1. Basic Diagnostic Procedure soutout

A: PROCEDURE SOUTSOTE45

No.	Step	Check	Yes	No
1	 START INSPECTIONS. 1) Perform pre-inspection. 2) Perform self-diagnosis. <ref. ac-12<="" li="" to=""> SELF-DIAGNOSIS MODE, Diagnostics Chart for Diagnosis System.> </ref.>	Dose self-diagnosis oper- ate?	Go to step 2.	<ref. ac-16<br="" to="">A/C AND/OR SELF-DIAGNO- SIS SYSTEMS DO NOT OPERATE, Diag- nostics for A/C System Failure.></ref.>
2	CHECK TROUBLE CODE. Check trouble code.	Is trouble code indicated?	<ref. ac-26<br="" to="">Diagnostic Proce- dure with Trouble Code.></ref.>	Go to step 3.
3	CHECK BLOWER MOTOR OPERATION.1) Turn blower switch ON.2) Check blower motor operation.	Is blower motor rotated?	Go to step 4.	<ref. ac-18<br="" to="">BLOWER MOTOR IS NOT ROTATED, Diag- nostics for A/C System Failure.></ref.>
4	CHECK FRESH/RECIRC MODE. Change FRESH/RECIRC mode by pushing mode switch.	Is FRESH/RECIRC mode changed?	Go to step 5 .	<ref. ac-20<br="" to="">FRESH/RECIRC IS NOT CHANGED, Diag- nostics for A/C System Failure.></ref.>
5	 CHECK COMPARTMENT TEMPERATURE. 1) Turn A/C switch ON. 2) Set temperature at 18°C (65°F) (MAX COOL). 3) Check compartment temperature changes. 	Is the compartment tem- perature changed?	Go to step 6 .	<ref. ac-22<br="" to="">COMPARTMENT TEMPERATURE IS NOT CHANGED OR A/C SYSTEM DOES NOT RESPOND QUICKLY, Diag- nostics for A/C System Failure.></ref.>
6	CHECK A/C SYSTEM RESPONSE. Change the temperature setting, and check response of A/C system.	Dose A/C system respond quickly?	A/C system is OK.	<ref. ac-22<br="" to="">COMPARTMENT TEMPERATURE IS NOT CHANGED OR A/C SYSTEM DOES NOT RESPOND QUICKLY, Diag- nostics for A/C System Failure.></ref.>

2. General Description SOUTOR

A: CAUTION S001001A03

1) Never connect the battery in reverse polarity.

• The Auto A/C control module will be destroyed instantly.

2) Do not disconnect the battery terminals while the engine is running.

• A large counter electro motive force will be generated in the alternator, and this voltage may damage electronic parts such as A/C control module.

3) Before disconnecting the connectors of each sensor and the A/C control module, be sure to turn off the ignition switch.

• Otherwise, the Auto A/C control module may be damaged.

4) Every Auto A/C-related part is a precision part. Do not drop them.

5) Airbag system wiring harness is routed near the A/C control panel (A/C control module) and junction box.

CAUTION:

• All Airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.

• Be careful not to damage Airbag system wiring harness when servicing the A/C control panel (A/C control module) and junction box.

B: INSPECTION SODIODIAIO

Before performing diagnosis, check the following items which might affect engine problems.

1. BATTERY S001001A1001

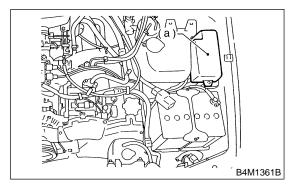

1) Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

2) Check the condition of the fuses for A/C, heater and other fuses.

3) Check the condition of the harnesses and harness connectors connection.

(a) Main fuse box

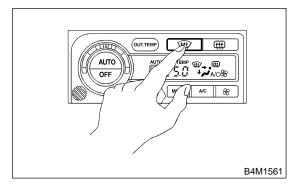

2. ASPIRATOR HOSE S001001A1002

1) Make sure that the aspirator hose is securely connected to the heater unit by inserting a hand from the driver's compartment and secure as necessary.

2) Turn ignition switch to ON.

3) Push "DEF" switch and then blower fan switch

to turn the blower fan to maximum speed.

AC-3

GENERAL DESCRIPTION

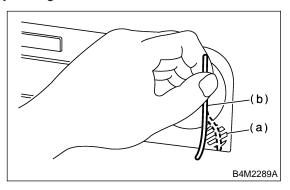

HVAC System (Auto A/C) (DIAGNOSTICS)

4) Firmly hold a thin thread (b) in front of the invehicle sensor suction port (a) for the auto A/C control unit and check that the thread moves towards the port indicating that air is being sucked into the port.

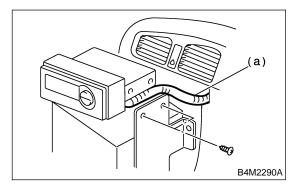

NOTE:

• Ensure the thread does not get sucked into the port.

• Hold the thread approximately 5 mm (0.02 in) away from the port when the suction force is not very strong.

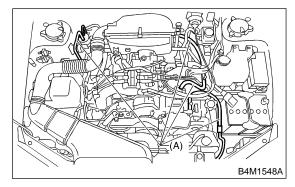

5) If the thread does not move at all, remove the auto A/C control unit <Ref. to AC-30 AUTO A/C, REMOVAL, Control Unit.> and check for improper connection of the aspirator hose (a) and auto A/C control unit and secure as necessary.

3. REFRIGERANT LINE S001001A1003

Check contact for refrigerant line (A).

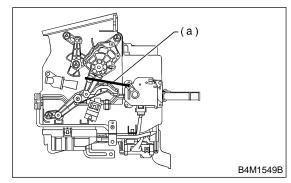

4. CONTROL LINKAGE S001001A1004

1) Check state of mode door control rod and link-age.

2) Check state of air mix door control rod and linkage.

3) Check state of intake door control rod and linkage.

(a) Control rod

5. CONTROL SWITCHES S001001A1006

Start and warm up engine completely.1) Inspection using switches.

No.	Point to check	Switch operation	Judgement standard
1	OFF switch	OFF switch "ON"	 "SET" temperature display go out. Air flow → OFF Outlet → HEAT Inlet → FRESH Compressor → OFF
		A. AUTO switch "ON" B. Temp. control switch 18°C (65°F) (Max. Cold)	a. AUTO switch display illuminates. b. • Outlet air \rightarrow Cool • Air flow \rightarrow HI (AUTO) • Outlet \rightarrow VENT • Inlet \rightarrow AUTO • Compressor \rightarrow AUTO
2	AUTO switch	C. TEMP control switch is gradually set from 18°C (65°F) to 32°C (85°F).	 c. Air and air outlet mode change as follows: Outlet air: cool → hot Air flow: AUTO Outlet: VENT → BI-LEVEL → HEAT Inlet: AUTO
		D. Temp. control switch 32°C (85°F) (Max. Hot)	d. Outlet air \rightarrow Hot • Air flow \rightarrow HI (AUTO) • Outlet \rightarrow HEAT • Inlet \rightarrow FRESH (AUTO) • Compressor \rightarrow AUTO
3	DEF switch	A. DEF switch "ON" B. Temp. control switch 18 — 32°C (65 — 85°F)	 a. DEF switch display illuminates. b. Outlet air temperature (AUTO control) Air flow (AUTO control) Outlet → DEF Inlet → FRESH Compressor → ON
4	FRESH/RECIRC switch	FRESH/RECIRC switch "ON"	Changes from RECIRC \rightarrow FRESH, or FRESH \rightarrow RECIRC.
5	MODE switch	MODE switch "ON"	Outlet changes from VENT \rightarrow BI-LEVEL \rightarrow HEAT \rightarrow DEF/HEAT each time MODE switch is pushed.
6	FAN switch	FAN switch "ON"	Fan speed changes from LO \rightarrow M1 \rightarrow M2 \rightarrow HI each time FAN switch is pushed.
7	OUT-TEMP switch	OUT-TEMP switch "ON"	Ambient temperature flashes on "set" tempera- ture display, and "set" temperature appears.

2) Compressor operation inspection

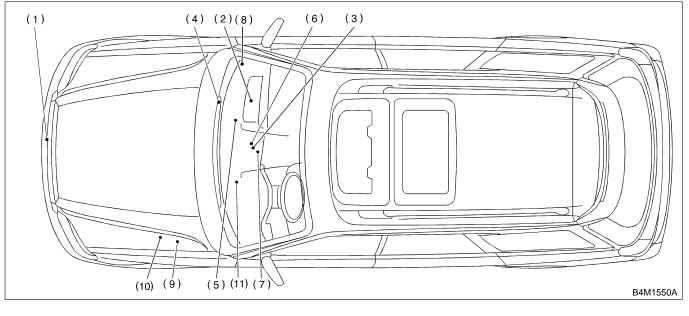

No.	Point to check	Switch operation	Judgement standard	Remarks
1	Compressor	B. A/C switch "ON"	a. Compressor ON b. Compressor ON c. Compressor ON	Compressor turns OFF several seconds after AUTO switch is turned ON.

3) Illumination control inspection

No.	Point to check	Switch operation	Judgement standard	Remarks
1	Illumination switch	Lighting switch "ON"	 Illumination light illuminates and both switch light and "set" temperature display dim. Switch lights: OFF → Green light illuminates. ON → Green light illuminates. 	Green lights remain on although OFF and OUT- TEMP switches are ON.

