

## DASH AND CLOCK REMOVAL

Using two paint scrapper's work along the front of the heater control's twisting the scrapper's as you go, it will come off very easily.

Undo the 2 screw's either side of the heater control's

With both door's open use the paint scrapers to prise the two ends of the dash open.

Now use the paint scappers to prise the top of the dash out working left to right.  
When you have gone all the way across the dash will be free, you will have to wiggle it to get it out but it will come away very easily.

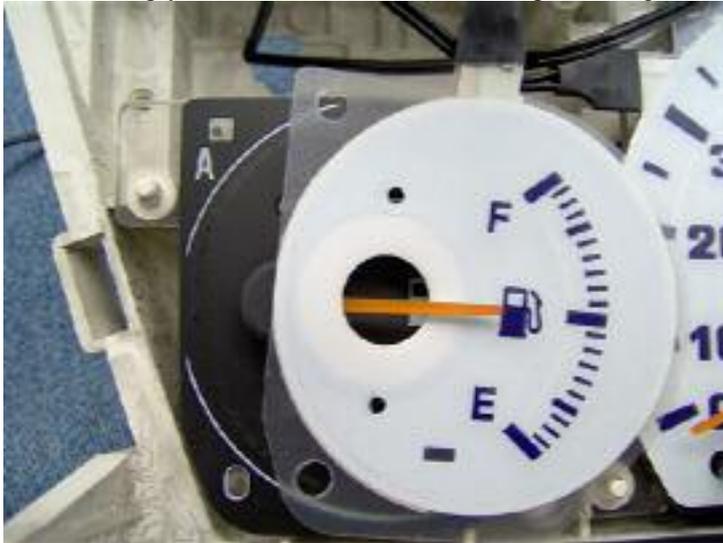

Now undo all 4 screw's that hold the clocks in, you will be able to pull the clocks forward now and put your hand behind to release the electrical connector's.  
The clocks can now be removed.

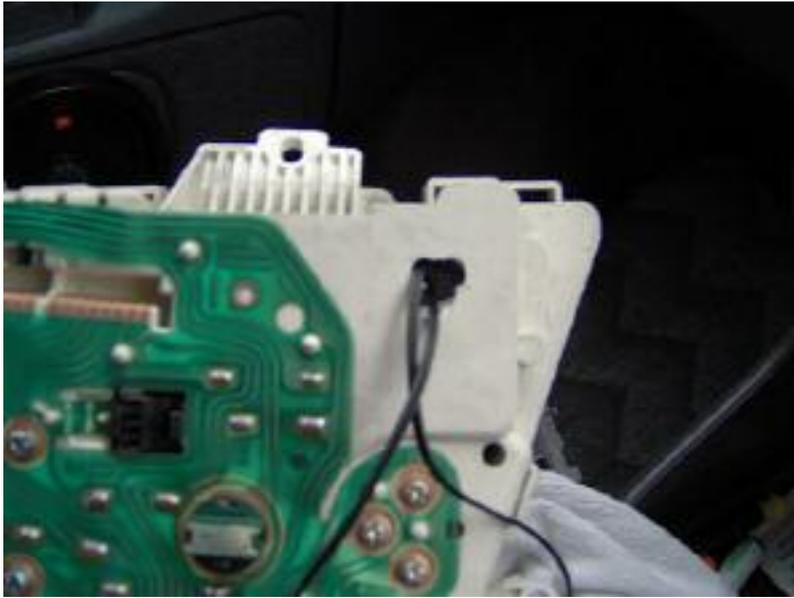

The dials simply slide over the needles and fix in place using the original screws.

The wiring is then passed through the back of the clock's as in the next 2 photo's.

The switch can be mounted anywhere you like.

All you need to do then is wire the two wires to EARTH and a LIVE when you turn the light's on.

Hope this helps it is a very easy job and should take no more than 45mins

Regards  
Paul Savage
