATION

4SD

1. Remove the trunk covering in the direction of arrow shown in the figure.

2. Install in the reverse order of removal.

5HB

1. Remove the trunk covering in the direction of arrow shown in the figure.

2. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE RECESS REMOVAL/INSTALLATION

1. Insert the remover tool into service hole A at the position shown in the figure.

2. Move the remover tool in the direction of arrow (1) shown in the figure to detach tabs A and B of the service hole cover from the liftgate lower trim.

3. Insert the remover tool into service hole B at the position shown in the figure.

4. Move the remover tool in the direction of arrow (2) shown in the figure to detach tabs C and D of the service hole cover from the liftgate lower trim.

5. Move the service hole cover in the direction of arrow (3) shown in the figure to pull the pins and guides of the service hole cover out, and remove the service hole cover.

6. Insert the remover tool into the opening of the service hole cover, and while pressing hooks A in the direction of arrow (4) shown in the figure, move the liftgate recess in the direction of arrow (5).

CAUTION:

- If hooks A are removed or disconnected without pressing in the upper part of the liftgate recess, hooks A could be damaged resulting in rattle noise occurring. When removing or disconnecting hooks A, always press in the upper part of the liftgate recess.

7. Remove the liftgate recess in the direction of the arrow (6) shown in the figure avoiding hooks B.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SHOCK ABSORBING PAD REMOVAL/INSTALLATION

4SD

Front

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
    a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
    a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
    m. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
8. Pinch the tab using pincers, remove the tab in the direction of the arrow (1) shown in the figure.

9. Pinch the tab using pincers, remove the tab in the direction of the arrow (2) shown in the figure.

10. Pull the shock-absorbing pad in the direction of the arrow (3) and remove it while detaching guide.

11. Install in the reverse order of removal.

Rear

1. Set the wheel blocks for both the front and rear wheels.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Shift the selector lever from the P position to the D position (ATX).

4. Remove the sunroof seaming welt. (with sunroof system)

5. Remove the following parts:

   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:

a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

m. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

8. Pinch the tab using pincers, remove tabs, then remove the shock-absorbing pad in the direction of the arrow shown in the figure.

9. Install in the reverse order of removal.

5HB

Front

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

7. Remove the following parts:

a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

h. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

j. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

k. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

s. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

8. Pinch the tab using pincers, remove tabs, then remove the shock-absorbing pad in the direction of the arrow shown in the figure.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DASHBOARD DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Seal tape
2	Nut
3	Screw
4	Center defroster
5	Side defroster
6	Screw
7	Dashboard member
8	Wiring harness
9	Screw
10	Duct
11	Dashboard

2. Assemble in the reverse order of disassembly.

2014 - Mazda3 - Body and Accessories

COLUMN COVER REMOVAL / INSTALLATION

1. Pull down the steering wheel.
2. Press the shaded area shown in the figure using your thumb, and lift the upper column cover in the direction of arrow (1).

3. Pull the upper column cover in the direction of the arrow (2) and remove it while detaching pins, tabs and guides.
4. Remove hooks from the meter hood.

CAUTION:

- If the cover of the meter hood is deformed, it may not return to its original condition. When removing the cover of the meter hood, detach hooks one by one from the upper column cover.

5. Pull up the steering wheel.

6. Remove screws.

7. Pull down the lower column cover in the direction of arrow (4) while keeping it open in the direction of arrow (3) shown in the figure.

8. Lower the adjusting lever to the bottommost position.

CAUTION:

- If the adjuster lever is pulled down to the very bottom and the lower column cover is removed while the steering wheel is not secured, the lower column cover will interfere with the driver's side lower panel and could cause damage to the lower column cover and driver's side lower panel. Secure the steering wheel when removing the lower column cover.

9. Set the adjusting lever aside in the direction of arrow (5) shown in the figure and remove the lower column cover while detaching the guide.

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LOWER PANEL REMOVAL/INSTALLATION

Driver-side

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the following parts:
    a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    b. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    c. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    d. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    e. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    f. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    g. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    h. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
    l. Driver-side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    m. Driver-side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
    n. Hood release lever (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)
    o. Fuel-filler lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)
5. Remove bolt.

6. Pull the driver-side lower panel in the direction of the arrow in the order of (1), (2), (3), (4), (5) while detaching clip, hooks A, hook B, pin and guide.

7. Disconnect the trunk lid opener switch connector. (only 4SD)

8. Install in the reverse order of removal.

Passenger-side

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Passenger-side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Passenger-side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   d. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   e. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

3. Remove bolts.

4. Remove screws.

5. Pull the passenger-side lower panel in the direction of the arrow in the order of (1), (2), (3), (4) and remove it while detaching clips, hook A, hook B, pin and guide.

Installation

1. Install clips, hook A, hook B, pin and guide while pressing the shaded area shown in the figure for the passenger-side lower panel in the direction of the arrow in the order of (1), (2), (3), (4) and (5).

2. Install screw (1).

3. Install screw (2).

4. Install bolt (1).

5. Install bolt (2).

6. Install the following parts:

   a. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   d. Passenger-side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   e. Passenger-side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

7. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

8. After installing the passenger-side lower panel and glove compartment, measure the clearance, and verify that the measurement value is within the specification shown in the figure.

   - If the measurement value is not within the specification after measuring the clearance between the passenger-side lower panel and glove compartment, adjust the passenger-side lower panel to the proper position. (See **Passenger-side lower panel adjustment**.)

Passenger-side lower panel adjustment

1. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL / INSTALLATION**.)
2. Loosen bolts.
    - If the passenger-side lower panel moves in the lateral direction when bolts are loosened, go to the Step 3 and 4.
    - If the passenger-side lower panel does not move in the lateral direction when bolts are loosened, go to the Step 5.

3. Remove bolts.

4. Install bolts in the order of (1), (2) shown in the figure.

5. Install bolts in the order of (1) and (2) while pressing the shaded area shown in the figure for the passenger-side lower panel.

6. Install the glove compartment, measure the clearance between the glove compartment and passenger-side lower panel again, and verify that it is within the specification.

- If it is not within the specification after measuring the clearance, repeat the adjustment procedure from Step 1.

2014 - Mazda3 - Body and Accessories

METER HOOD REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the upper column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Remove the meter hood in the direction of the arrows in the order of (1), (2), (3) while detaching the clips, pins and guides.

With Active Driving Display

Without Active Driving Display

4. Disconnect the start switch connector.

5. Remove the dashboard harness clip.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

GLOVE COMPARTMENT REMOVAL/INSTALLATION

1. Open the glove lid.
2. Pull the stay damper in the direction of the arrow (1) shown in the figure and remove the hook A.

CAUTION:

- If the glove compartment is closed without being joined to the stay damper, the stay damper may be damaged. Verify that the stay damper is joined to the glove compartment before closing the glove compartment.

3. Push the glove compartment end in the direction of the arrow (2) and remove hooks B.

CAUTION:

- When disengaging hooks B, the hooks could interfere with the lower panel and cause scratches or damage. When removing hooks B, press in the ends of the glove compartment to a location which does not interfere with the lower panel.

4. Pull down the glove compartment in the direction of the arrow (3).

5. Pull the glove compartment in the direction of the arrow (4) and remove it while detaching hooks C.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

VENTILATOR GRILLE REMOVAL/INSTALLATION

Side Ventilator Grille

Removal

1. Using the remover tool, release the ventilator grille tabs A at the positions shown in the figure and remove the bezel.

2. Insert the tape-wrapped flathead screwdriver into the position shown in the figure, move the side ventilator grille in the direction of arrow (1) shown in the figure, and remove the tab B from the dashboard.

Installation

1. Assemble the ventilator grille and bezel.

2. Move the ventilator grille component in the direction shown by the arrow in the figure and install the ventilator grille component to the dashboard.

Center Ventilator Grille

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
4. Remove screws.

5. Push the end of decoration panel in the direction of arrow (1) and detach hooks.

CAUTION:

- If excessive force is applied to the end of the decoration panel, it could damage the decoration panel. When disengaging the hooks, be careful not to apply excessive force to the hooks.

6. Remove the ventilator grille in the direction of the arrow (2) shown in the figure.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

KNEE BOLSTER REMOVAL/INSTALLATION

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the following parts:
    a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    b. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    c. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    d. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    e. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    f. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    g. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    h. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    i. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    j. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    k. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
    l. Driver-side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    m. Driver-side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
    n. Hood release lever (See **HOOD RELEASE LEVER AND RELEASE CABLE REMOVAL/INSTALLATION**.)
    o. Fuel-filler lid opener lever (See **FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION**.)
    p. Driver-side lower panel (See **LOWER PANEL REMOVAL/INSTALLATION**.)
5. Remove the bolts.

6. Pull the knee bolster in the direction of the arrow in the order of (1), (2) while detaching hooks.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SIDE WALL REMOVAL/INSTALLATION

LH

1. Pull the side wall in the direction of the arrow in the order of (1), (2) and remove it while detaching hooks and clip.

CAUTION:

- If hooks and clip are removed forcefully, guide may be damaged. Carefully remove hooks and clip so as not to damage guide.

2. Pull the side wall in the direction of the arrow (3) and remove it while detaching guide.

3. Install in the reverse order of removal.

RH

1. Pull the side wall in the direction of the arrow in the order of (1), (2) and remove it while detaching hooks.

CAUTION:

- If hooks are removed forcefully, guide may be damaged. Carefully remove hooks so as not to damage guide.

2. Pull the side wall in the direction of the arrow (3) and remove it while detaching guide.

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DASHBOARD UNDER COVER REMOVAL/INSTALLATION

1. Detach hooks in the direction of the arrows in the order of (1), (2) shown in the figure.

CAUTION:

- If hooks and pins are removed forcefully, guide may be damaged. Carefully remove hooks and pins so as not to damage guide.

2. Remove the dashboard under cover in the direction of the arrow (3) shown in the figure while detaching the guide.

3. Install in the reverse order of removal.

DASHBOARD UNDER COVER REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

UPPER PANEL REMOVAL

1. Disconnect the negative battery cable. (with commander switch) (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Open the console lid.

3. Remove the button, then open the fastener.

4. Pull the upper panel in the order of arrows (1), (2), and (3) as shown in the figure and remove it while detaching clips A, hooks, and clips B.

5. Disconnect the commander switch connector (with commander switch).

2014 - Mazda3 - Body and Accessories

UPPER PANEL INSTALLATION

NOTE:

- When clips B are removed at the front of the upper panel, clips for the rear of the shift panel may be disengaged.

1. Connect the commander switch connector (with commander switch).
2. Verify that the clips on the end of the shift panel are disengaged from the front console.

CAUTION:

- If the upper panel is installed with the upper panel hooks not inserted into the grooves of the console, the hooks could come out or be bent inward and damaged. Verify that the hooks are inserted into the grooves and then install.

3. Press the upper panel in the order of arrows (1), (2), and (3) as shown in the figure, and install hooks, clips A, clips B and clips C.

4. Fasten the fastener and button.

5. Close the console lid.

6. Connect the negative battery cable. (with commander switch) (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

SHIFT PANEL REMOVAL/INSTALLATION

ATX

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   b. Selector lever knob (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

3. Remove clip A.

4. Disconnect the connector.

5. Remove the shift panel in the direction of the arrows in the order of (1), (2), (3), (4) while detaching hooks, clips B and clip C.

6. Install in the reverse order of removal.

MTX

1. Disconnect the negative battery cable. (with commander switch) (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   b. Shift lever knob (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

3. Remove the shift panel in the direction of the arrows in the order of (1), (2), (3), (4) while detaching hooks, clips A and clip B.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT CONSOLE BOX REMOVAL/INSTALLATION

ATX

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   b. Selector lever knob (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   c. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
3. Insert a remover tool in the position indicated by the arrow (1) in the figure and detach clip (1).

4. Insert a remover tool in the position indicated by the arrow (2) in the figure and detach clip (2).

5. Remove the front console box in the direction of the arrow (3) shown in the figure while detaching guide.

6. Install in the reverse order of removal.

MTX

1. Disconnect the negative battery cable. (with commander switch) (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   b. Shift lever knob (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   c. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

3. Insert a remover tool in the position indicated by the arrow (1) in the figure and detach clip (1).

4. Insert a remover tool in the position indicated by the arrow (2) in the figure and detach clip (2).

5. Remove the front console box in the direction of the arrow (3) shown in the figure while detaching guide.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR CONSOLE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Open the rear console lid.

3. Remove the storage box in the direction of the arrow (1) shown in the figure.

4. Remove the console mat.

5. Remove screws.

6. Remove the upper panel. (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

7. Pull the console-up in the direction of the arrow (2) and remove it while detaching clips A, guides A.

8. Disconnect the auxiliary jack/USB port/SD card slot hub connector. (with center display and with CD player)

9. Disconnect the auxiliary jack/USB port connector. (without center display and with CD player)

10. Disconnect the center accessory socket connector.

11. Pull the rear console in the direction of the arrow (3) and remove it from the front console while detaching clips B, guides B.

12. Remove the rear console in the direction of the arrow (4) shown in the figure.

13. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR CONSOLE DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Console panel

2	Screw
3	Side panel (See **Side Panel Removal Note**.)
4	Rear console box
5	Pin
6	Rear console lid

2. Assemble in the reverse order of disassembly.

Side Panel Removal Note

1. Move the side panel in the order of arrows (1) and (2) shown in the figure and remove the guide from the rear console box.

2014 - Mazda3 - Body and Accessories

DECORATION PANEL REMOVAL/INSTALLATION

CAUTION:

- To prevent scratches or damage, apply protective tape to the position shown in the figure.
- If work using protective tape is performed in an area where the temperature can increase drastically or the protective tape is left adhered for a long period of time, tape adhesive could remain area where the protective tape was applied when the it is peeled off. When applying protective tape, avoid areas where the temperature of the tape can increase drastically and peel off the protective tape soon after the work is completed.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Press out clips A shown in the figure towards the rear of the vehicle.

4. While pressing clip A with a finger, insert the remover tool into the position shown in the figure, move the decoration panel, and disengage decoration panel clip A from the lower panel.

CAUTION:

- If the decoration panel is pulled with excessive force when disengaging clip A, the center ventilator grille and decoration panel connection could be damaged. When disengaging clip A, be careful not to damage the decoration panel.

5. Insert the remover tool into the position shown in the figure and move the decoration panel in the direction of arrow (1) shown in the figure, and disengage clip B from the dashboard.

6. Insert the remover tool into the position shown in the figure, move the decoration panel in the direction of arrow (2) shown in the figure, and remove clip B from the dashboard.

7. Hold the shaded areas shown in the figure, pull the decoration panel straight out in the direction (towards rear of vehicle) of arrows (3) shown in the figure, and disconnect clips B, clips C from the instrument panel.

CAUTION:

- If the decoration panel is pulled out while tilted, the center ventilator grille and decoration panel connection could be damaged. Pull the decoration panel straight out toward the rear of the vehicle when removing.

8. Disconnect the hazard warning switch connector.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DECORATION PANEL DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Screw
2	Bezel
3	Decoration plate

2. Assemble in the reverse order of disassembly.

2014 - Mazda3 - Body and Accessories

A-PILLAR TRIM REMOVAL/INSTALLATION

1. Partially peel back the seaming welt.

2. Grasp the shaded areas shown in the figure, and pull the A-pillar trim in the direction of the arrow (1) while detaching clips A, clip B.

3. Cut the lead wire connecting clips B and grommet using a nipper.

4. Pull the A-pillar trim in the direction of the arrow in the order of (2) and remove the A-pillar trim while detaching guides.

5. Move the hook in the direction of arrow (3) shown in the figure using a tape-wrapped flathead screwdriver and detach it from the front pillar inner panel.

6. Move the hook in the direction of arrow (4) shown in the figure using a tape-wrapped flathead screwdriver and detach it from the front pillar inner panel.

7. Remove the grommet in the direction of the arrow (5) shown in the figure.

8. When installing the A-pillar, install new clips B and grommet to the A-pillar trim in advance.

9. Install in the reverse order of removal.

A-PILLAR TRIM REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

FRONT SIDE TRIM REMOVAL/INSTALLATION

1. Remove the front scuff plate. (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
2. Partially peel back the seaming welt.
3. Remove the cap nut.

4. Pull the front side trim in the direction of the arrow shown in the figure and remove it while detaching the clip.
5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TIRE HOUSE TRIM REMOVAL/INSTALLATION

4SD

1. Remove the following parts:
    a. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**)
    b. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
    c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
2. Partially peel back the seaming welt.
3. Remove the fastener.

4. Move the tire house trim in the order of arrows (1) and (2) shown in the figure while setting the rear seat back aside, and remove the clips from the body.

5. Remove the tire house trim.

6. Install in the reverse order of removal.

5HB

1. Remove the following parts:

   a. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**)

   b. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)

2. Partially peel back the seaming welt.

3. Move the tire house trim in the order of arrows (1) and (2) shown in the figure while setting the rear seat back aside, and remove the clips from the body.

4. Remove the tire house trim.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR PACKAGE TRIM REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)

   d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   e. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

   f. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)

3. Remove fasteners.

4. Remove clips.

5. Pull up the rear package trim in the direction of the arrow (1) shown in the figure while remove the hook, pull the rear package trim in the direction of the arrow (2), and remove it.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR PACKAGE TRAY REMOVAL/INSTALLATION

1. Move the hooks in the direction of arrows (1) shown in the figure to disengage them from the strap hangers.

2. Move the rear package tray in the direction of the arrow in the order of arrow (2), (3) shown in the figure and unhook the cover from the pins of the trunk side upper trim.

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

B-PILLAR LOWER TRIM REMOVAL/INSTALLATION

1. Remove the front scuff plate. (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

2. Remove the rear scuff plate. (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

3. Partially peel back the seaming welt.

4. Grasp the shaded areas shown in the figure, and pull the B-pillar lower trim in the direction of the arrow in the order of (1), (2) while detaching hooks, pins A.

5. Grasp the shaded area shown in the figure, and pull the B-pillar lower trim in the direction of the arrow (3) while detaching the clips, pins B.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

B-PILLAR UPPER TRIM REMOVAL/INSTALLATION

1. Remove the following parts:
   a. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   c. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   d. Adjuster anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   e. Upper anchor installation bolts on the front seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
2. Partially peel back the seaming welt.
3. Grasp the shaded area shown in the figure, and pull the B-pillar upper trim in the direction of the arrow (1) while detaching clips, pin A, pin B.

4. Remove the B-pillar upper trim in the direction of the arrow (2) shown in the figure while detaching the guide.

CAUTION:

- If clips, pin A and pin B are removed forcefully, guide may be damaged. Carefully remove clips, pin A and pin B so as

not to damage guide.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

C-PILLAR TRIM REMOVAL/INSTALLATION

4SD

1. Lower the rear seat back.
2. Remove the fastener.

3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Pull the C-pillar trim in the direction of the arrow in the order of (1), (2) while detaching clips A, clip B and clip C.

5. Remove the C-pillar trim in the direction of the arrow in the order of (3), (4) while detaching guide (1), guide (2), and guide (3).

6. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**Rear package tray.)
   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
5. Remove the fastener.

6. Remove the screw.

7. Pull the C-pillar trim in the direction of the arrow (1) while detaching clip A, clip B.

8. Cut the lead wire connecting clips B and grommet using a nipper.

9. Slightly bend back the trunk side trim. (with rear speaker) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

10. Pull the C-pillar trim in the direction of the arrow (2) while detaching clips A.

11. Move the hook in the direction of arrow (3) shown in the figure using a tape-wrapped flathead screwdriver and detach it from the inner panel.

12. Move the hook in the direction of arrow (4) shown in the figure using a tape-wrapped flathead screwdriver and detach it from the inner panel.

13. When installing the C-pillar, install new clips B and grommet to the C-pillar trim in advance.

14. Disconnect the rear speaker connector. (with rear speaker)

15. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT SCUFF PLATE REMOVAL/INSTALLATION

1. Grasp the shaded area shown in the figure, detach tab A while pulling the front scuff plate in the direction of the arrow (1) shown in the figure, then detach the hook A, clip A, and pin A while pulling in the direction of the arrow (2).

2. Grasp the shaded area shown in the figure, detach tab B while pulling the front scuff plate in the direction of the arrow (3) shown in the figure, then detach the hook B, clip B and pin B while pulling in the direction of the arrow (4).

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR SCUFF PLATE REMOVAL/INSTALLATION

1. Grasp the shaded area shown in the figure, detach tab A while pulling the rear scuff plate in the direction of the arrow (1) shown in the figure, then detach hook A, clip A, pin A while pulling in the direction of the arrow (2).

2. Grasp the shaded area shown in the figure, detach tab B while pulling the rear scuff plate in the direction of the arrow (3) shown in the figure, then detach hook B, clip B, pin B while pulling in the direction of the arrow (4).

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR DOOR TRIM DISASSEMBLY/ASSEMBLY

1. Disassemble in the order shown in the figure.

1	Fastener
2	Switch panel cover (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)
3	Power window subswitch

4	Rear door trim

2. Assemble in the reverse order of disassembly.

2014 - Mazda3 - Body and Accessories

TRUNK END TRIM REMOVAL/INSTALLATION

4SD

1. Remove the trunk covering. (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
2. Remove the lock bezel in the direction of the arrow (1) shown in the figure while detaching tabs.

3. Partially peel back the seaming welt.
4. Remove fasteners.

5. Pull the trunk end trim in the direction of the arrow in the order of (2), (3) shown in the figure while detaching clips A, pins A, clips B, pins B and guides.

6. Install in the reverse order of removal.

5HB

1. Remove the trunk covering. (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
2. Remove the lock bezel in the direction of the arrow (1) shown in the figure while detaching tabs.

3. Partially peel back the seaming welt.

4. Remove fasteners.

5. Pull the trunk end trim in the direction of the arrow in the order of (2), (3) shown in the figure while detaching clips A, pins A, clips B, pins B and guides.

6. Pull the trunk end trim in the direction of the arrow in the order of (3), (4) shown in the figure while detaching hooks, clips B, pins B.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK SIDE TRIM REMOVAL/INSTALLATION

4SD

1. Remove the following parts:
   a. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   b. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
2. Remove fasteners (1).

3. Remove fasteners (2).
4. Remove fasteners (3).
5. Move the trunk side trim in the direction of arrows (4) shown in the figure, and remove the trunk side trim while setting the tire house trim aside.

6. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

   c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)

   d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

   e. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   f. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)

   g. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   h. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   i. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

3. Remove the fastener (1).

4. Remove the fastener (2).

5. Remove fasteners (3).

6. Remove the pin, then remove the cargo hook cover.

7. Remove the trunk side trim in the direction of the arrow (4) shown in the figure. (See **Trunk Side Trim Installation Note**.)

8. Install in the reverse order of removal.

Trunk Side Trim Installation Note

1. If the cargo compartment light wiring harness is routed incorrectly, the trunk side upper trim will interfere with the cargo compartment light wiring harness when installing the trunk side upper trim which could damage the cargo compartment light wiring harness. When routing the cargo compartment light wiring harness, route it through the slit area shown in the figure. (LH only)

TRUNK SIDE TRIM REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

4. Remove the fastener.

5. Remove the pin, then remove the cargo hook cover.

6. Partially peel back the seaming welt.

7. Pull the trunk side upper trim in the direction of the arrow in the order of (1), (2), (3), (4) and remove it while detaching clips A, clips B and hooks.

8. Disconnect the cargo room light connector. (LH only)

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR TRIM REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the inner handle cover while detach tabs A, pin A.

3. Remove the screw A.

4. Remove the cover, then remove the screw B.

5. Grasp the shaded area shown in the figure, and pull the front door trim in the direction of the arrow in the order of (1), (2), (3), (4) while detaching clips A, hooks A and pin B.

CAUTION:

- If the front door trim is removed in the same way as past vehicles by pulling it upward, it could damage clips A and pin B. When removing the front door trim, always pull it in the direction of the arrow shown in the figure.

6. Remove tab B in the direction of the arrow (5) shown in the figure.

7. Remove the front inner handle in the direction of the arrow (6) shown in the figure while detaching tab C.

8. Disconnect the power window main switch connector (driver-side) or power window subswitch connector (passenger-side).

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR TRIM DISASSEMBLY/ASSEMBLY

Driver-side

1. Disassemble in the order shown in the figure.

1	Fastener
2	Switch panel cover (See **POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION**.)
3	Power window main switch
4	Decoration panel
5	Front door trim

2. Assemble in the reverse order of disassembly.

Passenger-side

1. Disassemble in the order shown in the figure.

1	Fastener
2	Switch panel cover (See **POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION**.)
3	Lock switch
4	Power window subswitch

5	Decoration panel
6	Front door trim

2. Assemble in the reverse order of disassembly.

2014 - Mazda3 - Body and Accessories

REAR DOOR TRIM REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the inner handle cover while detach tabs A, pin A.

3. Remove the screw A.

4. Remove the cover, then remove the screw B.

5. Grasp the shaded areas shown in the figure, and pull the rear door trim in the direction of the arrow in the order of (1), (2), (3), (4) while detaching clips A, hooks A and pin B.

CAUTION:

- If the rear door trim is removed in the same way as past vehicles by pulling it upward, it could damage clips A and pin B. When removing the rear door trim, always pull it in the direction of the arrows shown in the figure.

