PRECAUTIONS PFP:00001

# Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

ICS00124

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

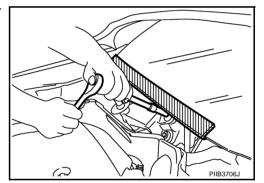

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# **Precautions for Procedures without Cowl Top Cover**

NCS001AJ

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

# **Precautions Necessary for Steering Wheel Rotation After Battery Disconnect**

VCS00125

#### NOTE:

- This Procedure is applied only to models with Intelligent Key system and NVIS/IVIS (NISSAN/INFINITI VEHICLE IMMOBILIZER SYSTEM NATS).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the "LOCK" position.
- Always use CONSULT-II to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NVIS/IVIS, an electrically controlled steering lock mechanism is adopted on the key cylinder.

For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.

If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

#### **OPERATION PROCEDURE**

1. Connect both battery cables.

#### NOTE:

Supply power using jumper cables if battery is discharged.

2. Use the Intelligent Key or mechanical key to turn the ignition switch to the "ACC" position. At this time, the steering lock will be released.

Revision: 2006 August CVT-8 2006 Murano

- 3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
- Perform the necessary repair operation.
- When the repair work is completed, return the ignition switch to the "LOCK" position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
- Perform a self-diagnosis check of all control units using CONSULT-II.

# Precautions for On Board Diagnostic (OBD) System of CVT and Engine

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

- Be sure to turn the ignition switch OFF and disconnect the battery cable from the negative terminal before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to an open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Be sure to route and secure the harnesses properly after work. Interference of the harness with a bracket, etc. may cause the MIL to light up due to a short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to a malfunction of the EVAP system or fuel injection system, etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the TCM and ECM before returning the vehicle to the customer.

# **Precautions for TCM and CVT Assembly Replacement**

NCS00126

#### **CAUTION:**

- Check if new data (Unit ID) are entered correctly after replacing CVT assembly and erasing data in TCM. (Connect CONSULT-II, and then turn ignition switch OFF.)
- When replacing CVT assembly or TCM, refer to the pattern table below and erase the EEPROM in the TCM if necessary.

#### **EEPROM ERASING PATTERNS**

CVT assembly	TCM	Erasing EEPROM in TCM	Remarks
Replaced	Replaced	Not required	Not required because the EEPROM in the TCM is in the default state. (CVT assembly must be replaced first.)
Not replaced	Replaced	Not required	Not required because the EEPROM in the TCM is in the default state.
Replaced	Not replaced	Required	Required because data has been written in the EEPROM in the TCM and because the TCM cannot write data from the ROM assembly in the transmission.

#### METHOD FOR ERASING THE EEPROM IN THE TCM

- Connect CONSULT-II to data link connector. Refer to <a href="CVT-63">CVT-63</a>, "CONSULT-II SETTING PROCEDURE".
- Turn ignition switch ON. Confirm that CONSULT-II is turned ON.
- 3. Move selector lever to "R" position.
- 4. Touch "START (NISSAN BASED VHCL)" on CONSULT-II.
- Select "SELF-DIAG RESULTS" mode for "TRANSMISSION" with CONSULT-II. 5.
- Press the brake pedal and turn the brake switch ON.
- Press the accelerator pedal (0.5/8 4/8 throttle) not to exceed the half, and hold it in the half or less open position. (This will set the closed throttle position signal to OFF and the wide open throttle position signal to OFF.)
- Touch "ERASE" on CONSULT-II, and then touch "YES".
- Wait 3 seconds and then release the accelerator pedal.

CVT-9 2006 Murano Revision: 2006 August

CVT

Α

R

Е

Н

10. Turn ignition switch OFF.

#### METHOD FOR WRITING DATA FROM THE ROM ASSEMBLY IN THE TRANSAXLE

In the following procedure, the TCM reads data from the ROM assembly and writes it to the EEPROM in the TCM.

- 1. Erase the EEPROM in the TCM.
- 2. Move selector lever to "P" position.
- 3. Turn ignition switch ON.

#### **CHECK METHOD**

- Standard: About 2 seconds after the ignition switch ON, the CVT indicator lamp lights up for 2 seconds.
- Non-standard: Even after the ignition switch ON, the CVT indicator lamp does not light up after 2 seconds or illuminates immediately.

#### **CAUTION:**

Perform in the "P" or "N" position.

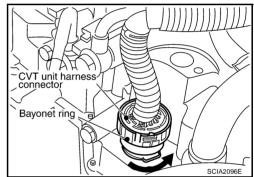

# **Action for Non-standard**

- Replace the CVT assembly.
- Replace the TCM.

# Removal and Installation Procedure for CVT Unit Connector REMOVAL

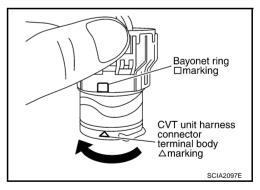

NCS00127

Rotate bayonet ring counterclockwise, pull out CVT unit harness connector upward and remove it.

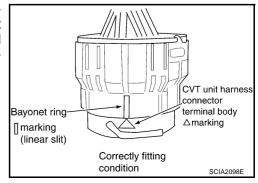

#### **INSTALLATION**

 Align ∆ marking on CVT unit harness connector terminal body with □ marking on bayonet ring, insert CVT unit harness connector, and then rotate bayonet ring clockwise.

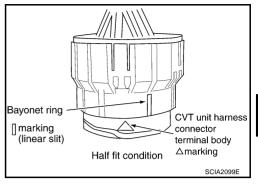

Rotate bayonet ring clockwise until Δ marking on CVT unit harness connector terminal body is aligned with the slit on bayonet ring as shown in the figure (correctly fitting condition), install CVT unit harness connector to CVT unit harness connector terminal body.

#### **CAUTION:**

- Securely align ∆ marking on CVT unit harness connector terminal body with bayonet ring slit. Then, be careful not to make a half fit condition as shown in the figure.
- Do not mistake the slit of bayonet ring for other dent portion.

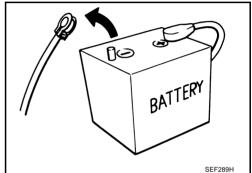

CVT

Precautions

### NOTE:

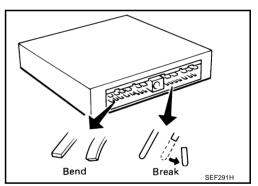

If any malfunction occurs in the RE0F09A model transaxle, replace the entire transaxle assembly.

Before connecting or disconnecting the TCM harness connector, turn ignition switch OFF and disconnect negative battery cable. Because battery voltage is applied to TCM even if ignition switch is turned OFF.

 When connecting or disconnecting pin connectors into or from TCM, take care not to damage pin terminals (bend or break).

When connecting pin connectors make sure that there are not any bends or breaks on TCM pin terminal.

 Before replacing TCM, perform TCM input/output signal inspection and make sure whether TCM functions properly or not. CVT-57, "TCM INSPECTION TABLE".

В

Α

D

Е

Н

J

- After performing each TROUBLE DIAGNOSIS, perform "DTC Confirmation Procedure".
   If the repair is completed the DTC should not be displayed in the "DTC Confirmation Procedure".
- Always use the specified brand of CVT fluid. Refer to MA-10, "Fluids and Lubricants".
- Use lint-free paper, not cloth rags, during work.
- After replacing the CVT fluid, dispose of the waste oil using the methods prescribed by law, ordinance, etc.

#### NCS00129

# Service Notice or Precautions CVT FLUID COOLER SERVICE

If CVT fluid contains friction material (clutches, brakes, etc.), or if a CVT is replaced, inspect and clean the CVT fluid cooler mounted in the radiator or replace the radiator. Flush cooler lines using cleaning solvent and compressed air after repair. For CVT fluid cooler cleaning procedure, refer to <a href="CVT-17">CVT-17</a>, "CVT Fluid Cooler Cleaning". For radiator replacement, refer to <a href="CO-13">CO-13</a>, "RADIATOR"</a>.

#### **OBD-II SELF-DIAGNOSIS**

- CVT self-diagnosis is performed by the TCM in combination with the ECM. The results can be read
  through the blinking pattern of the malfunction indicator lamp (MIL). Refer to the table on <u>CVT-65</u>, "<u>Display</u>
  <u>Items List"</u> for the indicator used to display each self-diagnostic result.
- The self-diagnostic results indicated by the MIL are automatically stored in both the ECM and TCM memories.
  - Always perform the procedure on <u>CVT-30</u>, "<u>HOW TO ERASE DTC</u>" to complete the repair and avoid unnecessary blinking of the MIL.

For details of OBD-II, refer to EC-45, "ON BOARD DIAGNOSTIC (OBD) SYSTEM".

 Certain systems and components, especially those related to OBD, may use the new style slidelocking type harness connector. For description and how to disconnect, refer to <u>PG-62</u>, "HAR-NESS CONNECTOR".

CVT FLUID PFP:KLE50

# Checking CVT Fluid FLUID LEVEL CHECK

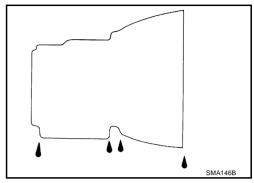

NCS0012D

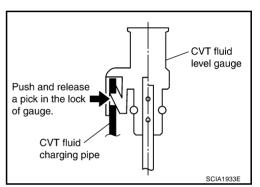

Fluid level should be checked with the fluid warmed up to 50 to 80°C (122 to 176°F). The fluid level check procedure is as follows:

- Check for fluid leakage.
- With the engine warmed up, drive the vehicle in an urban area. When ambient temperature is 20°C (68°F), it takes about 10 minutes for the CVT fluid to warm up to 50 to 80°C (122 to 176°F).

- 4. Apply parking brake firmly.
- 5. With engine at idle, while depressing brake pedal, move shift selector throughout the entire shift range.
- 6. Pull out the CVT fluid level gauge from the CVT fluid charging pipe after pressing the tab on the CVT fluid level gauge to release the lock.

7. Wipe fluid off the CVT fluid level gauge. Insert the CVT fluid level gauge rotating 180° from the originally installed position, then securely push the CVT fluid level gauge until it meets the top end of the CVT fluid charging pipe.

#### **CAUTION:**

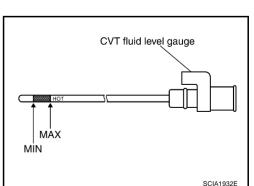

When wiping away the CVT fluid level gauge, always use lint-free paper, not a cloth rag.

8. Place the selector lever in "P" or "N" and make sure the fluid level is within the specified range.

#### CAUTION:

When reinstalling CVT fluid level gauge, insert it into the CVT fluid charging pipe and rotate it to the original installation position until it is securely locked.

Insert all the way in

### **CVT FLUID**

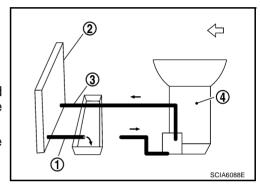

- 9. Check CVT fluid condition.
  - If CVT fluid is very dark or smells burned, check operation of CVT. Flush cooling system after repair of CVT.
  - If CVT fluid contains frictional material (clutches, brakes, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of CVT. Refer to CO-13, "RADIATOR" and CVT-17, "CVT Fluid Cooler Cleaning".

NCS0012F

# **Changing CVT Fluid**

- 1. Warm up CVT fluid by driving the vehicle for 10 minutes.
- Radiator (2)
- CVT fluid cooler hose [inlet side (3)]
- Transaxle assembly (4)
- 2. Drain CVT fluid from CVT fluid cooler hose [outlet side (1)] and refill with new CVT fluid at CVT fluid charging pipe with the engine running at idle speed.
- 3. Refill until new CVT fluid comes out from CVT fluid cooler hose [outlet side (1)].
  - About 30 to 50% extra fluid will be required for this procedure.

#### **CVT fluid:**

**Genuine NISSAN CVT Fluid NS-2** 

Fluid capacity:

Approx. 10.2 ℓ (10-6/8 US qt, 9 lmp qt)

#### **CAUTION:**

- Use only Genuine NISSAN CVT Fluid NS-2. Do not mix with other fluid.
- Using CVT fluid other than Genuine NISSAN CVT Fluid NS-2 will deteriorate in driveability and CVT durability, and may damage the CVT, which is not covered by the warranty.
- When filling CVT fluid, take care not to scatter heat generating parts such as exhaust.
- Delete CVT fluid deterioration date with CONSULT-II after changing CVT fluid. Refer to <a href="CVT-64">CVT-64</a>, "Check CVT Fluid Deterioration Date".
- 4. Check fluid level and condition.

# **CVT Fluid Cooler Cleaning**

Α

В

CVT

Whenever an automatic transaxle is repaired, overhauled, or replaced, the CVT fluid cooler mounted in the radiator must be inspected and cleaned.

Metal debris and friction material, if present, can be trapped or become deposit in the CVT fluid cooler. This debris can contaminate the newly serviced CVT or, in severe cases, can block or restrict the flow of CVT fluid. In either case, malfunction of the newly serviced CVT may occur.

Debris, if present, may deposit as CVT fluid enters the cooler inlet. It will be necessary to back flush the cooler through the cooler outlet in order to flush out any built up debris.

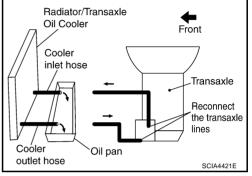

#### CVT FLUID COOLER CLEANING PROCEDURE

- 1. Position an oil pan under the transaxle's inlet and outlet cooler hoses.
- 2. Identify the inlet and outlet fluid cooler hoses.
- Disconnect the fluid cooler inlet and outlet rubber hoses from the steel cooler tubes or bypass valve.

#### NOTE:

Replace the cooler hoses if rubber material from the hose remains on the tube fitting.

Allow any CVT fluid that remains in the cooler hoses to drain into the oil pan.

Insert the extension adapter hose of a can of Transmission Cooler Cleaner (Nissan P/N 999MP-AM006) into the cooler outlet hose.

#### **CAUTION:**

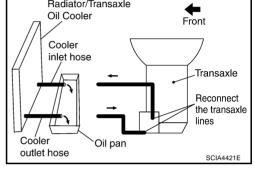

- Wear safety glasses and rubber gloves when spraying the Transmission Cooler Cleaner.
- Spray Transmission Cooler Cleaner only with adequate ventilation.
- Avoid contact with eyes and skin.
- Do not breath vapors or spray mist.
- Hold the hose and can as high as possible and spray Transmission Cooler Cleaner in a continuous stream into the cooler outlet hose until CVT fluid flows out of the cooler inlet hose for 5 seconds.
- Insert the tip of an air gun into the end of the cooler outlet hose.
- Wrap a shop rag around the air gun tip and of the cooler outlet hose.
- Blow compressed air regulated to 5 to 9 kg/cm<sup>2</sup> (70 to 130 psi) through the cooler outlet hose for 10 seconds to force out any remaining CVT fluid.
- 10. Repeat steps 5 through 9 three additional times.
- 11. Position an oil pan under the banjo bolts that connect the CVT fluid cooler steel lines to the transaxle.
- Remove the banio bolts.

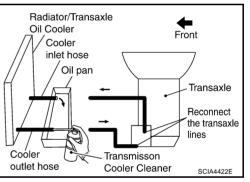

Revision: 2006 August

- 13. Flush each steel line from the cooler side back toward the transaxle by spraying Transmission Cooler Cleaner in a continuous stream for 5 seconds.
- 14. Blow compressed air regulated to 5 to 9 kg/cm<sup>2</sup> (70 to 130 psi) through each steel line from the cooler side back toward the transaxle for 10 seconds to force out any remaining CVT fluid.

**CVT-17** 

- 15. Ensure all debris is removed from the steel cooler lines.
- 16. Ensure all debris is removed from the banjo bolts and fittings.
- 17. Perform CVT-18, "CVT FLUID COOLER DIAGNOSIS PROCEDURE".

#### **CVT FLUID**

#### CVT FLUID COOLER DIAGNOSIS PROCEDURE

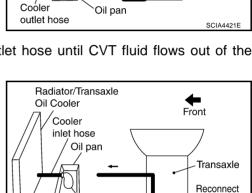

#### NOTE:

Insufficient cleaning of the cooler inlet hose exterior may lead to inaccurate debris identification.

- 1. Position an oil pan under the transaxle's inlet and outlet cooler hoses.
- 2. Clean the exterior and tip of the cooler inlet hose.
- Insert the extension adapter hose of a can of Transmission Cooler Cleaner (Nissan P/N 999MP-AM006) into the cooler outlet hose.

#### **CAUTION:**

- Wear safety glasses and rubber gloves when spraying the Transmission Cooler Cleaner.
- Spray Transmission Cooler Cleaner only with adequate ventilation.
- Avoid contact with eyes and skin.
- Do not breath vapors or spray mist.
- 4. Hold the hose and can as high as possible and spray Transmission Cooler Cleaner in a continuous stream into the cooler outlet hose until CVT fluid flows out of the cooler inlet hose for 5 seconds.
- Tie a common white, basket-type coffee filter to the end of the cooler inlet hose.

