

Genuine Subaru Parts MEANS BUSINESS!

Genuine SUBARU AUTOMOTIVE CHEMICALS

...provide protection and enhance performance.

When it comes to fluids and other chemicals you put in a car, there's only one way to be sure you're meeting the same high standards of original Subaru equipment: Use Genuine Subaru Automotive Chemicals.

Subaru offers a full line of quality tested aerosols and fluids.

This line covers all the essential service chemicals. From coolant and automatic transmission fluid to brake fluid and fuel injector cleaner, these premium chemicals are all approved by Subaru for use in Subaru vehicles. Each automotive chemical is engineered to assure maximum performance and trouble-free driving. And because they're competitively priced, you can use them day in and day out on all your service work and make extra money at the same time.

All refrigerants are not created equal!

Genuine Subaru R-134a Refrigerant, unlike many after-market products, is manufactured and packaged to the stringent Air Conditioning and Refrigerant Institute (ARI) 700 standard. This means possible contaminants are meticulously controlled, including moisture and non-condensable gases that can cause premature compressor failure and result in costly repair.

Thank you for your interest in Genuine Subaru Parts.

The Subaru Parts Program offers the largest inventory of these OE-quality Subaru parts available anywhere. Pricing information for the following products is available through your authorized Subaru dealer. Please call for complete details.
