- The HV battery uses nickel metal-hydride batteries and does not require external charging. The power management control ECU controls the SOC (state of charge) of the HV battery at a constant level during driving. The HV battery is composed of 28 modules, and each module consists of eight 1.2 V cells in series. The battery smart unit monitors battery block voltage at 14 locations. Each battery block is composed of 2 modules in a set.

DTC No.	DTC Detection Condition	Trouble Area
P0A80-123	Difference in voltage between battery blocks is larger than the standard (2 trip detection)	<ul style="list-style-type: none"> HV battery assembly Battery smart unit

HINT:

- P0A80-123 will not be set unless the vehicle is driven for approximately 10 minutes after clearing the DTC.

MONITOR DESCRIPTION

The battery smart unit, which monitors the voltage of the battery blocks, determines that malfunction has occurred if a voltage difference between the battery blocks exceeds the standard. When the malfunction detection condition is satisfied, the power management control ECU (HV CPU) will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A80 (INF 123): Rationality
Required sensors / components	Main: Battery voltage sensor inside battery smart unit Sub: Battery current sensor, battery temperature sensor
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-
-----------------------------	---

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0A80 (INF 123) is not detected
--------------------	-------------------------------------

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the power switch on (IG) and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure).
4. Turn the power switch off.
5. Turn the power switch on (READY) and turn the Techstream on.
6. Perform a universal trip.
7. With the select lever in N, leave the vehicle until SOC drops to 30%.

HINT:

Although DTC P3000 (INF 388) may be stored if the SOC drops to 20% or lower, this is not a malfunction.

8. Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
9. Check that permanent DTCs are cleared.

HINT:

- If the permanent DTC is not cleared, repeat steps 6 and 7.
- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

DTC	P0A82-123	Hybrid Battery Pack Cooling Fan 1
-----	-----------	-----------------------------------

DESCRIPTION

- Refer to the circuit description for DTC P0A84-123 INFO.

DTC No.	DTC Detection Condition	Trouble Area
P0A82-123	The speed of the battery cooling blower assembly is not within the specified range (1 trip detection)	<ul style="list-style-type: none"> • Battery cooling blower assembly • Battery smart unit • Power management control ECU • HV battery intake duct • Wire harness or connector

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0A84-123 INFO.

INSPECTION PROCEDURE

CAUTION:

- Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.
- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

PROCEDURE

1.	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT) INFO
----	---

B ▶ GO TO DTC CHART

A
▼

2. CHECK DUCT AND BLOWER

(a) Remove the upper hybrid battery cover sub-assembly **INFO**.

(b) Check that the No. 1 hybrid battery intake duct and battery cooling blower are not disconnected, damaged, or clogged with foreign objects, and that the acoustical materials have not peeled.

OK:

The duct and blower are not disconnected, damaged, or clogged with foreign objects and the acoustical materials have not peeled.

Text in Illustration

*1 No. 1 Hybrid Battery Intake Duct

(c) Install the upper hybrid battery cover sub-assembly **INFO**.

NG ► CORRECT THE PROBLEM

OK
▼

3. CHECK HARNESS AND CONNECTOR (BATTERY COOLING BLOWER - POWER MANAGEMENT CONTROL ECU)

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(c) Disconnect the battery cooling blower assembly connector.

(d) Disconnect the A21 connector from the power management control ECU **INFO**.

(e) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly **INFO**.

(f) Disconnect the S14 connector from the battery cooling blower assembly.

(g) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Specified Condition
S14-3 (SI0) or A21-29 (SI0) - Body ground	10 kΩ or higher
S14-3 (SI0) - A21-29 (SI0)	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Battery Cooling Blower Assembly)
*2	Rear view of wire harness connector (Power Management Control ECU)

(h) Connect the S14 connector to the battery cooling blower assembly.

(i) Install the No. 1 hybrid vehicle battery carrier bracket sub-assembly **INFO**.

(j) Connect the A21 connector to the power management control ECU **INFO**.

(k) Connect the cable to the negative (-) battery terminal.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4. CHECK POWER MANAGEMENT CONTROL ECU (GROUND SHORT CHECK)

(a) Remove the power management control ECU **INFO**.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Specified Condition
A21-29 (S10) - L5-5 (E01)	10 kΩ or higher
A21-29 (S10) - L6-5 (E02)	10 kΩ or higher

(c) Install the power management control ECU INFO.

NG ▶ REPLACE POWER MANAGEMENT CONTROL ECU

OK ▼

5. READ VALUE USING TECHSTREAM

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly INFO.

(d) Connect the cable to the negative (-) battery terminal.

(e) Connect the Techstream to the DLC3.

(f) Turn the power switch on (IG).

NOTICE:

- After removing the service plug grip, do not turn the power switch on (READY) unless instructed by the repair manual because this may cause a malfunction.
- If the power switch is turned on (IG) with the service plug grip removed, DTC P0A0D-350 for the interlock switch system will be stored. If this DTC is output, clear the DTC using the Techstream INFO.

(g) Enter the following menus: Powertrain / Hybrid Control / Active Test / Driving the Battery Cooling Fan.

HINT:

Check "Cooling Fan Mode 1" in the data list using the Techstream. If the "Cooling Fan Mode 1" is 1 to 6, it is not necessary to perform the Active Test.

(h) Enter the following menus: All Data / VMF Fan Motor Voltage 1.

(i) Select each air volume mode (1 to 6) in the "Driving the Battery Cooling Fan" active test to operate the battery cooling blower assembly.

(j) While the cooling fan is operating, compare the value in the data list (VMF Fan Motor Voltage 1) with the voltage value that was actually measured at the battery cooling blower assembly connector.

Standard:

Tester Connection	Condition	Specified Condition
S14-2 (VM0) - S14-4 (GND0)	Battery cooling blower is operating	Difference between the value in the Data List (VMF Fan Motor Voltage 1) and the actual measurement value is 1 V or less.

Text in Illustration

*1	Component with harness connected (Battery Cooling Blower assembly)
----	---

HINT:

Compare the values in each air volume mode (1 to 6).

(k) Install the No. 1 hybrid vehicle battery carrier bracket sub-assembly .

NG  REPLACE BATTERY SMART UNIT

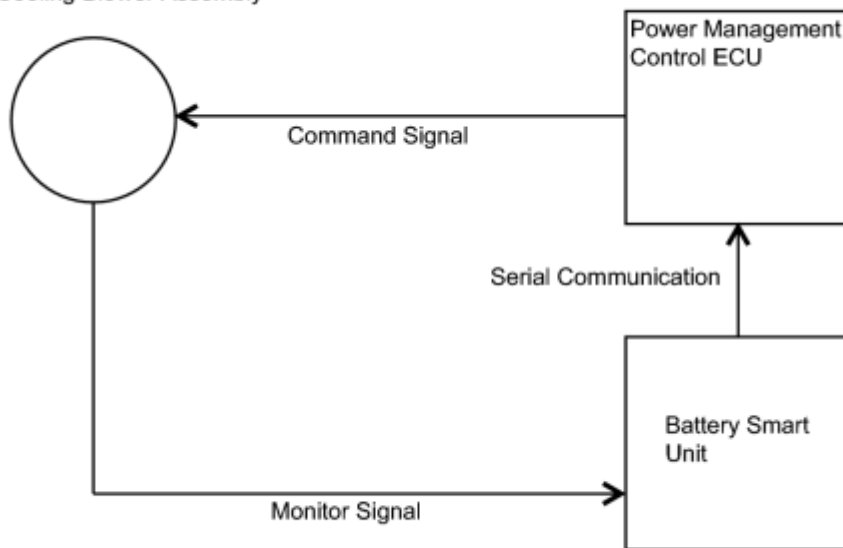

OK  REPLACE BATTERY COOLING BLOWER ASSEMBLY

DTC	P0A84-123	Hybrid Battery Pack Cooling Fan 1
-----	-----------	-----------------------------------

DESCRIPTION

• The speed of the battery cooling blower assembly is controlled by the power management control ECU. Battery cooling blower assembly power is supplied when the FCTL terminal of the power management control ECU turns on the battery blower relay. The power management control ECU sends command signals (SI) to the battery cooling blower assembly to get the fan speed corresponding to the HV battery temperature. Information about the voltage applied to the battery cooling blower assembly (VM) is sent to the power management control ECU as a monitor signal using serial communication via the battery smart unit.

Battery Cooling Blower Assembly

DTC No.	DTC Detection Condition	Trouble Area
P0A84-123	When the output voltage of the battery cooling blower assembly (VM) is too low compared to the target control voltage range (1 trip detection)	<ul style="list-style-type: none"> • Wire harness or connector • Integration relay • Battery cooling blower assembly • Battery smart unit • Power management control ECU

B ► GO TO DTC CHART

A

2. PERFORM ACTIVE TEST USING TECHSTREAM

(a) Remove the rear side seatback assembly RH INFO.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Enter the following menus: Powertrain / Hybrid Control / Active Test / Driving the Battery Cooling Fan.

HINT:

Check Cooling Fan Mode1 in the Data List. If the mode is 6, it is not necessary to perform the Active Test.

(e) Select air volume mode 6 in the "Driving the Battery Cooling Fan" active test to operate the battery cooling blower assembly.

(f) Check that the fan operates and air is sucked into the inlet duct.

HINT:

The cooling fan may not stop even when turning the cooling fan off in the "Driving the Battery Cooling Fan" active test. This is due to HV system control and not a malfunction.

OK:

The fan operates.

(g) Install the rear side seatback assembly RH INFO.

NG ► [CHECK INTEGRATION NO.1 RELAY \(BATT FAN\)](#)

OK

3. CHECK HARNESS AND CONNECTOR (BATTERY COOLING BLOWER - BATTERY SMART UNIT)

CAUTION:

Be sure to wear insulated gloves.

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly INFO.

(d) Disconnect the S14 connector of the battery cooling blower assembly.

(e) Disconnect the c1 connector of the battery smart unit.

(f) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Switch Condition	Specified Condition
S14-2 (VM0) - c1-7 (VM)	Power switch off	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Switch Condition	Specified Condition
S14-2 (VM0) or c1-7 (VM) - Body ground	Power switch off	10 k Ω or higher

DTC	P0A85-123	Hybrid Battery Pack Cooling Fan 1
-----	-----------	-----------------------------------

DESCRIPTION

Refer to the circuit description for DTC P0A84-123 [INFO](#).

DTC No.	DTC Detection Condition	Trouble Area
P0A85-123	When the output voltage of the battery cooling blower assembly (VM) is too high compared to the target control voltage range (1 trip detection)	<ul style="list-style-type: none"> • Wire harness or connector • Battery cooling blower assembly • Battery smart unit • HV battery assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

CAUTION:

- Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it

in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.

- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

PROCEDURE

1.	CHECK FOR DTCS (DTC P0AFC-123 IS OUTPUT)	INFO
B▶ GO TO DTC CHART		
A ▼		
2.	CHECK HARNESS AND CONNECTOR (VOLTAGE)	

CAUTION:

Be sure to wear insulated gloves.

- (a) Disconnect the cable from the negative (-) battery terminal.
- (b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

- (c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly INFO.
- (d) Connect the cable to the negative (-) battery terminal.
- (e) Connect the Techstream to the DLC3.
- (f) Turn the power switch on (IG).

NOTICE:

- After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

- If the power switch is turned on (IG) with the service plug grip removed, DTC P0A0D-350 for the interlock switch system will be stored. If this DTC is output, clear the DTC using the Techstream INFO.

(g) Enter the following menus: Powertrain / Hybrid Control / Active Test / Driving the Battery Cooling Fan.

HINT:

Check "Cooling Fan Mode 1" in the data list using the Techstream. If the "Cooling Fan Mode 1" is 6, it is not necessary to perform the Active Test.

(h) Select each air volume mode (1 to 6) in the "Driving the Battery Cooling Fan" active test to operate the battery cooling blower assembly.

(i) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
S14-2 (VM0) - S14-4 (GND0)	Battery cooling blower is operating	Below 5 V

DTC	P0A95-123	High Voltage Fuse
-----	-----------	-------------------

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
P0A95-123	Voltage between VBB4 and VBB5 terminals is below the standard despite the interlock switch being engaged (1 trip detection)	<ul style="list-style-type: none"> • Service plug grip • HV battery assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

CAUTION:

- Before inspecting the high-voltage system, take safety precautions to prevent electrical shocks, such as wearing insulated gloves and removing the service plug grip. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.
- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

At least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

PROCEDURE

▼

2. CHECK SERVICE PLUG GRIP

- (a) Turn the power switch off.
- (b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Standard Resistance
Service plug grip	Below 1 Ω

c

NG ▶ REPLACE SERVICE PLUG GRIP

OK ▶ REPLACE HV BATTERY ASSEMBLY

DTC	P0A9C-123	Hybrid Battery Temperature Sensor "A" Range / Performance
DTC	P0AC6-123	Hybrid Battery Temperature Sensor "B" Range / Performance
DTC	P0ACB-123	Hybrid Battery Temperature Sensor "C" Range / Performance
DTC	P3065-123	Hybrid Battery Temperature Sensor Range / Performance Stack A

DESCRIPTION

- The battery temperature sensors are provided at 3 locations of the HV battery. The resistance of the thermistor, which is built into each battery temperature sensor, varies in accordance with changes in the HV battery temperature. The lower the battery temperature, the higher the thermistor resistance. Conversely, the higher the temperature, the lower the resistance. The battery smart unit uses the battery temperature sensors to detect the HV battery temperature, and sends the detected value to the power management control ECU. Based on the results of this detection, the power management control ECU controls the blower fan. (The blower fan starts when HV battery temperature rises above a predetermined level.)

Temperature Sensor Identification Cross Reference Table:

DTC Title Sensor	Battery Temperature Sensor	Techstream Display
A	0	1
B	1	2
C	2	3

HINT:

For example, sensor A in the DTC title is battery temperature sensor (No. 0). This sensor is displayed as Temp of Batt TB1 in the Data List.

DTC No.	DTC Detection Condition	Trouble Area
P0A9C-123 P0AC6-123 P0ACB-123 P3065-123	When the battery temperature sensor performance is abnormal (1 trip detection/2 trip detection)	<ul style="list-style-type: none"> • HV battery assembly • Battery smart unit • Wire harness or connector

MONITOR DESCRIPTION

If the temperature indicated by the battery temperature sensor is lower than the standard level (open), or is higher than the standard level (short), the battery smart unit interprets this as a sensor malfunction. If the battery smart unit detects that HV battery temperature is out of the normal range or its value is abnormal, the power management control ECU (HV CPU) illuminates the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A9C (INF 123): Battery temperature sensor malfunction (stuck) P0AC6 (INF 123): Battery temperature sensor malfunction (stuck) P0ACB (INF 123): Battery temperature sensor malfunction (stuck) P3065 (INF 123): Battery temperature sensor malfunction (stuck)

	DTC P3065 (INF 123) is not detected

CONFIRMATION DRIVING PATTERN

c

1. Connect the Techstream to the DLC3.
2. Turn the power switch on (IG) and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure).
4. Turn the power switch off.
5. Turn the power switch on (READY) and turn the Techstream on.
6. Check that the temperature of each temperature sensor is 14°F (-10°C) or more.

HINT:

If any of temperature sensor values are less than 14°F (-10°C), raise the temperature to 14°F (-10°C) or more and then perform the next step.

7. Turn the power switch on (READY) and wait for 30 seconds or more.
8. Drive the vehicle on urban roads at a speed of 25 mph (40 km/h) or more for a total of at least 10 minutes. [A]

NOTICE:

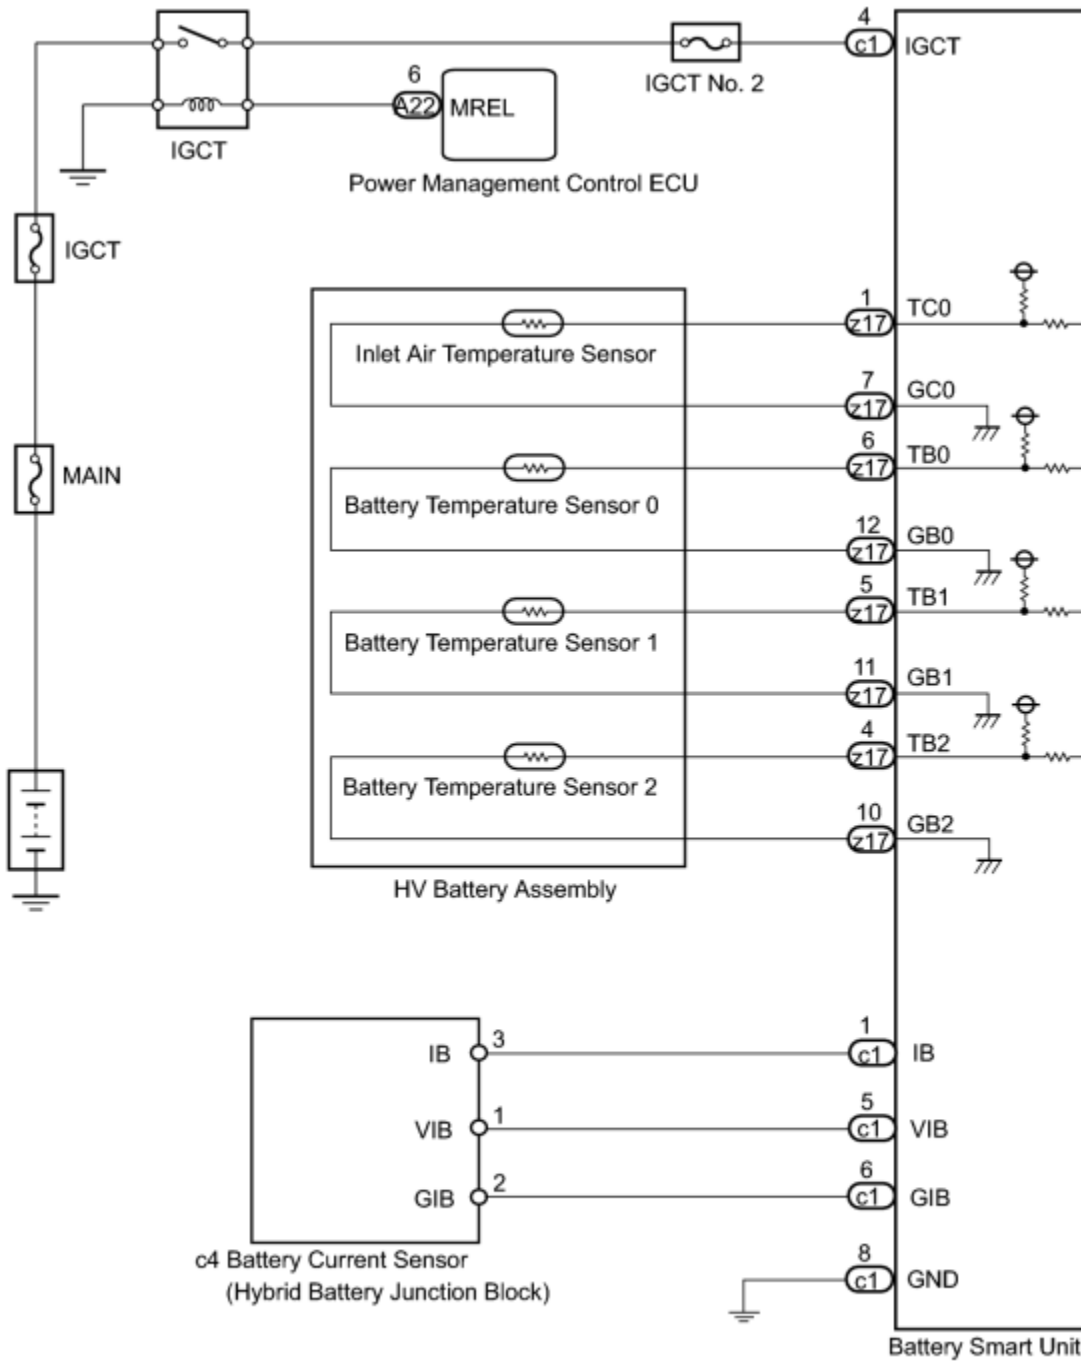

Avoid abrupt acceleration or braking.

9. Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
10. Check that permanent DTCs are cleared.
11. If the permanent DTCs are not cleared, perform the universal trip, and then check for permanent DTCs again.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

CAUTION:

- Before inspecting the high-voltage system, take safety precautions to prevent electrical shocks, such as wearing insulated gloves and removing the service plug grip. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.
- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

At least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

PROCEDURE

1. CHECK DTC OUTPUT (DTC P0A1D-390 IS OUTPUT)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
- (d) Read output DTCs .

Result:

Result	Proceed to
P0A1D-390 is not output.	A

DESCRIPTION

- Refer to the description for DTC P0A9C-123 INFO.

DTC No.	DTC Detection Condition	Trouble Area
P0A9D-123	When the temperature of the battery temperature sensor is less than the standard value (open) or higher than the standard value (shorted) (1 trip detection).	<ul style="list-style-type: none"> HV battery assembly Battery smart unit Wire harness or connector Hybrid battery junction block
P0A9E-123		
P0AC7-123		
P0AC8-123		
P0ACC-123		
P0ACD-123		

HINT:

After confirming that a DTC is output, use the Techstream to check "Temp of BATT TB 1 to 3" in the hybrid vehicle control system ECU data list.

Temperature Displayed	Malfunction
Below -49°F (-45°C)	Open or +B short circuit
203°F (95°C) or more	GND short circuit

MONITOR DESCRIPTION

If the temperature indicated by the battery temperature sensor is lower than the standard level (open), or is higher than the standard level (short), the battery smart unit interprets this as a sensor malfunction. If the battery smart unit detects that HV battery temperature is out of the normal range or its value is abnormal, the power management control ECU (HV CPU) will illuminate the MIL and set a DTC.

MONITOR STRATEGY

DTC	P0AAF-123	Hybrid Battery Pack Air Temperature Sensor "A" Circuit High

DESCRIPTION

- The inlet air temperature sensor (battery) is mounted on the HV battery. The resistance of the sensor varies in accordance with changes in the intake air temperature. The characteristics of the inlet air temperature sensor are the same as those of the battery temperature sensor [INFO](#). The battery smart unit uses signals from the inlet air temperature sensor to control the air volume of the battery cooling blower assembly.

DTC No.	DTC Detection Condition	Trouble Area
P0AAE-123 P0AAF-123	When the temperature indicated by the inlet air temperature sensor is lower than a predetermined limit (open circuit) or is higher than a predetermined limit (short circuit)	<ul style="list-style-type: none"> HV battery assembly Battery smart unit Wire harness or connector Hybrid battery junction block

HINT:

After confirming that DTC P0AAE-123 or P0AAF-123 is output, use the Techstream to check "Inhaling Air Temp" in the HV ECU data list.

Displayed Temperature	Malfunction
-49°F (-45°C) or less	Open or +B short circuit
203°F (95°C) or more	GND short

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0A9D-123 [INFO](#).

INSPECTION PROCEDURE

CAUTION:

- Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.
- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

PROCEDURE

1.	CHECK FOR DTCS (DTC P0AFC-123 IS OUTPUT)	INFO
----	--	------

B ► GO TO DTC CHART

A
▼

2.	CHECK INSTALLATION OF INLET AIR TEMPERATURE SENSOR
----	--

CAUTION:

Be sure to wear insulated gloves and protective goggles.

- (a) Disconnect the cable from the negative (-) battery terminal.
- (b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

- (c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly INFO.
- (d) Check installation of inlet air temperature sensor

(1) Check the connections of the z17 connector of the battery smart unit.

OK:

The connectors are connected securely and there are no contact problems.

Result:

Result	Proceed to
NG	B
OK	Go to next step

Text in Illustration

*1	Battery Smart Unit
----	--------------------

(2) Visually check the installation condition of the inlet air temperature sensor.

OK:

The inlet air temperature sensor is installed in the correct location and its claws are engaged securely.

Result:

Result	Proceed to
The inlet air temperature sensor is installed in the correct location and its claws are engaged securely	A
Claws are damaged.	C
Inlet air temperature sensor is not installed correctly, but claws are not damaged.	D

(e) Install the No. 1 hybrid vehicle battery carrier bracket sub-assembly INFO.

(f) Connect the cable to the negative (-) battery terminal.

- ▶ D INSTALL PARTS CORRECTLY
- ▶ C REPLACE HV BATTERY ASSEMBLY
- ▶ B CONNECT SECURELY
- ▼ A

3.	CHECK HV BATTERY ASSEMBLY (INLET AIR TEMPERATURE SENSOR AND BATTERY TEMPERATURE SENSOR)
----	---

CAUTION:

Be sure to wear insulated gloves.

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly INFO.

(d) Disconnect the c1 and z17 connectors from the battery smart unit.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z17-1 (TC0) - z17-7 (GC0)	32°F (0°C)	26.7 to 27.8 kΩ
	77°F (25°C)	9.9 to 10.1 kΩ
	104°F (40°C)	5.73 to 5.92 kΩ

Text in Illustration

*1	Rear view of wire harness connector (to Battery Smart Unit)
----	--

(f) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
z17-1 (TC0) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-1 (TC0) - c1-8 (GND)	Power switch off	10 kΩ or higher
z17-7 (GC0) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-7 (GC0) - c1-8 (GND)	Power switch off	10 kΩ or higher

(g) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
z17-6 (TB0) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-6 (TB0) - c1-8 (GND)	Power switch off	10 kΩ or higher
z17-12 (GB0) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-12 (GB0) - c1-8 (GND)	Power switch off	10 kΩ or higher

Tester Connection	Switch Condition	Specified Condition
z17-5 (TB1) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-5 (TB1) - c1-8 (GND)	Power switch off	10 kΩ or higher
z17-11 (GB1) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-11 (GB1) - c1-8 (GND)	Power switch off	10 kΩ or higher
z17-4 (TB2) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-4 (TB2) - c1-8 (GND)	Power switch off	10 kΩ or higher
z17-10 (GB2) - c1-4 (IGCT)	Power switch off	10 kΩ or higher
z17-10 (GB2) - c1-8 (GND)	Power switch off	10 kΩ or higher

(h) Connect the c1 and z17 connectors to the battery smart unit.

(i) Install the No. 1 hybrid vehicle battery carrier bracket sub-assembly .

(j) Connect the cable to the negative (-) battery terminal.

DTC	P0ABF-123	Hybrid Battery Pack Current Sensor Circuit
DTC	P0AC1-123	Hybrid Battery Pack Current Sensor Circuit Low
DTC	P0AC2-123	Hybrid Battery Pack Current Sensor Circuit High

DESCRIPTION

• The battery current sensor, which is mounted on the positive cable side of the HV battery assembly, detects the amperage that flows into the HV battery. The battery smart unit inputs a voltage, which varies between 0 and 5 V in proportion to the amperage, into the IB terminal from the battery current sensor. An output voltage of the battery current sensor below 2.5 V indicates that the HV battery is being charged, and above 2.5 V indicates that the HV battery is being discharged. The power management control ECU determines the charging and discharging amperage of the HV battery based on the signals that are input to its IB terminal from the battery smart unit, and calculates the SOC (state of charge) of the HV battery through the accumulated amperage.

6

DTC No.	DTC Detection Condition	Trouble Area
P0ABF-123	When the battery current sensor is abnormal (1 trip detection)	<ul style="list-style-type: none"> Hybrid battery junction block Battery smart unit Wire harness or connector
P0AC1-123		
P0AC2-123		

MONITOR DESCRIPTION

If the battery smart unit detects a malfunction in the battery current sensor, the power management control ECU (HV CPU) illuminates the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0ABF (INF 123): Power-supply circuit for current sensor malfunction (GND short/ +B short) P0AC1 (INF 123): Current sensor circuit malfunction (GND short) P0AC2 (INF 123): Current sensor circuit malfunction (open)
Required sensors / components	Battery current sensor
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0ABF (INF 123) is not detected DTC P0AC1 (INF 123) is not detected DTC P0AC2 (INF 123) is not detected
--------------------	---

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the power switch on (IG) and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure).
4. Turn the power switch off.
5. Turn the power switch on (READY) and turn the Techstream on.
6. Perform the universal trip.
7. Enter the following menus: Powertrain / HV / Trouble Codes.

8. Check that permanent DTCs are cleared.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

CAUTION:

- Before inspecting the high-voltage system, take safety precautions to prevent electrical shocks, such as wearing insulated gloves and removing the service plug grip. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.
- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

At least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

INSPECTION PROCEDURE

CAUTION:

- Before inspecting the high-voltage system, take safety precautions to prevent electrical shocks, such as wearing insulated gloves and removing the service plug grip. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.

- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

At least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

HINT:

After repairing, restart the system (turn the power switch on (READY)) and recheck for DTCs .

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (IGCT VOLTAGE)
----	--

CAUTION:

Be sure to wear insulated gloves.

- (a) Disconnect the cable from the negative (-) battery terminal.
- (b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

- (c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly .
- (d) Connect the cable to the negative (-) battery terminal.
- (e) Turn the power switch on (IG).

(f) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
c1-4 (IGCT) - c1-8 (GND)	Power switch on (IG)	11 to 14 V

- After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.
- Turning the power switch on (IG) with the service plug grip removed causes an interlock switch system DTC (P0A0D-350) to be set. Use the Techstream to clear the DTCs **INFO**.

B ▶ GO TO DTC CHART

A
▼

2.	CHECK CONNECTOR CONNECTION CONDITION
----	--------------------------------------

CAUTION:

Be sure to wear insulated gloves.

- (a) Disconnect the cable from the negative (-) battery terminal.
- (b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly **INFO**.

(d) Check the connections of the j1 connector of the battery smart unit.

OK:

The connectors are connected securely and there are no contact problems.

(e) Install the No. 1 hybrid vehicle battery carrier bracket sub-assembly **INFO**.

(f) Connect the cable to the negative (-) battery terminal.

NG **CONNECT SECURELY**

OK

3. REPLACE BATTERY SMART UNIT

(a) Replace the battery smart unit **INFO**.

NEXT

4. CLEAR DTC (HV)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.

(d) Clear the DTCs and freeze frame data **INFO**.

(e) Perform a road test to charge and discharge the HV battery assembly.

(f) Disconnect the Techstream from the DLC3.

NEXT

5. RECONFIRM DTC OUTPUT (HV)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.

(d) Read output DTCs **INFO**.

Result

Result	Proceed to
Battery temperature sensor DTCs for this diagnostic procedure are not output	A
Battery temperature sensor DTCs for this diagnostic procedure are output	B

HINT:

Turning the power switch on (IG) with the service plug grip removed causes an interlock switch system DTC (P0A0D-350) to be set. Use the Techstream to clear the DTCs .

(e) Disconnect the Techstream from the DLC3.

B ▶ REPLACE HV BATTERY ASSEMBLY

A ▶ RETURN TO NORMAL OPERATION

P3015-123		
P3016-123		
P3017-123		
P3018-123		
P3019-123		
P3020-123		
P3021-123		
P3022-123		
P3023-123		
P3024-123		

HINT:

P3011-123 and P3024-123 will not be set unless the vehicle is driven for approximately 10 minutes after clearing the DTCs.

MONITOR DESCRIPTION

If there is an abnormal internal resistance or electromotive voltage in the battery blocks, the battery smart unit determines that a malfunction has occurred. When the malfunction detection condition is satisfied, the power management control ECU (HV CPU) will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P3011 to P3024 (INF 123): Rationality
--------------	---------------------------------------

Required sensors / components	HV battery
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-
-----------------------------	---

COMPONENT OPERATING RANGE

Battery smart unit	DTC P3011 (INF 123) to P3024 (INF 123) is not detected
--------------------	--

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the power switch on (IG) and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure).
4. Turn the power switch off.
5. Turn the power switch on (READY) and turn the Techstream on.
6. Perform a universal trip.
7. Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
8. Check that permanent DTCs are cleared.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DTC OUTPUT (DTC P0AFC-123 IS OUTPUT)	INFO
----	--	------

B ▶ GO TO DTC CHART

B ▶ REPLACE BATTERY SMART UNIT

A ▶ REPLACE HV BATTERY ASSEMBLY

DTC	U029A-123	Lost Communication with Hybrid Battery Pack Sensor Module
-----	-----------	---

DESCRIPTION

The battery smart unit detects the HV battery conditions (voltage, current, and temperature) and the battery cooling fan voltage, and sends the detected signals to the power management control ECU via the serial communication system.

DTC No.	DTC Detection Condition	Trouble Area
U029A-123	Problem in serial communication between the battery smart unit and power management control ECU (1 trip detection)	<ul style="list-style-type: none"> • Wire harness or connector • Power management control ECU • Battery smart unit • IGCT fuse • IGCT NO. 2 fuse • IGCT relay

MONITOR DESCRIPTION

If a malfunction in communication line between the battery smart unit and power management control ECU (HV CPU) is detected, the power management control ECU (HV CPU) illuminates the MIL and sets a DTC.

MONITOR STRATEGY

Related DTCs	U029A (INF 123): Battery Smart Unit communication malfunction
Required sensors / components	Main: Battery smart unit Sub: Communication line
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property

TYPICAL MALFUNCTION THRESHOLDS

COMPONENT OPERATING RANGE

CONFIRMATION DRIVING PATTERN

c

1. Connect the Techstream to the DLC3.
2. Turn the power switch on (IG) and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure).
4. Turn the power switch off.
5. Turn the power switch on (READY) and after a few seconds, turn the power switch off. [A]
6. Repeat [A] 3 times. [B]
7. Turn the power switch on (IG) and turn the Techstream on.
8. Enter the following menus: Powertrain / Hybrid Control / Trouble Codes. [C]
9. Check that permanent DTCs are cleared.
10. If the permanent DTCs are not cleared, perform the universal trip, and then check for permanent DTCs again.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0AFC-123 INFO.

INSPECTION PROCEDURE

CAUTION:

- If the battery cover is removed, install it before turning the power switch on (IG) or (READY). If the power switch is turned on (IG) or (READY) with the battery cover removed, U029A-123 may be set.
- Before inspecting the high-voltage system, take safety precautions to prevent electrical shocks, such as wearing insulated gloves and removing the service plug grip. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.
- After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

At least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NOTICE:

After the power switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the power switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (IGCT VOLTAGE) 
NG  CHECK FUSE (IGCT, IGCT NO. 2)	
OK 	
2.	CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - BATTERY SMART UNIT)

CAUTION:

Be sure to wear insulated gloves.

- Disconnect the cable from the negative (-) battery terminal.
- Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

- Disconnect the L5 connector from the power management control ECU .
- Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly .
- Disconnect only the c1 connector of the battery smart unit.

(f) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
L5-32 (BTH+) - c1-2 (BTH+)	Power switch off	Below 1 Ω
L5-33 (BTH-) - c1-3 (BTH-)	Power switch off	Below 1 Ω
L5-32 (BTH+) - Body ground and other terminals	Power switch off	10 kΩ or more
L5-33 (BTH-) - Body ground and other terminals	Power switch off	10 kΩ or more

Text in Illustration

*1	Rear view of wire harness connector (to Power Management Control ECU)
*2	Rear view of wire harness connector (to Battery Smart Unit)

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the power switch on (IG).

(i) Measure the voltage according to the value(s) in the table below.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
-------------------	------------------	---------------------

Tester Connection	Switch Condition	Specified Condition
L5-32 (BTH+) - Body ground	Power switch on (IG)	Below 1 V
L5-33 (BTH-) - Body ground	Power switch on (IG)	Below 1 V

NOTICE:

- If the power switch is turned on (IG) with the service plug grip removed, DTC P0A0D-350 for the interlock switch system will be stored. If this DTC is stored, clear the DTC using the Techstream **INFO**.
- If the power switch is turned on (IG) with the connector removed from the sensor, DTCs will be stored. If DTC are stored, clear the DTCs using the Techstream **INFO**.

(j) Connect the c1 connector of the battery smart unit.

(k) Install the No. 1 hybrid vehicle battery carrier bracket sub-assembly **INFO**.

(l) Connect the L5 connector to the power management control ECU **INFO**.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.	CHECK WAVEFORM
----	----------------

CAUTION:

Be sure to wear insulated gloves.

- (a) Disconnect the cable from the negative (-) battery terminal.
- (b) Check that the service plug grip is not installed.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

- (c) Remove the No. 1 hybrid vehicle battery carrier bracket sub-assembly **INFO**.
- (d) Connect the cable to the negative (-) battery terminal.

(e) Connect an oscilloscope between the battery smart unit terminals specified in the table below, and measure the waveform.