6. Remove tab B in the direction of the arrow (5) shown in the figure.

7. Remove the rear inner handle in the direction of the arrow (6) shown in the figure while detaching tab C.

8. Disconnect the power window subswitch connector.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK LID RECESS REMOVAL/INSTALLATION

1. Using a remover tool, push hooks A in the direction of the arrow (1) shown in the figure and remove it.

CAUTION:

- If hooks A are removed or disconnected without pressing in the upper part of the trunk lid recess, hooks A could be damaged resulting in rattle noise occurring. When removing or disconnecting hooks A, always press in the upper part of the trunk lid recess.

2. Remove the trunk lid recess in the direction of the arrow (2) shown in the figure avoiding hooks B.

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK BOARD REMOVAL/INSTALLATION

4SD

1. Remove the trunk covering. (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
2. Remove trunk board in the direction of the arrow (1) shown in the figure.

3. Install in the reverse order of removal.

5HB

1. Remove the trunk covering. (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
2. Remove trunk board in the direction of the arrow (1) shown in the figure.

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE UPPER TRIM REMOVAL/INSTALLATION

1. Take the shaded area shown in the figure, detach tab A while pulling the liftgate upper trim in the direction of the arrow (1) shown in the figure, then detach clips A, clip B, and pin while pulling in the direction of the arrow (2).

2. Take the shaded area shown in the figure, detach tab B while pulling the liftgate upper trim in the direction of the arrow (3) shown in the figure, then detach the clip C, while pulling in the direction of the arrow (4).

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE SIDE TRIM REMOVAL/INSTALLATION

1. Remove the liftgate upper trim. (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)
2. Move the hooks in the direction of arrows (1) shown in the figure to disengage them from the strap hangers.

3. Pull the point A of the strap hanger as shown in the figure.

4. Remove the strap hanger.

5. Remove the fastener.

6. Take the shaded area shown in the figure, and pull the liftgate side trim in the direction of the arrow (1) while detaching clips.

7. Take the shaded area shown in the figure, detach tab A, tab B while pulling the liftgate side trim in the direction of the arrow (2) shown in the figure, then detach the hook while pulling in the direction of the arrow (3).

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE LOWER TRIM REMOVAL/INSTALLATION

1. Remove the following parts:
    a. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)
    b. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)
    c. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)
2. Remove fasteners.

3. Take the shaded area shown in the figure, and pull the liftgate lower trim in the direction of the arrow in the order of (1), (2), (3), (4) and remove it while detaching clips A, clips B, pins.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK LID TRIM REMOVAL/INSTALLATION

1. Remove the trunk lid recess. (See **TRUNK LID RECESS REMOVAL/INSTALLATION**.)
2. Remove the fasteners, then remove the trunk lid trim.

3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

ASSIST HANDLE REMOVAL/INSTALLATION

Removal

1. Insert a remover tool into the service hole and remove the assist handle covers.

2. Remove the assist handle in the direction of the arrow (1) and (2), while detaching the clips.

NOTE:

- Remove the assist handle by shaking it up and down.

Installation

1. Push the assist handle in the direction of the arrow shown in the figure.

2. Push the assist handle cover assembled to install the assist handle.

ASSIST HANDLE REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

SUNVISOR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove screw A.

3. Remove the sunvisor in the direction of the arrow (1) shown in the figure while detaching hook B.

4. Disconnect the vanity mirror illumination connector (with vanity mirror illumination).

5. Press the center adaptor tabs in the direction of the arrow (2) shown in the figure using two remover tool.

6. Remove the center adaptor in the direction of the arrow (3) shown in the figure.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

HEADLINER REMOVAL/INSTALLATION

4SD

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
    a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
    a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
8. Set the selector lever component aside. (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
9. Set the shift lever component aside. (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
10. Affix protective tape to the position shown in the figure.

11. Disconnect the roof wiring harness connector and remove the roof wiring harness connector clip from the body.

12. Temporarily install the seaming welt shown in the figure to the headliner.

CAUTION:

- If fasteners are removed without temporarily installing the seaming welt, the headliner may fall off and the part may be damaged. Before removing fasteners, temporarily install the seaming welt to prevent the headliner from falling off.

13. Open all of the doors (front/rear).

14. Remove fasteners.

15. Partially peel back the seaming welt. Take the headliner out from the opened passenger-side door opening.

16. Install in the reverse order of removal.

5HB

1. Set the wheel blocks for both the front and rear wheels.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Shift the selector lever from the P position to the D position (ATX).

4. Remove the sunroof seaming welt. (with sunroof system)

5. Remove the following parts:
   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
7. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
   d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
   e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
   f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
   g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   h. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   j. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   k. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   l. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   m. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   n. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   o. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
8. Set the selector lever component aside. (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
9. Set the shift lever component aside. (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
10. Affix protective tape to the position shown in the figure.

11. Disconnect the roof wiring harness connector and remove the roof wiring harness connector clip from the body.

12. Disconnect the rear washer hose C. (See **REAR WASHER HOSE REMOVAL / INSTALLATION**.)

13. Temporarily install the seaming welt shown in the figure to the headliner.

CAUTION:

- If fasteners are removed without temporarily installing the seaming welt, the headliner may fall off and the part may be damaged. Before removing fasteners, temporarily install the seaming welt to prevent the headliner from falling off.

14. Open all of the doors (front/rear).

15. Remove fasteners.

16. Partially peel back the seaming welt. Take the headliner out from the opened passenger-side door opening.

17. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FLOOR INSULATOR REMOVAL/INSTALLATION

Driver-side

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the following parts:
   a. Driver-side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Driver-side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   i. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   j. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   k. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   l. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   m. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
   n. Accelerator pedal (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
   o. Joint cover (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)
5. Partially peel back the floor covering.
6. Remove the tab in the direction of the arrow (1) shown in the figure.

7. Remove the cover in the direction of the arrow (2) shown in the figure.

8. Pull the floor insulator in the direction of the arrow (3) and remove it.

9. Install in the reverse order of removal.

Passenger-side

1. Set the wheel blocks for both the front and rear wheels.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Shift the selector lever from the P position to the D position (ATX).

4. Remove the following parts:

   a. Passenger-side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Passenger-side side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

   j. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   k. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

l. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

m. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

5. Partially peel back the floor covering.

6. Remove the fastener.

7. Pull the floor insulator in the direction of the arrow and remove it.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FLOOR COVERING REMOVAL/INSTALLATION

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the following parts:
    a. Front seat (See **FRONT SEAT REMOVAL/INSTALLATION**.)
    b. Lower anchor of the front seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    i. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
    j. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
    k. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
    l. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
    m. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
    n. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    o. Front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
    p. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    q. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    r. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
    s. Shift lever component (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    t. Selector lever component (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
5. Remove nuts.

6. Remove the front console bracket.

7. Remove bolts.

8. Remove the parking brake lever component.

9. Disconnect the service plug (With i-ELOOP) (See **SERVICE PLUG DISCONNECTION/CONNECTION [i-ELOOP]**.)

10. Remove the following parts:

    a. SAS control module (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **SAS CONTROL MODULE REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

    b. DC-DC converter (with i-ELOOP) (See **DC-DC CONVERTER REMOVAL/INSTALLATION [i-ELOOP]**.)

    c. Audio amplifier (with Bose®) (See **AUDIO AMPLIFIER REMOVAL/INSTALLATION**.)

    d. Joint cover (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

    e. Accelerator pedal (See **ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

11. Disconnect the dashboard harness connectors.

12. Remove the clips shown in the figure.

13. Remove the fasteners.

14. Take the floor covering out from the door opening.
15. Install in the reverse order of removal. (See **Floor Covering Installation Note**.)

Floor Covering Installation Note

CAUTION:

- When installing the floor covering, the floor covering may press the A/C unit drain hose and deform it. When installing the floor covering, align the floor covering to the body to prevent deforming the A/C unit drain hose.
- Place the floor covering with it aligned to the body.
- Before installing the side wall, verify that the A/C unit drain hose is not deformed.

- If the rear seat cushion lock lever is covered by the floor mat, the rear seat cushion lock cannot be released. When installing the floor mat, do not cover the rear seat cushion lock lever with the mat.

2014 - Mazda3 - Body and Accessories

DISCHARGE HEADLIGHT SERVICE WARNINGS

Discharge Headlight Service Warnings

- When replacing a discharge headlight bulb, performing the servicing with the negative battery cable connected or in a wet work area could result in electrocution. When replacing a discharge headlight bulb, perform the servicing under the following conditions:
    - Switch the ignition off and disconnect the negative battery cable.
    - Perform the servicing out of the rain and in a dry work area.
    - Thoroughly dry your hands.
- Because the discharge headlight bulb connector instantly produces **approx. 25,000 V** of high voltage, inserting a finger or a tester probe could result in electrocution. When turning the light switch on, do not insert a finger or tester probe into the discharge headlight bulb connector.

- If a discharge headlight bulb is turned on before completely assembling the discharge headlight related parts to a front combination light, it could result in electrocution. Before illuminating the discharge headlights, completely assemble the discharge headlight related

parts to the front combination lights and install the front combination lights to the vehicle.

Discharge Headlight Control Module Servicing Warnings

- If the discharge headlight control module tester is used to do a part inspection or the discharge headlight control module is disassembled, electrocution could result from the high voltage around the module. Do not do a part inspection of or disassemble the discharge headlight control module.

Reusing Discharge Headlight Control Module

- A discharge headlight control module damaged in an accident could leak high voltage around the module and cause electrocution. In addition, even if the discharge headlights are turned on without any exterior damage to the module, a light-illumination malfunction could occur after a period of time has elapsed due to internal damage of a module. If a discharge headlight control module is reused, perform the following inspection and verify that the module is not malfunctioning.
    - Perform the tests for the discharge headlight bulb several times under cold-bulb conditions (turn off the discharge headlight bulb for **approx. 10 min or more**, then turn it on) and under warm-bulb conditions (turn on the discharge headlight bulb for **approx. 15 min or more**, turn it off for **approx. 1 min**, then turn it on again), and verify that the discharge headlight bulb turns on normally.
    - Inspect the discharge headlight bulb illumination until it turns on evenly directly after cold-bulb illumination for **approx. 5 min**, and verify that the discharge headlight bulb illumination has no flicker or uneven brightness level.
    - Equip with normal discharge headlight bulbs and turn them on for **approx. 30 min**, and verify that the illumination condition is stabilized with no difference in brightness level between left and right.

DISCHARGE HEADLIGHT SERVICE WARNINGS

2014 - Mazda3 - Body and Accessories

FRONT COMBINATION LIGHT REMOVAL/INSTALLATION

WARNING:

- Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See **DISCHARGE HEADLIGHT SERVICE WARNINGS**.)

NOTE:

- Fogging or condensation on the inside of the front combination lights may occur due to a natural phenomenon occurring as a result of a temperature difference between the interior and exterior of the combination lights. However, it has no effect on the light performance because the temperature inside the front combination lights rises after illuminating the headlights or a period of time has elapsed.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
4. To prevent scratches or damage, affix protective tape to the position shown in the figure.

CAUTION:

- When removing the front combination light from the body, it could interfere with the body and cause scratching or damage to the body. When removing the front combination light from the body, apply protective tape to the body.

5. Disconnect the connector.

6. Remove the bolts in the order of (1), (2), and (3).

7. Remove the fasteners.

8. Pull the front combination light in the direction of the arrow shown in the figure while partially setting the intake air guide aside, and pull out the front combination light pins from the body.

9. Remove the front combination light.

10. Install in the reverse order of removal.

11. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

FRONT COMBINATION LIGHT DISASSEMBLY/ASSEMBLY

1. Disassemble in the order shown in the figure.

Without discharge headlight system

1	Short-cord (See **Short Cord Removal Note**.)
2	Front side marker light/parking light bulb (See **FRONT SIDE MARKER LIGHT/PARKING LIGHT BULB REMOVAL/INSTALLATION**.)
3	Headlight LO bulb (See **HEADLIGHT BULB REMOVAL/INSTALLATION**.)
4	Cover No.1 (See **Cover Installation Note**.)
5	Headlight HI bulb (See **HEADLIGHT BULB REMOVAL/INSTALLATION**.)
6	Cover No.2 (See **Cover Installation Note**.)
7	Front combination light

With discharge headlight system

WITHOUT AFS

WITH AFS

1	Short-cord (See **Short Cord Removal Note**.)
2	Cover (See **Cover Installation Note**.)
3	Igniter (See **IGNITER REMOVAL/INSTALLATION**.)
4	Headlight HI/LO bulb (See **HEADLIGHT BULB REMOVAL/INSTALLATION**.)

5	Discharge headlight control module (See **DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION**.)
6	Front combination light

2. Assemble in the reverse order of disassembly.

Short Cord Removal Note

1. While pressing the clip tabs in the direction of arrows (1) shown in the figure, press the clip in the direction of arrow (2) to detach the clip tabs from the front combination light.

2. Pull the clip out of the front combination light and remove the short cord.

Cover Installation Note

1. Install the cover to the housing so that there is no gap between the housing and the cover.

CAUTION:

- If there is a gap between the housing and the cover, water may penetrate through the gap, causing a front combination light malfunction. Verify that there is no gap between the cover and the housing.

2014 - Mazda3 - Body and Accessories

HEADLIGHT BULB REMOVAL/INSTALLATION

Without Discharge Headlight System

Headlight LO bulb (LH)

1. Turn the steering wheel to the right until it locks.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Partially peel back the front mudguard (LH). (See **MUDGUARD REMOVAL/INSTALLATION**.)
4. Disconnect the connector.

5. Turn the headlight LO bulb counterclockwise and remove it in the direction of arrow (1) shown in the figure.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

6. Install in the reverse order of removal.

Headlight LO bulb (RH)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0,**

SKYACTIV-G 2.5].)

2. Disconnect the connector.

3. Turn the headlight LO bulb counterclockwise and remove it in the direction of arrow (1) shown in the figure.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

4. Install in the reverse order of removal.

Headlight HI bulb

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the connector.

3. Turn the headlight HI bulb counterclockwise and remove it in the direction of arrow (1) shown in the figure.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

4. Install in the reverse order of removal.

With Discharge Headlight System

WARNING:

- Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See **DISCHARGE HEADLIGHT SERVICE WARNINGS**.)

Headlight HI/LO bulb (LH)

1. Turn the steering wheel to the right until it locks.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Partially peel back the front mudguard (LH). (See **MUDGUARD REMOVAL/INSTALLATION**.)

4. Remove the igniter (LH). (See **IGNITER REMOVAL/INSTALLATION**.)

5. Move the headlight HI/LO bulb retaining wires in the direction of arrows (1) shown in the figure, pull them in the direction of arrow (2), and disconnect the headlight HI/LO bulb retaining wires from the reflector.

6. Remove the headlight HI/LO bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

7. Install in the reverse order of removal.

Headlight HI/LO bulb (RH)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the igniter (RH). (See **IGNITER REMOVAL/INSTALLATION**.)

3. Move the headlight HI/LO bulb retaining wires in the direction of arrows (1) shown in the figure, pull them in the direction of arrow (2), and disconnect the headlight HI/LO bulb retaining wires from the reflector.

4. Remove the headlight HI/LO bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

HEADLIGHT AIMING

NOTE:

- If the following servicing is done, perform the headlight aiming adjustment.
  - Front combination light replacement
  - Suspension replacement and removal/installation, servicing requiring vehicle height to be changed
- If servicing was done which changes the vehicle height, perform the headlight auto leveling system initial setting first to record the vehicle height under the unloaded condition to the AFS control module, then perform headlight aiming. (With headlight auto leveling system)
- For vehicles without the discharge headlight system, the aiming adjustment is done on the low beams only because the reflector is integrated with the low and high beams.
- For vehicles with the discharge headlight system, the aiming adjustment is done on the low beams only because the low and high beams use the same bulb.

1. Empty the vehicle except for the spare tire, jack and vehicle tools.
2. Adjust the tire pressure to the specification. (See **WHEEL AND TIRE SPECIFICATION**.)
3. Move the vehicle to level ground.
4. Sit on the driver-side seat alone.
5. Make an adjustment-use screen as shown in the figure using double-weight, white paper.

6. Line up the vehicle with the wall so that the distance to the headlights is **3 m {9.8 ft}** from the wall.

7. Measure the height at the center point of the headlight.

NOTE:

- Measure the height at the center point of the headlight in which the aiming is being adjusted because the vehicle height differs depending on vehicle conditions.

8. Align the center of the headlight with the center of the adjustment-use screen.

9. Set a partition in front of the headlight which is not being adjusted to block the light.

10. Start the engine and charge the battery.

11. Turn on the headlight low beams.

12. Set the headlight leveling switch to the [0] position. (With headlight manual leveling system)

13. Verify that the actual elbow point of the headlight is at the elbow point position indicated by the adjustment-use screen.

- If the actual elbow point of the headlight is not at the elbow point position indicated by the adjustment-use screen, adjust by turning the aiming adjustment screw.

IGNITER REMOVAL/INSTALLATION

WARNING:

- Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See **DISCHARGE HEADLIGHT SERVICE WARNINGS**.)

Igniter (LH)

1. Turn the steering wheel to the right until it locks.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Partially peel back the front mudguard (LH). (See **MUDGUARD REMOVAL/INSTALLATION**.)
4. Turn the cover counterclockwise and remove it in the direction of arrow (1) shown in the figure.

FRONT COMBINATION LIGHT

5. Turn the igniter counterclockwise and pull out it in the direction of arrow (2) shown in the figure.

IGNITER

6. While pressing the connector tab in the direction of arrow (3) shown in the figure, press the igniter in the direction of arrow (4) to detach the connector tab from the igniter.

7. Disconnect the connector and remove the igniter. (See **Igniter Installation Note (With AFS)**.)

8. Install in the reverse order of removal.

Igniter (RH)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Turn the cover counterclockwise and remove it in the direction of arrow (1) shown in the figure.

FRONT COMBINATION LIGHT

3. Turn the igniter counterclockwise and pull out it in the direction of arrow (2) shown in the figure.

4. While pressing the connector tab in the direction of arrow (3) shown in the figure, press the igniter in the direction of arrow (4) to detach the connector tab from the igniter.

5. Disconnect the connector and remove the igniter. (See **Igniter Installation Note (With AFS)**.)

6. Install in the reverse order of removal.

Igniter Installation Note (With AFS)

CAUTION:

- If the igniter is installed in the wrong direction, the igniter may contact the housing when the AFS operates, causing the AFS not to operate normally. After installing the igniter to the position shown in the figure, verify that the igniter does not contact the housing.

DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION

WARNING:

- Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See **DISCHARGE HEADLIGHT SERVICE WARNINGS**.)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
4. Remove the front combination light. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)
5. Disconnect the connector.

FRONT COMBINATION LIGHT

6. Remove the screws.
7. Open the cover and insert the remover tool into the position shown in the figure.

8. Move the remover tool in the direction of arrow (1) shown in the figure and lift up the connector to disengage it from the discharge headlight control module.

9. Disconnect the connector and remove the discharge headlight control module.

10. Remove the seal.

11. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

DISCHARGE HEADLIGHT SYSTEM INSPECTION

WARNING:

- Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See **DISCHARGE HEADLIGHT SERVICE WARNINGS**.)

System Wiring Diagram

DISCHARGE HEADLIGHT CONTROL MODULE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs** • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See **DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]**.) • Is a DTC displayed?	Yes	Repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)]**.)
		No	Go to the next step.
2	**INSPECT RELAY** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Remove the following relays: ▪ Headlight LO relay (LH) ▪ Headlight LO relay (RH) ▪ Headlight HI relay • Inspect the relays. (See **RELAY INSPECTION**.) • Are the relays normal?	Yes	Install the relays, then go to the next step.
		No	Replace the malfunctioning relay.
3	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See **LIGHT SWITCH INSPECTION**.) • Is the light switch normal?	Yes	Install the light switch, then go to the next step. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
		No	Replace the light switch.

			(See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
4	**INSPECT FRONT COMBINATION LIGHT CONNECTOR** • Disconnect the front combination light connector. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.) • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector.
5	**INSPECT FRONT COMBINATION LIGHT GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the front combination light connector is disconnected. • Inspect for continuity between front combination light terminal O (front wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Refer to the wiring diagram and verify if there is a common connector between front combination light terminal O and body ground. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.
6	**INSPECT HEADLIGHT LO POWER SUPPLY CIRCUIT** • Verify that the front combination light connector is disconnected. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Operate the light switch to the HEAD position. • Measure the voltage at front combination light terminal B (front wiring harness side). • Is the voltage **B+**?	Yes	Operate the light switch to the OFF position, then go to the next step.
		No	Inspect the HID L 15 A fuse and HID R 15 A fuse. • If a fuse is blown: ▪ Refer to the wiring diagram and verify if there is a common connector between HID L 15 A fuse or HID R 15 A fuse and front combination light terminal B. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Replace the blown fuse. • If a fuse is damaged: ▪ Replace the damaged fuse. • If both fuses are normal:

			▪ Refer to the wiring diagram and verify if there is a common connector between positive battery terminal and front combination light terminal B. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.
7	**INSPECT HEADLIGHT HI POWER SUPPLY CIRCUIT** • Verify that the front combination light connector is disconnected. • Operate the light switch to the HEAD and HI position. • Measure the voltage at front combination light terminal A (front wiring harness side). • Is the voltage **B+**?	Yes	Operate the light switch to the OFF position, then go to the next step.
		No	Inspect the H/L HI 20 A fuse. • If the fuse is blown: ▪ Refer to the wiring diagram and verify if there is a common connector between H/L HI 20 A fuse and front combination light terminal A. **If there is a common connector:** • Inspect the common connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for short to ground to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which is shorted to ground. • Replace the blown fuse. • If the fuse is damaged: ▪ Replace the damaged fuse. • If the fuse is normal: ▪ Refer to the wiring diagram and verify if there is a common connector between positive battery terminal and front combination light terminal A. **If there is a common connector:** • Inspect the common

			connector and terminals for corrosion, damage, or disconnection and the common wiring harnesses for open circuit to determine the malfunctioning location. • Repair or replace the malfunctioning location. **If there is no common connector:** • Repair or replace the wiring harness which has an open circuit.
8	**INSPECT DISCHARGE HEADLIGHT CONTROL MODULE CONNECTOR** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Disconnect the discharge headlight control module connector. (See **DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION**.) • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector.
9	**INSPECT FRONT COMBINATION LIGHT INTERNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the following connectors are disconnected. ▪ Front combination light ▪ Discharge headlight control module • Inspect for continuity in the wiring harness between the following terminals: ▪ Front combination light terminal B (short cord side) and discharge headlight control module terminal A (short cord side) ▪ Front combination light terminal O (short cord side) and discharge headlight control module terminal B (short cord side) ▪ Front combination light terminal A (short cord side) and front combination	Yes	Go to the next step.
		No	Replace the front combination light. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

	light terminal O (short cord side) ▪ Discharge headlight control module terminal A (igniter side) and igniter terminal A ▪ Discharge headlight control module terminal B (igniter side) and igniter terminal B ▪ Discharge headlight control module terminal C (igniter side) and igniter terminal C • Is there continuity?		
10	**VERIFY IF MALFUNCTION CAUSE IS HEADLIGHT HI/LO BULB** • Install a normal headlight HI/LO bulb. (See **HEADLIGHT BULB REMOVAL/INSTALLATION**.) • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Operate the light switch to the HEAD position. • Does the headlight LO turn on?	Yes	Replace the headlight HI/LO bulb. (See **HEADLIGHT BULB REMOVAL/INSTALLATION**.)
		No	Operate the light switch to the OFF position, then go to the next step.
11	**VERIFY IF MALFUNCTION CAUSE IS DISCHARGE HEADLIGHT CONTROL MODULE OR IGNITER** • Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Install a normal igniter. (See **IGNITER REMOVAL/INSTALLATION**.) • Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.) • Operate the light switch to the HEAD position. • Does the headlight LO turn on?	Yes	Replace the igniter. (See **IGNITER REMOVAL/INSTALLATION**.)
		No	Replace the discharge headlight control module. (See **DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION

NOTE:

- The AFS control module stores the vehicle specification information.
- A new AFS control module does not store any vehicle specification information.
- When the ignition is switched ON after the AFS control module is replaced, the AFS control module reads the vehicle specification information sent via CAN transmission from the instrument cluster, and stores the vehicle specification information.
- The AFS control module records the vehicle height while it is unoccupied.
- Even if the battery is disconnected, the unoccupied vehicle height recorded by the AFS control module is not erased.
- The new AFS control module does not record the vehicle height while it is unoccupied.
- When the headlight auto leveling system initialization is performed after the AFS control module is replaced, the AFS control module inputs the vehicle height from the auto leveling sensor and records the vehicle height in unloaded condition.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front scuff plate (LH). (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
3. Remove the front side trim (LH). (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
4. Disconnect the connector.

5. While pressing hook A of the bracket in the direction of arrow (1) shown in the figure, pull the AFS control module in the direction of arrow (2) to detach hook A of the bracket from the AFS control module.

6. While pressing hook B of the bracket in the direction of arrow (3) shown in the figure, pull the

AFS control module in the direction of arrow (4) to detach hook B of the bracket from the AFS control module.

7. Remove the AFS control module.

8. Install in the reverse order of removal.

9. Switch the ignition ON (engine off or on) and perform the AFS control module configuration.

10. Clear the DTC. (See **CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)

11. If the AFS control module is replaced with a new one, perform the headlight auto leveling system initialization. (See **HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION**.)