3. Electrical Components Location S007507

A: LOCATION SOUISOTA13

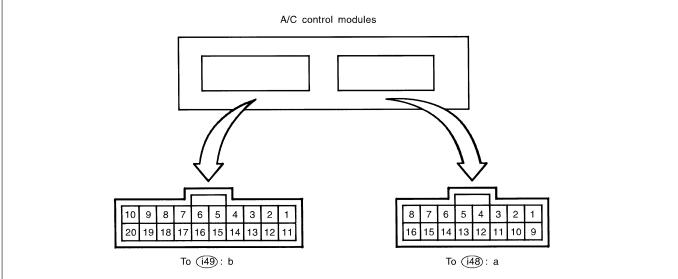

- (1) Ambient sensor
- (2) Power transistor
- (3) In-vehicle sensor
- (4) Sunload sensor

- (5) Evaporator sensor
- (6) Auto A/C control module
- (7) Air mix door motor
- (8) Intake door motor

- (9) A/C relay
- (10) A/C fuse
- (11) Mode door motor

4. A/C Control Module I/O Signal S001518

A: ELECTRICAL SPECIFICATION S00151BA08

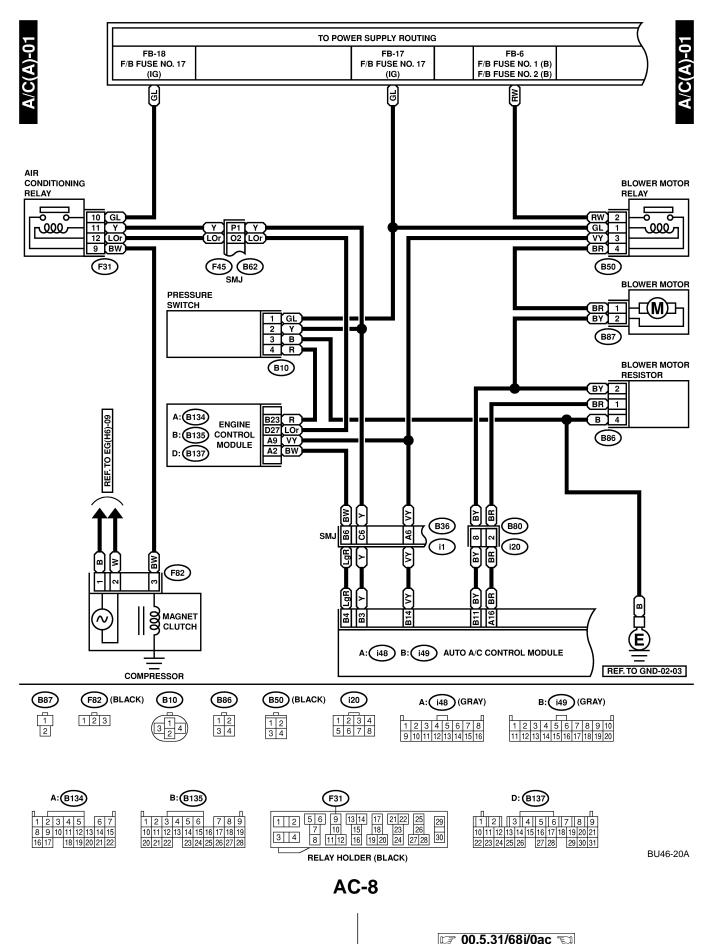

B4M1368B

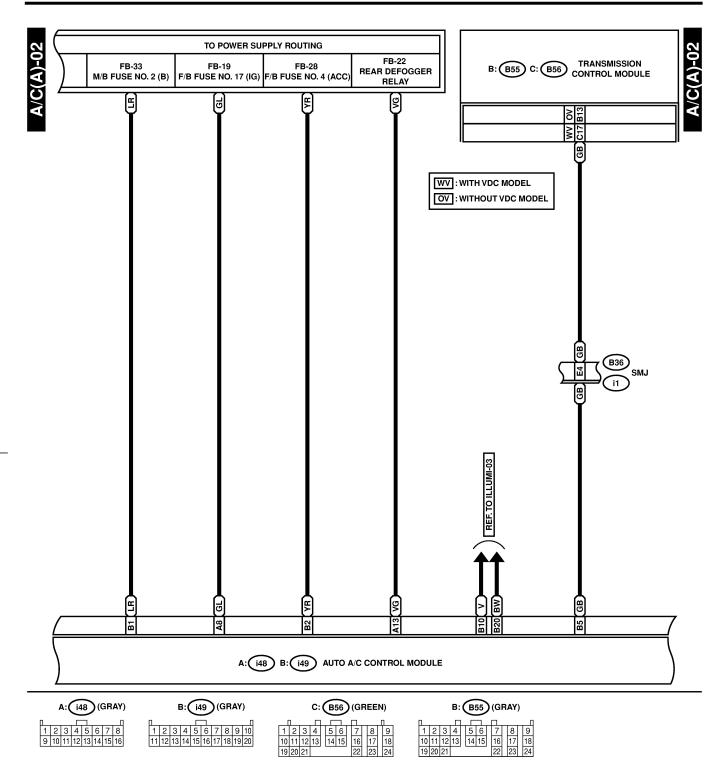

Content	Connector & Terminal No.	Signal (V)		
BATT voltage (Memory back-up)	b1—b12	BATT voltage, 13 — 14 (engine running)		
IGN power supply	a8—b12	Battery voltage (ignition switch ON), 13 — 14 (engine running)		
ACC power supply (OFF: ignition in START or diag- nosis system reset)	b2—b12	BATT voltage, 0 (engine cranking), BATT voltage (during engine starts)		
A/C control module ground circuit	b12—body	0 (ignition switch ON) — circuit constantly grounded		
Sensor ground circuit	b17—body	0 (ignition switch ON) — continuity exists		
Ambient sensor	b6—b17			
Evaporator sensor	b7—b17	Approx. 3.3 (disconnect connector, and ignition switch ON)		
Thermometer	b15—b12	-		
Sunload sensor	b16—b17	Approx. 4.2 (disconnect connector, and ignition switch ON)		
Air mix door motor	a4—a3	BATT voltage (AUTO mode) positive "+" at terminal "a4" and negative "-" at "a3" [temperature set at 18°C (65°F)]; negative "-" at terminal "a4" and positive "+" at "a13" [temperature set at 32°C (85°F)]		
Air mix door motor P.B.R.	a12—b17	Approx. 0.5 [temperature set at 18°C (65°F) in AUTO mode] Approx. 4.5 [temperature set at 32°C (85°F) in AUTO mode]		
Mode actuator VENT	a5—b17	BATT voltage (ignition switch ON in MANUAL mode); positive "+" at termi- nal "a5" and negative "" at "b17" (VENT); negative "" at "a5" and positive "+" at "b17" (DEF)		
Mode actuator DEF	a6—b17	BATT voltage (ignition switch ON in MANUAL mode) Approx. 4.5 (VENT); approx. 0.5 (DEF)		
Intake door FRS voltage	a7—a15	BATT voltage (CIRC switch OFF)		
Intake door CIRC voltage	a15—a7	BATT voltage (CIRC switch ON)		
Blower fan relay	b14—body	BATT voltage (ignition switch ON)		
A/C relay	b3—b12	0 (ignition and A/C switches ON) BATT voltage (A/C switch OFF)		
Illumination control signal	b10—b20	BATT voltage (ignition and lighting switches ON)		
Rear defogger	a13—b12	0 (IGN ON, R Def SW ON)

A: SELF-DIAGNOSIS MODE S001624F36

(2) AUTO switch

- (4) DEF switch

(5) MODE switch

DIAGNOSTICS CHART FOR DIAGNOSIS SYSTEM HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
1	SELECT CONTROL PANEL TO SELF-DIAG- NOSIS MODE. 1) Turn ignition switch to OFF. 2) While pushing "AUTO" and "REC" switches, start the engine.	Can it be moved to the self-diagnosis mode?	Go to step 2.	<ref. ac-16<br="" to="">A/C AND/OR SELF-DIAGNO- SIS SYSTEMS DO NOT OPERATE, Diag- nostics for A/C System Failure.></ref.>
2	 CHECK INDICATOR AND BUZZER. 1) Turn temperature select dial clockwise by one click. 2) Make sure that all characters illuminate on the display, and that the buzzer continuously sounds. 	Does each character illumi- nate and buzzer sound?	Go to step 3.	Go to step 7.
3	CHECK EACH SENSOR AND EACH POTENTION METER. 1) Turn temperature select dial clockwise by one click. 2) If system has the trouble for each sensor and/or each potention meter, trouble code is indicated on indicator. 3) If system has no trouble, code "20" is indi- cated on indicator. NOTE: When the sunload sensor is checked inside the passenger compartment or in the shade, code "25" may appear on the indicator. Always check the sunload sensor in a place where it senses direct sunlight.	Is the code "20" indicated on indicator?	Go to step 4.	Repair each trouble code.
4	 CHECK DOOR MOTOR POSITION SWITCH. 1) Turn temperature select dial clockwise by one click. 2) If system has the trouble for each door position switch, trouble code is indicated on indicator. 3) If system has no trouble, code "30" is indicated on indicator. 	Is the code "30" indicated on indicator?	Go to step 5.	Repair each trouble code.
5	CHECK OPERATION OF EACH ACTUATOR, BLOWER FAN AND COMPRESSOR CLUTCH. 1) Turn temperature select dial clockwise by one click. 2) Select operating mode by pushing every "DEF" switch. 3) Check the operation for each mode. • Air inlet: • Air outlet: • Air mix door: • Blower fan: • A/C compressor:	Does each mode displayed match the operating mode table? <ref. ac-14<br="" to="">OPERATING MODE TABLE, SELF-DIAGNOSIS MODE, Diagnostics Chart for Diagnosis System.></ref.>	Go to step 6.	Go to step 7.

DIAGNOSTICS CHART FOR DIAGNOSIS SYSTEM HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
6	CHECK INDICATED VALUE OF EACH SEN- SOR. 1) Turn temperature select dial clockwise by one click. 2) Each time the "DEF" switch is pressed, the value indicated on the display changes to cor- respond with the ambient sensor, in-vehicle sensor and intake sensor, in that order. 3) Make sure there is no big difference between the temperature indicated on the dis- play and the measured temperature. NOTE: If a large temperature difference is noted, check for ECM standard voltage and sensor function using the performance characteristic diagram.	Is a proper input signal value displayed in each sensor?	End	Go to step 7.
7	CHECK POOR CONTACT. Check poor contact in A/C control module.	Is there poor contact in A/C control module?	Repair poor con- tact in A/C control module.	Contact with your Subaru distributor.

1. OPERATING MODE TABLE S001624F3601

Mode display	41	42	43	44	45	46	47	48
Air inlet	REC	REC	REC	FRE	FRE	FRE	FRE	FRE
Air outlet	VENT	VENT	B/L	B/L	B/L	HEAT	D/H	DEF
Air mix door	FULL COOL	FULL COOL	FULL COOL	FULL HOT				
Blower fan	5V	5V	Power sup- ply voltage	8.5V	8.5V	8.5V	8.5V	Power sup- ply voltage
A/C compressor	ON	ON	ON	OFF	OFF	OFF	ON	ON

HVAC System (Auto A/C) (DIAGNOSTICS)

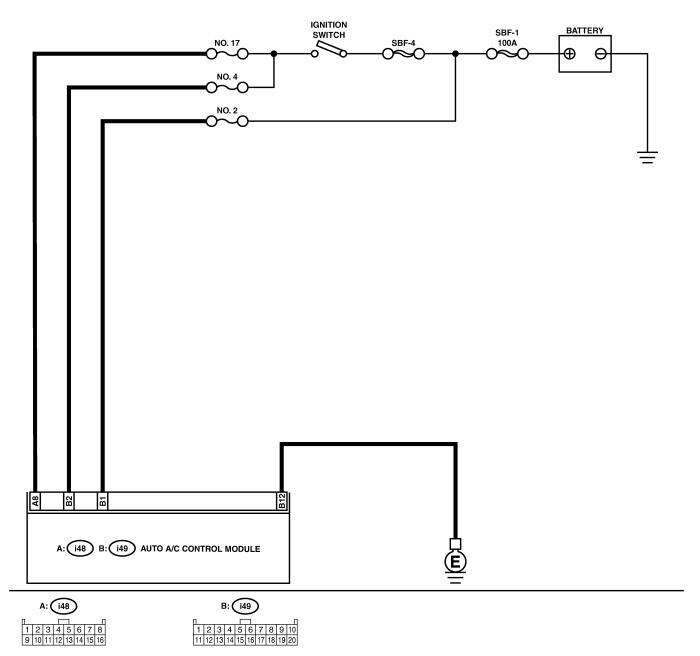

6. Diagnostics for A/C System Failure S001625

A: A/C AND/OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE S001625F37

TROUBLE SYMPTOM:

- "Set" temperature is not indicated on display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

WIRING DIAGRAM:

B4M2371

DIAGNOSTICS FOR A/C SYSTEM FAILURE HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
1	 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 2 from main fuse box. 3) Check condition of fuse. 	Is the fuse blown-out?	Replace fuse.	Go to step 2.
2	 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuses No. 4 and No. 17 from joint box. 3) Check condition of fuse. 	Is the fuse blown-out?	Replace fuse.	Go to step 3.
3	 CHECK A/C CONTROL MODULE POWER CIRCUIT. 1) Pull out A/C control module connector. 2) Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to OFF. Connector & terminal (i49) No. 1 (+) — Chassis ground (-): 	Is the voltage more than 10 V?	Go to step 4.	Repair short cir- cuit in harness for power supply line.
4	CHECK A/C CONTROL MODULE POWER CIRCUIT. Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to ACC. Connector & terminal (i49) No. 2 (+) — Chassis ground (–):	Is the voltage more than 10 V?	Go to step 5.	Repair short cir- cuit in harness for power supply line.
5	CHECK A/C CONTROL MODULE POWER CIRCUIT. Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to ON. Connector & terminal (i48) No. 8 (+) — Chassis ground (–):	Is the voltage more than 10 V?	Go to step 6 .	Repair short cir- cuit in harness for power supply line.
6	CHECK A/C CONTROL MODULE GROUND CIRCUIT. Measure resistance of harness between A/C control module and chassis ground. Connector & terminal (i49) No. 12 — Chassis ground:	Is the resistance less than 5 Ω ?	Go to step 7.	Repair short cir- cuit in harness for ground line.
7	CHECK POOR CONTACT. Check poor contact in A/C control module.	Is there poor contact in A/C control module?	Repair poor con- tact in A/C control module.	Contact with your Subaru distributor.

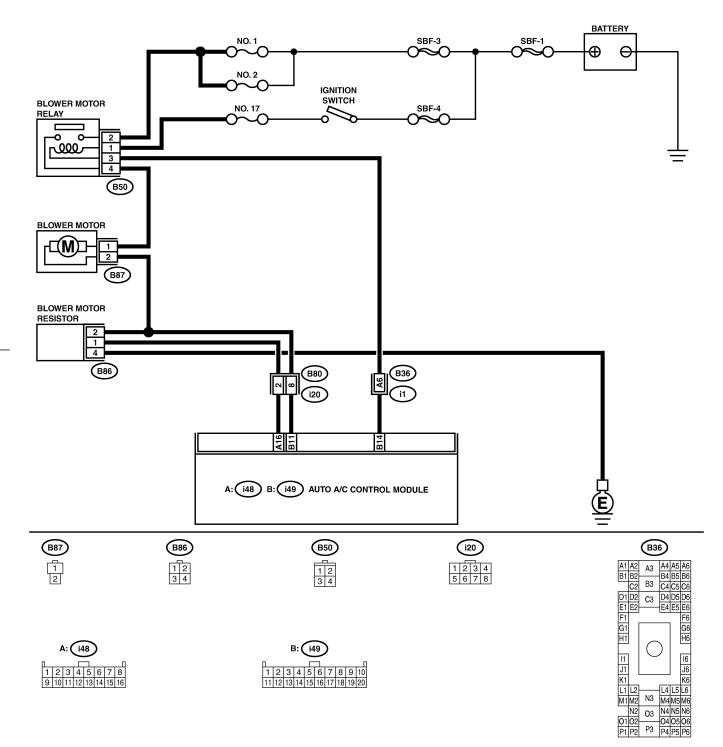

HVAC System (Auto A/C) (DIAGNOSTICS)

B: BLOWER MOTOR IS NOT ROTATED SOUTE25F38

TROUBLE SYMPTOM:

- Blower motor is not rotated.
- Blower motor is not rotated in "HI".

WIRING DIAGRAM:

B4M2372

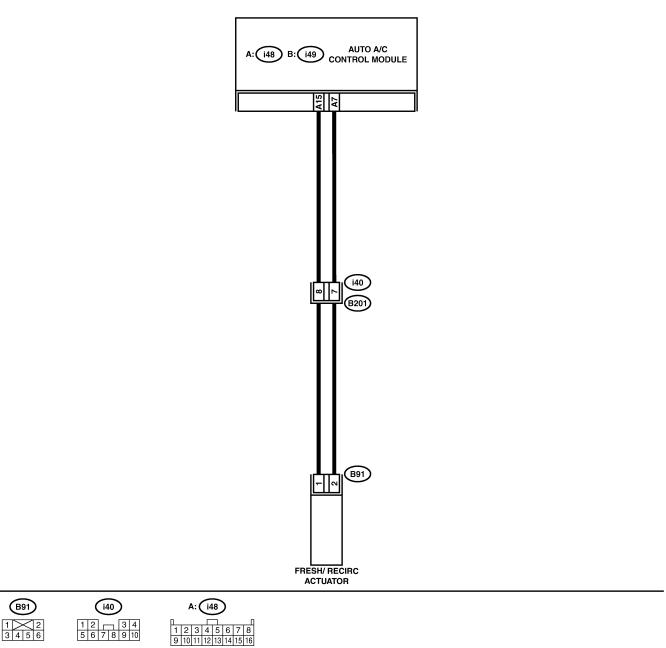

DIAGNOSTICS FOR A/C SYSTEM FAILURE HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
1	CHECK FUSE. 1) Remove No. 2 and No. 17 fuses in joint box. 2) Check condition of fuses.	Are any of the fuses blown- out?	Replace fuse.	Go to step 2.
2	 CHECK POWER SUPPLY TO BLOWER FAN MOTOR. 1) Turn ignition switch to ON. 2) Turn blower switch to ON. 3) Measure voltage between blower fan motor and chassis ground. Connector & terminal (B87) No. 1 (+) — Chassis ground (-): 	Is the voltage more than 10 V?	Go to step 3.	Repair open cir- cuit in harness for blower fan motor power supply line.
3	 CHECK BLOWER FAN MOTOR RELAY. 1) Turn ignition switch to OFF. 2) Remove blower fan motor relay. 3) Connect battery to No. 1 and No. 3 terminals of blower fan motor connector. 4) Measure resistance between No. 2 and No. 4 terminals. Terminals: No. 2 - No. 4 	Is the resistance less than 1 Ω?	Go to step 4.	Replace blower fan motor relay.
4	 CHECK BLOWER FAN MOTOR. 1) Disconnect connector from blower fan motor. 2) Connect battery to connector terminals of blower fan motor. 3) Make sure that blower fan motor is operated. 	Does the blower fan motor operate?	Go to step 5.	Replace blower fan motor.
5	CHECK POOR CONTACT. Check poor contact in A/C control module.	Is there poor contact in A/C control module?	Repair poor con- tact in A/C control module.	Contact with your Subaru distributor.

C: FRESH/RECIRC IS NOT CHANGED S001625F39

TROUBLE SYMPTOM:

FRESH/RECIRC mode door is not changed. WIRING DIAGRAM:

B4M2373

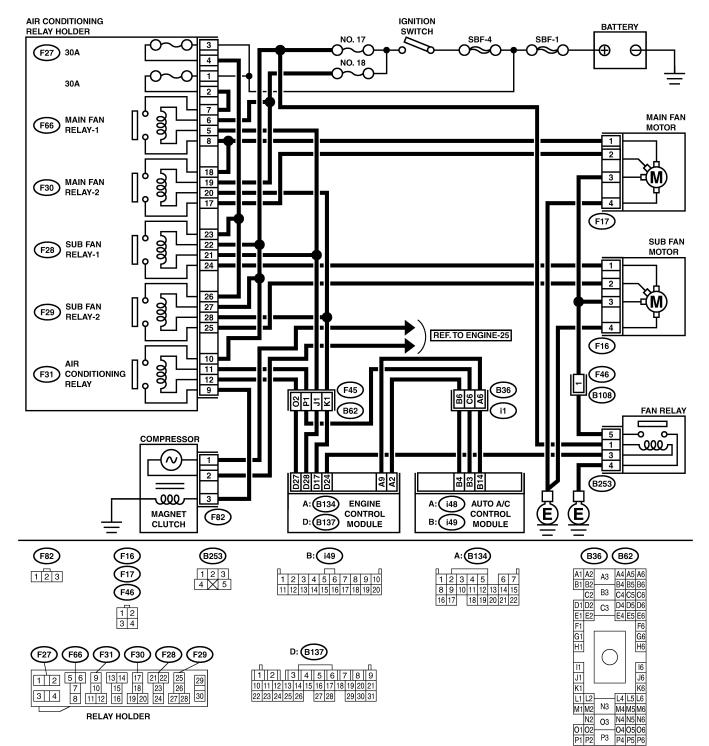

AC-20

DIAGNOSTICS FOR A/C SYSTEM FAILURE HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
1	CHECK SWITCH OPERATION. Make sure that the mode selection on display is changed when pushing the "MODE" switch.	Does the mode selection change?	Go to step 7.	Go to step 2.
2	CHECK FUSE. 1) Remove No. 17 fuse in joint box. 2) Check condition of fuse.	Is the fuse blown-out?	Replace fuse.	Go to step 3.
3	 CHECK SIGNAL VOLTAGE. 1) Change display to RECIRC by pushing MODE switch. 2) Measure voltage between A/C control mod- ule and chassis ground. Connector & terminal (i48) No. 15 (+) — Chassis ground (-): 	Is the voltage less than 1 V?	Go to step 4.	Repair short cir- cuit in harness for power supply line.
4	CHECK SIGNAL VOLTAGE. 1) Change display to FRESH with pushing MODE switch. 2) Measure voltage between A/C control mod- ule and chassis ground. Connector & terminal (i48) No. 7 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 5 .	Repair short cir- cuit in harness for power supply line.
5	CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND FRESH/RECIRC ACTUATOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from A/C control module and mode door motor. 3) Measure resistance of harness between A/C control module and FRESH/RECIRC actuator. Connector & terminal: (i48) No. 15 — (B91) No. 1	Is the resistance less than 1 Ω?	Go to step 6 .	Repair open cir- cuit in harness between A/C con- trol module and FRESH/RECIRC actuator.
6	CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND FRESH/RECIRC ACTUATOR. Measure resistance of harness between A/C control module and FRESH/RECIRC actuator. <i>Connector & terminal:</i> (i48) No. 7 — (B91) No. 2	Is the resistance less than 1 Ω ?	Go to step 7.	Repair open cir- cuit in harness between A/C con- trol module and FRESH/RECIRC actuator.
7	CHECK POOR CONTACT. Check poor contact in A/C control module.	Is there poor contact in A/C control module?	Repair poor con- tact in A/C control module.	Contact with your Subaru distributor.