- 6. Insert the tip of an air gun into the end of the cooler outlet hose.
- 7. Wrap a shop rag around the air gun tip and end of cooler outlet hose.
- 8. Blow compressed air regulated to 5 to 9 kg/cm<sup>2</sup> (70 to 130 psi) through the cooler outlet hose to force any remaining CVT fluid into the coffee filter.
- 9. Remove the coffee filter from the end of the cooler inlet hose.
- 10. Perform CVT-19, "CVT FLUID COOLER INSPECTION PROCEDURE".

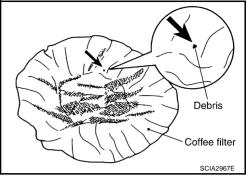

Coffee filter attached

to cooler inlet hose

# **CVT FLUID**

#### CVT FLUID COOLER INSPECTION PROCEDURE

- 1. Inspect the coffee filter for debris.
- If small metal debris less than 1 mm (0.040 in) in size or metal powder is found in the coffee filter, this is normal. If normal debris is found, the CVT fluid cooler/radiator can be re-used and the procedure is ended.

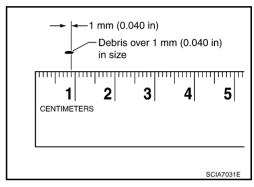

В

CVT

D

b. If one or more pieces of debris are found that are over 1 mm (0.040 in) in size and/or peeled clutch facing material is found in the coffee filter, the fluid cooler is not serviceable. The radiator/ fluid cooler must be replaced and the inspection procedure is ended.

#### CVT FLUID COOLER FINAL INSPECTION

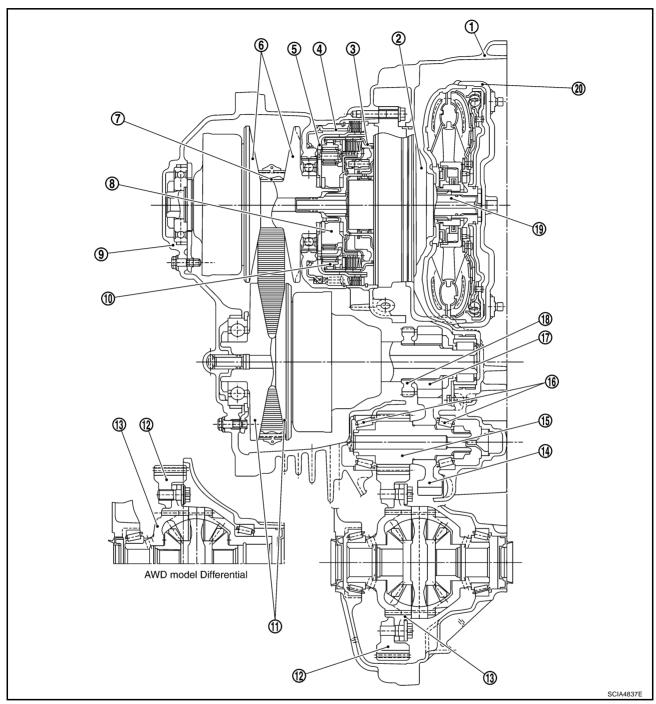

After performing all procedures, ensure that all remaining oil is cleaned from all components.

TCM Function

The function of the TCM is to:

- Receive input signals sent from various switches and sensors.
- Determine required line pressure, shifting point, and lock-up operation.
- Send required output signals to the step motor and the respective solenoids.

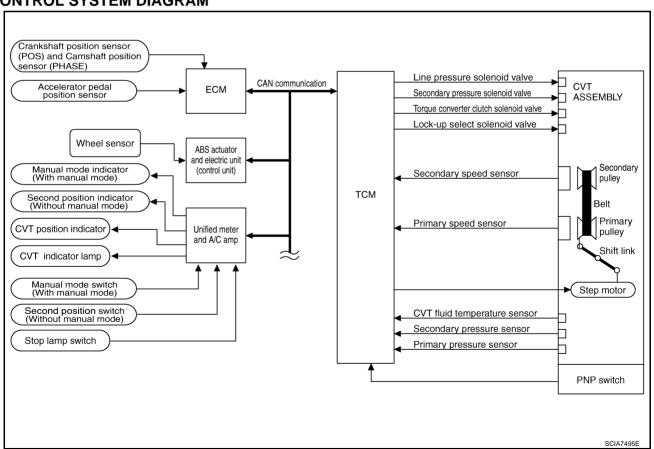

#### **CONTROL SYSTEM OUTLINE**

The CVT senses vehicle operating conditions through various sensors. It always controls the optimum shift position and reduces shifting and lock-up shocks.

# **CVT SYSTEM**

# CAN Communication SYSTEM DESCRIPTION

NCS0012K

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. For details, refer to LAN-32, "CAN Communication Unit".

<sup>\*1:</sup> Input by CAN communications.

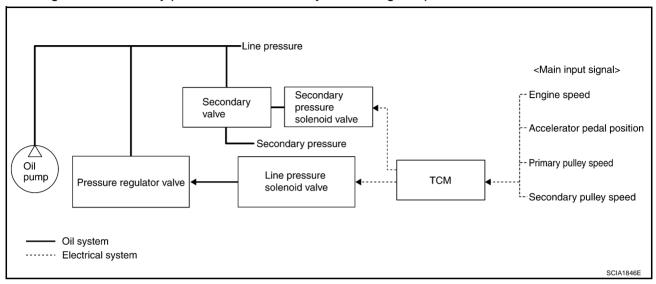

<sup>\*2:</sup> If these input and output signals are different, the TCM triggers the fail-safe function.

<sup>\*3:</sup> Without manual mode.

# **Line Pressure and Secondary Pressure Control**

NCS0012M

- When an input torque signal equivalent to the engine drive force is sent from the ECM to the TCM, the TCM controls the line pressure solenoid valve and secondary pressure solenoid valve.
- This line pressure solenoid controls the pressure regulator valve as the signal pressure and adjusts the
  pressure of the operating oil discharged from the oil pump to the line pressure most appropriate to the
  driving state. Secondary pressure is controlled by decreasing line pressure.

#### NORMAL CONTROL

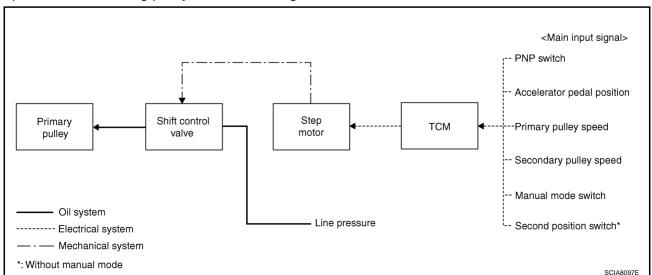

Optimize the line pressure and secondary pressure, depending on driving conditions, on the basis of the throttle position, the engine speed, the primary pulley (input) revolution speed, the secondary pulley (output) revolution speed, the brake signal, the PNP switch signal, the lock-up signal, the voltage, the target gear ratio, the fluid temperature, and the fluid pressure.

#### FEEDBACK CONTROL

When controlling the normal fluid pressure or the selected fluid pressure, the secondary pressure can be set more accurately by using the fluid pressure sensor to detect the secondary pressure and controlling the feedback.

Shift Control

In order to select the gear ratio which can obtain the driving force in accordance with driver's intention and the vehicle condition, TCM monitors the driving conditions, such as the vehicle speed and the throttle position and selects the optimum gear ratio, and determines the gear change steps to the gear ratio. Then send the command to the step motor, and control the flow-in/flow-out of line pressure from the primary pulley to determine the position of the moving-pulley and control the gear ratio.

CVT

Α

В

D

Е

F

G

Н

J

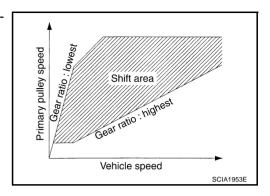

# **CVT SYSTEM**

#### NOTE:

The gear ratio is set for every position separately.

#### "D" POSITION

Shifting over all the ranges of gear ratios from the lowest to the highest.

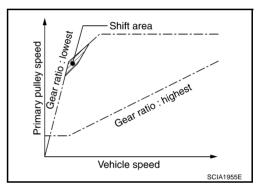

# "S" POSITION (WITHOUT MANUAL MODE)

Use this position for the improved engine braking.

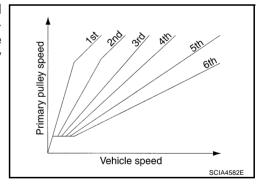

#### "L" POSITION (WITHOUT MANUAL MODE)

By limiting the gear range to the lowest position, the strong driving force and the engine brake can be secured.

#### "M" POSITION

When the selector lever is put in the manual shift gate side, the fixed changing gear line is set. By moving the selector lever to + side or - side, the manual mode switch is changed over, and shift change like M/T becomes possible following the changing gear set line step by step.

# DOWNHILL ENGINE BRAKE CONTROL (AUTO ENGINE BRAKE CONTROL)

When downhill is detected with the accelerator pedal released, the engine brake will be strengthened up by downshifting so as not to accelerate the vehicle more than necessary.

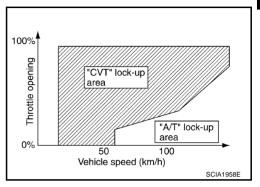

#### **ACCELERATION CONTROL**

According to vehicle speed and a change of accelerator pedal angle, driver's request for acceleration and driving scene are judged. This function assists improvement in acceleration feeling by making the engine speed proportionate to the vehicle speed. And a shift map which can gain a larger driving force is available for compatibility of mileage with driveability.

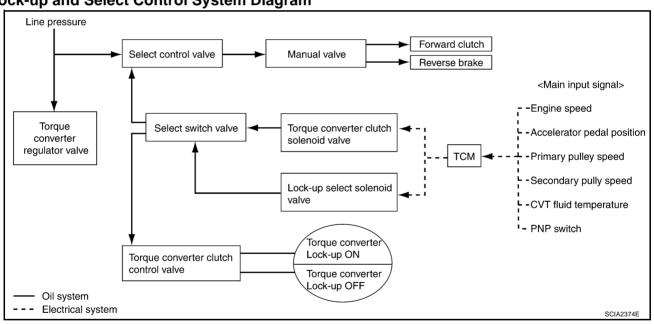

# **Lock-up and Select Control**

CS00120

- The torque converter clutch piston in the torque converter is engaged to eliminate torque converter slip to increase power transmission efficiency.
- The torque converter clutch control valve operation is controlled by the torque converter clutch solenoid valve, which is controlled by a signal from TCM. The torque converter clutch control valve engages or releases the torque converter clutch piston.
- When shifting between "N" ("P") ⇔ "D" ("R"), torque converter clutch solenoid controls engagement power of forward clutch and reverse brake.
- The lock-up applied gear range was expanded by locking up the torque converter at a lower vehicle speed than conventional CVT models.

# TORQUE CONVERTER CLUTCH AND SELECT CONTROL VALVE CONTROL Lock-up and Select Control System Diagram

### Lock-up Released

In the lock-up released state, the torque converter clutch control valve is set into the unlocked state by the torque converter clutch solenoid and the lock-up apply pressure is drained. In this way, the torque converter clutch piston is not coupled.

### **Lock-up Applied**

In the lock-up applied state, the torque converter clutch control valve is set into the locked state by the torque converter clutch solenoid and lock-up apply pressure is generated. In this way, the torque converter clutch piston is pressed and coupled.

#### **Select Control**

When shifting between "N" ("P")⇔"D" ("R"), optimize the operating pressure on the basis of the throttle position, the engine speed, and the secondary pulley (output) revolution speed to lessen the shift shock.

Lock-up select solenoid valve	Controls the select switch valve.	

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

Introduction NCS00120

The CVT system has two self-diagnostic systems.

The first is the emission-related on board diagnostic system (OBD-II) performed by the TCM in combination with the ECM. The malfunction is indicated by the MIL (malfunction indicator lamp) and is stored as a DTC in the ECM memory, and the TCM memory.

The second is the TCM original self-diagnosis performed by the TCM. The malfunction is stored in the TCM memory. The detected items are overlapped with OBD-II self-diagnostic items. For detail, refer to CVT-65, "Display Items List".

# **OBD-II Function for CVT System**

The ECM provides emission-related on board diagnostic (OBD-II) functions for the CVT system. One function is to receive a signal from the TCM used with OBD-related parts of the CVT system. The signal is sent to the ECM when a malfunction occurs in the corresponding OBD-related part. The other function is to indicate a diagnostic result by means of the MIL (malfunction indicator lamp) on the instrument panel. Sensors, switches and solenoid valves are used as sensing elements.

The MIL automatically illuminates in One or Two Trip Detection Logic when a malfunction is sensed in relation to CVT system parts.

### One or Two Trip Detection Logic of OBD-II ONE TRIP DETECTION LOGIC

NCS0012S

If a malfunction is sensed during the first test drive, the MIL will illuminate and the malfunction will be stored in the ECM memory as a DTC. The TCM is not provided with such a memory function.

#### TWO TRIP DETECTION LOGIC

When a malfunction is sensed during the first test drive, it is stored in the ECM memory as a 1st trip DTC (diagnostic trouble code) or 1st trip freeze frame data. At this point, the MIL will not illuminate. — 1st trip If the same malfunction as that experienced during the first test drive is sensed during the second test drive. the MIL will illuminate. — 2nd trip

The "trip" in the "One or Two Trip Detection Logic" means a driving mode in which self-diagnosis is performed during vehicle operation.

# OBD-II Diagnostic Trouble Code (DTC) HOW TO READ DTC AND 1ST TRIP DTC

NCS0012T

DTC and 1st trip DTC can be read by the following methods.

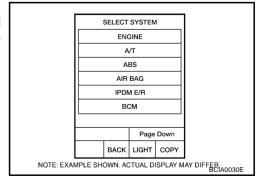

(P) with CONSULT-II or GST (Generic Scan Tool) Examples: P0705, P0720 etc. These DTC are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

- 1st trip DTC No. is the same as DTC No.
- Output of the diagnostic trouble code indicates that the indicated circuit has a malfunction. However, in case of the Mode II and GST, they do not indicate whether the malfunction is still occurring or occurred in the past and returned to normal.

CONSULT-II can identify them as shown below, therefore, CONSULT-II (if available) is recommended.

A sample of CONSULT-II display for DTC and 1st trip DTC is shown on the next page. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode for "ENGINE" with CON-SULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

Α

Н

2006 Murano

If the DTC is being detected currently, the time data will be "0".

		1
SELF-DIAG RES		
DTC RESULTS TIME		
PNP SW/CIRC [P0705]	0	
		SAT015K

If a 1st trip DTC is stored in the ECM, the time data will be "1t".

SELF-DIAG RES	SELF-DIAG RESULTS		
DTC RESULTS	DTC RESULTS TIME		
PNP SW/CIRC [P0705]	1 t		

### Freeze Frame Data and 1st Trip Freeze Frame Data

The ECM has a memory function, which stores the driving condition such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed and vehicle speed at the moment the ECM detects a malfunction.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data, and the data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For details, refer to <a href="EC-112">EC-112</a>, "CONSULT-II Function (ENGINE)".

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data, and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items		
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175	
2		Except the above items (Includes CVT related items)	
3	1st trip freeze frame data		

Both 1st trip freeze frame data and freeze frame data (along with the DTC) are cleared when the ECM memory is erased.

#### **HOW TO ERASE DTC**

The diagnostic trouble code can be erased by CONSULT-II, GST or ECM DIAGNOSTIC TEST MODE as described following.

- If the battery cable is disconnected, the diagnostic trouble code will be lost within 24 hours.
- When you erase the DTC, using CONSULT-II or GST is easier and quicker than switching the mode selector on the ECM.

The following emission-related diagnostic information is cleared from the ECM memory when erasing DTC related to OBD-II. For details, refer to <u>EC-46</u>, "<u>Emission-Related Diagnostic Information</u>".

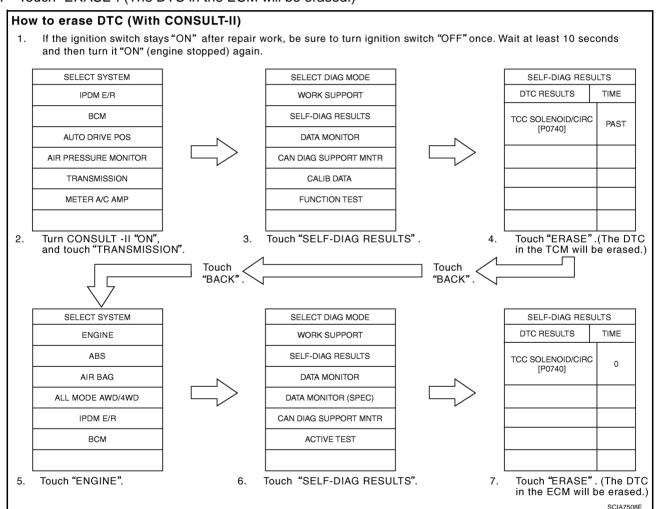

- Diagnostic trouble codes (DTC)
- 1st trip diagnostic trouble codes (1st trip DTC)
- Freeze frame data

Revision: 2006 August CVT-30 2006 Murano

- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

# (A) HOW TO ERASE DTC (WITH CONSULT-II)

- If a DTC is displayed for both ECM and TCM, it is necessary to be erased for both ECM and TCM.
- 1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- 2. Turn CONSULT-II ON and touch "TRANSMISSION".
- 3. Touch "SELF-DIAG RESULTS".
- 4. Touch "ERASE". (The DTC in the TCM will be erased.) Then touch "BACK" twice.
- Touch "ENGINE".
- 6. Touch "SELF-DIAG RESULTS".
- 7. Touch "ERASE". (The DTC in the ECM will be erased.)

