## New Tire Pressure Monitor Sensor/Valve for Some 2008 Models

Beginning with the 2008 models, the tire pressure monitor system (TPMS) sensor/valve on Forester, Impreza and some Legacy models has changed.

In the past, the tire valve stem on TPMS-equipped models had gray-colored threads, cap and retaining collar. This type will continue to be used only on Legacy models with alloy wheels.

The new version is a black rubber stem with brass-colored threads. This new style will be used on 2008 Legacy H-6 Sedan, Spec-B, and models with steel wheels, plus all Forester and Impreza models.

*The new rubber-stemmed style of TPMS sensor (left), will replace the old gray style (right) on some 2008 models.*
