- Do not forcibly pry up the battery. The terminals may be damaged.
- Do not touch the battery with wet hands. Water may cause rust.
- Do not touch or move any components inside the transmitter. It may interfere with proper operation.

HINT:

Tape the screwdriver tip before use.

2. INSTALL TRANSMITTER BATTERY

(a) Install a new battery (lithium battery: CR1632) with the positive (+) side facing upward, as shown in the illustration.

- Do not bend the transmitter battery electrode during insertion.
- Keep the transmitter cover interior free of dust and oil.

0

Y

(b) Install the transmitter housing cover by pressing down on it as shown in the illustration.

Y

(c) Insert the mechanical key into the transmitter.

(d) Press one of the transmitter switches and check that the LED illuminates.

OK:

Transmitter LED illuminates when switch is pressed.

COMPONENTS

ILLUSTRATION

● Non-reusable part

P

REMOVAL

1. REMOVE FRONT WHEEL

2. REMOVE FRONT FENDER LINER

HINT:

Use the same procedure for the RH side and LH side .

3. REMOVE WIRELESS DOOR LOCK BUZZER

(a) Disconnect the connector.

(b) Disengage the clamp and remove the wireless door lock buzzer.

INSPECTION

1. INSPECT WIRELESS DOOR LOCK BUZZER

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*1

*1	Component without harness connector (Wireless Door Lock Buzzer)
----	--

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	Always	950 to 1050 Ω

N

If the result is not as specified, replace the wireless door lock buzzer.

INSTALLATION

1. INSTALL WIRELESS DOOR LOCK BUZZER

(a) Engage the clamp and install the wireless door lock buzzer.

(b) Connect the connector.

2. INSTALL FRONT FENDER LINER

HINT:

Use the same procedure for the RH side and LH side INFO.

3. INSTALL FRONT WHEEL_ INFO

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE AUXILIARY BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) auxiliary battery terminal, initialize the following systems after the terminal is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	

2. PRECAUTION WHEN USING TECHSTREAM

(a) When using the Techstream to troubleshoot the wireless door lock control system:

Connect the Techstream to the DLC3 while the power switch is off, and turn a door courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

DOOR CONTROL TRANSMITTER

*: w/ Remote Air Conditioning System

SYSTEM DIAGRAM

Communication Table

Transmitting ECU (Transmitter)	Receiving ECU (Receiver)	Signal	Line
Certification ECU	Main body ECU	Wireless door lock signal	CAN

Transmitting ECU (Transmitter)	Receiving ECU (Receiver)	Signal	Line
(Smart key ECU assembly)	(Multiplex network body ECU)		

SYSTEM DESCRIPTION

1. WIRELESS DOOR LOCK CONTROL SYSTEM

The wireless door lock control system can be used to lock and unlock all doors from a distance. The system is controlled by a door control transmitter which sends radio waves to the door control receiver. The certification ECU (smart key ECU assembly) performs an ID code identification process and engages the door lock control.

2. FUNCTION OF MAIN COMPONENTS

Component	Function
Door control transmitter	<ul style="list-style-type: none"> • Has lock, unlock, remote air conditioning* and panic switches. • Transmits weak radio waves (recognition codes and function codes) to the door control receiver. • Illuminates indicator light (LED) during transmission.
Door control receiver	Receives weak radio waves from the door control transmitter and sends them to the certification ECU (smart key ECU assembly).
<ul style="list-style-type: none"> • Front door courtesy switch assembly LH/RH • Rear door courtesy switch assembly LH/RH • Back door courtesy switch 	<ul style="list-style-type: none"> • Turns on when a door is opened and turns off when it is closed. • Outputs door status signals (open or closed) to the main body ECU (multiplex network body ECU).
<ul style="list-style-type: none"> • Front door lock assembly LH/RH • Rear door lock assembly LH/RH • Back door lock assembly 	Transmits the door lock position of each door to the main body ECU (multiplex network body ECU).
Certification ECU (Smart key ECU assembly)	Sends wireless door lock control signals in response to the code data from the door control receiver and signals from each ECU.
Main body ECU (Multiplex network body ECU)	Receives wireless door lock signals from the certification ECU (smart key ECU assembly) and controls each door lock assembly

3. SYSTEM FUNCTION

The door control transmitter has the lock, unlock, and panic switches. Operating these switches activates each function.

The wireless door lock control system has the following functions:

HINT:

The default settings of the following functions are on. Part of these functions can be customized [INFO](#).

Function	Operation
----------	-----------

Function	Operation
All door lock	Pressing the lock switch locks all doors.
All door unlock (Unlock 2 operation)	Pressing the unlock switch twice within 3 seconds unlocks all doors after the driver door is unlocked.
Automatic lock	If none of the doors is opened within 60*1 or 30*2 seconds after they are unlocked by the wireless door lock control, all doors will lock again automatically.
Answer back	<ul style="list-style-type: none"> • When the doors are locked by wireless operation, the hazard warning lights flash once and wireless door lock buzzer sounds once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice and wireless door lock buzzer sounds twice.
Panic alarm	<p>Pressing the panic switch of the transmitter for longer than about 0.8 seconds causes the following alarms to activate:</p> <ul style="list-style-type: none"> • Sounds the horn. • Flashes the headlights*1, taillights*1 and hazard warning lights. • Illuminates the interior lights (when the switch is in the door position).*1 <p>While the panic alarm is operating, pressing any switch of the transmitter cancels the alarm operation.</p>
Remote air conditioning system*3	Holding air conditioning switch will cause air conditioning system and all doors lock.
Door ajar warning	The buzzer sounds for 10 seconds continuously when the lock switch is pressed when any of the doors are ajar. The buzzer stops when all doors are closed or the unlock switch is pressed.
Illuminated entry	When all doors are locked, pressing the unlock switch causes the interior lights to come on simultaneously with the unlock operation.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The wireless door lock control system troubleshooting procedure is based on the premise that the power door lock control system is operating normally. Check the power door lock control system first before troubleshooting the wireless door lock control system. Use this procedure to troubleshoot the wireless door lock control system.
- *: Use the Techstream.

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT AUXILIARY BATTERY VOLTAGE
----	-----------------------------------

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the auxiliary battery before proceeding to the next step.

NEXT

4.	CHECK FOR DTC*
----	----------------

(a) Check for DTCs and note any codes that are output .

(b) Clear the DTCs.

(c) Recheck for DTCs. Based on the DTCs output above, try to force output of the same CAN communication system DTC or wireless door lock control system DTC by simulating the symptoms indicated by the DTC.

Result:

OPERATION CHECK

1. NOTICE WHEN CHECKING FOLLOWING

(a) Wireless door lock/unlock function:

This wireless door lock control function operates only when the following 3 conditions are met:

- (1) The power switch is off.
- (2) All doors are closed.
- (3) The power door lock system is operating normally.

HINT:

The unlock function operates even when a door is open.

(b) The size of the wireless door lock control operational area differs depending on the situation.

- (1) The size of the operation area differs depending on the user and the way the transmitter is held.
- (2) In certain areas, the remote control function will only operate partially for the operational area, which will be reduced due to the vehicle body shape and the influence of the surrounding environment.
- (3) Since the transmitter uses weak radio waves, strong radio waves or electrical noise in the frequency used by the transmitter may reduce the size of the operational area and the remote control may not function.
- (4) When the transmitter battery is weak, the size of the operational area is reduced and the remote control may not function.

HINT:

If the door control transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, it may cause the battery to be weakened or cause other related problems.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:

- The switches described in this text are the switches for transmitting signals. The switches are built into the door control transmitter.
- All the functions listed below must be checked in comparison with the remote control operational area.

- (a) Make sure that the vehicle is in an area that allows the wireless control function to operate.
- (b) Check basic functions.

- (1) Check whether the LED of the transmitter comes on 3 times when each switch is pressed 3 times.

HINT:

If the LED does not come on when the switch has been pressed 3 times or more, it may have a weak battery.

(2) Check that all doors lock when the lock switch is pressed.

(3) Check that the driver side door unlock when the unlock switch is pressed once, and unlocks all doors when pressed twice within 3 seconds.

(c) Check the chattering prevention function.

(1) Check that the corresponding operation occurs only once and is not repeated continuously while the switch is held. However, when the switch is operated repeatedly at 1-second intervals, check that the corresponding operation is carried out.

(d) Check the automatic locking function.

(1) Check that the doors relock automatically as long as none of the doors have been opened or all doors have not been locked within approximately 60*1 or 30*2 seconds after all doors are unlocked by pressing the unlock switch.

(2) Check that the automatic locking function does not operate when any door has been opened within approximately 60*1 or 30*2 seconds of unlocking the doors by pressing the unlock switch.

(3) Check that the automatic locking function does not operate when all doors have been locked manually (such as using key linked operation, or by pressing the lock switch) within approximately 60*1 or 30*2 seconds of unlocking the doors by pressing the unlock switch.

- *1: except for Korea
- *2: for Korea

(e) Check the switch operation fail-safe function.

(1) Check that the doors cannot be locked or unlocked by operating a switch on the unregistered transmitter, and that the doors are locked and unlocked by operating a switch on the registered transmitter.

(f) Check the door ajar warning function.

(1) Check that the wireless door lock buzzer sounds for approximately 10 seconds when the lock switch is pressed with any of the doors ajar or open.

(g) Check the repeat function.

(1) Check that all doors attempt to automatically lock once again 1 second after the lock switch has been pressed while the driver door control knob is being held in the unlock position.

(h) Check the answer-back function.

(1) When the lock switch is pressed, check that the hazard warning lights flash once and the buzzer sounds once simultaneously with the locking operation.

(2) When the unlock switch is pressed once, check that the hazard warning lights flash twice and the buzzer sounds twice simultaneously with the unlocking operation of the driver door.

(3) Check remote air conditioning answer back function* **INFO**.

- *: w/ Remote Air Conditioning System

(i) Check the remote panic function.

(1) Check that the horn sounds, the headlights*1, taillights*1, hazard lights flash and the interior lights*1 remain on (when the light switch is turned to the door position) for 60*1 or 30*2 seconds by the theft alarm function, when the panic switch is held down for 0.8 seconds or more. Also, check that the horn stops sounding and the lights stop flashing when any switch of the transmitter is pressed.

- *1: except for Korea
- *2: for Korea

(j) Check the interior light on function **INFO**.

(k) Check the remote air conditioning function **INFO**.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH TECHSTREAM

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

2. CUSTOMIZE

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body or Illuminated Entry / Utility / Customize.

(e) Select the setting by referring to the table below.

Wireless Door Lock Control System

Display (item)	Default	Function	Setting
Wireless Control	ON	Function that turns wireless door lock function on or off	ON or OFF
Hazard Answer Back	ON	When the doors are locked by wireless operation, the hazard warning lights flash once. When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON or OFF
Open Door Warning	ON	The buzzer sounds when lock is pressed when any of the doors are ajar.	ON or OFF
Unlock 2 Operation	ON	Function that unlocks driver door when unlock switch on transmitter is pressed once, and unlocks all doors when pressed twice. If setting is OFF, pressing unlock switch once makes all doors unlock.	ON or OFF
Panic Function	ON	Function to operate theft deterrent system by continuously pressing panic switch on transmitter for 0.8 seconds	ON or OFF
Auto Lock Time	60 s*1 or 30 s*2	Function that regulates the interval between unlocking and automatic relocking of doors	30 s, 60 s or 120 s
Wireless Auto Lock	ON	This function turns the wireless auto lock function on or off.	ON or OFF

Display (item)	Default	Function	Setting
Wireless Buzzer Resp	ON	Wireless door lock buzzer response	ON or OFF
Wireless Buzzer Vol	Level7	Wireless door lock buzzer volume	Level7, Level6, Level5, Level4, Level3, Level2, Level1 or Level0

- *1: except for Korea
- *2: for Korea

Illuminated Entry

Display	Default	Content	Setting
Lighting Time	15 s	Changes the lighting time after closing all doors. (It will quickly fade out in case of turning the power switch from off to on (ACC or IG).)	7.5 s, 15 s or 30 s

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Wireless Door Lock Control System

Symptom	Suspected Area	See page
Wireless control function and entry function do not operate	Proceed to "All Door Entry Lock / Unlock Functions and Wireless Functions do not Operate"	INFO
Wireless control function does not operate but entry function operates	Electrical key transmitter	-

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU) AND DRIVER SIDE JUNCTION BLOCK ASSEMBLY

(a) Disconnect the L8 main body ECU (multiplex network body ECU) connectors.

*: LED Type

(b) Disconnect the A, 2B and 2C driver side junction block assembly connectors.

(c) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2C-18 (BECU) - Body ground	Y - Body ground	Auxiliary battery power supply	Power switch off	11 to 14 V
A-31 (ALTB) - Body ground	-	Auxiliary battery power supply	Power switch off	11 to 14 V
A-32 (IG) - Body ground	-	Power switch power supply	Power switch on (IG)	11 to 14 V
A-32 (IG) - Body ground	-	Power switch power supply	Power switch off	Below 1 V
A-29 (ACC) - Body ground	-	ACC power supply	Power switch on (ACC)	11 to 14 V
A-29 (ACC) - Body ground	-	ACC power supply	Power switch off	Below 1 V
L8-3 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2B-6 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(d) Reconnect the L8 main body ECU (multiplex network body ECU) connectors.

(e) Reconnect the A, 2B and 2C driver side junction block assembly connectors.

(f) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2D-35 (FLCY) - Body ground	V - Body ground	Driver side door courtesy switch input	Driver side door open	Below 1 V
2D-35 (FLCY) - Body ground	V - Body ground	Driver side door courtesy switch input	Driver side door closed	11 to 14 V
2D-36 (FRCY) - Body ground	BR - Body ground	Front passenger side door courtesy switch input	Front passenger side door open	Below 1 V
2D-36 (FRCY) - Body ground	BR - Body ground	Front passenger side door courtesy switch input	Front passenger side door closed	11 to 14 V
L7-6 (LRCY) -	G - Body	Rear door LH and RH	Rear door LH or RH open	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Body ground	ground	courtesy light switch input		
L7-6 (LRCY) - Body ground	G - Body ground	Rear door LH and RH courtesy light switch input	Rear door LH or RH closed	11 to 14 V
L7-19 (BCTY) - Body ground	GR - Body ground	Back door courtesy light switch input	Back door open	Below 1 V
L7-19 (BCTY) - Body ground	GR - Body ground	Back door courtesy light switch input	Back door closed	11 to 14 V
L7-11 (L2) - Body ground	G - Body ground	Driver side door key-linked lock input	Driver side door key cylinder turned to lock	Below 1 V
L7-11 (L2) - Body ground	G - Body ground	Driver side door key-linked lock input	Driver side door key cylinder off	11 to 14 V
L7-24 (UL3) - Body ground	U - Body ground	Driver side door key-linked unlock input	Driver side door key cylinder turned to unlock	Below 1 V
L7-24 (UL3) - Body ground	U - Body ground	Driver side door key-linked unlock input	Driver side door key cylinder off	11 to 14 V
L7-9 (L1) - Body ground	LG - Body ground	Front passenger side door control switch input	Front passenger side door control switch locked	Below 1 V
L7-9 (L1) - Body ground	LG - Body ground	Front passenger side door control switch input	Front passenger side door control switch off	11 to 14 V
L7-10 (UL1) - Body ground	BR - Body ground	Front passenger side door control switch input	Front passenger side door control switch unlocked	Below 1 V
L7-10 (UL1) - Body ground	BR - Body ground	Front passenger side door control switch input	Front passenger side door control switch off	11 to 14 V
2B-3 (ACT+) - Body ground	LG - Body ground	Door lock motor lock drive output (all doors)	Multiplex network master switch (door control switch) or driver side door key cylinder off	Below 1 V
2B-3 (ACT+) - Body ground	LG - Body ground	Door lock motor lock drive output (all doors)	Multiplex network master switch (door control switch) or driver side door key cylinder locked	11 to 14 V
2B-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor unlock drive output	Multiplex network master switch (door control switch) or driver side door key cylinder off	Below 1 V
2B-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor unlock drive output	Multiplex network master switch (door control switch) or driver side door key cylinder unlocked	11 to 14 V
2B-1 (ACT-) - Body ground	B - Body ground	Door lock motor unlock drive output (except driver side)	Multiplex network master switch (door control switch) or driver side door key cylinder off	Below 1 V
2B-1 (ACT-) - Body ground	B - Body ground	Door lock motor unlock drive output (except driver side)	Multiplex network master switch (door control switch) or driver side door key cylinder unlocked	11 to 14 V
L7-18 (LSFR) - Body ground	LG - Body ground	Front passenger side door lock position switch input	Front passenger side door unlocked	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L7-18 (LSFR) - Body ground	LG - Body ground	Front passenger side door lock position switch input	Power switch off, all doors closed and front passenger side door locked	11 to 14 V
2D-25 (LSR) - Body ground	GR - Body ground	Rear door LH lock position switch input	Rear door LH unlocked	Below 1 V
2D-25 (LSR) - Body ground	GR - Body ground	Rear door LH lock position switch input	Power switch off, all doors closed and rear door LH locked	11 to 14 V
2B-29 (LSR) - Body ground	GR - Body ground	Rear door RH lock position switch input	Rear door RH unlocked	Below 1 V
2B-29 (LSR) - Body ground	GR - Body ground	Rear door RH lock position switch input	Power switch off, all doors closed and rear door RH locked	11 to 14 V
L7-7 (LSFL) - Body ground	GR - Body ground	Driver door lock position switch input	Driver door unlocked	Below 1 V
L7-7 (LSFL) - Body ground	GR - Body ground	Driver door lock position switch input	Power switch off, all doors closed and driver door locked	11 to 14 V
2C-23 (BZR) - Body ground	R - Body ground	Wireless door lock buzzer signal	Wireless door lock buzzer off	Below 1 V
2C-23 (BZR) - Body ground	R - Body ground	Wireless door lock buzzer signal	Wireless door lock buzzer on	Pulse generation
L7-3 (HAZ) - Body ground	Y - Body ground	Turn signal flasher relay signal	Any transmitter switch not pressed	11 to 14 V
L7-3 (HAZ) - Body ground	Y - Body ground	Turn signal flasher relay signal	Any transmitter switch pressed	Below 1 V

If the result is not as specified, the main body ECU (multiplex network body ECU) or driver side junction block assembly may have a malfunction.

2. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

- Disconnect the L62 and L63 certification ECU (smart key ECU assembly) connectors.
- Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L62-15 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L62-1 (+B) - L62-15 (E)	B - W-B	Auxiliary battery power supply	Always	11 to 14 V
L62-16 (IG) - L62-15 (E)	BE - W-B	IG power supply	Power switch on (IG)	11 to 14 V
			Power switch off	Below 1 V

- If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L62 and L63 certification ECU (smart key ECU assembly) connectors.

(d) Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L63-16 (RSSI) - L62-15 (E)	V - W-B	Door control receiver output signal	Power switch off, all doors closed and transmitter switch not pressed	11 to 14 V
			Power switch off, all doors closed and transmitter switch pressed	Below 2 V
L63-15 (RDA) - L62-15 (E)	Y - W-B	Door control receiver output signal	Power switch off	Pulse between 11 to 14 V occurs regularly
L63-5 (RC0) - L62-15 (E)	R - W-B	Supply battery to door control receiver	Power switch off, all doors closed and transmitter switch pressed	4.5 to 5.5 V

- If the result is not as specified, the certification ECU (smart key ECU assembly) may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECU stores trouble codes when malfunctions occur.

The diagnostic system allows for reading of the trouble codes from the DLC3.

Use the Techstream to help diagnose and repair the problem.

2. CHECK DLC3

(a) Check the DLC3 .

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Read the DTC by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Clear the DTC by following the directions on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Wireless Control	Wireless door lock control function/ON or OFF	ON: Operating OFF: Not operating	-
Hazard Answer Back	Hazard answer-back of wireless/ON or OFF	ON: Operating OFF: Not operating	-
Wireless Auto Lock	Automatic lock function/ON or OFF	ON: Operating OFF: Not operating	-
Open Door Warning	Open door warning/ON or OFF	ON: Operating OFF: Not operating	-
Unlock 2 Operation	2 times operation of wireless unlock/ON or OFF	ON: All doors unlock when unlock switch pressed twice OFF: All doors unlock when unlock switch pressed once	-
Panic Function	Panic function/ON or OFF	ON: Operating	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		OFF: Not operating	
Auto Lock Time	Automatic lock time/120 s, 60 s or 30 s	120 s: 120 seconds 60 s: 60 seconds 30 s: 30 seconds	-
Keyless Entry Buzzer	Buzzer answer-back of wireless/ON or OFF	ON: Operating OFF: Not operating	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing the Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Test Part	Control Range	Diagnostic Note
Hazard	Turn signal flasher relay	ON/OFF	Observe headlights and rear combination lights for correct operation
Illuminated Entry System	Interior lights and power switch light (Interior light switch is in the door position and all doors are closed)	ON/OFF	-
Wireless Buzzer	Wireless door lock buzzer	ON/OFF	-
Vehicle Horn	Vehicle horns	ON/OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to "See page" in the DTC chart.

Wireless Door Lock Control System

DTC Code	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	<ol style="list-style-type: none">1. Wire harness or connector2. Door control receiver3. Certification ECU (Smart key ECU assembly)	INFO

DESCRIPTION

The door control receiver is used to receive electrical waves relating to the entry functions of the smart key system. The certification ECU (smart key ECU assembly) decodes the requested smart key system operation by identifying a key code based on the electric waves received via the door control receiver. The door control receiver receives a signal from the door control transmitter and sends signals to the main body ECU (multiplex network body ECU) through the certification ECU (smart key ECU assembly). The certification ECU (smart key ECU assembly) then sends a command, according to the requested operation, to each ECU (ex. if door lock operation is requested, the certification ECU (smart key ECU assembly) sends a door lock command to the main body ECU (multiplex network body ECU)).

DTC No.	DTC Detection Condition	Trouble Area
B1242	<ul style="list-style-type: none"> Short in RDA or RSSI to ground between the certification ECU (smart key ECU assembly) and the door control receiver. Short in RDA or RSSI to ground when RC0 (5 V) output from the ECU is off. 	<ul style="list-style-type: none"> Wire harness or connector Door control receiver Certification ECU (Smart key ECU assembly)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing or inspecting the door control receiver and wire harness, do not change the position or length of the wire harness. If the wire harness is too close to the door control receiver, entry and wireless function performance may be affected.
- Before performing the inspection, check that there are no problems related to the CAN communication system and LIN communication system.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - CERTIFICATION ECU AND BODY GROUND)
----	--

(a) Disconnect the L62 and L63 certification ECU (smart key ECU assembly) connectors.

(b) Disconnect the S12 door control receiver connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L63-16 (RSSI) - S12-2 (RSSI)	Always	Below 1 Ω
L63-15 (RDA) - S12-5 (DATA)	Always	Below 1 Ω

Tester Connection	Condition	Specified Condition
L63-5 (RC0) - S12-4 (+5)	Always	Below 1 Ω
L62-15 (E) - Body ground	Always	Below 1 Ω
S12-1 (GND) - Body ground	Always	Below 1 Ω
L63-16 (RSSI) or S12-2 (RSSI) - Body ground	Always	10 k Ω or higher
L63-15 (RDA) or S12-5 (DATA) - Body ground	Always	10 k Ω or higher
L63-5 (RC0) or S12-4 (+5) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector (to Certification ECU (Smart Key ECU Assembly))
*2	Front view of wire harness connector (to Door Control Receiver)

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.	CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)
----	--

(a) Reconnect the L62 and L63 certification ECU (smart key ECU assembly) connectors and the S12 door control receiver connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L63-5 (RC0) - L62-15 (E)	Power switch off, all doors closed and transmitter switch pressed	4.5 to 5.5 V

Text in Illustration

*1	Component with harness connected (Certification ECU (Smart Key ECU Assembly))
----	--

NG  REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

3.	REPLACE DOOR CONTROL RECEIVER
----	-------------------------------

(a) Temporarily replace the door control receiver with a new one .

NEXT

4.	CHECK FOR DTC
----	---------------

(a) Clear the DTC .

(b) Recheck for DTCs.

OK:

DTC B1242 is not output.

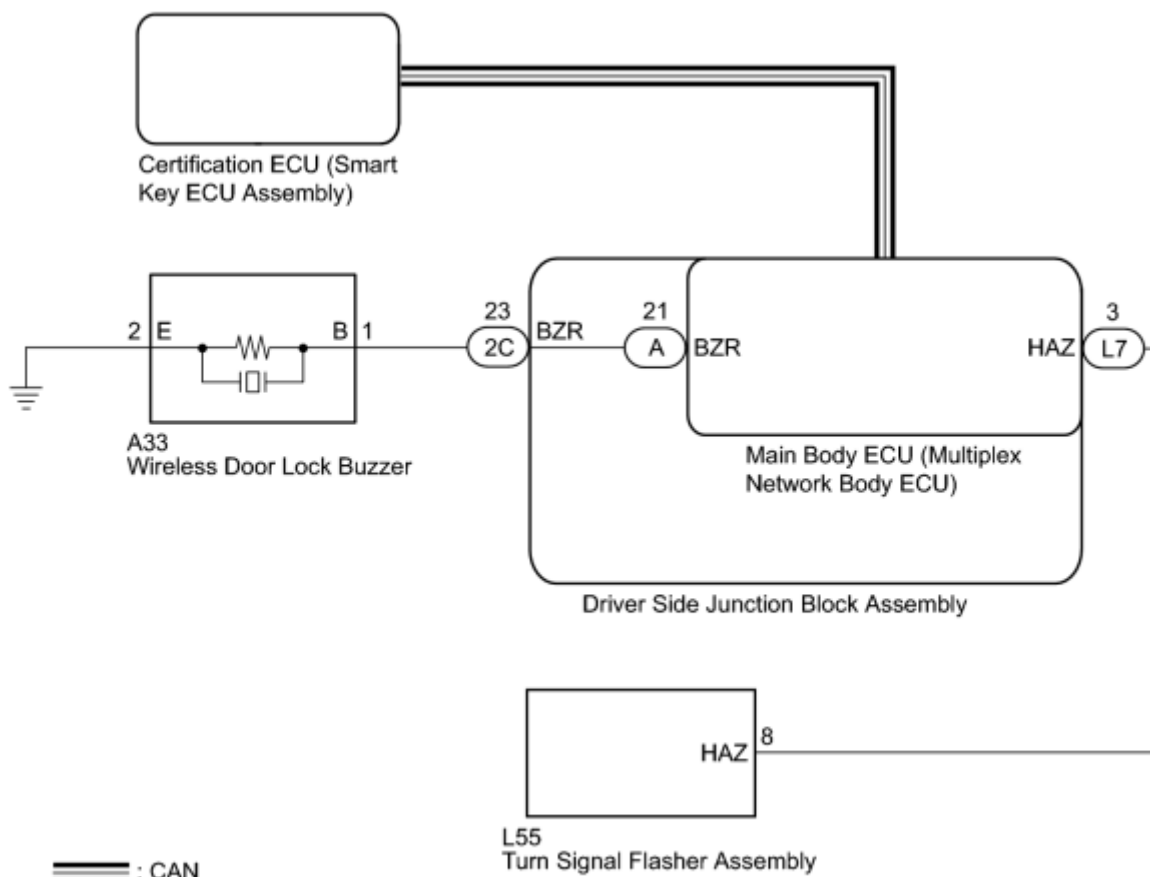

NG  REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK  **END (DOOR CONTROL RECEIVER WAS DEFECTIVE)**

DESCRIPTION

In some cases, wireless door lock control functions are normal but the hazard warning light and/or wireless door lock buzzer answer-back function(s) does not operate. In such cases, the hazard warning light and wireless door lock buzzer signals output from the main body ECU (multiplex network body ECU) may be malfunctioning.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Troubleshooting should be started after confirming that the customize status of the answer-back function has been switched on.

PROCEDURE

1. READ VALUE USING TECHSTREAM (ANSWER-BACK OPERATION)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Utility / Customize.
- (e) Select the setting by referring to the table below.

Wireless Door Lock Control System

Display (item)	Default	Function	Setting
Hazard Answer Back	ON	When the doors are locked by wireless operation, the hazard warning lights flash once. When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON or OFF
Wireless Buzzer Resp	ON	Wireless door lock buzzer response on or off	ON or OFF

Result:

Result	Proceed to
Both items are on.	A
Either item is off.	B

 B PERFORM CUSTOMIZE FUNCTION (ANSWER-BACK FUNCTION)

A

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

- (a) Check the wireless door lock control function by the electrical key transmitter.

Result:

Result	Proceed to
Wireless door lock/unlock operates normally.	A
Wireless door lock/unlock does not operate normally.	B

 B GO TO SMART KEY SYSTEM

A

3.	CHECK WIRELESS ANSWER-BACK OPERATION
----	--------------------------------------

(a) Check the wireless answer-back operation by wireless door lock control function.

Result:

Result	Proceed to
Only hazard warning light answer-back does not occur.	A
Only wireless door lock buzzer answer-back does not occur.	B

B [PERFORM ACTIVE TEST USING TECHSTREAM \(WIRELESS DOOR LOCK BUZZER\)](#)

A

4.	CHECK HAZARD WARNING LIGHT OPERATION
----	--------------------------------------

(a) Check that the hazard warning lights flash continuously when the hazard warning signal switch is pressed.

OK:

Hazard warning lights flash continuously.

NG [GO TO LIGHTING SYSTEM](#)

OK

5.	PERFORM ACTIVE TEST USING TECHSTREAM
----	--------------------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Test Part	Control Range	Diagnostic Note
Hazard	Turn signal flasher relay	ON/OFF	Observe headlights and rear combination lights for correct operation

Result:

Result	Proceed to
Turn signal flasher relay does not turn on/off.	A
Turn signal flasher relay turns on/off.	B

B ▶ REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

A

6.	CHECK HARNESS AND CONNECTOR (TURN SIGNAL FLASHER ASSEMBLY - MAIN BODY ECU)
----	--

(a) Disconnect the L55 turn signal flasher assembly and L7 main body ECU (multiplex network body ECU) connectors.

(b) Measure the resistance according to the value(s) in the table below.

*1

Standard Resistance:

Tester Connection	Condition	Specified Condition
L55-8 (HAZ) - L7-3 (HAZ)	Always	Below 1 Ω
L55-8 (HAZ) - Body ground	Always	10 k Ω or higher

*2

Text in Illustration

*1	Front view of wire harness connector (to Turn Signal Flasher Assembly)
*2	Front view of wire harness connector (to Main Body ECU (Multiplex Network Body ECU))

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

7.	PERFORM ACTIVE TEST USING TECHSTREAM (WIRELESS DOOR LOCK BUZZER)
----	--

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Test Part	Control Range	Diagnostic Note
Wireless Buzzer	Turns the wireless door lock buzzer	ON/OFF	-

Result:

Result	Proceed to
Wireless door lock buzzer does not turn on/off.	A
Wireless door lock buzzer turns on/off.	B

B ▶ REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

A

8.	CHECK HARNESS AND CONNECTOR (WIRELESS DOOR LOCK BUZZER - DRIVER SIDE JUNCTION BLOCK)
----	--

(a) Disconnect the A33 wireless door lock buzzer and 2C driver side junction block assembly connectors.

(b) Measure the resistance according to the value(s) in the table below.

*1

Standard Resistance:

Tester Connection	Condition	Specified Condition
A33-1 (B) - 2C-23 (BZR)	Always	Below 1 Ω
A33-2 (E) - Body ground	Always	Below 1 Ω
A33-1 (B) - Body ground	Always	10 kΩ or higher

*2

Text in Illustration

*1	Front view of wire harness connector (to Wireless Door Lock Buzzer)
*2	Front view of wire harness connector (to Driver Side Junction Block Assembly)

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9. CHECK DRIVER SIDE JUNCTION BLOCK ASSEMBLY

- (a) Remove the driver side junction block assembly INFO.

Text in Illustration

*1

Component without harness connected

(Driver Side Junction Block Assembly)

- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2C-23 (BZR) - A-21 (BZR)	Always	Below 1 Ω

NG ▶ REPLACE DRIVER SIDE JUNCTION BLOCK ASSEMBLY

OK

10. REPLACE WIRELESS DOOR LOCK BUZZER

- (a) Temporarily replace the wireless door lock buzzer with a new one INFO.

NEXT

11. CHECK WIRELESS DOOR LOCK BUZZER OPERATION

- (a) Check the operation of the wireless answer-back function.

OK:

Wireless answer-back function operates normally.

NG  REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

OK  **END (WIRELESS DOOR LOCK BUZZER WAS DEFECTIVE)**

12.	REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)
-----	--

(a) Temporarily replace the main body ECU (multiplex network body ECU) with a new one  .

NEXT

13.	CHECK WIRELESS DOOR LOCK BUZZER OPERATION
-----	---

(a) Check the operation of the wireless function.

OK:

Wireless function operates normally.

NG  REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK  **END (MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU) WAS DEFECTIVE)**

6. REMOVE AIR CONDITIONING PRESSURE SENSOR

(a) Disconnect the connector.

(b) Remove the air conditioning pressure sensor.

NOTICE:

Do not deform the piping.

INSTALLATION

1. INSTALL AIR CONDITIONING PRESSURE SENSOR

(a) Sufficiently apply compressor oil to a new air conditioning pressure sensor.

Compressor oil:

ND-OIL 11 or equivalent

- Keep the O-ring and O-ring fitting surfaces clean from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

(b) Install the new air conditioning pressure sensor.

Torque: **11 N·m (110 kgf·cm, 8ft·lbf)**

NOTICE:

- Do not deform the piping.
- Make sure to confirm that the piping does not disengage from the plastic clamp.

(c) Connect the connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

3. INSTALL REAR NO. 3 FLOOR BOARD INFO

4. INSTALL REAR DECK FLOOR BOX INFO

5. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

6. CHARGE WITH REFRIGERANT INFO

7. WARM UP COMPRESSOR INFO

8. INSPECT FOR REFRIGERANT LEAK INFO

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the terminal is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	INFO

2. GENERAL PRECAUTION

(a) While using the battery during inspection, do not bring the positive (+) and negative (-) tester probes too close to each other as a short circuit may occur.

3. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream with the power switch off to troubleshoot:

Connect the Techstream to the vehicle, and turn a courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

(b) After all DTCs are cleared, check if the trouble occurs again 6 seconds after the power switch is turned on (IG).

4. DO NOT HANDLE REFRIGERANT IN ENCLOSED AREA OR NEAR OPEN FLAME

Text in Illustration

*1	Charging Cylinder
----	-------------------

5. ALWAYS WEAR EYE PROTECTION

6. BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN

If liquid refrigerant gets in your eyes or on your skin:

(a) Wash the area with lots of cold water.

CAUTION:

Do not rub your eyes or skin.

(b) Apply clean petroleum jelly to the skin.

(c) Go immediately to a hospital or see a physician for professional treatment.

7. NEVER HEAT CONTAINER OR EXPOSE THE CONTAINER TO AN OPEN FLAME

8. BE CAREFUL NOT TO DROP CONTAINER OR APPLY PHYSICAL SHOCKS TO IT

9. DO NOT OPERATE COMPRESSOR WITHOUT ENOUGH REFRIGERANT IN AIR CONDITIONING SYSTEM

If there is not enough refrigerant in the A/C system, oil lubrication will be insufficient and the compressor may be damaged.

Necessary care should be taken to avoid this.

10. DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING

(a) Open and close only the low pressure valve.

If the high pressure valve is opened, refrigerant flows in the reverse direction causing the charging cylinder to rupture.

11. BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT

If refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy, engine overheating, etc.

12. DO NOT OPERATE COMPRESSOR WITHOUT REFRIGERANT

CAUTION:

Doing so may damage inside the compressor because the compressor parts always move regardless of whether the A/C system is turned on or off.

13. PRECAUTIONS TO BE OBSERVED WHILE SERVICING

CAUTION:

Always use electric insulating gloves and remove the service plug grip before beginning inspection, as inspection of the A/C system requires disconnecting high voltage connectors.

NOTICE:

- Only use ND-OIL11 for the electric inverter compressor of the air conditioning system. Using other compressor oils may be dangerous, as they may conduct electricity.
- Electrical insulation performance may decrease significantly if even a small amount of oil other than ND-OIL11 is used (or enters) in the refrigeration cycle, causing a DTC to be output.
- If other oil is accidentally used and a DTC is output, collect the compressor oil in the compressor and replace it with ND-OIL11 to increase the ND-OIL11 ratio amount.
- Replace the main components (evaporator, condenser, and compressor) if a large amount of oil other than ND-OIL11 enters the system. Failing to do so may cause electrical insulation performance to remain low, causing a DTC to be output.

14. SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

(a) This vehicle is equipped with an Supplemental Restraint System (SRS) such as the driver, front passenger, side and curtain shield airbags. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices

INFO

15. PRECAUTIONS WHEN WORKING (w/ Remote Air Conditioning System and Solar Ventilation System)

(a) Vehicles with the remote air conditioning system have the following risks that it is necessary to be aware of when performing repairs. Therefore, make sure to take care of the key (electrical transmitter) carefully so that the remote air conditioning system is not operated unexpectedly.

Risks

The electrical fan and other items in the engine compartment may operate resulting in various hazards.

The wipers may operate if the wiper switch is in the on position when the remote air conditioning system is activated. If this occurs, there is the potential for damage to the glass, wipers or injury.

When the light control switch is in the tail, head or AUTO position, the headlights may turn on.

Short circuits may occur if electrical inspections are being performed when the remote air conditioning system is turned on, because the IG circuit is powered at this time.

CAUTION:

Failure to take proper care with the key (electrical transmitter) may cause the system to be accidentally operated. This can lead to an accident and damage to parts or a serious injury.

HINT:

Make sure to store the key (electrical transmitter) in a box with the switch side facing up, and place the box where it can be monitored so that no one cannot operate the remote A/C switch.

(b) When performing repairs on vehicles with the solar ventilation system, turn the solar ventilation switch off.

CAUTION:

Depending on the environment around the vehicle, performing repairs with the solar ventilation switch on may cause the blower motor to operate unexpectedly, resulting in various hazards. This can lead to damage to parts or a serious injury.

For details of the remote air conditioning system, refer to System Description .

SYSTEM DESCRIPTION

1. GENERAL

(a) The air conditioning system uses the following types of control.

Control		Outline
Neural Network Control		This control is capable of effecting complex control by artificially simulating the information processing method of the nervous system of living organisms in order to establish a complex input or output relationship that is similar to a human brain.
Outlet Air Temperature Control		In compliance with the temperature set at the temperature control switch, the neural network control calculates the outlet temperature based on the input signals from various sensors. In addition, corrections in accordance with the signals from the evaporative temperature sensor and water temperature sensor are added to control the outlet air temperature.
Blower Control		Controls the blower motor in accordance with the airflow volume that has been calculated by the neural network control based on the input signals from various sensors.
Air Outlet Control		Automatically switches the outlets in accordance with the outlet mode ratio that has been calculated by the neural network control based on the input signals from various sensors.
Micro Dust and Pollen Filter Mode Control		<ul style="list-style-type: none"> • Activated by the micro dust and pollen filter mode switch operation. • Switches the air vent to the FACE mode. • Sends air which has passed through the clean air filter to the area around the upper part of the bodies of the driver and front passenger. This air is filtered by the clean air filter in order to remove pollen.
Air Inlet Control		Automatically controls the air inlet control damper in accordance with the outlet temperature that has been calculated by the neural network control.
Electric Inverter Compressor Control	Compressor Speed Control	<p>The A/C amplifier calculates the target speed of the compressor based on the target evaporator temperature (which is calculated by the temperature control switch, room temperature sensor, ambient temperature sensor, and solar sensor) and the actual evaporator temperature that is detected by the evaporator temperature sensor in order to control the compressor speed.</p> <p>The A/C amplifier calculates the target evaporator temperature, which includes corrections based on the temperature control switch, room temperature sensor, ambient temperature sensor, solar sensor, and evaporator temperature sensor. Accordingly, the A/C amplifier controls the compressor speed to an extent that would not inhibit the proper cooling performance or defogging performance.</p>
PTC Heater Control*1		<p>When the hybrid control system is operating (READY), and the blower motor is turned on, the A/C amplifier turns on the PTC heater assembly if the conditions listed below are met:</p> <ul style="list-style-type: none"> • Engine coolant temperature is below specified temperature. • Outside temperature is below specified temperature • Tentative air mix damper opening angle is above the specified value (MAX

Control	Outline
	HOT).
Plasmacluster (Ion Generator) Control*2	The Plasmacluster generator is controlled by the air conditioning amplifier assembly and operates in conjunction with the blower with fan motor sub-assembly.
ECO Mode Control	When the ECO MODE switch is turned on, the A/C amplifier limits the air conditioning system performance.
Remote Air Conditioning System Control*3	When the remote A/C switch on the key (electrical transmitter) is pressed, the air conditioning system is automatically controlled and operated for a maximum of 3 minutes using power from the HV battery.

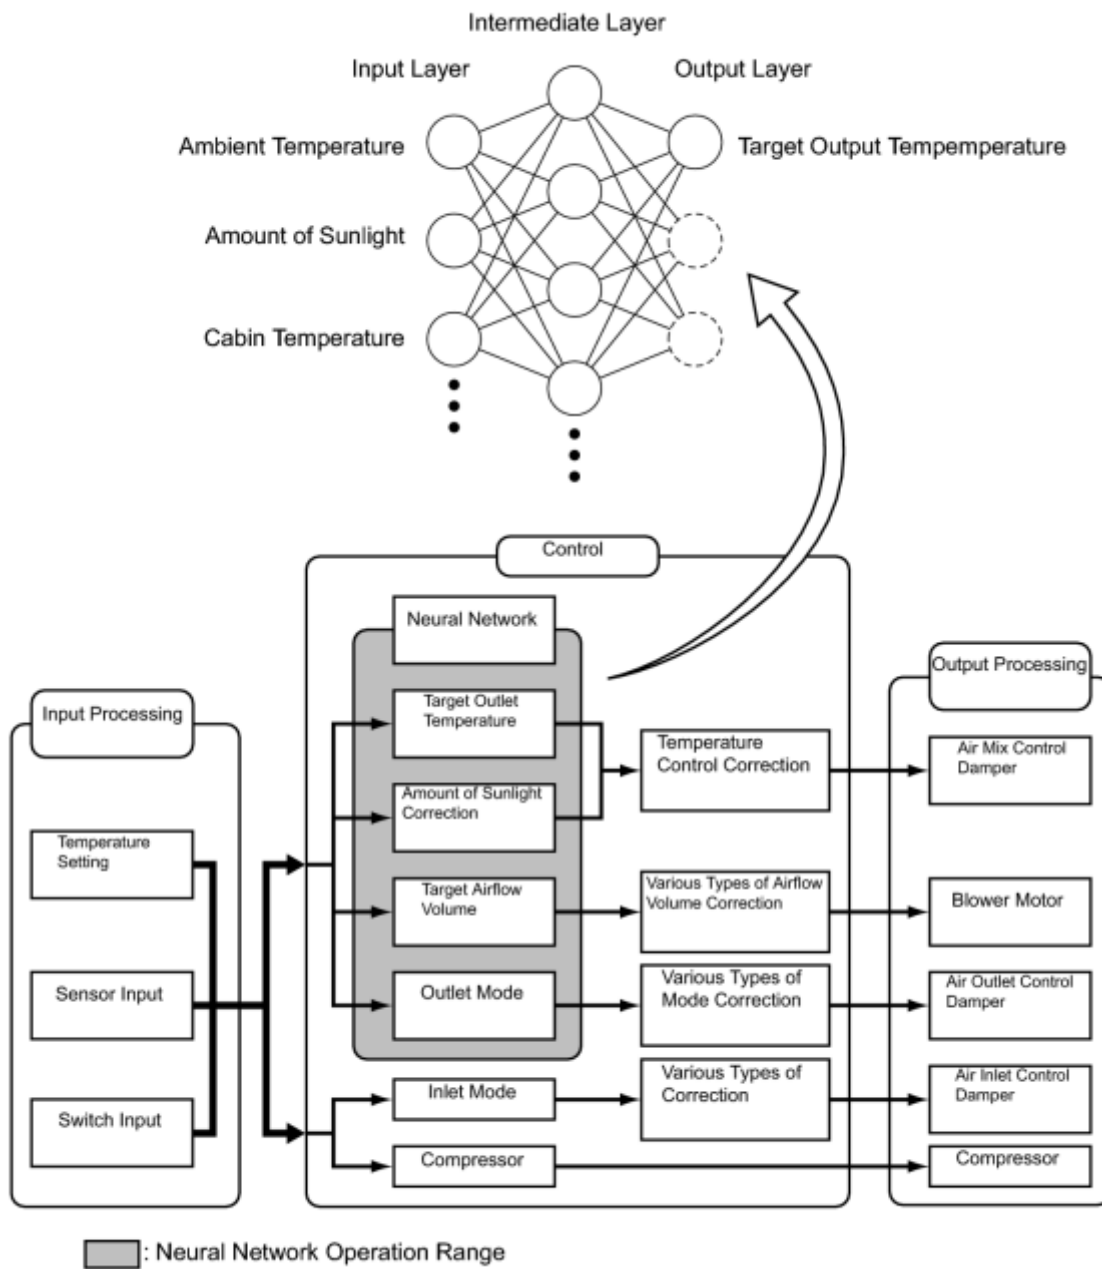

- *1: w/ PTC heater assembly
- *2: w/ Plasmacluster (ion generator)
- *3: w/ Remote air conditioning system

2. NEURAL NETWORK CONTROL

- In the previous automatic air conditioning systems, the A/C amplifier determined the required outlet air temperature and blower air volume in accordance with the calculation formula that has been obtained based on information received from the sensors.

However, because the senses of a person are rather complex, a given temperature is sensed differently, depending on the environment in which the person is situated. For example, a given amount of sunlight can feel comfortably warm in a cold climate, or extremely uncomfortable in a hot climate. Therefore, as a technique for effecting a higher level of control, a neural network has been adopted in the automatic air conditioning system. With this technique, the data that has been collected under varying environmental conditions is stored in the A/C amplifier. The A/C amplifier can then effect control to provide enhanced air conditioning comfort.

- The neural network control consists of neurons in the input layer, intermediate layer and output layer. The input layer neurons process the input data of the outside temperature, the amount of sunlight and the room temperature based on the outputs of the switches and sensors, and output them to the intermediate layer neurons. Based on this data, the intermediate layer neurons adjust the strength of the links among the neurons. The sum of these is then calculated by the output layer neurons in the form of the required outlet temperature, solar correction, target airflow volume and outlet mode control volume. Accordingly, the A/C amplifier controls the servo motors and blower motor in accordance with the control volumes that have been calculated by the neural network control.

5. OUTLINE OF REMOTE AIR CONDITIONING SYSTEM

(a) Outline

(1) When the remote A/C switch on the key (electrical transmitter) is pressed, the air conditioning system is automatically controlled and operated for a maximum of 3 minutes using power from the HV battery.

HINT:

The remote air conditioning system starts operating when all of the following operating conditions are met:

Operating Condition

Item	Condition
Power switch	<ul style="list-style-type: none"> Off Power switch is not pressed
Door Lock	<ul style="list-style-type: none"> All doors are closed and locked. Hood is closed.
Brake Pedal	Not operated (not depressed)
Security	Not in alarm sounding state
Shift Selection	Park (P) is selected.
HV Battery	<p>HV battery state of charge is sufficient.</p> <p>(Reference value: level 3 or higher)</p>

Item	Condition
Cabin Temperature	<ul style="list-style-type: none"> Higher than air conditioning temperature set by user Air conditioning (cooling) is necessary

(b) Function of Main Components

(1) Each component of the remote air conditioning system has the functions described in the table:

Function of Main Components

Component	Outline
Key (electrical transmitter)	Sends remote air conditioning system on/off signals to the certification ECU.
Certification ECU	Receives a signal from the key (electrical transmitter) and sends a signal to the main body ECU.
Main body ECU	<ul style="list-style-type: none"> Locks all of the doors. Checks that all of the doors are closed and locked. Checks that the hood is closed. When the remote air conditioning system starts, the main body ECU operates the wireless door lock system.
Power management control ECU	<ul style="list-style-type: none"> Turns the vehicle power (12 V) on/off. Checks the state of charge of the HV battery. Starts/stops the HV system. Controls the inverter with converter assembly. Checks the power switch condition. Checks if park (P) is selected. Checks the brake pedal condition. Permits/prohibits remote air conditioning system operation.
A/C amplifier	<ul style="list-style-type: none"> Judges whether the cooling function is operating during remote air conditioning system operation. Checks the operation of the air conditioning system based on signals from various sensors. Controls the air conditioning system. Judges when to stop the remote air conditioning system.
Inverter with converter assembly	Supplies DC power from the HV battery to the inverter of the compressor with motor assembly.
Compressor with motor assembly	Compresses refrigerant using power from the HV battery.

6. EJECTOR CYCLE SYSTEM

(a) In the conventional refrigerant cycle, liquid refrigerant gas is sent into the evaporator using the expansion valve, generating cold air. However, a rapid decrease in the refrigerant pressure forms swirls, causing energy loss. In this ejector cycle, the energy loss caused by the cooler expansion valve is utilized by the operation of the ejector that injects and expands a high-pressure refrigerant, thus improving energy consumption efficiency.

(b) The ejector includes nozzle, mixing and diffuser portions.

(c) A high temperature and pressure liquid refrigerant flowing from the condenser is introduced into the mixing section through the nozzle at high speeds as the nozzle is inwardly tapered. This decreases the refrigerant pressure in the vicinity of the nozzle, introducing low temperature and pressure gaseous refrigerant into the nozzle from the evaporator. Thus, both refrigerants are mixed in the mixing section and are introduced into the diffuser section.

(d) As the diffuser section is outwardly flared, the refrigerant flow rate in the diffuser decreases and the refrigerant pressure rises.

(e) Through these operations, the refrigerant pressure in the evaporator on the downwind side can be constantly kept lower than that on the upwind side, creating the lower temperature conditions. Therefore, air cooled by the evaporator on the upwind side can be further cooled by that on the downwind side, thus improving the efficiency of the evaporator.

7. MICRO DUST AND POLLEN FILTER MODE CONTROL

(a) When the micro dust and pollen filter mode switch is pressed, the micro dust and pollen filter mode control is activated.

(b) Then, the air vent is switched to the FACE mode and recirculated pollen-free air flows in the area around the upper part of the bodies of the driver and front passenger.

(c) When the micro dust and pollen filter mode switch signal is input to the A/C amplifier, the A/C amplifier controls the compressor with motor assembly, air inlet control servo motor, air outlet control servo motor and blower motor as shown in the timing chart below.

(d) This control usually operates for approximately 3 minutes. However, when the outside temperature is low (5°C (41°F) maximum), it will operate for approximately 1 minute.

(e) After this control stops operating, the A/C amplifier controls the air conditioning system using AUTO mode.

Timing Chart:
(Sample)

H

8. PLASMACLUSTER (ION GENERATOR) CONTROL (w/ Plasmacluster (Ion Generator))

(a) General:

(1) A Plasmacluster (ion generator) is provided inside the air duct of the side register on the driver seat side to improve the air quality and comfort in the cabin.

(2) This generator is controlled by the A/C amplifier and operates in conjunction with the blower motor.

NOTICE:

- The Plasmacluster (ion generator) uses a high voltage, which is hazardous. Therefore, if the Plasmacluster (ion generator) requires repairs, be sure to have them done at a TOYOTA dealer.
- Do not apply any type of spray (such as a cleaning solvent or hair spray) or stick any foreign matter into the Plasmacluster ion outlet, as this could cause improper operation or a malfunction.
- After use, dust may accumulate around the side register on the driver seat side. If this occurs, press the OFF switch on the A/C control assembly to stop the blower motor before cleaning the area.
- It is normal for the Plasmacluster (ion generator) to emit a slight sound during operation. This sound is created when electrons collide with the electrode while Plasmacluster ions are being generated.

HINT:

Plasmacluster™, plasmacluster, and plasmacluster ions are a trademark of the SHARP Corporation.

(b) Operation:

H

(1) The Plasmacluster (ion generator) produces positive and negative ions from the water molecules (H₂O) and oxygen molecules (O₂) in the air, and emits them into the air. These ions reduce airborne germs.

9. ECO MODE CONTROL

(a) Under the control of eco mode, the A/C amplifier restricts the air conditioning system performance under specified conditions, thus improving fuel economy.

(b) Eco mode control is activated when the ECO MODE switch provided inside the integration control and panel sub-assembly is pressed, and then restricts the air conditioning system performance as described below.

Control	Outline
Inside/outside Air Switch Control	Automatically switches the air inlet port to internal air circulation mode when the outside air temperature is equal to or higher than a predetermined temperature and reduces the power consumption.
Blower Level Control	Sets the blower level in AUTO mode lower than normal, and suppresses the power consumption.
PTC Heater Control	Stops the operation of PTC heater assembly and suppresses the power consumption.
Heating Restriction Control	Changes the air outlet temperature by turning the ECO MODE switch on and off during heating and increases the amount of engine-off time when the ECO MODE switch is in the on state, thus improving fuel economy.
Compressor Speed Restriction Control	Restricts the maximum speed during cooling and reduces the power consumption.

10. COMPRESSOR WITH MOTOR ASSEMBLY

(a) Compressor Control

HINT:

In order to ensure the proper insulation of the internal high-voltage portion of the compressor and the compressor housing, this vehicle has adopted compressor oil (ND11) with a high level of insulation performance. Therefore, never use compressor oil other than the ND11 type compressor oil or its equivalent.

(1) The A/C amplifier calculates the target compressor speed based on the target evaporator temperature (calculated from the temperature control switch, room temperature sensor, ambient temperature sensor, and solar sensor) and the actual evaporator temperature detected by the evaporator temperature sensor. Then, the A/C amplifier transmits the target speed to the power management control ECU. The power management control ECU controls the A/C inverter based on the target speed data in order to control the compressor with motor assembly to a speed that suits the operating condition of the air conditioning system.

(2) The A/C amplifier calculates the target evaporator temperature, which includes corrections based on the temperature control switch, room temperature sensor, ambient temperature sensor, automatic light control sensor, and evaporator temperature sensor. Accordingly, the A/C amplifier controls the compressor speed to an extent that does not inhibit the proper cooling performance or defogging performance.

(3) The compressor with motor assembly uses high-voltage alternating current. If a short or open circuit occurs in the compressor with motor assembly wiring harness, the power management control ECU will cut off the A/C inverter circuit in order to stop the power supply to the compressor motor.

11. PTC HEATER (w/ PTC Heater Assembly)

(a) General

(1) The PTC heater assembly is located above the heater core in the air conditioning unit.

(2) The PTC heater assembly consists of a PTC element, aluminum fin, and brass plate. When current is applied to the PTC element, it generates heat to warm the air that passes through the unit.

(b) PTC Heater Assembly Operating Conditions

(1) The PTC heater assembly is turned on and off by the A/C amplifier in accordance with the engine coolant temperature, ambient temperature, engine speed, temperature setting, and electrical load (generator power ratio).

12. BLOWER MOTOR

The blower motor has a built-in blower controller, and is controlled using duty control performed by the A/C amplifier.

13. BUS CONNECTOR (AIR CONDITIONING HARNESS)

(a) A Bus connector is used in the wire harness connection that connects the servo motor from the A/C amplifier.

Example:

H

(b) Each Bus connector has a built-in communication/driver IC which communicates with each servo motor connector, actuates the servo motor, and has a position detection function. This enables bus communication for the servo motor wire harness, for a more lightweight construction and a reduced number of wires.

w/ Bus Connector:

w/o Bus Connector:

H

14. SERVO MOTOR

The pulse pattern type servo motor consists of a printed circuit board and a servo motor. The printed circuit board has three contact points, and can transmit two ON-OFF signals to the A/C amplifier based on the difference of the pulse phases. The BUS connector can detect the damper position and movement direction with these signals.

H

15. EVAPORATOR TEMPERATURE SENSOR

The evaporator temperature sensor detects the temperature of the cool air immediately through the evaporator in the form of resistance changes, and outputs it to the A/C amplifier.

16. ROOM TEMPERATURE SENSOR

The room temperature sensor detects the cabin temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

17. AMBIENT TEMPERATURE SENSOR

The ambient temperature sensor detects the outside temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

18. SOLAR SENSOR (AUTOMATIC LIGHT CONTROL SENSOR)

The solar sensor (automatic light control sensor) detects the changes in the amount of sunlight and outputs it to the A/C amplifier in the form of voltage changes.

19. A/C PRESSURE SENSOR

The A/C pressure sensor detects the refrigerant pressure and outputs it to the A/C amplifier in the form of voltage changes.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the air conditioning system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	INSPECT BATTERY VOLTAGE
----	-------------------------

(a) Inspect the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3.	CHECK COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*
----	---

(a) Use the Techstream to check if the LIN communication system is functioning normally.

Result:

Result	Proceed to
LIN DTC is not output	A
LIN DTC is output	B

B ▶ GO TO LIN COMMUNICATION SYSTEM

A

4.	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*
----	---

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
CAN DTC is not output	A

Result	Proceed to
CAN DTC is output	B 

B ▶ GO TO CAN COMMUNICATION SYSTEM

A
▼

5.	CHECK FOR DTC*
----	----------------

(a) Check for DTCs and note any code that is output.

(b) Clear the DTCs.

(c) Recheck for DTCs. Based on the DTCs output above, try to force the A/C system to output DTCs by simulating the conditions indicated by the DTC.

Result:

Result	Proceed to
DTC is output	A
DTC is not output	B

B ▶ Go to step 7

A
▼

6.	DIAGNOSTIC TROUBLE CODE CHART
----	-------------------------------

(a) Find the output code in the diagnostic trouble code chart .

NEXT ▶ Go to step 9

7.	PROBLEM SYMPTOMS TABLE
----	------------------------

(a) Refer to Problem Symptoms Table .

Result:

Result	Proceed to
Fault is not listed in Problem Symptoms Table	A
Fault is listed in Problem Symptoms Table	B

B ▶ Go to step 9

A
▼

8.	OVERALL ANALYSIS AND TROUBLESHOOTING*
----	---------------------------------------

(a) Panel diagnosis (indicator check, sensor check) .

(b) Data List / Active Test 

(c) Terminals of ECU 

(d) Operation Check  (w/ Remote Air Conditioning System))

(e) On-vehicle Inspection

(f) Inspection

NEXT  **END**

OPERATION CHECK

1. OPERATION CHECK OF REMOTE AIR CONDITIONING SYSTEM

HINT:

The remote air conditioning system does not operate unless the required operating conditions are met. Therefore, confirm that the operating conditions are met before performing the inspection .

(a) Activation Control Check

(1) Press and hold the remote A/C switch on the key (electrical transmitter) once for 1 seconds or more to start the air conditioning system.

HINT:

The wireless door lock system locks all doors before the remote air conditioning system is activated.

(b) Operation Check

(1) Check that the remote air conditioning system operates for a maximum of 3 minutes.

HINT:

The operating time differs depending on the HV battery state of charge.

(c) Stop Control Check

(1) Press the remote A/C switch on the key (electrical transmitter) twice briefly within 3 seconds to stop the remote air conditioning system.

HINT:

- When any of the operating conditions are not met during remote air conditioning system operation, the remote air conditioning system will stop.
- When 3 minutes have elapsed after the remote air conditioning system was started, the remote air conditioning system will stop. Some operating conditions may result in the remote air conditioning system being stopped before 3 minutes elapses.

(d) Operation Check of the Remote A/C Switch on the Key (Electrical Transmitter)

NOTICE:

- Use 2 keys (electrical transmitters).
- Confirm that the wireless door lock functions operate normally.

(1) Prepare 2 registered keys (electrical transmitters), and label one of them key (electrical transmitter) A, and the other key (electrical transmitter) B.

(2) Operate the remote A/C switch on key (electrical transmitter) A and check that the remote air conditioning system can be operated.

(3) Operate the remote A/C switch on key (electrical transmitter) B and check that the remote air conditioning system can be operated.

HINT:

- If the remote air conditioning system is not operated for both keys (electrical transmitters) A and B, the remote air conditioning system may have a malfunction **INFO**.
- If the remote air conditioning system is not operated for one of the keys (electrical transmitter) A or B, the key (electrical transmitter) needs to be replaced because a malfunction of the remote A/C switch on the key (electrical transmitter) is suspected.

CUSTOMIZE PARAMETERS

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

Air Conditioner

Display (Item)	Default	Content	Setting
Set Temperature Shift	Normal	Function to control with the shifted temperature against the displayed temperature.	+2 C, +1 C, Normal, -1 C or -2 C
Compressor Mode	Automatic	Function to automatically turn the A/C on by pressing the AUTO button when blower is on and the A/C is off.	Manual or Automatic
Air Inlet Mode	Automatic	Function to shift from INLET mode to RECIRCULATION mode when the A/C is turned on.	Manual or Automatic
Foot/DEF Auto Mode	ON	Function to automatically turn the airflow from FOOT/DEF on when AUTO mode is on.	OFF or ON
Foot/DEF Automatic Blow Up Function	ON	Function to automatically increase the blower level when the defroster is on.	OFF or ON
Ambient Temperature Shift	Normal	Function to control the shifted ambient temperature in relation to the displayed ambient temperature.	+3 C, +2 C, +1 C, Normal, -1 C, -2 C or -3 C
ECO MODE Cancel	OFF	Function to cancel the ECO mode drive when item is on.	OFF or ON
Noise and Vibration Reduction	OFF	Function to change speed of the compressor when item is on.	OFF or ON
Start Pre A/C*1	Long1	Function to set the activation operation method for the remote air conditioning system using the key (electrical transmitter).	1 tim ON, 2 tim ON, Long1 or Long2
Stop Pre A/C*1	2 tim ON	Function to set the stop operation method for the remote air conditioning system using the key (electrical transmitter).	1 tim ON, 2 tim ON, Long1 or Long2

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

- *2: w/ Solar Ventilation System
- *3: w/ Plasmacluster (Ion Generator)

(a) Waveform 1:

Item	Content
Terminal No.	L17-23 (BLW) - L17-14 (GND)
Tool Setting	1 V/DIV., 500 μs/DIV.
Vehicle Condition	Power switch on (IG) Blower switch LO

HINT:

The waveform varies with the blower speed.

(b) Waveform 2:

Item	Content
Terminal No.	L17-26 (SSLR) - L17-14 (GND)
Tool Setting	1 V/DIV., 100 ms/DIV.
Vehicle Condition	Power switch on (IG) SBI terminal: 7 V or higher Solar ventilation system: off

HINT:

The waveform varies with the communication content.

2. A/C CONTROL ASSEMBLY

HINT:

Check from the rear of the connector while it is connected to the A/C control assembly.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L20-2 (TX+) - L20-8 (GND)	V - W-B	LIN communication signal	Power switch on (IG)	Pulse generation
L20-3 (SWO) - L20-8 (GND)	L - W-B	Steering pad switch assembly signal	No switch pushed → R/F switch pushed → TEMP+ switch pushed → TEMP- switch pushed	4.44 to 5.43 V → 1.19 to 1.49 V → 2.09 to 2.54 V → 3.2 to 3.88 V
L20-5 (IG+) - L20-8 (GND)	B - W-B	Power source (IG)	Power switch off	Below 1 V
L20-5 (IG+) - L20-8 (GND)	B - W-B	Power source (IG)	Power switch on (IG)	11 to 14 V
L20-6 (ILL+) - L20-7 (ILL-)	G - W-B	Light control switch signal	Light control switch off	Below 1 V
L20-6 (ILL+) - L20-7 (ILL-)	G - W-B	Light control switch signal	Light control switch tail or head	11 to 14 V
L20-8 (GND) - Body ground	W-B - Body ground	Ground for front A/C control assembly	Always	Below 1 V

DIAGNOSIS SYSTEM

1. DESCRIPTION

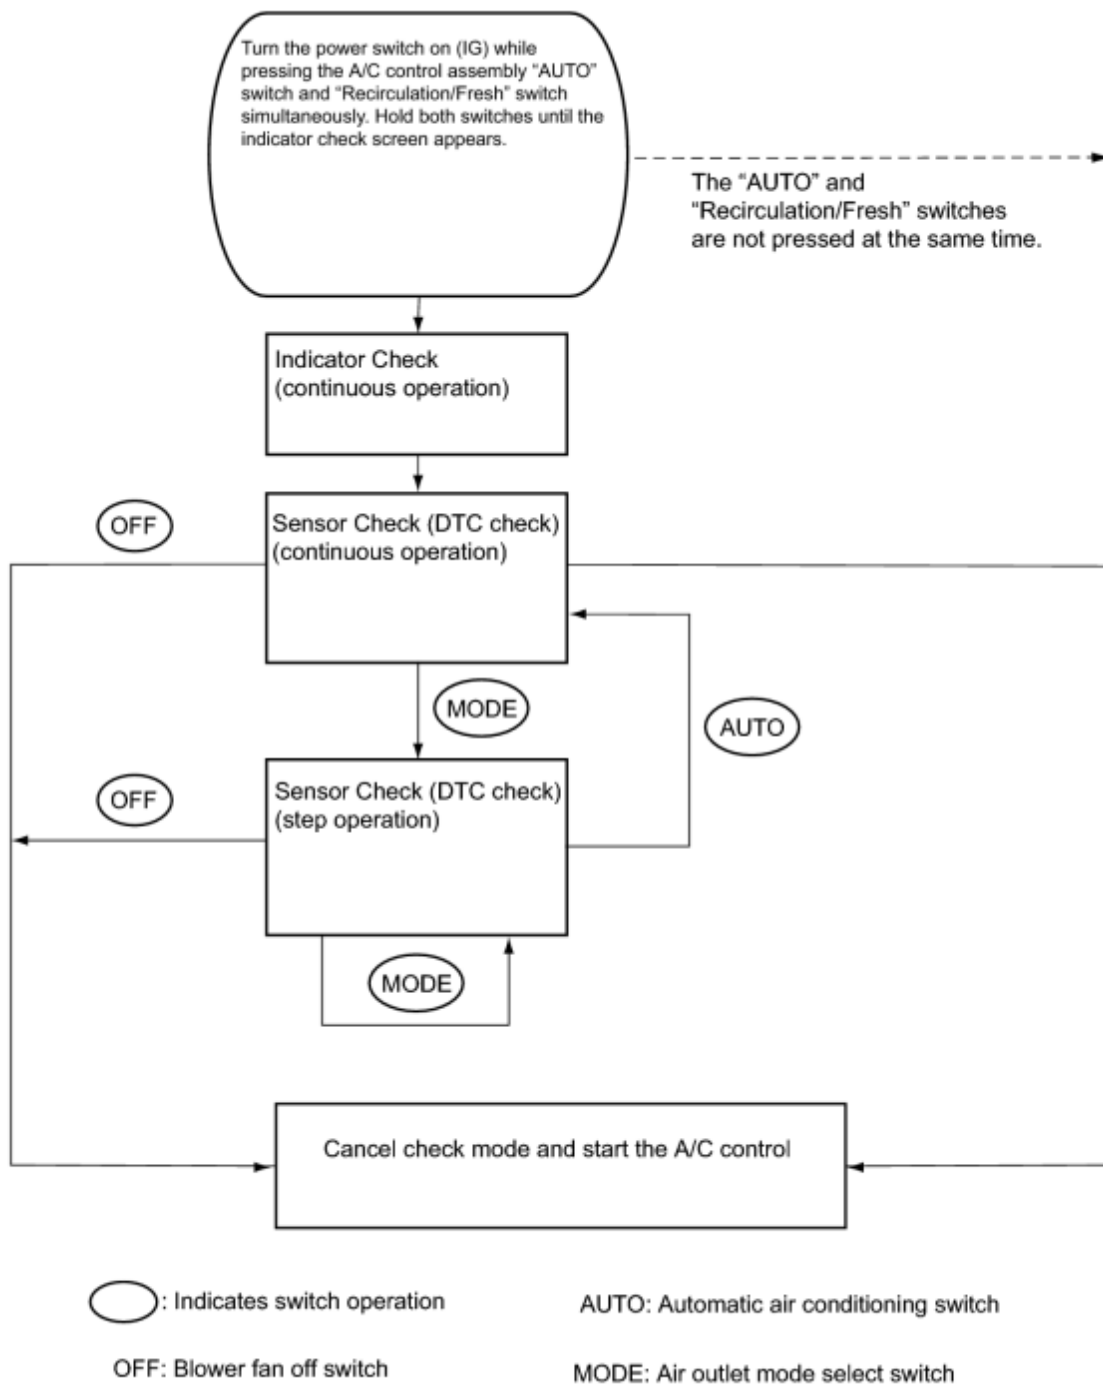

(a) Air conditioning system data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform troubleshooting.

2. CHECK DLC3

(a) Check the DLC3 .

3. LIST OF OPERATION METHODS

(a) By operating each of the air conditioning control switches as shown in the diagram below, it is possible to enter diagnostic check mode.

4. INDICATOR CHECK

- (a) Turn the power switch off.
- (b) Turn the power switch on (ACC) and wait for at least 5 seconds.
- (c) Turn the power switch on (IG) while pressing the A/C control

*1

assembly "AUTO" switch and "Recirculation/Fresh" switch simultaneously. Hold both switches until the indicator check screen appears.

Text in Illustration

*1	A/C Control Assembly
----	----------------------

H

*1

(d) The indicator check is automatically performed when panel diagnosis is activated. Check that the indicators light up and go off 4 times at 1-second intervals continuously.

- The sensor check automatically starts when the indicator check is completed.
- Press the "OFF" switch to cancel the check mode.

Indicator Blinking Pattern:

Text in Illustration

*1	A/C Control Assembly
----	----------------------

H

5. SENSOR CHECK (DTC CHECK)

- Start the engine and warm it up.
- Perform the indicator check.

HINT:

After the indicator check is completed, the system enters DTC check mode automatically.

(c) Read the DTC displayed on the A/C control assembly.

NOTICE:

In sensor check mode, which is automatically entered after indicator check mode, troubleshooting may be partially performed. Be sure to perform the sensor check again.

*1

HINT:

Refer to Diagnostic Trouble Code Chart for details of the codes INFO.

- When there are no problems, DTC 00 is output.
- As an example, the illustration shows that display DTC 12 is output.

Text in Illustration

*1	A/C Control Assembly
*2	Diagnostic Trouble Code (DTC)

H

*1

(d) If the steps are difficult to read because they change automatically, press the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pressed.

HINT:

Press the "OFF" switch to finish panel diagnosis.

Text in Illustration

*1	A/C Control Assembly
----	----------------------

H

(e) Clear the DTC

*1

(1) During the sensor check, press the "FRONT DEF" switch and "MODE" switch simultaneously.

DTC CHECK / CLEAR

1. DTC CHECK USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Trouble Codes.
- (e) Check for DTCs.

2. DTC CLEAR USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Trouble Codes.
- (e) Clear the DTCs by pressing the YES button on the Techstream display.

DATA LIST / ACTIVE TEST

1. DATA LIST

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Data List.
- (e) Check the value(s) by referring to the table below.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Room Temperature Sensor	Room temperature sensor / Min.: -6.5°C (20.3°F) Max.: 57.25°C (135.05°F)	Actual cabin temperature displayed	-

- *1: If the cabin temperature is approximately -18.6°C (-1.48°F) or lower, DTC B1411/11 may be output even though the system is normal.
- *2: If the ambient temperature is approximately -52.9°C (-63.22°F) or lower, DTC B1412/12 may be output even though the system is normal.
- *3: w/ Plasmacluster (Ion Generator)
- *4: The A/C amplifier stores the DTC of the respective malfunction if it has occurred for the period of time indicated in the brackets.

DESCRIPTION

The room temperature sensor is installed in the instrument panel. It detects the cabin temperature to control the air conditioning AUTO mode. The resistance of the room temperature sensor changes in accordance with the cabin temperature. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The A/C amplifier applies voltage (5 V) to the room temperature sensor and reads voltage changes as the resistance of the room temperature sensor changes. This sensor also sends appropriate signals to the A/C amplifier. The room temperature sensor is integrated with the room humidity sensor.

2.	INSPECT EVAPORATOR TEMPERATURE SENSOR
----	---------------------------------------

(a) Remove the evaporator temperature sensor.

(b) Disconnect the evaporator temperature sensor connector.

*1

Resistance (kΩ)

H

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z21-1 - z21-2	-10°C (14°F)	7.30 to 9.10 kΩ
z21-1 - z21-2	-5°C (23°F)	5.65 to 6.95 kΩ
z21-1 - z21-2	0°C (32°F)	4.40 to 5.35 kΩ
z21-1 - z21-2	5°C (41°F)	3.40 to 4.15 kΩ
z21-1 - z21-2	10°C (50°F)	2.70 to 3.25 kΩ
z21-1 - z21-2	15°C (59°F)	2.14 to 2.58 kΩ
z21-1 - z21-2	20°C (68°F)	1.71 to 2.05 kΩ
z21-1 - z21-2	25°C (77°F)	1.38 to 1.64 kΩ
z21-1 - z21-2	30°C (86°F)	1.11 to 1.32 kΩ

NOTICE:

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).

DESCRIPTION

This DTC is stored when refrigerant pressure on the high pressure side is extremely low (0.19 MPa (2.0 kgf/cm², 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm², 455 psi) or more). The A/C pressure sensor is installed on the high pressure line. It detects refrigerant pressure to output a refrigerant pressure signal to the A/C amplifier. The A/C amplifier converts this signal to a pressure value according to the sensor characteristics to control the compressor.

DTC No.	DTC Detection Condition	Trouble Area
B1423/23	<ul style="list-style-type: none"> • Open or short in pressure sensor circuit • Refrigerant pressure on the high pressure line is extremely low (0.19 MPa (2.0 kgf/cm², 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm², 455 psi) or more). 	<ul style="list-style-type: none"> • A/C pressure sensor • Harness or connector between A/C pressure sensor and A/C amplifier • A/C amplifier • Expansion valve (blocked, stuck) • Condenser (blocked, deterioration of cooling capacity due to dirt) • Cooler dryer (moisture in the refrigerant cycle cannot be absorbed) • Cooling fan system (condenser cannot be cooled down) • A/C system (leaks, blocked)

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

- CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)

*1

- Disconnect the A/C pressure sensor connector.

H

- Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A31-3 (+) - Body ground	Power switch on (IG)	4.75 to 5.25 V

Text in Illustration

*1	Front view of wire harness connector (to A/C Pressure Sensor)
----	--

NG ► [CHECK HARNESS AND CONNECTOR \(A/C AMPLIFIER - A/C PRESSURE SENSOR\)](#)

OK

2.	CHECK HARNESS AND CONNECTOR (GROUND CIRCUIT)
----	--

*1

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A31-1 (-) - Body ground	Always	Below 1 Ω

Text in Illustration

H

*1	Front view of wire harness connector (to A/C Pressure Sensor)
----	--

NG ► [CHECK HARNESS AND CONNECTOR \(A/C AMPLIFIER - A/C PRESSURE SENSOR\)](#)

OK

3.	INSPECT A/C PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)
----	---

(a) Reconnect the A/C pressure sensor connector.

(b) Remove the A/C amplifier with the connectors still connected.

*1

H

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L17-9 (PRE) - Body ground	Power switch on (IG) (A/C: off)	0.73 to 4.84 V

HINT:

If the voltage is not as specified, there may be a malfunction in the A/C amplifier, A/C pressure sensor or wire harness. It is also possible that the amount of refrigerant may not be appropriate.

Text in Illustration

*1	Component with harness connected (A/C Amplifier)
----	---

NG [CHECK HARNESS AND CONNECTOR \(A/C AMPLIFIER - A/C PRESSURE SENSOR\)](#)

OK

4.	INSPECT A/C PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)
----	---

(a) Measure the voltage when the following conditions are satisfied.

Item	Condition
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	on

Item	Condition
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)

NOTICE:

- If refrigerant pressure on the high pressure line becomes extremely high during the inspection (if the voltage exceeds 4.84 V), the fail-safe function stops compressor operation. Therefore, measure the voltage before the fail-safe function operates.
- It is necessary to measure the voltage over a period of time (approximately 10 minutes) because the problem symptom may recur after a while.

HINT:

When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to signals from the ambient temperature sensor and evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.

(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L17-9 (PRE) - Body ground	Power switch on (IG) (A/C: on)	0.73 to 4.84 V

*1

OK

8. CHECK FOR A/C SYSTEM LEAK

- Install the manifold gauge set.
- Recover the refrigerant from the A/C system using a refrigerant recovery unit.
- Evacuate the A/C system and check that vacuum can be maintained.

OK:

Vacuum can be maintained in the A/C system.

HINT:

If vacuum cannot be maintained in the A/C system, there may be a refrigerant leak. In this case, it is necessary to repair or replace the leaking part of the A/C system.

NG  [REPAIR A/C SYSTEM LEAK](#)

OK

9.	CHARGE REFRIGERANT
----	--------------------

(a) Add an appropriate amount of refrigerant .

NEXT

10.	RECHECK FOR DTC
-----	-----------------

(a) Recheck for the DTC when the following conditions are satisfied.

Item	Condition
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	on
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)

NOTICE:

If refrigerant pressure on the high pressure line is excessive, this DTC will be set. Therefore, it is necessary to measure the voltage over a period of time (approximately 10 minutes) because this DTC may be set after the A/C has been operating for a while.

HINT:

When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to signals from the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.

Result:

Result	Proceed to
DTC B1423/23 is output	A

Result	Proceed to
DTC B1423/23 is not output	B

NOTICE:

If the DTC was set due to an insufficient or excessive amount of refrigerant, the problem may have been solved after performing the previous step. However, the root cause of insufficient refrigerant may be refrigerant leaks. The root cause of excessive refrigerant may be adding refrigerant when the level was insufficient. Therefore, identify and repair any refrigerant leaks as necessary.

B END

A

11. INSPECT A/C PRESSURE SENSOR

- (a) Install the manifold gauge set.
- (b) Reconnect the A/C pressure sensor connector.
- (c) Turn the power switch on (IG).

*1

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L17-9 (PRE) - L17-13 (SG-2)	Refrigerant pressure: Normal pressure (less than 3.187 MPa [462 psi] and more than 0.39 MPa [57 psi])	1.0 to 4.912 V

Text in Illustration

*1	Component with harness connected (A/C Amplifier)
----	---

NG [REPLACE A/C PRESSURE SENSOR](#)

OK  **REPLACE A/C AMPLIFIER**

12. REPAIR A/C SYSTEM LEAK

- (a) Identify the area where refrigerant leaks from .
- (b) Repair the identified area of the A/C system.
- (c) Evacuate the A/C system.

NEXT  **CHARGE REFRIGERANT**

13. INSPECT COOLING FAN SYSTEM

- (a) Check that the cooling fan(s) operates normally.

HINT:

Refer to Cooling Fan Circuit .

NG  **REPAIR COOLING FAN SYSTEM**

OK

14. CHARGE REFRIGERANT

- (a) Use a refrigerant recovery unit to recover refrigerant.
- (b) Evacuate the A/C system.
- (c) Add an appropriate amount of refrigerant .

HINT:

If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for DTCs.

NEXT

15. RECHECK FOR DTC

- (a) Recheck for the DTC when the following conditions are satisfied.

Item	Condition
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	on
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)

NOTICE:

If refrigerant pressure on the high pressure line is excessive, this DTC will be set. Therefore, it is necessary to measure the voltage over a period of time (approximately 10 minutes) because DTC may be set after the A/C has been operating for a while.

HINT:

- When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to signals from the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.
- If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for the DTC. If the DTC is not output, it indicates that the cooler dryer in the condenser is not able to absorb moisture in the refrigerant. In this case, to complete the repair, it is necessary to replace the cooler dryer.

Result:

Result	Proceed to
DTC B1423/23 is output	A
DTC B1423/23 is not output	B

B ▶ REPLACE COOLER DRYER

A

16.	REPLACE EXPANSION VALVE
-----	-------------------------

(a) Replace the expansion valve with a new or a known good one .

Result:

Result	Proceed to
DTC B1423/23 is not output	A
DTC B1423/23 is output	B

B ▶ **REPLACE A/C AMPLIFIER**

A  END

DESCRIPTION

The air mix control servo motor sends pulse signals to indicate the damper position to the A/C amplifier. The A/C amplifier activates the motor (normal or reverse) based on these signals to move the air mix damper to any position. As a result, the amount of air passing through the heater core after passing through the evaporator is adjusted, and the temperature of the air blowing toward the passenger side is controlled.

The A/C amplifier communicates with the servo through a communication/driver IC and wiring assembly called the air conditioning harness.

HINT:

Confirm that no mechanical problem is present because this DTC can be stored when either a damper link or the damper is mechanically locked.

DTC No.	DTC Detection Condition	Trouble Area
B1441/41	Air mix damper position sensor value does not change even if A/C amplifier operates air mix control servo motor	<ul style="list-style-type: none"> • Air mix control servo motor • Air conditioning harness • A/C amplifier

Result	Proceed to
DTC B1443/43 is output	A
DTC B1443/43 is not output	B

B ▶ END (AIR CONDITIONING HARNESS WAS DEFECTIVE)

A ▶ **REPLACE A/C AMPLIFIER**

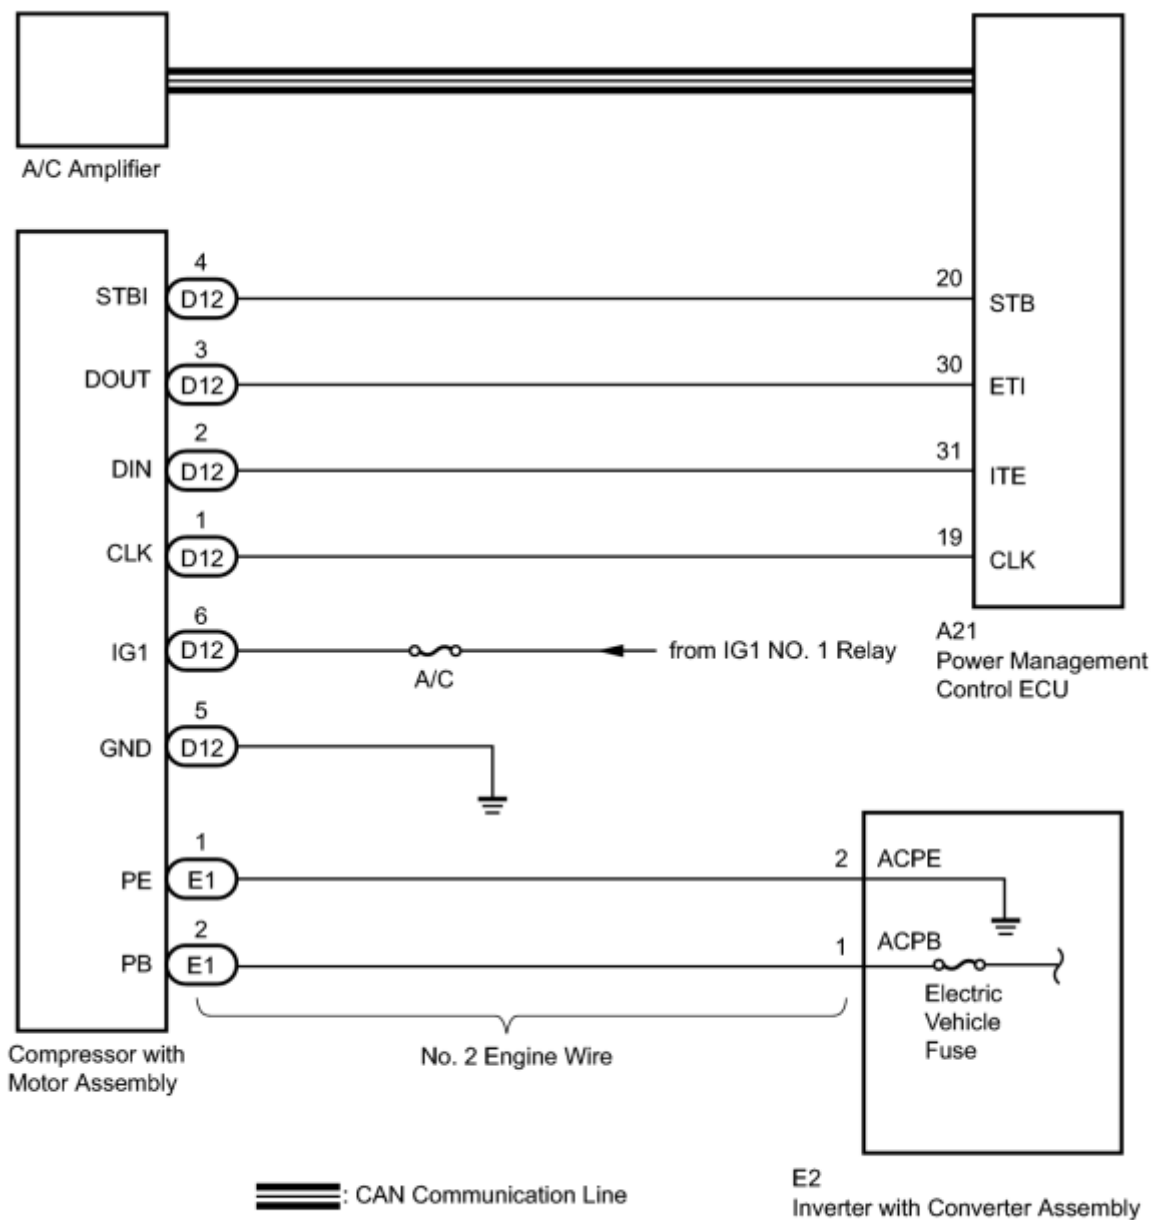

DESCRIPTION

The A/C inverter assembly monitors power voltage from the main battery in the circuit. It stops compressor control and stores the DTC when the monitored voltage is outside the specified range.

The output DTC is memorized as previous trouble. Compressor control may not resume unless the power switch is turned off.

DTC No.	DTC Detection Condition	Trouble Area
B1471/71	<ul style="list-style-type: none"> • Open or short in A/C inverter high voltage power resource system. • The boost pressure system is broken or malfunctioning. 	<ul style="list-style-type: none"> • Electric vehicle fuse • No. 2 engine wire (harness or connector between compressor with motor assembly and inverter with converter assembly) • Compressor with motor assembly • Hybrid control system • CAN communication system

WIRING DIAGRAM

INSPECTION PROCEDURE

CAUTION:

- Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.
- Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.

NOTICE:

The hybrid control system and air conditioning system output DTCs separately. Inspect DTCs following the flow chart for the hybrid control system first if any DTCs from those systems are output simultaneously.

PROCEDURE

1. CHECK CAN COMMUNICATION SYSTEM

(a) Using the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B  GO TO CAN COMMUNICATION SYSTEM

A

2. CHECK DIAGNOSTIC TROUBLE CODE (HYBRID CONTROL SYSTEM)

(a) Check if DTCs for the hybrid control system are output using the Techstream.

OK:

Hybrid control system DTCs are not output.

NG  GO TO HYBRID CONTROL SYSTEM

OK

3. INSPECT ELECTRIC VEHICLE FUSE

CAUTION:

Be sure to wear insulated gloves.

(a) Turn the power switch off.

(b) Remove the service plug grip.

CAUTION:

Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.

NOTICE:

2010 Toyota Prius

Repair Manual

Do not start the engine with the service plug grip removed because it may cause a malfunction.

(c) Remove the inverter terminal cover.

NOTICE:

Be sure to prevent foreign objects or water from entering the inverter with converter assembly.

*1

(d) Check that bolts A and B are tightened securely.

H

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Item (Tester Connection)	Condition	Specified Condition
ELECTRIC VEHICLE fuse (A - B)	Always	Below 1 Ω

H

*1	Front view of wire harness connector (to Compressor with Motor Assembly)
*2	Front view of wire harness connector (to Inverter with Converter Assembly)

NG REPLACE NO. 2 ENGINE WIRE

OK REPLACE COMPRESSOR WITH MOTOR ASSEMBLY

DESCRIPTION

The inverter in the compressor with motor assembly outputs high-voltage to operate the motor. If there is an open or short in the output circuit, the ECU will stop compressor operation and output the DTC. The output DTC will be memorized as a history DTC. The compressor operation remains stopped until both the history and current DTCs are cleared.

DTC No.	DTC Detection Condition	Trouble Area
B1472/72	Open or short in A/C inverter high voltage output system.	<ul style="list-style-type: none"> Compressor with motor assembly CAN communication system

OK  REPLACE AIR CONDITIONING HARNESS

DESCRIPTION

The power management control ECU and compressor with motor assembly transmit information to one another via a communication line. Compressor control is stopped and the DTC is stored if communication information is cut off or abnormal information occurs.

The DTC is also detected if high-voltage power supplied from the inverter with converter assembly to the compressor control circuit is shut off.

The output DTC is memorized as previous trouble.

DTC No.	DTC Detection Condition	Trouble Area
B1498/98	<ul style="list-style-type: none"> Communication line error or open between the power management control ECU and compressor with motor assembly. DTC B14A1 is not output	B

B ▶ REPLACE PLASMACLUSTER (ION GENERATOR)

A ▶ REPLACE A/C AMPLIFIER

DESCRIPTION

The solar sensor (automatic light control sensor) is installed on the upper side of the instrument panel. It detects sunlight to control air conditioning AUTO mode. The output voltage from the solar sensor (automatic light control sensor) varies in accordance with the amount of sunlight. When the amount of sunlight increases, the output voltage increases. As the sunlight decreases, the output voltage decreases. The A/C amplifier detects changes in the output voltage from the solar sensor (automatic light control sensor).

DTC No.	DTC Detection Condition	Trouble Area

A

2.	CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)
----	--

*1

(a) Disconnect the solar sensor (automatic light control sensor) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
I1-3 (CLTB) - I1-6 (CLTE)	Power switch off	Below 1 V
I1-3 (CLTB) - I1-6 (CLTE)	Power switch on (IG)	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Solar Sensor (Automatic Light Control Sensor))
----	--

NG **CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - SOLAR SENSOR)**

OK

3. **CHECK HARNESS AND CONNECTOR (SOLAR SENSOR - A/C AMPLIFIER)**

*1

(a) Disconnect the solar sensor (automatic light control sensor) connector.

*2

(b) Disconnect the A/C amplifier connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L17-33 (TS) - I1-1 (NSHA)	Always	Below 1 Ω
L17-33 (TS) - Body ground	Always	10 k Ω or higher

Text in Illustration

----	--------------------------------------

	(to Solar Sensor (Automatic Light Control Sensor))
*2	Front view of wire harness connector (to A/C Amplifier)

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.	INSPECT SOLAR SENSOR (AUTOMATIC LIGHT CONTROL SENSOR)
----	---

*1

(a) Remove the solar sensor (automatic light control sensor).

(b) Reconnect the solar sensor (automatic light control sensor) connector.

(c) Turn the power switch on (IG).

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
I1-1 (NSHA) - I1-6 (CLTE)	Sensor is exposed to electric light	0.8 to 4.3 V
I1-1 (NSHA) - I1-6 (CLTE)	Sensor is covered with a cloth	Below 0.8 V

NOTICE:

- The connection procedure for using a digital tester such as a TOYOTA electrical tester is shown above. When using an analog tester, connect the negative (-) lead to terminal 3 and the positive (+) lead to terminal 6 of the solar sensor (automatic light control sensor).
- While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

HINT:

- Use an incandescent light for inspection. Bring it within about 30 cm (11.8 in.) of the solar sensor (automatic light control sensor).
- As the inspection light is moved away from the sensor, the voltage decreases.

OK  **REPLACE MAIN BODY ECU**

DTC	P0AA6-611	Hybrid Battery Voltage System Isolation Fault
-----	-----------	---

DESCRIPTION

The DTC is stored if there is insulation trouble with the high-voltage circuits in the air conditioning system. Possible causes are poor insulation in the compressor with motor assembly, or mixing of any oil other than ND-OIL 11 in the refrigerant cycle.

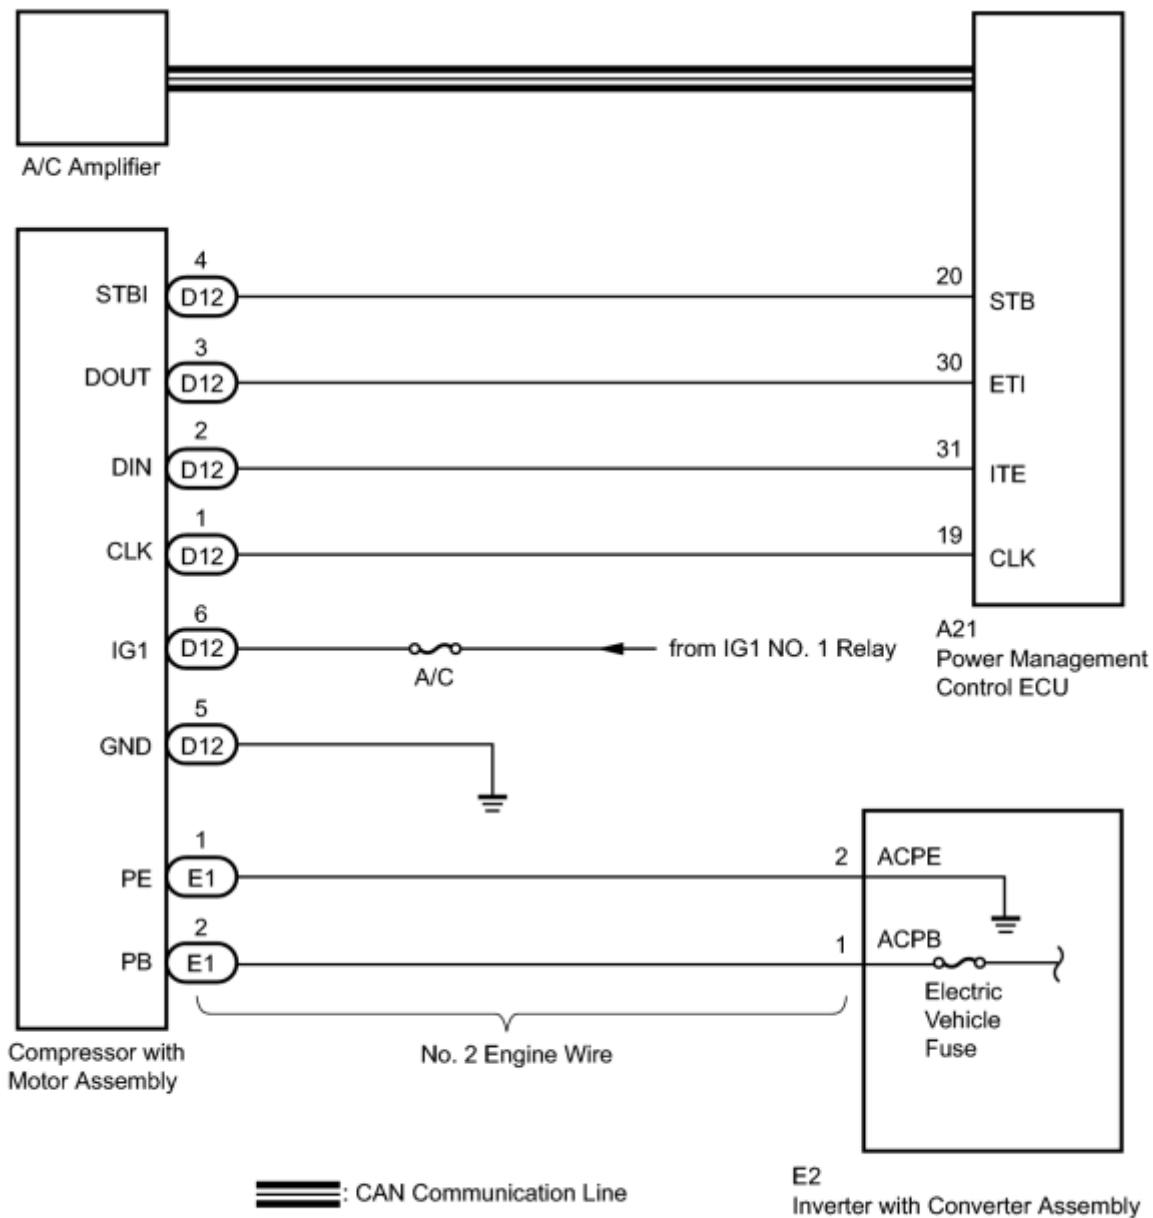

The motor driven with high-voltage is built into the electrical compressor and is cooled directly with refrigerant. Compressor oil (ND-OIL 11) with high insulation performance is used because a leakage of electrical power may occur if regular compressor oil (ND-OIL 8) is used.

CAUTION:

- Wear insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors.
- Be sure to carry the removed service plug grip because other workers may install it by mistake.
- Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.