# **B** HOW TO ERASE DTC (WITH GST)

- 1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
- 2. Select Mode 4 with GST (Generic Scan Tool). For details, refer to <a href="EC-124">EC-124</a>, "Generic Scan Tool (GST) <a href="Function">Function</a>.

# Malfunction Indicator Lamp (MIL) DESCRIPTION

NCS0012U

The MIL is located on the instrument panel.

- 1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check.
  - If the MIL does not light up, refer to <u>DI-38, "WARNING LAMPS"</u>, or see <u>EC-667, "MIL AND DATA LINK CONNECTOR"</u>.
- 2. When the engine is started, the MIL should go off. If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

### **TROUBLE DIAGNOSIS**

PFP:00004

# **DTC Inspection Priority Chart**

NCS0012V

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

000121

Α

В

CVT

#### NOTE:

Fail-safe

If DTC "U1000 CAN COMM CIRCUIT" is displayed with other DTCs, first perform the trouble diagnosis for "DTC U1000 CAN COMMUNICATION LINE". Refer to CVT-72.

Priority	Detected items (DTC)	
1	U1000 CAN communication line	
2	Except above	

NCS0012W

The TCM has an electrical fail-safe mode. This mode makes it possible to operate even if there is an error in a main electronic control input/output signal circuit.

Е

# **FAIL-SAFE FUNCTION**

If any malfunction occurs in a sensor or solenoid, this function controls the CVT to make driving possible.

F

# **Output Speed Sensor (Secondary Speed Sensor)**

The shift pattern is changed in accordance with throttle position when an unexpected signal is sent from the output speed sensor (secondary speed sensor) to the TCM. The manual mode position and second position is inhibited, and the transaxle is put in "D".

### Input Speed Sensor (Primary Speed Sensor)

The shift pattern is changed in accordance with throttle position and secondary speed (vehicle speed) when an unexpected signal is sent from the input speed sensor (primary speed sensor) to the TCM. The manual mode position and second position is inhibited, and the transaxle is put in "D".

Н

# **PNP Switch**

If an unexpected signal is sent from the PNP switch to the TCM, the transaxle is put in "D".

J

#### **Manual Mode Switch**

If an unexpected signal is sent from the manual mode switch to the TCM, the transaxle is put in "D".

# Κ

### **CVT Fluid Temperature Sensor**

If an unexpected signal is sent from the CVT fluid temperature sensor to the TCM, the gear ratio in use before receiving the unexpected signal is maintained or the gear ratio is controlled to keep engine speed under 5000 rpm.

#### **Transmission Fluid Pressure Sensor A (Secondary Pressure Sensor)**

- If an unexpected signal is sent from the transmission fluid pressure sensor A (secondary pressure sensor)
  to the TCM, the secondary pressure feedback control is stopped and the offset value obtained before the
  non-standard condition occurs is used to control line pressure.
- If transmission fluid pressure sensor A (secondary pressure sensor) error signal is input to TCM, secondary pressure feedback control stops, but line pressure is controlled normally.

# **Pressure Control Solenoid A (Line Pressure Solenoid)**

If an unexpected signal is sent from the solenoid to the TCM, the pressure control solenoid A (line pressure solenoid) is turned OFF to achieve the maximum fluid pressure.

# Pressure Control Solenoid B (Secondary Pressure Solenoid)

If an unexpected signal is sent from the solenoid to the TCM, the pressure control solenoid B (secondary pressure solenoid) is turned OFF to achieve the maximum fluid pressure.

# **Torque Converter Clutch Solenoid**

If an unexpected signal is sent from the solenoid to the TCM, the torque converter clutch solenoid is turned OFF to cancel the lock-up.

#### **Step Motor**

If an unexpected signal is sent from the step motor to the TCM, the step motor coil phases "A" through "D" are all turned OFF to hold the gear ratio used right before the non-standard condition occurred.

#### **CVT Lock-up Select Solenoid**

If an unexpected signal is sent from the solenoid to the TCM, the CVT lock-up select solenoid is turned OFF to cancel the lock-up.

# **TCM Power Supply (Memory Back-up)**

Transaxle assembly is protected by limiting the engine torque when the memory back-up power supply (for controlling) from the battery is not supplied to TCM. Normal statues is restored when turning the ignition switch OFF to ON after the normal power supply.

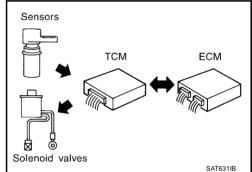

# How to Perform Trouble Diagnosis for Quick and Accurate Repair INTRODUCTION

NCS0012X

The TCM receives a signal from the vehicle speed sensor, PNP switch and provides shift control or lock-up control via CVT solenoid valves.

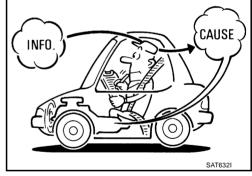

The TCM also communicates with the ECM by means of a signal sent from sensing elements used with the OBD-related parts of the CVT system for malfunction-diagnostic purposes. The TCM is capable of diagnosing malfunctioning parts while the ECM can store malfunctions in its memory.

Input and output signals must always be correct and stable in the operation of the CVT system. The CVT system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.

It is much more difficult to diagnose an error that occurs intermittently rather than continuously. Most intermittent errors are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

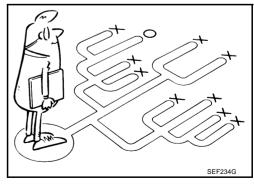

A visual check only may not find the cause of the errors. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the CVT-35, "WORK FLOW".

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such errors, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A "DIAGNOSTIC WORKSHEET" as shown on the example (Refer to CVT-36) should be used.

Start your diagnosis by looking for "conventional" errors first. This will help troubleshoot driveability errors on an electronically controlled engine vehicle.

Also check related Service bulletins.

#### **WORK FLOW**

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate. In general, each customer feels differently about a malfunction. It is important to fully understand the symptoms or conditions for a customer complaint.

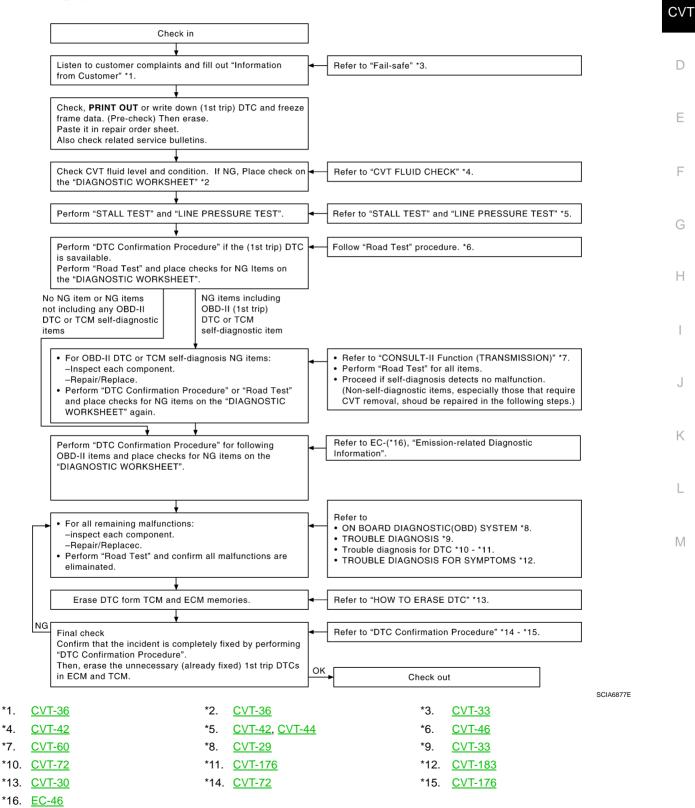

Α

В

Make good use of the two sheets provided, CVT-36, "Information From Customer" and CVT-36, "Diagnostic Worksheet Chart", to perform the best troubleshooting possible.

#### **Work Flow Chart**

# Inspections before Trouble Diagnosis CVT FLUID CHECK

NCS00131

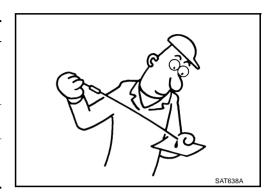

#### Fluid Leakage and Fluid Level Check

Inspect for fluid leakage and check the fluid level. Refer to CVT-15, "Checking CVT Fluid".

#### Fluid Condition Check

Inspect the fluid condition.

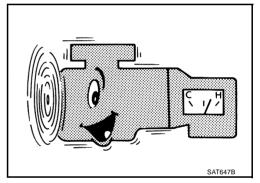

Fluid status	Conceivable cause	Required operation
Varnished (viscous varnish state)	Clutch, brake scorched	Replace the CVT fluid and check the CVT main unit and the vehicle for malfunctions (wire harnesses, cooler pipes, etc.)
Milky white or cloudy	Water in the fluid	Replace the CVT fluid and check for places where water is getting in.
Large amount of metal powder mixed in	Unusual wear of sliding parts within CVT	Replace the CVT fluid and check for improper operation of the CVT.

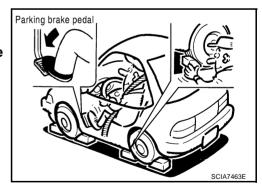

#### **STALL TEST**

#### **Stall Test Procedure**

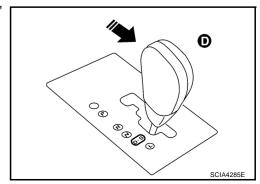

- 1. Inspect the amount of engine oil. Replenish the engine oil if necessary.
- 2. Drive for about 10 minutes to warm up the vehicle so that the CVT fluid temperature is 50 to 80°C (122 to 176°F). Inspect the amount of CVT fluid. Replenish if necessary.

- 3. Securely engage the parking brake so that the tires do not turn.
- 4. Install a tachometer where it can be seen by driver during test.
  - It is good practice to mark the point of specified engine rpm on indicator.

5. Start engine, apply foot brake, and place selector lever in "D" position.

- 6. While holding down the foot brake, gradually press down the accelerator pedal.
- 7. Quickly read off the stall speed, and then quickly remove your foot from the accelerator pedal.

#### **CAUTION:**

Do not hold down the accelerator pedal for more than 5 seconds during this test.

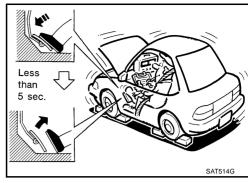

Stall speed: 2,700 - 3,250 rpm

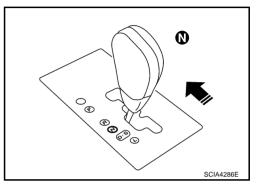

- 8. Move the selector lever to the "N" position.
- 9. Cool down the CVT fluid.

#### **CAUTION:**

Run the engine at idle for at least 1 minute.

10. Repeat steps 6 through 9 with selector lever in "R" position.

### **Judgment Stall Test**

	Selector le	ver position	Expected problem legation
	"D"	"R"	Expected problem location
	Н	0	Forward clutch
	0	H ● Reverse brake	
	L	L	Engine and torque converter one-way clutch
Stall rotation		1 Н	Line pressure low
	Н		Primary pulley
	П	11	Secondary pulley
			Steel belt

- O: Stall speed within standard value position.
- H: Stall speed is higher than standard value.
- L: Stall speed is lower than standard value.

# LINE PRESSURE TEST Line Pressure Test Port

#### **Line Pressure Test Procedure**

- 1. Inspect the amount of engine oil and replenish if necessary.
- 2. Drive the car for about 10 minutes to warm it up so that the CVT fluid reaches in the range of 50 to 80°C (122 to 176°F), then inspect the amount of CVT fluid and replenish if necessary.

#### NOTE:

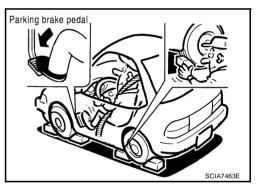

The CVT fluid temperature rises in the range of 50 - 80°C (122 - 176°F) during 10 minutes of driving.

3. After warming up CVT, remove the oil pressure detection plug and install the oil pressure gauge [special service tool: - (OTC3492)].

#### **CAUTION:**

When using the oil pressure gauge, be sure to use the O-ring attached to the oil pressure detection plug.

4. Securely engage the parking brake so that the tires do not turn.

5. Start the engine, and then measure the line pressure at both idle and the stall speed.

#### **CAUTION:**

- Keep the brake pedal pressed all the way down during measurement.
- When measuring the line pressure at the stall speed, refer to <u>CVT-42</u>, "<u>STALL TEST</u>".
- 6. After the measurements are complete, install the oil pressure detection plug and tighten to the specified torque below.

#### **CAUTION:**

- Do not reuse O-ring.
- Apply CVT fluid to O-ring.

Line Pressure						
Engine speed	Line pressure kPa (kg/cm² , psi)					
Liigiile speed	"R", "D" and "L"*1 positions					
At idle	750 (7.65, 108.8)					
At stall	5,700 (58.14, 826.5)* <sup>2</sup>					

<sup>\*1 :</sup> Without manual mode

## **Judgment of Line Pressure Test**

	Judgment	Possible cause
		Possible causes include malfunctions in the pressure supply system and low oil pump output. For example
	Low for all positions	Oil pump wear
	("P", "R", "N", "D", "L"* <sup>1</sup> )	Pressure regulator valve or plug sticking or spring fatigue
		<ul> <li>Oil strainer ⇒ oil pump ⇒ pressure regulator valve passage oil leak</li> </ul>
		Engine idle speed too low
Idle speed	Only low for a spe- cific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.
idie speed	High	Possible causes include a sensor malfunction or malfunction in the line pressure adjustment function.  For example
		Accelerator pedal position signal malfunction
		CVT fluid temperature sensor malfunction
		<ul> <li>Pressure control solenoid A (line pressure solenoid) malfunction (sticking in OFF state, filter clog, cut line)</li> </ul>
		Pressure regulator valve or plug sticking
	Line procesure de ce	Possible causes include a sensor malfunction or malfunction in the pressure adjustment function For example
	Line pressure does not rise higher than	Accelerator pedal position signal malfunction
	the line pressure for	TCM malfunction
	idle.	Pressure control solenoid A (line pressure solenoid) malfunction (shorting, sticking in ON state)
		Pressure regulator valve or plug sticking
Stall speed	The pressure rises, but does not enter	Possible causes include malfunctions in the pressure supply system and malfunction in the pressure adjustment function.  For example
	the standard posi-	Accelerator pedal position signal malfunction
	tion.	Pressure control solenoid A (line pressure solenoid) malfunction (sticking, filter clog)
		Pressure regulator valve or plug sticking
	Only low for a spe- cific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.

<sup>\*1 :</sup> Without manual mode.

Road Test
DESCRIPTION

 The purpose of the test is to determine overall performance of CVT and analyze causes of problems.

- The road test consists of the following three parts:
- 1. "Check Before Engine Is Started" CVT-48.
- 2. "Check at Idle" CVT-48.
- 3. "Cruise Test" CVT-52.

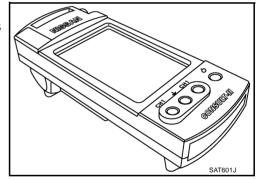

- Before road test, familiarize yourself with all test procedures and items to check.
- Perform tests on all items until specified symptom is found.
   Troubleshoot items which check out No Good after road test.

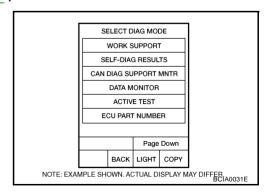

#### **CONSULT-II SETTING PROCEDURE**

- Using CONSULT-II, perform a cruise test and record the result.
- Print the result and ensure that shifts and lock-ups take place as per Shift Schedule.

- Set CONSULT-II. Refer to GI-38, "CONSULT-II Start Procedure".
- 2. Touch "DATA MONITOR" on "SELECT DIAG MODE" screen.

Touch "MAIN SIGNALS" to set recording condition. DATA MONITOR Α See "Numerical Display", "Barchart Display" or "Line Graph Dis-SELECT MONITOR ITEM play". ECU INPUT SIGNALS MAIN SIGNALS Touch "START". 5. SELECTION FROM MENU В **CVT** SETTING Numerical START MODE BACK LIGHT COPY SCIA5493E D When performing cruise test. Refer to CVT-52, "Cruise Test". ## Check before Engine Is Started

## 1. CHECK CVT INDICATOR LAMP

- 1. Park vehicle on flat surface.
- 2. Move selector lever to "P" position.
- Turn ignition switch OFF. Wait at least 5 seconds.
- Turn ignition switch ON. (Do not start engine.)