D: COMPARTMENT TEMPERATURE IS NOT CHANGED OR A/C SYSTEM DOES NOT RESPOND QUICKLY 5001625F40

WIRING DIAGRAM:

B4M2374

AC-22

DIAGNOSTICS FOR A/C SYSTEM FAILURE HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
1	CHECK FUSE.	Is the fuse blown-out?	Replace fuse.	Go to step 2.
	1) Turn ignition switch to OFF.			
	2) Remove No. 2 fuse in main fuse box.			
	3) Check condition of fuse.			
2	CHECK POWER SUPPLY TO MAGNET CLUTCH OF A/C COMPRESSOR. 1) Start the engine, and turn A/C switch to ON. 2) Set the compartment temperature at 18°C (65°F) (MAX COOL).	Is the voltage more than 10 V?	Go to step 3.	Repair open cir- cuit in harness for power supply line of the A/C com- pressor.
	 3) Measure voltage between magnet clutch connector and chassis ground. Connector & terminal (F82) No. 3 (+) — Chassis ground (-): 			
3	 CHECK SIGNAL VOLTAGE TO A/C RELAY. 1) Turn ignition switch to ON. 2) Turn A/C switch to ON. 3) Measure signal voltage to A/C relay and chassis ground. Connector & terminal (F31) No. 9 (+) — Chassis ground (-): 	Is the voltage more than 10 V?	Go to step 4.	Repair open cir- cuit in harness for power supply line.
4	 CHECK A/C RELAY. 1) Remove A/C relay in main fuse box. 2) Check A/C relay. <ref. ac-39<="" li="" to=""> INSPECTION, Relay and Fuse.> </ref.>	Is the operation of each relay OK?	Go to step 5.	Replace A/C relay.
5	 CHECK OPERATION OF MAIN FAN MOTOR. 1) Start the engine. 2) Turn A/C switch to ON. 3) Check operation of main fan motor. 	Does the radiator main fan operate?	Go to step 10 .	Go to step 6.
6	CHECK POWER SUPPLY TO MAIN FAN MOTOR. CAUTION: Be careful not to overheat engine during repair. 1) Turn ignition switch to OFF. 2) Disconnect connector from main fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 95°C (203°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between main fan motor connector and chassis ground. <i>Connector & terminal</i> <i>(F17) No. 1, 2 (+) — Chassis ground</i> <i>(-):</i>	Is the voltage more than 10 V?		Repair open cir- cuit in harness for power supply cir- cuit.
7	 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between main fan motor connector and chassis ground. Connector & terminal (F17) No. 4 — Chassis ground: 	Is the resistance less than 1 Ω?	Go to step 8.	Repair open cir- cuit in harness between main fan motor connector and chassis ground.
8	CHECK POOR CONTACT.	Is there poor contact in	Repair poor con-	Go to step 9.

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
1	 CHECK AMBIENT SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ambient sensor. 3) Measure resistance between connector terminals of ambient sensor. Terminals: No. 1 - No. 2 	Is the resistance approx. 2.2 kΩ at 25°C (77°F)?	Go to step 2.	Replace ambient sensor.
2	CHECK INPUT SIGNALS FOR AMBIENT SENSOR. 1) Turn ignition ON. 2) Measure voltage between (F78) connector terminals. Connector & terminal: (F78) No. 1 — No. 2	Is the voltage approx. 4.5 V?	Go to step 6.	Go to step 3.
3	 CHECK OUTPUT SIGNALS FROM A/C CONTROL MODULE. 1) Turn ignition switch to OFF. 2) Pull out A/C control panel. 3) Disconnect connector from ambient sensor. 4) Turn ignition switch to ON. 5) Measure voltage between connector terminals of A/C control module. Connector & terminal: (i49) No. 6 — No. 17 	Is the voltage approx. 4.5 V?	Go to step 6.	Go to step 4.
4	 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AMBIENT SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and ambient sensor. Connector & terminal: (F78) No. 1 — (i49) No. 6 	Is the resistance less than 1 Ω ?	Go to step 5.	Repair open cir- cuit in harness between A/C con- trol module and ambient sensor.
5	CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AMBIENT SENSOR. Measure resistance of harness between A/C control module and ambient sensor. Connector & terminal: (F78) No. 2 — (i49) No. 17	Is the resistance less than 1 Ω ?	Go to step 6.	Repair open cir- cuit in harness between A/C con- trol module and ambient sensor.
6	CHECK POOR CONTACT. Check poor contact in A/C control module.	Is there poor contact in A/C control module?	Repair poor con- tact in A/C control module.	Contact with your Subaru distributor.

AC-27

B: TROUBLE CODE 22 OR -22 (IN-VEHICLE SENSOR) S001509F42

TROUBLE SYMPTOM:

When turning AUTO switch to ON, blower fan speed, outlet port and inlet port is not changed.

If trouble code 22 or -22 appears on the display, replace the A/C control module. The in-vehicle sensor is built into the A/C control module and cannot be replaced as a single unit.

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE HVAC System (Auto A/C) (DIAGNOSTICS)

No.	Step	Check	Yes	No
1	 CHECK EVAPORATOR SENSOR. 1) Turn ignition switch to OFF. 2) Remove glove box. 3) Disconnect connector from evaporator sensor. 4) Measure resistance between connector terminals of evaporator sensor. Terminals: No. 1 — No. 3 	Is the resistance approx. 1.8 — 2.0 kΩ at 20°C (68°F)?	Go to step 2.	Replace evapora- tor sensor.
2	 CHECK INPUT SIGNALS FOR EVAPORA- TOR SENSOR. 1) Turn ignition switch to "ON". 2) Measure voltage between (B88) connector terminal and chassis ground. Connector & terminal (B88) No. 1 (+) — Chassis ground (-): 	Is the voltage approx. 4.5 V?	Go to step 3.	Replace evapora- tor sensor.
3	 CHECK OUTPUT SIGNALS FROM A/C CONTROL MODULE. 1) Turn ignition switch to OFF. 2) Pull out A/C control module. 3) Turn ignition switch to "ON". 4) Measure voltage between A/C control module connector terminals. Connector & terminal: (i49) No. 7 — No. 17 	Is the voltage approx. 4.5 V?	Go to step 4.	Go to step 6.
4	 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND EVAPORATOR SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and evaporator sensor. Connector & terminal: (B88) No. 1 — (i49) No. 7 	Is the resistance less than 1 Ω?	Go to step 5.	Repair open cir- cuit in harness between A/C con- trol module and evaporator sen- sor.
5	CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND EVAPORATOR SENSOR. Measure resistance of harness between A/C control module and evaporator sensor. Connector & terminal: (B88) No. 3 — (i49) No. 17	Is the resistance less than 1 Ω ?	Go to step 6.	Repair open cir- cuit in harness between A/C con- trol module and evaporator sen- sor.
6	CHECK POOR CONTACT. Check poor contact in A/C control module.	Is there poor contact in A/C control module?	Repair poor con- tact in A/C control module.	Contact with your Subaru distributor.

AC-31

D: TROUBLE CODE 25 OR -25 (SUNLOAD SENSOR) 5001509F44

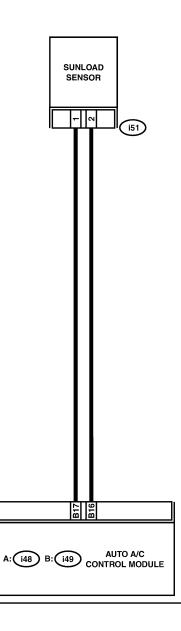

TROUBLE SYMPTOM:

- Sensor identified that sunlight is at maximum. Then, A/C system is controlled to COOL side.
 Sensor identified that sunlight is at minimum. Then, A/C system is controlled to HOT side.

NOTE:

When the sunload sensor is checked inside the passenger compartment or in the shade, code "25" may appear on the indicator. Always check the sunload sensor in a place where it senses direct sunlight.

WIRING DIAGRAM:

HVAC System (Heater, Ventilator and A/C)

C: CAUTION STO1001A03

1. HFC-134a A/C SYSTEM ST01001A0301

• Unlike the old conventional HFC-12 system components, the cooling system components for the HFC-134a system such as the refrigerant and compressor oil are incompatible.

• Vehicles with the HFC-134a system can be identified by the label "A" attached to the vehicle. Before maintenance, check which A/C system is installed in the vehicle.

2. COMPRESSOR OIL STO1001A0302

• HFC-134a compressor oil has no compatibility with that for R12 system.

• Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use ZXL200PG.

• Do not mix multiple compressor oils.

If HFC-12 compressor oil is used in a HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.

On the other hand, if HFC-134a compressor oil is used in a HFC-12 A/C system, the durability of the A/C system will be lowered.

• HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from the atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT STOTOD 1A0303

• The HFC-12 refrigerant cannot be used in the HFC-134a A/C system. The HFC-134a refrigerant, also, cannot be used in the HFC-12 A/C system.

• If an incorrect or no refrigerant is used, poor lubrication will result and the compressor itself may be damaged.

4. HANDLING OF REFRIGERANT STOTOD 1A0304

• The refrigerant boils at approx. -30°C (-22°F). When handling it, be sure to wear safety goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite.

If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.

• Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use hot water in 40°C (104°F) max.

• Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)

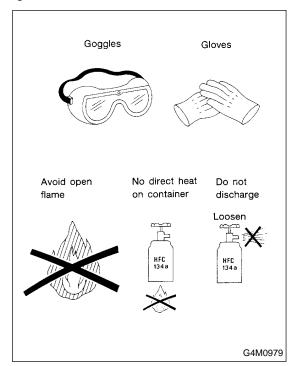

• When the engine is running, do not open the high-pressure valve of the manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.

• The refrigerant is non-toxic and harmless under normal operating circumstance, but it may change to phosgene (a noxious fume) under open flames or high temperatures (caused by a cigarette or heater).

• Provide good ventilation and do not work in a closed area.

• Never perform a gas leak test using a halide torch-type leak tester.

• In order to avoid destroying the ozone layer, prevent HFC-134a from being released into the atmosphere. Using a refrigerant recovery system, discharge and reuse it.

AC-12

5. O-RING CONNECTIONS STO 100 1A0305

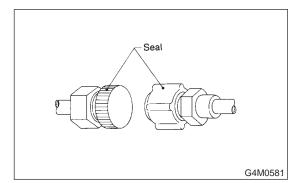

• Use new O-rings.

• In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform operations without gloves and shop towels.

• Apply the compressor oil to the O-rings to avoid sticking, then install them.

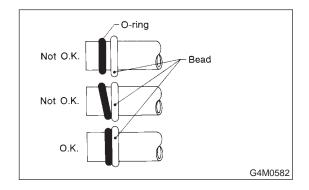

• Use a torque wrench to tighten the O-ring fittings: Over-tightening will damage the O-ring and tube end distortion.