2014 - Mazda3 - Body and Accessories

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION

NOTE:

- The AFS OFF switch is integrated with the cluster switch.
- Refer to CLUSTER SWITCH REMOVAL/INSTALLATION for the AFS OFF switch removal/installation. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION

NOTE:

- The AFS OFF switch is integrated with the cluster switch.
- If the AFS OFF switch is to be replaced, replace the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

Resistance Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Driver's side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Driver's side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   c. Cluster switch (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)
3. Measure the resistance between cluster switch terminals B and C under the following conditions.

   Resistance with AFS OFF switch pressed and held

   - 501.44—511.56 ohms

   Resistance with any switch not pressed

   - 1,139.99—1,163.01 ohms

CIRCUIT WITH AFS OFF SWITCH PRESSED AND HELD

CIRCUIT WITH ANY SWITCH NOT PRESSED

- If not within the specification, replace the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

LED Illumination Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Driver's side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Driver's side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Cluster switch (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

3. Apply battery positive voltage to cluster switch terminal J, and connect terminal I to ground.

4. Verify that the LED is turned on.

   - If the LED does not turn on, replace the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

STEERING ANGLE SENSOR REMOVAL/INSTALLATION

NOTE:

- If the steering angle sensor is removed from the clock spring, the steering angle sensor absolute angle could change, therefore, do not remove the steering angle sensor from the clock spring.
- When replacing the steering angle sensor, replace it together with the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Body and Accessories

STEERING ANGLE SENSOR INSPECTION

NOTE:

- If the steering angle sensor is removed from the clock spring, the steering angle sensor absolute angle could change, therefore, do not remove the steering angle sensor from the clock spring.
- If the steering angle sensor is replaced, replace it together with the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

1. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

2. Connect the plus (+) end of a tester to steering angle sensor terminal A and the minus (-) end of the tester to terminal B (ground).

3. Switch the ignition ON (engine off or on).

4. Turn the steering wheel to the right and left.

5. Verify that the voltage between steering angle sensor terminals A and B (ground) is as indicated in the table.

If the voltage can be verified as indicated in the table, go to the next step.

- If not as indicated in the table, replace the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

6. Switch the ignition off.

7. Connect the plus (+) end of a tester to steering angle sensor terminal C and the minus (-) end of the tester to terminal B (ground).

8. Switch the ignition ON (engine off or on).

9. Turn the steering wheel to the right and left.

10. Verify that the voltage between steering angle sensor terminals C and B (ground) is as indicated in the table.

- If not as indicated in the table, replace the clock spring. (See **CLOCK SPRING REMOVAL/INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **CLOCK SPRING REMOVAL/INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

2014 - Mazda3 - Body and Accessories

HEADLIGHT LEVELING ACTUATOR INSPECTION

NOTE:

- The headlight leveling actuator is integrated in the front combination light.
- Perform the headlight auto leveling system actuator inspection using the headlight leveling actuator operation check mode. (See **HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
- To replace the headlight leveling actuator, replace the front combination light as a single unit. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
4. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
5. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table.
    - If the voltage is not as indicated in the table, inspect the parts under Inspection item(s).
        - If the system does not work normally even though the parts under Inspection item(s) or related wiring harnesses do not have any malfunction, replace the front combination light. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

Terminal Voltage Table (Reference)

FRONT COMBINATION LIGHT
WIRING HARNESS-SIDE CONNECTOR

Terminal	Signal name	Connected to	Measurement condition		Voltage (V)	Inspection item(s)
F	Headlight leveling actuator signal	Headlight leveling switch	Light switch in HEAD position	Headlight leveling switch position 0	Approx. 10.1	• Headlight leveling switch • Related wiring harness
				Headlight leveling switch position -	Approx. 9.4	
				Headlight leveling switch position 1	Approx. 8.7	
				Headlight leveling switch position -	Approx. 7.9	
				Headlight leveling switch position 2	Approx. 7.2	
				Headlight leveling switch position -	Approx. 6.5	
				Headlight leveling switch position 3	Approx. 5.8	
				Headlight leveling switch position -	Approx. 5.1	
				Headlight leveling switch	Approx.	

				position 4	4.4	
				Headlight leveling switch position -	Approx. 3.6	
				Headlight leveling switch position 5	Approx. 2.9	
I	Headlight leveling actuator power supply	• Headlight leveling switch • Headlight LO relay (LH)	Light switch in HEAD position		B+	• Headlight leveling switch • Headlight LO relay (LH) • Related wiring harness
			Light switch in OFF position		1.0 or less	
L	Ground	• Headlight leveling switch • Body ground	Under any condition		1.0 or less	• Headlight leveling switch • Related wiring harness

2014 - Mazda3 - Body and Accessories

FRONT SIDE MARKER LIGHT/PARKING LIGHT BULB REMOVAL/INSTALLATION

NOTE:

- The LED-type parking light (with discharge headlight system) cannot be replaced separately. If there is any malfunction in the LED, replace the front combination light as a single unit. (See **FRONT COMBINATION LIGHT REMOVAL/INSTALLATION**.)

1. Turn the steering wheel in the direction opposite to the side on which the bulb is to be removed.

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Slightly bend back the front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

4. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

FRONT COMBINATION LIGHT

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Remove the front side marker light/parking light bulb.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT TURN LIGHT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the screws.

5. Pull out the front turn light from the pins and remove the front turn light.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT TURN LIGHT BULB REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back the front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

5. Remove the front turn light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT TURN LIGHT SHORT CORD REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

3. Insert the remover tool into the position shown in the figure.

4. While pressing the connector hook in the direction of arrow (1) shown in the figure using the remover tool, move the connector in the direction of arrow (2) and remove the connector from the clip.

5. Disconnect the connectors and remove the front turn light short cord.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT TURN LIGHT SHORT CORD INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

3. Remove the front turn light short cord. (See **FRONT TURN LIGHT SHORT CORD REMOVAL/INSTALLATION**.)

4. Verify that the continuity between the front turn light short cord terminals is as indicated in the table.

○—○ : Continuity

Test condition	Front wiring harness connector terminal		Front turn light connector terminal	
	A	D	A	B
Under any condition	○			○
		○	○	

- If not as indicated in the table, replace the front turn light short cord. (See **FRONT TURN LIGHT SHORT CORD REMOVAL/INSTALLATION**.)

FRONT TURN LIGHT SHORT CORD INSPECTION

2014 - Mazda3 - Body and Accessories

FRONT FOG LIGHT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back the front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

3. Remove the front fog light bezel No.1. (See **FRONT FOG LIGHT BEZEL REMOVAL/INSTALLATION**.)

4. Remove the screws.

5. Pull out the pins from the bracket and pull out the front fog light and the bracket from the front bumper.

6. Disconnect the connector and remove the front fog light and the bracket.

7. Remove the screw.

8. Remove the bolt.

9. Remove the front fog light from the bracket.

10. Install in the reverse order of removal.

11. Adjust the front fog light aiming. (See **FRONT FOG LIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

FRONT FOG LIGHT BULB REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Turn the front fog light bulb counterclockwise and remove it in the direction of arrow (1) shown in the figure.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

FRONT FOG LIGHT BULB REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

FRONT FOG LIGHT AIMING

NOTE:

- If the following servicing is done, perform the front fog light aiming adjustment.
  - Front fog light replacement
  - Suspension replacement and removal/installation, servicing requiring vehicle height to be changed

1. Empty the vehicle except for the spare tire, jack and vehicle tools.
2. Adjust the tire pressure to the specification. (See **WHEEL AND TIRE SPECIFICATION**.)
3. Move the vehicle to level ground.
4. Sit on the driver-side seat alone.
5. Make an adjustment-use screen as shown in the figure using double-weight, white paper. (Common to both left and right)

6. Line up the vehicle with the wall so that the distance to the front fog lights is **3 m {9.8 ft}** from the wall.

7. Measure the height at the center point of the front fog lights.

NOTE:

- Measure the height at the center point of the front fog light in which the aiming is being adjusted because the vehicle height differs depending on vehicle conditions.

8. Align the center point of the front fog light with the center of the adjustment-use screen.

9. Set a partition in front of the front fog light which is not being adjusted to block the light.

10. Start the engine and charge the battery.

11. Turn on the front fog lights.

12. Verify that the actual brightness borderline of the fog light is at the brightness borderline position indicated by the adjustment-use screen.

- If the actual brightness borderline is not in the position indicated on the adjustment-use screen, perform the following adjustment:

a. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

b. Partially peel back the front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

c. Remove the front fog light bezel No.1. (See **FRONT FOG LIGHT BEZEL REMOVAL/INSTALLATION**.)

d. Remove the front fog light and the bracket before cutting the front fog light hole cover located on the bolt installation hole. (See **FRONT FOG LIGHT REMOVAL/INSTALLATION**.)

e. Cutout the hatch-marked area of the front fog light hole cover shown in the figure.

NOTE:

- Remove all the shaded area shown in the figure so that the front fog light hole cover does not interfere with the bolt.

f. Install the front fog light to the bracket and temporarily tighten the bolt.

g. Install the front fog light and the bracket to the front bumper. (See **FRONT FOG LIGHT REMOVAL / INSTALLATION**.)

h. Move the front fog light in the direction of the arrow shown in the figure and adjust the brightness borderline.

N·m {kgf·cm, in·lbf}

i. Tighten the bolt.

j. Assemble the front fog light completely. (See **FRONT FOG LIGHT REMOVAL/INSTALLATION**.)

k. Install the front fog light bezel No.1. (See **FRONT FOG LIGHT BEZEL REMOVAL/INSTALLATION**.)

l. Install the front mudguard. (See **MUDGUARD REMOVAL/INSTALLATION**.)

m. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

SIDE TURN LIGHT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the outer mirror glass. (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)
3. Remove the upper outer mirror garnish. (See **OUTER MIRROR GARNISH REMOVAL/INSTALLATION**.)
4. Remove the screws.

5. Remove the side turn light.
6. Disconnect the connector.
7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

SIDE TURN LIGHT INSPECTION

LED Illumination Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Outer mirror glass (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)

   b. Upper outer mirror garnish (See **OUTER MIRROR GARNISH REMOVAL/INSTALLATION**.)

   c. Side turn light (See **SIDE TURN LIGHT REMOVAL/INSTALLATION**.)

3. Apply battery voltage to side turn light terminal A, and connect terminal B to ground.

SIDE TURN LIGHT

4. Verify that the LED turns on.

   - If the LED does not turn on, replace the side turn light. (See **SIDE TURN LIGHT REMOVAL/INSTALLATION**.)

Continuity Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Outer mirror glass (See **OUTER MIRROR GLASS REMOVAL**.) (See **OUTER MIRROR GLASS INSTALLATION**.)

   b. Upper outer mirror garnish (See **OUTER MIRROR GARNISH REMOVAL/INSTALLATION**.)

   c. Side turn light (See **SIDE TURN LIGHT REMOVAL/INSTALLATION**.)

   d. Front door trim (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

   e. Power outer mirror connector (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

3. Verify that the continuity between the power outer mirror terminals and side turn light terminals are as indicated in the table.

○——○ : Continuity

Test condition	Power outer mirror connector terminal		Side turn light connector terminal	
	E	G	A	B
Under any condition	○	———	○	
		○	———	○

- If not as indicated in the table, replace the power outer mirror. (See **POWER OUTER MIRROR REMOVAL/INSTALLATION**.)

SIDE TURN LIGHT INSPECTION

2014 - Mazda3 - Body and Accessories

REAR COMBINATION LIGHT REMOVAL/INSTALLATION

NOTE:

- Fogging or condensation on the inside of the rear combination lights may occur due to a natural phenomenon occurring as a result of a temperature difference between the interior and exterior of the combination lights. However, it has no effect on the light performance because the temperature inside the rear combination lights rises after illuminating a rear turn light or a period of time has elapsed.

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back the trunk side trim. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connectors.

4. Remove the nuts in the order of (1), (2), and (3).

5. To prevent scratches or damage, affix protective tape to the position shown in the figure.

CAUTION:

- When removing the rear combination light from the body, it could interfere with the body and cause scratching or damage to the body. When removing the rear combination light from the body, apply protective tape to the body.

6. Pull the rear combination light in the direction of the arrow shown in the figure and pull out pin, stud bolts and hook from the body. (See **Grommet Installation Note**.)

CAUTION:

- When removing the rear combination light from the body, the grommet could fall off and become lost. When removing the rear combination light from the body, verify that the grommet remains in the body.

7. Remove the rear combination light.

8. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure:

Rear combination light (LH) removal:

- Remove the service hole cover (LH).

Rear combination light (RH) removal:

- Turn the knob counterclockwise and release the lock.

- Pull out the tabs of the service hole cover (RH) from the trunk side trim, and remove the service hole cover (RH).

3. Disconnect the connectors.

4. Remove the nuts in the order of (1), (2), and (3).

5. To prevent scratches or damage, affix protective tape to the position shown in the figure.

CAUTION:

- When removing the rear combination light from the body, it could interfere with the body and cause scratching or damage to the body. When removing the rear combination light from the body, apply protective tape to the body.

6. Pull the rear combination light in the direction of the arrow shown in the figure and pull out pin, stud bolts and hook from the body. (See **Grommet Installation Note**.)

CAUTION:

- When removing the rear combination light from the body, a grommet could fall off and become lost. When removing the rear combination light from the body, verify that the grommet remains in the body.

7. Remove the rear combination light.

8. Install in the reverse order of removal.

Grommet Installation Note

1. Install the grommet with the arrow pointed outward of the vehicle.

2014 - Mazda3 - Body and Accessories

BRAKE LIGHT/REAR SIDE MARKER LIGHT/TAILLIGHT BULB REMOVAL/INSTALLATION

NOTE:

- The LED-type brake light/rear side marker light/taillight cannot be replaced as a single unit. If there is any malfunction in the LED, replace the rear combination light as a single unit. (See **REAR COMBINATION LIGHT REMOVAL/INSTALLATION**.)

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Partially peel back the trunk side trim. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
3. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

4. Remove the brake light/rear side marker light/taillight bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure:

When removing brake light/rear side marker light/taillight bulb (LH):

- Remove the service hole cover (LH).

When removing brake light/rear side marker light/taillight bulb (RH):

- Turn the knob counterclockwise and release the lock.

- Pull out the tabs of the service hole cover (RH) from the trunk side trim, and remove the service hole cover (RH).

3. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

4. Remove the brake light/rear side marker light/taillight bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR TURN LIGHT BULB REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Partially peel back the trunk side trim. (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
3. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

4. Remove the rear turn light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Perform the following procedure:

When removing rear turn light bulb (LH):

- Remove the service hole cover (LH).

When removing rear turn light bulb (RH):

- Turn the knob counterclockwise and release the lock.

- Pull the tabs of the service hole cover (RH) from the trunk side trim and remove the service hole cover (RH).

3. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

4. Remove the rear turn light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

BACK-UP LIGHT BULB REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Partially peel back the trunk lid trim. (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)
3. Disconnect the connector.

4. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.
5. Remove the back-up light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

6. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the service hole cover.

3. Disconnect the connector.

4. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

5. Remove the back-up light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TRUNK LID LIGHT REMOVAL/INSTALLATION

NOTE:

- Fogging or condensation may occur on the inside of the trunk lid light because of a natural phenomenon occurring as a result of a temperature difference between the interior and exterior of the trunk lid light. However, it has no effect on the light performance because the phenomenon is resolved when temperature inside the trunk lid light rises after the back-up light turns on or a period of time has elapsed.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Partially peel back the trunk lid trim. (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the nut.

5. Insert the remover tool into the service hole at the position shown in the figure.

6. Move the remover tool in the direction of arrow (1) shown in the figure to detach the tab of the service hole cover from the bracket.

7. Pull the guide of the service hole cover in the direction of arrow (2) shown in the figure and remove the service hole cover.

8. Insert the remover tool into the gap between tab (1) of the bracket and the trunk lid light.

9. While pressing tab (1) of the bracket in the direction of arrow (3) shown in the figure using the remover tool, pull the bracket in the direction of arrow (4) to detach tab (1) of the bracket from the trunk lid light.

10. Insert the remover tool into the gap between tab (2) of the bracket and the trunk lid light.

11. While pressing tab (2) of the bracket in the direction of arrow (5) shown in the figure using the remover tool, pull the bracket in the direction of arrow (6) to detach tab (2) of the bracket from the trunk lid light.

12. Insert the remover tool into the gap between tab (3) of the bracket and the trunk lid light.

13. While pressing tab (3) of the bracket in the direction of arrow (7) shown in the figure using the remover tool, pull the bracket in the direction of arrow (8) to detach tab (3) of the bracket from the trunk lid light.

14. Insert the remover tool into the gap between tab (4) of the bracket and the trunk lid light.

15. While pressing tab (4) of the bracket in the direction of arrow (9) shown in the figure using the remover tool, pull the bracket in the direction of arrow (10) to detach tab (4) of the bracket from the trunk lid light.

16. Detach all the tabs of the bracket from the trunk lid light and remove the bracket from the trunk lid light.

17. To prevent scratches or damage, affix protective tape to the position shown in the figure.

CAUTION:

- When removing the trunk lid light from the trunk lid, the trunk lid light could contact the trunk lid and damage it. Apply protective tape to the trunk lid before removing the trunk lid light from the trunk lid.

18. Pull the trunk lid light in the direction of the arrow shown in the figure and pull out the guides, pin and stud bolt from the trunk lid.

CAUTION:

- When removing the trunk lid light from the trunk lid, the trunk lid light could fall off and be damaged. When removing the trunk lid light from the trunk lid, hold the trunk lid light on the lens side with a hand.

19. Remove the trunk lid light.

20. While pressing tabs of grommet A in the direction of arrow (11) shown in the figure, push out grommet A in the direction of arrow (12) to remove grommet A from the trunk lid.

21. While pressing tabs of grommet B in the direction of arrow (13) shown in the figure, push out grommet B in the direction of arrow (14) to remove grommet B from the trunk lid.

22. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LIFTGATE LIGHT REMOVAL/INSTALLATION

NOTE:

- Fogging or dew condensation may occur on the inside of the liftgate light because of a natural phenomenon occurring as a result of a temperature difference between the interior and exterior of the liftgate light. However, it has no effect on the light performance because the phenomenon is resolved when temperature inside the liftgate light rises after the back-up light turns on or a period of time has elapsed.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   b. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   d. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   e. Liftgate garnish (See **LIFTGATE GARNISH REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the nut.

5. Insert the remover tool into the service hole at the position shown in the figure.

6. Move the remover tool in the direction of arrow (1) shown in the figure to detach the tab of the service hole cover from the bracket.

7. Pull the guide of the service hole cover in the direction of arrow (2) shown in the figure and remove the service hole cover.

8. Insert the remover tool into the gap between tab (1) of the bracket and liftgate light.

9. While pressing tab (1) of the bracket in the direction of arrow (3) shown in the figure using the remover tool, pull the bracket in the direction of arrow (4) to detach tab (1) of the bracket from the liftgate light.

10. Insert the remover tool into the gap between tab (2) of the bracket and the liftgate light.

11. While pressing tab (2) of the bracket in the direction of arrow (5) shown in the figure using the remover tool, pull the bracket in the direction of arrow (6) to detach tab (2) of the bracket from the liftgate light.

12. Insert the remover tool into the gap between tab (3) of the bracket and the liftgate light.

13. While pressing tab (3) of the bracket in the direction of arrow (7) shown in the figure using the remover tool, pull the bracket in the direction of arrow (8) to detach tab (3) of the bracket from the liftgate light.

14. Insert the remover tool into the gap between tab (4) of the bracket and the liftgate light.

15. While pressing tab (4) of the bracket in the direction of arrow (9) shown in the figure using the remover tool, pull the bracket in the direction of arrow (10) to detach tab (4) of the bracket from the liftgate light.

16. Detach all the tabs of the bracket from the liftgate light and remove the bracket from the liftgate light.

17. To prevent scratches, apply protective tape to the position shown in the figure.

CAUTION:

- When removing the liftgate light from the liftgate, the liftgate light could contact the liftgate and damage it. Apply protective tape to the liftgate before removing the liftgate light from the liftgate.

18. Move the liftgate light in the direction of the arrow shown in the figure and pull out the hook, guide, pins, and stud bolt from the liftgate.

CAUTION:

- When removing the liftgate light from the liftgate, the liftgate light may fall off and be damaged. Remove the liftgate light from the liftgate while holding the liftgate light on the lens side by hand.

19. Remove the liftgate light.

20. While pressing tabs of the grommet in the direction of arrow (11) shown in the figure, push out the grommet in the direction of arrow (12) to remove the grommet from the liftgate.

21. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION

4SD

NOTE:

- When removing the high-mount brake light, the procedure can be facilitated by folding down the rear seat.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Insert the remover tool in the gap between the high-mount brake light cover and the rear package trim.

3. While pressing the hook in the direction of arrow (1) shown in the figure, lift up the high-mount brake light cover in the direction of arrow (2) shown in the figure and pull out the hook from the rear package trim.

4. Move the high-mount brake light cover in the direction of arrow (3) shown in the figure and pull out the guide from the rear package trim.

5. Disconnect the connector.

6. Move the high-mount brake light in the direction of arrows (4) shown in the figure and disconnect the tabs of the high-mount brake light cover from the high-mount brake light.

7. Remove the high-mount brake light.

8. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the liftgate upper trim. (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

3. Remove the rear spoiler. (See **REAR SPOILER REMOVAL**.) (See **REAR SPOILER INSTALLATION**.)

4. While pressing the tabs of the clip in the direction of arrows (1) shown in the figure, pull the clip in the direction of arrow (2) to detach the clip tabs from the rear spoiler.

5. Remove the screws.

6. Remove the high-mount brake light.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

LICENSE PLATE LIGHT REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the trunk lid recess. (See **TRUNK LID RECESS REMOVAL/INSTALLATION**.)

3. Remove the trunk lid trim. (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)

4. Disconnect the connector.

5. While pressing the license plate light hook in the direction of arrow (1) shown in the figure, press the license plate light in the direction of arrow (2), and disconnect the license plate light hook from the trunk lid.

CAUTION:

- When removing the license plate light from the trunk lid, the license plate light could fall off and be damaged. Remove the license plate light from the trunk lid while holding the license plate light on the lens side with a hand.

6. Remove the license plate light.

7. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   b. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   d. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. While pressing the license plate light tabs in the direction of arrows (1) shown in the figure, press the license plate light in the direction of arrow (2), and disconnect the license plate light tabs from the liftgate.

CAUTION:

- When removing the license plate light from the liftgate, the license plate light could fall off and be damaged. When removing the license plate light from the liftgate, press the lens side of the license plate light with a hand.

5. Remove the license plate light.

6. Install in the reverse order of removal.

LICENSE PLATE LIGHT REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

LICENSE PLATE LIGHT BULB REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Partially peel back the trunk lid trim. (See **TRUNK LID TRIM REMOVAL/INSTALLATION**.)
3. Turn the socket counterclockwise and remove it in the direction of arrow (1) shown in the figure.

4. Remove the license plate light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Insert the remover tool into the service hole at the position shown in the figure.

3. Move the remover tool in the direction of arrow (1) shown in the figure to pull the lens in the direction of arrow (2) and detach the lens from the license plate light tab.

4. Remove the lens.

5. Remove the license plate light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

AUTO LEVELING SENSOR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. While pressing the clip tabs in the direction of arrows (1) shown in the figure, press the clip in the direction of arrow (2) to remove the clip from the auto leveling sensor.

3. Disconnect the connector.

4. Remove the bolts.

5. Pull the guides from the rear crossmember and remove the auto leveling sensor from the rear crossmember.

6. Install in the reverse order of removal.

7. Perform headlight auto leveling system initialization. (See **HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION**.)

2014 - Mazda3 - Body and Accessories

AUTO LEVELING SENSOR INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the auto leveling sensor. (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)

3. Prepare three dry cell batteries **(1.5 V)**.

4. Connect the three dry cell batteries in a series.

5. Connect the positive pole of the dry cell batteries to auto leveling sensor terminal C, and the negative pole to terminal A.

6. Connect the tester as shown in the figure with **approx. 4.5 V** of voltage applied between auto leveling sensor terminals A and C, and measure the voltage at auto leveling sensor terminal B.

7. Verify that the voltage fluctuates linearly between **0.5—4.5 V** as shown in the figure when slowly moving the auto leveling sensor link upward or downward.

- If the voltage cannot be verified as indicated in the figure, replace the auto leveling sensor. (See **AUTO LEVELING SENSOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION

NOTE:

- The AFS control module records the vehicle height in unoccupied condition by performing the headlight auto leveling system initialization.
- Perform headlight auto leveling system initialization if any of the following services is performed.
    - AFS control module replacement
    - Auto leveling sensor replacement or removal/installation
    - Any service which changes vehicle height, such as suspension replacement or removal/installation
- Two different procedures are available for the headlight auto leveling system initialization; one which uses the M-MDS, and one which does not.

Procedure Using M-MDS

CAUTION:

- Perform Steps 5 and 6 **within 30 s**.

1. Empty the vehicle except for the spare tire, jack and vehicle tools.
2. Adjust the tire pressure to the specification. (See **WHEEL AND TIRE SPECIFICATION**.)
3. Move the vehicle to level ground.
4. Connect the M-MDS to the DLC-2.
5. Switch the ignition ON (engine off or on).

NOTE:

- The AFS OFF indicator light continues flashing during the first initialization, however, continue the work because it does not indicate an improper procedure.