Does CVT indicator lamp come on for about 2 seconds?

YES >> 1. Turn ignition switch OFF.

- 2. Perform self-diagnosis and note NG items. Refer to CVT-65, "SELF-DIAGNOSTIC RESULT MODE".
- 3. Go to CVT-48, "Check at Idle".

140

160

CVT indicator lamp

## 1. CHECK STARTING THE ENGINE

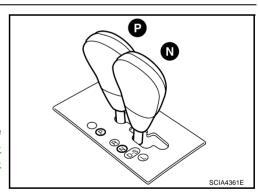

- 1. Park vehicle on flat surface.
- 2. Move selector lever to "P" or "N" position.
- 3. Turn ignition switch OFF.
- 4. Turn ignition switch to "START" position.

#### Is engine started?

YES >> GO TO 2.

NO

>> Stop "Road Test". Mark the box "Engine Cannot Be Started In "P" and "N" position" on the CVT-36, "DIAG-NOSTIC WORKSHEET" . Go to CVT-189, "Engine Cannot Be Started in "P" and "N" Position"

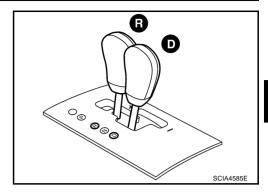

NCS00133

SCIA7497

# 2. CHECK STARTING THE ENGINE

#### With manual mode

- 1. Turn ignition switch ON.
- 2. Move selector lever to "D", "M" or "R" position.
- 3. Turn ignition switch to "START" position.

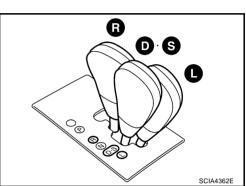

#### Without manual mode

- 1. Turn ignition switch ON.
- 2. Move selector lever to "D", "S", "L" or "R" position.
- 3. Turn ignition switch to "START" position.

#### Is engine started?

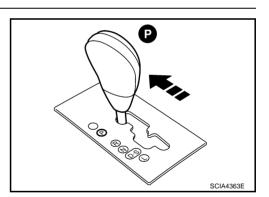

YES >> Stop "Road Test". Mark the box "Engine Cannot Be Started In "P" and "N" position" on the <u>CVT-36</u>, "<u>DIAG-NOSTIC WORKSHEET</u>". Go to <u>CVT-189</u>, "<u>Engine Cannot Be Started in "P" and "N" Position"</u>.

NO >> GO TO 3.

# 3. CHECK "P" POSITION FUNCTION

- 1. Move selector lever to "P" position.
- 2. Turn ignition switch OFF.
- 3. Release parking brake.

- 4. Push vehicle forward or backward.
- 5. Apply parking brake.

Does vehicle move when it is pushed forward or backward?

YES >> Mark the box "In "P" Position, Vehicle Moves Forward or Backward When Pushed" on the <a href="CVT-36">CVT-36</a>, "DIAGNOS-TIC WORKSHEET"</a>. Continue "Road Test".

NO >> GO TO 4.

L

N

IVI

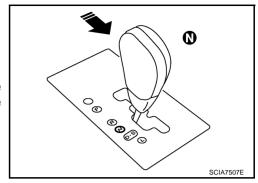

# 4. CHECK "N" POSITION FUNCTION

- 1. Start engine.
- 2. Move selector lever to "N" position.
- 3. Release parking brake.

Does vehicle move forward or backward?

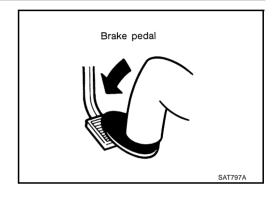

YES >> Mark the box "In "N" Position, Vehicle Moves" on the <u>CVT-36, "DIAGNOSTIC WORKSHEET"</u>. Continue "Road Test".

NO >> GO TO 5.

## 5. CHECK SHIFT SHOCK

Apply foot brake.

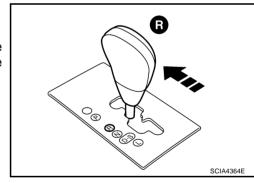

2. Move selector lever to "R" position.

Is there large shock when changing from "N" to "R" position?

YES >> Mark the box "Large shock "N"  $\rightarrow$  "R" Position" on the <u>CVT-36, "DIAGNOSTIC WORKSHEET"</u> . Continue "Road Test".

NO >> GO TO 6.

## 6. CHECK "R" POSITION FUNCTION

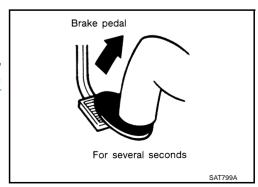

Release foot brake for several seconds.

Does vehicle creep backward when foot brake is released?

YES >> GO TO 7.

NO

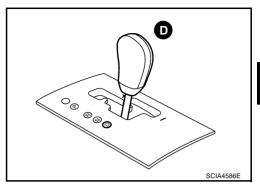

>> Mark the box "Vehicle Does Not Creep Backward in "R" Position" on the <a href="CVT-36">CVT-36</a>, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

# 7. CHECK "D", "S", "L" POSITION FUNCTION

#### With manual mode

Move selector lever to "D" position and check if vehicle creeps forward.

#### Without manual mode

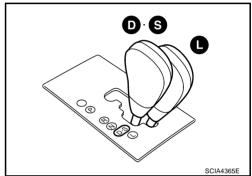

Move selector lever to "D", "S" and "L" positions and check if vehicle creeps forward.

Does vehicle creep forward in all positions?

YES >> Go to CVT-52, "Cruise Test".

NO

>> Mark the box "Vehicle Does Not Creep Forward in "D", "S" or "L" Position" on the <u>CVT-36</u>, "<u>DIAGNOSTIC</u> <u>WORKSHEET</u>" . Go to <u>CVT-196</u>, "<u>Vehicle Does Not Creep Forward in "D", "S" or "L" Position"</u> .

Cruise Test

# 1. CHECK VEHICLE SPEED WHEN SHIFTING GEARS — PART 1

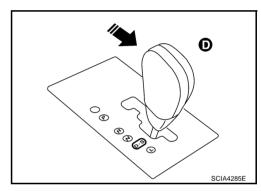

1. Drive vehicle for approximately 10 minutes to warm engine oil and CVT fluid up to operating temperature.

CVT fluid operating temperature: 50 - 80°C (122 - 176°F)

- 2. Park vehicle on flat surface.
- 3. Move selector lever to "P" position.
- 4. Start engine.

5. Move selector lever to "D" position.

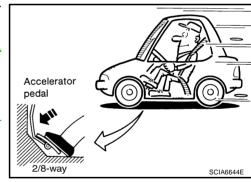

- 6. Accelerate vehicle to 2/8-way throttle depressing accelerator pedal constantly.
  - Read vehicle speed and engine speed. Refer to <a href="CVT-56">CVT-56</a>. <a href="Wehicle Speed When Shifting Gears"</a>.

#### OK or NG

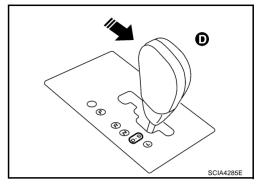

OK >> GO TO 2.

NG >> Mark the box of "CVT Does Not Shift" on the <u>CVT-36</u>, "<u>DIAGNOSTIC WORKSHEET"</u>. Continue "Road Test".

# $\overline{2}$ . CHECK VEHICLE SPEED WHEN SHIFTING GEARS — PART 2

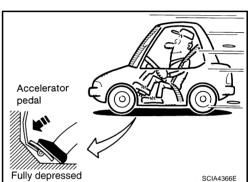

- Park vehicle on flat surface.
- Move selector lever to "D" position.

- 3. Accelerate vehicle to full depression depressing accelerator pedal constantly.
  - Read vehicle speed and engine speed. Refer to CVT-56, "Vehicle Speed When Shifting Gears".

#### OK or NG

- OK >> GO TO 3.(With manual mode)
- OK >> GO TO 7. (Without manual mode)
- NG >> Mark the box of "CVT Does Not Shift" on the CVT-36, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

## 3. CHECK MANUAL MODE FUNCTION

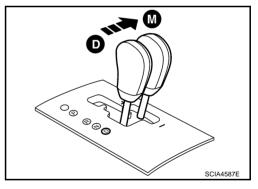

Move to manual mode from "D" position.

Does it switch to manual mode?

YES >> GO TO 4.

NO

>> Mark the box of "Cannot Be Changed to Manual Mode" on the CVT-36, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

## 4. CHECK SHIFT-UP FUNCTION

During manual mode driving, is upshift from M1  $\rightarrow$  M2  $\rightarrow$  M3  $\rightarrow$  M4  $\rightarrow$  M5  $\rightarrow$  M6 performed?

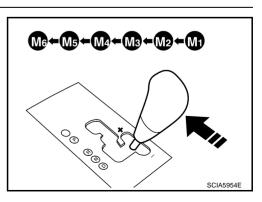

Read the gear position. Refer to CVT-68, "DATA MONITOR MODE".

Is upshifting correctly performed?

YES >> GO TO 5.

NO

>> Mark the box of "CVT Does Not Shift in Manual Mode" on the CVT-36, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

В

CVT

Н

## 5. CHECK SHIFT-DOWN FUNCTION

During manual mode driving, is downshift from M6  $\to$  M5  $\to$  M4  $\to$  M3  $\to$  M2  $\to$  M1 performed?

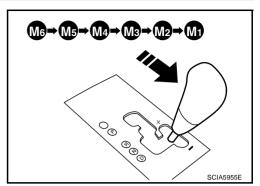

Read the gear position. Refer to <u>CVT-68</u>, "<u>DATA MONITOR</u> <u>MODE"</u>.

Is downshifting correctly performed?

YES >> GO TO 6.

NO

>> Mark the box of "CVT Does Not Shift in Manual Mode" on the <a href="CVT-36">CVT-36</a>, "DIAGNOSTIC WORKSHEET"</a>. Continue "Road Test".

### 6. CHECK ENGINE BRAKE FUNCTION

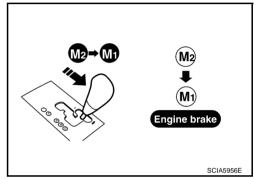

Check engine brake.

Does engine braking effectively reduce speed in M1 position?

YES >> 1. Stop the vehicle.

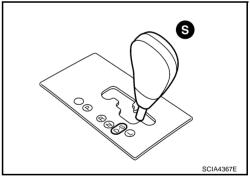

Perform self-diagnosis. Refer to <u>CVT-65</u>, <u>"SELF-DIAGNOSTIC RESULT MODE"</u>.

NO >> Mark the box of "Vehicle Does Not Decelerate by Engine Brake" on the <u>CVT-36</u>, "<u>DIAGNOSTIC WORKSHEET"</u> . then continue trouble diagnosis.

# 7. CHECK "S" POSITION FUNCTION — PART 1

- 1. Park vehicle on flat surface.
- 2. Move selector lever to "S" position.

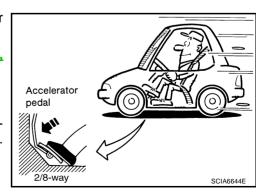

- 3. Accelerate vehicle to 2/8-way throttle depressing accelerator pedal constantly.
  - Read vehicle speed and engine speed. Refer to <a href="CVT-56">CVT-56</a>. <a href="CVT-56">"Vehicle Speed When Shifting Gears"</a>.

#### OK or NG

OK >> GO TO 8.

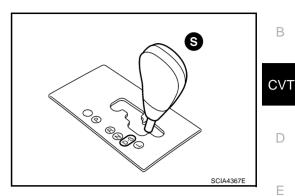

NG

>> Mark the box of "Cannot Be Changed to Second Position" on the <a href="CVT-36">CVT-36</a>, "DIAGNOSTIC WORKSHEET"</a>. Continue "Road Test".

## 8. CHECK "S" POSITION FUNCTION — PART 2

- Park vehicle on flat surface.
- 2. Move selector lever to "S" position.

В

Н

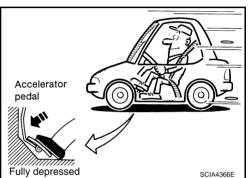

- 3. Accelerate vehicle to full depression depressing accelerator pedal constantly.
  - Read vehicle speed and engine speed. Refer to CVT-56. "Vehicle Speed When Shifting Gears".

#### OK or NG

OK >> GO TO 9.

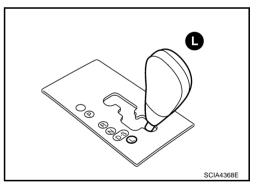

NG

>> Mark the box of "Cannot Be Changed to Second Position" on the CVT-36, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

## 9. CHECK "L" POSITION FUNCTION — PART 1

- Park vehicle on flat surface.
- 2. Move selector lever to "L" position.

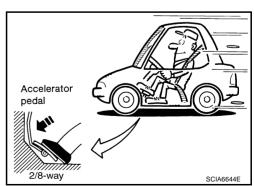

- 3. Accelerate vehicle to 2/8-way throttle depressing accelerator pedal constantly.
  - Read vehicle speed and engine speed. Refer to CVT-56, "Vehicle Speed When Shifting Gears"

### OK or NG

OK >> GO TO 10.

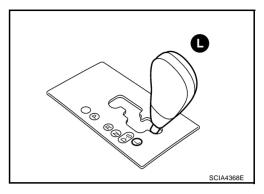

NG

>> Mark the box of "Cannot Be Changed to "L" Position " on the CVT-36, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

# 10. CHECK "L" POSITION FUNCTION — PART 2

- 1. Park vehicle on flat surface.
- 2. Move selector lever to "L" position.

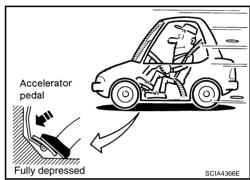

- 3. Accelerate vehicle to full depression depressing accelerator pedal constantly.
  - Read vehicle speed and engine speed. Refer to <a href="CVT-56">CVT-56</a>, <a href="Wehicle Speed When Shifting Gears"</a>.

#### OK or NG

OK >> GO TO 11.

NG

>> Mark the box of "Cannot Be Changed to "L" Position " on the <u>CVT-36</u>, "<u>DIAGNOSTIC WORKSHEET"</u>. Continue "Road Test".

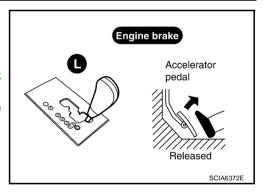

## 11. CHECK ENGINE BRAKE FUNCTION

Check engine brake.

Does engine braking effectively reduce speed in "L" position?

YES >> 1. Stop the vehicle.

- Perform self-diagnosis. Refer to <u>CVT-65</u>, <u>"SELF-DIAGNOSTIC RESULT MODE"</u>.
- NO >> Mark the box of "Vehicle Does Not Decelerate by Engine Brake" on the <u>CVT-36</u>, "<u>DIAGNOSTIC WORKSHEET</u>" . then continue trouble diagnosis.

# **Vehicle Speed When Shifting Gears**

NCS00136

Numerical value data are reference values.

Engine type	Throttle position	Shift pattorn	Engine speed (rpm)		
Engine type	Throttle position	Shift pattern —	At 40 km/h (25 MPH)	At 60 km/h (37 MPH)	
	8/8	"D" position Second position* "L" position*	2,800 - 4,300	3,900 - 5,300	
VQ35DE		"D" position	1,200 - 2,000	1,300 - 2,100

# **CONSULT-II Function (TRANSMISSION)**

NCS00138

CONSULT-II can display each diagnostic item using the diagnostic test modes shown below.

#### **FUNCTION**

Diagnostic test mode	Function	Reference page
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-II.	<u>CVT-63</u>
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.	<u>CVT-65</u>
Data monitor	Input/Output data in the TCM can be read.	<u>CVT-68</u>
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.	<u>CVT-70</u>
CALIB data	Characteristic information for TCM and CVT assembly can be read. Do not use, but displayed.	_
Function test	Performed by CONSULT-II instead of a technician to determine whether each system is "OK" or "NG".	_
ECU part number	TCM part number can be read.	<del>_</del>

#### **CONSULT-II REFERENCE VALUE**

Item name	Condition	Display value (Approx.)
VSP SENSOR	During driving	Approximately matches the speedometer
ESTM VSP SIG	During driving	reading.
PRI SPEED SEN	During driving (lock-up ON)	Approximately matches the engine speed.
ENG SPEED SIG	Engine running	Closely matches the tachometer reading.
SEC HYDR SEN	"N" position idle	0.8 - 1.0 V
PRI HYDR SEN	"N" position idle	0.7 - 3.5 V
ATF TEMP SEN	When CVT fluid temperature is 20°C (68°F).	1.8 - 2.0 V
AIF IEWF SEN	When CVT fluid temperature is 80°C (176°F).	0.6 - 1.0 V
VIGN SEN	Ignition switch: ON	Battery voltage
VEHICLE SPEED	During driving	Approximately matches the speedometer reading.
PRI SPEED	During driving (lock-up ON)	Approximately matches the engine speed.
SEC SPEED	During driving	45 X Approximately matches the speed-ometer reading.
ENG SPEED	Engine running	Closely matches the tachometer reading.
GEAR RATIO	During driving	2.37 - 0.43
ACC PEDAL OPEN	Released accelerator pedal - Fully depressed accelerator pedal	0.0/8 - 8.0/8
SEC PRESS	"N" position idle	0.5 - 0.9 MPa
PRI PRESS	"N" position idle	0.3 - 0.9 MPa
STM STEP	During driving	-20 step - 190 step
ISOLT1	Lock-up OFF	0.0 A
ISOLIT	Lock-up ON	0.7 A
ISOLT2	Release your foot from the accelerator pedal.	0.8 A
ISOLIZ	Press the accelerator pedal all the way down.	0.0 A
ISOLT3	Secondary pressure low - Secondary pressure high.	0.8 - 0.0 A
SOLMON1	Lock-up OFF	0.0 A
SOLIVIOIVI	Lock-up ON	0.6 - 0.7 A

Item name	Condition	Display value (Approx.)

