## JOINT ANGLE **ADJUSTMENT** NOTICE:

When doing operations which involve the removal and installation of the propeller shaft, always check the joint. Make adjustments if necessary.

- 1. STABILIZE PROPELLER SHAFT AND DIFFERENTIAL
- Turn the propeller shaft several times by hand to stabilize (a) the center support bearing.

(b) Using a jack, raise and lower the differential to stabilize the differential mounting cushion.

- SST
- 2. CHECK JOINT ANGLE OF NO. 2 JOINT AND NO. 3 JOINT
- Using SST, measure the installation angle of the inter-(a) mediate shaft and propeller shaft. 09370-50010 SST
- Using SST, measure the installation angle of the differen-(b) tial.

SST 09370-50010

HINT:

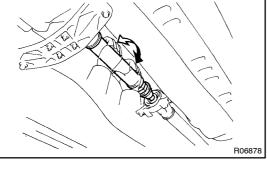

R06879

R06880

B01139

SST

Measure the installation angle by placing the SST in the position, as shown in the illustration.

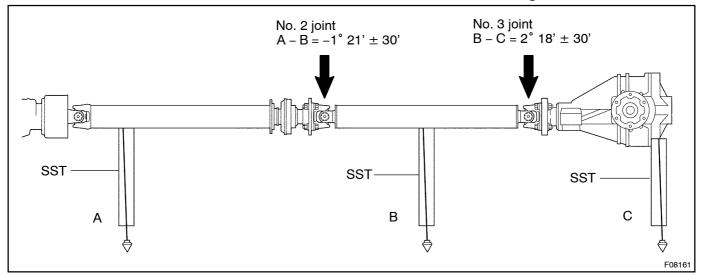

PR05I-01

## (c) Calculate the No. 2 joint angle.

- No. 2 joint angle:
  - $A B = -1^{\circ} 21' \pm 30'$

A: Intermediate shaft installation angle

- **B: Propeller shaft installation angle**
- (d) Calculate the No. 3 joint angle. No. 3 joint angle:
  - $B C = 2^{\circ} 18' \pm 30'$
  - **B:** Propeller shaft installation angle
  - **C: Differential installation angle**

If the measured angle is not within the specification, adjust it with the center support bearing adjusting washer and differential adjusting shim.

Center support bearing	adjusting washer thickness:
------------------------	-----------------------------

Thickness mm (in.)	Thickness mm (in.)
2.0 (0.079)	9.0 (0.354)
4.5 (0.177)	11.0 (0.433)
6.5 (0.256)	13.5 (0.531)

NOTICE:

- Left and right washers should be the same thickness.
- 2 washers should not be assembled together.
- Some vehicles are not assembled with washers.