Item	Content
Tester Connection	CH1: c1-2 (BTH+) - c1-8 (GND)
	CH2: c1-3 (BTH-) - c1-8 (GND)

Equipment Setting	2 V/DIV., 500 μs/DIV.
Condition	Power switch on (IG)

NOTICE:

- After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.
- If the power switch is turned on (IG) with the service plug grip removed, DTC P0A0D-350 for the interlock switch system will be stored. If this DTC is output, clear the DTC using the Techstream **INFO**.

PRECAUTION

1. PRECAUTIONS FOR INSPECTING HYBRID CONTROL SYSTEM

(a) Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.

NOTICE:

After removing the service plug grip, turning the power switch on (READY) may cause a malfunction. Do not turn the power switch on (READY) unless instructed by the repair manual.

(b) After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

(c) Check the voltage at the terminals in the inspection point in the inverter with converter assembly.

CAUTION:

Be sure to wear insulated gloves.

(1) Remove the 9 bolts and inverter terminal cover. INFO

NOTICE:

Cover the opening with non-residue tape to prevent entry of foreign matter or liquid after removing the connector cover.

(2) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
Inspection point	10 minutes passed after removing the service plug	0 V

HINT:

Set the tester to DC750 V or more to measure the voltage.

(d) When turning the power switch on (IG) during inspections, do not press the power switch with the brake pedal depressed.

CAUTION:

Pressing the power switch with the brake pedal depressed causes the system to enter the READY-on state. This is very dangerous because high voltage may be applied to the inspection area.

(e) Turn the power switch off, wear insulated gloves, and disconnect the cable from the negative (-) terminal of the auxiliary battery before touching any of the orange-colored wires of the high-voltage system.

(f) Turn the power switch off before performing any resistance checks.

(g) Turn the power switch off before disconnecting or reconnecting any connectors.

(h) When high-voltage connectors are removed, wrap the connectors with insulation tape to prevent them from contacting foreign objects.

2. NOTICE FOR HYBRID CONTROL SYSTEM ACTIVATION

(a) When the warning light is illuminated, or the auxiliary battery has been disconnected and reconnected, attempting to turn the power switch on (READY) may not start the system (the system may not enter the READY-on state) on the first attempt. If so, turn the power switch off and reattempt to start the hybrid system.

3. PRECAUTIONS FOR DISCONNECTING AMD TERMINAL

HINT:

The AMD terminal is connected to the positive terminal of the auxiliary battery. To prevent damage when the AMD terminal is being disconnected, use the following procedure.

(a) Be sure to disconnect the cable from the negative (-) terminal of the auxiliary battery before disconnecting the AMD terminal from the engine room junction block assembly.

(b) After disconnecting the AMD terminal, wrap the terminal with insulation tape.

(c) Be sure to reconnect the AMD terminal to the engine room junction block assembly before reconnecting the cable of the negative (-) terminal of the auxiliary battery.

NOTICE:

A short circuit to ground may occur if the AMD terminal is disconnected before the cable is disconnected from the negative (-) terminal of the auxiliary battery. If a short circuit to ground occurs, it can result in an open circuit in a fusible link or fuse.

4. DISCONNECTING AND RECONNECTING NEGATIVE BATTERY CABLE

(a) Before performing work on electronic components, disconnect the cable from the negative (-) battery terminal to prevent damage to the electrical system or electrical components.

Text in Illustration

*1	Negative (-) Battery Terminal
*2	Cable

(b) Before disconnecting and reconnecting the battery cable, turn the power switch off and the headlight switch off. Then loosen the terminal nut completely. Do not damage the cable or terminal.

(c) When the battery cable is disconnected, the clock and radio settings and stored DTCs are cleared. Therefore, before disconnecting the battery cable, make a note of them.

- When the cable is disconnected from the negative (-) battery terminal, initialize the following system(s) after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	INFO

DEFINITION OF TERMS

Terms	Definition
Monitor Description	Description of what the power management control ECU (HV CPU) monitors and how to detects malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble codes that are output by the power management control ECU (HV CPU) based on the same malfunction detection logic.
Typical Enabling Condition	<p>Preconditions that allow the power management control ECU (HV CPU) to detect malfunctions.</p> <p>With all preconditions satisfied, the power management control ECU (HV CPU) sets DTCs when the monitored value(s) exceeds malfunction threshold(s).</p>
Sequence of Operation	<p>Order of monitor priority, applied if multiple sensors and components are involved in a single malfunction detection process.</p> <p>Each sensor and component are monitored in turn and subsequent items are not monitored until the previous detection operation completes.</p>
Required Sensor/Components	Sensors and components used by the power management control ECU (HV CPU) to detect each malfunction.
Frequency of Operation	<p>Number of times the power management control ECU (HV CPU) checks for each malfunction during each driving cycle.</p> <p>"Once per driving cycle" means that the power management control ECU (HV CPU) only checks for malfunctions once during a single driving cycle.</p> <p>"Continuous" means that the power management control ECU (HV CPU) checks for malfunctions whenever enabling conditions are met.</p>
Duration	Minimum time for which the power management control ECU (HV CPU) must detect continuous deviation in monitored value(s) in order to set a DTC. Timing begins when typical enabling conditions are met.
Malfunction Thresholds	Value beyond which the power management control ECU (HV CPU) determines malfunctions exist and sets DTCs.
MIL Operation	<p>Timing of MIL illumination after a malfunction is detected.</p> <p>"Immediate" means that the power management control ECU (HV CPU) illuminates the MIL as soon as a malfunction is detected.</p> <p>"2 driving cycles" means that the power management control ECU (HV CPU) illuminates the MIL if the same malfunction is detected again during the next driving cycle.</p>

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

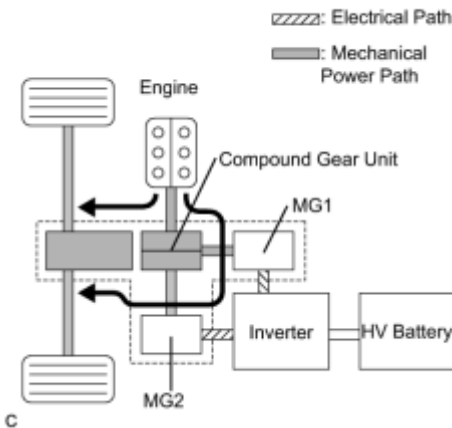

1. BASIC OPERATION

(a) This system generates a motive force in combination with the engine, MG1 and MG2 in accordance with the driving conditions. Representative examples of the various combinations are described below.

(b) Operation:

(1) Supply of electrical power from the HV battery to MG2 provides force to drive the front wheels.

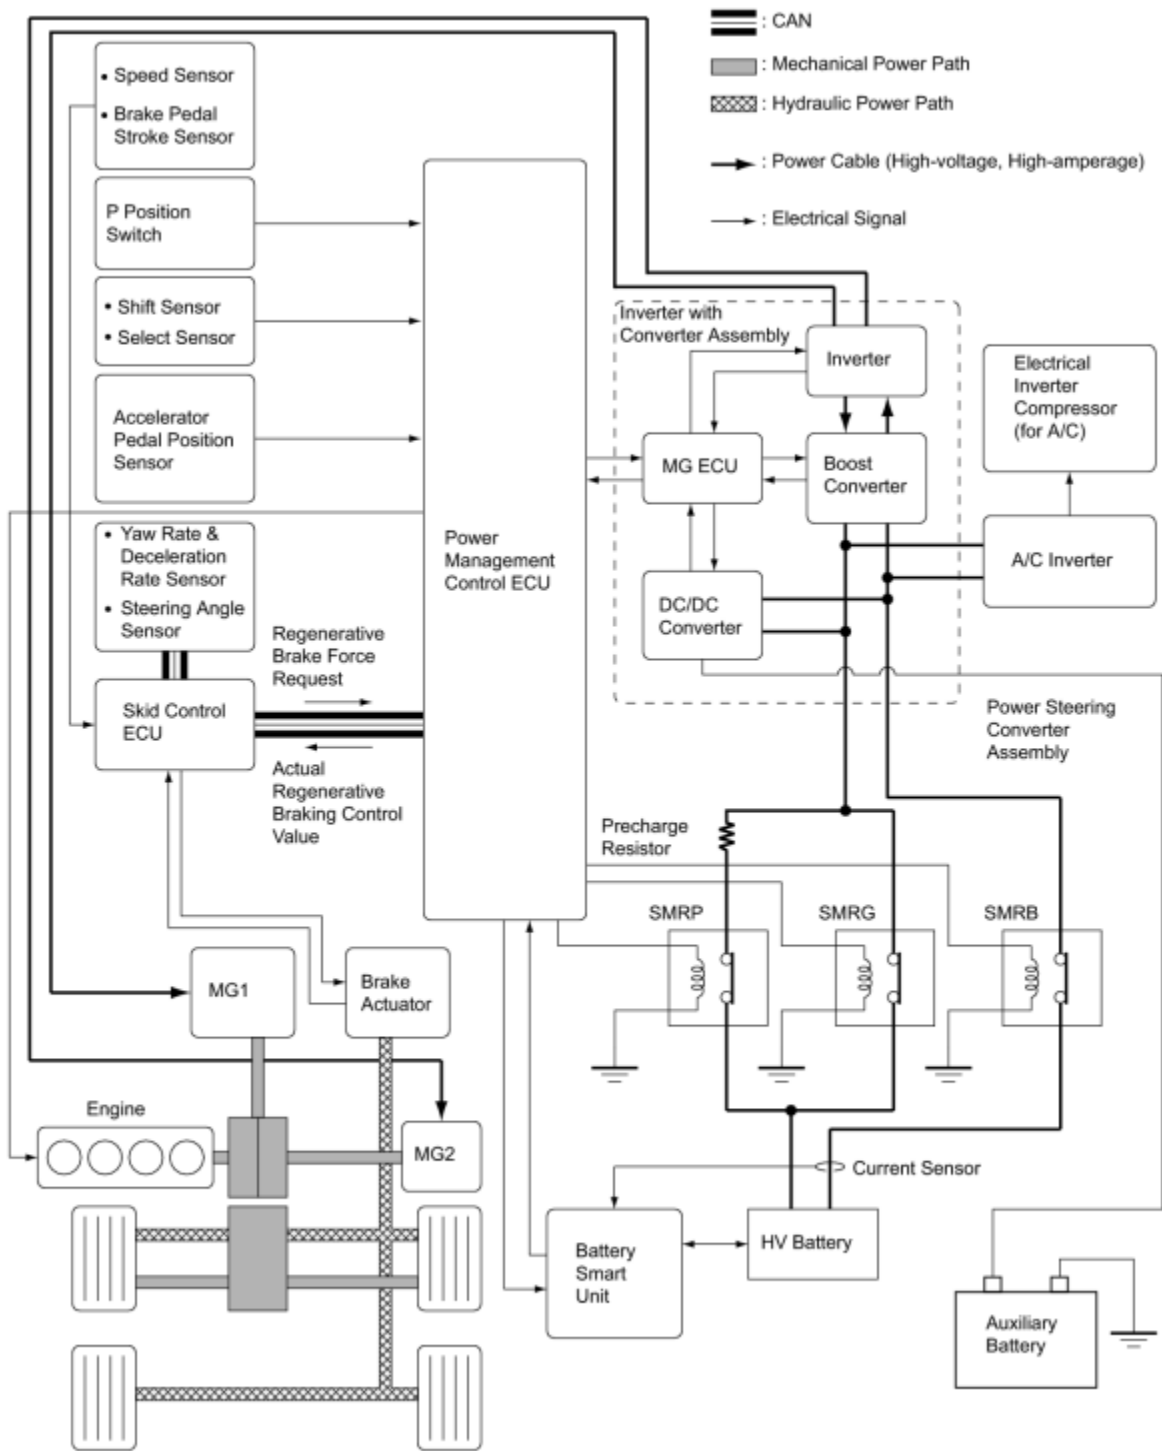

(2) While the front wheels are being driven by the engine via the planetary gears, MG1 is driven by the engine via the planetary gears, in order to supply the generated electricity to MG2.

(3) MG1 is rotated by the engine via the planetary gears, in order to charge the HV battery.

(4) When the vehicle is decelerating, kinetic energy from the front wheels is recovered and converted into electrical energy and used to recharge the HV battery by means of MG2.

2. SYSTEM DIAGRAM

3. FUNCTION OF MAIN COMPONENTS

Component	Function
Power Management Control ECU (HV CPU)	<ul style="list-style-type: none"> • Performs comprehensive control of the hybrid system. • Information from various sensors as well as from ECUs

Component		Function	
		<p>(ECM, MG ECU, battery smart unit and skid control ECU) is received, and based on this the required torque and output power is calculated. The power management control ECU (HV CPU) transmits the calculated result to the ECM, MG ECU and skid control ECU.</p> <ul style="list-style-type: none"> • Monitors the SOC of the HV battery. • Controls the DC-DC converter. • Controls the HV water pump with motor. • Controls the HV battery cooling blower. 	
Hybrid Vehicle Transaxle Assembly	Motor Generator 1 (MG1)	MG1, which is driven by the engine, generates high-voltage electricity in order to operate MG2 and charge the HV battery. Also, it functions as a starter to start the engine.	
	Motor Generator 2 (MG2)	<ul style="list-style-type: none"> • MG2, which is driven by electrical power from MG1 and the HV battery, generates motive force for the drive wheels. • During braking, or when the accelerator pedal is not depressed, it generates high-voltage electricity to recharge the HV battery. 	
	Resolver (for MG1/for MG2)	Detects the rotor position, rotational speed and direction of MG1 and MG2.	
	Temperature Sensor (for MG1/for MG2)	Detects the temperature of MG1 and MG2.	
	Compound Gear Unit	Power Split Planetary Gear Unit	Distributes the engine motive force as appropriate to directly drive the vehicle as well as MG1.
		Motor Speed Reduction Planetary Gear Unit	Reduces the rotational speed of MG2 in accordance with the characteristics of the planetary gear, in order to increase torque.
Inverter with Converter Assembly	Inverter	Converts the direct current from the boost converter into the alternating current for MG1 and MG 2, and vice versa (from AC to DC).	
	Boost Converter	Boosts the HV battery nominal voltage of DC 201.6 V up to a maximum voltage of DC 650 V and vice versa (drops DC 650 V to DC 201.6 V).	
	DC-DC Converter	Drops the HV battery nominal voltage of DC 201.6 V to approximately DC 14 V in order to supply electricity to the electrical components, as well as to recharge the auxiliary battery.	
	MG ECU	Controls the inverter and boost converter in accordance with the signals received from the power management control ECU (HV CPU), thus operating MG1 and MG2 as either a generator or motor.	
	Atmospheric Pressure Sensor	Detects the atmospheric pressure.	

Component		Function
	Temperature Sensor (for Inverter with Converter Assembly)	Detects temperatures in the parts of the inverter with converter assembly as well as the HV coolant temperature.
	Inverter Current Sensor	Detects the current of MG1 and MG2.
HV Battery Assembly	HV Battery (Battery Modules)	<ul style="list-style-type: none"> Supplies electrical power to MG1 and MG2 in accordance with the driving conditions of the vehicle. Recharged by MG1 and MG2 in accordance with the SOC and the driving conditions of the vehicle.
	HV Battery Temperature Sensor	Detects temperatures in the parts of the HV battery and the Intake air temperature from the HV battery cooling blower.
HV Junction Block Assembly	System Main Relays	Connects and disconnects the high-voltage circuit between the HV battery and the inverter with converter assembly, through the use of the signals from the power management control ECU (HV CPU).
	HV Battery Current Sensor	Detects the input and output current of the HV battery.
Battery Smart Unit		<ul style="list-style-type: none"> Monitors the conditions of the HV battery such as voltage, current and temperature, and transmits this information to the power management control ECU (HV CPU). Monitors the high-voltage system for breakdown of the electrical insulation.
Service Plug Grip		Shuts off the high-voltage circuit of the HV battery when the service plug grip is removed for vehicle inspection or maintenance.
Interlock Switch (for Service Plug Grip/for Inverter Terminal Cover/for Power Cable Connector)		Verifies that the service plug grip, inverter terminal cover and inverter power cable connector are installed.
Power Cable		Connects the HV battery, inverter with converter assembly, hybrid vehicle transaxle assembly and cooler compressor with motor assembly.
Water Pump with Motor Assembly		Operates by the signal from the power management control ECU (HV CPU) in order to cool the inverter with converter assembly and MG1.
HV Battery Cooling Blower		Operates by the signal from the power management control ECU (HV CPU) in order to cool the HV battery.
Auxiliary Battery Temperature Sensor		Detects the temperature of the auxiliary battery.
Accelerator Pedal Position Sensor		Converts the accelerator pedal position into an electrical signal and outputs it to the power management control ECU (HV CPU).
Selector Lever Position Sensor		Converts the selector lever operation into an electrical signal and outputs it to the power management control ECU (HV CPU).
P Position Switch		Outputs the P position switch signal to the power management control ECU (HV CPU) when operated by the driver.
EV Drive Mode Switch		Outputs the EV drive mode switch signal to the power management control ECU (HV CPU) when operated by the driver.
PWR MODE Switch		Outputs the PWR MODE switch signal to the power management

Component	Function
	control ECU (HV CPU) via the ECM when operated by the driver.
ECO MODE Switch	Outputs the ECO MODE switch signal to the power management control ECU (HV CPU) via the air conditioning amplifier when operated by the driver.
Air Conditioning Amplifier	Transmits various A/C state signals to the power management control ECU (HV CPU).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- *: Use the Techstream
- Use the following procedure to troubleshoot the hybrid control system.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. CUSTOMER PROBLEM ANALYSIS

NEXT

3. CONNECT TECHSTREAM TO THE DLC3*

HINT:

If the display on the tester indicates a communication fault, inspect the DLC3.

NEXT

4. CHECK DTC AND SAVE FREEZE FRAME DATA* INFO

HINT:

- Make sure to save freeze frame data because the data is necessary for a simulation test.
- For the hybrid vehicle control system, there are many DTCs, many of which can be stored due to a single malfunction. As a result, in some of the diagnosis procedures an instruction is provided to check for other DTCs and their corresponding INF codes. By following the diagnosis path based on the combination of output DTCs and INF codes, it is possible to narrow down the problem early and avoid unnecessary diagnosis.

NEXT

5. CLEAR DTC AND FREEZE FRAME DATA* INFO

NEXT

6. CONDUCT VISUAL INSPECTION

NEXT

7. CONFIRM PROBLEM SYMPTOMS

CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

(a) Perform a simulation test **INFO**.

(1) For the simulation test, reproduce the driving conditions that were present when the trouble occurred. These conditions should be based on the customer's comments and freeze frame data that is recorded with DTCs, such as the opening angle of the accelerator pedal, SOC (state of charge), engine coolant temperature, engine rpm, and MG1/MG2 rpm and torque.

(b) Check the connector(s) and terminal(s) **INFO**.

(c) Wiggle the harness and connector(s) **INFO**.

(d) Heat or cool suspected parts **INFO**.

REGISTRATION

NOTICE:

The Vehicle Identification Number (VIN) must be input into the replacement power management control ECU.

HINT:

The VIN is in a 17-digit alphanumeric vehicle identification number. The Techstream is required to register the VIN.

1. DESCRIPTION

(a) Read VIN: This process allows the VIN stored in the power management control ECU to be read, in order to confirm that the two VINs, provided with the vehicle and stored in the power management control ECU, are the same.

(b) Write VIN: This process allows the VIN to be input into the power management control ECU. If the power management control ECU is changed, or the power management control ECU VIN and the vehicle VIN do not match, the VIN can be registered, or overwritten in the power management control ECU by following this procedure.

2. READ VIN

(a) Confirm the vehicle VIN.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Hybrid Control / Utility / VIN / VIN Read.

3. WRITE VIN

(a) Confirm the vehicle VIN.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Hybrid Control / Utility / VIN / VIN Write.

TERMINALS OF ECU

Power Management Control ECU

Power management control ECU

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A21-2 (+B2) - L5-6 (E1)	L - BR	Power Source	Power switch on (IG)	11 to 14 V
A21-4 (FCTL) - L5-5 (E01)	BR - W- B	Cooling fan relay signal	Power switch on (IG)	Below 2 V
A21-11 (VLO) - L5-6 (E1)	R - BR	DC/DC operation monitor / voltage change signal	Power switch on (IG)	Pulse generation (Waveform 1)
A21-13 (IWP) - L5-6 (E1)	G - BR	Water pump with motor assembly signal	Power switch on (READY)	Pulse generation (Waveform 2)
A21-14 (NIWP) - L5-6 (E1)	P - BR	Water pump with motor assembly signal	Power switch on (READY)	Pulse generation (Waveform 2)
A21-15 (BL) - L5-6 (E1)	R - BR	Back up light	Power switch on (IG), selector lever in R	11 to 14 V
A21-16 (GI) - L5-6 (E1)	Y - BR	Camshaft position sensor signal	Power switch on (READY), with engine running	Pulse generation (Waveform 3)
A21-19 (CLK) - L5-6 (E1)	G - BR	A/C communication signal	Power switch on (READY), air conditioning system stopped	Pulse generation

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
				(Waveform 4)
A21-20 (STB) - L5-6 (E1)	W - BR	A/C communication signal	Power switch on (READY), air conditioning system stopped	Pulse generation (Waveform 4)
A21-21 (NODD) - L5- 6 (E1)	W - BR	DC/DC operation	Converter operating normally	5 to 7 V
A21-21 (NODD) - L5- 6 (E1)	W - BR	DC/DC operation	Converter not operating normally	2 to 4 V
A21-21 (NODD) - L5- 6 (E1)	W - BR	DC/DC operation	Converter operating prohibited	0.1 to 0.5 V
A21-24 (MMT) - A21- 25 (MMTG)	L - BR	Motor temperature sensor	Power switch on (IG), temperature 77°F (25°C)	3.6 to 4.6 V
A21-24 (MMT) - A21- 25 (MMTG)	L - BR	Motor temperature sensor	Power switch on (IG), temperature 140°F (60°C)	2.2 to 3.2 V
A21-26 (GMT) - A21-27 (GMTG)	B - R	Generator temperature sensor	Power switch on (IG), temperature 77°F (25°C)	3.6 to 4.6 V
A21-26 (GMT) - A21-27 (GMTG)	B - R	Generator temperature sensor	Power switch on (IG), temperature 140°F (60°C)	2.2 to 3.2 V
A21-29 (SI0) - L5-6 (E1)	Y - BR	HV battery blower fan	Power switch on (IG), during Active Test	Pulse generation (Waveform 5)
A21-30 (ETI) - L5-6 (E1)	R - BR	A/C communication signal	Power switch on (READY), air conditioning system stopped	Pulse generation (Waveform 4)
A21-31 (ITE) - L5-6 (E1)	Y - BR	A/C communication signal	Power switch on (READY), air conditioning system stopped	Pulse generation (Waveform 4)

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A21-32 (ILK) - L5-6 (E1)	V - BR	Interlock switch	Power switch on (IG), inverter terminal cover, high-voltage input cables and service plug grip installed correctly	0 to 1.5 V
A21-32 (ILK) - L5-6 (E1)	V - BR	Interlock switch	Power switch on (IG), inverter terminal cover, high-voltage input cables or service plug grip not installed	11 to 14 V
A22-1 (IG2) - L5-6 (E1)	R - BR	Power source	Power switch on (IG)	11 to 14 V
A22-2 (IG2D) - L5-6 (E1)	V - BR	IG2 relay	Power switch on (IG)	11 to 14 V
A22-5 (+B1) - L5-6 (E1)	L - BR	Power source	Power switch on (IG)	11 to 14 V
A22-6 (MREL) - L5-6 (E1)	BE - BR	Main relay	Power switch on (IG)	11 to 14 V
A22-7 (ST1-) - L5-6 (E1)	R - BR	Brake cancel switch	Power switch on (IG), brake pedal depressed	0 to 1.5 V
A22-7 (ST1-) - L5-6 (E1)	R - BR	Brake cancel switch	Power switch on (IG), brake pedal released	11 to 14 V
A22-18 (VCP1) - A22- 34 (EP1)	Y - B	Accelerator pedal position sensor power source (for VPA1)	Power switch on (IG)	4.5 to 5.5 V
A22-19 (VCP2) - A22- 35 (EP2)	G - R	Accelerator pedal position sensor power source (for VPA2)	Power switch on (IG)	4.5 to 5.5 V
A22-20 (CLK-) - L5-6 (E1)	W - BR	MG communication clock signal	Power switch on (IG)	Pulse generation (Waveform 6)
A22-21 (CLK+) - L5-6 (E1)	B - BR	MG communication clock signal	Power switch on (IG)	Pulse generation (Waveform 6)
A22-22 (PCON) - L5-6 (E1)	LG - BR	P position switch signal	Power switch on (IG), park (P) selected	Pulse generation (Waveform 7)
A22-23 (STP) - L5-6 (E1)	L - BR	Stop light switch	Brake pedal depressed	11 to 14 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A22-23 (STP) - L5-6 (E1)	L - BR	Stop light switch	Brake pedal released	0 to 1.5 V
A22-24 (HTM+) - L5-6 (E1)	B - BR	Communication signal from power management control ECU (HV CPU) to MG ECU	Power switch on (IG)	Pulse generation (Waveform 8)
A22-25 (HTM-) - L5-6 (E1)	W - BR	Communication signal from power management control ECU (HV CPU) to MG ECU	Power switch on (IG)	Pulse generation (Waveform 8)
A22-26 (VPA1) - A22- 34 (EP1)	L - B	Accelerator pedal position sensor (for accelerator pedal position detection)	Power switch on (IG), accelerator pedal released	0.4 to 1.4 V
A22-26 (VPA1) - A22- 34 (EP1)	L - B	Accelerator pedal position sensor (for accelerator pedal position detection)	Power switch on (IG) engine stopped, park (P) selected, accelerator pedal fully depressed	2.6 to 4.5 V
A22-27 (VPA2) - A22- 35 (EP2)	W - R	Accelerator pedal position sensor (for accelerator pedal position detection)	Power switch on (IG), accelerator pedal released	1.0 to 2.2 V
A22-27 (VPA2) - A22- 35 (EP2)	W - R	Accelerator pedal position sensor (for accelerator pedal position detection)	Power switch on (IG) engine stopped, park (P) selected, accelerator pedal fully depressed	3.4 to 5.3 V
A22-28 (PPOS) - L5-6 (E1)	W - BR	P position switch signal	Power switch on (IG), park (P) selected	Pulse generation (Waveform 7)
A22-29 (MTH-) - L5-6 (E1)	W - BR	Communication signal from MG ECU to power management control ECU (HV CPU)	Power switch on (IG)	Pulse generation (Waveform 9)
A22-30 (MTH+) - L5-6 (E1)	B - BR	Communication signal from MG ECU to power management control ECU (HV CPU)	Power switch on (IG)	Pulse generation (Waveform 9)
A22-31 (HSDN) - L5-6 (E1)	B - BR	MG ECU shutdown signal	Power switch on (READY)	0 to 1.5 V
A22-32 (REQ-) - L5-6 (E1)	W - BR	MG ECU communication request signal	Power switch on (IG)	Pulse

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
				generation (Waveform 10)
A22-33 (REQ+) - L5-6 (E1)	B - BR	MG ECU communication request signal	Power switch on (IG)	Pulse generation (Waveform 10)
L5-1 (AM22) - L5-6 (E1)	W - BR	Constant power source	Power switch on (IG)	11 to 14 V
L5-1 (AM22) - L5-6 (E1)	W - BR	Constant power source	Power switch on (READY)	11 to 15.5 V
L5-2 (SMRG) - L5-5 (E01)	Y - W-B	System main relay	Power switch on (IG)→Power switch on (READY)	Pulse generation (Waveform 11)
L5-3 (SMRP) - L5-5 (E01)	W - W- B	System main relay	Power switch on (IG)→Power switch on (READY)	Pulse generation (Waveform 11)
L5-4 (SMRB) - L5-5 (E01)	SB - W- B	System main relay	Power switch on (IG)→Power switch on (READY)	Pulse generation (Waveform 11)
L5-7 (SSW1) - L5-6 (E1)	B - BR	Power switch	Power switch pressed and held	0 to 1.5 V
L5-11 (TC) - L5-6 (E1)	P - BR	Diagnosis terminal	Power switch on (IG)	11 to 14 V
L5-13 (EVSW) - L5-6 (E1)	B - BR	EV switch signal	Power switch on (IG), EV switch off	11 to 14 V
L5-13 (EVSW) - L5-6 (E1)	B - BR	EV switch signal	Power switch on (IG), EV switch off	0 to 1.5 V
L5-14 (SPDI) - L5-6 (E1)	V - BR	Vehicle speed signal	Approximately 12 mph (20 km/h)	Pulse generation (Waveform 12)
L5-16 (P1) - L5-6 (E1)	Y - BR	P position switch signal	Power switch on (IG), P position switch off	7 to 12 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L5-16 (P1) - L5-6 (E1)	Y - BR	P position switch signal	Power switch on (IG), P position switch on	3 to 5 V
L5-17 (VCX4) - L5-6 (E1)	P - BR	Select position sensor power source (VCX4)	Power switch on (IG)	11 to 14 V
L5-18 (VSX4) - L5-6 (E1)	LG - BR	Select position sensor (Sub)	Power switch on (IG), selector lever in home position	0.5 to 0.2 V
L5-18 (VSX4) - L5-6 (E1)	LG - BR	Select position sensor (Sub)	Power switch on (IG), selector lever in R, N or D	3.0 to 4.85 V
L5-19 (VCX3) - L5-6 (E1)	W - BR	Select position sensor power source (VSX3)	Power switch on (IG)	11 to 14 V
L5-20 (VSX3) - L5-6 (E1)	BR - BR	Select position sensor (Main)	Power switch on (IG), selector lever in home position	0.5 to 0.2 V
L5-20 (VSX3) - L5-6 (E1)	BR - BR	Select position sensor (Main)	Power switch on (IG), selector lever in R, N or D	3.0 to 4.85 V
L5-21 (VCX2) - L5-23 (E2X2)	G - Y	Shift position sensor power source (VSX2)	Power switch on (IG)	4.5 to 5.5 V
L5-22 (VSX2) - L5-23 (E2X2)	L - Y	Shift position sensor (Sub)	Power switch on (IG), shift lever in home position	2.0 to 3.0 V
L5-22 (VSX2) - L5-23 (E2X2)	L - Y	Shift position sensor (Sub)	Power switch on (IG), selector lever in R	0.2 to 1.0 V
L5-22 (VSX2) - L5-23 (E2X2)	L - Y	Shift position sensor (Sub)	Power switch on (IG), selector lever in B or D	4.0 to 4.8 V
L5-25 (VSX1) - L5-24 (E2X1)	B - R	Shift position sensor (Main)	Power switch on (IG), selector lever in home position	2.0 to 3.0 V
L5-25 (VSX1) - L5-24 (E2X1)	B - R	Shift position sensor (Main)	Power switch on (IG), selector lever in R	0.2 to 1.0 V
L5-25 (VSX1) - L5-24 (E2X1)	B - R	Shift position sensor (Main)	Power switch on (IG), selector lever in B or D	4.0 to 4.8 V
L5-26 (VCX1) - L5-24 (E2X1)	W - R	Shift position sensor power source (VSX1)	Power switch on (IG)	4.5 to 5.5 V
L5-28 (THB) - L5-30 (ETHB)	L - V	Auxiliary battery temperature	Power switch on (IG), auxiliary battery temperature 77°F (25°C)	1.7 to 2.3 V
L5-28 (THB) - L5-30 (ETHB)	L - V	Auxiliary battery temperature	Power switch on (IG), auxiliary battery temperature 140°F (60°C)	0.6 to 0.9 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L5-29 (ABFS) - L5-6 (E1)	B - BR	Airbag activation signal	Power switch on (READY) (2 seconds after power switch on (ACC))	Pulse generation (Waveform 13)
L5-32 (BTH+) - L5-6 (E1)	R - BR	Communication signal from battery smart unit to power management control ECU (HV CPU)	Power switch on (IG)	Pulse generation (Waveform 14)
L5-33 (BTH-) - L5-6 (E1)	G - BR	Communication signal from battery smart unit to power management control ECU (HV CPU)	Power switch on (IG)	Pulse generation (Waveform 14)
L5-34 (CA2H) - L5-6 (E1)	P - BR	CAN communication system	Power switch on (IG)	Pulse generation (Waveform 15)
L5-35 (CA2L) - L5-6 (E1)	V - BR	CAN communication system	Power switch on (IG)	Pulse generation (Waveform 15)
L6-1 (ACCD) - L5-6 (E1)	G - BR	ACC relay	Power switch on (ACC)	11 to 14 V
L6-2 (IG1D) - L5-6 (E1)	B - BR	IG1 relay	Power switch on (IG)	11 to 14 V
L6-7 (AM21) - L5-6 (E1)	W - BR	Constant power source	Power switch on (IG)	11 to 14 V
L6-7 (AM21) - L5-6 (E1)	W - BR	Constant power source	Power switch on (READY)	11 to 15.5 V
L6-11 (LIN2) - L5-6 (E1)	L - BR	LIN communication system	Power switch on (IG), brake pedal depressed	Pulse generation
L6-17 (SSW2) - L5-6 (E1)	Y - BR	Power switch	Power switch pressed and held	0 to 1.5 V
L6-20 (IMO) - L5-6 (E1)	L - BR	Immobiliser communication	Immobiliser communicating	Pulse generation (Waveform 16)
L6-21 (IMI) -	R - BR	Immobiliser communication	Immobiliser communicating	Pulse

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L5-6 (E1)				generation (Waveform 16)
L6-24 (CA1L) - L5-6 (E1)	W - BR	CAN communication system	Power switch on (IG)	Pulse generation (Waveform 17)
L6-25 (CA1H) - L5-6 (E1)	B - BR	CAN communication system	Power switch on (IG)	Pulse generation (Waveform 17)
L6-30 (CA3N) - L5-6 (E1)	L - BR	CAN communication system	Power switch on (IG)	Pulse generation (Waveform 18)
L6-31 (CA3P) - L5-6 (E1)	LG - BR	CAN communication system	Power switch on (IG)	Pulse generation (Waveform 18)

1. Oscilloscope waveforms

HINT:

Oscilloscope waveform samples are provided here for informational purposes. Noise and fluttering waveforms have been omitted.

(a) Waveform 1 (DC/DC operation monitor / voltage change signal)

Item	Content
Terminal	A21-11 (VLO) - L5-6 (E1)
Equipment Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (IG)

HINT:

The cycle will vary depending on the specified voltage of the hybrid vehicle converter.

(b) Waveform 2 (HV water pump signal)

Item	Content
Terminal	CH1: A21-13 (IWP) - L5-6 (E1) CH2: A21-14 (NIWP) - L5-6 (E1)
Equipment Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (READY)

(c) Waveform 3 (GI signal)

Item	Content
Terminal	A21-16 (GI) - L5-6 (E1)
Equipment Setting	5 V/DIV., 20 ms./DIV.
Condition	Power switch on (READY) with engine running

HINT:

The pulse cycle becomes shorter as the engine speed increases.