#### **CONSULT-II SETTING PROCEDURE**

Refer to GI-38, "CONSULT-II Start Procedure".

#### **WORK SUPPORT MODE**

#### **Display Item List**

Item name	Description
ENGINE BRAKE ADJ.	The engine brake level setting can be canceled.
CONFORM CVTF DETERIORTN	The CVT fluid deterioration level can be checked.

#### CVT

D

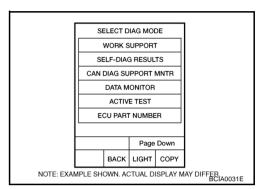

Н

Α

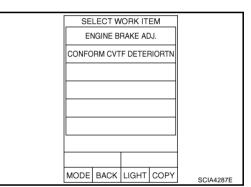

В

#### **Engine Brake Adjustment**

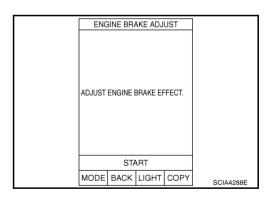

1. Touch "WORK SUPPORT" on "SELECT DIAG MODE" screen.

Touch "ENGINE BRAKE ADJ".

3. Touch "START".

4. Set "ENGINE BRAKE LEVEL" by touching "UP" or "DOWN".

"ENGINE BRAKE LEVEL"

0: Initial set value (Engine brake level control is activated)

OFF: Engine brake level control is deactivated.

- 5. Turn ignition switch OFF, wait at least 5 seconds and then turn ignition switch ON.
- 6. Engine brake level set is completed.

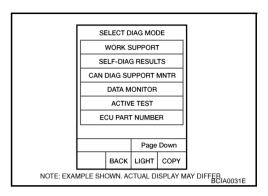

r				1
	ENGI	NE BRAKE		
	Al	DJ. MONITO	R	
	ENGINE BR	AKE LEVEL		
	UP	DOWN		CATOOAI
				SAT934J

#### **CAUTION:**

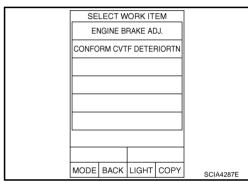

Mode of "+1" "0" "-1" "-2" "OFF" can be selected by pressing the "UP" "DOWN" on CONSULT-II screen. However, do not select mode other than "0" and "OFF". If the "+1" or "-1" or "-2" is selected, that might cause the irregular driveability.

#### **Check CVT Fluid Deterioration Date**

1. Touch "WORK SUPPORT" on "SELECT DIAG MODE" screen.

2. Touch "CONFORM CVTF DETERIORTN".

3. Check "CVTF DETERIORATION DATE".

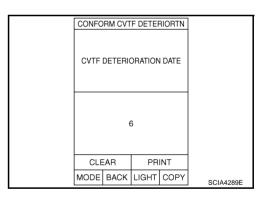

"CVTF DETERIORATION DATE"

More than 210000:

It is necessary to change CVT fluid.

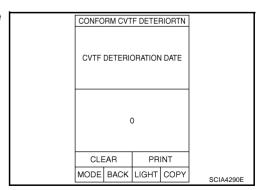

Less than 210000:

It is not necessary to change CVT fluid.

#### **CAUTION:**

Touch "CLEAR" after changing CVT fluid, and then erase "CVTF DETERIORATION DATE".

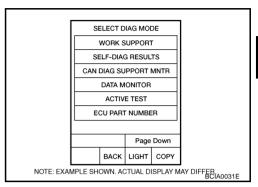

#### **SELF-DIAGNOSTIC RESULT MODE**

After performing self-diagnosis, place check marks for results on the CVT-36, "DIAGNOSTIC WORKSHEET". Reference pages are provided following the items.

#### **Operation Procedure**

1. Touch "SELF-DIAG RESULTS" on "SELECT DIAG MODE" screen.

Display shows malfunction experienced since the last erasing operation.

#### **DTC U1000 CAN COMMUNICATION LINE**

#### **DTC U1000 CAN COMMUNICATION LINE**

PFP:23710

**Description**NCS0013A

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent malfunction detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

## On Board Diagnosis Logic

NCS0013B

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "U1000 CAN COMM CIRCUIT" with CONSULT-II is detected when TCM cannot communicate to other control units.

Possible Cause

Harness or connectors (CAN communication line is open or shorted.)

#### **DTC Confirmation Procedure**

NCS0013D

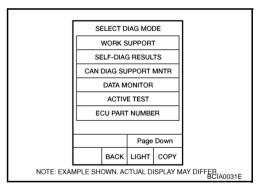

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- Turn ignition switch ON. (Do not start engine.)
- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and wait for at least 6 seconds.
- 4. If DTC is detected, go to CVT-74, "Diagnostic Procedure".

## **WITH GST**

Follow the procedure "WITH CONSULT-II".

### **DTC U1000 CAN COMMUNICATION LINE**

TCM terminal data are reference values, measured between each terminal and ground.

Terminal	Wire color	Item	Condition	Data (Approx.)
5	L	CAN-H	_	_
6	Υ	CAN-L	<del>-</del>	_

## **Diagnostic Procedure**

NCS0013F

## 1. CHECK CAN COMMUNICATION CIRCUIT

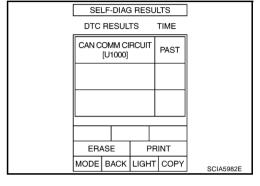

## (II) With CONSULT-II

- 1. Turn ignition switch ON and start engine.
- 2. Select "SELF-DIAG RESULTS" mode for "TRANSMISSION" with CONSULT-II.

Is any malfunction of the "U1000 CAN COMM CIRCUIT" indicated?

YES >> Print out CONSULT-II screen, go to LAN section. Refer to LAN-3, "Precautions When Using CONSULT-II".

NO >> INSPECTION END

#### **DTC P0615 START SIGNAL CIRCUIT**

PFP:25230

**Description** 

NCS0013G

Α

В

CVT

- TCM controls starter relay in IPDM E/R.
- TCM switches starter relay ON at "P" or "N" position and allows to crank engine.
- Then it prohibits cranking other than at "P" or "N" position.

#### **CONSULT-II Reference Value**

NCS0013H

Remarks: Specification data are reference values

Item name	Condition	Display value
STRTR RLY OUT	Selector lever in "P" and "N" positions	ON
STRTR REL OUT	Selector lever in other positions	OFF
STRTR RLY MON	Selector lever in "P" and "N" positions	ON
SININ NLI WON	Selector lever in other positions	OFF

## **On Board Diagnosis Logic**

NCS0013I

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0615 STARTER RELAY/CIRC" with CONSULT-II is detected when starter relay switched ON other than at "P" or "N" position. (Or when switched OFF at "P" or "N" position).

**Possible Cause** 

NCS0013J

- Harness or connectors (Starter relay and TCM circuit is open or shorted.)
- Starter relav

#### **DTC Confirmation Procedure**

NCS0013K

#### **CAUTION:**

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

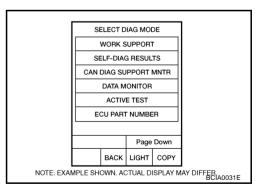

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (A) WITH CONSULT-II

- Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 3. Start engine.

Revision: 2006 August

- Drive vehicle for at least 2 consecutive seconds.
- If DTC is detected, go to CVT-77, "Diagnostic Procedure".

Starter relay	24 - Ground		Selector lever in "N" and "P" positions	Battery voltage
		(Lon)	Selector lever in other positions	0 V

#### OK or NG

OK >> GO TO 3. NG >> GO TO 2.

## 2. DETECT MALFUNCTIONING ITEM

#### Check the following:

- Starter relay. Refer to PG-67, "STANDARDIZED RELAY".
- Open or short-circuit in the harness between TCM and the starter relay. Refer to <u>CVT-76</u>, "Wiring <u>Diagram CVT STSIG"</u>.
- Ground circuit for the starter relay. Refer to SC-10, "Wiring Diagram START —".

#### OK or NG

OK >> GO TO 3.

NG >> Repair or replace damaged parts.

Revision: 2006 August CVT-77 2006 Murano

# 3. CHECK DTC

Perform "DTC Confirmation Procedure". Refer to CVT-75, "DTC Confirmation Procedure" .

#### OK or NG

OK >> INSPECTION END

NG >> GO TO 4.

## 4. CHECK TCM

- 1. Check TCM input/output signals. Refer to CVT-57, "TCM Input/Output Signal Reference Values" .
- 2. If NG, re-check TCM pin terminals for damage or loose connection with harness connector.

#### OK or NG

OK >> INSPECTION END

NG >> Repair or replace damaged parts.

#### DTC P0703 STOP LAMP SWITCH CIRCUIT

#### DTC P0703 STOP LAMP SWITCH CIRCUIT

PFP:25320

**Description** 

NCS0013N

ON, OFF status of the stop lamp switch is sent via the CAN communication from the unified meter and A/C amp to TCM using the signal.

#### **CONSULT-II Reference Value**

NCS00130

Remarks: Specification data are reference values.

Item name	Condition	Display value
BRAKE SW	Depressed brake pedal	ON
DIVAILE OW	Released brake pedal	OFF

## On Board Diagnosis Logic

NCS0013P

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0703 BRAKE SW/CIRC" with CONSULT-II is detected when the stop lamp switch does not switch to ON and OFF.
- The stop lamp switch does not switch to ON, OFF.

Possible Cause

NCS0013Q

- Harness or connectors
   (Stop lamp switch, and unified meter and A/C amp circuit are open or shorted.)
   (CAN communication line is open or shorted.)
- Stop lamp switch

#### **DTC Confirmation Procedure**

NCS0013R

#### **CAUTION:**

Always drive vehicle at a safe speed.

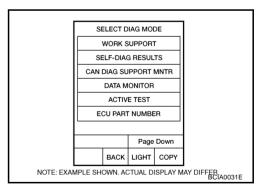

#### NOTE

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.

#### DTC P0703 STOP LAMP SWITCH CIRCUIT

## **Diagnostic Procedure**

NCS0013S

### 1. CHECK CAN COMMUNICATION LINE

Perform the self-diagnosis check. Refer to <u>CVT-65</u>, <u>"SELF-DIAGNOSTIC RESULT MODE"</u>. Is any malfunction of the "U1000 CAN COMM CIRCUIT" indicated?

YES >> Check CAN communication line. Refer to <a href="CVT-72">CVT-72</a>, "DTC U1000 CAN COMMUNICATION LINE" .

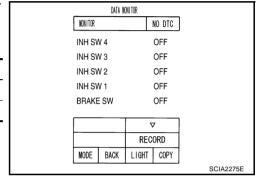

NO >> GO TO 2.

## 2. CHECK STOP LAMP SWITCH CIRCUIT

#### (II) With CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- Select "ECU INPUT SIGNALS" in "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Read out ON/OFF switching action of the "BRAKE SW".

Item name	Condition	Display value
BRAKE SW	Depressed brake pedal	ON
DIVARL OW	Released brake pedal	OFF

#### OK or NG

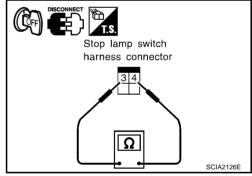

OK >> INSPECTION END

NG >> GO TO 3.

## 3. check stop lamp switch

Check continuity between stop lamp switch harness connector E116 terminals 3 and 4. Refer to <a href="CVT-183">CVT-183</a>, "Wiring Diagram — CVT — <a href="NONDTC">NONDTC"</a>.

Condition	Continuity
When brake pedal is depressed	Yes
When brake pedal is released	No

Check stop lamp switch after adjusting brake pedal — refer to BR-6, "BRAKE PEDAL".

#### OK or NG

OK

>> Check the following. If NG, repair or replace damaged parts.

- Harness for short or open between battery and stop lamp switch.
- Harness for short or open between stop lamp switch and unified meter and A/C amp.

NG >> Repair or replace the stop lamp switch.

#### DTC P0705 PARK/NEUTRAL POSITION SWITCH

PFP:32006

**Description** 

NCS0013T

- The PNP switch includes 4 transmission position switches.
- TCM judges the selector lever position by the PNP switch signal.

Shift position	PNP switch 1	PNP switch 2	PNP switch 3	PNP switch 4	PNP switch 3 (monitor)
Р	OFF	OFF	OFF	OFF	OFF
R	ON	OFF	OFF	ON	OFF
N	ON	ON	OFF	OFF	OFF
D·S*	ON	ON	ON	ON	ON
L*	OFF	ON	ON	OFF	ON

<sup>\*:</sup> Without manual mode

#### **CONSULT-II Reference Value**

NCS0013U

Remarks: Specification data are reference values.

Item name	Condition	Display value
INH SW3M	Selector lever in "D", "S"* and "L"* positions	ON
IIVI I SVVSIVI	Selector lever in "P", "R" and "N" positions	OFF
INH SW4	Selector lever in "R", "D" and "S"* positions	ON
INFI SW4	Selector lever in "P", "N" and "L"* positions	OFF

INH SW1	Selector lever in "R", "N", "D" and "S"* positions	ON
INITOVI	Selector lever in "P" and "L"* positions	OFF

<sup>\*:</sup> Without manual mode

## On Board Diagnosis Logic

NCS0013V

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0705 PNP SW/CIRC" with CONSULT-II is detected under the following conditions.
- When TCM does not receive the correct voltage signal from the PNP switches 1, 2, 3 and 4 based on the gear position.
- When the signal from monitor terminal of PNP switch 3 is different from PNP switch 3.

#### Possible Cause

NCS0013W

M

- Harness or connectors (PNP switches 1, 2, 3, 4 and TCM circuit is open or shorted.)
- PNP switches 1, 2, 3, 4
- PNP switch 3 monitor terminal is open or shorted

#### **DTC Confirmation Procedure**

NCS0013X

#### **CAUTION:**

Always drive vehicle at a safe speed.

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### DTC P0710 CVT FLUID TEMPERATURE SENSOR CIRCUIT

PFP:31020

**Description** 

The CVT fluid temperature sensor detects the CVT fluid temperature and sends a signal to the TCM.

#### **CONSULT-II Reference Value**

NCS00142

Remarks: Specification data are reference values.

Item name	Condition	Display value (Approx.)
ATF TEMP SEN	When CVT fluid temperature is 20°C (68°F).	1.8 - 2.0 V
AIF TEMP SEN	When CVT fluid temperature is 80°C (176°F).	0.6 - 1.0 V

## On Board Diagnosis Logic

NCS00143

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0710 ATF TEMP SEN/CIRC" with CONSULT-II is detected when TCM receives an excessively low or high voltage from the sensor.

Possible Cause

- Harness or connectors (Sensor circuit is open or shorted.)
- CVT fluid temperature sensor

#### **DTC Confirmation Procedure**

NCS00145

#### **CAUTION:**

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### WITH CONSULT-II

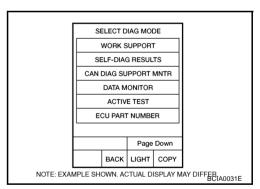

- 1. Turn ignition switch ON. (Do not start engine.)
- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 3. Start engine and maintain the following conditions for at least 10 minutes (Total).

VEHICLE SPEED: 10 km/h (6 MPH) or more

ENG SPEED: 450 rpm more than ACC PEDAL OPEN: More than 1.0/8

**RANGE: "D" position** 

If DTC is detected, go to <u>CVT-90, "Diagnostic Procedure"</u>.

#### **WITH GST**

Follow the procedure "WITH CONSULT-II".

47	V	CVI IIdid terribera-	(( LON))	When CVT fluid temperature is 80°C (176°F).	1.0 V

## **Diagnostic Procedure**

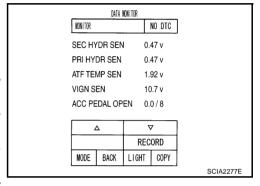

NCS00147

## 1. CHECK CVT FLUID TEMPERATURE SENSOR SIGNAL

#### (P) With CONSULT-II

- 1. Start engine.
- 2. Select "ECU INPUT SIGNALS" in "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 3. Read out the value of "ATF TEMP SEN".