DTC No.	DTC Detection Condition	Trouble Area
P0AA6-611	High voltage system insulation malfunction	<ul style="list-style-type: none"> • Compressor oil • Refrigerant pipe line • Compressor with motor assembly • CAN communication system

WIRING DIAGRAM

INSPECTION PROCEDURE

CAUTION:

- Wear insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors.
- Be sure to carry the removed service plug grip because other workers may install it by mistake.
- Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.

NOTICE:

- Electrical insulation performance may decrease significantly if even a small amount of oil other than ND-OIL 11 is used (or enters) in the refrigerant cycle, causing the DTC to be output.
- If other oil is accidentally used and a DTC is output, collect the oil in the refrigerant cycle into the compressor and replace it with ND-OIL 11 to increase the ND-OIL 11 ratio amount.
- Replace the main components (evaporator, condenser, and compressor) if a large amount of oil other than ND-OIL 11 enters the system. Failing to do so may cause electrical insulation performance to remain low, causing the DTC to be output.
- The hybrid control system and air conditioning system output DTCs separately. Inspect DTCs following the flow chart for the hybrid control system first if any DTCs from those systems are output simultaneously.

HINT:

If it can be confirmed that any compressor oil other than ND-OIL 11 has been used in the vehicle, replace the air conditioning cycle.

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
----	--------------------------------

(a) Using the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B ▶ GO TO CAN COMMUNICATION SYSTEM

A

2.	INSPECT COMPRESSOR WITH MOTOR ASSEMBLY
----	--

CAUTION:

Because the compressor has a high-voltage circuit, wear insulated gloves and pull out the service plug grip to cut off the high-voltage circuit before inspection.

- (a) Clear the DTCs INFO.
- (b) Turn the power switch on (IG).
- (c) Prepare the vehicle according to the table below for 3 minutes.

Item	Condition
Blower speed	HI
Temperature setting	MAX COLD

Item	Condition
A/C	ON

(d) Turn the power switch off.

(e) Remove the service plug grip.

CAUTION:

Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.

NOTICE:

Do not start the engine with the service plug grip removed because it may cause a malfunction.

(f) Disconnect the connector from the compressor with motor assembly.

H

(g) Using a megohmmeter, measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-1 (PE) - Body ground	Always	2 MΩ or higher
E1-2 (PB) - Body ground	Always	2 MΩ or higher

Text in Illustration

*1	Component without harness connected (Compressor with Motor Assembly)
----	---

NG  REPLACE COMPRESSOR WITH MOTOR ASSEMBLY

OK

3.	INSPECT AIR CONDITIONING CYCLE
----	--------------------------------

CAUTION:

Because the compressor has a high-voltage circuit, wear insulated gloves and pull out the service plug grip to cut off the high-voltage circuit before inspection.

- (a) Reconnect the connector to the compressor with motor assembly.
- (b) Install the service plug grip.
- (c) Turn the power switch on (IG).
- (d) Set the A/C setting temperature to 25°C (77°F) and the blower switch LO and then operate the compressor for 10 minutes to circulate the refrigerant cycle with refrigerant and collect as much compressor oil as possible.
- (e) Turn the power switch off.
- (f) Using a spot cooler or other tools, cool down the compressor with motor assembly for 30 minutes, or leave the vehicle overnight before inspection.

NOTICE:

Do not operate the compressor before inspection.

- (g) Remove the service plug grip.

CAUTION:

Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.

NOTICE:

Do not start the engine with the service plug grip removed because it may cause a malfunction.

- (h) Disconnect the connector from the compressor with motor assembly.

(i) Using a megohmmeter, measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-1 (PE) - Body ground	Always	3 MΩ or higher
E1-2 (PB) - Body ground	Always	3 MΩ or higher

NOTICE:

If the results are out of the specified range, replace the compressor without operating.

INSPECTION PROCEDURE

PROCEDURE

1.	GO TO CAN COMMUNICATION SYSTEM
----	--------------------------------

HINT:

Refer to CAN Communication System .

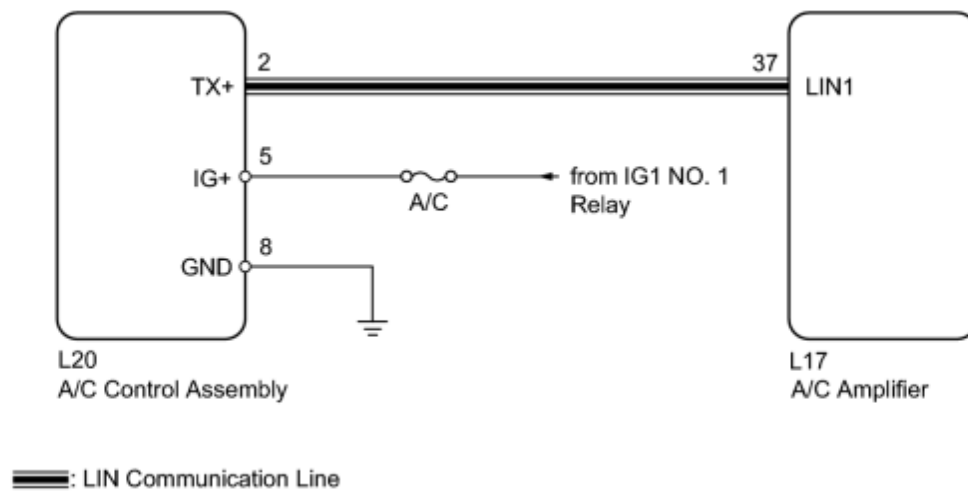

NEXT  END

DESCRIPTION

This circuit consists of the A/C control assembly and A/C amplifier. When the A/C control assembly is operated, signals are transmitted to the A/C amplifier through the LIN communication system.

If the LIN communication system malfunctions, the A/C amplifier does not operate even if the A/C control assembly is operated.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (A/C CONTROL ASSEMBLY - BODY GROUND)

- (a) Disconnect the A/C control assembly connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

*1

Tester Connection	Condition	Specified Condition
L20-8 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to A/C Control Assembly)

*1	Front view of wire harness connector (to A/C Amplifier)
*2	Front view of wire harness connector (to A/C Control Assembly)

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4. REPLACE A/C CONTROL ASSEMBLY

(a) Replace the A/C control assembly with a known good one and check if the same problem occurs again INFO

OK:

Same problem does not occur.

NG PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

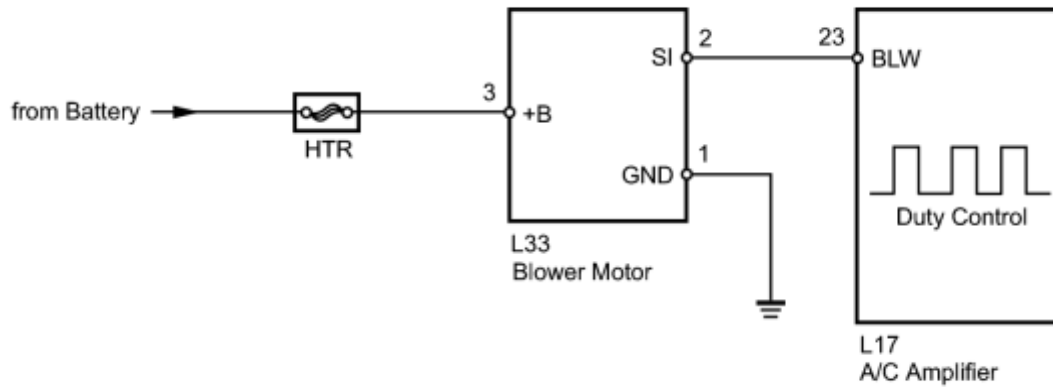

OK  **END (A/C CONTROL ASSEMBLY WAS DEFECTIVE)**

DESCRIPTION

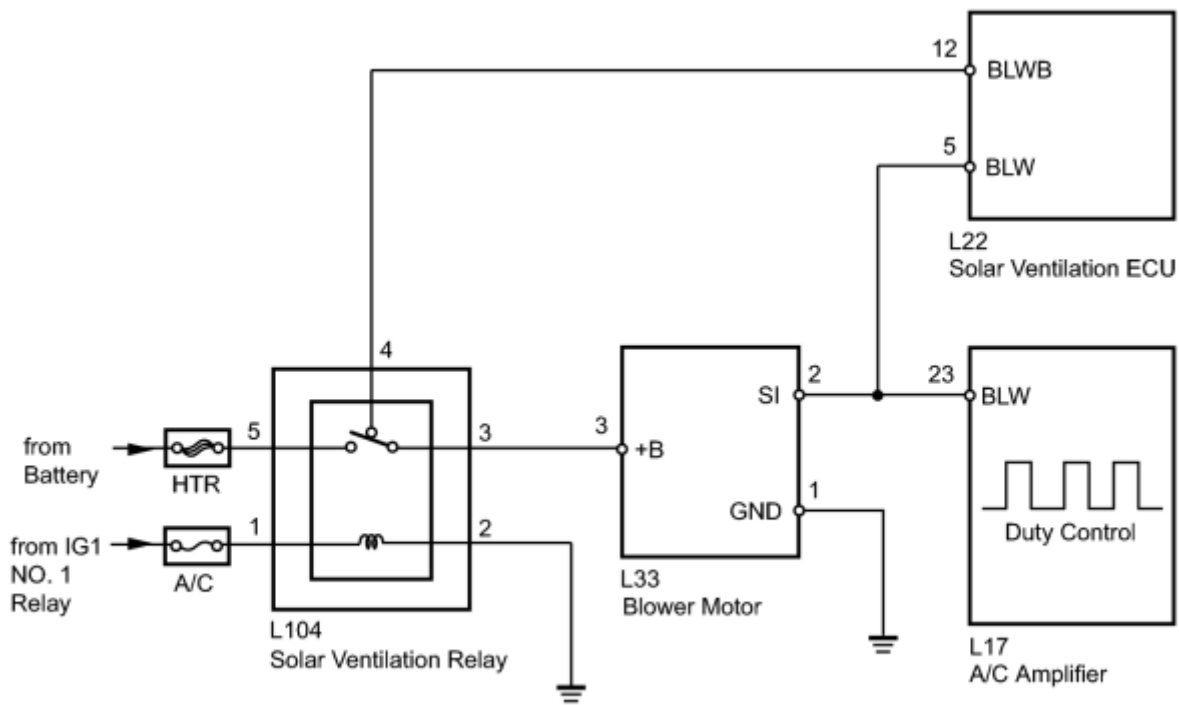

The blower motor is operated by signals from the A/C amplifier. Blower motor speed signals are transmitted in accordance with changes in the duty ratio.

WIRING DIAGRAM

1. w/o Solar Ventilation System

2. w/ Solar Ventilation System

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Air Conditioner / Active Test.
- Check the operation by referring to the table below.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Blower Motor	Blower motor	Min.: 0, Max.: 31	-

OK:

Blower motor operates and blower motor speed level changes.

Result:

Result	Proceed to

(A/C Amplifier)

NG  REPLACE A/C AMPLIFIER

OK  **REPLACE BLOWER MOTOR**

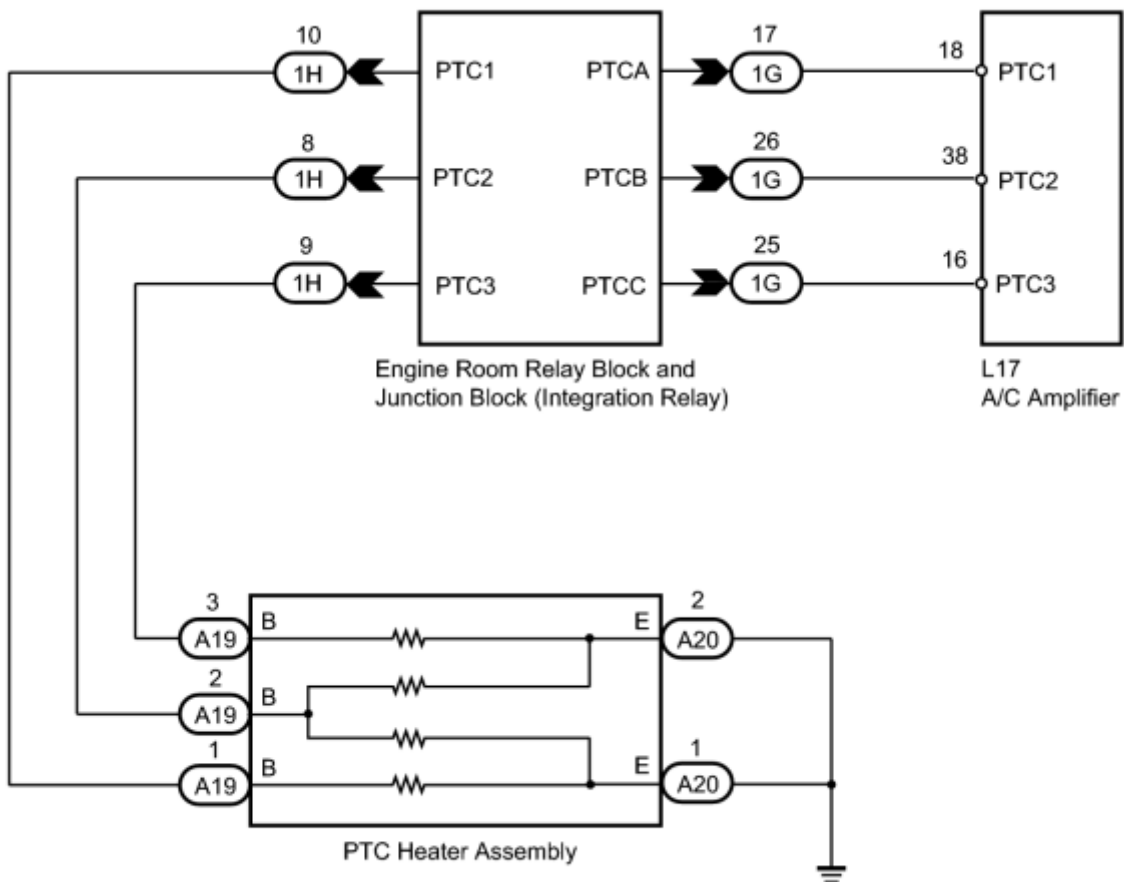

DESCRIPTION

The PTC heater assembly is installed in the radiator in the heater unit and operates when engine coolant temperature is low and normal heater effectiveness is insufficient.

The A/C control assembly switches the circuit in the PTC relay and operates the PTC heater assembly when the operating conditions (cooling water temperature is below 65°C (149°F), setting temperature is MAX. HOT, ambient temperature is below 10°C (50°F) and blower switch is not OFF) are met.

The PTC heater assembly controls PTC heater lines by electric load or the amount of inverter with converter assembly (PCU) output. Therefore, troubleshooting should be performed with other electric components off.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. INSPECT PTC HEATER ASSEMBLY

*1

(a) Remove the PTC heater assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A19-1 (B) - A20-1 (E)	Always	Below 1 Ω
A19-2 (B) - A20-2 (E)	Always	Below 1 Ω
A19-2 (B) - A20-1 (E)	Always	Below 1 Ω
A19-3 (B) - A20-2 (E)	Always	Below 1 Ω

5. REPLACE INTEGRATION NO.1 RELAY

(a) Replace the integration relay .

HINT:

Since the integration relay cannot be inspected while it is removed from the vehicle, replace the integration relay with a new or a known good one and check that the condition returns to normal.

(b) Check if the same problem occurs again.

OK:

Same problem does not occur.

NG ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ► **END (INTEGRATION RELAY WAS DEFECTIVE)**

DESCRIPTION

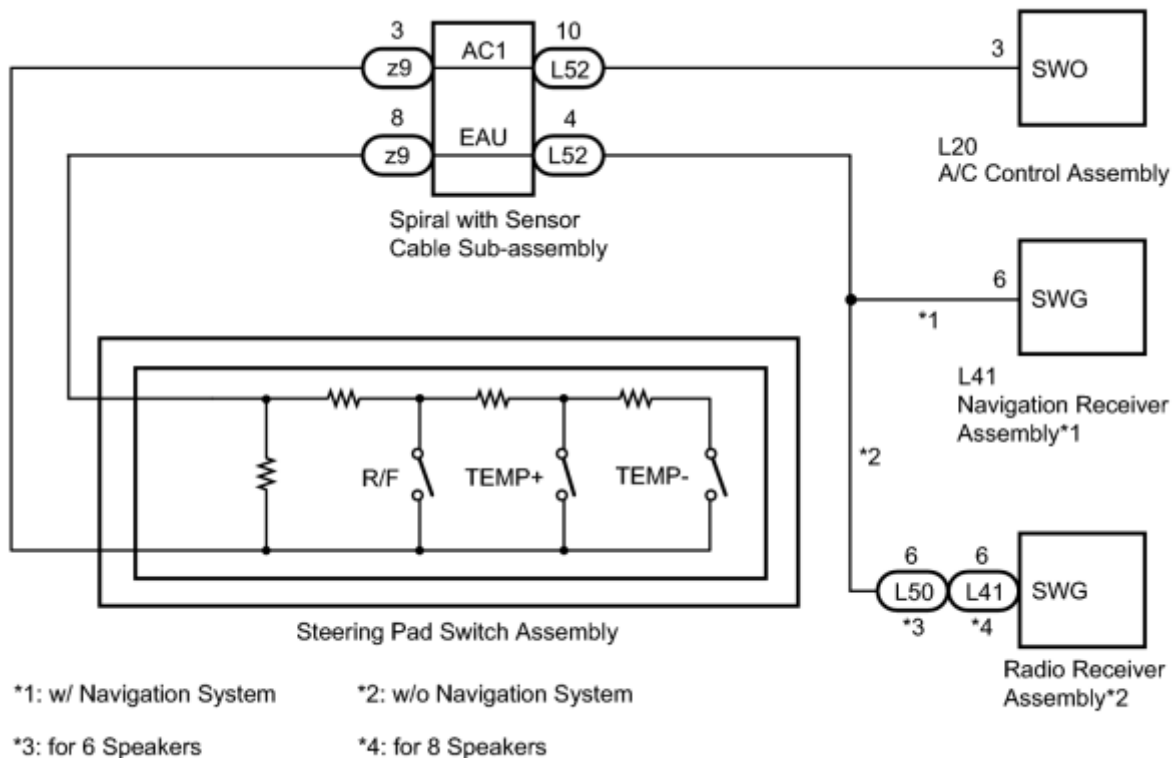

The R/F, TEMP UP (+), and TEMP DOWN (-) switches are located on the steering pad switch assembly. The resistance of the steering pad switch assembly changes in accordance with switch operation. The A/C control assembly outputs voltage to the steering pad switch assembly and reads voltage changes due to the resistance changes that result from switch operation.

HINT:

If there is an open in the circuit, the A/C system cannot be operated by the steering pad switch assembly.

If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the A/C control assembly cannot be operated by the steering pad switch assembly, and the A/C control assembly will not be able to function correctly.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System). Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System INFO.

PROCEDURE

1. INSPECT A/C CONTROL ASSEMBLY

*1

(a) Disconnect the connector from the spiral with sensor cable sub-assembly.

H

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L52-10 (AC1) - Body ground	Power switch off	Below 1 V

NG  REPLACE STEERING PAD SWITCH ASSEMBLY

OK

4.	INSPECT SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY
----	---

*1

(a) Disconnect the connector from the spiral with sensor cable sub-assembly.

H

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-------------------	-----------	---------------------

Tester Connection	Condition	Specified Condition
L52-10 (AC1) - z9-3 (AC1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
L52-4 (EAU) - z9-8 (EAU)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:

The spiral with sensor cable sub-assembly is an important part of the SRS airbag system. Incorrect removal or installation of the spiral with sensor cable sub-assembly may prevent the airbag from deploying. Refer to the pages shown in the brackets.

HINT:

- Removal 
- Installation 
- The spiral cable makes a maximum of approximately 5 rotations.

8.	CHECK HARNESS AND CONNECTOR (A/C CONTROL ASSEMBLY - SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY)
----	--

*1

(a) Disconnect the connector from the A/C control assembly.

(b) Measure the resistance according value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-3 (SWO) - L52-10 (AC1)	Always	Below 1 Ω
L20-3 (SWO) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector (to A/C Control Assembly)
*2	Front view of wire harness connector (to Spiral with Sensor Cable Sub-assembly)

H

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE A/C CONTROL ASSEMBLY

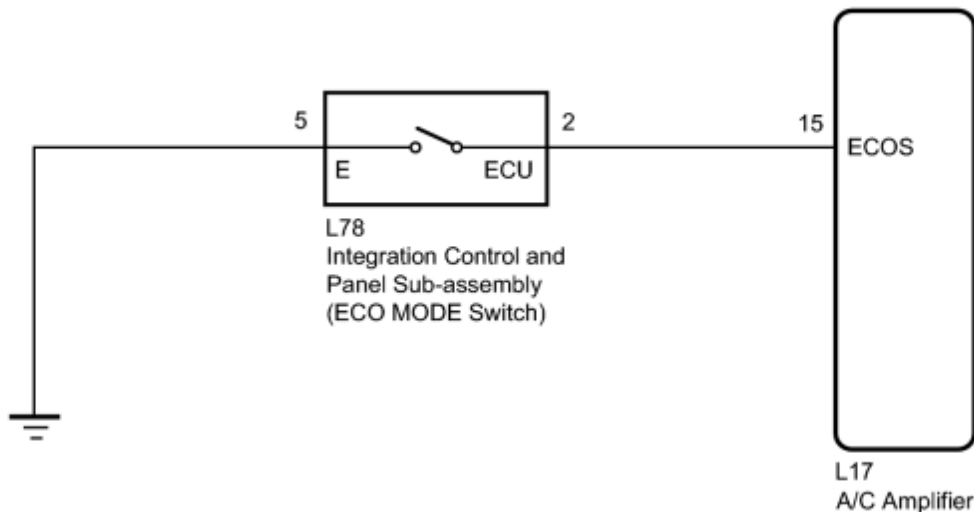

DESCRIPTION

The integration control and panel sub-assembly (ECO MODE switch) is installed on the instrument panel on the driver side. When the integration control and panel sub-assembly (ECO MODE switch) is turned on, the A/C amplifier receives an integration control and panel sub-assembly (ECO MODE switch) ON signal and controls the air conditioning to enhance fuel efficiency.

When the heater is on, the engine ON request coolant temperature will be set to a lower level. Thus, the length of time that the engine operates to generate the heat necessary to operate the heater will be limited. When the engine coolant temperature drops, the amount of air flow of the blower motor will also decrease. If FOOT/DEF or DEF is selected, or if the temperature is set to MAX HOT, the fuel efficiency control due to the integration control and panel sub-assembly (ECO MODE switch) operation will be canceled.

When the air conditioning is used to cool the vehicle, the power consumption of the compressor will be limited. Initially, the air conditioning will operate normally until the cabin temperature stabilizes. After the cabin temperature stabilizes, the power consumption of the compressor will be limited while stabilizing the cabin temperature. If the temperature is set to MAX COOL, the fuel efficiency control due to the integration control and panel sub-assembly (ECO MODE switch) operation will be canceled.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. INSPECT AIR CONDITIONING AMPLIFIER

*1

(a) Remove the A/C amplifier with the connectors still connected.

H

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L17-15 (ECOS) - Body ground	Power switch on (IG) ECO MODE switch off (when switch is not pressed)	11 to 14 V
L17-15 (ECOS) - Body ground	Power switch on (IG) ECO MODE switch on (when switch is pressed)	Below 1 V

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  **REPLACE A/C AMPLIFIER**

DESCRIPTION

The main power source is supplied to the A/C amplifier when the power switch is on (IG).

The power source is used for operating the A/C amplifier and servo motor, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Turn the power switch on (IG) before inspection. Check the IG1 NO. 1 relay or auxiliary battery if the power source does not change to on (IG).

PROCEDURE

1. INSPECT A/C AMPLIFIER

*1

(a) Remove the A/C amplifier with its connectors still connected.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L17-1 (IG+) - L17-14 (GND)	Power switch off	Below 1 V
L17-1 (IG+) - L17-14 (GND)	Power switch on (IG)	11 to 14 V

17. DISCONNECT SUCTION PIPE SUB-ASSEMBLY

(a) Remove the bolt and slide the hook connector.

(b) Disconnect the suction pipe assembly.

(c) Remove the O-ring from the suction pipe sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

18. DISCONNECT AIR CONDITIONING TUBE AND ACCESSORY ASSEMBLY

(a) Disconnect the air conditioning tube and accessory assembly.

(b) Remove the O-ring from the air conditioning tube and accessory assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

19. DISCONNECT INLET HEATER WATER HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the inlet heater water hose.

- Do not apply excessive force to the inlet heater water hose.
- Prepare a drain pan or cloth in case the coolant leaks.

20. DISCONNECT OUTLET HEATER WATER HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the outlet heater water hose.

- Do not apply excessive force to the outlet heater water hose.
- Prepare a drain pan or cloth in case the coolant leaks.

102. REMOVE DEFROSTER NOZZLE ASSEMBLY

(a) Disengage the 3 claws.

(b) Remove the defroster nozzle assembly as shown in the illustration.

103. REMOVE LOWER DEFROSTER NOZZLE ASSEMBLY

(a) Disengage the clamp.

(b) Disengage the 6 claws and remove the lower defroster nozzle assembly.

104. REMOVE NO. 3 AIR DUCT SUB-ASSEMBLY

(a) Remove the 2 nuts and No. 3 air duct sub-assembly.

105. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

(a) Disengage each clamp.

(b) Remove the 9 bolts and instrument panel reinforcement assembly.

P

106. REMOVE AIR CONDITIONING UNIT ASSEMBLY

NOTICE:

- Be sure to support the air conditioning unit assembly when removing it because failure to do so may cause the bracket of the air conditioning unit assembly to break.
- When disassembling the air conditioning unit, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

(a) Disengage the cooler drain hose.

P

(b) Remove the bolt, nut and air conditioning unit assembly.

DISASSEMBLY

1. REMOVE ID CODE BOX (IMMOBILISER CODE ECU) (w/ Engine Immobiliser System) INFO

2. REMOVE BLOWER ASSEMBLY INFO

3. REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY

(a) Disengage the 2 claws and remove the No. 1 air duct sub-assembly.

4. REMOVE AIR CONDITIONING DUCT SUB-ASSEMBLY

(a) Disengage the 2 claws and remove the air conditioning duct sub-assembly.

5. REMOVE AIR CONDITIONING HARNESS ASSEMBLY

(a) Disconnect each connector.

(b) Disengage each clamp and remove the air conditioning harness assembly.

P

6. REMOVE AIR OUTLET CONTROL SERVO MOTOR SUB-ASSEMBLY

(a) Remove the 3 screws and air outlet control servo motor sub-assembly.

7. REMOVE AIR MIX CONTROL SERVO MOTOR SUB-ASSEMBLY

P

(a) Remove the 3 screws and air mix control servo motor sub-assembly.

8. REMOVE QUICK HEATER ASSEMBLY

(a) Disengage each clamp.

(b) Remove the 2 screws.

(c) Remove the quick heater assembly as shown in the illustration.

9. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Remove the screw and clamp.

Text in Illustration

*1	Clamp
----	-------

(b) Remove the heater radiator unit sub-assembly as shown in the illustration.

NOTICE:

Prepare a drain pan or cloth in case the cooling water leaks.

10. REMOVE CONSOLE MOUNTING BRACKET LH

(a) Remove the screw and console mounting bracket LH.

11. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Remove the screw.

(b) Disengage the 2 guides and remove the air conditioning amplifier assembly as shown in the illustration.

12. REMOVE CONSOLE MOUNTING BRACKET RH

(a) Disengage the 2 claws and remove the console mounting bracket RH.

13. REMOVE DRAIN COOLER HOSE

(a) Remove the drain cooler hose as shown in the illustration.

14. REMOVE COOLER EXPANSION VALVE

(a) Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and cooler expansion valve.

15. REMOVE COOLER EVAPORATOR SUB-ASSEMBLY

(a) Remove the packing.

NOTICE:

Remove the packing carefully because it will be reused.

(b) Remove the 4 screws.

P

(c) Disengage the 4 claws and remove the lower heater case.

P

(d) Disengage the clamp and remove the cooler evaporator sub-assembly with the No. 1 cooler thermistor.

P

(e) Remove the 2 O-rings from the cooler evaporator sub-assembly.

16. REMOVE NO. 1 COOLER THERMISTOR INFO

REASSEMBLY

1. INSTALL NO. 1 COOLER THERMISTOR_ INFO

2. INSTALL COOLER EVAPORATOR SUB-ASSEMBLY

P

(a) Sufficiently apply compressor oil to 2 new O-rings and the fitting surfaces.

Compressor oil:

ND-OIL 11 or equivalent

(b) Install the 2 O-rings to the cooler evaporator sub-assembly.

NOTICE:

- Keep the O-rings and O-ring fitting surfaces free from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

P

(c) Engage the clamp and install the cooler evaporator sub-assembly with the No. 1 cooler thermistor.

HINT:

Completely cover the tube with the grommet.

(d) Engage the 4 claws.

P

(e) Install the lower heater case with the 4 screws.

P

(f) Install the packing.

3. INSTALL COOLER EXPANSION VALVE

P

(a) Using a 4 mm hexagon wrench, install the cooler expansion valve with the 2 hexagon bolts.

Torque: **3.5 N·m (36 kgf·cm, 31in·lbf)**

4. INSTALL DRAIN COOLER HOSE

(a) Install the drain cooler hose as shown in the illustration.

P

5. INSTALL CONSOLE MOUNTING BRACKET RH

P

(a) Engage the 2 claws and install the console mounting bracket RH.

6. INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY

P

(a) Engage the 2 guides to install the air conditioning amplifier assembly as shown in the illustration.

(b) Install the screw.

7. INSTALL CONSOLE MOUNTING BRACKET LH

(a) Install the console mounting bracket LH with the screw.

P

8. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

P

(a) Install the heater radiator unit sub-assembly as shown in the illustration.

P

(b) Install the clamp with the screw.

Text in Illustration

*1	Clamp
----	-------

9. INSTALL QUICK HEATER ASSEMBLY

P

(a) Install the quick heater assembly as shown in the illustration.

(b) Install the 2 screws.

P

(c) Engage each clamp.

10. INSTALL AIR MIX CONTROL SERVO MOTOR SUB-ASSEMBLY

P

(a) Using the reference point, install the air mix control servo motor sub-assembly with the 3 screws.

Text in Illustration

*1	Reference Point
----	-----------------

11. INSTALL AIR OUTLET CONTROL SERVO MOTOR SUB-ASSEMBLY

P

(a) Using the reference point, install the air outlet control servo motor sub-assembly with the 3 screws.

Text in Illustration

*1	Reference Point
----	-----------------

12. INSTALL AIR CONDITIONING HARNESS ASSEMBLY

(a) Connect each connector.

(b) Engage each clamp to install the air conditioning harness assembly.

P

13. INSTALL AIR CONDITIONING DUCT SUB-ASSEMBLY

P

(a) Engage the 2 claws and install the air conditioning duct sub-assembly.

14. INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY

P

(a) Engage the 2 claws to install the No. 1 air duct sub-assembly.

15. INSTALL BLOWER ASSEMBLY [INFO](#)

16. INSTALL ID CODE BOX (IMMOBILISER CODE ECU) (w/ Engine Immobiliser System) [INFO](#)

INSTALLATION

1. TEMPORARILY TIGHTEN AIR CONDITIONING UNIT ASSEMBLY

NOTICE:

- Be sure to support the air conditioning unit assembly when removing it because failure to do so may cause the bracket of the air conditioning unit assembly to break.
- When installing the air conditioning unit, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

(a) Temporarily tighten the air conditioning unit assembly with the bolt and nut.

(b) Engage the cooler drain hose as shown in the illustration.

NOTICE:

Connect the cooler drain hose firmly to prevent water leaks.

2. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

(a) Install the instrument panel reinforcement assembly with the 6 bolts <A>.

(b) Install the air conditioning unit assembly with the 3 bolts

Bolt - Torque: **9.8 N·m (100 kgf·cm, 87in·lbf)**

HINT:

Tighten the bolts in the order shown in the illustration.

P

(c) Engage each clamp.

P

3. INSTALL AIR CONDITIONING UNIT ASSEMBLY

P

(a) Install the air conditioning unit assembly with the bolt and nut.

Bolt - Torque: **9.8 N·m (100 kgf·cm, 87in·lbf)**

Nut - Torque: **9.8 N·m (100 kgf·cm, 87in·lbf)**

4. INSTALL NO. 3 AIR DUCT SUB-ASSEMBLY

(a) Install the No. 3 air duct sub-assembly with the 2 nuts.

Torque: **9.8 N·m (100 kgf·cm, 87in·lbf)**

5. INSTALL LOWER DEFROSTER NOZZLE ASSEMBLY

(a) Engage the 6 claws and remove the lower defroster nozzle assembly.

P

(b) Engage the clamp.

6. INSTALL DEFROSTER NOZZLE ASSEMBLY

P

(a) Install the defroster nozzle assembly as shown in the illustration.

P

(b) Engage the 3 claws.

7. INSTALL NO. 2 INSTRUMENT PANEL BRACE SUB-ASSEMBLY

(a) Install the No. 2 instrument panel brace sub-assembly with the screw.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

- (b) Install the bolt and nut.
- (c) Install the screw and 2 nuts to the computer integration box RH.
- (d) Engage each clamp.
- (e) Connect each connector.
- (f) Install the 3 screws <A>.
- (g) Install the bolt and connect the earth wire.

Torque: **8.4 N·m (86 kgf·cm, 74in·lbf)**

P

Text in Illustration

*1	Screw <A>	*2	Bolt
*3	Earth Wire	*4	Screw
*5	Nut	*6	Computer Integration Box RH

8. INSTALL NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY

(a) Install the No. 1 instrument panel brace sub-assembly with the screw.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

P

- (b) Install the bolt and nut.
- (c) Check that the power switch is off.
- (d) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (e) Connect the center airbag sensor connectors to the center airbag sensor assembly as shown in the illustration.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

- (f) Check that the waterproof sheet on the top of the center airbag sensor is not folded or deformed.
- (g) Check that there is no looseness in the installation parts of the center airbag sensor assembly.
- (h) Connect each connector.
- (i) Engage each clamp and claw.
- (j) Install the screw.
- (k) Install the 2 bolts and connect the 2 earth wires.

Torque: **8.4 N·m (86 kgf·cm, 74in·lbf)**

P

85. INSTALL INSTRUMENT CLUSTER FINISH PANEL GARNISH [INFO](#)
86. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY [INFO](#)
87. INSTALL INTEGRATION CONTROL AND PANEL ASSEMBLY [INFO](#)
88. CONNECT OUTLET HEATER WATER HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to connect the

outlet heater water hose.

89. CONNECT INLET HEATER WATER HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to connect the inlet heater water hose.

90. CONNECT AIR CONDITIONING TUBE AND ACCESSORY ASSEMBLY

(a) Remove the attached vinyl tape from the pipe.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the air conditioning tube and accessory assembly.

Compressor oil:

ND-OIL 11 or equivalent

(c) Install the O-ring on the air conditioning tube and accessory assembly.

NOTICE:

- Keep the O-ring and O-ring fitting surfaces clean from dirt or any foreign objects.

- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

(d) Install the air conditioning tube and accessory assembly.

91. CONNECT SUCTION PIPE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the pipe.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the suction pipe sub-assembly.

Compressor oil:

ND-OIL 11 or equivalent

(c) Install the O-ring on the suction pipe sub-assembly.

NOTICE:

- Keep the O-ring and O-ring fitting surfaces clean from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

(d) Install the suction pipe sub-assembly.

(e) Move the hook connector in the direction indicated by the arrow in the illustration.

(f) Insert the pipe joint into the fitting hole securely and tighten the bolt.

REMOVAL

1. REMOVE RADIATOR SUPPORT OPENING COVER_ [INFO](#)

2. REMOVE FRONT BUMPER ASSEMBLY_ [INFO](#)

3. REMOVE AMBIENT TEMPERATURE SENSOR

(a) Disconnect the connector.

P

(b) Disengage the clamp to remove the ambient temperature sensor.

INSPECTION

1. INSPECT AMBIENT TEMPERATURE SENSOR

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

Text in Illustration

*1	Component without harness connected (Ambient Temperature Sensor)
*2	Sensing Portion

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the ambient temperature sensor.

INSTALLATION

1. INSTALL AMBIENT TEMPERATURE SENSOR

(a) Engage the clamp to install the ambient temperature sensor.

P

(b) Connect the connector.

2. INSTALL FRONT BUMPER ASSEMBLY [INFO](#)

3. INSTALL RADIATOR SUPPORT OPENING COVER [INFO](#)

REMOVAL

1. REMOVE AIR CONDITIONING UNIT ASSEMBLY

HINT:

Refer to the procedure for Remove Air Conditioning Unit Assembly INFO.

2. REMOVE BLOWER ASSEMBLY

- (a) Remove the screw and disconnect the quick heater connector.
- (b) Disconnect the connector and disengage each clamp.
- (c) Disengage the 3 screws and guide, and remove the blower assembly.

Text in Illustration

*1	Quick Heater Connector	-	-
----	------------------------	---	---

DISASSEMBLY

1. REMOVE AIR INLET CONTROL SERVO MOTOR SUB-ASSEMBLY

(a) Remove the 2 screws and air inlet control servo motor sub-assembly.

2. REMOVE AIR FILTER CASE

(a) Disengage the claw and guide, and remove the air filter case as shown in the illustration.

3. REMOVE CLEAN AIR FILTER

(a) Remove the clean air filter as shown in the illustration.

4. REMOVE FRONT BLOWER MOTOR SUB-ASSEMBLY (w/o Solar Ventilation System)

P

(a) Remove the 3 screws and front blower motor sub-assembly.

NOTICE:

Do not remove the front blower motor sub-assembly if it has been damaged or impacted.

5. REMOVE FRONT BLOWER MOTOR SUB-ASSEMBLY (w/ Solar Ventilation System)

P

(a) Remove the 3 screws and front blower motor sub-assembly.

NOTICE:

Do not remove the front blower motor sub-assembly if it has been damaged or impacted.

REASSEMBLY

1. INSTALL FRONT BLOWER MOTOR SUB-ASSEMBLY (w/o Solar Ventilation System)

(a) Install the front blower motor sub-assembly with the 3 screws.

NOTICE:

Do not install the front blower motor sub-assembly if it has been damaged or impacted.

2. INSTALL FRONT BLOWER MOTOR SUB-ASSEMBLY (w/ Solar Ventilation System)

(a) Install the front blower motor sub-assembly with the 3 screws.

NOTICE:

Do not install the front blower motor sub-assembly if it has been damaged or impacted.

3. INSTALL CLEAN AIR FILTER

(a) Install the clean air filter as shown in the illustration.

4. INSTALL AIR FILTER CASE

(a) Engage the guide and claw to install the air filter case as shown in the illustration.

P

5. INSTALL AIR INLET CONTROL SERVO MOTOR SUB-ASSEMBLY

P

(a) Install the air inlet control servo motor sub-assembly with the 2 screws.

INSTALLATION

1. INSTALL BLOWER ASSEMBLY

- (a) Engage the guide.
- (b) Install the blower assembly with the 3 screws.
- (c) Connect the connector.
- (d) Engage each clamps.
- (e) Install the screw and connect the quick heater connector.

Text in Illustration

INFO

8. CHECK TERMINAL VOLTAGE

(a) Remove the 9 bolts and inverter terminal cover.

CAUTION:

Wear insulating gloves.

NOTICE:

Make sure to pull the inverter cover straight up, as a connector is connected to the bottom of the cover.

(b) Check the terminal voltage

INFO

CAUTION:

Wear insulating gloves.

(c) Install the inverter cover with the 9 bolts to the inverter with converter assembly.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

CAUTION:

Wear insulating gloves.

- Make sure that the interlock is fully engaged.
- Do not allow any foreign objects or water drops to enter the inverter with converter assembly.

9. REMOVE INLET AIR CLEANER ASSEMBLY_ INFO

10. REMOVE NO. 1 ENGINE UNDER COVER

11. DRAIN COOLANT (for Engine)_ INFO

12. DISCONNECT NO. 2 RADIATOR HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to remove the No. 2 radiator hose.

13. DISCONNECT DISCHARGE HOSE SUB-ASSEMBLY

(a) Remove the bolt and disconnect the discharge hose sub-assembly from the electric inverter compressor.

(b) Remove the O-ring from the discharge hose sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

14. DISCONNECT SUCTION HOSE SUB-ASSEMBLY

(a) Remove the bolt and disconnect the suction hose sub-assembly from the electric inverter compressor.

P

(b) Remove the O-ring from the suction hose sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

15. REMOVE ELECTRIC INVERTER COMPRESSOR

(a) Release the green-colored lock and disconnect the connector <A> as shown in the illustration.

P

CAUTION:

Wear insulated gloves when performing the procedures.

NOTICE:

Insulate the connector by sealing it with tape.

Text in Illustration

*1	Green-colored Lock
----	--------------------

(b) Disconnect the connector .

P

(c) Remove the 3 bolts and electric inverter compressor.

INSPECTION

1. INSPECT COMPRESSOR WITH MOTOR ASSEMBLY

CAUTION:

- Because the compressor has a high-voltage circuit, wear insulated gloves and pull out the service plug grip to cut off the high-voltage circuit before inspection.
- Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.

NOTICE:

Do not start the engine with the service plug grip removed because it may cause a malfunction.

(a) Disconnect the compressor with motor assembly connector.

H

(b) Using a megohmmeter, measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-1 (PE) - Body ground	Always	2 MΩ or higher
E1-2 (PB) - Body ground	Always	2 MΩ or higher

Text in Illustration

*1	Component without harness connected (Compressor with motor assembly)
----	---

If the resistance is not as specified, replace the compressor with motor assembly.

INSTALLATION

1. ADJUST COMPRESSOR OIL

(a) When replacing the electric inverter compressor with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new electric inverter compressor before installation.

Standard:

(Oil capacity inside the new electric inverter compressor: 130 to 145 cc (4.4 to 4.9 fl. oz.)) - (Remaining oil amount in the removed electric inverter compressor) = (Oil amount to be removed from the new compressor when replacing)

P

- When checking the compressor oil level, observe the precautions on the cooler removal/installation.
- If a new compressor and magnetic clutch are installed without removing some oil, there will be too much oil in the system due to the oil remaining in the pipes of the vehicle. Excessive oil in the system prevents heat exchange in the refrigeration cycle and causes refrigeration failure.
- If the amount of oil remaining in the old compressor and magnetic clutch is too small, check the A/C system for oil leaks.
- Be sure to use ND-OIL 11 or equivalent for compressor oil. If any compressor oil other than ND-OIL 11 is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

2. INSTALL ELECTRIC INVERTER COMPRESSOR

P

(a) Temporarily install the electric inverter compressor with the 3 bolts.

(b) Install the electric inverter compressor with the 3 bolts.

Torque: **25 N·m (250 kgf·cm, 18ft·lbf)**

NOTICE:

Tighten the bolts in the order shown in the illustration to install the

electric inverter compressor.

P

(c) Connect the connector <A> and lock the green-colored lock as shown in the illustration.

CAUTION:

Wear insulated gloves when performing the procedures.

Text in Illustration

*1	Green-colored Lock
----	--------------------

P

(d) Connect the connector .

3. CONNECT SUCTION HOSE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the hose.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the compressor and magnetic clutch.

Compressor oil:

ND-OIL 11 or equivalent

(c) Install the O-ring onto the suction hose sub-assembly.

NOTICE:

- Keep the O-ring and O-ring fitting surfaces free from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

(d) Install the suction hose sub-assembly onto the compressor and magnetic clutch with the bolt.

Torque: **9.8 N·m (100 kgf·cm, 87in·lbf)**

4. CONNECT DISCHARGE HOSE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the hose.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the compressor and magnetic clutch.

Compressor oil:

ND-OIL 11 or equivalent

(c) Install the O-ring onto the discharge hose sub-assembly.

NOTICE:

- Keep the O-ring and O-ring fitting surfaces free from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

(d) Install the discharge hose sub-assembly onto the compressor and magnetic clutch with the bolt.

Torque: **9.8 N·m (100 kgf·cm, 87in·lbf)**

5. CONNECT NO. 2 RADIATOR HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to install the No. 2 radiator hose.

ON-VEHICLE INSPECTION

1. INSPECT COOLER CONDENSER ASSEMBLY

(a) If the cooler condenser assembly fins are dirty, clean them with water and dry with compressed air.

NOTICE:

Do not damage the cooler condenser assembly fins.

(b) If any cooler condenser assembly fins are bent, straighten them using a screwdriver or pliers.

2. INSPECT FOR REFRIGERANT LEAK

(a) Using a halogen leak detector, check pipe joints for refrigerant leaks.

(b) If refrigerant leak is detected in a joint, check the torque of the joint.

REMOVAL

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM_ [INFO](#)

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type)_ [INFO](#)

3. REMOVE REAR DECK FLOOR BOX_ [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD_ [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

6. REMOVE RADIATOR SUPPORT OPENING COVER_ [INFO](#)

7. REMOVE FRONT BUMPER ASSEMBLY_ [INFO](#)

8. REMOVE MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System)_ [INFO](#)

9. REMOVE MILLIMETER WAVE RADAR SENSOR BRACKET

(a) w/o Dynamic Radar Cruise Control System:

(1) Remove the 3 bolts and millimeter wave radar sensor bracket.

(b) w/ Dynamic Radar Cruise Control System:

(1) Remove the bolt and millimeter wave radar sensor bracket.

P

10. DISCONNECT DISCHARGE HOSE SUB-ASSEMBLY

P

(a) Remove the bolt and disconnect the discharge hose sub-assembly.

(b) Remove the O-ring from the discharge hose sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

11. DISCONNECT AIR CONDITIONING TUBE AND ACCESSORY ASSEMBLY

P

(a) Remove the bolt and disconnect the air conditioning tube and accessory assembly.

(b) Remove the O-ring from the air conditioning tube and accessory assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

12. DISCONNECT NO. 5 INVERTER COOLING HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the No. 5 inverter cooling hose.

- Do not apply excessive force to the No. 5 inverter cooling hose.
- Prepare a drain pan or cloth in case the coolant leaks.

13. DISCONNECT NO. 7 INVERTER COOLING HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the No. 7 inverter cooling hose.

- Do not apply excessive force to the No. 7 inverter cooling hose.
- Prepare a drain pan or cloth in case the coolant leaks.

14. REMOVE NO. 1 INVERTER BRACKET INFO

15. REMOVE HOOD LOCK SUPPORT SUB-ASSEMBLY INFO

16. REMOVE NO. 2 FAN SHROUD INFO

17. REMOVE COOLER CONDENSER ASSEMBLY

(a) Remove the cooler condenser assembly with hybrid radiator assembly.

(b) Remove the 4 bolts and cooler condenser assembly from the hybrid radiator assembly.

DISASSEMBLY

1. REMOVE COOLER CONDENSER CUSHION

(a) for LH Side:

(1) Remove the cooler condenser cushion.

(b) for RH Side:

(1) Remove the cooler condenser cushion.

2. REMOVE COOLER DRYER

(a) Using a 14 mm straight hexagon wrench, remove the cap from the modulator.

Text in Illustration

*1	14 mm Straight Hexagon Wrench
*2	Modulator

(b) Using pliers, remove the cooler dryer.

P

REASSEMBLY

1. INSTALL COOLER DRYER

(a) Using pliers, install a new cooler dryer to the modulator.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surfaces of the cap.

Compressor oil:

ND-OIL 11 or equivalent

(c) Using a 14 mm straight hexagon wrench, install the cap to the cooler condenser core.

Torque: **2.9 N·m (30 kgf·cm, 26in·lbf)**

- Keep the O-ring and O-ring fitting surfaces clean from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

Text in Illustration

*1	14 mm Straight Hexagon Wrench
*2	Modulator

2. INSTALL COOLER CONDENSER CUSHION

(a) for LH Side:

(1) Install the cooler condenser cushion.

P

(b) for RH Side:

P

(1) Install the cooler condenser cushion.

INSTALLATION

1. INSTALL COOLER CONDENSER ASSEMBLY

(a) Install the cooler condenser assembly with the 4 bolts to the hybrid radiator assembly.

Torque: **9.0 N·m (92 kgf·cm, 80in·lbf)**

(b) Install the cooler condenser assembly.

HINT:

If the condenser is replaced with a new one, add compressor oil to the new condenser.

Capacity:

40 cc (1.35 fl. oz.)

Compressor oil:

ND-11 or equivalent

NOTICE:

Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

2. INSTALL NO. 2 FAN SHROUD INFO

3. INSTALL HOOD LOCK SUPPORT SUB-ASSEMBLY INFO

4. INSTALL NO. 1 INVERTER BRACKET INFO

5. CONNECT NO. 7 INVERTER COOLING HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to connect the No. 7 inverter cooling hose.

P

6. CONNECT NO. 5 INVERTER COOLING HOSE

P

(a) Using pliers, grip the claws of the clip and slide the clip to connect the No. 5 inverter cooling hose.

7. CONNECT AIR CONDITIONING TUBE AND ACCESSORY ASSEMBLY

(a) Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser assembly.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the pipe joint.

Compressor oil:

ND-OIL 11 or equivalent

(c) Install the O-ring on the air conditioning tube and accessory assembly.

NOTICE:

- Keep the O-ring and O-ring fitting surfaces clean from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

P

(d) Install the air conditioning tube and accessory assembly on the cooler condenser assembly with the bolt.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

8. CONNECT DISCHARGE HOSE SUB-ASSEMBLY

- (a) Remove the attached vinyl tape from the hose and the connecting part of the cooler condenser assembly.
- (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the hose joint.

Compressor oil:

ND-OIL 11 or equivalent

- (c) Install the O-ring on the discharge hose sub-assembly.

NOTICE:

- Keep the O-ring and O-ring fitting surfaces clean from dirt or any foreign objects.
- Do not use any compressor oil other than ND-OIL 11 or equivalent. If any compressor oil other than ND-OIL 11 or equivalent is used, compressor motor insulation performance may decrease, resulting in a leakage of electric power.

- (d) Install the discharge hose sub-assembly on the cooler condenser assembly with the bolt.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

P

9. INSTALL MILLIMETER WAVE RADAR SENSOR BRACKET

- (a) w/o Dynamic Radar Cruise Control System:

- (1) Install the millimeter wave radar sensor bracket with the 3 bolts.

Torque: **6.2 N·m (63 kgf·cm, 55in·lbf)**

NOTICE:

Tighten the bolts in the order shown in the illustration to install the millimeter wave radar sensor bracket.

P

- (b) w/ Dynamic Radar Cruise Control System:

(1) Install the millimeter wave radar sensor bracket with the bolt.

Torque: **6.2 N·m (63 kgf·cm, 55in·lbf)**

P

10. INSTALL MILLIMETER WAVE RADAR SENSOR ASSEMBLY (w/ Dynamic Radar Cruise Control System) [INFO](#)

11. INSTALL FRONT BUMPER ASSEMBLY [INFO](#)

12. ADD WASHER FLUID (w/ Headlight Cleaner System) [INFO](#)

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

14. INSTALL REAR NO. 3 FLOOR BOARD [INFO](#)

REMOVAL

1. PRECAUTION (w/ Solar Ventilation System)

NOTICE:

Make sure to turn off the solar ventilation switch to prevent the blower motor from operating unexpectedly.

2. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

3. REMOVE FRONT BLOWER MOTOR SUB-ASSEMBLY (w/o Solar Ventilation System)

(a) Remove the quick heater connector screw.

(b) Disengage the clamp and disconnect the connector.

(c) Remove the 3 screws and front blower motor sub-assembly.

NOTICE:

Do not remove the front blower motor sub-assembly if it has been damaged or impacted.

4. REMOVE FRONT BLOWER MOTOR SUB-ASSEMBLY (w/ Solar Ventilation System)

(a) Remove the quick heater connector screw.

P

- (b) Disengage the clamp and disconnect the connector.
- (c) Remove the 3 screws and front blower motor sub-assembly.

NOTICE:

Do not remove the front blower motor sub-assembly if it has been damaged or impacted.

INSTALLATION

1. PRECAUTION (w/ Solar Ventilation System)

NOTICE:

Make sure to turn off the solar ventilation switch to prevent the blower motor from operating unexpectedly.

2. INSTALL FRONT BLOWER MOTOR SUB-ASSEMBLY (w/o Solar Ventilation System)

(a) Install the front blower motor sub-assembly with the 3 screws.

NOTICE:

Do not install the front blower motor sub-assembly if it has been damaged or impacted.

P

(b) Engage the clamp and connect the connector.

(c) Install the quick heater connector screw.

3. INSTALL FRONT BLOWER MOTOR SUB-ASSEMBLY (w/ Solar Ventilation System)

(a) Install the front blower motor sub-assembly with the 3 screws.

NOTICE:

Do not install the front blower motor sub-assembly if it has been damaged or impacted.

P

(b) Engage the clamp and connect the connector.

(c) Install the quick heater connector screw.

P

REMOVAL

1. REMOVE AIR CONDITIONING UNIT ASSEMBLY

HINT:

Refer to the procedure for Remove Air Conditioning Unit Assembly [INFO](#).

2. REMOVE BLOWER ASSEMBLY [INFO](#)

3. REMOVE COOLER EXPANSION VALVE [INFO](#)

4. REMOVE COOLER EVAPORATOR SUB-ASSEMBLY [INFO](#)

5. REMOVE NO. 1 COOLER THERMISTOR

(a) Remove the No. 1 cooler thermistor.

INSPECTION

1. INSPECT EVAPORATOR TEMPERATURE SENSOR

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	-10°C (14°F)	7.30 to 9.10 kΩ
1 - 2	-5°C (23°F)	5.65 to 6.95 kΩ
1 - 2	0°C (32°F)	4.40 to 5.35 kΩ
1 - 2	5°C (41°F)	3.40 to 4.15 kΩ
1 - 2	10°C (50°F)	2.70 to 3.25 kΩ
1 - 2	15°C (59°F)	2.14 to 2.58 kΩ
1 - 2	20°C (68°F)	1.71 to 2.05 kΩ
1 - 2	25°C (77°F)	1.38 to 1.64 kΩ
1 - 2	30°C (86°F)	1.11 to 1.32 kΩ

Resistance (kΩ)

H

Text in Illustration

*1	Component without harness connected (Evaporator Temperature Sensor)
*2	Sensing Portion

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the evaporator temperature sensor.

INSTALLATION

1. INSTALL NO. 1 COOLER THERMISTOR

(a) Install the No. 1 cooler thermistor as shown in the illustration.

Part	Length	
A	175 mm	6.89 in.
B	161.6 mm	6.36 in.
C	87.9 mm	3.46 in.
D	50 mm	1.99 in.

Text in Illustration

*1	From Tank
*2	Fixed Part
*3	Sensor Part

- Be sure to insert the thermistor only once because reinserting it into the same position will not allow it to be firmly secured.
- When reusing the evaporator, insert the thermistor one row next to the one that has been used previously (X in the illustration).
- After inserting the thermistor, do not apply excessive force to the wire.
- Directly insert the thermistor until the edge of plastic case "a" comes into contact with evaporator "b".

2. INSTALL COOLER EVAPORATOR SUB-ASSEMBLY [INFO](#)

3. INSTALL COOLER EXPANSION VALVE [INFO](#)

4. INSTALL BLOWER ASSEMBLY [INFO](#)

5. INSTALL AIR CONDITIONING UNIT ASSEMBLY

HINT:

Refer to the procedure for Install Air Conditioning Unit Assembly [INFO](#).

P

ON-VEHICLE INSPECTION

1. INSPECT REFRIGERANT VOLUME

(a) Check the sight glass on the air conditioning tube and accessory.

(1) Prepare the vehicle according to the chart below.

Item	Condition
Vehicle door	Fully open
Temperature setting	MAX COOL
Blower speed	HI
A/C	on

(2) Compare the sight glass to the following chart.

P

Item	Symptom	Amount of Refrigerant	Corrective Action
1	Bubbles exist	Insufficient*	<ol style="list-style-type: none"> 1. Check for gas leaks and repair if necessary 2. Recharge with a proper amount of refrigerant
2	No bubbles exist	Empty, insufficient, or excessive	Refer to 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	<ol style="list-style-type: none"> 1. Check for gas leaks and repair if necessary 2. Evacuate the AC system and recharge with a proper amount of refrigerant
4	Considerable temperature difference between compressor inlet and outlet	Proper or excessive	Refer to 5 and 6
5	Immediately after air conditioning is turned off, refrigerant remains clear	Excessive	<ol style="list-style-type: none"> 1. Recover refrigerant 2. Evacuate the AC system and recharge with a proper

			amount of refrigerant
6	Immediately after air conditioning is turned off, refrigerant foams and then becomes clear	Proper	-

*: Bubbles in the sight glass with the vehicle's interior temperature above 35°C (95°F) can be considered normal if cooling is sufficient.

2. INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

HINT:

This is a method where a manifold gauge set is used to help locate the problem.

(a) Read the manifold gauge pressure when the following conditions are met:

Test conditions:

- Temperature at the air inlet with the switch set at RECIRC is 30 to 35°C (86 to 95°F).
- The blower speed control switch position is at "HI".
- The temperature control dial position is at "COOL".
- The A/C switch is on.
- Doors are fully open.
- The power switch is in a position that enables the A/C compressor to run.

(1) Normally functioning refrigeration system

Gauge Reading

Pressure Side	Refrigerant Volume
Low	0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm ² , 21 to 36 psi)
High	1.37 to 1.57 MPa (13.9 to 16.0 kgf/cm ² , 199 to 228 psi)

(2) Moisture is present in the refrigeration system.

Condition: Periodically cools and then fails to cool

Symptom	Probable Cause	Diagnosis	Corrective Action
During operation, pressure on low pressure side cycles between normal and vacuum	<ul style="list-style-type: none"> Moisture in the AC system will freeze at the expansion valve orifice, causing the refrigeration cycle to temporarily stop After the system stops, and warms up again, the ice will melt and normal operation will be temporarily restored 	<ul style="list-style-type: none"> Cooler dryer (integrated into condenser tank) in oversaturated state Moisture in refrigeration system freezes at expansion valve orifice and blocks circulation of refrigerant 	<ol style="list-style-type: none"> Replace cooler dryer Remove moisture in system by repeatedly evacuating air Supply a proper amount of new refrigerant

(3) Insufficient cooling

Condition: Cooling system does not function effectively.

I22118

Symptom	Probable Cause	Diagnosis	Corrective Action
<ul style="list-style-type: none"> Pressure is low on both low and high pressure sides Bubbles are seen through sight glass continuously Insufficient cooling performance 	Gas leaks from the refrigeration system	<ul style="list-style-type: none"> Insufficient refrigerant Refrigerant leaking 	<ol style="list-style-type: none"> Check for gas leaks and repair if necessary Supply a proper amount of new refrigerant If the gauge indicates a pressure of close to 0, then it will be necessary to evacuate the system after repairing the leak

(4) Poor circulation of refrigerant

Condition: Cooling system does not function effectively.

I22119

Symptom	Probable Cause	Diagnosis	Corrective Action
---------	----------------	-----------	-------------------

Symptom	Probable Cause	Diagnosis	Corrective Action
<ul style="list-style-type: none"> Pressure is low on both low and high pressure sides Frost exists on pipe from condenser to unit 	Refrigerant flow is obstructed by dirt inside the pipes of the condenser core	Receiver is clogged	Replace condenser

(5) Refrigerant does not circulate.

Condition: Cooling system does not function. (Sometimes it may function.)

I22120

Symptom	Probable Cause	Diagnosis	Corrective Action
<ul style="list-style-type: none"> Vacuum is indicated on low pressure side and very low pressure is indicated on high pressure side Frost or condensation is seen on piping on both sides of receiver/drier or expansion valve 	<ul style="list-style-type: none"> Refrigerant flow is obstructed by moisture or dirt in refrigeration system Refrigerant flow is disrupted by gas leaks internally through the expansion valve 	Refrigerant does not circulate	<ol style="list-style-type: none"> Check expansion valve Replace expansion valve Replace condenser Evacuate air and supply a proper amount of new refrigerant For internal gas leaks at expansion valve, replace expansion valve

(6) Refrigerant is overcharged or cooling effectiveness of condenser is insufficient.

Condition: Cooling system does not function.

I22121

Symptom	Probable Cause	Diagnosis	Corrective Action
<ul style="list-style-type: none"> Pressure is too 	<ul style="list-style-type: none"> Unable to develop 	<ul style="list-style-type: none"> Excessive refrigerant 	<ol style="list-style-type: none"> Clean condenser

Symptom	Probable Cause	Diagnosis	Corrective Action
high on both low and high pressure sides <ul style="list-style-type: none"> No air bubbles are seen through sight glass even when compressor is on 	sufficient performance due to excessive use of refrigeration system <ul style="list-style-type: none"> Cooling effectiveness of condenser is insufficient 	in cycle → excessive refrigerant was added during recharging <ul style="list-style-type: none"> Condenser cooling effectiveness is insufficient → condenser fins are clogged at cooling fan 	<ol style="list-style-type: none"> Check the operation of the condenser cooling fan If 1 and 2 are normal state, check the amount of refrigerant and supply a proper amount of refrigerant

(7) Air is present in the refrigeration system.

Condition: Cooling system does not function.

NOTE: These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuum purging.

Symptom	Probable Cause	Diagnosis	Corrective Action
<ul style="list-style-type: none"> Pressure is too high on both low and high pressure sides The low pressure piping is too hot to touch Bubbles can be seen through sight glass 	Air in system	<ul style="list-style-type: none"> Air present in refrigeration system Insufficient vacuum purging 	<ol style="list-style-type: none"> Check compressor oil to see if it is dirty or insufficient Evacuate the system and recharge it with new or purified refrigerant

(8) Expansion valve malfunction

Condition: Insufficient cooling

I22123

Symptom	Probable Cause	Diagnosis	Corrective Action
---------	----------------	-----------	-------------------

Symptom	Probable Cause	Diagnosis	Corrective Action
<ul style="list-style-type: none"> Pressure is too high on both low and high pressure sides Frost or a large amount of condensation on piping on low pressure side 	Expansion valve may be stuck	<ul style="list-style-type: none"> Excessive refrigerant in low pressure piping Expansion valve opened too wide 	Check expansion valve

(9) Insufficient compressor compression

Condition: Insufficient cooling

Symptom	Probable Cause	Diagnosis	Corrective Action
<ul style="list-style-type: none"> Pressure is too high on both low and high pressure sides Pressure is too low on high pressure side 	Internal leak in compressor	<ul style="list-style-type: none"> Low compression Leak from a damaged valve, or parts may be broken 	Replace compressor

Gauge readings (Reference)

Pressure on low pressure side

MPa (kgf/cm², psi)

REPLACEMENT

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

(a) Turn the A/C switch on.

(b) Operate the A/C with the setting temperature at 25°C (77°F) and the blower level at LO for 10 minutes to circulate the refrigerant. This causes most of the compressor oil from the various components of the A/C system to collect in the A/C compressor.

(c) Turn the power switch off.

(d) Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. CHARGE WITH REFRIGERANT

(a) Perform vacuum purging using a vacuum pump.

(b) Charge with refrigerant HFC-134a (R134a).

P

Standard:

470 g (16.6 oz.)

SST: 09985-20010

2010 Toyota Prius

Repair Manual

09985-02110

09985-02130

09985-02140

09985-02150

NOTICE:

- Do not turn the A/C on before charging with refrigerant. Doing so will cause the compressor to work without refrigerant, resulting in overheating of the cooler compressor.
- Approximately 100 g (3.53 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by quantity, not with the sight glass.
- Avoid using the gauge manifold set that had been used for vehicles with conventional compressor oil (ND-OIL11 or equivalent) as much as possible. This will cause compressor oil remaining in the manifold to enter the vehicle, resulting in insulation performance deterioration. A gauge manifold set that had been used 3 times or less can be reused if an appropriate one is not available.

HINT:

Ensure that sufficient refrigerant is available to recharge the system when using a refrigerant recovery unit. Refrigerant recovery units are not always able to recover 100% of the refrigerant from an A/C system.

3. WARM UP COMPRESSOR

- (a) Keep the A/C switch on for at least 2 minutes to warm up the compressor.

NOTICE:

Be sure to warm up the compressor when turning the A/C on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

4. INSPECT FOR REFRIGERANT LEAK

- (a) After recharging with refrigerant, inspect for refrigerant leaks using a halogen leak detector.
- (b) Carry out the test under the following conditions:

- Turn the power switch off.
- Secure good ventilation (the halogen leak detector may react to volatile gases which are not refrigerant, such as evaporated gasoline and exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that there is some refrigerant remaining in the refrigeration system.

When the compressor is off: approx. 392 to 588 kPa (3.9 to 5.9 kgf/cm², 57 to 85 psi)

(c) Using a halogen leak detector, inspect for refrigerant leaks from the refrigerant lines.

Text in Illustration

*1	Inspect for Leak
*2	Halogen Leak Detector

(d) Bring the halogen leak detector close to the drain hose with the detector's power off, and then turn the detector on.

Text in Illustration

*1	Halogen Leak Detector
*2	Drain Hose

- After the blower motor has stopped, let the cooling unit stand for more than 15 minutes.
- Bring the halogen leak detector sensor under the drain hose.
- When bringing the halogen leak detector close to the drain hose, make sure that the halogen leak detector does not react to volatile gases. If it is not possible to avoid interference from volatile gases, the vehicle should be lifted up to allow testing.

(e) If a refrigerant leak is not detected from the drain hose, remove the blower motor control from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

(f) Disconnect the pressure switch connector and leave it for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

P

INSPECTION

1. INSPECT ROOM TEMPERATURE SENSOR

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

*1

Resistance (kΩ)

Text in Illustration

*1	Component without harness connected (Room Temperature Sensor)
*2	Sensing Portion

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the room temperature sensor.

INSTALLATION

1. INSTALL ROOM TEMPERATURE SENSOR

(a) Engage the 2 claws to install the room temperature sensor to the No. 1 switch hole base.

2. INSTALL NO. 1 SWITCH HOLE BASE_ [INFO](#)

3. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ [INFO](#)

4. INSTALL SHIFT LOCK CONTROL UNIT ASSEMBLY_ [INFO](#)

5. INSTALL AIR CONDITIONING CONTROL ASSEMBLY_ [INFO](#)

6. INSTALL CONSOLE BOX ASSEMBLY_ [INFO](#)

7. INSTALL BOX BOTTOM MAT_ [INFO](#)

8. INSTALL FRONT NO. 2 CONSOLE BOX INSERT_ [INFO](#)

9. INSTALL FRONT NO. 1 CONSOLE BOX INSERT_ [INFO](#)

10. INSTALL NO. 2 CONSOLE BOX MOUNTING BRACKET_ [INFO](#)

11. INSTALL ELECTRICAL KEY OSCILLATOR_ [INFO](#)

12. INSTALL REAR CONSOLE BOX ASSEMBLY (w/ Power Outlet Socket)_ [INFO](#)

13. INSTALL REAR CONSOLE BOX ASSEMBLY (w/o Power Outlet Socket)_ [INFO](#)

14. INSTALL CONSOLE BOX CARPET_ [INFO](#)

15. INSTALL UPPER CONSOLE PANEL (w/ Power Outlet Socket)_ [INFO](#)

16. INSTALL REAR CONSOLE BOX POCKET (w/ Power Outlet Socket)_ [INFO](#)

17. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY_ [INFO](#)

18. INSTALL INSTRUMENT CLUSTER FINISH PANEL GARNISH_ [INFO](#)

SOLAR SENSOR —————

P

REMOVAL

1. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure for Remove Upper Instrument Panel Assembly [INFO](#).

2. REMOVE SOLAR SENSOR

(a) Disconnect the connector.

(b) Disengage the 2 claws and remove the solar sensor as shown in the illustration.

INSPECTION

1. INSPECT SOLAR SENSOR

*1

(a) Disconnect the solar sensor connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
6 (CLTB) - 3 (CLTE)	Power switch off	Below 1 V
6 (CLTB) - 3 (CLTE)	Power switch on (IG)	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Solar Sensor)
----	---

If the voltage is not as specified, repair or replace the wire harness or connector.

(c) Reconnect the solar sensor connector.

(d) Turn the power switch on (IG).

(e) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
1 (NSHA) - 6 (CLTE)	Sensor is exposed to electric light	0.8 to 4.3 V
1 (NSHA) - 6 (CLTE)	Sensor is covered with a cloth	Below 0.8 V

Text in Illustration

*1	Component with harness connected (Solar Sensor)
----	--

NOTICE:

- The connection procedure for using a digital tester such as a TOYOTA electrical tester is shown above. When using an analog tester, connect the positive (+) lead to terminal 6 and the negative (-) lead to terminal 1 of the solar sensor.
- While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

HINT:

- Use an incandescent light for inspection. Bring it within about 30 cm (11.8 in.) of the solar sensor.
- As the inspection light is moved away from the sensor, the voltage decreases.

If the voltage is not as specified, replace the solar sensor.

INSTALLATION

1. INSTALL SOLAR SENSOR

(a) Engage the 2 claws to install the solar sensor as shown in the illustration.

(b) Connect the connector.

2. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure for Install Upper Instrument Panel Assembly [INFO](#).

INSPECTION

1. INSPECT SOLAR VENTILATION SWITCH

*1

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
9 (SW+) - 6 (SW-)	Solar ventilation switch: off	10 k Ω or higher
9 (SW+) - 6 (SW-)	Solar ventilation switch: on	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Solar Ventilation Switch)
----	---

If the resistance is not as specified, replace the solar ventilation switch.

INSTALLATION

1. INSTALL SOLAR VENTILATION SWITCH

(a) Engage the 2 claws to install the solar ventilation switch.

2. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ [INFO](#)

3. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH_ [INFO](#)

4. INSTALL FRONT DOOR SCUFF PLATE LH_ [INFO](#)

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the terminal is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	

2. GENERAL PRECAUTION

(a) While using the battery during inspection, do not bring the positive (+) and negative (-) tester probes too close to each other as a short circuit may occur.

3. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream with the power switch off to troubleshoot:

Connect the Techstream to the vehicle, and turn a courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

(b) After all DTCs are cleared, check if the trouble occurs again 6 seconds after the power switch is turned on (IG).

4. OPERATION PRECAUTIONS

(a) The solar ventilation system operates using electrical power generated by the moon roof glass assembly (solar panel). Therefore, the solar ventilation system stops operating when the amount of electricity generated by the moon roof glass assembly (solar panel) becomes insufficient.

HINT:

If the solar ventilation system stops operating due to the moon roof glass assembly (solar panel) generating an insufficient amount of electricity, the solar ventilation system will resume operating after output from the moon roof glass assembly (solar panel) has recovered.

(b) The solar ventilation system may degrade the air quality in the cabin or lower air conditioning efficiency depending on the usage environment. When ventilation is not necessary, turn the solar ventilation switch off.

- Depending on the usage environment, exhaust emissions from other vehicles or polluted outside air may enter in the cabin.
- Depending on the strength of the sunlight when the outside temperature is low, the cabin temperature may become low because of the cool air drawn into the cabin due to solar ventilation system operation.

- When the cabin temperature is initially low, the temperature may rise because the cool air escapes from the cabin due to solar ventilation system operation.

(c) If it is not necessary to operate the solar ventilation system while working on it, turn the solar ventilation switch off.

CAUTION:

Depending on the usage environment, performing repairs with the solar ventilation switch on may cause the blower motor to operate unexpectedly, resulting in various hazards. This can lead to damage to parts or a serious injury.

(d) Before disconnecting the moon roof glass assembly (solar panel) connector, make sure to cover the entire moon roof glass assembly (solar panel) with a material such as thick fabric which blocks sunlight.

CAUTION:

The moon roof glass assembly (solar panel) generates electricity from sunlight and other light sources. If the moon roof glass assembly (solar panel) connector is touched while the moon roof glass assembly (solar panel) is generating electricity, an accidental short circuit or electric shock may occur, causing serious injury.

HINT:

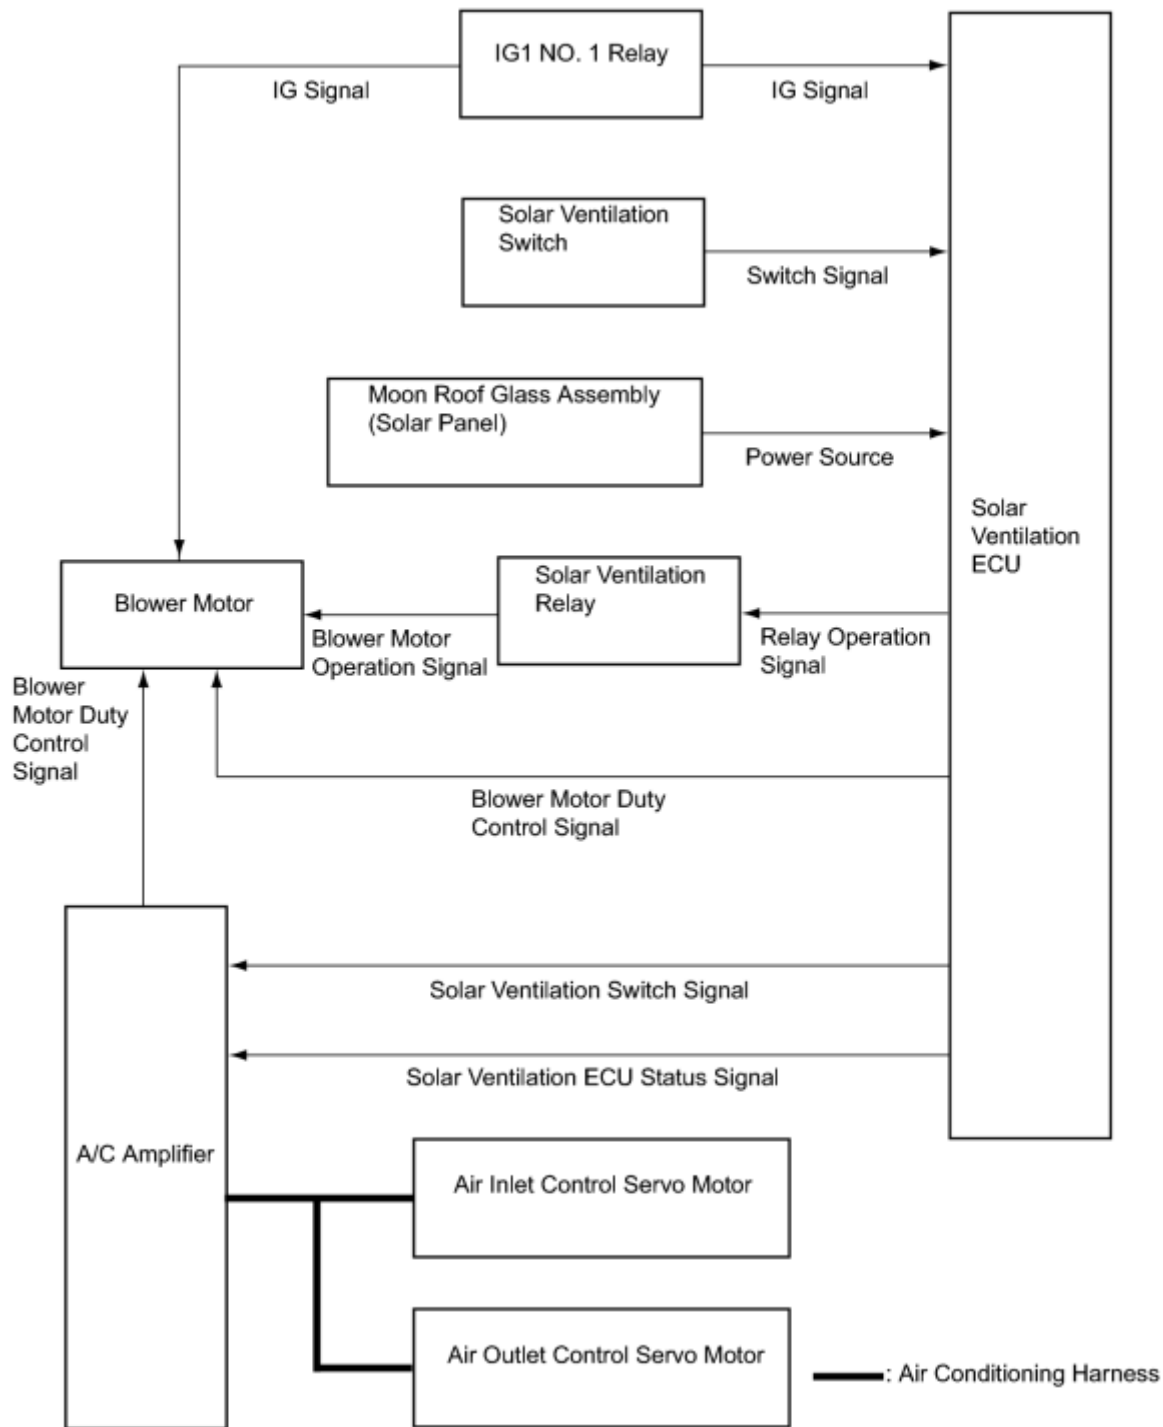

The moon roof glass assembly (solar panel) always generates electricity when exposed to light. When exposed to a light source such as sunlight, approximately 3.6 A and 22 V will be generated.

PARTS LOCATION

ILLUSTRATION

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. GENERAL

(a) The solar ventilation system ventilates the cabin when the vehicle is parked in an extremely hot environment. Ventilation is provided by the system operating the blower motor using electricity generated by the moon roof glass assembly (solar panel) installed on the roof.

HINT:

- The solar ventilation system may operate even when not all conditions of the following table are met. Meeting all conditions of the following System Operation Condition Reference Table is necessary to obtain precise inspection results.

System Operation Conditions Reference Table

Item	Condition
Amount of sunlight	A sufficient amount of sunlight is received by the moon roof glass assembly (solar panel). (The amount of sunlight on a cloudless day between 11:00 and 14:00 is typically sufficient for operation.)
Moon roof glass assembly (solar panel) status	The moon roof glass assembly (solar panel) is not in the shade No fallen leaves or dirt is present on the moon roof glass assembly (solar panel)
Ambient temperature	20 to 40°C (68 to 104°F)

- Shortly after the solar ventilation system has been activated, it may stop the blower motor if the sunlight is not sufficient even when the rest of the system operation conditions reference table are met.

(b) Activation Control

(1) When the solar ventilation switch is turned on while the power switch is on (IG):

The inlets will be changed to fresh air mode and the outlets will be changed to face mode approximately 1 minute after the power switch is turned off. In addition, the blower motor will be activated and start ventilating the cabin approximately 10 minutes after the power switch is turned off.

HINT:

In order to enhance ventilation efficiency, the inlets will be changed to fresh air mode and the outlets will be changed to face mode automatically when the solar ventilation switch is turned on while the power switch is on (IG).

(2) When the solar ventilation switch is turned on after the power switch is turned off:

The blower motor will be activated and start ventilating the cabin approximately 10 minutes after the solar ventilation switch is turned on.

HINT:

Inlet and outlet modes will remain unchanged when the solar ventilation switch is turned on after the power switch is turned off.

(c) Stop Control

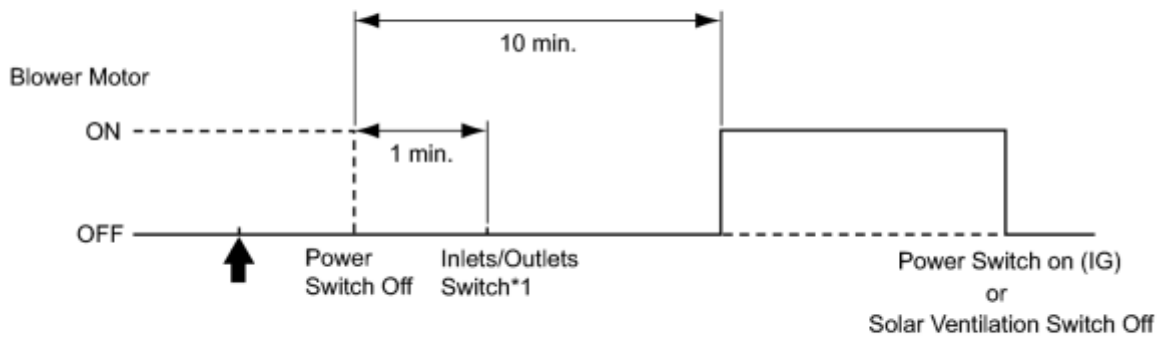

(1) When the solar ventilation switch is turned off or the power switch is turned on (IG), the solar ventilation system will stop operating.

HINT:

After the power switch is turned on (IG), both the inlets and outlets return to the mode that they were in before the power switch was turned off.

Example:

When the solar ventilation switch is turned on while the power switch is on (IG):

When the solar ventilation switch is turned on after the power switch is turned off:

←: Solar Ventilation Switch On

*1: The inlets switch to fresh air mode and the outlets switch to face mode.

*2: The inlets and outlets do not switch.

2. FUNCTION OF MAIN COMPONENTS

(a) The solar ventilation system consists of the following components:

Component	Function
Moon roof glass assembly (solar panel)	Generates power from sunlight and supplies system power to the solar ventilation ECU.
Solar ventilation ECU	<ul style="list-style-type: none">• Activated by power generated by the moon roof glass assembly (solar panel).• Activates the solar ventilation system by receiving an on signal from the solar ventilation switch and an off signal from the vehicle power switch.• Sends a solar ventilation system condition signal to the A/C amplifier.• Operates the blower motor when the solar ventilation system is turned on.
Solar ventilation switch	Turns the solar ventilation system on or off.
Solar ventilation relay	Switches the power supply source for the blower motor between the auxiliary battery and solar ventilation ECU according to the power switch condition.
Blower motor	<ul style="list-style-type: none">• Performs ventilation when the power switch is off based on instructions from the solar ventilation ECU.• Changes its speed according to the amount of sunlight received by the moon roof glass assembly (solar panel).
A/C amplifier	<ul style="list-style-type: none">• Activates the air outlet control servo motor and air inlet control servo motor according to the signals from the solar ventilation ECU.• Receives solar ventilation system condition signal from the solar ventilation ECU and sends a solar ventilation system condition signal via CAN.
Air inlet control servo motor	Switches the inlets to fresh air mode based on signals from the A/C amplifier.
Air outlet control servo motor	Switches the outlets to face mode based on signals from the A/C amplifier.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the solar ventilation system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. INSPECT BATTERY VOLTAGE

(a) Inspect the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

OPERATION CHECK

1. SOLAR VENTILATION SYSTEM OPERATION CHECK

(a) Inspection of Voltage Generated by Moon Roof Glass Assembly (Solar Panel)

(1) Park the vehicle in a location with a stable temperature and a sufficient amount of sunlight, and leave the vehicle as is for approximately 10 minutes.

NOTICE:

To ensure stable generation of voltage by the moon roof glass assembly (solar panel), make sure to park the vehicle in a location where the system operation conditions reference table are satisfied.

HINT:

The solar ventilation system operates only when the generated voltage is 10 V or higher. Therefore, make sure to park the vehicle where the system operation conditions reference table are satisfied. This will allow the moon roof glass assembly (solar panel) to generate a voltage of 10 V or higher.

System Operation Conditions Reference Table

Item	Condition
Amount of sunlight	A sufficient amount of sunlight is received by the moon roof glass assembly (solar panel). (The amount of sunlight on a cloudless day between 11:00 and 14:00 is typically sufficient for operation.)
Moon roof glass assembly (solar panel) status	The moon roof glass assembly (solar panel) is not in the shade No fallen leaves or dirt is present on the moon roof glass assembly (solar panel)
Ambient temperature	20 to 40°C (68 to 104°F)

(2) Connect the Techstream to the DLC3.

(3) Turn the power switch on (IG).

(4) Turn the Techstream on.

(5) Enter the following menus: Body Electrical / Air Conditioner / Data List.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Solar Voltage	Solar panel voltage / Variable, 10V les, 10V-11V, 11V-12V, 12V-13V, 13V-14V, 14V-15V, 15V-16V, 16V-17V, 17V-18V, 18V-19V, 19V-20V, 20V-21V, 21V-22V, 22V-23V or 23V	Actual generated voltage displayed	System operation conditions reference table are met  .

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	ovr		

HINT:

If the Data List items related to the solar ventilation system are not displayed, the following conditions are suspected:

- The voltage generated by the moon roof glass assembly (solar panel) is less than 7 V [INFO](#).
- There is a communication error between the solar ventilation ECU and A/C amplifier [INFO](#).

(b) Operation Check

(1) Check that the Solar Voltage value in the Data List is 10 V or higher.

(2) Turn the solar ventilation switch on.

(3) Turn the power switch off.

(4) Check that the blower motor operates 10 minutes after the power switch is turned off.

HINT:

- The inlets will be changed to fresh air mode and the outlets will be changed to face mode approximately 1 minute after the power switch is turned off.
- Inlet and outlet modes will remain unchanged when the solar ventilation switch is turned on after the power switch is turned off.
- When the moon roof glass assembly (solar panel) is generating high voltage, a noise may occur when the blower motor starts operating. This noise does not indicate a malfunction.
- For details of the solar ventilation system control, refer to System Description [INFO](#).

2. TEST MODE

HINT:

In test mode, the solar ventilation ECU operates the blower motor while the power switch is on (IG). The state of the solar ventilation switch received by the solar ventilation ECU and the status of duty output from the solar ventilation ECU to the blower motor can be checked.

(a) Test Mode Procedure

HINT:

Perform the operation according to the following procedure with the power switch on (IG) and the solar ventilation switch off.

(1) Check that the Solar Voltage value in the Data List is 10 V or higher.

(2) With the power switch on (IG), turn the power switch from off to on (ACC) to on (IG) 3 times within 5 seconds (on (IG) → off → on (ACC) → on (IG) → off → on (ACC) → on (IG) → off → on (ACC) → on (IG)).

HINT:

Operate the power switch 9 times.

(3) Turn the solar ventilation switch from off to on 3 times within 3 seconds (off → on → off → on → off → on) of operating the power switch.

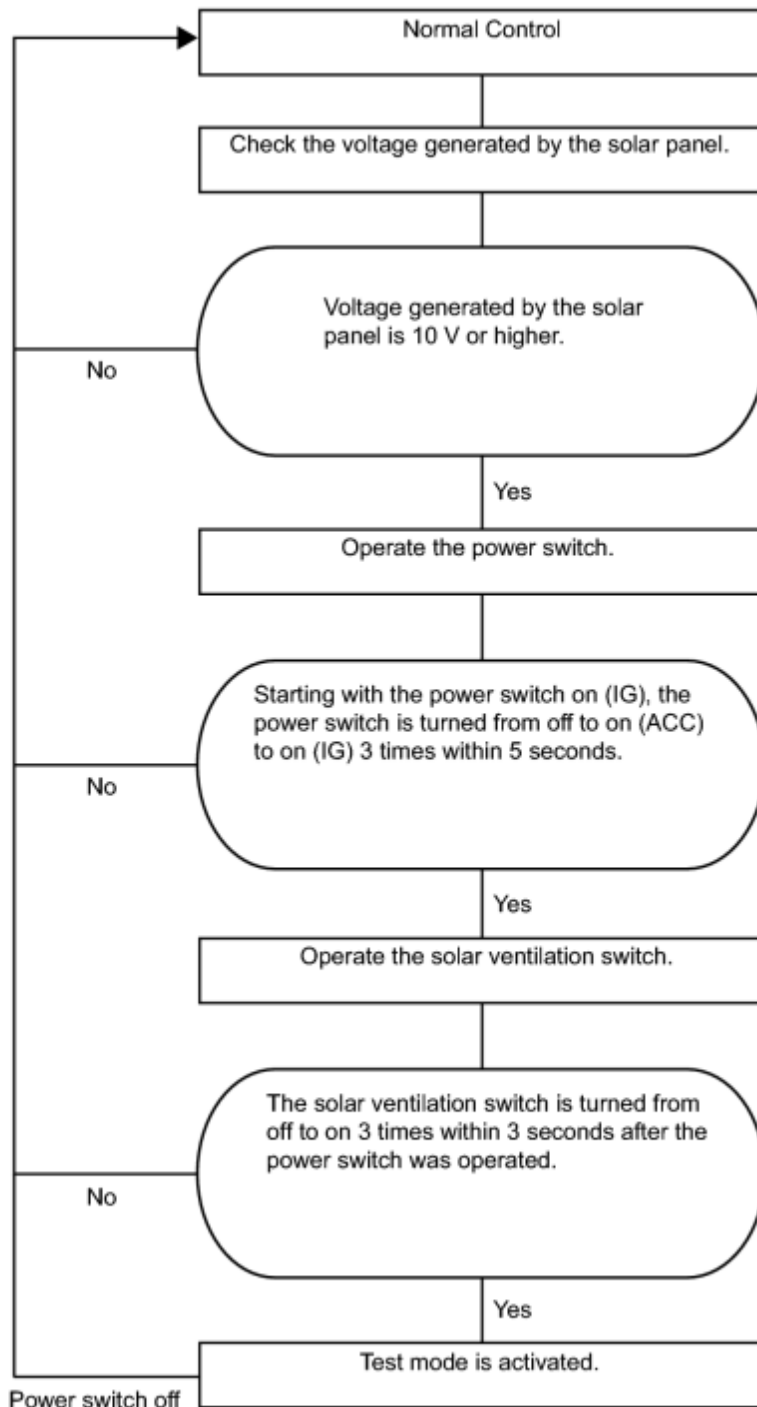

HINT:

Operate the solar ventilation switch 5 times.

(4) Check that test mode is activated and the blower motor rotates at a constant speed.

HINT:

- When the solar ventilation switch is turned off, the blower motor will stop and when the solar ventilation switch is turned on, the blower motor will operate.
- When the power switch is turned off, the solar ventilation system returns to normal control.

Power switch off

on (IG) → off → on (ACC) →

DATA LIST / ACTIVE TEST

1. DATA LIST

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Data List.
- (e) Check the value(s) by referring to the table below.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Solar Ventilation Switch	Solar ventilation switch (Switch recognition value at A/C amplifier side) / OFF or ON	OFF: Solar ventilation switch off ON: Solar ventilation switch on	-
Solar Voltage	Solar panel voltage / Variable, 10V les, 10V-11V, 11V-12V, 12V-13V, 13V-14V, 14V-15V, 15V-16V, 16V-17V, 17V-18V, 18V-19V, 19V-20V, 20V-21V, 21V-22V, 22V-23V or 23V ovr	Actual generated voltage displayed	System operation conditions reference table are met INFO .
Solar Ventilation Switch Status	Solar ventilation switch (Switch recognition value at solar ventilation ECU side) / OFF or ON	OFF: Solar ventilation switch off ON: Solar ventilation switch on	-
Solar IG Status	Solar ventilation ECU IG status /	OFF: Power	When OFF is displayed, a malfunction in the solar

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	OFF or ON	switch off ON: Power switch on (IG)	ventilation ECU is suspected.
Solar Ventilation Test Mode Status	Solar ventilation ECU test mode status / OFF or ON	OFF: Test mode off ON: Test mode on	-

HINT:

If the Data List items related to the solar ventilation system are not displayed, the following conditions are suspected:

- The voltage generated by the moon roof glass assembly (solar panel) is less than 7 V .
- There is a communication error between the solar ventilation ECU and A/C amplifier .

2. ACTIVE TEST

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Air Conditioner / Active Test.
- Check the operation by referring to the table below.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Blower Motor	Blower motor	Min.: 0, Max.: 31	-

DESCRIPTION

The solar ventilation system activates when the vehicle power switch is off. If the solar ventilation switch has been turned on, the solar ventilation ECU checks that the vehicle power switch is off and then activates the solar ventilation system.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Before performing this inspection procedure, check if the Data List items for the solar ventilation system are displayed. If the Data List items are not displayed, inspect the communication circuit between the solar ventilation ECU and A/C amplifier INFO.

PROCEDURE

1. READ VALUE USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Air Conditioner / Data List.

(e) Check the value(s) by referring to the table below.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Solar IG Status	Solar ventilation ECU IG status / OFF or ON	OFF: Power switch off ON: Power switch on (IG)	When OFF is displayed, a malfunction in the solar ventilation ECU is suspected.

OK:

The display is as specified in the Normal Condition column.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE SOLAR VENTILATION ECU

DESCRIPTION

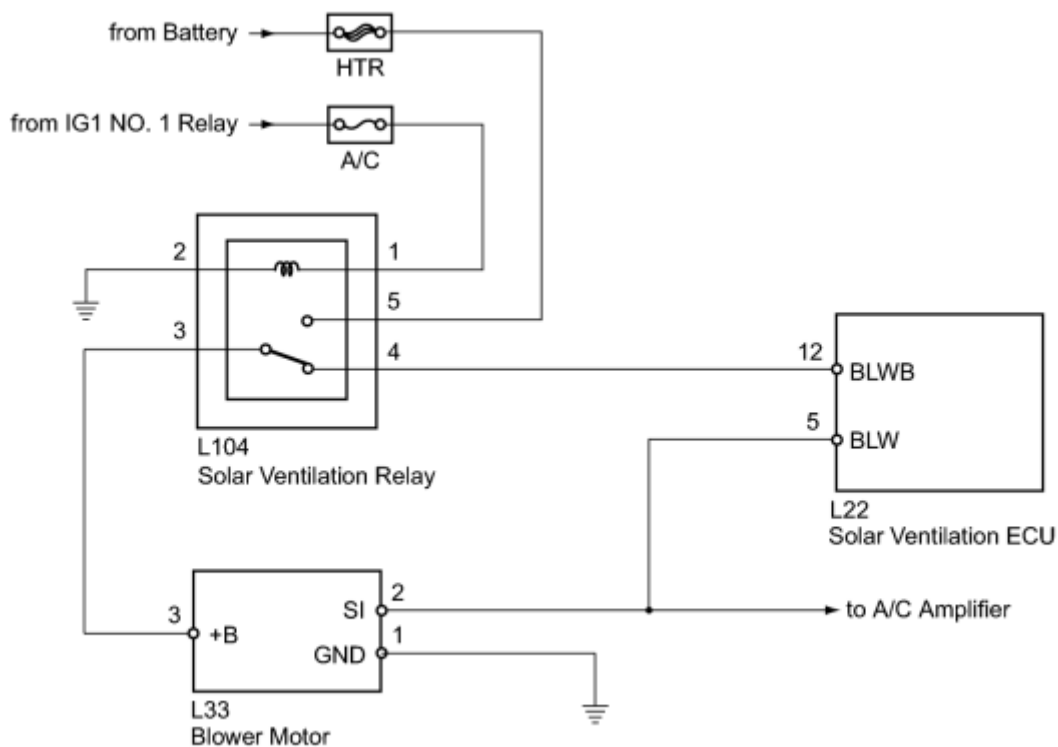

The solar ventilation system and air conditioning system use the same blower motor for ventilation.

In order to be driven by each system, the blower motor switches between two different power sources using the solar ventilation relay. When the power switch is off, power from the solar ventilation system is supplied to the blower motor and when the power switch is in a mode other than off, power from the air conditioning system is supplied to the blower motor.

The blower motor controls its operation and speed using the power and signals supplied by the solar ventilation ECU when the power switch is off.

Changes its speed according to the amount of sunlight received by the moon roof glass assembly (solar panel).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Active Test.
- (e) Check the operation by referring to the table below.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Blower Motor	Blower motor	Min.: 0, Max.: 31	-

OK:

Blower motor operates and blower motor speed level changes.

NG ► GO TO AIR CONDITIONING SYSTEM (BLOWER MOTOR CIRCUIT)

OK

2. INSPECT SOLAR VENTILATION RELAY

H

(a) Remove the solar ventilation relay.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Specified Condition
3 - 5	10 k Ω or higher
3 - 4	Below 1 Ω

Tester Connection	Specified Condition
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
3 - 4	10 k Ω or higher (when battery voltage is applied to terminals 1 and 2)

NG  REPLACE SOLAR VENTILATION RELAY

OK

3.	INSPECT SOLAR VENTILATION ECU
----	-------------------------------

*1

(a) Disconnect the solar ventilation relay connector.

H

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L104-4 - Body ground	Power switch off Solar ventilation switch off	Below 1 V
L104-4 - Body ground	Power switch off Solar ventilation switch on (System operation conditions reference table met )	1 to 28 V

Text in Illustration

*1	Front view of wire harness connector (to Solar Ventilation Relay)
----	--

NG [CHECK HARNESS AND CONNECTOR \(SOLAR VENTILATION ECU - SOLAR VENTILATION RELAY\)](#)

OK

4. CHECK HARNESS AND CONNECTOR (SOLAR VENTILATION ECU - BLOWER MOTOR)

*1

(a) Disconnect the solar ventilation ECU connector.