(d) Waveform 4 (A/C communication signal)

Item	Content
Terminal	CH1: A21-19 (CLK) - L5-6 (E1) CH2: A21-31 (ITE) - L5-6 (E1) CH3: A21-30 (ETI) - L5-6 (E1) CH4: A21-20 (STB) - L5-6 (E1)
Equipment Setting	10 V/DIV., 100 ms./DIV.
Condition	Power switch on (READY) with air conditioning system stopped

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(e) Waveform 5 (HV battery blower fan operation signal)

Item	Content
Terminal	CH1: A21-29 (SI0) - L5-6 (E1) CH2: A21-4 (FCTL) - L5-5 (E01)

Equipment Setting	10 V/DIV., 1 ms./DIV.
Condition	Power switch on (READY), with air conditioning system stopped

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(f) Waveform 6 (MG communication clock signal)

Item	Content
Terminal	CH1: A22-21 (CLK+) - L5-6 (E1) CH2: A22-20 (CLK-) - L5-6 (E1)
Equipment Setting	1 V/DIV., 1 μs./DIV.
Condition	Power switch on (READY)

(g) Waveform 7 (P position signal)

Item	Content
Terminal	CH1: A22-22 (PCON) - L5-6 (E1) CH2: A22-28 (PPOS) - L5-6 (E1)
Equipment Setting	5 V/DIV., 20 ms./DIV.
Condition	Power switch on (IG)

(h) Waveform 8 (communication signal from power management control ECU (HV CPU) to MG ECU)

Item	Content
Terminal	CH1: A22-24 (HTM+) - L5-6 (E1) CH2: A22-25 (HTM-) - L5-6 (E1)
Equipment Setting	1 V/DIV., 200 μs./DIV.
Condition	Power switch on (READY)

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(i) Waveform 9 (communication signal from MG ECU to power management control ECU (HV CPU))

Item	Content
Terminal	CH1: A22-30 (MTH+) - L5-6 (E1) CH2: A22-29 (MTH-) - L5-6 (E1)
Equipment Setting	1 V/DIV., 200 μs./DIV.
Condition	Power switch on (READY)

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(j) Waveform 10 (MG ECU communication request signal)

Item	Content
Terminal	CH1: A22-33 (REQ+) - L5-6 (E1) CH2: A22-32 (REQ-) - L5-6 (E1)
Equipment Setting	1 V/DIV., 1 ms./DIV.
Condition	Power switch on (READY)

(k) Waveform 11 (system main relay operation signal)

Item	Content
Terminal	CH1: L5-3 (SMRP) - L5-5 (E01) CH2: L5-4 (SMRB) - L5-5 (E01) CH3: L5-2 (SMRG) - L5-5 (E01)
Equipment Setting	10 V/DIV., 200 ms./DIV.
Condition	Power switch on (IG) → Power switch on (READY)

(l) Waveform 12 (vehicle speed signal)

Item	Content
Terminal	L5-14 (SPDI) - L5-6 (E1)
Equipment Setting	5 V/DIV., 20 ms./DIV.
Condition	Driving at approximately 12 mph (20 km/h) with power switch on (READY)

HINT:

The higher the vehicle speed, the shorter the cycle.

(m) Waveform 13 (airbag deployment signal)

c

Item	Content
Terminal	L5-29 (ABFS) - L5-6 (E1)
Equipment Setting	5 V/DIV., 500 ms./DIV.
Condition	Power switch on (READY)

(n) Waveform 14 (communication signal from battery smart unit to power management control ECU (HV CPU))

c

Item	Content
Terminal	CH1: L5-32 (BTH+) - L5-6 (E1) CH2: L5-33 (BTH-) - L5-6 (E1)
Equipment Setting	2 V/DIV., 500 μs./DIV.
Condition	Power switch on (IG)

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(o) Waveform 15 (CAN communication signal)

c

Item	Content
Terminal	CH1: L5-34 (CA2H) - L5-6 (E1) CH2: L5-35 (CA2L) - L5-6 (E1)
Equipment Setting	1 V/DIV., 50 μs./DIV.
Condition	Power switch on (IG)

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(p) Waveform 16 (immobilizer communication signal)

c

Item	Content
Terminal	CH1: L6-20 (IMO) - L5-6 (E1) CH2: L6-21 (IMI) - L5-6 (E1)
Equipment Setting	5 V/DIV., 200 ms./DIV.
Condition	Power switch off → Power switch on (IG) → Power

	switch on (READY)
--	-------------------

(q) Waveform 17 (CAN communication signal)

Item	Content
Terminal	CH1: L6-25 (CA1H) - L5-6 (E1) CH2: L6-24 (CA1L) - L5-6 (E1)
Equipment Setting	1 V/DIV., 50 μ s./DIV.
Condition	Power switch on (IG)

c

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(r) Waveform 18 (CAN communication signal)

Item	Content
Terminal	CH1: L6-31 (CA3P) - L5-6 (E1) CH2: L6-30 (CA3N) - L5-6 (E1)
Equipment Setting	1 V/DIV., 50 μ s./DIV.
Condition	Power switch on (IG)

c

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

Inverter with Converter Assembly

c

HINT:

Since the inverter with converter assembly uses waterproof connectors, the voltage and waveform cannot be inspected directly. Standard voltage readings and waveforms are indicated for reference only.

Inverter with converter assembly

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Standard Condition
A59-1 (IGCT) - A59-28 (GND1)	B - W-B	MG ECU power source	Power switch on (IG)	11 to 14 V
A59-2 (IDH) - A59-28 (GND1)	L - W-B	PTC heater prohibit signal	Power switch on (IG)	4 to 6 V
A59-3 (VLO) - A59-28 (GND1)	R - W-B	DC/DC operation monitor / voltage change signal	Power switch on (IG)	Pulse generation (Waveform 1)
A59-5 (CLK+) - A59-28 (GND1)	B - W-B	Communication clock signal	Power switch on (READY)	Pulse generation (Waveform 2)
A59-6 (REQ+) - A59-28 (GND1)	B - W-B	Communication request signal	Power switch on (READY)	Pulse generation (Waveform 3)
A59-7 (MTH+) - A59-28 (GND1)	B - W-B	Communication signal from MG ECU to power management control ECU (HV CPU)	Power switch on (READY)	Pulse generation (Waveform 4)
A59-8 (HTM+) - A59-28 (GND1)	B - W-B	Communication signal from power management control ECU (HV CPU) to MG ECU	Power switch on (READY)	Pulse generation (Waveform 5)
A59-11 (S) - A59-28 (GND1)	W - W-B	Auxiliary battery voltage monitor	Power switch on (IG)	11 to 14 V
A59-12 (NODD) - A59- 28 (GND1)	W - W-B	DC/DC operation	Converter operating normally	5 to 7 V
A59-12 (NODD) - A59-	W - W-B	DC/DC operation	Converter not operating normally	2 to 4 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Standard Condition
28 (GND1)				
A59-12 (NODD) - A59- 28 (GND1)	W - W-B	DC/DC operation	Converter operation prohibited	0.1 to 0.5 V
A59-15 (CLK-) - A59-28 (GND1)	W - W-B	Communication clock signal	Power switch on (READY)	Pulse generation (Waveform 2)
A59-16 (REQ-) - A59-28 (GND1)	W - W-B	Communication request signal	Power switch on (READY)	Pulse generation (Waveform 3)
A59-17 (MTH-) - A59-28 (GND1)	W - W-B	Communication signal from MG ECU to power management control ECU (HV CPU)	Power switch on (READY)	Pulse generation (Waveform 4)
A59-18 (HTM-) - A59-28 (GND1)	W - W-B	Communication signal from power management control ECU (HV CPU) to MG ECU	Power switch on (READY)	Pulse generation (Waveform 5)
A59-29 (GI) - A59-28 (GND1)	B - W-B	GI signal	Power switch on (READY), with engine running	Pulse generation (Waveform 6)
A59-31 (HSDN) - A59- 28 (GND1)	B - W-B	MG shutdown signal	Power switch on (READY)	0 to 1 V
A59-35 (ILKI) - A59-28 (GND1)	V - W-B	Interlock switch signal	Power switch on (IG), inverter terminal cover, high-voltage input cables and service plug grip installed correctly	Below 1 V
A59-35 (ILKI) - A59-28 (GND1)	V - W-B	Interlock switch signal	Power switch on (IG), inverter terminal cover, high-voltage input cables or service plug grip not installed	11 to 14
A59-36 (ILKO) - A59-28 (GND1)	LG - W- B	Interlock switch signal	Power switch on (IG), inverter terminal cover, high-voltage input cables and service plug grip installed correctly	Below 1 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Standard Condition
A59-36 (ILKO) - A59-28 (GND1)	LG - W- B	Interlock switch signal	Power switch on (IG), inverter terminal cover, high-voltage input cables or service plug grip not installed	11 to 14
A59-9 (+B2) - A59-28 (GND1)	G - W-B	MG ECU power source	Power switch on (IG)	11 to 14 V
A59-10 (+B) - A59-28 (GND1)	G - W-B	MG ECU power source	Power switch on (IG)	11 to 14 V
D29-1 (MRF) - D29-2 (MRFG)	Y - L	Motor resolver signal	Motor resolver stopped or running	Pulse generation (Waveform 7)
D29-3 (MSN) - D29-4 (MSNG)	G - W	Motor resolver signal	Motor resolver stopped or running	Pulse generation (Waveform 7)
D29-6 (MCS) - D29-5 (MCSG)	R - BR	Motor resolver signal	Motor resolver stopped or running	Pulse generation (Waveform 7)
D29-7 (GSN) - D29-8 (GSNG)	G - W	Generator resolver signal	Generator resolver stopped or running	Pulse generation (Waveform 8)
D29-10 (GCS) - D29-9 (GCSG)	R - B	Generator resolver signal	Generator resolver stopped or running	Pulse generation (Waveform 8)
D29-11 (GRF) - D29-12 (GRFG)	Y - L	Generator resolver signal	Generator resolver stopped or running	Pulse generation (Waveform 8)

NOTICE:

Do not measure the voltage or waveform directly at the sealed side of the inverter with converter assembly connector. Doing so may damage the connector because the connector is waterproof.

2. Oscilloscope waveforms

HINT:

Oscilloscope waveform samples are provided here for informational purposes. Noise and fluttering waveforms have been omitted.

(a) Waveform 1 (DC/DC operation monitor / voltage change signal)

Item	Content
Terminal	A59-3 (VLO) - A59-28 (GND1)
Equipment Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (IG)

HINT:

The cycle will vary depending on the specified voltage of the hybrid vehicle converter.

(b) Waveform 2 (MG ECU communication clock signal)

Item	Content
Terminal	CH1: A59-5 (CLK+) - A59-28 (GND1) CH2: A59-15 (CLK-) - A59-28 (GND1)
Equipment Setting	1 V/DIV., 1 μ s./DIV.
Condition	Power switch on (READY)

(c) Waveform 3 (MG ECU communication request signal)

Item	Content
Terminal	CH1: A59-6 (REQ+) - A59-28 (GND1) CH2: A59-16 (REQ-) - A59-28 (GND1)
Equipment Setting	1 V/DIV., 1 ms./DIV.
Condition	Power switch on (READY)

(d) Waveform 4 (communication signal from MG ECU to power management control ECU (HV CPU))

Item	Content
Terminal	CH1: A59-7 (MTH+) - A59-28 (GND1)

	CH2: A59-17 (MTH-) - A59-28 (GND1)
Equipment Setting	1 V/DIV., 200 μs./DIV.
Condition	Power switch on (READY)

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(e) Waveform 5 (communication signal from power management control ECU (HV CPU) to MG ECU)

Item	Content
Terminal	CH1: A59-8 (HTM+) - A59-28 (GND1) CH2: A59-18 (HTM-) - A59-28 (GND1)
Equipment Setting	1 V/DIV., 200 μs./DIV.
Condition	Power switch on (READY)

HINT:

The waveform will vary depending on the content of the digital communication (digital signal).

(f) Waveform 6 (GI signal)

Item	Content
Terminal	A59-29 (GI) - A59-28 (GND1)
Equipment Setting	5 V/DIV., 20 ms./DIV.
Condition	Power switch on (READY) with engine running

HINT:

The pulse cycle becomes shorter as the engine speed increases.

(g) Waveform 7 (motor resolver signal)

Item	Content
Terminal	CH1: D29-1 (MRF) - D29-2 (MRFG) CH2: D29-3 (MSN) - D29-4 (MSNG) CH3: D29-6 (MCS) - D29-5 (MCSG)
Equipment Setting	CH1: 10 V/DIV., 1 ms./DIV. CH2, 3: 5 V/DIV., 1 ms./DIV.
Condition	Resolver running

c

HINT:

Pulse cycle A becomes shorter as the rotor speed increases.
 (h) Waveform 8 (generator resolver signal)

c

Item	Content
Terminal	CH1: D29-11 (GRF) - D29-12 (GRFG) CH2: D29-7 (GSN) - D29-8 (GSNG) CH3: D29-10 (GCS) - D29-9 (GCSG)
Equipment Setting	CH1: 10 V/DIV., 1 ms./DIV. CH2, 3: 5 V/DIV., 1 ms./DIV.
Condition	Resolver running

HINT:

Pulse cycle A becomes shorter as the rotor speed increases.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The power management control ECU (HV CPU) has a self-diagnosis system. If the computer, power management control ECU (HV CPU), or a component is not working properly, the ECU records the conditions that relate to the fault. The ECU also illuminates the master warning light in the combination meter and provides other appropriate messages on the multi-information display, such as the HV system warning message, the HV battery warning message, on the discharge warning message.

HINT:

The master warning light will illuminate when the hybrid control system malfunctions and the light will blink when in inspection mode.

- When troubleshooting OBD II (On-Board Diagnostics) vehicles, the Techstream (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle ECM (Engine Control Module) can then be read.
- OBD II regulations require that the vehicle's on-board computer illuminate the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

- a. The emission control system components.
- b. The powertrain control components (which affect vehicle emissions).
- c. The computer itself.

In addition, the applicable DTCs prescribed by SAE J2012 are recorded in the power management control ECU (HV CPU) memory. If the malfunction does not recur in 3 consecutive

trips, the MIL turns off automatically but the DTCs remain recorded in the power management control ECU (HV CPU) memory.

- To check for DTCs, connect the Techstream to the DLC3. The Techstream displays DTCs, freeze frame data, and a variety of hybrid control system data. The DTCs and freeze frame data can be cleared with the Techstream. In order to enhance the OBD function on vehicles and develop the Off-Board diagnosis system, Controller Area Network (CAN) communication is used in this system. CAN is a network which uses a pair of data transmission lines spanning multiple computers and sensors. It allows for high speed communications between the systems and simplification of the wire harness connections.

2. 2 TRIP DETECTION LOGIC

- When a malfunction is first detected, the malfunction is temporarily stored in the power management control ECU (HV CPU) memory (1st trip). If the same malfunction is detected during the next drive cycle, the MIL is illuminated (2nd trip).

3. FREEZE FRAME DATA

- The power management control ECU (HV CPU) records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, as well as other data recorded at the time of a malfunction.

4. AUXILIARY BATTERY VOLTAGE

Standard Voltage:

Switch Condition	Specified Condition
Power switch on (IG)	11 to 14 V

- If voltage is below 11 V, replace or recharge the battery.

5. MIL (Malfunction Indicator Lamp)

(a) The MIL is illuminated when the power switch is first turned on (IG), before the READY indicator comes on.

(b) When the READY indicator turns on, the MIL should turn off. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.

HINT:

If the MIL is not illuminated when the power switch is first turned on (IG), check the MIL circuit .

DTC CHECK / CLEAR

1. CHECK FOR DTCS

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
- (e) Check the DTCs and freeze frame data, and then write them down.
- (f) Check the details of the DTCs .

2. CHECK FREEZE FRAME DATA AND INFORMATION

- (a) If a DTC is present, select it in order to display its freeze frame data.
- (b) Read the freeze frame data recorded when the DTC was set.

NOTICE:

A 3-digit information code (INF code) will be displayed as the value for one of the Information 1 to Information 5 lines.

- (c) Read the information for the information code.
- (1) Select the item from among Information 1 to Information 5 that has an information code and click the engine icon to view the additional information.

3. CHECK FOR DTCS (SYSTEMS OTHER THAN POWER MANAGEMENT CONTROL ECU (HV CPU))

HINT:

The power management control ECU (HV CPU) maintains communication with other computers, including the ECM, skid control ECU and power steering ECU. Therefore, if the power management control ECU (HV CPU) outputs a warning, it is necessary to check and record the DTCs of all systems.

- (a) If DTCs are present, check the relevant systems.

HINT:

If DTCs for the CAN communication system are present in addition to other DTCs, first troubleshoot and repair any malfunctions in the CAN communication system.

4. CLEAR DTCS

NOTICE:

Clearing the DTCs will also clear the freeze frame data, information **INFO**, and operation history data **INFO**.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Check that park (P) is selected.
- (e) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
- (f) Clear DTCs and freeze frame data.

5. CLEAR PERMANENT DTC

HINT:

Even if the following procedure is not performed, permanent DTCs are cleared by obtaining a normal judgment during 3 consecutive driving cycles.

Universal Trip Driving Pattern

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
- (e) Check if permanent DTCs are stored.

HINT:

If permanent DTCs are not output, it is not necessary to continue this procedure.

(f) Clear the DTCs.

(g) Perform the respective confirmation driving patterns in order to obtain a normal judgment for the output DTCs.

HINT:

- Confirmation driving patterns do not need to be performed for misfire and fuel system DTCs.
- For the confirmation driving pattern, refer to the procedures for the relevant DTC **INFO**.

(h) Perform the universal trip.

HINT:

The driving pattern to obtain a normal judgment and the universal trip driving can be performed consecutively in the same driving cycle.

1. Put the engine in inspection mode **INFO**.
2. Idle the engine for 30 seconds or more.
3. Drive the vehicle at 25 mph (40 km/h) or more for a total of 5 minutes or more.

HINT:

It is possible to complete the drive pattern even if the vehicle decelerates to less than 25 mph (40 km/h) during the driving cycle provided that the vehicle is driven at 25 mph (40 km/h) or more for a total of 5 minutes.

4. Allow 10 minutes or more to elapse from the time the engine is started.

(i) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.

(j) Check that the permanent DTCs have been cleared.

HINT:

The permanent DTCs are cleared when the universal trip is completed.

DATA LIST / ACTIVE TEST

1. DATA LIST

NOTICE:

- Some Data List values may vary significantly if there are slight differences in the environment in which the vehicle is operating when measurements are obtained. Variations may also occur due to aging of the vehicle. Due to these considerations, it is not always possible to provide definite values to be used for judgment of malfunctions. It is possible that a malfunction may be present even if measured values are within the reference range.
- In the event of a problem with intricate symptoms, collect sample data from another vehicle of the same model operating under identical conditions in order to reach an overall judgment by comparing all the items in the Data List.

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Enter the following menus: Powertrain / Hybrid Control / Data List.

(d) Check the results by referring to the following table.

HINT:

- When reviewing Data List information, try to select only the specific Data List items related to the inspection being performed. If all items are selected when checking the Data List, the interval between updates for each item will be longer, resulting in delayed or incorrect data.
- Using a custom list makes it possible to easily select smaller groups of related Data List items.
- The following custom lists are available:
 - Electric Leakage
 - Boost/Lower Converter
 - High Voltage Charge
 - HV Transmission
 - Thermo Sensor
 - Auxiliary Battery
 - Drive Performance
 - Elec Shift Lever System

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Engine Coolant Temp	Engine coolant temperature/ Min.: -40°F (-40°C), Max.: 419°F (215°C)	Cold start→Fully warmed up Gradually rises: After warming up: 176 to 212°F (80 to 100°C):	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Engine Revolution	Engine speed/ Min.: 0 r/min, Max.: 16383.75 r/min	While idling after the engine is warmed up and inspection mode: Approximately 900 rpm While driving at a constant speed: No significant fluctuation	-
Vehicle Spd	Vehicle speed/ Min.: 0 mph (0 km/h), Max.: 158 mph (255 km/h)	Vehicle stopped: 0 mph (0 km/h) While driving at a constant speed: No significant fluctuation	-
Engine Run Time	Elapsed time after starting engine/ Min.: 0 s, Max.: 65535 s	-	-
+B	Auxiliary battery voltage/ Min.: 0 V, Max.: 65.535 V	Constant: Auxiliary battery voltage +/-3 V	Auxiliary battery
Accel Pedal Pos #1	Accelerator pedal position sensor No.1/ Min.: 0%, Max.: 100%	Accelerator pedal depressed: Changes with accelerator pedal pressure	Accelerator pedal position sensor
Accel Pedal Pos #2	Accelerator pedal position sensor No.2/ Min.: 0%, Max.: 100%	Accelerator pedal depressed: Changes with accelerator pedal pressure	Accelerator pedal position sensor
Ambient Temperature	Ambient air temperature/ Min.: -40°F (-40°C), Max.: 419°F (215°C)	Power switch on (IG): Same as ambient air	Ambient temperature sensor

		switch on (READY): OFF (Permitted)	
EV Request	EV mode transition availability/ ON or OFF	In EV mode: ON	-
TRC OFF Switch	VSC condition/ OFF / TRC / TRC/VSC	-	-
Starter Switch	ST ON signal/ ON or OFF	-	-
Inv-T (MG1) aftr IG-ON	Generator inverter temperature soon after power switch on (IG)/ Min.: 59°F (15°C), Max.: 302°F (150°C)	-	-
Inv-T (MG2) aftr IG-ON	Motor temperature soon after power switch on (IG)/ Min.: 59°F (15°C), Max.: 302°F (150°C)	-	-
Mtr-T (MG2) aftr IG-ON	MG2 temperature soon after power switch on (IG)/ Min.: -40°F (-40°C), Max.: 419°F (215°C)	-	-
Conv-Tmp after IG-ON	Boost converter temperature soon after power switch on (IG)/ Min.: 59°F (15°C), Max.: 302°F (150°C)	-	-
SOC after IG-ON	SOC soon after power switch on (IG)/ Min.: 0%, Max.: 127.5%	-	-
Inv-Temp (MG1) Max	Generator inverter maximum temperature/ Min.: 59°F (15°C), Max.: 302°F (150°C)	-	-
Inv-Temp (MG2) Max	Motor inverter maximum temperature/ Min.: 59°F (15°C), Max.: 302°F (150°C)	-	-
Mtr-Temp (MG2) Max	MG2 maximum temperature/ Min.: -40°F (-40°C), Max.: 419°F (215°C)	-	-
Converter Temp Max	Boost converter maximum temperature/ Min.: 59°F (15°C), Max.: 302°F (150°C)	-	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	Min.: 59°F (15°C), Max.: 302°F (150°C)		
Status of Charge Max	Maximum status of charge/ Min.: 0%, Max.: 127.5%	-	-
Status of Charge Min	Minimum status of charge/ Min.: 0%, Max.: 127.5%	-	-
Stop Light Switch	Stop light switch condition/ ON or OFF	Brake pedal depressed: ON	-
Auxiliary Batt Temperature	Auxiliary battery temperature/ Min.: -40°F (-40°C), Max.: 419°F (215°C)	Auxiliary battery temperature is 68°F (20°C): 68°F (20°C)	-
Collision Signal (Airbag)	Airbag sensor assembly collision detection/ ON or OFF	Collision detection by the airbag sensor assembly: ON	-
TC Terminal	TC terminal state/ ON or OFF	TC terminal connected: ON	-
Inter Lock Switch	Interlock switch condition/ ON or OFF	Power switch on (IG), inverter terminal cover, high voltage input cables and service plug grip installed detached ON	-
EV SW2	EV switch condition/ ON or OFF	EV switch on: ON	-
Back Up Lamp Relay	Back up light switch condition/ ON or OFF	Selector lever in R ON	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ECO Mode	ECO mode signal/ ON or OFF	ECO mode being selected OFF→ON: OFF→ON	<ul style="list-style-type: none"> • Combination meter assembly • Power management control ECU
Generate Torque	Currently generated drive torque/ Min.: -4096 Nm, Max.: 4095.875 Nm	While driving: Varies depending on vehicle operating conditions	-
Prohibit Charge for P Pos	HV battery charge in park (P) selected prohibition state/ ON or OFF	HV battery charge in park (P) selected prohibition: ON	-
Vehicle Parking (T/M Ctrl)	Indicates whether vehicle being driven or stopped./ ON or OFF	-	-
Shift Pos Status (T/M Ctrl)	Indicates whether park (P) is selected/ Not P / Run / P	-	-
Shift P Permission Signal	Indicates whether selection of park (P) is permitted./ ON or OFF	-	-
DC/DC Cnv Tmp (Upper)	Boost converter temperature (upper)/ Min.: 59°F (15°C), Max.: 302°F (150°C)	<ul style="list-style-type: none"> • Vehicle left for 1 day at an ambient temperature of 77°F (25°C): 59°F (15°C) to 95°F (35°C) • While driving at an ambient temperature of 	Inverter with converter assembly

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		77°F (25°C): 59°F (15°C) to 230°F (110°C)	
Safing Signal (Airbag)	Safing state of the airbag sensor assembly/ ON or OFF	When safing state of the airbag sensor assembly: ON	-
DC/DC Cnv Temp (Lower)	Boost converter temperature (lower)/ Min.: 59°F (15°C), Max.: 302°F (150°C)	<ul style="list-style-type: none"> • Vehicle left for 1 day at an ambient temperature of 77°F (25°C): 59°F (15°C) to 95°F (35°C) • While driving at an ambient temperature of 77°F (25°C): 59°F (15°C) to 250°F (121°C) 	Inverter with converter assembly
Normal Signal for A/B ECU	Control state of airbag sensor assembly/ ON or OFF	When the airbag sensor assembly is operating normally: ON	-
Mtr-T (MG1) aftr IG-ON	MG1 temperature soon after power switch on (IG)/ Min.: -40°F (-40°C), Max.: 419°F (215°C)	-	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Mtr-Temp (MG1) Max	MG1 maximum temperature/ Min.: -40°F (-40°C), Max.: 419°F (215°C)	-	-
Overvoltage Input to Conv	Boost converter overvoltage detection/ ON or OFF	Overvoltage is received by the boost converter: ON	-
Overvoltage Input to Inv	Inverter overvoltage detection/ ON or OFF	Overvoltage is received by the inverter: ON	-
Emergency Shutdown	Inverter emergency shutdown/ ON or OFF	Inverter emergency shutdown: ON	-
MG1 Inverter Shutdown	Generator inverter shutdown/ ON or OFF	Generator inverter shutdown: ON	-
MG1 Inverter Fail	Generator inverter failure/ ON or OFF	Generator inverter faulty: ON	-
MG2 Inverter Shutdown	Motor inverter shutdown/ ON or OFF	Motor inverter shutdown: ON	-
MG2 Inverter Fail	Motor inverter failure/ ON or OFF	Motor inverter faulty: ON	-
Conv Shutdown	Boost converter shutdown/ ON or OFF	Boost converter shutdown: ON	-
Converter Fail	Boost converter failure/ ON or OFF	Boost converter faulty: ON	-
P Pos SW Terminal Vol	Indicates voltage at the P position switch terminals/	P position	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	Min.: 0 V, Max.: 79.9987793 V	switch ON: 0 to 1.5 V	
Internal Shift Position	ECU internal shift condition/ P/R/N/D/B	Matches currently selected condition: P, R, N, D or B	-
P Rq Malfunction (T/M Ctrl)	Indicates whether park (P) selection request is normal/ Normal or Abnormal	-	-
P Request (T/M Ctrl)	Indicates whether selection of park (P) is requested./ ON or OFF	-	-
T/M Control ECU Status	Indicates the control condition of the transmission control ECU/ Normal or Abnormal	-	-
T/M ECU Pulse Consec Err	Indicates consecutive communication errors with the transmission control ECU/ Normal or Abnormal	-	-
T/M ECU Pulse Single Err	Indicates a single communication error with the transmission control ECU/ Normal or Abnormal	-	-
HV Start Condition	Indicates the hybrid start condition/ Norml /Pr A/C / Remote	-	-
W/P Run Control Duty	Water pump motor driver request duty/ Min.: 0%, Max.: 100%	Power switch on (READY): 62.5 to 81.25%	Power management control ECU
Engine Stop Request	Engine stop request/ ON or OFF	Requesting engine stop: ON	<ul style="list-style-type: none"> • ECM • Power management control ECU
Engine Idling Request	Engine idling request/ ON or OFF	Requesting idle: ON	<ul style="list-style-type: none"> • ECM • Power management control ECU

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Main Batt Charging Rqst	HV battery charging request/ ON or OFF	Requesting HV battery charging: ON	<ul style="list-style-type: none"> Battery smart unit HV battery
Aircon Request	Engine starting request from A/C amplifier/ ON or OFF	While an engine start is requested from the A/C amplifier: ON	Air conditioning amplifier
Engine Warming Up Rqst	Engine warm-up request/ ON or OFF	While an engine warm-up is requested: ON After the engine is warmed up: OFF	<ul style="list-style-type: none"> Power management control ECU ECM
SMRP Status	Operating state of SMRP/ ON or OFF	Immediately after the power switch on (ST-ON) state occurred: ON After the above timing: OFF	<ul style="list-style-type: none"> Hybrid battery junction block Wire harness
SMRB Status	Operating state of SMRB/ ON or OFF	Power switch on (READY): ON	<ul style="list-style-type: none"> Hybrid battery junction block Wire harness
SMRG Status	Operating state of SMRG/ ON or OFF	Power switch on (READY): ON	<ul style="list-style-type: none"> Hybrid battery junction block Wire harness

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
MG1 Gate Status	MG1 gate status/ ON or OFF	Shutting down generator inverter: ON	<ul style="list-style-type: none"> Power management control ECU Inverter with converter assembly
MG2 Gate Status	MG2 gate status/ ON or OFF	Shutting down motor inverter: ON	<ul style="list-style-type: none"> Power management control ECU Inverter with converter assembly
Converter Gate Status	Boost converter gate status/ ON or OFF	Shutting down boost converter: ON	<ul style="list-style-type: none"> Power management control ECU Inverter with converter assembly
Aircon Gate Status	While A/C inverter is being shut off/ ON or OFF	While A/C inverter is being shut off: ON	<ul style="list-style-type: none"> Air conditioning amplifier Power management control ECU
Converter Carrier Freq	Converter signal carrier frequency/ 9.55kHz/9.13kHz/8.71kHz/8.29kHz/7.87kHz/7.45kHz/ 4.8kHz	-	-
Delta SOC	Difference between maximum and minimum values of SOC/ Min.: 0%, Max.: 127.5%	READY indicator on, engine stopped and no electrical load: 0 to 60%	-
Batt Pack Current Val	HV battery current/ Min.: -327.68 A, Max.: 327.67 A	Immediately after a full-load acceleration with the engine stopped: Maximum 190	HV battery current sensor circuit

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		<p>A</p> <p>Immediately after engine start with park (P) selected:</p> <p>100 A or more</p>	
Inhaling Air Temp	<p>HV battery intake air temperature/</p> <p>Min.: -58°F (-50°C), Max.: 402.6°F (205.9°C)</p>	-	-
VMF Fan Motor Voltage1	<p>Battery blower motor monitoring voltage/</p> <p>Min.: 0 V, Max.: 25.5 V</p>	<p>Fan mode 1 with READY indicator ON and park (P) selected:</p> <p>1.0 to 1.4 V</p>	Battery cooling fan circuit
Auxiliary Battery Vol	<p>Auxiliary battery voltage/</p> <p>Min.: -40 V, Max.: 39.9 V</p>	Same as auxiliary battery voltage	<ul style="list-style-type: none"> • Auxiliary battery • Hybrid vehicle converter
Charge Control Value	<p>Charge control wattage sent from battery smart unit to power management control ECU/</p> <p>Min.: -64 kW, Max.: 63.5 kW</p>	-33 kW or more	-
Discharge Control Value	<p>Discharge control wattage sent from battery smart unit to power management control ECU/</p> <p>Min.: -64 kW, Max.: 63.5 kW</p>	30 kW or less	-
Cooling Fan Mode1	<p>Battery cooling fan operation mode/</p> <p>Min.: 0, Max.: 255</p>	<p>Power switch on (IG) or on (READY), and cooling fan stopped:</p> <p>0</p> <p>Power switch on (IG) or on (READY), and cooling fan low speed to high</p>	Battery cooling fan circuit

Internal Resistance R11	Internal resistance of each battery block/ Min.: 0 Ω , Max.: 0.255 Ω	Always: 0.01 to 0.1 Ω	HV battery
Internal Resistance R12	Internal resistance of each battery block/ Min.: 0 Ω , Max.: 0.255 Ω	Always: 0.01 to 0.1 Ω	HV battery
Internal Resistance R13	Internal resistance of each battery block/ Min.: 0 Ω , Max.: 0.255 Ω	Always: 0.01 to 0.1 Ω	HV battery
Internal Resistance R14	Internal resistance of each battery block/ Min.: 0 Ω , Max.: 0.255 Ω	Always: 0.01 to 0.1 Ω	HV battery
Battery Low Time	Cumulative total of extremely low battery charge level (engine not startable)/ Min.: 0, Max.: 65535	-	-
DC Inhibit Time	Cumulative total of extremely low battery charge level (engine startable)/ Min.: 0, Max.: 65535	-	-
Battery too High Time	Cumulative total of charging during charge prohibition state/ Min.: 0, Max.: 65535	-	-
Hot Temperature Time	Cumulative total of rapid battery temperature increase/ Min.: 0, Max.: 65535	-	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Pattern Switch (PWR/M)	POWER mode switch signal/ ON or OFF	POWER mode switch on: ON	-

2. ACTIVE TEST

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data list information can be displayed while performing Active Tests.

NOTICE:

It is necessary to use caution, because if the tester DLC connector becomes disconnected or if a communication error occurs during an Active Test, the vehicle could become inoperative (the READY indicator may go off).

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.

Enter the following menus: Powertrain / Hybrid Control / Active Test.

- (d) According to the display on the Techstream perform the appropriate Active Test.

Tester Display	Test Part	Control Range	Test Details	Test Condition
Inspection Mode - 2WD Inspection*1	-	-	-	-
Inspection Mode - 2WD Chassis-Dynamo*1	-	-	-	-
Compression Test*2	To crank the engine continuously in order to measure the compression	ON / OFF	Allows the engine to continue cranking by activating MG1 continuously	Power switch on (IG), HV system normal, not in cranking mode, and other Active Tests not being done
Activate the Water Pump	To activate the water pump with motor assembly continuously	ON / OFF	Activates the water pump with motor assembly continuously	Power switch on (IG), HV system normal, not in inspection mode, and other Active Tests not being done
Driving the Battery Cooling Fan	To check operation of the cooling fan check if there is sufficient air	1 to 6	Stops the cooling fan or changes air volume mode	-

Tester Display	Test Part	Control Range	Test Details	Test Condition
	flow			
Connect the TC and TE1	Batch display of warnings on combination meter	ON / OFF	TC terminal can be switched ON/OFF	Power switch on (IG), system is normal

NOTICE:

- *1: Enter inspection mode .
- *2: The Techstream will display a communication error and the vehicle's READY indicator will turn off when the Active Test is completed. If the Techstream will be used on the vehicle again, turn the power switch off and then on (READY) again to restart the Techstream.

INFORMATION / FREEZE FRAME DATA

1. FREEZE FRAME DATA

HINT:

The power management control ECU (HV CPU) records vehicle and driving condition information as freeze frame data the moment a DTC is stored. It can be used for estimating or duplicating the vehicle conditions that were present when the malfunction occurred. To confirm the details of the hybrid control system, check the detailed information for the DTC information code in the Data List (INF code).

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.
- (e) Select a DTC in order to display its freeze frame data.
- (f) Check the freeze frame information recorded with the DTC.

FREEZE FRAME DATA

2. INFORMATION

HINT:

Similar to freeze frame data, the power management control ECU (HV CPU) also records vehicle and driving condition information as INFORMATION (INF code) at the moment a DTC is stored.

(a) Select the information item which has an INF code from among INFORMATION 1 to 5.

(b) Check the information for the DTC.

OPERATION HISTORY DATA

1. OPERATION HISTORY DATA

HINT:

The power management control ECU (HV CPU) records inappropriate operations performed by the driver and the number of abnormal conditions that have been input to the ECU as operation history data.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Hybrid Control / Data List.
- (e) Enter the menu to view the number of inappropriate operations or controls that have been performed.

HINT:

- Latest Operation: Among the past occurrences, the number of inappropriate operations or controls that have been performed during the most recent 1 trip detection.
- Latest Trip: The number of trips after the occurrence of Latest Operation.
- Operation before Latest: The number of occurrences during the trip previous to the Latest Operation.
- Trip before Latest: The number of trips after the occurrence of Operation before Latest.

Inappropriate operation and history data

Tester Display	Count Condition
Shift Gear before READY	Selector lever moved with READY indicator blinking
N Range Control by Busy Shift	N position control performed due to frequent shifting operation
Step Accelerator in N Range	Accelerator pedal depressed in N position
Auxiliary Battery Low	Auxiliary battery voltage below 9.5 V
HV ECU Intermittent Problems	Instantaneous open circuit at +B terminal of power management control ECU
MG2 Temp High	MG2 temperature exceeded 323.6°F (162°C)
MG1 Temp High	MG1 temperature exceeded 334.4°F (168°C)
MG2 (Motor) Inv Temp High	Motor inverter temperature rose and HV system overheat was indicated
MG1 (Generator) Inv Temp High	Generator inverter temperature rose and HV system overheat was indicated
Main Battery Low Voltage	Battery state of charge dropped below 30%
Resister Over Heat	System main resistor overheated
Coolant Heating	HV coolant temperature exceeded 149°F (65°C)
Converter Heating	Boost converter temperature rose and HV system overheat was indicated
Shift Backward Direction	Shifted to R while moving forward or to D or B while moving in reverse
Prevention Control of staying	Engine speed stays in resonance frequency band

Tester Display	Count Condition
Accelerator and Brake Depress	Both accelerator and brake pedals depressed
Shift P in Running	P position switch pushed while driving

c

REMOVAL

1. PRECAUTION

HINT: .