Item name	Condition	Display value (Approx.)
ATF TEMP SEN	When CVT fluid temperature is 20°C (68°F).	1.8 - 2.0 V
ATT TEIWIT GEIN	When CVT fluid temperature is 80°C (176°F).	0.6 - 1.0 V

#### Without CONSULT-II

- Start engine.
- 2. Check voltage between TCM connector terminals.

Name	Connector	Terminal	Temperature °C (°F)	Voltage (Approx.)
CVT fluid tem-	<b>5</b> 404	47 40	20 (68)	2.0 V
perature sen- sor	F104	47 - 42	80 (176)	1.0 V

- 3. Turn ignition switch OFF.
- 4. Disconnect TCM connector.
- 5. Check if there is continuity between connector terminal and ground.

# TCM connector (Vehicle side) 47 42 SCIA2027E

#### OK or NG

OK >> GO TO 5. NG >> GO TO 2.

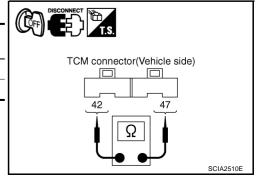

## 2. CHECK CVT FLUID TEMPERATURE SENSOR CIRCUIT

- 1. Turn ignition switch OFF.
- Disconnect the TCM connector.
- 3. Check resistance between TCM connector terminals.

Name	Connector	Terminal	Temperature °C (°F)	Resistance (Approx.)
CVT fluid tem-	CVT fluid tem-	47 - 42	20 (68)	6.5 kΩ
perature sensor	1 104	47 - 42	80 (176)	0.9 kΩ

# OK or NG

OK >> GO TO 5. NG >> GO TO 3.

# $\overline{3}$ . CHECK CVT FLUID TEMPERATURE SENSOR

- 1. Turn ignition switch OFF.
- 2. Disconnect CVT unit harness connector.
- Check resistance between CVT unit harness connector terminals.

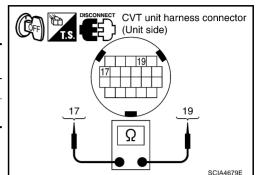

Name	Connector	Terminal	Tempera- ture °C (°F)	Resistance (Approx.)
CVT fluid			20 (68)	6.5 kΩ
tempera- ture sensor	F6	17 - 19	80 (176)	0.9 kΩ

4. Reinstall any part removed.

#### OK or NG

>> GO TO 4. OK

NG >> Replace the transaxle assembly. Refer to CVT-229, "Removal and Installation".

## 4. CHECK HARNESS BETWEEN TCM AND CVT FLUID TEMPERATURE SENSOR

- 1. Turn ignition switch OFF.
- Disconnect the TCM connector and CVT unit harness connector.
- 3. Check continuity between TCM connector terminals and CVT unit harness connector terminals.

Item	Connector	Terminal	Continuity	
TCM connector	F104	42	Yes	
CVT unit harness connector	F6	19	163	
TCM connector	F104	47	Yes	
CVT unit harness connector	F6	17	res	

- 4. If OK, check harness for short to ground and short to power.
- 5. Reinstall any part removed.

#### OK or NG

OK >> GO TO 5.

NG >> Repair or replace damaged parts.

## 5. CHECK DTC

Perform "DTC Confirmation Procedure". Refer to CVT-88, "DTC Confirmation Procedure".

#### OK or NG

>> INSPECTION END OK

NG >> GO TO 6.

### 6. CHECK TCM

Revision: 2006 August

Check TCM input/output signals. Refer to CVT-57, "TCM Input/Output Signal Reference Values".

**CVT-91** 

2. If NG, re-check TCM pin terminals for damage or loose connection with harness connector.

#### OK or NG

OK >> INSPECTION END

NG >> Repair or replace damaged parts.

4. If NG, replace the transaxle assembly. Refer to <a href="CVT-229">CVT-229</a>, <a href="Removal and Installation"</a>.

## DTC P0715 INPUT SPEED SENSOR CIRCUIT (PRI SPEED SENSOR)

PFP:31935

The input speed sensor (primary speed sensor) detects the primary pulley revolution speed and sends a sig-

NCS00149

#### **CONSULT-II Reference Value**

NCS0014A

Remarks: Specification data are reference values

Item name	Condition	Display value
ENG SPEED SIG	Engine running	Closely matches the tachometer reading.
PRI SPEED SEN	During driving (lock-up ON)	Approximately matches the engine speed.

## **On Board Diagnosis Logic**

NCS0014B

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0715 INPUT SPD SEN/CIRC" with CONSULT-II is detected when TCM does not receive the proper signal from the sensor.

Possible Cause NCS0014C

- Harness or connectors (Sensor circuit is open or shorted.)
- Input speed sensor (Primary speed sensor)

#### **DTC Confirmation Procedure**

NCS0014D

#### **CAUTION:**

**Description** 

nal to the TCM.

Always drive vehicle at a safe speed.

NOTE

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 2. Start engine and maintain the following conditions for at least 5 consecutive seconds.

VEHICLE SPEED: 10 km/h (6 MPH) or more

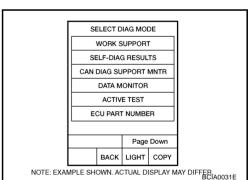

ACC PEDAL OPEN: More than 1.0/8

**RANGE: "D" position** 

ENG SPEED: 450 rpm or more

Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.

3. If DTC is detected, go to CVT-95, "Diagnostic Procedure".

#### **S** WITH GST

Follow the procedure "WITH CONSULT-II".

## DTC P0720 VEHICLE SPEED SENSOR CVT (SECONDARY SPEED SENSOR)

PFP:31935

**Description**NCS0014G

The vehicle speed sensor CVT [output speed sensor (secondary speed sensor)] detects the revolution of the CVT output shaft and emits a pulse signal. The pulse signal is sent to the TCM, which converts it into vehicle speed.

#### **CONSULT-II Reference Value**

NCS0014H

Remarks: Specification data are reference values

Item name	Condition	Display value
VSP SENSOR	During driving	Approximately matches the speedometer reading.

## **On Board Diagnosis Logic**

NCS0014

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0720 VEH SPD SEN/CIR AT" with CONSULT-II is detected TCM does not receive the proper signal from the sensor.

Possible Cause NCS0014J

- Harness or connectors (Sensor circuit is open or shorted.)
- Output speed sensor (Secondary speed sensor)

#### **DTC Confirmation Procedure**

NCS0014K

#### **CAUTION:**

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

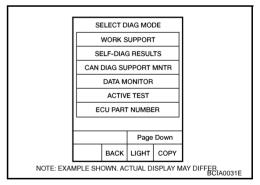

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 2. Start engine and maintain the following conditions for at least 12 consecutive seconds.

ACC PEDAL OPEN: More than 1.0/8

**RANGE: "D" position** 

Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.

3. If DTC is detected, go to CVT-100, "Diagnostic Procedure".

#### **WITH GST**

Follow the procedure "WITH CONSULT-II".

#### **DTC P0730 BELT DAMAGE**

#### **DTC P0730 BELT DAMAGE**

PFP:31935

**Description**NCS00147

TCM selects the gear ratio using the engine load (throttle position), the primary pulley revolution speed, and the secondary pulley revolution speed as input signal. Then it changes the operating pressure of the primary pulley and the secondary pulley and changes the groove width of the pulley.

#### CONSULT-II Reference Value

NCS0014U

Remarks: Specification data are reference values.

Item name	Condition	Display value (Approx.)
GEAR RATIO	During driving	2.37 - 0.43

## On Board Diagnosis Logic

NCS0014V

- This is not an OBD-II self-diagnostic item.
- TCM calculates the actual gear ratio with input speed sensor (primary speed sensor) and output speed sensor (secondary speed sensor).
- Diagnostic trouble code "P0730 BELT DAMG" with CONSULT-II is detected, when TCM receives an unexpected gear ratio signal.

Possible Cause NCS0014W

Transaxle assembly

#### **DTC Confirmation Procedure**

NCS0014X

#### **CAUTION:**

Always drive vehicle at a safe speed.

#### NOTE

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Make sure that output voltage of CVT fluid temperature sensor is within the range below.

**ATF TEMP SEN: 1.0 - 2.0 V** 

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and maintain the following conditions for at least 30 consecutive seconds.

TEST START FROM 0 km/h (0 MPH)

CONSTANT ACCELERATION: Keep 30 sec or more

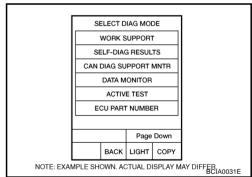

VEHICLE SPEED: 10 km/h (6 MPH) or more

ACC PEDAL OPEN: More than 1.0/8

RANGE: "D" position

#### DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

#### DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

PFP:31940

#### **Description**

NCS00147

- The torque converter clutch solenoid valve is activated by the TCM in response to signals sent from the vehicle speed and accelerator pedal position sensors. Lock-up piston operation will then be controlled.
- Lock-up operation, however, is prohibited when CVT fluid temperature is too low.
- When the accelerator pedal is depressed (less than 2.0/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.

#### **CONSULT-II Reference Value**

NCS00150

Remarks: Specification data are reference values.

Item name	Condition	Display value (Approx.)
ISOLT1	Lock-up OFF	0.0 A
	Lock-up ON	0.7 A

## On Board Diagnosis Logic

NCS00151

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0740 TCC SOLENOID/CIRC" with CONSULT-II is detected under the following conditions.
- TCM detects an improper voltage drop when it tries to operate the solenoid valve.

Possible Cause

- Torque converter clutch solenoid valve
- Harness or connectors (Solenoid circuit is open or shorted.)

#### **DTC Confirmation Procedure**

NCS00153

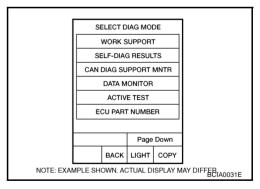

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II and wait at least 10 consecutive seconds.
- 3. If DTC is detected, go to CVT-110, "Diagnostic Procedure".

## **WITH GST**

Follow the procedure "WITH CONSULT-II".

# DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

## DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

PFP:31940

Description

NCS00157

This malfunction is detected when the torque converter clutch does not lock-up as instructed by the TCM. This is not only caused by electrical malfunction (circuits open or shorted), but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

#### **CONSULT-II Reference Value**

NCS00158

Remarks: Specification data are reference values

Item name	Condition	Display value
ENG SPEED SIG	Engine running	Closely matches the tachometer reading.
PRI SPEED SEN	During driving (lock-up ON)	Approximately matches the engine speed.

# **On Board Diagnosis Logic**

NCS00159

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0744 A/T TCC S/V FNCTN" with CONSULT-II is detected under the following conditions.
- When CVT cannot perform lock-up even if electrical circuit is good.
- When TCM compares difference value with slip revolution and detects an irregularity.

Possible Cause

NCS0015A

- Torque converter clutch solenoid valve
- Hydraulic control circuit

## **DTC Confirmation Procedure**

NCS0015B

#### **CAUTION:**

Always drive vehicle at a safe speed.

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

NCS0015Z

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0778 PRS CNT SOL/B CIRC" with CONSULT-II is detected under the following conditions.
- TCM detects an improper voltage drop when it tries to operate the solenoid valve.
- When TCM compares target value with monitor value and detects an irregularity.

Possible Cause

- Harness or connectors (Solenoid circuit is open or shorted.)
- Pressure control solenoid valve B (Secondary pressure solenoid valve)

#### **DTC Confirmation Procedure**

NCS00161

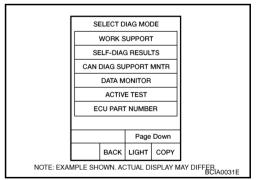

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### (A) WITH CONSULT-II

- 1. Turn ignition switch ON.
- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 3. Start engine and wait at least 5 seconds.
- If DTC is detected, go to <u>CVT-129</u>, "<u>Diagnostic Procedure</u>".

#### WITH GST

Follow the procedure "WITH CONSULT-II".

#### DTC P0826 MANUAL MODE SWITCH CIRCUIT

PFP:34901

Description

Manual mode switch is installed in CVT control device. The manual mode switch sends shift up and shift down switch signals to TCM.

TCM sends the switch signals to unified meter and A/C amp via CAN communication line. Then manual mode switch position is indicated on the CVT position indicator. For inspection, refer to <a href="CVT-182">CVT-182</a>, "Diagnostic Procedure".

#### **CONSULT-II Reference Value**

NCS00166

Item name	Condition	Display value
MMODE	Manual shift gate position (neutral)	ON
MINIODE	Other than the above	OFF
NON MMODE	Manual shift gate position (neutral, +side, -side)	OFF
NON WIWODE	Other than the above	ON
UPLVR	Selector lever: + side	ON
UPLVK	Other than the above	OFF
DOWNI VR	Selector lever: - side	ON
DOWNLYK	Other than the above	OFF

# On Board Diagnosis Logic

NCS00167

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0826 MANUAL MODE SWITCH" with CONSULT-II is detected when TCM monitors Manual mode, Non manual mode, Up or Down switch signal, and then detects irregular with impossible input pattern for 1 second or more.

Possible Cause

Harness or connectors

(These switches circuit is open or shorted.)

(TCM, and unified meter and A/C amp circuit are open or shorted.)

(CAN communication line is open or shorted.)

- Manual mode select switch (Built into CVT control device)
- Manual mode position select switch (Built into CVT control device)

#### **DTC Confirmation Procedure**

NCS00169

#### **CAUTION:**

Always drive vehicle at a safe speed.

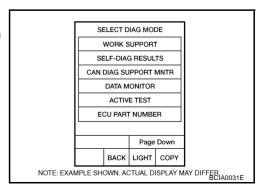

#### NOTE

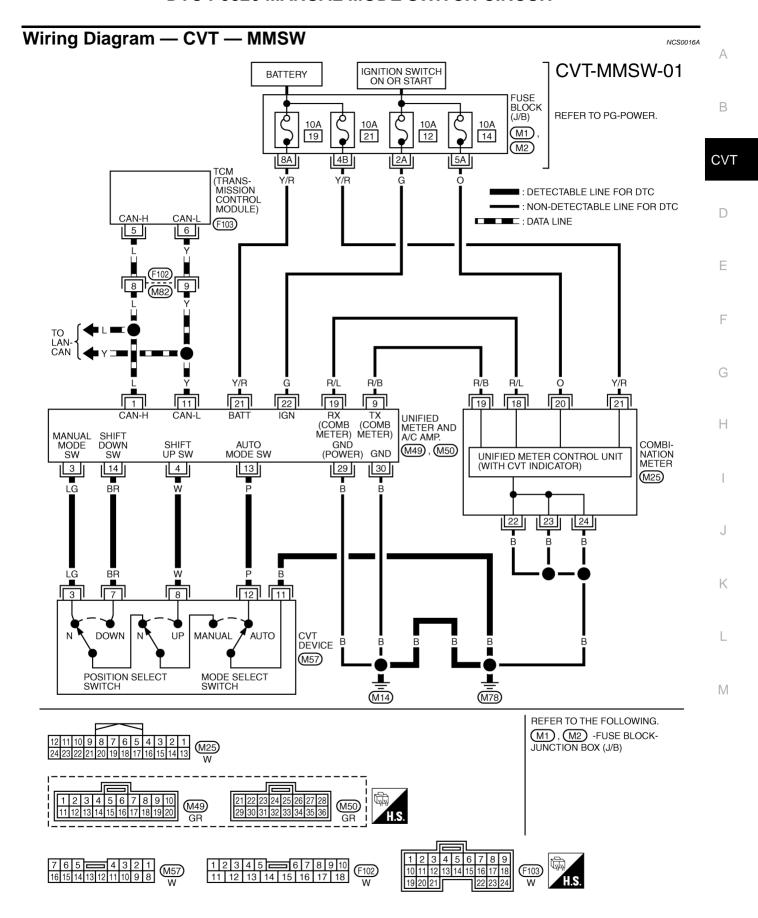

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 3. Start engine.
- 4. Move selector lever to "M" position.
- Drive vehicle for at least 2 consecutive seconds.
- 6. If DTC is detected, go to CVT-134, "Diagnostic Procedure".

#### DTC P0868 SECONDARY PRESSURE DOWN

#### DTC P0868 SECONDARY PRESSURE DOWN

PFP:31941

Description

The pressure control solenoid valve B (secondary pressure solenoid valve) regulates the secondary pressure to suit the driving condition in response to a signal sent from the TCM.

#### **CONSULT-II Reference Value**

NCS0016Y

Remarks: Specification data are reference values.

Item name	Condition	Display value (Approx.)
SEC PRESS	"N" position idle	0.5 - 0.9 MPa

## **On Board Diagnosis Logic**

NCS0016Z

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code "P0868 SEC/PRESS DOWN" with CONSULT-II is detected when secondary fluid pressure is too low compared with the commanded value while driving.

Possible Cause

- Harness or connectors (Solenoid circuit is open or shorted.)
- Pressure control solenoid valve B (Secondary pressure solenoid valve) system
- Transmission fluid pressure sensor A (Secondary pressure sensor)
- Line pressure control system

#### **DTC Confirmation Procedure**

NCS00171

#### **CAUTION:**

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 2. Make sure that output voltage of CVT fluid temperature sensor is within the range below.