H

*2

(b) Disconnect the blower motor connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L22-5 (BLW) - L33-2 (SI)	Always	Below 1 Ω
L22-5 (BLW) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector
----	--------------------------------------

	(to Solar Ventilation ECU)
*2	Front view of wire harness connector (to Blower Motor)

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.	INSPECT SOLAR VENTILATION ECU
----	-------------------------------

- (a) Reinstall the solar ventilation relay.
- (b) Reconnect the solar ventilation relay connector.
- (c) Reconnect the blower motor connector.
- (d) Reconnect the solar ventilation ECU connector.

(e) Measure the waveform between terminal L22-5 (BLW) of the solar ventilation ECU and body ground.

*1

Item	Content
Tool setting	1 V/DIV., 500 μ s/DIV.
Vehicle condition	Power switch off Solar ventilation switch on (blower motor operating)

OK:

Waveform is as shown in the illustration.

HINT:

The waveform varies with the blower speed.

*1	Front view of wire harness connector (to Solar Ventilation ECU)
*2	Front view of wire harness connector (to Solar Ventilation Relay)

H

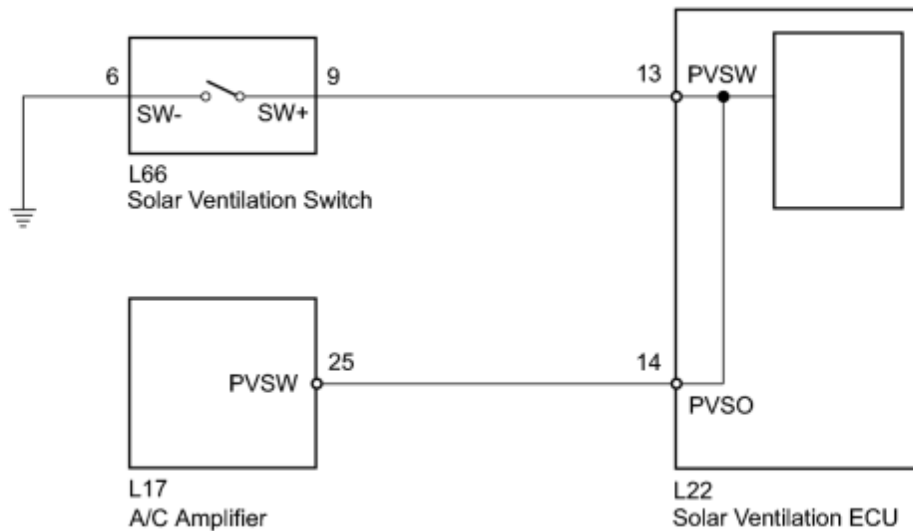

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE SOLAR VENTILATION ECU

DESCRIPTION

The solar ventilation system can operate when the solar ventilation switch is on and the moon roof glass assembly (solar panel) generates the necessary amount of electricity.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Before performing this inspection procedure, check if the Data List items for the solar ventilation system are displayed. If the Data List items are not displayed, inspect the communication circuit between the solar ventilation ECU and A/C amplifier INFO.

PROCEDURE

1. READ VALUE USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Air Conditioner / Data List.

(e) Check the value(s) by referring to the table below.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Solar Ventilation Switch	Solar ventilation switch (Switch recognition value at A/C amplifier side) / OFF or ON	OFF: Solar ventilation switch off ON: Solar ventilation switch on	-
Solar Ventilation Switch Status	Solar ventilation switch (Switch recognition value at solar ventilation ECU side) / OFF or ON	OFF: Solar ventilation switch off ON: Solar ventilation switch on	-

OK:

The display is as specified in the Normal Condition column.

Result:

Result	Proceed to
OK	A
NG (OFF/ON display does not change for both Solar Ventilation Switch Status and Solar Ventilation Switch even though the solar ventilation switch is operated.)	B
NG (OFF/ON display does not change for Solar Ventilation Switch even though the solar ventilation switch is operated.)	C
NG (OFF/ON display does not change for Solar Ventilation Switch Status even though the solar ventilation switch is operated.)	D

D ▶ REPLACE SOLAR VENTILATION ECU

C ▶ [CHECK HARNESS AND CONNECTOR \(SOLAR VENTILATION ECU - A/C AMPLIFIER\)](#)

B ▶ [INSPECT SOLAR VENTILATION SWITCH](#)

A ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

2. INSPECT SOLAR VENTILATION SWITCH

*1

(a) Remove the solar ventilation switch.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L66-9 (SW+) - L66-6 (SW-)	Solar ventilation switch: off (when switch is not pressed)	10 k Ω or higher
L66-9 (SW+) - L66-6 (SW-)	Solar ventilation switch: on (when switch is pressed)	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Solar Ventilation Switch)

6. REPLACE SOLAR VENTILATION ECU

(a) Replace the solar ventilation ECU with a known good one and check if the same problem occurs again 

.

OK:

Same problem does not occur.

NG ► REPLACE A/C AMPLIFIER

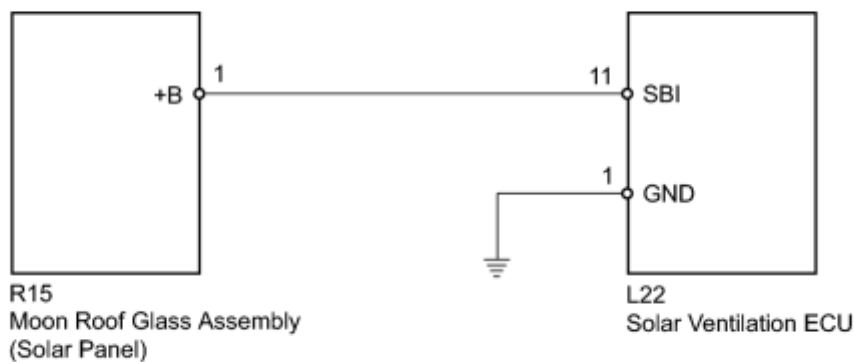

OK ► **END (SOLAR VENTILATION ECU WAS DEFECTIVE)**

DESCRIPTION

For the solar ventilation system, the moon roof glass assembly (solar panel) generates electricity using sunlight to generate the required power.

The electricity generated by the moon roof glass assembly (solar panel) is sent to the solar ventilation ECU and used as the power source for the solar ventilation system.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. INSPECT MOON ROOF GLASS ASSEMBLY (SOLAR PANEL)

(a) Leave the vehicle for 10 minutes in a location where the following conditions are met, and then measure the voltage.

System Operation Conditions Reference Table

Items	Condition
Amount of sunlight	A sufficient amount of sunlight is received by the moon roof glass assembly (solar panel). (The amount of sunlight on a cloudless day between 11:00 and 14:00 is typically sufficient for operation.)
Moon roof glass assembly (solar panel) status	The moon roof glass assembly (solar panel) is not in the shade No fallen leaves or dirt is present on the moon roof glass assembly (solar panel)

Items	Condition
	panel)
Ambient temperature	20 to 40°C (68 to 104°F)

NOTICE:

To ensure stable generation of voltage by the moon roof glass assembly (solar panel), make sure to park the vehicle in a location where the system operation conditions reference table are satisfied.

*1

(b) Disconnect the solar ventilation ECU connector.

CAUTION:

The moon roof glass assembly (solar panel) generates electricity when exposed to a light source such as sunlight. If an inspection of the moon roof glass assembly (solar panel) is performed while electricity is being generated, work carefully in order to prevent an accidental short circuit or electric shock.

H

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L22-11 (SBI) - L22-1 (GND)	System operation conditions reference table are met.	12 V or higher

Text in Illustration

*1	Front view of wire harness connector (to Solar Ventilation ECU)
----	--

NG [CHECK HARNESS AND CONNECTOR \(SOLAR VENTILATION ECU - SOLAR PANEL, BODY GROUND\)](#)

OK

2.	READ VALUE USING TECHSTREAM
----	-----------------------------

(a) Reconnect the solar ventilation ECU connector.

(b) Connect the Techstream to the DLC3.

- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Air Conditioner / Data List.
- (f) Check the value(s) by referring to the table below.
- (1) Check that the Solar Voltage value in the Data List is 10 V or higher.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Solar Voltage	Solar panel voltage / Variable, 10V les, 10V-11V, 11V-12V, 12V-13V, 13V-14V, 14V-15V, 15V-16V, 16V-17V, 17V-18V, 18V-19V, 19V-20V, 20V-21V, 21V-22V, 22V-23V or 23V ovr	Actual generated voltage displayed	System operation conditions reference table are met INFO .

OK:

10 V or higher

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK REPLACE MOON ROOF GLASS ASSEMBLY (SOLAR PANEL)

DESCRIPTION

The solar ventilation ECU communicates with the A/C amplifier using a direct line. The A/C amplifier checks the condition of the solar ventilation system based on signals sent via the direct line.

When this circuit malfunctions, Data List items for the solar ventilation system will not be displayed.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

- CHECK HARNESS AND CONNECTOR (SOLAR VENTILATION ECU - A/C AMPLIFIER)

*1

- Disconnect the solar ventilation ECU connector.

H

(b) Disconnect the A/C amplifier connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L22-17 (SIND) - L17-26 (SSLR)	Always	Below 1 Ω
L22-17 (SIND) - Body ground	Always	10 k Ω or higher

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Automatic Glare-resistant EC Mirror

Symptom	Suspected Area	See page
Auto glare-resistant EC mirror does not operate	ECU-IG No. 2 fuse	-
	Inner rear view mirror	INFO
	Wire harness or connector	-

REMOVAL

1. REMOVE INNER REAR VIEW MIRROR COVER (w/ EC Mirror)

(a) w/o Rear View Monitor System:

(1) Disengage the 2 claws and slide the inner rear view mirror cover as shown in the illustration.

(2) Disengage the 6 claws and remove the inner rear view mirror cover.

(b) w/ Rear View Monitor System:

(1) Disengage the 2 claws and slide the inner rear view mirror cover as shown in the illustration.

(2) Disengage the 2 claws and remove the inner rear view mirror cover.

P

2. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (w/o EC Mirror)

P

(a) Disengage the 2 claws and disconnect the inner rear view mirror cover.

P

(b) Remove the inner rear view mirror as shown in the illustration.

3. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)

(a) w/o Rear View Monitor System:

(1) Disconnect the connector.

(2) Using "TORX" socket wrench (T20), remove the screw and inner rear view mirror assembly.

(b) w/ Rear View Monitor System:

(1) Disconnect the connector.

(2) Using "TORX" socket wrench (T20), remove the screw and inner rear view mirror assembly.

INSPECTION

1. INSPECT INNER REAR VIEW MIRROR ASSEMBLY (w/ GARAGE DOOR OPENER SYSTEM)

(a) Inspect the operation of the electrochromic inner mirror.

H

Text in Illustration

*1	Black Colored Tape	*2	Forward Sensor
*3	Bright	*4	Dark
*5	w/ Rear View Monitor System	*6	w/o Rear View Monitor System

(1) Connect the positive (+) lead from a battery to terminal 1 and the negative (-) lead to terminal 2.

(2) Press the EC ON switch.

(3) Attach black colored tape to the forward sensor to prevent it from sensing.

(4) Light up the mirror with an electric light, and check that the mirror surface changes from bright to dark.

Standard:

Mirror surface changes from bright to dark.

If the result is not as specified, replace the mirror assembly.

2. INSPECT INNER REAR VIEW MIRROR ASSEMBLY (w/o GARAGE DOOR OPENER)

(a) Inspect the operation of the electrochromic inner mirror.

H

Text in Illustration

*1	Black Colored Tape	*2	Forward Sensor
*3	Bright	*4	Dark

- (1) Connect the positive (+) lead from a battery to terminal 4 and the negative (-) lead to terminal 1.
- (2) Press the AUTO switch.
- (3) Attach black colored tape to the forward sensor to prevent it from sensing.
- (4) Light up the mirror with an electric light, and check that the mirror surface changes from bright to dark.

Standard:

Mirror surface changes from bright to dark.

If the result is not as specified, replace the mirror assembly.

INSTALLATION

1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/o EC Mirror)

(a) Install the inner rear view mirror as shown in the illustration.

(b) Engage the 2 claws and connect the inner rear view mirror cover.

2. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)

(a) w/o Rear View Monitor System:

(1) Using "TORX" socket wrench (T20), install the inner rear view mirror with the screw.

Torque: **1.5 N·m (15 kgf·cm, 13in·lbf)**

(2) Connect the connector.

(b) w/ Rear View Monitor System:

(1) Using "TORX" socket wrench (T20), install the inner rear view mirror with the screw.

Torque: **1.5 N·m (15 kgf·cm, 13in·lbf)**

(2) Connect the connector.

3. INSTALL INNER REAR VIEW MIRROR COVER (w/ EC Mirror)

(a) w/o Rear View Monitor System:

(1) Engage the 6 claws and install the inner rear view mirror cover.

(2) Engage the 2 claws and install the inner rear view mirror cover as shown in the illustration.

(b) w/ Rear View Monitor System:

(1) Engage the 2 claws and install the inner rear view mirror cover.

(2) Engage the 2 claws and install the inner rear view mirror cover as shown in the illustration.

DISASSEMBLY

1. REMOVE CONSOLE BOX POCKET (w/ Power Outlet Socket)

(a) Disengage the 2 claws and remove the console box pocket as shown in the illustration.

2. REMOVE CONSOLE REAR END PANEL (w/ Power Outlet Socket)

(a) Disengage the 10 claws to remove the console rear end panel.

3. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/ Power Outlet Socket)

(a) Using a screwdriver, pull out the box door hinge shafts.

- The illustration is for the LH side.
- Use the same procedure for the RH side and LH side.

(b) Remove the console compartment door sub-assembly.

4. REMOVE REAR CONSOLE COMPARTMENT DOOR BOX COVER (w/ Power Outlet Socket)

(a) Remove the 4 screws.

(b) Remove the 4 screws and the outer console compartment door.

(c) Pull the rear console compartment door box cover in the direction indicated by the arrow to disengage the 2 claws and 5 guides, and remove the rear console compartment door box cover.

5. REMOVE NO. 2 CONSOLE COMPARTMENT DOOR INSERT (w/ Power Outlet Socket)

(a) Pull the No. 2 console compartment door insert in the direction indicated by the arrow to disengage the 3 claws and 7 guides, and remove the No. 2 console compartment door insert.

6. REMOVE NO. 1 CONSOLE COMPARTMENT DOOR INSERT (w/ Power Outlet Socket)

HINT:

Use the same procedure for the RH side and LH side.

7. REMOVE CONSOLE COMPARTMENT DOOR CUSHION (w/ Power Outlet Socket)

(a) Disengage the 4 claws and remove the inner console compartment door.

(b) Remove the console compartment door cushion.

8. REMOVE NO. 2 BOX SIDE PANEL (w/ Power Outlet Socket)

(a) Remove the 2 screws.

(b) Pull the No. 2 box side panel in the direction indicated by the arrow to disengage the 9 claws and guide, and remove the No. 2 box side panel.

9. REMOVE NO. 1 BOX SIDE PANEL (w/ Power Outlet Socket)

HINT:

Use the same procedure for the RH side and LH side.

10. REMOVE CONSOLE COMPARTMENT DOOR CUSHION (w/ Power Outlet Socket)

(a) Remove the 2 console compartment door cushions.

11. REMOVE CIGARETTE LIGHTER WIRE ASSEMBLY (w/ Power Outlet Socket)

(a) Disconnect the 2 connectors.

P

(b) Disengage the clamp and remove the cigarette lighter wire assembly.

12. REMOVE STEREO JACK ADAPTER ASSEMBLY (w/ Power Outlet Socket) INFO

13. REMOVE CENTER POWER OUTLET SOCKET ASSEMBLY (w/ Power Outlet Socket) INFO

14. REMOVE CENTER POWER OUTLET SOCKET COVER (w/ Power Outlet Socket) INFO

15. REMOVE CONSOLE REAR END PANEL (w/o Power Outlet Socket)

P

(a) Disengage the 10 claws to remove the console rear end panel.

16. REMOVE REAR CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/o Power Outlet Socket)

(a) Remove the 2 screws and remove the rear console compartment door sub-assembly.

P

17. REMOVE CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY (w/o Power Outlet Socket)

P

(a) Remove the 2 screws and the console compartment door hinge sub-assembly.

18. REMOVE OUTER CONSOLE COMPARTMENT DOOR (w/o Power Outlet Socket)

P

(a) Remove the 4 screws.

(b) Disengage the 6 claws and remove the outer console compartment door.

19. REMOVE CONSOLE COMPARTMENT DOOR CUSHION (w/o Power Outlet Socket)

P

(a) Remove the 2 console compartment door cushions.

20. REMOVE NO. 2 BOX SIDE PANEL (w/o Power Outlet Socket)

(a) Remove the screw.

P

(b) Disengage the 3 claws and 6 guides and remove the No. 2 box side panel.

P

21. REMOVE NO. 1 BOX SIDE PANEL (w/o Power Outlet Socket)

HINT:

Use the same procedure for the RH side and LH side.

REASSEMBLY

1. INSTALL NO. 2 BOX SIDE PANEL (w/o Power Outlet Socket)

(a) Engage the 6 guides and 3 claws as shown in the illustration.

P

(b) Install the No. 2 box side panel with the screw.

P

2. INSTALL NO. 1 BOX SIDE PANEL (w/o Power Outlet Socket)

HINT:

Use the same procedure for the RH side and LH side.

3. INSTALL CONSOLE COMPARTMENT DOOR CUSHION (w/o Power Outlet Socket)

(a) Install the 2 console compartment door cushions.

P

4. INSTALL OUTER CONSOLE COMPARTMENT DOOR (w/o Power Outlet Socket)

(a) Engage the 6 claws.

P

(b) Install the outer console compartment door with the 4 screws.

5. INSTALL CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY (w/o Power Outlet Socket)

P

(a) Install the console compartment door hinge sub-assembly with the 2 screws.

6. INSTALL REAR CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/o Power Outlet Socket)

P

(a) Install the rear console compartment door sub-assembly with the 2 screws.

7. INSTALL CONSOLE REAR END PANEL (w/o Power Outlet Socket)

P

(a) Engage the 10 claws to install the console rear end panel.

8. INSTALL CENTER POWER OUTLET SOCKET COVER (w/ Power Outlet Socket)

9. INSTALL CENTER POWER OUTLET SOCKET ASSEMBLY (w/ Power Outlet Socket) INFO

10. INSTALL STEREO JACK ADAPTER ASSEMBLY (w/ Power Outlet Socket) INFO

11. INSTALL CIGARETTE LIGHTER WIRE ASSEMBLY (w/ Power Outlet Socket)

(a) Engage the clamp.

P

(b) Connect the 2 connectors to install the cigarette lighter wire assembly.

12. INSTALL CONSOLE COMPARTMENT DOOR CUSHION (w/ Power Outlet Socket)

(a) Install the 2 console compartment door cushions.

13. INSTALL NO. 2 BOX SIDE PANEL (w/ Power Outlet Socket)

(a) Engage the 9 claws and guide as shown in the illustration.

P

(b) Install the No. 2 box side panel with the 2 screws.

P

14. INSTALL NO. 1 BOX SIDE PANEL (w/ Power Outlet Socket)

HINT:

Use the same procedure for the RH side and LH side.

15. INSTALL CONSOLE COMPARTMENT DOOR CUSHION (w/ Power Outlet Socket)

P

(a) Install a new console compartment door cushion.

P

(b) Engage the 4 claws to install the inner console compartment door.

16. INSTALL NO. 2 CONSOLE COMPARTMENT DOOR INSERT (w/ Power Outlet Socket)

P

(a) Engage the 3 claws and 7 guides to install the No. 2 console compartment door insert as shown in the illustration.

17. INSTALL NO. 1 CONSOLE COMPARTMENT DOOR INSERT (w/ Power Outlet Socket)

HINT:

Use the same procedure for the RH side and LH side.

18. INSTALL REAR CONSOLE COMPARTMENT DOOR BOX COVER (w/ Power Outlet Socket)

(a) Engage the 2 claws and 5 guides to install the rear console compartment door box cover as shown in the illustration.

P

(b) Temporarily install the outer console compartment door with the 4 screws.

P

(c) Install the outer console compartment door with the 4 screws.

P

19. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/ Power Outlet Socket)

(a) Temporarily install the console compartment door sub-assembly.

(b) Push in the box door hinge shafts by hand as far as possible.

- The illustration is for the LH side.
- Use the same procedure for the RH side and LH side.

P

P

(c) Using pliers, push in the box door hinge shafts completely and install the console compartment door sub-assembly.

- The illustration is for the LH side.
- Use the same procedure for the RH side and LH side.

20. INSTALL CONSOLE REAR END PANEL (w/ Power Outlet Socket)

P

(a) Engage the 10 claws to install the console rear end panel.

21. INSTALL CONSOLE BOX POCKET (w/ Power Outlet Socket)

(a) Engage the 2 claws and install the console box pocket as shown in the illustration.

INSTALLATION

1. INSTALL REAR CONSOLE BOX ASSEMBLY (w/ Power Outlet Socket)

(a) Connect the connector.

(b) Engage the 8 claws as shown in the illustration.

(c) Install the rear console box assembly with the 5 bolts.

2. INSTALL REAR CONSOLE BOX ASSEMBLY (w/o Power Outlet Socket)

(a) Engage the 8 claws and guide as shown in the illustration.

(b) Install the rear console box assembly with the 4 bolts.

3. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.

4. INSTALL UPPER CONSOLE PANEL (w/ Power Outlet Socket)

(a) Engage the 3 claws to install the upper console panel.

5. INSTALL REAR CONSOLE BOX POCKET (w/ Power Outlet Socket)

(a) Install the rear console box pocket as shown in the illustration.

PRECAUTION

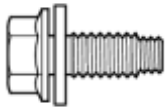

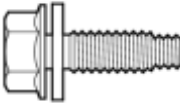

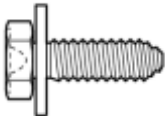

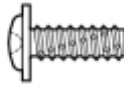

1. PRECAUTION FOR VEHICLE WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

(a) Some operations in this section may affect the SRS airbags. Prior to performing the corresponding operations, read the precautions regarding the SRS airbags .

2. TABLE OF BOLT, SCREW AND NUT

HINT:

All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabet codes in the table below.

Code	Shape	Size	Code	Shape	Size
<A>		$\varphi=8$ mm (0.314 in.) Length=21 mm (0.827 in.)			$\varphi=6$ mm (0.236 in.) Length=20 mm (0.787 in.)
<C>		$\varphi=6$ mm (0.236 in.) Length=20 mm (0.787 in.)	<D>		$\varphi=5$ mm (0.197 in.) Length=14 mm (0.551 in.)

REMOVAL

1. PRECAUTION

INFO

2. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

(a) Remove the upper instrument panel assembly INFO.

3. REMOVE REAR CONSOLE BOX POCKET (w/ Power Outlet Socket) INFO

4. REMOVE UPPER CONSOLE PANEL (w/ Power Outlet Socket) INFO

5. REMOVE CONSOLE BOX CARPET INFO

6. REMOVE REAR CONSOLE BOX ASSEMBLY (w/ Power Outlet Socket) INFO

7. REMOVE REAR CONSOLE BOX ASSEMBLY (w/o Power Outlet Socket) INFO

8. REMOVE ELECTRICAL KEY OSCILLATOR INFO

9. REMOVE NO. 2 CONSOLE BOX MOUNTING BRACKET

(a) Remove the 6 bolts and No. 2 console box mounting bracket.

10. REMOVE FRONT NO. 1 CONSOLE BOX INSERT

(a) Pull the front No. 1 console box insert in the direction indicated by the arrow to disengage the 4 claws and guide, and remove the front No. 1 console box insert.

P

11. REMOVE FRONT NO. 2 CONSOLE BOX INSERT

P

(a) Pull the front No. 2 console box insert in the direction indicated by the arrow to disengage the 4 claws and guide, and remove the front No. 2 console box insert.

12. REMOVE BOX BOTTOM MAT

P

(a) Disengage the fastener and remove the box bottom mat.

13. SEPARATE CONSOLE BOX ASSEMBLY

(a) Remove the bolt and 2 clips.

P

P

(b) While pushing the parts shown in the illustration inward, pull the console box assembly in the direction indicated by the arrow to disengage the 2 claws and 4 guides.

(c) Disconnect the connector and separate the console box assembly.

14. REMOVE AIR CONDITIONING CONTROL ASSEMBLY_ INFO

15. REMOVE SHIFT LOCK CONTROL UNIT ASSEMBLY_ INFO

16. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY

(a) Disengage the clamp.

(b) Remove the 2 bolts <A>.

(c) Pull the upper instrument panel finish panel assembly in the direction indicated by the arrow to disengage the 9 claws and remove the upper instrument panel finish panel assembly.

17. REMOVE CONSOLE BOX ASSEMBLY

(a) Remove the console box assembly.

18. REMOVE NO. 1 SWITCH HOLE BASE

(a) Disengage the 5 claws.

(b) Disconnect the connector to remove the No. 1 switch hole base.

19. REMOVE LOWER STEERING COLUMN COVER_ INFO

20. REMOVE UPPER STEERING COLUMN COVER_ INFO

21. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Remove the 2 screws <D>.

(b) Disengage the claw and guide.

(c) Disconnect each connector and remove the No. 1 instrument panel under cover sub-assembly.

22. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY_ INFO

23. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Disengage the 3 claws and guide.

(b) Disconnect each connector and remove the No. 2 instrument panel under cover sub-assembly.

24. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY

(a) Disengage the claw and release the glove compartment door stopper.

Text in Illustration

*1	Glove Compartment Door Stopper Sub-assembly
*2	Moulding Remover
*3	Lower Instrument Panel Sub-assembly
*4	Glove Compartment Door Assembly
*5	Stopper

P

(b) Insert the moulding remover into the location shown in the illustration.

(c) Move the moulding remover in the direction indicated by the arrow to bend the lower instrument panel sub-assembly and release the stopper (A).

HINT:

Use the same procedure to release the stopper (B).

(d) Open the glove compartment door assembly to approximately 55° from its closed position. Pull it horizontally in the direction indicated by the arrow to disengage the 2 hinges and remove the glove compartment door assembly.

Text in Illustration

*a	Close
*b	Open Approximately

NOTICE:

Pulling the glove compartment door assembly upward to remove it causes

the hinges to deform. Be sure to pull out the glove compartment door assembly horizontally.

25. REMOVE GLOVE COMPARTMENT DOOR STOPPER SUB-ASSEMBLY

(a) Disengage the claw to remove the glove compartment door stopper sub-assembly.

26. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure for the RH side and LH side [INFO](#).

27. REMOVE COWL SIDE TRIM BOARD RH

HINT:

Use the same procedure for the RH side and LH side [INFO](#).

28. REMOVE NO. 1 HEATER TO REGISTER DUCT

(a) Remove the 3 clips and the No. 1 heater to register duct.

29. REMOVE COMBINATION METER ASSEMBLY [INFO](#)

30. REMOVE POWER STEERING ECU ASSEMBLY (for Brush Type Motor) [INFO](#)

31. REMOVE POWER STEERING ECU ASSEMBLY (for Brushless Type Motor) [INFO](#)

32. REMOVE INSTRUMENT PANEL SAFETY PAD PLATE SUB-ASSEMBLY

(a) Remove the 2 bolts and instrument panel safety pad plate sub-assembly.

33. REMOVE GLOVE COMPARTMENT DOOR LOCK ASSEMBLY

(a) Remove the screw <D> and glove compartment door lock assembly.

34. REMOVE GLOVE BOX LIGHT ASSEMBLY INFO

35. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/o Satellite Radio) INFO

36. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/ Satellite Radio) INFO

37. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Disengage each clamp.

P

(b) Remove the 4 bolts , 11 bolts <C>, screw <D> and lower instrument panel sub-assembly.

P

Text in Illustration

*1	Bolt 	*2	Bolt <C>
*3	Screw <D>	-	-

INSTALLATION

1. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) When using a new lower instrument panel sub-assembly:

(1) Immediately before installing the lower instrument panel sub-assembly, twist and cut off the portions shown in the illustration.

P

(b) Install the lower instrument panel sub-assembly with the 4 bolts , 11 bolts <C> and screw <D>.

P

Text in Illustration

*1	Bolt 	*2	Bolt <C>
*3	Screw <D>	-	-

(c) Engage each clamp.

P

2. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/o Satellite Radio) [INFO](#)

3. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/ Satellite Radio) [INFO](#)

4. INSTALL GLOVE BOX LIGHT ASSEMBLY [INFO](#)

5. INSTALL GLOVE COMPARTMENT DOOR LOCK ASSEMBLY

(a) Install the glove compartment door lock assembly with the screw <D>.

6. INSTALL INSTRUMENT PANEL SAFETY PAD PLATE SUB-ASSEMBLY

(a) Install the instrument panel safety pad plate sub-assembly with the 2 bolts .

7. INSTALL POWER STEERING ECU ASSEMBLY (for Brush Type Motor) [INFO](#)

8. INSTALL POWER STEERING ECU ASSEMBLY (for Brushless Type Motor) [INFO](#)

9. INSTALL COMBINATION METER ASSEMBLY [INFO](#)

10. INSTALL NO. 1 HEATER TO REGISTER DUCT

(a) Install the No. 1 heater to register duct with the 3 clips.

11. INSTALL COWL SIDE TRIM BOARD RH

HINT:

Use the same procedure for the RH side and LH side [INFO](#).

12. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure for the RH side and LH side INFO.

13. INSTALL GLOVE COMPARTMENT DOOR STOPPER SUB-ASSEMBLY

(a) Engage the claw to install the glove compartment door stopper sub-assembly.

14. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY

(a) With the glove compartment door assembly opened approximately 55° from its closed position, engage the 2 hinges horizontally.

Text in Illustration

*a	Opened Approximately 55°
*b	Closed

NOTICE:

Engaging the hinges from the top will deform the hinges. Be sure to install the glove compartment door assembly horizontally.

(b) Slightly bend the stoppers (A) and (B) in the directions indicated by the arrows in the illustration and engage the stoppers to install the glove compartment door assembly.

Text in Illustration

*1	Glove Compartment Door Stopper Sub-assembly
*2	Stopper

(c) Engage the claw and connect the glove compartment door stopper sub-assembly.

15. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Connect each connector.

(b) Engage the guide and 3 claws to install the No. 2 instrument panel under cover sub-assembly.

16. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY INFO

17. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Connect each connector.

(b) Engage the guide and claw.

(c) Install the No. 1 instrument panel under cover sub-assembly with the 2 screws <D>.

18. INSTALL UPPER STEERING COLUMN COVER INFO

19. INSTALL LOWER STEERING COLUMN COVER INFO

20. INSTALL NO. 1 SWITCH HOLE BASE

(a) Connect the connector.

(b) Engage the 5 claws to install the No. 1 switch hole base.

21. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY

(a) Temporarily install the console box assembly.

(b) Engage the 9 claws as shown in the illustration.

(c) Install the upper instrument panel finish panel assembly with the 2 bolts <A>.

(d) Engage the clamp.

22. INSTALL SHIFT LOCK CONTROL UNIT ASSEMBLY_ INFO

23. INSTALL AIR CONDITIONING CONTROL ASSEMBLY_ INFO

24. INSTALL CONSOLE BOX ASSEMBLY

(a) Connect the connector.

(b) Engage the 4 guides and 2 claws as shown in the illustration.

(c) Install the console box assembly with the bolt and 2 clips.

25. INSTALL BOX BOTTOM MAT

(a) Engage the fastener to install the box bottom mat.

26. INSTALL FRONT NO. 2 CONSOLE BOX INSERT

(a) Engage the guide and 4 claws to install the front No. 2 console box insert as shown in the illustration.

27. INSTALL FRONT NO. 1 CONSOLE BOX INSERT

(a) Engage the guide and 4 claws to install the front No. 1 console box insert as shown in the illustration.

28. INSTALL NO. 2 CONSOLE BOX MOUNTING BRACKET

(a) Install the No. 2 console box mounting bracket with the 6 bolts .

29. INSTALL ELECTRICAL KEY OSCILLATOR_ [INFO](#)

30. INSTALL REAR CONSOLE BOX ASSEMBLY (w/ Power Outlet Socket)_ [INFO](#)

31. INSTALL REAR CONSOLE BOX ASSEMBLY (w/o Power Outlet Socket)_ [INFO](#)

32. INSTALL CONSOLE BOX CARPET_ [INFO](#)

33. INSTALL UPPER CONSOLE PANEL (w/ Power Outlet Socket)_ [INFO](#)

34. INSTALL REAR CONSOLE BOX POCKET (w/ Power Outlet Socket)_ [INFO](#)

35. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

(a) Install the upper instrument panel assembly_ [INFO](#) .

36. INSPECT SHIFT LEVER_ [INFO](#)

REMOVAL

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type)

(a) Disengage the 2 guides <A> as shown in the illustration.

(b) Disengage the 3 guides and remove the rear No. 2 floor board.

2. REMOVE REAR DECK FLOOR BOX

(a) Remove the rear deck floor box.

3. REMOVE REAR NO. 3 FLOOR BOARD

(a) Disengage the 2 guides and remove the rear No. 3 floor board.

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE FRONT DOOR SCUFF PLATE LH

(a) Disengage the 10 claws and remove the front door scuff plate LH.

P

6. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH

P

(a) Remove the clip.

(b) Disengage the 2 clips and remove the cowl side trim sub-assembly LH.

7. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

P

(a) Remove the front door opening trim weatherstrip LH.

8. REMOVE FRONT PILLAR GARNISH LH

(a) Pull the upper part of the garnish toward the inside of the cabin and disengage the 2 clips.

Text in Illustration

*1	Front Pillar Garnish Clip
----	---------------------------

HINT:

Make the front pillar garnish RH hang down from the front pillar garnish clip.

P

(b) Turn the end of the front pillar garnish clip 90° with needle-nosed pliers and remove it from the front pillar garnish RH.

NOTICE:

- Front pillar garnish clips are reusable if they are not removed from the vehicle and have no damage.
- Replace the front pillar garnish clips with new ones if they are removed from the vehicle.

HINT:

Tape the needle-nosed pliers tip before use.

(c) Disengage the 3 guides and remove the front pillar garnish LH.

(d) Protect the curtain shield airbag assembly.

Text in Illustration

*1	Adhesive Tape
*2	Protective Cover
*3	Curtain Shield Airbag Assembly

(1) Cover the airbag with a cloth or piece of nylon and secure the ends of the cover with tape as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

P

9. REMOVE REAR DOOR SCUFF PLATE LH

(a) Disengage the 7 claws and remove the rear door scuff plate LH.

P

10. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

(a) Remove the rear door opening trim weatherstrip LH.

P

11. REMOVE LAP BELT OUTER ANCHOR COVER (for LH Side) INFO

12. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH INFO

13. REMOVE CENTER PILLAR LOWER GARNISH LH

(a) Disengage the 2 claws and 2 clips, and remove the center pillar lower garnish LH.

P

14. REMOVE CENTER PILLAR GARNISH LH

P

(a) Remove the screw.

(b) Using a clip remover, disengage the clip.

(c) Pass the floor anchor of the front seat outer seat belt assembly LH through the center pillar garnish LH and remove the center pillar garnish LH.

15. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure described for the LH side.

16. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

17. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedure described for the LH side.

18. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedure described for the LH side.

19. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedure described for the LH side.

20. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedure described for the LH side.

21. REMOVE LAP BELT OUTER ANCHOR COVER (for RH Side)

HINT:

Use the same procedure described for the LH side.

22. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

23. REMOVE CENTER PILLAR LOWER GARNISH RH

HINT:

Use the same procedure described for the LH side.

24. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedure described for the LH side.

25. REMOVE REAR SEAT CUSHION ASSEMBLY 

26. REMOVE REAR SIDE SEATBACK ASSEMBLY LH 

27. REMOVE REAR SIDE SEATBACK ASSEMBLY RH 

28. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

(a) Remove the upper instrument panel assembly .

29. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

(a) Remove the tonneau cover assembly.

30. REMOVE REAR NO. 4 FLOOR BOARD

(a) Disengage the guide and remove the rear No. 4 floor board.

31. REMOVE DECK FLOOR BOX LH

(a) Remove the clip.

(b) Disengage the 2 guides and remove the deck floor box LH.

32. REMOVE REAR NO. 1 FLOOR BOARD SUB-ASSEMBLY

(a) Disengage the 2 claws and 2 clips, and remove the rear No. 1 floor board sub-assembly.

33. REMOVE REAR NO. 2 FLOOR BOARD SUB-ASSEMBLY

(a) Disengage the claw and 2 clips, and remove the rear No. 2 floor board sub-assembly.

34. REMOVE REAR NO. 1 FLOOR BOARD

(a) Remove the bolt.

(b) Disengage the 2 claws and 2 clips, and remove the rear No. 1 floor board.

35. REMOVE DECK TRIM SERVICE HOLE COVER

(a) Disengage the 2 claws and 3 guides, and remove the deck trim service hole cover.

36. REMOVE REAR DECK TRIM COVER

(a) Disengage the 4 claws and 4 guides, and remove the rear deck trim

cover.

P

37. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (for LH Side)

(a) Remove the 2 bolts.

(b) Disengage each guide and remove the 2 luggage hold belt striker assemblies.

38. REMOVE TONNEAU COVER HOLDER CAP (for LH Side)

(a) Using a screwdriver, disengage the claw and remove the tonneau cover holder cap.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Tape the screwdriver tip before use.

39. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH

(a) Remove the screw.

(b) Disengage the 7 claws and 2 clips.

(c) Disconnect the connector and remove the deck trim side panel assembly LH.

40. REMOVE ROOF SIDE INNER GARNISH ASSEMBLY LH

(a) Disengage the 9 clips and remove the roof side inner garnish assembly LH.

41. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (for RH Side)

HINT:

Use the same procedure described for the LH side.

42. REMOVE TONNEAU COVER HOLDER CAP (for RH Side)

HINT:

Use the same procedure described for the LH side.

43. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH

(a) Remove the screw.

(b) Disengage the 7 claws and 2 clips, and remove the deck trim side panel assembly RH.

44. REMOVE ROOF SIDE INNER GARNISH ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

45. REMOVE INNER REAR VIEW MIRROR COVER (w/ EC Mirror) INFO

46. REMOVE ROOF TOP MOULDING (w/o Lane Keeping Assist System)

(a) Using a moulding remover, disengage the 3 claws and 2 clips, and remove the roof top moulding.

47. REMOVE ROOF TOP MOULDING (w/ Lane Keeping Assist System)

(a) Disengage the claw <A> as shown in the illustration.

(b) Disengage the 2 claws as shown in the illustration.

(c) Disengage the 3 claws and remove the roof top moulding.

48. REMOVE LANE RECOGNITION CAMERA SENSOR ASSEMBLY (w/ Lane Keeping Assist System)

INFO

49. REMOVE MAP LIGHT ASSEMBLY (w/o Sliding Roof) INFO

50. REMOVE MAP LIGHT ASSEMBLY (w/ Sliding Roof) INFO

51. REMOVE NO. 1 ROOM LIGHT ASSEMBLY INFO

52. REMOVE FRONT ASSIST GRIP ASSEMBLY

(a) Using a clip remover, disengage the 4 claws.

NOTICE:

Do not forcibly pry the assist grip covers to prevent them from being deformed.

- Gently pry on the assist grip covers as shown in the illustration to remove them.

- Tape the clip remover tip before use.

(b) Pull off the 2 assist grip covers by hand.

(c) Disengage the 2 clips and remove the front assist grip assembly.

(d) Remove the 2 clips from the vehicle body.

HINT:

Use the same procedure for the other front assist grip.

53. REMOVE REAR ASSIST GRIP ASSEMBLY

(a) Using a clip remover, disengage the 4 claws.

NOTICE:

Do not forcibly pry the assist grip covers to prevent them from being

deformed.

- Gently pry on the assist grip covers as shown in the illustration to remove them.
- Tape the clip remover tip before use.

P

(b) Pull off the 2 assist grip covers by hand.

P

(c) Disengage the 2 clips and remove the rear assist grip assembly.

(d) Remove the 2 clips from the vehicle body.

HINT:

Use the same procedure for the other rear assist grip.

54. REMOVE VISOR BRACKET COVER LH

(a) Using a moulding remover, disengage the 3 claws and remove the visor bracket cover LH.

55. REMOVE VISOR ASSEMBLY LH

(a) Disengage the 2 clips and remove the visor assembly LH.

56. REMOVE VISOR BRACKET COVER RH

HINT:

Use the same procedure described for the LH side.

57. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

58. REMOVE VISOR HOLDER

(a) Turn the visor holder approximately 45° and pull it out as shown in the illustration.

P

(b) Disengage the 2 claws and remove the visor holder.

HINT:

Use the same procedure for the other visor holder.

59. REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

(a) w/ EC Mirror:

(1) Disengage the 2 clamps and disconnect the inner rear view mirror connector.

(b) w/ Lane Keeping Assist System:

(1) Disengage the clamp and disconnect the inner rear view mirror connector.

(c) w/o Manual (SOS) Switch:

(1) Disengage the 3 clamps and disconnect the connector from the front pillar RH.

(2) Disengage the clamp and disconnect the connector from the rear pillar RH.

(d) w/ Manual (SOS) Switch:

(1) Disengage the 3 clamps and disconnect the 2 connectors from the front pillar RH.

(2) Disengage the clamp and disconnect the 2 connectors from the rear pillar RH.

(e) Disengage the 4 clamps from the front pillar LH.

(f) Disconnect the 2 No. 1 roof wire connectors from the connector holder.

(g) Remove the 5 clips.

P

10. INSTALL VANITY LIGHT ASSEMBLY

(a) Install the vanity light assembly INFC.

HINT:

Use the same procedure for the other vanity light.

INSTALLATION

1. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

(a) Put the roof headlining assembly into the vehicle through the back door.

NOTICE:

Do not damage the roof headlining assembly or body interior.

(b) Install the 5 clips.

(c) Connect the 2 connectors to the connector holder.

(d) Engage the 4 clamps to the front pillar LH.

(e) w/o Manual (SOS) Switch:

(1) Engage the 3 clamps and connect the connector to the front pillar RH.

(2) Disengage the clamp and disconnect the connector to the rear pillar RH.

(f) w/ Manual (SOS) Switch:

(1) Engage the 3 clamps and connect the 2 connectors to the front pillar RH.

(2) Engage the clamp and connect the 2 connectors to the rear pillar RH.

(g) w/ EC Mirror:

(1) Connect the inner rear view mirror connector and engage the 2 clamps.

(h) w/ Lane Keeping Assist System:

(1) Connect the inner rear view mirror connector and engage the clamp.

P

2. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

(a) Put the roof headlining assembly into the vehicle through the back door.

NOTICE:

Do not damage the roof headlining assembly or body interior.

(b) Engage the 6 fasteners.

(c) Install the 3 clips.

(d) Connect the 2 connectors to the connector holder.

(e) Engage the 4 clamps to the front pillar LH.

(f) w/o Manual (SOS) Switch:

(1) Engage the 3 clamps and connect the connector to the front pillar RH.

(2) Disengage the clamp and disconnect the connector to the rear pillar RH.

(g) w/ Manual (SOS) Switch:

(1) Engage the 3 clamps and connect the 2 connectors to the front pillar RH.

(2) Engage the clamp and connect the 2 connectors to the rear pillar RH.

(h) w/ EC Mirror:

(1) Connect the inner rear view mirror connector and engage the 2 clamps.

3. INSTALL VISOR HOLDER

(a) Engage the 2 claws.

P

(b) Push in the visor holder as shown in the illustration.

HINT:

Use the same procedure for the other visor holder.

4. INSTALL VISOR ASSEMBLY LH

P

(a) Engage the 2 clips to install the visor assembly LH.

5. INSTALL VISOR BRACKET COVER LH

(a) Engage the 3 claws to install the visor bracket cover LH.

6. INSTALL VISOR ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

7. INSTALL VISOR BRACKET COVER RH

HINT:

Use the same procedure described for the LH side.

8. INSTALL FRONT ASSIST GRIP ASSEMBLY

(a) Assemble the front assist grip assembly as shown in the illustration.

(b) Install the front assist grip assembly.

HINT:

Use the same procedure for the other front assist grip.

9. INSTALL REAR ASSIST GRIP ASSEMBLY

(a) Assemble the rear assist grip assembly as shown in the illustration.

P

(b) Install the rear assist grip assembly.

HINT:

Use the same procedure for the other rear assist grip.

10. INSTALL NO. 1 ROOM LIGHT ASSEMBLY [INFO](#)

14. INSTALL ROOF TOP MOULDING (w/o Lane Keeping Assist System)

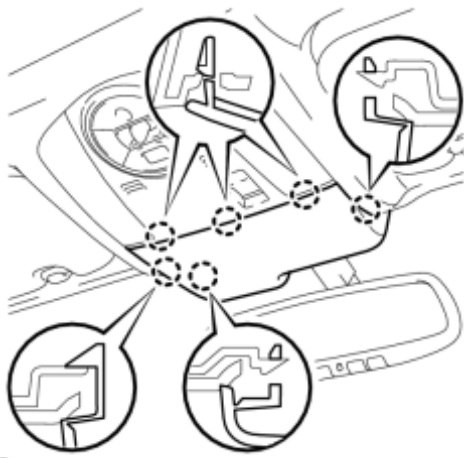

P

(a) Engage the 3 claws and 2 clips to install the roof top moulding.

15. INSTALL ROOF TOP MOULDING (w/ Lane Keeping Assist System)

(a) Engage the 6 claws to install the roof top moulding.

P

16. INSTALL INNER REAR VIEW MIRROR COVER (w/ EC Mirror) INFO

17. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH

(a) Engage the 9 clips to install the roof side inner garnish assembly LH.

P

18. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH

(a) Connect the connector.

(b) Engage the 7 claws and 2 clips.

(c) Install the deck trim side panel assembly LH with the screw.

19. INSTALL TONNEAU COVER HOLDER CAP (for LH Side)

(a) Engage the claw to install the tonneau cover holder cap.

20. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (for LH Side)

(a) Engage the 2 guides.

(b) Install the 2 luggage hold belt striker assemblies with the 2 bolts.

21. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

22. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH

(a) Engage the 7 claws and 2 clips.

(b) Install the deck trim side panel assembly RH with the screw.

23. INSTALL TONNEAU COVER HOLDER CAP (for RH Side)

HINT:

Use the same procedure described for the LH side.

24. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (for RH Side)

HINT:

Use the same procedure described for the LH side.

25. INSTALL REAR DECK TRIM COVER

(a) Engage the 4 claws and 4 guides to install the rear deck trim cover.

P

26. INSTALL DECK TRIM SERVICE HOLE COVER

P

(a) Engage the 3 guides.

(b) Engage the 2 claws to install the deck trim service hole cover.

27. INSTALL REAR NO. 1 FLOOR BOARD

P

(a) Engage the 2 claws and 2 clips.

(b) Install the rear No. 1 floor board with the bolt.

28. INSTALL REAR NO. 2 FLOOR BOARD SUB-ASSEMBLY

(a) Engage the claw and 2 clips to install the rear No. 2 floor board sub-assembly.

29. INSTALL REAR NO. 1 FLOOR BOARD SUB-ASSEMBLY

(a) Engage the 2 claws and 2 clips to install the rear No. 1 floor board sub-assembly.

30. INSTALL DECK FLOOR BOX LH

(a) Engage the 2 guides.

(b) Install the deck floor box LH with the clip.

31. INSTALL REAR NO. 4 FLOOR BOARD

(a) Engage the guide to install the rear No. 4 floor board.

32. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

(a) Install the tonneau cover assembly.

33. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

(a) Install the upper instrument panel assembly INFO.

34. INSTALL REAR SIDE SEATBACK ASSEMBLY LH INFO

35. INSTALL REAR SIDE SEATBACK ASSEMBLY RH INFO

36. INSTALL REAR SEAT CUSHION ASSEMBLY INFO

37. INSTALL CENTER PILLAR GARNISH LH

(a) Pass the floor anchor of the front seat outer seat belt assembly LH through the center pillar garnish LH.

(b) Engage the clip.

(c) Install the center pillar garnish LH with the screw.

38. INSTALL CENTER PILLAR LOWER GARNISH LH

(a) Engage the 2 claws and 2 clips to install the center pillar lower garnish LH.

P

39. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH INFO

40. INSTALL LAP BELT OUTER ANCHOR COVER (for LH Side) INFO

41. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

(a) Align the alignment mark (Red) on the weatherstrip with the protruding portion on the body indicated by the arrow in the illustration, and install the rear door opening trim weatherstrip LH.

Text in Illustration

*1	Alignment Mark (Red)
----	----------------------

P

NOTICE:

After installation, check that the corners fit correctly.

42. INSTALL REAR DOOR SCUFF PLATE LH

(a) Engage the 7 claws to install the rear door scuff plate LH.

P

(c) Turn the end of the front pillar garnish clip 90° with needle-nosed pliers and install it to the front pillar garnish RH.

HINT:

Tape the needle-nosed pliers tip before use.

(d) Engage the 2 clips to install the front pillar garnish LH.

44. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Align the alignment mark (Yellow) on the weatherstrip with the protruding portion on the body indicated by the arrow in the illustration, and install the front door opening trim weatherstrip LH.

Text in Illustration

*1	Alignment Mark (Yellow)
----	-------------------------

NOTICE:

After installation, check that the corners fit correctly.

P

45. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH

(a) Engage the 2 clips.

(b) Install the cowl side trim board LH with the clip.

46. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 10 claws to install the front door scuff plate LH.

47. INSTALL CENTER PILLAR GARNISH RH

HINT:

Use the same procedure described for the LH side.

48. INSTALL CENTER PILLAR LOWER GARNISH RH

HINT:

Use the same procedure described for the LH side.

49. CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

50. INSTALL LAP BELT OUTER ANCHOR COVER (for RH Side)

HINT:

Use the same procedure described for the LH side.

51. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

(a) Align the alignment mark (Blue) on the weatherstrip with the protruding portion on the body indicated by the arrow in the illustration, and install the rear door opening trim weatherstrip LH.

Text in Illustration

*1	Alignment Mark (Blue)
----	-----------------------

NOTICE:

After installation, check that the corners fit correctly.

52. INSTALL REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedure described for the LH side.

53. INSTALL FRONT PILLAR GARNISH RH

HINT:

Use the same procedure described for the LH side.

54. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

(a) Align the alignment mark (White) on the weatherstrip with the protruding portion on the body indicated by the arrow in the illustration, and install the front door opening trim weatherstrip RH.

Text in Illustration

*1	Alignment Mark (White)
----	------------------------

NOTICE:

After installation, check that the corners fit correctly.

P

55. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

56. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure described for the LH side.

57. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

58. INSTALL REAR NO. 3 FLOOR BOARD

P

(a) Engage the 2 guides to install the rear No. 3 floor board.

59. INSTALL REAR DECK FLOOR BOX

(a) Install the rear deck floor box.

60. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type)

(a) Engage the 3 guides <A>.

(b) Engage the 2 guides and install the rear No. 2 floor board as shown in the illustration.

61. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light **INFO**.

62. ADJUST LANE RECOGNITION CAMERA SENSOR ASSEMBLY (w/ Lane Keeping Assist System)

INFO

PRECAUTION

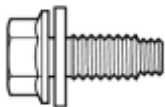

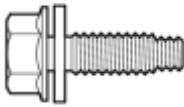

1. PRECAUTION FOR VEHICLE WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

(a) Some operations in this section may affect the SRS airbags. Prior to performing the corresponding operations, read the precautions regarding the SRS airbags .

2. TABLE OF BOLT, SCREW AND NUT

HINT:

All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabet codes in the table below.

Code	Shape	Size	Code	Shape	Size
<A>		$\varphi=8$ mm (0.314 in.) Length=21 mm (0.827 in.)			$\varphi=6$ mm (0.236 in.) Length=20 mm (0.787 in.)
<C>		$\varphi=5$ mm (0.197 in.) Length=14 mm (0.551 in.)

REMOVAL

1. PRECAUTION

INFO

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

3. REMOVE REAR DECK FLOOR BOX INFO

4. REMOVE REAR NO. 3 FLOOR BOARD INFO

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

6. REMOVE INTEGRATION CONTROL AND PANEL ASSEMBLY

(a) Using a moulding remover, slightly lift the panel at the position shown in the illustration.

Text in Illustration

*a	Lift slightly
----	---------------

(b) Pull the integration control and panel assembly in the direction indicated by the arrow to disengage the 6 claws.

(c) Disconnect each connector and remove the integration control and panel assembly.

7. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Pull the lower center instrument cluster finish panel sub-assembly in the direction indicated by the arrow to disengage the 2 claws and 2 clips.

P

P

(b) Pull the lower center instrument cluster finish panel sub-assembly in the direction indicated by the arrow to disengage the 5 claws and remove the lower center instrument cluster finish panel sub-assembly.

8. REMOVE INSTRUMENT PANEL CUP HOLDER ASSEMBLY

(a) Remove the 4 screws <C> and instrument panel cup holder assembly from the lower center instrument cluster finish panel sub-assembly.

P

9. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH

- (a) Disengage the 14 claws.
- (b) Disconnect the connector and remove the instrument cluster finish panel garnish.

P

10. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY

P

- (a) Disengage the 3 claws.

(b) Disconnect the connector and remove the upper instrument panel finish panel sub-assembly.

11. REMOVE RADIO RECEIVER WITH BRACKET (w/o Navigation System) INFO

12. REMOVE NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System) INFO

13. REMOVE FRONT DOOR SCUFF PLATE LH INFO

14. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH INFO

15. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY

(a) Remove the screw <C>.

(b) Disengage the 6 claws and clip as shown in the illustration.

(c) Disengage the claw and 2 guides and disconnect the hood lock control cable.

(d) Disconnect each connector and clamp, and remove the lower instrument panel finish panel assembly.

16. REMOVE NO. 1 INSTRUMENT PANEL REGISTER

(a) Pull the No. 1 instrument panel register in the direction indicated by the arrow to disengage the 2 claws.

(b) Pull the No. 1 instrument panel register in the direction indicated by the arrow to disengage the 2 claws and remove the No. 1 instrument panel register.

17. REMOVE NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL

(a) Disengage the 4 claws to remove the No. 1 center instrument cluster finish panel.

18. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH

19. REMOVE INSTRUMENT PANEL FINISH PANEL END LH

(a) Pull the instrument panel finish panel end LH in the direction indicated by the arrow to disengage the 4 claws.

P

P

(b) Disengage the guide as shown in the illustration.

P

(c) Disengage the guide and remove the instrument panel finish panel end LH as shown in the illustration.

20. REMOVE NO. 1 SIDE DEFROSTER NOZZLE

(a) Using a moulding remover, slightly lift the panel at the position shown in the illustration.

Text in Illustration

*a	Lift slightly
----	---------------

(b) Pull the No. 1 side defroster nozzle in the direction indicated by the arrow to disengage the 3 claws and remove the No. 1 side defroster nozzle.

21. REMOVE NO. 2 INSTRUMENT PANEL REGISTER

(a) Pull the No. 2 instrument panel register in the direction indicated by the arrow to disengage the claw and clip.

(b) Pull the No. 2 instrument panel register in the direction indicated by the arrow to disengage the 2 claws and remove the No. 2 instrument panel register.

22. REMOVE GLOVE COMPARTMENT DOOR

(a) Open the glove compartment door assembly.

(b) Pull the glove compartment door in the direction indicated by the arrow to disengage the 7 claws.

(c) Pull the glove compartment door in the direction indicated by the arrow to remove the glove compartment door.

23. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH

24. REMOVE INSTRUMENT PANEL FINISH PANEL END RH

(a) Pull the instrument panel finish panel end RH in the direction indicated by the arrow to disengage the 4 claws.

(b) Disengage the guide as shown in the illustration.

(c) Disengage the guide and remove the instrument panel finish panel end RH as shown in the illustration.

25. REMOVE FRONT PILLAR GARNISH LH INFO

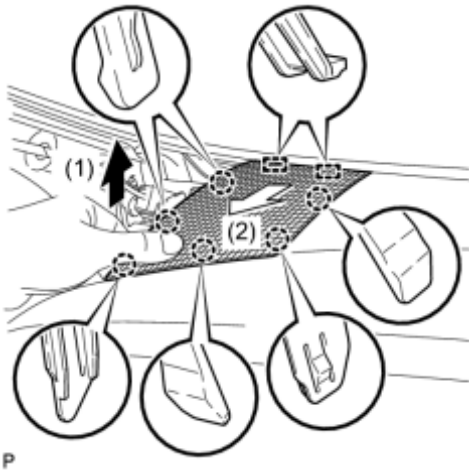

26. REMOVE FRONT PILLAR GARNISH CORNER PIECE LH

(a) Disengage the 3 claws and front pillar garnish corner piece LH as shown in the illustration.

27. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

(a) Pull the No. 1 instrument panel speaker panel sub-assembly in the direction indicated by the arrow to disengage the 6 claws and 2 guides, and remove the No. 1 instrument panel speaker panel sub-assembly.

28. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY INFO

29. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedure for the RH side and LH side INFO.

30. REMOVE FRONT PILLAR GARNISH CORNER PIECE RH

(a) Disengage the 3 claws and front pillar garnish corner piece RH as shown in the illustration.

31. REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

(a) Pull the No. 2 instrument panel speaker panel sub-assembly in the direction indicated by the arrow to disengage the 6 claws and 2 guides, and remove the No. 2 instrument panel speaker panel sub-assembly.

P

32. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY

HINT:

Use the same procedure for the RH side and LH side INFO.

33. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL GARNISH

- (a) Remove the 2 screws <C>.
- (b) Disengage the 7 claws.
- (c) Disconnect the connector and remove the center instrument cluster finish panel garnish.

P

34. DISCONNECT NO. 3 INSTRUMENT PANEL WIRE INFO

35. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

- (a) Disconnect each connector.

(b) Disengage the 2 clamps.

P

(c) Remove the 2 bolts .

(d) Remove the 2 passenger airbag bolts <A>.

P

Text in Illustration

*1	Passenger Airbag Bolt <A>	*2	Bolt

(e) Pull the upper instrument panel assembly in the direction indicated by the arrow to disengage the 2 claws and 4 clips.

(f) Pull the upper instrument panel assembly in the direction indicated by the arrow to disengage the 5 claws and remove the upper instrument panel assembly.

P

DISASSEMBLY

1. REMOVE NO. 3 HEATER TO REGISTER DUCT

(a) Remove the 3 screws <C> and No. 3 heater to register duct.

P

2. REMOVE NO. 2 HEATER TO REGISTER DUCT

(a) Remove the 3 screws <C> and No. 2 heater to register duct.

P

3. REMOVE PLASMACLUSTER WITH BRACKET (w/ Plasmacluster) INFO

4. REMOVE NAVIGATION ANTENNA ASSEMBLY (w/ Navigation System) INFO

5. REMOVE AUTOMATIC LIGHT CONTROL SENSOR INFO

6. REMOVE NO. 2 INSTRUMENT PANEL WIRE

(a) Disconnect the connector.

(b) Disengage the 2 claws and each clamp, and remove the No. 2 instrument panel wire.

P

7. REMOVE NO. 5 INSTRUMENT PANEL WIRE

P

(a) Disengage the 2 clamps and remove the No. 5 instrument panel wire.

8. REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY

P

(a) Remove the 5 screws <C> and instrument cluster finish panel assembly.

9. REMOVE CENTER INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Remove the 3 screws <C> and center instrument panel register

assembly.

10. REMOVE METER HOOD SPACER

(a) Remove the 2 screws <C> and meter hood spacer.

11. REMOVE FRONT PASSENGER SIDE AIRBAG ASSEMBLY INFO

12. REMOVE NO. 1 INSTRUMENT PANEL CUSHION

(a) Remove the No. 1 instrument panel cushion.

13. REMOVE INSTRUMENT PANEL CUSHION

(a) Remove the instrument panel cushion.

14. REMOVE NO. 2 INSTRUMENT PANEL CUSHION

(a) Remove the No. 2 instrument panel cushion.

15. REMOVE NO. 4 INSTRUMENT PANEL CUSHION

(a) Remove the No. 4 instrument panel cushion.

16. REMOVE NO. 5 INSTRUMENT PANEL CUSHION

(a) Remove the No. 5 instrument panel cushion.

REASSEMBLY

1. INSTALL NO. 5 INSTRUMENT PANEL CUSHION

(a) Using hot-melt glue and install a new No. 5 instrument panel cushion as shown in the illustration.

2. INSTALL NO. 4 INSTRUMENT PANEL CUSHION

(a) Using hot-melt glue and install a new No. 4 instrument panel cushion as shown in the illustration.

3. INSTALL NO. 2 INSTRUMENT PANEL CUSHION

(a) Using hot-melt glue and install a new No. 2 instrument panel cushion as shown in the illustration.

4. INSTALL INSTRUMENT PANEL CUSHION

(a) Align the marking lines on the upper instrument panel with the ends of the instrument panel cushion and install a new instrument panel cushion

as shown in the illustration.

Text in Illustration

*1	Marking Line
----	--------------

5. INSTALL NO. 1 INSTRUMENT PANEL CUSHION

(a) Align the marking lines on the upper instrument panel with the ends of the No. 1 instrument panel cushion and install a new No. 1 instrument panel cushion as shown in the illustration.

Text in Illustration

*1	Marking Line

6. INSTALL FRONT PASSENGER SIDE AIRBAG ASSEMBLY [INFO](#)

7. INSTALL METER HOOD SPACER

(a) Install the meter hood spacer with the 2 screws <C>.

8. INSTALL CENTER INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Install the center instrument panel register assembly with the 3 screws <C>.

9. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY

(a) Install the instrument cluster finish panel assembly with the 5 screws <C>.

10. INSTALL NO. 5 INSTRUMENT PANEL WIRE

(a) Engage the 2 clamps to install the No. 5 instrument panel wire.

11. INSTALL NO. 2 INSTRUMENT PANEL WIRE

(a) Engage each clamp and 2 claws.

(b) Connect the connector to install the No. 2 instrument panel wire.

P

12. INSTALL AUTOMATIC LIGHT CONTROL SENSOR_ [INFO](#)

13. INSTALL NAVIGATION ANTENNA ASSEMBLY (w/ Navigation System)_ [INFO](#)

14. INSTALL PLASMACLUSTER WITH BRACKET (w/ Plasmacluster)_ [INFO](#)

15. INSTALL NO. 2 HEATER TO REGISTER DUCT

P

(a) Install the No. 2 heater to register duct with the 3 screws <C>.

16. INSTALL NO. 3 HEATER TO REGISTER DUCT

(a) Install the No. 3 heater to register duct with the 3 screws <C>.

P

INSTALLATION

1. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

(a) When using a new upper instrument panel sub-assembly:

(1) Immediately before installing the upper instrument panel assembly, twist and cut off the portions shown in the illustration.

P

(b) Engage the 5 claws as shown in the illustration.

(c) Engage the 2 claws and 4 clips, and install the upper instrument panel assembly as shown in the illustration.

P

(d) Install the 2 bolts .

(e) Install the 2 passenger airbag bolts <A>.

Torque: **20 N·m (204 kgf·cm, 15ft·lbf)**

P

Text in Illustration

8. REMOVE REAR NO. 4 FLOOR BOARD [INFO](#)
9. REMOVE DECK FLOOR BOX LH [INFO](#)
10. REMOVE REAR NO. 1 FLOOR BOARD SUB-ASSEMBLY [INFO](#)
11. REMOVE REAR NO. 2 FLOOR BOARD SUB-ASSEMBLY [INFO](#)
12. REMOVE REAR NO. 1 FLOOR BOARD [INFO](#)
13. REMOVE DECK TRIM SERVICE HOLE COVER [INFO](#)
14. REMOVE REAR DECK TRIM COVER [INFO](#)
15. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY [INFO](#)
16. REMOVE TONNEAU COVER HOLDER CAP [INFO](#)
17. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH [INFO](#)
18. REMOVE BACK DOOR LOCK ASSEMBLY

(a) Disconnect the connector and disengage the 4 clamps.

(b) Remove the 3 bolts and back door lock assembly.

INSPECTION

1. INSPECT BACK DOOR COURTESY SWITCH (BACK DOOR LOCK ASSEMBLY)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 (E) - 2 (+)	Locked	10 k Ω or higher
	Unlocked	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Back Door Lock Assembly)
*2	Lock
*3	Unlock

If the result is not specified, replace the back door lock assembly.

P

INSTALLATION

1. INSTALL BACK DOOR LOCK ASSEMBLY

(a) Apply MP grease to the sliding parts of the back door lock assembly.

(b) Install the back door lock assembly with the 3 bolts.

Torque: **7.5 N·m (77 kgf·cm, 66in·lbf)**

(c) Engage the 4 clamps and connect the connector.

2. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH [INFO](#)

3. INSTALL TONNEAU COVER HOLDER CAP [INFO](#)

4. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY [INFO](#)

5. INSTALL REAR DECK TRIM COVER [INFO](#)

6. INSTALL DECK TRIM SERVICE HOLE COVER [INFO](#)

7. INSTALL REAR NO. 1 FLOOR BOARD [INFO](#)

8. INSTALL REAR NO. 2 FLOOR BOARD SUB-ASSEMBLY [INFO](#)

9. INSTALL REAR NO. 1 FLOOR BOARD SUB-ASSEMBLY [INFO](#)

6. REMOVE NO. 4 COMBINATION METER COVER

(a) Remove the 7 screws.

(b) Disengage the 6 claws to remove the No. 4 combination meter cover.

7. REMOVE NO. 2 METER CIRCUIT PLATE

(a) Disconnect the connector as shown in the illustration.

P

(b) Disengage the 2 guides to remove the No. 2 meter circuit plate.

P

P

(c) Disconnect the connector to remove the No. 5 meter circuit plate from the No. 2 meter circuit plate as shown in the illustration.

8. REMOVE NO. 2 COMBINATION METER CASE

(a) Disengage the 2 guides to remove the No. 2 combination meter case.

9. REMOVE NO. 1 METER LENS

(a) Disengage the 2 guides to remove the No. 1 meter lens.

10. REMOVE NO. 4 METER CIRCUIT PLATE

(a) Disconnect the connector to remove the No. 4 meter circuit plate as shown in the illustration.

11. REMOVE NO. 3 METER CIRCUIT PLATE

(a) Disengage the 2 guides to remove the No. 3 meter circuit plate.

12. REMOVE COMBINATION METER CASE

(a) Disengage the 2 guides to remove the combination meter case.

13. REMOVE NO. 2 METER LENS

(a) Disengage the 2 guides to remove the No. 2 meter lens.

14. REMOVE NO. 3 METER LENS

(a) Disengage the 2 guides to remove the No. 3 meter lens.

15. REMOVE NO. 1 COMBINATION METER REFLECTOR

(a) Disengage the clip and 9 guides, and remove the No. 1 combination meter reflector as shown in the illustration.

16. REMOVE NO. 3 COMBINATION METER CASE

REASSEMBLY

1. INSTALL NO. 3 COMBINATION METER CASE

2. INSTALL NO. 1 COMBINATION METER REFLECTOR

(a) Engage the clip and 9 guides to install the No. 1 combination meter reflector as shown in the illustration.

3. INSTALL NO. 3 METER LENS

(a) Engage the 2 guides to install the No. 3 meter lens.

4. INSTALL NO. 2 METER LENS

(a) Engage the 2 guides to install the No. 2 meter lens.

5. INSTALL COMBINATION METER CASE

(a) Engage the 2 guides to install the combination meter case.

6. INSTALL NO. 3 METER CIRCUIT PLATE

(a) Engage the 2 guides to install the No. 3 meter circuit plate.

7. INSTALL NO. 4 METER CIRCUIT PLATE

(a) Connect the connector to install the No. 4 meter circuit plate to the No. 3 meter circuit plate.

8. INSTALL NO. 1 METER LENS

(a) Engage the 2 guides to install the No. 1 meter lens.

9. INSTALL NO. 2 COMBINATION METER CASE

(a) Engage the 2 guides to install the No. 2 combination meter case.

10. INSTALL NO. 2 METER CIRCUIT PLATE

(a) Connect the connector to install the No. 5 meter circuit plate to the No. 2 meter circuit plate.

(b) Engage the 2 guides to install the No. 2 meter circuit plate.

P

(c) Connect the connector as shown in the illustration.

P

11. INSTALL NO. 4 COMBINATION METER COVER

(a) Engage the 6 claws.

P

(b) Install the No. 4 combination meter cover with the 7 screws.

P

12. INSTALL NO. 1 COMBINATION METER COVER

(a) Engage the 2 guides to install the No. 1 combination meter cover.

13. INSTALL NO. 2 COMBINATION METER COVER

(a) Engage the 2 guides to install the No. 2 combination meter cover.

14. INSTALL METER CIRCUIT PLATE

(a) Engage the 2 guides to install the meter circuit plate.

3. MULTI-INFORMATION DISPLAY FLOW CHART

(a) Multi-information display flow chart

Turn the power switch off

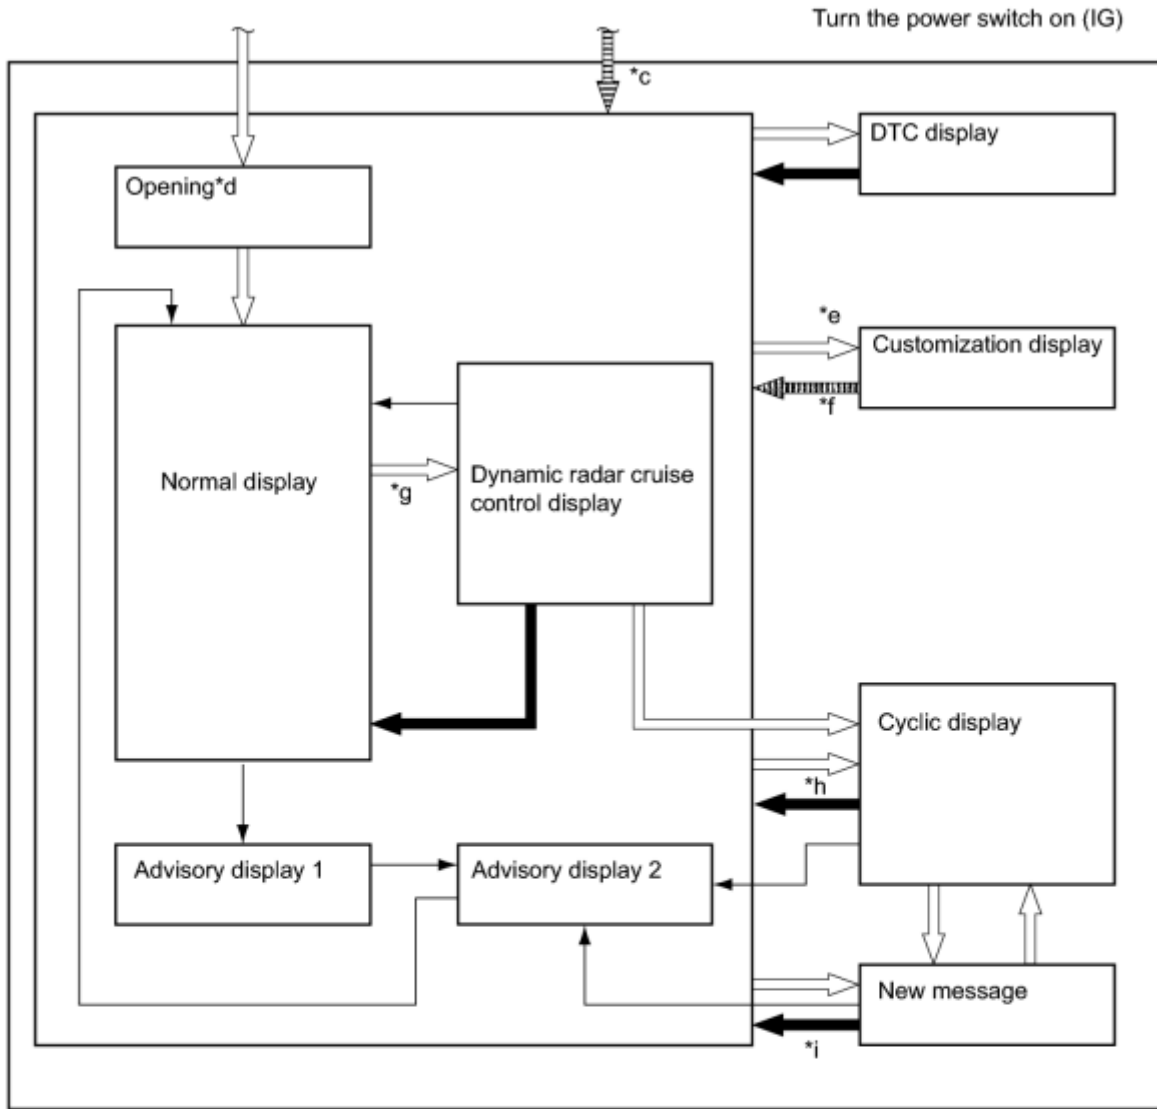

←: Condition not met

←: Condition met

←: Mode finished or completed

*1: for U.S.A.

← : Condition not met ←▨ : Mode finished or completed
 ⇐ : Condition met ← : DISP switch pressed

Display Shifting Condition:

No.	Display Shifting Condition
*a	Display cycles between messages.
*b	Conditions are not met and all new messages have been displayed.
*c	Mode has completed or reset mode is interrupted.
*d	If the power switch turned off, then on (IG) during the opening, then the opening display will be shown

No.	Display Shifting Condition
	from the beginning.
*e	Conditions are met and vehicle speed is less than 8 km/h (5 mph).
*f	Conditions for displaying new messages other than the door open warning are met, or the vehicle speed is more than 8 km/h (5 mph).
*g	Mode has completed and conditions for dynamic radar cruise display are met.
*h	Up or down switch is not operated for more than 6 seconds.
*i	The advisory display will be shown as the last of the normal displays.

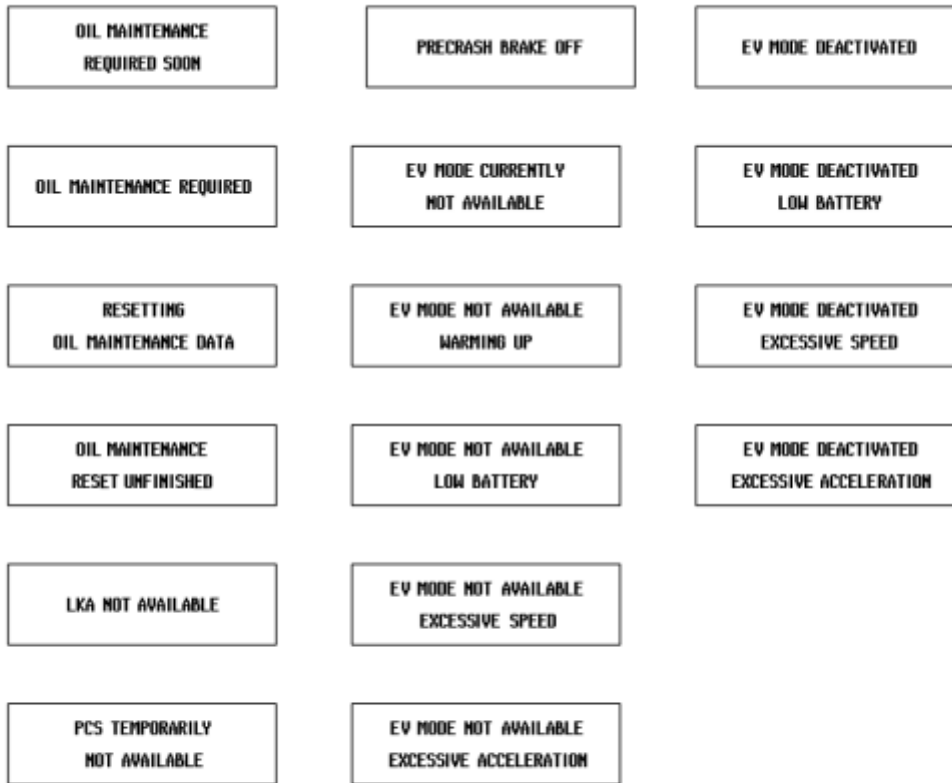

4. EACH WARNING DISPLAY

(a) Each warning display for combination meter assembly

HINT:

Illustrations may differ from the actual screen displayed depending on the specifications of the vehicle.

BRAKE!	LOW TRACTION BATTERY SHIFT TO P POSITION	ENGINE OIL PRESSURE LOW
MAINTENANCE MODE	(P) LOCK MALFUNCTION WHEN PARKING. PARK IN FLAT PLACE AND APPLY PARKING BRAKE SECURELY	TURN POWER OFF
CERTIFICATION MODE	CHECK HYBRID SYSTEM	SHIFT TO (P) POSITION AND PUSH POWER SWITCH TURN OFF
ADJUSTING LKA CAMERA	CHECK STOP LIGHT SYSTEM	KEY DETECTED IN VEHICLE
ADJUSTING FRONT RADAR BEAM	KEY NOT DETECTED	DERRESS BRAKE PEDAL, TOUCH POWER SWITCH WITH KEY
CHECKING CRUISE CONTROL C/D	CLEAN RADAR SENSOR	DERRESS BRAKE PEDAL AND PUSH POWER SWITCH TO START
CHECKING CRUISE CONTROL BRAKE	CRUISE NOT AVAILABLE	SHIFT TO (P) POSITION TO START
AUTO POWER OFF TO CONSERVE BATTERY	CHECK CRUISE CONTROL SYSTEM	KEY BATTERY LOW
SHIFT TO (P) POSITION	CHECK PCS SYSTEM	HYBRID SYSTEM OVERHEAT
SHIFT TO (P) POSITION WHEN PARKED	CHECK LKA SYSTEM	CHECK HEADLIGHT SYSTEM

5. LED INITIAL CHECK

(a) Check the illumination function of the warning or indicator lights listed below when turning the power switch on (IG).

OK:

Warning or Indicator Light	Specified Condition
PCS*1, Tire pressure*2, ECO mode, Master, Coolant temperature hot	Warning or indicator light comes on for about 3 seconds after turning the power switch on (IG).
SRS	Warning light comes on for about 6 seconds after turning the power switch on (IG).
Charge, MIL (Check engine), EPS,	Indicator or warning light comes on when turning the power switch on (IG) before hybrid system starts.
Brake, ABS, Slip, Electrically controlled brake	<ul style="list-style-type: none"> Indicator or warning light comes on when turning the power switch on (IG) before hybrid system starts.*3 Indicator or warning light comes on when turn the power switch off to on (READY) for 3 seconds, then goes off.

- *1: w/ Pre-collision System

- *2: w/ Tire Pressure Warning System
- *3: When turning the power switch on (IG), if it takes 3 seconds or more for the READY indicator light to illuminate, the warning or indicator light turns off right after the READY indicator light illuminates.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Perform troubleshooting according to the following flow chart.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. CUSTOMER PROBLEM ANALYSIS

NEXT

3. CHECK CAN COMMUNICATION SYSTEM*

(a) Check for DTC output **INFO**.

Result:

Result	Proceed to
No CAN DTC is output	A
CAN DTC is output	B

B **INFO** GO TO CAN COMMUNICATION SYSTEM

A

4. PROBLEM SYMPTOM CONFIRMATION

NEXT

5. SYMPTOM SIMULATION

NEXT

6. PROBLEM SYMPTOMS TABLE

CONFIRMATION TEST

NEXT  END

CUSTOMIZE PARAMETERS

1. METER/GAUGE SYSTEM

(a) Combination Meter

NOTICE:

- Be sure to record the current value before customizing.

HINT:

The following items can be customized using the Techstream.

Warning

Tester Display	Default	Content	Setting
Key Remind Sound	Slow	Function to change the cycle of the key reminder buzzer	Normal, Fast or Slow
Driver Side Seatbelt Warning Buzzer*1	ON	Function to turn on/off the seat belt warning buzzer	ON or OFF
Front Passenger Side Seatbelt Warning Buzzer*1	ON	Function to turn on/off the seat belt warning buzzer	ON or OFF
Rear Seatbelt Warning Buzzer*2	ON	Function to turn on/off the rear seat belt warning buzzer	ON or OFF
Reverse Buzzer	Continual	Function to change the type of the reverse warning buzzer	Single or Continual

- *1: This setting is only valid for the buzzer which sounds at 20 km/h (12 mph) or more.
- *2: w/ Rear Seat Belt Warning

INITIALIZATION

1. OIL MAINTENANCE WARNING RESETTING PROCEDURE

HINT:

The ODO/TRIP change switch is located on the left side of the multi-information switch (steering pad switch assembly).

- (a) Turn the power switch on (IG).
- (b) Press the ODO/TRIP change switch until the TRIP A meter appears.
- (c) Turn the power switch off.
- (d) Turn the power switch on (IG) while pressing and holding the unit change switch. Hold the unit change switch until the following conditions are met and 5 seconds have elapsed.
 - (1) The TRIP A meter shows "-----".
 - (2) The TRIP A meter shows "COMPLETE".
 - (3) The master warning light illuminates.
 - (4) When "COMPLETE" disappears and the master warning light turns off, the resetting procedure is complete.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptom are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Entire System

Symptom	Suspected Area	See page
Entire combination meter assembly does not operate.	Power Source Circuit	INFO
Meter illumination is always dark.	Meter Illumination Circuit	INFO
Meter illumination does not dim at night.	Meter Illumination Circuit	INFO

TERMINALS OF ECU

1. COMBINATION METER ASSEMBLY

H

(a) Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L27-2 (TC O) - Body ground	G - Body ground	Trip switch signal (Unit change switch)	Unit change switch not pressed	11 to 14 V
			Unit change switch pressed	Below 1 V
L27-3 (TIRE)*1 - Body ground	G - Body ground	Tire pressure warning light signal	Power switch on (IG), tire pressure warning light off	3.2 V or higher
			Power switch on (IG), tire pressure warning light blinks	Below 3.2 V
L27-5 (S) - Body ground	R - Body ground	Oil pressure switch signal	Power switch on (IG), oil pressure warning display off	Below 1 V
			Power switch on (IG), oil pressure warning display comes on	11 to 14 V
L27-6 (LVWG) - Body ground	L - Body ground	Headlight leveling indicator light signal	Power switch on (IG), headlight leveling indicator light off	11 to 14 V
			Power switch on (IG), headlight leveling indicator light blinks	Below 1 V ←→ 11 to 14 V
L27-7 (+S) - Body ground	V - Body ground	Speed signal for other systems (Output)	Power switch on (IG), front wheel turns slowly	Pulse generation (See waveform 1)
L27-8 (SI) - Body ground	V - Body ground	Speed signal (Input)	Power switch on (IG), front wheel turns slowly	Pulse generation (See waveform 1)
L27-9 (E2) - Body ground	G - Body ground	Ground (Water temperature sensor ground)	Always	Below 1 Ω

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L27-10 (CANH) - Body ground	P - Body ground	CAN communication signal	Power switch off	200 Ω or higher
L27-11 (CANL) - Body ground	W - Body ground	CAN communication signal	Power switch off	200 Ω or higher
L27-12 (HOUR) - Body ground	B - Body ground	Trip switch signal (Hour adjust switch)	Hour adjust switch not pressed	11 to 14 V
			Hour adjust switch pressed	Below 1 V
L27-13 (MIN) - Body ground	B - Body ground	Trip switch signal (Minute adjust switch)	Minute adjust switch not pressed	11 to 14 V
			Minute adjust switch pressed	Below 1 V
L27-14 (L) - Body ground	B - Body ground	Fuel level signal	Power switch on (IG), fuel level warning light off	Below 1 V
			Power switch on (IG), fuel level warning light on	3 to 7 V
L27-15 (ES2) - Body ground	W - Body ground	Ground	Always	Below 1 Ω
L27-16 (TWS3) - Body ground	B - Body ground	Water temperature sensor signal	Power switch on (IG), coolant temperature below 113°C (235°F)	0.2 to 4.8 V
			Power switch on (IG), coolant temperature below 120°C (248°F) or more	Below 0.15 V
L27-17 (RST) - Body ground	R - Body ground	Trip switch signal (Set switch)	Set switch not pressed	11 to 14 V
			Set switch pressed	Below 1 V
L27-18 (B) - Body ground	R - Body ground	Battery	Power switch off	11 to 14 V
L27-19 (IG+) - Body ground	L - Body ground	Power switch signal	Power switch off	Below 1 V
			Power switch on (IG)	11 to 14 V
L27-20 (IG2) - Body ground	G - Body ground	Power switch signal	Power switch off	Below 1 V
			Power switch on (IG)	11 to 14 V
L27-21 (PBLT) - Body ground	Y - Body ground	Front passenger side seat belt warning light signal	Power switch on (IG), front passenger side seat belt warning light off	11 to 14 V
			Power switch on (IG), front passenger side seat belt warning light blinks	Below 1 V ←→ 11 to 14 V
L27-22 (LP) - Body ground	B - Body ground	Security indicator light signal	Power switch on (IG), security indicator light off	Below 2 V
			Security indicator light blinks	Pulse generation
L27-25 (EFI) - Body ground	LG - Body ground	MIL (Check engine warning light) signal	Power switch on (IG), MIL (Check engine warning light)	11 to 14 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
			off	
			Power switch on (IG), MIL (Check engine warning light) comes on	Below 1 V
L27-26 (B) - Body ground	Y - Body ground	Turn LH indicator light signal	Power switch on (IG), turn LH indicator light off	11 to 14 V
			Power switch on (IG), turn LH indicator light blinks	Below 1 V ←→ 11 to 14 V
L27-27 (B) - Body ground	G - Body ground	Turn RH indicator light signal	Power switch on (IG), turn RH indicator light off	11 to 14 V
			Power switch on (IG), turn RH indicator light blinks	Below 1 V ←→ 11 to 14 V
L27-29 (STRG) - Body ground	G - Body ground	Multi-information switch (steering pad switch assembly) signal	Always	Pulse generation
L27-30 (ES) - Body ground	BR - Body ground	Ground (Signal ground)	Always	Below 1 Ω
L27-35 (TC) - Body ground	G - Body ground	Light control rheostat signal (Tail cancel switch)	Power switch on (IG), light control rheostat position except below	1 to 6 V
			Power switch on (IG), turn the light control rheostat fully upwards	Below 1 V
L27-36 (SW1) - Body ground	B - Body ground	Light control rheostat signal	Always	4 to 6 V
L27-37 (SW2) - Body ground	B - Body ground	Light control rheostat signal	Power switch on (IG), light control rheostat except on tail cancel position	1 to 6 V (Gradually change)
L27-38 (SW3) - Body ground	R - Body ground	Light control rheostat signal (Rheostat ground)	Always	Below 1 Ω
L27-39 (RL) - Body ground	L - Body ground	Light control rheostat LED illumination signal	Power switch on (IG), light control rheostat LED illumination off	Below 1 V
			Power switch on (IG), light control rheostat LED illumination illuminates	4 to 6 V
L27-40 (RV) - Body ground	W - Body ground	Light control rheostat illumination signal	Power switch on (IG), light control rheostat illumination off	Below 1 V
			Power switch on (IG), light control rheostat illumination illuminates	4 to 6 V

- *1: w/ Tire Pressure Warning System

(b) Waveform 1 (Reference): Using an oscilloscope:

Item	Condition
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

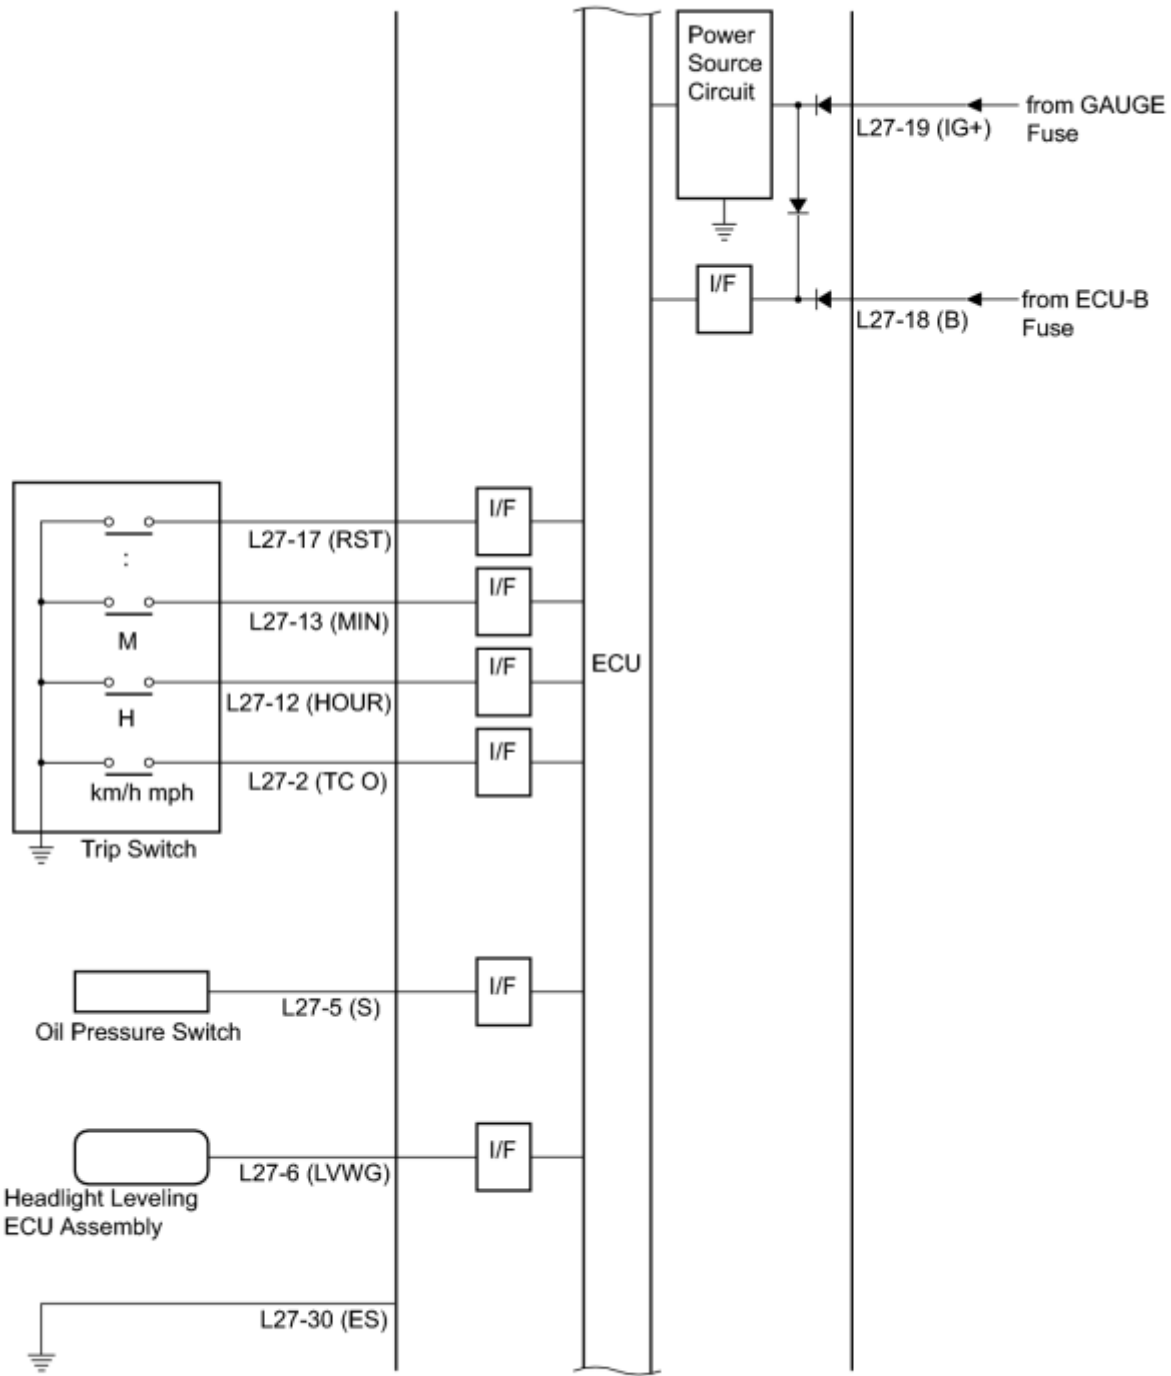

2. COMBINATION METER ASSEMBLY INNER CIRCUIT

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 .

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Trouble Codes.
- (e) Check for DTCs.

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Trouble Code.
- (e) Clear the DTCs.

FAIL-SAFE CHART

Engine Coolant Temperature Hot Warning Light

Condition	Response	Recovery
Engine coolant temperature data is interrupted for 3.1 seconds.	The warning light comes on.	Engine coolant temperature data is received.

Shift Indicator

Condition	Response	Recovery
Shift position data is interrupted for 3.1 seconds.	All indicator lights go off.	Normal data is received.

ABS, EBD, BA, TRAC, and VSC

Condition	Response	Recovery
ABS, brake, VSC, or slip data is interrupted for 1 second.	The warning light comes on.	Normal data is received.
Brake data is interrupted for 10 seconds.		

Door

Condition	Response	Recovery
Each door condition data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

Driver Side Seat Belt

Condition	Response	Recovery
Driver side front seat inner belt assembly data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

*Head*1*

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

*Tail*2*

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

Beam

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

SRS

Condition	Response	Recovery
-----------	----------	----------

Condition	Response	Recovery
SRS data is interrupted for 10 seconds or there is a malfunction in the combination meter assembly (meter ECU).	The warning light comes on.	Normal data is received.

EPS

Condition	Response	Recovery
Regular data is interrupted for 1 second.	The warning light comes on.	Normal data is received.

Multi-information Display

Condition	Response	Recovery
Cruise information data is interrupted for 3.1 seconds.	The display becomes blank (only measurement units are displayed).	Normal data is received.

- *1: for U.S.A.
- *2: except U.S.A.

DATA LIST / ACTIVE TEST

1. DATA LIST

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Warm up the engine.
- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG).
- (e) Turn the Techstream on.
- (f) Enter the following menus:
 - (1) for Combination Meter: Body Electrical / Combination Meter / Data List.
 - (2) for ABS/VSC/TRAC: Chassis / ABS/VSC/TRAC / Data List.
 - (3) for Engine: Powertrain / Engine / Data List.
- (g) Check the values by referring to the table below.

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Tail Cancel SW	Tail cancel switch/OFF or ON	OFF: Tail cancel switch off	-
		ON: Tail cancel switch on	
P-Seatbelt Buckle SW	Front passenger side seat belt buckle switch/OFF or ON	OFF: Front passenger side seat belt unfastened	-
		ON: Front passenger side seat belt fastened	
Vehicle Speed Meter	Vehicle speed/Min.: 0 km/h (0 mph), Max.:199 km/h (124 mph)	Almost the same as actual vehicle speed (Speedometer tester)	-
Coolant Temperature	Engine coolant temperature/-40 to 127.5°C	After warming up: 80 to 100°C (176 to 212°F)	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	(-40 to 261.5°F)		
Head Up Display Switch (Up)*1	Headup display position up switch/OFF or ON	OFF: Headup display position up switch not pressed	-
		ON: Headup display position up switch pressed	
Head Up Display Switch (Down)*1	Headup display position down switch/OFF or ON	OFF: Headup display position down switch not pressed	-
		ON: Headup display position down switch pressed	
Head Up Display Switch (Main)*1	Headup display main switch/OFF or ON	OFF: Headup display main switch not pressed	-

2. ACTIVE TEST

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the operation by referring to the table below.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Speed Meter Operation	Speedometer	0, 40, 80, 120 mph*1	Confirm that the vehicle is stopped with the engine idling
		0, 40, 80, 120, 160, 200, 240 km/h*2	
Fuel Meter Operation	Fuel receiver gauge	EMPTY, 1/2, FULL	Confirm that the vehicle is stopped with the engine idling
Fuel Consumption Meter Operation	Fuel consumption meter	OFF, MIN., 1/4, 1/2, 3/4, MAX.	Confirm that the vehicle is stopped with the engine idling

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check speedometer operation.

NOTICE:

- The meter ECU (No. 3 meter circuit plate) receives the vehicle speed signal from the skid control ECU via CAN communication. Therefore, perform the following inspection referring to values on the Data List of the skid control ECU because it is the source of the vehicle speed signal.
- The Data List values of the skid control ECU are used for this inspection. Therefore, make sure to perform the inspection after confirming that no DTCs are output from the brake control system.
- If the tire size or tire inflation pressure is not within the specified range, or the tires are excessively worn, the speedometer indication error will increase. Therefore, make sure to perform the inspection after checking that the tire size, tire inflation pressure and tire wear are in the specified range.

(1) Before starting the following inspection, check if the Brake Control System outputs the DTCs.

(2) Check the values by referring to the table below.

ABS/VSC/TRAC:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

NG ► REPLACE FUEL SENDER GAUGE ASSEMBLY

OK

H

5.	REPLACE COMBINATION METER ASSEMBLY (METER CIRCUIT PLATE)
----	--

(a) Replace the combination meter assembly (meter circuit plate) to a new or a known good one INFO.