• If the operation is interrupted before completing a pipe connection, recap the tubes, components, and fittings with a plug or tape to prevent contamination from entering.

• Visually check the surfaces and mating surfaces of O-rings, threads, and connecting points. If a failure is found, replace the applicable parts.

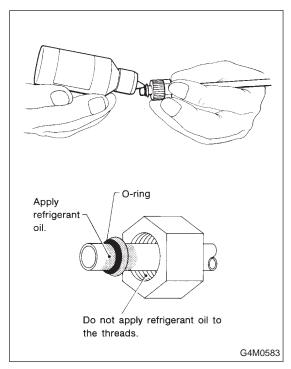

• Install the O-rings at right angle to the tube beards.

• Use the oil specified in the service manual to lubricate the O-rings.

Apply the oil to the top and sides of the O-rings before installation.

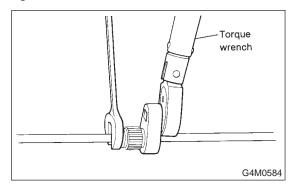

Apply the oil to the area including the O-rings and tube beads.

• When connecting hoses or pipes, use 2 wrenches (a torque wrench for tightening). While securing one side with a wrench, tighten the other side to the specified torque with a torque wrench. If only one wrench is used to tighten, the tightening torque will be excessive or insufficient. This may cause a pipe distortion or gas leak, resulting in damage to hoses and pipes.

• After tightening, using a clean shop towel to remove excess oil from the connections and any oil which may have run on the vehicle body or other parts.

• If any leakage is suspected after tightening, do not retighten the connections, Disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

AC-13

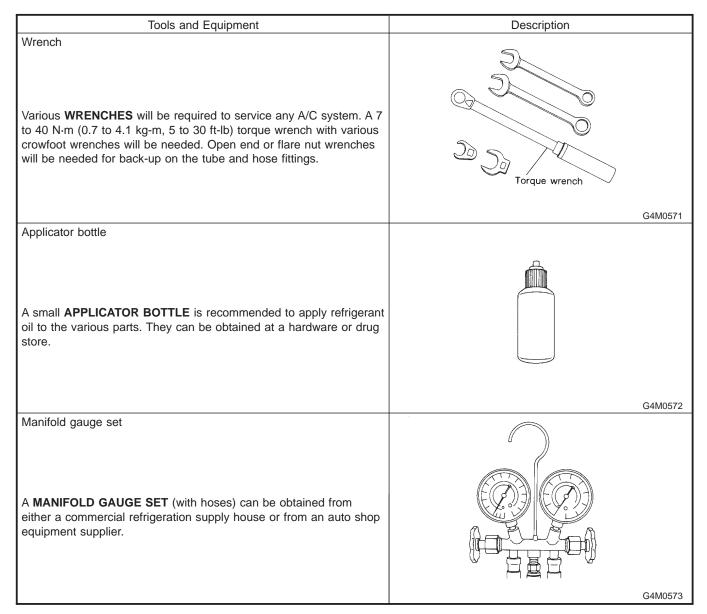

HVAC System (Heater, Ventilator and A/C)

D: PREPARATION TOOL STOIDOLAIT

CAUTION:

When working on vehicles with the HFC-134a system, only use HFC-134a specified tools and parts. Do not mix with CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, poor lubrication will result and the compressor itself may be destroyed. In order to help prevent mixing HFC-134a and CFC-12 parts and liquid, the tool and screw type and the type of service valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool & screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

2. Refrigerant Pressure with Manifold Gauge Set STOTEST

A: OPERATION STO1631A16

- 1) Place the vehicle in the shade and draftless condition.
- 2) Connect the manifold gauge set.
- 3) Open the front windows and close all doors.
- 4) Open the hood.
- 5) Increase engine rpm to 1,500.
- 6) Turn ON the A/C switch.
- 7) Turn the temperature control switch to MAX COOL.
- 8) Put in RECIRC position.
- 9) Turn the blower control switch to HI.
- 10) Read the gauge.

Standard:

Low pressure: 127 - 196 kPa (1.3 - 2.0 kg/cm², 18 - 28 psi) High pressure: 1,471 - 1,667 kPa (15 - 17 kg/cm², 213 - 242 psi) Ambient temperature: 30 - 35°C (86 - 95°F)

B: INSPECTION STO1631A10

Symptom	Probable cause	Repair order
High-pressure side is unusually high.	 Defective condenser fan motor Clogged condenser fan Too much refrigerant Air inside the system Defective receiver drier 	 Replace the fan motor. Clean the condenser fin. Discharge refrigerant. Replace the receiver drier.
High-pressure side is unusually low.	 Defective compressor Not enough refrigerant Clogged expansion valve Expansion valve frozen temporarily by moisture 	Replace the compressor.Check for leaks.Replace the expansion valve.
Low-pressure side is unusually high.	 Defective compressor Defective expansion valve Too much refrigerant 	Replace the compressor.Replace the expansion valve.Discharge refigerant.
Low-pressure side is unusually low.	 Not enough refrigerant Clogged expansion valve Expansion valve frozen temporarily by moisture Saturated receiver drier 	Check for leaks.Replace the expansion valveReplace the receiver drier.

3. Refrigerant Recovery Procedure STO1291

A: OPERATION ST01291A16

CAUTION:

• During operation, be sure to wear safety goggles and protective gloves.

• Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and reuse it.

• When reusing the discharged refrigerant, keep service cans on hand. Because the discharge rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.

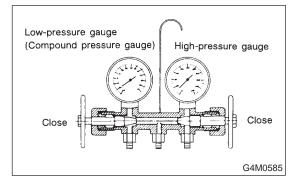

• Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

1) Turn the A/C switch ON.

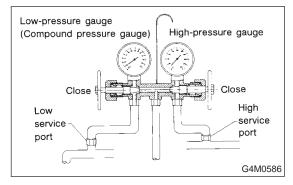

Leave the engine running for approx. 5 minutes to activate the compressor. Perform the refrigerating cycle with the refrigerant to discharge the compressor oil remaining on the functional parts into the compressor as much as possible.

2) Stop the engine.

3) Close the valves on the low-/high-pressure sides of the manifold gauge set.

4) Install the low-/high-pressure hoses to the service ports on the low-/high-pressure sides of the vehicle respectively.

5) Connect the center hose to the refrigerant recovery system.

6) Follow the operation manual to activate the refrigerant recovery system.

4. Refrigerant Charging Procedure ST01292

A: OPERATION ST01292A16

CAUTION:

• During operation, be sure to wear safety goggles and protective gloves.

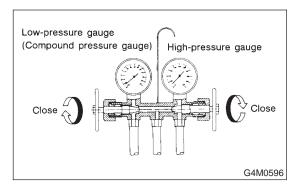

• Before charging the refrigerant, evacuate the system to remove small amounts of moisture remaining in the system.

The moisture in the system can be completely evacuated only under the minimum vacuum level. The minimum vacuum level affects the temperature in the system.

• The list below shows the vacuum values necessary to boil water in various temperature. In addition, the vacuum levels indicated on the gauge are approx. 3.3 kPa (25 mmHg, 0.98 inHg) lower than those measured at 304.8 m (1,000 ft) above sea level.

Vacuum level required to boil water (at sea level)			
Temperature	Vacuum		
1.7°C (35°F)	100.9 kPa (757 mmHg, 29.8 inHg)		
7.2°C (45°F)	100.5 kPa (754 mmHg, 29.7 inHg)		
12.8°C (55°F)	99.8 kPa (749 mmHg, 29.5 inHg)		
18.3°C (65°F)	99.2 kPa (744 mmHg, 29.3 inHg)		
23.9°C (75°F)	98.5 kPa (739 mmHg, 29.1 inHg)		
29.4°C (85°F)	97.2 kPa (729 mmHg, 28.7 inHg)		
35°C (95°F)	95.8 kPa (719 mmHg, 28.3 inHg)		

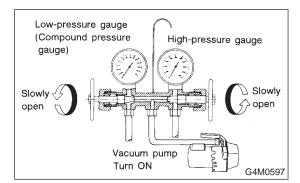

1) Close the valves on low-/high-pressure sides of the manifold gauge.

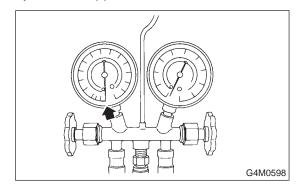

2) Install the low-/high-pressure hoses to the corresponding service ports on the vehicle respectively.

3) Connect the center hose of the manifold gauge set with the vacuum pump.

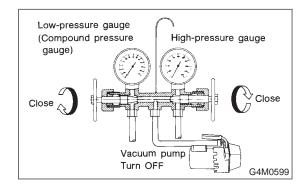

4) Carefully open the valves on the low-/highpressure sides to activate the vacuum pump.

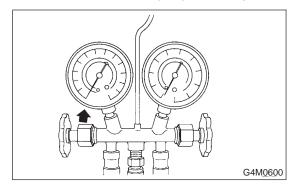

5) After the low-pressure gauge reaches 100.0 kPa (750 mmHg, 29.5 inHg) or higher, evacuate the system for approx. 15 minutes.

6) After 15 minutes of evacuation, if the reading shows 100.0 kPa (750 mmHg, 29.5 inHg) or higher, close the valves on the both sides to stop the vacuum pump.

7) Note the low-pressure gauge reading.

AC-19

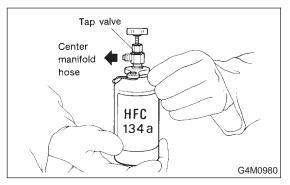

REFRIGERANT CHARGING PROCEDURE

HVAC System (Heater, Ventilator and A/C)

8) Leave it at least 5 minutes, and then check the low-pressure gauge reading for any changes.

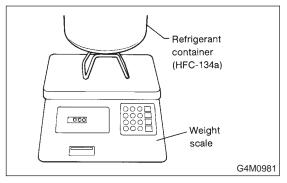

When a gauge indicator shows near to zero point, this is a sign of leakage. Check pipe connector points, repair them, make sure there is no leakage by air bleeding.

9) Following the can tap operation manual instructions, install it to the refrigerant can.

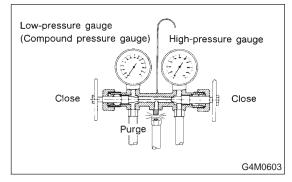

10) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

11) When a 13.6 kg (30 lb) refrigerant container is used, measure the refrigerant amount in use using a weighting scale.

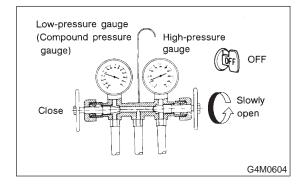

12) Confirm that all the 3 hoses are tightly connected to the manifold gauge set.

13) Open the valve on the HFC-134a source. 14) Loosen the center hose connection on the manifold gauge set (if applicable, press a purge valve on the manifold gauge set) only for a couple of seconds to allow the air in the center hose to escape by the refrigerant. 15) Carefully open the high-pressure valve with the engine OFF.