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) .

3. REMOVE REAR DECK FLOOR BOX .

4. REMOVE REAR NO. 3 FLOOR BOARD .

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected .

6. REMOVE SERVICE PLUG GRIP .

7. REMOVE FRONT SPOILER COVER (w/ Front Spoiler)

8. REMOVE ENGINE UNDER COVER (w/ Cover)

9. REMOVE NO. 1 ENGINE UNDER COVER

10. DRAIN COOLANT (for Inverter) .

11. REMOVE RADIATOR SUPPORT OPENING COVER .

12. REMOVE NO. 1 INVERTER BRACKET

(a) Remove the 3 bolts and No. 1 inverter bracket.

13. DISCONNECT ENGINE ROOM MAIN WIRE

(a) Raise the lock lever and disconnect the inverter with converter connector.

c

c

(b) Disconnect the engine wire from the engine room main wire.

c

(c) Remove the bolt.

c

(d) Remove the bolt, clamp and clip, and disconnect the engine room main wire.

14. REMOVE INVERTER TERMINAL COVER

CAUTION:

Wear insulating gloves.

(a) Remove the 9 bolts and inverter terminal cover.

NOTICE:

Make sure to pull the inverter terminal cover straight up, as a connector is connected to the bottom of the cover.

15. CHECK TERMINAL VOLTAGE

CAUTION:

Wear insulating gloves.

NOTICE:

Do not allow any foreign objects or water to enter the inverter with converter assembly.

(a) Using a voltmeter, measure the voltage between the terminals of the 2 phase connectors.

Standard voltage:

0 V

HINT:

Use measuring range of DC 750 V or more on the voltmeter.

16. DISCONNECT FRAME WIRE

CAUTION:

Wear insulating gloves.

NOTICE:

- Insulate the removed terminals with insulating tape.
- Cover the hole where the cable was connected with tape or equivalent (non-residue type) to prevent entry of foreign matter.

(a) Remove the 4 bolts, and disconnect the frame wire (high voltage cables of the hybrid battery) from the inverter with converter assembly.

c

(b) Disconnect the harness clamp.

c

17. DISCONNECT HIGH VOLTAGE CABLE OF FRONT TRANSAXLE

CAUTION:

Wear insulating gloves.

NOTICE:

- Insulate the removed terminals with insulating tape.
- Cover the hole where the cable was connected with tape or equivalent (non-residue type) to prevent entry of foreign matter.

(a) Remove the 5 bolts, and disconnect the high voltage cables of the generator (MG1) from the inverter with converter assembly.

c

c

(b) Turn back the wire harness cover and release the cable.

c

(c) Remove the 5 bolts, and disconnect the high voltage cables of the motor (MG2) from the inverter with converter assembly.

c

(d) Disconnect the harness clamp.

18. DISCONNECT NO. 2 ENGINE WIRE

CAUTION:

Wear insulating gloves.

NOTICE:

- Insulate the removed terminals with insulating tape.
- Cover the hole where the cable was connected with tape or equivalent (non-residue type) to prevent entry of foreign matter.

(a) Remove the 4 bolts, and disconnect the No. 2 engine wire (high voltage cables for the air conditioning compressor) from the inverter with converter assembly.

c

(b) Disconnect the harness clamp.

c

19. INSTALL INVERTER TERMINAL COVER

(a) Temporarily install the inverter terminal cover with the 9 bolts to prevent any foreign objects or water from entering the inverter with converter assembly.

c

20. DISCONNECT NO. 2 ENGINE ROOM WIRE

(a) Remove the relay block cover.

(b) Release the 2 clamps, and remove the No. 1 relay block cover.

(c) Remove the bolt from the No. 2 engine room wire.

(d) Release the 2 claws, and disconnect the No. 2 engine room wire.

(e) Connect the No. 2 engine room wire to the protector.

21. DISCONNECT WATER HOSE

(a) Release the retainer and disconnect the water hose from the inverter with converter assembly.

c

c

(b) Release the retainer and disconnect the water hose from the inverter with converter assembly.

c

(c) Disconnect the coolant hose from the inverter with converter assembly. Put a piece of cloth in the pipe and in the disconnected hose or cover the pipe and hose with plastic bags as shown in the illustration, so that foreign matter doesn't stick to the union or the inside of the connector and to prevent coolant from spilling near the inverter with converter assembly.

22. REMOVE INVERTER WITH CONVERTER ASSEMBLY

CAUTION:

Wear insulating gloves.

(a) Remove the 3 bolts and inverter with converter assembly.

- Since the inverter with converter assembly is very heavy, 2 people are needed to remove the inverter with converter assembly. When removing the inverter with converter assembly, do not damage the parts around it.
- To prevent damage, do not hold the inverter with converter assembly by the connectors.
- To prevent damage due to static electricity, do not touch the terminals

of the disconnected connectors.

c

23. REMOVE MOTOR CABLE BRACKET

(a) Remove the 2 bolts and motor cable bracket.

c

24. REMOVE HIGH VOLTAGE FUSE

CAUTION:

Wear insulating gloves.

HINT:

Perform this procedure only when replacement of the high voltage fuse is necessary.

(a) Remove the 9 bolts and inverter terminal cover.

NOTICE:

Make sure to pull the inverter terminal cover straight up, as a connector is connected to the bottom of the cover.

(b) Remove the 2 bolts and high voltage fuse from the inverter with converter assembly.

NOTICE:

Do not allow any foreign objects or water to enter the inverter with converter assembly.

(c) Temporarily install the inverter terminal cover with the 9 bolts to prevent any foreign objects or water from entering the inverter with converter assembly.

INSTALLATION

1. INSTALL HIGH VOLTAGE FUSE

CAUTION:

Wear insulating gloves.

HINT:

Perform this procedure only when replacement of the high voltage fuse is necessary.

(a) Remove the 9 bolts and inverter terminal cover.

NOTICE:

Make sure to pull the inverter terminal cover straight up, as a connector is connected to the bottom of the cover.

(b) Install the high voltage fuse with the 2 bolts.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

NOTICE:

Be sure to use a torque wrench to tighten the bolts.

(c) Temporarily install the inverter terminal cover with the 9 bolts to prevent any foreign objects or water from entering the inverter with converter assembly.

2. INSTALL MOTOR CABLE BRACKET

(a) Temporarily install the motor cable bracket with the 2 bolts.

(b) Tighten the 2 bolts in the order shown in the illustration.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

c

3. INSTALL INVERTER WITH CONVERTER ASSEMBLY

CAUTION:

Wear insulating gloves.

c

(a) Install the inverter with converter assembly with the 3 bolts.

Torque: **12 N·m (122 kgf·cm, 8ft·lbf)**

- Since the inverter with converter assembly is very heavy, 2 people are needed to install the inverter with converter assembly. When installing the inverter with converter assembly, do not damage the parts around it.
- To prevent damage, do not hold the inverter with converter assembly by the connectors.
- To prevent damage due to static electricity, do not touch the terminals of the disconnected connectors.

4. CONNECT WATER HOSE

c

(a) Connect the water hose to the inverter with converter assembly and lock the hose with the retainer.

- Insert the retainer until a click sound is heard.
- Pull on the hose to confirm that the hose is securely connected.
- If there is foreign matter on the union or the O-ring, clean it with water and finger scouring.

(b) Connect the water hose to the inverter with converter assembly and lock the hose with the retainer.

- Insert the retainer until a click sound is heard.

- Pull on the hose to confirm that the hose is securely connected.
- If there is foreign matter on the union or the O-ring, clean it with water and finger scouring.

5. CONNECT NO. 2 ENGINE ROOM WIRE

(a) Disconnect the No. 2 engine room wire from the protector.

(b) Connect the No. 2 engine room wire with the bolt and 2 claws.

Torque: **8.3 N·m (85 kgf·cm, 73in·lbf)**

NOTICE:

Pass the No. 2 engine room wire under the two cooling hoses that pass beside the inverter.

(c) Install the No. 1 relay block cover and 2 clamps.

(d) Install the relay block cover.

6. REMOVE INVERTER TERMINAL COVER

CAUTION:

Wear insulating gloves.

(a) Remove the 9 bolts and inverter terminal cover.

NOTICE:

Make sure to pull the inverter terminal cover straight up, as a connector is connected to the bottom of the cover.

7. CONNECT NO. 2 ENGINE WIRE

CAUTION:

Wear insulating gloves.

NOTICE:

Do not allow any foreign objects or water to enter the inverter with converter assembly.

(a) Temporarily install the No. 2 engine wire (high voltage cables of the air conditioning) and 4 bolts to the inverter assembly by hand.

(b) Fully tighten the 4 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

NOTICE:

Be sure to use a torque wrench to tighten the bolts.

(c) Connect the harness clamp.

8. CONNECT HIGH VOLTAGE CABLE OF FRONT TRANSAXLE

CAUTION:

Wear insulating gloves.

NOTICE:

Do not allow any foreign objects or water to enter the inverter with converter assembly.

(a) Temporarily install the high voltage cable of the motor (MG2) and 5 bolts to the inverter assembly by hand.

c

(b) Fully tighten the 5 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

NOTICE:

Be sure to use a torque wrench to tighten the bolts.

(c) Connect the harness clamp.

c

c

(d) Temporarily install the high voltage cable of the generator (MG1) and 5 bolts to the inverter assembly by hand.

(e) Fully tighten the 5 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

NOTICE:

Be sure to use a torque wrench to tighten the bolts.

(f) Install the cable and cover.

*1	Align Mark
----	------------

NOTICE:

Close the cover so that the matchmarks are not visible.

c

9. CONNECT FRAME WIRE

CAUTION:

Wear insulating gloves.

NOTICE:

- Make sure that the interlock is fully engaged.
- Do not allow any foreign objects or water to enter the inverter with converter assembly.

(a) Temporarily install the frame wire (high voltage cables of the hybrid battery) and 4 bolts to the inverter assembly by hand.

c

(b) Fully tighten the 4 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

NOTICE:

Be sure to use a torque wrench to tighten the bolts.

(c) Connect the harness clamp.

10. CHECK HIGH VOLTAGE CABLE CONNECTION

CAUTION:

Wear insulating gloves.

NOTICE:

Do not allow any foreign objects or water to enter the inverter with converter assembly.

(a) Check that each connector and terminal is firmly installed.

NOTICE:

Make sure that the bolts are fully tightened.

11. INSTALL INVERTER TERMINAL COVER

CAUTION:

Wear insulating gloves.

NOTICE:

- Make sure that the interlock is fully engaged.
- Do not allow any foreign objects or water to enter the inverter with converter assembly.

(a) Install the inverter terminal cover with the 9 bolts to the inverter with converter assembly.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

12. INSTALL ENGINE ROOM MAIN WIRE

NOTICE:

- Make sure that the connectors are fully engaged.
- Do not allow any foreign objects or water to enter the inverter with converter assembly.

(a) Install the bolt, clamp and clip, and connect the engine room main wire.

Torque: **12 N·m (122 kgf·cm, 9ft·lbf)**

(b) Install the bolt.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

c

(c) Connect the engine wire to the engine room main wire.

c

(d) Connect the connector to the inverter with converter assembly and lock the connector with the lock lever.

c

13. INSTALL NO. 1 INVERTER BRACKET

(a) Temporarily install the No. 1 inverter bracket with the 3 bolts.

c

(b) Tighten the 3 bolts in the order shown in the illustration.

Torque: 14 N·m (140 kgf·cm, 10ft·lbf)

14. INSTALL SERVICE PLUG GRIP INFO

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected .

16. INSTALL REAR NO. 3 FLOOR BOARD 

17. INSTALL REAR DECK FLOOR BOX 

18. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) 

19. ADD COOLANT (for Inverter) 

20. INSPECT FOR COOLANT LEAK (for Inverter) 

21. INSTALL NO. 1 ENGINE UNDER COVER

22. INSTALL FRONT SPOILER COVER (w/ Front Spoiler)

23. INSTALL ENGINE UNDER COVER (w/ Cover)

24. INSTALL RADIATOR SUPPORT OPENING COVER 

ON-VEHICLE INSPECTION

1. INSPECT RELAY

(a) Inspect IGCT MAIN relay

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

A32779

Tester Connection	Condition	Specified Condition
3 - 5	No battery voltage is applied across terminals 1 and 2	10 k Ω or higher
3 - 5	Battery voltage is applied across terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

REMOVAL

1. PRECAUTION

HINT: INFO.

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

3. REMOVE REAR DECK FLOOR BOX INFO

4. REMOVE REAR NO. 3 FLOOR BOARD INFO

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

6. REMOVE SERVICE PLUG GRIP

CAUTION:

- Wear insulating gloves.
- Remove the service plug grip to interrupt the high voltage circuit at the time of inspection or repair.
- Keep the removed service plug grip in your pocket to prevent other technicians from accidentally reconnecting it while you are servicing the vehicle.
- All the high voltage wiring connectors are colored in orange.

(a) Wear insulating gloves and remove the service plug grip after sliding up the lever of the service plug grip as shown in the illustration.

c

CAUTION:

- Keep the removed service plug grip in your pocket to prevent other technicians from accidentally reconnecting it while you are servicing the vehicle.
- After removing the service plug grip, do not touch the high voltage connectors or terminals for 10 minutes.

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

INSPECTION

1. INSPECT SERVICE PLUG GRIP

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Service plug grip	Always	Below 1 Ω

c

If the result is not as specified, replace the service plug grip.

INSTALLATION

1. INSTALL SERVICE PLUG GRIP

CAUTION:

Wear insulating gloves.

NOTICE:

Before connecting the service plug, check that no parts and tools remain and that the high voltage terminals and connectors are connected securely.

(a) Wear insulated gloves and install the service plug grip in the order shown in the illustration.

c

(b) Rotate the handle of the service plug grip 90° toward the battery and slide it in the direction shown by the arrow until a click sound is heard.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

3. INSTALL REAR NO. 3 FLOOR BOARD INFO

4. INSTALL REAR DECK FLOOR BOX INFO

5. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

(a) Disconnect the 3 clamps and oxygen sensor connector.

(b) Disconnect the 2 heater water hoses.

(c) Remove the 4 bolts and 4 compression springs.

(d) Remove the front exhaust pipe assembly from the 3 exhaust pipe supports.

(e) Remove the 2 gaskets from the front exhaust pipe assembly and exhaust manifold.

7. REMOVE FRONT EXHAUST PIPE ASSEMBLY (w/o Exhaust Heat Recirculation System)

(a) Remove the 4 bolts and 4 compression springs.

(b) Remove the front exhaust pipe assembly from the 3 exhaust pipe supports.

(c) Remove the 2 gaskets from the front exhaust pipe assembly and exhaust manifold.

8. REMOVE FRONT NO. 1 FLOOR HEAT INSULATOR

(a) Remove the 3 nuts and No. 1 floor heat insulator.

9. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

(a) Remove the 3 bolts and No. 1 exhaust manifold heat insulator.

10. REMOVE AIR FUEL RATIO SENSOR INFO

11. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay.

12. REMOVE EXHAUST MANIFOLD

(a) Remove the 7 nuts, exhaust manifold and 2 gaskets.

13. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

(a) Remove the 3 bolts and No. 2 exhaust manifold heat insulator.

INSTALLATION

1. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

(a) Install the No. 2 exhaust manifold heat insulator with the 3 bolts.

Torque: **12 N·m (122 kgf·cm, 9ft·lbf)**

T

2. INSTALL EXHAUST MANIFOLD

(a) Install 2 new gaskets and the exhaust manifold with the 7 nuts.

Torque: **21 N·m (214 kgf·cm, 15ft·lbf)**

T

3. INSTALL MANIFOLD STAY

(a) Install the manifold stay with the 3 bolts.

Torque: **43 N·m (440 kgf·cm, 32ft·lbf)**

T

4. INSTALL AIR FUEL RATIO SENSOR INFO

5. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

(a) Install the No. 1 exhaust manifold heat insulator with the 3 bolts.

Torque: **12 N·m (122 kgf·cm, 9ft·lbf)**

6. INSTALL FRONT NO. 1 FLOOR HEAT INSULATOR

(a) Install the No. 1 floor heat insulator with the 3 nuts.

Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

7. INSTALL FRONT EXHAUST PIPE ASSEMBLY (w/ Exhaust Heat Recirculation System)

NOTICE:

When installing the water hose, ensure that the exhaust heat recirculation system is filled with coolant. Otherwise, the electric water pump may be damaged.

(a) Using a vernier caliper, measure the free length of the compression springs.

Minimum (front)	41.5 mm (1.64 in.)
Minimum (rear)	38.5 mm (1.52 in.)

HINT:

A77867 If the free length is less than minimum, replace the compression spring.

(b) Fully insert 2 new gaskets to the exhaust manifold and front exhaust pipe assembly.

(c) Using a plastic hammer and wooden block, tap in the new gaskets until its surface is flush with the exhaust manifold and front exhaust pipe assembly.

REMOVAL

1. REMOVE THROTTLE BODY ASSEMBLY

(a) Remove the throttle body assembly **INFO**.

2. REMOVE EGR PIPE ASSEMBLY **INFO**

3. REMOVE MANIFOLD ABSOLUTE PRESSURE SENSOR **INFO**

4. REMOVE VACUUM SWITCHING VALVE ASSEMBLY **INFO**

5. REMOVE INTAKE MANIFOLD

(a) Disconnect the 3 connectors and 2 wire harness clamps.

(b) Remove the engine oil level dipstick guide sub-assembly.

(c) Disconnect the wire harness clamp, and then remove the 2 bolts and engine oil level dipstick guide sub-assembly.

(d) Remove the O-ring from the engine oil level dipstick guide sub-assembly.

(e) Disconnect the fuel vapor feed hose and ventilation hose.

(f) Remove the 2 bolts, 2 nuts and intake manifold.

(g) Remove the No. 1 intake manifold to head gasket.

6. REPLACE STUD BOLT

HINT:

If a stud bolt is deformed or the threads are damaged, replace it.

(a) Using an E6 "TORX" wrench, replace the 2 stud bolts.

Torque: **5.0 N·m (51 kgf·cm, 44in·lbf)**

INSTALLATION

1. INSTALL INTAKE MANIFOLD

(a) Install a new No. 1 intake manifold to head gasket to the intake manifold.

(b) Install the intake manifold with the 2 bolts and 2 nuts.

Torque: **28 N·m (285 kgf·cm, 21ft·lbf)**

(c) Connect the fuel vapor feed hose and ventilation hose.

(d) Install a new O-ring to the engine oil level dipstick guide sub-assembly.

(e) Apply a light coat of engine oil to the O-ring.

(f) Install the engine oil level dipstick guide sub-assembly with the 2 bolts and connect the wire harness clamp.

Bolt (A) - Torque: **28 N·m (285 kgf·cm, 21ft·lbf)**

Bolt (B) - Torque: **21 N·m (214 kgf·cm, 15ft·lbf)**

(g) Install the engine oil level dipstick.

(h) Connect the 2 wire harness clamps and 3 connectors.

2. INSTALL VACUUM SWITCHING VALVE ASSEMBLY_ [INFO](#)

3. INSTALL MANIFOLD ABSOLUTE PRESSURE SENSOR_ [INFO](#)

4. INSTALL EGR PIPE ASSEMBLY_ [INFO](#)

5. INSTALL THROTTLE BODY ASSEMBLY

(a) Install the throttle body assembly [INFO](#).

ON-VEHICLE INSPECTION

1. INSPECT INTAKE SYSTEM

(a) Check that there are no vacuum leaks at the points shown in the illustration.

T

ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL LEVEL

(a) Put the engine in inspection mode **INFO**.

(b) Warm up and stop the engine, then wait for 5 minutes. The oil level should be between the low level and full level marks on the engine oil level dipstick. If the engine oil level is low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill with engine oil to above the full level mark.

2. CHECK ENGINE OIL

(a) Check the engine oil for deterioration, water contamination, discoloring or thinning. If the condition is visibly poor, replace the engine oil and oil filter element.

3. INSPECT ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Remove the oil pressure switch **INFO**.

(b) Install the oil pressure gauge with the adapter.

(c) Put the engine in inspection mode **INFO**.

(d) Warm up the engine.

(e) Check the oil pressure.

Standard Oil Pressure:

Engine Condition	Oil Pressure
Idle	60 kPa (0.6 kgf/cm ² , 8.7 psi) or more
2500 rpm	142 kPa (1.4 kgf/cm ² , 21 psi) or more

(f) If the oil pressure is not as specified, check the oil pump **INFO**.

(g) Install the oil pressure switch .

REPLACEMENT

CAUTION:

- Prolonged and repeated contact with engine oil will result in the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.
- Wear protective clothing and gloves. Avoid contact with used oil. If contact occurs, wash your skin thoroughly with soap or waterless hand cleaner. Never use gasoline, thinners, or solvents to wash the skin.
- In order to protect the environment, dispose of used oil and used oil filters at designated disposal sites only.

1. REMOVE FRONT SPOILER COVER (w/ Front Spoiler)

2. REMOVE ENGINE UNDER COVER (w/ Cover)

3. REMOVE NO. 1 ENGINE UNDER COVER

4. DRAIN ENGINE OIL

(a) Remove the oil filler cap.

(b) Remove the oil pan drain plug and gasket, and drain the oil into a container.

(c) Clean and install the oil pan drain plug with a new gasket.

Torque: **37 N·m (377 kgf·cm, 27ft·lbf)**

5. REMOVE OIL FILTER CAP ASSEMBLY

(a) Using SST, loosen the oil filter cap 4 revolutions, align the cap ribs vertically, and drain the remaining engine oil in the oil filter cap.

Text in Illustration

*1	Cap Rib
*2	Oil Filter Bracket Clip

SST: 09228-06501

NOTICE:

Do not remove the oil filter bracket clip when removing the oil filter cap assembly.

HINT:

Set a container below the oil filter cap assembly before loosening the oil filter cap.

T

(b) Remove the oil filter cap assembly.

(c) Remove the oil filter element and O-ring from the oil filter cap.

Text in Illustration

*1	Oil Filter Element
*2	O-ring

NOTICE:

Be sure to remove the O-ring (for the cap) by hand, without using any tools, to prevent damage to the groove for the O-ring on the cap.

6. INSTALL OIL FILTER CAP ASSEMBLY

(a) Clean the oil filter cap threads and O-ring groove.

(b) Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.

(c) Set a new oil filter element in the oil filter cap.

(d) Remove any dirt or foreign matter from the installation surface and inside of the engine.

(e) Reapply a small amount of engine oil to the O-ring of the oil filter cap assembly. Align the cutout in the oil filter cap threads 90° to the grooves in the oil filter bracket and temporarily tighten the cap.

NOTICE:

Make sure that the O-ring does not get caught between the parts.

(f) Using SST, tighten the oil filter cap assembly.

Text in Illustration

*1	No Clearance
*2	Oil Filter Bracket Clip

Torque: **25 N·m (255 kgf·cm, 18ft·lbf)**

SST: 09228-06501

- After tightening the oil filter cap assembly, check for gaps between the installation surfaces.

- Do not remove the oil filter bracket clip when installing the oil filter cap assembly.
- Do not cross thread the oil filter cap assembly.

T

7. ADD ENGINE OIL

(a) Add new engine oil and install the oil filler cap.

Standard Oil Grade (For USA)

Oil Grade	Oil Viscosity (SAE)
<ul style="list-style-type: none"> • ILSAC multigrade engine oil 	0W-20

Standard Oil Grade (For Canada)

Oil Grade	Oil Viscosity (SAE)
<ul style="list-style-type: none"> • ILSAC multigrade engine oil 	<ul style="list-style-type: none"> • 0W-20 • 5W-20 <p>(0W-20 is best choice for fuel economy and good starting in cold weather.)</p>

Standard Capacity

Item	Standard Condition
Drain and refill with oil filter change	4.2 liters (4.4 US qts, 3.7 Imp. qts)
Drain and refill without oil filter change	3.9 liters (4.1 US qts, 3.4 Imp. qts)
Dry fill	4.7 liters (5.0 US qts, 4.1 Imp. qts)

8. INSPECT FOR ENGINE OIL LEAK

(a) Put the engine in inspection mode INFO.

(b) Start the engine.

(c) Check for engine oil leaks from the connected parts of the oil filter cap and oil filter drain plug.

9. INSTALL NO. 1 ENGINE UNDER COVER

10. INSTALL ENGINE UNDER COVER (w/ Cover)

11. INSTALL FRONT SPOILER COVER (w/ Front Spoiler)

REMOVAL

1. REMOVE FRONT WHEEL RH

2. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Disconnect the oil pressure switch connector.

(b) Using a 24 mm deep socket wrench, remove the oil pressure switch.

INSPECTION

1. INSPECT ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Disconnect the oil pressure switch connector.

(b) Start the engine.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - Switch body	Idling	10 kΩ or higher
1 - Switch body	Engine stopped	Below 1 Ω

If the result is not as specified, replace the oil pressure switch assembly.

(d) Reconnect the oil pressure switch connector.

INSTALLATION

1. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Text in Illustration

*1	Adhesive
----	----------

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(b) Using a 24 mm deep socket wrench, install the oil pressure switch.

Torque: **15 N·m (153 kgf·cm, 11ft·lbf)**

NOTICE:

Do not start the engine for at least 1 hour after installation.

(c) Connect the oil pressure switch connector.

21. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY INFO

22. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

(a) Remove the 3 bolts and engine mounting bracket RH.

(b) Remove the 4 bolts and oil filter bracket.

(c) Remove the 2 O-rings.

(d) Remove the 18 bolts and seal washer.

Text in Illustration

*1	Seal Washer
----	-------------

c

c

(e) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

Text in Illustration

*1	Protective Tape
----	-----------------

- Be careful not to damage the contact surfaces of the timing chain cover, cylinder block, and cylinder head.
- Pry the timing chain cover out evenly in order to prevent damaging the knock pins.

HINT:

Tape the screwdriver tip before use.

c

(f) Remove the 3 O-rings.

23. REMOVE TIMING CHAIN COVER OIL SEAL

(a) Place the timing chain cover on wooden blocks.

(b) Using a screwdriver, pry out the oil seal.

Text in Illustration

*1	Protective Tape
*2	Wooden Block

HINT:

Tape the screwdriver tip before use.

NOTICE:

Do not damage the surface of the oil seal press fit hole.

24. REMOVE CHAIN TENSIONER SLIPPER INFO

25. REMOVE NO. 1 CHAIN VIBRATION DAMPER INFO

26. REMOVE NO. 2 CHAIN VIBRATION DAMPER INFO

27. REMOVE CHAIN SUB-ASSEMBLY INFO

28. REMOVE CRANKSHAFT TIMING SPROCKET

(a) Remove the crankshaft timing sprocket.

29. REMOVE NO. 2 CHAIN SUB-ASSEMBLY

(a) Temporarily tighten the crankshaft pulley and crankshaft pulley bolt.

(b) Using SST, remove the oil pump drive shaft sprocket nut while holding the crankshaft pulley.

SST: 09213-58014

91551-80840

SST: 09330-00021

(c) Remove the SST, crankshaft pulley, and crankshaft pulley bolt.

(d) Remove the bolt, chain tensioner plate, and spring.

(e) Remove the oil pump drive gear, oil pump drive shaft gear, and No. 2 chain sub-assembly.

Text in Illustration

*1	Oil Pump Drive Gear
*2	Oil Pump Drive Shaft Gear
*3	No. 2 Chain Sub-assembly

30. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

31. REMOVE OIL PAN DRAIN PLUG INFO

32. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

(a) Remove the 10 bolts and 2 nuts.

(b) Insert the blade of oil pan seal cutter between the crankcase and oil pan. Cut through the sealer and remove the oil pan.

NOTICE:

Be careful not to damage the contact surfaces of the crankcase, chain cover, and oil pan.

33. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 3 bolts and oil pump.

DISASSEMBLY

1. REMOVE OIL PUMP RELIEF VALVE

(a) Using a 27 mm socket wrench, remove the plug.

Text in Illustration

*1	Plug
*2	Spring
*3	Valve

c

(b) Remove the valve spring and relief valve.

2. REMOVE OIL PUMP COVER SUB-ASSEMBLY

c

(a) Remove the 5 bolts and oil pump cover.

(b) Remove the oil pump drive and driven rotors from the oil pump.

INSPECTION

1. INSPECT OIL PUMP RELIEF VALVE

c

(a) Coat the oil pump relief valve with engine oil, then check that it falls smoothly into the valve hole by its own weight.

If this does not occur, repair or replace the oil pump assembly.

2. INSPECT OIL PUMP ROTOR

T

(a) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.

Standard tip clearance:

0.08 to 0.16 mm (0.00315 to 0.00631 in.)

Maximum tip clearance:

0.35 mm (0.0138 in.)

If the tip clearance is greater than the maximum, replace the oil pump assembly.

(b) Using a feeler gauge and precision straightedge, measure the clearance between the 2 rotors and precision straight edge.

Standard side clearance:

0.085 to 0.135 mm (0.00335 to 0.00532 in.)

Maximum side clearance:

0.16 mm (0.00631 in.)

If the side clearance is greater than the maximum, replace the oil pump assembly.

(c) Using a feeler gauge, measure the clearance between the driven rotor and oil pump body.

Standard body clearance:

T

T

0.12 to 0.19 mm (0.00472 to 0.00750 in.)

Maximum body clearance:

0.325 mm (0.0128 in.)

If the body clearance is greater than the maximum, replace the oil pump assembly.

REASSEMBLY

1. INSTALL OIL PUMP COVER SUB-ASSEMBLY

(a) Coat the oil pump drive and driven rotors with engine oil, and place them into the oil pump with the marks facing the oil pump cover side.

Text in Illustration

*1	Mark
----	------

(b) Install the oil pump cover with the 5 bolts.

Torque: **8.8 N·m (90 kgf·cm, 78in·lbf)**

2. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the relief valve with engine oil.

Text in Illustration

*1	Plug
*2	Spring
*3	Valve

(b) Insert the relief valve and spring into the pump body hole.

(c) Using a 27 mm socket wrench, install the plug.

Torque: **49 N·m (500 kgf·cm, 37ft·lbf)**

INSTALLATION

1. INSTALL OIL PUMP ASSEMBLY

(a) Install the oil pump with the 3 bolts.

Torque: **21 N·m (214 kgf·cm, 16ft·lbf)**

2. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder block and oil pan.

(b) Apply a continuous bead of seal packing (Diameter 4.0 mm (0.157 in.)) as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

- Remove any oil from the contact surfaces.
- Install the oil pan within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the oil pan.

T

(c) Install the No. 2 oil pan with the 10 bolts and 2 nuts.

Torque: **10 N·m (102 kgf·cm, 7ft·lbf)**

T

3. INSTALL OIL PAN DRAIN PLUG INFO

4. INSTALL CRANKSHAFT TIMING GEAR KEY INFO

5. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

6. INSTALL NO. 2 CHAIN SUB-ASSEMBLY

(a) Temporarily install the crankshaft pulley bolt.

(b) Turn the crankshaft counterclockwise to position the timing gear key to the 9 o'clock position.

(c) Turn the drive shaft so that the cutout faces the 12 o'clock position.

(d) Align the yellow mark links with the timing marks of each gear as shown in the illustration.

Text in Illustration

*1	Front
*2	Mark Plate (Yellow)
*3	Timing Mark
*4	Oil Pump Drive Gear
*5	Oil Pump Drive Shaft Gear

HINT:

Be sure to position the mark plate at the front of the engine.

(e) Install the sprockets onto the crankshaft and oil pump shaft with the chain on the gears.

(f) Temporarily tighten the oil pump drive shaft gear with the nut.

(g) Insert the damper spring into the adjusting hole, and then install the chain tensioner plate with the bolt.

Torque: **10 N·m (102 kgf·cm, 7ft·lbf)**

T

(h) Temporarily tighten the crankshaft pulley with the bolt.

(i) Using SST, install the oil pump drive shaft gear nut while holding the crankshaft pulley.

SST: 09213-58014

91551-80840

SST: 09330-00021

Torque: **28 N·m (286 kgf·cm, 21ft·lbf)**

(j) Remove the crankshaft pulley and bolt.

7. INSTALL CRANKSHAFT TIMING SPROCKET

(a) Install the crankshaft timing sprocket.

T

8. INSTALL NO. 1 CHAIN VIBRATION DAMPER_ [INFO](#)

9. SET NO. 1 CYLINDER TO TDC / COMPRESSION_ [INFO](#)

10. INSTALL CHAIN SUB-ASSEMBLY_ [INFO](#)

11. CHECK NO. 1 CYLINDER TO TDC / COMPRESSION_ [INFO](#)

12. INSTALL CHAIN TENSIONER SLIPPER_ [INFO](#)

13. INSTALL NO. 2 CHAIN VIBRATION DAMPER INFO

14. INSTALL TIMING CHAIN COVER OIL SEAL

(a) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.

SST: 09223-22010

- Keep the lip free from foreign matter.
- Do not tap on the oil seal at an angle.
- Make sure that the oil seal edge does not stick out of the timing chain case.

HINT:

Tap in the oil seal so that it is positioned within 1.0 mm from the edge of the timing chain case.

(b) Apply MP grease to the lip of the oil seal.

15. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head, and cylinder block.

: Clean and degrease

c

(b) Install 3 new O-rings.

(c) Apply seal packing as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Seal diameter:

5.0 mm (0.197 in.)

NOTICE:

- Remove any oil from the contact surfaces.
- Install the chain cover within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the timing chain cover sub-assembly.

(d) Apply seal packing to the timing chain cover in a line as shown in the following illustration.

NOTICE:

- When the contact surfaces are wet, wipe them with oil-free cloth before applying seal packing.
- Install the chain cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installation.

c

Seal Packing:

Item	Seal Packing
------	--------------

Item	Seal Packing
Dashed line	Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Continuous line	
Alternate long and short dashed line	Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

Application Specification:

Area	Seal Packing Diameter	Distance from Edge of Cover to:	Seal Packing Application Length	Distance from Top of Cover to Top of Seal Packing

O	4.0 mm (0.157 in.)	Center of seal packing 3.0 mm (0.118 in.)	-	-

NOTICE:

- When the contact surfaces are wet, wipe them with oil-free cloth before applying seal packing.
- Install the timing chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.
- After applying seal packing to the timing chain cover, install the engine mounting bracket and oil filter bracket within 10 minutes.
- Do not add engine oil for at least 2 hours after installation.

(e) Clean the bolt and fitting hole.

(f) Install the timing chain cover.

(g) Temporarily tighten the engine mounting bracket RH with the 3 bolts.

- Install the mounting bracket within 10 minutes after installing the chain cover.
- Do not start the engine for at least 2 hours after installation.

Bolt Length:

Item	Length
Bolt	80 mm (3.15 in.)

(h) Install 2 new O-rings.

c

(i) Temporarily tighten the oil filter bracket with the 4 bolts.

c

- Install the oil filter bracket within 10 minutes after installing the chain cover.
- Do not start the engine for at least 2 hours after installation.

Bolt Length:

Item	Length
Bolt	35 mm (1.38 in.)

(j) Install the timing chain cover with the 25 bolts and seal washer as shown in the illustration.

Torque:

Bolt Torque Order:

c

Text in Illustration

*1	Seal Washer	-	-

6. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY INFO

7. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH INFO

8. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

9. REMOVE POWER SWITCH

(a) Detach the 2 claws and remove the power switch.

INSPECTION

1. INSPECT POWER SWITCH

(a) Measure the resistance according to the value(s) in the table below.

N

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 k Ω or higher
2 (SS2) - 5 (GND)	Not pushed	10 k Ω or higher

If the result is not as specified, replace the power switch.

(b) Apply battery voltage between the terminals of the switch, and check the illumination condition of the power switch.

N

Text in Illustration

*1	Indicator Light	*2	Power Switch Illumination
----	-----------------	----	---------------------------

Standard Resistance:

Measurement Condition	Specified Condition
Battery positive (+) →Terminal 11 (SWIL)	Illuminates
Battery negative (-) →Terminal 4 (COM) or 5 (GND)	(Power Switch Illumination)
Battery positive (+) →Terminal 12 (INDS)	Illuminates
Battery negative (-) →Terminal 4 (COM) or 5 (GND)	(Indicator Light)
Battery positive (+) →Terminal 13 (INDW)	Illuminates
Battery negative (-) →Terminal 4 (COM) or 5 (GND)	(Indicator Light)

If the result is not as specified, replace the power switch.