OK:

The operation of the fuel receiver gauge returns to normal.

NG ► REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

OK ► END

DESCRIPTION

This DTC is stored when the combination meter assembly (No. 3 meter circuit plate) detects a malfunction in the water temperature sensor that is connected to the combination meter assembly (No. 3 meter circuit plate) via a direct line.

DTC No.	DTC Detection Condition	Trouble Area
B1503	<p>When IG voltage is 9.5 V or more and the following condition is detected:</p> <ol style="list-style-type: none"> 1. Water temperature sensor operation malfunction 2. Water temperature sensor circuit open or short 3. Engine coolant temperature is 120°C (248°F) or more 	<ul style="list-style-type: none"> • Harness or connector • Water temperature sensor • Combination meter assembly (No. 3 meter circuit plate)

HINT:

This DTC is for the water temperature sensor which is used to detect the engine water temperature sensor for the exhaust heat recirculation system, not for the engine coolant temperature sensor which is used for the EFI system.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. READ VALUE USING TECHSTREAM

- (a) Set the vehicle in the maintenance mode using the Techstream .
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Combination Meter / Data List.
- (f) Check the values by referring to the table below.

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Coolant Temperature	Engine coolant temperature/-40 to 127.5°C (-40 to 261.5°F)	After warming up: 80 to 100°C (176 to 212°F)	-

HINT:

- The coolant temperature value in this inspection is the data sent from the engine coolant temperature sensor for the SFI system.
- When the Data List values do not match, a signal output error of the ECM is suspected.

OK:

Engine coolant temperature displayed on the Techstream is 80 to 100°C (176 to 212°F) after warming up.

NG  GO TO EXHAUST HEAT RECIRCULATION SYSTEM

OK

2. CHECK HARNESS AND CONNECTOR (NO. 3 METER CIRCUIT PLATE - WATER TEMPERATURE SENSOR)

- (a) Disconnect the G2 connector.
- (b) Disconnect the L27 connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
G2-2 (TWS3) - L27-16 (TWS3)	Always	Below 1 Ω

Tester Connection	Condition	Specified Condition
G2-1 (E2) - L27-9 (E2)	Always	Below 1 Ω
G2-2 (TWS3) or L27-16 (TWS3) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.	WATER TEMPERATURE SENSOR
----	--------------------------

*1

Resistance k Ω

(a) Remove the water temperature sensor .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (E2) - 2 (TWS3)	Temperature is 20°C (68°F)	2.32 to 2.59 k Ω
1 (E2) - 2 (TWS3)	Temperature is 80°C (176°F)	0.310 to 0.326 k Ω

NG  REPLACE WATER TEMPERATURE SENSOR

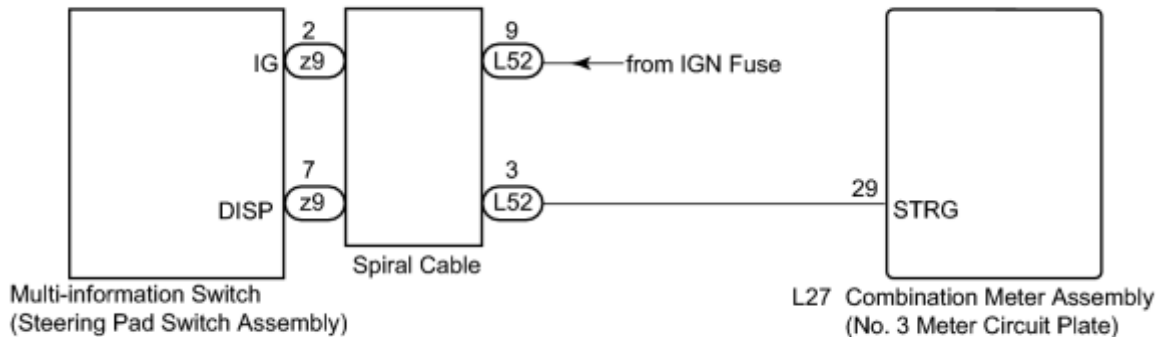

OK  REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

DESCRIPTION

The combination meter assembly (No. 3 meter circuit plate) communicates with the multi-information switch (steering pad switch assembly) via a direct line. If the combination meter assembly (No. 3 meter circuit plate) detects a communication malfunction, it stores this DTC.

DTC No.	DTC Detection Condition	Trouble Area
B1504	<p>When the IG voltage is 9.5 V or more and power switch on (IG) and the following condition is detected:</p> <ol style="list-style-type: none"> Multi-information switch (steering pad switch assembly) communication error has been detected more than 3 seconds. 	<ul style="list-style-type: none"> Harness or connector Spiral cable Multi-information switch (steering pad switch assembly) Combination meter assembly (No. 3 meter circuit plate)

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Before starting the following inspection, confirm the multi-information switch (steering pad switch assembly) setting.

PROCEDURE

1. READ VALUE USING TECHSTREAM (MULTI DISPLAY SELECT SWITCH)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Data List.
- (e) Check the values by referring to the table below.

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Multi Display Select Switch	DISP switch in the multi-information switch (steering pad switch assembly)/OFF or ON	OFF: DISP switch in the multi-information switch (steering pad switch assembly) not pressed	-
		ON: DISP switch in the multi-information switch (steering pad switch assembly) pressed	-
Drive Monitor Reset SW	TRIP switch in the multi-information switch (steering pad switch assembly)/OFF or ON	OFF: TRIP switch in the multi-information switch (steering pad switch assembly) not pressed	-
		ON: TRIP switch in the multi-information switch (steering pad switch assembly) pressed more than 1 second	-

OK:

Steering pad switch assembly (multi-information switch) condition displayed on the Techstream changes with the actual switch operation.

NG  [CHECK SPIRAL CABLE](#)

OK  **REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)**

2.	CHECK SPIRAL CABLE
----	--------------------

(a) Check the spiral cable .

NG  REPLACE SPIRAL CABLE

OK

3.	CHECK HARNESS AND CONNECTOR (NO. 3 METER CIRCUIT PLATE - STEERING PAD SWITCH ASSEMBLY)
----	--

(a) Disconnect the L27 and z9 connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
z9-2 (IG) - Body ground	Power switch off	Below 1 V
z9-2 (IG) - Body ground	Power switch on (IG)	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z9-7 (DISP) - L27-29 (STRG)	Always	Below 1 Ω
L27-29 (STRG) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.	REPLACE MULTI-INFORMATION SWITCH (STEERING PAD SWITCH ASSEMBLY)
----	---

(a) Replace the multi-information switch (steering pad switch assembly) with a new or a known good one 

OK:

The operation of the combination meter assembly (No. 3 meter circuit plate) returns to normal.

NG  REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

OK  END

INSPECTION PROCEDURE

PROCEDURE

1.	CONFIRM DTC OUTPUT
----	--------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Trouble Codes.
- (e) Clear the stored DTCs.
- (f) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.
- (g) Stop the vehicle.
- (h) Check for DTCs .

Result:

Result	Proceed to
DTC is output.	A
DTC is not output.	B

HINT:

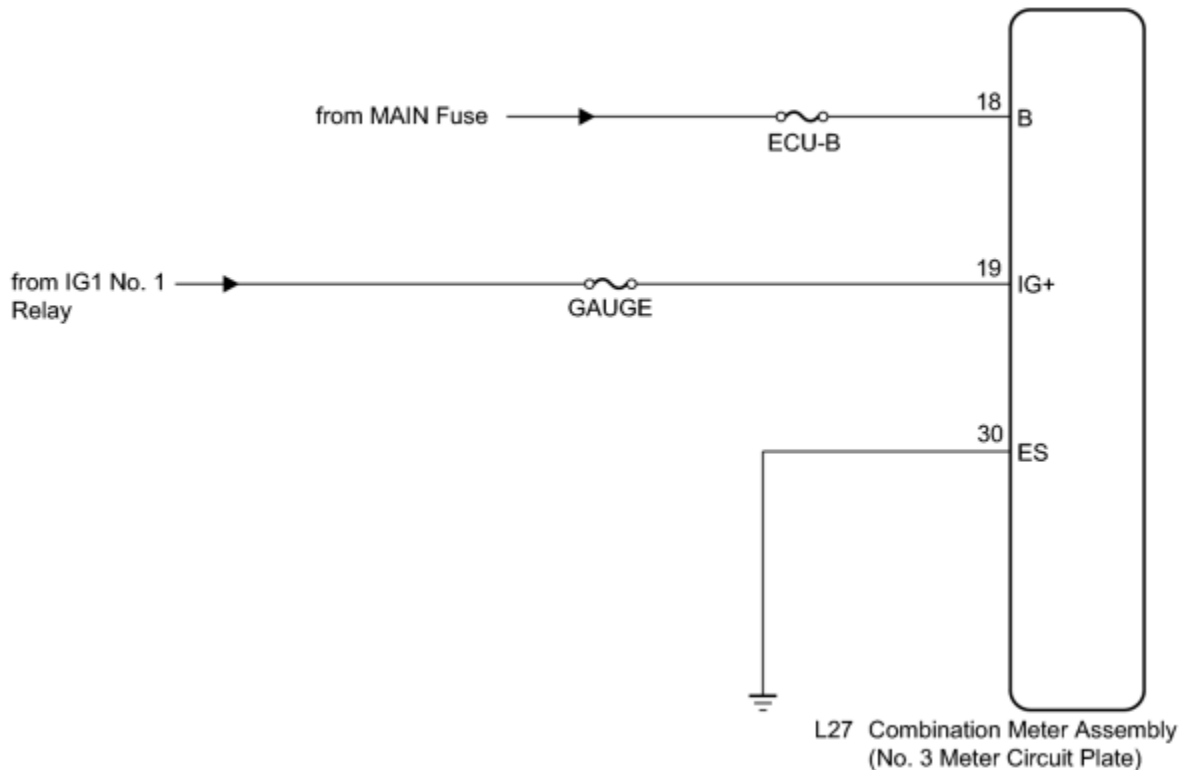

If CAN communication system DTC U0100, U0129, U0131, U0142, or U0151 and another DTC are output at the same time, perform troubleshooting for CAN communication system DTC U0100, U0129, U0131, U0142, or U0151 first.

-  USE SIMULATION METHOD TO CHECK
-  GO TO CAN COMMUNICATION SYSTEM

DESCRIPTION

This circuit is the power source circuit for the meter. This circuit provides two types of power sources; one is a constant power source, and the other is an IG power source. If a voltage of 12 V is not applied to terminal IG+ when the power switch is turned on (IG), the indicators will not operate.

WIRING DIAGRAM

C

INSPECTION PROCEDURE

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY CIRCUIT)

(a) Disconnect the L27 connector.

*1

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L27-30 (ES) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L27-19 (IG+) - Body ground	Power switch off	Below 1 V
L27-19 (IG+) - Body ground	Power switch on (IG)	11 to 14 V
L27-18 (B) - Body ground	Power switch off	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Combination Meter Assembly (No. 3 Meter Circuit Plate))
----	---

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

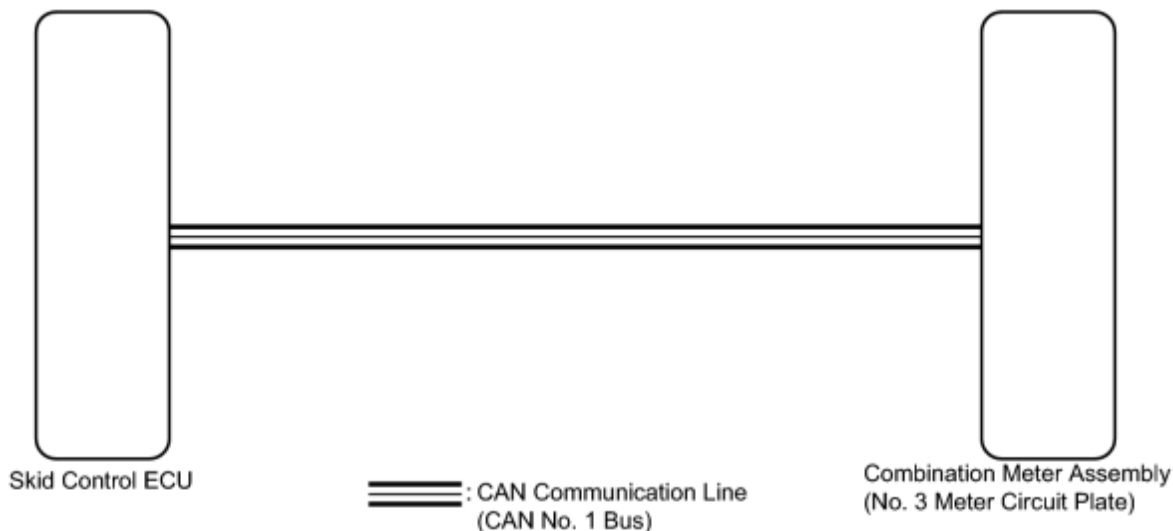

DESCRIPTION

The meter ECU (No. 3 meter circuit plate) receives vehicle speed signals from the skid control ECU via the CAN communication system (CAN No. 1 Bus). The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. The skid control ECU supplies power to the vehicle speed sensor. The skid control ECU detects vehicle speed signals based on the pulses of the voltage.

HINT:

- Factors that affect the indicated vehicle speed include tire size, tire inflation, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of error, see the reference chart [INFO](#).
- If the vehicle speed sensor circuit has a malfunction, the skid control ECU stores the DTCs. Troubleshoot the Brake Control System [INFO](#).

WIRING DIAGRAM

C

INSPECTION PROCEDURE

NOTICE:

If the vehicle speed is outside the allowable range when tested, perform the on-vehicle inspection [INFO](#).

HINT:

Before starting the following inspection, check tire size and tire air pressure.

PROCEDURE

1. CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication DTC is output .

Result:

Result	Proceed to
CAN communication DTC is not output.	A
CAN communication DTC is output.	B

 **B** GO TO CAN COMMUNICATION SYSTEM

2. PERFORM ACTIVE TEST USING TECHSTREAM (SPEED METER OPERATION)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the operation by referring to the table below.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Speed Meter Operation	Speedometer	0, 40, 80, 120 mph*1	Confirm that the vehicle is stopped with the engine idling
		0, 40, 80, 120, 160, 200, 240 km/h*2	

- *1: for U.S.A.
- *2: except U.S.A.

OK:

Speedometer indication is normal.

 **NG** REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

OK

3. CHECK BRAKE CONTROL SYSTEM

(a) Check if the brake control system output the DTC .

Result:

Result	Proceed to
The DTC is not output.	A
The DTC is output.	B

 **GO TO BRAKE CONTROL SYSTEM**

A

4. READ VALUE USING TECHSTREAM (FR/FL/RR/RL WHEEL SPEED, VEHICLE SPEED METER)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus:

(1) for ABS/VSC/TRAC: Chassis / ABS/VSC/TRAC / Data List.

(2) for Combination Meter: Body Electrical / Combination Meter / Data List.

(e) Check the values by referring to the table below.

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost the same as actual vehicle speed (Speedometer tester)	-
FL Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost the same as actual vehicle speed (Speedometer tester)	-
RR Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost the same as actual vehicle speed (Speedometer tester)	-
RL Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost the same as actual vehicle speed (Speedometer tester)	-

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
----------------	------------------------	------------------	-----------------

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Vehicle Speed Meter	Vehicle speed/Min.: 0 mph (0 km/h), Max.: 255 km/h (158 mph)	Almost the same as actual vehicle speed (Speedometer tester)	-

OK:

When the Data List values of the ECUs match, an internal malfunction of the combination meter assembly is suspected.

NG:

When the Data List values of the ECUs do not match, a signal output error of the skid control ECU or an internal malfunction of the combination meter assembly is suspected.

NG ► [REPLACE COMBINATION METER ASSEMBLY \(METER CIRCUIT PLATE\)](#)

OK ► **GO TO BRAKE CONTROL SYSTEM**

5.	REPLACE COMBINATION METER ASSEMBLY (METER CIRCUIT PLATE)
----	--

(a) Replace the meter circuit plate with a new or a known good one .

OK:

The operation of the speedometer returns to normal.

NG ► [REPLACE COMBINATION METER ASSEMBLY \(NO.4 METER CIRCUIT PLATE\)](#)

OK ► **END**

6.	REPLACE COMBINATION METER ASSEMBLY (NO.4 METER CIRCUIT PLATE)
----	---

(a) Replace the combination meter assembly (No. 4 meter circuit plate) with a new or a known good one .

OK:

The operation of the speedometer returns to normal.

NG ► [REPLACE COMBINATION METER ASSEMBLY \(NO. 3 METER CIRCUIT PLATE\)](#)

OK ► **END**

7.	REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)
----	--

(a) Replace the combination meter assembly (No. 3 meter circuit plate) with a new or a known good one .

OK:

The operation of the speedometer returns to normal.

NG  REPLACE SKID CONTROL ECU

OK  **END**

DESCRIPTION

- The meter ECU (No. 3 meter circuit plate) uses the fuel sender gauge assembly to determine the level of the fuel in the fuel tank. The resistance of the fuel sender gauge will vary between approximately $12\ \Omega$ with the float at the full position, and $415\ \Omega$ with the float at the empty position. The meter outputs battery voltage through two resistors of $820\ \Omega$ that are mounted in parallel inside the meter ECU (No. 3 meter circuit plate). The meter ECU (No. 3 meter circuit plate) measures the voltage between the variable resistor in the fuel sender gauge and the two resistors mounted in parallel in the meter. Voltage measured at this point will vary as the float of the fuel sender gauge is moved. The highest voltage observed should be approximately half of the battery voltage.

HINT:

The fuel level warning light will come on when the fuel level is below 6.0 liters (6.3 US qts, 5.3 Imp.qts).

WIRING DIAGRAM

Result:

Result	Proceed to
Heater control panel illumination does not operate normally.	A
Heater control panel illumination operates normally.	B

HINT:

Both the heater control panel and the combination meter assembly illumination dim according to the dimmer signal. Therefore, when only the meter illumination is always dark, there may be a malfunction in the combination meter assembly.

B▶ REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

A
▼

4.	CHECK OPERATION (AUTOMATIC LIGHT CONTROL SYSTEM)
----	--

- (a) Turn the power switch on (IG).
- (b) Turn the light control switch to the AUTO position.
- (c) Cover the automatic light control sensor.
- (d) Check the taillights and low beam headlights.

OK:

The taillights and low beam headlights come on.

- (e) Uncover the automatic light control sensor.
- (f) Check the low beam headlights and taillights.

OK:

The taillights and low beam headlights go off.

Result:

Result	Proceed to
Automatic light control system operates normally.	A
Automatic light control system does not operate normally.	B

B▶ CHECK LIGHTING SETTING

A
▼

5.	REPLACE MAIN BODY ECU
----	-----------------------

- (a) Replace the main body ECU with a new or a normal one .

OK:

The operation of the combination meter assembly returns to normal.

HINT:

The meter ECU (meter circuit plate No.3) controls the meter illumination based on an auto dimmer signal from the main body ECU. When the meter illumination is always dark (very dim), it may be due to the main body ECU sending an auto dimmer signal to the meter ECU (meter circuit plate No.3) because of a malfunction in the main body ECU.

NG ▶ REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)
OK ▶ **END**

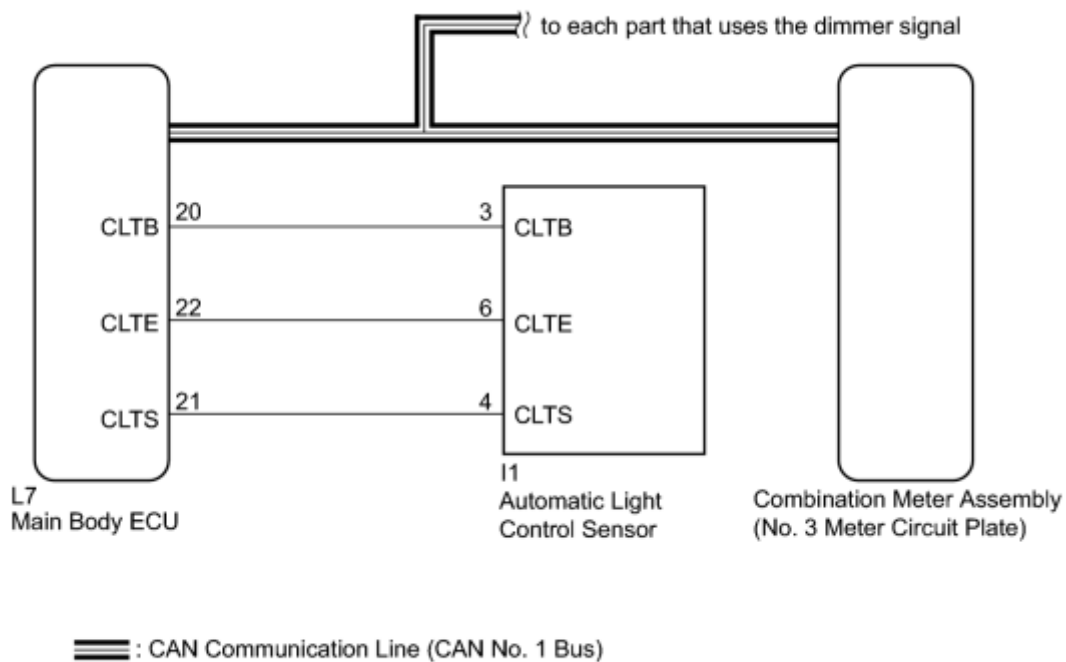

DESCRIPTION

In this circuit, the meter ECU (meter circuit plate No.3) receives auto dimmer signals from the main body ECU using the CAN communication system (CAN No. 1 Bus). When the meter ECU (meter circuit plate No.3) receives an auto dimmer signal, it dims the meter illumination (warning and indicator lights). The main body ECU determines whether it is daytime, twilight, or nighttime based on the waveform transmitted from the automatic light control sensor. If the main body ECU determines that it is nighttime and the light control switch is in the tail, head, or AUTO position, the ECU sends an auto dimmer signal. According to the signal, the combination meter assembly dims the meter illumination.

HINT:

When the meter illumination does not dim at night, there may be a malfunction in the automatic light control sensor, main body ECU, CAN communication system, harness or connector, or combination meter assembly.

WIRING DIAGRAM

H

INSPECTION PROCEDURE

HINT:

- The automatic light control sensor sensitiveness can be customized [INFO](#).

- Setting the meter illumination to maximum brightness prevents the meter illumination from dimming when the light control switch is changed to the tail, head, or AUTO position at night. Therefore, check the meter illumination setting before proceeding to the following steps.

PROCEDURE

1. CHECK CAN COMMUNICATION SYSTEM

- (a) Check if a CAN communication DTC is output .

Result:

Result	Proceed to
CAN communication DTC is not output.	A
CAN communication DTC is output.	B

B ▶ GO TO CAN COMMUNICATION SYSTEM

A

2. CHECK DTC (LIGHT CONTROL SENSOR CIRCUIT)

- (a) Check if DTC B1244 is output .

Result:

Result	Proceed to
B1244 is not output.	A
B1244 is output.	B

B ▶ GO TO LIGHTING SYSTEM

A
▼

3. CHECK OPERATION (HEATER CONTROL PANEL)

- (a) Turn the power switch on (IG).
- (b) Turn the light control switch to the tail, head, or AUTO position.
- (c) Cover the light control switch.
- (d) Check the heater control panel illumination.

Result:

Result	Proceed to
Heater control panel illumination does not operate normally.	A
Heater control panel illumination operates normally.	B

HINT:

Both the heater control panel and combination meter assembly illumination dim according to the dimmer signal. Therefore, when only the meter illumination does not dim at night, replace the combination meter assembly.

B▶ REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

A

4.	CHECK OPERATION (AUTOMATIC LIGHT CONTROL SYSTEM)
----	--

- (a) Turn the power switch on (IG).
- (b) Turn the light control switch to the AUTO position.
- (c) Cover the automatic light control sensor.
- (d) Check the taillights and low beam headlights.

OK:

The taillights and low beam headlights come on.

- (e) Uncover the automatic light control sensor.
- (f) Check the low beam headlights and taillights.

OK:

The low beam headlights and taillights go off.

Result:

Result	Proceed to
Automatic light control system operates normally.	A
Automatic light control system does not operate normally.	B

B▶ CHECK LIGHTING SETTING

A

5.	REPLACE MAIN BODY ECU
----	-----------------------

- (a) Replace the main body ECU with a new or a known good one .

OK:

The operation of the combination meter assembly returns to normal.

HINT:

The meter ECU (meter circuit plate No.3) controls the meter illumination based on an auto dimmer signal from the main body ECU. If the meter does not dim when the light control switch is in the tail, head, or AUTO position at night, it may be for either of 2 reasons. The first reason is that the main body ECU does not send an auto dimmer signal. The second is that the meter ECU (meter circuit plate No.3) does not dim the meter illumination even though the meter ECU (meter circuit plate No.3) receives an auto dimmer signal.

NG ▶ REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)
OK ▶ **END**

DESCRIPTION

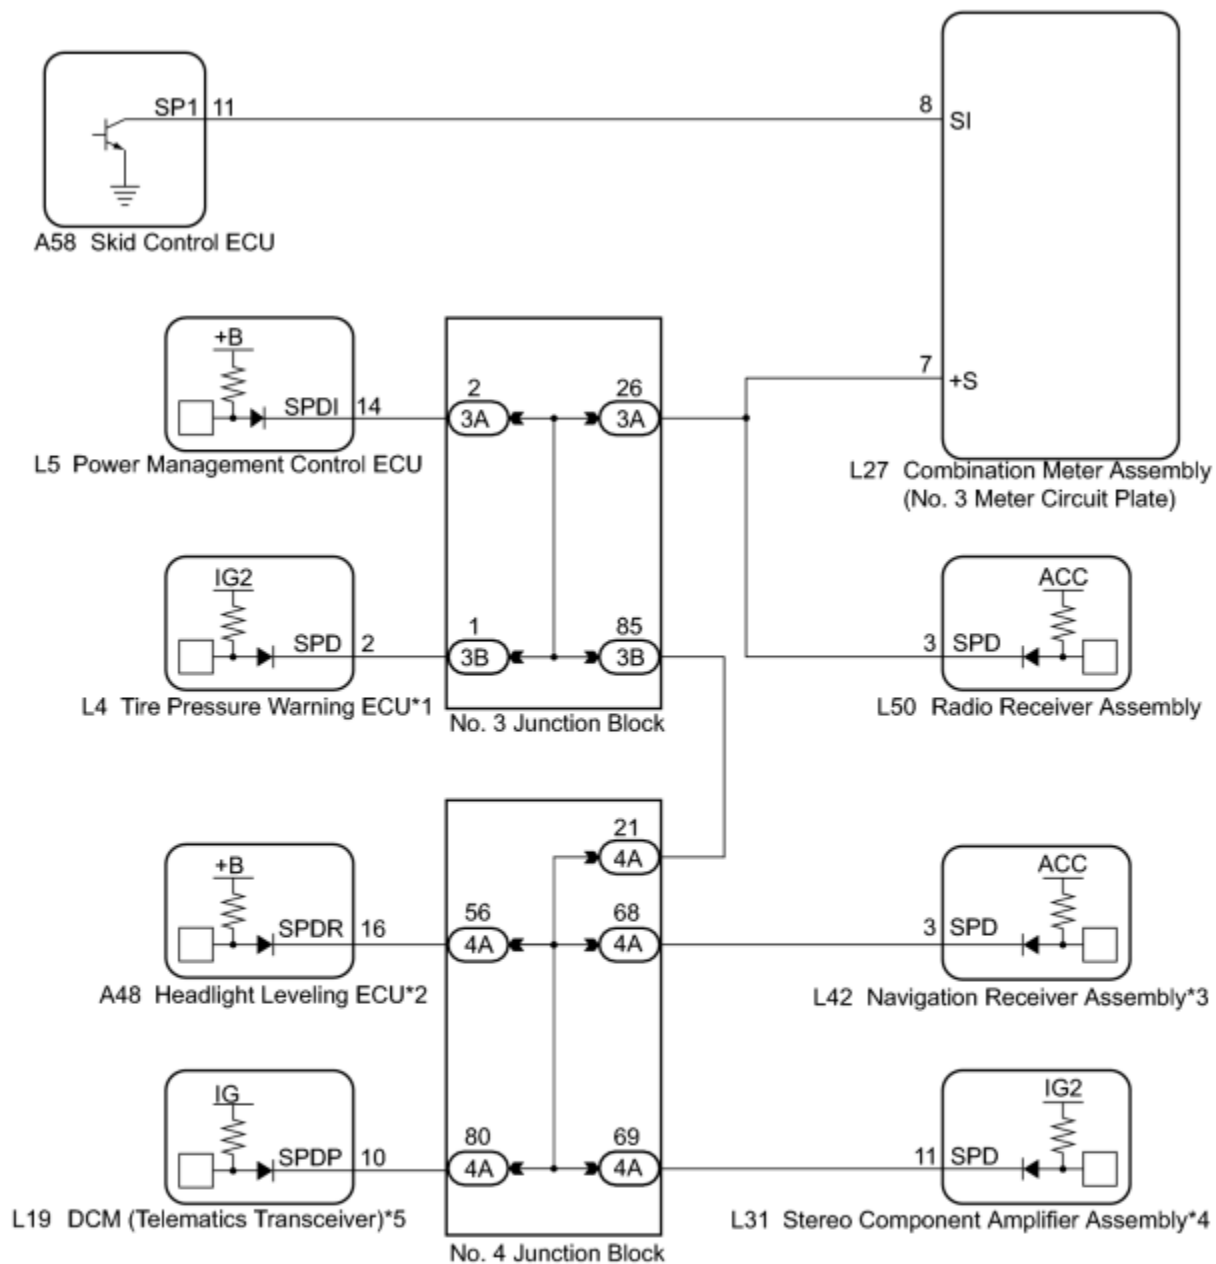

The combination meter assembly (No. 3 meter circuit plate) receives the vehicle speed signal from this circuit. The wheel speed sensors produce an output that varies according to the vehicle speed. The wheel speed sensor output is received by the skid control ECU which uses this information to create the vehicle speed sensor signal*1. The vehicle speed sensor signal consists of pulses sent to the combination meter assembly from the skid control ECU. To create this signal, 12 V is output from IG2 which is behind a resistor in the combination meter assembly. This voltage is sent to the skid control ECU. The pulse signal is created by switching the transistor in the skid control ECU on and off, making the voltage on the wire drop to 0 V. A similar system is used for the output of this signal from the combination meter assembly via terminal +S. A voltage of 12 V or 5 V is applied to terminal +S from each ECU or relay that is connected to this terminal. The transistor in the combination meter assembly is controlled by the signal from the skid control ECU. When this transistor is turned on, this transistor makes the voltage supplied by the various ECUs (via their respective internal resistors) drop to 0 V. Each ECU connected to terminal +S of the combination meter assembly controls its respective system based on the pulse signal.

- *1: This vehicle speed sensor signal is created by the skid control ECU. There is no actual component that is referred to as the vehicle speed sensor. In addition, for some other systems, vehicle speed information may be exchanged using CAN communication.

HINT:

This circuit is used for the systems connected to terminal +S. This signal is not used for combination meter assembly (no. 3 meter circuit plate) operation. Combination meter assembly components such as the speedometer operate using data received via CAN communication.

INSPECTION PROCEDURE

PROCEDURE

1. INSPECT ECU TERMINAL VOLTAGE (INPUT VOLTAGE)

*1

(a) Disconnect the L27 connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L27-7 (+S) - Body ground	Power switch on (IG)	4.5 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Combination Meter Assembly (No. 3 Meter Circuit Plate))
----	---

HINT:

If any of the ECUs specified in the wiring diagram supplies power to the combination meter assembly, the combination meter assembly will output a waveform.

NG [▶ CHECK HARNESS AND CONNECTOR \(NO. 3 METER CIRCUIT PLATE - RADIO RECEIVER ASSEMBLY\)](#)

OK

2.	INSPECT COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE) (OUTPUT VOLTAGE)
----	---

(a) Reconnect the L27 connector.

(b) Disconnect the A58 connector.

*1

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A58-11 (SP1) - Body ground	Power switch on (IG)	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Skid Control ECU)
----	---

NG [CHECK HARNESS AND CONNECTOR \(NO. 3 METER CIRCUIT PLATE - SKID CONTROL ECU\)](#)

OK

3.	INSPECT SKID CONTROL ECU (INPUT WAVEFORM)
----	---

- (a) Check the input waveform.
- (1) Reconnect the A58 connector.
- (2) Remove the combination meter assembly with the connector(s) still connected.
- (3) Connect an oscilloscope to terminal L27-8 (SI) and body ground.
- (4) Turn the power switch on (IG).
- (5) Turn the wheel slowly.
- (6) Check the signal waveform according to the condition(s) in the table below.

*1

Item	Condition
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

Text in Illustration

*1	Component with harness connected (Combination Meter Assembly)
----	--

OK:

The waveform is displayed as shown in the illustration.

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG ▶ REPLACE SKID CONTROL ECU

OK ▶ REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

4.	CHECK HARNESS AND CONNECTOR (NO. 3 METER CIRCUIT PLATE - SKID CONTROL ECU)
----	--

(a) Disconnect the L27 and A58 connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A58-11 (SP1) - L27-8 (SI)	Always	Below 1 Ω
A58-11 (SP1) - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE)

5.	CHECK HARNESS AND CONNECTOR (NO. 3 METER CIRCUIT PLATE - RADIO RECEIVER ASSEMBLY)
----	---

(a) Disconnect the L27 and L50 connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L50-3 (SPD) - L27-7 (+S)	Always	Below 1 Ω
L50-3 (SPD) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.	INSPECT RADIO RECEIVER ASSEMBLY (OUTPUT VOLTAGE)
----	--

*1

(a) Reconnect the L50 connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L50-3 (SPD) - Body ground	Power switch on (IG)	4 to 14 V

Text in Illustration

*1	Component with harness connected (Radio Receiver Assembly)
----	---

NG  REPLACE RADIO RECEIVER ASSEMBLY

OK

7.	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - NO. 3 JUNCTION BLOCK)
----	---

(a) Disconnect the 3A connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L27-7 (+S) - 3A-26	Always	Below 1 Ω
L27-7 (+S) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.	CHECK HARNESS AND CONNECTOR (NO. 3 JUNCTION BLOCK (INSTRUMENT PANEL WIRE))
----	--

(a) Inspect for a short in the circuit that is connected to the junction block connector shown in the wiring diagram.

HINT:

If voltage is not present, it is possible that an ECU or circuit has a malfunction. The malfunctioning ECU or circuit will be diagnosed in the following steps.

(1) Disconnect the 3B connector.

*1

H

(2) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
3A-2 - Body ground	Power switch on (IG)	4.5 to 14 V
3B-1 - Body ground	Power switch on (IG)	4.5 to 14 V
3B-85 - Body ground	Power switch on (IG)	4.5 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to No. 3 Junction Block)
----	---

Result:

Result	Proceed to
Voltage is not present in one circuit.	A
Voltage is present in all the circuits.	B

B ▶ REPLACE NO. 3 JUNCTION BLOCK (INSTRUMENT PANEL WIRE)

A

9.	CHECK HARNESS AND CONNECTOR (NO. 3 JUNCTION BLOCK - NO. 4 JUNCTION BLOCK)
----	---

(a) Disconnect the 4A connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3B-85 - 4A-21	Always	Below 1 Ω
3B-85 - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

10.	CHECK HARNESS AND CONNECTOR (NO. 4 JUNCTION BLOCK (INSTRUMENT PANEL WIRE))
-----	--

(a) Inspect for a short in the circuit that is connected to the junction block connector shown in the wiring diagram.

HINT:

2010 Toyota Prius

Repair Manual

If voltage is not present, it is possible that an ECU or circuit has a malfunction. The malfunctioning ECU or circuit will be diagnosed in the following steps.

(1) Measure the voltage according to the value(s) in the table below.

H

Standard Voltage:

Tester Connection	Condition	Specified Condition
4A-56 - Body ground	Power switch on (IG)	4.5 to 14 V
4A-68 - Body ground	Power switch on (IG)	4.5 to 14 V
4A-69 - Body ground	Power switch on (IG)	4.5 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to No. 4 Junction Block)
----	---

Result:

Result	Proceed to
Voltage is not present in one circuit.	A
Voltage is present in all the circuits.	B

B ▶ REPLACE NO. 4 JUNCTION BLOCK (INSTRUMENT PANEL WIRE)

A

11.	SYSTEM CHECK
-----	--------------

(a) Select the circuit for which voltage was not present in step 7 or 9.

Result:

Tester Connection	System that Uses the Circuit	Proceed to

A

13. CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU CIRCUIT)

(a) Disconnect the L5 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L5-14 (SPDI) - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE POWER MANAGEMENT CONTROL ECU

14. CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY CIRCUIT)

(a) Disconnect the L31 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L31-11 (SPD) - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY

15. CHECK HARNESS AND CONNECTOR (NAVIGATION RECEIVER ASSEMBLY CIRCUIT)

(a) Disconnect the L42 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L42-3 (SPD) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE NAVIGATION RECEIVER ASSEMBLY

16. CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU CIRCUIT)

(a) Disconnect the L4 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L4-2 (SPD) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE TIRE PRESSURE WARNING ECU

17. CHECK HARNESS AND CONNECTOR (HEADLIGHT LEVELING ECU CIRCUIT)

(a) Disconnect the A48 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A48-16 (SPDR) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE HEADLIGHT LEVELING ECU ASSEMBLY

18. CHECK HARNESS AND CONNECTOR (DCM (TELEMATICS TRANSCEIVER) CIRCUIT)

(a) Disconnect the L19 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L19-10 (SPDP) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE DCM (TELEMATICS TRANSCEIVER)

REMOVAL

1. REMOVE INTEGRATION CONTROL AND PANEL ASSEMBLY_ [INFO](#)

2. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY_ [INFO](#)

3. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH_ [INFO](#)

4. REMOVE TRIP SWITCH

(a) Disengage the 2 claws to remove the trip switch.

INSPECTION

1. INSPECT TRIP SWITCH

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (CS) - 12 (E)	Unit change switch not pressed	10 k Ω or higher
1 (CS) - 12 (E)	Unit change switch pressed	Below 1 Ω
9 (HOUR) - 12 (E)	Hour adjust switch not pressed	10 k Ω or higher
9 (HOUR) - 12 (E)	Hour adjust switch pressed	Below 1 Ω
10 (MIN) - 12 (E)	Minute adjust switch not pressed	10 k Ω or higher
10 (MIN) - 12 (E)	Minute adjust switch pressed	Below 1 Ω
11 (RST) - 12 (E)	Set switch not pressed	10 k Ω or higher
1 (RST) - 12 (E)	Set switch pressed	Below 1 Ω

(b) Apply battery voltage from the wire harness back side between the terminals of the switch, and check the lighting condition of the trip switch.

OK:

Measurement Condition	Condition	Specified Condition
Battery positive (+) → 5 (ILL+)	Always	Trip switch illuminates
Battery negative (-) → 4 (ILL-)		

If the result is not as specified, replace the trip switch INFO.

INSTALLATION

1. INSTALL TRIP SWITCH

(a) Engage the 2 claws to install the trip switch.

2. INSTALL INSTRUMENT CLUSTER FINISH PANEL GARNISH_ [INFO](#)

3. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY_ [INFO](#)

4. INSTALL INTEGRATION CONTROL AND PANEL ASSEMBLY_ [INFO](#)

OPERATION CHECK

1. CHECK POWER SEAT FUNCTION

(a) Check the basic function.

(1) Operate the lumbar support switch and check to make sure the seat function works:

- Lumbar support function (*1)

H

2. CHECK LUMBAR SUPPORT MOTOR

(a) Inspect the PTC operation inside the power seat motor.

NOTICE:

The inspection should be performed with the seat installed in the vehicle.

(1) Move the lumbar support to either the foremost or rearmost position by operating the lumbar support switch, and keep it there for approximately 60 seconds.

(2) Try to move the lumbar support beyond the maximum position using the switch. Measure the time needed for shutting off the electrical current after the lumbar support stops moving (verify when current is shut off or listening for the motor to stop).

Standard:

4 to 90 seconds

(3) Release the lumbar support switch and wait for approximately 60 seconds.

(4) Operate the lumbar support switch to move the lumbar support to the opposite position and check that the motor operates.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays and relays related to this system before inspecting the suspected areas below.

3. REMOVE REAR NO. 3 FLOOR BOARD INFO

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

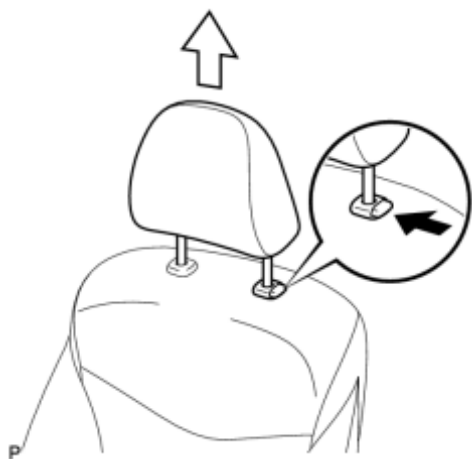

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE FRONT SEAT HEADREST ASSEMBLY

(a) Press the headrest support button and pull up the headrest as shown in the illustration to remove it.

6. REMOVE OUTER SEAT TRACK COVER

(a) Lift up the seat track adjusting handle and move the seat to the foremost position.

(b) Disengage the 2 claws and remove the outer seat track cover.

7. REMOVE INNER SEAT TRACK COVER

(a) Disengage the claw.

(b) Separate the guide and remove the inner seat track cover.

8. REMOVE FRONT SEAT ASSEMBLY

(a) Remove the 2 bolts on the rear side of the seat.

(b) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(c) Remove the 2 bolts on the front side of the seat.

(d) Lift up the seat track adjusting handle and move the seat to the center position. Also, operate the reclining adjuster release handle and move the seatback to the upright position.

(e) Disconnect the connectors under the seat.

(f) Remove the seat.

NOTICE:

Be careful not to damage the vehicle body.

DISASSEMBLY

1. REMOVE RECLINING ADJUSTER RELEASE HANDLE

(a) Using a screwdriver wrapped with protective tape, disengage the claw and remove the reclining adjuster release handle.

Text in Illustration

*1	Protective Tape

2. REMOVE VERTICAL ADJUSTING HANDLE (w/ Vertical Adjuster)

(a) Remove the screw and vertical adjusting handle.

3. REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY

(a) Remove the screw.

(b) Disengage the 2 claws and clip.

(c) w/ Lumbar Support:

(1) Disconnect the connector.

(2) Disengage the 5 clamps and remove the front seat cushion shield assembly.

4. REMOVE LUMBAR SWITCH (w/ Lumbar Support)

(a) Remove the 2 screws and lumbar switch.

5. REMOVE FRONT SEAT INNER BELT ASSEMBLY INFO

6. REMOVE FRONT SEAT CUSHION INNER SHIELD

(a) Disengage the 2 claws and remove the front seat cushion inner shield.

7. REMOVE FRONT SEAT CUSHION COVER WITH PAD

P

(a) Remove the hook.

(b) w/ Lumbar Support:

P

(1) Disconnect the connector.

(2) Disengage the 3 clamps.

P

(3) Disengage the 4 clamps.

(c) w/ Seat Heater System:

(1) Disconnect the connector.

(2) Unfasten the front seat cushion cover with pad as shown in the illustration.

(3) Disengage the clamp.

(d) Disengage the 4 hooks.

(e) for Passenger Side:

(1) Disconnect the connector.

(2) Disengage the 3 clamps.

(3) Disengage the guide and remove the belt warning occupant detection

sensor.

(f) Remove the 3 hog rings.

(g) Disengage the 2 hooks as shown in the illustration.

(h) Disengage each hook and remove the front seat cushion cover with pad as shown in the illustration.

P

8. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Remove the 2 hog rings.

P

(b) Remove the 11 hog rings and separate type front seat cushion cover.

P

9. REMOVE FRONT SEATBACK COVER WITH PAD

(a) Remove the 3 hog rings.

(b) Disengage the 4 claws and remove the 2 front seat headrest supports.

(c) Turn back the separate type front seatback cover to remove the nut, and separate the bracket of the separate type front seatback cover RH.

(d) Remove the separate type front seatback cover with pad from the front seat frame assembly with adjuster.

10. REMOVE SEPARATE TYPE FRONT SEATBACK COVER

(a) Remove the 5 hog rings.

(b) Remove the 2 hog rings and the separate type front seatback cover.

11. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Disengage the guide and remove the reclining adjuster inside cover LH.

12. REMOVE RECLINING ADJUSTER INSIDE COVER RH

(a) Disengage the guide and remove the reclining adjuster inside cover RH.

13. REMOVE FRONT SEAT LOWER CUSHION SHIELD LH (w/ Vertical Adjuster)

(a) Disengage the hook as shown in the illustration.

P

(b) Remove the screw.

P

(c) Disengage the clip and remove the front seat lower cushion shield LH.

14. REMOVE FRONT SEAT LOWER CUSHION SHIELD RH (w/ Vertical Adjuster)

(a) Disengage the hook as shown in the illustration.

P

(b) Remove the screw.

P

(c) Disengage the clip and remove the front seat lower cushion shield RH.

15. REMOVE NO. 2 FRONT SEAT CUSHION PROTECTOR

P

(a) Remove the screw.

(b) Disengage the 2 guides and remove the No. 2 front seat cushion protector.

16. REMOVE NO. 1 FRONT SEAT CUSHION PROTECTOR

P

(a) Remove the screw.

(b) Disengage the 2 guides and remove the No. 1 front seat cushion protector.

17. REMOVE FRONT SEAT WIRE (w/ Lumbar Support)

(a) Disconnect the connector.

P

(b) Disengage the 2 clamps and remove the front seat wire.

18. REMOVE OCCUPANT DETECTION ECU (for Front Passenger Side) INFO

19. REMOVE SEAT POSITION SENSOR INFO

20. REMOVE SEPARATE TYPE FRONT SEATBACK ASSEMBLY (w/o Lumbar Support)

(a) Remove the 4 bolts and separate type front seatback assembly.

21. REMOVE SEPARATE TYPE FRONT SEATBACK ASSEMBLY (w/ Lumbar Support)

(a) Remove the 4 bolts and separate type front seatback assembly.

REASSEMBLY

1. INSTALL SEPARATE TYPE FRONT SEATBACK ASSEMBLY (w/o Lumbar Support)

(a) Install the separate type front seatback assembly with the 4 bolts.

Torque: **42 N·m (428 kgf·cm, 31ft·lbf)**

2. INSTALL SEPARATE TYPE FRONT SEATBACK ASSEMBLY (w/ Lumbar Support)

(a) Install the separate type front seatback assembly with the 4 bolts.

Torque: **42 N·m (428 kgf·cm, 31ft·lbf)**

3. INSTALL SEAT POSITION SENSOR INFO

4. INSTALL OCCUPANT DETECTION ECU (for Front Passenger Side) INFO

5. INSTALL FRONT SEAT WIRE (w/ Lumbar Support)

(a) Engage the 2 clamps and install the front seat wire.

(b) Connect the connector.

6. INSTALL NO. 1 FRONT SEAT CUSHION PROTECTOR

(a) Engage the 2 guides and install the No. 1 front seat cushion protector with the screw.

7. INSTALL NO. 2 FRONT SEAT CUSHION PROTECTOR

(a) Engage the 2 guides and install the No. 2 front seat cushion protector with the screw.

8. INSTALL FRONT SEAT LOWER CUSHION SHIELD RH (w/ Vertical Adjuster)

(a) Engage the clip and install the screw.

P

P

(b) Engage the hook and install the front seat lower cushion shield RH as shown in the illustration.

9. INSTALL FRONT SEAT LOWER CUSHION SHIELD LH (w/ Vertical Adjuster)

P

(a) Engage the clip and install the screw.

(b) Engage the hook and install the front seat lower cushion shield LH as shown in the illustration.

P

10. INSTALL RECLINING ADJUSTER INSIDE COVER RH

(a) Engage the guide and install the reclining adjuster inside cover RH.

11. INSTALL RECLINING ADJUSTER INSIDE COVER LH

(a) Engage the guide and install the reclining adjuster inside cover LH.

12. INSTALL SEPARATE TYPE FRONT SEATBACK COVER

(a) Using hog ring pliers, install 2 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

(b) Using hog ring pliers, install 5 new hog rings

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

13. INSTALL FRONT SEATBACK COVER WITH PAD

(a) Install the front seatback cover bracket with the nut.

Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

P

- For vehicles with side airbags, the side airbags may not be activated normally unless the front seatback cover is securely installed.
- Check that the strap is not twisted after installing the bracket.
- Install the bracket securely.

(b) Engage the 4 claws and install the 2 front seat headrest supports.

(c) Using hog ring pliers, install the separate type front seat cushion cover to the separate type front seat cushion pad with 3 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

14. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Using hog ring pliers, install 11 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

(b) Using hog ring pliers, install the separate type front seat cushion cover to the separate type front seat cushion pad with 2 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

15. INSTALL FRONT SEAT CUSHION COVER WITH PAD

(a) Engage each hook as shown in the illustration.

P

P

(b) Engage the 2 hooks as shown in the illustration.

(c) Using hog ring pliers, install 3 new hog rings

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

(d) for Passenger Side:

(1) Engage the guide and install the belt warning occupant detection

sensor.

(2) Engage the 3 clamps.

(3) Connect the connector.

(e) Engage the 4 hooks.

(f) w/ Seat Heater System:

(1) Engage the clamp.

(2) Fasten the front seat cushion cover with pad as shown in the illustration.

(3) Connect the connector.

(g) w/ Lumber support:

(1) Engage the 4 clamps.

(2) Engage the 3 clamps and connect the connector.

(h) Engage the hook and install the front seat cushion cover with pad.

16. INSTALL FRONT SEAT CUSHION INNER SHIELD

(a) Engage the 2 claws and install the front seat cushion inner shield.

P

17. INSTALL FRONT SEAT INNER BELT ASSEMBLY INFO

18. INSTALL LUMBAR SWITCH (w/ Lumbar Support)

P

(a) Install the lumbar switch with the 2 screws.

19. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY

(a) w/ Lumbar Support:

P

(1) Disengage the 5 clamps.

(2) Connect the connector.

(b) Engage the clip and 2 claws.

P

(c) Install the front seat cushion shield assembly with the screw.

20. INSTALL VERTICAL ADJUSTING HANDLE (w/ Vertical Adjuster)

P

(a) Install the vertical adjusting handle with the screw.

21. INSTALL RECLINING ADJUSTER RELEASE HANDLE

P

(a) Engage the claw and install the reclining adjuster release handle.

INSTALLATION

1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the front seat assembly in the cabin.

NOTICE:

Be careful not to damage the vehicle body.

(b) Connect the connectors under the seat.

(c) Temporarily install the front seat assembly with the 4 bolts.

(d) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(e) Tighten the 2 bolts on the front side of the seat.

Torque: **37 N·m (377 kgf·cm, 27ft·lbf)**

HINT:

Tighten the bolts in the order indicated in the illustration.

(f) Lift up the seat track adjusting handle and move the seat to the foremost position.

(g) Tighten the 2 bolts on the rear side of the seat.

Torque: **37 N·m (377 kgf·cm, 27ft·lbf)**

HINT:

Tighten the bolts in the order indicated in the illustration.

2. ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)

(a) Perform zero point calibration and sensitivity check .

3. INSTALL INNER SEAT TRACK COVER

(a) Engage the claw and guide and install the inner seat track cover.

P

4. INSTALL OUTER SEAT TRACK COVER

(a) Engage the 2 claws and install the outer seat track cover.

P

5. INSTALL FRONT SEAT HEADREST ASSEMBLY

(a) Install the front seat headrest assembly as shown in the illustration.

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

7. INSTALL REAR NO. 3 FLOOR BOARD **INFO**

8. INSTALL REAR DECK FLOOR BOX **INFO**

9. INSTALL REAR NO. 2 FLOOR BOARD **INFO**

10. INSPECT FRONT SEAT ASSEMBLY

(a) During sliding operation of the front seat, check that the left and right adjusters move together smoothly and lock simultaneously.

If the seat adjusters do not lock simultaneously, loosen the seat mounting bolts to adjust the adjuster position.

(b) w/ Seat Heater Seat System:

Check the seat heater operation.

(1) Turn the power switch on (IG).

(2) Push the seat heater switch on.

(3) Wait 5 minutes or more and confirm that the seat surface becomes warm.

11. INSPECT SRS WARNING LIGHT

15. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Remove the 2 hog rings.

P

P

(b) Remove the 11 hog rings and the separate type front seat cushion cover.

INSPECTION

1. INSPECT FRONT SEAT CUSHION HEATER (w/o Lumbar Support Function)

(a) Apply battery voltage and check the seatback heater.

OK:

*1

Connector A

Connector B

Connection	Condition	Specified Condition
Battery positive (+) → Terminal A-1	Always	seatback heater becomes warm
Battery negative (-) → Terminal A-2		

NOTICE:

Immediately after confirming that the seat heater is functioning normally, remove the battery ideas. Falling to do so may cause the seat heater to overheat.

H

If the result is not as specified, replace the separate type front seat cushion cover.

2. INSPECT FRONT SEAT CUSHION HEATER (w/ Lumbar Support Function)

(a) Apply battery voltage and check the seatback heater.

OK:

*1

Connector A

Connector B

Connection	Condition	Specified Condition
Battery positive (+) → Terminal A-2	Always	seatback heater becomes warm
Battery negative (-) → Terminal A-4		

NOTICE:

Immediately after confirming that the seat heater is functioning normally, remove the battery ideas. Falling to do so may cause the seat heater to overheat.

H

If the result is not as specified, replace the separate type front seat cushion cover.

INSTALLATION

1. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Using hog ring pliers, install 11 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

(b) Using hog ring pliers, install the separate type front seat cushion cover to the separate type front seat cushion pad with 2 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

3. REMOVE REAR NO. 3 FLOOR BOARD INFO
4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE FRONT SEAT HEADREST ASSEMBLY

(a) Press the headrest support button and pull up the headrest as shown in the illustration to remove it.

6. REMOVE OUTER SEAT TRACK COVER

(a) Lift up the seat track adjusting handle and move the seat to the foremost position.

P

(b) Disengage the 2 claws and remove the outer seat track cover.

7. REMOVE INNER SEAT TRACK COVER

P

(a) Disengage the claw.

(b) Separate the guide and remove the inner seat track cover.

8. REMOVE FRONT SEAT ASSEMBLY

(a) Remove the 2 bolts on the rear side of the seat.

P

(b) Lift up the seat track adjusting handle and move the seat to the rearmost position.

P

(c) Remove the 2 bolts on the front side of the seat.

(d) Lift up the seat track adjusting handle and move the seat to the center position. Also, operate the reclining adjuster release handle and move the seatback to the upright position.

(e) Disconnect the connectors under the seat.

(f) Remove the seat.

NOTICE:

Be careful not to damage the vehicle body.

9. REMOVE RECLINING ADJUSTER RELEASE HANDLE

(a) Using a screwdriver wrapped with protective tape, disengage the claw and remove the reclining adjuster release handle.

Text in Illustration

*1

Protective Tape

P

10. REMOVE VERTICAL ADJUSTING HANDLE (w/ Vertical Adjuster)

P

(a) Remove the screw and vertical adjusting handle.

11. REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY

P

(a) Remove the screw.

(b) Disengage the 2 claws and clip.

(c) Disconnect the connector.

(d) Disengage the 5 clamps and remove the front seat cushion shield assembly.

12. REMOVE LUMBAR SWITCH

(a) Remove the 2 screws and lumbar switch.

INSPECTION

1. INSPECT LUMBAR SWITCH

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 - 2	Hold	Below 1 Ω
1 - 2	Off	Below 1 Ω
1 - 2	Release	10 k Ω or higher
3 - 4	Hold	Below 1 Ω
3 - 4	Release	10 k Ω or higher
5 - 4	Hold	10 k Ω or higher
5 - 4	Off	Below 1 Ω
5 - 4	Release	Below 1 Ω
1 - 3	Hold	10 k Ω or higher
1 - 3	Release	Below 1 Ω

Text in Illustration

*1	Hold
*2	Release
*3	Front view of wire harness connector (to Lumbar Switch LH)

If the result is not as specified, replace the lumbar switch.

INSTALLATION

1. INSTALL LUMBAR SWITCH

(a) Install the lumbar switch with the 2 screws.

2. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY

(a) Disengage the 5 clamps.

(b) Connect the connector.

(c) Engage the clip and 2 claws.

(d) Install the front seat cushion shield assembly with the screw.

3. INSTALL VERTICAL ADJUSTING HANDLE (w/ Vertical Adjuster)

(a) Install the vertical adjusting handle with the screw.

4. INSTALL RECLINING ADJUSTER RELEASE HANDLE

(a) Engage the claw and install the reclining adjuster release handle.

5. INSTALL FRONT SEAT ASSEMBLY

(a) Place the front seat assembly in the cabin.

NOTICE:

Be careful not to damage the vehicle body.

(b) Connect the connectors under the seat.

(c) Temporarily install the front seat assembly with the 4 bolts.

(d) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(e) Tighten the 2 bolts on the front side of the seat.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

HINT:

Tighten the bolts in the order indicated in the illustration.

(f) Lift up the seat track adjusting handle and move the seat to the foremost position.

(g) Tighten the 2 bolts on the rear side of the seat.

Torque: **37 N·m (377 kgf·cm, 27ft·lbf)**

HINT:

Tighten the bolts in the order indicated in the illustration.

6. ZERO POINT CALIBRATION AND SENSITIVITY

(a) Perform zero point calibration and sensitivity check .

7. INSTALL INNER SEAT TRACK COVER

(a) Engage the claw and guide, and install the inner seat track cover.

P

8. INSTALL OUTER SEAT TRACK COVER

P

(a) Engage the 2 claws and install the outer seat track cover.

9. INSTALL FRONT SEAT HEADREST ASSEMBLY

P

(a) Install the front seat headrest assembly as shown in the illustration.

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected .

11. INSTALL REAR NO. 3 FLOOR BOARD

12. INSTALL REAR DECK FLOOR BOX (for Separate Type)

13. INSTALL REAR NO. 2 FLOOR BOARD

14. INSPECT FRONT SEAT ASSEMBLY

(a) During sliding operation of the front seat, check that the left and right adjusters move together smoothly and lock simultaneously.

If the seat adjusters do not lock simultaneously, loosen the seat mounting bolts to adjust the adjuster position.

(b) w/ Seat Heater Seat System:

Check the seat heater operation.

(1) Turn the power switch on (IG).

(2) Push the seat heater switch on.

(3) Wait 5 minutes or more and confirm that the seat surface becomes warm.

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY

(a) Disengage the 2 front hooks of the seat cushion from the vehicle body as shown in the illustration.

Text in Illustration

*1	100 mm (3.94 in.) or less
*2	Hook
*3	Guide

NOTICE:

Follow the instructions below carefully as the cushion frame deforms easily.

(1) Choose a hook to detach first. Place your hands near the hook as shown in the illustration. Then lift the seat cushion to detach the hook.

(2) Repeat the above procedure for the other hook.

(b) Disengage the 2 guides of the seat cushion from the seatback.

(c) Remove the rear seat cushion assembly.

2. REMOVE REAR SIDE SEATBACK ASSEMBLY LH

(a) Remove the bolt.

(b) Disengage the 2 guides and remove the rear side seatback assembly LH as shown in the illustration.

3. REMOVE REAR SIDE SEATBACK ASSEMBLY RH

(a) Remove the bolt.

(b) Disengage the 2 guides and remove the rear side seatback assembly RH as shown in the illustration.

4. DISCONNECT REAR CENTER SEAT BELT ASSEMBLY_ INFO

5. REMOVE REAR SEAT HEADREST ASSEMBLY LH

(a) Press the 2 headrest support buttons and pull up the rear seat headrest assembly LH as shown in the illustration.

6. REMOVE REAR SEAT HEADREST ASSEMBLY RH

(a) Press the 2 headrest support buttons and pull up the rear seat headrest assembly RH as shown in the illustration.

7. REMOVE REAR SEAT CENTER HEADREST ASSEMBLY

(a) Press the headrest support button and pull up the rear seat center headrest assembly as shown in the illustration.

P

8. REMOVE REAR SEATBACK ASSEMBLY LH

(a) Fold the rear seatback assembly LH forward.

P

(b) Disengage the fastener.

Text in Illustration

*1	Fastener
----	----------

P

(c) Remove the 2 bolts and rear seatback assembly LH.

9. REMOVE REAR SEATBACK ASSEMBLY RH

(a) Fold the rear seatback assembly RH forward.

(b) Disengage the fastener.

Text in Illustration

(c) Remove the 2 bolts and rear seatback assembly RH.

DISASSEMBLY

1. REMOVE REAR SEATBACK COVER LH

(a) Disengage the 4 claws and remove the rear seatback cover LH.

P

2. REMOVE REAR SEAT SHOULDER BELT GUIDE LH

(a) Remove the 2 screws.

P

(b) Disengage the guide and remove the rear seat shoulder belt guide LH.

3. REMOVE REAR SEATBACK STOP BUTTON GROMMET

(a) Disengage the 3 claws and remove the rear seatback stop button grommet.

P

4. REMOVE REAR SEATBACK COVER WITH PAD LH

(a) Using a clip remover, remove the 2 clips.

P

(b) Disengage the 6 clips.

P

(c) Remove the 13 hog rings.

P

(d) Disengage the 4 claws and remove the 2 rear seat headrest supports.

(e) Remove the rear seatback cover with pad LH from the rear seatback frame sub-assembly LH.

5. REMOVE SEPARATE TYPE REAR SEATBACK COVER LH

2010 Toyota Prius

Repair Manual

(a) Remove the 9 hog rings.

P

6. REMOVE REAR SEATBACK LOCK RELEASE BUTTON LH

(a) Remove the rear seatback frame LH from the rear seatback lock release button LH as shown in the illustration.

P

7. REMOVE REAR SEATBACK LOCK ASSEMBLY LH

(a) Remove the 2 bolts and rear seatback lock assembly LH.

P

8. REMOVE REAR SEATBACK CENTER COVER

(a) Disengage the 4 claws and remove the rear seatback center cover.

P

9. REMOVE REAR SEATBACK COVER RH

(a) Disengage the 4 claws and remove the rear seatback cover RH.

10. REMOVE REAR SEAT SHOULDER BELT GUIDE RH

(a) Remove the 2 screws.

(b) Disengage the guide and remove the rear seat shoulder belt guide RH.

11. REMOVE REAR SEATBACK STOP BUTTON GROMMET

(a) Disengage the 3 claws and remove the rear seatback stop button grommet.

12. REMOVE CENTER ARMREST HINGE COVER

(a) Using a screwdriver wrapped with protective tape, disengage the claw and remove the center armrest hinge cover as shown in the illustration.

Text in Illustration

*1

Protective Tape

13. REMOVE REAR SEAT CENTER ARMREST ASSEMBLY

(a) Remove the bolt and bush.

(b) Separate the pin and remove the center armrest assembly.

(c) Remove the bush.

14. REMOVE REAR SEATBACK COVER WITH PAD RH

(a) Using a clip remover, remove the 3 clips.

P

(b) Disengage the 6 clips.

P

(c) Remove the 16 hog rings.

(d) Disengage the guide and remove the rear seat shoulder belt guide RH.

P

(e) Disengage the 2 claws and remove the seat belt anchor cover cap.

(f) Move the rear seat shoulder belt hole cover in the direction indicated by the arrow in the illustration to disengage the 2 claws (A).

(g) Move the rear seat shoulder belt hole cover in the direction indicated by the arrow in the illustration to disengage the 2 claws (B) and remove the cover.

(h) Disengage the 4 claws and remove the 2 rear seat center headrest supports.

(i) Disengage the 4 claws and remove the 2 rear seat headrest supports.

(j) Remove the rear seatback cover with pad RH from the rear seatback frame sub-assembly RH.

15. REMOVE REAR CENTER SEAT BELT ASSEMBLY INFO

16. REMOVE SEPARATE TYPE REAR SEATBACK COVER RH

P

(a) Remove the 7 hog rings.

P

(b) Remove the 9 hog rings.

(c) Remove the separate type rear seatback cover RH.

17. REMOVE REAR SEATBACK LOCK RELEASE BUTTON RH

P

(a) Remove the rear seatback frame RH from the rear seatback lock release button RH as shown in the illustration.

18. REMOVE REAR SEATBACK LOCK ASSEMBLY RH

(a) Remove the 2 bolts and rear seatback lock assembly RH.

19. REMOVE BENCH TYPE REAR SEAT CUSHION COVER

(a) Remove the 28 hog rings.

(b) Remove the 14 hog rings and rear seat cushion cover.

REASSEMBLY

1. INSTALL BENCH TYPE REAR SEAT CUSHION COVER

(a) Using hog ring pliers, install the rear seat cushion cover with 14 new hog rings.

P

NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

(b) Using hog ring pliers, install the rear seat cushion cover with 28 new hog rings.

P

NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

2. INSTALL REAR SEATBACK LOCK ASSEMBLY LH

(a) Install the rear seatback lock assembly LH with the 2 bolts.

Torque: **30 N·m (306 kgf·cm, 22ft·lbf)**

P

3. INSTALL REAR SEATBACK LOCK RELEASE BUTTON LH

(a) Install the rear seatback lock release button LH to the rear seatback frame LH as shown in the illustration.

P

4. INSTALL SEPARATE TYPE REAR SEATBACK COVER LH

(a) Using hog ring pliers, install the separate type rear seatback cover LH to the separate type rear seatback pad LH with 9 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

5. INSTALL REAR SEATBACK COVER WITH PAD LH

(a) Temporarily install the rear seatback cover with pad LH to the rear seatback frame sub-assembly LH.

(b) Engage the 4 claws and install the 2 rear seat headrest supports.

(c) Using hog ring pliers, install 13 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

(d) Engage the 6 clips and Install the rear seatback cover with pad LH with the 2 clips.

6. INSTALL REAR SEATBACK STOP BUTTON GROMMET

(a) Engage the 3 claws and install the rear seatback stop button grommet.

7. INSTALL REAR SEAT SHOULDER BELT GUIDE LH

(a) Engage the guide and install the rear seat shoulder belt guide LH with the 2 screws.

8. INSTALL REAR SEATBACK COVER LH

(a) Engage the 4 claws and install the rear seatback cover LH.

9. INSTALL REAR SEATBACK LOCK ASSEMBLY RH

(a) Install the rear seatback lock assembly RH with 2 bolts.

Torque: **30 N·m (306 kgf·cm, 22ft·lbf)**

10. INSTALL REAR SEATBACK LOCK RELEASE BUTTON RH

(a) Install the rear seatback lock release button RH to the rear seatback frame RH as shown in the illustration.

P

11. INSTALL REAR CENTER SEAT BELT ASSEMBLY_ INFO

12. INSTALL SEPARATE TYPE REAR SEATBACK COVER RH

(a) Temporarily install the separate type rear seatback cover RH.

(b) Using hog ring pliers, install 9 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

P

(c) Using hog ring pliers, install the rear seatback cover with pad RH with 7 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

(d) Install the rear seatback cover with pad RH.

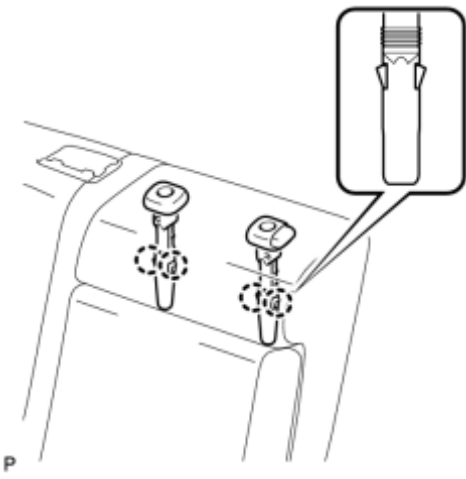

13. INSTALL REAR SEATBACK COVER WITH PAD RH

(a) Temporarily install the rear seatback cover with pad RH.

(b) Engage the 4 claws and install the 2 rear seat headrest supports.

(c) Engage the 4 claws and install the 2 rear seat center headrest supports.

(d) Move the rear seat shoulder belt hole cover in the direction indicated by the arrow in the illustration to engage the 2 claws (A).

(e) Move the rear seat shoulder belt hole cover in the direction indicated by the arrow in the illustration to disengage the 2 claws (B) and remove the cover.

(f) Engage the 2 claws and install the seat belt anchor cover cap.

(g) Using hog ring pliers, install 16 new hog rings.

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as

much as possible.

P

(h) Engage the 6 clips and Install the rear seatback cover with pad RH with the 3 clips.

P

14. INSTALL REAR SEAT CENTER ARMREST ASSEMBLY

(a) Install the bush.

P

(b) Insert the pin into the rear seatback.

P

(c) Install the rear seat center armrest assembly with the bolt and bush.

15. INSTALL CENTER ARMREST HINGE COVER

P

(a) Engage the claw and install the center armrest hinge cover as shown in the illustration.

16. INSTALL REAR SEATBACK STOP BUTTON GROMMET

P

(a) Engage the 3 claws and install the rear seatback stop button grommet.

17. INSTALL REAR SEAT SHOULDER BELT GUIDE RH

(a) Engage the guide and install the rear seat shoulder belt guide RH with the 2 screws.

18. INSTALL REAR SEATBACK COVER RH

(a) Engage the 4 claws and install the rear seatback cover RH.

19. INSTALL REAR SEATBACK CENTER COVER

(a) Engage the 4 claws and install the rear seatback center cover.

INSTALLATION

1. INSTALL REAR SEATBACK ASSEMBLY RH

(a) Place the rear seatback assembly RH in the cabin.

NOTICE:

Be careful not to damage the vehicle body.

(b) Install the rear seatback assembly RH with the 2 bolts.

Torque: **37 N·m (377 kgf·cm, 27ft·lbf)**

2. INSTALL REAR SEATBACK ASSEMBLY LH

(a) Place the rear seatback assembly LH in the cabin.

NOTICE:

Be careful not to damage the vehicle body.

(b) Install the rear seatback assembly LH with the 2 bolts.

Torque: **37 N·m (377 kgf·cm, 27ft·lbf)**

3. INSTALL REAR SEAT CENTER HEADREST ASSEMBLY

(a) Install the rear seat center headrest assembly as shown in the illustration.

4. INSTALL REAR SEAT HEADREST ASSEMBLY RH

(a) Install the rear seat headrest assembly RH as shown in the illustration.

5. INSTALL REAR SEAT HEADREST ASSEMBLY LH

(a) Install the rear seat headrest assembly LH as shown in the illustration.

6. CONNECT REAR CENTER SEAT BELT ASSEMBLY_ INFO

7. INSTALL REAR SIDE SEATBACK ASSEMBLY RH

(a) Engage the 2 guides as shown in the illustration.

(b) Install the rear side seatback assembly RH with the bolt.

Torque: **18 N·m (184 kgf·cm, 13ft·lbf)**

8. INSTALL REAR SIDE SEATBACK ASSEMBLY LH

(a) Engage the 2 guides as shown in the illustration.

(b) Install the rear side seatback assembly LH with the bolt.

Torque: **18 N·m (184 kgf·cm, 13ft·lbf)**

9. INSTALL REAR SEAT CUSHION ASSEMBLY

(a) Engage the 2 guides of the seat cushion to the seatback.

Text in Illustration

*1	100 mm (3.94 in.) or less
*2	Guide
*3	Hook

(b) Engage the 2 front hooks of the seat cushion to the vehicle body.

NOTICE:

When installing the seat cushion, make sure that the seat belt buckle is not under the seat cushion.

HINT:

Confirm that the seat cushion is firmly installed.

P

REMOVAL

1. REMOVE FRONT CONSOLE BOX COVER INFO

2. REMOVE SEAT HEATER SWITCH

(a) Disengage the 2 claws and 3 guides, and remove the seat heater switch as shown in the illustration.

P

INSPECTION

1. INSPECT SEAT HEATER SWITCH

*1

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
L26-5 (IG) - L26-6 (LH)	"L" switch off	10 k Ω or higher
L26-5 (IG) - L26-6 (LH)	"L" switch on	Below 1 Ω
L26-4 (IG) - L26-3 (RH)	"R" switch off	10 k Ω or higher
L26-4 (IG) - L26-3 (RH)	"R" switch on	Below 1 Ω

If the result is not as specified, replace the seat heater switch.

(b) Turn the seat heater switch on and check if the seat heater switch indicator comes on.

OK:

Connection	Switch Condition	Specified Condition
Battery positive (+) → L26-5 (IG)	"L" Switch on	Comes on
Battery negative (-) → L26-2 (E)		
Battery positive (+) → L26-4 (IG)	"R " Switch off	Comes on
Battery negative (-) → L26-2 (E)		

If the result is not as specified, replace the seat heater switch.

(c) Check if the seat heater switch comes on.

OK:

Connection	Switch Condition	Specified Condition
Battery positive (+) → L26-7 (ILL+)	Always	Comes on
Battery positive (-) → L26-8 (ILL-)		

If the result is not as specified, replace the seat heater switch.

INSTALLATION

1. INSTALL SEAT HEATER SWITCH

(a) Engage the 3 guides and 2 claws, and install the seat heater switch as shown in the illustration.

P

2. INSTALL FRONT CONSOLE BOX COVER_ INFO

PRECAUTION

1. NOTICE FOR INITIALIZATION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing .

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) .

3. REMOVE REAR DECK FLOOR BOX .

4. REMOVE REAR NO. 3 FLOOR BOARD .

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected .

6. REMOVE INTEGRATION CONTROL AND PANEL ASSEMBLY .

7. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY .

8. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH .

9. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY .

10. REMOVE RADIO RECEIVER WITH BRACKET (w/o Navigation System) .

11. REMOVE NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System) .

12. REMOVE NO. 1 SIDE DEFROSTER NOZZLE .

13. REMOVE NO. 2 INSTRUMENT PANEL REGISTER .

14. REMOVE GLOVE COMPARTMENT DOOR .

15. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL GARNISH .

16. REMOVE PASSENGER SEAT BELT WARNING LIGHT ASSEMBLY

(a) Disengage the 2 claws to remove the passenger seat belt warning light assembly.

c

INSPECTION

1. INSPECT PASSENGER SEAT BELT WARNING LIGHT ASSEMBLY

(a) Apply battery voltage to the connector and check the passenger airbag ON/OFF indicator condition.

Result:

Connection	Result
Battery positive (+) → M2-6 (IG+)	"ON" comes on
Battery negative (-) → M2-1 (PAON)	
Battery positive (+) → M2-6 (IG+)	"OFF" comes on
Battery negative (-) → M2-5 (P-AB)

SYSTEM DIAGRAM

PRECAUTION

CAUTION:

- The vehicle is equipped with a Supplemental Restraint System (SRS), which consists of a steering pad, front passenger airbag, curtain shield airbag, front seat side airbag, seat belt pretensioner, center airbag sensor, front airbag sensor, side airbag sensor, rear airbag sensor, occupant classification ECU and seat position airbag sensor. Failure to carry out service procedures in the correct sequence could cause SRS parts to unexpectedly deploy and possibly lead to serious injuries. Furthermore, if a mistake is made when service SRS parts, they may fail to operate when required. Before performing servicing (including installation/removal, inspection and replacement of parts), be sure to read the following precautions.
- Before starting work, wait at least 90 seconds after the power switch is turned OFF and after the cable of the negative (-) battery terminal is disconnected. (SRS parts are equipped with a back-up power source. If work is started within 90 seconds of turning the power switch OFF and disconnecting the cable from the negative (-) battery terminal, SRS parts may deploy.)

(The SRS is equipped with a back-up power source, so if work is started within 90 seconds of disconnecting the negative (-) terminal cable of the battery, the SRS may be deployed).

- Do not expose the steering pad, front passenger airbag, center airbag sensor, front airbag sensor, front seat inner belt, seat position airbag sensor, occupant classification ECU, front seat airbag, side airbag sensor, curtain shield airbag, rear seat airbag, rear airbag sensor, front seat outer belt or rear seat outer belt directly to hot air or flames.

NOTICE:

- Malfunction symptoms of SRS parts are difficult to confirm. DTCs are the most important source of information when troubleshooting. During troubleshooting, always confirm DTCs before disconnecting the cable from the negative (-) battery terminal.
- Even in the case of a minor collision when the SRS does not deploy, the steering pad, front passenger airbag, center airbag sensor, front airbag sensor, front seat inner belt, seat position airbag sensor, occupant classification ECU, front seat side airbag, side airbag sensor, curtain shield airbag, rear seat airbag, rear airbag sensor, front seat outer belt or rear seat outer belt should be inspected.
- Before repair work, remove airbag sensors as necessary if any kind of impact is likely to occur to an airbag sensor during the operation.
- Never use SRS parts from another vehicle. When replacing SRS parts, replace them with new ones.
- Never disassemble or attempt to repair SRS parts.
- If an SRS part has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace the SRS part with a new one.
- Use an ohmmeter/voltmeter with high impedance (10 k Ω /V minimum) for troubleshooting the electrical circuits.
- Information labels are attached to the periphery of SRS parts. Follow the cautions and instructions on the labels.
- After work on SRS parts is completed, perform the SRS warning light check .
- When the cable is disconnected from the negative (-) battery terminal, the memory settings of each system will be cleared. Because of this, be sure to write down the settings of each system before starting work. When work is finished, reset the settings of each system as before. Never use a back-up power supply from outside the vehicle to avoid erasing the memory in a system.
- If the vehicle is equipped with a mobile communication system, refer to the precaution in the INTRODUCTION section .
- When disconnecting the cable from the negative (-) battery terminal, initialize the following system(s) after the cable is reconnected.

SYSTEM NAME	SEE PROCEDURE
Power Window Control System	

HINT:

In the airbag system, the center airbag sensor, front airbag sensor LH and RH, side airbag sensor LH and RH, rear airbag sensor LH and RH are collectively referred to as the airbag sensors.

1. HANDLING PRECAUTIONS FOR AIRBAG SENSORS

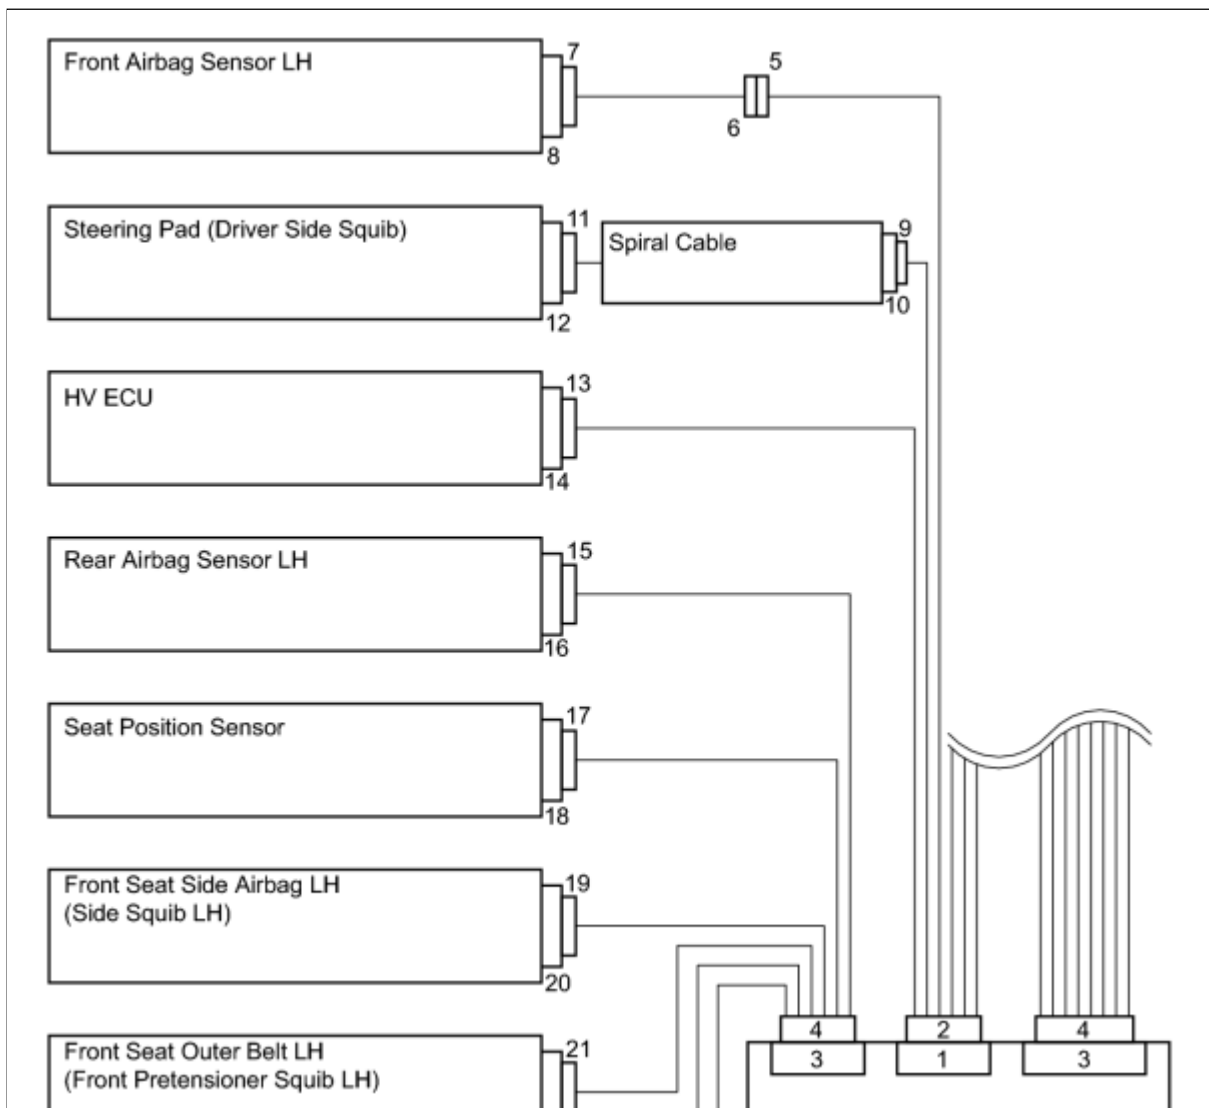

- (a) Before starting the following operations, wait for at least 90 seconds after disconnecting the negative (-) terminal cable from the battery:
- (1) Replacement of the airbag sensors.
 - (2) Adjustment of the front/rear doors of the vehicle equipped with the side airbag and curtain shield airbag (fitting adjustment).
- (b) When connecting or disconnecting the airbag sensor connectors, ensure that each sensor is installed in the vehicle.
- (c) Do not use the airbag sensors which has been dropped during the operation or transportation.
- (d) Do not disassemble the airbag sensors.

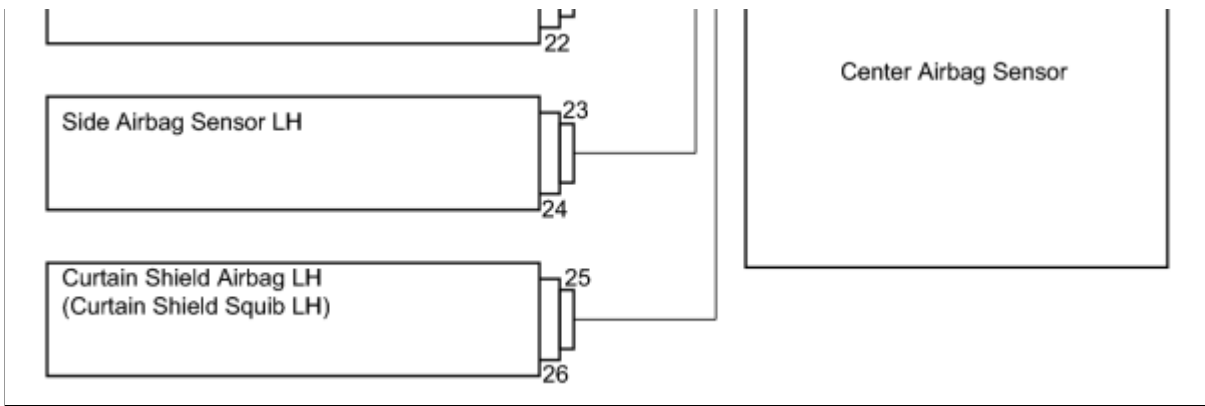

2. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

- (a) When the airbag has not deployed, confirm the DTCs by checking the SRS warning light. If there is any malfunction in the SRS airbag system, perform troubleshooting.
- (b) When any of the airbags have deployed, replace the airbag sensors and check the installation condition.

3. SRS CONNECTORS

- (a) SRS connectors are located as shown in the following illustration.

T

NO.	ITEM	APPLICATION
(1)	Terminal Twin-Lock Mechanism	Connectors 5, 6, 7, 9, 10, 15, 19, 20, 23, 27, 28
(2)	Activation Prevention Mechanism	Connectors 2, 4, 10, 12, 20, 22, 26, 28, 30
(3)	Half Connection Prevention Mechanism	Connectors 6, 7, 9, 15, 19, 23, 27
(4)	Connector Lock Mechanism (1)	Connectors 11, 21, 25, 29
(5)	Connector Lock Mechanism (2)	Connectors 2, 4
(6)	Improper Connection Prevention Lock Mechanism	Connectors 1, 3

(b) All connectors in the SRS, except the seat position airbag sensor connector, are colored yellow to distinguish them from other connectors. These connectors have special functions, and are specially designed for the SRS. All SRS connectors use durable gold-plated terminals, and are placed in the locations shown above to ensure high reliability.

(1) Terminal twin-lock mechanism:

All connectors with a terminal twin-lock mechanism have a two-piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent terminals from coming out.

(2) Activation prevention mechanism:

All connectors with an activation prevention mechanism contain a short spring plate. When these connectors are disconnected, the short spring plate creates a short circuit by automatically connecting the positive (+) and negative (-) terminals of the squib.

(3) Half connection prevention mechanism:

If the connector is not completely connected, the connector is disconnected due to the spring operation so that no continuity exists.

(4) Connector position assurance mechanism:

Only when the housing lock (white part) is completely engaged, the CPA (yellow part) slides, which completes the connector engagement.

(5) Connector lock mechanism (1):

Locking the connector lock button connects the connector securely.

(6) Connector lock mechanism (2):

Both the primary lock with holder lances and the secondary lock with retainer prevent the connectors from being disconnected.

(7) Improper connection prevention lock mechanism:

When connecting the holder, the lever is pushed into the end by rotating around the A axis to lock the holder securely.

4. DISCONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG (SQUIB SIDE), CURTAIN SHIELD AIRBAG AND FRONT SEAT OUTER BELT

HINT:

Tape the screwdriver tip before use.

- (a) Release the lock button (yellow part) of the connector using a screwdriver.
- (b) Insert the screwdriver tip between the connector and the base, and then raise the connector.

5. CONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG (SQUIB SIDE), CURTAIN SHIELD AIRBAG AND FRONT SEAT OUTER BELT

(a) Connect the connector.

(b) Push down securely on the lock button (yellow part) of the connector. When locking, a click sound can be heard.

6. DISCONNECTION OF CONNECTOR FOR FRONT PASSENGER AIRBAG (INSTRUMENT PANEL WIRE SIDE)

(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.

7. CONNECTION OF CONNECTOR FOR FRONT PASSENGER AIRBAG (INSTRUMENT PANEL WIRE SIDE)

- (a) Connect the connector as shown in the illustration. When locking, make sure that the slider returns to its original position and a click sound can be heard.

HINT:

When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

8. DISCONNECTION OF CONNECTORS FOR FRONT SEAT AIRBAG

- (a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.

9. CONNECTION OF CONNECTORS FOR FRONT SEAT AIRBAG

- (a) Connect the connector as shown in the illustration. When locking, make sure that the slider returns to its original position and a click sound can be heard.

HINT:

When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

10. DISCONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR

(a) Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).

HINT:

Perform the following procedures when replacing the holder.

(b) Remove the holder.

(1) Using a screwdriver, unlock the retainer.

(2) Release the fitting lance and remove the holder.

(c) Install the holder.

(1) Install the connectors to the holder. When locking, a click sound can be heard.

HINT:

The retainer is locked when the holder is connected.

11. CONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR

(a) Firmly insert the holder (with connectors) into the center airbag sensor until it cannot be pushed any further.

(b) Push the lever to connect the holder (with connectors). When locking, a click sound can be heard.

HINT:

The holder slides in to the center airbag sensor when it is being connected. Be sure not to hold the holder while connecting, as it may result in an insecure fit.

12. DISCONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR

(a) Push down the housing lock (white part) and slide the CPA (yellow part). At this time, the connector cannot be disconnected yet.

(b) Push down the housing lock (white part) again and disconnect the connector.

HINT:

Do not push down the A part shown in the illustration when disconnecting.

(c) After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.

13. CONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR

(a) Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.

(b) Be sure to engage the connectors until they are locked. When locking, make sure that a click sound can be heard.

HINT:

When connecting them, the housing lock (white part) slides. Be sure not to hold the housing lock (white part) and part A, as it may result in an insecure fit.

14. DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) While holding both the sides of the outer connector locking sleeve, slide the outer in the direction shown by the arrow.

(b) When the connector lock is released, the connectors are disconnected.

HINT:

Be sure to hold both outer flank sides. Holding the top and bottom will make disconnection difficult.

15. CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

- (a) Connect the connector as shown in the illustration. When locking, make sure that the outer returns to its original position and a click sound can be heard.

HINT:

When connecting, the outer will slide. Be sure not to hold the outer while connecting, as it may result in an insecure fit.

SYSTEM DESCRIPTION

1. SRS AIRBAG SYSTEM OUTLINE

(a) FRONTAL COLLISION

- (1) The driver and front passenger airbag are designed to supplement seat belts in the event of a front collision in order to help reduce shock to the head and chest of the driver and front passenger.
- (2) Frontal collisions are detected by the center airbag sensor and two front airbag sensors. The driver and front passenger airbag and the seat belt pretensioner then operate simultaneously.
- (3) Electrical deceleration sensors are built into the two front airbag sensors in the engine compartment in order to detect the severity of the impact during the initial stage of the collision. The deployment of the driver and front passenger airbags are controlled in two stages according to the severity of the impact.

(b) SIDE COLLISION

- (1) The front seat airbag and curtain shield airbag are designed to help reduce shock to the driver, front passenger and rear outer passenger. The curtain shield airbag was designed to help reduce shock to the front and rear passengers in the event of a side collision.
- (2) Side collisions are detected by the side airbag sensor installed in the bottom of the center pillar and the rear airbag sensor installed in the bottom of the rear pillar. Front side collisions are detected by the side airbag sensor, causing the front seat side airbag and curtain shield airbag to deploy simultaneously. Rear side collisions are detected by the rear airbag sensor to deploy only the curtain shield airbag.

2. CONSTRUCTION AND OPERATION

(a) FRONT AIRBAG SENSOR

- (1) The front airbag sensors are installed on the right and left side members.
- (2) The deceleration sensor and safing sensor are built into the airbag sensor front and distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a frontal collision. Accordingly, the extent of the initial collision can be detected in detail.

(b) SIDE AIRBAG SENSOR

- (1) The side airbag sensors are installed on the right and left center pillars.
- (2) The side airbag sensor consists of the deceleration sensor, safing sensor, ignition control circuit, and diagnostic circuit. The side airbag sensor receives signals from the deceleration sensor and determines whether the front seat side airbag and curtain shield airbag should be activated, and diagnoses system malfunctions simultaneously.

(c) REAR AIRBAG SENSOR

- (1) The rear airbag sensor is installed on the bottom of the right and left rear pillars respectively.
- (2) The deceleration sensor and safing sensor are built into the rear airbag sensor and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a rear side collision.

(d) CENTER AIRBAG SENSOR

(1) General

- The center airbag sensor is installed on the center floor under the instrument panel.
- The center airbag sensor consists of the deceleration sensor, safing sensor, electrical safing sensor, ignition control circuit and diagnostic circuit.
- The center airbag sensor receives signals from the deceleration sensors and safing sensors built into the center airbag sensor and front airbag sensor.
- The center airbag sensor causes the front seat side airbag and the curtain shield airbag to deploy when receiving signals from the deceleration sensor and the safing sensor built into the side airbag sensor.
- The center airbag sensor receives signals from the deceleration sensors and the electrical safing sensors built into the center airbag sensor and the rear airbag sensor, and determines whether or

sensors built into the center airbag sensor and the rear airbag sensor, and determines whether or not the curtain shield airbag should be activated, and then diagnoses system malfunctions.

- The center airbag sensor can be checked using check mode, which can detect and output DTCs. If the malfunction does not recur during troubleshooting, joggling each connector or driving on various types of roads with the center airbag sensor in check mode as a simulation method makes it possible to obtain more accurate information.

(2) Deceleration sensor and ignition control circuit

- The deceleration sensor is built into the center airbag sensor, and the distortion created based on the deceleration of the vehicle during a frontal or rear side collision is converted into an electric signal.
- The ignition control circuit performs calculations based on the signal output from the deceleration sensors of the center airbag sensor and front airbag sensor. If the calculated values are greater than the specified values, the airbag deploys.

(3) Safing sensor

- The safing sensor is built into the center airbag sensor. During a frontal collision, the sensor turns on and outputs an ON signal to the center airbag sensor if a deceleration rate greater than the specified value is applied to the safing sensor.

(4) Electronic safing sensor

- The electronic safing sensor is built into the center airbag sensor. During a rear side collision, the sensor turns on and outputs an ON signal to the center airbag sensor if a deceleration rate greater than the specified value is applied to the electronic safing sensor.

(5) Back-up power source

- The back-up power source consists of a condenser and a DC-DC converter. When the power system does not function during a collision, the condenser discharges and supplies electric power to the system. The DC-DC converter operates as a boosting transformer when the battery voltage falls below a predetermined level.

(6) Diagnostic circuit

- This circuit constantly diagnoses the system malfunctions. When a malfunction is detected, it lights up the SRS warning light on the combination meter to inform the driver.

(7) Memory circuit

- When a malfunction is detected in the diagnostic circuit, it is coded and stored in the memory circuit.

(e) SRS WARNING LIGHT

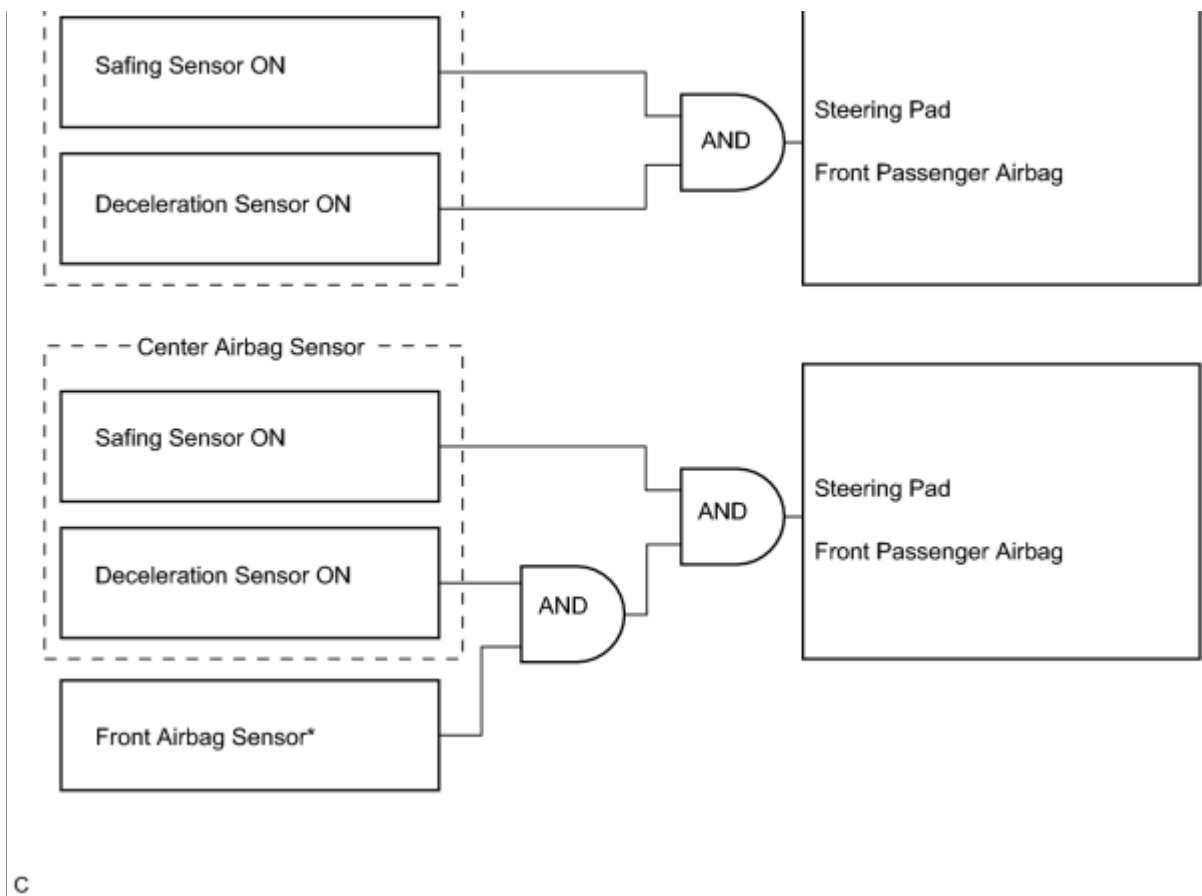

- (1) The SRS warning light is located on the combination meter. The SRS warning light informs the driver of detected malfunctions in the diagnostic circuit of the center airbag sensor or the SRS airbag system. Under normal operating conditions when the power switch is turned on, the SRS warning light comes on for approximately 6 seconds and then goes off.