CAUTION: Do not open the low-pressure valve.

CAUTION:

Never run the engine during charging from the high-pressure side.

16) Close the high-pressure valve when the lowpressure gauge reaches 98 kPa (1 kg/cm², 14 psi). Using a leak tester, check the system for leaks. If any leakage is found after the refrigerant recovery is completed, repair the applicable area.

17) After confirming that there are no leaks with the leak test, charge the required amount of refrigerant.

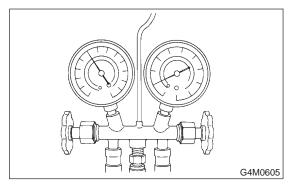

CAUTION:

Never run the engine during charging from the high-pressure side.

18) Close the high-pressure valve when;

• the readings of low- and high-pressure gauges become almost equal, after the charging speed is reduced,

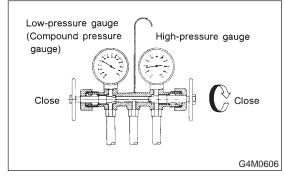

- the HFC-134a source becomes empty, or
- the system is filled with the gas.

AC-20

HVAC System (Heater, Ventilator and A/C)

19) If the HFC-134a source is empty, close the high-pressure valve, close the valve on the can tap, and replace the HFC-134a source with a new one to restart the operation.

20) Confirm that both the low- and high-pressure valves can be closed. Start the engine with the A/C switch OFF.

21) Quickly repeat ON-OFF cycles a few times to prevent initial compressor damage.

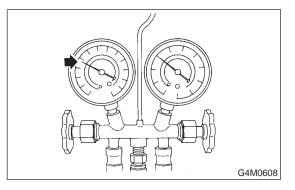

22) Set up the vehicle to the following status:

- A/C switch ON
- Engine running at 1,500 rpm
- Blower speed setting to "HI"
- Temperature setting to "MAX COOL"
- Air inlet setting to "RECIRC"
- Windows open

23) While reading the low-pressure gauge, carefully open the low-pressure valve with the refrigerant source connected and the service hose purged.

CAUTION:

Never open the high-pressure valve with the engine running.

24) Adjust the refrigerant flow to maintain the pressure on the low-pressure side at 276 kPa (2.81 kg/cm², 40 psi) max.

25) After the system is fully charged, close the low-pressure valve.

26) Close the valve on the refrigerant source.

Refrigerant amount			
Refrigerant		Minimum	Maximum
HFC-134a	LHD	0.6 kg (1.3 lb)	0.7 kg (1.5 lb)
пгс-134а	RHD	0.4 kg (0.9 lb)	0.5 kg (1.1 lb)

27) Disconnect the hose from the service port, and install the service port cap.

HVAC System (Heater, Ventilator and A/C)

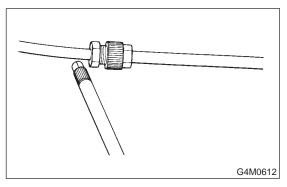

5. Refrigerant Leak Check STO1293

A: INSPECTION ST01293A10

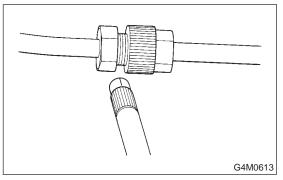

1) Operate the A/C system for approx. 10 minutes, and confirm that the high-side pressure shows at least 690 kPa (7.03 kg/cm², 100 psi). Then stop the engine to start the leak test.

2) Starting from the connection between the highpressure tube and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.

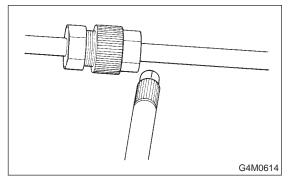

• Connection between the tube and tube fitting

Connection between 2 parts

• Connection between the tube and nut

3) Check the joint and seam between the pressure switch (dual switch) and receiver dryer.

4) Check the connections between the condenser and tubes, and welded joints on the condenser. The leak tester may detect the oil on the condenser fins as a leak. 5) Check the joint between the compressor and hoses.

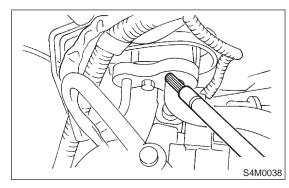

6) Check the machined area of compressor and other joints on the compressor.

7) Check the thermal limiter (if equipped) on the compressor housing.

8) Check the compressor shaft seal at the area near the center of compressor clutch pulley.

Some shaft seals show a slight amount of leakage about 28 g (1.0 oz) per year. This is not a problem. 9) Starting from the connection between the lowpressure tube and evaporator, check the system for leakage along the high-pressure side through the compressor. The following items must be checked thoroughly.

- Connection between the tube and tube fitting
- Connection between 2 parts
- Connection between the tube and nut

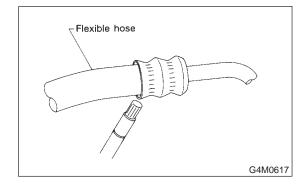

10) Visually check the rubber area of the flexible hose for cracks.

Check the entire length of the flexible hose, especially the connection with the metal hose end.

CAUTION:

Carefully check the external surface of hoses and tubes at approx. 25 mm (0.98 in) per second.

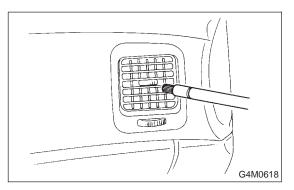

11) Disconnect the drain hose from the evaporator case, and check the hose end for at least 10 seconds.

After the test is finished, reconnect the drain hose.

🖙 00.5.31/68i/7ac 🖘

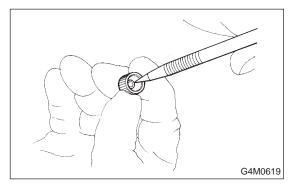

AC-22

12) Turn the ignition key to ON position, and run the blower at high speed for 1 minute. Stop the blower to check the ventilation grill on the instrument panel. While moving the tester closer to the grill, run the blower for 1 or 2 seconds, then stop it. Check the grill at that point for at least 10 seconds.

13) Check the valve in the service port.

14) Visually check the rubber seal in the service port cap.

AC-23

6. Compressor Oil 5701294

A: OPERATION S701294A16

NOTE:

Before making repairs, conduct the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

- 1) Increase engine rpm to 1,500.
- 2) Turn ON the A/C switch.

3) Turn the temperature control switch to MAX COOL.

- 4) Put in RECIRC position.
- 5) Turn the blower control switch to HI.
- 6) Leave in this condition for 10 minutes.

B: REPLACEMENT ST01294A20

NOTE:

• If a component is replaced, add an appropriate amount of compressor oil.

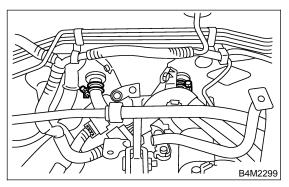

• When replacing the compressor, the new compressor will already have the specified amount of oil in it. Install the new compressor after removing the same amount of oil that is remaining in the compressor removed.

Replacement parts	Amount of oil replenishment
Evaporator	114 mℓ (3.9 US fl oz, 4.0 lmp fl oz)
Receiver drier	5 mℓ (0.2 US fl oz, 0.2 Imp fl oz)
Condenser	2 mℓ (0.07 US fl oz, 0.07 Imp fl oz)
Hose	1 mℓ (0.03 US fl oz, 0.04 Imp fl oz)

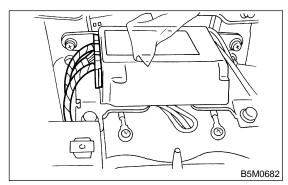

7. Heater Unit ST01290

A: REMOVAL STO1290A18

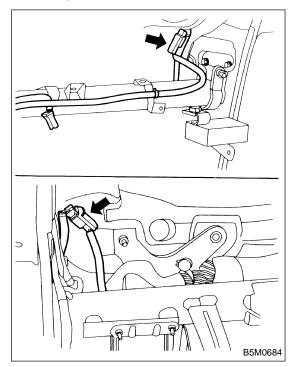

- 1) Disconnect ground cable from battery.
- 2) Pull out LLC.
- 3) Remove air cleaner case.
- 4) Release heater hose clamps in engine com-
- partment to remove the hoses.

5) Remove A/C unit. <Ref. to INTAKE UNIT.>6) Using a Torx wrench, remove airbag control unit.

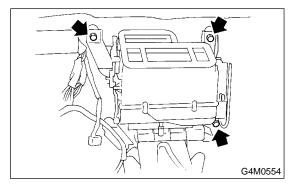

7) Disconnect connector of airbag main harness near steering support beam.

8) Loosen bolts and nuts of support beam to remove support beam.

9) Disconnect servo connector.

10) Loosen bolts and nuts of heater unit to remove heater unit.

B: INSTALLATION *storage of the reverse order of removal.*

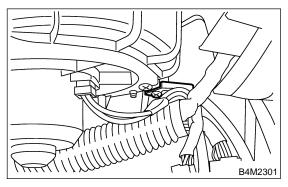

AC-25

HVAC System (Heater, Ventilator and A/C)

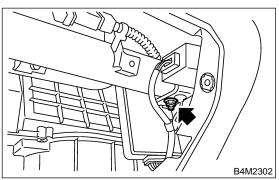

8. Blower Motor Assembly 5701295

A: REMOVAL STO1295A18

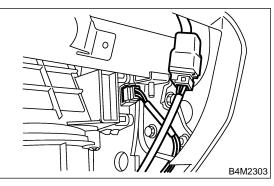

- 1) Disconnect ground cable from battery.
- 2) Remove glove box. <Ref. to EI-34 REMOVAL, Glove Box.>
- 3) Remove mounting bolts of harness stay.

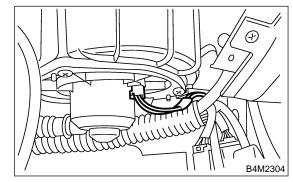

4) Remove nuts of keyless unit stay and CRU unit stay.

- 5) Disconnect connector of sunroof.
- 6) Disconnect servo connector.

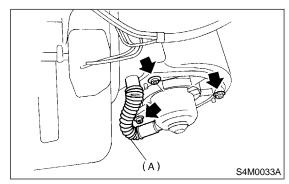

7) Disconnect motor connector.

8) Remove 3 screws.

9) Disconnect aspirator pipe (A) and remove blower motor.

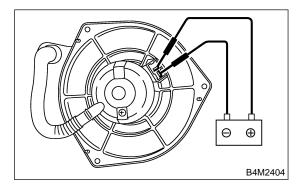

B: INSTALLATION S701295A11

Install in the reverse order of removal.

C: INSPECTION STO1295A10

Connect motor connector terminal 1 from the battery to the positive (+) lead and terminal 2 to the negative (-) lead. Make sure the motor runs smoothly.