ON-VEHICLE INSPECTION

1. CHECK AUXILIARY BATTERY VOLTAGE

NOTICE:

If the battery is fully depleted or "READY" does not light up, recharge the battery. Check the battery again before the vehicle is returned to the customer.

(a) Check the battery for damage and deformation. If severe damage, deformation or leakage is found, replace the battery.

(b) Check the voltage.

(1) Turn the power switch off and turn on the headlights for 20 to 30 seconds. This will remove the surface charge from the battery.

(2) Measure the battery voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
Positive (+) terminal - Negative (-) terminal	20°C (68°F)	12.5 to 12.9 V

If the voltage is not as specified, charge the battery.

2. CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.

If the terminals are corroded, clean them.

3. CHECK FUSES

(a) Measure the resistance of each fuse for the auxiliary battery charging system.

Standard resistance:

Below 1 Ω

- If any of the results is not as specified, replace the fuse(s) as necessary.

4. CHECK AUXILIARY BATTERY VENTILATION HOSE

(a) Make sure that the hose is not kinked.

REMOVAL

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

2. REMOVE REAR DECK FLOOR BOX INFO

3. REMOVE REAR NO. 3 FLOOR BOARD INFO

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE AUXILIARY BATTERY

(a) Disengage the 2 claws and remove the No. 3 rear floor board plate upper.

(b) Open the battery terminal cap.

(c) Loosen the nut, and disconnect the positive (+) battery terminal.

(d) Remove the nut and bolt.

(e) Remove the battery thermometer sensor connector.

(f) Remove the battery clamp.

(g) Disconnect the battery ventilation hose.

(h) Remove the battery.

INSTALLATION

1. INSTALL AUXILIARY BATTERY

(a) Install the battery.

(b) Connect the battery ventilation hose to the battery without kinking it.

HINT:

Push in the battery ventilation hose to the battery until a click sound is heard.

(c) Install the battery clamp with the bolt and nut.

Nut - Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

Bolt - Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

(d) Install the battery thermometer sensor connector

(e) Connect the positive (+) battery terminal with the nut.

(f) Install the battery terminal cap.

(g) Engage the 2 claws to install the No. 3 rear floor board plate upper.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

3. INSTALL REAR NO. 3 FLOOR BOARD INFO

4. INSTALL REAR DECK FLOOR BOX INFO

5. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

ON-VEHICLE INSPECTION

1. INSPECT BATTERY THERMOMETER SENSOR ASSEMBLY

*1

(a) Disconnect the connector from the battery thermometer sensor assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ

Tester Connection	Condition	Specified Condition
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

Text in Illustration

*1	Component without harness connected (Battery Thermometer Sensor Assembly)
*2	Sensing Portion

NOTICE:

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the battery thermometer sensor assembly.

REMOVAL

1. REMOVE FRONT CONSOLE BOX COVER

(a) Disengage the 6 claws.

(b) Disconnect each connector and remove the front console box cover.

2. REMOVE POWER OUTLET SOCKET ASSEMBLY

(a) Using a screwdriver, disengage the claw and remove the power outlet socket assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Tape the screwdriver tip before use.

3. REMOVE POWER OUTLET SOCKET COVER

(a) Disengage the 2 claws and remove the power outlet socket cover.

INSTALLATION

1. INSTALL POWER OUTLET SOCKET COVER

(a) Engage the 2 claws to install the power outlet socket cover.

2. INSTALL POWER OUTLET SOCKET ASSEMBLY

(a) Engage the claw to install the power outlet socket assembly.

3. INSTALL FRONT CONSOLE BOX COVER

(a) Connect each connector.

(b) Engage the 6 claws to install the front console box cover.

PRECAUTION

1. PRECAUTION FOR DISCONNECTING BATTERY CABLE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

System	See Procedure
Advanced Parking Guide System	INFO

2. PRECAUTIONS FOR STEERING SYSTEM HANDLING

(a) Be careful when replacing parts. Incorrect replacement could affect the performance of the steering system and result in hazardous driving.

3. PRECAUTIONS FOR SRS AIRBAG SYSTEM HANDLING

(a) This vehicle is equipped with an Supplemental Restraint System (SRS) which includes parts such as airbags for the driver and front passenger. Failure to carry out service operations in the correct sequence could cause unexpected SRS deployment during servicing and may cause a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precaution for the SRS [INFO](#).

4. BUS WIRE REPAIR

(a) After repairing a bus wire with solder, wrap the repaired part with electrical tape.

- The CANL bus wire and CANH bus wire must be installed together at all times.
- When installing, make sure that these wires are twisted, because CAN bus wires are likely to be influenced by electrical noise if the bus wires are not twisted.
- The difference in length between the CANL bus wire and CANH bus wire should be 100 mm (3.937 in.) or less.
- Leave approximately 80 mm (3.150 in.) loose in the twisted wires around the connector.

N

F45104

N

(b) Do not use bypass wiring between connectors.

NOTICE:

The ability of the twisted bus wires to resist interference will be lost if bypass wiring is used.

5. CONNECTOR HANDLING

(a) When checking resistance with a tester, insert the tester probes from the backside (harness side) of the connector.

(b) Use service wires to check the connector if it is impossible to check continuity from the rear of the connector.

6. PRECAUTIONS FOR INSPECTING OR REPLACING CAN JUNCTION CONNECTOR

(a) If the CAN junction connector is removed from the vehicle for inspection or replacement, make sure to install the CAN junction connector and all wire harnesses to their original locations with tape and the clamps.

- — — — —: CAN Bus Main Wire (CANL) - - - - -: CAN Bus Branch Wire (CANL)

SYSTEM DESCRIPTION

1. BRIEF DESCRIPTION

- (a) The Control Area Network (CAN) is a serial data communication system for real time application. It is a vehicle multiplex communication system which has a high communication speed and the ability to detect malfunctions.
- (b) By pairing the CANH and CANL bus wires, the CAN performs communication based on differential voltage.
- (c) Many ECUs or sensors installed on the vehicle operate by sharing information and communicating with each other.
- (d) The CAN has two resistors of 120 Ω which are necessary to communicate with the main bus wire.

2. DEFINITION OF TERMS

(a) Main bus wire

(1) The main bus wire is a wire harness between the two terminating resistors on the bus (communication wire). This is the main bus in the CAN communication system.

(b) Branch wire

(1) The branch wire is a wire harness which diverges from the main bus wire to an ECU or sensor.

(c) Terminating resistors

(1) The termination circuit is a circuit which converts the communication current of CAN communication into the bus voltage. It consists of a resistor and condenser. Two termination circuits are necessary on the bus.

3. ECUS OR SENSORS WHICH COMMUNICATE THROUGH CAN COMMUNICATION SYSTEM

(a) CAN No. 1 Bus

(1) ECM

(2) Power management control ECU

(3) Combination meter

(4) Skid control ECU (Brake booster with master cylinder)

(5) Steering angle sensor

(6) Yaw rate sensor

(7) Power steering ECU

(8) Center airbag sensor assembly

- (9) Certification ECU (Smart key ECU)
- (10) Main body ECU
- (11) Transmission control ECU
- (12) Navigation ECU (Navigation receiver assembly)*1
- (b) CAN No. 2 Bus
 - (1) Power management control ECU
 - (2) Driving support ECU*2
 - (3) Seat belt control ECU*3
 - (4) Parking assist ECU*4
- (c) Power Management Bus
 - (1) Power management control ECU
 - (2) ECM
 - (3) Skid control ECU (Brake booster with master cylinder)
 - (4) Air conditioning amplifier
- (d) Parking Assist Bus*2
 - (1) Driving support ECU
 - (2) Millimeter wave radar sensor
 - (3) Lane recognition camera sensor*5

HINT:

*1: w/ Navigation system

*2: w/ Dynamic radar cruise control system

*3: w/ Pre-collision system

*4: w/ Advanced parking guidance system

*5: w/ Lane-keeping assist system

4. CIRCUIT DESCRIPTION

(a) The CAN No. 1 bus, CAN No. 2 bus, power management bus and parking assist bus each have termination circuits with two resistors of 120 Ω. High speed communication at 500 kbps is possible.

5. TROUBLESHOOTING REMARKS

(a) DTCs for the CAN communication system can be checked using the Techstream. The DLC3 is connected to the CAN communication system, but no DTCs exist regarding problems in the DLC3 or the DLC3 branch wires. If there is any trouble in the DLC3 or the DLC3 branch wires, ECUs on the CAN network cannot output codes to the Techstream.

(b) Trouble in the CAN buses (communication wires) can be checked by measuring the resistance between terminals of the DLC3. However, an open circuit in a branch wire other than the DLC3 branch wires cannot be checked from the DLC3.

NOTICE:

Do not insert the tester probes directly into the DLC3. Be sure to use service wires.

6. DIAGNOSTIC TROUBLE CODE FOR CAN COMMUNICATION SYSTEM

(a) DTCs for the CAN communication system are as follows: U0073, U0100, U0101, U0104, U0122, U0123, U0124, U0126, U0129, U0131, U0140, U0142, U0146, U0151, U0155, U0164, U0235, U0293, U0327, U1000, U1002, U1100, U1104, U1105, U1107, U110B, U1119 and U1133.

7. NOTES REGARDING TROUBLESHOOTING

(a) Trouble in the CAN bus (communication line) can be checked through the DLC3 (except when there is a wire break other than in the branch wire of the DLC3).

NOTICE:

Do not insert the tester probes directly into the DLC3. Be sure to use service wires.

(b) DTCs regarding the CAN communication system can be checked using the Techstream.

(c) The CAN communication system cannot detect trouble in the branch wires for the DLC3 even though the DLC3 is also connected to the CAN communication system.

8. HOW TO DISTINGUISH CONNECTOR OF CAN JUNCTION CONNECTOR

(a) In the CAN communication system, the shape of connectors connected to the CAN junction connector which has an earth terminal is the same. The connectors connected to the CAN junction connector can be distinguished by the colors of the bus wires and the connecting side of the junction connector.

HINT:

See Terminals of ECU for bus wire color or the shape of connecting surface .

HOW TO PROCEED WITH TROUBLESHOOTING

NOTICE:

- DTCs for the CAN communication system are as follows: U0073, U0100, U0101, U0104, U0122, U0123, U0124, U0126, U0129, U0131, U0140, U0142, U0146, U0151, U0155, U0164, U0235, U0293, U0327, U1000, U1002, U1100, U1104, U1105, U1107, U110B, U1119 and U1133.
- Refer to troubleshooting of each system if DTCs regarding the CAN communication system are not output.

HINT:

*: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

(a) Interview the customer and confirm the problem.

NEXT

3.	CHECK BATTERY
----	---------------

Standard Voltage:

11 to 14 V

HINT:

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	CHECK AND CLEAR DTCS*
----	-----------------------

HINT:

- CAN communication DTCs are stored when there is an open or short in any of the communication wires. Any problems with the power source of a corresponding ECU or sensor, or problems in the ECU or the sensor itself also cause these DTCs to be stored.
- If a CAN communication wire connector is disconnected with the power switch on (IG), the ECUs of the corresponding system and related systems store a DTC.

NEXT

5. CHECK FOR DLC3 BRANCH WIRE AND CAN NO. 1 BUS MAIN WIRE (CANH - CANL)

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.
- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

*1

(a) Turn the power switch off.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
L61-6 (CANH) - L61-14 (CANL)	Power switch off	54 to 69 Ω

(a) Based on the vehicle equipment and specifications, confirm the systems that use CAN communication INFO

NEXT

9.	CHECK ECUS CONNECTED TO CAN BUS*
----	----------------------------------

(a) Select "CAN Bus Check" from the screen on the Techstream INFO.

(b) Observe the screen for approximately 1 minute to check the ECUs and sensors displayed on the screen.

Result:

Result	Proceed to
All ECUs and sensors connected to the CAN communication system are displayed on the screen. (CAN bus circuit is currently normal.)	A
<ul style="list-style-type: none"> All ECUs except the power management control ECU connected to the CAN No. 2 bus are not displayed on the screen. The power management control ECU (power management1) outputs DTC U1002. (Open or short in CAN No. 2 bus main wires.)	B
<ul style="list-style-type: none"> All ECUs except the power management control ECU connected to the power management bus are not displayed on the screen. The power management control ECU (power management2) outputs DTC U1002. (Open or short in power management bus main wires.)	C
The driving support ECU (Pre-Collision2) outputs DTC U1002. (Open or short in parking assist bus main wires.)	D
All ECUs connected to the CAN No. 2 bus and power management bus are not displayed on the screen. (Open in power management control ECU branch wires or power management control ECU malfunction.)	E
One of the ECUs and sensors connected to the CAN No. 1 bus is not displayed on the screen. (Open in ECU or sensor branch wires, or communication interrupted.)	F
One of the ECUs and sensors connected to the CAN No. 2 bus or power management bus is not displayed on the screen. (Open in ECU or sensor branch wires, or communication interrupted.)	G
Some ECUs and sensors repeatedly appear and disappear on the screen during this check. (Open in one side of ECU or sensor branch wires.)	H

NOTICE:

- The systems (ECUs and sensors) that adopt CAN communication vary depending on the vehicle and optional equipment. Check which systems (ECUs and sensors) are installed on the vehicle .
- Non-installed ECUs or sensors will not be displayed. Do not mistake them for being in communication stop mode.
- The ECUs and sensors that repeatedly appear and disappear from the screen during this check are considered normal. (The response to the Techstream and its display are affected by signals output from other ECUs which have an open circuit in either of their CAN bus branch wires.)

HINT:

The ECUs connected to the CAN No. 2 bus and power management bus are displayed on the screen by the power management control ECU.

- B  GO TO U1002 (POWER MANAGEMENT1)
- C  GO TO U1002 (POWER MANAGEMENT2)

- G  GO TO DIAGNOSTIC TROUBLE CODE CHART
- H  GO TO OPEN IN ONE SIDE OF CAN BRANCH LINE

A

10.	RECHECK DTC
-----	-------------

HINT:

- Sometimes CAN communication system DTCs are output, but all ECUs and sensors connected to the CAN communication system are displayed on the Techstream. In this case, previous or history DTCs may indicate the cause of the problem.
- ECUs related to a problem in the CAN bus will store DTCs to indicate communication malfunctions. Communication stop mode in the CAN bus can be determined by comparing the combination of DTCs that have been set. Refer to DTC Combination Table for the CAN bus.
- The power management control ECU will store communication error DTCs when the ECUs connected to the CAN No. 2 bus and power management bus cannot communicate, or if a network malfunction occurs.

Result:

Result	Proceed to
Communication error DTCs other than the codes output from the power management control ECU are output. (A malfunction occurred in the CAN No. 1 bus.)	A
The power management control ECU (Power Management1) outputs DTC 1002. (A malfunction occurred in the CAN No. 2 bus.)	B
The power management control ECU (Power Management2) outputs DTC 1002. (A malfunction occurred in the power management bus.)	C
The driving support ECU (Pre-Collision2) outputs DTC 1002. (A malfunction occurred in the driving support bus.)	D
The power management ECU outputs DTCs other than DTC 1002.	E

Result	Proceed to
(A malfunction occurred in an ECU branch wire connected to the CAN No. 2 bus or power management bus.)	

- B  GO TO U1002 (POWER MANAGEMENT1)
- C  GO TO U1002 (POWER MANAGEMENT2)
- D  GO TO U1002 (PARKING ASSIST BUS)

TERMINALS OF ECU

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.
- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.
- This section describes the standard CAN values for all CAN related components.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for CAN No. 1 Bus Branch Wire

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L6-25 (CA1H) - L6-24 (CA1L)	B - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L6-25 (CA1H) - L6-4 (E12)	B - BR	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L6-24 (CA1L) - L6-4 (E12)	W - BR	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L6-25 (CA1H) - L6-7 (AM21)	B - W	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
L6-24 (CA1L) - L6-7 (AM21)	W - W	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

(b) CAN No. 2 Bus Main Wire

(1) Disconnect the power management control ECU connector.

Text in Illustration

*1	Rear view of wire harness connector (to Power Management Control ECU)
----	--

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for CAN No. 2 Bus Main Wire

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L5-34 (CA2H) - L5-35 (CA2L)	P - V	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	108 to 132 Ω
L5-34 (CA2H) - L5-6 (E1)	P - BR	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L5-35 (CA2L) - L5-6 (E1)	V - BR	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L5-34 (CA2H) - L5-1 (AM22)	P - W	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
L5-35 (CA2L) - L5-1 (AM22)	V - W	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

(c) Power Management Bus Main Wire

(1) Disconnect the power management control ECU connector.

Text in Illustration

*1	Rear view of wire harness connector (to Power Management Control ECU)
----	--

*1

P

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for Power Management Bus Main Wire

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L6-31 (CA3P) - L6-30 (CA3N)	LG - L	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	108 to 132 Ω
L6-31 (CA3P) - L6-4 (E12)	LG - BR	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L6-30 (CA3N) - L6-4 (E12)	L - BR	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L6-31 (CA3P) - L6-7 (AM21)	LG - W	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
L6-30 (CA3N) - L6-7 (AM21)	L - W	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

10. MAIN BODY ECU

H

Text in Illustration

*1 Instrument Panel Junction Block and Main Body ECU

----	--	----	------

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L7-14 (CANH) - L7-13 (CANL)	BR - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L7-14 (CANH) - L61-4 (CG)	BR - G	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L7-13 (CANL) - L61-4 (CG)	W - G	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L7-14 (CANH) - L61-16 (BAT)	BR - R	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L7-13 (CANL) - L61-16 (BAT)	W - R	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

11. SKID CONTROL ECU (BRAKE BOOSTER WITH MASTER CYLINDER)

(a) Disconnect the skid control ECU (brake booster with master cylinder) connector.

Text in Illustration

*1	Front view of wire harness connector
----	--------------------------------------

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for CAN No. 1 Bus Branch Wire

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A58-37 (CA1H) - A58-38 (CA1L)	LG - L	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
A58-37 (CA1H) - A58-28 (GND)	LG - W	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
A58-38 (CA1L) - A58-28 (GND)	L - W	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
A58-37 (CA1H) - A58-15 (BS)	LG - B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
A58-38 (CA1L) - A58-15 (BS)	L - B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

for Power Management Bus Branch Wire

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A58-35 (CA2H) - A58-34 (CA2L)	P - V	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
A58-35 (CA2H) - A58-28 (GND)	P - W	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
A58-34 (CA2L) - A58-28 (GND)	V - W	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
A58-35 (CA2H) - A58-15 (BS)	P - B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
A58-34 (CA2L) - A58-15 (BS)	V - B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

12. STEERING ANGLE SENSOR

*1

(a) Disconnect the steering angle sensor connector.

Text in Illustration

*1	Front view of wire harness connector (to Steering Angle Sensor)
----	--

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L51-4 (CANH) - L51-3 (CANL)	L - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L51-4 (CANH) - L51-2 (ESS)	L - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L51-3 (CANL) - L51-2 (ESS)	W - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L51-4 (CANH) - L51-6 (BAT)	L - R	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L51-3 (CANL) - L51-6 (BAT)	W - R	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

13. YAW RATE SENSOR

(a) Disconnect the yaw rate sensor connector.

Text in Illustration

*1	Front view of wire harness connector (to Yaw Rate Sensor)
*2	DLC3

*1

*2

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L12-3 (CANH) - L12-2 (CANL)	Y - L	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L12-3 (CANH) - L12-1 (GND)	Y - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L12-2 (CANL) - L12-1 (GND)	L - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L12-3 (CANH) - L61-16 (BAT)	Y - R	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L12-2 (CANL) - L61-16 (BAT)	L - R	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

14. POWER STEERING ECU

(a) Disconnect the power steering ECU connectors.

Text in Illustration

*1 Front view of wire harness connector (to Power Steering ECU)

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L54-1 (CANH) - L54-7 (CANL)	R - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L54-1 (CANH) - A27-2 (PGND)	R - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L54-7 (CANL) - A27-2 (PGND)	W - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L54-1 (CANH) - A27-1 (PIG)	R - W	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L54-7 (CANL) - A27-1 (PIG)	W - W	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

15. CENTER AIRBAG SENSOR ASSEMBLY

(a) Disconnect the center airbag sensor assembly connector.

*1

*2

Text in Illustration

*1	Front view of wire harness connector (to Center Airbag Sensor Assembly)	*2	DLC3
----	--	----	------

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L16-13 (CANH) - L16-22 (CANL)	R - G	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L16-13 (CANH) - L16-25 (E1)	R - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L16-22 (CANL) - L16-25 (E1)	G - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L16-13 (CANH) - L61-16 (BAT)	R - R	CAN communication line H - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L16-22 (CANL) - L61-16 (BAT)	G - R	CAN communication line L - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

16. CERTIFICATION ECU (SMART KEY ECU)

(a) Disconnect the certification ECU connector.

Text in Illustration

*1 Front view of wire harness connector (to Certification ECU)

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L62-9 (CANH) - L62-10 (CANL)	BE - P	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L62-9 (CANH) - L62-15 (E)	BE - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L62-10 (CANL) - L62-15 (E)	P - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L62-9 (CANH) - L62-1 (+B)	BE - B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L62-10 (CANL) - L62-1 (+B)	P - B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

17. TRANSMISSION CONTROL ECU

H

*1

(a) Disconnect the transmission control ECU connectors.

Text in Illustration

*1 Front view of wire harness connector
(to Transmission Control ECU)

(b) Measure the resistance according to the value(s) in the table below.

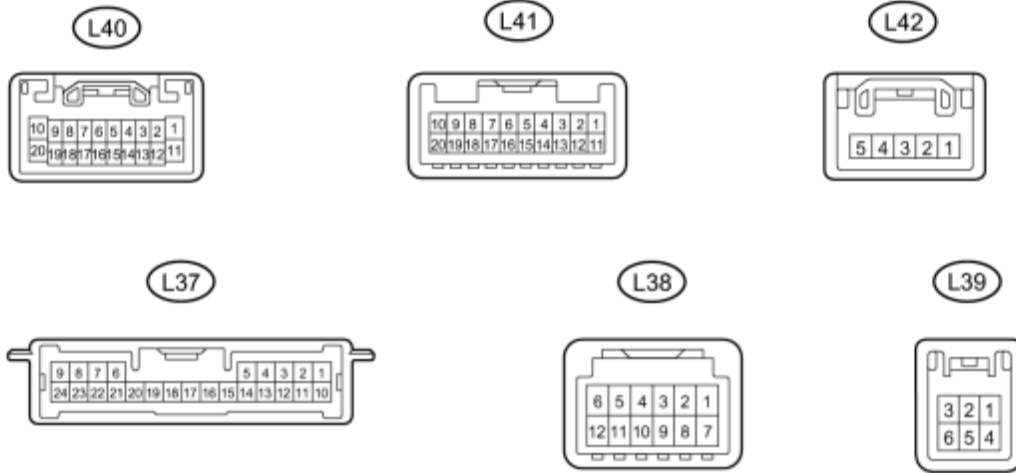

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A24-16 (CA1H) - A24-15 (CA1L)	Y - BR	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
A24-16 (CA1H) - A24-1 (E1)	Y - BR	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
A24-15 (CA1L) - A24-1 (E1)	BR - BR	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
A24-16 (CA1H) - A23-15 (BATT)	Y - SB	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A24-15 (CA1L) - A23-15 (BATT)	BR - SB	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

18. NAVIGATION ECU (NAVIGATION RECEIVER ASSEMBLY) (w/ Navigation System)

(a) w/ "Bluetooth" Audio System

H

*1

(1) Disconnect the navigation ECU connectors.

Text in Illustration

*1 Front view of wire harness connector
(to Navigation ECU)

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L37-2 (CANH) - L37-3 (CANL)	G - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L37-2 (CANH) - L40-20 (GND)	G - BR	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L37-3 (CANL) - L40-20 (GND)	W - BR	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L37-2 (CANH) - L40-1 (B)	G - SB	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
L37-3 (CANL) - L40-1 (B)	W - SB	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

(b) w/o "Bluetooth" Audio System

P

(1) Disconnect the navigation ECU connectors.

Text in Illustration

*1	Front view of wire harness connector (to Navigation ECU)
----	---

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L37-2 (CANH) - L37-3 (CANL)	G - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L37-2 (CANH) - L34-7 (GND)	G - BR	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L37-3 (CANL) - L34-7 (GND)	W - BR	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L37-2 (CANH) - L34-4 (B)	G - SB	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L37-3 (CANL) - L34-4 (B)	W - SB	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

19. AIR CONDITIONING AMPLIFIER

(a) Disconnect the air conditioning amplifier connector.

Text in Illustration

*1 Front view of wire harness connector (to Air Conditioning Amplifier)

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L17-11 (CANH) - L17-12 (CANL)	Y - BR	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L17-11 (CANH) - L17-14 (GND)	Y - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L17-12 (CANL) - L17-14 (GND)	BR - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L17-11 (CANH) - L17-21 (B)	Y - Y	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
L17-12 (CANL) - L17-21 (B)	BR - Y	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

20. SEAT BELT CONTROL ECU (w/ Pre-collision System)

*1

(a) Disconnect the seat belt control ECU connectors.

Text in Illustration

*1 Front view of wire harness connector
(to Seat Belt Control ECU)

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L3-1 (CANH) - L3-2 (CANL)	LG - L	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L3-1 (CANH) - L2-8 (PGND)	LG - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L3-2 (CANL) - L2-8 (PGND)	L - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L3-1 (CANH) - L2-7 (+B)	LG - B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L3-2 (CANL) - L2-7 (+B)	L - B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

21. PARKING ASSIST ECU (w/ Advanced Parking Guidance System)

*1

(a) Disconnect the parking assist ECU connector.

Text in Illustration

*1	Front view of wire harness connector (to Parking Assist ECU)
----	--

H

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L65-22 (CANH) - L65-21 (CANL)	Y - BR	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L65-22 (CANH) - L65-3 (GND1)	Y - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L65-21 (CANL) - L65-3 (GND1)	BR - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L65-22 (CANH) - L65-1 (+B)	Y - SB	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
L65-21 (CANL) - L65-1 (+B)	BR - SB	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

22. DRIVING SUPPORT ECU (w/ Dynamic Radar Cruise Control System)

(a) Disconnect the driving support ECU connector.

Text in Illustration

*1

*1	Front view of wire harness connector (to Driving Support ECU)
----	--

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

CAN No. 2 Bus Branch Wire

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L60-39 (CA2H) - L60-17 (CA2L)	B - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
L60-39 (CA2H) - L60-25 (GND)	B - W-B	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
L60-17 (CA2L) - L60-25 (GND)	W - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L60-39 (CA2H) - L60-30 (B)	B - B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
L60-17 (CA2L) - L60-30 (B)	W - B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

Standard Resistance:

Parking Assist Bus Main Wire

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L60-40 (CA1P) - L60-18 (CA1N)	Y - L	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	108 to 132 Ω
L60-40	Y - W-	HIGH-level	Power switch off	200 Ω or

(CA1P) - L60-25 (GND)	B	CAN bus line - Ground		higher
L60-18 (CA1N) - L60-25 (GND)	L - W-B	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
L60-40 (CA1P) - L60-30 (B)	Y - B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
L60-18 (CA1N) - L60-30 (B)	L - B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

23. MILLIMETER WAVE RADAR SENSOR (w/ Dynamic Radar Cruise Control System)

*1

(a) Disconnect the millimeter wave radar sensor connector.

Text in Illustration

*1	Front view of wire harness connector (to Millimeter Wave Radar Sensor)
*2	DLC3

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A2-4 (CA1P) - A2-3 (CA1N)	LG - P	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	108 to 132 Ω
A2-4 (CA1P) - L61-4 (CG)	LG - G	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A2-3 (CA1N) - L61-4 (CG)	P - G	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
A2-4 (CA1P) - L61-16 (BAT)	LG - R	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
A2-3 (CA1N) - L61-16 (BAT)	P - R	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

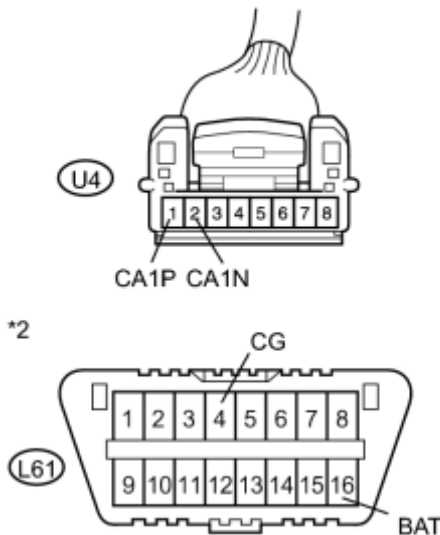

24. LANE RECOGNITION CAMERA SENSOR (w/ Lane-keeping Assist System)

(a) Disconnect the lane recognition camera sensor connector.

Text in Illustration

*1	Front view of wire harness connector (to Lane Recognition Camera Sensor)
*2	DLC3

*1

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
U4-1 (CA1P) - U4-2 (CA1N)	B - W	HIGH-level CAN bus line - LOW-level CAN bus line	Power switch off	54 to 69 Ω
U4-1 (CA1P) - L61-4 (CG)	B - G	HIGH-level CAN bus line - Ground	Power switch off	200 Ω or higher
U4-2 (CA1N) - L61-4 (CG)	W - G	LOW-level CAN bus line - Ground	Power switch off	200 Ω or higher
U4-1 (CA1P) - L61-16 (BAT)	B - R	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
U4-2 (CA1N) - L61-16 (BAT)	W - R	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

DIAGNOSIS SYSTEM

1. ECUS OR SENSORS WHICH COMMUNICATE THROUGH CAN COMMUNICATION SYSTEM

(a) CAN No. 1 Bus

- (1) ECM
- (2) Power management control ECU
- (3) Combination meter
- (4) Main body ECU
- (5) Power steering ECU
- (6) Center airbag sensor assembly
- (7) Skid control ECU (Brake booster with master cylinder)
- (8) Steering angle sensor
- (9) Yaw rate sensor
- (10) Certification ECU (Smart key ECU)
- (11) Transmission control ECU
- (12) Navigation ECU (Navigation receiver assembly)*1

(b) CAN No. 2 Bus

- (1) Power management control ECU
- (2) Driving support ECU*2
- (3) Seat belt control ECU*3
- (4) Parking assist ECU*4

(c) Power Management Bus

- (1) Power management control ECU
- (2) ECM
- (3) Skid control ECU (Brake booster with master cylinder)
- (4) Air conditioning amplifier

(d) Driving Support Bus*2

(1) Driving support ECU

(2) Millimeter wave radar sensor

(3) Lane recognition camera sensor*5

HINT:

*1: w/ Navigation system

*2: w/ Dynamic radar cruise control system

*3: w/ Pre-collision system

*4: w/ Advanced parking guidance system

*5: w/ Lane-keeping assist system

2. CHECK FOR INSTALLED SYSTEMS (ECUS AND SENSORS) THAT ADOPT CAN COMMUNICATION

(a) The systems (ECUs and sensors) that adopt CAN communication vary depending on the vehicle and optional equipment. Check which systems (ECUs and sensors) are installed on the vehicle.

ECU/Sensor Name	Techstream Display	Applicability
ECM	Engine	Installed on all vehicles
Power management ECU	<ul style="list-style-type: none">Hybrid ControlPower Management I	Installed on all vehicles
Transmission control ECU	Transmission Control	Installed on all vehicles
Combination meter	Combination Meter	Installed on all vehicles
Main body ECU	Main Body	Installed on all vehicles
Power steering ECU	EPS	Installed on all vehicles
Skid control ECU	ABS/VSC/TRAC	Installed on all vehicles
Steering angle sensor	Steering Angle Sensor	Installed on all vehicles
Yaw rate sensor	Yaw Rate/Deceleration Sensor	Installed on all vehicles
Center airbag sensor assembly	SRS Airbag	Installed on all vehicles
Certification ECU	Smart Access/Smart Key/Wireless Tuner	Installed on all vehicles
Air conditioning amplifier	Air Conditioner	Installed on all vehicles
Navigation ECU	AVN1	w/ Navigation system
Driving support ECU	Cruise Control (ACC)	w/ Dynamic radar cruise control system
Millimeter wave radar sensor	-	w/ Dynamic radar cruise control

ECU/Sensor Name	Techstream Display	Applicability
		system
Lane recognition camera sensor	-	w/ Lane-keeping assist system
Seat belt control ECU	Pre-Collision I	w/ Pre-collision system
Parking assist ECU	Advanced Parking Guidance System	w/ Advanced parking guidance system

3. CAN BUS CHECK

HINT:

The ECUs and sensors that are properly connected to the CAN communication system can be displayed using the Techstream.

(a) Using the Techstream, select "CAN Bus Check" from "System Select".

4. DTC TABLE BY ECU

HINT:

- In the CAN communication system, CAN communication system DTCs can be displayed by the ECU using the Techstream.
- If CAN communication system DTCs are output, trouble cannot be determined only by the DTCs. Perform troubleshooting according to How to Proceed with Troubleshooting .

(a) Power Management Control ECU / Techstream Display "Hybrid Control"

DTC Code	Detection Item
U0100-211	Lost Communication with ECM/PCM "A"
U0100-212	Lost Communication with ECM/PCM "A"
U0100-530	Lost Communication with ECM/PCM "A"
U0122-732*1	Lost Communication with Vehicle Dynamic Control Module
U0129-220	Lost Communication with Brake System Control Module
U0129-222	Lost Communication with Brake System Control Module
U0129-527	Lost Communication with Brake System Control Module
U0129-528	Lost Communication with Brake System Control Module
U0140-146	Communication Error from Body ECU to HV ECU
U0151-763	Communication Error from Airbag ECU to HV ECU
U0164-594	Communication Error from A/C ECU to HV ECU
U0164-827	Communication Error from A/C ECU to HV ECU
U1104-728	Lost Communication with Driving Support ECU
U1107-436	Lost Communication with Power Management Module

HINT:

- DTC communication uses the CAN communication system.
- *1: Dynamic radar cruise control system DTC

(b) Power Management Control ECU / Techstream Display "Electric Power Control"

DTC Code	Detection Item
U0129	Vehicle Speed Signal Communication
U0140	Lost Communication with Body Control Module
U0155	Lost Communication with Instrument Panel Cluster (IPC) Control Module
U0293*2	HV ECU Communication

HINT:

- DTC communication uses the CAN communication system.
- *2: If U0293 is output alone, CAN communication is normal. Refer to Smart Key System .

(c) Power Management Control ECU / Techstream Display "Power Management1"

DTC Code	Detection Item
U0104	Lost Communication with Cruise Control Module
U1002	Lost Communication with Gateway Module
U1100	Lost Communication with Pre-Collision Module
U110B	Lost Communication with Parking Assist Control Module "B"

HINT:

- DTC communication uses the CAN communication system.
- "Power Management1" output DTC is communication error in the CAN No. 2 bus.

(d) Power Management Control ECU / Techstream Display "Power Management2"

DTC Code	Detection Item
U0100	Lost Communication with ECM / PCM
U0129	Lost Communication with Brake System Control Module
U0164	Lost Communication with HVAC Control Module
U1002	Lost Communication with Gateway Module

HINT:

- DTC communication uses the CAN communication system.
- "Power Management2" output DTC is communication error in the power management bus.

(e) ECM / Techstream Display "Engine"

DTC Code	Detection Item
----------	----------------

DTC Code	Detection Item
U0293	Lost Communication with Hybrid Vehicle Control System

HINT:

DTC communication uses the CAN communication system.

(f) Transmission Control ECU / Techstream Display "Transmission Control"

DTC Code	Detection Item
U0146	Lost Communication with Body ECU

HINT:

DTC communication uses the CAN communication system.

(g) Power Steering ECU / Techstream Display "EPS"

DTC Code	Detection Item
U0129	Lost Communication with Brake System Control Module
U0293	Lost Communication with Hybrid Control Module
U1104	Lost Communication with Driving Support ECU
U1105	Lost Communication with Parking Assist ECU

HINT:

DTC communication uses the CAN communication system.

(h) Skid control ECU (Brake booster with master cylinder) / Techstream Display "ABS/VSC/TRAC"

DTC Code	Detection Item
U0073	Control Module Communication Bus OFF
U0123	Lost Communication with Yaw Rate Sensor Module
U0124	Lost Communication with Lateral Acceleration Sensor Module
U0126	Lost Communication with Steering Angle Sensor Module
U0293	Lost Communication with Hybrid Vehicle Control System

HINT:

DTC communication uses the CAN communication system.

(i) Steering Angle Sensor / Techstream Display "Steering Angle Sensor"

HINT:

The steering angle sensor is connected to the CAN communication system, but CAN communication DTCs are not output.