3. DEPLOYMENT CONDITION

When the vehicle collides and the shock is greater than the specified value, the SRS is activated automatically. The center airbag sensor includes the safing sensor and deceleration sensor. The safing sensor was designed to be turned on at a smaller deceleration rate than the deceleration sensor.

- (a) The center airbag sensor determines whether or not ignition is necessary based on signals from the deceleration sensor and the front airbag sensor*. If the deceleration sensor, front airbag sensor* and safing sensor turn on simultaneously, current flows to the squibs to deploy the SRS as shown in the illustration below.

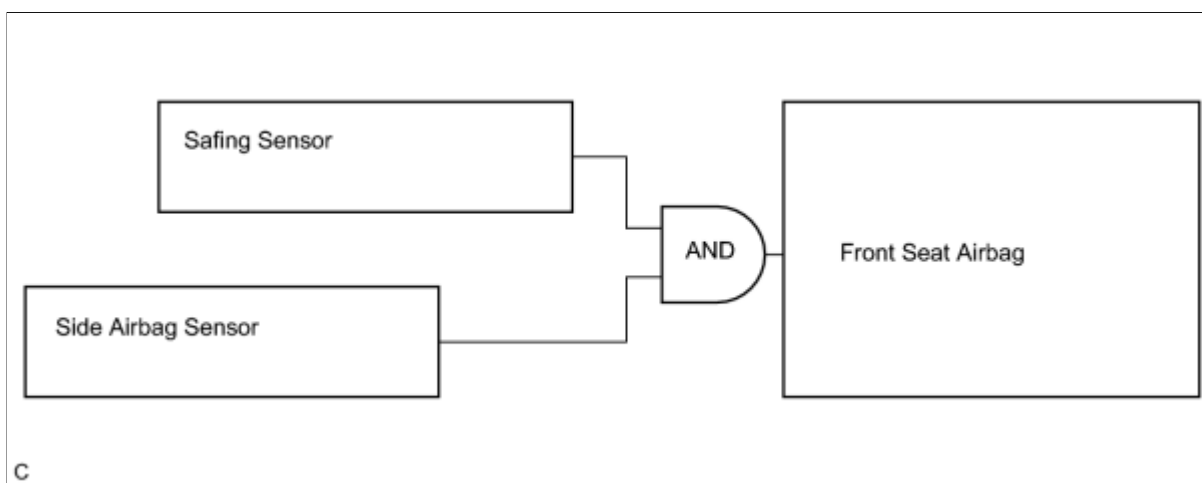

HINT:

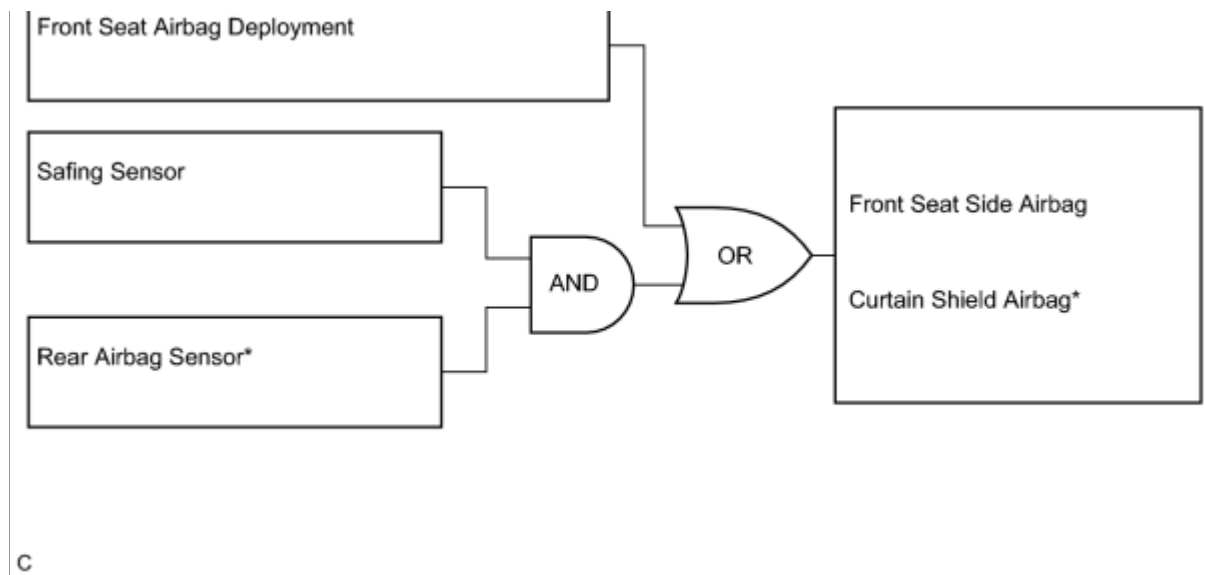

*: In case of front collision, the ignition signal could be output with the deceleration sensor ON signal even without a signal from the front airbag sensor.

(b) The center airbag sensor determines whether or not ignition is necessary based on signals from the side airbag sensor. If the side airbag sensor and safing sensor turn on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.

(c) The center airbag sensor determines whether or not ignition is necessary based on signals from the rear airbag sensor. If the rear airbag sensor and safing sensor turn on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.

**HINT:**

*: If the front seat side airbag deploys, the curtain shield airbag will also deploy, regardless of whether the signal is output from the rear airbag sensor.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the airbag system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

DIAGNOSIS SYSTEM

1. DESCRIPTION

The center airbag sensor controls the functions of the Supplemental Restraint System (SRS) on the vehicle. Data of the SRS can be read in the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for a malfunction and perform repairs.

2. CHECK DLC3

- (a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

SYMBOLS (TERMINAL NO.)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch is OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Power switch is OFF*	1 k Ω or more
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch is OFF*	1 k Ω or more
CANL (14) - Battery positive	LOW-level CAN bus line	Power switch is OFF*	1 M Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch is OFF*	1 M Ω or more

NOTICE:

*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the Techstream to the DLC3, turn the power switch ON (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the Techstream.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to

another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the power switch ON (IG)).

- (1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

HINT:

Shaking the relays too strongly may result in open relays.

- (2) Slightly shake the connector vertically and horizontally.
- (3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

4. FUNCTION OF SRS WARNING LIGHT

(a) Primary check.

- (1) Turn the power switch OFF. Wait for at least 2 seconds, then turn the power switch ON (IG). The SRS warning light comes on for approximately 6 seconds and the diagnosis of the airbag system (including the seat belt pretensioners) is performed.

HINT:

If trouble is detected during the primary check, the SRS warning light remains on even after the primary check period (for approximately 6 seconds) has elapsed.

(b) Constant check.

- (1) After the primary check, the center airbag sensor constantly monitors the airbag system for trouble.

HINT:

If trouble is detected during the constant check, the center airbag sensor functions as follows:

- The SRS warning light comes on.
- The SRS warning light goes off, and then comes on. This blinking pattern indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.

(c) Review.

- (1) When the airbag system is normal:

(1) When the airbag system is normal:

The SRS warning light comes on only during the primary check period (for approximately 6 seconds after the power switch is turned ON (IG)).

(2) When the airbag system has trouble:

- The SRS warning light remains on even after the primary check period has elapsed.
- The SRS warning light goes off after the primary check, but comes on again during the constant check.
- The SRS warning light does not come on when turning the power switch from OFF to ON (IG).

HINT:

The center airbag sensor keeps the SRS warning light on if the airbag has been deployed.

5. SRS WARNING LIGHT CHECK

(a) Turn the power switch ON (IG), and check that the SRS warning light comes on for approximately 6 seconds (primary check).

(b) Check that the SRS warning light goes off approximately 6 seconds after the power switch is turned ON (IG) (constant check).

HINT:

When any of the following symptoms occur, refer to the "Problem Symptoms Table" .

- The SRS warning light comes on occasionally after the primary check period has elapsed.
- The SRS warning light comes on, but a DTC is not output.
- The power switch is turned from OFF to ON (IG), but the SRS warning light does not come on.

6. ACTIVATION PREVENTION MECHANISM

(a) FUNCTION OF ACTIVATION PREVENTION MECHANISM

- (1) An activation prevention mechanism is built into the connector on the center airbag sensor side of the airbag system squib circuit to prevent accidental airbag activation.
- (2) This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and shutting off external electricity to prevent accidental airbag activation.

(b) RELEASE METHOD OF ACTIVATION PREVENTION MECHANISM

- (1) To release the activation prevention mechanism, insert a piece of paper with the same thickness as the male terminal (approximately 0.5 mm (0.020 in.)) between the terminals and the short spring to break the connection.
- (2) Refer to the illustrations below concerning connectors utilizing the activation prevention mechanism and its release method.

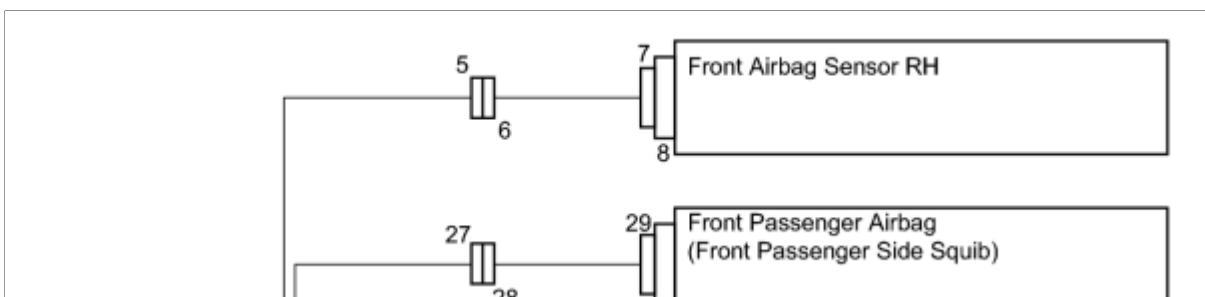

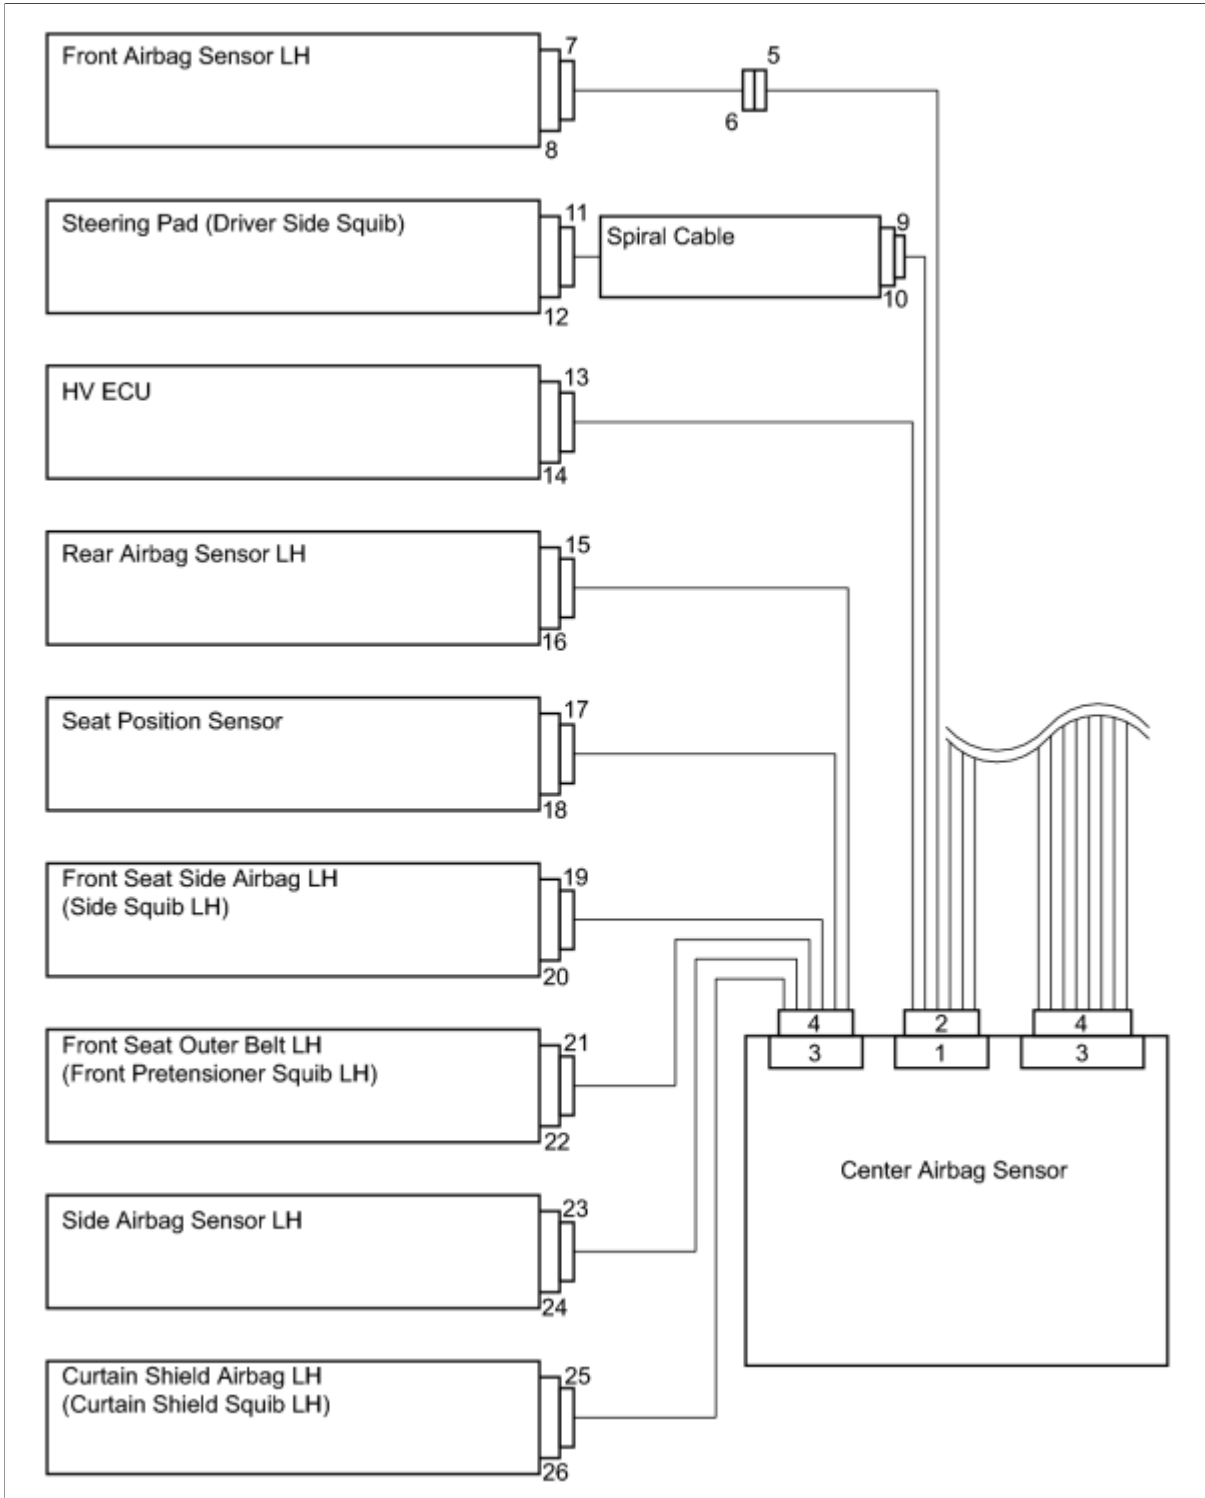

CAUTION:

Never release the activation prevention mechanism on the squib connector even when inspecting with the squib disconnected.

NOTICE:

- Do not release the activation prevention mechanism unless specially directed by the troubleshooting procedure.

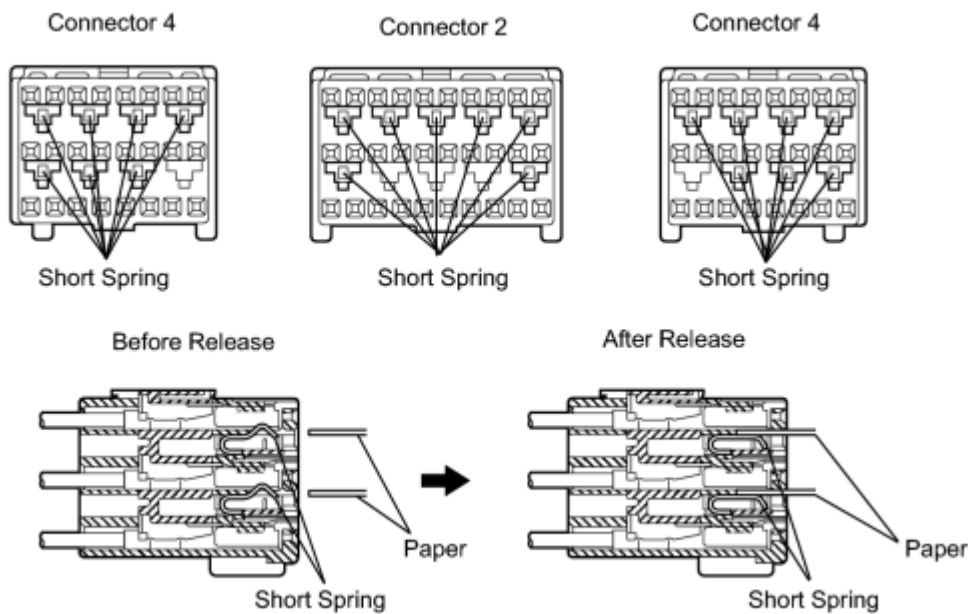

- Do not release the activation prevention mechanism unless explicitly directed by the troubleshooting procedure.
- To prevent the terminal and the short spring from being damaged, always use a piece of paper of the same thickness as the male terminal.

T

Center Airbag Sensor Connector

C

DTC CHECK / CLEAR

1. CHECK DTC (USING SST CHECK WIRE)

(a) Check for DTCs (Present DTC).

(1) Turn the power switch ON (IG), and wait for approximately 60 seconds.

(2) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST: 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(b) Check for DTCs (Past DTC).

(1) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST: 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(2) Turn the power switch ON (IG), and wait for approximately 60 seconds.

Normal System Code (without Past Trouble Code)

Normal System Code (with Past Trouble Code)

DTC (Example DTCs 11 and 31)

(c) Read the DTCs.

(1) Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and DTCs 11 and 31 are shown in the illustration.

- Normal system code indication (without past DTC)

The light blinks twice per second.

- Normal system code indication (with past DTC)

When the past DTC is stored in the center airbag sensor, the light blinks once per second.

- DTC indication

The first blinking pattern indicates the first digit DTC. The second blinking pattern occurs after a 1.5-second pause.

If there are 2 or more DTCs, there is a 2.5-second pause between each DTC. After all DTCs are shown, there is a 4.0-second pause, and they are all repeated.

- If 2 or more malfunctions are found, the indication begins with the lowest numbered DTC.
- If DTCs are indicated without connecting the terminals, proceed to the "TC and CG Terminal Circuit" .

DTC 11 DTC 31

T

2. CLEAR DTC (USING SST CHECK WIRE)

(a) Clear the DTCs.

(1) When the power switch is turned OFF, the DTCs are cleared.

HINT:

Depending on the DTCs, the DTCs may not all be cleared by turning off the power switch. In this case, proceed to the next step.

(2) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3, and then turn the power switch on.

SST: 09843-18040

(3) Disconnect terminal 13 (TC) of the DLC3 within 3 to 10 seconds after the DTCs are output, and check that the SRS warning light comes on after 3 seconds.

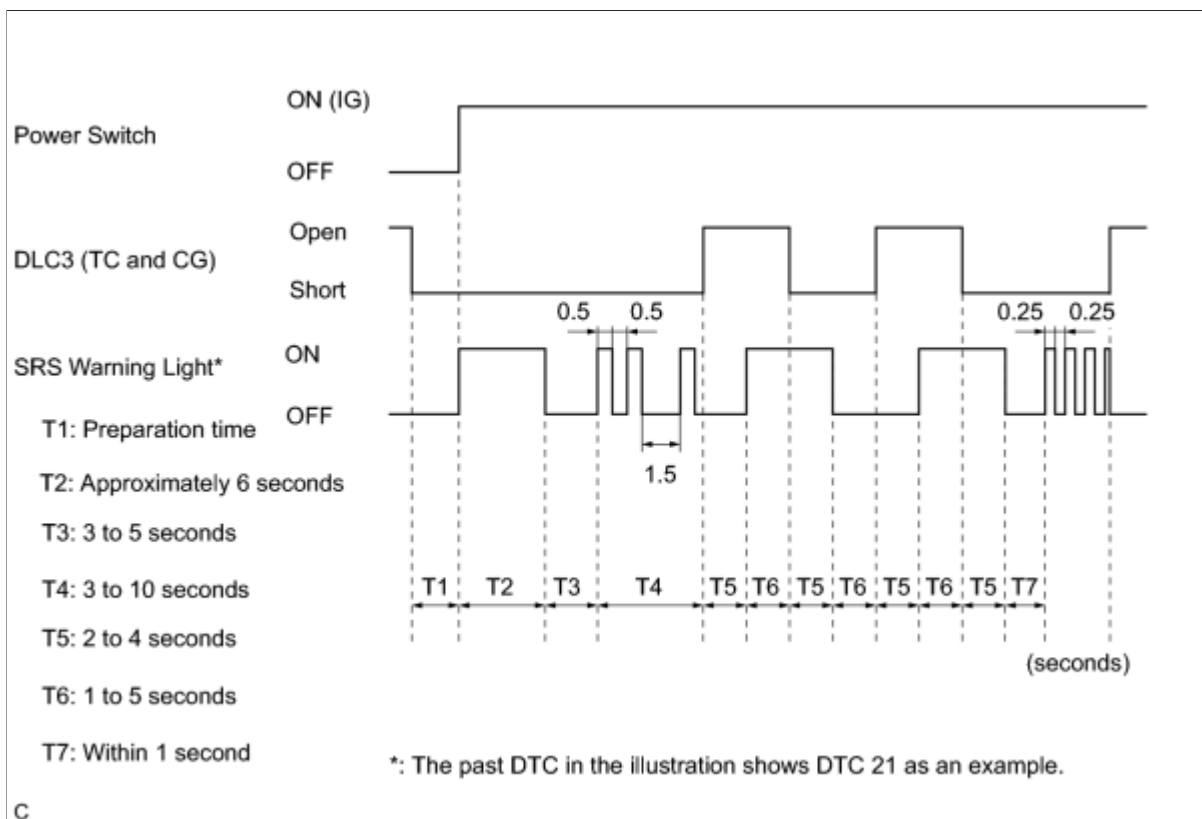

(4) Within 2 to 4 seconds of the SRS warning light coming on, connect terminals 13 (TC) and 4 (CG) of the DLC3.

(5) The SRS warning light goes off within 2 to 4 seconds of connecting terminals 13 (TC) and 4 (CG) of the DLC3. Then, disconnect terminal 13 (TC) within 2 to 4 seconds of the SRS warning light going off.

(6) The SRS warning light comes on again within 2 to 4 seconds of disconnecting terminal 13 (TC). Then, reconnect terminals 13 (TC) and 4 (CG) within 2 to 4 seconds of the SRS warning light coming on.

(7) Check that the SRS warning light goes off within 2 to 4 seconds of connecting terminals 13 (TC) and 4 (CG) of the DLC3. Also check that the normal system code is output within 1 second of the SRS warning light going off.

If DTCs are not cleared, repeat these procedure until the DTCs are cleared.

C

3. CHECK DTC (USING TECHSTREAM)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch ON (IG).

- (c) Check the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

4. CLEAR DTC (USING TECHSTREAM)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch ON (IG).
- (c) Clear the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

CHECK MODE PROCEDURE

1. CHECK MODE (SIGNAL CHECK): DTC CHECK

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch ON (IG).
- (c) Select the SIGNAL CHECK, and proceed to check with the Techstream.

NOTICE:

Select the **SIGNAL CHECK** from the **DTC CHECK** screen displayed on the Techstream to clear the output DTCs (both present and past).

HINT:

- DTCs can be detected more sensitively in check mode than in normal diagnosis mode.
- Perform the check mode inspection when a malfunction in each squib circuit is suspected even after the normal system code is output through the normal diagnosis mode inspection.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch ON (IG).
- (c) Read the DATA LIST according to the display on the Techstream.

Center airbag sensor:

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the circuit listed for the DTC in the table below.

HINT:

- When the SRS warning light remains on and the normal system code is output, a decrease in the source voltage is likely to occur. This malfunction is not stored in the memory of the center airbag sensor. If the power source voltage returns to normal, the SRS warning light will automatically go off.
- When 2 or more DTCs are indicated, the DTC with the lowest number appears first.
- If a DTC is not listed on the DTC chart, the center airbag sensor may have malfunction.
- In the case of any malfunctions concerning open circuits, shorts to ground, or shorts to B+ due to squibs, other DTCs may not be set. In this case, repair the malfunction currently indicated and then perform malfunction diagnosis again.
- Mark in the check mode column:
 - : DTC does not correspond to check mode.
 - o: DTC corresponds to check mode.
- When DTC B1650/32 is set as a result of troubleshooting the Supplemental Restraint System (SRS), perform troubleshooting for the occupant classification system.

DTC	B1000/31	Center Airbag Sensor Assembly Malfunction
-----	----------	---

DESCRIPTION

The center airbag sensor consists of the airbag sensor, the safing sensor, the drive circuit, the diagnosis circuit and the power control.

When the center airbag sensor receives signals from the airbag sensor, it determines whether or not the SRS should be activated.

DTC B1000/31 is set when a malfunction is detected in the center airbag sensor.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1000/31	Center airbag sensor malfunction	Center airbag sensor

HINT:

When any other DTCs are set simultaneously with B1000/31, repair the malfunctions indicated by those DTCs first.

INSPECTION PROCEDURE

PROCEDURE

1. CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Turn the power switch OFF.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

(d) Turn the power switch ON (IG), and wait for at least 60 seconds.

(e) Clear the DTCs .

(f) Turn the power switch OFF.

(g) Turn the power switch ON (IG), and wait for at least 60 seconds.

(h) Check for DTCs .

OK:

DTC B1000/31 is not output.

NG  **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK  **USE SIMULATION METHOD TO CHECK**

DTC	B1610/13	Front Airbag Sensor RH Circuit Malfunction
-----	----------	--

DESCRIPTION

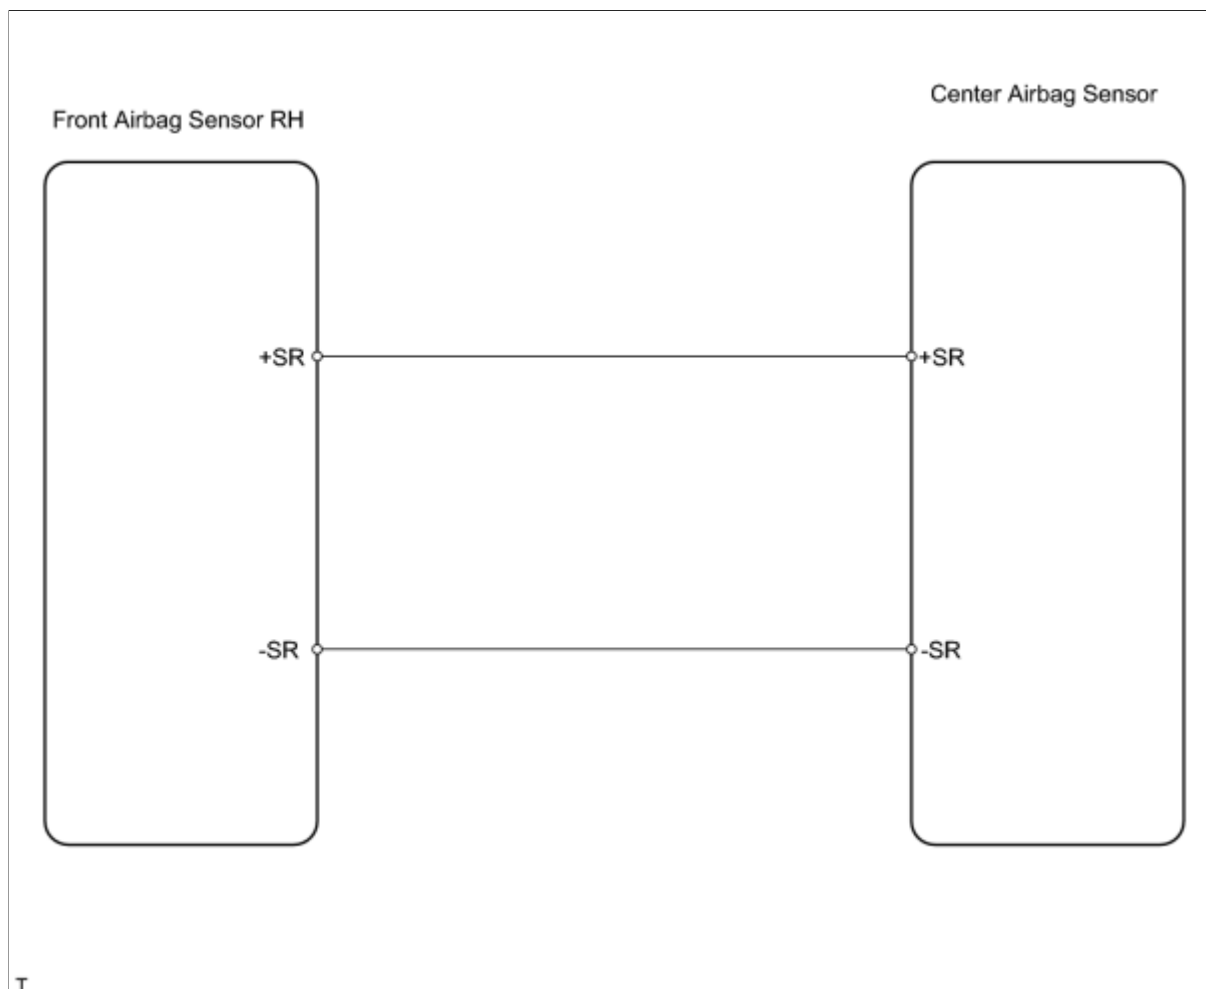

The front airbag sensor RH consists of the diagnostic circuit and the front deceleration sensor.

If the center airbag sensor receives signals from the frontal deceleration sensor, it determines whether or not the SRS should be activated.

DTC B1610/13 is recorded when a malfunction is detected in the front airbag sensor RH circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1610/13	<p>When one of following conditions is met:</p> <ul style="list-style-type: none"> • Center airbag sensor receives a line short signal, an open signal, a short to ground signal or a short to B+ signal from the front airbag sensor RH for 2 seconds. • Front airbag sensor RH malfunction • Center airbag sensor malfunction 	<ul style="list-style-type: none"> • Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor

WIRING DIAGRAM

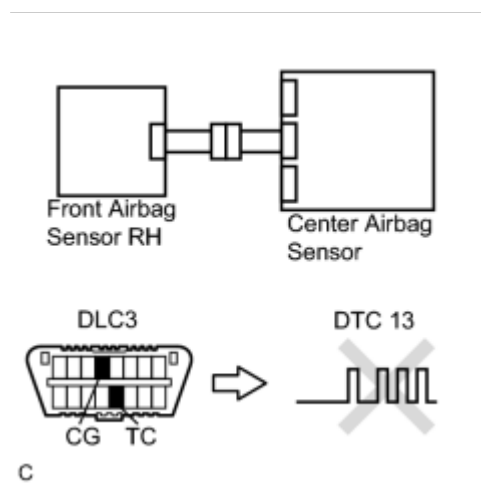

T

INSPECTION PROCEDURE

PROCEDURE

1. CHECK FOR DTC

- (a) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (b) Clear the DTCs .
- (c) Turn the power switch OFF.
- (d) Turn the power switch ON (IG), and wait for at least 60 seconds.

- (e) Check the DTCs .
- OK:
DTC B1610/13 is not output.

HINT:

DTCs other than DTC B1610/13 may be output at this time, but they are not related to this check.

OK  USE SIMULATION METHOD TO CHECK

NG 

2. CHECK CONNECTION OF CONNECTOR

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.

OK:
The connectors are properly connected.

NG  CONNECT CONNECTOR

OK 

3. CHECK FRONT AIRBAG SENSOR RH CIRCUIT (OPEN)

(a) Disconnect the connectors from the center airbag sensor and the front airbag sensor RH.

(b) Using a service wire, connect terminals A18-29 (+SR) and A18-27 (-SR) of connector B.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector.

(c) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
F2-2 (+SR) - F2-1 (-SR)	Below 1 Ω

NG ► CHECK ENGINE ROOM MAIN WIRE (OPEN)

OK ▼

4. CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT)

(a) Disconnect the service wire from connector B.

(b) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
F2-2 (+SR) - F2-1 (-SR)	1 MΩ or higher

NG ► CHECK ENGINE ROOM MAIN WIRE (SHORT)

OK

5. CHECK FRONT AIRBAG SENSOR RH CIRCUIT (TO B+)

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

(b) Turn the power switch ON (IG).

(c) Measure the voltage of the wire harness side connector.

Standard voltage:

OK
▼

NG ► **CHECK ENGINE ROOM MAIN WIRE (TO B+)**

TESTER CONNECTION	SPECIFIED CONDITION
F2-2 (+SR) - Body ground	Below 1 V
F2-1 (-SR) - Body ground	Below 1 V

6. CHECK FRONT AIRBAG SENSOR RH CIRCUIT (TO GROUND)

(a) Turn the power switch OFF.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
F2-2 (+SR) - Body ground	1 MΩ or higher
F2-1 (-SR) - Body ground	1 MΩ or higher

NG ► **CHECK ENGINE ROOM MAIN WIRE (TO GROUND)**

OK

7. CHECK FRONT AIRBAG SENSOR RH

- Connect the connectors to the center airbag sensor.
- Interchange the front airbag sensor RH with the front airbag sensor LH and connect the connectors to them.
- Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- Turn the power switch ON (IG), and wait for at least 60 seconds.
- Clear the DTCs INFO.
- Turn the power switch OFF.
- Turn the power switch ON (IG), and wait for at least 60 seconds.

- Check the DTCs INFO.

DTC	B1615/14	Front Airbag Sensor LH Circuit Malfunction
-----	----------	--

DESCRIPTION

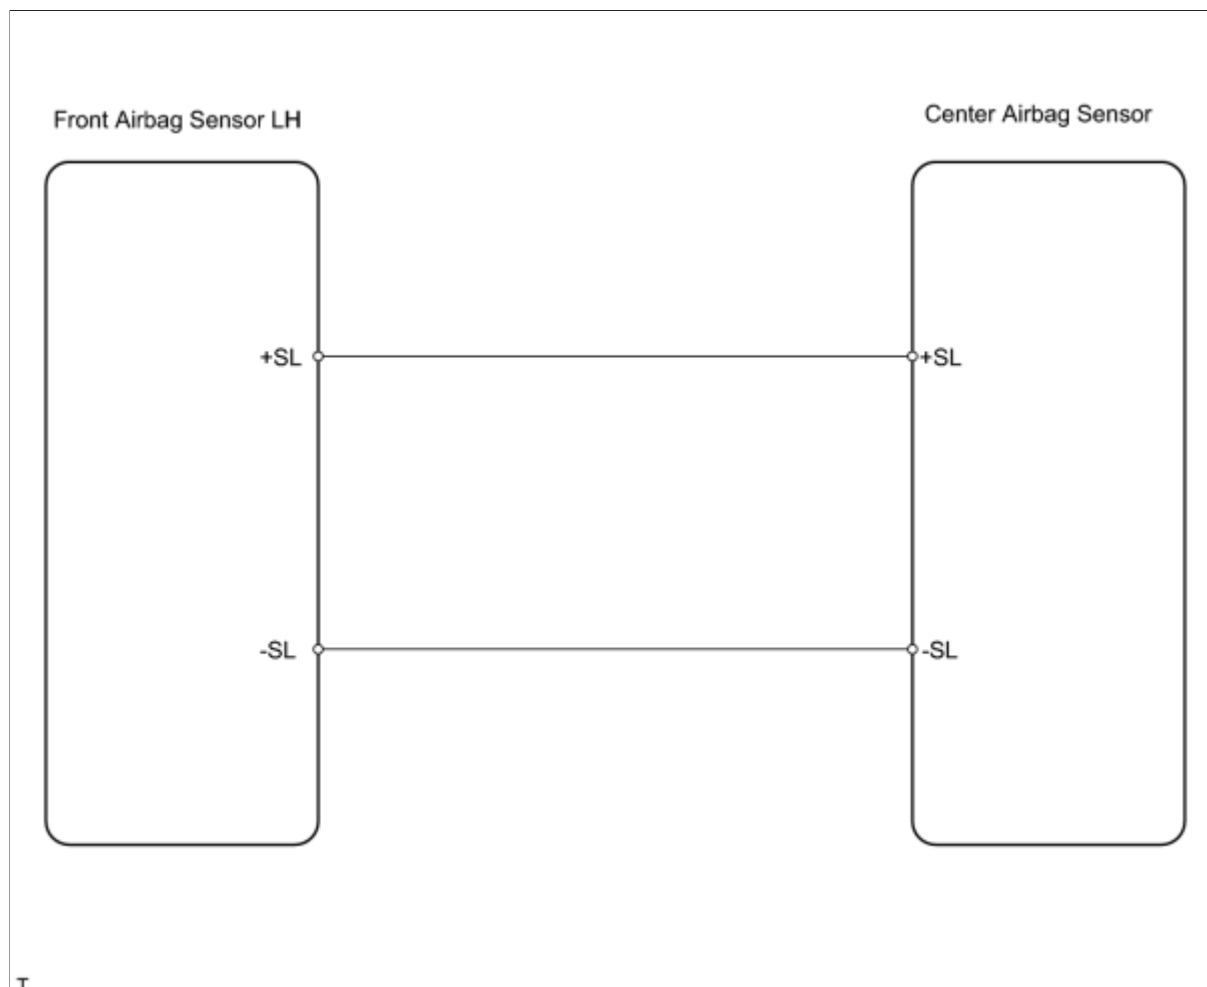

The front airbag sensor LH consists of the diagnostic circuit and the front deceleration sensor.

If the center airbag sensor receives signals from the frontal deceleration sensor, it determines whether or not the SRS should be activated.

DTC B1615/14 is recorded when a malfunction is detected in the front airbag sensor LH circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1615/14	<p>When one of following conditions is met:</p> <ul style="list-style-type: none"> • The center airbag sensor receives a line short signal, an open signal, a short to ground signal or a short to B+ signal from the front airbag sensor LH sensor for 2 seconds. • Front airbag sensor LH malfunction • Center airbag sensor malfunction 	<ul style="list-style-type: none"> • Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor

INSPECTION PROCEDURE

PROCEDURE

1. CHECK FOR DTC

- (a) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (b) Clear the DTCs .
- (c) Turn the power switch OFF.

- (d) Turn the power switch ON (IG), and wait for at least 60 seconds.
 - (e) Check for DTCs .
- OK:
DTC B1615/14 is not output.

HINT:

DTCs other than DTC B1615/14 may be output at this time, but they are not related to this check.

OK  USE SIMULATION METHOD TO CHECK

NG 

2. CHECK CONNECTION OF CONNECTOR

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor LH.

OK:
The connectors are properly connected.

NG  CONNECT CONNECTOR

OK 

3. CHECK FRONT AIRBAG SENSOR LH CIRCUIT (OPEN)

(a) Disconnect the connectors from the center airbag sensor and the front airbag sensor LH.

(b) Using a service wire, connect A18-30 (+SL) and A18-28 (-SL) of connector B.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector.

(c) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
F1-2 (+SL) - F1-1 (-SL)	Below 1 Ω

NG ▶ CHECK ENGINE ROOM MAIN WIRE (OPEN)

OK

4. CHECK FRONT AIRBAG SENSOR LH CIRCUIT (SHORT)

(a) Disconnect the service wire from connector B.

Connector E

C

(b) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
F1-2 (+SL) - F1-1 (-SL)	1 MΩ or higher

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DTC (OCCUPANT CLASSIFICATION ECU)

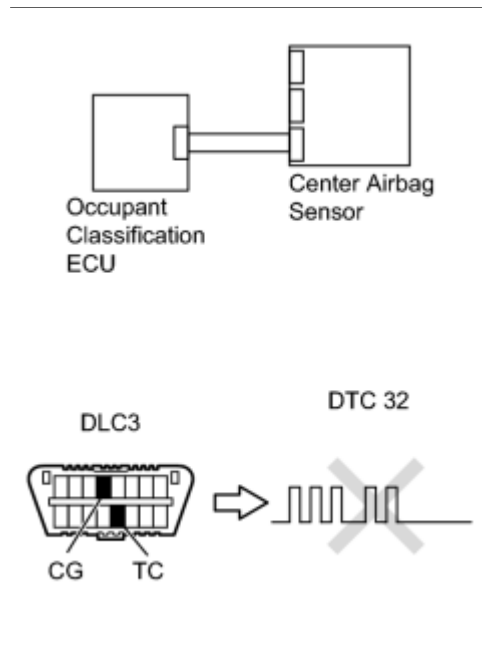

- (a) Turn the power switch ON (IG), and wait for at least 10 seconds.
- (b) Using the Techstream, check for DTCs of the occupant classification ECU INFO.
- OK:
DTC is not output.

OK  GO TO DTC CHART

NG

2. CHECK DTC (CENTER AIRBAG SENSOR ASSEMBLY)

- (a) Turn the power switch ON (IG), and wait for at least 60 seconds.

- (b) Clear the DTCs INFO.
- (c) Turn the power switch OFF.
- (d) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (e) Check for DTCs INFO.

OK:

DTC B1650/32 is not output.

HINT:

DTCs other than DTC B1650/32 may be output at this time, but they are not related to this check.

NG  USE SIMULATION METHOD TO CHECK

OK

3.	CHECK CONNECTION OF CONNECTOR
-----------	--------------------------------------

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Check that the connectors are properly connected to the center airbag sensor and the occupant classification ECU.

OK:

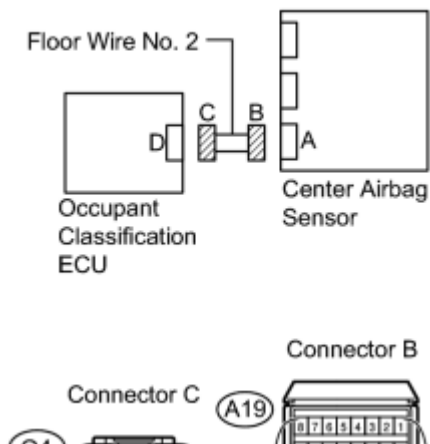

Connectors are connected.

NG  CONNECT CONNECTOR

OK

4.	CHECK FLOOR WIRE NO. 2 (OPEN)
-----------	--------------------------------------

- (a) Disconnect the connectors from the center airbag sensor and the occupant classification ECU.

- (b) Using a service wire, connect terminals O4-8 (FSR+) and O4-4 (FSR-) of connector C.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector.

- (c) Measure the resistance of the wire harness side connector.

Standard resistance:

TERMINAL CONNECTION	SPECIFIED CONDITION
A19-16 (FSP+) - A19-24 (FSP-)	Below 1 Ω

NG ▶ REPAIR OR REPLACE FLOOR WIRE NO. 2

OK ▼

5. CHECK FLOOR WIRE NO. 2 (SHORT)

- (a) Disconnect the service wire from connector C.
- (b) Measure the resistance of the wire harness side connector.

Standard resistance:

TERMINAL CONNECTION	SPECIFIED CONDITION
A19-16 (FSP+) - A19-24 (FSP-)	1 MΩ or higher

NG ▶ REPAIR OR REPLACE FLOOR WIRE NO. 2

OK ▼

6. CHECK FLOOR WIRE NO. 2 (TO B+)

- (a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (b) Turn the power switch ON (IG).
- (c) Measure the voltage of the wire harness side connector.

Standard voltage:

TERMINAL CONNECTION	SPECIFIED CONDITION
A19-16 (FSP+) - Body ground	Below 1 V
A19-24 (FSP-) - Body ground	Below 1 V

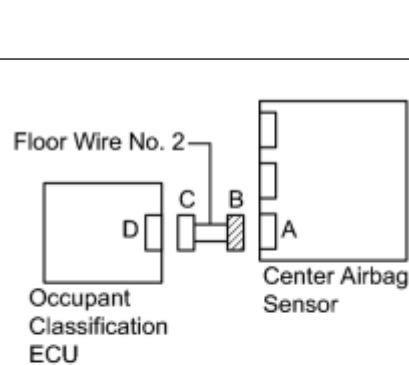

NG ▶ REPAIR OR

NG ▶ REPLACE FLOOR WIRE NO. 2

OK
▼

7. CHECK FLOOR WIRE NO. 2 (TO GROUND)

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Measure the resistance of the wire harness side connector.
Standard resistance:

TERMINAL CONNECTION	SPECIFIED CONDITION
A19-16 (FSP+) - Body ground	1 MΩ or higher
A19-24 (FSP-) - Body ground	1 MΩ or higher

NG ▶ REPAIR OR REPLACE FLOOR WIRE NO. 2

OK
▼

8. CHECK CENTER AIRBAG SENSOR ASSEMBLY

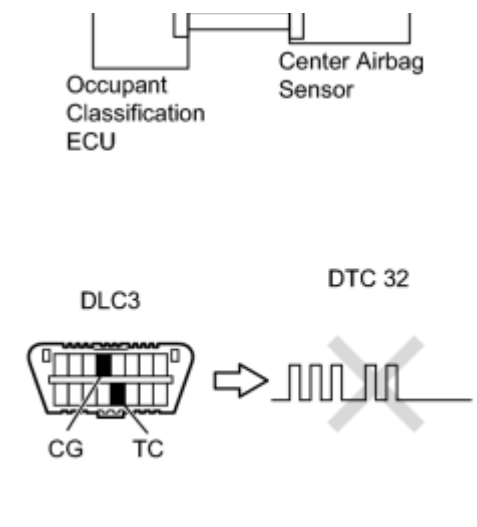

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Replace the center airbag sensor INFO.

HINT:

Perform the inspection using parts from a normal vehicle when possible.

- (d) Connect the connectors to the center airbag sensor.
- (e) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

- (f) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (g) Clear the DTCs INFO.
- (h) Turn the power switch OFF.
- (i) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (j) Check for DTCs INFO.

OK:
DTC B1650/32 is not output.

HINT:

DTCs other than DTC B1650/32 may be output at this time, but they are not related to this check.

OK ► **USE SIMULATION METHOD TO CHECK**

NG

9. REPLACE OCCUPANT CLASSIFICATION ECU

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Replace the occupant classification ECU INFO.

NEXT

10. PERFORM ZERO POINT CALIBRATION

- (a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch ON (IG).
- (d) Using the Techstream, perform the zero point calibration INFO.

OK:
"Zero Point Calibration is complete." is displayed on the tester.

NEXT

11.	PERFORM SENSITIVITY CHECK
------------	----------------------------------

(a) Using the Techstream, perform the sensitivity check  .

Standard value:

27 to 33 kg (59.52 to 72.75 lb)

NEXT  **END**

DTC	B1653/35	Seat Position Airbag Sensor Circuit Malfunction
-----	----------	---

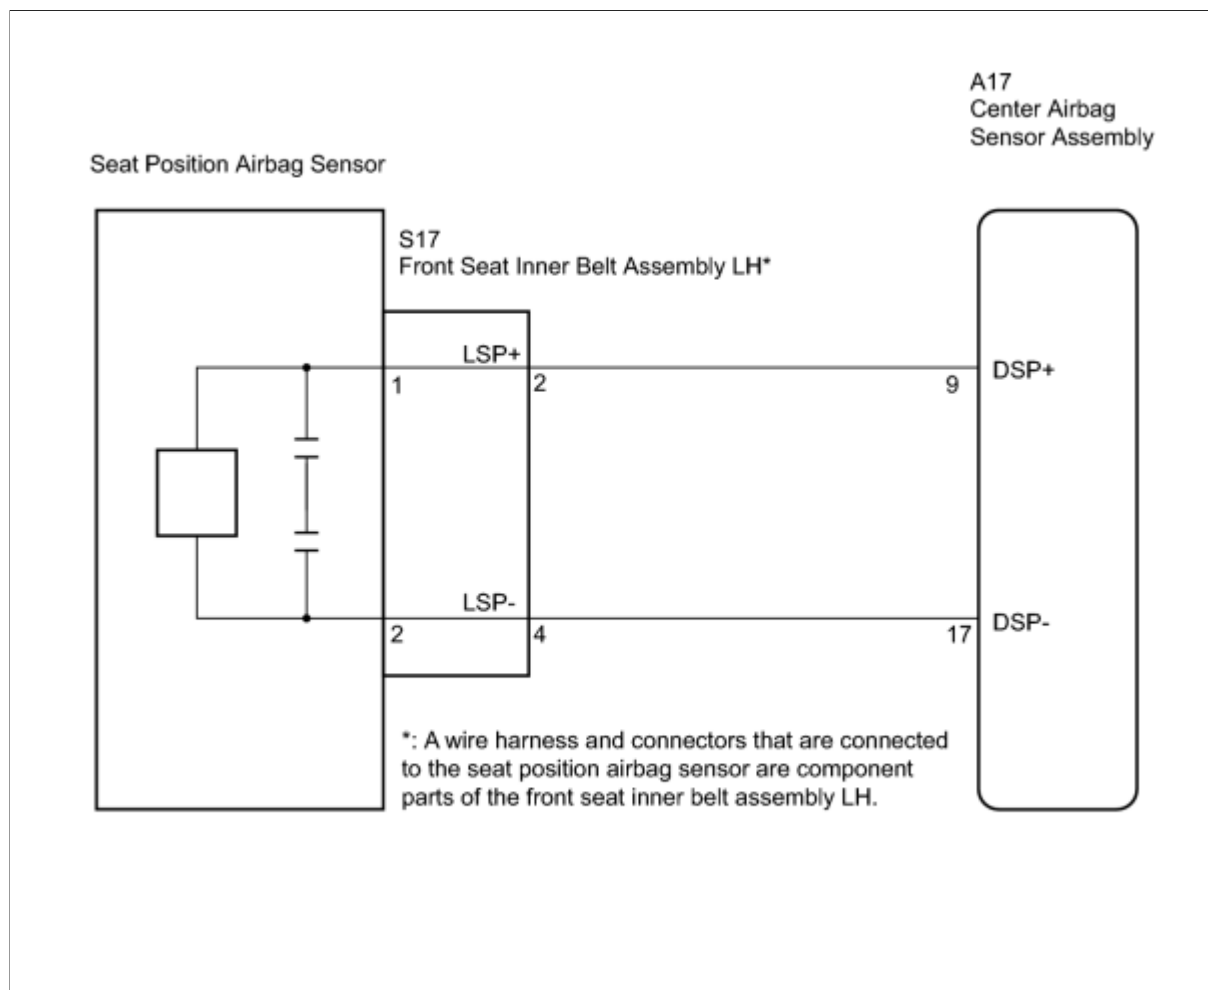

DESCRIPTION

The seat position airbag sensor circuit consists of the center airbag sensor assembly and the seat position airbag sensor.

DTC B1653/35 is recorded when a malfunction is detected in the seat position airbag sensor circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1653/35	<ul style="list-style-type: none"> The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the seat position airbag sensor circuit for 2 seconds. Seat position airbag sensor malfunction Center airbag sensor assembly malfunction 	<ul style="list-style-type: none"> Floor wire Front seat inner belt assembly LH Seat position airbag sensor Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DTC

(a) Turn the power switch ON (IG), and wait for at least 60 seconds.

(b) Clear the DTCs stored in the memory INFO.

(c) Turn the power switch OFF.

(d) Turn the power switch ON (IG), and wait for at least 60 seconds.

(e) Check for DTCs INFO.

OK:

DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG ► CHECK CONNECTION OF CONNECTORS

OK ► USE SIMULATION METHOD TO CHECK

2. CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch OFF.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the center airbag sensor assembly and the seat position airbag sensor.

OK:

The connectors are properly connected.

NG  **CONNECT CONNECTORS, THEN GO TO STEP 1**

OK

3.	CHECK CONNECTORS
-----------	-------------------------

(a) Disconnect the connectors from the center airbag sensor assembly and the seat position airbag sensor.

(b) Check that the connectors are not damaged.

OK:

The connectors are not deformed or damaged.

NG  **REPAIR OR REPLACE WIRE HARNESS**

OK

4.	CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (OPEN)
-----------	---

(a) Using a service wire, connect terminals 1 and 2 of connector "E".

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

A17-9 (DSP+) - A17-17 (DSP-)	Always	Below 1 Ω
------------------------------	--------	-----------

NG ▶ CHECK FRONT SEAT INNER BELT ASSEMBLY LH (OPEN)

OK

5. CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (SHORT)

(a) Disconnect the service wire from connector E.

(b) Measure the resistance between the terminals of connector E according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A17-9 (DSP+) - A17-17 (DSP-)	Always	1 MΩ or higher

NG ▶ CHECK FRONT SEAT INNER BELT ASSEMBLY LH (SHORT)

OK

6. CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (SHORT TO B+)

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(b) Turn the power switch ON (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A17-9 (DSP+) - Body ground	Power switch ON (IG)	Below 1 V
A17-17 (DSP-) - Body ground	Power switch ON (IG)	Below 1 V

NG ▶ CHECK FRONT SEAT INNER BELT ASSEMBLY LH (SHORT TO B+)

OK

7. CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (SHORT TO GROUND)

(a) Turn the power switch OFF.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A17-9 (DSP+) - Body ground	Always	1 MΩ or higher
A17-17 (DSP-) - Body ground	Always	1 MΩ or higher

NG ► CHECK FRONT SEAT INNER BELT ASSEMBLY LH (SHORT TO GROUND)

OK

8. CHECK SEAT POSITION AIRBAG SENSOR

(a) Connect the connectors to the center airbag sensor assembly and the seat position airbag sensor.

(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(c) Turn the power switch ON (IG), and wait for at least 60 seconds.

- (d) Clear the DTCs stored in the memory  .
 - (e) Turn the power switch OFF.
 - (f) Turn the power switch ON (IG), and wait for at least 60 seconds.
 - (g) Check for DTCs  .
- OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG  REPLACE SEAT POSITION AIRBAG SENSOR

OK  USE SIMULATION METHOD TO CHECK

9.	REPLACE SEAT POSITION AIRBAG SENSOR
-----------	--

- (a) Turn the power switch OFF.
- (b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
- (c) Replace the seat position airbag sensor  .

HINT:

Perform inspection using parts from a normal vehicle if possible.

NEXT

10.	CHECK CENTER AIRBAG SENSOR ASSEMBLY
------------	--

- (a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

- (b) Turn the power switch ON (IG), and wait for at least 60 seconds.
 - (c) Clear the DTCs stored in the memory **INFO**.
 - (d) Turn the power switch OFF.
 - (e) Turn the power switch ON (IG), and wait for at least 60 seconds.
 - (f) Check for DTCs **INFO**.
- OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

- NG** ▶ REPLACE CENTER AIRBAG SENSOR ASSEMBLY
- OK** ▶ END

11. CHECK FRONT SEAT INNER BELT ASSEMBLY LH (OPEN)

- (a) Disconnect the floor wire connector from the front seat inner belt assembly LH.

HINT:

The service wire has already been inserted into connector "E".

- (b) Measure the resistance according to the value(s) in the table below.
- Standard resistance:

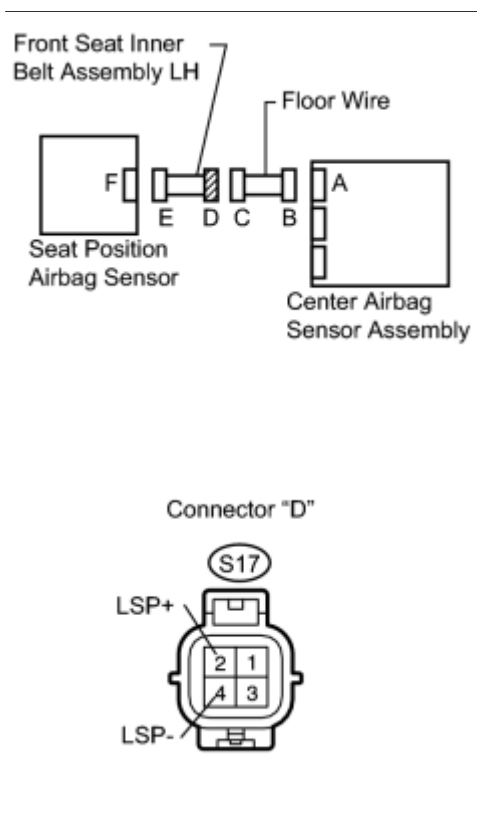

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S17-2 (LSP+) - S17-4 (LSP-)	Always	Below 1 Ω

NG ▶ REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

OK ▶ REPAIR OR REPLACE FLOOR WIRE

12. CHECK FRONT SEAT INNER BELT ASSEMBLY LH (SHORT)

(a) Disconnect the floor wire connector from the front seat inner belt assembly LH.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S17-2 (LSP+) - S17-4 (LSP-)	Always	1 MΩ or higher

NG ▶ REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

OK ▶ REPAIR OR REPLACE FLOOR WIRE

13. CHECK FRONT SEAT INNER BELT ASSEMBLY LH (SHORT TO B+)

Front Seat Inner →

(a) Turn the power switch OFF.

- (b) Disconnect the negative(-) terminal cable from the battery, and wait for at least 90 seconds.
- (c) Disconnect the floor wire connector from the front seat inner belt assembly LH.
- (d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
- (e) Turn the power switch ON (IG).
- (f) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S17-2 (LSP+) - Body ground	Power switch ON (IG)	Below 1 V
S17-4 (LSP-) - Body ground	Power switch ON (IG)	Below 1 V

NG ▶ REPLACE FRONT SEAT INNER BELT ASSEMBLY LH
OK ▶ REPAIR OR REPLACE FLOOR WIRE

14. CHECK FRONT SEAT INNER BELT ASSEMBLY LH (SHORT TO GROUND)

(a) Turn the power switch OFF.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the floor wire connector from the front seat inner belt assembly LH.

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S17-2 (LSP+) - Body ground	Always	1 MΩ or higher
S17-4 (LSP-) - Body ground	Always	1 MΩ or higher

NG ▶ REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

OK ▶ REPAIR OR REPLACE FLOOR WIRE

DTC | **B1655/37** | **Driver Side Seat Belt Buckle Switch Circuit Malfunction**

DESCRIPTION

The driver side seat belt buckle switch circuit consists of the center airbag sensor and the front seat inner belt LH.

DTC B1655/37 is recorded when a malfunction is detected in the driver side seat belt buckle switch circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1655/37	<p>When one of following conditions is met:</p> <ul style="list-style-type: none"> Center airbag sensor receives a line short signal, an open signal, a short to ground signal or a short to B+ signal from the driver side seat belt buckle switch sensor for 2 seconds. Front seat inner belt LH malfunction Center airbag sensor malfunction 	<ul style="list-style-type: none"> Floor wire Front seat inner belt LH (Driver side seat belt buckle switch) Center airbag sensor

INSPECTION PROCEDURE

PROCEDURE

PROCEDURE**1. CHECK FOR DTC**

- (a) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (b) Clear the DTCs INFO.
- (c) Turn the power switch OFF.
- (d) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (e) Check the DTCs INFO.

OK:
DTC B1655/37 is not output.

HINT:

DTCs other than DTC B1655/37 may be output at this time, but they are not related to this check.

OK ► **USE SIMULATION METHOD TO CHECK**

NG

**2. CHECK CONNECTION OF CONNECTOR**

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Check that the connectors are properly connected to the center airbag sensor and the front seat inner belt LH.

OK:
Connectors are connected.

NG ► **CONNECT CONNECTOR**

OK

**3. CHECK FLOOR WIRE (OPEN)**

- (a) Disconnect the connectors from the center airbag sensor and the front seat inner belt LH.

- (b) Using a service wire, connect terminals A17-10 (DBE+) and A17-18 (DBE-) of connector B.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector.

- (c) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
S17-1 - S17-3	Below 1 Ω

NG ▶ REPAIR OR REPLACE FLOOR WIRE

OK ▼

4. CHECK FLOOR WIRE (SHORT)

- (a) Disconnect the service wire from connector B.

- (b) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
S17-1 - S17-3	1 MΩ or higher

NG ▶ REPAIR OR REPLACE FLOOR WIRE

OK ▼

5. CHECK FLOOR WIRE (TO B+)

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

(b) Turn the power switch ON (IG).

(c) Measure the voltage of the wire harness side connector.

Standard voltage:

TESTER CONNECTION	SPECIFIED CONDITION
S17-1 - Body ground	Below 1 V
S17-3 - Body ground	Below 1 V

OK

NG ▶ REPAIR OR
REPLACE FLOOR
WIRE

6. CHECK FLOOR WIRE (TO GROUND)

(a) Turn the power switch OFF.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
S17-1 - Body ground	1 MΩ or higher
S17-3 - Body ground	1 MΩ or higher

OK

NG ▶ REPAIR OR
REPLACE FLOOR
WIRE

7. CHECK FRONT SEAT INNER BELT ASSEMBLY LH

- Connect the connectors to the center airbag sensor and the front seat inner belt LH.
- Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- Turn the power switch ON (IG), and wait for at least 60 seconds.
- Clear the DTCs .
- Turn the power switch OFF.
- Turn the power switch ON (IG), and wait for at least 60 seconds.
- Check the DTCs .

OK:
DTC B1655/37 is not output.

HINT:

DTCs other than DTC B1655/37 may be output at this time, but they are not related to this check.

OK ► USE SIMULATION METHOD TO CHECK

NG

8. REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

- Turn the power switch OFF.
- Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- Replace the front seat inner belt LH .

HINT:

Perform inspection using parts from a normal vehicle if possible.

NEXT

9. CHECK CENTER AIRBAG SENSOR ASSEMBLY

- (a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (b) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (c) Clear the DTCs INFO.
- (d) Turn the power switch OFF.
- (e) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (f) Check the DTCs INFO.
 - OK:
DTC B1655/37 is not output.

HINT:

DTCs other than DTC B1655/37 may be output at this time, but they are not related to this check.

DTC	B1660/43	Passenger Airbag ON/OFF Indicator Circuit Malfunction
-----	----------	---

DESCRIPTION

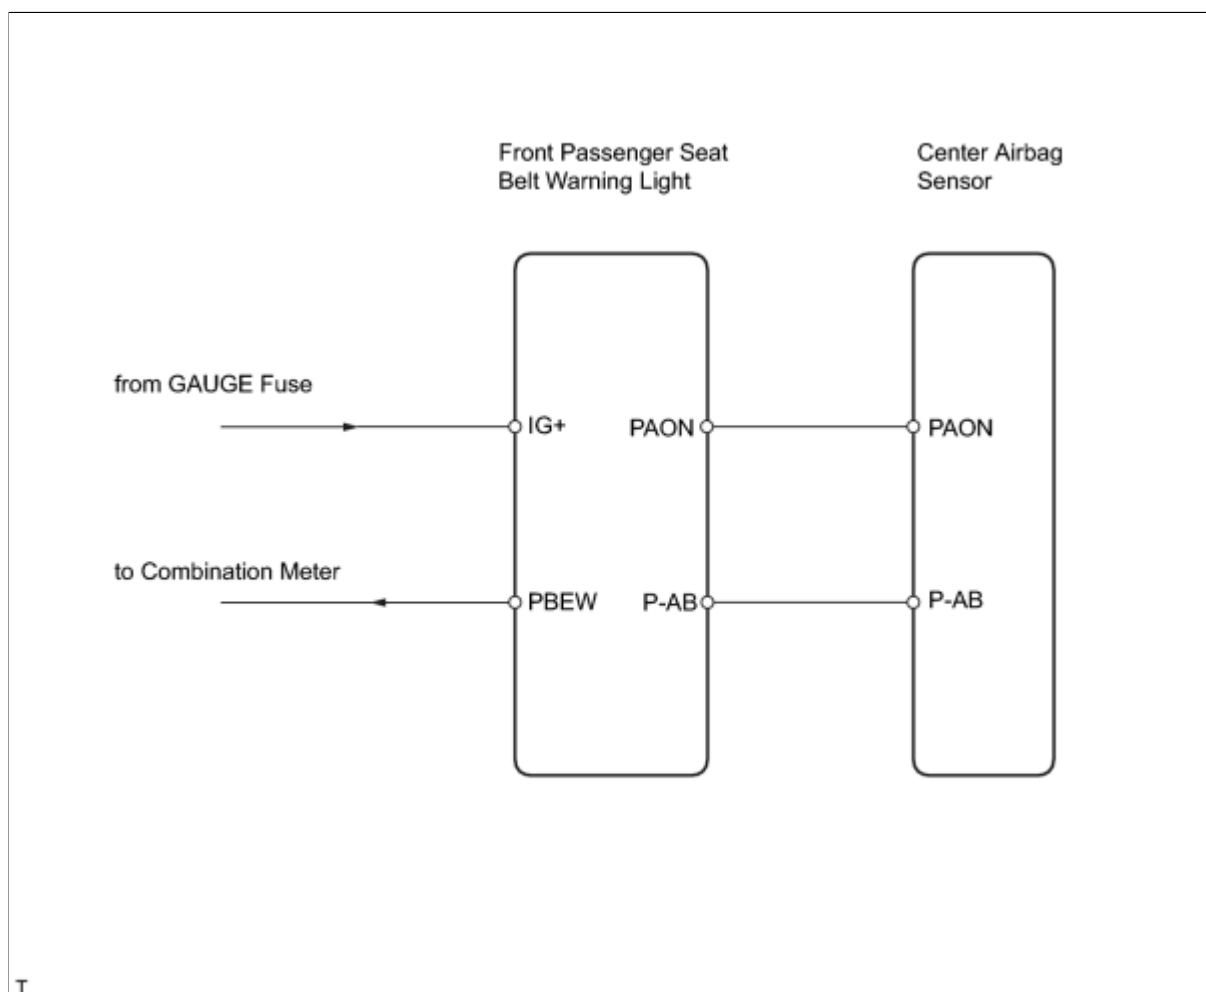

The passenger airbag ON / OFF indicator circuit consists of the center airbag sensor and the front passenger seat belt warning light.

This circuit indicates the operation condition of the front passenger airbag, front passenger side airbag and passenger side seat belt pretensioner.

DTC B1660/43 is set when a malfunction is detected in the passenger airbag ON / OFF indicator circuit.

DTC NO.	DTC DETECTION CONDITIONS	TROUBLE AREAS
B1660/43	<p>When one of following is met:</p> <ul style="list-style-type: none"> Center airbag sensor detects line short signal, open signal, short to ground signal or short to B+ signal from passenger airbag ON / OFF indicator circuit for 2 seconds Front passenger seat belt warning light malfunction Center airbag sensor malfunction 	<ul style="list-style-type: none"> Instrument panel wire Front passenger airbag ON / OFF Indicator light Center airbag sensor

15.	CHECK CENTER AIRBAG SENSOR ASSEMBLY
------------	--

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Connect the connectors to the center airbag sensor and the front passenger seat belt warning light.
- (d) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

- (e) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (f) Clear the DTCs INFO.
- (g) Turn the power switch OFF.
- (h) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (i) Check for DTCs INFO.

OK:
DTC B1660/43 is not output.

HINT:

DTCs other than DTC B1660/43 may be output at this time, but they are not related to this check.

NG ▶ REPLACE CENTER AIRBAG SENSOR ASSEMBLY

OK ▶ USE SIMULATION METHOD TO CHECK

DTC	B1800/51	Short in Driver Side Squib Circuit
-----	----------	------------------------------------

DTC	B1801/51	Open in Driver Side Squib Circuit
-----	----------	-----------------------------------

DTC	B1802/51	Short to GND in Driver Side Squib Circuit
-----	----------	---

DTC	B1803/51	Short to B+ in Driver Side Squib Circuit
-----	----------	--

DESCRIPTION

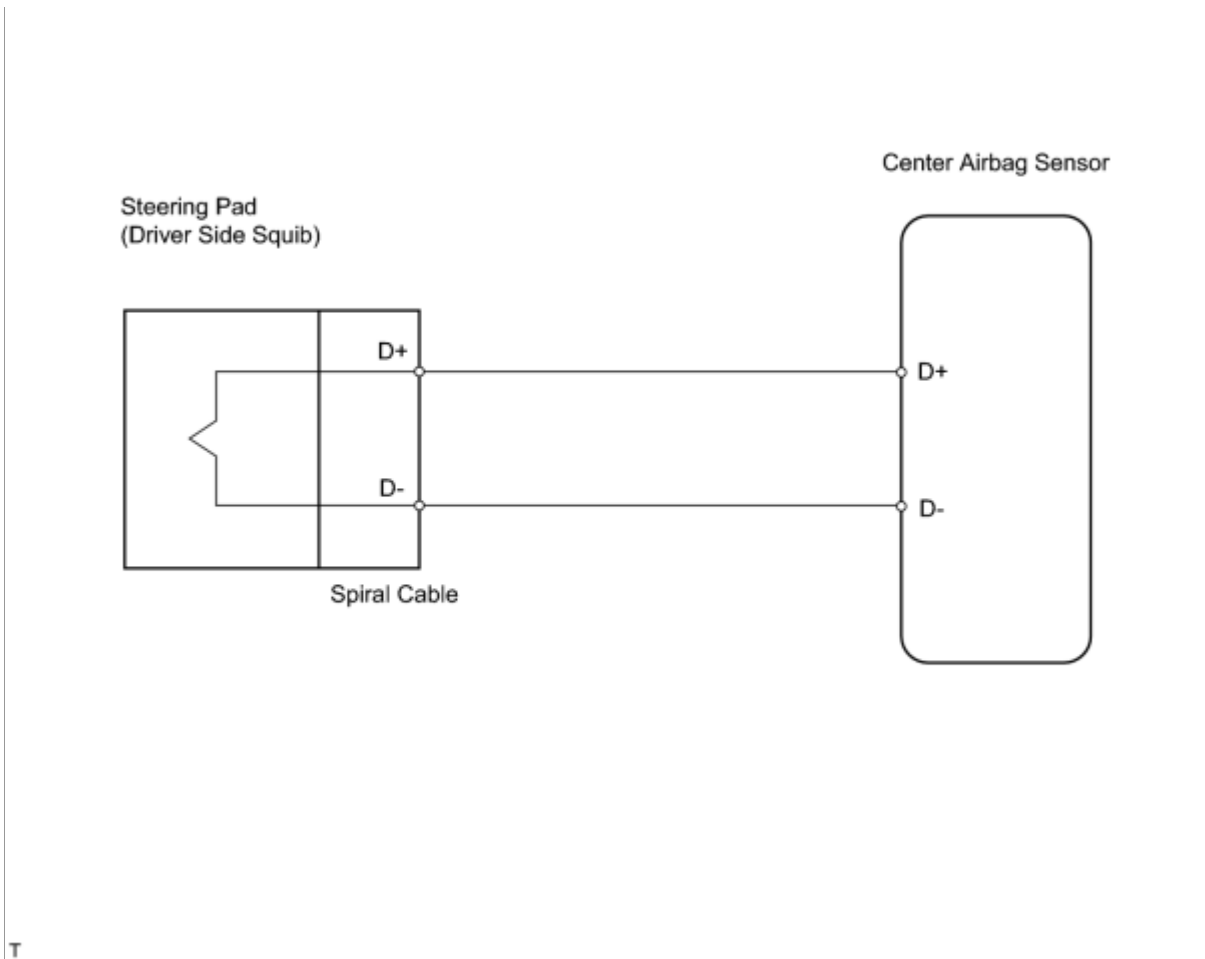

The driver side squib circuit consists of the center airbag sensor, the spiral cable and the steering pad.

The circuit instructs the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the driver side squib circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1800/51	Center airbag sensor receives a line short signal 5 times from the driver side squib circuit during primary check.	<ul style="list-style-type: none"> • Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor
B1801/51	Center airbag sensor receives an open signal from the driver side squib circuit for 2 seconds.	<ul style="list-style-type: none"> • Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor
B1802/51	Center airbag sensor receives a short to ground signal from the driver side squib circuit for 0.5 seconds.	<ul style="list-style-type: none"> • Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor
B1803/51	Center airbag sensor receives a short to B+ signal from the driver side squib circuit for 0.5 seconds.	<ul style="list-style-type: none"> • Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting the "CHECK MODE" (signal check) with the Techstream INFO.
- After selecting the "CHECK MODE" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on various types of roads INFO.

PROCEDURE

1.	CHECK STEERING PAD (DRIVER SIDE SQUIB)
-----------	---

(a) Turn the power switch OFF.

- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Disconnect the connectors from the steering pad.
- (d) Connect SST (resistance 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect SST to the steering pad (driver side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

- (e) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (f) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (g) Clear the DTCs .
- (h) Turn the power switch OFF.
- (i) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (j) Check the DTCs .

OK:

DTC B1800, B1801, B1802, B1803 or 51 is not output.

HINT:

DTCs other than DTC B1800, B1801, B1802, B1803 or 51 may be output at this time, but they are not related to this check.

OK  **REPLACE STEERING PAD**

NG

2. CHECK CONNECTOR

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Disconnect SST from the spiral cable.
- (d) Check that the spiral cable connectors (on the steering pad side) are not damaged.
 - OK:
 - Lock button is not disengaged, and claw of lock is not deformed or damaged.

NG **REPLACE SPIRAL CABLE**

OK

3. CHECK DRIVER SIDE SQUIB CIRCUIT

- (a) Disconnect the connectors from the center airbag sensor.

- (b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (c) Turn the power switch ON (IG).
- (d) Measure the voltage of the wire harness side connector.
 - Standard voltage:

TESTER CONNECTION	SPECIFIED CONDITION
D+ - Body ground	Below 1 V
D- - Body ground	Below 1 V

- (e) Turn the power switch OFF.
- (f) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (g) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
D+ - D-	Below 1 Ω
D+ - Body ground	1 MΩ or higher
D- - Body ground	1 MΩ or higher

- (h) Release the activation prevention mechanism built into connector B INFO.

- (i) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
D+ - D-	1 MΩ or higher

OK ▶ REPLACE CENTER AIRBAG SENSOR ASSEMBLY

NG

4. CHECK INSTRUMENT PANEL WIRE

- (a) Restore the released activation prevention mechanism of connector B to its original position.

- (b) Disconnect the instrument panel wire connector from the spiral cable.
- (c) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (d) Turn the power switch ON (IG).
- (e) Measure the voltage of the wire harness side connector.

Standard voltage:

TESTER CONNECTION	SPECIFIED CONDITION
A22-1 (D+) - Body ground	Below 1 V
A22-2 (D-) - Body ground	Below 1 V

- (f) Turn the power switch OFF.
- (g) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (h) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
A22-1 (D+) - A22-2 (D-)	Below 1 Ω
A22-1 (D+) - Body ground	1 M Ω or higher
A22-2 (D-) - Body ground	1 M Ω or higher

- (i) Release the activation prevention mechanism built into connector B  .

- (j) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
A22-1 (D+) - A22-2 (D-)	1 M Ω or higher

INSPECTION PROCEDURE

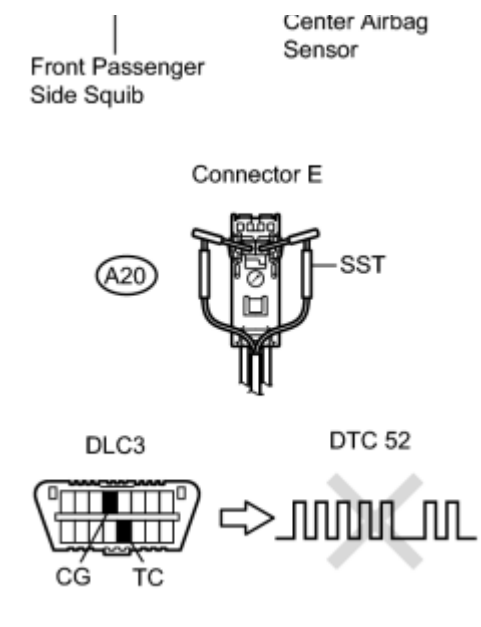

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the Techstream [INFO](#) .
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road [INFO](#) .

PROCEDURE

1. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY LH (FRONT DRIVER SIDE - SIDE SQUIB)

(a) Turn the power switch OFF.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the connector from the front seat side airbag assembly LH.

(d) Connect SST (resistance 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat side airbag assembly LH (front driver side - side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert the SST into the terminals of the connector when connecting.
- Insert straight the SST into the terminals of the connector.

SST: 09843-18061

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(f) Turn the power switch ON (IG), and wait for at least 60 seconds.

(g) Clear the DTCs stored in the memory .

(h) Turn the power switch OFF.

(i) Turn the power switch ON (IG), and wait for at least 60 seconds.

(j) Check the DTCs .

OK:

DTC B1820, B1821, B1822, B1823, or 55 is not output.

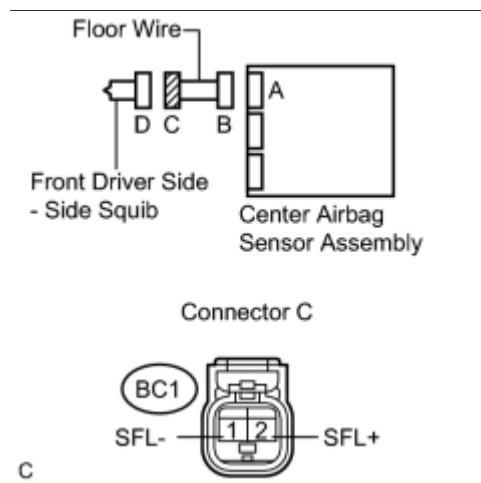

HINT:

Codes other than DTC B1820, B1821, B1822, B1823, and 55 may be output at this time, but they are not related to this check.

OK REPLACE FRONT SEAT ASSEMBLY LH

NG

2. CHECK FLOOR WIRE (FRONT DRIVER SIDE - SIDE SQUIB CIRCUIT)

(a) Turn the power switch OFF.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the SST from connector C.

(d) Disconnect the connectors from the center airbag sensor assembly.

(e) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the power switch ON (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BC1-1 (SFL-) - Body ground	Power switch ON (IG)	Below 1 V
BC1-2 (SFL+) - Body ground	Power switch ON (IG)	Below 1 V

(f) Check for an open in the circuit.

(1) Turn the power switch OFF.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BC1-1 (SFL-) - BC1-2 (SFL+)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BC1-1 (SFL-) - Body ground	Always	1 MΩ or higher
BC1-2 (SFL+) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO.

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BC1-1 (SFL-) - BC1-2 (SFL+)	Always	1 MΩ or higher

NG ▶ REPAIR OR REPLACE FLOOR WIRE

OK

3.	CHECK CENTER AIRBAG SENSOR ASSEMBLY
-----------	--

(a) Connect the connectors to the front seat side airbag assembly LH and the center airbag sensor assembly.

(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(c) Turn the power switch ON (IG), and wait for at least 60 seconds.

(d) Clear the DTCs stored in the memory INFO.

(e) Turn the power switch OFF.

(f) Turn the power switch ON (IG), and wait for at least 60 seconds.

(g) Check the DTCs  .

OK:

DTC B1820, B1821, B1822, B1823, or 55 is not output.

HINT:

Codes other than DTC B1820, B1821, B1822, B1823, and 55 may be output at this time, but they are not related to this check.

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the Techstream [INFO](#) .
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road [INFO](#) .

PROCEDURE

1. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY RH (FRONT PASSENGER SIDE - SIDE SQUIB)

(a) Turn the power switch OFF.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the connector from the front seat side airbag assembly RH.

(d) Connect SST (resistance 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat side airbag assembly RH (front passenger side - side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert the SST into the terminals of the connector when connecting.
- Insert straight the SST into the terminals of the connector.

SST: 09843-18061

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(f) Turn the power switch ON (IG), and wait for at least 60 seconds.

(g) Clear the DTCs stored in the memory INFO.

(h) Turn the power switch OFF.

(i) Turn the power switch ON (IG), and wait for at least 60 seconds.

(j) Check the DTCs INFO.

OK:

DTC B1825, B1826, B1827, B1828, or 56 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827, B1828, and 56 may be output at this time, but they are not related to this check.

OK ▶ REPLACE FRONT SEAT ASSEMBLY RH

NG

2. CHECK FLOOR WIRE NO. 2 (FRONT PASSENGER SIDE - SIDE SQUIB CIRCUIT)

(a) Turn the power switch OFF.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Disconnect the SST from connector C.

(d) Disconnect the connectors from the center airbag sensor assembly.

(e) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the power switch ON (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BG1-1 (SFR-) - Body ground	Power switch ON (IG)	Below 1 V
BG1-2 (SFR+) - Body ground	Power switch ON (IG)	Below 1 V

(f) Check for an open in the circuit.

(1) Turn the power switch OFF.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BG1-1 (SFR-) - BG1-2 (SFR+)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BG1-1 (SFR-) - Body ground	Always	1 MΩ or higher
BG1-2 (SFR+) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO.

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
BG1-1 (SFR-) - BG1-2 (SFR+)	Always	1 MΩ or higher

NG ▶ REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

3.	CHECK CENTER AIRBAG SENSOR ASSEMBLY
-----------	--

(a) Connect the connectors to the front seat side airbag assembly RH and the center airbag sensor assembly.

(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(c) Turn the power switch ON (IG), and wait for at least 60 seconds.

(d) Clear the DTCs stored in the memory INFO.

- (e) Turn the power switch OFF.
- (f) Turn the power switch ON (IG), and wait for at least 60 seconds.
- (g) Check the DTCs  .

OK:

DTC B1825, B1826, B1827, B1828, or 56 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827, B1828, and 56 may be output at this time, but they are not related to this check.

ASSEMBLY**

Source Voltage Drop**DESCRIPTION**

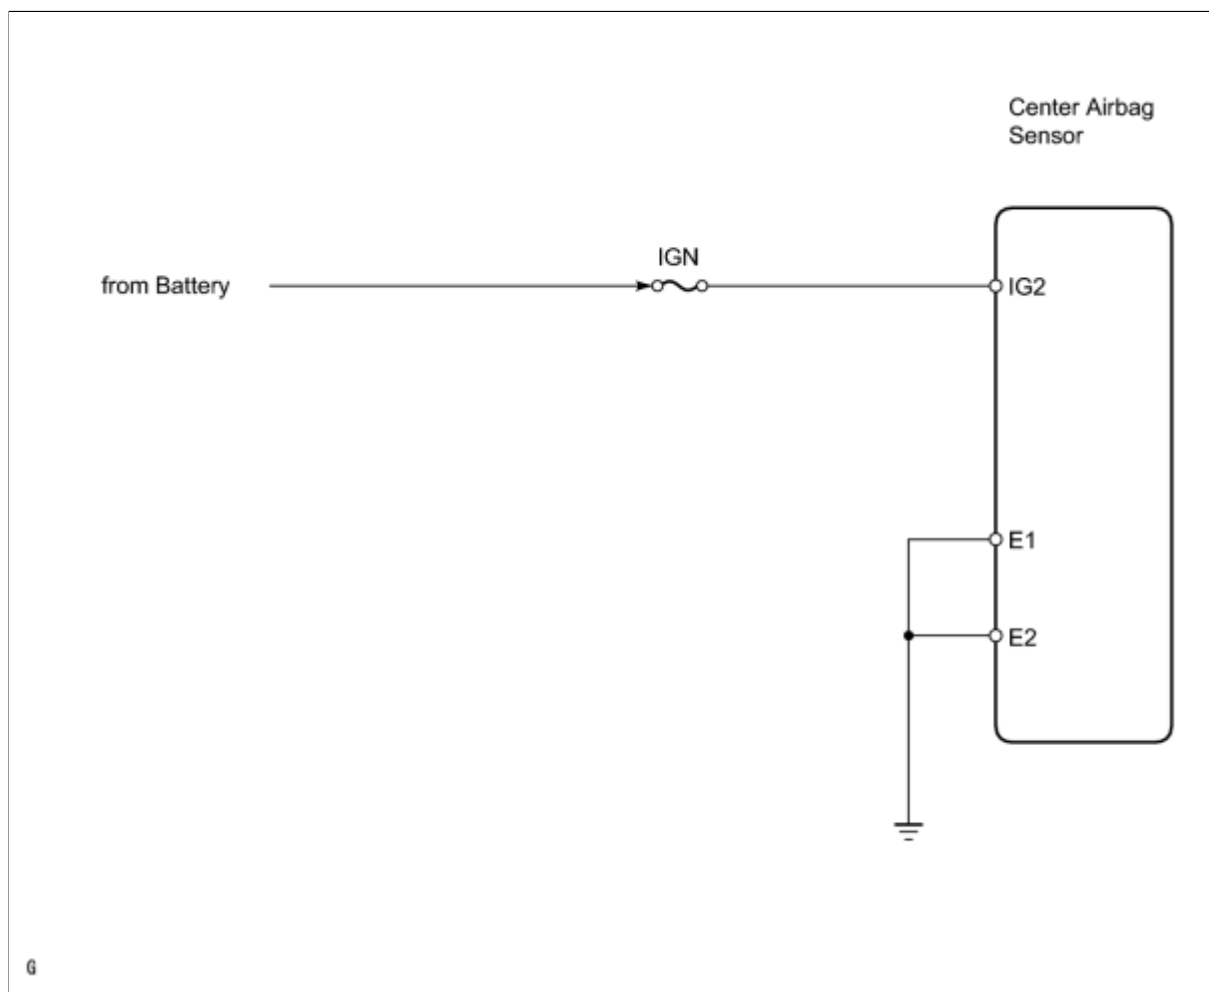

The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor in case the source voltage drops.

When the source voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to a normal working level.

When a malfunction occurs in this circuit, no DTCs are output (a normal system code is output). If a source voltage drop occurs, the SRS warning light comes on.

A malfunction in this circuit is not recorded in the center airbag sensor.

The SRS warning light automatically goes off when the source voltage returns to normal.

WIRING DIAGRAM**INSPECTION PROCEDURE****PROCEDURE**

1. CHECK WIRE HARNESS (CENTER AIRBAG SENSOR, BATTERY)

1. CHECK WIRE HARNESS (CENTER AIRBAG SENSOR - BATTERY)

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Disconnect the connectors from the center airbag sensor.
- (d) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (e) Measure the voltage of the wire harness side connector.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-21 (IG2) - Body ground	Power switch ON (IG)	11 to 14 V

NG ▶ REPAIR OR REPLACE HARNESS AND CONNECTOR, CHARGING SYSTEM AND BATTERY

OK ▼

2. CHECK WIRE HARNESS (CENTER AIRBAG SENSOR - BODY GROUND)

- (a) Measure the resistance of the wire harness side connector.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
A18-25 (E1) - Body ground	Below 1 Ω
A18-26 (E2) - Body ground	Below 1 Ω

NG ▶ REPAIR OR REPLACE HARNESS AND CONNECTOR

OK ▼

3.	CHECK SRS WARNING LIGHT
-----------	--------------------------------

- (a) Turn the power switch OFF.
- (b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (c) Connect the center airbag sensor connector.
- (d) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
- (e) Turn the power switch ON (IG), and wait for at least 6 seconds.
- (f) Operate all components of the electrical system (defogger, wiper, headlight, heater, blower, etc.) and check that the SRS warning light does not come on.

OK:

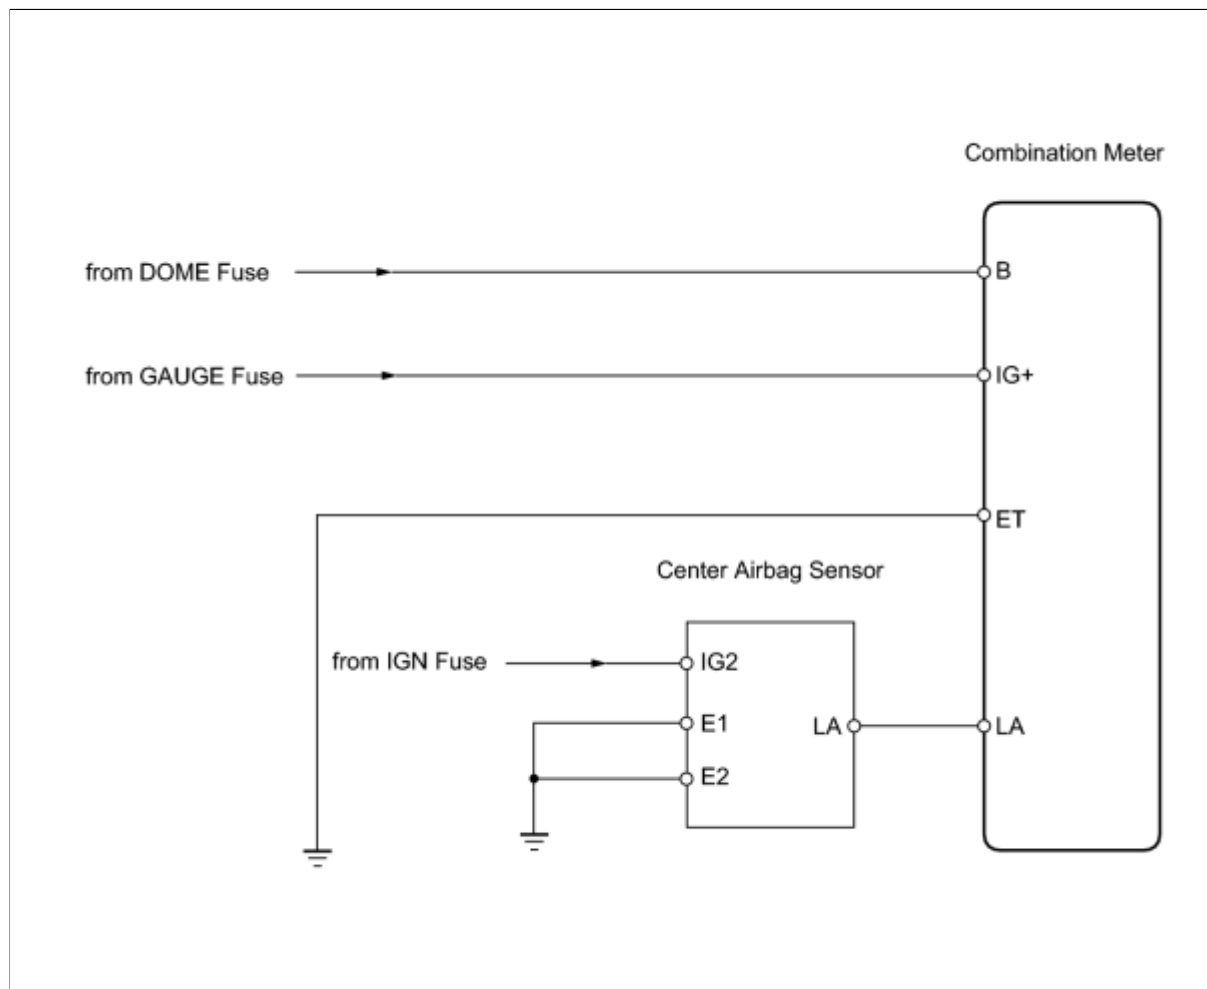

SRS warning light does not come on.

NG  **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK  **END**

SRS Warning Light Remains ON**DESCRIPTION**

The SRS warning light is located on the combination meter. When the power switch is turned from OFF to ON (IG), the SRS warning light illuminates. If the SRS is normal, the SRS warning light turns off automatically after approximately 6 seconds. If there is a malfunction in the SRS, the SRS warning light remains illuminated even after approximately 6 seconds have passed. When terminals TC and CG of the DLC3 are connected, the DTCs are communicated through SRS warning light blinking patterns.

WIRING DIAGRAM**INSPECTION PROCEDURE****PROCEDURE****1. INSPECT BATTERY**

(a) Measure the voltage of the battery.

Standard voltage:

.....

11 to 14 V

NG  **RECHARGE OR REPLACE BATTERY****OK****2. CHECK CONNECTION OF CONNECTOR**

- (a) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (b) Check that the connector is properly connected to the center airbag sensor.

OK:

Connector is connected.

NG  **CONNECT CONNECTOR****OK****3. PREPARE FOR INSPECTION****CAUTION:**

Be sure to perform the following procedures before troubleshooting to avoid unexpected airbag deployment.

- (a) Disconnect the connector from the center airbag sensor.
- (b) Disconnect the connector from the steering pad connector.

NEXT**4. CHECK CENTER AIRBAG SENSOR ASSEMBLY**

Wire Harness Side

- (a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

- (b) Turn the power switch ON (IG).
- (c) Measure the voltage and resistance of the wire harness side connector.

Standard voltage:

TESTER CONNECTION	SPECIFIED CONDITION
A18-21 (IG2) - Body ground	8 to 14 V

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
A18-25 (E1) - Body ground	Below 1 Ω

NG REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

5. CHECK COMBINATION METER ASSEMBLY (POWER SOURCE)

- (a) Disconnect the C10 meter connector.

- (b) Turn the power switch ON (IG).
- (c) Measure the voltage of the wire harness side connector.

Standard voltage:

TESTER CONNECTION	SPECIFIED CONDITION
C10-21 - Body ground	8 to 14 V

NG REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

6. CHECK WIRE HARNESS (CENTER AIRBAG SENSOR - COMBINATION METER)

(a) Disconnect the A18 sensor connector.

(b) Disconnect the C10 meter connector.

(c) Measure the resistance of the wire harness side connectors.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
A18-14 (LA) - C10-11	Below 1 Ω

NG **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

7. CHECK SRS WARNING LIGHT (OPERATION)

(a) Disconnect the A18 ECU connector with the C10 meter connector connected.

(b) Turn the power switch ON (IG).

(c) Check that the warning light illuminates for 6 seconds after turning the power switch ON (IG).

OK:

Warning light illuminates for 6 seconds after turning power switch ON (IG).

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK

8. CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Disconnect the A18 sensor connector.

(b) Turn the power switch ON (IG).

(c) Measure the voltage of the wire harness side connector.

Standard voltage:

TESTER CONNECTION	SPECIFIED CONDITION
A18-14 (LA) - Body ground	8 to 14 V

NG  **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

9. REPLACE CENTER AIRBAG SENSOR ASSEMBLY

(a) Replace the center airbag sensor.

(b) Check that the SRS warning light illuminates normally.

