HYDRAULIC SHOCK ABSORBER

1000-6000 Series
Q Series (1000-6000 Series with Spring Seat)

- ★High performance quality
- ★Improved riding comfort under severe driving conditions, due to Tokico's unique rebound and compression control disc valve system which automatically adjusts to all ride conditions.
- ★Smooth operation and greater durability of the shock absorber.
- ★Improved road holding and necessary stability for safety.

MONO TUBE GAS SHOCK

G Series
X Series (G Series with Spring Seat)

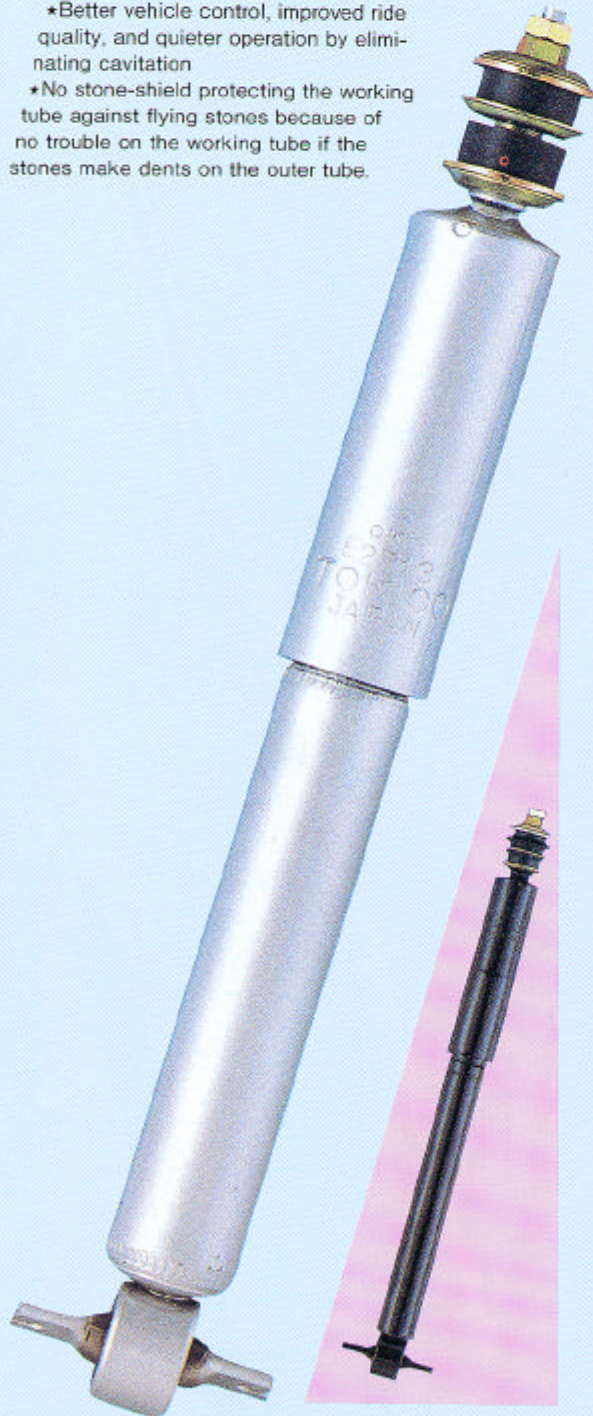

- ★Improved heat dissipation into the air passing around the tube by means of a greater direct cooling area of the tube.
- ★Improved damping control, because of the complete elimination of fluid aeration and cavitation: thus, providing top performance with greatly improved road holding and directional stability.

TWIN TUBE GAS SHOCK

E Series
U Series (E Series with Spring Seat)

- ★Originally developed by TOKICO (first in the world)
- ★Better vehicle control, improved ride quality, and quieter operation by eliminating cavitation
- ★No stone-shield protecting the working tube against flying stones because of no trouble on the working tube if the stones make dents on the outer tube.