(j) Yaw Rate Sensor / Techstream Display "Yaw Rate / Deceleration Sensor"

HINT:

The yaw rate and acceleration sensor is connected to the CAN communication system, but CAN communication DTCs are not output.

(k) Center Airbag Sensor Assembly / Techstream Display "SRS Airbag"

HINT:

The center airbag sensor assembly is connected to the CAN communication system, but CAN communication DTCs are not output.

(l) Main Body ECU (w/ LED Headlight System or w/ Remote Air Conditioning System)/ Techstream Display "Main Body"

DTC Code	Detection Item
U0100	Lost Communication with ECM/ PCM "A"
U0101	Lost Communication with TCM
U0151	Lost Communication with Restraints Control Module
U0155	Lost Communication with Instrument Panel Cluster
U0164	Lost Communication with HVAC Control Module
U0293	Lost Communication with Hybrid Powertrain Control Module
U0327	Software Incompatibility with Vehicle Security
U1133	Lost Communication with PMN Module

HINT:

DTC communication uses the CAN communication system.

(m) Main Body ECU (w/o LED Headlight System and w/o Remote Air Conditioning System)/ Techstream Display "Main Body"

HINT:

The main body ECU (w/o LED Headlight System and w/o Remote Air Conditioning System) is connected to the CAN communication system, but CAN communication DTCs are not output.

(n) Certification ECU / Techstream Display "Smart Access/ Smart Key/ Wireless Tuner"

DTC Code	Detection Item
U0100	Lost Communication with ECM / PCM "A"
U0142	Lost Communication with Body Control Module "B"

DTC Code	Detection Item
U0155	Lost Communication with Instrument Panel Cluster (IPC) Control Module
U0293	Lost Communication with HV ECU

HINT:

DTC communication uses the CAN communication system.

(o) Air Conditioning Amplifier / Techstream Display "Air Conditioner"

DTC Code	Detection Item
U0100	Communication Malfunction (Engine ECU)
U0101	Lost Communication with TCM
U0131	Communication Malfunction (Electric Power Steering ECU)
U0142	Communication Malfunction (Main body ECU)
U0155	Communication Malfunction (Meter ECU)
U0293	Communication Malfunction (Navigation ECU)

HINT:

DTC communication uses the CAN communication system.

(p) Combination Meter / Techstream Display "Combination Meter"

DTC Code	Detection Item
U0100	Lost Communication with ECM / PCM "A"
U0129	Lost Communication with Brake System Control Module
U0131	Lost Communication with Power Steering Control Module
U0142	Lost Communication with Body Control Module "B"
U0151	Lost Communication with Restraints Control Module

HINT:

DTC communication uses the CAN communication system.

(q) Navigation ECU (Navigation receiver assembly) / Techstream Display "AVN1"

DTC Code	Detection Item
U0073	Sending Malfunction (Navigation to APGS)

HINT:

DTC communication uses the CAN communication system.

(r) Seat Belt Control ECU / Techstream Display "Pre-Collision1"

DTC Code	Detection Item
U0122	Lost Communication with Vehicle Dynamics Control Module
U0140	Lost Communication with J/B ECU
U0151	Lost Communication with SRS Airbag ECU
U1104	Lost Communication with Driving Support ECU

HINT:

DTC communication uses the CAN communication system.

(s) Driving Support ECU / Techstream Display "Pre-Collision2"

DTC Code	Detection Item
U0122	Lost Communication with Vehicle Dynamics Control Module
U0123	Lost Communication with Yaw Rate Sensor Module
U0126	Lost Communication with Steering Angle Sensor Module
U0235*3	Lost Communication with Cruise Control Front Distance Range Sensor
U0293	Lost Communication with Hybrid Vehicle Control System
U1002	Lost Communication with Gateway Module
U1100	Lost Communication with Pre-Collision Module
U1104	Lost Communication with Driving Support ECU
U1119*3	Lost Communication with Object Recognition ECU

HINT:

- DTC communication uses the CAN communication system.
- *3: If U0235 or U1119 is output alone, CAN communication is normal. Refer to Dynamic Radar Cruise Control System .

(t) Driving Support ECU / Techstream Display "Cruise Control (ACC)"

DTC Code	Detection Item
U0122	Lost Communication with Vehicle Dynamics Control Module
U0123	Lost Communication with Yaw Rate Sensor Module
U0126	Lost Communication with Steering Angle Sensor Module
U0235*3	Lost Communication with Cruise Control Front Distance Range Sensor
U0293	Lost Communication with Hybrid Vehicle Control System
U1104	Lost Communication with Driving Support ECU

HINT:

- DTC communication uses the CAN communication system.
- *3: If U0235 is output alone, CAN communication is normal. Refer to Dynamic Radar Cruise Control System .

(u) Driving Support ECU / Techstream Display "Lane Keeping Assist"

DTC Code	Detection Item
U0122	Lost Communication with Vehicle Dynamics Control Module
U0123	Lost Communication with Yaw Rate Sensor Module
U0131	Lost Communication with Power Steering Control Module
U0235*3	Lost Communication with Cruise Control Front Distance Range Sensor
U0293	Lost Communication with Hybrid Vehicle Control System
U1104	Lost Communication with Driving Support ECU
U1119*4	Lost Communication with Object Recognition ECU

HINT:

- DTC communication uses the CAN communication system.
- *3: If U0235 is output alone, CAN communication is normal. Refer to Dynamic Radar Cruise Control System .
- *4: If U1119 is output alone, CAN communication is normal. Refer to Lane-keeping Assist System .

(v) Parking Assist ECU / Techstream Display "Advanced Parking Guidance System"

DTC Code	Detection Item
U0073	Control Module Communication Bus Off
U0126	Lost Communication with Steering Angle Sensor Module
U0129	Lost Communication with Brake System Control Module
U0131	Lost Communication with Power Steering Control Module
U0140	Lost Communication with Body Control Module
U0293	Lost Communication with Hybrid Control Module
U1000*5	CAN Communication Failure (Message Registry)

HINT:

- DTC communication uses the CAN communication system.
- *5: If U1000 is output alone, CAN communication is normal. Refer to Parking Assist System .

(w) Millimeter Wave Radar Sensor

HINT:

The millimeter wave radar sensor is connected to the CAN communication system, but CAN communication DTCs are not output.

(x) Lane Recognition Camera Sensor

HINT:

The lane recognition camera sensor is connected to the CAN communication system, but CAN communication DTCs are not output.

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION

(a) When communication fails in any of the CAN bus wires (communication wires), a fail-safe function(s) will operate. The fail-safe function that is specified for each system operates to prevent those systems from malfunctioning.

(b) The following table shows the effects on each system when communication is impossible. (For further details, see the pages for each system.)

Function (Function Description)	Control Master	System Related	Fail-safe Operation	DTC (Driver Detectable)
Power switch (Power source control)	Power management control ECU	<ul style="list-style-type: none"> Transmission control ECU Skid control ECU Main body ECU 	<ul style="list-style-type: none"> Power switch does not change to on (READY) even when power switch is pressed with the brake pedal depressed Power switch off is prohibited 	U0073 U0129 U0293 (Warning and indicator lights come on)
Hybrid driving control	Power management control ECU	ECM	Only motor operation is used (Engine is not used)	U0100 (Warning and indicator lights come on)
Shift position indicator display	Transmission control ECU	<ul style="list-style-type: none"> Transmission control ECU Main body ECU Combination meter 	Shift position indicator is not displayed	U0146 (Warning and indicator lights come on)
Regenerative braking control	Power management control ECU	Skid control ECU	Regenerative braking will stop (ABS/VSC control gradually stops)	U0073 U0129 U0293 (Warning and indicator lights come on)
VSC control	Skid control ECU	<ul style="list-style-type: none"> Power management 	ABS/VSC control is	U0073

DTC

U0100

Lost Communication with ECM / PCM

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
U0100	No communication from the ECM continues.	<ul style="list-style-type: none"> ECM main wire or connector Power source circuit of ECM ECM

HINT:

The diagnosis procedure is for when DTC U0100 is output by the power management control ECU (Techstream display: Power Management2).

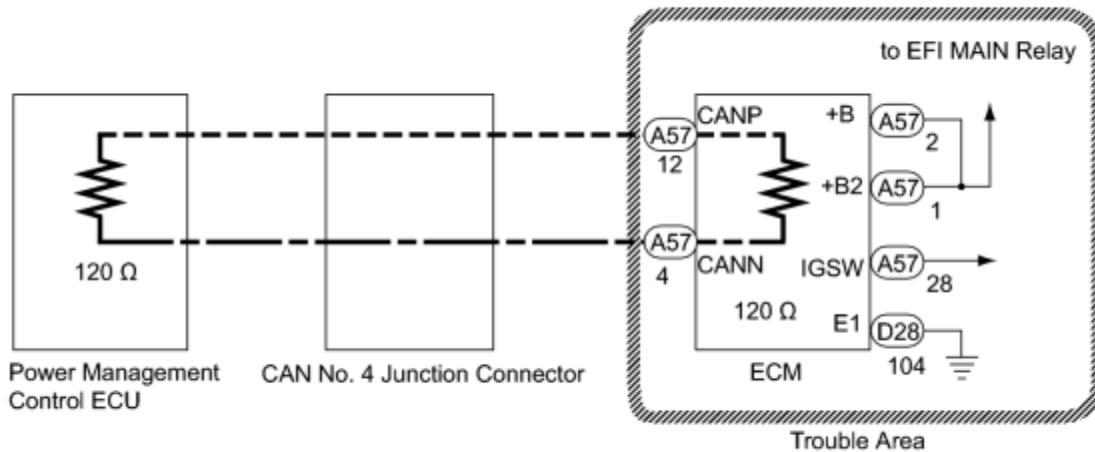

WIRING DIAGRAM

-----: CAN Bus Main Wire (CANH)

-----: CAN Bus Main Wire (CANL)

-----: CAN Bus Branch Wire (CANH)

-----: CAN Bus Branch Wire (CANL)

H

INSPECTION PROCEDURE

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.
- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	RECONFIRM DTC OUTPUT
----	----------------------

(a) Reconfirm DTCs.

HINT:

If CAN power management bus DTC U1002 is output from the power management control ECU (Techstream display/Power Management2), troubleshoot for U1002 and check for malfunctions in the power management main bus circuit.

Result:

Result	Proceed to
U1002 is not output from power management control ECU (Techstream display/Power Management2)	A
U1002 is output from power management control ECU (Techstream display/Power Management2)	B

B ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A
▼

2.	CHECK CAN BUS WIRE FOR DISCONNECTION (ECM MAIN WIRE/POWER MANAGEMENT BUS)
----	---

(a) Turn the power switch off.

(b) Disconnect the ECM connector.

Text in Illustration

*1
Front view of wire harness connector
(to ECM)

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
A57-12 (CANP) - A57-4 (CANN)	Power switch off	108 to 132 Ω

NG ▶ REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (ECM MAIN WIRE)

OK

3.	CHECK ECM POWER SOURCE CIRCUIT
----	--------------------------------

(a) Check for the ECM power source circuit INFO.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)

OK ▶ REPLACE ECM

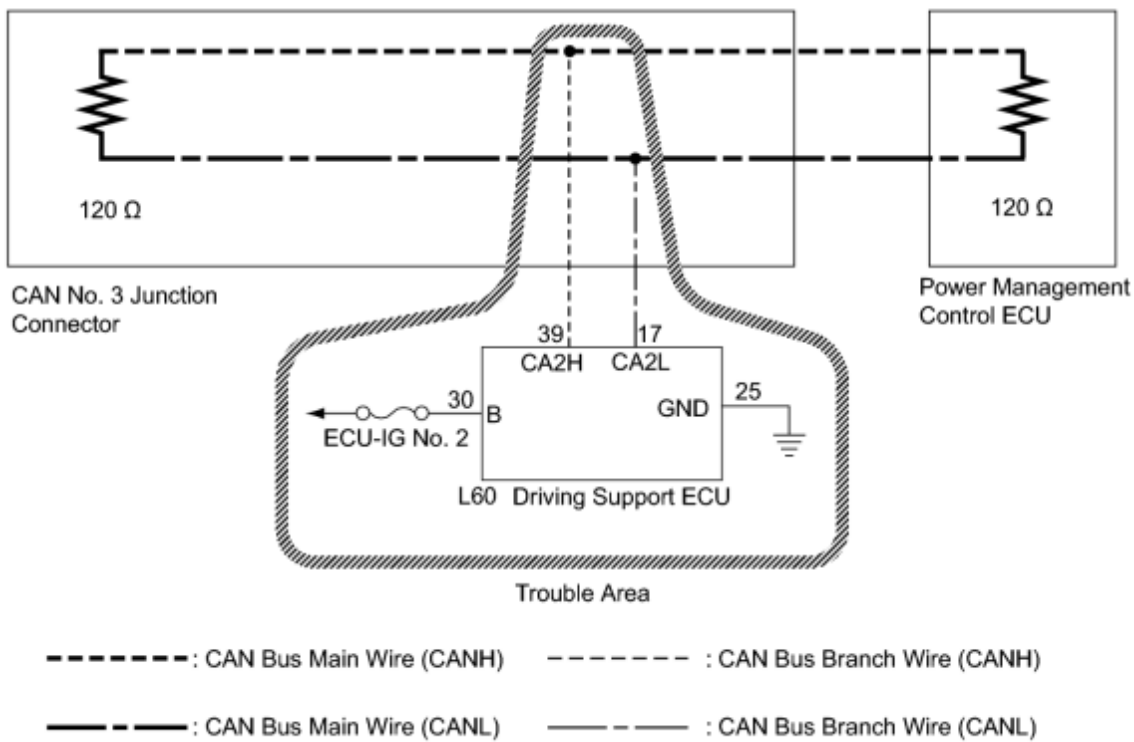

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
U0104	No communication from the driving support ECU continues.	<ul style="list-style-type: none"> • Driving support ECU branch wire or connector • Power source circuit of driving support ECU • Driving support ECU

HINT:

The diagnosis procedure is for when DTC U0104 is output by the power management control ECU (Techstream display: Power Management1).

WIRING DIAGRAM

H

INSPECTION PROCEDURE

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.
- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	RECONFIRM DTC OUTPUT
----	----------------------

(a) Reconfirm DTCs.

HINT:

If CAN No. 2 bus DTC U1002 is output from the power the management control ECU (Techstream display/Power Management1), troubleshoot for U1002 and check for malfunctions in the CAN No. 2 main bus circuit.

Result:

Result	Proceed to
U1002 is not output from power management control ECU (Techstream display/Power Management1)	A
U1002 is output from power management control ECU (Techstream display/Power Management1)	B

 GO TO CIRCUITS INDICATED BY OUTPUT DTCS

A

2.	CHECK CAN BUS WIRE FOR DISCONNECTION (DRIVING SUPPORT ECU BRANCH WIRE)
----	--

(a) Turn the power switch off.

*1

(b) Disconnect the driving support ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
L60-39 (CA2H) - L60-17 (CA2L)	Power switch off	54 to 69 Ω

Text in Illustration

*1	Front view of wire harness connector (to Driving Support ECU)
----	--

NG ► REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (DRIVING SUPPORT ECU BRANCH WIRE)

OK

3.	CHECK HARNESS AND CONNECTOR (POWER SOURCE TERMINAL)
----	---

(a) Turn the power switch on (IG).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L60-30 (B) - Body ground	Power switch on (IG)	11 to 14 V

DESCRIPTION

- The power management control ECU will store this DTC when no signals can be received from the ECUs that have been memorized as those that are connected to the CAN No. 2 bus.
- When the power management control ECU receives a response signal from the ECUs connected to the CAN No. 2 bus, the power management control ECU recognizes and memorizes that the ECU is connected to the CAN No. 2 bus. Based on this memorized data, the power management control ECU monitors for malfunctions in the ECUs connected to the CAN No. 2 bus when communicating with those ECUs. If the power management control ECU cannot receive response signals from the ECUs that have been memorized as those connected to the CAN No. 2 bus, the power management control ECU determines that a malfunction exists.

DTC No.	DTC Detection Condition	Trouble Area
U1002	Power management control ECU cannot receive signals from all ECUs that have been memorized as those connected to the CAN No. 2 bus.	<ul style="list-style-type: none"> • Open or short in CAN No. 2 bus main wire or connector • Open or short in CAN No. 2 bus branch wire or connector • Power management control ECU • Driving support ECU • Seat belt control ECU • Parking assist ECU • CAN No. 3 junction connector

NG ▶ REPAIR OR REPLACE CORRESPONDING ECU OR SENSOR BRANCH WIRE OR CONNECTOR

OK ▶ REPLACE CORRESPONDING ECU OR SENSOR

DESCRIPTION

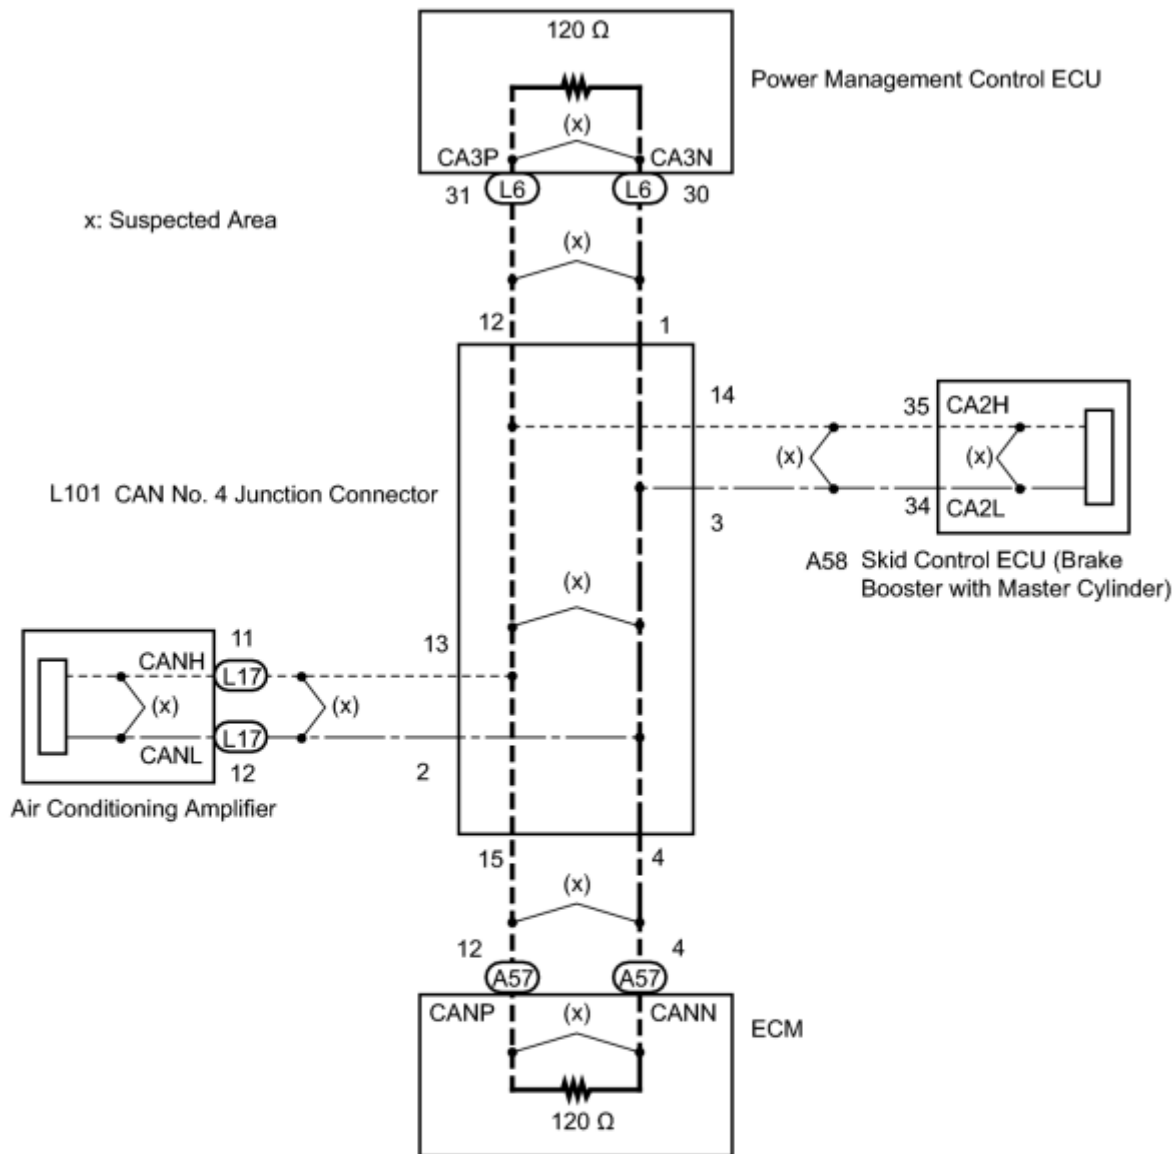

- The power management control ECU will store this DTC when no signals can be received from the ECUs that have been memorized as those that are connected to the power management bus.
- When the power management control ECU receives a response signal from the ECUs connected to the power management bus, the power management control ECU recognizes and memorizes that the ECU is connected to the power management bus. Based on this memorized data, the power management control ECU monitors for malfunctions in the ECUs connected to the power management bus when communicating with those ECUs. If the power management control ECU cannot receive response signals from the ECUs that have been memorized as those connected to the power management bus, the power management control ECU determines that a malfunction exists.

DTC No.	DTC Detection Condition	Trouble Area
U1002	Power management control ECU cannot receive signals from all ECUs that have been memorized as those connected to the power management bus.	<ul style="list-style-type: none"> • Open or short in power management bus main wire or connector • Open or short in power management bus branch wire or connector • Power management control ECU • ECM • Air conditioning amplifier • Skid control ECU (Brake booster with master cylinder) • CAN No. 4 junction connector

HINT:

The diagnosis procedure is for when DTC U1002 is output by the power management control ECU (Techstream display: Power Management2).

 - - - - : CAN Bus Main Wire (CANL) - - - - - : CAN Bus Branch Wire (CANL)

INSPECTION PROCEDURE

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.

- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

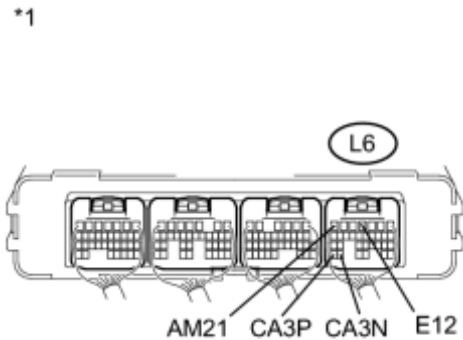

PROCEDURE

1.	CHECK CAN BUS WIRE
-----------	---------------------------

(a) Turn the power switch off.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition	Result
L6-31 (CA3P) - L6-30 (CA3N)	Power switch off	54 to 69 Ω	Below 54 Ω : Short circuit between bus lines
			70 Ω or higher: Open circuit in a main bus line
L6-31 (CA3P) - L6-4 (E12)	Power switch off	200 Ω or higher	Below 200 Ω : CANH ground short
L6-30 (CA3N) - L6-4 (E12)	Power switch off	200 Ω or higher	Below 200 Ω : CANL ground short

(c) Disconnect the cable from the negative (-) battery terminal.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition	Result
L6-31 (CA3P) - L6-7 (AM21)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	Below 6 kΩ: CANH +B short
L6-30 (CA3N) - L6-7 (AM21)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	Below 6 kΩ: CANL +B short

DTC

U1002

Lost Communication with Gateway Module (Parking Assist Bus)

DESCRIPTION

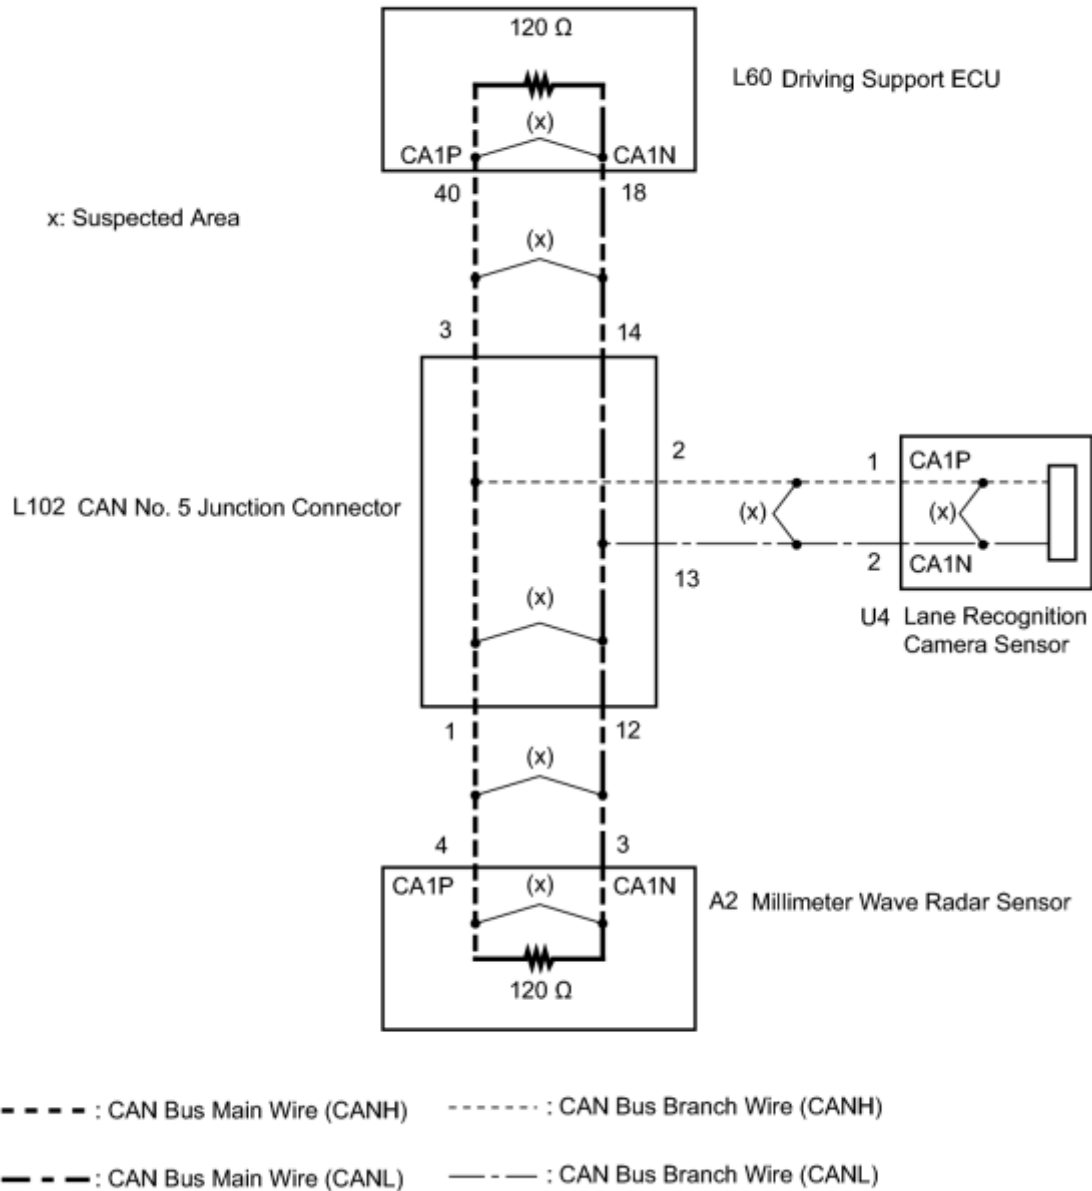

The driving support ECU will store this DTC when no signals can be received from the ECUs that have been memorized as those that are connected to the parking assist bus.

DTC No.	DTC Detection Condition	Trouble Area
U1002	Driving support ECU cannot receive signals from all ECUs that have been memorized as those connected to the parking assist bus.	<ul style="list-style-type: none">• Open or short in parking assist bus main wire or connector• Open or short in parking assist bus branch wire or connector• Driving support ECU• CAN No. 5 junction connector

HINT:

The diagnosis procedure is for when DTC U1002 is output by the driving support ECU (Techstream display: Pre-Collision2).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.
- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.

- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

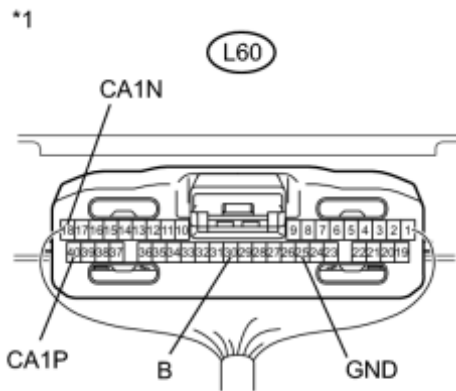

1.	CHECK CAN BUS WIRE
-----------	---------------------------

(a) Turn the power switch off.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition	Result
L60-40 (CA1P) - L60-18 (CA1N)	Power switch off	54 to 69 Ω	Below 54 Ω: Short circuit between bus lines 70 Ω or more: Open circuit in a main bus line
L60-40 (CA1P) - L60-25 (GND)	Power switch off	200 Ω or higher	Below 200 Ω: CANH ground short
L60-18 (CA1N) - L60-25 (GND)	Power switch off	200 Ω or higher	Below 200 Ω: CANL ground short

NG  [CHECK CAN BUS WIRE \(ECU, SENSOR\)](#)

OK  **REPLACE CAN NO. 5 JUNCTION CONNECTOR**

12.	CHECK CAN BUS WIRE (ECU, SENSOR)
-----	----------------------------------

(a) Disconnect the ECU or sensor connected to the CAN bus wire that is shorted to B+ or shorted to GND.

HINT:

If the ECU or sensor has multiple connectors, disconnect the connector that includes the CAN bus wires. To determine the ECU or sensor that is connected to shorted bus wire, refer to Terminals of ECU tables INFO.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition	Purpose
L60-40 (CA1P) - L60-25 (GND)	Power switch off	200 Ω or higher	Below 200 Ω : CANH ground short
L60-18 (CA1N) - L60-25 (GND)	Power switch off	200 Ω or higher	Below 200 Ω : CANL ground short
L60-40 (CA1P) - L60-30 (B)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher	Below 6 k Ω : CANH +B short
L60-18 (CA1N) - L60-30 (B)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher	Below 6 k Ω : CANL +B short

- It is only necessary to perform the inspection in the above table for the result (short circuit) that was obtained in the Check CAN Bus Wire inspection.

Find the necessary inspection from the Purpose column that matches the result in the Result column from the Check CAN Bus Wire inspection.

- If the resistance changes to normal when the connector is disconnected from the ECU, there may be a short in the ECU.

NG  REPAIR OR REPLACE CORRESPONDING ECU OR SENSOR WIRE OR CONNECTOR

OK  REPLACE CORRESPONDING ECU

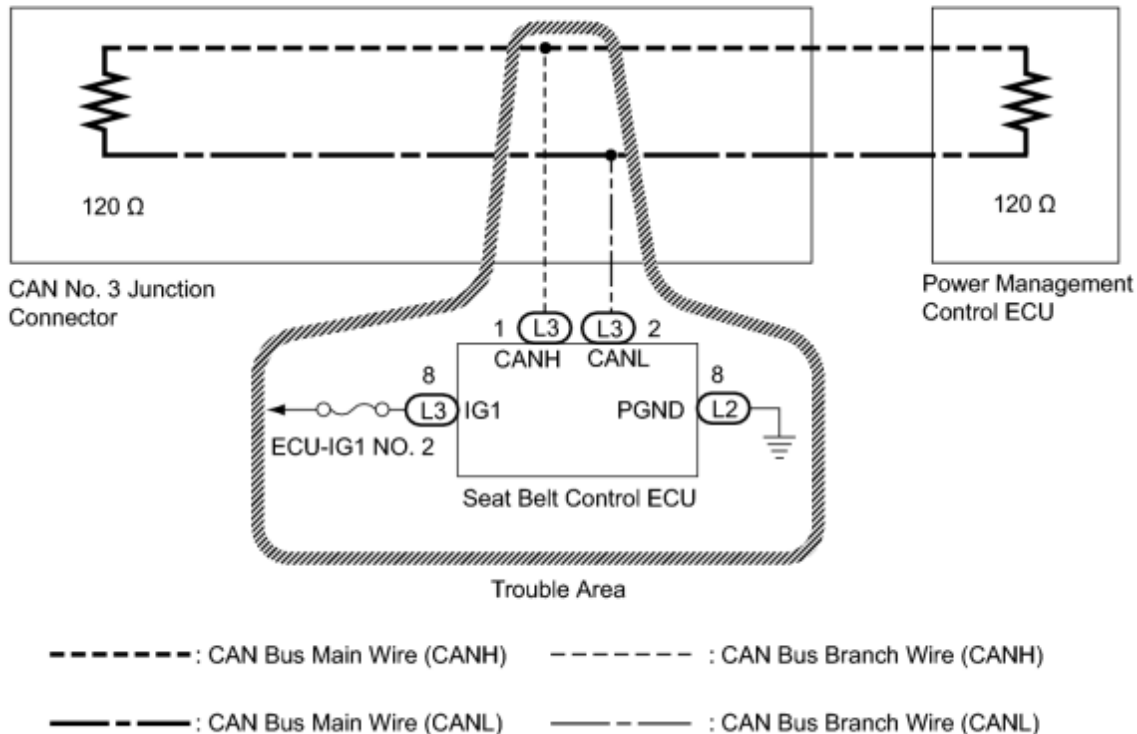

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
U1100	No communication from the seat belt control ECU continues.	<ul style="list-style-type: none"> Seat belt control ECU branch wire or connector Power source circuit of seat belt control ECU Seat belt control ECU

HINT:

The diagnosis procedure is for when DTC U1100 is output by the power management control ECU (Techstream display: Power Management1).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.
- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	RECONFIRM DTC OUTPUT
----	----------------------

(a) Reconfirm DTCs.

HINT:

If CAN No. 2 bus DTC U1002 is output from the power management control ECU (Techstream display/Power Management1), troubleshoot for U1002 and check for malfunctions in the CAN No. 2 main bus circuit.

Result:

Result	Proceed to
U1002 is not output from power management control ECU (Techstream display/Power Management1)	A
U1002 is output from power management control ECU (Techstream display/Power Management1)	B

 GO TO CIRCUITS INDICATED BY OUTPUT DTCS

INSPECTION PROCEDURE

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.
- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

- | | |
|----|---|
| 1. | CHECK CAN BUS WIRE FOR DISCONNECTION (POWER MANAGEMENT CONTROL ECU BRANCH WIRE) |
|----|---|

(a) Turn the power switch off.

*1

(b) Disconnect the power management control ECU connector.

DESCRIPTION

There may be a short circuit between the CAN bus main wire and +B when no resistance exists between terminals 6 (CANH) and 16 (BAT) or 14 (CANL) and 16 (BAT) of the DLC3.

Symptom	Trouble Area
<p>No resistance exists between terminals 6 (CANH) and 16 (BAT) or 14 (CANL) and 16 (BAT) of DLC3.</p>	<ul style="list-style-type: none"> • Short to +B in CAN bus main wire • Short to +B in CAN bus branch wire • Power management control ECU • ECM • Main body ECU • Combination meter • Skid control ECU (Brake booster with master cylinder) • Steering angle sensor • Yaw rate sensor • Power steering ECU • Center airbag sensor assembly • Transmission control ECU • Certification ECU (Smart key ECU) • Navigation ECU (Navigation receiver assembly) • CAN No. 1 junction connector • CAN No. 2 junction connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Turn the power switch off before measuring the resistances between CAN bus main wires and between CAN bus branch wires.
- Turn the power switch off before inspecting CAN bus wires for a ground short.

- After the power switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:

- Operating the power switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1. CHECK FOR SHORT TO +B IN CAN BUS WIRE (CAN NO. 1 J/C)

(a) Disconnect the cable from the negative (-) battery terminal.

*1

(b) Disconnect the CAN No. 2 junction connector.

NG ▶ REPAIR OR REPLACE CORRESPONDING ECU/SENSOR WIRE OR CONNECTOR

OK ▶ **REPLACE CORRESPONDING ECU OR SENSOR**

DESCRIPTION

If some ECUs and sensors are not displayed on the "CAN Bus Check" screen of the Techstream and some ECUs and sensors repeatedly appear and disappear from the screen when the CAN main bus wires are normal (there is no open, short, short to B+ or short to GND in the main bus wires), there may be an open circuit in either of the CAN branch wires.