OK:

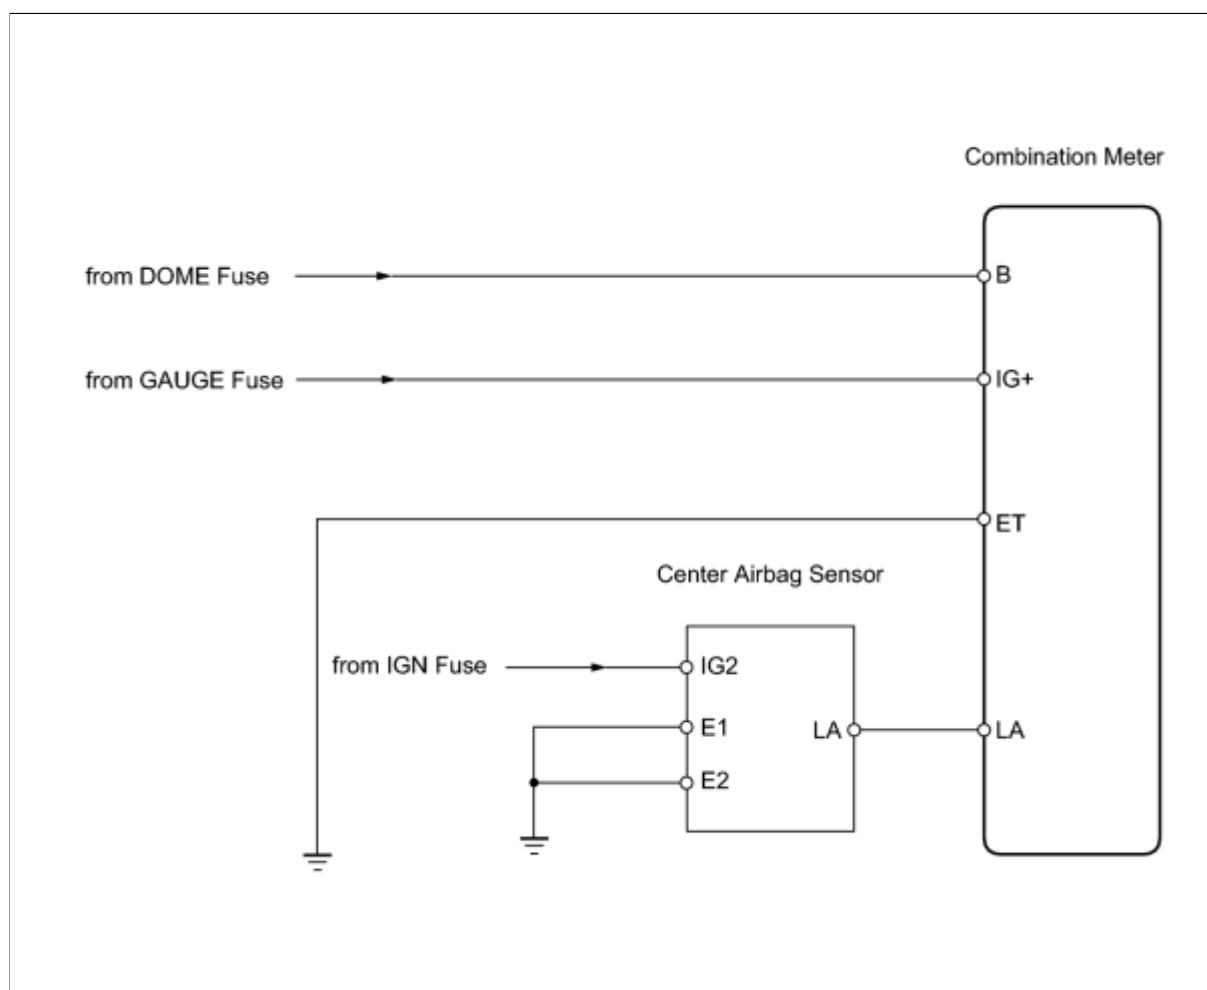

SRS warning light illuminates normally.

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK  **END**

SRS Warning Light does not Come ON**DESCRIPTION**

The SRS warning light is located on the combination meter. When the power switch is turned from OFF to ON (IG), the SRS warning light illuminates. If the SRS is normal, the SRS warning light turns off automatically after approximately 6 seconds. If there is a malfunction in the SRS, the SRS warning light remains illuminated even after approximately 6 seconds have passed. When terminals TC and CG of the DLC3 are connected, the DTCs are communicated through SRS warning light blinking patterns.

WIRING DIAGRAM**INSPECTION PROCEDURE****PROCEDURE****1. CHECK CONNECTION OF CONNECTORS**

- (a) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
- (b) Check that the connectors are properly connected to the center airbag sensor and combination meter.

OK:
Connectors are connected.

NG ▶ **CONNECT CONNECTORS**

OK
▼

2. CHECK COMBINATION METER ASSEMBLY

- (a) Disconnect the C10 meter connector.
- (b) Turn the power switch ON (IG).
- (c) Measure the voltage of the wire harness side connector.

Standard voltage:

TESTER CONNECTION	SPECIFIED CONDITION
C10-21 - Body ground	8 to 14 V

NG ▶ **REPAIR OR
REPLACE
HARNESS AND
CONNECTOR**

OK
▼

3. CHECK SRS WARNING LIGHT (OPERATION)

- (a) Disconnect the A18 sensor connector with the C10 meter connector connected.
- (b) Turn the power switch ON (IG).
- (c) Check that the warning light illuminates for 6 seconds after turning the power switch ON (IG).

OK:
Warning light illuminates for 6 seconds after turning power switch ON (IG).

NG ▶ **REPLACE COMBINATION METER ASSEMBLY**

OK
▼

4.	REPLACE CENTER AIRBAG SENSOR ASSEMBLY
-----------	--

- (a) Replace the center airbag sensor.
- (b) Check that the SRS warning light illuminates normally.

OK:

SRS warning light illuminates normally.

NG  **REPLACE COMBINATION METER ASSEMBLY**

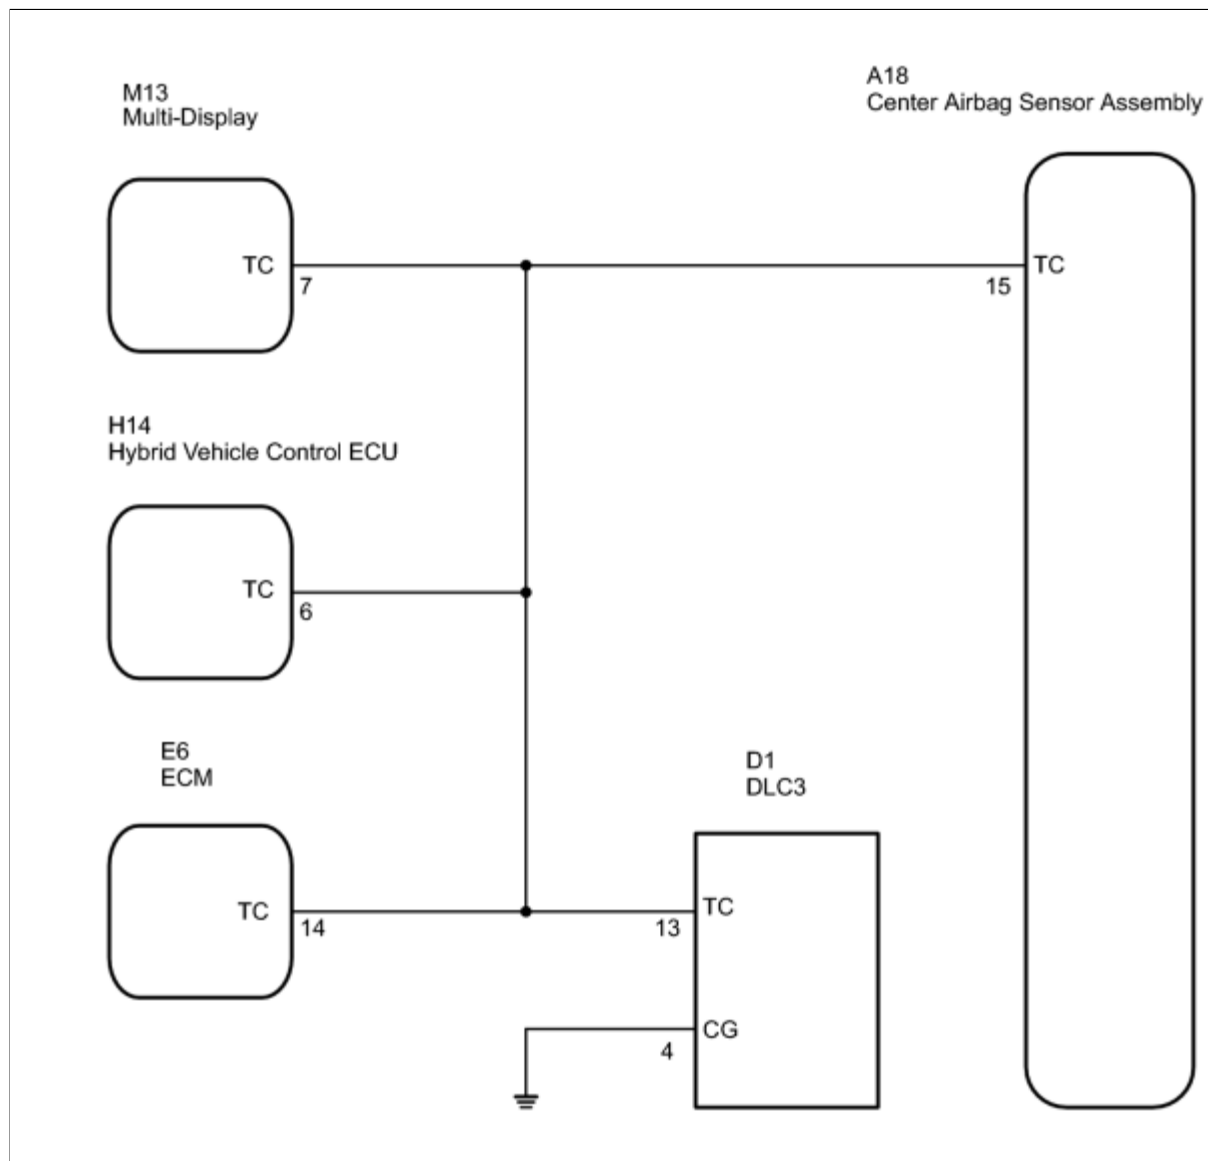

OK  **END**

TC and CG Terminal Circuit**DESCRIPTION**

DTC output mode is set by connecting terminals TC and CG of the DLC3. The DTCs are communicated through SRS warning light blinking patterns.

HINT:

When one or more of the warning lights blinks continuously, the cause may be a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in each ECU.

WIRING DIAGRAM**INSPECTION PROCEDURE****CAUTION:**

Be sure to perform the following procedures before troubleshooting to avoid unexpected airbag deployment.

1. Turn the power switch OFF.

2. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

PROCEDURE

1. CHECK WIRE HARNESS (DLC3 - CENTER AIRBAG SENSOR AND BODY GROUND)

(a) Disconnect the A18 sensor connector.

(b) Measure the resistance of the wire harness side connectors.

Standard resistance:

TESTER CONNECTION	SPECIFIED CONDITION
D1-13 (TC) - A18-15 (TC)	Below 1 Ω
D1-4 (CG) - Body ground	Below 1 Ω
A18-15 (TC) - Body ground	1 M Ω or higher

NG ▶ REPAIR OR
REPLACE
HARNESS AND
CONNECTOR

OK ▶ REPLACE CENTER
AIRBAG SENSOR

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the center airbag sensor assembly.

1. INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

2. INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the center airbag sensor assembly installed on the vehicle.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Peeling of the label

OK:

No defects are found.

HINT:

If any of the defects is found, replace the center airbag sensor assembly with a new one.

3. INSPECT CENTER AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag is Deployed)

(a) Replace the center airbag sensor assembly.

HINT:

The center airbag sensor assembly should be replaced after any of the airbags has deployed, as it has been subjected to an impact.

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing [INFO](#).

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

3. REMOVE REAR DECK FLOOR BOX [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

6. REMOVE REAR CONSOLE BOX ASSEMBLY

HINT:

Refer to the procedure up to Remove Rear Console Box Assembly [INFO](#).

7. REMOVE INTEGRATION CONTROL AND PANEL ASSEMBLY [INFO](#)

8. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY [INFO](#)

9. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH [INFO](#)

10. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY [INFO](#)

11. REMOVE RADIO RECEIVER WITH BRACKET (w/o Navigation System) [INFO](#)

12. REMOVE NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System) [INFO](#)

13. REMOVE NO. 1 SIDE DEFROSTER NOZZLE [INFO](#)

14. REMOVE NO. 2 INSTRUMENT PANEL REGISTER [INFO](#)

15. REMOVE GLOVE COMPARTMENT DOOR [INFO](#)

16. REMOVE AIR CONDITIONING CONTROL ASSEMBLY_ **INFO**

17. REMOVE SHIFT LOCK CONTROL UNIT ASSEMBLY_ **INFO**

18. REMOVE ELECTRICAL KEY OSCILLATOR_ **INFO**

19. REMOVE NO. 2 CONSOLE BOX MOUNTING BRACKET_ **INFO**

20. REMOVE FRONT NO. 1 CONSOLE BOX INSERT_ **INFO**

21. REMOVE FRONT NO. 2 CONSOLE BOX INSERT_ **INFO**

22. REMOVE BOX BOTTOM MAT_ **INFO**

23. SEPARATE CONSOLE BOX ASSEMBLY_ **INFO**

24. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ **INFO**

25. REMOVE CONSOLE BOX ASSEMBLY_ **INFO**

26. REMOVE CENTER AIRBAG SENSOR ASSEMBLY

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Disconnect the connectors from the center airbag sensor assembly as shown in the illustration.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(d) Remove the 3 bolts and center airbag sensor assembly.

INSTALLATION

1. INSTALL CENTER AIRBAG SENSOR ASSEMBLY

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Using SST and a torque wrench, install the center airbag sensor assembly with the 3 bolts.

Text in Illustration

*1	Fulcrum Length
*2	Waterproof Sheet

SST: 09961-00950

without SST - Torque: **18 N·m (178 kgf·cm, 13ft·lbf)**

with SST - Torque: **11 N·m (112 kgf·cm, 8ft·lbf)**

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when SST is parallel to a torque wrench.
- If the center airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the center airbag sensor assembly, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- When the power switch is first turned on (IG) after the center airbag sensor assembly has been replaced, make sure that no one is in the vehicle.

- (d) Connect the connectors to the center airbag sensor assembly as shown in the illustration.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

- (e) Check that the waterproof sheet is properly set.

(f) Check that there is no looseness in the installation parts of the center airbag sensor assembly.

2. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ [INFO](#)

3. INSTALL CONSOLE BOX ASSEMBLY_ [INFO](#)

4. INSTALL BOX BOTTOM MAT_ [INFO](#)

5. INSTALL FRONT NO. 2 CONSOLE BOX INSERT_ [INFO](#)

6. INSTALL FRONT NO. 1 CONSOLE BOX INSERT_ [INFO](#)

7. INSTALL NO. 2 CONSOLE BOX MOUNTING BRACKET_ [INFO](#)

8. INSTALL ELECTRICAL KEY OSCILLATOR_ [INFO](#)

9. INSTALL SHIFT LOCK CONTROL UNIT ASSEMBLY_ [INFO](#)

10. INSTALL AIR CONDITIONING CONTROL ASSEMBLY_ [INFO](#)

11. INSTALL GLOVE COMPARTMENT DOOR_ [INFO](#)

12. INSTALL NO. 2 INSTRUMENT PANEL REGISTER_ [INFO](#)

13. INSTALL NO. 1 SIDE DEFROSTER NOZZLE_ [INFO](#)

14. INSTALL RADIO RECEIVER WITH BRACKET (w/o Navigation System)_ [INFO](#)

15. INSTALL NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System)_ [INFO](#)

16. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY_ [INFO](#)

17. INSTALL INSTRUMENT CLUSTER FINISH PANEL GARNISH_ [INFO](#)

18. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY_ [INFO](#)

19. INSTALL INTEGRATION CONTROL AND PANEL ASSEMBLY_ [INFO](#)

20. INSTALL REAR CONSOLE BOX ASSEMBLY

HINT:

Refer to the procedure from Install Rear Console Box Assembly_ [INFO](#) .

21. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected_ [INFO](#) .

22. INSTALL REAR NO. 3 FLOOR BOARD_ [INFO](#)

23. INSTALL REAR DECK FLOOR BOX_ [INFO](#)

24. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type)_ [INFO](#)

25. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check [INFO](#).

26. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light [INFO](#).

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the curtain shield airbag assemblies.

1. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the curtain shield airbag assemblies installed on the vehicle.

(1) The defects are as follows:

- Cuts on each pillar garnish or the roof headlining assembly around the curtain shield airbag assemblies
- Small cracks on each pillar garnish or the roof headlining assembly around the curtain shield airbag assemblies
- Significant discoloration on each pillar garnish or the roof headlining assembly around the curtain shield airbag assemblies

OK:

No defects are found.

HINT:

If any of the defects is found, replace each pillar garnish or the roof headlining assembly with a new one.

2. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the curtain shield airbag assemblies removed from the vehicle.

(1) The defects are as follows:

- Cuts on the curtain shield airbag assemblies
- Small cracks on the curtain shield airbag assemblies
- Significant discoloration on the curtain shield airbag assemblies
- Cracks or other damage to the connector

OK:

No defects are found.

HINT:

If any of the defects is found, replace the curtain shield airbag assembly with a new one.

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected .

3. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure up to Remove Roof Headlining Assembly .

4. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY

CAUTION:

When storing the curtain shield airbag assembly, keep the airbag deployment side facing upward.

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Using a screwdriver with the tip wrapped with protective tape, release the airbag connector lock and disconnect the curtain shield airbag connector.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(d) Remove the 5 bolts.

(e) Remove the 4 clips.

(1) Using a clip remover, remove the 4 pins.

P

Text in Illustration

*1	Pin
*2	Clip
*3	Airbag

*3	Body
*4	Spacer

(f) Disengage the 5 hooks to remove the curtain shield airbag assembly.

C

(g) Remove the 4 clips and 4 spacers from the curtain shield airbag assembly.

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Temporarily install the curtain shield airbag assembly with the 5 hooks.

NOTICE:

Do not twist the curtain shield airbag assembly when installing it.

- (d) Install the curtain shield airbag assembly to the body panel with 4 new clips and 4 new spacers.

(1) Install 4 new pins as shown in the illustration.

Text in Illustration

*1	Pin
*2	Clip
*3	Airbag
*4	Body
*5	Spacer

NOTICE:

Make sure that the pins of the clips are pushed in firmly.

(e) Install the 5 bolts.

Torque: **9.8 N·m (100 kgf·cm, 87in·lbf)**

(f) Connect the curtain shield airbag connector.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

(g) Push in the lock to install the airbag connector.

2. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure from Install Roof Headlining Assembly [INFO](#).

3. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check [INFO](#).

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with your bare hands to discharge static electricity before performing this procedure.
- Never dispose of a curtain shield airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the curtain shield airbag assembly.
- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the curtain shield airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (When Installed in Vehicle)

NOTICE:

- When disposing of the curtain shield airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST .

SST: 09082-00700

(b) Refer to Precaution **INFO**.

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(d) Remove the roof headlining assembly **INFO**.

(e) Install SST.

CAUTION:

Check that there is no looseness in the curtain shield airbag assembly.

(1) Disconnect the connector from the curtain shield airbag assembly.

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.

(2) After connecting the following SST to each other, connect them to the curtain shield airbag assembly.

SST: 09082-00700

SST: 09082-00802

09082-10801

09082-20801

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (32.8 ft.) away from the rear side window.

Text in Illustration

*1	Battery
----	---------

(4) Maintaining sufficient clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- Before deployment, make sure that no one is near the vehicle.
- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

3. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (When Not Installed in Vehicle)

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST INFO.

SST: 09082-00700

Y

(b) Remove the curtain shield airbag assembly INFO.

CAUTION:

- Before removing the curtain shield airbag assembly, wait at least 90 seconds after turning the power switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the curtain shield airbag assembly, keep the airbag deployment side facing upward.

(c) Cut off the deployment section of the curtain shield airbag assembly.

C

(d) Using braided wire, tie down the curtain shield airbag assembly to an unneeded tire.

H

Text in Illustration

*1	Stripped Wire Section
*2	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire is too thin or an alternative object is used to tie down the curtain shield airbag assembly, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

(1) Position the curtain shield airbag assembly inside the tire as shown in the illustration.

Text in Illustration

*1	Width
*2	Inner Diameter

Minimum tire size:

Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (1.18 ft.)

c

CAUTION:

Make sure that the wires are tight. If there is slack in the wires, the curtain shield airbag assembly may break loose when the airbag is deployed.

NOTICE:

The tire may be marked by the airbag deployment, so use an unneeded tire.

(e) Install SST.

(1) After connecting the following SST to each other, connect them to the

curtain shield airbag assembly.

SST: 09082-00802

09082-10801

09082-20801

c

(f) Place the tires.

CAUTION:

Do not face the deployment side of the curtain shield airbag assembly toward the ground.

(1) Place at least 2 tires under the tire to which the curtain shield airbag assembly is tied.

c

(2) Place at least 2 tires onto the tire to which the curtain shield airbag assembly is tied. The top tire should have a wheel installed.

NOTICE:

Do not place the SST connector under the tire because it could be damaged.

(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

H

(g) Install SST.

(1) Connect the SST connector.

Text in Illustration

*1 Curtain Shield Airbag Assembly

*2 Battery

SST: 09082-00700

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

c

(2) Move SST at least 10 m (32.8 ft.) away from the airbag tied down to the tire.

(h) Deploy the airbag.

(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check that no one is within a 10 m (32.8 ft.) radius of the tire to which the curtain shield airbag assembly is tied.

(3) Press the SST activation switch and deploy the airbag.

CAUTION:

Before deployment, make sure that no one is near the airbag.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

(i) Dispose of the curtain shield airbag assembly.

- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

c

(1) Remove the curtain shield airbag assembly from the tire.

(2) Place the curtain shield airbag assembly in a plastic bag, tie it tightly, and dispose of it according to local regulations.

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the front airbag sensors.

1. INSPECT FRONT AIRBAG SENSOR (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

2. INSPECT FRONT AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check the front airbag sensors for defects if the front bumper of the vehicle or the area around the bumper is damaged.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found, replace the front airbag sensor with a new one.

3. INSPECT FRONT AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag is Deployed)

(a) When airbags have deployed as the result of a collision, be sure to replace all front airbag sensors in the damaged areas (anywhere in need of repair).

(b) Visually check the front airbag sensors in undamaged areas for defects.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found or a front airbag sensor has detected a major collision, replace the front airbag sensor with a new one.

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing [INFO](#).

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

3. REMOVE REAR DECK FLOOR BOX [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

6. REMOVE FRONT BUMPER ASSEMBLY

HINT:

Refer to the procedure up to Remove Front Bumper Assembly [INFO](#).

7. REMOVE FRONT AIRBAG SENSOR

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Disconnect the connector from the front airbag sensor.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(1) Push down the white housing lock and slide the yellow CPA. (At this time, the connector cannot be disconnected yet.)

c

(2) Push down the white housing lock again and disconnect the connector.

NOTICE:

Do not push down the part (A) shown in the illustration when disconnecting.

(3) After disconnecting the connector, check that the position of the white housing lock is correct as shown in the illustration.

c

c

(d) Remove the bolt and front airbag sensor.

NOTICE:

Loosen the bolt while holding the front airbag sensor because the front airbag sensor pin (stopper) is easily damaged.

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL FRONT AIRBAG SENSOR

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Using SST and a torque wrench, install the front airbag sensor with the bolt.

Text in Illustration

*1	Fulcrum Length
----	----------------

SST: 09961-00950

without SST - Torque: **9.0 N·m (92 kgf·cm, 80in·lbf)**

with SST - Torque: **5.6 N·m (57 kgf·cm, 50in·lbf)**

c

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when SST is parallel to the torque wrench.
- If the front airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the front airbag sensor, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- Make sure that the pin (stopper) is securely inserted into the body hole.
- Tighten the bolt while holding the front airbag sensor because the front airbag sensor pin (stopper) is easily damaged.

- (d) Connect the connector to the front airbag sensor.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

(1) Before connecting the connector, check that the position of the white housing lock is correct as shown in the illustration.

(2) Be sure to engage the connectors until they are locked (when locking, make sure that a click sound can be heard).

C

HINT:

When engaged, the white housing lock will slide. Be sure not to hold the white housing lock and part (A), as it may result in an insecure fit.

(e) Check that there is no looseness in the installation parts of the front airbag sensor.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

3. INSTALL REAR NO. 3 FLOOR BOARD [INFO](#)

4. INSTALL REAR DECK FLOOR BOX [INFO](#)

5. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

6. INSTALL FRONT BUMPER ASSEMBLY

HINT:

Refer to the procedure from Install Front Bumper Assembly [INFO](#).

7. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check [INFO](#).

8. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light .

COMPONENTS

ILLUSTRATION

N*m (kgf*cm, ft.*lbf) : Specified torque

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the front passenger airbag assembly.

1. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the front passenger airbag assembly installed on the vehicle.

(1) The defects are as follows:

- Cuts on the instrument panel around the front passenger airbag assembly
- Small cracks on the instrument panel around the front passenger airbag assembly
- Significant discoloration on the instrument panel around the front passenger airbag assembly

OK:

No defects are found.

HINT:

If any of the defects is found, replace the instrument panel with a new one.

2. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the front passenger airbag assembly removed from the vehicle.

(1) The defects are as follows:

- Cuts on the front passenger airbag assembly
- Small cracks on the front passenger airbag assembly
- Significant discoloration on the front passenger airbag assembly
- Cracks or other damage to the connector
- Deformation or cracks on the instrument panel or instrument panel reinforcement

OK:

No defects are found.

HINT:

If any of the defects is found, replace the front passenger airbag assembly, instrument panel or instrument panel reinforcement with a new one.

REMOVAL

1. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL GARNISH

HINT:

Refer to the procedure up to Remove Center Instrument Cluster Finish Panel Garnish **INFO**.

2. DISCONNECT NO. 3 INSTRUMENT PANEL WIRE

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Slide the slider to release the lock, and then disconnect the connector.

Text in Illustration

*1

Slider

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

3. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY **INFO**

4. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY

CAUTION:

When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.

(a) Remove the 2 screws and 2 clamps.

(b) Lean the instrument panel and disengage the 3 hooks as shown in the illustration.

(c) Disengage the 3 hooks to remove the front passenger airbag assembly from the instrument panel safety pad assembly as shown in the illustration.

5. REMOVE NO. 3 INSTRUMENT PANEL WIRE

(a) Disengage the clamp.

(b) Separate the No. 3 instrument panel wire from the front passenger airbag assembly clamp.

(c) Using a screwdriver with the tip wrapped with protective tape, release the 2 airbag connector locks.

Text in Illustration

*1	Protective Tape
----	-----------------

(d) Disconnect the 2 airbag connectors to remove the No. 3 instrument panel wire from the front passenger airbag assembly.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

INSTALLATION

1. INSTALL NO. 3 INSTRUMENT PANEL WIRE

(a) Connect the 2 airbag connectors to the front passenger airbag assembly.

- When connecting any airbag connector, take care not to damage the airbag wire harness.
- Be sure to only connect the connectors to each corresponding color.

(b) Push in the 2 locks to install the 2 airbag connectors.

(c) Connect the No. 3 instrument panel wire to the front passenger airbag assembly clamp.

(d) Engage the clamp to install the No. 3 instrument panel wire to the front passenger airbag assembly.

2. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY

(a) Engage the 3 hooks.

(b) Push the front passenger airbag assembly to engage the 3 hooks.

(c) Install the 2 screws to install the front passenger airbag assembly.

(d) Install the 2 clamps to the front passenger airbag assembly.

3. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY INFO

4. CONNECT NO. 3 INSTRUMENT PANEL WIRE

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Connect the connector.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

5. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL GARNISH

HINT:

Refer to the procedure from Install Center Instrument Cluster Finish Panel Garnish INFO.

6. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check INFO.

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.
- Never dispose of a front passenger airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the front passenger airbag assembly.
- The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- Do not apply water etc. to a front passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the front passenger airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (When Installed in Vehicle)

NOTICE:

- When disposing of the front passenger airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST .

SST: 09082-00700

(b) Refer to Precaution **INFO**.

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(d) Remove the glove compartment door **INFO**.

(e) Disconnect the instrument panel wire assembly.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(1) Slide the slider to release the lock, and then disconnect the connector.

Text in Illustration

*1	Slider
----	--------

(f) Install SST.

CAUTION:

Check that there is no looseness in the front passenger airbag assembly and upper instrument panel assembly.

(1) Connect the SST connector to the instrument panel wire assembly.

SST: 09082-00700

SST: 09082-00780

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

(2) Move SST at least 10 m (32.8 ft.) away from the front side window of the vehicle.

Text in Illustration

*1

Battery

(3) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(4) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(g) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- Before deployment, make sure that no one is near the vehicle.
- The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- Do not apply water etc. to a front passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

3. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (When Not Installed in Vehicle)

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST INFO.

SST: 09082-00700

(b) Remove the front passenger airbag assembly INFO.

CAUTION:

- Before removing the front passenger airbag assembly, wait at least 90 seconds after turning the power switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.

(c) Install SST.

(1) After connecting the following SST to each other, connect them to the front passenger airbag assembly.

SST: 09082-00802

09082-10801

09082-30801

(d) Using braided wire, tie down the front passenger airbag assembly to an unneeded tire.

H

Text in Illustration

*1	Stripped Wire Section
*2	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire is too thin or an alternative object is used to tie down the front passenger airbag assembly, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

(1) Position the front passenger airbag assembly inside the tire with the airbag deployment side facing inside.

Minimum tire size:

Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (1.18 ft.)

c

Text in Illustration

*1	Inner Diameter	*2	Width
----	----------------	----	-------

CAUTION:

- Make sure that the wires are tight. If there is slack in the wires, the front passenger airbag assembly may break loose when the airbag is deployed.
- Always tie down the front passenger airbag assembly with the airbag deployment side facing inside the tire as shown in the illustration.

NOTICE:

The tires may be damaged by the airbag deployment, so use an unneeded tire.

(e) Place the tires.

c

(1) Place at least 2 tires under the tire to which the front passenger airbag assembly is tied.

(2) Place at least 2 tires onto the tire to which the front passenger airbag assembly is tied. The top tire should have a wheel installed.

NOTICE:

Do not place the SST connector under the tire because it could be damaged.

H

(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

(f) Install SST.

(1) Connect the SST connector.

Text in Illustration

c

*1	Front Passenger Airbag Assembly
*2	Battery

SST: 09082-00700

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(2) Move SST at least 10 m (32.8 ft.) away from the airbag tied down to the tire.

(g) Deploy the airbag.

(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check that no one is within a 10 m (32.8 ft.) radius of the tire to which the front passenger airbag assembly is tied.

(3) Press the SST activation switch and deploy the airbag.

CAUTION:

Before deployment, make sure that no one is near the airbag.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the front passenger airbag assembly.

- The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- Do not apply water etc. to a front passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

H41436 (1) Remove the front passenger airbag assembly from the tire.

(2) Place the front passenger airbag assembly in a plastic bag, tie it tightly, and dispose of it according to local regulations.

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the front seat assemblies.

1. INSPECT FRONT SEAT SIDE AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the front seat side airbag assemblies installed on the vehicle.

(1) The defects are as follows:

- Cuts on the front seatback assembly around the front seat side airbag assemblies
- Small cracks on the front seatback assembly around the front seat side airbag assemblies
- Significant discoloration on the front seatback assembly around the front seat side airbag assemblies

OK:

No defects are found.

HINT:

If any of the defects is found, replace the front seat assembly with a new one.

2. INSPECT FRONT SEAT SIDE AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the front seat side airbag assemblies removed from the vehicle.

(1) The defects are as follows:

- Cuts on the surface of the front seat side airbag assemblies
- Small cracks on the surface of the front seat side airbag assemblies
- Marks from being dropped
- Deformation on the installation part of the front seat side airbag assemblies
- Cracks or other damage to the wire harness or connector

OK:

No defects are found.

HINT:

If any of the defects is found, replace the front seat assembly with a new one.

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with your bare hands to discharge static electricity before performing this procedure.
- Never dispose of a front seat side airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the front seat side airbag assembly.
- The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.
- Do not apply water etc. to a front seat side airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the front seat side airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (When Installed in Vehicle)

NOTICE:

- When disposing of the front seat side airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST .

SST: 09082-00700

(b) Refer to Precaution **INFO**.

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(d) Disconnect the connector from the front seat side airbag assembly under the front seat assembly.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(1) Slide the slider to release the lock, and then disconnect the yellow airbag connector under the front seat assembly.

c

Text in Illustration

*1	Slider	-	-
----	--------	---	---

(e) Install SST.

CAUTION:

Check that there is no looseness in the front seat assembly.

(1) Connect the SST connector to the front seat side airbag assembly connector.

SST: 09082-00700

SST: 09082-00820

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the driver side knee airbag assembly.

1. INSPECT DRIVER SIDE KNEE AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the driver side knee airbag assembly installed on the vehicle.

(1) The defects are as follows:

- Cuts on the driver side knee airbag assembly
- Small cracks on the driver side knee airbag assembly
- Significant discoloration on the driver side knee airbag assembly

OK:

No defects are found.

HINT:

If any of the defects is found, replace the driver side knee airbag assembly with a new one.

2. INSPECT DRIVER SIDE KNEE AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the driver side knee airbag assembly removed from the vehicle.

(1) The defects are as follows:

- Cuts on the driver side knee airbag assembly
- Small cracks on the driver side knee airbag assembly
- Significant discoloration on the driver side knee airbag assembly
- Cracks or other damage to the connector
- Deformation or cracks on the instrument panel or instrument panel reinforcement

OK:

No defects are found.

HINT:

If any of the defects is found, replace the driver side knee airbag assembly, instrument panel or instrument panel reinforcement with a new one.

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing [INFO](#).

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

3. REMOVE REAR DECK FLOOR BOX [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

21. REMOVE FRONT NO. 2 CONSOLE BOX INSERT_ INFO
22. REMOVE BOX BOTTOM MAT_ INFO
23. SEPARATE CONSOLE BOX ASSEMBLY_ INFO
24. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ INFO
25. REMOVE CONSOLE BOX ASSEMBLY_ INFO
26. REMOVE NO. 1 SWITCH HOLE BASE_ INFO
27. REMOVE FRONT DOOR SCUFF PLATE LH_ INFO
28. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH_ INFO
29. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY_ INFO
30. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ INFO
31. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY

CAUTION:

When storing the driver side knee airbag assembly, keep the airbag deployment side facing upward.

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Remove the 4 bolts.

c

(d) Disengage the 2 claws to separate the DLC3.

c

(e) Disengage the 6 claws and 4 guides to separate the driver side knee airbag assembly.

(f) Disengage the clamp to separate the wire harness.

c

(g) Using a screwdriver with the tip wrapped with protective tape, release the airbag connector lock.

Text in Illustration

*1	Protective Tape
----	-----------------

(h) Disconnect the airbag connector to remove the driver side knee airbag assembly.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

INSTALLATION

1. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Connect the airbag connector and install the clamp to the driver side knee airbag assembly.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

c

- (d) Push in the lock to install the airbag connector.

- (e) Temporarily install the driver side knee airbag assembly with the 6 claws and 4 guides.

c

- (f) Install the driver side knee airbag assembly with the 4 bolts.

Torque: **10 N·m (102 kgf·cm, 7ft·lbf)**

NOTICE:

Confirm that the driver side knee airbag assembly is installed securely without any excessive gaps and is not protruding outward.

- c
2. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY [INFO](#)
 3. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY [INFO](#)
 4. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH [INFO](#)
 5. INSTALL FRONT DOOR SCUFF PLATE LH [INFO](#)

25. INSTALL REAR CONSOLE BOX ASSEMBLY

HINT:

Refer to the procedure from Install Rear Console Box Assembly_ [INFO](#).

26. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected_ [INFO](#).

27. INSTALL REAR NO. 3 FLOOR BOARD_ [INFO](#)

28. INSTALL REAR DECK FLOOR BOX_ [INFO](#)

29. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type)_ [INFO](#)

30. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check_ [INFO](#).

31. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light_ [INFO](#).

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with your bare hands to discharge static electricity before performing this procedure.
- Never dispose of a driver side knee airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the driver side knee airbag assembly.
- The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.
- Do not apply water etc. to a driver side knee airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the driver side knee airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (When Installed in Vehicle)

NOTICE:

- When disposing of the driver side knee airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST .

SST: 09082-00700

(b) Refer to Precaution **INFO**.

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(d) Remove the No. 1 instrument panel under cover sub-assembly **INFO**.

(e) Disconnect the driver side knee airbag connector.

(1) Using a screwdriver with the tip wrapped with protective tape, disconnect the airbag connector.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(f) Install SST.

CAUTION:

Check that there is no looseness in the driver side knee airbag assembly.

(1) Connect the SST connector to the driver side knee airbag assembly.

SST: 09082-00700

SST: 09082-00802

09082-10801

09082-20801

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

(2) Move SST at least 10 m (32.8 ft.) away from the side window of the

vehicle.

Text in Illustration

*1	Battery
----	---------

(3) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(4) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(g) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- Before deployment, make sure that no one is near the vehicle.
- The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.
- Do not apply water etc. to a driver side knee airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

3. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (When Not Installed in Vehicle)

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST INFO.

Y

(b) Remove the driver side knee airbag assembly INFO.

CAUTION:

- Before removing the driver side knee airbag assembly, wait at least 90 seconds after turning the power switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the driver side knee airbag assembly, keep the airbag deployment side facing upward.

(c) Using braided wire, tie down the driver side knee airbag assembly to an unneeded tire.

H

Text in Illustration

*1	Stripped Wire Section
*2	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire is too thin or an alternative object is used to tie down the driver side knee airbag assembly, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

(1) Position the driver side knee airbag assembly inside the tire with the airbag deployment side facing inside.

Minimum tire size:

Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (1.18 ft.)

c

Text in Illustration

*1	Width	*2	Inner Diameter
----	-------	----	----------------

CAUTION:

- Make sure that the wires are tight. If there is slack in the wires, the driver side knee airbag assembly may break loose when the airbag is deployed.
- Always tie down the driver side knee airbag assembly with the airbag deployment side facing inside the tire as shown in the illustration.

NOTICE:

The tires may be marked by the airbag deployment, so use an unneeded tire.

(d) Install SST.

(1) After connecting the following SST to each other, connect them to the driver side knee airbag assembly.

SST: 09082-00802

09082-10801

09082-20801

(e) Place the tires.

(1) Place at least 2 tires under the tire to which the driver side knee airbag assembly is tied.

(2) Place at least 2 tires onto the tire to which the driver side knee airbag assembly is tied. The top tire should have a wheel installed.

NOTICE:

Do not place the SST connector under the tire because it could be damaged.

(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

(f) Install SST.

(1) Connect the SST connector.

Text in Illustration

*1	Driver Side Knee Airbag Assembly
----	----------------------------------

*2	Battery
----	---------

SST: 09082-00700

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(2) Move SST at least 10 m (32.8 ft.) away from the airbag tied down to the tire.

(g) Deploy the airbag.

(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check that no one is within a 10 m (32.8 ft.) radius of the tire to which the driver side knee airbag assembly is tied.

(3) Press the SST activation switch and deploy the airbag.

CAUTION:

Before deployment, make sure that no one is near the airbag.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the driver side knee airbag assembly.

- The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.
- Do not apply water etc. to a driver side knee airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

(1) Remove the driver side knee airbag assembly from the tire.

(2) Place the driver side knee airbag assembly in a plastic bag, tie it

tightly, and dispose of it according to local regulations.

COMPONENTS

ILLUSTRATION

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the occupant classification ECU.

1. INSPECT OCCUPANT CLASSIFICATION ECU (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

2. INSPECT OCCUPANT CLASSIFICATION ECU (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the occupant classification ECU.

(1) The defects are as follows:

- Cracks on the ECU housing
- Dents on the ECU housing
- Chips on the ECU housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found, replace the occupant classification ECU with a new one.

3. INSPECT OCCUPANT CLASSIFICATION ECU (for Vehicle Involved in Collision and Airbag is Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the occupant classification ECU.

(1) The defects are as follows:

- Cracks on the ECU housing
- Dents on the ECU housing
- Chips on the ECU housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found, replace the occupant classification ECU with a new one.

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO.

NOTICE:

- When removing front seat assembly RH, perform zero point calibration and sensitivity check INFO.
- When replacing the occupant classification ECU, perform zero point calibration and sensitivity check INFO.

2. REMOVE FRONT SEAT ASSEMBLY RH

HINT:

- Use the same procedure for the RH side and LH side.
- Refer to the procedure up to Remove Front Seat Assembly INFO.

3. REMOVE OCCUPANT CLASSIFICATION ECU

(a) Disconnect the 2 connectors.

(b) Using a screwdriver with the tip wrapped with protective tape, disengage the claw and remove the occupant classification ECU.

Text in Illustration

*1	Protective Tape
----	-----------------

INSTALLATION

1. INSTALL OCCUPANT CLASSIFICATION ECU

(a) Install the occupant classification ECU with the claw.

NOTICE:

If the occupant classification ECU has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the occupant classification ECU with a new one.

(b) Connect the 2 connectors.

NOTICE:

When installing the occupant classification ECU, be careful that the SRS wiring does not interfere with or is pinched between other parts.

2. INSTALL FRONT SEAT ASSEMBLY RH

HINT:

- Use the same procedure for the RH side and LH side.
- Refer to the procedure from Install Front Seat Assembly **INFO**.

3. ZERO POINT CALIBRATION AND SENSITIVITY CHECK

(a) Perform zero point calibration and sensitivity check **INFO**.

4. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check **INFO**.

5. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light **INFO**.

PRECAUTION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	INFO

1. GENERAL PRECAUTION

(a) Perform zero point calibration and sensitivity check if any of the following conditions occur:

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator ("OFF") comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

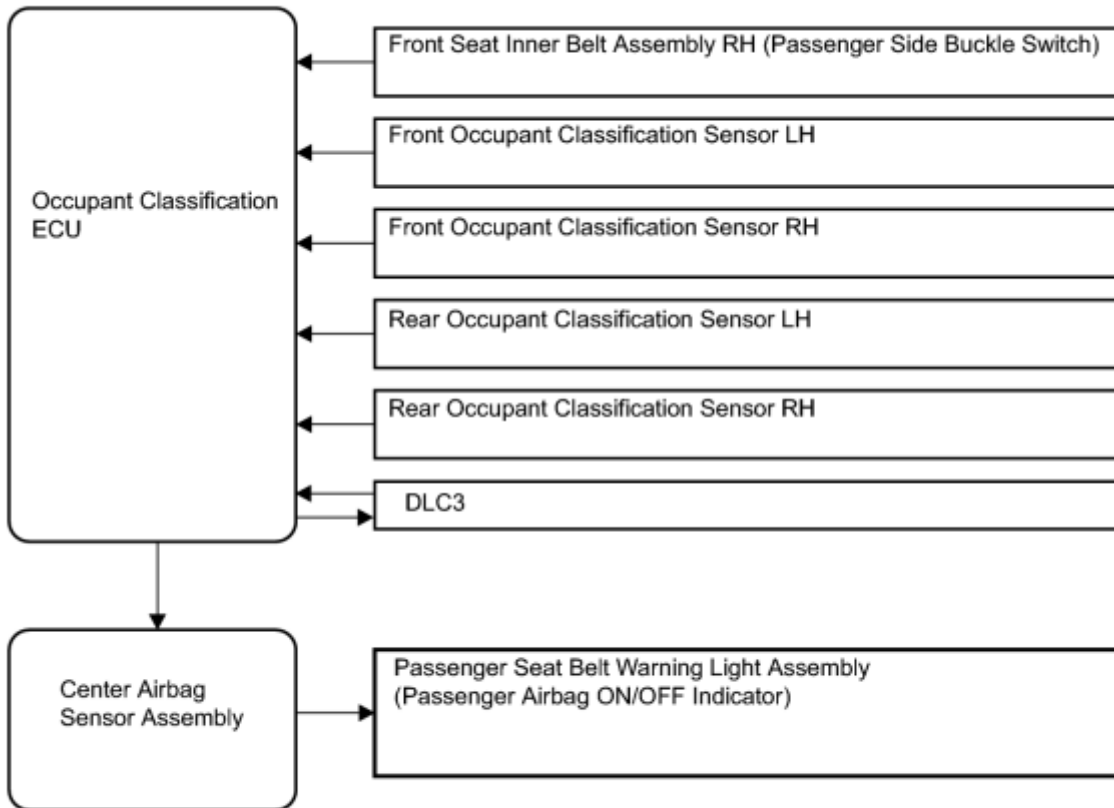

PARTS LOCATION

ILLUSTRATION

P

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. GENERAL

(a) In the occupant classification system, the occupant classification ECU calculates the weight of the occupant based on signals from the occupant classification sensors. This system recognizes the occupant as a child if it detects a weight of less than 36 kg (79.3 lb), and disables the front passenger airbag and front seat belt pretensioner RH.

(b) This system is mainly comprised of 4 occupant classification sensors that detect the load on the front passenger seat. The occupant classification ECU controls the system, and the passenger airbag ON/OFF indicator indicates the ON/OFF condition of the front passenger airbag and front seat belt pretensioner RH.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshooting the occupant classification system.
- *: Use the Techstream.

NEXT  END

INITIALIZATION

NOTICE:

Make sure that the front passenger seat is not occupied before performing the operation.

HINT:

Perform zero point calibration and sensitivity check if any of the following conditions occur:

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator ("OFF") comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

1. ZERO POINT CALIBRATION

(a) Zero point calibration procedure

HINT:

Make sure that zero point calibration has finished normally, and then perform the sensitivity check.

(1) Check that all of the following conditions are met:

- The vehicle is parked on a level surface.
- No objects are placed on the front passenger seat.
- The front passenger seat belt buckle switch is off.

(2) Adjust the seat position according to the table below.

Adjustment Item	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

(3) Turn the power switch off.

(4) Connect the Techstream to the DLC3.

(5) Turn the power switch on (IG).

(6) Turn the Techstream on.

(7) Enter the following menus: Body Electrical / Occupant Detection / Utility / Zero Point Calibration.

(8) Perform zero point calibration by following the prompts on the Techstream screen.

HINT:

- Refer to the Techstream operator's manual for further details.
- If zero point calibration does not complete, replace the front seat cushion spring assembly.

OK:

"Zero Point Calibration is complete." is displayed.

2. SENSITIVITY CHECK

(a) Sensitivity check procedure

(1) Turn the power switch off.

(2) Connect the Techstream to the DLC3.

(3) Turn the power switch on (IG).

(4) Turn the Techstream on.

(5) Enter the following menus: Body Electrical / Occupant Detection / Utility / Sensitivity Check.

(6) Perform sensitivity check by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

(7) Confirm that the initial sensor reading is within the specified range.

Standard:

-3.2 to 3.2 kg (-7.0 to 7.0 lb)

(8) Place a 30 kg (66.1 lb) weight (e.g. a 30 kg (66.1 lb) of lead mass) onto the front passenger seat.

(9) Confirm that sensitivity is within the specified range.

Standard:

27 to 33 kg (59.5 to 72.8 lb)

HINT:

- When performing sensitivity check, use a solid metal weight (the check result may not appear properly if a liquid weight is used).

- If sensitivity deviates from the specified range, retighten the bolts of the front passenger seat without deforming the seat rail. After performing this procedure, if sensitivity is not within the specified range, replace the Front seat cushion spring assembly.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Occupant Classification System

Symptom	Suspected Area	See page
The front passenger seat condition differs from the indication by the passenger airbag ON/OFF indicator (DTC is not output).	Trouble in Passenger Airbag ON/OFF Indicator

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 .

2. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

(1) Turn the power switch on (IG).

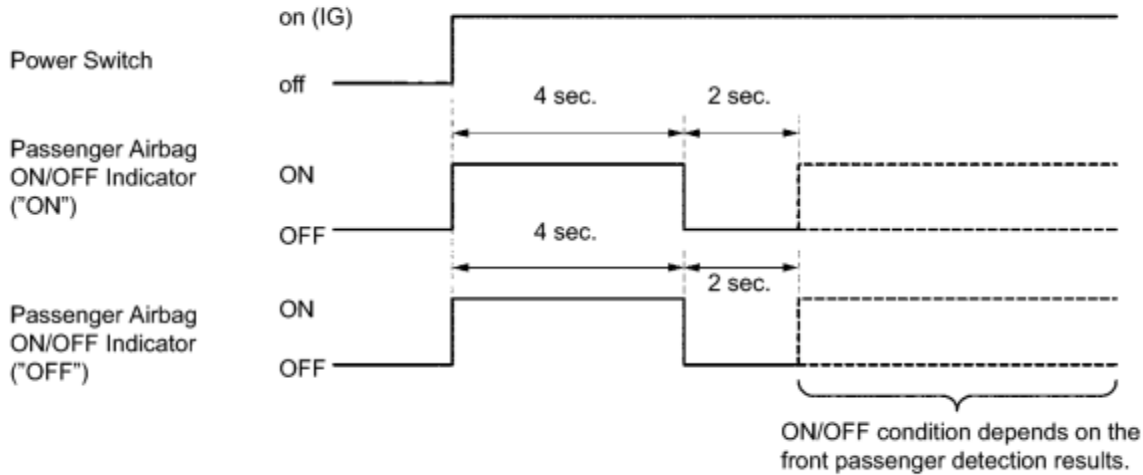

(2) The passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.

(3) Approximately 6 seconds after the power switch is turned on (IG), the passenger airbag ON/OFF indicator will indicate ON or OFF depending on the conditions listed below.

Front Passenger Seat Condition	Passenger Airbag ON/OFF Indicator		SRS Warning Light
	ON Indicator	OFF Indicator	
Vacant	OFF	OFF	OFF
Adult is seated.	ON	OFF	OFF
Child is seated.	OFF	ON	OFF
Child restraint system is set.	OFF	ON	OFF
Occupant classification system failure	OFF	ON	ON

HINT:

- The passenger airbag ON/OFF indicator illuminates based on the timing chart below in order to check the indicator light circuit.
- When the occupant classification system has trouble, both the SRS warning light and passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in the airbag system first.

P

3. CHECK PASSENGER AIRBAG ON/OFF INDICATOR

(a) Turn the power switch on (IG).

P

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.

HINT:

Refer to the table in previous step regarding the passenger airbag ON/OFF indicator when the power switch is turned on (IG) and approximately 6 seconds elapse.

DTC CHECK / CLEAR

1. DTC CHECK

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Occupant Detection / Trouble Codes.
- (f) Check the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

2. DTC CLEAR

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Occupant Detection / Trouble Codes.
- (f) Clear the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

FAIL-SAFE CHART

1. FAIL SAFE FUNCTION

(a) The following chart shows the status of the controls when the system is normal and malfunctioning.

- The passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
- Approximately 6 seconds after the power switch turned on (IG), the passenger airbag ON/OFF indicator will indicate ON or OFF depending on the conditions listed below.

Condition	ON Indicator	OFF Indicator	Front Passenger Airbag	Front Seat Side Airbag RH	Front Seat Belt Pretensioner RH	Curtain Shield Airbag RH
Adult is seated	ON	OFF	○	○	○	○
Child is seated	OFF	ON	X	○	○	○
Vacant	OFF	OFF	X	○	X	○
Failure	OFF	ON	X	○	○	○

HINT:

○: Deployable

X: Not deployable

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Occupant Detection / Data List.
- (f) Check the values by referring to the table below.

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG Switch	Power switch condition/ ON: Power switch on (IG) OFF: Power switch off	ON/OFF	-
Passenger Buckle SW	Passenger side buckle switch/ Set: The seat belt is fastened Unset: The seat belt is not fastened NG: Data is not determined	Set/Unset	-
Passenger Classification	Passenger classification/ AM50: Adult (more than 54 kg (119.1 lb)) is seated AF05: Adult (36 to 54 kg (79.4 to 119.1 lb)) is	AM50/AF05/Child/CRS/OFF	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the circuit listed for the code in the table below (proceed to the page listed for that circuit).

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, perform troubleshooting for the occupant classification system as shown in the chart below.

Occupant Classification System

DTC Code	Detection Item	Trouble Area	Passenger Airbag ON/OFF Indicator (OFF indicator)	See page

DTC

B1771

Passenger Side Buckle Switch Circuit Malfunction

DESCRIPTION

The passenger side buckle switch circuit consists of the occupant classification ECU and front seat inner belt assembly RH.

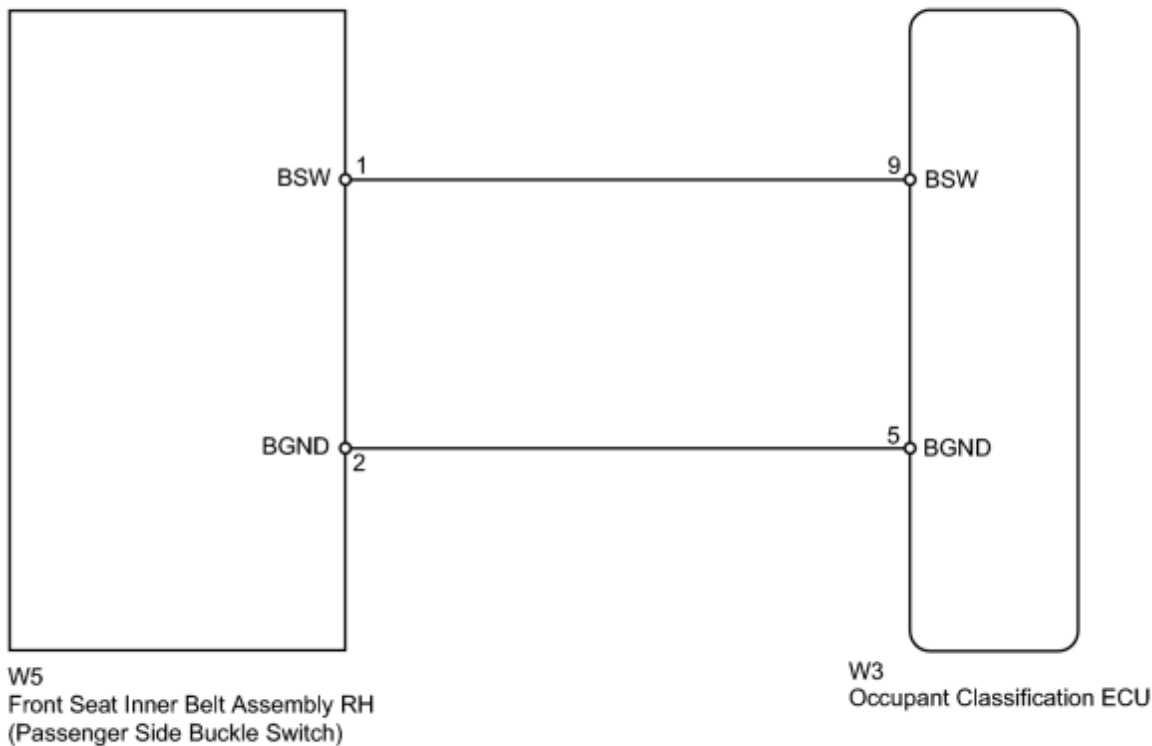

DTC B1771 is stored when a malfunction is detected in the passenger side buckle switch circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1771	<ul style="list-style-type: none"> • The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger side buckle switch circuit. • Passenger side buckle switch malfunction • Occupant classification ECU malfunction 	<ul style="list-style-type: none"> • Front seat wire RH • Front seat inner belt assembly RH (Passenger side buckle switch) • Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1771 is output, perform troubleshooting for the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see under the seat cushion.
- In the above case, hold the seat so that it does not fall down. Hold the seat only as necessary because holding the seat for a long period of time may cause seat rail deformation.

PROCEDURE

1.	CHECK CONNECTORS
----	------------------

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Check that the connectors are properly connected to the occupant classification ECU and front seat inner belt assembly RH.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the occupant classification ECU and front seat inner belt assembly RH.

(e) Check that the terminals of connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ▶ REPLACE FRONT SEAT WIRE RH

OK

2.	CHECK FRONT SEAT WIRE RH (SHORT TO B+)
----	--

*4

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
W3-9 (BSW) - Body ground	Power switch on (IG)	Below 1 V
W3-5 (BGND) - Body ground	Power switch on (IG)	Below 1 V

Text in Illustration

*2	Occupant Classification ECU
*3	Front Seat Wire RH
*4	Front view of wire harness connector (to Occupant Classification ECU)
*5	Connector B

NG  REPLACE FRONT SEAT WIRE RH

OK

3.	CHECK FRONT SEAT WIRE RH (OPEN)
----	---------------------------------

(a) Turn the power switch off.

P

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Using SST, connect terminals 1 (BSW) and 2 (BGND) of connector C.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
W3-9 (BSW) - W3-5 (BGND)	Always	Below 1 Ω

Text in Illustration

*1	Front Seat Inner Belt Assembly RH	*2	Occupant Classification ECU

NG ► REPLACE FRONT SEAT WIRE RH

OK

6. CHECK DTC

- Connect the connectors to the occupant classification ECU and front seat inner belt assembly RH.
- Connect the cable to the negative (-) battery terminal.
- Turn the power switch on (IG).
- Clear the DTCs stored in the occupant classification ECU INFO.
- Clear the DTCs stored in the center airbag sensor assembly INFO.
- Turn the power switch off.
- Turn the power switch on (IG).
- Check for DTCs INFO.

OK:

DTC B1771 is not output.

HINT:

Codes other than DTC B1771 may be output at this time, but they are not related to this check.

NG ► [REPLACE FRONT SEAT INNER BELT ASSEMBLY RH](#)

OK ► **USE SIMULATION METHOD TO CHECK**

7.	REPLACE FRONT SEAT INNER BELT ASSEMBLY RH
----	---

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Replace the front seat inner belt assembly RH INFO.

HINT:

Perform the inspection using parts from a normal vehicle if possible.

- (d) Connect the cable to the negative (-) battery terminal.
- (e) Turn the power switch on (IG).
- (f) Clear the DTCs stored in the occupant classification ECU INFO.
- (g) Clear the DTCs stored in the center airbag sensor assembly INFO.
- (h) Turn the power switch off.
- (i) Turn the power switch on (IG).
- (j) Check for DTCs INFO.

OK:

DTC B1771 is not output.

HINT:

Codes other than DTC B1771 may be output at this time, but they are not related to this check.

NG ► [REPLACE OCCUPANT CLASSIFICATION ECU](#)

OK ► **END**

8.	REPLACE OCCUPANT CLASSIFICATION ECU
----	-------------------------------------

- (a) Turn the power switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Replace the occupant classification ECU .

NEXT

9.	PERFORM ZERO POINT CALIBRATION
----	--------------------------------

(a) Connect the cable to the negative (-) battery terminal.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Using the Techstream, perform Zero Point Calibration .

OK:

"Zero Point Calibration is complete." is displayed.

NEXT

10.	PERFORM SENSITIVITY CHECK
-----	---------------------------

(a) Using the Techstream, perform Sensitivity Check .

Standard:

27 to 33 kg (59.5 to 72.8 lb)

DTC	B1783	Rear Occupant Classification Sensor RH Circuit Malfunction
-----	-------	--

DESCRIPTION

The rear occupant classification sensor RH circuit consists of the occupant classification ECU and rear occupant classification sensor RH.

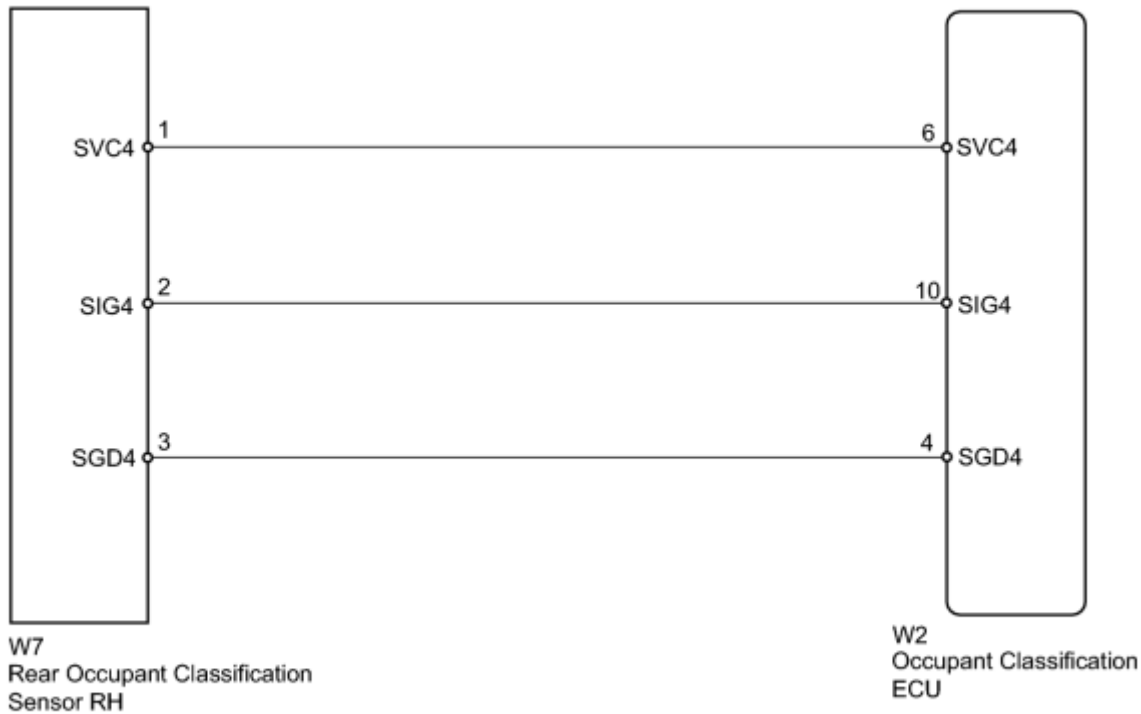

DTC B1783 is stored when a malfunction is detected in the rear occupant classification sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1783	<ul style="list-style-type: none"> The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear occupant classification sensor RH circuit. Rear occupant classification sensor RH malfunction 	<ul style="list-style-type: none"> Front seat wire RH Front seat cushion spring assembly (Rear occupant classification sensor RH)

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1783 is output, perform troubleshooting for the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see under the seat cushion.
- In the above case, hold the seat so that it does not fall down. Hold the seat only as necessary because holding the seat for a long period of time may cause seat rail deformation.

PROCEDURE

1. CHECK CONNECTORS

- Turn the power switch off.
- Disconnect the cable from the negative (-) battery terminal.
- Check that the connectors are properly connected to the occupant classification ECU and rear occupant classification sensor RH.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the occupant classification ECU and rear occupant classification sensor RH.

(e) Check that the terminals of connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG  REPLACE FRONT SEAT WIRE RH

OK

2.	CHECK FRONT SEAT WIRE RH (SHORT TO B+)
----	--

(a) Connect the cable to the negative (-) battery terminal.

*4

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

2010 Toyota Prius

Repair Manual

Standard Voltage:

Tester Connection	Condition	Specified Condition
W2-4 (SGD4) - Body ground	Power switch on (IG)	Below 1 V
W2-6 (SVC4) - Body ground	Power switch on (IG)	Below 1 V
W2-10 (SIG4) - Body ground	Power switch on (IG)	Below 1 V

DTC	B1785	Front Occupant Classification Sensor LH Collision Detection
-----	-------	---

DESCRIPTION

DTC B1785 is stored when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor LH if an accident occurs.

DTC B1785 is also stored when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.

If the vehicle is not in a collision, but the occupant classification ECU outputs a collision detection signal and sets DTC B1785, the DTC can be cleared by performing Zero Point Calibration and Sensitivity Check.

Therefore, if DTC B1785 is output, first perform Zero Point Calibration and Sensitivity Check.

DTC No.	DTC Detection Condition	Trouble Area
B1785	<ul style="list-style-type: none"> • Front occupant classification sensor LH sensed large load • Front seat cushion spring assembly malfunction 	<ul style="list-style-type: none"> • Front seat cushion spring assembly (Front occupant classification sensor LH)

HINT:

DTC

B1793

Occupant Classification Sensor Power Supply Circuit Malfunction

DESCRIPTION

The occupant classification sensor power supply circuit consists of the occupant classification ECU and occupant classification sensors.

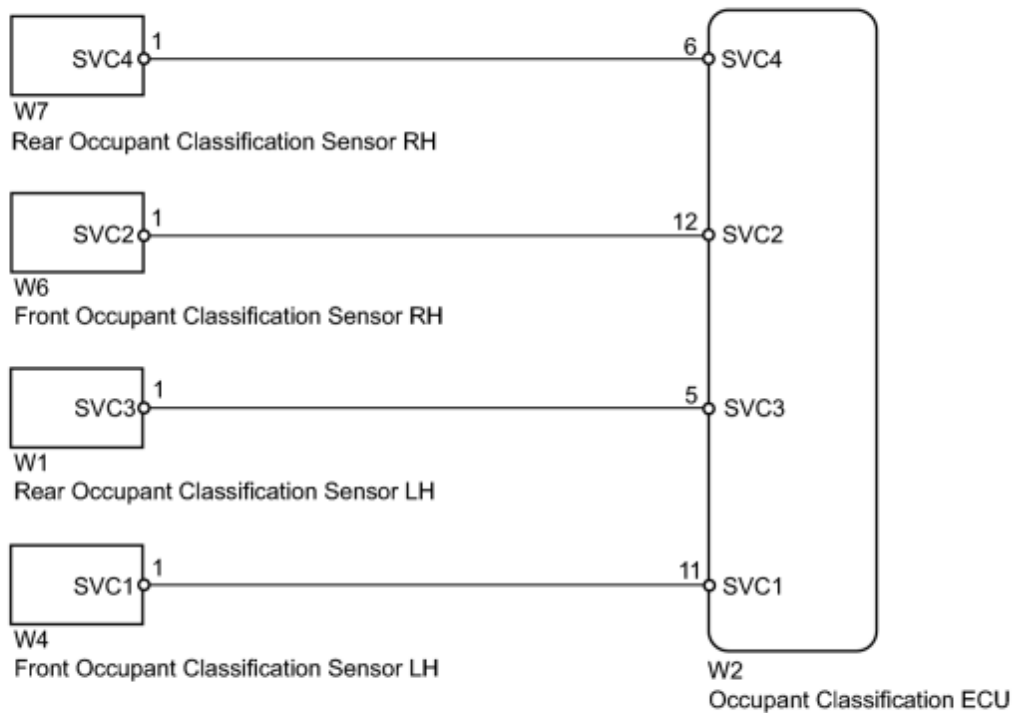

DTC B1793 is stored when a malfunction is detected in the occupant classification sensor power supply circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1793	<ul style="list-style-type: none"> • The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant classification sensor power supply circuit. • Occupant classification sensors malfunction 	<ul style="list-style-type: none"> • Front seat wire RH • Front seat cushion spring assembly (Occupant classification sensors)

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1793 is output, perform troubleshooting for the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see under the seat cushion.
- In the above case, hold the seat so that it does not fall down. Hold the seat only as necessary because holding the seat for a long period of time may cause seat rail deformation.

PROCEDURE

1.	CHECK CONNECTORS
----	------------------

(a) Turn the power switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Check that the connectors are properly connected to the 4 occupant classification sensors and occupant classification ECU.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the 4 occupant classification sensors and occupant classification ECU.

(e) Check that the terminals of connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ▶ REPLACE FRONT SEAT WIRE RH

OK

2.	CHECK FRONT SEAT WIRE RH (SHORT TO B+)
----	--

*1

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
W2-5 (SVC3) - Body ground	Power switch on (IG)	Below 1 V
W2-6 (SVC4) - Body ground	Power switch on (IG)	Below 1 V
W2-11 (SVC1) - Body ground	Power switch on (IG)	Below 1 V

Tester Connection	Condition	Specified Condition
W2-12 (SVC2) - Body ground	Power switch on (IG)	Below 1 V

(to Occupant Classification ECU)

NG ▶ REPLACE FRONT SEAT WIRE RH

OK

6. CHECK DTC

- Connect the connectors to the occupant classification ECU and 4 occupant classification sensors.
- Connect the cable to the negative (-) battery terminal.
- Turn the power switch on (IG).
- Clear the DTCs stored in the occupant classification ECU INFO.
- Clear the DTCs stored in the center airbag sensor assembly INFO.
- Turn the power switch off.
- Turn the power switch on (IG).
- Check for DTCs INFO.

OK:

DTC B1793 is not output.

HINT:

Codes other than DTC B1793 may be output at this time, but they are not related to this check.

NG ▶ [REPLACE FRONT SEAT CUSHION SPRING ASSEMBLY](#)

OK ▶ USE SIMULATION METHOD TO CHECK

7. REPLACE FRONT SEAT CUSHION SPRING ASSEMBLY

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Replace the front seat cushion spring assembly .

NEXT

8. PERFORM ZERO POINT CALIBRATION

- (a) Connect the cable to the negative (-) battery terminal.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Using the Techstream, perform Zero Point Calibration .

OK:

"Zero Point Calibration is complete." is displayed.

NEXT

9. PERFORM SENSITIVITY CHECK

- (a) Using the Techstream, perform Sensitivity Check .

Standard:

27 to 33 kg (59.5 to 72.8 lb)

NEXT  **END**

DTC

B1794

Open in Occupant Classification ECU Battery Positive Line

DESCRIPTION

DTC B1794 is stored when a malfunction is detected in the occupant classification ECU battery positive line.

DTC No.	DTC Detections Conditions	Trouble Areas
B1794	<ul style="list-style-type: none"> The occupant classification ECU receives an open circuit signal in the occupant classification ECU battery positive line. Occupant classification ECU malfunction 	<ul style="list-style-type: none"> Auxiliary battery ECU-B fuse Wire harness Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1794 is output, perform troubleshooting for the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK AUXILIARY BATTERY VOLTAGE

(a) Measure the voltage of the auxiliary battery.

Standard Voltage:

11 to 14 V

NG ► INSPECT AUXILIARY BATTERY

OK

2. CHECK WIRE HARNESS (SOURCE VOLTAGE)

*1

(a) Turn the power switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Disconnect the connector from the occupant classification ECU.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the power switch on (IG).

(f) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
W3-1 (+B) - Body ground	Always	11 to 14 V

(g) Turn the power switch off.

(h) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
W3-3 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Occupant Classification ECU)
----	--

NG  REPLACE WIRE HARNESS

OK

3.	CHECK DTC
----	-----------

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Connect the connector to the occupant classification ECU.
- (d) Connect the Techstream to the DLC3.
- (e) Connect the cable to the negative (-) battery terminal.
- (f) Turn the power switch on (IG).
- (g) Clear the DTCs stored in the occupant classification ECU .
- (h) Clear the DTCs stored in the center airbag sensor assembly .
- (i) Turn the power switch off.
- (j) Turn the power switch on (IG), and wait for at least 10 seconds.
- (k) Using the Techstream, check for DTCs of the occupant classification ECU .

OK:

DTC B1794 is not output.

HINT:

Codes other than DTC B1794 may be output at this time, but they are not related to this check.

NG  [REPLACE OCCUPANT CLASSIFICATION ECU](#)

OK  **USE SIMULATION METHOD TO CHECK**

4. REPLACE OCCUPANT CLASSIFICATION ECU

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Replace the occupant classification ECU .

NEXT

5. PERFORM ZERO POINT CALIBRATION

- (a) Connect the cable to the negative (-) battery terminal.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Using the Techstream, perform Zero Point Calibration .

OK:

"Zero Point Calibration is complete." is displayed.

NEXT

6. PERFORM SENSITIVITY CHECK

- (a) Using the Techstream, perform Sensitivity Check .

Standard:

27 to 33 kg (59.5 to 72.8 lb)

NEXT  **END**

DESCRIPTION

DTC B1795 is stored when a malfunction is detected in the occupant classification ECU.

DTC No.	DTC Detection Condition	Trouble Area
B1795	Occupant classification ECU malfunction	Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1795 is output, perform troubleshooting for the DTC.

INSPECTION PROCEDURE

PROCEDURE

1.	REPLACE OCCUPANT CLASSIFICATION ECU
----	-------------------------------------

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Replace the occupant classification ECU .

NEXT

2.	PERFORM ZERO POINT CALIBRATION
----	--------------------------------

- (a) Connect the cable to the negative (-) battery terminal.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Using the Techstream, perform Zero Point Calibration .

OK:

"Zero Point Calibration is complete." is displayed.

NEXT

3.	PERFORM SENSITIVITY CHECK
----	---------------------------

(a) Using the Techstream, perform Sensitivity Check .

Standard:

27 to 33 kg (59.5 to 72.8 lb)

NEXT  END

DTC

B1796

Sleep Operation Failure of Occupant Classification ECU

DESCRIPTION

In sleep mode, the occupant classification ECU reads the condition of each sensor while the power switch is off.

In this mode, if occupant classification ECU detects an internal malfunction, DTC B1796 is stored.

DTC No.	DTC Detection Condition	Trouble Area
B1796	<ul style="list-style-type: none"> Occupant classification ECU malfunction 	<ul style="list-style-type: none"> Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1796 is output, perform troubleshooting for the DTC.

INSPECTION PROCEDURE

PROCEDURE

1. REPLACE OCCUPANT CLASSIFICATION ECU

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Replace the occupant classification ECU .

NEXT

2. PERFORM ZERO POINT CALIBRATION

- (a) Connect the cable to the negative (-) battery terminal.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Using the Techstream, perform Zero Point Calibration .

OK:

"Zero Point Calibration is complete." is displayed.

NEXT

3.	PERFORM SENSITIVITY CHECK
----	---------------------------

(a) Using the Techstream, perform Sensitivity Check .

Standard:

27 to 33 kg (59.5 to 72.8 lb)

NEXT  END

DESCRIPTION

The occupant classification system detects the front passenger seat condition. It then informs the front passenger airbag and front seat belt pretensioner RH condition (activated/not activated) with the passenger airbag ON/OFF indicator.

HINT:

Approximately 6 seconds after the power switch is turned on (IG), the passenger airbag ON/OFF indicator will indicate ON/OFF depending on the conditions listed below.

Front Passenger Seat Condition	Passenger Airbag ON/OFF Indicator		SRS Warning Light
	ON Indicator	OFF Indicator	
Vacant	OFF	OFF	OFF
Adult is seated.	ON	OFF	OFF
Child is seated.	OFF	ON	OFF
Child restraint system is set.	OFF	ON	OFF
Occupant classification system failure	OFF	ON	ON

INSPECTION PROCEDURE

PROCEDURE

1. CHECK SRS WARNING LIGHT

(a) Turn the power switch on (IG), and check the SRS warning light condition.

HINT:

If this trouble occurs, the SRS warning light is off. If the light is on, a DTC is output. Troubleshoot for the output DTC.

OK:

After the primary check period, the SRS warning light goes off.

HINT:

The primary check is performed for approximately 6 seconds after the power switch is turned on (IG).

NG  GO TO DTC CHART

OK

2. PERFORM ZERO POINT CALIBRATION

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Using the Techstream, perform Zero Point Calibration .

OK:

"Zero Point Calibration is complete." is displayed.

NG  [RETIGHTEN FRONT SEAT ASSEMBLY RH BOLT](#)

OK

3. PERFORM SENSITIVITY CHECK

- (a) Using the Techstream, perform Sensitivity Check .

Standard:

27 to 33 kg (59.5 to 72.8 lb)

NG  [RETIGHTEN FRONT SEAT ASSEMBLY RH BOLT](#)

OK  **END**

4. RETIGHTEN FRONT SEAT ASSEMBLY RH BOLT

- (a) Turn the power switch off.
- (b) Loosen the 4 installation bolts of the front seat assembly RH.
- (c) Tighten the 4 installation bolts of the front seat assembly RH to the specified torque.

Torque: **37 N·m (374 kgf·cm, 27ft·lbf)**

NEXT

5. PERFORM ZERO POINT CALIBRATION

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Using the Techstream, perform Zero Point Calibration .

OK:

"Zero Point Calibration is complete." is displayed.

NG  [READ VALUE USING PASSENGER SIDE BUCKLE SWITCH](#)

OK

6.	PERFORM SENSITIVITY CHECK
----	---------------------------

- (a) Using the Techstream, perform Sensitivity Check .

Standard:

27 to 33 kg (59.5 to 72.8 lb)

NG  [READ VALUE USING PASSENGER SIDE BUCKLE SWITCH](#)

OK  **END**

7.	READ VALUE USING PASSENGER SIDE BUCKLE SWITCH
----	---

- (a) Turn the power switch on (IG).
- (b) Using the Techstream, read Data List .
- (1) Read the display when the passenger side buckle switch is operated.

Occupant Detection

Tester Display	Measurement Item / Range	Normal Condition	Diagnostic Note
Passenger Buckle SW	Passenger side buckle switch/ Set: The seat belt is fastened Unset: The seat belt is not fastened NG: Data is not determined	Unset/Set	-

OK:

The Techstream display changes correctly in accordance with the operation of the buckle switch.

NG  CHECK CONNECTORS

OK

8.	CHECK CONNECTORS
----	------------------

- (a) Turn the power switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Disconnect the connectors from the occupant classification ECU and 4 occupant classification sensors.
- (d) Check that the terminals of connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG  REPLACE FRONT SEAT WIRE RH

OK

9.	REPLACE OCCUPANT CLASSIFICATION ECU
----	-------------------------------------

- (a) Connect the connectors to the 4 occupant classification sensors.
- (b) Replace the occupant classification ECU .

NEXT

10.	PERFORM ZERO POINT CALIBRATION

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the rear airbag sensors.

1. INSPECT REAR AIRBAG SENSOR (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

2. INSPECT REAR AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check the rear airbag sensors for defects if a quarter panel of the vehicle or the area around a quarter panel is damaged.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found, replace the rear airbag sensor with a new one.

3. INSPECT REAR AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag is Deployed)

(a) When airbags have deployed as the result of a collision, be sure to replace all rear airbag sensors in the damaged areas (anywhere in need of repair).

(b) Visually check the rear airbag sensors in undamaged areas for defects.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found or a rear airbag sensor has detected a major collision, replace the rear airbag sensor with a new one.

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing [INFO](#).

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

3. REMOVE REAR DECK FLOOR BOX [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

6. REMOVE REAR SEAT CUSHION ASSEMBLY [INFO](#)

7. REMOVE REAR DOOR SCUFF PLATE [INFO](#)

8. REMOVE REAR SIDE SEATBACK ASSEMBLY

for LH Side: [INFO](#)

for RH Side: [INFO](#)

11. REMOVE REAR NO. 1 FLOOR BOARD (for RH Side) [INFO](#)

12. REMOVE REAR FLOOR BOARD SPACER (for RH Side) [INFO](#)

13. REMOVE NO. 1 HYBRID BATTERY INTAKE DUCT (for RH Side) [INFO](#)

14. REMOVE REAR AIRBAG SENSOR

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Disconnect the connector.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

- (1) Push and hold the white housing lock, and slide the yellow outer connector locking sleeve.

Text in Illustration

*1	Housing Lock	*2	Outer Connector Locking Sleeve
----	--------------	----	--------------------------------

(2) Push and hold the white housing lock again, and slide the yellow outer connector locking sleeve to disconnect the connector.

(d) Remove the nut and rear airbag sensor.

NOTICE:

Loosen the nut while holding the rear airbag sensor because the rear airbag sensor pin (stopper) is easily damaged.

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL REAR AIRBAG SENSOR

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Insert the pin (stopper) into the body hole to install the rear airbag sensor to the vehicle with the nut.

Torque: **9.0 N·m (92 kgf·cm, 80in·lbf)**

- If the rear airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the rear airbag sensor, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- Make sure that the pin (stopper) is securely inserted into the body hole.
- Tighten the nut while holding the rear airbag sensor because the rear airbag sensor pin (stopper) is easily damaged.

(d) Connect the connector to the rear airbag sensor.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

(1) Connect the connector as shown in the illustration (when locking, make sure that the outer connector locking sleeve returns to its original position and a click sound can be heard).

c

Text in Illustration

*1	Outer Connector Locking Sleeve	-	-
----	--------------------------------	---	---

HINT:

When connected, the outer connector locking sleeve will slide. Be sure not to hold the outer connector locking sleeve while connecting, as it may result in an insecure fit.

(e) Check that there is no looseness in the installation parts of the rear airbag sensor.

2. INSTALL NO. 1 HYBRID BATTERY INTAKE DUCT (for RH Side) [INFO](#)

3. INSTALL REAR FLOOR BOARD SPACER (for RH Side) [INFO](#)

6. REMOVE ECU INTEGRATION BOX RH

(a) Remove the bolt and 2 nuts.

(b) Disconnect each connector and remove the ECU integration box RH.

7. REMOVE SEAT BELT CONTROL ECU

(a) Disengage the 2 claws and remove the seat belt control ECU.

INSTALLATION

1. INSTALL SEAT BELT CONTROL ECU

(a) Engage the 2 claws to install the seat belt control ECU.

2. INSTALL ECU INTEGRATION BOX RH

(a) Connect each connector.

(b) Install the ECU integration box RH with the bolt and 2 nuts.

3. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY_ [INFO](#)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

5. INSTALL REAR NO. 3 FLOOR BOARD_ [INFO](#)

6. INSTALL REAR DECK FLOOR BOX_ [INFO](#)

7. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type)_ [INFO](#)

8. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light [INFO](#).

COMPONENTS

ILLUSTRATION

N*m (kgf*cm, ft.*lbf) : Specified torque

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the seat position sensor.

1. INSPECT SEAT POSITION SENSOR (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

2. INSPECT SEAT POSITION SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the seat position sensor removed from the vehicle.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector

OK:

No defects are found.

HINT:

If any of the defects is found, replace the seat position sensor with a new one.

REMOVAL

1. REMOVE FRONT SEAT ASSEMBLY LH

HINT:

Refer to the procedure up to Remove Front Seat Assembly LH [INFO](#).

2. REMOVE RECLINING ADJUSTER RELEASE HANDLE LH [INFO](#)

3. REMOVE VERTICAL ADJUSTING HANDLE LH (w/ Vertical Adjuster) [INFO](#)

4. REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY LH [INFO](#)

5. REMOVE SEAT POSITION SENSOR

(a) Disconnect the connector.

c

(b) Separate the wire harness from the seat slide position sensor protector.

(c) Using a T30 "TORX" socket wrench, remove the "TORX" screw and seat position sensor with the seat slide position sensor protector.

(d) Remove the seat position sensor from the seat slide position sensor protector as shown in the illustration.

c

INSTALLATION

1. INSTALL SEAT POSITION SENSOR

(a) Install the seat position sensor to the seat slide position sensor protector with the pin as shown in the illustration.

c

(b) Using a 1.3 mm (0.0512 in.) feeler gauge, temporarily install the seat position sensor.

Text in Illustration

*1	Seat Position Sensor
*2	Feeler Gauge
*3	Seat Rail

P

- If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the seat position sensor with a new one.
- When installing the seat position sensor, be careful that the SRS wiring does not interfere with or is pinched between other parts.

HINT:

Be sure that the clearance between the seat position sensor and seat rail is between 0.6 mm (0.0236 in.) and 2.0 mm (0.0787 in.).

(c) Using a T30 "TORX" socket wrench, tighten the "TORX" screw to install the seat position sensor.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

c

(d) Make sure that the clearance between the seat position sensor and seat rail is between 0.6 mm (0.0236 in.) and 2.0 mm (0.0787 in.).

(e) Install the wire harness to the seat slide position sensor protector.

(f) Connect the connector.

(g) Check that there is no looseness in the installation parts of the seat position sensor.

2. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY LH 

3. INSTALL VERTICAL ADJUSTING HANDLE LH (w/ Vertical Adjuster) 

4. INSTALL RECLINING ADJUSTER RELEASE HANDLE LH 

5. INSTALL FRONT SEAT ASSEMBLY LH

HINT:

Refer to the procedure from Install Front Seat Assembly .

COMPONENTS

ILLUSTRATION

P

ILLUSTRATION

9.0 (92, 80 in.*lbf) : Specified torque

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the side airbag sensors.

1. INSPECT SIDE AIRBAG SENSOR (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

2. INSPECT SIDE AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check the side airbag sensors for defects if a center pillar of the vehicle or the area around a center pillar is damaged.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found, replace the side airbag sensor with a new one.

3. INSPECT SIDE AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag is Deployed)

(a) When airbags have deployed as the result of a collision, be sure to replace all side airbag sensors in the damaged areas (anywhere in need of repair).

(b) Visually check the side airbag sensors in undamaged areas for defects.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

HINT:

If any of the defects is found or a side airbag sensor has detected a major collision, replace the side airbag sensor with a new one.

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing [INFO](#).

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

3. REMOVE REAR DECK FLOOR BOX [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

6. REMOVE FRONT DOOR SCUFF PLATE [INFO](#)

7. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP

8. REMOVE REAR DOOR SCUFF PLATE [INFO](#)

9. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP

10. REMOVE CENTER PILLAR LOWER GARNISH [INFO](#)

11. REMOVE SIDE AIRBAG SENSOR

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Disconnect the connector.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(1) Push and hold the white housing lock, and slide the yellow outer connector locking sleeve.

Text in Illustration

*1	Housing Lock	*2	Outer Connector Locking Sleeve
----	--------------	----	--------------------------------

(2) Push and hold the white housing lock again, and slide the yellow outer connector locking sleeve to disconnect the connector.

(d) Remove the bolt and side airbag sensor.

NOTICE:

Loosen the bolt while holding the side airbag sensor because the side airbag sensor pin (stopper) is easily damaged.

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL SIDE AIRBAG SENSOR

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Insert the pin (stopper) into the body hole to install the side airbag sensor to the vehicle with the bolt.

Torque: **9.0 N·m (92 kgf·cm, 80in·lbf)**

- If the side airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the side airbag sensor, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- Make sure that the pin (stopper) is securely inserted into the body hole.
- Tighten the bolt while holding the side airbag sensor because the side airbag sensor pin (stopper) is easily damaged.

(d) Connect the connector to the side airbag sensor.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

(1) Connect the connector as shown in the illustration (when locking, make sure that the outer connector locking sleeve returns to its original position and a click sound can be heard).

c

Text in Illustration

*1	Outer Connector Locking Sleeve	-	-
----	--------------------------------	---	---

HINT:

When connected, the outer connector locking sleeve will slide. Be sure not to hold the outer connector locking sleeve while connecting, as it may result in an insecure fit.

(e) Check that there is no looseness in the installation parts of the side airbag sensor.

2. INSTALL CENTER PILLAR LOWER GARNISH_ [INFO](#)

3. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP

4. INSTALL REAR DOOR SCUFF PLATE_ [INFO](#)

5. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP

6. INSTALL FRONT DOOR SCUFF PLATE_ [INFO](#)

7. INSTALL REAR NO. 3 FLOOR BOARD_ [INFO](#)

8. INSTALL REAR DECK FLOOR BOX_ [INFO](#)

9. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type)_ [INFO](#)

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

11. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check .

12. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light .

COMPONENTS

ILLUSTRATION

REMOVAL

1. REMOVE STEERING WHEEL ASSEMBLY

HINT:

Refer to the procedure up to Remove Steering Wheel Assembly INFO.

2. REMOVE LOWER STEERING COLUMN COVER INFO

3. REMOVE UPPER STEERING COLUMN COVER INFO

4. REMOVE SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

NOTICE:

- Do not replace the spiral cable with the battery connected and the power switch on (IG).
- Do not rotate the spiral cable with the battery connected and the power switch on (IG).
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.
- Do not remove the steering sensor from the spiral cable.

(a) Slide the slider to release the lock, and then disconnect the yellow airbag connector from the spiral cable with sensor sub-assembly.

Text in Illustration

*1

Slider

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

c

(b) Disconnect the other connector from the spiral cable with sensor sub-assembly.

(c) Disengage the 3 claws to remove the spiral cable with sensor sub-assembly.

c

INSPECTION

1. INSPECT SPIRAL CABLE

(a) Visually check for defects with the spiral cable removed from the vehicle.

(1) The defects are as follows:

- Scratches on the spiral cable
- Small cracks the spiral cable
- Dents on the spiral cable
- Chips on the spiral cable
- Cracks or other damage to the connector

OK:

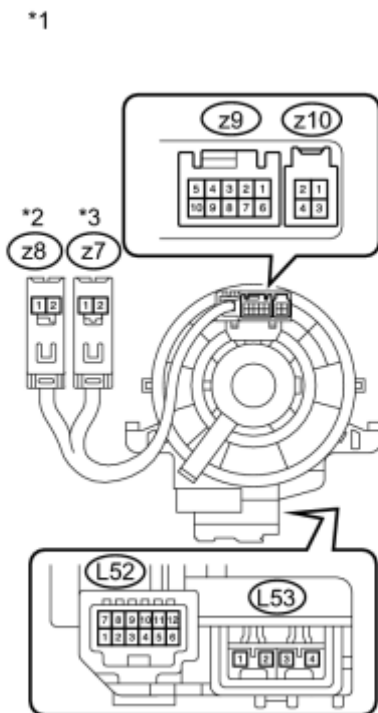

No defects are found.

HINT:

If any of the defects is found, replace the spiral cable with a new one.

(b) Inspect the spiral cable.

Text in Illustration

*1	Component without harness connected (Spiral Cable)
*2	Color: Orange
*3	Color: Black

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

To avoid breakage of the spiral cable, do not turn the spiral cable more than necessary.

Standard Resistance

Tester Connection	Condition	Specified Condition
z9-1 - L52-8 (HO)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-2 - L52-9 (IG)	Center	Below 1 Ω

	2.5 rotations to the left	
	2.5 rotations to the right	
z9-3 - L52-10 (AC1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-4 - L52-11 (DIST)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-5 - L52-12 (IL+2)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-6 - L52-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-7 - L52-3 (TX1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-8 - L52-4 (EAU)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-9 - L52-5 (AU2)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-10 - L52-6 (AU1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z10-1 - L52-7 (R/N)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z10-3 - L52-1 (CCS)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z10-4 - L52-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z8-1 - L53-2 (D-)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

z8-2 - L53-1 (D+)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z7-1 - L53-3 (D2-)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z7-2 - L53-4 (D2+)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

If the value is not within the specified range, replace the spiral cable.

INSTALLATION

1. INSTALL SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

NOTICE:

- Do not replace the spiral cable with the battery connected and the power switch on (IG).
- Do not rotate the spiral cable with the battery connected and the power switch on (IG).
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.
- Do not remove the steering sensor from the spiral cable.

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

(c) Check that the front wheels are facing straight ahead.

(d) Set the turn signal switch to the neutral position.

NOTICE:

If it is not in the neutral position, the turn signal switch pin may snap.

(e) Install the spiral cable with sensor sub-assembly with the 3 claws.

NOTICE:

When replacing the spiral cable with sensor sub-assembly with a new one, remove the lock pin before installing the steering wheel assembly.

(f) Connect the connectors to the spiral cable with sensor sub-assembly.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

2. INSTALL UPPER STEERING COLUMN COVER_ INFO

3. INSTALL LOWER STEERING COLUMN COVER INFO

4. TURN FRONT WHEELS TO FACE STRAIGHT AHEAD

5. ADJUST SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Rotate the spiral cable counterclockwise slowly by hand until it stops.

NOTICE:

Do not turn the spiral cable using the airbag wire harness.

c

(d) Rotate the spiral cable clockwise approximately 2.5 turns to align the marks.

Text in Illustration

*1	Alignment Mark
----	----------------

NOTICE:

Do not turn the spiral cable using the airbag wire harness.

HINT:

The spiral cable will rotate approximately 2.5 turns to both the left and right from the center.

6. INSTALL STEERING WHEEL ASSEMBLY

HINT:

Refer to the procedure from Install Steering Wheel Assembly INFO.

INSTALLATION

1. INSTALL SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

NOTICE:

- Do not replace the spiral cable with the battery connected and the power switch on (IG).
- Do not rotate the spiral cable with the battery connected and the power switch on (IG).
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.
- Do not remove the steering sensor from the spiral cable.

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

(c) Check that the front wheels are facing straight ahead.

(d) Set the turn signal switch to the neutral position.

NOTICE:

If it is not in the neutral position, the turn signal switch pin may snap.

(e) Install the spiral cable with sensor sub-assembly with the 3 claws.

NOTICE:

When replacing the spiral cable with sensor sub-assembly with a new one, remove the lock pin before installing the steering wheel assembly.

(f) Connect the connectors to the spiral cable with sensor sub-assembly.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

2. INSTALL UPPER STEERING COLUMN COVER_ [INFO](#)

3. INSTALL LOWER STEERING COLUMN COVER_ [INFO](#)

4. TURN FRONT WHEELS TO FACE STRAIGHT AHEAD

5. ADJUST SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

(a) Check that the power switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Rotate the spiral cable counterclockwise slowly by hand until it stops.

NOTICE:

Do not turn the spiral cable using the airbag wire harness.

c

(d) Rotate the spiral cable clockwise approximately 2.5 turns to align the marks.

Text in Illustration

*1	Alignment Mark
----	----------------

NOTICE:

Do not turn the spiral cable using the airbag wire harness.

HINT:

The spiral cable will rotate approximately 2.5 turns to both the left and right from the center.

6. INSTALL STEERING WHEEL ASSEMBLY

HINT:

Refer to the procedure from Install Steering Wheel Assembly [INFO](#).

COMPONENTS

ILLUSTRATION

P

ILLUSTRATION

STEERING PAD

w/o Cruise Control System:

LOWER NO. 2 STEERING WHEEL COVER

LOWER NO. 3 STEERING WHEEL COVER

w/ Cruise Control System:

LOWER NO. 2 STEERING WHEEL COVER

ON-VEHICLE INSPECTION

CAUTION:

Be sure to follow the correct removal and installation procedures of the steering pad.

1. INSPECT STEERING PAD (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the steering pad installed on the vehicle.

(1) The defects are as follows:

- Cuts on the surface and in the grooves of the steering pad
- Small cracks on the surface and in the grooves of the steering pad
- Significant discoloration on the surface and in the grooves of the steering pad

OK:

No defects are found.

HINT:

If any of the defects is found, replace the steering pad with a new one.

2. INSPECT STEERING PAD (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check .

(b) Visually check for defects with the steering pad removed from the vehicle.

(1) The defects are as follows:

- Cuts on the surface and in the grooves of the steering pad
- Small cracks on the surface and in the grooves of the steering pad
- Significant discoloration on the surface and in the grooves of the steering pad
- Cracks or other damage to the connector
- Deformation of the steering wheel assembly
- Deformation of the horn button contact plate of the steering pad
- Interference or uneven clearance between the steering pad and steering wheel assembly when the new steering pad is installed on the steering wheel assembly

OK:

No defects are found.

HINT:

If any of the defects is found, replace the steering pad or steering wheel assembly with a new one.

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO.

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

3. REMOVE REAR DECK FLOOR BOX INFO

4. REMOVE REAR NO. 3 FLOOR BOARD INFO

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

6. REMOVE LOWER NO. 3 STEERING WHEEL COVER

(a) Using a screwdriver with its tip wrapped with protective tape, disengage the claw to remove the lower No. 3 steering wheel cover.

Text in Illustration

*1	Protective Tape
----	-----------------

7. REMOVE LOWER NO. 2 STEERING WHEEL COVER

(a) Using a screwdriver with its tip wrapped with protective tape, disengage the claw to remove the lower No. 2 steering wheel cover.

Text in Illustration

*1	Protective Tape
----	-----------------

c

8. REMOVE STEERING PAD

CAUTION:

When storing the steering pad, keep the airbag deployment side facing upward.

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

c

- (c) Using a screwdriver, push the torsional spring to disengage the 2 pins.

Text in Illustration

*1	Torsional Spring
----	------------------

- (d) Pull out the steering pad from the steering wheel assembly and support the steering pad with one hand.

NOTICE:

When removing the steering pad, do not pull the airbag wire harness.

c

(e) Disconnect the horn connector from the steering pad.

(f) Using a screwdriver with its tip wrapped with protective tape, release the 2 airbag connector locks.

Text in Illustration

*1	Protective Tape
----	-----------------

(g) Disconnect the 2 airbag connectors to remove the steering pad.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

INSTALLATION

1. INSTALL STEERING PAD

- (a) Check that the power switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Connect the 2 airbag connectors to the steering pad.

- When connecting any airbag connector, take care not to damage the airbag wire harness.
- Be sure to only connect the connectors to each corresponding color.

- (d) Push in the 2 locks to install the 2 airbag connectors.

- (e) Connect the horn connector to the steering pad.

- (f) Push the steering pad to engage the 2 pins.

NOTICE:

Make sure that the pins are securely inserted into the steering holes.

2. INSTALL LOWER NO. 3 STEERING WHEEL COVER

- (a) Engage the claw to install the lower No. 3 steering wheel cover.

c

3. INSTALL LOWER NO. 2 STEERING WHEEL COVER

c

(a) Engage the claw to install the lower No. 2 steering wheel cover.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. INSTALL REAR NO. 3 FLOOR BOARD INFO

6. INSTALL REAR DECK FLOOR BOX INFO

7. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

8. INSPECT STEERING PAD

(a) Visually check for defects with the steering pad installed on the vehicle.

(1) The defects are as follows:

- Cuts on the surface and in the grooves of the steering pad
- Small cracks on the surface and in the grooves of the steering pad
- Significant discoloration on the surface and in the grooves of the steering pad

OK:

No defects are found.

c

HINT:

If any of the defects is found, replace the steering pad with a new one.

(b) Make sure that the horn sounds.

HINT:

If the horn does not sound, inspect the horn system **INFO**.

9. PERFORM DIAGNOSTIC SYSTEM CHECK

(a) Perform a diagnostic system check **INFO**.

10. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light **INFO**.

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with your bare hands to discharge static electricity before performing this procedure.
- Never dispose of a steering pad with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the steering pad.
- The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a steering pad with a deployed airbag.
- Do not apply water etc. to a steering pad with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF STEERING PAD (When Installed in Vehicle)

NOTICE:

- When disposing of the steering pad, never use the customer's vehicle to deploy the airbag.
- Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.