6. After vehicle identification, the following can be selected from the M-MDS initial screen.
    a. "Electrical"
    b. "ExteriorLighting"
    c. "Headlamp"
    d. "Auto Leveling Sensor"
    e. "Auto Leveling Sensors Calibration"
7. Verify the AFS OFF indicator light.
    - The initialization is completed if the AFS OFF indicator light flashes **three times every 0.25 s** and turns off. Go to the next step.

    - If the AFS OFF indicator light continues flashing, the procedure may have been performed incorrectly. Repeat the procedure from Step 5.
    - If the AFS OFF indicator light turns on, the headlight auto leveling system may have a malfunction. Perform the DTC inspection. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
        - Repair or replace the malfunctioning location, then repeat the procedure from Step 5.

8. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

Procedure Not Using M-MDS

CAUTION:

- Perform Steps 4 and 5 **within 30 s**.

1. Empty the vehicle except for the spare tire, jack and vehicle tools.
2. Adjust the tire pressure to the specification. (See **WHEEL AND TIRE SPECIFICATION**.)
3. Move the vehicle to level ground.
4. Switch the ignition ON (engine off or on).

NOTE:

- The AFS OFF indicator light continues flashing during the first initialization, however, continue the work because it does not indicate an improper procedure.

INSTRUMENT CLUSTER

5. Using a jumper wire, connect DLC-2 terminals B and J (ground) **three times at 0.5—1.5 s intervals** as shown in the figure.

CAUTION:

- If the terminals are mistakenly connected, vehicle damage or fire could occur. When connecting with the jumper wire, thoroughly verify what terminals are being connected to prevent a miss-connection.

6. Verify the AFS OFF indicator light.

- The initialization is completed if the AFS OFF indicator light flashes **three times every 0.25 s** and turns off. Go to the next step.

- If the AFS OFF indicator light continues flashing, the procedure may be performed incorrectly. Repeat the procedure from Step 4.
- If the AFS OFF indicator light turns on, the headlight auto leveling system may have a malfunction. Perform the DTC inspection. (See **DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]**.)
    - Repair or replace the malfunctioning location, then repeat the procedure from Step 4.

7. Adjust the headlight aiming. (See **HEADLIGHT AIMING**.)

2014 - Mazda3 - Body and Accessories

BACK-UP LIGHT SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner component. (ex: air cleaner, air hose) (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Disconnect the back-up light switch connector. (See **BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

4. Verify that the continuity between the back-up light switch terminals is as indicated in the table.

○—○ : Continuity

Shift lever position	Terminal	
	A	D
Reverse	○	○
Other		

- If not as indicated in the table, replace the back-up light switch. (See **BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R]**.)

2014 - Mazda3 - Body and Accessories

LIGHT SWITCH REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Rotate the steering wheel until the service hole is visible in the position shown in the figure.

4. While pressing the light switch tab in the direction of arrow (1) shown in the figure, pull out the light switch in the direction of arrow (2) shown in the figure, and detach the light switch tab from the start stop unit.

5. Remove the light switch.

6. Install in the reverse order of removal.

LIGHT SWITCH REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

LIGHT SWITCH INSPECTION

Light Switch

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)
3. Remove the light switch. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
4. Verify that the continuity between the light switch terminals is as indicated in the table.

Without auto light system

○—○ : Continuity

Switch position			Terminal					
Light	Dimmer	FLASH-TO-PASS	C	D	E	F	I	K
OFF	—	Off			○	○		
		On	○		○	○		○
TNS	—	Off		○	○			
		On	○	○	○			○
HEAD	LO	Off		○	○			○
		On	○	○	○			○
	HI	—		○	○		○	○

With auto light system

○—○ : Continuity

Switch position			Terminal					
Light	Dimmer	FLASH-TO-PASS	C	D	E	F	I	K
OFF	—	Off			○—○			
		On	○	○	○	○		○
AUTO	LO	Off						
		On	○	○	○			○
TNS	—	Off		○—○				
		On	○	○	○			○
HEAD	LO	Off		○—○				○
		On	○	○	○			○
	HI	—		○—○			○	○

- If not as indicated in the table, replace the light switch. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)

Turn Switch

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)
3. Remove the light switch. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
4. Verify that the continuity between the light switch terminals is as indicated in the table.

○—○ : Continuity

Switch position	Terminal		
	A	B	E
RH		○	○
OFF			
LH	○		○

K	J	I	H	G	F	E	D	C	B	A

- If not as indicated in the table, replace the light switch. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

FRONT FOG LIGHT SWITCH INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)
3. Remove the light switch. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)
4. Verify that the continuity between the light switch terminals is as indicated in the table.

○—○ : Continuity

Switch position	Terminal	
	E	G
F.FOG	○	○
OFF		

- If not as indicated in the table, replace the light switch. (See **LIGHT SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

HAZARD WARNING SWITCH REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

4. While pressing the hazard warning switch hooks in the direction of arrows (1) shown in the figure, press the hazard warning switch in the direction of arrow (2), and disconnect the hazard warning switch hooks from the decoration panel.

5. Remove the hazard warning switch.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

HAZARD WARNING SWITCH INSPECTION

Continuity Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
4. Verify that the continuity between the hazard warning switch terminals is as indicated in the table.

○—○ : Continuity

Switch position	Terminal	
	C	D
On	○	○
Off		

- If not as indicated in the table, replace the hazard warning switch. (See **HAZARD WARNING SWITCH REMOVAL/INSTALLATION**.)

LED Illumination Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
4. Apply battery voltage to hazard warning switch terminal A, and connect terminal B to ground.

5. Verify that the LED is turned on.

- If the LED does not turn on, replace the hazard warning switch. (See **HAZARD WARNING SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

HEADLIGHT LEVELING SWITCH REMOVAL/INSTALLATION

NOTE:

- The headlight leveling switch is integrated with the cluster switch.
- Refer to CLUSTER SWITCH REMOVAL/INSTALLATION for the headlight leveling switch removal/installation. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

HEADLIGHT LEVELING SWITCH INSPECTION

NOTE:

- The headlight leveling switch is integrated with the cluster switch.
- If the headlight leveling switch is to be replaced, replace the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Driver's side front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Driver's side front side trim (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   c. Cluster switch (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)
3. Verify that the resistance between the cluster switch terminals is as indicated in the table.

○—⩘—○ : Resistance

Switch position	Terminal			Resistance (ohms)
	D	E	F	
0	○—⩘—○			470.25—479.75
-	○—⩘—○			648.45—661.55
1	○—⩘—○			826.65—843.35
-	○—⩘—○			1,004.85—1,025.15
2	○—⩘—○			1,183.05—1,206.95
-	○—⩘—○			1,361.25—1,388.75
3	○—⩘—○			1,539.45—1,570.55
-	○—⩘—○			1,717.65—1,752.35
4	○—⩘—○			1,895.85—1,934.15
-	○—⩘—○			2,074.05—2,115.95
5	○—⩘—○			2,252.25—2,297.75
All positions	○	—⩘—	○	2,976.93—3,037.07

- If not as indicated in the table, replace the cluster switch. (See **CLUSTER SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

AUTO LIGHT SENSOR REMOVAL/INSTALLATION

NOTE:

- The auto light sensor is integrated with the rain sensor as a single unit.
- When replacing the auto light sensor, refer to RAIN SENSOR REMOVAL/INSTALLATION. (See **RAIN SENSOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

LIGHTING SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE

Turn Light System

- There are two methods for personalizing the turn light system: One using the M-MDS and the other using the center display (with center display). Refer to the following and perform the setting.

  Using M-MDS

  - CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE

  Using center display

  - CENTER DISPLAY PERSONALIZATION FEATURES SETTING PROCEDURE

Auto Light System

- There are two methods for personalizing the auto light system: One using the M-MDS and the other using the center display (with center display). Refer to the following and perform the setting.

  Using M-MDS

FRONT MAP LIGHT REMOVAL/INSTALLATION

Without Sunglasses Holder

Single light type

NOTE:

- The front map light can be removed without having to remove the headliner from the vehicle.

1. Perform the following procedure.

4SD

- Set the wheel blocks for both the front and rear wheels.
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Shift the selector lever from the P position to the D position (ATX).
- Remove the sunroof seaming welt. (with sunroof system)
- Remove the following parts:
  - A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
  - Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
  - Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
  - Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
  - Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
  - B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
  - Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
  - Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
  - B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- Remove the C-pillar trim. (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
- Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)

5HB

- Set the wheel blocks for both the front and rear wheels.
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Shift the selector lever from the P position to the D position (ATX).
- Remove the sunroof seaming welt. (with sunroof system)
- Remove the following parts:
  - A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
  - Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
  - Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
  - Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
  - Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

- B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
- Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
- Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
- B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- Remove the following parts:
  - Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
  - Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
  - Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
  - Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
  - Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
  - Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
  - C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
  - Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

2. Disconnect the connector.

3. While pressing the hooks of the front map light in the direction of arrows (1) shown in the figure, press out the front map light in the direction of arrow (2) to detach the hooks from the bracket.

CAUTION:

- When removing the front map light from the bracket, the front map light may fall off and be damaged. Remove the front map light from the bracket while holding the front map light on the lens side by hand.

4. Remove the front map light.

5. Install in the reverse order of removal.

Dual light type

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Pull out sections A of the front map light in the direction of arrow (1) shown in the figure and detach the clips from the bracket.

CAUTION:

- Be careful not to pull the connector out strongly when removing the front map light. Otherwise, the contact surface of the wiring harness secured to the headliner will come off and the wiring harness could be pulled out. If the front map light is installed with the wiring harness pulled out, the wiring harness could get caught between the headliner and front map light bracket resulting in an open or short circuit in the wiring harness.

3. Move the front map light in the direction of arrow (2) shown in the figure and pull out the front map light hooks from the headliner.

4. Disconnect the connector and remove the front map light from the headliner.

CAUTION:

- When removing the front map light from the headliner, the front map light may fall off and be damaged. Remove the front map light from the headliner while holding the front map light on the lens side by hand.

5. Install in the reverse order of removal.

With Sunglasses Holder

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Open the sunglasses holder.

3. Remove the screws.

4. Move the front map light in the direction of arrow (1) shown in the figure and pull out the pin from the bracket.

CAUTION:

- Be careful not to pull the connector out strongly when removing the front map light. Otherwise, the contact surface of the wiring harness secured to the headliner will come off and the wiring harness could be pulled out. If the front map light is installed with the wiring harness pulled out, the wiring harness could get caught between the headliner and front map light bracket resulting in an open or short circuit in the wiring harness.

5. Move the front map light in the direction of arrow (2) shown in the figure and pull out the front map light hooks from the headliner.

6. Disconnect the connector and remove the front map light from the headliner.

CAUTION:

- When removing the front map light from the headliner, the front map light may fall off and be damaged. Remove the front map light from the headliner while holding the front map light on the lens side by hand.

7. Install in the reverse order of removal.

FRONT MAP LIGHT REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

FRONT MAP LIGHT BULB REMOVAL/INSTALLATION

Single Light Type

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. To prevent scratches, apply protective tape to the position shown in the figure.

CAUTION:

- When inserting the remover tool in the gap between the front map light and the lens, the remover tool could interfere with the front map light and scratch or damage it. When removing the lens from the front map light, apply protective tape to the front map light.

3. Insert the remover tool into the service hole at the position shown in the figure.

4. Move the remover tool in the direction shown in the figure and detach the lens tabs from the front map light.

5. Pull out the lens tabs from the front map light and remove the lens from the front map light.

6. Remove the front map light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

7. Install in the reverse order of removal.

Dual Light Type

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. To prevent scratches, apply protective tape to the position shown in the figure.

CAUTION:

- When inserting the remover tool in the gap between the front map light and the lens, the remover tool could interfere with the front map light and scratch or damage it. When removing the lens from the front map light, apply protective tape to the front map light.

3. Press the lens to assure a space for inserting the remover tool.

4. Insert the remover tool into the gap between the lens and the front map light.

5. Move the remover tool in the direction of arrow (1) shown in the figure, pull out the lens from the pin.

6. Remove the lens from the front map light.

7. Press the spring of the front map light in the direction of arrow (2) shown in the figure and disengage the front map light bulb from the spring.

8. Remove the front map light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT MAP LIGHT INSPECTION

Single Light Type

NOTE:

- The front map light can be removed without having to remove the headliner from the vehicle.

1. Perform the following procedure.

4SD

- Set the wheel blocks for both the front and rear wheels.
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Shift the selector lever from the P position to the D position (ATX).
- Remove the sunroof seaming welt. (with sunroof system)
- Remove the following parts:
  - A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
  - Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
  - Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
  - Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
  - Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
  - B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
  - Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
  - Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
  - B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- Remove the C-pillar trim. (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

- Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)

5HB

- Set the wheel blocks for both the front and rear wheels.
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Shift the selector lever from the P position to the D position (ATX).
- Remove the sunroof seaming welt. (with sunroof system)
- Remove the following parts:
    - A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    - Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    - Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    - Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    - Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    - B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    - Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    - Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    - B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- Remove the following parts:
    - Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
    - Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
    - Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
    - Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
    - Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
    - Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
    - C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    - Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

2. Remove the front map light. (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

3. Verify that the continuity between the front map light terminals is as indicated in the table.

: Bulb

Room light switch	Terminal		
	B	C	D
OFF			
ON	○	○	○
DOOR		○	○

- If not as indicated in the table, replace the front map light bulb or front map light. (See **FRONT MAP LIGHT BULB REMOVAL/INSTALLATION**.) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

Dual Light Type

Front map light switch

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front map light. (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

3. Verify that the continuity between the front map light terminals is as indicated in the table.

FRONT MAP LIGHT INSPECTION

: Bulb

Front map light switch		Terminal		
LH	RH	A	F	G
OFF	ON			
ON	OFF			
OFF	OFF			
ON	ON			

- If not as indicated in the table, replace the front map light bulb or the front map

light. (See **FRONT MAP LIGHT BULB REMOVAL/INSTALLATION**.) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

Room light switch

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the front map light. (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
3. Verify that the continuity between the front map light terminals is as indicated in the table.

○—○ : Continuity

Room light switch	Terminal		
	A	G	H
OFF			
ON	○—○		
DOOR		○—○	

- If not as indicated in the table, replace the front map light. (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR MAP LIGHT BULB REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. To prevent scratches or damage, affix protective tape to the position shown in the figure.

CAUTION:

- When inserting the remover tool in the gap between the rear map light and the lens, the remover tool may contact the rear map light and damage it. Apply protective tape to the rear map light before removing the lens from the rear map light.

3. Insert the remover tool into the service hole at the position shown in the figure.

4. Move the remover tool in the direction of the arrow shown in the figure to detach the lens tabs from the rear map light.

5. Pull out the lens tabs from the rear map light and remove the lens from the rear map light.

6. Remove the rear map light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR MAP LIGHT REMOVAL/INSTALLATION

NOTE:

- The rear map light can be removed without having to remove the headliner from the vehicle.

1. Perform the following procedure.

4SD

- Set the wheel blocks for both the front and rear wheels.
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Shift the selector lever from the P position to the D position (ATX).
- Remove the sunroof seaming welt. (with sunroof system)
- Remove the following parts:
  - A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
  - Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
  - Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
  - Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
  - Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
  - Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
  - B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
  - Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
  - Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
  - B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- Remove the C-pillar trim. (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
- Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)

5HB

- Set the wheel blocks for both the front and rear wheels.
- Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
- Shift the selector lever from the P position to the D position (ATX).
- Remove the sunroof seaming welt. (with sunroof system)
- Remove the following parts:
    - A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    - Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    - Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    - Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    - Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    - Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    - B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    - Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    - Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    - B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
- Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
- Remove the following parts:
    - Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
    - Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
    - Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
    - Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
    - Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
    - Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
    - C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

- Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)

2. Disconnect the connector.

3. While pressing the hooks of the rear map light in the direction of arrows (1) shown in the figure, pull the rear map light in the direction of arrow (2) to detach the hooks of the rear map light from the bracket.

CAUTION:

- When removing the rear map light from the bracket, the rear map light may fall off and be damaged. Remove the rear map light from the bracket while holding the rear map light on the lens side by hand.

4. Remove the rear map light.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. To prevent scratches or damage, apply protective tape to the position shown in the figure.

CAUTION:

- When inserting the remover tool in the gap between the cargo compartment light and the trunk side upper trim, the remover tool could interfere with the trunk side upper trim and scratch or damage it. When removing the cargo compartment light from the trunk side upper trim, apply protective tape to the trunk side upper trim.

3. Insert the remover tool into the gap between the cargo compartment light and the trunk side upper trim.

4. Move the remover tool in the direction of arrow (1) shown in the figure and pull out the tab of the cargo compartment light from the trunk side upper trim.

5. Move the cargo compartment light in the direction of arrow (2) shown in the figure and pull out the cargo compartment light from the trunk side upper trim.

6. Disconnect the connector and remove the cargo compartment light.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CARGO COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

CAUTION:

- If the cargo compartment light bulb is removed without disconnecting the negative battery cable, the circuit may be shorted and the related parts such as the rear body control module (RBCM) may be damaged. Always disconnect the negative battery cable before removing the cargo compartment light bulb.

2. To prevent scratches, apply protective tape to the position shown in the figure.

CAUTION:

- When inserting the remover tool in the gap between the cargo compartment light and the trunk side upper trim, the remover tool could interfere with the trunk side upper trim and scratch or damage it. Before removing the cargo compartment light from the trunk side upper trim, apply protective tape to the trunk side upper trim.

3. Insert the remover tool into the gap between the cargo compartment light and the trunk side upper trim.

4. Move the remover tool in the direction of arrow (1) shown in the figure and pull out the tab of the cargo compartment light from the trunk side upper trim.

5. Move the cargo compartment light in the direction of arrow (2) shown in the figure and pull out the cargo compartment light from the trunk side upper trim.

6. Press the spring in the direction of the arrow shown in the figure to detach the spring from the cargo compartment light bulb.

7. Remove the cargo compartment light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CARGO COMPARTMENT LIGHT INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the cargo compartment light. (See **CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION**.)

3. Verify that the continuity between the cargo compartment light terminals is as indicated in the table.

: Bulb

Switch position	Terminal	
	A	B
On		
Off		

- If not as indicated in the table, replace the cargo compartment light bulb or the cargo compartment light. (See **CARGO COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION**.) (See **CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

TRUNK COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. While pressing the lens in the direction of arrows (1) shown in the figure, move the lens in the direction of arrow (2) to detach the lens tabs from the rear package trim.

3. Remove the lens.

4. Remove the trunk compartment light bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

VANITY MIRROR ILLUMINATION BULB REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Insert the remover tool into the service hole at the position shown in the figure.

3. Move the remover tool in the direction of arrow (1) shown in the figure to pull out the lens and detach the lens tabs from the sunvisor.

4. Pull the lens in the direction of arrow (2) shown in the figure to remove it.

5. Remove the vanity mirror illumination bulb.

CAUTION:

- The bulb reaches high temperatures when illuminated. If there is oil or dirt on the surface of the bulb, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

VANITY MIRROR ILLUMINATION INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the sunvisor. (See **SUNVISOR REMOVAL/INSTALLATION**.)
3. Verify that the continuity between the vanity mirror illumination terminals is as indicated in the table.

SEC. A—A

: Bulb

Vanity mirror cover condition	Sunvisor condition	Terminal	
		A	B
Fully open	Within range **A** shown in figure	○	○
Except above	Except above		

- If not as indicated in the table, replace the vanity mirror illumination bulb or the sunvisor. (See **VANITY MIRROR ILLUMINATION BULB REMOVAL/INSTALLATION**.) (See **SUNVISOR REMOVAL/INSTALLATION**.)

VANITY MIRROR ILLUMINATION INSPECTION

2014 - Mazda3 - Body and Accessories

WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION

Windshield Wiper Arm

1. Open the hood.

2. Carefully pull the cap up in the direction of arrow (1) shown in the figure while slightly shaking it, and detach the cap from the windshield wiper arm.

CAUTION:

- If excessive force is applied when removing the cap, the tabs could break. Carefully remove the

cap.

3. Remove the cap from the windshield wiper arm by pulling the cap in the direction of arrow (2) shown in the figure.

4. While pressing the windshield wiper arm as shown in the figure, loosen the nut without completely removing it.

5. Close the hood.

6. Raise the windshield wiper arm as shown in the figure.

7. Pull the windshield wiper arm up to the loosened nut.

CAUTION:

- If the windshield wiper arm is pulled up with the nut completely removed, the windshield wiper arm could contact the hood when it is removed. Always pull up the windshield wiper arm with the nut not completely removed.

8. Remove the nut.

9. Remove the windshield wiper arm. (See **Windshield wiper arm installation note**)

10. Install in the reverse order of removal.

11. Adjust the windshield wiper arm and blade. (See **WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT**.)

Windshield wiper arm installation note

1. Clean the serrated connecting part with a wire brush before installing the windshield wiper arm.

Windshield Wiper Blade

1. Pull the windshield wiper blade tab up in the direction of arrow (1) shown in the figure.

2. Tilt the windshield wiper blade in the direction of arrow (2) shown in the figure, press it in the direction of arrow (3) shown in the figure, and detach the windshield wiper arm from the windshield wiper blade.

3. Remove the windshield wiper blade.

CAUTION:

- If the windshield wiper arm end is placed directly on the windshield after removing the windshield wiper blade, it could scratch the windshield. If the windshield wiper arm end is to be placed on the windshield, place it on a rag to protect the windshield.

4. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT

1. Switch the ignition ON (engine off or on).
2. Operate the windshield wiper at low speed.
3. Turn off the windshield wiper switch during windshield wiper low operation, and stop the windshield wiper motor mid-way.
4. Verify that the windshield wipers stop at the park position as a result of the auto-stop operating.
5. Remove the windshield wiper arm. (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
6. Install the windshield wiper arm to the serrated connecting part, align the windshield wiper arm and blade end with the hollowed marks in the ceramic coating while sliding the windshield wiper arm onto the grooves of the serrated connecting part one by one, and temporarily tighten the nut.

NOTE:

- If the hollowed marks in the ceramic coating cannot be located, adjust the windshield wiper blade end to the area shown in the figure and temporarily tighten the nut.

- If the windshield wiper arm and blade has not been installed correctly to the area shown in the figure, repeat the adjustment procedure.
- If the windshield wiper arm and blade is installed correctly to the area shown in the figure, tighten the nut completely.

7. Install the windshield wiper arm. (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the windshield wiper arm and blade. (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

3. Remove the cowl grille. (See **COWL GRILLE REMOVAL/INSTALLATION**.)

4. Apply protective tape to the area where the windshield end interferes with the windshield wiper motor and link as shown in the figure.

CAUTION:

- Always apply protective tape to the windshield end. If the windshield wiper motor and link contacts the windshield, it could damage the windshield.

5. Disconnect the connector.

6. Remove the bolts.

7. Pull the windshield wiper motor and link out from the pin and remove it.

8. Secure the position of the windshield wiper link shown in the figure in a vise.

CAUTION:

- If the vise is tightened with excessive force, it could deform or damage the windshield wiper link. When securing the windshield wiper link in the vise, be careful not to deform or damage the windshield wiper link.
- Protect the windshield wiper link by placing a rag in the vise when securing it in the vise. Otherwise, it could damage the area where the vise is secured.

9. Insert a tape-wrapped flathead screwdriver into the gap between windshield wiper links No.1 and 2.

10. Move the flathead screwdriver in the direction of arrow (1) shown in the figure and remove the windshield wiper motor and the ball joint for windshield wiper link No.2. (See **Ball Joint Assembly Note**.)

11. Remove the rubber seal.

12. Insert a flathead screwdriver into the gap between the windshield wiper motor and windshield wiper link No.1.

13. Move the flathead screwdriver in the direction of arrow (2) shown in the figure and remove the windshield wiper motor and the ball joint for windshield wiper link No.1. (See **Ball Joint Assembly Note**.)

14. Remove the bolts.

15. Remove the windshield wiper motor from the windshield wiper link.

16. Install in the reverse order of removal.

Ball Joint Assembly Note

1. When assembling the ball joint, use a clean rag to protect the links, and squeeze using a pair of protective tape-wrapped pliers.

RAG

WINDSHIELD WIPER MOTOR INSPECTION

Windshield Wiper Motor Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

   b. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)

   c. Windshield wiper motor connector (See **WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION**.)

3. Apply battery positive voltage and connect the ground to the windshield wiper motor terminals, and then verify the operation condition.

B+ terminal	Ground terminal	Windshield wiper motor operation status
A	C	LO
B	C	HI

- If the windshield wiper motor does not operate as indicated in the table, replace the windshield wiper motor. (See **WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION**.)

Auto-stop Operation Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Windshield wiper arm and blade (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

   b. Cowl grille (See **COWL GRILLE REMOVAL/INSTALLATION**.)

   c. Windshield wiper motor connector (See **WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION**.)

3. Connect the battery voltage to windshield wiper motor terminal A, connect the ground to terminal C, and operate the windshield wiper motor at low speed.

4. Disconnect the battery voltage from terminal A during windshield wiper low operation, and stop the windshield wiper motor mid-way.