WHY TOKICO?

Tough durability

OEM oriented

Knowledgeable engineering

Identified brand

Comprehensive range

Originated quality

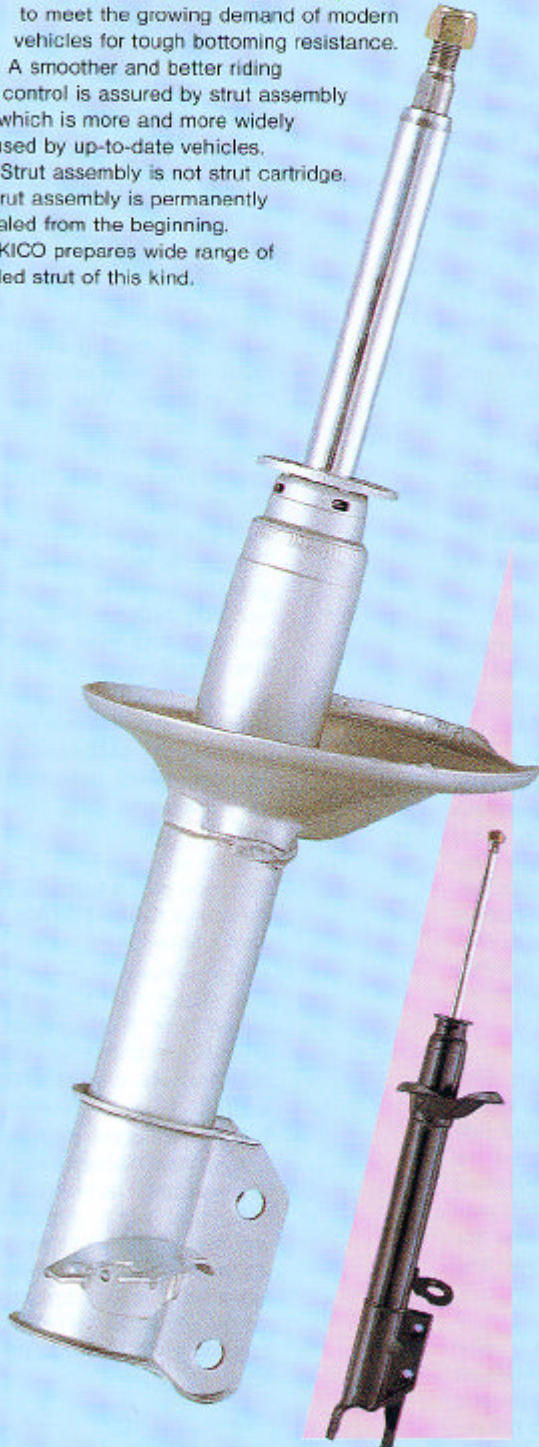

TOKICO MAKES SHOCK OF SHOCKS!

STRUT ASSEMBLY

A Series
B Series

★TOKICO strut assembly is designed to meet the growing demand of modern vehicles for tough bottoming resistance. A smoother and better riding control is assured by strut assembly which is more and more widely used by up-to-date vehicles.

★Strut assembly is not strut cartridge. Strut assembly is permanently sealed from the beginning. TOKICO prepares wide range of sealed strut of this kind.