ATF TEMP SEN: 1.0 - 2.0 V

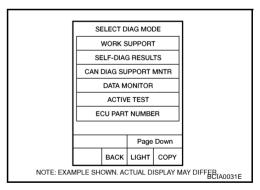

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

Start engine and maintain the following conditions for at least 10 consecutive seconds.

VEHICLE SPEED (accelerate slowly):  $0 \rightarrow 50$  km/h (31 MPH) ACC PEDAL OPEN: 0.5/8 - 1.0/8

RANGE: "D" position

4. If DTC is detected, go to CVT-151, "Diagnostic Procedure".

#### DTC P0868 SECONDARY PRESSURE DOWN

# **Diagnostic Procedure**

# 1. CHECK INPUT SIGNAL

#### (P) With CONSULT-II

- 1. Start engine.
- Select "MAIN SIGNALS" in "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start vehicle and read out the value of "SEC PRESS".

Item name	Condition	Display value (Approx.)
SEC PRESS	"N" position idle	0.5 - 0.9 MPa

#### OK or NG

# DTC P1701 TRANSMISSION CONTROL MODULE (POWER SUPPLY)

PFP:31036

**Description** 

NCS00173

Α

В

CVT

When the power supply to the TCM is cut OFF, for example because the battery is removed, and the self-diagnosis memory function stops, malfunction is detected.

#### NOTE:

Since "P1701 TCM-POWER SUPPLY" will be indicated when replacing TCM, perform diagnosis after erasing "SELF-DIAG RESULTS"

# **On Board Diagnosis Logic**

NCS00174

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code "P1701 TCM-POWER SUPPLY" with CONSULT-II is detected when TCM does not receive the voltage signal from the battery power supply.
- This is not a malfunction message. (Whenever shutting OFF a power supply to the TCM, this message appears on the screen.)

Possible Cause

Harness or connectors

(Battery or ignition switch and TCM circuit is open or shorted.)

#### **DTC Confirmation Procedure**

NCS00176

Н

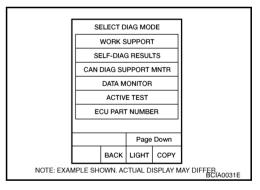

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Wait for at least 2 consecutive seconds.
- If DTC is detected, go to CVT-155, "Diagnostic Procedure".

#### DTC P1723 CVT SPEED SENSOR FUNCTION

#### **DTC P1723 CVT SPEED SENSOR FUNCTION**

PFP:31907

**Description**The vehicle speed sensor CVT [output speed sensor (secondary speed sensor)] detects the revolution of the

idler gear parking pawl lock gear and generates a pulse signal. The pulse signal is sent to the TCM, which converts it into vehicle speed.

The input speed sensor (primary speed sensor) detects the primary pulley revolution speed and sends a signal to the TCM.

## On Board Diagnosis Logic

NCS0017M

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code "P1723 CVT SPD SEN/FNCTN" with CONSULT-II is detected when there is a
  great difference between the vehicle speed signal and the secondary speed sensor signal.

#### **CAUTION:**

One of the "P0720 VEH SPD SEN/CIR AT", the "P0715 INPUT SPD SEN/CIRC" or the "P0725 ENGINE SPEED SIG" is displayed with the DTC at the same time.

Possible Cause

- Harness or connectors (Sensor circuit is open or shorted.)
- Output speed sensor (Secondary speed sensor)
- Input speed sensor (Primary speed sensor)
- Engine speed signal system

#### **DTC Confirmation Procedure**

NCS00170

#### **CAUTION:**

Always drive vehicle at a safe speed.

#### NOTE

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 2. Start engine and maintain the following conditions for at least 5 consecutive seconds.

VEHICLE SPEED SE: 10 km/h (6 MPH) or more

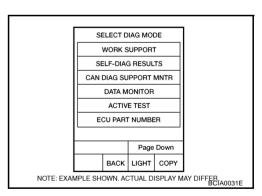

ACC PEDAL OPEN: More than 1.0/8

**RANGE: "D" position** 

ENG SPEED: 450 rpm or more

Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.

If DTC is detected, go to <u>CVT-163</u>, "<u>Diagnostic Procedure</u>".

#### **DTC P1723 CVT SPEED SENSOR FUNCTION**

#### **Diagnostic Procedure** NCS0017F Α CHECK STEP MOTOR FUNCTION Perform the self-diagnosis check, Refer to CVT-65, "SELF-DIAGNOSTIC RESULT MODE". #### DTC P1740 LOCK-UP SELECT SOLENOID VALVE CIRCUIT

PFP:31941

#### **Description**

NCS0017V

 Lock-up select solenoid valve controls lock-up clutch pressure or forward clutch pressure (reverse brake pressure).

When controlling lock-up clutch, the valve is turned OFF. When controlling forward clutch, it is turned ON.

#### **CONSULT-II Reference Value**

VCS0017W

Item name	Condition	Display value
LUSEL SOL OUT	Selector lever in "P" and "N" positions	ON
	Wait at least for 5 seconds with the selector lever in "R", "D" "S"* and "L"* positions	OFF

<sup>\*:</sup> Without manual mode.

## On Board Diagnosis Logic

NCS0017X

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "P1740 LU-SLCT SOL/CIRC" with CONSULT-II is detected under the following conditions.
- When TCM compares target value with monitor value and detects an irregularity.

Possible Cause

- Lock-up select solenoid valve
- Harness or connectors (Solenoid circuit is open or shorted.)

#### **DTC Confirmation Procedure**

NCS00177

#### **CAUTION:**

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

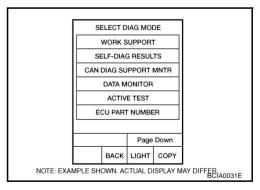

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

#### (P) WITH CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and maintain the following conditions for at least 5 consecutive seconds.

RANGE: "D" position and "N" position (At each time, wait for 5 seconds.)

4. If DTC is detected, go to CVT-168, "Diagnostic Procedure".

#### **WITH GST**

Follow the procedure "WITH CONSULT-II".

 If NG, replace the transaxle assembly. Refer to <u>CVT-229</u>, <u>"Removal and Installation"</u>.

#### **DTC P1745 LINE PRESSURE CONTROL**

#### **DTC P1745 LINE PRESSURE CONTROL**

PFP:31036

**Description** 

NCS00183

Α

В

CVT

D

The pressure control solenoid valve A (line pressure solenoid valve) regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

#### On Board Diagnosis Logic

NCS00184

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code "P1745 L/PRESS CONTROL" with CONSULT-II is detected when TCM detects the unexpected line pressure.

Possible Cause NCS00185

**TCM** 

#### **DTC Confirmation Procedure**

F NCS00186

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

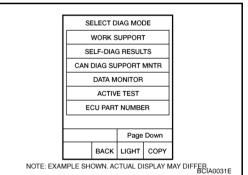

## (A) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Make sure that output voltage of CVT fluid temperature sensor is within the range below.

**ATF TEMP SEN: 1.0 - 2.0 V** 

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

3. If DTC is detected, go to CVT-171, "Diagnostic Procedure".

# **Diagnostic Procedure**

#### 1. CHECK DTC

- 1. Turn ignition switch ON. (Do not start engine.)
- Select "SELF-DIAG RESULTS" mode for "TRANSMISSION" with CONSULT-II. 2
- Erase self-diagnostic results. Refer to CVT-67, "How to Erase Self-diagnostic Results". 3.
- 4. Turn ignition switch OFF, and wait for 5 seconds or more.
- Start engine.
- Confirm self-diagnostic results again. Refer to <a href="CVT-65">CVT-65</a>, "SELF-DIAGNOSTIC RESULT MODE".

Is the "P1745 L/PRESS CONTROL" displayed?

>> Replace TCM. Refer to CVT-9, "Precautions for TCM and CVT Assembly Replacement".

CVT-171

# Large Shock "N" → "R" Position SYMPTOM:

NCS0018Z

There is large shock when shifting from "N" to "R" position.

#### **DIAGNOSTIC PROCEDURE**

### 1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis check. Refer to  $\underline{\text{CVT-}65}, \, "\text{SELF-DIAGNOSTIC RESULT MODE"}$  .

Is any malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system. Refer to <a href="CVT-65">CVT-65</a>, "Display Items List"</a>.

NO >> GO TO 2.

### 2. CHECK ENGINE IDLE SPEED

Check the engine idle speed. Refer to EC-73, "Idle Speed and Ignition Timing Check" .

#### OK or NG

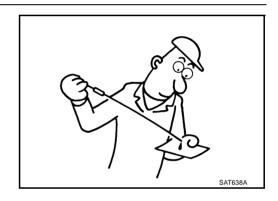

OK >> GO TO 3. NG >> Repair.

### 3. CHECK CVT FLUID LEVEL

Check CVT fluid level. Refer to CVT-15, "Checking CVT Fluid".

OK or NG

OK >> GO TO 4. NG >> Refill CVT fluid.

### 4. CHECK LINE PRESSURE

Check line pressure at idle. Refer to <u>CVT-44, "LINE PRESSURE TEST"</u>.

#### OK or NG

OK >> GO TO 5.

NG >> Check the malfunctioning item. Refer to <u>CVT-45</u>, "Judgment of Line Pressure Test".

### 5. SYMPTOM CHECK

Check again. Refer to CVT-48, "Check at Idle".

#### OK or NG

OK >> INSPECTION END

NG >> GO TO 6.

## 6. снеск тсм

- 1. Check TCM input/output signals. Refer to CVT-57, "TCM Input/Output Signal Reference Values".
- 2. If NG, re-check TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> Replace the transaxle assembly. Refer to CVT-229, "Removal and Installation" .
- NG >> Repair or replace damaged parts.

#### **CONTROL CABLE COMPONENTS**

Refer to the figure below for control cable removal and installation procedure.

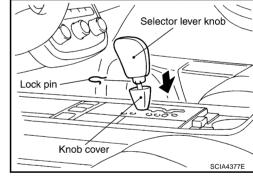

- 1. Selector lever knob
- 4. Bracket
- 7. Transaxle assembly
- 2. Control device assembly
- 5. Control cable

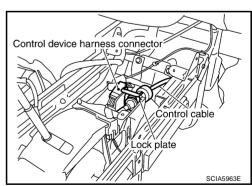

- 3. Lock plate
- 6. Lock plate

#### **REMOVAL**

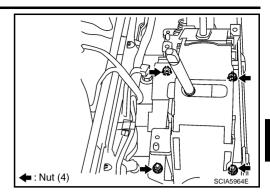

- 1. Remove knob cover below selector lever downward.
- 2. Pull lock pin out of selector lever knob.
- 3. Remove selector lever knob.
- 4. Remove A/T console finisher.
  - Refer to IP-18, "Removal and Installation".
- 5. Remove console box assembly.
  - Refer to IP-18, "Removal and Installation".

- 6. Disconnect control cable of control device.
- 7. Disconnect control device harness connector.

8. Remove control device assembly.

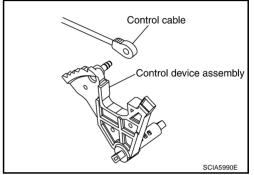

CVT

D

#### **INSTALLATION**

Note the following, and install in the reverse order of removal.

- The knurled surface of rib should be upward when installing the control cable to the control device assembly. And insert the control cable securely.
- After installation is completed, adjust and check CVT position.
   Refer to <u>CVT-211</u>, "Adjustment of <u>CVT Position"</u> and <u>CVT-212</u>, "Checking of <u>CVT Position"</u>.

NCS00199

### **Adjustment of CVT Position**

- 1. Place selector lever in "P" position.
- 2. Loosen control cable nut and place manual lever in "P" position.

#### **CAUTION:**

Turn wheels more than 1/4 rotations and apply the park lock.

- 3. Hold the control cable at the end. Push and pull it twice or three times, and then push it with a load of 9.8 N (approximately 1 kg, 2.2 lb). Temporarily tighten the control cable nut with the control cable loose.
- 4. Connect control cable on manual lever.

#### **CAUTION:**

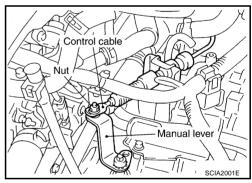

No application of a force to the manual lever.

5. Tighten control cable nut.

#### **CAUTION:**

Fix the manual lever when tightening.

(1.3 kg-m, 10 ft-lb)

M

Revision: 2006 August CVT-211 2006 Murano

### **Checking of CVT Position**

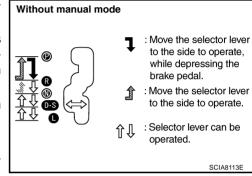

NCS0019A

- 1. Place selector lever in "P" position, and turn ignition switch ON. (Do not start engine.)
- Make sure selector lever can be shifted to other than "P" position when brake pedal is depressed. Also make sure selector lever can be shifted from "P" position only when brake pedal is depressed.
- 3. Move the selector lever and check for excessive effort, sticking, noise or rattle.
- 4. Confirm the selector lever stops at each position with the feel of engagement when it is moved through all the positions. Check whether or not the actual position the selector lever is in matches the position shown by the shift position indicator and the transaxle body.
- 5. The method of operating the selector lever to individual positions correctly should be as shown in the figure.
- 6. Confirm the back-up lamps illuminate only when selector lever is placed in the "R" position. Confirm the back-up lamps do not illuminate when the selector lever is pushed toward the "R" position side with the gear position remained in the "P" or "N" position.
- 7. Confirm the engine can only be started with the selector lever in the "P" and "N" positions.
- 8. Make sure transaxle is locked completely in "P" position.
- 9. When selector lever is set to manual shift gate, make sure manual mode is displayed on combination meter.

  Shift selector lever to "+" and "-" sides, and make sure set shift position changes.

With manual mode

: Move the selector lever to the side to operate, while depressing the brake pedal.
: Move the selector lever to the side to operate.
: Selector lever can be operated.

#### **CVT SHIFT LOCK SYSTEM**

PFP:00000

**Description** 

NCS0019B

The electrical key interlock mechanism also operates as a shift lock: With the ignition switch turned to ON, the selector lever cannot be shifted from "P" (parking) to any other position unless the brake pedal is depressed.

With the key removed, the selector lever cannot be shifted from "P" to any other position.

With Intelligent Key

Ø\)

Key lock solenoid

The key cannot be removed unless the selector lever is placed in "P".

• The shift lock and key interlock mechanisms are controlled by the ON-OFF operation of the shift lock solenoid and by the operation of the rotator and slider located inside the key cylinder, respectively.

Emergency lever

Accelerator pedal

#### SHIFT LOCK CONTROL UNIT INSPECTION TABLE

Shift lock control unit terminal data are reference values, measured between each terminal and ground.

Terminal (Wire color)	Item	Condition	Judgment standard
1 (R/Y)	Power source	Always	Battery voltage
2	Detention switch (for	When selector lever is not in "P" position with key inserted or ignition knob switch pushed.	Battery voltage
(L) key)		When selector lever is in "P" position with key inserted.	Approx. 0 V
3	Detention switch (for	When selector lever is not in "P" position.	Battery voltage
(L/W)	shift)	When selector lever is in "P" position.	Approx. 0 V
4	Stan Jama switch	When brake pedal is depressed	Battery voltage
(R/G)	Stop lamp switch	When brake pedal is released	Approx. 0 V
5 (V/W)	Vehicle speed signal (8pulse signal)	Speed meter is operated	Refer to DI-14, "Terminals and Reference Value for Unified Meter and A/C Amp."
6 Innition signal	Ignition signal	Ignition switch: OFF	Approx. 0 V
(G)	Ignition signal	Ignition switch: ON	Battery voltage
7 (R/L)	Shift lock solenoid	<ul> <li>When selector lever is in "P" position, brake pedal is depressed, and ignition switch is ON.</li> <li>When selector lever is not in "P" position, ignition switch is ON, and vehicle speed is 10 km/h</li> </ul>	
		<ul> <li>(6 MPH) or less.</li> <li>For 3 minutes after selector lever is not in "P" position, vehicle speed is 10 km/h (6 MPH) or less, and ignition switch is ON → OFF.</li> </ul>	Approx. 0 V
		Except the above	Battery voltage
8 (B)	Ground	_	Approx. 0 V
9	Key lock solenoid	When selector lever is not in "P" position.	Battery voltage for approx. 0.1 sec. (Note)
(V)		When selector lever is in "P" position.	Approx. 0 V
10	Key unlock solenoid	When selector lever is in "P" position with ignition switch OFF.	Battery voltage for approx. 0.1 sec. (Note)
(W/B)		When selector lever is not in "P" position with ignition switch OFF.	Approx. 0 V

## NOTE:

Take care that the pointer swings only momentarily because the output time is so short. If the inspection is done with an oscilloscope, it should be observed that the power source voltage lasts for 3.5 to 10 ms.

# Component Inspection SHIFT LOCK SOLENOID

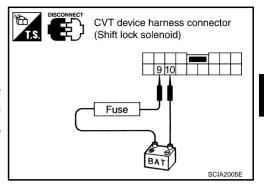

NCS0019G

Check operation by applying battery voltage to the CVT device harness connector.

#### **CAUTION:**

Be sure to apply the voltage of the correct polarity to the respective terminals. Otherwise, the part may be damaged.