Y

SST: 09082-00700

CAUTION:

When deploying the airbag, always use the specified SST:

SRS Airbag Deployment Tool

Y

(1) Connect SST to the battery.

Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

Text in Illustration

*1	Battery
----	---------

Y

(2) Check the function of SST.

Press the SST activation switch and check that the LED of the SST activation switch comes on.

- Do not connect the yellow SST connector to the airbag.
- If the LED comes on when the activation switch is not being pressed, SST is malfunctioning. Replace SST.

(3) Disconnect SST from the battery.

(b) Refer to Precaution INFO.

(c) Remove the lower steering column cover.

(1) While turning the steering wheel assembly to the right and left, disengage the 2 claws.

c

(2) Disengage the 4 claws to remove the lower steering column cover.

c

(d) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(e) Disconnect the yellow airbag connector from the spiral cable.

(1) Slide the slider to release the lock, and then disconnect the connector.

Text in Illustration

*1	Slider
----	--------

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

c

(f) Install SST.

CAUTION:

Check that there is no looseness in the steering wheel assembly and steering pad.

(1) Connect the SST connector to the airbag connector of the spiral cable.

SST: 09082-00700

SST: 09082-00780

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

c

(2) Move SST at least 10 m (32.8 ft.) away from the front side window of the vehicle.

Text in Illustration

*1	Battery
----	---------

(3) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(4) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(g) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- Before deployment, make sure that no one is near the vehicle.
- The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a steering pad with a deployed airbag.
- Do not apply water etc. to a steering pad with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

3. DISPOSE OF STEERING PAD (When Not Installed in Vehicle)

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.

SST: 09082-00700

CAUTION:

When deploying the airbag, always use the specified SST:

(1) Connect SST to the battery.

Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

Text in Illustration

*1	Battery
----	---------

(2) Check the function of SST.

Press the SST activation switch and check that the LED of the SST activation switch comes on.

- Do not connect the yellow SST connector to the airbag.
- If the LED comes on when the activation switch is not being pressed, SST is malfunctioning. Replace SST.

(3) Disconnect SST from the battery.

(b) Remove the steering pad INFO.

CAUTION:

- Before removing the steering pad, wait at least 90 seconds after turning the power switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the steering pad, keep the airbag deployment side facing upward.

(c) Using braided wire, tie down the steering pad to an unneeded wheel.

H

Text in Illustration

*1	Stripped Wire Section
*2	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the steering pad, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

(1) After connecting the following SST to each other, connect them to the steering pad.

SST: 09082-00802

09082-10801

09082-30801

c

(2) Wind 3 wires at least 2 times around the horn button contact plate.

- Tightly wind the wires around the horn button contact plate without any slack.
- Make sure that the wires are tight. If there is slack in the wires, the steering pad may break loose when the airbag is deployed.

c

(3) Face the airbag deployment side of the steering pad upward on top of an unneeded tire and wheel set. Separately tie the left and right sides of the steering pad to the wheel through the hub nut holes. Position the SST

connector so that it hangs downward through the hub hole of the wheel.

c

- Make sure that the wires are tight. If there is slack in the wires, the steering pad may break loose when the airbag is deployed.
- Always tie down the steering pad with the airbag deployment side facing upward.

NOTICE:

The wheel will be damaged by the airbag deployment, so use an unneeded wheel.

(d) Install SST.

c

CAUTION:

Place the wheel on level ground.

(1) Connect the SST connector.

SST: 09082-00700

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.

c

(2) Move SST at least 10 m (32.8 ft.) away from the airbag tied down to the wheel.

(e) Cover the steering pad (using a cardboard box).

Text in Illustration

*1	Weight
----	--------

(1) Cover the steering pad with a cardboard box.

(2) Place weights on the cardboard box in 4 places totalling at least 190 N (19 kg, 42.7 lb).

Minimum cardboard box size:

Must exceed the following dimensions

X

460 mm (1.51 ft.)

Y

650 mm (2.13 ft.)

- When dimension Y of the cardboard box exceeds the diameter of the wheel and tire to which the steering pad is tied, X should be the following size.

$$X = 460 \text{ mm (1.51 ft.)} + \text{width of tire}$$

- If a cardboard box smaller than the specified size is used, it may be broken by the shock from the airbag deployment.

c

(f) Cover the steering pad (using tires).

c

(1) Place at least 3 tires without wheels onto the wheel and tire to which the steering pad is tied.

Text in Illustration

*1	Inner Diameter
*2	Width

(2) Place a wheel and tire on top.

Minimum tire size:

Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (1.18 ft.)

CAUTION:

Do not use tires with wheels except for on the top and bottom.

NOTICE:

- The tires may be damaged by the airbag deployment, so use unneeded tires.
- Do not place the SST connector under the tire because it could be damaged.

(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

(g) Deploy the airbag.

(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

Text in Illustration

*1	Battery
*2	Steering Pad

Using a cardboard box:

Using tires:

c

(2) Check that no one is within a 10 m (32.8 ft.) radius of the wheel to which the steering pad is tied.

(3) Press the SST activation switch and deploy the airbag.

CAUTION:

Before deployment, make sure that no one is near the airbag.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the steering pad.

- The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a steering pad with a deployed airbag.
- Do not apply water etc. to a steering pad with a deployed airbag.
- Always wash your hands with water after completing the operation.

(1) Remove the steering pad from the wheel.

(2) Place the steering pad in a plastic bag, tie it tightly and dispose of it according to local regulations.

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected:

System Name	See Procedure
Advanced Parking Guidance System	

2. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream to troubleshoot the engine immobiliser system:

Connect the Techstream to the DLC3 while the power switch is off, and turn a door courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

3. PRECAUTIONS FOR EACH FUNCTION

(a) Precautions for the key:

The key is a precision instrument. Be sure to observe the following:

- (1) Do not drop the key, subject it to strong shocks or bend it.
- (2) Do not keep the key in a high temperature area for a long time.
- (3) Do not get the key wet or wash it in an ultrasonic washer etc.
- (4) Keep the key away from magnets or magnetized items during use.
- (5) Do not disassemble the key except when replacing the battery.
- (6) Do not place the key near objects that produce magnetic fields such as TVs, audio systems and electrical ranges, or electrical medical equipment such as low-frequency therapy instruments.

(b) Precautions for the engine immobiliser system inspection:

- (1) Make sure to carry the key.
- (2) All registered keys for the vehicle should be available when repairing or diagnosing the engine immobiliser system.

4. PRECAUTIONS FOR BATTERY

(a) Immediately after removing and reinstalling the battery, doors may not be unlocked by the smart key system. In this case, lock and unlock the doors using the door control transmitter. Then, it will be possible to unlock doors using the smart key system.

(b) When the battery is fully depleted and it is recharged using another vehicle battery, start the hybrid vehicle control system by performing the following:

(1) Push the P position switch.

(2) Turn the power switch off, open and close the driver door once.

(3) Start the hybrid vehicle control system (turn the power switch on (READY)).

(c) When starting the hybrid vehicle control system after removing and installing the battery, open and close the driver door and wait 10 seconds before starting the system.

HINT:

If the hybrid vehicle control system does not start the first time after removing and installing the battery, the hybrid vehicle control system will start normally from the second time onward.

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

The immobiliser system is a theft deterrent system that determines whether to disable starting of the hybrid vehicle control system based on a comparison of the key ID code and vehicle pre-registered code. The immobiliser system compares the certification ECU (smart key ECU assembly) preregistered ID code with the ID of the key-embedded transponder chip. If the ID codes do not match, the immobiliser system is activated and the hybrid vehicle control system cannot be started.

2. FUNCTION OF MAIN COMPONENTS

Component	Outline
Power switch	Informs the driver of any power source or system abnormality through the illumination stage of the indicator light.
Transponder key coil (built into the power switch)	Receives the ID code and transmits it to the certification ECU (smart key ECU assembly) when the key battery is too weak to respond to the tuner based on signals from the room oscillators.
Key	Receives the signals from the oscillators and returns the ID code to the door control receiver.
Certification ECU (smart key ECU assembly)	<ul style="list-style-type: none"> • Certifies the ID code received from the door control receiver. • Transmits the engine immobiliser set/unset request signals. • Certifies immobiliser disengage signals, and transmits each disengage signal to the hybrid vehicle control system.* 1
ID code box (immobiliser code ECU)*2	Receives the immobiliser disengage signals from the certification ECU (smart key ECU assembly), certifies them, and transmits each disengage signal to the hybrid vehicle control system.
Power management control ECU (HV CPU)	Receives the signal from the certification ECU (smart key ECU assembly), and performs hybrid vehicle control system.
Transmission control ECU Assembly	Registers the ID verification code. Outputs the P position signal or Not P position signal to the power management control ECU.
Indoor electrical key oscillator <ul style="list-style-type: none"> • Front, Center, Rear 	Transmits key detection signals within the detection area in the cabin upon receiving a transmission request signal from the certification ECU (smart key ECU assembly). A certification ECU (smart key ECU assembly) request signal is activated when the key is brought into the cabin and the power switch is pushed or brake pedal is depressed.
Door control receiver	Receives an ID code from the key in the detection area and transmits it to the certification ECU (smart key ECU assembly).
Combination meter assembly <ul style="list-style-type: none"> • Security indicator 	Illuminates or flashes. Illumination is controlled by the certification ECU (smart key ECU assembly).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the engine immobiliser system.
- *: Using the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

HINT:

- When troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE
----	-------------------------

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	POWER SWITCH ON (IG)
----	----------------------

NEXT

5. INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
ECU is connected, communication is normal	A
ECU is connected, communication is abnormal	B

  GO TO CAN COMMUNICATION SYSTEM

A

6. INSPECT COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*

(a) Use the Techstream to check if the LIN communication system is functioning normally.

Result:

Result	Proceed to
No DTC is output	A
DTC is output (DTC B2287, B2785, B2786, B2789 or B278C)	B

  GO TO LIN COMMUNICATION SYSTEM

A

7. CHECK FOR DTCS (ENGINE IMMOBILISER SYSTEM)*

(a) Check for DTCs and note any codes that are output.

(b) Clear the DTCs .

(c) Recheck for DTCs. Based on the DTCs output above, try to duplicate the engine immobiliser system DTC by simulating the symptoms indicated by the DTCs.

Result:

Result	Proceed to
No DTCs are output	A
Engine immobiliser system DTC is output	B

  GO TO DIAGNOSTIC TROUBLE CODE CHART

A

8. CHECK FOR DTCS (HYBRID VEHICLE CONTROL SYSTEM)*

(a) Clear the DTCs .

(b) Recheck for DTCs.

HINT:

The DTCs for the engine immobiliser system are specified above. If other codes are output, check the DTC chart for the hybrid vehicle control system.

Result:

Result	Proceed to
No DTCs are output	A
Engine immobiliser system DTC is output (DTC B2799, B279A or B279C)	B
Hybrid vehicle control system DTC is output (except DTC B2799, B279A and B279C)	C

B  GO TO DIAGNOSTIC TROUBLE CODE CHART

C  GO TO HYBRID VEHICLE CONTROL SYSTEM

A

9.	PROBLEM SYMPTOMS TABLE
----	------------------------

(a) Refer to Problem Symptoms Table .

Result:

Result	Proceed to
Fault is not listed in Problem Symptoms Table	A
Fault is listed in Problem Symptoms Table	B

B  Go to step 11

A

10.	OVERALL ANALYSIS AND TROUBLESHOOTING*
-----	---------------------------------------

(a) Data List / Active Test .

(b) Terminals of ECU .

NEXT

11.	REPAIR OR REPLACE
-----	-------------------

NEXT

12.	CONFIRMATION TEST
-----	-------------------

NEXT  END

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

HINT:

- The ID codes are the same as recognition codes for the wireless transmitter and engine immobiliser function. Registering an ID code enables the smart key system, the wireless door lock control function and the engine immobiliser function to be operated.
- Code registration is necessary when the certification ECU (smart key ECU assembly), ID code box (immobiliser code ECU)*, transmission control ECU assembly or key is replaced with a new one.

*: w/ Automatic Light Control System

(a) When registering a key, bring the key close to the power switch as shown in the illustration.

Hold the key with its ornament surface within a range of 10 mm (0.394 in.) or less from the power switch.

Communication distance: 10 mm (0.394 in.) or less from the power switch

2. KEY REGISTRATION PROCEDURES WHEN ADDING OR REPLACING KEY OR WHEN KEY IS LOST

HINT:

- The following procedures require the use of the Techstream:
 - New key ID registration
- A maximum of 7 keys can be registered.

	Registration Procedure Condition	Procedure	Refer to
Registering an additional key	Customer must bring at least 1 key	1. Register additional keys as necessary (additional key ID registration)	PROCEDURE "C"

	Registration Procedure Condition	Procedure	Refer to
<ul style="list-style-type: none"> Replacing a key Making a lost key unable <p>HINT:</p> <p>After key ID erasure, any remaining keys that are not registered at this time cannot be used. Therefore, after key ID erasure, register all remaining keys.</p>	Customer must bring at least 1 key	1. Using remaining keys, clear all registered keys except one (key ID erasure)	PROCEDURE "D"
		2. Register additional keys as necessary (additional key ID registration)	PROCEDURE "C"
All keys are lost	-	1. Reset all keys (all keys ID erasure (key code reset))	PROCEDURE "E"
		2. Register all keys (new key ID registration)	PROCEDURE "A"

3. PART REPLACEMENT AND KEY REGISTRATION PROCEDURES

(a) The following table shows ECU replacement and key registration procedures for cases in which a malfunctioning ECU has been identified through the troubleshooting of the smart key system.

HINT:

- The following procedures can be performed:
 - New key ID registration
 - Additional key ID registration
 - Key ID erasure
 - All key ID erasure
 - ECU code registration
- If the customer has not brought all the registered keys, replacement of the transmission control ECU assembly*1 or ID code box (immobiliser code ECU)*2 is also required.
 - *1: w/o Automatic Light Control System
 - *2: w/ Automatic Light Control System
- A maximum of 7 keys can be registered.

(a) PROCEDURE "A"

New key ID registration (when replacing the certification ECU (smart key ECU assembly) and transmission control ECU assembly*1, or certification ECU (smart key ECU assembly) and ID code box (immobiliser code ECU)*2, or when replacing the certification ECU (smart key ECU assembly), ID code box (immobiliser code ECU) and transmission control ECU assembly*2)

- *1: w/o Automatic Light Control System
- *2: w/ Automatic Light Control System

Process	Procedure
1. Start of registration	<ol style="list-style-type: none"> 1. Connect the Techstream to DLC3 2. Turn the power switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration <p>HINT:</p> <p>The power switch cannot be turned on (IG) more than 10 times. After connecting the Techstream, turn the Techstream on while turning the driver door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.</p>
2. Confirmation of ECU code	<ul style="list-style-type: none"> • Perform operation according to prompts on the Techstream screen

Process	Procedure
	<p>HINT:</p> <p>Mode is automatically selected by the Techstream (new registration mode or add mode).</p>
3. Verification of unregistered key*1	<ol style="list-style-type: none"> 1. Hold the unregistered key close to the power switch (for details, refer to Description of Code Registration) 2. Confirm that the wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on the driver seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)
4. Registration of ID code	<ul style="list-style-type: none"> • Perform operation according to prompts on the Techstream screen
5. End of registration	<ul style="list-style-type: none"> • Finish new key ID code registration

- *1: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(b) PROCEDURE "B"

New key ID registration (when replacing the certification ECU (smart key ECU assembly))

Process	Procedure
1. Start of registration	<ol style="list-style-type: none"> 1. Connect the Techstream to DLC3 2. Turn the power switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration <p>HINT:</p> <p>The power switch cannot be turned on (IG) more than 10 times. After connecting the Techstream, turn the Techstream on while turning the driver door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.</p>
2. Confirmation of ECU code	<ul style="list-style-type: none"> • Perform operation according to prompts on the Techstream screen <p>HINT:</p> <p>Mode is automatically selected by the Techstream (new registration mode or add mode).</p>
3. Confirmation of all registered keys*1	<ol style="list-style-type: none"> 1. Hold the registered key close to the power switch (for details, refer to Description of Code Registration) 2. Confirm that wireless door lock buzzer sounds once (short beep)
4. Confirmation of ECU code	<ul style="list-style-type: none"> • Perform operation according to prompts on the Techstream screen
5. Verification of unregistered key*2	<ol style="list-style-type: none"> 1. Hold the unregistered key close to the power switch (for details, refer to Description of Code Registration) 2. Confirm that the wireless door lock buzzer sounds once (short beep)

Process	Procedure
	<ol style="list-style-type: none"> 3. Place the unregistered key on the driver seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)
6. Registration of ID code	<ul style="list-style-type: none"> • Perform operation according to prompts on the Techstream screen
7. End of registration	<ul style="list-style-type: none"> • Finish new key ID code registration

• *1: Repeat this process for each key which is not to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. If the key confirmation procedure for a key is performed, the security indicator light comes on and remains on until all the keys are confirmed.

• *2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(c) PROCEDURE "C"

Additional key ID registration

Process	Procedure
1. Start of registration	<ol style="list-style-type: none"> 1. Connect the Techstream to DLC3 2. Turn the power switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration
2. Confirmation of registered key*1	<ol style="list-style-type: none"> 1. Perform operation according to prompts on the Techstream screen <p>HINT:</p> <p>Mode is automatically selected by the Techstream (new registration mode or add mode)</p> <ol style="list-style-type: none"> 2. Hold the registered key close to the power switch (for details, refer to Description of Code Registration) 3. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Confirmation of ECU code	<ul style="list-style-type: none"> • Perform operation according to prompts on the Techstream screen
4. Verification of unregistered key*2	<ol style="list-style-type: none"> 1. Hold the unregistered key close to the power switch (for details, refer to Description of Code Registration) 2. Confirm that the wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on driver seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)

Process	Procedure
5. Registration of ID code	<ul style="list-style-type: none"> Perform operation according to prompts on the Techstream screen
6. End of registration	<ul style="list-style-type: none"> Finish additional key ID code registration

- *1: Perform this process for one of the keys which are to be registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the registration procedures again from process 1.

- *2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(d) PROCEDURE "D"

Key ID erasure

HINT:

Procedure "D" erases all registered key codes except one.

Process	Procedure
1. Start of erasure	<ol style="list-style-type: none"> Connect the Techstream to DLC3 Turn the power switch on (IG) Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Erasure
2. Confirmation of registered key*1 HINT: Select the key that will not be erased.	<ol style="list-style-type: none"> Perform operation according to prompts on the Techstream screen Hold the registered key close to the power switch (for details, refer to Description of Code Registration) Confirm that the wireless door lock buzzer sounds once (short beep)
3. Confirmation of ECU code	<ul style="list-style-type: none"> Perform operation according to prompts on the Techstream screen
4. Erasure of ID code	<ul style="list-style-type: none"> Perform operation according to prompts on the Techstream screen
5. End of erasure	<ul style="list-style-type: none"> Finish key ID code erasure

- *1: Perform this process for one of the keys which are to be registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the erasure procedure again from process 1.

(e) PROCEDURE "E"

All key ID erasure

HINT:

Procedure "E" erases all the key codes registered in the vehicle.

Process	Procedure
1. Start of erasure	<ol style="list-style-type: none">1. Connect the Techstream to DLC32. Turn the power switch on (IG)3. Turn the Techstream on while turning driver door courtesy light switch on and off repeatedly at 1.5-second intervals or less4. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Rest5. Read the "Seed Number" of the Techstream screen and input into TIS6. Input the "Pass-Code Number" sent from TIS according to the Techstream screen
2. Confirmation of ECU code	<ul style="list-style-type: none">• Perform operation according to prompts on the Techstream screen
3. Erasure of ID code	<ul style="list-style-type: none">• Perform operation according to prompts on the Techstream screen Wait for 15 minutes
4. End of erasure	<ul style="list-style-type: none">• Finish key ID code erasure

(f) PROCEDURE "F"

ECU code registration

Process	Procedure
1. Start of registration	<ol style="list-style-type: none">1. Connect the Techstream to DLC32. Turn the power switch on (IG)3. Enter the following menus: Body Electrical / Smart Key / Utility / ECU Communication ID Registration / ID Code Box and Steering Lock
2. Confirmation of registered key*1	<ol style="list-style-type: none">1. Hold the registered key close to the power switch (for details, refer to Description of Code Registration)2. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Registration of ECU code	<ul style="list-style-type: none">• Perform operation according to prompts on the Techstream screen
4. End of registration	<ul style="list-style-type: none">• Finish ECU code registration

• *1: Perform this process for one of the keys which are to be registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the erasure procedures again from process 1.

(g) PROCEDURE "G"

ECU communication ID registration

NOTICE:

- The ECU communication ID should be registered when the certification ECU (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 is replaced in order to match these ECU communication IDs.
 - *1: w/o Automatic Light Control System
 - *2: w/ Automatic Light Control System
- The hybrid vehicle control system cannot be started unless the ECU communication IDs match.
- After the registration, pressing the power switch may not start the hybrid vehicle control system on the first try. If so, press the power switch again.
- Clear DTC B2799 (code for power management control ECU (HV CPU) immobiliser communication error) by either of the following:
 - Use the Techstream.
 - Disconnect the cable from the negative (-) battery terminal for 30 seconds.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the power switch on (IG) and leave it as is for 30 minutes.

HINT:

Do not start the hybrid vehicle control system.

(3) Turn the power switch off and disconnect terminals TC and CG.

(4) Check that the hybrid vehicle control system starts and remains READY for more than 3 seconds.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Engine Immobiliser System

Symptom	Suspected Area	See page
Engine does not start.	Key	INFO
	Smart key system (for start function)	INFO
	Hybrid vehicle control system	INFO
Security indicator light does not blinking.	Certification ECU (smart key ECU assembly)	INFO
	Wire harness or connector	-
	No. 3 meter circuit plate	-

TERMINALS OF ECU

1. CHECK POWER SWITCH

(a) Disconnect the L43 power switch connector.

(b) Measure the resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L43-8 (AGND) - Body ground	P - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L43 power switch connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L43-9 (TXCT) - L43-8 (AGND)	V - P	Key code output signal	<ul style="list-style-type: none"> Power switch off 30 seconds after door opened and closed Brake pedal not depressed 	Below 1 V
L43-9 (TXCT) - L43-8 (AGND)	V - P	Key code output signal	<ul style="list-style-type: none"> Power switch off Key not in cabin Power switch pressed within 30 seconds 	Pulse generation (See waveform 1)
L43-10 (CODE) - L43-8 (AGND)	L - P	Demodulated signal of key code data	<ul style="list-style-type: none"> Power switch off 30 seconds after door opened and closed 	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
			<ul style="list-style-type: none"> Brake pedal not depressed 	
L43-10 (CODE) - L43-8 (AGND)	L - P	Demodulated signal of key code data	<ul style="list-style-type: none"> Power switch off Key battery removed Power switch touched with key and pressed 	Pulse generation (See waveform 2)
L43-14 (VC5) - L43-8 (AGND)	Y - P	Power supply	<ul style="list-style-type: none"> Power switch off 30 seconds after door opened and closed Brake pedal not depressed 	Below 1 V
L43-14 (VC5) - L43-8 (AGND)	Y - P	Power supply	<ul style="list-style-type: none"> Power switch off Key not in cabin Power switch pressed within 30 seconds 	Pulse generation (See waveform 3)

If the result is not as specified, the power switch may have a malfunction.

(e) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)

Item	Content
Tester Connection	L43-9 (TXCT) - L43-8 (AGND)
Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	<ul style="list-style-type: none"> Power switch off Key not in cabin Power switch pressed within 30 seconds

(2) Waveform 2 (Reference)

Item	Content
Tester Connection	L43-10 (CODE) - L43-8 (AGND)
Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	<ul style="list-style-type: none"> Power switch off Key battery removed Power switch touched with key and pressed

(3) Waveform 3 (Reference)

Item	Content
Tester Connection	L43-14 (VC5) - L43-8 (AGND)
Tool Setting	2 V/DIV., 200 ms./DIV.
Condition	<ul style="list-style-type: none"> • Power switch off • Key not in cabin • Power switch pressed within 30 seconds

2. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the L62 certification ECU (smart key ECU assembly) connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-1 (+B) - L62-15 (E)	B - W-B	+B power supply	Power switch off	11 to 14 V
L62-15 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L62-17 (CUTB) - L62-15 (E)	Y - W-B	Dark current cut fuse pin input signal	Power switch off	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L62 certification ECU (smart key ECU assembly) connector.

(d) Measure the resistance and voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-2 (IND) -	B - Body	Security indicator	<ul style="list-style-type: none"> • Power switch on (IG) 	Below 2 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Body ground	ground	light signal	<ul style="list-style-type: none"> Security indicator light off 	
L62-2 (IND) - Body ground	B - Body ground	Security indicator light signal	<ul style="list-style-type: none"> Power switch off Security indicator light blinks 	Pulse generation

-----------	--

(4) Waveform 4 (Reference)

Item	Content
Tester Connection	L62-34 (EFII) - L62-15 (E)
Tool Setting	5 V/DIV., 500 ms./DIV.
Condition	Within 3 seconds after power switch on (READY), or within 3 seconds after power switch first turned on (IG) after battery disconnected and connected

H

(5) Waveform 5 (Reference)

Item	Content
Tester Connection	L62-35 (EFIO) - L62-15 (E)
Tool Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (IG)

H

3. CHECK ID CODE BOX (IMMOBILISER CODE ECU) (w/ Automatic Light Control System)

(a) Disconnect the L10 ID code box (immobiliser code ECU) connector.

P

(b) Measure the resistance and voltage according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L10-1 (+B) - L10-8 (GND)	B - W-B	+B power supply	Power switch off	11 to 14 V
L10-8 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

- If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L10 ID code box (immobiliser code ECU) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L10-5 (EFII) - L10-8 (GND)	L - W-B	Power management control ECU (HV CPU) output signal	Power switch off	11 to 14 V
L10-5 (EFII) - L10-8 (GND)	L - W-B	Power management control ECU (HV CPU) output signal	Within 3 seconds after power switch on (READY), or within 3 seconds after power switch first turned on (IG) after battery disconnected and connected	Pulse generation (See waveform 1)
L10-6 (EFIO) - L10-8 (GND)	R - W-B	Power management control ECU (HV CPU) input signal	Power switch off	Below 1 V
L10-6 (EFIO) - L10-8 (GND)	R - W-B	Power management control ECU (HV CPU) input signal	Power switch on (IG)	Pulse generation (See waveform 2)

- If the result is not as specified, the ID code box (immobiliser code ECU) may have a malfunction.

(e) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)

Item	Content
Tester Connection	L10-5 (EFII) - L10-8 (GND)
Tool Setting	5 V/DIV., 500 ms./DIV.
Condition	Within 3 seconds after power switch on (READY), or within 3 seconds after power switch first turned on (IG) after battery disconnected and connected

(2) Waveform 2 (Reference)

Item	Content
Tester Connection	L10-6 (EFIO) - L10-8 (GND)
Tool Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (IG)

H

4. CHECK TRANSMISSION CONTROL ECU ASSEMBLY

(a) Disconnect the A23 and A24 transmission control ECU assembly connectors.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
A23-15 (BATT) - Body ground	SB - Body ground	Battery power supply	Power switch off	11 to 14 V
A24-1 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
A24-5 (E02) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
A24-6 (E01) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

5. CHECK POWER MANAGEMENT CONTROL ECU (HV CPU)

(a) Disconnect the L5 power management control ECU (HV CPU) connector.

H

(b) Measure the resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L5-6 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L5 power management control ECU (HV CPU) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L6-20 (IMO) - L5-6 (E1)	L - BR	Certification ECU (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 input signal	Power switch off	11 to 14 V
L6-20 (IMO) - L5-6 (E1)	L - BR	Certification ECU (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 input signal	Within 3 seconds after power switch on (READY), or within 3 seconds after power switch first turned on (IG) after battery disconnected and connected	Pulse generation (See waveform 1)
L6-21 (IMI) - L5-6 (E1)	R - BR	Certification ECU (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 output signal	Power switch off	Below 1 V
L6-21 (IMI) - L5-6 (E1)	R - BR	Certification ECU (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 output signal	Power switch on (IG)	Pulse generation (See waveform 2)

- *1: w/o Automatic Light Control System
- *2: w/ Automatic Light Control System
- If the result is not as specified, the power management control ECU (HV CPU) may have a malfunction.

(e) Waveform:

(1) Waveform 1 (Reference)

Item	Content
Tester Connection	L6-20 (IMO) - L5-6 (E1)
Tool Setting	5 V/DIV., 500 ms./DIV.
Condition	Within 3 seconds after power switch on (READY), or within 3 seconds after power switch first turned on (IG) after battery disconnected and connected

(2) Waveform 2 (Reference)

Item	Content
Tester Connection	L6-21 (IMI) - L5-6 (E1)
Tool Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (IG)

6. COMBINATION METER ASSEMBLY

(a) Disconnect the L27 combination meter assembly connector.

(L27)

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L27-18 (B) - Body ground	R - Body ground	Battery	Power switch off	11 to 14 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L27-30 (ES) - Body ground	BR - Body ground	Ground (Signal ground)	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L27 combination meter assembly connector.

(d) Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L27-19 (IG+) - Body ground	L - Body ground	Power switch signal	Power switch off	Below 1 V
L27-19 (IG+) - Body ground	L - Body ground	Power switch signal	Power switch on (IG)	11 to 14 V
L27-22 (LP) - Body ground	B - Body ground	Security indicator light signal	<ul style="list-style-type: none"> Power switch on (IG) Security indicator light off 	Below 2 V
L27-22 (LP) - Body ground	B - Body ground	Security indicator light signal	<ul style="list-style-type: none"> Power switch off Security indicator light blinks 	Pulse generation

If the result is not as specified, the combination meter assembly may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The certification ECU (smart key ECU assembly) and power management control ECU (HV CPU) control the vehicle engine immobiliser system functions. Engine immobiliser system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle Data Link Connector 3 (DLC3).

In some cases, a malfunction may be occurring in the engine immobiliser system even though the security indicator light is not illuminated.

When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery.

DTC CHECK / CLEAR

1. CHECK FOR CERTIFICATION ECU (SMART KEY ECU ASSEMBLY) DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key / Trouble Codes.
- (e) Check the details of the DTC(s) **INFO**.

2. CHECK FOR POWER MANAGEMENT CONTROL ECU (HV CPU) DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / HV Control / Trouble Codes.
- (e) Check the details of the DTC(s).

INFO for engine immobiliser system)

INFO for hybrid vehicle control system)

3. CLEAR CERTIFICATION ECU (SMART KEY ECU ASSEMBLY) DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key / Trouble Codes.
- (e) Clear the DTCs.

4. CLEAR POWER MANAGEMENT CONTROL ECU (HV CPU) DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / HV Control / Trouble Codes.

(e) Clear the DTCs.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key / Data List.
- (e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

Tester Display	Test Part	Control Range	Diagnostic Note
Immobiliser Indicator	Security indicator light	ON or OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is stored during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

1. CERTIFICATION ECU (SMART KEY ECU ASSEMBLY) DIAGNOSTIC TROUBLE CODE CHART

Certification ECU (Smart Key ECU Assembly)

DTC Code	Detection Item	Trouble Area	See page
B2784	Antenna Coil Open / Short	1. Wire harness or connector 2. Power switch 3. Certification ECU (Smart key ECU assembly)	INFO
B278A	Short to GND in Immobiliser System Power Source Circuit	1. Wire harness or connector 2. Power switch 3. Certification ECU (Smart key ECU assembly)	INFO
B2790 *2	ID BOX EEPROM Malfunction	1. ID code box (Immobiliser code ECU) 2. Certification ECU (Smart key ECU assembly)	INFO

*2: w/ Automatic Light Control System

2. POWER MANAGEMENT CONTROL ECU (HV CPU) DIAGNOSTIC TROUBLE CODE CHART

HINT:

The DTCs for the engine immobiliser system are specified above. If the other codes are output, check the DTC chart for the hybrid vehicle control system.

Power Management Control ECU (HV CPU)

DTC Code	Detection Item	Trouble Area	See page

NG  REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK  **END (ID CODE BOX (IMMOBILISER CODE ECU) WAS DEFECTIVE)**

DESCRIPTION

This DTC is stored when one of the following occurs: 1) the power management control ECU (HV CPU) detects an error in its own communication with the certification ECU assembly (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2; 2) the power management control ECU (HV CPU) detects an error in the communication lines; or 3) the ECU communication ID between the certification ECU assembly (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 and power management control ECU (HV CPU) is different and a hybrid vehicle control system start is attempted.

- *1: w/o Automatic Light Control System
- *2: w/ Automatic Light Control System

HINT:

Before troubleshooting this DTC, make sure that no certification ECU (smart key ECU assembly) DTCs are present. If present, troubleshoot the certification ECU (smart key ECU assembly) DTCs first.

DTC No.	DTC Detection Condition	Trouble Area
B2799	One of the following conditions is met: <ul style="list-style-type: none"> • Error in communication between power management control ECU (HV CPU) and certification ECU assembly (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 • Error in communication lines • Communication ID is different between certification ECU assembly (smart key ECU assembly)*1 or ID code box (immobiliser code ECU)*2 and power management control ECU (HV CPU) during communication 	<ul style="list-style-type: none"> • Wire harness or connector • Power management control ECU (HV CPU) • Certification ECU (Smart key ECU assembly)*1 • ID code box (Immobiliser code ECU)*2

REMOVAL

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO
2. REMOVE REAR DECK FLOOR BOX INFO
3. REMOVE REAR NO. 3 FLOOR BOARD INFO
4. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG INFO
5. REMOVE ASSIST GRIP COVER INFO
6. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side) INFO
7. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side) INFO
8. REMOVE DOOR ARMREST COVER INFO
9. REMOVE COURTESY LIGHT ASSEMBLY INFO
10. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO
11. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY INFO
12. REMOVE FRONT DOOR TRIM BRACKET INFO
13. REMOVE FRONT DOOR SERVICE HOLE COVER INFO
14. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY INFO
15. REMOVE FRONT DOOR GLASS RUN INFO
16. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY INFO
17. REMOVE FRONT DOOR OUTSIDE HANDLE COVER WITH LOCK CYLINDER ASSEMBLY (for Driver Side) INFO
18. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side) INFO
19. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Disengage the 2 claws.

(b) Disconnect the connector.

(c) Move the lever in the direction indicated by the arrow in the illustration.

(d) Remove the front door outside handle assembly as shown in the illustration.

INSTALLATION

1. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.

(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame, then slide the front door outside handle assembly toward the front of the vehicle to install it.

(c) Move the lever back in the direction indicated by the arrow in the illustration to lock the door outside handle assembly.

(d) Connect the connector.

(e) Engage the 2 claws.

2. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side) [INFO](#)

3. INSTALL FRONT DOOR OUTSIDE HANDLE COVER WITH LOCK CYLINDER ASSEMBLY (for Driver Side) [INFO](#)

4. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY [INFO](#)

5. INSTALL FRONT DOOR GLASS RUN [INFO](#)

P

REMOVAL

1. REMOVE AIR CONDITIONING UNIT ASSEMBLY

HINT:

Refer to the procedure up to Remove Air Conditioning Unit Assembly INFO.

2. REMOVE ID CODE BOX (IMMOBILISER CODE ECU)

(a) Remove the bolt and ID code box (immobiliser code ECU).

INSTALLATION

1. INSTALL ID CODE BOX (IMMOBILISER CODE ECU)

(a) Install the ID code box (immobiliser code ECU) with the bolt.

2. INSTALL AIR CONDITIONING UNIT ASSEMBLY

HINT:

Refer to the procedure from Install Air Conditioning Unit Assembly [INFO](#).

3. REGISTER ECU CODE

NOTICE:

If the ID code box (immobiliser code ECU) is replaced, register the ECU code and ECU communication ID [INFO](#).

4. REGISTER ECU COMMUNICATION ID

NOTICE:

If the ID code box (immobiliser code ECU) is replaced, register the ECU code and ECU communication ID [INFO](#).

COMPONENTS

ILLUSTRATION

P

REMOVAL

1. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure up to Remove Upper Instrument Panel Assembly [INFO](#).

2. REMOVE NO. 1 HEATER TO REGISTER DUCT_ [INFO](#)

3. REMOVE COMBINATION METER ASSEMBLY_ [INFO](#)

INSPECTION

1. INSPECT SECURITY INDICATOR LIGHT

(a) Apply battery voltage from the wire harness back side between the specified terminals of the indicator, and check the lighting condition of the security indicator.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminals L27-22 (LP)	Security indicator comes on
Battery negative (-) → Terminals L27-30 (ES)	

Text in illustration

*1	Component with harness connected (Combination Meter Assembly)
----	--

If the result is not as specified, replace the No. 3 meter circuit plate.

INSTALLATION

1. INSTALL COMBINATION METER ASSEMBLY_ [INFO](#)

2. INSTALL NO. 1 HEATER TO REGISTER DUCT_ [INFO](#)

3. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure from Install Upper Instrument Panel Assembly [INFO](#).

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected:

System Name	See Procedure
Advanced Parking Guidance System	

2. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream to troubleshoot the smart key system:

Connect the Techstream to the DLC3 while the power switch is off, and turn a door courtesy light switch on and off at intervals of 1.5 seconds until communication between the Techstream and vehicle begins.

(b) After all DTCs are cleared, check if the malfunction occurs again 6 seconds after the power switch is turned on (IG).

3. PRECAUTION FOR DISCONNECTING AND CONNECTING CABLE OF NEGATIVE BATTERY TERMINAL

(a) Immediately after disconnecting or connecting the cable of the negative (-) battery terminal, the doors may not be unlocked by the smart key system. In this situation, lock and unlock the doors using the wireless function. Then, it will be possible to unlock doors using the smart key system.

4. PRECAUTIONS FOR KEY BATTERY AND VEHICLE BATTERY

(a) When the doors are locked, the vehicle battery is used to transmit radio waves. The battery may discharge if the vehicle remains stopped for a long time. If the vehicle is not to be used for a long time, remove the battery from the vehicle or cancel the smart key system.

(b) When the doors are locked and the key is in the detection area of a door electrical key oscillator, the key battery will be depleted due to regular communication between the key and vehicle. If the vehicle is not to be used, keep the key away from the vehicle (more than 2 m (6.56 ft.)).

5. PRECAUTION FOR KEY

(a) The key is a precision instrument. Be sure to observe the following:

(1) Do not drop the key, subject it to strong shocks or bend it.

(2) Do not keep the key in a high temperature area for a long time.

(3) Do not get the key wet or wash it in an ultrasonic washer etc.

(4) Keep the key away from magnets or magnetized items during use.

(5) Do not disassemble the key except when replacing the battery.

(6) Do not place the key near objects that produce magnetic fields such as TVs, audio systems and electrical ranges, or electrical medical equipment such as low-frequency therapy instruments.

6. PRECAUTIONS FOR SMART KEY SYSTEM (for Entry Function) INSPECTION

(a) Overall smart key system (for entry function):

(1) Make sure to carry the key.

(2) All registered keys for the vehicle should be available when repairing or diagnosing the smart key system (for entry function).

(b) The smart key system, wireless door lock control system and engine immobiliser system may not operate normally, or the size of the operation area may decrease in the following situations:

HINT:

This is because faint radio waves are used for key detection.

(1) When the key battery is depleted.

(2) When any facilities that generate strong radio waves or electrical noise such as a TV tower, power plant, gas station, broadcast station, video billboard or airport are located near the inspection site.

(3) When the key is located near a wireless device such as a radio, cellular phone or cordless telephone.

(4) When the key is in contact with or covered with a metal object similar to the following:

- Metal or aluminum plated card
- Aluminum film from a cigarette box
- Metallic wallet or bag
- Coins
- Heating pad
- Media such as CDs or DVDs

(5) When a wireless remote is operated near the vehicle.

(6) When the key is carried with following items:

- Electrical key or wireless remote from another vehicle
- PC or similar handheld device (PDA etc.)
- Digital audio player
- Portable game device

(7) When a metallic film is applied to the back window glass.

(c) Precautions for key detection

(1) When using the key outside the vehicle, do not keep it too close to the vehicle. Depending on the way the key is held, the key may not be detected properly and the system will not operate normally.

HINT:

In this situation, warning buzzer may sound accidentally or key confinement prevention function may not operate.

(2) Even the key is in a detection area, it may not function normally in the following situations:

- When the doors are locked or unlocked with the key too close to a window or door outside handle, near the ground or in a high place
- When the key is on the instrument panel, floor, rear package tray, a door pocket or in the glove box

(d) Precautions specific to the smart key system

(1) If the key is within the vehicle exterior detection area, the doors can be locked or unlocked even when a person other than the person carrying the key holds the door outside handle. However, doors other than the door that detects the key cannot be unlocked.

(2) If a large amount of water is applied to the door outside handle due to a car wash or heavy rain, and the key is within the vehicle exterior detection area, the doors may be locked or unlocked. However, even when the doors are unlocked, the doors will be locked again after approximately 30 seconds if a door is not opened.

(3) If the doors are locked using the wireless remote transmitter when the key is in the cabin or near the vehicle, it may not be possible to unlock the doors using the smart key system. In this situation, use the wireless function of the key to unlock the doors.

HINT:

If the doors are locked from inside the vehicle using the wireless transmitter, it would not be desirable for it to be possible to unlock the vehicle via the touch sensors on the front outside door handles. Thus, unlocking via the touch sensors is disabled because radio waves from the door electrical key oscillator might otherwise leak into the cabin, detect the key, and enable the front door outside handle touch sensors.

7. PRECAUTIONS FOR SMART DOOR UNLOCK FUNCTION

(a) When unlocking the doors, make sure to grasp the door outside handle, ensuring contact with the sensor on the inner part of the handle. Pull the handle after confirming that the door has unlocked.

(b) When attempting to open a door suddenly or immediately after entering the vehicle exterior antenna detection area, the doors may not be unlocked. If the doors are not unlocked, return the door outside handle to its original position. Pull the handle after confirming that the door has unlocked.

HINT:

Due to mechanical reasons the door cannot be unlocked when the handle is being pulled.

(c) If the door outside handle is grasped with gloved hands, unlocking may be delayed or may not occur.

(d) If another key is in the detection area, the unlocking time may be delayed.

(e) The doors cannot be unlocked within 3 seconds after the door lock operation.

8. PRECAUTIONS FOR SMART DOOR LOCK FUNCTION

(a) Be sure to touch the lock sensor on the door outside handle (depressed portion on the handle) to lock the doors.

(b) If the doors are not locked even when the lock sensor on the door outside handle is touched, touch the both upper and lower lock sensors simultaneously.

(c) If the lock sensor is touched with gloved hands, locking may be delayed or may not occur.

(d) If water is applied to the door outside handle when washing the vehicle and carrying a key, lock and unlock operations may repeat. In this situation, keep the key more than 2 m (6.56 ft.) away from the vehicle and wash the vehicle (be aware of the potential for key theft).

(e) If water is applied to the door outside handle due to a car wash or heavy rain with a key inside the cabin, a warning message "Key not detected" may be displayed and buzzer may sound outside the vehicle. In this situation, the warning message will disappear and buzzer will stop when all the doors are locked.

(f) If ice, snow or dirt adheres to a lock sensor surface, the sensor may not react. In this situation, remove the ice, snow or dirt and touch the sensor again or touch the lock sensor on the lower part of the handle.

SYSTEM DESCRIPTION

CAUTION:

If using a pacemaker, be sure to read the manual of the pacemaker before using the key, as the radio waves of the key may affect the pacemaker.

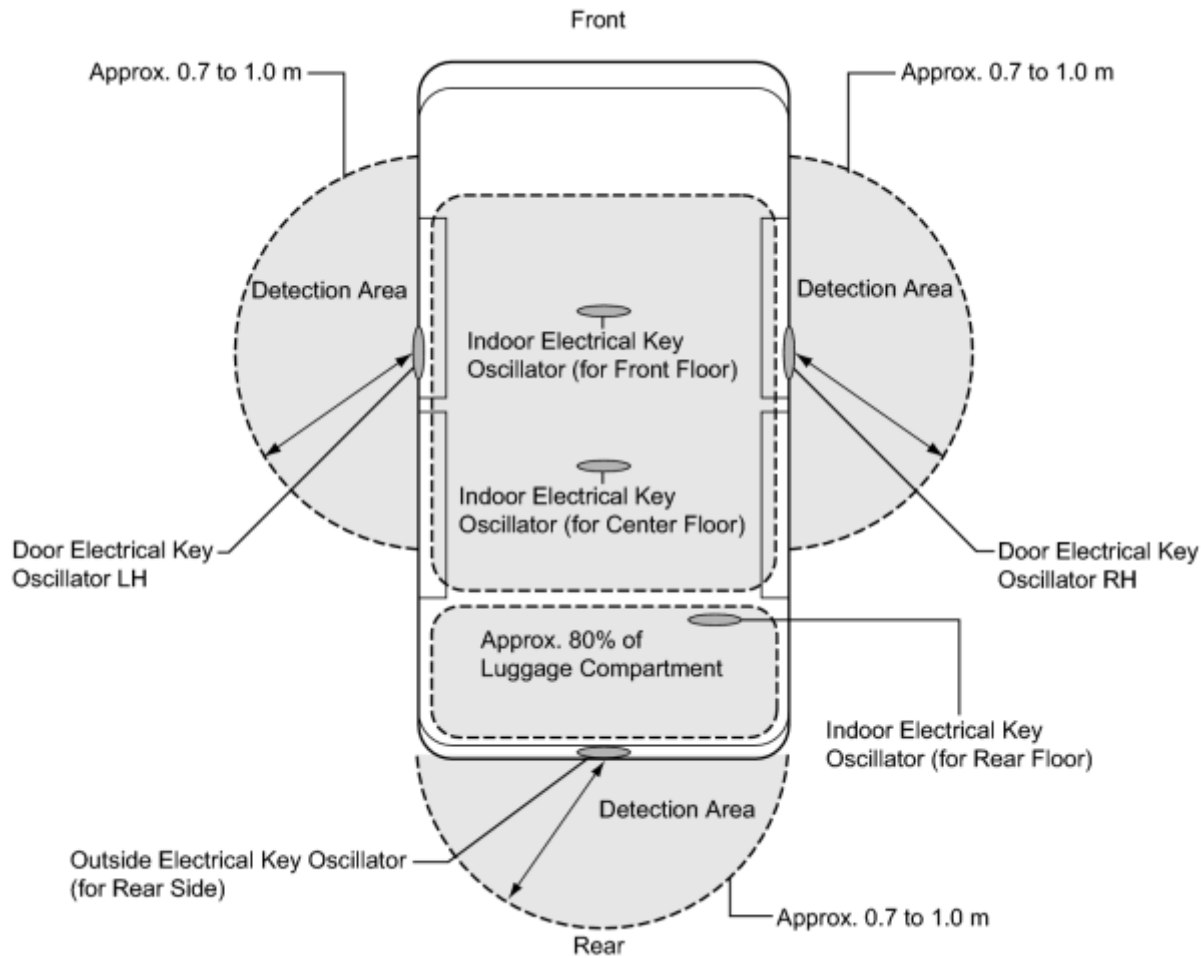

1. SMART KEY SYSTEM DESCRIPTION

(a) In addition to conventional mechanical key and wireless door lock control functions, the smart key system enables door locking/unlocking and hybrid vehicle control system starting without operating the key. The only requirement is that the key is in the user's possession.

- This system is controlled by the certification ECU (smart key ECU assembly). When the certification ECU (smart key ECU assembly) detects the presence of the smart key system in one of the detection areas, it identifies and checks the ID code, and outputs operation signals to the related ECU in accordance with their functions.
- The detection areas are formed by 6 oscillators (2 door oscillators, 1 outside oscillator and 3 indoor oscillators).

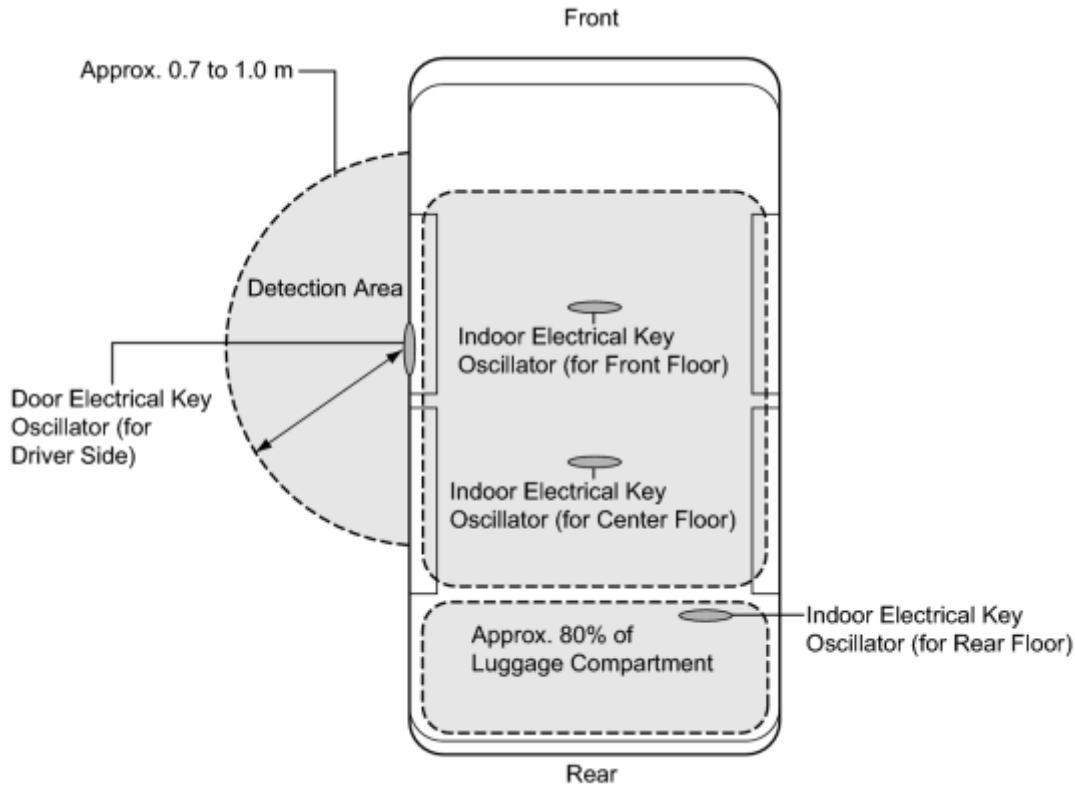

2. DETECTION AREA

(a) w/ Entry System Back Door Open Function

Actuation Area	Detail
Interior	The interior detection area of the indoor electrical key oscillators (for front, center and rear floor) is formed when the driver door is opened or closed, when the power switch is pushed, when a warning is activated, or when the lock sensor on the door outside handle assembly or lock switch on the back door opener switch assembly is on.
Exterior	The exterior detection area formed by the door electrical key oscillators (for driver side and front passenger side) and outside electrical key oscillator (for rear side) is approximately 0.7 to 1.0 m (2.30 to 3.28 ft.) from the door outside handle assembly of the front doors, or the center of the rear bumper.
Around Front Door	The exterior detection area of the door electrical key oscillator (for driver side or front passenger side) is formed by transmitting a request signal every 0.25 seconds while the power switch is off and each door is locked. In this way it detects the proximity of a key. When locking the door using the lock sensor on the door outside handle assembly, the detection area is formed when the lock sensor is touched.
Around Back Door	The exterior detection area of the outside electrical key oscillator (for rear side) is formed by when the back door opener switch assembly (opener or lock switch) is on.

(b) w/o Entry System Back Door Open Function

Actuation Area	Detail
Interior	The interior detection area of the indoor electrical key oscillators (for front, center and rear floor) is formed when the driver door is opened or closed, when the power switch is pushed, when a warning is activated, or when the lock sensor on the door outside handle assembly or lock switch on the back door opener switch assembly is on.
Exterior	The exterior detection area formed by the door electrical key oscillators (for driver side) is approximately 0.7 to 1.0 m (2.30 to 3.28 ft.) from the door outside handle assembly of the front doors, or the center of the rear bumper.
Around Front Door	The exterior detection area of the door electrical key oscillator (for driver side) is formed by transmitting a request signal every 0.25 seconds while the power switch is off and each door is locked. In this way it detects the proximity of a key. When locking the door using the lock sensor on the door outside handle assembly, the detection area is formed when the lock sensor is touched.

3. FUNCTION OF MAIN COMPONENTS

Component	Function
Key	<ul style="list-style-type: none"> • Outputs information such as the key ID and vehicle ID when request signals that are output by the indoor, outside and door oscillators are received. • Outputs a request signal when the lock, unlock, panic or remote A/C*1 button on the key is pushed. • Outputs information such as the key ID and vehicle ID when the radio wave that is output by the transponder key amplifier in the power switch is received. • Has an integrated mechanical key that can be used to

Component		Function
		unlock the doors when the key battery is weak.
Certification ECU (Smart Key ECU Assembly)		<ul style="list-style-type: none"> • Certifies the ID code received from the door control receiver and transmits the certification results to the steering lock ECU (steering lock actuator assembly). • Controls the oscillators and touch sensors. • Transmits the door lock/unlock request signals during the entry function.
Main Body ECU (Multiplex Network Body ECU)		<ul style="list-style-type: none"> • Receives the request signal from the certification ECU (smart key ECU assembly) and actuates the door lock motors to unlock or lock all the doors. • Transmits the condition of each door and, the back door to the certification ECU (smart key ECU assembly).
Front Door Outside Handle Assembly (for Driver Side, Front Passenger Side*2) (touch sensor)		Sends a door unlock request signal to the certification ECU (smart key ECU assembly) when the touch sensor on the inner side of the front door outside handle assembly is touched.
Front Door Outside Handle Assembly (for Driver Side, Front Passenger Side*2) (lock sensor)		Sends a door lock request signal to the certification ECU (smart key ECU assembly) when the lock sensor on the front door outside handle assembly is touched.
Door Electrical Key Oscillator (for Driver Side, Front Passenger Side*2)		Receives the request signal from the certification ECU (smart key ECU assembly), and creates an detection area around the front doors.
Indoor Electrical Key Oscillator (for Front, Center and Rear Floor)		Receives a request signal from the certification ECU (smart key ECU assembly) and forms the interior detection area.
Outside Electrical Key Oscillator (for Rear Side)*2		Receives the request signal from the certification ECU (smart key ECU assembly), and forms an detection area around the back door.
Door Control Receiver Assembly		Receives the ID code from the key and transmits it to the certification ECU (smart key ECU assembly).
Back Door Opener Switch Assembly*2 <ul style="list-style-type: none"> • Opener Switch 		Transmits a back door open request signal to the certification ECU (smart key ECU assembly).
Back Door Opener Switch Assembly*2 <ul style="list-style-type: none"> • Lock Switch 		Transmits a back door lock request signal to the certification ECU (smart key ECU assembly).
Stop Light Switch		Outputs state of the brake pedal to the power management control ECU.
Combination Meter Assembly	Buzzer	Sounds to inform the driver of malfunctions in the smart key system.
	Multi-information Display	The following warning messages appear to alert the driver:

Component		Function
		<ul style="list-style-type: none"> • Shift to P Position • Shift to P Position and Push Power Switch Turn Power Off • Key not Detected • Turn Power Off • Key Detected in Vehicle • Key Battery Low • Depress Brake Pedal and Push Power Switch to Start • Depress Brake Pedal, Touch Power Switch with Key • Auto Power Off to Conserve Battery • Shift to P Position to Start
Wireless Door Lock Buzzer Assembly		Sounds to inform the driver of malfunctions in the smart key system.

- *1: w/ Remote Air Conditioning System
- *2: w/ Entry System Back Door Open Function

4. CONSTRUCTION AND OPERATION

(a) Key

The key consists of a mechanical key, transmitter for wireless door lock control and transceiver for the smart key system.

- The transceiver function for the smart key system receives the signals from the oscillators and sends the ID code to the tuner.
- The transmitter function for the wireless door lock control has a lock switch, unlock switch, panic switch and remote A/C switch*.

*: w/ Remote Air Conditioning System

- This mechanical key works for the driver door and glove box, but cannot start the hybrid vehicle control system.

A total of 7 keys can be registered.

(1) Key (w/ Remote Air Conditioning System):

H

(2) Key (w/o Remote Air Conditioning System):

H

(b) Oscillator (door electrical key oscillator (for driver side and front passenger side*), indoor electrical key oscillator (for front, center and rear floors) and outside electrical key oscillator (for rear side)*)

Each oscillator transmits the request signal received from the certification ECU (smart key ECU assembly), and forms a key detection area to detect the presence of a key. The detection area formed by door electrical key oscillator (for driver side and front passenger side*) and outside electrical key oscillator (for rear side)* is approximately 0.7 to 1.0 m (2.30 to 3.28 ft.) from the door outside handle assembly of door (for driver side, front passenger side*) or the center of the rear bumper.

*: w/ Entry System Back Door Open Function

- The detection area of the door electrical key oscillators (for driver side and front passenger side*) is formed by transmitting a request signal periodically while the power switch is off and the doors (for driver side and front passenger side*) are locked. In this way, the oscillator detects the proximity of a key. During entry lock, the detection area is formed with the lock sensor on.

*: w/ Entry System Back Door Open Function

- The detection area of the outside electrical key oscillator (for rear side)* is formed when the back door opener switch assembly (opener or lock switch) is on.

*: w/ Entry System Back Door Open Function

- The detection area of the indoor electrical key oscillators (for front, center and rear floor) is formed when any door is opened or closed, during hybrid vehicle control system start, when a warning is activated, or when the lock sensor on the door outside handle assembly or lock switch on the back door opener switch assembly is on.

5. ENTRY FUNCTION OPERATION

(a) The smart key system has the following functions:

Function	Outline
Wireless Door Lock Control	This function is a convenient system for locking and unlocking all the doors and back door at a distance. The operation of this function is the same as that in the wireless door lock control system.
Entry Unlock	<p>When a key is in the exterior detection area of any door electrical key oscillator, the door will unlock after the inner side of either front door outside handle assembly (for driver side or front passenger side*) is touched.</p> <ul style="list-style-type: none"> • The front door outside handle assembly (for driver side) unlocks the driver door. • The front door outside handle assembly (for front passenger side) unlocks all doors and the back door.
Entry Unlock Mode Switching	<p>This function allows switching between 2 modes that can be operated with the entry unlock function.</p> <ul style="list-style-type: none"> • Driver Door Mode (Default Setting) • All Door Mode
Entry Lock	<ul style="list-style-type: none"> • When a key is in the exterior detection area of a door electrical key oscillator (driver side or front passenger side*) and the power switch is off, all doors can be locked by simply touching the lock sensor on the door outside handle assembly. • When a key is in the exterior detection area of the outside electrical key oscillator (for rear side) and the power switch is off, all doors can be locked by simply pressing the lock switch on the back door opener switch assembly.*
Entry System Back Door Open Function*	When a key is in the exterior detection area of the outside electrical key oscillator (for rear side), the back door opens manually by simply pressing the back door opener switch assembly (opener switch).
Prevention of Key Confinement	The key confinement prevention function prevents the vehicle from being locked with a key left inside.
Warning	When any of the situations below occur, the smart key system causes the certification ECU (smart key ECU assembly) to sound the buzzer in the combination meter assembly and wireless door lock buzzer assembly, and indicate a warning on the multi-information

Function	Outline
	<p>display in order to alert the driver:</p> <ul style="list-style-type: none"> • The hybrid vehicle control system is left running and the shift lever is in R, N, D or B when the driver gets out of the vehicle. • The key reminder sounds. • The hybrid vehicle control system is left running and park (P) is selected when the driver gets out of the vehicle. • A door is ajar. • The hybrid vehicle control system is left running when a passenger gets out of the vehicle while holding the key. • The key is not in the detection areas. • The key is left in the vehicle. • The key battery is weak. • The power management control ECU is malfunctioning. • The hybrid vehicle control system cannot be started (driver error). • The hybrid vehicle control system cannot be started (system error). • An attempt is made to turn off the vehicle with the shift lever in a R, D or B. • Auto power off operation occurs. • Immobiliser system certification completion occurs. • The vehicle is driven without a key.
Battery Saving	<p>If the key remains within the exterior detection area of any electrical key oscillator (for driver, front passenger or rear side), the system maintains periodic communication with the key. Therefore, if the vehicle remains parked in that state for a long time, the key battery and the vehicle battery could be drained.</p>
Key Cancel INFO	<p>The following key functions can be cancelled by following certain procedures:</p> <ul style="list-style-type: none"> • Entry Unlock/Lock • Entry Hybrid Vehicle Control System Start • Entry System Back Door Open Function* • Key Lock-in Prevention • Warning
Key Code Registration	<p>A total of 7 keys can be registered.</p> <p>This function enables the registration (writing and storing) of transmitter recognition codes in the EEPROM that is contained in the certification ECU (smart key ECU assembly).</p>

*: w/ Entry System Back Door Open Function

6. WIRELESS DOOR LOCK CONTROL SYSTEM FUNCTION

Push the lock/unlock/panic/remote A/C* switch on the key to operate each function. For details, INFO.

*: w/ Remote Air Conditioning System

7. ENTRY UNLOCK FUNCTION

(a) When the key enters any exterior detection area of a front door, the certification ECU (smart key ECU assembly) judges and certifies the key ID code received from the door control receiver assembly.

(b) After the key certification OK is confirmed, the certification ECU (smart key ECU assembly) transmits an unlock stand-by signal to the touch sensor of the relevant door.

(c) If a touch sensor is touched in this condition, the certification ECU (smart key ECU assembly) transmits a door unlock request signal to the main body ECU (multiplex network body ECU), and unlocks either the driver door or all doors.

- The front door outside handle assembly (for driver side) unlocks the driver door.*

*: except for Korea and Mexico

- The front door outside handle assembly (for front passenger side) unlocks all doors.*

*: w/ Entry System Back Door Open Function and for Korea and Mexico

(d) The main body ECU (multiplex network body ECU) sounds the wireless door lock buzzer twice, and the main body ECU (multiplex network body ECU) flashes the hazard warning lights twice, as an answer back for entry unlock.

8. ENTRY LOCK FUNCTION

(a) The entry lock signal is transmitted to the certification ECU (smart key ECU assembly) when the user (who has the key in their possession) exits the vehicle and touches the lock sensor on the door outside handle assembly or presses the lock switch on the back door opener switch assembly*.

*: w/ Entry System Back Door Open Function

(b) The certification ECU (smart key ECU assembly) transmits a request signal for the indoor electrical key oscillators (for front, center and rear floor), door electrical key oscillators (for driver side and front passenger side*) and outside electrical key oscillator (for rear side)* to form detection areas.

*: w/ Entry System Back Door Open Function

(c) The certification ECU (smart key ECU assembly) judges and certifies the ID code. It then checks the location of the key, and if all doors are closed, the ECU transmits a door lock signal to the main body ECU (multiplex network body ECU).

(d) The main body ECU (multiplex network body ECU) receives this signal and actuates the lock motors.

(e) The main body ECU (multiplex network body ECU) blinks the hazard warning lights once and the main body ECU (multiplex network body ECU) sounds the wireless door lock buzzer once as an answerback for the entry lock function.

9. ENTRY SYSTEM BACK DOOR OPEN FUNCTION*

*: w/ Entry System Back Door Open Function

- (a) The unlock signal is transmitted to the certification ECU (smart key ECU assembly) from the back door opener switch assembly.
- (b) The certification ECU (smart key ECU assembly) transmits a request signal for the outside electrical key oscillator (for rear side) to form a detection area.
- (c) The key receives this signal and returns the ID code to the door control receiver assembly.
- (d) The certification ECU (smart key ECU assembly) judges and certifies the ID code, and check the location of the key. The ECU transmits a back door open signal to the main body ECU (multiplex network body ECU).
- (e) Any ECU receives this signal and actuates the motor to open manually the back door.

10. PREVENTION OF KEY CONFINEMENT FUNCTION

- (a) The key confinement prevention function prevents the key from being locked in the vehicle.
 - (1) When the door is locked by the lock knob in the inside door handle while the key is still in the vehicle interior, the main body ECU (multiplex network body ECU) receives this signal and transmits the door condition signal to the certification ECU (smart key ECU assembly).
 - (2) The certification ECU (smart key ECU assembly) transmits a request signal for the indoor electrical key oscillators (for front, center and rear floor) to form detection areas.
 - (3) The key receives this signal and returns the ID code to the door control receiver assembly.
 - (4) The certification ECU (smart key ECU assembly) judges and certifies the ID code, and check the location of the key. The ECU transmits a door unlock signal to the main body ECU (multiplex network body ECU).
 - (5) The main body ECU (multiplex network body ECU) receives this signal and actuates the all door lock assemblies to unlock.
 - (6) The certification ECU (smart key ECU assembly) sounds the wireless door lock buzzer and buzzer in the combination meter as an answer back for unlock.

11. WARNING FUNCTION

(a) Warning

- (1) When any of the situations below occur, the smart key system causes the certification ECU (smart key ECU assembly) to sound a buzzer in the combination meter assembly and the wireless door lock buzzer assembly, a message to appear on the multi-information display, and the power switch illumination to operate in order to alert the driver.

Situation	Condition
A	The hybrid vehicle control system is left running and the shift lever is in R, N, D or B when the driver gets out of the vehicle.
B	The key reminder sounds.
C	The hybrid vehicle control system is left running and park (P) is selected when the driver gets out of the vehicle.

Situation	Condition
D	A door is ajar.
E	The hybrid vehicle control system is left running when a passenger gets out of the vehicle while holding the key.
F	The key is not in the detection areas.
G	The key is left in the vehicle.
H	The key battery is weak.
I	The power management ECU is malfunctioning.
J	The hybrid vehicle control system cannot be started (driver error).
K	The hybrid vehicle control system cannot be started (system error).
L	An attempt is made to turn off the vehicle with the shift lever in a R, D or B.
M	Auto power off operation occurs.
N	Immobiliser system certification completion occurs.
O	The vehicle is driven without a key.

(2) Situation A

- There are 2 patterns for situation A.
 - Pattern 1:

When the hybrid vehicle control system is left running and the shift lever is in R, N, D or B, the driver opens the door and attempts to get out of the vehicle.

In this situation, the following control is performed:

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away		
Warning Active Condition	The warning is activated when all of the following conditions are met: <ul style="list-style-type: none"> ○ The power switch is in a mode other than off. ○ The shift lever is in R, N, D or B. ○ The vehicle speed is less than 5 km/h (3.1 mph). ○ The driver door is opened. 		
Warning Method	Combination Meter Assembly	Buzzer	Sounds continuously
		Multi-information Display	The following warning message is displayed: <ul style="list-style-type: none"> ○ Shift to P Position
	Wireless Door Lock Buzzer Assembly	-	
	Power Switch Illumination	-	

Warning Stop Condition	<p>The warning is stopped when one of the following conditions is met:</p> <ul style="list-style-type: none"> ○ The power switch is turned off. ○ The P position switch is pushed. ○ The vehicle speed is above 5 km/h (3.1 mph). ○ The driver door is closed.
------------------------	--

(3) Situation B

- There are two patterns for situation B.

- Pattern 1:

When the driver door is open, the driver turns the power switch on (ACC) and attempts to leave the vehicle.

- Pattern 2:

When the driver door is open, the driver turns the power switch from on (IG) to off and attempts to leave the vehicle.

In these situations, the following control is performed:

Possible Effects without Warning	Vehicle theft		
Warning Active Condition	<p>The warning is activated when either of the following patterns is met:</p> <ul style="list-style-type: none"> ○ Pattern 1: <ul style="list-style-type: none"> ▪ The power switch is on (ACC). ▪ The driver door is opened. ▪ The remote air conditioning system is off. ○ Pattern 2: <ul style="list-style-type: none"> ▪ The power switch is off. ▪ The shift control is unlocked. ▪ The driver door is opened. 		
Warning Method	Combination Meter Assembly	Buzzer	Sounds continuously at short and even intervals
		Multi-information Display	-
	Wireless Door Lock Buzzer Assembly		-
	Power Switch Illumination		-
Warning Stop Condition	<p>The warning is stopped when one of the following conditions is met:</p> <ul style="list-style-type: none"> ○ The power switch is turned on (IG). ○ The driver door is closed. ○ The power switch is turned off and the shift control is locked. 		

	<ul style="list-style-type: none"> ○ The remote air conditioning system is turned on.
--	--

(4) Situation C

- There are 2 patterns for situation C.
 - Pattern 1:

When the hybrid vehicle control system is left running and park (P) is selected, the driver closes the driver door and attempts to leave the vehicle while holding the key.

In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft, hybrid vehicle control system cannot be restarted, discharged battery		
Warning Active Condition	The warning is activated when all of the following conditions are met: <ul style="list-style-type: none"> ○ Park (P) is selected. ○ The power switch is in a mode other than off. ○ The key is not in the vehicle. ○ The driver door is opened → closed. ○ The vehicle speed is 0 km/h (0 mph). 		
Warning Method	Combination Meter Assembly	Buzzer	Sounds once
		Multi-information Display	The following warning message is displayed: <ul style="list-style-type: none"> ○ Key not Detected
	Wireless Door Lock Buzzer Assembly	Sounds 3 times	
	Power Switch Illumination	-	
Warning Stop Condition	The warning is stopped when either of the following conditions is met: <ul style="list-style-type: none"> ○ The power switch is turned off. ○ The key is returned to the vehicle. 		

(5) Situation D

- The lock sensor on the door outside handle assembly is touched to perform entry lock with a door open.

In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
----------------------------------	---------------

Warning Active Condition	<p>The warning is activated when all of the following conditions are met:</p> <ul style="list-style-type: none"> • The power switch is off. • Any door is opened. • The lock sensor on the door outside handle assembly is on (touched). 		
Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	-
	Wireless Door Lock Buzzer Assembly		Sounds continuously
	Power Switch Illumination		-
Warning Stop Condition	<p>The warning is stopped when one of the following conditions is met:</p> <ul style="list-style-type: none"> • The power switch is turned to a mode other than off. • All doors are closed. • An unlock operation is performed using the wireless door lock remote function. • The touch sensor on the inner side of a door outside handle assembly is used to perform entry unlock. • 10 seconds have elapsed after the wireless door lock buzzer assembly is activated. 		

(6) Situation E

- When the hybrid vehicle control system is left running, a passenger leaves the vehicle while holding the key.

In this situation, the following control is performed:

Possible Effect without Warning	Hybrid vehicle control system cannot be restarted		
Warning Active Condition	<p>The warning is activated when all of the following conditions are met:</p> <ul style="list-style-type: none"> • The power switch is in a mode other than off. • A door other than the driver door is opened → closed. • The vehicle speed is 0 mph (0 km/h). • The key is not in the vehicle. 		
Warning Method	Combination Meter Assembly	Buzzer	Sounds once
		Multi-information Display	<p>The following warning message is displayed:</p> <ul style="list-style-type: none"> • Key not Detected
	Wireless Door Lock Buzzer Assembly		Sounds 3 times
	Power Switch Illumination		-

Warning Stop Condition	<p>The warning is stopped when either of the following conditions is met:</p> <ul style="list-style-type: none"> • The power switch is turned off. • The key is returned to the vehicle.
------------------------	--

(7) Situation F

- When the key is not in the vehicle or the key battery is dead, the driver attempts to start the hybrid vehicle control system or turn the power switch on (IG).

In this situation, the following control is performed:

Possible Effects without Warning	Confuses the user		
Warning Active Condition	<p>The warning is activated when all of the following conditions are met:</p> <ul style="list-style-type: none"> • The power switch is pushed. • The key is not in the vehicle. • The immobiliser system is set. 		
Warning Method	Combination Meter Assembly	Buzzer	Sounds once
		Multi-information Display	<p>The following warning message is displayed for 15 seconds (and then automatically turned off).</p> <ul style="list-style-type: none"> • Key not Detected
	Wireless Door Lock Buzzer Assembly	-	
	Power Switch Illumination	-	
Warning Stop Condition	<p>Check if the key is in the detection area.</p> <p>If the key is in the detection area, press the wireless door lock switch and confirm that the indicator comes on. If the indicator does not come on, replace the key battery with a new one.</p>		

(8) Situation G

- There are two patterns for situation G.
 - Pattern 1:

The lock sensor on a door outside handle assembly is touched to perform entry lock with the key left in the vehicle.

In this situation, the following control is performed:

Possible Effect without Warning	Vehicle theft
---------------------------------	---------------

Warning Active Condition	The warning is activated when all of the following conditions are met: <ul style="list-style-type: none"> ○ The power switch is off. ○ All doors are closed. ○ The key is in the vehicle. ○ The lock sensor on the door outside handle assembly is on (touched). ○ Any door is unlocked. 		
Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	The following warning message is displayed for 60 seconds (and then automatically turned off). <ul style="list-style-type: none"> ○ Key Detected in Vehicle
	Wireless Door Lock Buzzer Assembly	Sounds continuously	
	Power Switch Illumination		
	-		
Warning Stop Condition	The warning is stopped when one of the following conditions is met:		
	Combination Meter Assembly	Multi-information Display	<ul style="list-style-type: none"> ○ The power switch is turned to a mode other than off. ○ Lock operation is detected.
	Wireless Door Lock Buzzer Assembly		<ul style="list-style-type: none"> ○ 10 seconds have elapsed after the wireless door lock buzzer assembly is activated. ○ Any door is opened. ○ The power switch is turned to a mode other than off. ○ Lock operation is detected.

(9) Situation H

- The vehicle is driven using a key that has a low battery.

In this situation, the following control is performed:

Possible Effect without Warning	Smart key system does not function		
Warning Active Condition	The warning is activated when both of the following conditions are met: <ul style="list-style-type: none"> • The power switch is turned off after being left on (IG) for more than 20 minutes. • The key battery voltage is low. 		
Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	The following warning message is displayed for 15 seconds (and then automatically turned off).

			<ul style="list-style-type: none"> • Key Battery Low
	Wireless Door Lock Buzzer Assembly	-	
	Power Switch Illumination	-	
Warning Stop Condition	The key battery is replaced with a new one.		

(10) Situation I

- A malfunction of the power management control ECU is detected.

In this situation, the following control is performed:

Possible Effect without Warning	Malfunction detection		
Warning Active Condition	A malfunction of the power management ECU is detected.		
Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	-
	Wireless Door Lock Buzzer Assembly		-
	Power Switch Illumination		The amber indicator blinks at 2-second intervals (goes off automatically after 15 seconds).
Warning Stop Condition	The power management control ECU returns to normal.		

(11) Situation J

- There are two patterns for situation J.
 - Pattern 1:

A warning message appears on the multi-information display when the driver does not follow the proper procedure to start the vehicle.

In this situation, the following control is performed:

Possible Effects without Warning	Usability function
Warning Active Condition	<p>The warning is activated when all of the following conditions are met:</p> <ul style="list-style-type: none"> ○ The power switch is turned off. ○ Driver door is closed → opened. ○ The power switch is turned from off to on (ACC) more than twice with the hybrid vehicle control system off and brake pedal not depressed.

Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	The following warning message is displayed for 10 seconds (and then automatically turned off). <ul style="list-style-type: none"> ○ Depress Brake Pedal and Push Power Switch to Start
	Wireless Door Lock Buzzer Assembly		-
	Power Switch Illumination		-
Warning Stop Condition	The power switch is pushed with the brake pedal depressed.		

- Pattern 2:

A message indicating how to start the hybrid vehicle control system appears on the multi-information display when the shift lever is in a position in which the hybrid vehicle control system cannot be started.

In this situation, the following control is performed:

Possible Effects without Warning	Usability function		
Warning Active Condition	The warning is activated when all of the following conditions are met: <ul style="list-style-type: none"> ○ The hybrid vehicle control system is stopped. ○ The vehicle speed is 0 km/h (0 mph). ○ More than 0.5 seconds have elapsed after the power switch is turned on (IG). ○ The shift lever is R, N, D or B. 		
Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	The following warning message is displayed: <ul style="list-style-type: none"> ○ Shift to P Position to Start
	Wireless Door Lock Buzzer Assembly		-
	Power Switch Illumination		-
Warning Stop Condition	The warning is stopped when one of the following conditions is met: <ul style="list-style-type: none"> ○ The P position switch is pushed. ○ The shift lever is moved to N. ○ The vehicle speed is above 0 km/h (0 mph). ○ The power switch is turned off or on (ACC). ○ The hybrid vehicle control system is started. 		

(12) Situation K

- There are two patterns for situation K.

- Pattern 1:

When the power switch is pushed, the key cannot be detected in the vehicle two times in a row.

In this situation, the following control is performed:

Possible Effects without Warning	Usability function		
Warning Active Condition	<p>The warning is activated when all of the following conditions are met:</p> <ul style="list-style-type: none"> ○ The immobiliser system is set. ○ The key is not in the vehicle. ○ When the power switch is turned on (ACC) or on (IG) , a certification error occurs two times in a row. 		
Warning Method	Combination Meter Assembly	Buzzer	Sounds once
		Multi-information Display	<p>The following warning message is displayed for 60 seconds (and then automatically turned off).</p> <ul style="list-style-type: none"> ○ Depress Brake Pedal, Touch Power Switch with Key
	Wireless Door Lock Buzzer Assembly	-	
	Power Switch Illumination	-	
Warning Stop Condition	<p>The warning is stopped when either of the following conditions is met:</p> <ul style="list-style-type: none"> ○ The immobiliser system certification result is OK. ○ Key certification in the vehicle has stopped either because 30 seconds have elapsed after any of the doors is opened and closed, or because the brake pedal is depressed. 		

- Pattern 2:

The driver attempts to start the hybrid vehicle control system after performing a driver door key linked unlock operation.

In this situation, the following control is performed:

Possible Effects without Warning	Usability function		
Warning Active Condition	<p>The warning is activated when all of the following conditions are met:</p> <ul style="list-style-type: none"> ○ A driver door key linked unlock operation is performed. ○ The immobiliser system is set. ○ The power switch is pushed. 		

	<ul style="list-style-type: none"> ○ The key is not in the vehicle. 		
Warning Method	Combination Meter Assembly	Buzzer	Sounds once
		Multi-information Display	The following warning message is displayed for 60 seconds (and then automatically turned off). <ul style="list-style-type: none"> ○ Depress Brake Pedal, Touch Power Switch with Key
	Wireless Door Lock Buzzer Assembly	-	
	Power Switch Illumination	-	
Warning Stop Condition	The warning is stopped when either of the following conditions is met: <ul style="list-style-type: none"> ○ The immobiliser system certification result is OK. ○ The Key is returned to the vehicle. 		

(13) Situation L

- A warning message appears on the multi-information display when the driver attempts to turn the power switch off with the shift lever in R, N, D or B.

In this situation, the following control is performed:

Possible Effects without Warning	Usability function		
Warning Active Condition	The warning is activated when both of the following conditions are met: <ul style="list-style-type: none"> • The shift lever in R, N, D or B. • The power switch is turned from on (IG) to on (ACC). 		
Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	The following warning message is displayed: <ul style="list-style-type: none"> • Shift to P Position and Push Power Switch Turn Power Off
	Wireless Door Lock Buzzer Assembly	-	
	Power Switch Illumination	-	
Warning Stop Condition	The warning is stopped when either of the following conditions is met: <ul style="list-style-type: none"> • The P position switch is pushed. • The power switch is turned to a mode other than on (ACC). 		

(14) Situation M

- A warning message appears on the multi-information display when automatic power off operation occurs.

In this situation, the following control is performed:

Possible Effects without Warning	Battery Saving function		
Warning Active Condition	<p>The warning is activated when all of the following conditions are met:</p> <ul style="list-style-type: none"> • Park (P) is selected. • The power switch is on (ACC) or on (IG). • The vehicle speed is 0 km/h (0 mph). • The hybrid vehicle control system is stopped. • The power source control system is turned off by automatic power off function. 		
Warning Method	Combination Meter Assembly	Buzzer	-
		Multi-information Display	<p>The following warning message is displayed for 10 seconds (and then automatically turned off).</p> <ul style="list-style-type: none"> • Auto Power Off to Conserve Battery
	Wireless Door Lock Buzzer Assembly		-
	Power Switch Illumination		-
Warning Stop Condition	The power switch is turned to a mode other than off.		

(15) Situation N

- A warning message appears on the multi-information display when a key with a depleted battery is touched to the power switch while depressing the brake.

In this situation, the following control is performed:

Possible Effects without Warning	Malfunction detection		
Warning Active Condition	Key certification result is OK.*		
Warning Method	Combination Meter Assembly	Buzzer	Sounds once
		Multi-information Display	<p>The following warning message is displayed for 10 seconds (and then automatically turned off).</p> <ul style="list-style-type: none"> • Depress Brake Pedal and Push Power Switch to Start
	Wireless Door Lock Buzzer Assembly		-

	Power Switch Illumination	The amber indicator blinks
Warning Stop Condition	The warning is stopped when either of the following conditions is met: <ul style="list-style-type: none"> • The hybrid vehicle control system is started. • The key is returned to the vehicle. 	

*: This situation occurs following situation M.

(16) Situation O

- A warning message appears on the multi-information display when the vehicle starts moving without the registered key in the vehicle interior.

In this situation, the following control is performed:

Possible Effects without Warning	Hybrid vehicle control system cannot be restarted		
Warning Active Condition	When vehicle speed is detected after the key is removed from the vehicle, the warning is activated (only for first time).		
Warning Method	Combination Meter Assembly	Buzzer	Sounds once
		Multi-information Display	The following warning message is displayed: <ul style="list-style-type: none"> • Key not Detected
	Wireless Door Lock Buzzer Assembly		-
	Power Switch Illumination		-
Warning Stop Condition	The warning is stopped when either of the following conditions is met: <ul style="list-style-type: none"> • The power switch is turned off. • The key is returned the vehicle. 		

12. BATTERY SAVING

(a) Vehicle Battery Saving Function

In the smart key system, signals are emitted outside the vehicle at a prescribed interval (0.25 seconds) when the doors are locked. Therefore, the vehicle battery could be drained if the vehicle remains parked for a long time. For this reason, the controls listed below are affected:

Condition	Control
Both conditions below are met for 5 days: <ul style="list-style-type: none"> • Key is not in detection area • Touch sensor or lock switch operation is not 	Signal transmission interval is extended from 0.25 to 0.75 seconds

Condition	Control
performed	
Both conditions below are met for 14 days: <ul style="list-style-type: none"> • Key is not in detection area • Touch sensor or lock switch operation is not performed 	The smart key system is automatically deactivates

Reinstatement Conditions

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the key and touches a lock sensor on a door outside handle assembly.
- The driver door is locked or unlocked by the mechanical key.

(b) Key Battery and Vehicle Battery Saving Function

In the smart key system, if the key is constantly in the exterior detection area of the doors, the system maintains periodic communication with the key. Therefore, if the vehicle remains parked in that state for a long time, the key battery and vehicle battery could be drained. For this reason, if this state continues longer than 10 minutes, the smart key system automatically becomes deactivated.

Reinstatement Conditions

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the key and touches a lock sensor on a door outside handle assembly.
- A door is locked or unlocked by the mechanical key.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the smart key system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE
----	-------------------------

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*
----	---

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
ECU connected, communication line is normal.	A
ECU connected, communication line is malfunctioning.	B

B  GO TO CAN COMMUNICATION SYSTEM

A
▼

5.	INSPECT COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM (LIN)*
----	---

(a) Use the Techstream to check if the LIN communication system (LIN) is functioning normally .

Result:

Result	Proceed to
LIN DTC is not output.	A
LIN DTC is output.	B

B  GO TO LIN COMMUNICATION SYSTEM

A
▼

6.	CHECK FOR DTC*
----	----------------

(a) Check for DTCs and note any codes that are output.

(b) Clear the DTCs.

(c) Recheck for DTCs. Based on the DTCs output, try to cause the same engine immobiliser system DTC, wireless door lock control system DTC or smart key system (for start function) DTC to be output by simulating the symptoms indicated by the DTCs.

Result:

Result	Proceed to
DTC is not output.	A
Engine immobiliser system DTC is output.	B
Wireless door lock control system DTC is output.	C
Smart key system (for start function) DTC is output.	D

B  GO TO ENGINE IMMOBILISER SYSTEM

C  GO TO WIRELESS DOOR LOCK CONTROL SYSTEM SYSTEM

D  GO TO SMART KEY SYSTEM (for Start Function)

A
▼

7.	PROBLEM SYMPTOMS TABLE
----	------------------------

(a) Refer to Problem Symptoms Table .

Result:

Result	Proceed to
Fault is not listed in Problem Symptoms Table.	A
Fault is listed in Problem Symptoms Table.	B

NEXT ▶ **END**

OPERATION CHECK

1. SMART KEY SYSTEM OPERATION INSPECTION

(a) Check the entry unlock function.

(1) Use the wireless lock operation to lock the doors. With the key outside the vehicle, touch a front door outside handle assembly (touch sensor) and check that the door unlocks.

(b) Check the entry unlock operation detection area.

(1) Step 1: Hold the key at the same height as the door outside handle assembly (approximately 0.8 m (2.62 ft.)). Make sure that the direction of the key is as shown in the illustration.

(2) Step 2: Check that when the key is brought within 0.7 to 1.0 m (2.30 to 3.28 ft.) of the vehicle, the system enters unlock standby mode.

HINT:

When the system enters unlock standby mode, the key LED illuminates.

(3) Step 3: After the system enters unlock standby mode, touch the door outside handle assembly (touch sensor) within 3 seconds. Check that the door unlocks.

NOTICE:

The key may not be able to communicate with the system within a 0.2 m (0.656 ft.) radius of each door outside handle assembly.

(4) Step 4: Repeat step 2 and 3 for the remaining front door.

(5) Step 5: Inspect the door outside handle assembly (touch sensor) response sensitivity. When the system is in unlock standby mode, check that touching the area shown in the illustration causes the door to unlock.

NOTICE:

When touching the highlighted area, touching too quickly or having extended contact may not trigger the sensor. In such a case, the door will not unlock.

(6) Step 6: Repeat step 5 for the remaining front door.

(c) Check the entry lock function.

NOTICE:

If the key is in the cabin, but is not in a detection area (on the instrument panel, rear tray, in the glove box, or on the floor), the key confinement function may not operate. This can result in the key confinement.

(1) Step 1: Confirm that all the doors lock when a lock sensor on a front door outside handle is touched with all the doors closed and unlocked while the key is outside the vehicle.

(2) Step 2: Inspect the smart door lock detection area. Hold the key 0.1 m (0.328 ft.) below the window (about 1 m (3.28 ft.) above the ground). Move the key about 0.3 m (0.984 ft.) away from the vehicle and touch the lock sensor as shown in the illustration to check that the all doors lock.

- Due to the key being unable to communicate with the system from within 0.2 m (0.656 ft.) of the door handle, the lock sensor may not operate when the lock sensor is touched by the same hand that is holding the key.
- If the key confinement prevention function buzzer sounds, radio waves from the indoor electrical oscillator may be leaking from the vehicle.

(d) Check the entry system back door open function.*

*: w/ Entry System Back Door Open Function

(1) Close the back door. With the key outside the vehicle, check that pushing the back door opener switch assembly opens the back door.

(2) Inspect the entry back door open operation detection area. Hold the key at the same height as the back door opener switch assembly (approximately 0.8 m (2.62 ft.)) aligning it with the center of the rear of the vehicle. Make sure that the direction of the key is as shown in the illustration. Check that when the key is brought within 0.7 to 1.0 m (2.30 to 3.28 ft.) of the vehicle, pushing the back door opener switch assembly (opener switch) opens the back door.

(e) Check the entry back door lock function.*

*: w/ Entry System Back Door Open Function

(1) Close all of the vehicle doors. With the key in your possession outside the vehicle, check that pushing the back door opener switch assembly (lock switch) locks all the doors.

- When pressing the lock switch, hold the key about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.
- Due to the key being unable to communicate with the system from within 0.2 m (0.656 ft.) of the door handle, the lock sensor may not operate when the lock sensor is touched by the same hand that is holding the key.
- If the key confinement prevention function buzzer sounds, radio waves from the indoor electrical oscillator may be leaking from the vehicle.

(f) Check the entry hybrid vehicle control system start function.

(1) While holding the key, confirm that the power switch indicator light illuminates green when the power switch is off, park (P) is selected and the brake pedal is depressed. With the power switch indicator illuminates green, confirm that the hybrid vehicle control system starts when the power switch is pressed.

(2) While holding the key, confirm that the power switch turns off → on (ACC) → on (IG) → off every time the power switch is pressed when the brake pedal is not depressed.

HINT:

When the power switch is pressed with the power switch on (IG) and the shift lever is in R, N, D or B, the power switch will not turn off but remain on (ACC).

(3) With the hybrid vehicle control system running, vehicle stopped and park (P) selected, confirm that pressing the power switch turns the hybrid vehicle control system off, and opening the driver door.

HINT:

When the power switch is pressed with the power switch on (IG) and wthe shift lever is in R, N, D or B, the power switch will not turn off but remain on (ACC).

(4) Inspect the detection area for the entry hybrid vehicle control system start function (for front floor). Make sure that the direction of the key is as shown in the illustration. When the key is in either of the 2 inspection points shown in the illustration, check that the hybrid vehicle control system can start.

NOTICE:

The hybrid vehicle control system may not start when the key is on the instrument panel, rear package tray or in the glove box.

(5) Inspect the detection area for the entry hybrid vehicle control system start function (for center floor). Make sure that the direction of the key is as shown in the illustration. When the key is in either of the 2 inspection points shown in the illustration, check that the hybrid vehicle control system can start.

NOTICE:

The hybrid vehicle control system may not start when the key is on the instrument panel, rear package tray or in the glove box.

(6) Inspect the detection area for the entry hybrid vehicle control system start function (for rear floor). Make sure that the direction of the key is as shown in the illustration. When the key is in either of the 2 inspection points shown in the illustration, check that the hybrid vehicle control system can start.

NOTICE:

The hybrid vehicle control system may not start when the key is on the instrument panel, rear package tray or in the glove box.

(g) Check the key confinement prevention function (in cabin)

NOTICE:

Perform this check with a window open to prevent key confinement.

(1) Turn the power switch off.

(2) Put the key on a front seat or a rear seat.

(3) Close all the doors (all doors are in unlocked state).

(4) Confirm that the door lock does not operate but the wireless door lock buzzer sounds for 10 seconds when a front door lock sensor is touched.

(h) Check the key cancel function.

(1) While the power switch is on (IG), check that the back door opener switch assembly (opener switch) is the only switch that can be operated in the smart key system.

(2) While the key cancel function (smart key system cancel function) is on, check that all functions of the smart key system cannot be operated.

(i) Check the answer-back function (hazard warning light flashing and buzzer sounding).

Entry Operation	Hazard Warning Light	Buzzer
Entry Door Lock	Flashes once	Sounds once
Entry Door Unlock	Flashes twice	Sounds twice
Entry System Back Door Open Function	Does not flash	Does not sound

(j) Check that the key reminder warning buzzer sounds.

(1) With the key inside the vehicle, close the driver door. Then turn the power switch off or on (ACC).

(2) Open the driver door and check that the buzzer sounds intermittently.

(k) Check that the key reminder warning buzzer stops.

(1) When the buzzer is sounding, check that the buzzer stops sounding if either of the following is performed:

- Close the driver door (front door courtesy light switch is off).
- Turn the power switch on (IG).

2. KEY DIAGNOSTIC MODE

HINT:

Key diagnostic mode checks if the key within a selected oscillator detection area is operating normally. The results are output through the wireless door lock buzzer assembly.

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check.

(e) Check the values by referring to the table below.

Smart Key (Certification ECU (Smart Key ECU Assembly))

Tester Display	Inspection Range
Overhead + Driver Side*1	Door electrical key oscillator (for driver side)

Tester Display	Inspection Range
Overhead + Passenger Side*2	Door electrical key oscillator (for front passenger side)*
Overhead + Front Room*3	Indoor electrical key oscillator (for front floor)
Overhead + Rear Room*4	Indoor electrical key oscillator (for center floor)
Overhead + Back Door (inside)*5	Indoor electrical key oscillator (for rear floor)
Overhead + Back Door*6	Outside electrical key oscillator (for rear side)*

*: w/ Entry System Back Door Open Function

(f) When the key is brought near the selected oscillator, check that the wireless door lock buzzer sounds.

(1) *1: Door electrical key oscillator (for driver side)

- Hold the key at the same height as the door outside handle assembly (0.7 to 1.0 m (2.30 to 3.28 ft.)). Make sure that the direction of the key is as shown in the illustration.
- *2: Perform the same inspection above for the door electrical key oscillator (for front passenger side).

(2) *3: Indoor electrical key oscillator (for front floor)

HINT:

Place the key on the driver or front passenger seat cushion.

(3) *4: Indoor electrical key oscillator (for center floor)

HINT:

Place the key on the rear seat cushion.

(4) *5: Indoor electrical key oscillator (for rear floor)

HINT:

Place the key on the luggage area.

(5) *6: Outside electrical key oscillator (for rear side)

HINT:

Hold the key at the same height as the rear bumper upper surface and align with the center of the rear of the vehicle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Make sure that the direction of the key is as shown in the illustration.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH TECHSTREAM

HINT:

The items in the table below can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current setting before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Customize Setting.
- (e) Select the setting by referring to the table below.

Smart Key / Access

Tester Display	Default	Content	Setting
Park Wait Time	2.5 s	Function that sets waiting time to permit opening door after door is locked with entry lock function	0.5 s, 1.5 s, 2.5 s or 5 s
Ignition Available Area	All	Function that switches the entry hybrid vehicle control system start detection area	Front or All*1
Back Door Opening Operation*2	Long	Function that opens the back door when the driver has the key and presses back door opener switch assembly (opener switch)	Long, Twice or OFF

- *1: Weak radio waves will still be emitted from oscillators other than the front oscillator even when the "Front" customize setting is selected.
- *2: w/ Entry System Back Door Open Function

Warning

Tester Display	Default	Content	Setting
Key Low Battery Warning	ON	Function that warns driver that the key battery is weak	ON or OFF

2. ENTRY UNLOCK MODE SWITCHING*

*: except for Korea and Mexico

- (a) To change the vehicle entry unlock mode, make sure that the vehicle power is off and simultaneously push and hold the lock switch and another switch on the key for 5 seconds.

Driver door unlock default setting:

When the switches are pressed and held for 5 seconds, the entry door unlock mode changes to the mode that is not currently selected.

NOTICE:

After pressing and holding the switches for 5 seconds, wait 5 seconds before performing the same procedure again.

- Driver door unlock mode:

When the driver door touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.*

*: w/ Entry System Back Door Open Function

- All door unlock mode:

When any touch sensor is touched, all doors unlock.

(b) The certification ECU (smart key ECU assembly) receives this signal from the door control receiver assembly and changes the smart key system to entry unlock mode.

(c) The certification ECU (smart key ECU assembly) sounds the buzzers of the wireless door lock buzzer assembly.

Mode	Wireless Door Lock Buzzer Assembly
Driver Door (Default)	Sounds 3 times
All Doors (Customized)	Sounds 2 times

HINT:

The procedure only changes entry unlock mode of the smart key system. It does not switch the unlocking of the wireless door lock control.

3. ELECTRICAL KEY CANCEL

The electrical key cancel operation disables the following functions:

- Entry Unlock/Lock
- Entry Hybrid Vehicle Control System Start
- Entry System Back Door Open Function*

*: w/ Entry System Back Door Open Function

- Electrical Key Lock-in Prevention
- Warning

(a) The operation procedure is as follows:

Precondition:

Power switch off, driver door closed and unlocked.

- (1) Push the unlock switch of the key once.
- (2) Open the driver door within 5 seconds.
- (3) Push the unlock switch of the key twice within 5 seconds.
- (4) Close and open the driver door twice within 30 seconds.
(Driver door: Close → Open → Close → Open)
- (5) Push the unlock switch of the key twice within 5 seconds.
- (6) Close and open the driver door within 30 seconds.
(Driver door: Close → Open)
- (7) Close the driver door within 5 seconds.

When electrical key cancel is activated, the wireless door lock buzzer sounds twice.

To return to the original condition, perform the procedure again. When the original condition is returned, the wireless door lock buzzer sounds once.

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Smart Key System

TERMINALS OF ECU

1. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the L62 certification ECU (smart key ECU assembly) connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-1 (+B) - Body ground	B - Body ground	+B power supply	Always	11 to 14 V
L62-15 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L62-17 (CUTB) - Body ground	Y - Body ground	Dark current cut fuse pin input signal	Always	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L62 certification ECU (smart key ECU assembly) connector.