**WHY
TOKICO
BEST?**

Blessed experience

Excellent technology

Splendid production

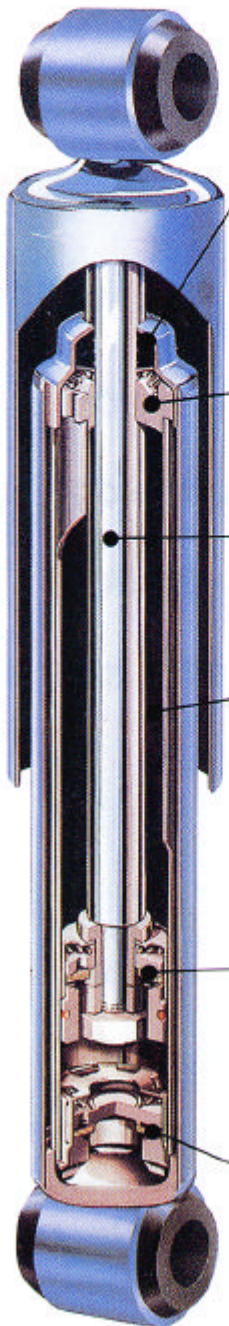

Talented quality control

**TOKICO
IS
YOUR BEST
CHOICE!**

FUNCTION & STRUCTURE

HIGH QUALITY SHOCK ABSORBERS THAT PROVIDE STRONG PERFORMANCE FOR THE DEMANDING, PERFORMANCE-MINDED DRIVER

HYDRAULIC SHOCK ABSORBER

● Rod Seal

The rod seal, made of high quality oil-resistant and wear-proof synthetic rubber, is multi-lipped. The lips are always pressed against the rod through compression of the rubber by means of a conical spring. This seal is engineered with high sealing efficiency, to keep vital oil in and dirt out of the cylinder. This also maintains full working capability over wide temperature ranges, and increases the lifespan of the shock.

● Rod Guide

Tokico's sintered iron rod guide features a sulfurized sliding surface, which assures reliable guidance and long life of the rod.

● Piston Rod

The piston rod is hard-chrome plated, and finely polished for greater resistance to corrosion, to assure its smooth action.

● Fluid

Tokico's constant viscosity fluid retains its efficiency, regardless of weather conditions. This fluid has been specially developed for Tokico shock absorbers through exhaustive research. It is blended with chemical additives which provide optimum operating performance.

● Rebound Valve

Tokico's unique automatic control rebound disc valve, which automatically adjusts to all ride conditions, is engineered to assure maximum performance and smooth ride control. It also provides instant response for full performance, without any time lag in reaction.

● Compression Valve

Tokico's compression disc valve, which provides excellent performance, has automatic control actions similar to the rebound disc valve.

TWIN-TUBE GAS SHOCK

● Rod Seal

The rod seal, made of oil-resistant and wearproof high quality synthetic rubber, is multi-lipped. The lips are always pressed against the rod through compression of the rubber by means of a conical spring. This seal is engineered with high sealing efficiency to keep vital oil in and dirt out of the cylinder. This also maintains full working capability over wide temperature ranges, and increases the lifespan of the shock.

● Check Valve

The check valve allows oil and gas to flow one way from the working tube to the reservoir, but prohibits flow in the opposite direction.

● Rod Guide

Tokico's sintered iron rod guide features a sulfurized sliding surface, which assures reliable guidance and long life of the rod.

● Gas

Nitrogen gas is sealed in the reservoir at 0.5 to 1.5 MPa to prevent cavitation.

● Piston Rod

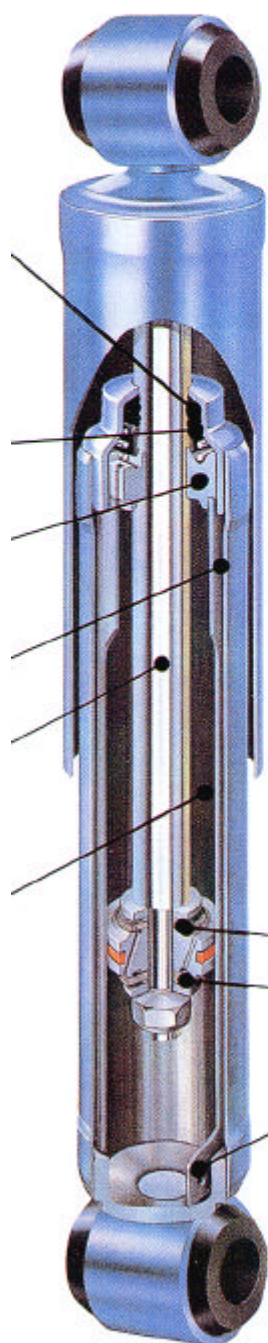

The piston rod is hard-chrome plated, and finely polished for greater resistance to corrosion, to assure its smooth action.