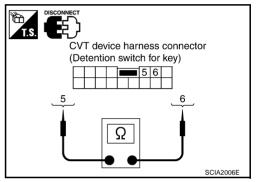

Connector	Terminal
M57	9 (Battery voltage) - 10 (Ground)

## **DETENTION SWITCH (FOR KEY)**

Check continuity between terminals of the CVT device harness connector.

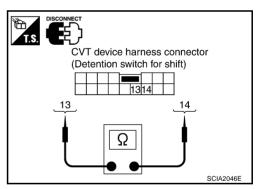

Condition	Connector	Terminal	Continuity
When selector lever is in "P" position.	M57	5 - 6	No
When selector lever is not in "P" position.			Yes

## **DETENTION SWITCH (FOR SHIFT)**

Check continuity between terminals of the CVT device harness connector.

Condition	Connector	Terminal	Continuity
When selector lever is in "P" position.	M57	13 - 14	No
When selector lever is not in "P" position.		13 - 14	Yes

# KEY LOCK SOLENOID (WITH INTELLIGENT KEY)

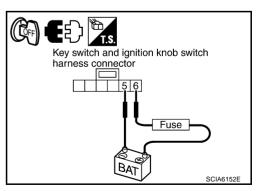

#### **Key Lock**

Check operation by applying battery voltage to key switch and ignition knob switch harness connector.

#### CALITION

Be careful not to cause burnout of the harness.

#### **REMOVAL**

1. Remove drive shaft assembly. Refer to <u>FAX-7</u>, <u>"FRONT DRIVE SHAFT"</u>.

- 2. Remove transfer from transaxle assembly. (AWD models) Refer to TF-52, "Removal and Installation".
- Remove differential side oil seals using a flat-bladed screwdriver.

#### **CAUTION:**

Be careful not to scratch transaxle case or converter housing.

## **DIFFERENTIAL SIDE OIL SEAL**

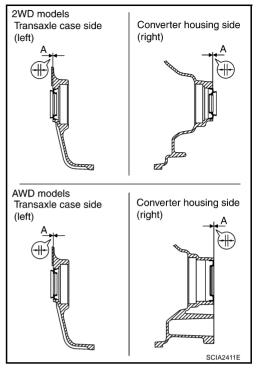

#### **INSTALLATION**

1. As shown below, use a drift to drive the differential side oil seals into the case until it is flush. Refer to dimensions A.

	Onit. min (in)
Dimensions A	$0 \pm 0.5 \ (0 \pm 0.020)$

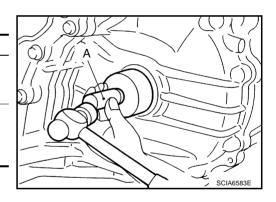

#### NOTE:

The differential side oil seals pulling direction is used as the reference

#### Drift to be used:

Location	2WD models	AWD models
Transaxle case side (left) Tool number: A (Kent-Moore No.)	 (J-47244)	 (J-47244)
Converter housing side (right) Tool number: A (Kent-Moore No.)	ST33400001 (J-47005)	 (J-34339-A)

#### **CAUTION:**

- Do not reuse differential side oil seals.
- When installing differential side oil seals, apply NISSAN CVT Fluid NS-2.
- 2. Reinstall any part removed.

#### **CAUTION:**

If lubricant leak has occurred, after finishing work, check fluid level. Refer to <a href="CVT-15">CVT-15</a>, "Checking <a href="CVT-15">CVT Fluid</a>.

## **CVT FLUID COOLER VALVE**

#### **REMOVAL**

## **WARNING:**

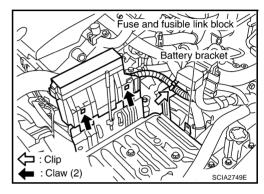

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure engine coolant escaping from the radiator.

- 1. Remove engine undercover.
- 2. Drain engine coolant. Refer to CO-9, "Changing Engine Coolant".

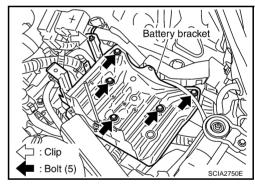

#### CAUTION

Perform when the engine is cold.

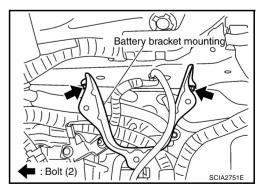

- 3. Remove air duct (inlet). Refer to EM-16, "Removal and Installation" .
- 4. Remove battery. Refer to SC-8, "Removal and Installation".
- 5. Remove air cleaner case (upper and lower), resonator, mass air flow sensor and air duct assembly. Refer to EM-16. "Removal and Installation".
- 6. Remove fuse and fusible link block from battery bracket.

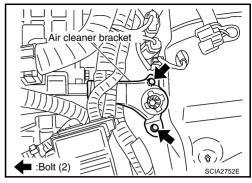

7. Remove battery bracket.

8. Remove battery bracket mounting.

- 9. Remove air cleaner bracket. Refer to EM-16, "Removal and Installation".
- 10. Remove control cable from transaxle assembly. Refer to <u>CVT-</u>208, "Removal and Installation".

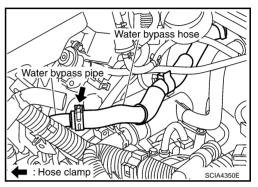

**CVT** 

D

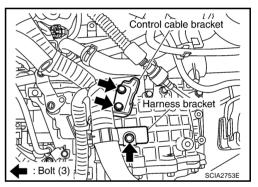

Н

В

11. Remove water bypass hose from water bypass pipe. Refer to CO-29, "Removal and Installation".

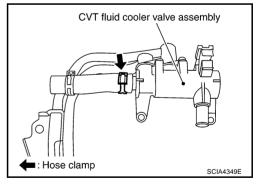

- 12. Remove harness bracket and control cable bracket from transaxle assembly. Refer to <a href="CVT-210">CVT-210</a>, "CONTROL CABLE COMPONENTS" and <a href="CVT-225">CVT-225</a>, "COMPONENTS"</a>.
- 13. Remove inlet water hose and outlet water hose. Refer to <a href="CVT-225">CVT-225</a>, "COMPONENTS".
- 14. Remove heater hose from heater pipe. Refer to <u>CO-29</u>, <u>"Removal and Installation"</u>.
- 15. Remove CVT fluid cooler valve assembly from transaxle assembly. Refer to <a href="CVT-225">CVT-225</a>, "COMPONENTS"</a>.
- 16. Remove heater hose from CVT fluid cooler valve assembly.

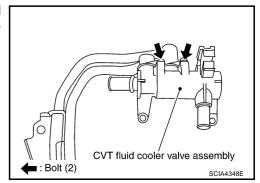

L

M

 Remove CVT fluid cooler inlet tube assembly and CVT fluid cooler outlet tube assembly from CVT fluid cooler valve assembly.

#### **INSTALLATION**

Note the following, and install in the reverse order of removal.

 After completing installation, check for engine coolant leakage, engine coolant level, and the positions of CVT. Refer to <u>CO-9</u>, "Inspection" and <u>CVT-212</u>, "Checking of <u>CVT Position"</u>.

#### **CAUTION:**

- Do not reuse CVT fluid cooler inlet tube assembly and CVT fluid cooler outlet tube assembly.
- Install hose clamp with tabs aligned with markings of CVT fluid cooler valve assembly and each hose.
- Apply LLC around O-ring when installing CVT fluid cooler inlet tube and CVT fluid cooler outlet tube assembly to CVT fluid cooler valve assembly.

## **Component Inspection**

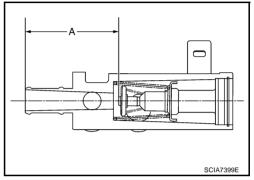

NCS0019K

 Make sure that CVT fluid cooler valve is fully opened at room temperature.

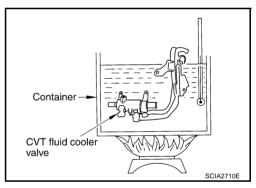

#### **Standard**

Dimension A from CVT fluid cooler valve port end to tip of valve shaft (At room temperature):

Approx. 72.0 mm (2.835 in) or more

2. Put CVT fluid cooler valve into a water-filled container, and then heat it up to 82°C (180°F) or more for 10 minutes or more.

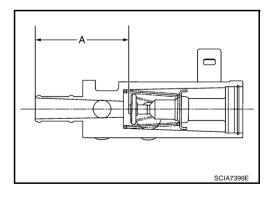

3. Make sure that CVT fluid cooler valve is fully closed.

#### **Standard**

Dimension A from CVT fluid cooler valve port end to tip of valve shaft

[When heating to 82°C (180°F) or more for 10 minutes or more]:

Approx. 66.5 mm (2.618 in) or less

Refer to GI section to make sure icons (symbol marks) in the figure. Refer to GI-10. "Components" .

 $\label{prop:lower} \mbox{However, refer to the following symbols for others.}$ 

∴ For tightening torque, refer to <u>CVT-234</u>, "INSTALLATION".

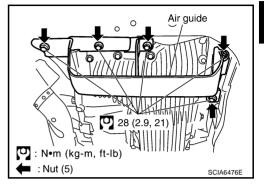

A : To radiator

#### **REMOVAL**

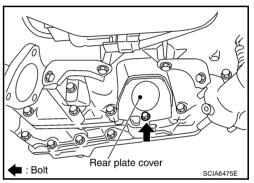

#### **CAUTION:**

The transaxle assembly itself cannot be removed from the vehicle. Remove the transaxle assembly and engine assembly together from the vehicle.

- 1. Disconnect the battery cable from the negative terminal.
- 2. Remove engine undercover.
- 3. Remove air guide.
- 4. Remove exhaust front tube with power tool. Refer to <u>EX-3</u>, "Removal and Installation".

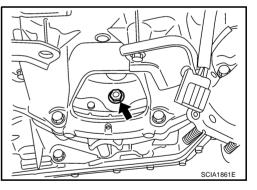

5. Remove rear plate cover. Refer to EM-29, "Removal and Installation".

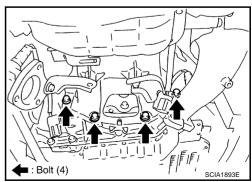

6. Turn crankshaft, and remove the four tightening nuts for drive plate and torque converter.

#### **CAUTION:**

The crankshaft should be rotated clockwise, viewed from the front of the engine.

7. Remove the four bolts in the figure. (2WD models)

Κ

L

- 8. Remove the six bolts in the figure. (AWD models)
- 9. Remove transaxle assembly and engine assembly together from the vehicle. Refer to <u>EM-108</u>, "Removal and Installation".
- 10. Remove drive shaft. Refer to <u>FAX-7</u>, "<u>Removal and Installation</u> (<u>Left Side</u>)", <u>FAX-9</u>, "<u>Removal and Installation</u> (<u>Right Side</u>)".

#### CAUTION:

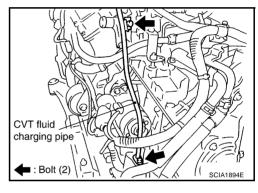

Be sure to replace the differential side oil seal with new one at the every removal of drive shaft. Refer to <a href="CVT-223">CVT-223</a>. "Removal and Installation".

- 11. Remove rear gusset.
- 12. Remove transfer gusset. (AWD models)
- 13. Remove transfer assembly. Refer to TF-52, "Removal and Installation". (AWD models)

#### **CAUTION:**

Be sure to replace the differential side oil seal with new one (converter housing side only) at the every removal of transfer. Refer to <a href="CVT-223">CVT-223</a>, "Removal and Installation".

- 14. Remove CVT fluid level gauge.
- 15. Remove CVT fluid charging pipe.
- 16. Remove O-ring from CVT fluid charging pipe.
- 17. Disconnect harness connector and wire harness.

SCIA6016E

: Bolt (6)

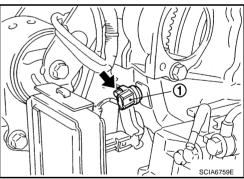

18. Remove crankshaft position sensor (POS) (1) from engine assembly. Refer to <a href="EM-29">EM-29</a>, "Removal and Installation"</a>.

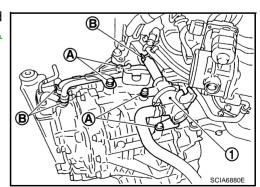

#### CAUTION:

- Do not subject it to impact by dropping or hitting it.
- Do not disassemble.
- Do not allow metal filings, etc. to get on the sensor's front edge magnetic area.
- Do not place in an area affected by magnetism.
- 19. Remove starter motor. Refer to <u>SC-15, "Removal and Installation"</u>.
- 20. Remove CVT fluid cooler valve assembly (1). (With CVT fluid cooler tube assembly and heater hose). Refer to <a href="CVT-225">CVT-225</a>, <a href="Removal and Installation"</a>.

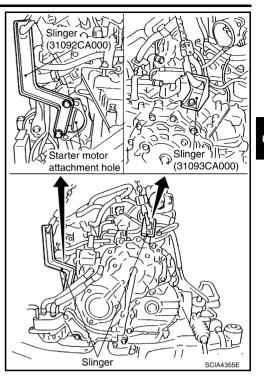

(A): Bolt (4)

(B): Hose clamp (3)

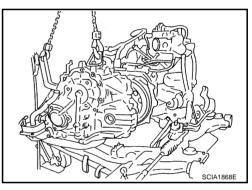

- 21. Install slinger to transaxle assembly.
- 22. Remove LH engine mounting bracket and LH engine mounting insulator.
- 23. Remove front suspension member from transaxle assembly and engine assembly. Refer to <a href="EM-108">EM-108</a>, "Removal and Installation"</a>. (AWD models)
- 24. Remove front engine mounting bracket and rear engine mounting bracket.
- 25. Remove transaxle assembly fixing bolts with power tool.

26. Remove transaxle assembly from engine assembly with a hoist. **CAUTION:** 

Secure torque converter to prevent it from dropping.

- 27. Remove air breather hose. Refer to <u>CVT-222</u>, "Removal and Installation".
- 28. Remove CVT fluid cooler hoses.
- 29. Remove fluid cooler tube.

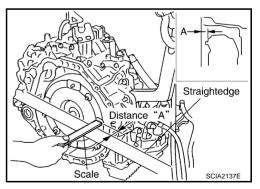

#### **INSPECTION**

#### **Installation and Inspection of Torque Converter**

After inserting a torque converter to a transaxle, be sure to check distance A to ensure it is within the reference value limit.

Distance A: 14.0 mm (0.55 in) or more

Д

В

CVT

D

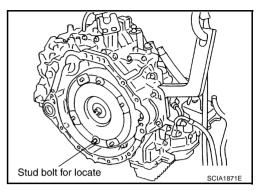

Н

L

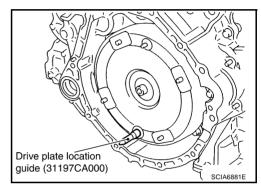

#### **INSTALLATION**

Note the following, and install in the reverse order of removal.

 Set and screw in the drive plate location guide onto the stud bolts for the torque converter locate.

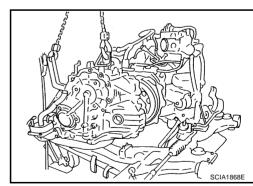

Rotate the torque converter for the locate to go down.

 Rotate the drive plate for the hole of the drive plate locate to go down.

Install transaxle assembly to engine assembly with a hoist.

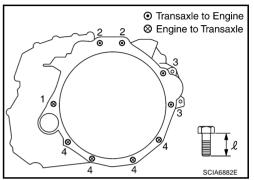

• When installing fluid cooler tube to transaxle assembly, assemble the part with the tube aligned with the rib.

 When installing transaxle to the engine, attach the fixing bolts in accordance with the following standard.

Bolt No.	1	2	3	4
Number of bolts	1	2	2	4
Bolt length " $\ell$ "mm (in)	52 (2.05)	36 (1.42)	105 (4.13)	35 (1.38)
Tightening torque N⋅m (kg-m, ft-lb)		75 (7.7, 55)		47 (4.8, 35)

 Align the positions of tightening nuts for drive plate with those of the torque converter, and temporarily tighten the nuts. Then, tighten the nuts with the specified torque.

: 51 N·m (5.2 kg-m, 38 ft-lb)

#### **CAUTION:**

- Do not reuse O-ring and copper washers.
- When turning crankshaft, turn it clockwise as viewed from the front of the engine.
- When tightening the tightening nuts for the torque converter after fixing the crankshaft pulley bolts, be sure to confirm the tightening torque of the crankshaft pulley mounting bolts. Refer to <a href="EM-68">EM-68</a>, "INSTALLATION".

- Install crankshaft position sensor (POS) sensor. Refer to EM-29, "Removal and Installation".
- After completing installation, check for fluid leakage, fluid level, and the positions of CVT. Refer to CVT-15,
   "Checking CVT Fluid", CVT-211, "Adjustment of CVT Position", CVT-212, "Checking of CVT Position".
- When replacing the CVT assembly, erase EEP ROM in TCM. Refer to CVT-9, "Precautions for TCM and CVT Assembly Replacement".
