

# Intermediate Shaft

## Removal

1. Drain oil from the transmission.
2. Remove the three 8 mm bolts and one 10 mm bolt.

3. Lower the bearing support close to the steering gearbox and remove the intermediate shaft from the differential.

**CAUTION:** To prevent damage to the differential oil seal, hold the intermediate shaft horizontal until it is clear of the differential.

## Disassembly

1. Remove the heat shield from the bearing support.

2. Remove the intermediate shaft outer seal.
3. Remove the 40 mm external circlip.