● Fluid

Tokico's constant viscosity fluid retains its efficiency, regardless of weather conditions. This fluid has been specially developed for Tokico shock absorbers through exhaustive research. It is blended with chemical additives which provide optimum operating performance.

SOLID, AND RELIABLE RESPONSE

MONO-TUBE GAS SHOCK

● Rod Guide

Tokico's unique sintered iron rod guide, with a sulfurized sliding surface, assures smooth action and long life of the piston rod.

● Rod Seal

The high quality seal is made of fluorine rubber. It features self-sealing efficiency under high pressure, and assures durability over wide temperature ranges.

● Piston Rod

The piston rod is hard-chrome plated, and finely polished for greater resistance to corrosion, to assure its smooth action.

● Fluid

Tokico's constant viscosity fluid, blended with chemical additives, provides optimum operating performance and retains its efficiency, regardless of weather conditions.

● Valve

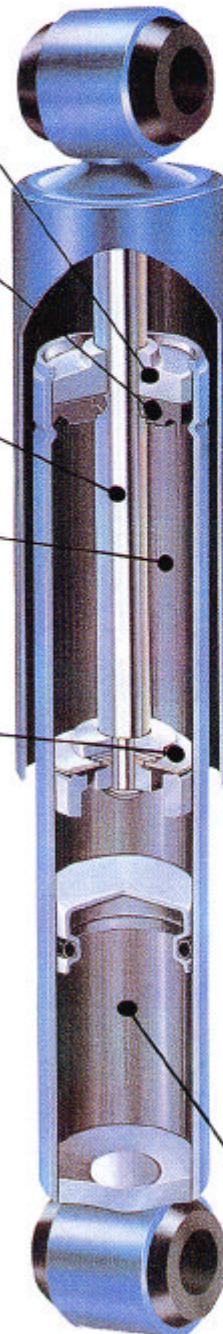

A two-way disc valve, automatically controlling the damping force for both rebound and compression, is incorporated into the upper surface of the piston to assure superior performance.

● Valve

The sandwich valve at the piston automatically controls the damping force in both the rebound and compression directions.

● Passageway

The specially-designed passageway restricts the oil flow between the working tube and the reservoir, allowing for lower pressures than in regular gas shocks.

ADVANTAGES OF TWIN-TUBE GAS SHOCK

- By completely preventing cavitation, it assures superior comfort, drivability, and stability under any driving conditions.
- There is no need to install a separate outer protector. The twin tubing prevents denting (by flying stones) from interfering with the action of the piston encased in the innermost tube.
- No bottom valve or gas chamber in the working tube is required. The base length can be made shorter than previous kinds of shocks, meaning a perfect fit for any car.

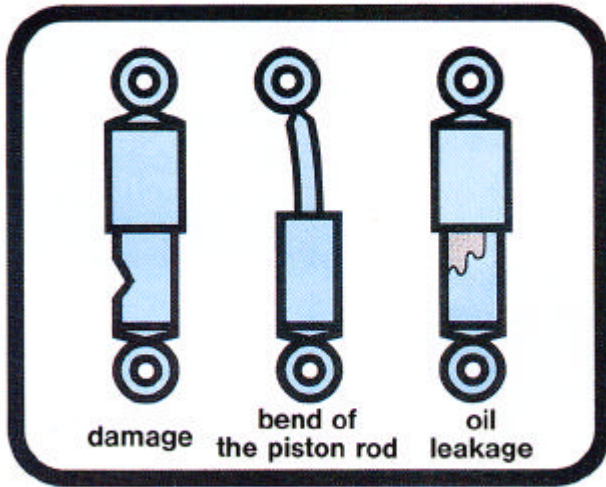

ADVANTAGES OF MONO-TUBE GAS SHOCK

- In the mono-tube shock, the outer wall of the working tube is directly exposed to air flow, improving heat dissipation and increasing the life of the shock.
- It prevents oil cavitation completely, ensuring superior comfort, drivability and stability during even the most demanding driving conditions.