HINT:

If some ECUs and sensors repeatedly appear and disappear from the "CAN Bus Check" screen, communication between the normal ECUs (sensors) and the Techstream may be affected by the incomplete signals that are output from the ECU that has an open circuit in either of its CAN branch wires. In this case, the CAN branch wires for the ECUs and sensors that repeatedly appear and disappear from the screen are normal and the ECU that is not displayed on the screen may be the main cause of the problem (this ECU may have an open circuit in either of its CAN branch wires).

Symptom	Trouble Area
<p>2 or more ECUs and/or sensors do not appear on the Techstream "Communication Bus Check" screen.</p>	<p>One side of CAN branch wire is open, or output signals are incomplete.</p> <ul style="list-style-type: none"> • Power management control ECU • ECM • Main body ECU • Combination meter • Power steering ECU • Skid control ECU (Brake booster with master cylinder) • Steering angle sensor • Yaw rate sensor • Center airbag sensor assembly • Transmission control ECU • Certification ECU (Smart key ECU) • Navigation ECU (Navigation receiver assembly)

INSPECTION PROCEDURE

HINT:

Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	CHECK FOR OPEN IN ONE SIDE OF CAN NO. 1 BUS BRANCH WIRE
----	---

- (a) Confirm the systems (ECUs and sensors), which use CAN communication, equipped on the vehicle **INFO**.
- (b) Using the Techstream, select and perform "CAN Bus Check" **INFO**.
- (c) Observe the screen for approximately 1 minute to check the ECUs and sensors that are not displayed on the screen and also those that repeatedly appear and disappear from the screen.
- (d) Check that the ECUs and sensors, which are connected to the ECUs or sensors that are not displayed on the screen.
- (e) Check that the ECUs and sensors, which repeatedly appeared and disappeared from the "CAN Bus Check" screen, are constantly displayed.

NEXT ▶ GO TO CORRESPONDING COMMUNICATION STOP MODE

PRECAUTION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	INFO

1. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream to troubleshoot with the power switch off:

Connect the Techstream to the DLC3, and turn the courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

(b) After all DTCs are cleared, check if the trouble occurs again 6 seconds after the power switch is turned on (IG).

SYSTEM DESCRIPTION

1. LIN COMMUNICATION SYSTEM DESCRIPTION

The LIN communication system is used for communication between the components in the tables below. If communication cannot be performed through LIN communication because of an open in the communication lines or other reasons, the master control ECU of the relevant system will store a DTC. Refer to the table below about the communication bus lines and connected components.

HINT:

- Each component has a fail-safe function which activates to maintain the minimum performance of the system and protect the system.
- In the following table, "o" indicates that the function applies, and "-" indicates that it does not.

Door Bus Lines

Component	Master Control	LIN Communication DTC Output Function
Main Body ECU (Multiplex Network Body ECU)	o	o

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the LIN communication system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE
----	-------------------------

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	CHECK COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*
----	---

(a) Using the Techstream, inspect the LIN communication function to ensure there are no malfunctions in the communication system .

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

NEXT  END

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

LIN Communication System

Symptom	Suspected Area	See page
LIN communication of the air conditioning system is malfunctioning	LIN communication line	INFO
	Heater control panel assembly	-
	Air conditioning amplifier assembly	-

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2C-18 (BECU) - Body ground	Y - Body ground	Battery power supply	Power switch off	11 to 14 V
2B-6 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the 2C and 2B instrument panel junction block assembly connectors.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2D-26 (LIN2) - 2B-6 (GND1)	P - W-B	LIN communication line	Power switch on (IG)	Pulse generation
2A-27 (LIN2) - 2B-6 (GND1)	P - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the main body ECU (multiplex network body ECU) or instrument panel junction block assembly may be malfunctioning.

2. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)

(a) Disconnect the O2 power window regulator motor assembly (for driver side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O2-2 (B) - O2-1 (GND)	L - W-B	Battery power supply	Power switch off	11 to 14 V
O2-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the O2 power window regulator motor assembly (for driver side) connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O2-9 (LIN) - O2-1 (GND)	B - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the power window regulator motor assembly (for driver side) may be malfunctioning.

3. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

(a) Disconnect the N2 power window regulator motor assembly (for front passenger side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N2-2 (B) - N2-1 (GND)	R - W-B	Battery power supply	Power switch off	11 to 14 V
N2-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the N2 power window regulator motor assembly (for front passenger side) connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N2-9 (LIN) - N2-1 (GND)	P - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the power window regulator motor assembly (for front passenger side) may be malfunctioning.

4. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)

(a) Disconnect the P4 power window regulator motor assembly (for rear RH side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
P4-2 (B) - P4-1 (GND)	R - W-B	Battery power supply	Power switch off	11 to 14 V
P4-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the P4 power window regulator motor assembly (for rear RH side) connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
P4-9 (LIN) - P4-1 (GND)	P - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the power window regulator motor assembly (for rear RH side) may be malfunctioning.

5. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)

(a) Disconnect the Q4 power window regulator motor assembly (for rear LH side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q4-2 (B) - Q4-1 (GND)	R - W-B	Battery power supply	Power switch off	11 to 14 V
Q4-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the Q4 power window regulator motor assembly (for rear LH side) connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q4-9 (LIN) - Q4-1 (GND)	P - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the power window regulator motor assembly (for rear LH side) may be malfunctioning.

6. CHECK MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY

(a) Disconnect the O6 multiplex network master switch assembly connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O6-11 (B) - O6-12 (GND)	L - W-B	Battery power supply	Power switch off	11 to 14 V
O6-12 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the O6 multiplex network master switch assembly connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O6-17 (LIN1) - O6-12 (GND)	P - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the multiplex network master switch assembly may be malfunctioning.

7. CHECK SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY) (w/ Moonroof with Solar Panel)

(a) Disconnect the R23 sliding roof ECU (sliding roof drive gear sub-assembly) connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
R23-1 (B) - R23-2 (E)	R - W-B	Battery power supply	Power switch off	11 to 14 V
R23-2 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the R23 sliding roof ECU (sliding roof drive gear sub-assembly) connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
R23-4 (MPX1) - R23-2 (E)	P - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the sliding roof ECU (sliding roof drive gear sub-assembly) may be malfunctioning.

8. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the L62 certification ECU (smart key ECU assembly) connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-1 (+B) - L62-15 (E)	B - W-B	Battery power supply	Power switch off	11 to 14 V
L62-15 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L62 certification ECU (smart key ECU assembly) connector.

(d) Measure the voltage and check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-16 (IG) - L62-15 (E)	BE - W-B	Power switch power supply	Power switch on (IG)	11 to 14 V
L62-16 (IG) - L62-15 (E)	BE - W-B	Power switch power supply	Power switch off	Below 1 V
L62-29 (LIN) - L62-15 (E)	L - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the certification ECU (smart key ECU assembly) may be malfunctioning.

9. CHECK ID CODE BOX (IMMOBILISER CODE ECU) (w/ Automatic Light Control System)

(a) Disconnect the L10 ID code box (immobiliser code ECU) connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L10-1 (+B) - L10-8 (GND)	B - W-B	Battery power supply	Power switch off	11 to 14 V
L10-8 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L10 ID code box (immobiliser code ECU) connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L10-3 (LIN1) - L10-8 (GND)	L - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the ID code box (immobiliser code ECU) may be malfunctioning.

10. CHECK TRANSMISSION CONTROL ECU ASSEMBLY

(a) Disconnect the A23 and A24 transmission control ECU assembly connectors.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
A23-15 (BATT) - Body ground	SB - Body ground	Battery power supply	Power switch off	11 to 14 V
A24-1 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
A24-5 (E02) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
A24-6 (E01) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the A23 and A24 transmission control ECU assembly connectors.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
A24-24 (LIN) - A24-1 (E1)	L - W-B	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the transmission control ECU assembly may be malfunctioning.

11. CHECK POWER MANAGEMENT CONTROL ECU

(a) Disconnect the L5 and L6 power management control ECU connectors.

Y

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L5-1 (AM22) - Body ground	W - Body ground	Battery power supply	Power switch off	11 to 14 V
L6-7 (AM21) - Body ground	W - Body ground	Battery power supply	Power switch off	11 to 14 V
L5-6 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L5 and L6 power management control ECU connectors.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L6-11 (LIN2) - L5-6 (E1)	L - BR	LIN communication line	Power switch on (IG)	Pulse generation

If the result is not as specified, the power management control ECU may be malfunctioning.

DIAGNOSIS SYSTEM

1. DESCRIPTION

The main body ECU (multiplex network body ECU) and certification ECU (smart key ECU assembly) control the LIN communication system. LIN communication system data and Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3).

When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

- If the voltage is below 11 V, recharge or replace the battery.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Power Source Control, Smart Key or Main Body / Trouble Codes.
- (e) Check the details of the DTC(s)  .

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Power Source Control, Smart Key or Main Body / Trouble Codes.
- (e) Clear the DTC(s).

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Communication D-Door Motor	Connection status between power window regulator motor assembly (for driver side) and main body ECU (multiplex network body ECU)/OK or STOP	OK: Connected STOP: Not Connected	DTC is output if an error occurs in LIN communication.
Communication P-Door Motor	Connection status between power window regulator motor assembly (for front passenger side) and main body ECU (multiplex network body ECU)/OK or STOP	OK: Connected STOP: Not Connected	DTC is output if an error occurs in LIN communication.
Communication RR-Door Motor	Connection status between power window regulator motor assembly (for rear RH side) and main body ECU (multiplex network body ECU)/OK or STOP	OK: Connected STOP: Not Connected	DTC is output if an error occurs in LIN communication.
Communication RL-Door Motor	Connection status between power window regulator motor assembly (for rear LH side) and main body ECU (multiplex network body ECU)/OK or STOP	OK: Connected STOP: Not Connected	DTC is output if an error occurs in LIN communication.

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Communication Slide Roof*1	Connection status between sliding roof ECU (sliding roof drive gear sub-assembly) and main body ECU (multiplex network body ECU)/OK or STOP	OK: Connected STOP: Not Connected	DTC is output if an error occurs in LIN communication.
Communication Master SW	Connection status between multiplex network master switch assembly and main body ECU (multiplex network body ECU)/OK or STOP	OK: Connected STOP: Not Connected	DTC is output if an error occurs in LIN communication.

Power Management Control ECU

DTC Code	Detection Item	Trouble Area	See page
B2287	LIN Communication Master Malfunction	1. Power management control ECU 2. Certification ECU (smart key ECU assembly) 3. Wire harness or connector	

DESCRIPTION

This DTC is stored when LIN communication between the multiplex network master switch assembly and main body ECU (multiplex network body ECU) stops for 10 seconds or more.

DTC No.	DTC Detection Condition	Trouble Area
B1206	No communication between multiplex network master switch assembly and main body ECU (multiplex network body ECU) for 10 seconds or more.	<ul style="list-style-type: none"> • Multiplex network master switch assembly • Main body ECU (multiplex network body ECU) • Instrument panel junction block assembly • Wire harness or connector • D FR DOOR fuse

WIRING DIAGRAM

—: LIN Communication Line

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- When using the Techstream to troubleshoot with the power switch off:

Connect the Techstream to the DLC3, and turn the courtesy switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

PROCEDURE

1. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

(a) Remove the instrument panel junction block assembly INFO.

(b) Remove the main body ECU (multiplex network body ECU) from the instrument panel junction block assembly.

(c) Measure the resistance according to the value(s) in the table below.

HINT:

This inspection is to check the LIN line in the instrument panel junction block assembly that connects the wire harness to the built-in main body ECU (multiplex network body ECU).

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-27 (LIN2) - MB-16 (LIN2)	Always	Below 1 Ω
2A-27 (LIN2) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Instrument Panel Junction Block Assembly)	*2	Component without harness connected (Instrument Panel Junction Block Assembly)
----	---	----	---

NG ▶ REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK

2. CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - MULTIPLEX NETWORK MASTER SWITCH)

*1

(a) Disconnect the O6 multiplex network master switch assembly connector.

*2

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-27 (LIN2) - O6-17 (LIN1)	Always	Below 1 Ω
2A-27 (LIN2) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector (to Instrument Panel Junction Block Assembly)
*2	Front view of wire harness connector (to Multiplex Network Master Switch Assembly)

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.	CHECK HARNESS AND CONNECTOR (MULTIPLEX NETWORK MASTER SWITCH - BATTERY, BODY GROUND)
----	--

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
-------------------	-----------	---------------------

*1

O6-11 (B) - O6-12 (GND) Power switch off 11 to 14 V

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
O6-12 (GND) - Body ground	Always	Below 1 Ω

DTC	B1273	Sliding Roof ECU Communication Stop
-----	-------	-------------------------------------

DESCRIPTION

This DTC is stored when LIN communication between the sliding roof ECU (sliding roof drive gear sub-assembly) and main body ECU (multiplex network body ECU) stops for 10 seconds or more.

DTC No.	DTC Detection Condition	Trouble Area
B1273	No communication between sliding roof ECU (sliding roof drive gear sub-assembly) and main body ECU (multiplex network body ECU) for 10 seconds or more.	<ul style="list-style-type: none"> Sliding roof ECU (sliding roof drive gear sub-assembly) Main body ECU (multiplex network body ECU) Instrument panel junction block assembly Wire harness or connector S/ROOF fuse

WIRING DIAGRAM

—: LIN Communication Line

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- When the sliding roof ECU (sliding roof drive gear sub-assembly) is replaced or removed and reinstalled, it requires initialization INFO.
- When using the Techstream to troubleshoot with the power switch off:

Connect the Techstream to the DLC3, and turn the courtesy switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

PROCEDURE

1. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

(a) Remove the instrument panel junction block assembly INFO.

*1

*2

(b) Remove the main body ECU (multiplex network body ECU) from the instrument panel junction block assembly.

(c) Measure the resistance according to the value(s) in the table below.

HINT:

This inspection is to check the LIN line in the instrument panel junction block assembly that connects the wire harness to the built-in main body ECU (multiplex network body ECU).

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-27 (LIN2)- MB-16 (LIN2)	Always	Below 1 Ω
2A-27 (LIN2) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Instrument Panel Junction Block Assembly)	*2	Component without harness connected (Instrument Panel Junction Block Assembly)
----	---	----	---

NG ▶ REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK

2. CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - SLIDING ROOF ECU)

*1

(a) Disconnect the R23 sliding roof ECU (sliding roof drive gear sub-assembly) connector.

*2

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-27 (LIN2) - R23-4 (MPX1)	Always	Below 1 Ω
2A-27 (LIN2) - Body ground	Always	10 k Ω or higher

DTC

B2785

Communication Malfunction between ECUs Connected by LIN

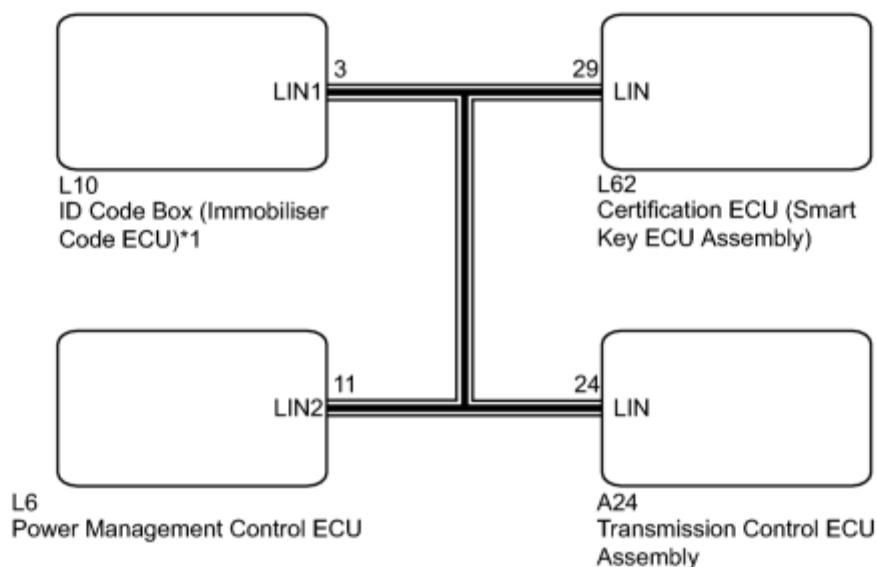

DESCRIPTION

The certification ECU (smart key ECU assembly) monitors communication between all the ECUs connected to the certification bus lines. When the certification ECU (smart key ECU assembly) detects errors in communication with all the ECUs connected to the certification bus lines at a set interval and 3 times in a row, DTC B2785 will be stored.

DTC No.	DTC Detection Condition	Trouble Area
B2785	<ul style="list-style-type: none"> • Errors in LIN communication between ECUs and an open or short in communication lines • LIN communication from the certification ECU (smart key ECU assembly) detects errors in communication 3 times in a row. 	<ul style="list-style-type: none"> • Certification ECU (smart key ECU assembly) • Power management control ECU • Transmission control ECU assembly • ID code box (immobiliser code ECU)*1 • Wire harness or connector

- *1: w/ Automatic Light Control System

INSPECTION PROCEDURE

NOTICE:

- If the certification ECU (smart key ECU assembly) is replaced, register the key.
- If the transmission control ECU assembly is replaced, register the ECU code.
- If the ID code box (immobiliser code ECU) is replaced, register the ECU code and ECU communication ID.
- When using the Techstream to troubleshoot with the power switch off:

Connect the Techstream to the DLC3, and turn the courtesy switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - EACH ECU)

(a) Disconnect the L62, L6, L10*1 and A24 connectors.

- *1: w/ Automatic Light Control System

*1

*2

*3

*4

(b) Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L62-29 (LIN) - A24-24 (LIN)	Always	Below 1 Ω
L62-29 (LIN) - L6-11 (LIN2)	Always	Below 1 Ω
L62-29 (LIN) - L10-3 (LIN1)*1	Always	Below 1 Ω
L62-29 (LIN) - Body ground	Always	10 kΩ or higher

Standard Voltage:

Tester Connection	Condition	Specified Condition
L62-29 (LIN) - Body ground	Always	Below 1 V

- *1: w/ Automatic Light Control System

INSPECTION PROCEDURE

HINT:

Although "No Response from Steering Lock ECU" is displayed on the Techstream, this message is shown if the certification ECU (smart key ECU assembly) cannot communicate with the transmission control ECU assembly.

NOTICE:

2010 Toyota Prius

Repair Manual

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- If the certification ECU (smart key ECU assembly) is replaced, register the key.
- If the transmission control ECU assembly is replaced, register the ECU code.
- When using the Techstream to troubleshoot with the power switch off:

Connect the Techstream to the DLC3, and turn the courtesy switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL ECU ASSEMBLY - BATTERY AND BODY GROUND)

*1

(a) Disconnect the A23 and A24 transmission control ECU assembly connectors.

(b) Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A24-6 (E01) - Body ground	Always	Below 1 Ω
A24-5 (E02) - Body ground	Always	Below 1 Ω

Standard Voltage:

Tester Connection	Condition	Specified Condition
A23-15 (BATT) - Body ground	Power switch off	11 to 14 V

REMOVAL

1. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure up to Remove Upper Instrument Panel Assembly INFO.

2. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

HINT:

Refer to the procedure up to Remove Lower Instrument Panel Sub-assembly INFO.

3. REMOVE DRIVER SIDE JUNCTION BLOCK ASSEMBLY

(a) Disengage the clamp and disconnect the wire harness.

(b) Disconnect the 3 connectors (1), (2) and (3).

(c) Disengage the 2 claws and disconnect the 2 connectors (4) and (5) as shown in the illustration.

(d) Remove the bolt and nut, and disconnect the driver side junction block assembly.

P

P

(e) Disengage the 6 claws and remove the junction block bracket.

P

(f) Disengage the 2 clamps and disconnect the wire harness.

P

(g) Disengage the claw and disconnect the connector as shown in the illustration.

(h) Disengage the claw and release the connector lock as shown in the illustration.

(i) Disengage the claw and disconnect the connector as shown in the illustration.

(j) Remove the driver side junction block assembly.

4. REMOVE MAIN BODY ECU

(a) Press the claw of the junction block as shown in the illustration to release the lock.

Text in Illustration

*1	Main Body ECU
*2	Driver Side Junction Block
*3	Protective Tape

(b) With the junction block lock released, insert a screwdriver with its tip taped horizontally between the main body ECU and junction block.

NOTICE:

Use a screwdriver with a radius of between 5.0 mm (0.197 in.) and 6.3 mm (0.248 in.) and a length of approximately 90 mm (3.54 in.).

(c) Using the screwdriver, carefully raise the main body ECU up to the

position where the connector becomes disengaged.

NOTICE:

Do not twist the screwdriver to raise the multiplex network body ECU.

(d) Raise the main body ECU as shown by arrow (1), and then pull it out as shown by arrow (2) shown in the illustration.

NOTICE:

Do not touch the ECU connector.

INSTALLATION

1. INSTALL MAIN BODY ECU

NOTICE:

- Make sure that no foreign objects get on the connecting surfaces.
- Do not touch the ECU connector.

(a) Insert the main body ECU up to the position it contacts the housing sidewall of the guide as shown in the illustration.

Text in Illustration

*1	Housing Sidewall
*a	20°

HINT:

Make sure to keep the angle 20° or more as shown in the illustration.

(b) Slide the guide of the main body ECU along the housing sidewall so that it contacts junction block fuses as shown in the illustration.

Text in Illustration

*1	Housing Sidewall
*2	Junction Block Fuse

(c) While contacting the main body ECU to side A of the junction block (point of rotation), rotate it downward as shown in the illustration.

Text in Illustration

*1	Side A Contact Portion
----	------------------------

(d) Press the push area until the claw engages to install the main body ECU.

Text in Illustration

*1	Push Area
----	-----------

- Make sure to press only the push area.
- Confirm the engagement of the main body ECU and junction block by listening for the lock sound.

HINT:

If a lock sound cannot be heard, visually check the lock part engagement. The engagement can also be confirmed if the main body ECU and junction block are flush.

2. INSTALL DRIVER SIDE JUNCTION BLOCK ASSEMBLY

(a) Engage the claw to install the connector as shown in the illustration.

NOTICE:

Be sure to engage each connector securely.

(b) Engage the claw to lock the connector lock as shown in the illustration.

(c) Engage the claw to connect the connector as shown in the illustration.

NOTICE:

Be sure to engage each connector securely.

(d) Engage the 2 clamps to connect the wire harness.

(e) Engage the 6 claws to install the junction block cover.

(f) Install the driver side junction block assembly with the bolt and nut.

Torque: **14 N·m (138 kgf·cm, 10ft·lbf)**

(g) Engage the 2 claws to connect the 2 connectors (5) and (4) as shown in the illustration.

NOTICE:

Be sure to engage each connector securely.

(h) Connect the 3 connectors (3), (2) and (1) as shown in the illustration.

NOTICE:

Be sure to engage each connector securely.

(i) Engage the clamp to connect the wire harness.

3. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

HINT:

Refer to the procedure from Install Lower Instrument Panel Sub-assembly .

4. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure from Install Upper Instrument Panel Assembly .

c

(d) Engage the wire harness clamp to the power steering ECU assembly.

3. INSTALL UPPER INSTRUMENT PANEL

HINT:

Refer to the instructions for Installation of the upper instrument panel **INFO**.

4. TORQUE SENSOR ZERO POINT CALIBRATION (for Brush Type Motor)

(a) Perform the torque sensor zero point calibration **INFO**.

5. ASSIST MAP WRITING (for Brush Type Motor)

(a) Perform assist map writing **INFO**.

6. ROTATION ANGLE SENSOR INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION (for Brushless Type Motor)

(a) Clear the rotation angle sensor calibration value, initialize the rotation angle sensor, and calibrate the torque sensor zero point **INFO**.

7. ASSIST MAP WRITING (for Brushless Type Motor)

(a) Perform assist map writing **INFO**.

PRECAUTION

1. DETERMINING POWER STEERING SYSTEM TYPE

(a) Two types of power steering system are available for this model. A different type of motor is used for each system; a brushless type motor and a brush type motor. Refer to the table below to determine which type of motor is used.

Types

Type of Motor	Model
Brushless Type Motor	Mexico package models and models with 215/45R17 tires
Brush Type Motor	Other than those above

2. PRECAUTION FOR DISCONNECTING THE BATTERY CABLE

NOTICE:

When disconnecting the battery negative (-) cable, initialize the following system after the cable is reconnected:

System	See Procedure
Advanced Parking Guidance System	INFO

3. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with a Supplemental Restraint System (SRS). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident.

Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System [INFO](#).

4. PRECAUTIONS FOR REMOVAL, INSTALLATION AND REPLACEMENT OF ELECTRONIC POWER STEERING COMPONENTS

(a) Be sure to align the front wheels straight ahead when removing and installing the power steering gear assembly.

(b) When disconnecting the No. 2 steering intermediate shaft assembly, be sure to place matchmarks before starting the operation.

(c) After replacing the steering column assembly or power steering ECU, calibrate the torque sensor zero point [INFO](#).

5. HANDLING PRECAUTION

(a) When handling electronic parts:

(1) Avoid any impact to parts such as ECUs and relays. Replace them with new ones if dropped or subjected to a severe blow.

(2) Do not expose to high temperatures or humidity.

(3) In order to prevent deformation or malfunctions due to static electricity, do not touch the connector terminals.

(b) When handling the power steering ECU:

(1) When the power steering ECU has been replaced with a new one, perform the assist map writing and the torque sensor zero point calibration **INFO**.

(c) When handling the steering column assembly:

(1) Avoid any impact to the steering column assembly, especially to the motor and torque sensor. Replace them with new ones if dropped or subjected to a severe blow.

(2) Do not pull the wire harness when moving the steering column assembly.

(3) When the steering column assembly has been replaced, perform the torque sensor zero point calibration after initializing the torque sensor zero point **INFO**.

(d) When disconnecting and reconnecting the connectors:

(1) Before disconnecting the connectors related to the power steering system, turn the power switch on (IG), center the steering wheel, turn the power switch off, and then disconnect the connectors.

(2) Before reconnecting the connectors related to the power steering system, ensure that the power switch is off. Then center the steering wheel and turn the power switch on (IG).

NOTICE:

Do not turn the power switch on (IG) when the steering wheel is not centered.

(3) If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between turning right and left. If there is a difference in steering effort between turning right and left, perform the torque sensor zero point calibration after initializing the torque sensor zero point **INFO**.

6. PRECAUTIONS FOR CAN COMMUNICATION

(a) CAN communication lines are used to receive information from the skid control ECU and the power management control ECU, and to transmit warnings to the combination meter. When there are any problems in the CAN communication lines, DTCs of the CAN communication line are output.

(b) Perform troubleshooting of the communication line problems when the CAN communication DTCs are output. Be sure to start troubleshooting on the electronic power steering system after confirming that the CAN communication system is normal.

(c) Since the CAN communication line has its own length and route, it cannot be temporarily repaired with a bypass wire, etc.

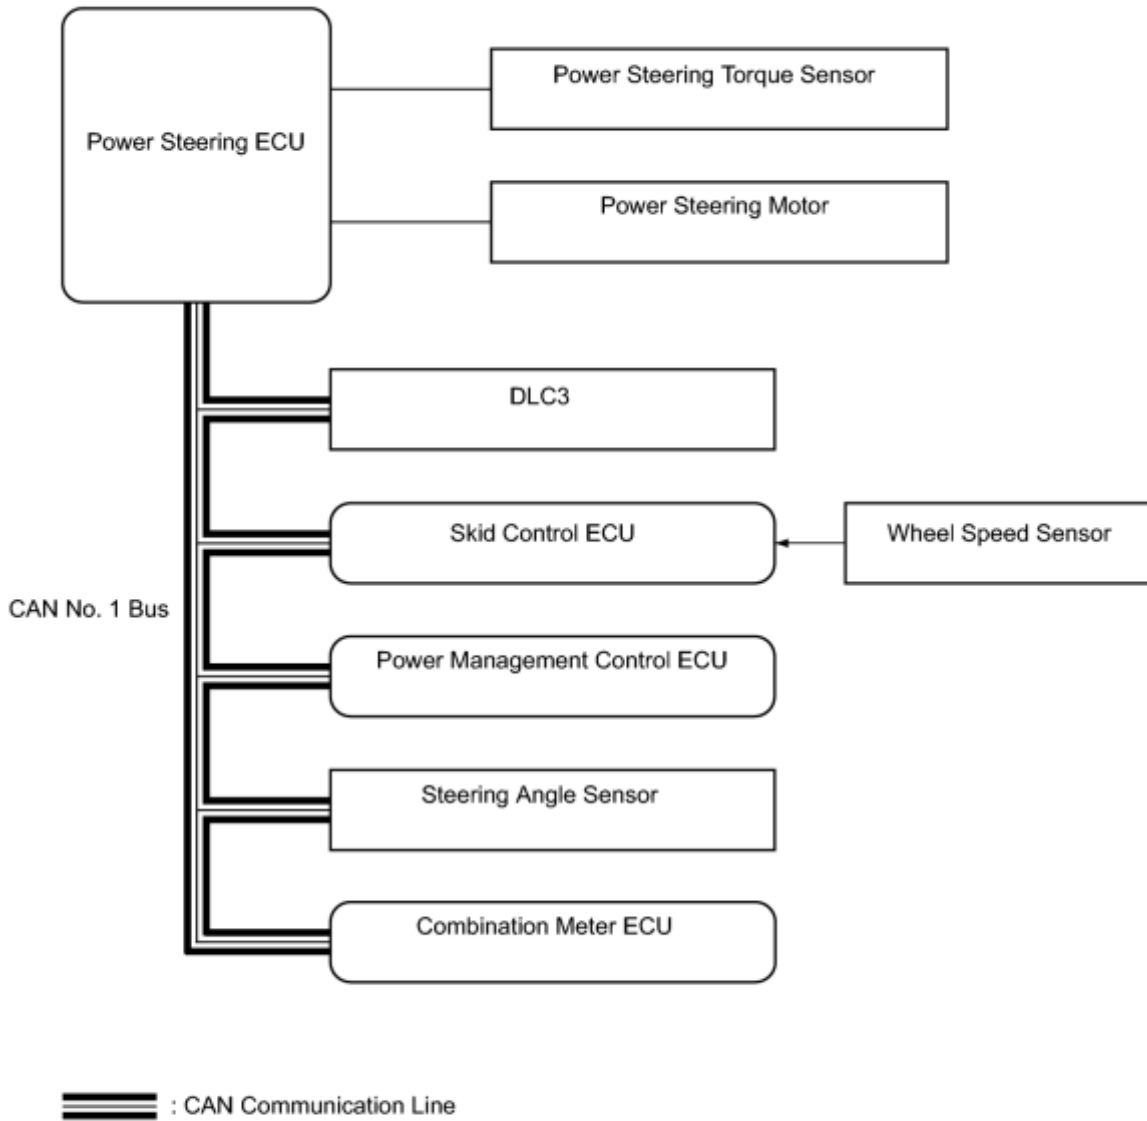

PARTS LOCATION

ILLUSTRATION

P

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. DESCRIPTION

The power steering system generates torque through the operation of the motor and the reduction gear installed on the column shaft in order to assist steering effort.

The power steering ECU determines the direction and the amount of assisting power in accordance with the vehicle speed signals and signals from the torque sensor built into the steering column assembly. As a result, steering effort is controlled to be light during low speed driving and moderately high during high speed driving.

(a) Power steering ECU:

The power steering ECU calculates assisting power based on steering torque signals from the torque sensor and vehicle speed signals from the skid control ECU.

(b) Torque sensor:

The torque sensor detects the steering effort generated when the steering wheel is turned and converts it to an electrical signal.

(c) Power steering motor:

The power steering motor is activated by the current from the power steering ECU and generates torque to assist the steering effort.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the power steering system.
- *: Use the Techstream.

CAN system DTC is not output	A
CAN system DTC is output	B

HINT:

- If any CAN communication system DTCs are output, perform troubleshooting on the CAN communication system first.
- If communication to the power steering ECU cannot be established through the Techstream, inspect terminals CANH and CANL of the DLC3 and the power steering ECU, and the IG circuit of the power steering ECU.

B  PROCEED TO CAN COMMUNICATION SYSTEM

CALIBRATION

1. TORQUE SENSOR ZERO POINT CALIBRATION

NOTICE:

Perform the torque sensor zero point calibration if any of the following conditions occur:

- The steering column assembly (containing the torque sensor) has been replaced.
- The power steering ECU has been replaced.
- There is a difference in steering effort between turning right and left.

HINT:

When torque sensor zero point calibration is performed, the assist map is written automatically at the same time.

(a) Inspection before calibration.

(1) Turn the power switch off.

(2) Connect the Techstream to the DLC3.

(3) Turn the power switch on (IG).

(4) Turn the Techstream on.

(5) Calibrate the power steering ECU. Enter the following menus: Chassis / EMPS / Data List.

(6) Check the values by referring to the table below.

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG Power Supply	ECU power source voltage/ Min.: 0 V Max.: 20.1531 V	11 to 14 V	Power switch on (IG)

Standard voltage:

11 to 14 V

NOTICE:

If the IG power supply voltage is 9 V or less, calibration cannot be performed. In this case, charge or replace the battery, and then perform calibration.

(b) Perform the torque sensor zero point calibration.

NOTICE:

If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.

- (1) Set the steering wheel to the center point and align the front wheels straight ahead.
- (2) Turn the power switch off.
- (3) Connect the Techstream to the DLC3.
- (4) Turn the power switch on (READY).
- (5) Turn the Techstream on.
- (6) Calibrate the power steering ECU. Enter the following menus: Chassis / EMPS / Utility / Torque Sensor Adjustment.

NOTICE:

- Do not touch the steering wheel during the torque sensor zero point calibration.
- Perform the calibration only when the vehicle is stopped.

(7) Check for DTCs .

NOTICE:

- After zero point calibration is completed normally, confirm that DTC is not output.
- If DTC C1515, C1516, C1534 or C1581 is output, perform troubleshooting for the corresponding DTC.

Result:

Result	See Procedure
DTC C1515 is output.	
DTC C1516 is output.	
DTC C1534 is output.	
DTC C1581 is output.	

2. ASSIST MAP WRITING

HINT:

If DTC C1581 is output after torque sensor zero point calibration, perform assist map writing.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Utility / Signal Check.

HINT:

- Follow the instructions on the Techstream to perform Signal Check.
- With DTC C1581 output, performing Signal Check will cause the power steering ECU to enter Test Mode and the assist map will be written automatically.

(f) Check for DTCs .

HINT:

After writing the assist map, if DTC C1581 is output, perform the troubleshooting procedure for DTC C1581

.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Power Steering System

Symptom	Suspected Area	See page
Heavy steering	Front tires (improperly inflated, unevenly worn)	INFO
	Front wheel alignment (incorrect)	INFO
	Front suspension (lower ball joint)	INFO
	Steering column	INFO

TERMINALS OF ECU

1. CHECK POWER STEERING ECU

*1

N

Text in Illustration

*1	Component without harness connected (Power Steering ECU)
----	---

(a) Measure the voltage and resistance according to the value(s) in the table below.

NOTICE:

- Check if the power steering ECU connectors are securely connected by pulling on them from the backside.
- If the P/S warning light is illuminated due to a malfunction, the fail-safe function may cause the voltage of the power steering ECU's terminals to become 0 V.

Terminals No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A27-1 (PIG) - Body ground	W - Body ground	Power steering motor power supply input signal	Always	11 to 14 V
A27-2 (PGND) - Body ground	W-B - Body ground	Power ground	Always	Below 1 Ω
z12-1 (M1) - Body ground	R - Body ground	Power steering motor output signal 1	Power switch on (READY), steering wheel turned to left	11 to 14 V
			Power switch on (READY), steering wheel turned to right	Below 1 V
z12-2 (M2) - Body ground	B - Body ground	Power steering motor output signal 2	Power switch on (READY), steering wheel turned to left	Below 1 V
			Power switch on (READY), steering wheel turned to right	11 to 14 V

Terminals No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L54-1 (CANH) - L54-7 (CANL)	R - W	CAN communication line (CAN HI signal)	Power switch off	54 to 69 Ω
L54-6 (IG) - Body ground	B - Body ground	IG power source	Power switch on (IG)	11 to 14 V
L54-7 (CANL) - L54-1 (CANH)	W - R	CAN communication line (CAN LO signal)	Power switch off	54 to 69 Ω
z13-5 (TRQ1) - Body ground	W - Body ground	Torque sensor 1 input signal	Power switch on (READY), steering wheel not turned (without load)	2.3 to 2.7 V
			Power switch on (READY), steering wheel turned to right	2.5 to 4.7 V
			Power switch on (READY), steering wheel turned to left	0.3 to 2.5 V
z13-6 (TRQV) - Body ground	R - Body ground	Torque sensor power source	Power switch on (READY)	7.5 to 8.5 V
z13-7 (TRQ2) - Body ground	Y - Body ground	Torque sensor 2 input signal	Power switch on (READY), steering wheel not turned (without load)	2.3 to 2.7 V
			Power switch on (READY), steering wheel turned to right	2.5 to 4.7 V
			Power switch on (READY), steering wheel turned to left	0.3 to 2.5 V
z13-8 (TRQG) - Body ground	B - Body ground	Torque sensor ground	Always	Below 1 Ω

If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbol (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 Ω or higher

NOTICE:

*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch or any other switches or the doors.

