GENERAL INFORMATION 32-2

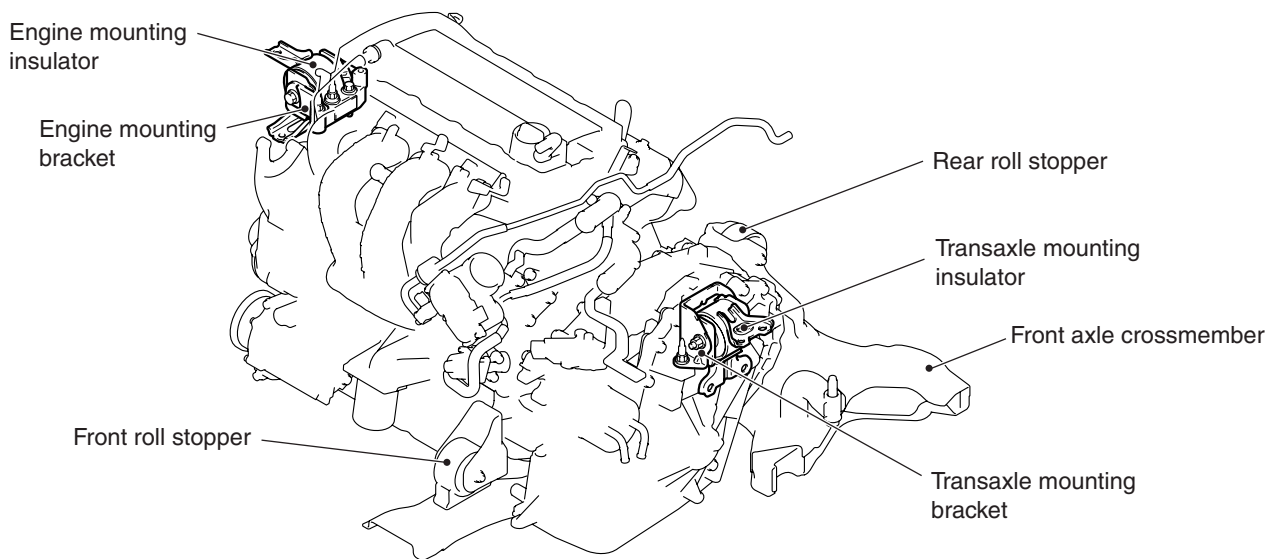

GENERAL INFORMATION

M2320000100856

For the power plant support, the inertial axis four-point mounting system is adopted, and the system has the following features.

- For the engine and transmission mounting insulator, the cylindrical liquid seal mountings are adopted. This reduces idling vibration and acceleration noise, and improves riding comfort.
- For the engine mounting bracket, lightweight and high rigidity aluminum is adopted to reduce acceleration noise.
- For the transmission mounting bracket, light weight and high rigidity sheet metal is adopted to reduce gear noise.
- For the front and rear roll stoppers, insulators developed for CVT. This reduces idling vibration and acceleration/deceleration shock.
- A front axle crossmember is adopted to improve steering ability.