(d) Measure the voltage and check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-3 (CLG1) - L62-15 (E)	G - W-B	Door electrical key oscillator (for driver side) sensor signal	<ul style="list-style-type: none"> Power switch off All doors closed Key not in cabin 	No pulse generation
L62-3 (CLG1) - L62-15 (E)	G - W-B	Door electrical key oscillator (for driver side) sensor signal	<ul style="list-style-type: none"> Power switch off All doors closed Key not in cabin All doors locked by 	Pulse generation

- *: w/ Entry System Back Door Open Function

If the result is not as specified, the certification ECU (smart key ECU assembly) may have a malfunction.

2. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

- (a) Disconnect the 2B and 2C junction block connectors.

(b) Disconnect the A main body ECU connector.

(c) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2B-6 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2C-18 (BECU) - Body ground	Y - Body ground	Battery power supply	Power switch off	11 to 14 V
L8-3 (GND2) - Body ground*	W-B - Body ground	Ground	Always	Below 1 Ω
A-29 (ACC) - Body ground	-	ACC power supply	Power switch on (ACC)	11 to 14 V
A-29 (ACC) - Body ground	-	ACC power supply	Power switch off	Below 1 V
A-31 (ALTB) - Body ground	-	Battery power supply	Power switch off	11 to 14 V
A-32 (IG) - Body ground	-	Power switch power supply	Power switch on (IG)	11 to 14 V
A-32 (IG) - Body ground	-	Power switch power supply	Power switch off	Below 1 V

*: LED Headlight Type

If the result is not as specified, there may be a malfunction in the wire harness.

(d) Reconnect the 2B and 2C junction block connectors.

(e) Reconnect the A main body ECU connector.

(f) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2B-1 (ACT-) - Body ground	B - Body ground	Door lock motor unlock drive output (except driver side)	Driver or front passenger side door control switch off	Below 1 V
2B-1 (ACT-) - Body ground	B - Body ground	Door lock motor unlock drive output (except driver side)	Driver or front passenger side door control switch unlocked	11 to 14 V
2B-8 (ACT+) - Body ground	LG - Body ground	Door lock motor lock drive output (all doors)	Driver or front passenger side door control switch off	Below 1 V
2B-8 (ACT+) - Body ground	LG - Body ground	Door lock motor lock drive output (all doors)	Driver or front passenger side door control switch locked	11 to 14 V
2B-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor unlock drive output	Driver or front passenger side door control switch off	Below 1 V
2B-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor unlock drive output	Driver or front passenger side door control switch unlocked	11 to 14 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition

L7-9 (L1) - Body ground	LG - Body ground	Front passenger side door control switch input	Front passenger side door control switch off	11 to 14 V
L7-10 (UL1) - Body ground	BR - Body ground	Front passenger side door control switch input	Front passenger side door control switch unlocked	Below 1 V
L7-10 (UL1) - Body ground	BR - Body ground	Front passenger side door control switch input	Front passenger side door control switch off	11 to 14 V
L7-11 (L2) - Body ground	G - Body ground	Driver door key-linked lock input	Driver door key cylinder turned to lock	Below 1 V
L7-11 (L2) - Body ground	G - Body ground	Driver door key-linked lock input	Driver door key cylinder off	11 to 14 V
L7-18 (LSFR) - Body ground	LG - Body ground	Front passenger side door lock position switch input	Front passenger side door unlocked	Below 1 V
L7-18 (LSFR) - Body ground	LG - Body ground	Front passenger side door lock position switch input	Power switch off, all doors closed and front passenger side door locked	11 to 14 V
L7-19 (BCTY) -	L - Body	Back door courtesy light	Back door open	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Body ground	ground	switch input		
L7-19 (BCTY) - Body ground	L - Body ground	Back door courtesy light switch input	Back door closed	11 to 14 V
L7-23 (BDSU) - Body ground*1	GR - Body ground	Back door opener switch input	Back door opener switch pushed	Below 1 V
L7-23 (BDSU) - Body ground*1	GR - Body ground	Back door opener switch input	Back door opener switch not pushed	11 to 14 V
L7-24 (UL3) - Body ground	GR - Body ground	Driver door key-linked unlock input	Driver door key cylinder turned to unlock	Below 1 V
L7-24 (UL3) - Body ground	GR - Body ground	Driver door key-linked unlock input	Driver door key cylinder off	11 to 14 V

- *1: w/o Entry System Back Door Open Function

If the result is not as specified, the main body ECU (multiplex network body ECU) may have a malfunction.

3. COMBINATION METER ASSEMBLY

- (a) Disconnect the L27 combination meter assembly connector.

H

- (b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L27-18 (B) - Body ground	R - Body ground	Battery	Power switch off	11 to 14 V
L27-30 (ES) - Body ground	BR - Body ground	Ground (Signal ground)	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

- (c) Reconnect the L27 combination meter assembly connector.

- (d) Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L27-19 (IG+) - Body ground	L - Body ground	Power switch signal	Power switch off	Below 1 V
L27-19 (IG+) - Body ground	L - Body ground	Power switch signal	Power switch on (IG)	11 to 14 V

If the result is not as specified, the combination meter assembly may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The certification ECU (smart key ECU assembly) control the vehicle smart key system functions. Smart key system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle Data Link Connector 3 (DLC3). In some cases, a malfunction may be occurring in the smart key system. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key / Trouble Codes.
- (e) Check the details of the DTC(s) .

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key / Trouble Codes.
- (e) Clear the DTCs.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key or Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key or Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

DTC Code	Detection Item	Trouble Area	See page
		2. Certification ECU (smart key ECU assembly) 3. Wire harness or connector	

*: w/ Entry System Back Door Open Function

DESCRIPTION

The certification ECU (smart key ECU assembly) generates a request signal and sends it to the electrical key oscillator built into the front door outside handle assembly (for driver side) at 0.25-second intervals. To detect a key near the driver door, the front door outside handle assembly (for driver side) creates a detection area with a radius of approximately 1.0 m (3.28 ft.) from the driver door at 0.25-second intervals.

DTC B27A1 is detected by the certification ECU (smart key ECU assembly) if an open circuit is detected between the certification ECU (smart key ECU assembly) and front door outside handle assembly (for driver side) terminals (between CLG1 and ANT1, or CG1B and ANT2).

DTC No.	DTC Detection Condition	Trouble Area
B27A1	Open circuit detected between the certification ECU (smart key ECU assembly) and front door outside handle assembly (for driver side) terminals (between CLG1 and ANT1, or CG1B and ANT2).	<ul style="list-style-type: none"> • Front door outside handle assembly (for driver side) • Certification ECU (smart key ECU assembly) • Wire harness or connector

INSPECTION PROCEDURE

NOTICE:

The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting [INFO](#). Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.

PROCEDURE

1.	CHECK CONNECTOR (CONNECTOR CONNECTION CONDITION)
----	--

(a) Turn the power switch off.

(b) Check that the connectors are properly connected to the certification ECU (smart key ECU assembly) and the front door outside handle assembly (for driver side).

OK:

Connectors are properly connected.

NG ▶ CONNECT CONNECTORS PROPERLY

OK

2.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - FRONT DOOR OUTSIDE HANDLE)
----	---

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the front door outside handle assembly (for driver side) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-------------------	-----------	---------------------

Tester Connection	Condition	Specified Condition
L62-3 (CLG1) - z3-6 (ANT1)	Always	Below 1 Ω
L62-4 (CG1B) - z3-3 (ANT2)	Always	Below 1 Ω
L62-3 (CLG1) - Body ground	Always	10 k Ω or higher
L62-4 (CG1B) - Body ground	Always	10 k Ω or higher
z3-6 (ANT1) - Body ground	Always	10 k Ω or higher
z3-3 (ANT2) - Body ground	Always	10 k Ω or higher

2010 Toyota Prius

Repair Manual

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ **END (INDOOR ELECTRICAL KEY OSCILLATOR WAS DEFECTIVE)**

DESCRIPTION

The certification ECU (smart key ECU assembly) generates a request signal and sends it to the indoor electrical key oscillator (for rear floor). To detect the key inside the cabin, the indoor electrical key oscillator (for rear floor) creates a detection area in the cabin.

DTC B27A7 is detected by the certification ECU (smart key ECU assembly) when an open circuit occurs between the certification ECU (smart key ECU assembly) and indoor electrical key oscillator (for rear floor) terminals (between CLG7 and CLG6, or CG7B and CLGB).

DTC No.	DTC Detection Condition	Trouble Area
B27A7	Open circuit detected between the certification ECU (smart key ECU assembly) and indoor electrical key oscillator (for rear floor) terminals (between CLG7 and CLG6, or CG7B and CLGB).	<ul style="list-style-type: none"> Indoor electrical key oscillator (for rear floor) Certification ECU (smart key ECU assembly) Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting [INFO](#). Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.

PROCEDURE

1.	CHECK CONNECTOR CONNECTION CONDITION
----	--------------------------------------

(a) Turn the power switch off.

(b) Check that the connectors are properly connected to the certification ECU (smart key ECU assembly) and the indoor electrical key oscillator (for rear floor).

OK:

Connectors are properly connected.

NG ▶ CONNECT CONNECTORS PROPERLY

OK

2.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR)
----	--

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the indoor electrical key oscillator (for rear floor) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-------------------	-----------	---------------------

Tester Connection	Condition	Specified Condition
L62-26 (CLG7) - S15-1 (CLG6)	Always	Below 1 Ω
L62-27 (CG7B) - S15-3 (CLGB)	Always	Below 1 Ω

(b) Recheck for DTCs.

OK:

DTC B27A7 is not output.

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ **END (INDOOR ELECTRICAL KEY OSCILLATOR WAS DEFECTIVE)**

DESCRIPTION

The certification ECU (smart key ECU assembly) generates a request signal and sends it to the outside electrical key oscillator (for rear side). To detect the key near the driver door, the outside electrical key oscillator (for rear side) creates a detection area towards the area approximately 1.0 m (3.28 ft.) from the back door.

DTC B27A8 is detected by the certification ECU (smart key ECU assembly) when an open circuit occurs between the certification ECU (smart key ECU assembly) and outside electrical key oscillator (for rear side) terminals (between CLG8 and CLG5, or CG8B and CLGB).

DTC No.	DTC Detection Condition	Trouble Area

NG  REPLACE OUTSIDE ELECTRICAL KEY OSCILLATOR

OK  **END (CERTIFICATION ECU (SMART KEY ECU ASSEMBLY) WAS DEFECTIVE)**

DESCRIPTION

The smart key system uses the wireless door lock buzzer assembly to perform various vehicle exterior warnings. When the conditions for each warning are met, the certification ECU (smart key ECU assembly) sends a buzzer request signal to the main body ECU (multiplex network body ECU) via CAN communication. The wireless door lock assembly sounds the buzzer according to the signal from the main body ECU (multiplex network body ECU).

INSPECTION PROCEDURE

NOTICE:

The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting . Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.

PROCEDURE

1. READ VALUE USING TECHSTREAM (ANSWER-BACK BUZZER FUNCTION)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

2.	PERFORM ACTIVE TEST USING TECHSTREAM
----	--------------------------------------

(a) Enter the following menus: Body Electrical / Main Body / Active Test.

(b) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Test Part	Control Range	Diagnostic Note
Wireless Buzzer	Wireless door lock buzzer assembly	ON/OFF	-

OK:

Wireless door lock buzzer sounds.

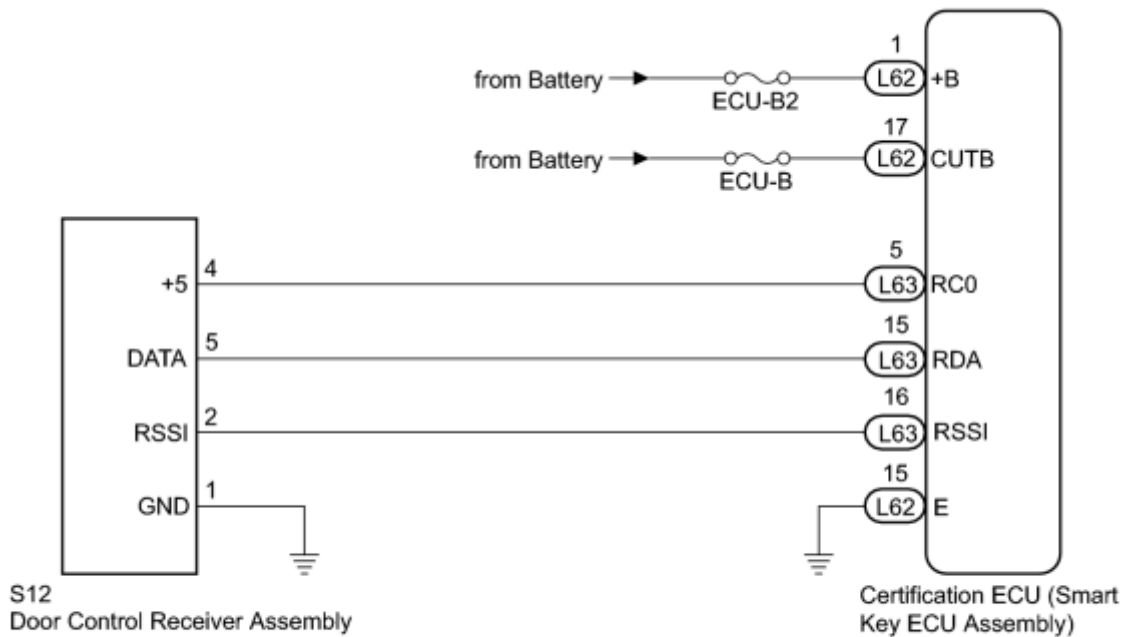

NG  GO TO WIRELESS DOOR LOCK CONTROL SYSTEM (Proceed to No Answer-Back)

OK  REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

DESCRIPTION

When the entry door lock and unlock functions and wireless door lock and unlock functions do not operate, radio wave interference, or a malfunction in the key or signal circuit between the door control receiver assembly and certification ECU (smart key ECU assembly) is suspected. The signal circuit is shared by the entry function and wireless door lock function.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting [INFO](#). Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.
- Before performing the inspection, check that DTC B1242 (wireless door lock control) is not output [INFO](#).
- Confirm that another key is not in the cabin.

PROCEDURE

1. CHECK POWER DOOR LOCK OPERATION

(a) When the door control switch on the master switch assembly is operated, check that the doors unlock and lock according to switch operation .

OK:

Door locks operate normally.

NG  GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Problem Symptoms Table)

OK

2. CHECK ELECTRICAL KEY TRANSMITTER

(a) Check if another registered key is available.

Result:

Result	Proceed to
Another registered key is not available.	A
Another registered key is available.	B

B  [CHECK ELECTRICAL KEY TRANSMITTER \(OPERATION\)](#)

A

3. REGISTER ELECTRICAL KEY TRANSMITTER

(a) Register a new key .

NEXT

4. CHECK ELECTRICAL KEY TRANSMITTER (OPERATION)

(a) Using the key registered in the previous step or another registered key, check that the entry function operates normally .

OK:

Entry function operates normally.

NG  [CHECK WAVE ENVIRONMENT](#)

OK

5. CHECK ELECTRICAL KEY TRANSMITTER (LED)

(a) Check that the transmitter LED illuminates each time when the switch is pushed 3 times.

Result:

Result	Proceed to
Transmitter LED does not illuminate at all when switch is pushed 3 times.	A
Transmitter LED illuminates each time when switch is pushed 3 times.	B
Transmitter LED does not illuminate the second or third time.	C

HINT:

If the transmitter LED does not illuminate the second or third time, replace the transmitter battery as it is depleted.

C ▶ REPLACE TRANSMITTER BATTERY

B ▶ REPLACE ELECTRICAL KEY TRANSMITTER

A

6. INSPECT TRANSMITTER BATTERY (VOLTAGE)

(a) Remove the battery from the key that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) or less in diameter including wire sheath) with tape or equivalent to the negative (-) terminal .

NOTICE:

Do not wrap the wire around the terminal, wedge it between the terminals, or solder it. A terminal may be deformed or damaged, and the battery will not be able to be installed correctly.

(b) Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.

(c) Using an oscilloscope, check the transmitter battery voltage waveform.

HINT:

When measuring the battery voltage, while operating the lock switch of a

door outside handle assembly, bring the key within the entry operating range to perform the measurement. For the entry operating range, refer to System Description **INFO**.

Standard Voltage:

Item	Content
Tester Connection	Battery positive (+) - Battery negative (-)
Tool Setting	0.5 V/DIV., 100 ms/DIV.
Condition	Power switch off, all doors closed and lock switch pushed
Specified Condition	2.2 to 3.2 V (Refer to the waveform)

Text in Illustration

*1	Measurement Position
*2	GND

NG **▶ REPLACE TRANSMITTER BATTERY**

OK **▶ REPLACE ELECTRICAL KEY TRANSMITTER**

7.	CHECK WAVE ENVIRONMENT
----	------------------------

(a) Bring the key near the door control receiver, and check the wireless function.

HINT:

- When the key is brought near the door control receiver, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the inspection result indicates that the problem only occurs in certain locations or times of day, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:

Wireless function operates normally.

NG **▶ CHECK POWER SOURCE**

OK **▶ AFFECTED BY WAVE INTERFERENCE**

8.	CHECK POWER SOURCE
----	--------------------

(a) Check if functions other than the entry function operate when the power switch is off.

Result:

Result	Proceed to
Other functions do not operate.	A
Other functions operate.	B

HINT:

Perform this check using functions that do not require the power switch to be on (ACC or IG) in order to operate.

B ▶ GO TO SMART KEY SYSTEM (for Start Function) (Proceed to How to Proceed with Troubleshooting)

A

9.	INSPECT FUSES (ECU-B2, ECU-B)
----	-------------------------------

(a) Remove the ECU-B2 and ECU-B fuses from the engine room relay block and junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-B2 fuse	Always	Below 1 Ω
ECU-B fuse	Always	Below 1 Ω

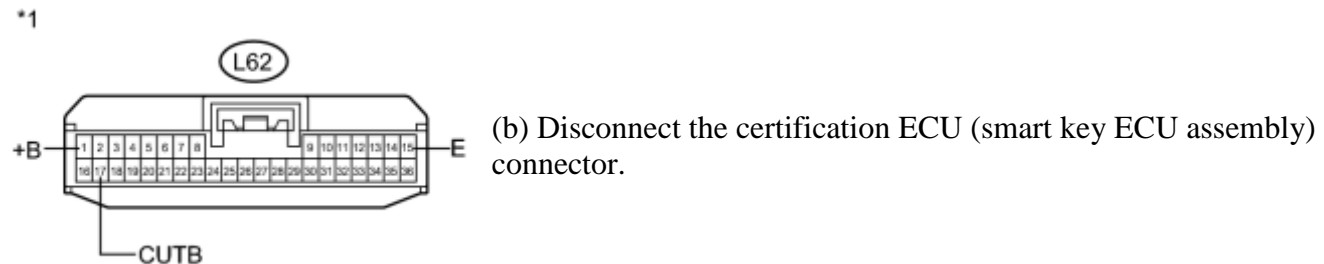

NG ▶ REPLACE FUSE (ECU-B2, ECU-B)

OK

10.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BATTERY AND BODY GROUND)
-----	---

(a) Install the ECU-B2 and ECU-B fuses to the engine room relay block and junction block.

(c) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L62-1 (+B) - Body ground	Except power switch on (READY)	11 to 14 V
L62-1 (+B) - Body ground	Power switch on (READY)	11 to 15.5 V
L62-17 (CUTB) - Body ground	Except power switch on (READY)	11 to 14 V
L62-17 (CUTB) - Body ground	Power switch on (READY)	11 to 15.5 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
L62-15 (E) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Component with harness connected (Door Control Receiver Assembly)
----	--

NG ► REPLACE DOOR CONTROL RECEIVER ASSEMBLY

OK ► REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

DESCRIPTION

When the wireless door lock and unlock functions operate, the communication circuit between the door lock receiver assembly and certification ECU (smart key ECU assembly) is normal. When the entry lock and unlock functions do not operate, radio wave interference, a customized entry cancel function, or a communication error between the key and vehicle in the smart communication circuit, is suspected.

INSPECTION PROCEDURE

NOTICE:

- The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting . Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.
- Confirm that another key is not in the cabin.

PROCEDURE

1. CHECK POWER DOOR LOCK OPERATION

(a) When the door control switch on the master switch assembly is operated, check that the doors unlock and lock according to switch operation .

OK:

Door locks operate normally.

NG  GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Problem Symptoms Table)

OK

2. READ VALUE USING TECHSTREAM (ENTRY CANCEL FUNCTION)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Auto Entry Cancel SW	Entry function cancel / ON or OFF	Mode status displayed	-

Result:

Result	Proceed to
Entry function cancel is OFF.	A
Entry function cancel is ON.	B

B ▶ PERFORM CANCELLATION OF ENTRY KEY CANCEL FUNCTION (Proceed to Customize Parameters)

A

3.	CHECK WAVE ENVIRONMENT
----	------------------------

(a) Move the key as described below and perform the operation inspection.

HINT:

- When the key is brought near the door outside handle assembly or outside electrical key oscillator, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- The transmitting waves of the wireless functions and entry functions are the same, but the wave logic is different. Therefore, it is possible that only the wireless functions or only the entry functions are affected by wave interference.

(b) Bring the key near the driver door outside handle assembly, and perform a front driver door entry lock and unlock operation check.

HINT:

When pressing the lock switch, hold the electrical key transmitter about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door outside handle assembly, communication is not possible.

(c) Bring the key near the front passenger door outside handle assembly, and perform a front passenger door entry lock and unlock operation check.*

*: w/ Entry System Back Door Open Function

HINT:

When pressing the lock switch, hold the electrical key transmitter about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door outside handle assembly, communication is not possible.

(d) Bring the key near the outside electrical key oscillator (for rear side), and perform an entry back door open function check.*

*: w/ Entry System Back Door Open Function

HINT:

When pressing the lock switch, hold the electrical key transmitter about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear bumper, communication is not possible.

HINT:

If the inspection result indicates that the problem only occurs in certain locations or times of day, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

Result:

w/ Entry System Back Door Open Function

Result	Proceed to
Entry function does not operate for all doors.	A
Entry function operates for all doors.	B
Entry function operates for an individual door.	C

w/o Entry System Back Door Open Function

Result	Proceed to
Entry function does not operate for driver door.	A
Entry function operates for driver door.	B

C ▶ GO TO OTHER PROBLEM (Proceed to Problem Symptoms Table)

B ▶ AFFECTED BY WAVE INTERFERENCE

A

4.	SYSTEM CHECK
----	--------------

(a) Check the vehicle specification.

Result:

Result	Proceed to
w/ Entry System Back Door Open Function	A
w/o Entry System Back Door Open Function	B

B ▶ [PERFORM KEY DIAGNOSTIC MODE INSPECTION](#)

A

5.	PERFORM KEY DIAGNOSTIC MODE INSPECTION
----	--

(a) Diagnostic mode inspection (door electrical key oscillator (for driver side))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Driver Side.

(5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Hold the electrical key transmitter at the same height as the door outside handle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Make sure that the direction of the key is as shown in the illustration.

(b) Diagnostic mode inspection (door electrical key oscillator (for front passenger side))

(1) Connect the Techstream to the DLC3.

- (2) Turn the power switch on (IG).
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Passenger Side.
- (5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Hold the electrical key transmitter at the same height as the door outside handle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Make sure that the direction of the key is as shown in the illustration.

(c) Diagnostic mode inspection (indoor electrical key oscillator (for front floor))

- (1) Connect the Techstream to the DLC3.

- (2) Turn the power switch on (IG).
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Front Room.
- (5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Place the key on the driver or front passenger seat cushion.

(d) Diagnostic mode inspection (indoor electrical key oscillator (for center floor))

- (1) Connect the Techstream to the DLC3.

- (2) Turn the power switch on (IG).
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Rear Room.
- (5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Place the key on the rear seat cushion.

(e) Diagnostic mode inspection (indoor electrical key oscillator (for rear floor))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Back Door (inside).

(5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Place the key on the luggage area.

(f) Diagnostic mode inspection (outside electrical key oscillator (for rear side))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Back Door (outside).

(5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Hold the electrical key transmitter at the same height as the rear bumper upper surface and align with the center of the rear of the vehicle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Make sure that the direction of the key is as shown in the illustration.

Result:

Result	Proceed to
Wireless door lock buzzer does not sound for all electrical key oscillators.	A

OK ▶ REPLACE ELECTRICAL KEY TRANSMITTER (REPLACE MALFUNCTIONING KEY)

9.	PERFORM KEY DIAGNOSTIC MODE INSPECTION
----	--

(a) Diagnostic mode inspection (door electrical key oscillator (for driver side))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Driver Side.

(5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Hold the electrical key transmitter at the same height as the door outside handle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Make sure that the direction of the key is as shown in the illustration.

(b) Diagnostic mode inspection (indoor electrical key oscillator (for front floor))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Front Room.

(5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Place the key on the driver or front passenger seat cushion.

(c) Diagnostic mode inspection (indoor electrical key oscillator (for center floor))

(1) Connect the Techstream to the DLC3.

- (2) Turn the power switch on (IG).
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Rear Room.
- (5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Place the key on the rear seat cushion.

(d) Diagnostic mode inspection (indoor electrical key oscillator (for rear floor))

- (1) Connect the Techstream to the DLC3.
- (2) Turn the power switch on (IG).
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Back Door (inside).
- (5) When the key is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

Place the key on the luggage area.

Result:

12. CHECK ELECTRICAL KEY TRANSMITTER (OPERATION)

(a) Using the key registered in the previous step or another registered key, check that the entry function operates normally .

OK:

Entry function operates normally.

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ REPLACE ELECTRICAL KEY TRANSMITTER (REPLACE MALFUNCTIONING KEY)

DESCRIPTION

If the driver door entry lock function operates normally, but its entry unlock function does not, this means that the request code from the driver door is being output normally. In this case, a malfunction in the touch sensor circuit (from the certification ECU (smart key ECU assembly) to the front door outside handle assembly (touch sensor)) is suspected.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting **INFO**. Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.
- Confirm that another key is not in the cabin.

PROCEDURE

1. CHECK POWER DOOR LOCK OPERATION

(a) When the door control switch on the master switch assembly is operated, check that the doors unlock and lock according to switch operation **INFO**.

OK:

Door locks operate normally.

NG ► GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Problem Symptoms Table)

OK

2.	READ VALUE USING TECHSTREAM (DOOR OUTSIDE HANDLE)
----	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Smart Key / Data List.
- (e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D-Door Touch Sensor	Status of touch sensor (for driver side) / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-

OK:

On the Techstream screen, the display changes between ON and OFF as shown in the chart above.

NG ► [CHECK HARNESS AND CONNECTOR \(CERTIFICATION ECU - FRONT DOOR OUTSIDE HANDLE\)](#)

OK ► REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

3.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - FRONT DOOR OUTSIDE HANDLE)
----	---

- (a) Disconnect the certification ECU (smart key ECU assembly) connector.
- (b) Disconnect the front door outside handle assembly (for driver side) connector.

NG REPLACE FRONT DOOR OUTSIDE HANDLE ASSEMBLY (for Front Passenger Side)

OK REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

DESCRIPTION

When the entry lock and unlock functions do not operate only for the driver door, an error in output request codes from the driver door or malfunction in the front door outside handle assembly is suspected. If the entry functions for the other doors operate normally, then the communication circuit between the key and door control receiver assembly is functioning normally. In this case, radio wave interference or a malfunction in the request code sending circuit (from the certification ECU (smart key ECU assembly) to the front door outside handle assembly (for driver side)) is suspected.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting **INFO**. Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.

*1	Component with harness connected (Certification ECU (Smart Key ECU Assembly))	-	-
----	--	---	---

NG ▶ REPLACE FRONT DOOR OUTSIDE HANDLE ASSEMBLY (for Front Passenger Side)

OK ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

DESCRIPTION

If the room oscillator does not recognize a key, one of the following may be the cause: 1) communication between the indoor electrical key oscillator (for front floor) and key cannot be performed; 2) communication between the indoor electrical key oscillator (for center floor) and key cannot be performed; or 3) communication between the indoor electrical key oscillator (for rear floor) and key cannot be performed.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting [INFO](#). Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.
- When using the Techstream with the power switch off to troubleshoot:

Connect the Techstream to the DLC3, and turn a courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

PROCEDURE

1. CHECK SMART KEY SYSTEM (for Entry Function)

(a) Check that entry lock and unlock functions can be operated at each door **INFO**.

OK:

Entry lock and unlock functions operate normally.

NG **▶** GO TO OTHER PROBLEM (Proceed to Problem Symptoms Table)

OK

2. CHECK SMART KEY SYSTEM (for Start Function)

(a) Remove the battery of the key **INFO**.

(b) With the brake pedal depressed, touch the power switch while facing the logo side of the key to the power switch.

(c) When operating the power switch, check whether the power source mode changes.

OK:

Power source mode changes.

HINT:

- When the key cannot be verified even though it is within the specified range, the hybrid vehicle control system start check can be performed by removing the transmitter battery from the key and holding the transmitter close to the power switch.
- When performing the check, if the power source mode changes, there is a problem with key certification inside the cabin.

NG  GO TO SMART KEY SYSTEM (for Start Function) (Proceed to Power Source Mode does not Change to ON)

OK

3.	CHECK WAVE ENVIRONMENT
----	------------------------

(a) Install the battery to the key .

(b) Bring the key near the indoor electrical key oscillator (for front floor), and check that the hybrid vehicle control system can be started.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the indoor electrical key oscillator (for front floor), communication is not possible.

(c) Bring the key near the indoor electrical key oscillator (for center floor), and check that the hybrid vehicle control system can be started.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the indoor electrical key oscillator (for center floor), communication is not possible.

(d) Bring the key near the indoor electrical key oscillator (for rear floor), and check that the hybrid vehicle control system can be started*.

*: If the customize setting for Ignition Available Area is not set All, the hybrid vehicle control system will not start. Before performing this inspection, check that All has been selected .

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the indoor electrical key oscillator (for rear floor), communication is not possible.

HINT:

- When the key is brought near the indoor electrical key oscillator, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the operation is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:

The hybrid vehicle control system starts.

NG  [PERFORM KEY DIAGNOSTIC MODE INSPECTION](#)

4. **PERFORM KEY DIAGNOSTIC MODE INSPECTION**

(a) Diagnostic mode inspection (indoor electrical key oscillator (for front floor))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Front Room.

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

- Place the key on the driver or front passenger seat cushion.
- If the buzzer sounds, it can be determined that the indoor electrical key oscillators are operating normally.

(b) Diagnostic mode inspection (indoor electrical key oscillator (for center floor))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Rear Room.

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

- Place the key on the rear seat cushion.
- If the buzzer sounds, it can be determined that the indoor electrical key oscillators are operating normally.

(c) Diagnostic mode inspection (indoor electrical key oscillator (for rear floor))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Back Door (inside).

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

- Place the key on the luggage area.
- If the buzzer sounds, it can be determined that the indoor electrical key oscillators are operating normally.

Result:

Result	Proceed to
Wireless door lock buzzer does not sound only for indoor electrical key oscillator (for front floor).	A
Wireless door lock buzzer does not sound only for indoor electrical key oscillator (for center floor).	B
Wireless door lock buzzer does not sound only for indoor electrical key oscillator (for rear floor).	C
Wireless door lock buzzer sounds for all indoor electrical key oscillators.	D

D ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

C ▶ [CHECK HARNESS AND CONNECTOR \(CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR\)](#)

B ▶ [CHECK HARNESS AND CONNECTOR \(CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR\)](#)

A

5.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR)
----	--

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the indoor electrical key oscillator (for front floor) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L62-7 (CLG5) - L11-1 (CLG3)	Always	Below 1 Ω
L62-8 (CG5B) - L11-3 (CLGB)	Always	Below 1 Ω
L62-7 (CLG5) - Body ground	Always	10 k Ω or higher
L62-8 (CG5B) - Body ground	Always	10 k Ω or higher
L11-1 (CLG3) - Body ground	Always	10 k Ω or higher
L11-3 (CLGB) - Body ground	Always	10 k Ω or higher

- Place the key on the driver or front passenger seat cushion.
- If the buzzer sounds, it can be determined that the indoor electrical key oscillators are operating normally.

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ END (INDOOR ELECTRICAL KEY OSCILLATOR WAS DEFECTIVE)

DESCRIPTION

The smart key system uses the combination meter buzzer to perform various vehicle interior warnings. When the conditions for each warning are met, the certification ECU (smart key ECU assembly) sends a buzzer signal to the combination meter assembly, and the combination meter buzzer sounds.

INSPECTION PROCEDURE

NOTICE:

The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting . Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.

PROCEDURE

1.	CHECK COMBINATION METER ASSEMBLY (OPERATION)
----	--

(a) When the power switch is on (IG) and the shift lever is in R, check that the combination meter buzzer sounds.

OK:

Combination meter buzzer sounds.

NG  GO TO METER / GAUGE SYSTEM (Proceed to Problem Symptoms Table)

OK  **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

DESCRIPTION

If the entry back door open function does not operate but the back door entry lock function operates, the communication between the vehicle and key is normal. As a faulty part, the back door open switch circuit (from the back door opener switch assembly (opener switch) to the certification ECU (smart key ECU assembly)) is suspected.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting [INFO](#). Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.
- Confirm that another key is not in the cabin.

PROCEDURE

1. READ VALUE USING TECHSTREAM (ENTRY BACK DOOR OPEN FUNCTION)

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

DESCRIPTION

When the back door entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock control system; 2) outside electrical key oscillator (for rear side); 3) certification ECU (smart key ECU assembly), or 4) back door opener switch assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The smart key system (for entry function) uses a LIN communication system and CAN communication system. Inspect the communication function by following How to Proceed with Troubleshooting [INFO](#). Troubleshoot the smart key system (for entry function) after confirming that the communication system is functioning properly.
- Confirm that another key is not in the cabin.

PROCEDURE

1. CHECK POWER DOOR LOCK OPERATION

(a) When the door control switch or **INFO** master switch assembly is operated, check that the doors unlock and lock according to switch operation .

OK:

Door locks operate normally.

NG  **GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Problem Symptoms Table)**

OK

2.	READ VALUE USING TECHSTREAM (BACK DOOR OPENER SWITCH)
----	---

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

Tester Display	Measurement Item/Display	Normal Condition	Diagnostic Note
Tr/B-Door Lock SW	Back door opener switch assembly (lock switch) / ON or OFF	ON: Back door opener switch assembly (lock switch) pushed OFF: Back door opener switch assembly (lock switch) not pushed	-
Tr/B-Door Unlock SW	Back door opener switch assembly (opener switch) / ON or OFF	ON: Back door opener switch assembly (opener switch) pushed OFF: Back door opener switch assembly (opener switch) not pushed	-

OK:

On the Techstream screen, the display changes between ON and OFF as shown in the chart above.

NG  **CHECK HARNESS AND CONNECTOR (BACK DOOR OPENER SWITCH - BODY GROUND)**

OK

3. CHECK WAVE ENVIRONMENT

(a) Bring the key near the outside electrical key oscillator (for rear side), and perform an entry back door open and entry lock functions check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear bumper, communication is not possible.

- When pressing the lock switch and pressing the opener switch, hold the electrical key transmitter about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.
- When the key is brought near the outside electrical key oscillator (for rear side), the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the operation is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation.

OK:

Entry functions operate normally.

NG [▶ PERFORM KEY DIAGNOSTIC MODE INSPECTION](#)

OK [▶ AFFECTED BY WAVE INTERFERENCE](#)

4. PERFORM KEY DIAGNOSTIC MODE INSPECTION

(a) Diagnostic mode inspection (outside electrical key oscillator (for rear side))

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Key Communication Check / Overhead + Back Door.

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

- Hold the electrical key transmitter at the same height as the rear bumper upper surface and align with the center of the rear of the vehicle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Make sure that the direction of the key is as shown in the illustration.
- If the buzzer sounds, it can be determined that the outside electrical key oscillator (for rear side) is operating normally.

OK:

Wireless door lock buzzer sounds.

NG ► [CHECK HARNESS AND CONNECTOR \(CERTIFICATION ECU - OUTSIDE ELECTRICAL KEY OSCILLATOR\)](#)

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

PRECAUTION

1. WHEN DISCONNECTING CABLE FROM NEGATIVE AUXILIARY BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) auxiliary battery terminal, initialize the following system after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guide System	

(a) The power source mode (off, on (ACC), on (IG)) is always retained in memory by the vehicle. If the auxiliary battery is disconnected, the power source mode that was present before disconnection will be restored after the auxiliary battery is reconnected. Be sure to turn the power switch off (change the power source mode to off) before disconnecting the cable from the negative (-) auxiliary battery terminal. Be careful if the power source mode of a vehicle with a discharged auxiliary battery is not known.

(b) After the cable is reconnected to the negative (-) auxiliary battery terminal, the hybrid control system may not start on the first attempt. This is not a malfunction. The hybrid control system will start normally for subsequent attempts.

HINT:

In this chapter, the expression "power source" has been used in some locations to allow precise explanations. The power source mode is also expressed using conventional expressions such as "power switch off", "power switch on (ACC)" and "power switch on (IG)".

2. PRECAUTIONS FOR PUSH-BUTTON START FUNCTION

(a) Before starting hybrid control system, firmly depress the brake pedal until the indicator in the power switch turns green.

(b) The smart key system, wireless door lock control system and engine immobiliser system may not operate normally, or the size of the operation area may decrease in the following situations:

- (1) When the smart key battery is depleted.
- (2) When any facility that generates strong radio waves or electrical noise such as a TV tower, power plant, gas station, broadcast station, large video-billboard or airport are located near the inspection site.
- (3) When the key is located near a wireless device such as a radio, cellular phone or cordless telephone.
- (4) When the smart key is in contact with or covered with a metal object similar to the following:
 - Metal or aluminum plated card
 - Aluminum film from a cigarette box
 - Metallic wallet or bag
 - Coins
 - Heating pad

- Media such as CDs or DVDs

(5) When a wireless remote is operated near the vehicle.

(6) When the key is carried with following items:

- Electronic key or wireless remote from another vehicle
- PC or similar handheld device
- Digital audio player
- Portable game device

(7) When a metallic film is applied to the rear glass.

3. WHEN KEY BATTERY IS LOW

(a) When the key battery is depleted, the hybrid control system cannot be started using the smart function. For how to start the hybrid control system when the key battery is depleted, see Description .

(b) If the electrical key is held near the power switch to start the hybrid control system when the electrical key battery is depleted, the following warnings will sound:

(1) Driver door open → closed

- An exit warning will sound if R, N, D or B is selected and the power source (power switch) is in a mode other than off.
- An exit warning will sound if park (P) is selected and the power source is in a mode other than off.

(2) Doors other than the driver door open → closed

- A warning will sound to indicate that the electrical key has been taken out of the vehicle.

These warnings will sound because it is not possible for the vehicle to determine if the key is present in the vehicle (due to the depleted key battery). These warnings do not indicate system malfunctions.

4. EMERGENCY HYBRID CONTROL SYSTEM STOP CONTROL

(a) If it is necessary to stop the hybrid control system in an emergency while driving the vehicle, push and hold the power switch for more than 3 seconds.

While driving, the power switch should only be operated in the event of an emergency.

NOTICE:

If the hybrid control system stops while the vehicle is being driven, this could lead to an accident.

5. EMERGENCY HYBRID CONTROL SYSTEM START CONTROL

(a) If there is a malfunction in the stop light switch or STOP fuse, their signals may not be correctly transmitted to the power management control ECU. This may result in the hybrid control system not starting even if the power switch is pressed while the brake pedal is depressed and park (P) is selected.

To activate the hybrid control system:

- (1) Push the P position switch.
- (2) Parking brake pedal is depressed.
- (3) Turn the power switch from off to on (ACC).
- (4) Brake pedal is depressed.
- (5) Press and hold the power switch for 15 seconds or more.

SYSTEM DESCRIPTION

1. PUSH-BUTTON START DESCRIPTION

(a) The push-button start uses a push-type power switch, which the driver can operate by merely carrying the electrical key. This system consists primarily of the power management control ECU, power switch, transmission control ECU assembly, electrical key, ACC relay, P/POINT relay, IG1 NO. 1 relay, IG1 NO. 2 relay, IG1 NO. 3 relay, IG2 relay, ID code box (immobiliser code ECU) and certification ECU (smart key ECU assembly). The power management control ECU controls the system. This function operates in cooperation with the smart key system.

HINT:

In this chapter, the expression "power source" has been used in some locations to allow precise explanations. The power source mode is also expressed using conventional expressions such as "power switch off", "power switch on (ACC)" and "power switch on (IG)".

2. FUNCTION OF MAIN COMPONENTS

Component	Function
Power Switch <ul style="list-style-type: none">Transponder Key Amplifier	<ul style="list-style-type: none">Transmits power switch signal to power management control ECU.Informs driver of power source mode or system abnormality with illumination stage of indicator light.Receives ID code and transmits it to certification ECU (smart key ECU assembly) when key battery is low.
Electrical Key	Receives signals from oscillators and returns ID code to entry door control receiver.
Electrical Key Oscillator <ul style="list-style-type: none">Console and Rear Seat	Receives request signals from certification ECU (smart key ECU assembly) and forms detection area in vehicle.
Power Management Control ECU	<ul style="list-style-type: none">Changes power source mode in 4 stages (off, on (ACC), on (IG), on (READY) in accordance with shift position and state of stop light switch.Controls push-button start function in accordance with signals received from switches and each ECU.Power management control ECU and certification ECU (smart key ECU assembly) permit starting of hybrid control system after receiving unlock signal from transmission control ECU.
Certification ECU (Smart Key ECU Assembly)	Certifies ID code received from entry door control receiver and transmits the certification results to the ID code box (immobiliser code ECU) and transmission control ECU assembly.
Stop Light Switch	Outputs state of brake pedal to power management control ECU.
ID Code Box (Immobiliser Code ECU)	Receives gearshift control unlock or engine immobiliser unset signals from the certification ECU (smart key ECU assembly), certifies them, and transmits each unset signal to transmission control ECU assembly or power management

Component	Function
	control ECU.
Transmission Control ECU Assembly	<ul style="list-style-type: none"> • Transmission control ECU locks/unlocks gearshift control based on lock/unlock request signals from certification ECU (smart key ECU assembly). • Detects gearshift control lock/unlock status and transmits to other ECUs. • Transmission control ECU activates the shift control actuator based on signals from the power management control ECU when gearshift control is unlocked. • Transmission control ECU controls the application timing of current to the parking lock motor based on signals from the rotation angle sensor.

3. SYSTEM FUNCTION

The electric controls of the push-button start function are described below:

Control	Outline
Power switch control	<p>When the person carrying the key enters the vehicle and the brake pedal is depressed, the power management control ECU sends the key certification request signal to the certification ECU (smart key ECU assembly).</p> <p>On receiving the key certification request signal, the certification ECU (smart key ECU assembly) generates a request signal and sends it to the indoor electrical key oscillator. The indoor electrical key oscillator transmits the request signal in order to detect that the key is in the cabin.</p> <p>When the key receives the request signal, it sends back the response code and ID code.</p> <p>When the door control receiver assembly receives the signal from the key, it sends the ID code to the certification ECU (smart key ECU assembly). The ID code box verifies check results received from the certification ECU via LIN and sends them to the power management control ECU. Based on these results, the power management control ECU authorizes the operation of the power switch.</p> <p>If the ID codes match, the certification ECU (smart key ECU assembly) sends the certification OK signal to the power management control ECU.</p> <p>Upon receiving the certification OK signal, the power management control ECU illuminates the power switch indicator light, changes the power source mode and starts the hybrid control system depending on how the power switch is operated.</p>
Diagnosis	When the power management control ECU detects a malfunction, the power management control ECU diagnoses and memorizes information related to the fault.

4. CONSTRUCTION AND OPERATION

(a) Power Switch

The power switch consists of a momentary type switch, 3 color (amber,

N

green, greenish white) LEDs, and a transponder key amplifier.

- The greenish white LED is for illumination.
- The amber and green LEDs are for the indicator lights. The driver can check the present power source mode and whether the hybrid control system can start in accordance with the illumination state of the indicator light.
- When the power management control ECU detects an abnormality in the push-button start system, it makes the amber indicator light flash. If the hybrid control system stopped in this state, it may not be possible to restart it.

(b) Indicator Light Condition

Power Switch Indicator Light Condition

Power Source Mode/Condition	Indicator Light Condition	
	Brake Pedal Released	Brake Pedal Depressed, Park (P) selected
off	off	Turns on (Green)
on (ACC, IG)	Turns on (Amber)	Turns on (Green)
on (READY)	off	off
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

(c) Power Management Control ECU

The power management control ECU consists of the IG1 NO. 1, IG1 NO. 2, IG1 NO. 3, IG2, ACC, P/POINT relay actuation circuits and CPU.

HINT:

Before removing the auxiliary battery, make sure to turn the power switch off. The power management control ECU constantly stores the present power source mode in its memory. Therefore, if the power supply for the power management control ECU is interrupted by disconnecting the auxiliary battery, the power management control ECU restores the power source mode after the auxiliary battery is reconnected. For this reason, if the auxiliary battery is disconnected when the power switch is other than off, the power source mode will be restored to the vehicle at the same time the power source mode is restored to the power management control ECU (by reconnecting the auxiliary battery).

5. PUSH-BUTTON START FUNCTION OPERATION

(a) This system has different power source mode patterns depending on the brake pedal condition and shift lever position.

Brake Pedal	Shift Lever	Power Source Mode Pattern
Depressed	P	When the power switch is pushed once. <ul style="list-style-type: none"> off → on (READY)
Not depressed	P	Each time the power switch is pushed. <ul style="list-style-type: none"> off → on (ACC) → on (IG) → off
	Except P	Each time the power switch is pushed. <ul style="list-style-type: none"> on (ACC) → on (IG) → off
-	P	When the power switch is pushed in the on (READY) condition. <ul style="list-style-type: none"> on (READY) → off
-	Except P	When the power switch is pushed in the on (READY) condition. <ul style="list-style-type: none"> on (READY) → off

When the key battery is low, the push-button start function can be operated by holding the key against the power switch.

- After approximately 1 hour has elapsed with the power switch on (ACC) or on (IG) and park (P) selected, the power management control ECU will automatically cut the power supply (the power source mode will change to off).
- The illustration below shows the transition of power source modes.

Transition of power source modes:

Transition of Power Source Modes:

: Transition

: Only when the vehicle is stopped.

: Only when the key certification is OK

: When the power switch is turned off with the vehicle stopped, the shift position is automatically changed to P.

HINT:

While the vehicle is being driven normally, operation of the power switch is disabled. However, if the hybrid control system must be stopped in an emergency while the vehicle is being driven, pressing the power switch for 3 seconds or more stops the hybrid control system. The power source mode will change from on (READY) to on (ACC).

6. WHEN KEY BATTERY IS LOW

(a) To operate the push-button start function when the key battery is low, hold the key close to the power switch with the brake pedal depressed.

(b) The power management control ECU transmits a key verification request signal to the certification ECU (smart key ECU assembly) when it receives the stop light switch signal.

(c) The certification ECU (smart key ECU assembly) does not receive an ID code response from the entry door control receiver, so it actuates the transponder key amplifier built into the power switch.

(d) The transponder key amplifier outputs an engine immobiliser radio wave to the key.

(e) The key receives the radio wave, and returns a radio wave response to the transponder key amplifier.

(f) The transponder key amplifier combines the key ID codes with the radio wave response, and transmits it to the certification ECU (smart key ECU assembly).

(g) The certification ECU (smart key ECU assembly) judges and verifies the ID code, and transmits a key verification OK signal to the power management control ECU. The buzzer in the combination meter sounds at the same time.

(h) After the buzzer sounds, if the power switch is pressed within 10 seconds with the brake pedal not depressed, the power source mode changes to on (ACC) or on (IG), the same as in the normal condition.

HINT:

The key (for card type) operation inspection can be performed using the same procedure as for the key (for standard type).

7. DIAGNOSIS

The power management control ECU can detect malfunctions in the push-button start function when the power source mode is on (IG).

When the ECU detects a malfunction, the amber indicator light of the power switch flashes to warn the driver. At the same time, the ECU stores a 5-digit Diagnostic Trouble Code (DTC) in its memory.

- The indicator light warning continues for 15 seconds even after the power source mode is changed to off.
- The DTC can be read by connecting the Techstream to the DLC3.
- The push-button start function cannot be operated if a malfunction occurs.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the start function.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS CHECK
----	---------------------------------

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT AUXILIARY BATTERY VOLTAGE
----	-----------------------------------

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the auxiliary battery before proceeding to the next step.

NEXT

4.	CHECK CAN COMMUNICATION SYSTEM*
----	---------------------------------

(a) Use the Techstream to check if the CAN communication system is functioning normally .

Result:

Result	Proceed to
CAN communication DTC is not output	A
CAN communication DTC is output	B

B  GO TO CAN COMMUNICATION SYSTEM

A
▼

5.	CHECK LIN COMMUNICATION SYSTEM*
----	---------------------------------

(a) Use the Techstream to check if the LIN communication system (LIN) is functioning normally .

Result:

Result	Proceed to
LIN communication DTC is not output	A
LIN communication DTC is output	B

B  GO TO LIN COMMUNICATION SYSTEM

A
▼

6.	CHECK FOR DTC (for Entry Function)*
----	-------------------------------------

(a) Check for DTC and note any codes that are output .

(b) Clear the DTC.

(c) Recheck for DTCs.

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B  GO TO DIAGNOSTIC TROUBLE CODE CHART

A
▼

7.	CHECK FOR DTC (for Start Function)*
----	-------------------------------------

(a) Check for DTC and note any codes that are output .

(b) Clear the DTC.

(c) Recheck for DTCs.

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B  GO TO DIAGNOSTIC TROUBLE CODE CHART

A

8.	INSPECT BASIC OPERATION
----	-------------------------

(a) Check that the hybrid control system starts normally when the power switch is pushed while the brake pedal is depressed and park (P) is selected.

(b) Check that the power source mode can be changed by pushing the power switch.

HINT:

Without depressing the brake pedal, push the power switch repeatedly. The power source mode should change from off to on (ACC), to on (IG) and back to off.

With the brake pedal depressed, push the power switch. The hybrid control system should start regardless of the original power source mode.

OK:

Hybrid control system can start normally.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH TECHSTREAM

HINT:

The items in the table below can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current setting before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Utility / Customize Setting.
- (e) Select the setting by referring to the table below.

Smart Key / Access

Tester Display	Default	Content	Setting
Ignition Available Area (Entry ignition available area)	All	Function to choose the available area for electrical key to start the hybrid control system.	Front or All*

- *: Weak radio waves will still be emitted from oscillators other than the front oscillator even when the "Front" customize setting is selected.

2. CUSTOMIZING FUNCTION WITHOUT TECHSTREAM

Performing the following procedure disables the smart key system.

HINT:

To start the hybrid control system while the smart key system is disabled, follow the procedure for when the key battery is low .

- (a) The procedure to disable the smart key system is as follows:

HINT:

Repeating the following steps switches the smart key system status between activated and disabled.

Preconditions:

Power switch off, driver door closed and unlocked.

- (1) Press the unlock switch of the key once.
- (2) Open the driver door within 5 seconds after pressing the unlock switch of the key in the previous step.
- (3) Repeat closing and opening of the driver door twice within 30 seconds after opening the driver door in the previous step.
- (4) Press the unlock switch of the key twice within 30 seconds after the last closing of the driver door in the previous step.
- (5) Close and then open the driver door within 30 seconds after pressing the unlock switch of the key twice in the previous step.
- (6) Close the driver door within 5 seconds after opening the driver door in the previous step.
- (7) Check that the wireless buzzer sounds once*1 or twice*2.
 - *1: When the smart key system status is changed from activated to disabled.
 - *2: When the smart key system status is changed from disabled to activated.

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

TERMINALS OF ECU

1. CHECK POWER MANAGEMENT CONTROL ECU

Y

(a) Disconnect the A22, L5 and L6 connectors.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
A22-2 (IG2D) - Body ground	V - Body ground	IG2 relay operation signal	Always	131 to 230 Ω
A22-23 (STP) - Body ground	L - Body ground	Stop light switch signal	Brake pedal depressed	11 to 14 V
A22-23 (STP) - Body ground	L - Body ground	Stop light switch signal	Brake pedal released	Below 1 V
L5-1 (AM22) - Body ground	W - Body ground	+B power supply	Always	9.5 to 16 V
L6-7 (AM21) - Body ground	W - Body ground	+B power supply	Always	9.5 to 16 V
L5-6 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
L6-4 (E12) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
L6-24 (CA1L) - Body ground	W - Body ground	CAN communication line	Always	10 k Ω or higher
L6-25 (CA1H) - Body ground	B - Body ground	CAN communication line	Always	10 k Ω or higher
L6-17 (SSW2) - Body ground	Y - Body ground	Power switch signal	Power switch pushed	Below 1 Ω
L6-17 (SSW2) - Body ground	Y - Body ground	Power switch signal	Power switch not pushed	10 k Ω or higher
L5-7 (SSW1) - Body ground	B - Body ground	Power switch signal	Power switch pushed	Below 1 Ω

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L5-7 (SSW1) - Body ground	B - Body ground	Power switch signal	Power switch not pushed	10 k Ω or higher
L6-1 (ACCD) - Body ground	G - Body ground	ACC relay operation signal	Always	50.625 to 61.875 Ω
L6-2 (IG1D) - Body ground	B - Body ground	IG1 relay operation signal	Always	50.625 to 61.875 Ω
L6-11 (LIN2) - Body ground	L - Body ground	LIN communication line	Always	10 k Ω or higher

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the A22, L5 and L6 connectors.

(d) Measure the voltage and check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
A22-2 (IG2D) - L5-6 (E1)	V - BR	IG2 signal	Power switch on (IG)	Output voltage at terminal AM21 or AM22 is -2 V or more
A22-2 (IG2D) - L5-6 (E1)	V - BR	IG2 signal	Power switch on (ACC)	Below 1 V
L5-9 (INDW) - L5-6 (E1)	G - BR	Warning signal	Brake pedal depressed, park (P) selected, power switch on (ACC, IG)	8 to 14 V
A22-22 (PCON) - L5-6 (E1)	LG - BR	P position signal	Park (P) selected	Pulse generation (See waveform 1)
A22-28 (PPOS) - L5-6 (E1)	W - BR	P position signal	Park (P) selected	Pulse generation (See waveform 1)
L6-17 (SSW2) - L5-6 (E1)	Y - BR	Power switch signal	Power switch not pushed	Output voltage at terminal AM21 or AM22 is -2 V or more
L6-17 (SSW2) - L5-6 (E1)	Y - BR	Power switch signal	Power switch pushed	Below 1 V
L5-7 (SSW1) - L5-6 (E1)	B - BR	Power switch signal	Power switch not pushed	Output voltage at terminal AM21 or AM22 is -2 V or more
L5-7 (SSW1) - L5-6 (E1)	B - BR	Power switch signal	Power switch pushed	Below 1 V
L6-1 (ACCD) - L5-6 (E1)	G - BR	ACC signal	Power switch on (ACC)	Output voltage at terminal AM21 or AM22 is -2 V or more

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L6-1 (ACCD) - L5-6 (E1)	G - BR	ACC signal	Power switch off	Below 1 V
L6-2 (IG1D) - L5-6 (E1)	B - BR	IG1 signal	Power switch on (IG)	Output voltage at terminal AM21 or AM22 is -2 V or more
L6-2 (IG1D) - L5-6 (E1)	B - BR	IG1 signal	Power switch on (ACC)	Below 1 V
L5-8 (INDS) - L5-6 (E1)	R - BR	Vehicle condition signal	Brake pedal depressed, park (P) selected	8 to 14 V
L5-14 (SPDI) - L5-6 (E1)	V - BR	Vehicle speed signal	Power switch on (IG), wheel rotated slowly	Pulse generation (See waveform 2)
L6-20 (IMO) - L5-6 (E1)	L - BR	Immobiliser communication status	Immobiliser communicating	Pulse generation (See waveform 3)
L6-21 (IMI) - L5-6 (E1)	R - BR	Immobiliser communication status	Immobiliser communicating	Pulse generation (See waveform 4)

If the result is not as specified, the ECU may have a malfunction.

(e) Using an oscilloscope, check the signal waveform of the ECU.

(1) Waveform 1

Tester Connection	CH1: A22-22 (PCON) - L5-6 (E1) CH2: A22-28 (PPOS) - L5-6 (E1)
Tool Setting	5 V/DIV., 20 ms./DIV.
Vehicle Condition	Power switch on (IG)

(2) Waveform 2

Tester Connection	L5-14 (SPDI) - L5-6 (E1)
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Driving at approx. 20 km/h (12 mph)

HINT:

The wavelength becomes shorter as the vehicle speed increases.

(3) Waveform 3

Tester Connection	L6-20 (IMO) - L5-6 (E1)
Tool Setting	5 V/DIV., 500 ms./DIV.
Vehicle Condition	Within 3 seconds after power switch on (READY), or within 3 seconds after power switch first turned on (IG) after battery disconnected and connected

H

(4) Waveform 4

Tester Connection	L6-21 (IMI) - L5-6 (E1)
Tool Setting	5 V/DIV., 50 ms./DIV.
Vehicle Condition	Power switch on (IG)

H

2. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the L62 connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-1 (+B) - Body ground	B - Body ground	+B power supply	Always	11 to 14 V
L62-9 (CANH) - Body ground	BE - Body ground	CAN communication line	Always	10 kΩ or higher
L62-10 (CANL) - Body ground	P - Body ground	CAN communication line	Always	10 kΩ or higher
L62-15 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L62-16 (IG) - Body ground	BE - Body ground	IG power supply	Power switch on (IG)	11 to 14 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-29 (LIN) - Body ground	L - Body ground	LIN communication line	Always	10 kΩ or higher

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L62 connector.

(d) Check for pulses according to the value(s) in the table below.

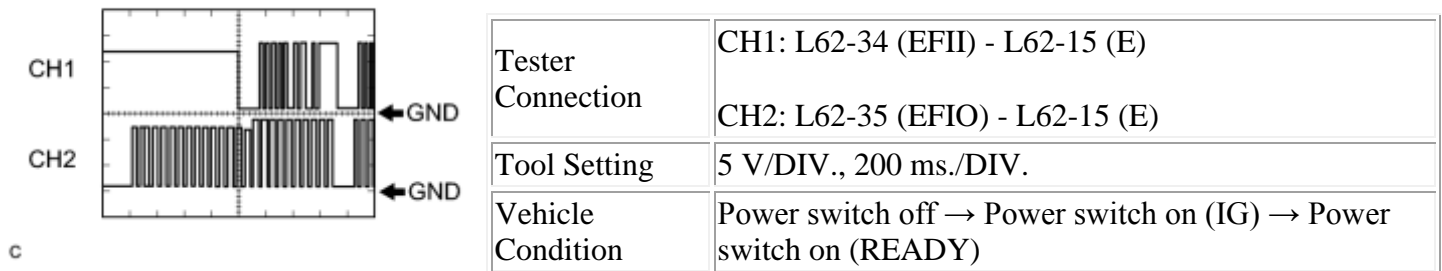

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-34 (EFII) - L62-15 (E)*1	L - W-B	Immobiliser communication status	Immobiliser communicating	Pulse generation (See waveform 1)
L62-35 (EFIO) - L62-15 (E)*1	R - W-B	Immobiliser communication status	Immobiliser communicating	Pulse generation (See waveform 1)

- *1: w/ Automatic Light Control System

If the result is not as specified, the ECU may have a malfunction.

(e) Using an oscilloscope, check the signal waveform of the ECU.

(1) Waveform 1

3. CHECK TRANSMISSION CONTROL ECU ASSEMBLY

(a) Disconnect the A23 and A24 connectors.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
A24-1 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
A24-5 (E02) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
A24-6 (E01) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
A23-16 (+B) - Body ground	L - Body ground	Ignition power supply	Power switch on (IG)	11 to 14 V
A23-16 (+B) - Body ground	L - Body ground	Ignition power supply	Power switch off	Below 1 V
A23-15 (BATT) - Body ground	SB - Body ground	+B power supply	Except power switch on (READY)	11 to 14 V
A23-15 (BATT) - Body ground	SB - Body ground	+B power supply	Power switch on (READY)	11 to 15.5 V
A24-15 (CA1L) - Body ground	BR - Body ground	CAN communication line	Always	10 k Ω or higher
A24-16 (CA1H) - Body ground	Y - Body ground	CAN communication line	Always	10 k Ω or higher
A24-24 (LIN) - Body ground	L - Body ground	LIN communication line	Always	10 k Ω or higher

- If the result is not as specified, there may be a malfunction in the wire harness.

4. CHECK ID CODE BOX (IMMOBILISER CODE ECU)

P

(a) Disconnect the L10 connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L10-1 (+B) - L10-8 (GND)	B - W-B	+B power supply	Always	11 to 14 V
L10-8 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L10-3 (LIN1) - Body ground	L - Body ground	LIN communication line	Always	10 k Ω or higher

If the result is not as specified, there may be a malfunction in the wire harness.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Push-button start function data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the function seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 .

3. INSPECT AUXILIARY BATTERY VOLTAGE

(a) Measure the auxiliary battery voltage.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the auxiliary battery.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Power Source Control / Trouble Codes.
- (e) Read the DTC by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Power Source Control / Trouble Codes.
- (e) Clear the DTC by following the directions on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Power Source Control / Data List.
- (e) Read the Data List according to the display on the Techstream.

Power Source Control

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stop Light Switch1	Stop light switch 1/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Start Switch1	Start switch 1/ON or OFF	ON: Power switch pushed OFF: Power switch not pushed	-
Start Switch2	Start switch 2/ON or OFF	ON: Power switch pushed OFF: Power switch not pushed	-
Latch Circuit	Latch circuit/ON or OFF	ON: Power switch on (IG) or on (READY) OFF: Power switch off or on (ACC)	-
IG1 Relay Monitor (Outside)	IG1 outer relay monitor/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG1 Relay Monitor (Inside)	IG1 inner relay monitor/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
IG2 Relay Monitor (Outside)	IG2 outer relay monitor/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
IG2 Relay Monitor (Inside)	IG2 inner relay monitor/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
Starter Request Signal	Starter request signal monitor/ON or OFF	ON: ST relay on OFF: ST relay off	-
ACC Relay Monitor	ACC relay monitor/ON or OFF	ON: Power switch on (ACC) OFF: Power switch off	-
Ready Signal	Status of the ready signal/ON or OFF	ON: Hybrid control system on (on (READY)) OFF: Hybrid control system off	-
Vehicle Speed Signal	Vehicle speed signal/Stop or Run	Stop: Vehicle stopped Run: Vehicle running	-
Shift P Signal Pulse	Status of the shift P signal pulse/Unknown, Error2, Normal2, Error1, Normal3, Error3 or Normal1	Unknown: Other Error2: Signal abnormal and park (P) selected Normal2: Signal normal and park (P) selected Error1: Signal abnormal and park (P) state cannot be determined Normal3: Signal normal and R, N, D or B selected Error3: Signal abnormal and R, N, D or B selected Normal1: Signal normal and park (P) state cannot be determined	-
Power Supply Condition	Power supply condition/All OFF, ACC ON, IG1 ON, IG2 ON, ST ON	All OFF: All relays off	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		ACC ON: ACC relay on IG1 ON: IG1 relay on IG2 ON: IG2 relay on ST ON: ST request signal on	
Powertrain Type	Status of the powertrain type/HV-AT, Conventional-AT, Conventional-MT, Conventional-MMT	HV-AT	-
IG1 Circuit	Status of the IG1 relay activation circuit/OK or NG	OK: IG1 relay activation circuit normal NG: IG1 relay activation circuit abnormal	-
IG2 Circuit	Status of the IG2 relay activation circuit/OK or NG	OK: IG2 relay activation circuit normal NG: IG2 relay activation circuit abnormal	-
Starter Switch Signal Mismatch	Power switch error detection/No or Yes	No: Power switch error not detected Yes: Power switch error detected	-
Park Signal Mismatch	Status of the park signal mismatch/No or Yes	No: Park signal mismatch no detected Yes: Park signal mismatch detected	-
Key Certification Waiting Timed Out	Key certification error detection/No or Yes	No: Key certification error not detected Yes: Key certification error detected	-
Number of Diagnosis Code	Number of diagnosis code/Min.: 0, MAX.: 255	Number of DTCs will be displayed	-

(f) Enter the following menus: Body Electrical / Smart Key / Data List.

(g) Read the Data List according to the display on the Techstream.

Smart Key

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
----------------	------------------------	------------------	-----------------

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Ignition Switch	Power switch/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
Key Low Battery	Low key battery/Yes or No	Yes: Key battery voltage low No: Key battery voltage normal	-
# Code	Number of DTC recorded/Min.: 0, Max.: 225	Number of DTCs displayed	-
Steering Lock Sleep Cond	Transmission control ECU sleep condition/Yes or No	Yes: Transmission control ECU sleep mode can be entered No: Transmission control ECU sleep mode cannot be entered	-
Steering Lock Start Cond	Transmission control ECU start signal/Yes or No	Yes: Transmission control ECU sent a start signal No: Transmission control ECU did not send a start signal	-
Engine Start Condition	Hybrid control system start condition/OK or NG	OK: Hybrid control system allowed to start NG: Hybrid control system not allowed to start	-
Engine Start Request	Start request condition signal/OK or NG	OK: Start request condition signal received NG: Start request condition signal not received	-
3bit Code Request	Status of the 3-bit code request/OK or NG	OK: 3-bit code request signal received NG: 3-bit code request signal not received	-
S Code Check	S code certification result/OK or NG	OK: Certification confirmed NG: Certification not confirmed	-
L Code Check	L code certification result/OK or NG	OK: Certification confirmed NG: Certification not confirmed	-
Unlock Request Receive	Status of the gearshift control unlock request receive/OK or NG	OK: Gearshift control unlock request signal received NG: Gearshift control unlock request signal not received	-
Lock Request	Status of the gearshift control lock	OK: Gearshift control lock request	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Receive	request receive/OK or NG	signal received NG: Gearshift control lock request signal not received

L Code Check (Past)	L code verification result (Past)/OK or NG	OK: Certification confirmed (past) NG: Certification not confirmed (past)	-
EFI Code Receive	SFI communication (when DTC stored)/OK or NG	OK: SFI code received NG: SFI code not received	-
EFI Communication	SFI communication /OK or NG	OK: SFI communication normal NG: SFI communication abnormal	-
Ignition Available Area	Ignition available area/Front or All	Customization status displayed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relay, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Power Source Control / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Power Source Control

Tester Display	Test Part	Control Range	Diagnostic Note
Indicator Condition	Power switch indicator	Green/Red/No Sig	Power switch on (READY)

- (f) Enter the following menus: Body Electrical / Smart Key/ Active Test.

(g) Perform the Active Test according to the display on the Techstream.

Smart Key

Tester Display	Test Part	Control Range	Diagnostic Note
Power / Engine SW Light	Power switch illumination	ON/OFF	Operate with power switch on (IG) and the vehicle stopped.

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is stored during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

Power Management Control ECU

DTC Code	Detection Item	Trouble Area	See page
B2271	Ignition Hold Monitor Malfunction	<ol style="list-style-type: none"> 1. AM2 fuse 2. IG1 relays 3. IG2 relay 4. Power management control ECU 5. Instrument panel junction block assembly 6. Wire harness or connector 	
B2274	ACC Monitor Malfunction	<ol style="list-style-type: none"> 1. AM2 fuse 2. ACC relay 3. Power management control ECU 4. Instrument panel junction block assembly 5. Wire harness or connector 	
B2275	STSW Monitor Malfunction	<ol style="list-style-type: none"> 1. AM2 fuse 2. Power management Control ECU 3. Wire harness or connector 	
B2277	Detecting Vehicle Submersion	Power management control ECU	
B2282	Vehicle Speed Signal Malfunction	<ol style="list-style-type: none"> 1. CAN communication system 2. Combination meter system 3. Power management control ECU 4. Wire harness or connector 	
B2284	Brake Signal Malfunction	<ol style="list-style-type: none"> 1. STOP fuse 2. Stop light switch assembly 3. CAN communication system 	

DTC Code	Detection Item	Trouble Area	See page
		4. Skid control ECU assembly 5. Power management control ECU 6. Wire harness or connector	
B2286	Runnable Signal Malfunction	1. AM2 fuse 2. Power management control ECU 3. Wire harness or connector	
U0293	Lost Communication with HV ECU	Power management control ECU	

ON-VEHICLE INSPECTION

1. CHECK POWER SOURCE MODE CHANGE FUNCTION

(a) Check the function of the power switch.

(1) Check that power source mode changes in accordance with the conditions of the shift position and brake pedal.

Brake Pedal	Shift Lever	Power Source Mode Pattern
Depressed	P	When the power switch is pushed once. <ul style="list-style-type: none"> off → on (READY)
Not depressed	P	Each time the power switch is pushed. <ul style="list-style-type: none"> off → on (ACC) → on (IG) → off
	Except P	Each time the power switch is pushed. <ul style="list-style-type: none"> on (ACC) → on (IG) → off
-	P	When the power switch is pushed in the on (READY) condition. <ul style="list-style-type: none"> on (READY) → off
-	Except P	When the power switch is pushed in the on (READY) condition. <ul style="list-style-type: none"> on (READY) → off

(b) Check that the power source mode changes without pressing the power switch.

(1) With power source mode on (ACC) or on (IG) and with park (P) selected, wait for at least 1 hour. Check that the power source mode changes from on (ACC) or on (IG) to off automatically.

2. CHECK INDICATOR CONDITION

(a) Check the indicator light on the power switch.

(1) Check that the power switch indicator turns on and changes color according to the table below.

N

Power Source Mode/Condition	Indicator Light Condition	
	Brake Pedal Released	Brake Pedal Depressed, Park (P) selected
off	off	Turns on (Green)

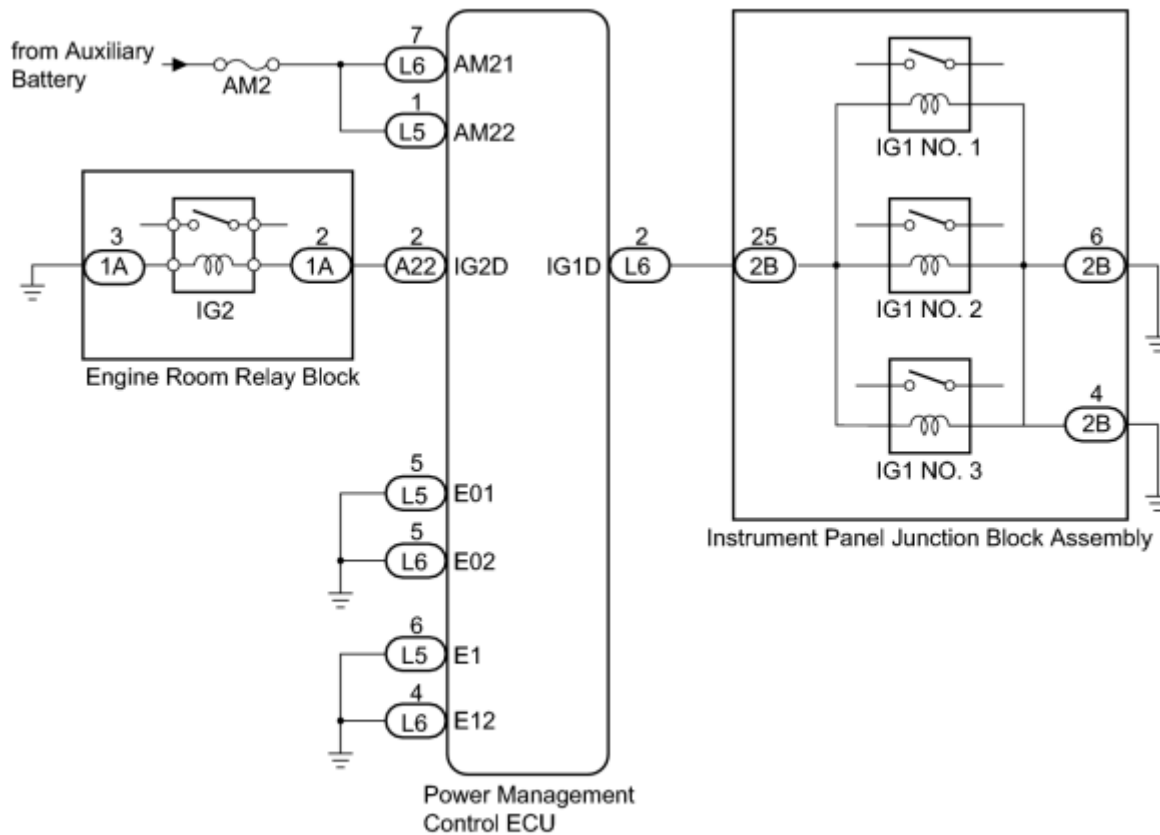

on (ACC, IG)	Turns on (Amber)	Turns on (Green)
on (READY)	off	off
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

DESCRIPTION

This DTC is stored when a problem such as an open in the AM2 fuse, an open or short in the wire harness between the fuse and power management control ECU, a short in the IG output circuit inside the power management control ECU, a short between the power management control ECU and relay, or a short in the relay is detected.

DTC No.	DTC Detection Condition	Trouble Area
B2271	The hold circuit, IG1 relay actuation circuit or IG2 relay actuation circuit inside the power management control ECU is open or shorted.	<ul style="list-style-type: none">• AM2 fuse• IG1 relays• IG2 relay• Power management control ECU• Instrument panel junction block assembly• Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When the power management control ECU is replaced with a new one and the cable from the negative (-) auxiliary battery terminal is connected, the power source mode becomes on (IG) mode. When the auxiliary battery is removed and reinstalled, the power source mode that was selected when the auxiliary battery was removed is restored.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU)
----	--

(a) Disconnect the L5 and L6 connectors from the power management control ECU.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

2010 Toyota Prius

Repair Manual

Tester Connection	Condition	Specified Condition
L5-1 (AM22) - Body ground	Always	9.5 to 16 V
L6-7 (AM21) - Body ground	Always	9.5 to 16 V

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU)

OK

2.	CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND)
----	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L5-5 (E01) - Body ground	Always	Below 1 Ω
L5-6 (E1) - Body ground	Always	Below 1 Ω
L6-4 (E12) - Body ground	Always	Below 1 Ω
L6-5 (E02) - Body ground	Always	Below 1 Ω

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND)

OK

3.	INSPECT IG2 RELAY
----	-------------------

*1

(a) Remove the engine room relay block assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1A-2 - 1A-3	20°C (68°F)	130 to 230 Ω

Text in Illustration

*1	Component without harness connected (Engine Room Relay Block)
----	--

NG ▶ REPLACE IG2 RELAY

OK

4.	INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY (IG1 NO. 1, IG1 NO. 2 AND IG1 NO. 3 RELAYS)
----	--

*1

(a) Remove the instrument panel junction block assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2B-25 - 2B-4	20°C (68°F)	101.25 to 123.75 Ω
2B-25 - 2B-6	20°C (68°F)	101.25 to 123.75 Ω
2B-4 - 2B-6	Always	Below 1 Ω

Text in Illustration

*1	Component without harness connected
----	-------------------------------------

(Instrument Panel Junction Block Assembly)

NG  REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK

5. CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - INSTRUMENT PANEL J/B)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L6-2 (IG1D) - 2B-25	Always	Below 1 Ω
L6-2 (IG1D) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6. CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2B-4 - Body ground	Always	Below 1 Ω
2B-6 - Body ground	Always	Below 1 Ω

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)

OK

7. CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - IG2 RELAY)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-------------------	-----------	---------------------

Tester Connection	Condition	Specified Condition
A22-2 (IG2D) - 1A-2	Always	Below 1 Ω
A22-2 (IG2D) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - IG2 RELAY)

OK

8.	CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK ASSEMBLY - BODY GROUND)
----	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1A-3 - Body ground	Always	Below 1 Ω

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK ASSEMBLY - BODY GROUND)

OK

9.	CHECK POWER MANAGEMENT CONTROL ECU
----	------------------------------------

*1

(a) Install the instrument panel junction block assembly.

(b) Install the engine room relay block.

(c) Reconnect the A22 and L6 connectors.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A22-2 (IG2D) - Body ground	Power switch on (IG)	Output voltage at terminal AM21 or AM22 is -2.5 V or more

Tester Connection	Condition	Specified Condition
L6-2 (IG1D) - Body ground	Power switch on (IG)	Output voltage at terminal AM21 or AM22 is -2.5 V or more

Text in Illustration

*1	Component with harness connected (Power Management Control ECU)
----	--

NG  REPLACE POWER MANAGEMENT CONTROL ECU

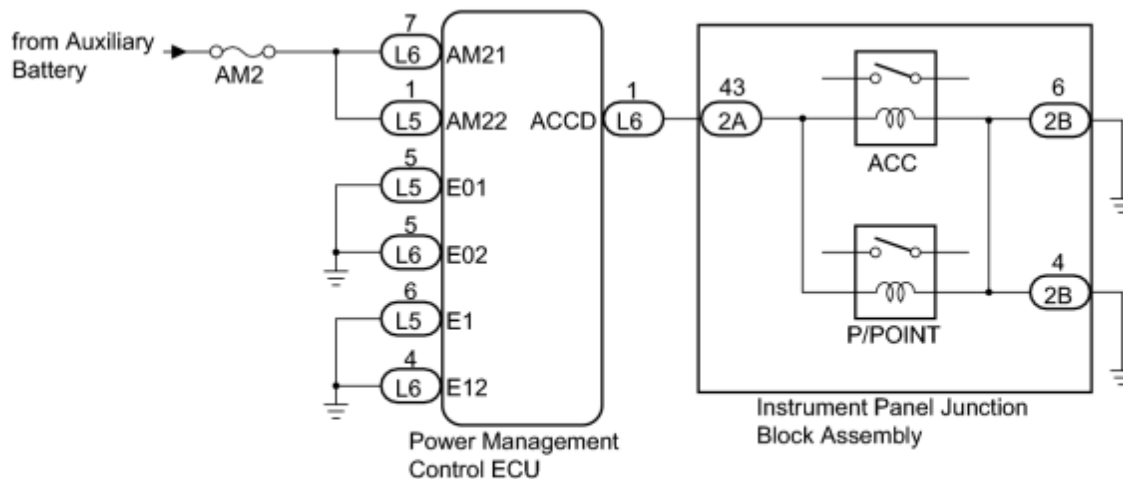

OK  USE SIMULATION METHOD TO CHECK

DESCRIPTION

This DTC is stored when there is a problem in the ACC output circuit. The ACC circuit is the circuit that goes from inside the power management control ECU to the ACC relay.

DTC No.	DTC Detection Condition	Trouble Area
B2274	The ACC relay actuation circuit inside the power management control ECU or other related circuit is malfunctioning.	<ul style="list-style-type: none"> • AM2 fuse • ACC relay • Power management control ECU • Instrument panel junction block assembly • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When the power management control ECU is replaced with a new one and the cable from the negative (-) auxiliary battery terminal is connected, the power source mode becomes on (IG) mode. When the auxiliary battery is removed and reinstalled, the power source mode that was selected when the auxiliary battery was removed is restored.

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU) <small>INFO</small>
----	--

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU)

OK

2.	CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND) <small>INFO</small>
----	--

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND)

OK

3.	INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY
----	--

*1

(a) Remove the instrument panel junction block assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-43 - 2B-4	20°C (68°F)	101.25 to 123.75 Ω

Tester Connection	Condition	Specified Condition
2A-43 - 2B-6	20°C (68°F)	101.25 to 123.75 Ω
2B-4 - 2B-6	Always	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Instrument Panel Junction Block Assembly)
----	---

NG  REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK

4.	CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - INSTRUMENT PANEL J/B)
----	---

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L6-1 (ACCD) - 2A-43	Always	Below 1 Ω
L6-1 (ACCD) - Body ground	Always	10 kΩ or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)
----	--

(a) Measure the resistance according to the value(s) the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2B-4 - Body ground	Always	Below 1 Ω
2B-6 - Body ground	Always	Below 1 Ω

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)

OK

6.	INSPECT POWER MANAGEMENT CONTROL ECU
----	--------------------------------------

*1

(a) Reinstall the instrument panel junction block assembly.

(b) Reconnect the L5 and L6 connectors.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L6-1 (ACCD) - Body ground	Power switch on (ACC)	Output voltage at terminal AM21 or AM22 is -2.5 V or more

Text in Illustration

*1	Component with harness connected (Power Management Control ECU)

NG ► REPLACE POWER MANAGEMENT CONTROL ECU

OK ► USE SIMULATION METHOD TO CHECK

DESCRIPTION

This DTC is stored when a malfunction is detected in the starter circuit inside the power management control ECU.

DTC No.	DTC Detection Condition	Trouble Area
B2275	Power management control ECU internal HV activation request output circuit malfunction or external circuit malfunction.	<ul style="list-style-type: none"> • AM2 fuse • Power management control ECU • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When the power management control ECU is replaced with a new one and the cable from the negative (-) auxiliary battery terminal is connected, the power source mode becomes the on (IG) mode. When the auxiliary battery is removed and reinstalled, the power source mode that was selected when the auxiliary battery was removed is restored.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU) 

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU)

OK

2. CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND) 

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND)

OK

3. CHECK FOR DTC

(a) Clear the DTC .

(b) Turn the power switch on (IG).

(c) After 25 seconds have elapsed, check if the DTC has been set again.

OK:

DTC B2275 is not output.

NG  USE SIMULATION METHOD TO CHECK

OK  REPLACE POWER MANAGEMENT CONTROL ECU

DTC

B2277

Detecting Vehicle Submersion

DESCRIPTION

This DTC is stored when the submersion circuit monitor inside the power management control ECU detects a large amount of water.

DTC No.	DTC Detection Condition	Trouble Area
B2277	The submersion circuit monitor inside the power management control ECU detects a large amount of water.	Power management control ECU

INSPECTION PROCEDURE

NOTICE:

- When the power management control ECU is replaced with a new one and the cable from the negative (-) auxiliary battery terminal is connected, the power source mode becomes on (IG) mode. When the auxiliary battery is removed and reinstalled, the power source mode that was selected when the auxiliary battery was removed is restored.

PROCEDURE

1. CHECK FOR DTC

- Clear the DTC .
- Turn the power switch on (IG).
- After 330 seconds have elapsed, check if the DTC has been set again.

OK:

DTC B2277 is not output

HINT:

If there are any signs that water was present, before replacing the power management control ECU, take measures to prevent any further water entry.

NG  REPLACE POWER MANAGEMENT CONTROL ECU

OK  USE SIMULATION METHOD TO CHECK

DTC

B2282

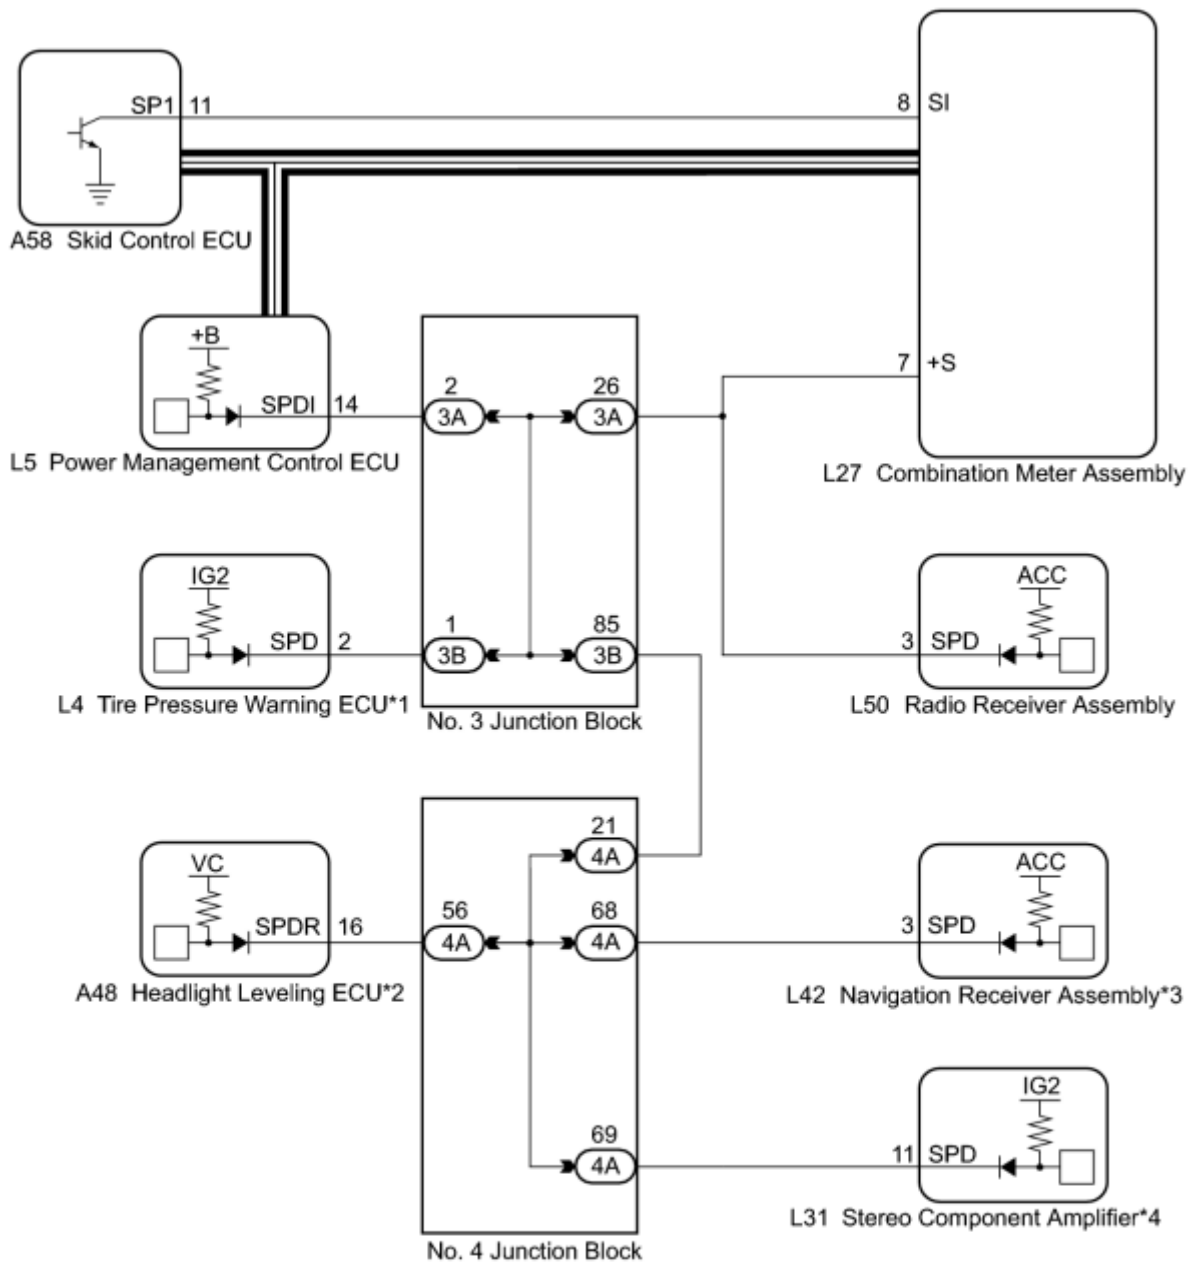

Vehicle Speed Signal Malfunction

DESCRIPTION

The power management control ECU receives vehicle speed information using 2 methods. It receives a speed signal from the meter ECU via a direct line, and a from the skid control ECU via CAN. If the information sent using these 2 methods is inconsistent, this DTC will be stored.

DTC No.	DTC Detection Condition	Trouble Area
B2282	Speed information received by the power management control ECU via direct line and via CAN is inconsistent.	<ul style="list-style-type: none">• CAN communication system• Combination meter assembly• Power management control ECU• No.3 junction block• Wire harness or connector

WIRING DIAGRAM

*1: w/ Tire Pressure Warning System

*2: w/ Automatic Type Headlight Beam Level Control

*3: w/ Navigation System

*4: for Separate Type Amplifier System

HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram above will not operate normally.

INSPECTION PROCEDURE

NOTICE:

- When the power management control ECU is replaced with a new one and the cable from the negative (-) auxiliary battery terminal is connected, the power source mode becomes on (IG) mode. When the auxiliary battery is removed and reinstalled, the power source mode that was selected when the auxiliary battery was removed is restored.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
----	--------------------------------

(a) Check if CAN communication DTCs are output.

HINT:

If any DTCs for CAN communication system malfunction are output, inspect those DTCs first.

OK:

CAN communication DTC is not output.

NG  GO TO CAN COMMUNICATION SYSTEM (DIAGNOSTIC TROUBLE CODE CHART)

OK

2.	CHECK SPEEDOMETER OPERATION
----	-----------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Data List.

(e) Check the Data List for proper functioning of the vehicle speed signal.

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Vehicle Speed Meter	Vehicle speed/Min.: 0, Max.: 255	Almost same as actual speed (When driving)	-

OK:

Vehicle speed displayed on the Techstream is almost the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

NG  GO TO METER / GAUGE SYSTEM (Speedometer Malfunction)

OK

3.	READ VALUE USING TECHSTREAM
----	-----------------------------

(a) Enter the following menus: Body Electrical / Power Source Control / Data List.

(b) Read the Data List according to the display on the Techstream.

Power Source Control

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Vehicle speed signal	Vehicle speed signal/Stop or Run	Stop: Vehicle stopped Run: Vehicle running	-

OK:

Stop (vehicle is stopped) and Run (vehicle is running) appear on the screen.

NG  [CHECK HARNESS AND CONNECTOR \(AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU\)](#)

OK  REPLACE POWER MANAGEMENT CONTROL ECU

4.	CHECK HARNESS AND CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU)

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU)

OK

5.	CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND) 
----	--

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - BODY GROUND)

OK

6.	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - POWER MANAGEMENT CONTROL ECU)
----	---

(a) Disconnect the L27 connector from the combination meter assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L5-14 (SPDI) - L27-7 (+S)	Always	Below 1 Ω
L5-14 (SPDI) - Body ground	Always	10 k Ω or higher

NG [▶ CHECK HARNESS AND CONNECTOR \(COMBINATION METER ASSEMBLY - NO. 3 JUNCTION BLOCK\)](#)

OK

7.	INSPECT COMBINATION METER ASSEMBLY
----	------------------------------------

*1

(a) Remove the combination meter INFO.

(b) Reconnect the L27 connector to the combination meter assembly.

(c) Reconnect the L5 connector to the power management control ECU.

(d) Connect an oscilloscope to terminal L27-7 (+S) and body ground.

(e) Turn the power switch on (IG).

(f) Turn the wheel slowly.

(g) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:

The waveform is displayed as shown in the illustration.

Text in Illustration

*1	Component with harness connected (Combination Meter Assembly)
----	--

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG  GO TO METER / GAUGE SYSTEM (Speed Signal Circuit)

OK  **REPLACE POWER MANAGEMENT CONTROL ECU**

8.	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - NO. 3 JUNCTION BLOCK)
----	---

(a) Disconnect the 3A connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L27-7 (+S) - 3A-26	Always	Below 1 Ω
L27-7 (+S) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - NO. 3 JUNCTION BLOCK)

OK

9.	CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - JUNCTION BLOCK)
----	---

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

2010 Toyota Prius

Repair Manual

Tester Connection	Condition	Specified Condition
L5-14 (SPDI) - 3A-2	Always	Below 1 Ω
L5-14 (SPDI) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - NO. 3 JUNCTION BLOCK)

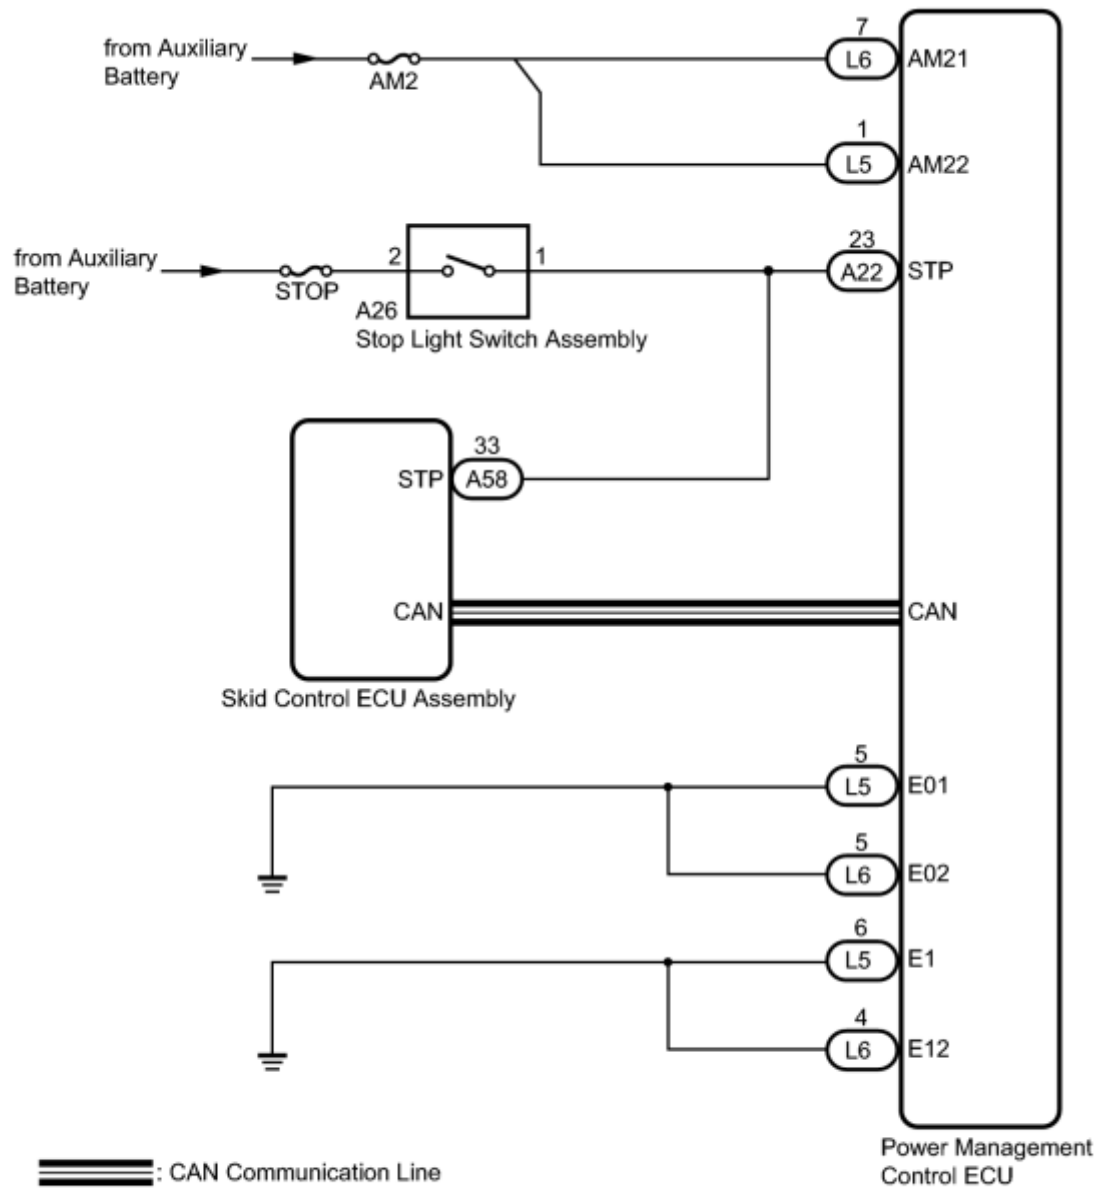

OK ► **REPLACE NO. 3 JUNCTION BLOCK**

DESCRIPTION

The power management control ECU receives brake signal information from 2 sources. It receives a signal from the stop light switch assembly via a direct line, and a signal from the skid control ECU assembly via CAN. If the information from these 2 sources is inconsistent, this DTC will be stored.

DTC No.	DTC Detection Condition	Trouble Area
B2284	Stop light switch assembly operation information received by the power management control ECU from the stop light switch assembly via a direct line and stop light switch assembly information from the skid control ECU assembly via CAN are inconsistent.	<ul style="list-style-type: none"> • STOP fuse • Stop light switch assembly • CAN communication system • Skid control ECU assembly • Power management control ECU • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When the power management control ECU is replaced with a new one and the cable from the negative (-) auxiliary battery terminal is connected, the power source mode becomes on (IG) mode. When the auxiliary battery is removed and reinstalled, the power source mode that was selected when the auxiliary battery was removed is restored.
- Inspect the fuse for circuits related to this system before performing the following inspection procedure.

HINT:

Check the connector connection to the terminal to make sure that there is no abnormality such as a loose connection, deformation, etc.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (AUXILIARY BATTERY - POWER MANAGEMENT CONTROL ECU) INFO