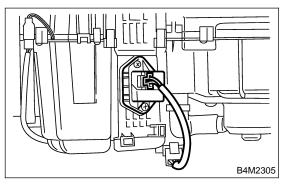

AC-26

9. Power Transistor (Heater Blower Resistor) 5701553

A: REMOVAL STO1553A18

1) Remove glove box. <Ref. to EI-36 REMOVAL, Glove Box.>

- 2) Disconnect power transistor connector.
- 3) Loosen 2 screws to remove power transistor.

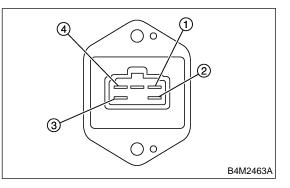

B: INSTALLATION STO1553A11

Install in the reverse order of removal.

C: INSPECTION ST01553A10

1. MANUAL A/C \$701553A1002

Check continuity between connector terminals.

Tester connection	Condition	Specified condition
4 — 3	Constant	Approx. 0.46 Ω
3 — 2	Constant	Approx. 0.85 Ω
2 — 1	Constant	Approx. 1.77 Ω

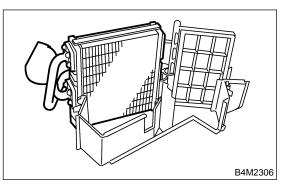

If NG, replace the blower resistor.

10. Heater Core STO1554

A: REMOVAL STO1554A18

1) Remove heater unit. <Ref. to AC-25 REMOVAL, Heater Unit.>

- 2) Remove screws to separate heater unit case.
- 3) Remove heater core.

B: INSTALLATION STO1554A11

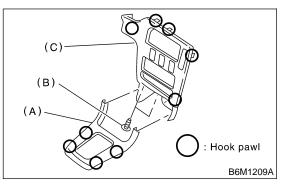

Install in the reverse order of removal.

11. Control Unit ST01285

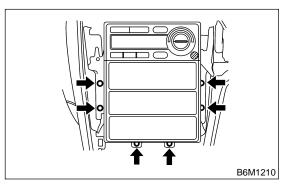

A: REMOVAL ST01285A18

1. AUTO A/C ST01285A1801

- 1) Disconnect ground cable from battery.
- 2) Remove front cover (A).
- 3) Loosen 2 screws (B) to remove center panel (C).

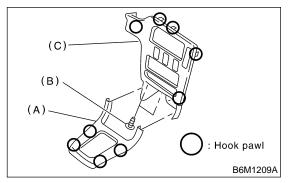

4) Loosen screws to pull control unit slightly out of center console.

5) Disconnect connector to remove control unit.

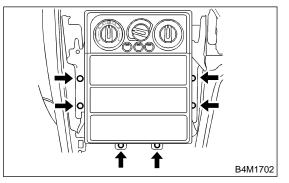

2. MANUAL A/C S701285A1802

- 1) Disconnect ground cable from battery.
- 2) Remove front cover (A).
- 3) Loosen 2 screws (B) to remove center panel (C).

4) Set temperature control switch to "FULL HOT", and disconnect temperature control cable from heater unit.

5) Loosen screws to pull control unit slightly out of center console.

6) Disconnect connector from antenna cable to remove control unit.

B: INSTALLATION STO1285A11

1. AUTO A/C S701285A1101

Install in the reverse order of removal.

2. MANUAL A/C S701285A1102

1) Install in the reverse order of removal.

2) Before installation, set temperature control switch to "FULL HOT".

12. Compressor ST01281

A: INSPECTION ST01281A10

1. MAGNETIC CLUTCH CLEARANCE

\$701281A1001

1) Check the clearance of the entire circumference around the drive plate and pulley.

Standard:

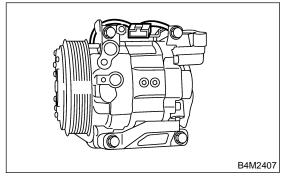

0.45±0.15 mm (0.0177±0.0059 in)

2. MAGNETIC CLUTCH OPERATION

S701281A1002

1) Disconnect the compressor connector.

2) Connect the No. 3 terminal of the compressor connector from the battery to the positive (+) lead. Ground the negative (-) lead to the body.

3) Make sure the magnet clutch engages. If NG, replace the compressor.

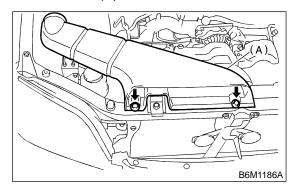

B: REMOVAL STO1281A18

1) Perform oil return operation. <Ref. to AC-24 OPERATION, Compressor Oil.>

2) Turn A/C switch OFF and stop the engine.

3) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-18 OPERATION, Refrigerant Recovery Procedure.>

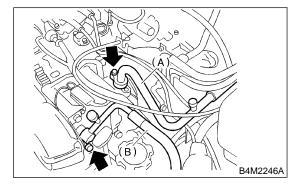

- 4) Disconnect ground cable from battery.
- 5) Remove duct (A).

6) Disconnect low-pressure hose (A) and high-pressure hose (B).

CAUTION:

Be careful not to lose O-rings on hose. Immediately seal hose with a plug or vinyl tape to prevent the entry of contamination.

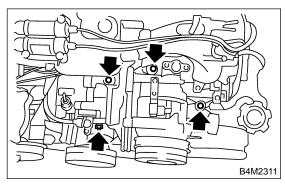

7) Remove V-belt. <Ref. to ME(H4)-43 REMOVAL, V-belt.>

8) Remove generator. <Ref. to SC(H4)-15 REMOVAL, Generator.>

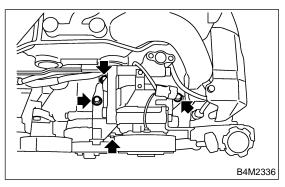

9) Disconnect compressor harness from body harness.

AC-31

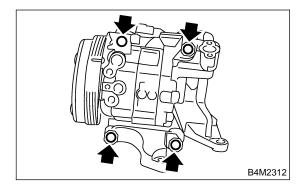

10) Remove bolts from compressor bracket. **4 CYLINDERS:**

6 CYLINDERS:

11) Loosen bolts to remove compressor from bracket.

C: INSTALLATION STO1281A11

1) Install in the reverse order of removal.

2) Replace O-rings on low-/high-pressure hoses with new ones, then apply compressor oil.

3) When replacing compressor, adjust amount of compressor oil. <Ref. to Compressor Oil.>
4) Charge refrigerant. <Ref. to AC-19

OPERATION, Refrigerant Charging Procedure.>

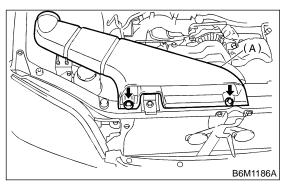

AC-32

13. Condenser ST01282

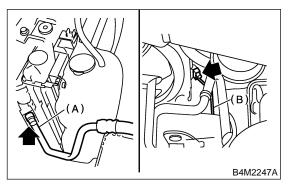

A: REMOVAL STO1282A18

1) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-18 OPERATION, Refrigerant Recovery Procedure.>

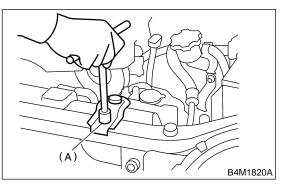

- 2) Disconnect ground cable from battery.
- 3) Remove duct (A).

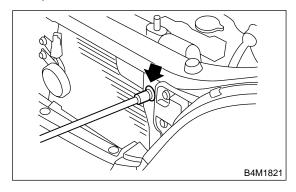

4) Disconnect high-pressure hose (A) and low-pressure hose (B) from condenser.

5) Remove radiator bracket (A).

6) Remove 2 bolts. While lifting condenser, pull it out through the space between the radiator and the radiator panel.

CAUTION:

Be careful not to damage condenser fins. If a damaged fin is found, repair it using a thin screwdriver.

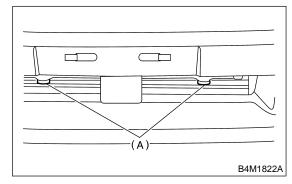

If condenser is replaced, add appropriate amount of compressor oil to the compressor. <Ref. to AC-24 REPLACEMENT, Compressor Oil.>

B: INSTALLATION STO1282A11

1) Install in the reverse order of removal.

CAUTION:

Replace O-rings on hoses or pipes with new ones, and then apply compressor oil. Confirm that lower guide of condenser has been fitted into holes on radiator panel.

2) Charge refrigerant. <Ref. to AC-19 OPERATION, Refrigerant Charging Procedure.>

C: INSPECTION ST01282A10

1) Confirm that no dust or insects are found on the condenser fins. Air-blow or flush fins with water as needed.

2) Confirm that no oil leaks from condenser. If a failure is found, replace condenser with a new one.

AC-33

14. Receiver Drier STO1283

A: REMOVAL STO1283A18

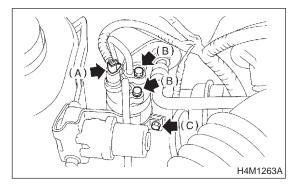

1) Disconnect ground cable from battery.

2) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-18 OPERATION, Refriger-

ant Recovery Procedure.>

- 3) Disconnect pressure switch harness (A).
- 4) Disconnect pipe (B).

5) Loosen mounting bolts (C) to remove receiver drier.

CAUTION:

The receiver drier contains a desiccant. After disconnecting receiver drier, plug it to avoid moisture.

If receiver drier is replaced, add appropriate amount of compressor oil to the compressor. <Ref. to AC-24 REPLACEMENT, Compressor Oil.>

B: INSTALLATION STO1283A11

1) Install in the reverse order of removal.

CAUTION:

Replace O-rings with new ones, and apply compressor oil.

2) Charge refrigerant. <Ref. to AC-19 OPERATION, Refrigerant Charging Procedure.>

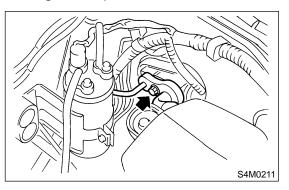

15. Intake Unit STO1632

A: REMOVAL STO1632A18

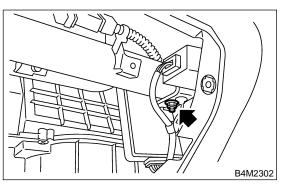

1) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-18 OPERATION, Refrigerant Recovery Procedure.>

2) Disconnect ground cable from battery.

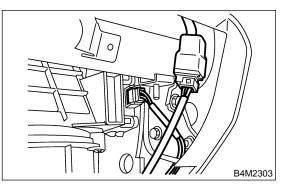

3) Remove bolts securing expansion valve and pipe in engine compartment.

- 4) Remove instrument panel. <Ref. to EI-37 REMOVAL, Instrument Panel.>
- 5) Remove keyless unit and CRU unit.

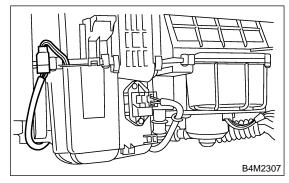

- 6) Disconnect sunroof connector.
- 7) Disconnect servo motor connector.

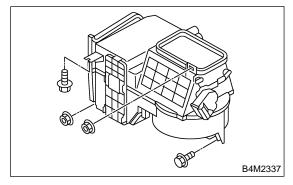

- 8) Disconnect heater blower power transistor connector.
- 9) Disconnect heater blower motor connector.