5. Connect windshield wiper motor terminals A and D using a jumper wire.

6. Connect the battery positive voltage to windshield wiper motor terminal E.

7. Verify that the windshield wipers stop at the park position as a result of the auto-stop operating.

- If the windshield wipers do not stop at the park position, replace the windshield wiper motor. (See **WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

WASHER TANK REMOVAL/INSTALLATION

NOTE:

- If the procedure is performed with washer fluid in the washer tank, the washer fluid may leak out. When performing the procedure, place a container under the washer tank to collect washer fluid, and perform the procedure.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)

3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

4. Insert the remover tool into the service hole at the position shown in the figure.

5. While pressing the washer tank bracket tabs in the direction of the arrows (1) shown in the figure, pull the washer tank bracket in the direction of the arrow (2) and pull out the washer tank bracket from the bracket.

6. Remove the cap.

7. Move the washer funnel in the direction of arrow (4) shown in the figure while pressing it in the direction of arrows (3) shown in the figure, and remove the washer funnel from the washer tank bracket.

8. Disconnect the connectors.

9. Press out the clip in the direction of arrow (6) shown in the figure while pressing the clip tabs in the direction of arrows (5) shown in the figure, and remove the clip from the washer tank.

10. Disconnect the washer hose from the washer motor.

11. Remove the washer hose from the washer tank hook. (See **WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION**.) (See **REAR WASHER HOSE REMOVAL/INSTALLATION**.)

12. Pull out the washer hose from area A of the washer tank.

13. Remove the bolts.

14. Move the washer tank in the direction of arrow (7) shown in the figure and pull out the washer tank hook from the vehicle.

15. Pull out the washer tank pin and remove the washer tank from the vehicle.
16. Remove the washer motor. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)
17. Remove the washer fluid-level sensor (with washer fluid-level sensor). (See **WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION**.)
18. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

WASHER MOTOR REMOVAL/INSTALLATION

NOTE:

- If the procedure is performed with washer fluid in the washer tank, the washer fluid may leak out. When performing the procedure, place a container under the washer tank to collect washer fluid, and perform the procedure.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)

3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

4. Disconnect the connector.

5. Disconnect the washer hose from the washer motor.

6. Remove the washer motor in the direction of arrow (2) shown in the figure while moving it in the direction of arrow (1) shown in the figure.

7. Remove the grommet.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

WASHER MOTOR INSPECTION

NOTE:

- If the procedure is performed with washer fluid in the washer tank, the washer fluid may leak out. When performing the procedure, place a container under the washer tank to collect washer fluid, and perform the procedure.

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)

3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

4. Disconnect the connector. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)

5. Disconnect the washer hose from the washer motor. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)

6. Apply battery voltage to washer motor terminal A, and connect terminal B to ground.

WARNING:

- Water sprayed on the battery and ground could cause electrocution. When performing the washer motor inspection, prepare a container to collect washer fluid and be careful not to spray washer fluid.

7. Verify that washer fluid sprays from the washer motor.

- If washer fluid does not spray from the washer motor, replace the washer motor. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)

3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

4. Disconnect the connector. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)

5. Disconnect the washer hose from the washer motor. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)

6. Apply battery voltage to washer motor terminal A, and connect terminal B to ground.

WARNING:

- Water sprayed on the battery and ground could cause electrocution. When performing the washer motor inspection, prepare a container to collect washer fluid and be careful not to spray washer fluid.

7. Verify that washer fluid sprays from the front side of the washer motor.

- If washer fluid does not spray from the front side of the washer motor, replace the washer motor. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)

8. Apply battery positive voltage to washer motor terminal B, and connect terminal A to ground.

9. Verify that washer fluid sprays from the rear side of the washer motor.

- If washer fluid does not spray from the rear side of the washer motor, replace the washer motor. (See **WASHER MOTOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

WINDSHIELD WASHER NOZZLE REMOVAL/INSTALLATION

1. Remove the windshield wiper arm and blade. (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
2. Remove the cowl grille. (See **COWL GRILLE REMOVAL/INSTALLATION**.)
3. Disconnect the windshield washer hose from the windshield washer nozzle.

4. Press out the windshield washer nozzle in the direction of arrow (2) shown in the figure while pressing the windshield washer nozzle tabs in the direction of arrows (1) shown in the figure.
5. Remove the windshield washer nozzle.
6. Install in the reverse order of removal.
7. Adjust the windshield washer nozzle. (See **WINDSHIELD WASHER NOZZLE ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

WINDSHIELD WASHER NOZZLE ADJUSTMENT

CAUTION:

- Do not insert objects into the injection nozzle when adjusting the nozzle. If the nozzle is adjusted by inserting a stick-like object into the nozzle, it could deform the injection nozzle and the washer fluid may not spray normally.

1. Insert the remover tool into the adjustment holes of the windshield washer nozzle and adjust the area where washer fluid is sprayed as shown in the figure.

WINDSHIELD WASHER NOZZLE

WINDSHIELD WASHER NOZZLE ADJUSTMENT

2014 - Mazda3 - Body and Accessories

WASHER FLUID-LEVEL SENSOR INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)

3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)

4. Disconnect the connector. (See **WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION**.)

5. Verify that the continuity between the washer fluid-level sensor terminals is as indicated in the table.

○——○ : Continuity

Washer fluid level	Terminal	
	A	B
Above low		
Below low	○	○

- If not as indicated in the table, replace the washer fluid-level sensor. (See **WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION

NOTE:

- If the procedure is performed with washer fluid in the washer tank, the washer fluid may leak out. When performing the procedure, place a container under the washer tank to collect washer fluid, and perform the procedure.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the set plate. (See **SET PLATE REMOVAL/INSTALLATION**.)
3. Remove the front bumper. (See **FRONT BUMPER REMOVAL/INSTALLATION**.)
4. Disconnect the connector.

5. Remove the washer fluid-level sensor.

6. Remove the grommet.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION

Windshield Washer Hose A

1. Remove the front mudguard (RH). (See **MUDGUARD REMOVAL/INSTALLATION**.)
2. Disconnect windshield washer hose A from the washer motor.

3. Remove windshield washer hose A from the washer tank hook. (See **Windshield washer hose A installation note**.)
4. Pull out windshield washer hose A from area A of the washer tank.
5. Remove windshield washer hose A from clips A and B.
6. Disconnect windshield washer hose B from joint pipe A.
7. Remove windshield washer hose A.

8. Install in the reverse order of removal.

Windshield washer hose A installation note

1. When installing windshield washer hose A to the washer tank hook, align the hook with the upper part of the white mark and install.

Windshield Washer Hose B

1. Remove the windshield wiper arm and blade. (See **WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
2. Remove the cowl grille. (See **COWL GRILLE REMOVAL/INSTALLATION**.)
3. Disconnect windshield washer hose C from joint pipe B.

4. Disconnect windshield washer hose B from joint pipe C.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION

Rear Wiper Arm

1. Pull the cap in the direction of arrows (1) shown in the figure and detach the cap tabs from the rear wiper arm.

2. Remove the cap.
3. Remove the nut with the rear wiper arm pressed as shown in the figure.

4. Raise the rear wiper arm as shown in the figure and pull out the rear wiper arm from the serrated connecting part.

5. Install in the reverse order of removal.
6. Adjust the rear wiper arm and blade. (See **REAR WIPER ARM AND BLADE ADJUSTMENT**.)

Rear wiper arm installation note

1. Clean the serrated connecting part with a wire brush before installing the rear wiper arm.

Rear Wiper Blade

1. Move the rear wiper blade in the direction of arrow (1) shown in the figure and detach the rear wiper blade from the rear wiper arm.

2. Remove the rear wiper blade.
3. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR WIPER ARM AND BLADE ADJUSTMENT

1. Switch the ignition ON (engine off or on).
2. Operate the rear wiper.
3. Turn off the rear wiper switch during rear wiper operation and stop the rear wiper motor mid-way.
4. Verify that the rear wiper stops at the park position as a result of the auto-stop operating.
5. Remove the rear wiper arm. (See **REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)
6. Install the rear wiper arm to the serrated connecting part, adjust the rear wiper arm and blade end to the area shown in the figure while sliding the rear wiper arm onto the grooves of the serrated connecting part one by one, and temporarily tighten the nut.

- If the rear wiper arm and blade is not installed to the area shown in the figure, repeat the adjustment procedure.
- If the rear wiper arm and blade is installed to the area shown in the figure, tighten the nut completely.

7. Install the rear wiper arm. (See **REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR WIPER MOTOR REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear wiper arm and blade (See **REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the bolts in the order of (1), (2), and (3). (See **Rear Wiper Motor Installation Note**.)

5. Pull out the rear wiper motor pin from the outer bushing and remove the rear wiper motor.

6. Press in the outer bushing from the outside of the liftgate.

7. Pull the outer bushing from the inside of the liftgate and remove it.

8. Install in the reverse order of removal.

Rear Wiper Motor Installation Note

1. When installing the rear wiper motor to the liftgate, temporarily tighten bolt (2) and install bolts in the order of (3), (2), and (1).

REAR WIPER MOTOR REMOVAL/INSTALLATION

2014 - Mazda3 - Body and Accessories

REAR WIPER MOTOR INSPECTION

Rear Wiper Motor Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear wiper arm and blade (See **REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector. (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

4. Apply battery positive voltage to rear wiper motor terminal B and connect terminal A to the ground, and then verify the operation condition.

- If the rear wiper motor does not operate normally, replace it. (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

Auto-stop Operation Inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear wiper arm and blade (See **REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION**.)

   b. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   d. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   e. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector. (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

4. Apply battery positive voltage to rear wiper motor terminal B and connect terminals A and C to the ground, and then operate the rear wiper motor.

5. Disconnect the battery voltage from terminal B during rear wiper motor operation, and stop the windshield wiper motor mid-way.

6. Verify that the rear wiper stops at the park position as a result of the auto-stop operating.

   - If the rear wiper does not stop at the park position, replace the rear wiper motor. (See **REAR WIPER MOTOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR WASHER NOZZLE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the liftgate upper trim. (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

3. Remove the rear spoiler. (See **REAR SPOILER REMOVAL**.) (See **REAR SPOILER INSTALLATION**.)

4. Disconnect the rear washer hose from the rear washer nozzle.

5. Press out the rear washer nozzle in the direction of arrow (2) shown in the figure while pressing the rear washer nozzle tabs in the direction of arrows (1) shown in the figure.

6. Remove the rear washer nozzle.

7. Install in the reverse order of removal.

8. Adjust the rear washer nozzle. (See **REAR WASHER NOZZLE ADJUSTMENT**.)

2014 - Mazda3 - Body and Accessories

REAR WASHER NOZZLE ADJUSTMENT

CAUTION:

- If the nozzle angle is adjusted with excessive force by inserting a needle or similar thin tool into the rear washer nozzle, it could damage the nozzle internally. When adjusting the rear washer nozzle, be careful not to apply excessive force.

1. Insert a needle or similar thin tool into the rear washer nozzle and adjust the area where washer fluid is sprayed as shown in the figure.

REAR WASHER NOZZLE ADJUSTMENT

2014 - Mazda3 - Body and Accessories

REAR WASHER HOSE REMOVAL/INSTALLATION

Rear Washer Hose A

1. Remove the front mudguard (RH). (See **MUDGUARD REMOVAL/INSTALLATION**.)
2. Disconnect rear washer hose A from the washer motor.

3. Remove rear washer hose A from washer tank hook. (See **Rear washer hose A installation note**.)
4. Pull out rear washer hose A from area A of the washer tank.
5. Remove rear washer hose A from the clip.
6. Disconnect rear washer hose B from joint pipe A.
7. Remove rear washer hose A.
8. Install in the reverse order of removal.

Rear washer hose A installation note

1. When installing rear washer hose A to the washer tank hook, align the upper part of the yellow mark with the hook and install.

Rear Washer Hose B

1. Remove the front mudguard (RH). (See **MUDGUARD REMOVAL/INSTALLATION**.)
2. Disconnect rear washer hose B from joint pipe A.

3. Remove rear washer hose B from the clip.

4. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

5. Remove the following parts:

   a. Front scuff plate (RH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Front side trim (RH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   d. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)

   e. Bluetooth unit (without center display, with Bluetooth system) (See **Bluetooth® UNIT REMOVAL/INSTALLATION**.)

   f. Tuner and amp unit (with center display) (See **TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION**.)

   g. A-pillar trim (RH) (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

6. Remove the grommet from the body.

7. Remove rear washer hose B from clips A and B.
8. Disconnect rear washer hose C from joint pipe D.
9. Remove rear washer hose B.
10. Install in the reverse order of removal.

Rear Washer Hose C

1. Set the wheel blocks for both the front and rear wheels.
2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
3. Shift the selector lever from the P position to the D position (ATX).
4. Remove the sunroof seaming welt. (with sunroof system)
5. Remove the following parts:
   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
6. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

7. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   c. Trunk board (See **TRUNK BOARD REMOVAL/INSTALLATION**.)
   d. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
   e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
   f. Trunk side trim (LH only) (See **TRUNK SIDE TRIM REMOVAL/INSTALLATION**.)
   g. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   h. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   i. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   j. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   k. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   l. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   m. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   n. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   o. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   p. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   q. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   r. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
8. Set the selector lever component aside. (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
9. Set the shift lever component aside. (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
10. Remove the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)
11. Remove the tape.

Without sunroof

With sunroof

12. Remove rear washer hose C from the clip.
13. Remove rear washer hose C. (See **Rear washer hose C installation note**.)
14. Install in the reverse order of removal.

Rear washer hose C installation note

1. When installing rear washer hose C to the headliner, cut rear washer hose C according to the following dimensions.

Without sunroof

With sunroof

Rear Washer Hose D

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G**

2.5].)

2. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the following parts:
   a. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
   b. C pillar trim (RH) (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   c. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)
5. Partially peel back the headliner. (See **HEADLINER REMOVAL/INSTALLATION**.)
6. Disconnect rear washer hose C from joint pipe E.

7. Remove the tape.
8. Partially peel the liftgate grommet.

9. While pressing the tab of the liftgate grommet inner in the direction of arrow (1) shown in the figure using the remover tool, pull the liftgate grommet inner in the direction of arrow (2) shown in the figure to detach the tab of the liftgate grommet inner from the liftgate.

10. Detach all the tabs of the liftgate grommet inner from the liftgate and remove the liftgate grommet inner.

11. Disconnect rear washer hose D from the rear washer nozzle.

12. Disconnect rear washer hose D from joint pipe F.
13. Remove rear washer hose D.
14. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

WIPER AND WASHER SWITCH REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Rotate the steering wheel until the service hole in the position shown in the figure is visible.

4. While pressing the wiper and washer switch tab in the direction of arrow (1) shown in the figure, pull out the wiper and washer switch in the direction of arrow (2) shown in the figure, and detach the wiper and washer switch tab and the start stop unit.

5. Remove the wiper and washer switch.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

WIPER AND WASHER SWITCH INSPECTION

Windshield Wiper Switch

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Remove the wiper and washer switch. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)

4. Verify that the continuity between the wiper and washer switch terminals is as indicated in the table.

○—○ : Continuity

Switch position		Terminal					
		B	C	G	I	J	K
Windshield wiper switch	MIST	○	—	○			
	OFF						
	INT/AUTO		○	○			
	LO	○	—	○			
	HI	○	○	○			
Auto VOL	-2 (Low)			○	○	○	○
	-1			○	○	—	○
	0			○	—	—	○
	+1			○	—	○	○
	+2 (Fast)			○	—	○	

- If the continuity is not as indicated in the table, replace the wiper and washer switch. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)

Windshield Washer Switch

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Remove the wiper and washer switch. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)

4. Verify that the continuity between the wiper and washer switch terminals is as indicated in the table.

○—○ : Continuity

Switch position	Terminal	
	G	H
WINDSHIELD WASHER	○	○
OFF		

- If the continuity is not as indicated in the table, replace the wiper and washer switch. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)

Rear Wiper and Washer Switch

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the column cover. (See **COLUMN COVER REMOVAL/INSTALLATION**.)

3. Remove the wiper and washer switch. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)

4. Verify that the continuity between the wiper and washer switch terminals is as indicated in the table.

○—○ : Continuity

Switch position		Terminal			
		D	E	F	G
Rear wiper switch	OFF				
	R.INT	○	—	—	○
	ON		○	—	○
REAR WASHER 1				○	○
REAR WASHER 2			○	○	○

K	J	I	H	G	F	E	D	C	B	A

- If the continuity is not as indicated in the table, replace the wiper and washer switch. (See **WIPER AND WASHER SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

RAIN SENSOR REMOVAL/INSTALLATION

Without Forward Sensing Camera (FSC) and Smart City Brake Support (SCBS)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Open the rain sensor cover in the direction of arrows (1) shown in the figure and detach the rain sensor cover tabs from the rain sensor.

3. Remove the rain sensor cover from the rain sensor in the direction of arrow (2) shown in the figure.

4. Disconnect the connector.

5. Insert the remover tool into the gap between the rain sensor and the tab (1).

6. Move the remover tool in the direction of arrow (3) shown in the figure and detach the tab (1) from the rain sensor.

7. Insert the remover tool into the gap between the rain sensor and the tab (2).

8. Move the remover tool in the direction of arrow (4) shown in the figure and detach the tab (2) from the rain sensor.

9. Pull out the tab from the rain sensor.

10. Move the rain sensor in the direction of arrow (5) shown in the figure and pull out the rain sensor from the bracket.

11. Peel off the rain sensor protective sheet from the rain sensor.

12. Install in the reverse order of removal. (See **Rain Sensor Installation Note**.)

13. If the rain sensor is replaced, perform the following sensitivity setting procedure for the auto lights.

CAUTION:

- If the auto light sensitivity setting is not performed after replacing the rain sensor (auto light sensor), the rain sensor will be unable to detect the correct illumination level and the auto light/wiper system will not operate normally. If the rain sensor is replaced, perform the auto light sensitivity setting.

a. Using the M-MDS, verify the current auto light sensitivity setting. (See **CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE**.)

b. Change the sensitivity setting to a value other than the auto light sensitivity setting verified in Step 1.

c. Re-set to the auto light sensitivity setting verified in Step 1.

With Forward Sensing Camera (FSC) or Smart City Brake Support (SCBS)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the cover. (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Insert the remover tool into the gap between the rain sensor and the tab (1).

5. Move the remover tool in the direction of arrow (1) shown in the figure and detach the tab (1) from the rain sensor.

6. Insert the remover tool into the gap between the rain sensor and the tab (2).

7. Move the remover tool in the direction of arrow (2) shown in the figure and detach the tab (2) from the rain sensor.

8. Pull out the tab from the rain sensor.

9. Move the rain sensor in the direction of arrow (3) shown in the figure and pull out the rain sensor from the bracket.

10. Peel off the rain sensor protective sheet from the rain sensor.

11. Install in the reverse order of removal. (See **Rain Sensor Installation Note**.)

12. If the rain sensor is replaced, perform the following sensitivity setting procedure for the auto lights.

CAUTION:

- If the auto light sensitivity setting is not performed after replacing the rain sensor (auto light sensor), the rain sensor will be unable to detect the correct illumination level and the auto light/wiper system will not operate normally. If the rain sensor is replaced, perform the auto light sensitivity setting.

a. Using the M-MDS, verify the current auto light sensitivity setting. (See **CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE**.)

b. Change the sensitivity setting to a value other than the auto light sensitivity setting verified in Step 1.

c. Re-set to the auto light sensitivity setting verified in Step 1.

Rain Sensor Installation Note

CAUTION:

- If the rate at which the rain sensor reflects or transmits infrared light between the rain sensor and the windshield, or through the protective sheet, is changed, the rain sensor will determine that there is a problem in the rain detection function and stop the auto wiper system control. Be careful of the following when installing the rain sensor:
    - Do not reuse the rain sensor protective sheet.
    - Do not touch the rain sensor lens, rain sensor protective sheet, and sensor installation area on the windshield with your fingers.
    - Verify that there are no air bubbles after installing the rain sensor.

1. Wipe off any oil or dirt from the rain sensor lens and the windshield using a clean rag.

2. Peel off adhesive tape backing A from a new rain sensor protective sheet.

3. Adhere a new rain sensor protective sheet to the rain sensor lens.

4. Peel off adhesive tape backing B from the rain sensor protective sheet.

5. Move the rain sensor in the direction of arrow (1) shown in the figure and install the rain sensor to the bracket.

6. Press the rain sensor in the direction (direction of arrow (2) shown in figure) of the windshield and press out any air bubbles.

7. Verify that there are no air bubbles between the rain sensor and the windshield.

2014 - Mazda3 - Body and Accessories

RAIN SENSOR INITIALIZATION SETTING

NOTE:

- When the ignition is switched ON (engine off or on), the rain sensor detects the condition of the windshield surface, and performs initialization automatically.

2014 - Mazda3 - Body and Accessories

WIPER/WASHER SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE

Auto Wiper System

Using M-MDS

- For details on the method for setting the auto wiper system personalization features, refer to the control system personalization features setting. (See **CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE**.)

Using center display

- The user can enable or disable the auto wiper function by operating the center display. Refer to the entertainment system personalization features setting. (See **CENTER DISPLAY PERSONALIZATION FEATURES SETTING PROCEDURE**.)

2014 - Mazda3 - Body and Accessories

2014 - Mazda3 - Body and Accessories

AUDIO UNIT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

4. Remove the bolt.

6.9—9.8 N·m {71—99 kgf·cm, 62—86 in·lbf}

5. Pull the audio unit in the order of arrows (1) and (2) shown in the figure, and detach clips A and B from the dashboard.

6. Disconnect the connectors.

7. Remove the audio unit.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CENTER DISPLAY REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

4. Remove the bolt.

6.9—9.8 N·m {71—99 kgf·cm, 62—86 in·lbf}

5. Pull the center display component in the order of arrows (1) and (2) shown in the figure, and detach clips A and B from the dashboard.

6. Disconnect the connectors.

7. Remove the center display component.

8. Remove the connectivity master unit (CMU). (See **CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION**.)

9. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CONNECTIVITY MASTER UNIT (CMU) REMOVAL/INSTALLATION

NOTE:

- The connectivity master unit (CMU) prior to replacement stores the vehicle specification information.
- A new CMU does not store any vehicle specification information.
- When the ignition is switched ON after the CMU is replaced, the CMU reads the vehicle specification information sent via CAN transmission from the instrument cluster using the automatic configuration function, and stores it.
- The Bluetooth® pairing information recorded in the CMU cannot be written to a new CMU. Therefore, the Bluetooth® pairing information will be eliminated if the CMU is replaced. Before replacing the CMU, explain to the customer that the Bluetooth® pairing resetting is required.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the glove compartment. (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
3. Remove the decoration panel. (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
4. Remove the center display component. (See **CENTER DISPLAY REMOVAL/INSTALLATION**.)
5. Disconnect the connector.

6. Remove the screws.

7. Remove the CMU.

8. Install in the reverse order of removal.

9. Switch the ignition ON (engine off or on) and perform the CMU automatic configuration.

10. Using the M-MDS, verify that DTC U2300:55 is not displayed.

- If DTC U2300:55 is displayed, go to the DTC troubleshooting procedure. (See **DTC U2300:55 [CONNECTIVITY MASTER UNIT]**.)

2014 - Mazda3 - Body and Accessories

CONNECTIVITY MASTER UNIT (CMU) DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Screw A
2	Bracket A
3	Screw B
4	Bracket B
5	Short-cord
6	Connectivity master unit (CMU)

2. Assemble in the reverse order of disassembly.

2014 - Mazda3 - Body and Accessories

TUNER AND AMP UNIT (TAU) REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Front scuff plate (RH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Front side trim (RH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   c. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   d. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
3. Remove the nuts.

4. Disconnect the connectors.
5. Pull out the wiring harness clip.
6. Remove the tuner and amp unit (TAU).
7. Remove the clip.

BOLT: **8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}**

8. Remove the bolts.
9. Remove the TAU bracket.
10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CD PLAYER REMOVAL

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Shift the selector lever from the P position to the D position (ATX).

3. Insert the SSTs (removing tool) into the positions shown in the figure and disengage the CD player from the front console.

4. Pull the SSTs (removing tool) in the direction shown in the figure and remove the CD player from the front console.

5. Disconnect the connector.

6. Remove the CD player.

7. While pulling the SSTs (removing tool) in the direction of arrow (2) shown in the figure, press the CD player spring in the direction of arrow (1) shown in the figure.

2014 - Mazda3 - Body and Accessories

CD PLAYER INSTALLATION

1. Connect the connector.

2. Install the CD player.

3. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2014 - Mazda3 - Body and Accessories

CENTER DISPLAY PERSONALIZATION FEATURES SETTING PROCEDURE

Smart City Brake Support (SCBS) System

1. Switch the ignition ON (engine off or on).
2. Select [Settings] on the center display.
3. Select [Safety] on the center display.
4. Select an item name, and then select option.

Display of center display	Function	Initial setting	Settings	Control module
Smart City Brake Support	The operation of smart city brake support (SCBS) can be turned off.	On	On / Off	Laser sensor

Blind Spot Monitoring (BSM) System

1. Switch the ignition ON (engine off or on).
2. Select [Settings] on the center display.
3. Select [Safety] on the center display.
4. Select an item name, and then select option.

Display of center display	Function	Initial setting	Settings	Control module
Blind Spot Monitor Volume	The volume of the blind spot monitoring (BSM) warning alarm can be changed.	High	High / Low / Off	Instrument cluster

Lane Departure Warning System (LDWS)

1. Switch the ignition ON (engine off or on).
2. Select [Settings] on the center display.
3. Select [Safety] on the center display.
4. Select [Lane Departure Warning System] on the center display.
5. Select an item name, and then select option.