● Gas

The high-pressure nitrogen gas (2.0 to 3.0 MPa) completely eliminates cavitation.

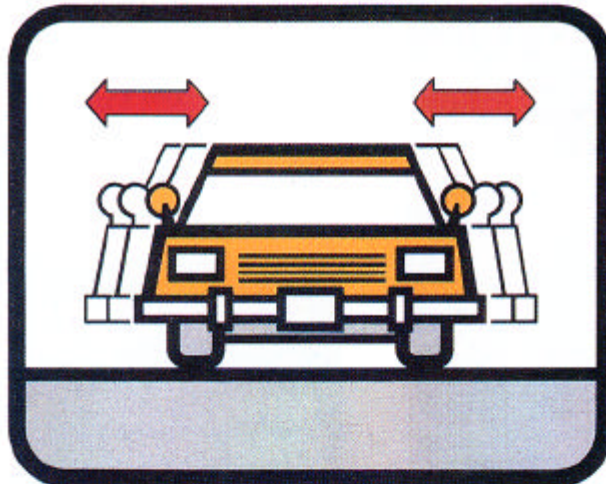

SIGNS TO SERVE YOUR SHOCKS

Look at the appearance of your Shock Absorber.

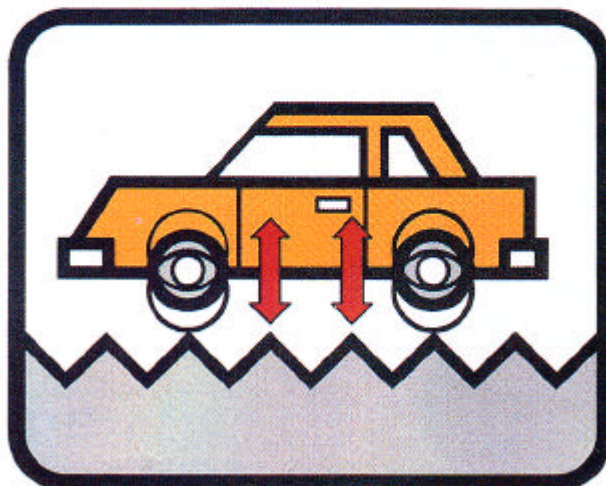

When the rocking continued after your push-down on the car.

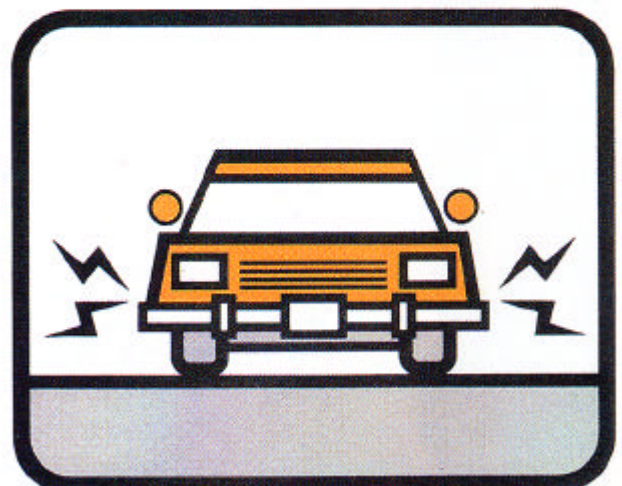

When your car veers sideways under the influence of cross wind.

When your car 'nosedives' or dips forward badly on braking.

When your car bounds hardly on the uneven road.

When it makes a bad noise.