10) Disconnect in-vehicle temperature sensor connector.

11) Remove bolts and nuts on the unit.

- 12) Disconnect drain hose.
- 13) Remove the unit.

B: INSTALLATION STO1632A11

1) Install in the reverse order of removal.

CAUTION:

Replace O-rings with new ones, and apply compressor oil.

2) Charge refrigerant. <Ref. to AC-19 OPERATION, Refrigerant Charging Procedure.>

AC-35

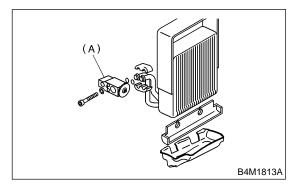

C: DISASSEMBLY ST01632A06

1) Remove resistor (A) and thermistor (B) from intake unit.

2) Remove screws and clips to separate intake unit.

<image><image>

3) Remove expansion valve (A) from evaporator.

CAUTION:

If evaporator is replaced, add appropriate amount of compressor oil to evaporator. <Ref. to AC-24 REPLACEMENT, Compressor Oil.>

D: ASSEMBLY ST01632A02

Assemble in the reverse order of disassembly.

CAUTION:

Replace O-rings with new ones, and then apply compressor oil.

16. Flexible Hose ST01286

A: REMOVAL STO1286A18

CAUTION:

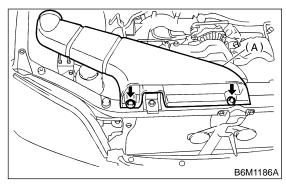

• When disconnecting/connecting hoses, do not apply excessive force them. Confirm that no torsion and excessive tension exist after installing.

• Seal the disconnected hose with a plug or vinyl tape to prevent contamination from entering.

1) Disconnect ground cable from battery.

2) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-18 OPERATION, Refrigerant Recovery Procedure.>

3) Remove duct (A).

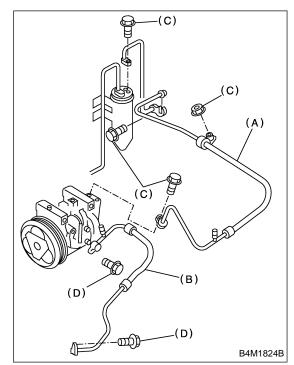

- 4) Remove hose attaching bolts (C).
- 5) Disconnect hose from evaporator unit.
- 6) Disconnect hose from compressor.

7) Remove low-pressure hose (A) from the vehicle.

- 8) Remove hose attaching bolts (D).
- 9) Disconnect hose from compressor.
- 10) Disconnect hose from condenser.

11) Disconnect high-pressure hose (B) from the vehicle.

B: INSTALLATION STO1286A11

CAUTION:

When disconnecting/connecting hoses, do not apply an excessive force them. Confirm that no torsion and excessive tension exist after installing. Seal the disconnected hose with a plug or vinyl tape to prevent contamination from entering.

1) Install in the reverse order of removal.

2) Charge refrigerant. <Ref. to AC-19 OPERATION, Refrigerant Charging Procedure.>

C: INSPECTION ST01286A10

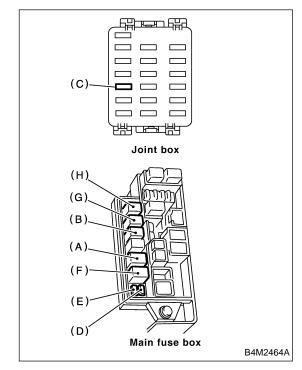

NOTE:

If cracking, damage, or swelling is found on a hose, replace it with a new one.

AC-37

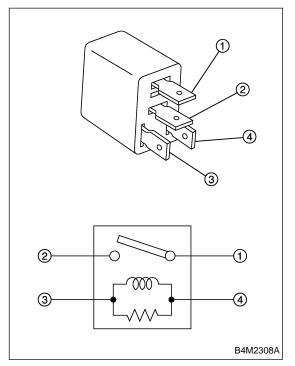

17. Relay and Fuse STO1287

A: LOCATION ST01287A13

	4 cylinder engine model	6 cylinder engine model
Main fan relay	F	—
Sub fan relay	В	—
A/C relay	A	A
Main fan relay 1	—	F
Sub fan relay 1	—	G

Main fan fuse	E (20 A)	E (30 A)
Sub fan fuse	D (20 A)	D (30 A)

B: INSPECTION ST01287A10

(3) — (4): Continuity exists.
(1) — (2): No continuity
While applying battery voltage to the cable between (3) and (4), check continuity between (1) and (2).

If no continuity exists, replace the relay with a new one.

AC-39

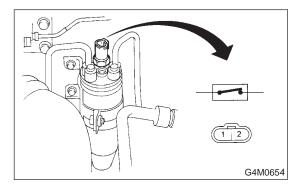

HVAC System (Heater, Ventilator and A/C)

18. Pressure Switch (Dual Switch) 5701555

A: INSPECTION STO1555A10

1) Connect the manifold gauge to the service valve on the high-pressure side.

2) Remove the pressure switch harness connector. Using a circuit tester, inspect the ON-OFF operation of the pressure switch.

	Tester connection	Operation	Specified condition kPa (kg/cm ² , psi)
High and low pressure switch		Turns OFF.	Increasing to 2,942±196 (30±2, 427±28)
	1 — 2		Decreasing to 177±20 (1.8±0.2, 26±3)
	1 - 2	Turns ON.	Increasing to 216 (2.2, 31) or less
			Decreasing to 2,354±196 (24±2, 341±28)

19. Pressure Switch (Triple Switch) 5701633

A: INSPECTION STO1633A10

1) Connect the manifold gauge to the service manifold on the high-pressure side.

2) Remove the pressure switch harness connector. Using a circuit tester, inspect the ON-OFF operation of the pressure switch.

	Tester connection	Operation	Specified condition kPa (kg/cm ² , psi)
	1 — 2	Turns OFF.	Increasing to 2,940±196 (29.98±2.00, 426±28)
High and low pressure			Decreasing to 177±20 (1.8±0.2, 26±3)
switch		Turns ON.	Increasing to 216 or less (2.2, 31)
			Decreasing to 2,350±196 (23.97±2.00, 341±28)
Middle pressure switch	3 — 4	Turns OFF.	1,370±120 (13.97±1.22, 199±17)
		Turns ON.	1,770±100 (18.05±1.02, 257±15)

HVAC System (Heater, Ventilator and A/C)

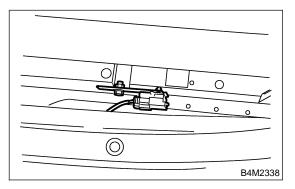

20. Ambient Sensor (Auto A/C)

S701289

A: REMOVAL STO1289A18

- 1) Open front hood.
- 2) Disconnect ground cable from battery.
- 3) Disconnect ambient sensor connector.

4) Remove ambient sensor from radiator lower panel.

B: INSTALLATION STO1289A11

Install in the reverse order of removal.

C: INSPECTION ST01289A10

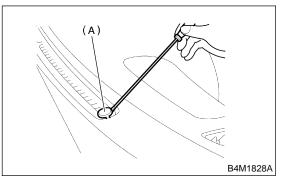

<Ref. to AC-26 TROUBLE CODE 21 OR -21 (AMBIENT SENSOR), Diagnostic Procedure with Trouble Code.>

21. Sun-load Sensor (Auto A/C)

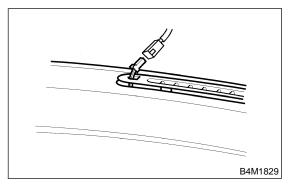

S701279

A: REMOVAL STO1279A18

- 1) Disconnect ground cable from battery.
- 2) Insert a slotted screwdriver to remove sunload sensor.

3) Disconnect sunload sensor connector.

CAUTION:

Be careful not to damage sensors and interior trims when removing them.

B: INSTALLATION STO1279A11

Install in the reverse order of removal.

C: INSPECTION STO1279A10

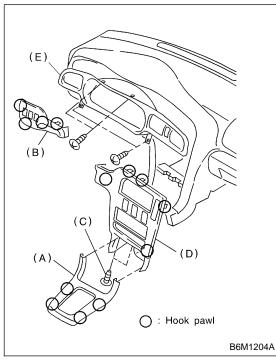

<Ref. to AC-32 TROUBLE CODE 25 OR -25 (SUN-LOAD SENSOR), Diagnostic Procedure with Trouble Code.>

22. Air Vent Grille STO1284

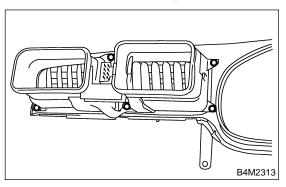

A: REMOVAL STO1284A18

1. AIR VENT GRILLE DRIVER SIDE ST01284A1801

- 1) Disconnect ground cable from battery.
- 2) Set tilt steering to the lowest position.
- 3) Disconnect each electrical connector to remove
- front cover (A) and switch panel (B).
- 4) Loosen screw (C) to remove center panel (D).
- 5) Remove meter visor (E).

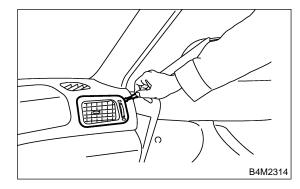

6) Loosen screws to remove grille.

2. AIR VENT GRILLE PASSENGER SIDE

- S701284A1802
- 1) Remove grille using sharp-edged screwdriver.

CAUTION:

Wrap screwdriver with vinyl tape to prevent damage to interior parts.

B: INSTALLATION ST01284A11

Install in the reverse order of removal.

C: INSPECTION ST01284A10

The direction and amount of air should be adjusted smoothly.

The adjustment should be kept in each position.

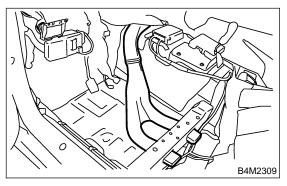

AC-44

23. Heater Duct STO1556

A: REMOVAL STO1556A18

1) Remove heater unit. <Ref. to AC-25 REMOVAL, Heater Unit.>

- 2) Remove front seat. <Ref. to SE-6 REMOVAL,
- Front Seat.>
- 3) Remove front side sill cover.
- 4) Pull off floor mat to remove heater duct.

B: INSTALLATION STO1556A11

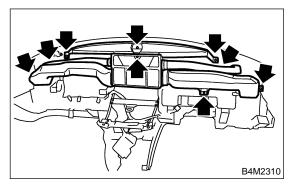

Install in the reverse order of removal.

24. Heater Vent Duct STO1557

A: REMOVAL STO1557A18

1) Remove instrument panel. <Ref. to EI-37 REMOVAL, Instrument Panel.>

- 2) Remove nine screws.
- 3) Remove heater vent duct.

B: INSTALLATION STO1557A11

Install in the reverse order of removal.

25. General Diagnostics ST01278

A: INSPECTION STO1278A10