Display of center display	Function	Initial setting	Settings	Control module
Timing	The distance between the warning-trigger lines for the Lane Departure Warning System (LDWS) and vehicle lanes can be changed.	Before Line	At Line / Before Line	FSC
Warning	The warning operation sensitivity of the lane departure warning system (LDWS) can be changed.	Low	High / Low	FSC
Sound	The type of the LDWS warning alarm can be changed.	Beep	Beep / Rumble	Instrument cluster
Beep Volume	The volume of the LDWS warning alarm (Beep) can be changed.	High or Low*1	High / Low	Instrument cluster
Rumble Strip Volume	The volume of the LDWS warning alarm (Rumble) can be changed.	High or Low*1	High / Mid / Low	Instrument cluster
Reset	Returns the setting content of the lane departure warning system to the initial setting.	No	No / Yes	• FSC • Instrument cluster

*1

The initial value differs depending on the market.

Auto Wiper System

1. Switch the ignition ON (engine off or on).
2. Select [Settings] on the center display.
3. Select [Vehicle] on the center display.
4. Select an item name, and then select option.

Display of center display	Function	Initial setting	Settings	Control module
Rain Sensing Wiper	Auto wiper system can be set to operable or inoperable.	On	On / Off	Rear body control module (RBCM)

Door Locks Systems

1. Switch the ignition ON (engine off or on).
2. Select [Settings] on the center display.
3. Select [Vehicle] on the center display.
4. Select [Door Lock] on the center display.
5. Select an item name, and then select option.

Power door lock system

Display of center display	Function	Initial setting	Settings	Control module
Auto Door Lock Mode	Auto door lock function can be changed.	Lock:When Driving, Unlock: IGN Off	Off / Lock: When Driving / Lock:When Driving, Unlock: IGN Off / Lock: Shifting from Park / Lock: Shifting from Park, Unlock: In Park	Rear body control module (RBCM)
Unlock Mode	2-step unlocking system can be set.	Once Driver's, Twice: All Doors	Once: ALL Doors / Once Driver's, Twice: All Doors	Rear body control module (RBCM)
Reset	Returns the setting content of the door lock system to the initial setting.	No	No / Yes	• Rear body control module (RBCM) • Start stop unit

Advanced keyless entry system

Display of center display	Function	Initial setting	Settings	Control module
Keyless Lock Beep Volume	The keyless beeper volume can be adjusted.	Medium	High / Medium / Low / Off	Start stop unit
Auto Door Relock Time	The operation start time of the auto re-lock function can be changed.	60 seconds	30 seconds / 60 seconds / 90 seconds	Start stop unit
Walk Away Lock	The out-of-area (reception area) type auto lock function can be set.	Off	Off / On	Start stop unit
Reset	Returns the setting content of the door lock system to the initial setting.	No	No / Yes	• Rear body control module (RBCM) • Start stop unit

Keyless entry system

Display of center display	Function	Initial setting	Settings	Control module
Auto Door Relock Time	The operation start time of the auto re-lock function can be changed.	60 seconds	30 seconds / 60 seconds / 90 seconds	Start stop unit

3. Select [System] on the center display.
4. Select an item name, and then select option.

Display of center display	Function	Initial setting	Settings	Control module
Temp*1	The temperature unit can be changed.	F° or C°*2	F° / C°	Instrument cluster

*1

The initial value differs depending on the market.

*2

The setting of the lights-on reminder can be changed with the time setting of auto light off system set to Off.

2014 - Mazda3 - Body and Accessories

Bluetooth® PAIRING PROCEDURE

Without center display

1. Switch the ignition ON (engine off or on).

2. Turn the audio unit on.

3. Select [BT SETUP] by operating the MENU button of the audio unit, and press the POWER/VOLUME button.

4. Select [PAIR DEVICE] by operating the POWER/VOLUME button of the audio unit, and press the POWER/VOLUME button.

NOTE:

- If seven Bluetooth devices have been programmed, "MEMORY FULL" is displayed and the pairing programming is not performed.

5. After "ENTER PIN" is displayed in the audio unit display for approx. 3 s, verify that "PIN 0000 (initial value is 0000)" (4-digit pairing code) is displayed.

6. Input the verified 4-digit pairing code by operating the PRESET 1 button, PRESET 2 button, PRESET 3 button, and PRESET 4 button of the audio unit, and press the POWER/VOLUME button.

7. Verify that "PAIRING" flashes in the display of the audio unit.

8. Input the same 4-digit pairing code which was input to the audio unit to the Bluetooth®-enabled device.

9. After completing the pairing programming, verify that the "Musical note symbol" is displayed in the audio unit display, and then "PAIR SUCCESS" approx. 3 s afterward.

NOTE:

- If the pairing programming fails, "Err" flashes in the audio unit display for approx. 3 s and the screen returns to the [PAIR DEVICE] screen.

With center display

Introduction

- The Bluetooth® pairing procedure differs depending on the version of the Bluetooth®-enabled device. Ask the customer in advance what the Bluetooth®-enabled device's version was when the Bluetooth® pairing was performed.

NOTE:

- A maximum of seven Bluetooth-enabled devices can be programmed to one vehicle.

If Bluetooth®-enabled device is version 2.0

1. Switch the ignition ON (engine off or on).
2. Select "Settings" from the home screen of the center display as shown in the figure.

3. Select the following on the center display.
    - [Devices]
    - [Bluetooth]
    - Bluetooth setting ON
    - [Add New Device]
4. Verify that the 4-digit pairing code (initial value "0000") is indicated in the center display.
5. Input the 4-digit pairing code indicated in the center display into the Bluetooth®-enabled device.

NOTE:

- After inputting the 4-digit pairing code, the connectivity master unit (CMU) initiates the pairing programming with the Bluetooth®-enabled device.

6. Verify that "Pairing complete Connection complete"is indicated in the center display.

NOTE:

- If the Mobile 911 screen is displayed in the center display, end the Mobile 911 setting according to the instructions on the screen.
    - If "YES" is selected on the center display, the Mobile 911 function is valid.
    - If "NO" is selected on the center display, the Mobile 911 function is invalid.

If Bluetooth-enabled device is version 2.1 and later

1. Switch the ignition ON (engine off or on).
2. Select "Settings" from the home screen of the center display as shown in the figure.

3. Select the following on the center display.
    - [Devices]
    - [Bluetooth]
    - Bluetooth setting ON
    - [Add New Device]
4. Verify the 6-digit code displayed in the center display and the Bluetooth-enabled device.

NOTE:

- When "Add New Device" is selected, the CMU searches for a Bluetooth®-enabled device. If the CMU detects a Bluetooth®-enabled device, a 6-digit code is displayed in the center display.

5. Select [YES] on the center display.

NOTE:

- When "YES" is selected, the CMU initiates the pairing programming with the Bluetooth®-enabled device.

6. Verify that "Pairing complete Connection complete" is indicated in the center display.

NOTE:

- If the Mobile 911 screen is displayed in the center display, end the Mobile 911 setting according to the instructions on the screen.
    - If "YES" is selected on the center display, the Mobile 911 function is valid.
    - If "NO" is selected on the center display, the Mobile 911 function is invalid.

2014 - Mazda3 - Body and Accessories

MAINTENANCE MONITOR OPERATION PROCEDURE

NOTE:

- The maintenance monitor displays a message when any of the following display conditions is met based on the preset maintenance period.

  Display condition

  - Day setting: Remaining days are 15 days or less
  - Distance setting: Remaining distance is 500 km
- The instrument cluster displays a message at approx. 5 s intervals according to the following priority order when multiple display conditions are met.
  - Scheduled maintenance
  - Tire rotation
  - Oil inspection/replacement
- The maintenance monitor setting information recorded in the connectivity master unit cannot be written to a new connectivity master unit, therefore, the maintenance monitor is set to the initial setting value if the connectivity master unit is replaced. Before replacing the connectivity master unit, explain to the customer that the maintenance monitor is reset to the initial setting value.
- After implementing the maintenance, reset the maintenance monitor items that were implemented.

Scheduled Maintenance Setting Procedure

1. Switch the ignition ON (engine off or on).
2. Select [Applications] on the center display.
3. Select [Scheduled Maintenance] on the center display.
4. Select the following items and change the setting.

Display of center display	Function	Initial setting	Setting contents	Control unit
Setting	Display/non-display of the scheduled maintenance can be set.	On	On / Off	Connectivity master unit

Time	Number of days to display of scheduled maintenance can be set.	4 months	1-36 months	Connectivity master unit
Distance	Distance to display of scheduled maintenance can be set.	8,000 km / 5,000 miles	0-99500 km (0-99750 miles)	Connectivity master unit
Reset	Maintenance monitor setting can be reset to the initial value.	Back	Back / Reset	Connectivity master unit

Tire Rotation Setting Procedure

1. Switch the ignition ON (engine off or on).
2. Select [Applications] on the center display.
3. Select [Tire Rotation] on the center display.
4. Select the following items and change the setting.

Display of center display	Function	Initial setting	Setting contents	Control unit
Setting	Display/non-display of the tire rotation can be set.	On	On / Off	Connectivity master unit
Distance	Distance to display of tire rotation can be set.	8,000 km / 5,000 miles	0-99500 km (0-99750 miles)	Connectivity master unit
Reset	Maintenance monitor setting can be reset to the initial value.	Back	Back / Reset	Connectivity master unit

Oil Change Setting Procedure

Canada

- Switch the ignition ON (engine off or on).
- Select [Applications] on the center display.
- Select [Oil Change] on the center display.
- Select the following items and change the setting.

Display of center display	Function	Initial setting	Setting contents	Control unit
Setting	Display/non-display of the oil inspection/replacement can be set.	Off	Off / On	Connectivity master unit
Distance	Distance to display of oil inspection/replacement can be set.	8,000 km / 5,000 miles	0-99500 km (0-99750 miles)	Connectivity master unit
Reset	Maintenance monitor setting can be reset to the initial value.	Back	Back / Reset	Connectivity master unit

U.S.A. and Puerto Rico

CAUTION:

- Do not select "Flexible" under the following driving conditions.
    - The vehicle is used as a police car, taxi, or for driving instruction.
    - The vehicle is driven under dusty conditions.
    - The vehicle is idled or driven at low speeds for extended periods.

Using M-MDS

- Connect the M-MDS to the DLC-2.
- After vehicle identification is completed, select the following from the M-MDS initial screen.
    - "Powertrain"
    - "Engine Oil Maintenance Monitor"
- Select "ON*1" or "OFF" from the M-MDS screen.

*1

When oil inspection/replacement is set to "ON", the engine oil deterioration condition is calculated based on the frequency of engine starts and the distance travelled. Because the engine oil deterioration condition cannot be calculated correctly if engine oil other than Mazda genuine oil (0W-20) or Castrol oil (0W-20) is used, use Mazda genuine oil (0W-20) or Castrol oil (0W-20) when setting the oil inspection/replacement to "ON".

Using center display

- Switch the ignition ON (engine off or on).
- Select [Applications] on the center display.
- Select [Oil Change] on the center display.
- Select the following items and change the setting.

Display of center display	Function	Initial setting	Setting contents	Control unit
Setting	Display (Fixed, Flexible)/non-display of the oil inspection/replacement can be set.	Off	Off / Fixed / Flexible*1	Connectivity master unit
Distance*2	Distance to display of oil inspection/replacement can be set.	8,000 km / 5,000 miles	0-99500 km (0-99750 miles)	Connectivity master unit
Oil Life*3	Oil life to oil inspection/replacement can be displayed.	100%	—	Connectivity master unit
Reset	Maintenance monitor setting can be reset to the initial value.	Back	Back / Reset	Connectivity master unit

*1

When "Flexible" is selected, the engine oil deterioration condition is calculated based on the frequency of engine starts and the distance travelled. Because the engine oil deterioration condition cannot be calculated correctly if engine oil other than Mazda genuine oil (0W-20) or Castrol oil (0W-20) is used, use Mazda genuine oil (0W-20) or Castrol oil (0W-20) when selecting "Flexible".

*2

If "Fixed" is selected in setting

*3

If "Flexible" is selected in setting

2014 - Mazda3 - Body and Accessories

AUDIO AMPLIFIER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Slide the seat rearward (RH).

3. Remove the bolt.

BOLT: **9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}**

4. Slide the seat forward (RH).

5. Remove the bolt.

BOLT: 9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}

6. Raise the audio amplifier component and remove the stud bolt from the body.

7. Disconnect the connectors.

8. Remove the nuts.

NUT: **9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}**

9. Remove the audio amplifier.

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR SPEAKER REMOVAL/INSTALLATION

Without Bose®

NOTE:

- If the procedure is performed while holding the front door speaker cone, it could deform the cone causing a malfunction. Therefore, perform the procedure while holding any part other than the cone.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the bolts.

5. Pull the front door speaker in the direction of the arrow shown in the figure and remove it while detaching the pins.

6. Install in the reverse order of removal.

With Bose®

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the bolts.

5. Pull the front door speaker in the direction of the arrow shown in the figure and remove it while detaching the pins.

6. Remove the screws.

7. Remove the front door speaker from the bracket.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT DOOR SPEAKER INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front door trim. (See **FRONT DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the front door speaker connector. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)

4. Inspect the resistance between front door speaker terminals B and C.

Front door speaker resistance

- Without Bose® : 3.4—4.6 ohms
- With Bose® : 1.25 ohms

- If not within the specification, replace the front door speaker. (See **FRONT DOOR SPEAKER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR DOOR SPEAKER REMOVAL/INSTALLATION

Without Bose®

NOTE:

- If the procedure is performed while holding the rear door speaker cone, it could deform the cone causing a malfunction. Therefore, perform the procedure while holding any part other than the cone.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

BOLT: 2.0—3.0 N·m {21—30 kgf·cm, 18—26 in·lbf}

4. Remove the bolts.

5. Pull the rear door speaker in the direction of the arrow shown in the figure and remove it while detaching the pins.

6. Install in the reverse order of removal.

With Bose®

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

BOLT: 2.0—3.0 N·m {21—30 kgf·cm, 18—26 in·lbf}

4. Remove the bolts.

5. Pull the rear door speaker in the direction of the arrow shown in the figure and remove it while detaching the pins.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR DOOR SPEAKER INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the rear door trim. (See **REAR DOOR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the rear door speaker connector. (See **REAR DOOR SPEAKER REMOVAL/INSTALLATION**.)

4. Inspect the resistance between rear door speaker terminals B and C.

Rear door speaker resistance

- Without Bose® : 3.4—4.6 ohms
- With Bose® : 3.7 ohms

- If not within the specification, replace the rear door speaker. (See **REAR SPEAKER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

FRONT CENTER SPEAKER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the center speaker grille. (See **SPEAKER GRILLE REMOVAL/INSTALLATION**.)

3. Remove the screws.

4. Remove the front center speaker.

5. Disconnect the connector.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT CENTER SPEAKER INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the center speaker grille. (See **SPEAKER GRILLE REMOVAL/INSTALLATION**.)

3. Remove the front center speaker. (See **FRONT CENTER SPEAKER REMOVAL/INSTALLATION**.)

4. Inspect the resistance between front center speaker terminals A and B.

Front center speaker resistance

- 3.24—3.96 ohms

- If not within the specification, replace the front center speaker. (See **FRONT CENTER SPEAKER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

FRONT SIDE SPEAKER REMOVAL/INSTALLATION

NOTE:

- If the procedure is performed while holding the front side speaker cone, it could deform the cone causing a malfunction. Therefore, perform the procedure while holding any part other than the cone.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the side speaker grille. (See **SPEAKER GRILLE REMOVAL/INSTALLATION**.)

3. Remove the screws.

4. Remove the front side speaker.

5. Disconnect the connector.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT SIDE SPEAKER INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the side speaker grille. (See **SPEAKER GRILLE REMOVAL/INSTALLATION**.)

3. Remove the front side speaker. (See **FRONT SIDE SPEAKER REMOVAL/INSTALLATION**.)

4. Inspect the resistance between front side speaker terminals A and B.

Front side speaker resistance

- 3.24—3.96 ohms

- If not within the specification, replace the front side speaker. (See **FRONT SIDE SPEAKER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

REAR SPEAKER REMOVAL/INSTALLATION

NOTE:

- If the procedure is performed while holding the rear speaker cone, it could deform the cone causing a malfunction. Therefore, perform the procedure while holding any part other than the cone.

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
   d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   e. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   f. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)
   g. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)
3. Remove the screws.

4. Remove the rear speaker.

5. Disconnect the connector.

6. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

   d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   e. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

   f. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Remove the screws.

5. Remove the rear speaker component.

6. Remove the screws.

7. Remove the rear speaker.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

REAR SPEAKER INSPECTION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Rear seat cushion (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)
   c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)
   d. Tire house trim (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
   e. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   f. High-mount brake light (See **HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION**.)
   g. Rear package trim (See **REAR PACKAGE TRIM REMOVAL/INSTALLATION**.)
   h. Rear speaker (See **REAR SPEAKER REMOVAL/INSTALLATION**.)
3. Inspect the resistance between rear speaker terminals B and C.

Rear speaker resistance

- 3.24—3.96 ohms

- If not within the specification, replace the rear speaker. (See **REAR SPEAKER REMOVAL/INSTALLATION**.)

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)

   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)

   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)

3. Inspect the resistance between rear speaker terminals B and C.

   Rear speaker resistance

   - 3.24—3.96 ohms

   - If not within the specification, replace the rear speaker. (See **REAR SPEAKER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

TWEETER REMOVAL/INSTALLATION

NOTE:

- If the procedure is performed while holding the tweeter cone, it could deform the cone causing a malfunction. Therefore, perform the procedure while holding any part other than the cone.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the side speaker grille. (See **SPEAKER GRILLE REMOVAL/INSTALLATION**.)

3. Remove the screws.

4. Remove the tweeter.

5. Disconnect the connector.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

TWEETER INSPECTION

1. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the side speaker grille. (See **SPEAKER GRILLE REMOVAL/INSTALLATION**.)

3. Remove the tweeter. (See **TWEETER REMOVAL/INSTALLATION**.)

4. Inspect the resistance between tweeter terminals A and B.

Tweeter resistance

- 3.4—4.6 ohms

- If not within the specification, replace the tweeter. (See **TWEETER REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

AudioPilot®2 MICROPHONE REMOVAL/INSTALLATION

NOTE:

- AudioPilot®2 is a registered trademark of Bose® Corporation.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Disconnect the connector.

3. Remove the nut.

4. Remove the AudioPilot®2 microphone.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CENTER ROOF ANTENNA REMOVAL/INSTALLATION

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
    a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
    c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
    d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
    e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
    f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
    g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
    h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
    j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the following parts:
    a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
    c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
    d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
    e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
    f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
    g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
    h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL / INSTALLATION**.)

j. Decoration panel (See **DECORATION PANEL REMOVAL / INSTALLATION**.)

k. Side wall (See **SIDE WALL REMOVAL / INSTALLATION**.)

l. Front console (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)

m. Headliner (See **HEADLINER REMOVAL / INSTALLATION**.)

5. Disconnect the connector.

6. Remove the nut.

7. While pressing the center roof antenna tabs in the direction of arrows (1) shown in the figure, press the center roof antenna in the direction of arrow (2) to detach the center roof antenna tabs from the body.

8. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
    a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
    b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
    c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the following parts:
    a. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
    b. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
    c. Rear assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
5. Partially peel back the headliner.

NOTE:

- If the headliner is peeled back excessively, the headliner could become creased. Be careful not to peel back the headliner excessively.

6. Disconnect the connector.

7. Remove the nut.

8. While pressing the center roof antenna tabs in the direction of arrows (1) shown in the figure, press the center roof antenna in the direction of arrow (2) to detach the center roof antenna tabs from the body.

9. Remove the center roof antenna.

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CENTER ROOF ANTENNA INSPECTION

NOTE:

- The center roof antenna is integrated with the antenna amplifier.

Type A (With rod)

Antenna amplifier inspection (5HB)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the following parts:
   a. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)
   b. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   c. Rear assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
5. Partially peel back the headliner.

   NOTE:

   - Be careful not to peel back the headliner excessively. Otherwise it could create a fold-seam in the headliner.

6. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
7. Switch the ignition ON (engine off).
8. Turn the audio unit power on.
9. Tune in the radio.
10. Verify that the battery voltage is supplied to center roof antenna terminal B.

- If the battery voltage cannot be verified, inspect the audio unit and antenna feeder.
- If the battery voltage can be verified, go to the feeder line inspection.

Feeder line inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the center roof antenna. (See **CENTER ROOF ANTENNA REMOVAL/INSTALLATION**.)
3. Verify that there is no continuity between center roof antenna sections A’ and C.

- If there is continuity, replace the center roof antenna.

4. Install the center roof antenna.

5. Verify that the continuity between the center roof antenna terminals is as indicated in the table.

○—○ :Continuity

Test condition	Terminal					BODY GND
	CENTER ROOF ANTENNA INSTALLATION NUT	CENTER ROOF ANTENNA CONNECTOR				
	A'	A	B	C	C'	
Under any condition	○				○	○

- If the continuity is not as indicated in the table, verify the installation condition of the center roof antenna installation nut.
- If the installation condition of the center roof antenna installation nut is normal, replace the center roof antenna.

Type B (Without rod)

Antenna amplifier inspection (5HB)

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Rear package tray (See **REAR PACKAGE TRAY REMOVAL/INSTALLATION**.)
   b. Trunk covering (See **TRUNK COVERING REMOVAL/INSTALLATION**.)
   c. Trunk end trim (See **TRUNK END TRIM REMOVAL/INSTALLATION**.)
3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the following parts:
   a. Trunk side upper trim (See **TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION**.)

b. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

c. Rear assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

5. Partially peel back the headliner.

NOTE:

- Be careful not to peel back the headliner excessively. Otherwise it could create a fold-seam in the headliner.

6. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

7. Switch the ignition ON (engine off).

8. Turn the audio unit power on.

9. Tune in the radio.

10. Verify that the battery voltage is supplied to center roof antenna terminal B.

- If the battery voltage cannot be verified, inspect the audio unit and antenna feeder.
- If the battery voltage can be verified, go to the feeder line inspection.

Feeder line inspection

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE**

DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)

2. Remove the center roof antenna. (See **CENTER ROOF ANTENNA REMOVAL/INSTALLATION**.)

3. Verify that there is no continuity between center roof antenna sections A' and C and A (with SiriusXM satellite radio system only).

- If there is continuity, replace the center roof antenna.

4. Install the center roof antenna.

5. Verify that the continuity between the center roof antenna terminals is as indicated in the table.

○—○ :Continuity

Test condition	Terminal							BODY GND
	CENTER ROOF ANTENNA INSTALLATION NUT	CENTER ROOF ANTENNA CONNECTOR				SiriusXM SATELLITE RADIO CONNECTOR		
	A'	A	B	C	C'	A	A'	
Under any condition	○				○		○	○

: WITH SiriusXM SATELLITE RADIO SYSTEM

: WITH SiriusXM SATELLITE RADIO SYSTEM

- If the continuity is not as indicated in the table, verify the installation condition of the center roof antenna installation nut.
- If the installation condition of the center roof antenna installation nut is normal, replace the center roof antenna.

2014 - Mazda3 - Body and Accessories

GLASS ANTENNA INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the glass antenna terminal cover. (See **ANTENNA AMPLIFIER REMOVAL/INSTALLATION**.)

3. Visually inspect the glass antenna for damage.

4. Verify that the continuity is as indicated in the table.

○—○ : Continuity

Test condition	Terminal	
	A	B
Under any condition	○	○

- If not as indicated in the table, repair the glass antenna. (See **REAR WINDOW DEFROSTER/GLASS ANTENNA REPAIR**.)

GLASS ANTENNA INSPECTION

2014 - Mazda3 - Body and Accessories

ANTENNA AMPLIFIER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)
   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)
   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)
   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)
   g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)
   h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)
   j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)
3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)
4. Remove the following parts:
   a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)
   i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   k. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   l. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
   m. Headliner (See **HEADLINER REMOVAL/INSTALLATION**.)
5. Disconnect the connector. (with SiriusXM satellite radio system)

6. Remove clips A, B, C and D.

7. Remove the glass antenna terminal cover in the direction of the arrow shown in the figure.

8. Remove the clip E.

9. Remove the bolt.

10. Remove the antenna amplifier.

11. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

ANTENNA AMPLIFIER INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

   b. Sunvisor (See **SUNVISOR REMOVAL/INSTALLATION**.)

   c. Front map light (dual light type) (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

   d. Assist handle (See **ASSIST HANDLE REMOVAL/INSTALLATION**.)

   e. Front scuff plate (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   f. Rear scuff plate (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   g. B-pillar lower trim (See **B-PILLAR LOWER TRIM REMOVAL/INSTALLATION**.)

   h. Adjust anchor cover (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

   i. Upper anchor installation bolt on the seat belt (See **FRONT SEAT BELT REMOVAL/INSTALLATION**.)

   j. B-pillar upper trim (See **B-PILLAR UPPER TRIM REMOVAL/INSTALLATION**.)

3. Set the tire house trim aside. (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

4. Remove the following parts:

   a. C-pillar trim (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

   b. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   c. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   d. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   e. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   f. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   g. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   h. CD player (with CD player) (See **CD PLAYER REMOVAL**.) (See **CD PLAYER INSTALLATION**.)

   i. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   j. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

k. Side wall (See **SIDE WALL REMOVAL / INSTALLATION**.)

l. Front console (See **FRONT CONSOLE REMOVAL / INSTALLATION**.)

m. Headliner (See **HEADLINER REMOVAL / INSTALLATION**.)