HOW TO INSTALL SHOCKS

When replacing shock absorbers, please select the correct shocks from the application listing, and follow the instructions below.

1. When removing the used shock absorbers

- ① Please check and remember the positions where each of the parts currently are installed. When installing new shocks, the fittings must be set back in the original position.
- ② Please remove dirt and rust from screws by using a stiff brush.
- ③ Before removing the screws, please make sure to apply oil on to the rusted nuts & screws. If you tap delicately with a hammer, the oil will easily soak into the grooves.
- ④ Please do not throw away the worn shock and the removed kits until installation of the new shocks is completed.

2. When installing the new shock absorbers

- ① Before installation, please check the TOKICO number on the shock body, and compare it with the application listing, making sure the model year and fitting position, etc., are correct.
- ② Please confirm that all the parts required for installation are included in the product package.
- ③ Please do not grab the piston rod, or damage it, with any type of metallic tool. Damaging a piston rod will ruin the rod seal, causing leakage. (A rod seal ruined by damage to the piston rod will not be covered under the warranty.)
- ④ When installing the "eye type", please do not tighten the nut when the car body is jacked-up. Please tighten the nut in the natural position.
- ⑤ In case of the bolt type, please follow the diagram printed on the vinyl bag for the fitting kits or the mounting-kit listing.
- ⑥ When installing a cartridge, please follow this procedure:
 - Remove the strut from the car body.

- Remove the gland nut and take the internal parts out of the strut housing.
- Remove the oil in the strut housing and clean the internal surfaces.
- Insert the new cartridge into the strut housing.
- Use the new gland nut contained in the box to fix the cartridge securely in place. Follow the instruction sheet contained in the box for further details.

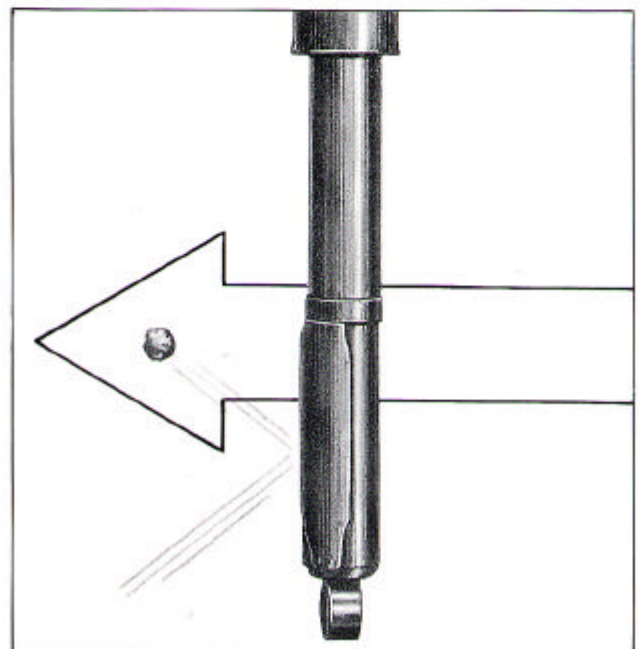

- ⑦ Make sure that all nuts and bolts are tightened securely.

3. When scrapping the used shock absorbers

- ① Please take out the oil completely.
- ② For gas shocks, please take out the gas and oil completely, according to the instruction sheet contained in the individual box.
- ③ Follow your local regulation when throwing away old shock absorbers.

4. When using gas shocks

- ① Please do not puncture, take apart, or put in a fire.
- ② In case of the gas shock with the protector, the protector must face toward the front direction.

NUMERICAL

TOKICO SHOCK ABSORBERS

The length "L" is changed without any advanced notification.
 The different TOKICO numbers adopt the different designs about the following points even if the length is the same. Please take care of the cartridge of this kind.
 1)Outer Diameter of the Base 2)Shape of the Base Cap
 3)Damping Ratio 4)Maximum Length 5)Minimum Length