5. Switch the ignition ON (engine off or on).

6. Turn the radio power to ON.

7. Verify that voltage is B+ at the antenna amplifier terminal B.

- If the battery voltage cannot be verified, replace the antenna amplifier.

2014 - Mazda3 - Body and Accessories

CONDENSER REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Rear seat cushion (LH) (See **REAR SEAT CUSHION REMOVAL/INSTALLATION**.)

   b. Rear scuff plate (LH) (See **REAR SCUFF PLATE REMOVAL/INSTALLATION**.)

   c. Rear seat back (See **REAR SEAT BACK REMOVAL/INSTALLATION**.)

   d. Tire house trim (LH) (See **TIRE HOUSE TRIM REMOVAL/INSTALLATION**.)

   e. C-pillar trim (LH) (See **C-PILLAR TRIM REMOVAL/INSTALLATION**.)

3. Disconnect the connectors.

BOLT : **9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}**

4. Remove the bolts.

5. Remove the condensers.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION

Without Center Display

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)
   b. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   c. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   d. Audio unit (See **AUDIO UNIT REMOVAL/INSTALLATION**.)
3. Remove clips A, B, C, D, E and F.

4. Remove antenna feeder No.1.
5. Install in the reverse order of removal.

With Center Display

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Front scuff plate (LH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

   b. Front side trim (LH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   d. A-pillar trim (See **A-PILLAR TRIM REMOVAL/INSTALLATION**.)

3. Remove clips A, B, C, D and E.

E :WITH SiriusXM SATELLITE RADIO SYSTEM

4. Remove antenna feeder No.1.

GPS ANTENNA FEEDER INSPECTION

2014 - Mazda3 - Body and Accessories

STEERING SWITCH REMOVAL/INSTALLATION

WARNING:

- Handling the driver-side air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

Without Steering Shift Switch

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for 1 min or more. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

5. Affix protective tape to the gaps between the steering wheel and cover as shown in the figure.

6. Using a tape-wrapped flathead screwdriver, press the cover tabs in the direction of the arrows shown in the figure to detach the cover tabs from the steering wheel.

7. Insert the fastener remover into the clearance between the steering wheel and cover as shown in the figure.

8. Move the fastener remover in the direction of the arrow shown in the figure and detach cover tab from the steering wheel.

9. Remove the cover while detaching the pins from the steering wheel.

10. While pressing the clip tabs in the direction of the arrows (1) shown in the figure, press the clip in the direction of the arrow (2) to detach the clip tabs from the steering wheel.

11. Detach the clip.

12. While pressing the tabs of the steering switch in the direction of the arrows (1) shown in the figure, press the steering switch in the direction of the arrow (2) to detach the tabs of the steering switch from the steering wheel.

13. Insert a fastener remover into the position shown in the figure.

14. Move the fastener remover straight in the direction shown in the figure and remove the tabs of the steering switch from the steering wheel.

CAUTION:

- When removing the pins of the steering switch, pull them out straight. If the fastener remover is moved at an angle, the pins could be damaged.

NOTE:

- Because the pins of the steering switch are installed to the hard plastic area of the steering wheel, the engagement is strong.

15. Remove the steering switch while detaching the pin and tabs of the steering wheel.

16. Install in the reverse order of removal.

With Steering Shift Switch

1. Switch the ignition off.

2. Disconnect the negative battery cable and wait for 1 min or more. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

5. Remove the screws.

6. Disconnect the connectors.

7. While pressing the pin tabs in the direction of arrows (1) shown in the figure, press the pin in the direction of arrow (2) to detach the cover pin from the steering wheel.

8. Using a tape-wrapped flathead screwdriver, press the cover tabs in the direction of the arrows shown in the figure to detach the cover tabs from the steering wheel.

9. Remove the cover.

10. While pressing the clip tabs in the direction of the arrows (1) shown in the figure, press the clip in the direction of the arrow (2) to detach the clip tabs from the steering wheel.

11. Detach the clip.

12. While pressing the tabs of the steering switch in the direction of the arrows (1) shown in the figure, press the steering switch in the direction of the arrow (2) to detach the tabs of the steering switch from the steering wheel.

13. Insert a fastener remover into the position shown in the figure.

14. Move the fastener remover straight in the direction shown in the figure and remove the tabs of the steering switch from the steering wheel.

CAUTION:

- When removing the pins of the steering switch, pull them out straight. If the fastener remover is moved at an angle, the pins could be damaged.

NOTE:

- Because the pins of the steering switch are installed to the hard plastic area of the steering wheel, the engagement is strong.

15. Remove the steering switch while detaching the pin and tabs of the steering wheel.

16. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

STEERING SWITCH INSPECTION

Resistance Inspection

WARNING:

- Handling the driver-side air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition OFF.

2. Disconnect the negative battery cable and wait for 1 min or more. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

Cue/automatic band selector switch or volume adjustment switch

1. Measure the resistance between steering switches H and J under the following conditions:

    - Resistance with volume adjustment switch (-) pressed and held

        - 53.064—54.136 ohms

*:PART WIRING HARNESS SIDE

- Resistance with volume adjustment switch (+) pressed and held
  - 145.233—148.167 ohms

- Resistance with cue/automatic band selector switch (up) pressed and held
  - 297.693—303.707 ohms

*:PART WIRING HARNESS SIDE

- Resistance with cue/automatic band selector switch (down) pressed and held
  - 556.083—567.317 ohms

CIRCUIT WITH CUE/AUTOMATIC BAND SELECTOR SWITCH (DOWN) PRESSED AND HELD

*:PART WIRING HARNESS SIDE

- Resistance with any switches not pressed
  - 4,813.083—4,910.317 ohms

*:PART WIRING HARNESS SIDE

- If not within the specification, replace the steering switch.

Talk button or pick-up button or hang-up button

1. Measure the resistance between steering switches M and J under the following conditions:
    - Resistance with talk button pressed and held
        - 103.95—106.05 ohms

CIRCUIT WITH TALK BUTTON PRESSED AND HELD

*:PART WIRING HARNESS SIDE

- Resistance with pick-up button pressed and held
  - 271.26—276.74 ohms

CIRCUIT WITH PICK-UP BUTTON PRESSED AND HELD

*:PART WIRING HARNESS SIDE

- Resistance with hang-up button pressed and held
  - 657.36—670.64 ohms

CIRCUIT WITH HANG-UP BUTTON PRESSED AND HELD

*:PART WIRING HARNESS SIDE

- Resistance with any switches not pressed
  - 3,330.36—3,397.64 ohms

CIRCUIT WITH ANY SWITCHES NOT PRESSED

*:PART WIRING HARNESS SIDE

- If not within the specification, replace the steering switch.

INFO button or up switch or down switch

1. Measure the resistance between steering switches D and L under the following conditions:

- Resistance with up switch pressed and held
  - 0 ohms

CIRCUIT WITH UP SWITCH PRESSED AND HELD

*:PART WIRING HARNESS SIDE

- Resistance with down switch pressed and held
  - 386.1—393.9 ohms

CIRCUIT WITH DOWN SWITCH PRESSED AND HELD

*:PART WIRING HARNESS SIDE

- Resistance with INFO button pressed and held
  - 999.9—1,020.1

CIRCUIT WITH INFO BUTTON PRESSED AND HELD

*:PART WIRING HARNESS SIDE

- Resistance with any switches not pressed
  - 2,524.5—2,575.5 ohms

CIRCUIT WITH ANY SWITCHES NOT PRESSED

*:PART WIRING HARNESS SIDE

- If not within the specification, replace the steering switch.

LED Illumination Inspection

WARNING:

- Handling the driver-side air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See **AIR BAG SYSTEM SERVICE WARNINGS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE WARNINGS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **AIR BAG SYSTEM SERVICE CAUTIONS [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

1. Switch the ignition OFF.

2. Disconnect the negative battery cable and wait for 1 min or more. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the driver-side air bag module. (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [TWO-STEP DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE REMOVAL [STANDARD DEPLOYMENT CONTROL SYSTEM]**.) (See **DRIVER-SIDE AIR BAG MODULE INSTALLATION [STANDARD DEPLOYMENT CONTROL SYSTEM]**.)

4. Remove the steering wheel. (See **STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION**.)

5. Apply battery positive voltage to steering switch terminal F, and connect terminal B to ground.

6. Verify that the LED illuminates.

- If the LED does not illuminate, replace the steering switch. (See **STEERING SWITCH REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

COMMANDER SWITCH REMOVAL/INSTALLATION

CAUTION:

- The audio unit communicates with the commander switch and records the presence/non-presence of the commander switch when the ignition is switched to ACC or ON (engine off or on) after connecting the negative battery cable.
- If the commander switch is installed with the negative battery cable connected when the audio unit records that there is no commander switch, the commander switch does not operate.
- For the commander switch installation/removal, disconnect the negative battery cable, switch the ignition to ACC or ON (engine off or on) after the servicing is completed, and the audio unit records the presence/non-presence of the commander switch.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

3. Remove the screws.

4. Remove the commander switch.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

MICROPHONE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the front map light. (See **FRONT MAP LIGHT REMOVAL/INSTALLATION**.)

3. While pressing tabs A of the voice recognition microphone in the direction of the arrows (1) shown in the figure using a tape-wrapped flathead screwdriver, pull the voice recognition microphone in the direction of the arrow (2) shown in the figure to detach tabs A of the voice recognition microphone from the front map light.

4. While pulling tab B of the voice recognition microphone in the direction of the arrow (1) shown in the figure, pull the voice recognition microphone in the direction of the arrow (2) shown in the figure to detach tab B of the voice recognition microphone from the front map light.

5. Remove the microphone.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

Bluetooth® UNIT REMOVAL/INSTALLATION

CAUTION:

- The audio unit communicates with the Bluetooth® unit and records the presence/non-presence of the Bluetooth® unit when the ignition is switched to ACC or ON (engine off or on) after connecting the negative battery cable.
- If the commander switch is installed with the negative battery cable connected when the audio unit records that there is no Bluetooth® unit, the Bluetooth® unit does not operate.
- For the Bluetooth® unit installation/removal, disconnect the negative battery cable, switch the ignition to ACC or ON (engine off or on) after the servicing is completed, and the audio unit records the presence/non-presence of the Bluetooth® unit.

NOTE:

- The Bluetooth® pairing information recorded in the Bluetooth® unit cannot be written to a new Bluetooth® unit. Therefore, the Bluetooth® pairing formation will be eliminated if the Bluetooth® unit is replaced. Before replacing the Bluetooth® unit, explain to the customer that the Bluetooth® pairing resetting is required.

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Front scuff plate (RH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Front side trim (RH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   c. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   d. Dashboard under cover (See **DASHBOARD UNDER COVER REMOVAL/INSTALLATION**.)
3. Remove the clip.

4. Remove the bolts.
5. Disconnect the connector.
6. Remove the wiring harness clip.
7. Remove the Bluetooth® unit component.
8. Remove the screws.

9. Remove the Bluetooth® unit.

10. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION

Front

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   i. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   j. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
3. While pressing the auxiliary jack/USB port tabs in the direction of the arrows (1) shown in the figure, press the auxiliary jack/USB port in the direction of the arrow (2) to detach the auxiliary jack/USB port tabs from the front console.

4. Remove the auxiliary jack/USB port.
5. Install in the reverse order of removal.

Rear

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the console-up. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. While pressing the auxiliary jack/USB port tabs in the direction of the arrows (1) shown in the figure, press the auxiliary jack/USB port in the direction of the arrow (2) to detach the auxiliary jack/USB port tabs from the console-up.

4. Remove the auxiliary jack/USB port.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

AUXILIARY JACK/USB PORT INSPECTION

Auxiliary Jack Inspection

Front

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)
   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)
   c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)
   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)
   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)
   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)
   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)
   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)
   i. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)
   j. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)
   k. Auxiliary jack/USB port (See **AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION**.)
3. Connect a commercially-available plug to the auxiliary jack/USB port.

4. Verify that the continuity between the auxiliary jack/USB port terminals is as indicated in the table.

○—○ : Continuity

Test condition	Terminal				
	A	B	C	D	E
Plug is connected	○	—	—	—	○
Plug is not connected					

- If not as indicated in the table, replace the auxiliary jack/USB port.

Rear

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the console-up. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. Remove the Auxiliary jack/USB port. (See **AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION**.)

4. Connect a commercially-available plug to the auxiliary jack/USB port.

5. Verify that the continuity between the auxiliary jack/USB port terminals is as indicated in the table.

○—○ : Continuity

Test condition	Terminal				
	A	B	C	D	E
Plug is connected	○				○
Plug is not connected					

- If not as indicated in the table, replace the auxiliary jack/USB port.

USB Port Inspection

Front

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM**

REMOVAL/INSTALLATION.)

g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

i. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

j. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

k. Auxiliary jack/USB port (See **AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION**.)

3. Insert the pins to positions UA', UB', UC', and UD' shown in the figure from the side of the USB device insertion area for the auxiliary jack/USB port, and verify the continuity at the insertion side and terminal side of the USB device.

4. Verify that the continuity at the insertion side and terminal side of the USB device is as indicated in the table.

NOTE:

- When inspecting the USB device insertion side, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.

○—○ : Continuity

Test condition	Terminal							
	Terminal side				USB devise insertion area			
	UA	UB	UC	UD	UA'	UB'	UC'	UD'
Under any condition	○				○			
		○				○		
			○				○	
				○				○

- If not as indicated in the table, replace the auxiliary jack/USB port.

Rear

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the console-up. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. Remove the Auxiliary jack/USB port. (See **AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION**.)

4. Insert the pins to positions UA', UB', UC', and UD' shown in the figure from the side of the USB device insertion area for the auxiliary jack/USB port, and verify the continuity at the insertion side and terminal side of the USB device.

5. Verify that the continuity at the insertion side and terminal side of the USB device is as indicated in the table.

NOTE:

- When inspecting the USB device insertion side, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.

○—○ : Continuity

Test condition	Terminal							
	Terminal side				USB devise insertion area			
	UA	UB	UC	UD	UA'	UB'	UC'	UD'
Under any condition	○	—	—	—	○			
		○	—	—	—	○		
			○	—	—	—	○	
				○	—	—	—	○

- If not as indicated in the table, replace the auxiliary jack/USB port.

AUXILIARY JACK/USB PORT INSPECTION

2014 - Mazda3 - Body and Accessories

AUXILIARY JACK/USB PORT/SD CARD SLOT HUB REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the console-up. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. While pressing the auxiliary jack/USB port/SD card slot hub tabs in the direction of the arrows (1) shown in the figure, press the auxiliary jack/USB port/SD card slot hub in the direction of the arrow (2) to detach the auxiliary jack/USB port/SD card slot hub tabs from the console-up.

4. Remove the auxiliary jack/USB port/SD card slot hub.

5. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

AUXILIARY JACK/USB PORT/SD CARD SLOT HUB INSPECTION

NOTE:

- The integrity of the auxiliary jack/USB port/SD card slot hub cannot be determined by a single unit inspection. When inspecting the auxiliary jack/USB port/SD card slot hub, perform the following procedure.

1. Connect the M-MDS to the DLC-2.

2. Perform the connectivity master unit (CMU) DTC inspection and verify if DTCs related to the auxiliary jack/USB port/SD card slot hub are detected. (See **DTC INSPECTION [CONNECTIVITY MASTER UNIT]**.)

    - If DTCs are detected, repair the malfunctioning location according to the applicable DTC troubleshooting. (See **DTC TABLE [CONNECTIVITY MASTER UNIT]**.)
    - If DTCs are not detected, repair the malfunctioning location according to the symptom troubleshooting. (See **SYMPTOM TROUBLESHOOTING [ENTERTAINMENT SYSTEM [WITH CENTER DISPLAY]]**.)

2014 - Mazda3 - Body and Accessories

REAR MOUNT CAMERA REMOVAL/INSTALLATION

CAUTION:

- The audio unit communicates with the rear mount camera and records the presence/non-presence of the rear mount camera when the ignition is switched to ACC or ON (engine off or on) after connecting the negative battery cable.
- If the commander switch is installed with the negative battery cable connected when the audio unit records that there is no rear mount camera, the rear mount camera does not operate.
- For the rear mount camera installation/removal, disconnect the negative battery cable, switch the ignition to ACC or ON (engine off or on) after the servicing is completed, and the audio unit records the presence/non-presence of the rear mount camera.

4SD

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Partially peel back the trunk lid trim.
3. Disconnect the connector.

4. Press the rear mount camera tabs in the direction of arrows (1) shown in the figure, press the rear mount camera in the direction of arrow (2) shown in the figure, and disengage the rear mount camera tabs from the trunk lid.

5. Remove the rear mount camera.

6. Install in the reverse order of removal.

5HB

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Liftgate upper trim (See **LIFTGATE UPPER TRIM REMOVAL/INSTALLATION**.)

   b. Liftgate side trim (See **LIFTGATE SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Liftgate recess (See **LIFTGATE RECESS REMOVAL/INSTALLATION**.)

   d. Liftgate lower trim (See **LIFTGATE LOWER TRIM REMOVAL/INSTALLATION**.)

   e. Liftgate garnish (See **LIFTGATE GARNISH REMOVAL/INSTALLATION**.)

3. Disconnect the connector.

4. Press the rear mount camera tabs in the direction of arrows (1) shown in the figure, press the rear mount camera in the direction of arrow (2) shown in the figure, and disengage the rear mount camera tabs from the liftgate.

5. Remove the rear mount camera.

6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

POWER SYSTEM LOCATION INDEX

1	Main fuse (See **MAIN FUSE REMOVAL/INSTALLATION**.)
2	Multiplex slow blow fuse (See **MULTIPLEX SLOW BLOW FUSE REMOVAL/INSTALLATION**.)
3	Front accessory socket (See **FRONT ACCESSORY SOCKET REMOVAL/INSTALLATION**.) (See **FRONT ACCESSORY SOCKET INSPECTION**.)
4	Center accessory socket

	(See **CENTER ACCESSORY SOCKET REMOVAL/INSTALLATION**.) (See **CENTER ACCESSORY SOCKET INSPECTION**.)
5	Fuse block (See **FUSE BLOCK REMOVAL/INSTALLATION**.)
6	Relay and fuse block (See **RELAY AND FUSE BLOCK REMOVAL/INSTALLATION**.) (See **FUSE SERVICE CAUTIONS**.) (See **RELAY LOCATION**.) (See **RELAY INSPECTION**.)
7	Front wiring harness protector No.2 (See **FRONT WIRING HARNESS PROTECTOR REMOVAL/INSTALLATION**.)
8	Front wiring harness protector No.1 (See **FRONT WIRING HARNESS PROTECTOR REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

RELAY AND FUSE BLOCK REMOVAL/INSTALLATION

NOTE:

- When replacing the relay and fuse block, it is necessary to switch terminals from the relay and fuse block terminal prior to replacement to the relay and fuse block terminal on the replacement. When switching terminals, ready the replacement relay and fuse block before pulling out the terminal of the relay and fuse block prior to replacement. This is because it is necessary to switch the terminals one at a time so that the installation positions are not mistaken.

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner case. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the battery tray. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

4. While pressing the relay and fuse block upper cover hook in the direction of the arrow (1) shown in the figure, lift up the relay and fuse block upper cover in the direction of the arrow (2) to detach the relay and fuse block upper cover hook from the relay and fuse block middle cover tab.

5. Remove the relay and fuse block upper cover.

6. Remove the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)

7. Remove the multiplex slow blow fuse. (See **MULTIPLEX SLOW BLOW FUSE REMOVAL/INSTALLATION**.)

8. Remove all the relays and fuses.

CAUTION:

- If the relay and fuse block is removed with the relays and fuses installed, the area around the relay and fuse block may contact the relays or fuses and damage the them. Before removing the relay and fuse block, remove all the relays and fuses.

9. While pressing the relay and fuse block hook in the direction of the arrow (3) shown in the figure, set the emission wiring harness away in the direction of the arrow (4) shown in the figure from the relay and fuse block hook.

10. Disconnect the emission wiring harness connectors.

RELAY AND FUSE BLOCK

11. Remove the nut and bolt.

RELAY AND FUSE BLOCK

12. Pull out the relay and fuse block from the stud bolt and set it aside as shown in the figure.

RELAY AND FUSE BLOCK

13. While pressing the clip tabs of front wiring harness protector No.2 in the direction of the arrows (5) shown in the figure, pull the clip of front wiring harness protector No.2 in the direction of the arrow (6) shown in the figure to detach the clip tabs of front wiring harness protector No.2 from the engine mount.

14. Pull out the front wiring harness protector No.2 clip.

15. Lift up the front wiring harness protector No.2 cap in the direction of the arrow shown in the figure.

16. Pull out the front wiring harness protector No.2 from the stud bolt and set it aside as shown in the figure.

17. Cut the bands shown in the figure.

18. Insert a flathead screwdriver into the gap between the relay and fuse block middle cover tabs and the relay and fuse block lower cover as shown in the figure.

19. Move the flathead screwdriver in the direction of the arrow (7) shown in the figure, and pull down the relay and fuse block lower cover in the direction of the arrow (8) shown in the figure to detach the relay and fuse block middle cover tab from the relay and fuse block lower cover.

20. Detach all of the relay and fuse block middle cover and the relay and fuse block lower cover.

21. While pressing the wiring harness clip tabs in the direction of the arrows (9) shown in the figure, push out the wiring harness clip in the direction of the arrow (10) shown in the figure to detach the wiring harness clip tabs from the relay and fuse block lower cover.

22. Pull out the wiring harness clip.

23. Remove the relay and fuse block lower cover.

24. Insert a flathead screwdriver into the service hole in the position shown in the figure.

25. Move the flathead screwdriver in the direction of the arrow (11) shown in the figure, and lift up the front wiring harness connector in the direction of the arrow (12) shown in the figure to detach the front wiring harness connector tab from the relay and fuse block middle cover.

26. Move the front wiring harness connector in the direction of the arrow shown in the figure, release the hook, and pull it out from the relay and fuse block middle cover.

27. Pull out all the front wiring harness connectors from the relay and fuse block middle cover.

28. Insert the flathead screwdriver into the gap between the relay and fuse block middle cover and the relay and fuse block shown in the figure.

29. Move the flathead screwdriver in the direction of the arrow (13) shown in the figure, and pull up the relay and fuse block middle cover in the direction of the arrow (14) shown in the figure to detach the relay and fuse block tab from the relay and fuse block middle cover.

30. Detach all the relay and fuse block tabs from the relay and fuse block middle cover, and remove the relay and fuse block middle cover.

31. Set the removed relay and fuse block aside so that it does not scratch the vehicle and parts.

Installation

1. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, and pull the wiring harness in the direction of the arrow (2) while pressing the stopper to detach the relay or fuse terminal from the stopper.

2. Relocate all relay and fuse terminals to the new relay and fuse block.

CAUTION:

- If terminals are installed incorrectly, it could damage electrical accessories and burn wiring harnesses. When relocating terminals after replacing the relay and fuse block, line up the relay and fuse blocks of old and news parts and always verify each of the wiring harnesses in the wiring diagram so that the installation positions are correct.

- A terminal disconnection could cause electronic components and the system to not operate normally due to poor contact. After terminal relocation, lightly pull the wiring harnesses to verify that they cannot be pulled out.

3. Temporarily install the ground.

4. Move the relay and fuse block middle cover in the direction of arrow shown in the figure and insert the relay and fuse block tab into the relay and fuse block middle cover.

5. Insert all the relay and fuse block tabs into the relay and fuse block middle cover and install the relay and fuse block middle cover.

6. Insert the front wiring harness connector into the relay and fuse block middle cover.

7. Move the front wiring harness connector in the direction of arrow shown in the figure to engage the front wiring harness connector tab with the relay and fuse block middle cover.

8. Install all the front wiring harness connectors to the relay and fuse block middle cover.

9. Move the relay and fuse block lower cover in the direction of arrow shown in the figure and insert the relay and fuse block middle cover tab into the relay and fuse block lower cover.

10. Insert all the relay and fuse block middle cover tabs into the relay and fuse block lower cover and install the relay and fuse block lower cover.

11. Install the wiring harness clip to the relay and fuse block lower cover.

12. Install the bands shown in the figure.

13. Insert the front wiring harness protector No.2 into the stud bolt.

14. Insert the front wiring harness protector No.2 cap into the stud bolt.

15. Install the front wiring harness protector No.2 clip to the engine mount.

16. Insert the relay and fuse block into the stud bolt.

RELAY AND FUSE BLOCK

17. Install the nut and bolt.

RELAY AND FUSE BLOCK

N·m {kgf·cm, in·lbf}

18. Connect the emission wiring harness connectors.

RELAY AND FUSE BLOCK

19. Press the emission wiring harness into the relay and fuse block hook.

20. Remove the bolt temporarily tightened in Step 3 of [INSTALLATION].

21. Install the multiplex slow blow fuse. (See **MULTIPLEX SLOW BLOW FUSE REMOVAL/INSTALLATION**.)

22. Install the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)

23. Install the relay and fuse block upper cover.

24. Install the parts removed in Steps 2 and 3 in “REMOVAL”. (See **Removal**.)

25. Perform the "Verify Relay and Fuse Block Replacement". (See **Verify relay and fuse block replacement**.)

26. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Verify relay and fuse block replacement

1. Temporarily connect the negative battery cable to verify that the related wiring harness is not heated.

2. Switch the ignition ON (engine off).

3. Verify that the fuse is not blown and the related wiring harness is not heated.

4. Perform the initial settings for the following systems:

    - Power window system (See **POWER WINDOW SYSTEM INITIALIZATION PROCEDURE**.)
    - Sunroof system (See **SUNROOF SYSTEM INITIALIZATION PROCEDURE**.)
    - Tire pressure monitoring system (TPMS) (See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)

5. Verify DTCs using the M-MDS.

    - If a DTC is displayed, repair the malfunctioning part according to the corresponding DTC inspection.
        - After completion of repairs, clear all DTCs stored in the module.

6. If there is no malfunction in Step 1, 3, and 5, start the engine and maintain the idle status.

7. Operate all the switches of the interior/exterior lights of the vehicle and verify that all the light bulbs illuminate and flash.

8. Operate the audio, climate control, wiper switch, and selector lever (ATX) and verify that they operate correctly.

9. Shift the selector lever to the P position, race the engine at **approx. 3,000 rpm** from engine idling, and verify that there is no malfunction. (ATX)

10. Perform a road test and verify that low speed, acceleration, shift-up, and shift-down conditions are normal. (ATX)

2014 - Mazda3 - Body and Accessories

FRONT WIRING HARNESS PROTECTOR REMOVAL/INSTALLATION

Front Wiring Harness Protector No.1

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the air cleaner case. (See **INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.

4. While pressing the tabs of clip A in the direction of the arrows (1) shown in the figure, pull clip A in the direction of the arrow (2) shown in the figure to detach the tabs of clip A from the radiator.

5. Pull out clip A.

6. While pressing the tabs of clip B in the direction of the arrows (3) shown in the figure, pull clip B in the direction of the arrow (4) shown in the figure to detach the tabs of clip B from the front bumper.

7. Pull out clip B.

8. While pressing the clip tabs in the direction of the arrows (5) shown in the figure, pull the front wiring harness protector No.1 in the direction of the arrow (6) to detach the clip tabs from the radiator.

9. Detach all the clip tabs from the radiator and pull out the front wiring harness protector No.1 from the radiator.

10. Insert a remover tool into the front wiring harness protector No.1 tabs in the positions shown in the figure.

11. While lifting up the hook in the direction of the arrow (7) shown in the figure using a remover tool, pull the hook in the direction of the arrows (8) shown in the figure to detach the tab from the hook.

12. Detach all the tabs from hooks and remove the front wiring harness protector No.1.

13. Install in the reverse order of removal.

Front Wiring Harness Protector No.2

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the battery tray. (See **BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. While pressing the clip tabs of front wiring harness protector No.2 in the direction of the arrows (1) shown in the figure, pull the clip of front wiring harness protector No.2 in the direction of the arrow (2) shown in the figure to detach the clip tabs of front wiring harness protector No.2 from the engine mount.

4. Pull out the clip.

5. Lift up the cap of front wiring harness protector No.2 in the direction of the arrow shown in the figure.

6. Pull out the front wiring harness protector No.2 from the stud bolt and set it aside as shown in the figure.

7. While pressing the clip tabs in the direction of the arrows (3) shown in the figure, push out the clip in the direction of the arrow (4) shown in the figure to detach the clip tabs from the front wiring harness protector No.2.

8. Pull out the clip.

9. Insert the remover tool into the front wiring harness protector No.2 tabs in the positions shown in the figure.

FRONT WIRING HARNESS PROTECTOR NO.2

10. While lifting up the hook in the direction of the arrow (5) shown in the figure using a remover tool, pull the hook in the direction of the arrows (6) shown in the figure to detach the tab from the hook.

11. Detach all the tabs from hooks and remove the front wiring harness protector No.2.

12. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FUSE BLOCK REMOVAL/INSTALLATION

NOTE:

- When replacing the fuse block, it is necessary to switch terminals from the fuse block terminal prior to replacement to the fuse block terminal on the replacement. When switching terminals, ready the replacement fuse block before pulling out the terminal of the fuse block prior to replacement. This is because it is necessary to switch the terminals one at a time so that the installation positions are not mistaken.

Removal

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the following parts:
   a. Front scuff plate (LH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)
   b. Front side trim (LH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)
   c. LF control unit (with advanced keyless entry system) (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)
3. Remove all the fuses.
4. Cut the bands shown in the figure.

5. Remove the bolt.

6. Remove the fuse block clip from the body.

7. Set the removed fuse block aside so that it does not scratch the vehicle and parts.

Installation

1. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, and pull the wiring harness in the direction of the arrow (2) while pressing the stopper to detach the fuse terminal from the stopper.

2. Relocate all fuse terminals to the new fuse block.

CAUTION:

- If terminals are installed incorrectly, it could damage electrical accessories and burn wiring harnesses. When relocating terminals after replacing the fuse block, line up the fuse blocks of old and news parts and always verify each of the wiring harnesses in the wiring diagram so that the installation positions are correct.

- A terminal disconnection could cause electronic components and the system to not operate normally due to poor contact. After terminal relocation, lightly pull the wiring harnesses to verify that they cannot be pulled out.

3. Install the fuse block clip to the body.

4. Install the bolt.

5. Install the bands shown in the figure.

6. Install all the fuses.

7. Install the following parts:

   a. LF control unit (with advanced keyless entry system) (See **LF CONTROL UNIT REMOVAL/INSTALLATION**.)

   b. Front side trim (LH) (See **FRONT SIDE TRIM REMOVAL/INSTALLATION**.)

   c. Front scuff plate (LH) (See **FRONT SCUFF PLATE REMOVAL/INSTALLATION**.)

8. Perform the "Verify Fuse Block Replacement". (See **Verify Fuse Block Replacement**.)

9. Connect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

Verify Fuse Block Replacement

1. Temporarily connect the negative battery cable to verify that the related wiring harness is not heated.

2. Switch the ignition ON (engine off).

3. Verify that the fuse is not blown and the related wiring harness is not heated.

4. Perform the initial settings for the following systems:

   - Power window system (See **POWER WINDOW SYSTEM INITIALIZATION PROCEDURE**.)
   - Sunroof system (See **SUNROOF SYSTEM INITIALIZATION PROCEDURE**.)
   - Tire pressure monitoring system (TPMS) (See **TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE**.)

5. Verify DTCs using the M-MDS.

- If a DTC is displayed, repair the malfunctioning part according to the corresponding DTC inspection.
    - After completion of repairs, clear all DTCs stored in the module.

6. If there is no malfunction in Step 1, 3, and 5, start the engine and maintain the idle status.

7. Operate all the switches of the interior/exterior lights of the vehicle and verify that all the light bulbs illuminate and flash.

8. Operate the audio, climate control, wiper switch, and selector lever (ATX) and verify that they operate correctly.

9. Shift the selector lever to the P position, race the engine at **approx. 3,000 rpm** from engine idling, and verify that there is no malfunction. (ATX)

10. Perform a road test and verify that low speed, acceleration, shift-up, and shift-down conditions are normal. (ATX)

2014 - Mazda3 - Body and Accessories

FUSE SERVICE CAUTIONS

CAUTION:

- If a fuse is burnt out, inspect the cause and repair the malfunctioning part, and always replace a fuse with one of the specified value. If the fuse is replaced before repairing a malfunction, it may burn out again.

2014 - Mazda3 - Body and Accessories

MAIN FUSE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.

3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, and pull up the main fuse cover in the direction of the arrow (2) shown in the figure to detach the main fuse cover tab from the main fuse.

4. Remove the main fuse cover.

5. Remove the nuts.

Without i-ELOOP

With i-ELOOP

6. Remove the main fuse.

7. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

MULTIPLEX SLOW BLOW FUSE REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)
2. Remove the relay and fuse block upper cover. (See **RELAY AND FUSE BLOCK REMOVAL/INSTALLATION**.)
3. Remove the front body control module (FBCM). (See **FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION**.)
4. Remove the bolt.

5. Remove the multiplex slow blow fuse.
6. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FORCED IGNITION ON

NOTE:

- The forced ignition ON procedure forces a power supply to each part when no power is available even after the ignition switch has been operated. However, the engine cannot be started and the steering cannot be unlocked.
- In order to perform a forced ignition ON, the M-MDS is necessary. If the servicing is being done outside of an Authorized Mazda dealership, contact an Authorized Mazda dealership for instructions.

1. Verify that the vehicle is in accordance with the following conditions:
    - Communication between start stop unit and M-MDS is enabled.
    - There are no remote transmitters in the vehicle.
    - All the doors, hood, and trunk lid (4SD)/liftgate (5HB) are closed.
2. Get PCM part number from As-built site.
3. Connect the M-MDS to the DLC-2.
4. Select "Manual Vehicle Entry".
5. Select the “All other” from Vehicle list.
6. Input the PCM part number on the following screen.

7. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    - Select the "Body".
    - Select the "Special Ignition ON".
8. Perform the procedure according to the directions on the screen.

9. Delete the session, but keep the ignition ON.

10. Normal vehicle identification.

2014 - Mazda3 - Body and Accessories

RELAY LOCATION

1	Cooling fan relay No.1

2	Rear window defroster relay
3	ACC relay
4	IG1 relay
5	• Headlight LO relay (Without discharge headlight system) • Headlight LO relay (LH) (With discharge headlight system)
6	• DRL relay (Without discharge headlight system) • Headlight LO relay (RH) (With discharge headlight system)
7	Starter relay
8	Electric variable valve timing relay
9	Fuel pump relay
10	Fuel injector relay
11	Main relay
12	Cooling fan relay No.2
13	Horn relay
14	Front fog light relay
15	Blower relay
16	TNS relay
17	Headlight HI relay
18	A/C relay
19	Cooling fan relay No.3
20	Brake light relay

2014 - Mazda3 - Body and Accessories

RELAY INSPECTION

Relay Type

Connector type	Part name
Type A	• Cooling fan relay No.1 • Cooling fan relay No.2 • Rear window defroster relay • ACC relay • Headlight LO relay (Without discharge headlight system) • Headlight LO relay (LH) (With discharge headlight system) • Headlight LO relay (RH) (With discharge headlight system) • Starter relay • Main relay • Horn relay • Front fog light relay • TNS relay • Headlight HI relay • A/C relay
Type B	• DRL relay (Without discharge headlight system) • Cooling fan relay No.3 • Brake light relay
Type C	• Blower relay
	• IG1 relay • Electric variable valve timing relay

Type D	• Fuel pump relay • Fuel injector relay

Type A

1. Remove the relay. (See **RELAY LOCATION**.)
2. Verify the continuity between relay terminals C and D.

   - If it can be verified, replace the relay. (See **RELAY LOCATION**.)
   - If it cannot be verified, go to the next step.
3. Verify the continuity between relay terminals E and A.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)
4. Apply battery voltage to relay terminal E, and connect terminal A to ground.
5. Verify the continuity between relay terminals C and D.
   - If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)

Type B

1. Remove the relay. (See **RELAY LOCATION**.)
2. Verify the continuity between relay terminals C and D.

- If it can be verified, replace the relay. (See **RELAY LOCATION**.)
- If it cannot be verified, go to the next step.

3. Verify the continuity between the relay terminals E and A.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)
4. Verify the continuity between the relay terminals B and D.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)
5. Apply battery voltage to relay terminal E, and connect terminal A to ground.
6. Verify the continuity between relay terminals C and D.
   - If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)

Type C

1. Remove the relay. (See **RELAY LOCATION**.)
2. Verify the continuity between the relay terminals C and A.

   - If it can be verified, replace the relay. (See **RELAY LOCATION**.)
   - If it cannot be verified, go to the next step.
3. Verify the continuity between the relay terminals D and B.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)
4. Apply battery voltage to relay terminal D, and connect terminal B to ground.
5. Verify the continuity between relay terminals C and A.
   - If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)

Type D

1. Remove the relay. (See **RELAY LOCATION**.)

2. Verify the continuity between relay terminals D and C.

- If it can be verified, replace the relay. (See **RELAY LOCATION**.)
- If it cannot be verified, go to the next step.

3. Verify the continuity between relay terminals A and E.

- If it can be verified, go to the next step.
- If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)

4. Apply battery voltage to relay terminal A, and connect terminal E to ground.

5. Verify the continuity between relay terminals D and C.

- If it cannot be verified, replace the relay. (See **RELAY LOCATION**.)

2014 - Mazda3 - Body and Accessories

FRONT ACCESSORY SOCKET REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   j. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

3. Insert a tape-wrapped flathead screwdriver into the gap between the cap tab and socket.

4. Move the flathead screwdriver in the direction of the arrows (1) shown in the figure, and press the front accessory socket in the direction of the arrow (2) shown in the figure to detach the cap tabs from the socket.

5. Pull the front accessory socket in the direction of the arrow shown in the figure and remove it.

6. While pressing the cap tabs in the direction of arrows (3) shown in the figure, press the cap in the direction of arrow (4) shown in the figure to detach the cap tabs from the front console.

FRONT CONSOLE

7. Remove the cap.

8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

FRONT ACCESSORY SOCKET INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the following parts:

   a. Glove compartment (See **GLOVE COMPARTMENT REMOVAL/INSTALLATION**.)

   b. Decoration panel (See **DECORATION PANEL REMOVAL/INSTALLATION**.)

   c. Upper panel (See **UPPER PANEL REMOVAL**.) (See **UPPER PANEL INSTALLATION**.)

   d. Rear console (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

   e. Shift lever knob (MTX) (See **MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R]**.)

   f. Selector lever knob (ATX) (See **AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION**.)

   g. Shift panel (See **SHIFT PANEL REMOVAL/INSTALLATION**.)

   h. Front console box (See **FRONT CONSOLE BOX REMOVAL/INSTALLATION**.)

   i. Side wall (See **SIDE WALL REMOVAL/INSTALLATION**.)

   j. Front console (See **FRONT CONSOLE REMOVAL/INSTALLATION**.)

   k. Front accessory socket (See **FRONT ACCESSORY SOCKET REMOVAL/INSTALLATION**.)

3. Connect the tester probe to the position shown in the figure and verify that there is continuity.

FRONT ACCESSORY SOCKET INSPECTION

- If it cannot be verified, replace the front accessory socket.

2014 - Mazda3 - Body and Accessories

CENTER ACCESSORY SOCKET REMOVAL/INSTALLATION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the console-up. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. Insert a tape-wrapped flathead screwdriver into the gap between the cap tab and socket.

4. Move the flathead screwdriver in the direction of the arrows (1) shown in the figure, and press the center accessory socket in the direction of the arrow (2) shown in the figure to detach the cap tabs from the socket.

5. Pull the center accessory socket in the direction of the arrow shown in the figure and remove it.

6. While pressing the cap tabs in the direction of arrows (3) shown in the figure, press the cap in the direction of arrow (4) shown in the figure to detach the cap tabs from the console-up.

7. Remove the cap.
8. Install in the reverse order of removal.

2014 - Mazda3 - Body and Accessories

CENTER ACCESSORY SOCKET INSPECTION

1. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

2. Remove the console-up. (See **REAR CONSOLE REMOVAL/INSTALLATION**.)

3. Remove the center accessory socket. (See **CENTER ACCESSORY SOCKET REMOVAL/INSTALLATION**.)

4. Connect the tester probe to the position shown in the figure and verify that there is continuity.

- If it cannot be verified, replace the center accessory socket.

2014 - Mazda3 - Body and Accessories

INSTRUMENTATION/DRIVER INFO. LOCATION INDEX

Interior

1	Instrument cluster (See **INSTRUMENT CLUSTER REMOVAL/INSTALLATION**.) (See **INSTRUMENT CLUSTER DISASSEMBLY/ASSEMBLY**.) (See **INSTRUMENT CLUSTER INSPECTION**.) 3	Indicator unit (See **INDICATOR UNIT REMOVAL/INSTALLATION**.) (See **INDICATOR UNIT INSPECTION**.)
4	LDWS switch (with lane departure warning system (LDWS)) (See **LDWS SWITCH REMOVAL/INSTALLATION**.) (See **LDWS SWITCH INSPECTION**.)
5	BSM OFF switch (with blind spot monitoring (BSM) system) (See **BLIND SPOT MONITORING (BSM) OFF SWITCH REMOVAL/INSTALLATION**.) (See **BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION**.)
6	Fuel gauge sender unit (See **FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION**.) (See **FUEL GAUGE SENDER UNIT INSPECTION**.)
7	Forward sensing camera (FSC) short-cord (with lane departure warning system (LDWS)) (See **FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION**.) (See **FORWARD SENSING CAMERA (FSC) SHORT-CORD INSPECTION**.)
8	Forward sensing camera (FSC) (with lane departure warning system (LDWS)) (See **FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION**.) (See **FORWARD SENSING CAMERA (FSC) CLIP REMOVAL/INSTALLATION**.) (See **FORWARD SENSING CAMERA (FSC) COVER REMOVAL/INSTALLATION**.) (See **FORWARD SENSING CAMERA (FSC) AIMING**.) (See **FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING READ/WRITE FUNCTION)**.) (See **FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)**.) (See **FORWARD SENSING CAMERA (FSC) PERSONALIZATION FEATURES SETTING PROCEDURE**.)

Exterior

1	Horn (See **HORN REMOVAL/INSTALLATION**.) (See **HORN INSPECTION**.)
2	Blind spot monitoring (BSM) control module (with blind spot monitoring (BSM) system) (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION**.) (See **BLIND SPOT MONITORING (BSM) CONTROL MODULE INSPECTION**.) (See **BLIND SPOT MONITORING (BSM) RADAR TEST**.)
3	Blind spot monitoring (BSM) warning indicator light (with blind spot monitoring (BSM) system) (See **BLIND SPOT MONITORING (BSM) INDICATOR LIGHT REMOVAL/INSTALLATION**.) (See **BLIND SPOT MONITORING (BSM) INDICATOR LIGHT INSPECTION**.)

4	Blind spot monitoring (BSM) bracket (with blind spot monitoring (BSM) system) (See **BLIND SPOT MONITORING (BSM) BRACKET REMOVAL/INSTALLATION**.)

2014 - Mazda3 - Body and Accessories

INSTRUMENT CLUSTER REMOVAL/INSTALLATION

CAUTION:

- If configuration is not performed when the instrument cluster is replaced with a new one, the vehicle specification information is not stored in the instrument cluster and the system will not operate normally.
- When performing configuration, it is necessary to read the vehicle specification information from the instrument cluster before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the instrument cluster. The vehicle specification information is temporarily stored in the M-MDS.

NOTE:

- The instrument cluster prior to replacement stores the vehicle specification information.
- A new instrument cluster does not store any vehicle specification information.
- If the vehicle specification information from the instrument cluster prior to replacement cannot be read, perform the configuration using As-Built data.
- Because the personalization setting information stored in the instrument cluster cannot be written to a new instrument cluster, if the instrument cluster is replaced, the personalization setting information is at the initial setting. Therefore, before replacing the instrument cluster, verify the personalization setting information and reset the replaced instrument cluster with the information.

1. When replacing the instrument cluster, perform the configuration. (See **INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION)**.)

2. Disconnect the negative battery cable. (See **NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5]**.)

3. Remove the following parts:

   a. Upper column cover (See **COLUMN COVER REMOVAL/INSTALLATION**.)

   b. Meter hood (See **METER HOOD REMOVAL/INSTALLATION**.)

4. Remove the screws.

5. Cover the light switch, wiper switch, and start stop unit using a rag to prevent scratches.

CAUTION:

- When removing the instrument cluster, the instrument cluster may contact the light switch, wiper switch, or the start stop unit and the instrument cluster may be scratched. When removing the instrument cluster, cover the light switch, wiper switch, and start stop unit using a rag.

6. Pull the instrument cluster outward to detach it from the instrument panel pins.

7. Rotate the instrument cluster in the direction of the arrow shown in the figure.

8. Disconnect the connector.

9. Remove the wiring harness clip.

10. Remove the instrument cluster by sliding it between the instrument panel and the steering.

11. Install in the reverse order of removal.

CAUTION:

- If the instrument cluster is left for a long time with its screen facing down, grease applied to the needles may spill and the needles may not operate smoothly. When storing the instrument cluster, store it with its screen facing upward.

NOTE:

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the instrument cluster. (See **INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)**.)

2014 - Mazda3 - Body and Accessories

INSTRUMENT CLUSTER DISASSEMBLY/ASSEMBLY

CAUTION:

- If the instrument cluster is hit forcefully during disassembly such as by being dropped, it could get damaged and the system may not operate normally. When disassembling the instrument cluster, perform the procedure on a workbench on clean clothes being careful not to drop it.

1. Disassemble in the order indicated in the table.

3

INSTRUMENT CLUSTER INSPECTION

Speedometer Inspection (Analog Speedometer Type)

Using a speedometer tester

CAUTION:

- When only the front or the rear wheels are driven using a speedometer tester, the DSC HU/CM may determine that the vehicle speed signal is in error and the engine cannot be stopped by the normal operation. If the engine cannot be stopped, perform an emergency engine stop operation. (See **SERVICE CAUTIONS**.)

1. Adjust the tire pressure to the specification.
2. Using a speedometer tester, verify that the tester reading is as indicated in the following table. **km/h**

Speedometer tester indication (km/h)	Allowable range (km/h)
20	17—23
40	37—43
60	57—63
80	77—83
100	97—103
120	116—124
140	136—144
160	156—164
180	176—184
200	196—204
220	215—225
240	235—245

mph

Speedometer tester indication (mph)	Allowable range (mph)
10	8—12
20	18—22
30	28—32
40	38—42

50	48—52
60	58—62
70	67—73
80	77—83
90	87—93
100	97—103
110	107—113
120	117—123
130	127—133
140	137—143
150	147—153

3. Verify that the speedometer reading is within the range indicated in the table.
    - If the speedometer does not operate or the indication is not within the allowable range, inspect the DTC inspection for the following control module and the related wiring harnesses.
        - PCM
        - TCM (ATX)
        - DSC HU/CM
    - If the PCM, TCM (ATX), DSC HU/CM, and related wiring harnesses are normal, replace the instrument cluster.

Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
    a. “Data logger”
    b. “Module”
    c. “IC”
3. Using “SPEEDOMTR”, verify that the displayed information is as indicated in the table.

M-MDS display	Speedometer display
60 km/h	Speedometer needle moves to approx. 57—63 km/h {35—40 mph}.
120 km/h	Speedometer needle moves to approx. 116—124 km/h {72—77 mph}.
Off	Speedometer needle moves to the bottommost position.

- If the speedometer does not operate or the indication is not within the allowable range, inspect the DTC inspection for the following control module and the related wiring harnesses.
    - PCM
    - TCM (ATX)
    - DSC HU/CM
- If the PCM, TCM (ATX), DSC HU/CM, and related wiring harnesses are normal, replace the instrument cluster.

Speedometer Inspection (Digital Speedometer Type)

Using a speedometer tester

CAUTION:

- When only the front or the rear wheels are driven using a speedometer tester, the DSC HU/CM may determine that the vehicle speed signal is in error and the engine cannot be stopped by the normal operation. If the engine cannot be stopped, perform an emergency engine stop operation. (See **SERVICE CAUTIONS**.)

1. Adjust the tire pressure to the specification.
2. Using a speedometer tester, verify that the tester reading is as indicated in the following table. **km/h**

Speedometer tester indication (km/h)	Allowable range (km/h)
20	19—21
40	39—41
60	59—61
80	79—81
100	99—101
120	119—121
140	139—141
160	159—161
180	179—181
200	199—201
220	219—221
240	239—241

mph

Speedometer tester indication (mph)	Allowable range (mph)
10	9—11
20	19—21
30	29—31
40	39—41
50	49—51
60	59—61
70	69—71
80	79—81

90	89—91
100	99—101
110	109—111
120	119—121
130	129—131
140	139—141
150	149—151

3. Verify that the speedometer reading is within the range indicated in the table.
    - If the speedometer does not operate or the indication is not within the allowable range, inspect the DTC inspection for the following control module and the related wiring harnesses.
        - PCM
        - TCM (ATX)
        - DSC HU/CM
    - If the PCM, TCM (ATX), DSC HU/CM, and related wiring harnesses are normal, replace the instrument cluster.

Tachometer Inspection (Analog Tachometer Type Only)

CAUTION:

- If the engine speed exceeds the allowable range, the engine could be damaged. Therefore, when inspecting the tachometer, do not allow the engine speed to exceed the allowable range indicated on the tachometer.

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
    a. “Data logger”
    b. “Module”
    c. “IC”
3. Using “TACHOMTR”, verify that the displayed information is as indicated in the table.

M-MDS display	Tachometer display
3000 RPM	Tachometer needle moves to approx. 3,050 rpm.
6000 RPM	Tachometer needle moves to approx. 6,100 rpm.
Off	Tachometer needle moves to bottommost position.

- If the tachometer does not operate or the indication is not within the allowable range, inspect the DTC inspection for the following control module and the related wiring harnesses.
    - PCM
- If the PCM and related wiring harnesses are normal, replace the instrument cluster.

Fuel Gauge/LCD Inspection

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
    a. “Data logger”

b. “Module”

c. “IC”

3. Using “LCD_SEG”, verify that the LCD is illuminated.

TYPE A (Digital speed meter type)

TYPE B (Analog speed meter type (with tachometer))