(b) If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the Techstream cable to the DLC3, turn the power switch on (IG) and attempt to use the Techstream. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the Techstream.

- If communication is normal when the Techstream is connected to another vehicle, inspect the DLC3 of the original vehicle.

- If communication is still not possible when the Techstream is connected to another vehicle, the problem may be in the Techstream itself. Consult the Service Department listed in the Techstream instruction manual.

2. CHECK WARNING LIGHT

(a) If a problem occurs in the power steering system, the P/S warning light on the combination meter comes on to inform the driver of the problem.

DTC CHECK / CLEAR

1. CHECK DTCs

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Read the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.
- (f) Refer to the Diagnostic Trouble Code Chart for DTC information  .

2. CLEAR DTCs

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Clear the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.
- (f) According to the display on the Techstream, select the trouble code data display with the clear button.
- (g) Turn the power switch off.
- (h) Disconnect the Techstream from the DLC3.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

NOTICE:

- Freeze frame data values will vary depending on the measurement conditions, surroundings, or vehicle conditions. For this reason, there may be a problem even if the values are within specifications.
- Turn the power switch on (IG) and park the vehicle on level ground. Check the freeze frame data by using the Techstream.

- Turn the power switch off.
- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Check the freeze frame data on the Techstream.

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Meter Vehicle Velocity	Vehicle speed from meter/	0 km/h (0 mph)	Turn the power switch on (READY) and vehicle stopped
	Min.: 0 km/h (mph) Max.: 300 km/h (186.4 mph)	No significant fluctuation	Turn the power switch on (READY) and vehicle driven at constant speed
Motor Actual Current	Current to motor/ Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Turn the power switch on (READY) and power steering is in operation
Command Value Current	Requested current to motor/ Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Turn the power switch on (READY) and power steering is in operation
Thermistor Temperature	ECU substrate temperature/ Min.: -40°C (-40°F) Max.: 150°C (302°F)	-40 to 150°C (-40 to 302°F)	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
PIG Power Supply	Power source voltage to activate motor/ Min.: 0 V Max.: 20.1531 V	11 to 14 V	Power switch on (READY)
IG Power Supply	ECU power source voltage/ Min.: 0 V Max.: 20.1531 V	11 to 14 V	Power switch on (READY)
Steering Wheel Torque	Steering wheel torque/ Min.: -327.68 Nm Max.: 7 Nm	Value changes in proportion to steering effort	Power switch on (READY) and power steering is in operation
Torque Sensor 1 Output	Torque sensor 1 output value/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Turn the power switch on (READY) and steering wheel not turned (without load)
		2.5 to 4.7 V	Turn the power switch on (READY) and steering wheel turned to right with vehicle stopped
		0.3 to 2.5 V	Turn the power switch on (READY) and steering wheel turned to left with vehicle stopped
Torque Sensor 2 Output	Torque sensor 2 output value/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Turn the power switch on (READY) and steering wheel not turned (without load)
		2.5 to 4.7 V	Turn the power switch on (READY) and steering wheel turned to right with vehicle stopped
		0.3 to 2.5 V	Turn the power switch on (READY) and steering wheel turned to left with vehicle stopped
TRQ1 Zero Point Value	Zero point value of torque sensor 1/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Turn the power switch on (READY) and steering wheel not turned (without load)
TRQ2 Zero Point Value	Zero point value of torque sensor 2/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Turn the power switch on (READY) and steering wheel not turned (without load)

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Motor Terminal Volt(+)	Motor terminal M1 voltage/ Min.: 0 V Max.: 25.5 V	11 to 14 V	Turn the power switch on (READY) and steering wheel turned to right
		Below 1 V	Turn the power switch on (READY) and steering wheel turned to left
Motor Terminal Volt(-)	Motor terminal M2 voltage/ Min.: 0 V Max.: 25.5 V	Below 1 V	Turn the power switch on (READY) and steering wheel turned to right
		11 to 14 V	Turn the power switch on (READY) and steering wheel turned to left
Ready Status	Ready status/ READY or OFF	READY or OFF	-

FAIL-SAFE CHART

If a problem occurs in the power steering system, the P/S warning light will come on in the combination meter and the power steering assist will be stopped, locked at a particular point, or decreased simultaneously to protect the system.

DTC No.	DTC Detection Condition	Fail-safe
C1511	Torque sensor malfunction	Power assist stopped
C1512		
C1513		
C1514		
C1515		
C1516		
C1517	Torque sensor malfunction	Power assist stopped
C1524	Motor malfunction	Power assist stopped
C1531	Power steering ECU malfunction	Power assist stopped
C1532		
C1533	Temperature sensor malfunction in power steering ECU	Assist force restricted
C1534	EEPROM abnormal	Power assist stopped
C1535	Steering wheel location data error	Power assist stopped
C1551	IG power source voltage error	Power assist stopped
C1552	PIG power source voltage error	Power assist stopped
C1553	Overvoltage at IG and PIG terminals	Power assist stopped
C1554	Power source relay malfunction	Power assist stopped
C1555	Motor relay malfunction	Power assist stopped
C1581	ECU malfunction (Assist map number un-writing)	Permission of control assist map
C1582	Assist map number mismatch	Controlled using current default map
U0129	Skid control ECU communication error	Amount of power assist remains constant at speed of 70 km/h (43 mph)
U0293	HV ECU communication error	Power assist stopped
U1105	Parking assist ECU communication error	Power assist stopped

HINT:

- The amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept in either full lock position for a long time. In such cases, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the power switch on (READY).
- If the battery is not sufficiently charged or the voltage decreases temporarily, the amount of power assist will be reduced and the P/S warning light will come on. In such cases, the amount of power assist returns normal when the battery voltage recovers.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.
- (f) According to the display on the Techstream, read the "Data List".

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Meter Vehicle Velocity	Vehicle speed from meter/ Min.: 0 km/h (mph) Max.: 300 km/h (186.4 mph)	0 km/h (0 mph) No significant fluctuation	Turn the power switch on (READY) and vehicle stopped Turn the power switch on (READY) and vehicle driven at constant speed
	Motor Actual Current Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Turn the power switch on (READY) and power steering is in operation

HINT:

- ○: Warning light comes on
- X: Warning light turns off (normal reset)
- *1: Depending on some detection conditions, there is a case that the warning light does not come on.

ON-VEHICLE INSPECTION

1. CHECK STEERING EFFORT (TORQUE)

NOTICE:

Some of these service operations may affect the SRS airbags. Read the precautionary notices concerning the SRS airbag system before servicing.

(a) Stop the vehicle on a level, paved road and align the wheels facing straight ahead.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

(c) Remove the steering pad INFO.

(d) Connect the cable to the negative (-) battery terminal.

(e) Using a torque wrench, check that the steering wheel set nut is properly tightened.

Torque: **50 N·m (510 kgf·cm, 37ft·lbf)**

(f) Turn the power switch to on (READY) so that the power steering is ready to operate.

(g) Turn the steering wheel 90 degrees to the right and check the steering effort (torque) while continuing to turn it further in the same direction.

Steering effort (Reference):

6.0 N*m (61 kgf*cm, 53 in.*lbf) or less

(h) Align the front wheels facing straight ahead.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Install the steering pad **INFO**.

(k) Connect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

(l) Clear the DTCs **INFO**.

(m) Inspect the airbag warning light **INFO**.

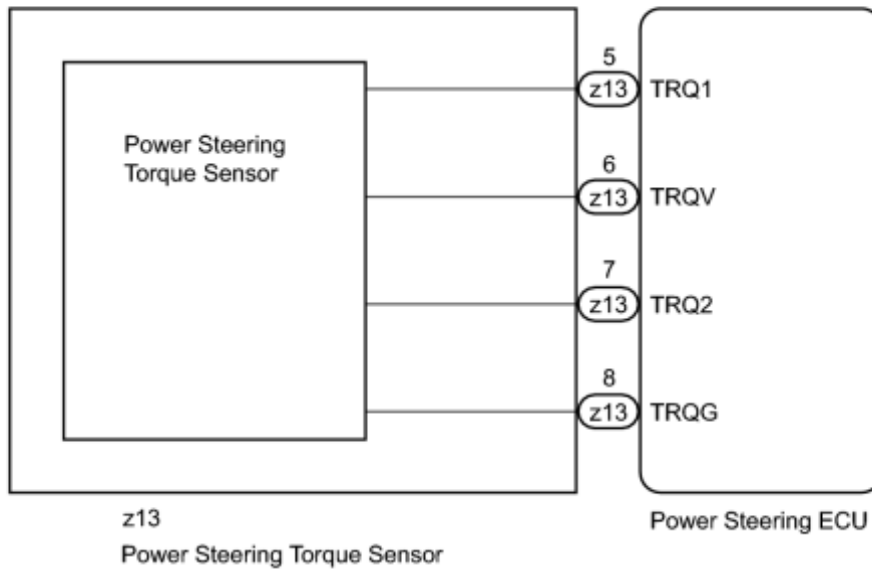

DTC	C1511	Torque Sensor Circuit Malfunction
DTC	C1512	Torque Sensor Circuit Malfunction
DTC	C1513	Torque Sensor Circuit Malfunction
DTC	C1514	Torque Sensor Power Supply Abnormal
DTC	C1517	Torque Hold Abnormal

DESCRIPTION

The power steering ECU calculates assisting power based on steering torque signals from the torque sensor. If these DTCs are stored in the power steering ECU, the ECU stops steering power assist as a fail-safe function.

DTC No.	DTC Detection Condition	Trouble Area
C1511	Torque sensor (TRQ1) signal error or stop	<ul style="list-style-type: none"> Steering column assembly (Torque sensor) Power steering ECU
C1512	Torque sensor (TRQ2) signal error or stop	
C1513	Deviation between torque sensor TRQ1 and TRQ2 exceeds specified value	
C1514	Torque sensor power source voltage error	
C1517	Temporary control due to malfunction related to torque sensor continues for long time	

WIRING DIAGRAM

H

INSPECTION PROCEDURE

NOTICE:

- If the power steering ECU has been replaced with a new one, perform the assist map writing and the torque sensor zero point calibration **NFC**.
- If the steering column assembly has been replaced with a new one, perform the torque sensor zero point calibration after performing the initialization of the torque sensor zero point value **NFC**.

PROCEDURE

1. CHECK CONNECTOR CONNECTION CONDITION (TORQUE SENSOR - ECU)

(a) Check the installation condition of the torque sensor connector.

OK:

Torque sensor connector is securely connected to the power steering ECU.

NG **▶** CONNECT CONNECTOR

OK

2.	READ VALUE USING TECHSTREAM (TORQUE SENSOR1, TORQUE SENSOR2)
----	--

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (READY).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.
- (f) Select the items "Torque sensor 1 output" and "Torque sensor 2 output" in the Data List and read the value displayed on the Techstream.

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Torque Sensor 1 Output	Torque sensor 1 output value/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Turn the power switch on (READY) and steering wheel not turned (without load)
		2.5 to 4.7 V	Turn the power switch on (READY) and steering wheel turned to right with vehicle stopped
		0.3 to 2.5 V	Turn the power switch on (READY) and steering wheel turned to left with vehicle stopped
Torque Sensor 2 Output	Torque sensor 2 output value/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Turn the power switch on (READY) and steering wheel not turned (without load)
		2.5 to 4.7 V	Turn the power switch on (READY) and steering wheel turned to right with vehicle stopped
		0.3 to 2.5 V	Turn the power switch on (READY) and steering wheel turned to left with vehicle stopped

OK:

Normal condition value is displayed on the Techstream during each steering operation.

NG [CHECK POWER STEERING ECU \(TOQUE SENSOR OUTPUT\)](#)

OK **REPLACE POWER STEERING ECU**

3.	CHECK POWER STEERING ECU (TOQUE SENSOR OUTPUT)
----	--

- (a) Turn the power switch on (READY).

*1

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z13-6 (TRQV) - z13-8 (TRQG)	Power switch on (READY)	7.5 to 8.5 V

Text in Illustration

*1	Component with harness connected (Power Steering ECU)
----	--

NG ▶ REPLACE POWER STEERING ECU

OK

4.	CHECK STEERING COLUMN ASSEMBLY (TORQUE SENSOR)
----	--

*1

(a) Turn the power switch on (READY).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition (Steering Wheel Position)	Specified Condition
z13-5 (TRQ1) - z13-8 (TRQG)	Power switch on (READY) Center position	2.3 to 2.7 V
z13-7 (TRQ2) - z13-8 (TRQG)	Power switch on (READY) Center position	2.3 to 2.7 V
z13-5 (TRQ1) - z13-8 (TRQG)	Power switch on (READY) Turned to right	2.5 to 4.7 V
z13-7 (TRQ2) - z13-8 (TRQG)	Power switch on (READY) Turned to right	2.5 to 4.7 V
z13-5 (TRQ1) - z13-8 (TRQG)	Power switch on (READY) Turned to left	0.3 to 2.5 V
z13-7 (TRQ2) - z13-8 (TRQG)	Power switch on (READY) Turned to left	0.3 to 2.5 V

NG  REPLACE STEERING COLUMN ASSEMBLY

OK  REPLACE POWER STEERING ECU

DTC

C1515

Torque Sensor Zero Point Adjustment Undone

DESCRIPTION

This DTC does not indicate a malfunction. The power steering ECU stores this DTC when it determines that the torque sensor zero point calibration has not been performed.

DTC No.	DTC Detection Condition	Trouble Area
C1515	Torque sensor zero point calibration not performed	There is no malfunction if DTC is not output after performing the torque sensor zero point calibration.

INSPECTION PROCEDURE

NOTICE:

- If the power steering ECU has been replaced with a new one, perform the assist map writing and the torque sensor zero point calibration INFO.
- If the steering column assembly has been replaced with a new one, perform the torque sensor zero point calibration after performing the initialization of the torque sensor zero point value INFO.

PROCEDURE

1. PERFORM ZERO POINT CALIBRATION (TORQUE SENSOR)

(a) Perform the torque sensor zero point calibration INFO.

NEXT

2. CHECK FOR DTC

(a) Check for DTCs INFO.

Result:

Result	Proceed to
DTC is still output even after performing torque sensor zero point calibration 3 times*1.	A
DTC is still output even after performing torque sensor zero point calibration once or twice*2.	B
Normal system code is output.	C

HINT:

- *1: The power steering ECU must be replaced if DTC C1515 is still output even after the torque sensor zero point calibration is performed 3 times.

- *2: Perform the torque sensor zero point calibration again if DTC C1515 is still output even after the calibration is performed once or twice.

C ▶ END

B ▶ PERFORM ZERO POINT CALIBRATION AGAIN (TORQUE SENSOR)

3. PERFORM ACTIVE TEST USING TECHSTREAM

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (f) Perform the Active Test of the combination meter using the Techstream.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. EPS	EPS warning light	OFF or ON	Confirm that the vehicle is stopped with the engine idling

- (g) Check that the EPS warning light operates in accordance with the Active Test.

HINT:

Reconnect the connectors and restore the vehicle to its previous condition before checking the combination meter.

NG  REPLACE METER CIRCUIT PLATE NO.3

OK  REPLACE POWER STEERING ECU

PRECAUTION

1. DETERMINING POWER STEERING SYSTEM TYPE

(a) Two types of power steering system are available for this model. A different type of motor is used for each system; a brushless type motor and a brush type motor. Refer to the table below to determine which type of motor is used.

Types

Type of Motor	Model
Brushless Type Motor	Mexico package models and models with 215/45R17 tires
Brush Type Motor	Other than those above

2. PRECAUTION FOR DISCONNECTING THE BATTERY CABLE

NOTICE:

When disconnecting the battery negative (-) cable, initialize the following system after the cable is reconnected:

System	See Procedure
Advanced Parking Guidance System	INFO

3. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with a Supplemental Restraint System (SRS). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident.

Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System [INFO](#).

4. PRECAUTIONS FOR REMOVAL, INSTALLATION AND REPLACEMENT OF ELECTRONIC MOTOR POWER STEERING COMPONENTS

(a) Be sure to align the front wheels straight ahead when removing and installing the power steering gear assembly.

(b) When disconnecting the No. 2 steering intermediate shaft assembly, be sure to place matchmarks before starting the operation.

(c) After replacing the steering column assembly or power steering ECU, clear the rotation angle sensor calibration value, initialize the rotation angle sensor, and calibrate the torque sensor zero point [INFO](#).

5. HANDLING PRECAUTION

(a) When handling the electronic parts:

(1) Avoid any impact to electronic parts such as ECUs and relays. Replace them with new ones if dropped or subjected to a severe blow.

(2) Do not expose any electronic parts to high temperatures or humidity.

(3) Do not touch the connector terminals in order to prevent deformation or malfunctions due to static electricity.

(b) When handling the power steering ECU:

(1) When the power steering ECU has been replaced with a new one, perform the assist map writing, the rotation angle sensor value initialization and the torque sensor zero point calibration .

(c) When handling the steering column assembly:

(1) Avoid any impact to the steering column assembly, especially to the motor and torque sensor. Replace them with new ones if dropped or subjected to a severe blow.

(2) Do not pull the wire harness when moving the steering column assembly.

(3) When the steering column assembly has been replaced, perform the rotation angle sensor value initialization and the torque sensor zero point calibration after initializing the torque sensor zero point.

(d) When disconnecting and reconnecting the connectors:

(1) Before disconnecting the connectors related to the power steering system, turn the power switch on (IG), center the steering wheel, turn the power switch off, and then disconnect the connectors.

(2) Before reconnecting the connectors related to the power steering system, ensure that the power switch is off. Then center the steering wheel and turn the power switch on (IG).

NOTICE:

Do not turn the power switch on (IG) when the steering wheel is not centered.

(3) If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between turning right and left. If there is a difference in steering effort between turning right and left, perform the rotation angle sensor value initialization and the torque sensor zero point calibration after initializing the torque sensor zero point .

6. PRECAUTIONS FOR CAN COMMUNICATION

(a) CAN communication lines are used to receive information from the skid control ECU and the power management control ECU, and to transmit warnings to the combination meter.

When there are any problems in the CAN communication lines, DTCs of the CAN communication line are output.

(b) Perform troubleshooting for the communication line problems when the CAN communication DTCs are output. Be sure to start troubleshooting on the power steering system after confirming that the CAN communication system is normal.

(c) Since the CAN communication line has its own length and route, it cannot be repaired temporarily with a bypass wire, etc.

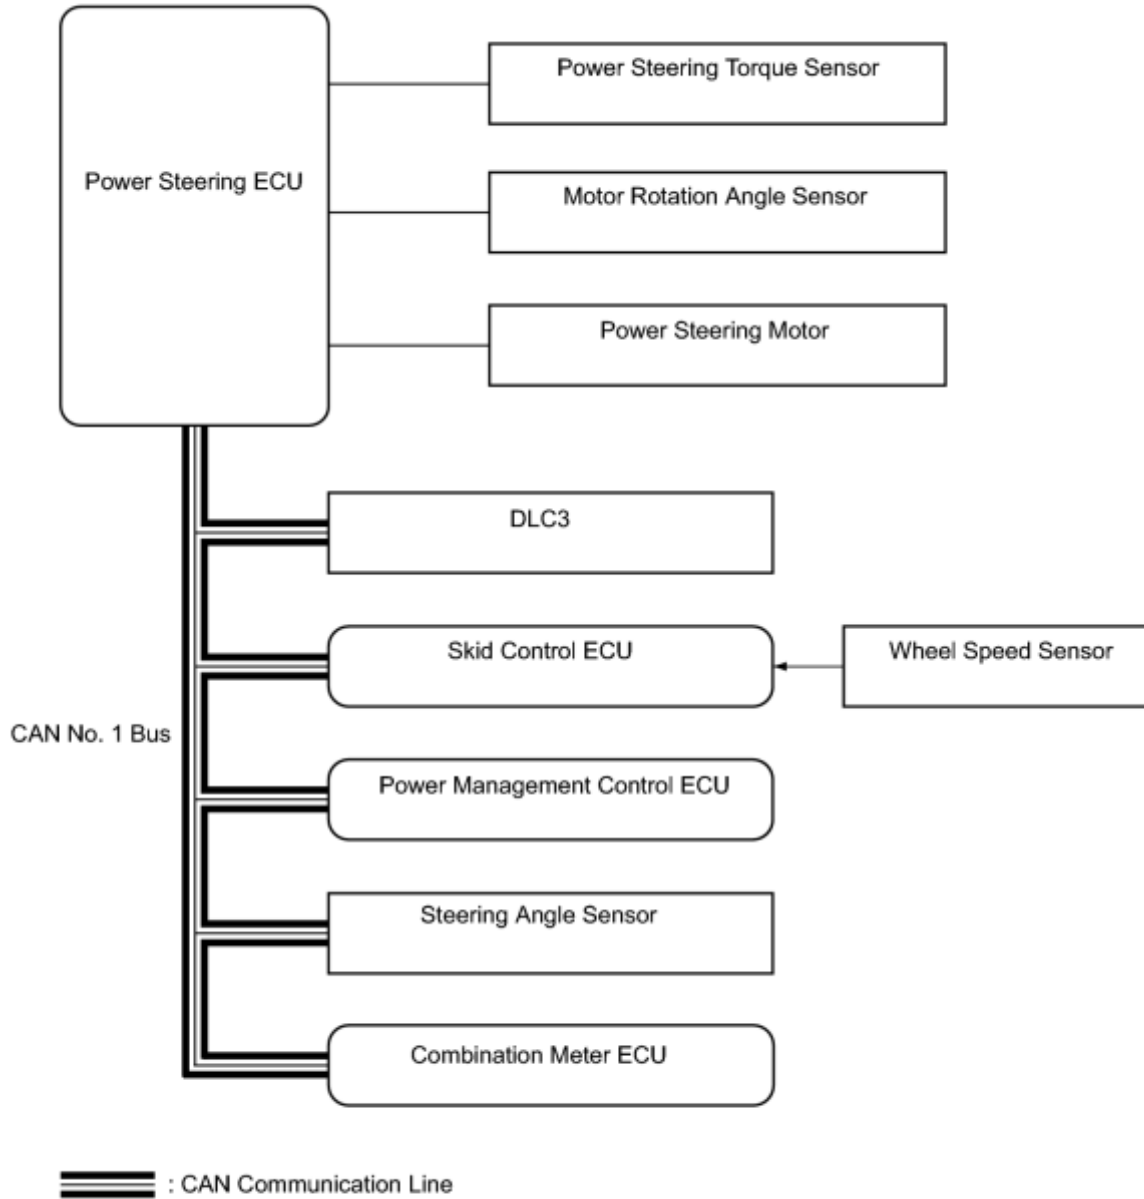

PARTS LOCATION

ILLUSTRATION

P

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. DESCRIPTION

- The power steering system generates torque through the operation of the motor and the reduction gear installed on the column shaft in order to assist steering effort.
- The power steering ECU determines directions and the amount of assisting power in accordance with vehicle speed signals and signals from the torque sensor built into the steering column assembly. As a result, the power steering ECU adjusts the steering effort so that it is lighter during low speed driving and heavier during high speed driving.

(a) Power steering ECU:

The power steering ECU calculates assisting power based on steering torque signals from the torque sensor and vehicle speed signals from the skid control ECU.

(b) Torque sensor:

The torque sensor detects the steering effort generated when the steering wheel is turned and converts it to an electrical signal.

(c) Power steering motor:

The power steering motor is activated by the current from the power steering ECU and generates torque to assist the steering effort.

(d) Motor rotation angle sensor:

The motor rotation angle sensor consists of the resolver sensor, which excels in reliability and durability. The rotation angle sensor detects the rotation angle of the motor and outputs it to the power steering ECU. As a result, it ensures efficient EPS control.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the power steering system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3. CHECK DTC AND FREEZE FRAME DATA*

HINT:

Refer to Clear DTCs .

NEXT

4. PROBLEM SYMPTOM CONFIRMATION

Result:

Result	Proceed to
Symptom does not occur.	A
Symptom occurs.	B

B ▶ Go to step 6

A

5. SYMPTOM SIMULATION

NEXT

6. CHECK CAN COMMUNICATION SYSTEM*

(a) Check for DTCs .

Result:

Result	Proceed to
CAN system DTC is not output	A
CAN system DTC is output	B

HINT:

- If any CAN communication system DTCs are output, perform troubleshooting on the CAN communication system first.
- If communication to the power steering ECU cannot be established through the Techstream, inspect terminals CANH and CANL of the DLC3 and the power steering ECU, and the IG circuit of the power steering ECU.

B  PROCEED TO CAN COMMUNICATION SYSTEM

A

7.	CHECK FOR DTC*
----	----------------

(a) Check for DTCs .

HINT:

Refer to Diagnostic Trouble Code Chart when any DTCs are output .

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B  Go to step 9

Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B  Go to step 9

A

9.	OVERALL ANALYSIS AND TROUBLESHOOTING*
----	---------------------------------------

(a) Refer to Terminals of ECU .

(b) Refer to Data List / Active Test .

NEXT

10.	REPAIR OR REPLACE
-----	-------------------

NEXT

11.	CONFIRMATION TEST
-----	-------------------

NEXT  **END**

CALIBRATION

1. ROTATION ANGLE SENSOR VALUE INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION

NOTICE:

Clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point if any of the following has occurred:

- The power steering ECU has been replaced.
- The steering column assembly has been replaced.
- Steering effort differs between left and right.

(a) Inspection before calibration

- (1) Turn the power switch off.
- (2) Connect the Techstream to the DLC3.
- (3) Turn the power switch on (IG).
- (4) Turn the Techstream on.
- (5) Calibrate the power steering ECU. Enter the following menus: Chassis / EMPS / Data List.
- (6) Check the values by referring to the table below.

Power Steering ECU

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG Power Supply	ECU power source voltage/ Min.: 0 V Max.: 20.1531 V	11 to 14 V	Power switch on (IG)

Standard voltage:

11 to 14 V

NOTICE:

If the IG power supply voltage is 9 V or less, calibration cannot be performed. In this case, charge or replace the battery, and then perform calibration.

(b) Rotation angle sensor calibration value clear, rotation angle sensor value initialization, and torque sensor zero point calibration

NOTICE:

- If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.
- If DTC C1526 (Rotation Angle Sensor Initialization Incomplete) is stored, the rotation angle sensor value cannot be initialized. Clear the DTC before starting initialization.

(1) Set the steering wheel to the center point and align the front tires straight ahead.

(2) Turn the power switch off.

(3) Connect the Techstream to the DLC3.

(4) Turn the power switch on (IG).

(5) Turn the Techstream on.

(6) Enter the following menus: Chassis / EMPS / Utility / Torque Sensor Adjustment.

NOTICE:

- Do not turn the steering wheel sharply.
- Do not touch the steering wheel during the torque sensor zero point calibration (for 3 seconds).

(7) Check for DTCs .

NOTICE:

- After rotation angle sensor value initialization and zero point calibration is completed normally, confirm that DTC is not output.
- If DTC C1515, C1516, C1525, C1526, C1534 or C1581 is output, perform troubleshooting for the corresponding DTC.

Result:

Result	See Procedure
DTC C1515 is output.	
DTC C1516 is output.	
DTC C1525 is output.	
DTC C1526 is output.	
DTC C1534 is output.	
DTC C1581 is output.	

2. ASSIST MAP WRITING

HINT:

If DTC C1581 is output after torque sensor zero point calibration, perform assist map writing.

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Utility / Signal Check.

HINT:

- Follow the instructions on the Techstream to perform Signal Check.
- With DTC C1581 output, performing Signal Check will cause the power steering ECU to enter Test Mode and the assist map will be written automatically.

(f) Check for DTCs .

HINT:

After writing the assist map, if DTC C1581 is output, perform the troubleshooting procedure for DTC C1581

.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Power Steering System

TERMINALS OF ECU

1. CHECK POWER STEERING ECU

*1

Text in Illustration

*1	Component without harness connected (Power Steering ECU)
----	---

HINT:

As connector z16 uses a lock lever, each terminal cannot be checked while the connector is still connected to the power steering ECU.

Terminal No. (Symbols)	Wiring Color	Terminal Description
z16-1 (V)	W	V phase motor output
z16-2 (U)	B	U phase motor output
z16-3 (W)	R	W phase motor output

(a) Measure the voltage and resistance according to the value(s) in the table below.

NOTICE:

When the P/S warning light is illuminated during a malfunction, the fail-safe function may cause the voltage of the power steering ECU terminals to become 0 V.

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
A27-1 (PIG) - A27-2 (PGND)	W - W-B	Power source	Always	11 to 14 V
A27-2 (PGND) - Body ground	W-B - Body ground	Power ground	Always	Below 1 Ω

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
L54-1 (CANH) - L54-7 (CANL)	R - W	CAN communication line	Power switch off	54 to 69 Ω
L54-6 (IG) - A27-2 (PGND)	B - W-B	IG power source	Power switch on (IG)	11 to 14 V
z15-1 (RZV) - A27- 2 (PGND)	R - W-B	Rotation angle sensor excitation output signal	Power switch on (READY) Steering wheel turned	0.68 to 4.42 V
z15-3 (RZG) - A27- 2 (PGND)	B - W-B	Rotation angle sensor excitation circuit GND	Always	Below 1 Ω
z15-5 (RZCS) - A27-2 (PGND)	L - W-B	Rotation angle sensor COS aspect output signal	Power switch on (READY) Steering wheel turned	0.68 to 4.42 V
z15-6 (RZSN) - A27-2 (PGND)	Y - W-B	Rotation angle sensor SIN aspect output signal	Power switch on (READY) Steering wheel turned	0.68 to 4.42 V
z14-5 (TRQ1) - z14-8 (TRQG)	-	Torque sensor signal	Power switch on (READY) Steering wheel not turned (without load)	2.3 to 2.7 V
			Power switch on (READY) Steering wheel turned to right with vehicle stopped	2.5 to 3.8 V
			Power switch on (READY) Steering wheel turned to left with vehicle stopped	1.2 to 2.5 V
z14-6 (TRQV) - z14-8 (TRQG)	-	Torque sensor voltage source	Power switch on (IG)	4.5 to 5.5 V
z14-7 (TRQ2) - z14-8 (TRQG)	-	Torque sensor signal	Power switch on (READY) Steering wheel not turned (without load)	2.3 to 2.7 V
			Power switch on (READY) Steering wheel turned to right with vehicle stopped	1.2 to 2.5 V
			Power switch on (READY) Steering wheel turned to left with vehicle stopped	2.5 to 3.8 V
z14-8 (TRQG) - Body ground	- Body ground	Torque sensor ground	Always	Below 1 Ω

If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbol (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 Ω or higher

NOTICE:

*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch or any other switches or the doors.

(b) If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the Techstream cable to the DLC3, turn the power switch on (IG) and attempt to use the Techstream. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the Techstream.

- If communication is normal when the Techstream is connected to another vehicle, inspect the DLC3 of the original vehicle.

- If communication is still not possible when the Techstream is connected to another vehicle, the problem may be in the Techstream itself. Consult the Service Department listed in the Techstream instruction manual.

2. CHECK WARNING LIGHT

(a) When a problem occurs in the power steering system, the P/S warning light on the combination meter comes on to inform the driver of the problem.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Read the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.
- (f) Refer to the Diagnostic Trouble Code Chart for DTC information  .

2. CLEAR DTC

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Clear the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.
- (f) According to the display on the Techstream, select the trouble code data display with the clear button.
- (g) Turn the power switch off.
- (h) Disconnect the Techstream from the DLC3.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

NOTICE:

- It is difficult to show the specified values (judgment values) clearly because freeze frame data values change significantly due to differences in measurement conditions, surroundings, or vehicle conditions. For this reason, there may be a problem even when the values are within specifications.
- Turn the power switch on (IG) and park the vehicle on level ground. Check the freeze frame data by using the Techstream.

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Check the freeze frame data on the Techstream.

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Meter Vehicle Velocity	Vehicle speed from meter/ Min.: 0 km/h (0 mph) Max.: 300 km/h (186.4 mph)	0 km/h (0 mph)	Power switch on (READY) and vehicle stopped
		No significant fluctuation	Power switch on (READY) and vehicle driven at a constant speed
Motor Actual Current	Amount of current to motor/ Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Power switch on (READY) and power steering is in operation
Command Value Current	Demanded amount of current to motor/ Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Power switch on (READY) and power steering is in operation
Steering Angle Velocity	Steering angle speed/ Min.: -32768 deg/s Max.: 32767 deg/s	Value changes in proportion to steering effort	Power switch on (READY) and steering wheel is turned

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Thermistor Temperature	ECU substrate temperature/ Min.: -40°C (-40°F) Max.: 150°C (302°F)	-40°C to 150°C (-40°F to 302°F)	Power switch on (READY)
PIG Power Supply	Power source voltage to active motor/ Min.: 0 V Max.: 20.1531 V	11 to 14 V	Power switch on (READY) and power steering is in operation
IG Power Supply	ECU power source voltage/ Min.: 0 V Max.: 20.1531 V	11 to 14 V	Power switch on (IG)
Steering Wheel Torque	Steering wheel torque/ Min.: -327.68 Nm Max.: 7 Nm	Value changes in proportion to steering effort	Power switch on (READY) and power steering is in operation
Motor Rotation Angle	Motor rotation angle/ Min.: 0 deg Max.: 1441.77 deg	During steering operation, motor rotation angle value changes from 0 to 360°	Power switch on (READY) and power steering is in operation
Command Val Current 2	Demanded amount of current to motor/ Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Power switch on (READY) and power steering is in operation
PIG2 Voltage	Coil rear pressurization voltage/ Min.: 0 V Max.: 45.955 V	Approximately 27 V	Power switch on (READY) and steering wheel is not turned
		Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned
Motor Voltage	Motor power supply voltage/ Min.: 0 V	Approximately 27 V	Power switch on (READY) and steering wheel is not turned
		Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	Max.: 45.955 V		
Motor Terminal Volt (U)	Motor terminal voltage (U phase)/ Min.: 0 V Max.: 46.667 V	Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned
Motor Terminal Volt (V)	Motor terminal voltage (V phase)/ Min.: 0 V Max.: 46.667 V	Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned
Motor Terminal Volt (W)	Motor terminal voltage (W phase)/ Min.: 0 V Max.: 46.667 V	Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned
Torque Sensor 1 Output	Torque sensor voltage/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Power switch on (READY) and steering wheel is not turned (without load)
		2.5 to 3.8 V	Power switch on (READY) and steering wheel turned to right with vehicle stopped
		1.2 to 2.5 V	Power switch on (READY) and steering wheel turned to left with vehicle stopped
Torque Sensor 2 Output	Torque sensor voltage/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Power switch on (READY) and steering wheel is not turned (without load)
		1.2 to 2.5 V	Power switch on (READY) and steering wheel turned to right with vehicle stopped
		2.5 to 3.8 V	Power switch on (READY) and steering wheel turned to left with vehicle stopped
TRQ1 Zero Point Value	Torque sensor voltage/ Min.: 0 V Max.: 5 V	Values differ depending on vehicle	Power switch on (READY) and steering wheel is not turned
TRQ2 Zero Point Value	Torque sensor	Values differ depending on vehicle	Power switch on (READY) and steering wheel is not turned

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

Ready Status	Ready status/ READY or OFF	READY or OFF	-

FAIL-SAFE CHART

If a problem occurs in the power steering system, the P/S warning light will come on in the combination meter and the power steering assist will be stopped, locked at a particular point, or decreased simultaneously to protect the system.

Power Steering System

DTC No.	Detection Condition	Fail-safe
C1511	Torque sensor malfunction	Power assist stopped
C1512		
C1513		
C1514		
C1515		
C1516		
C1517		
C1521	Motor circuit malfunction	
C1522		
C1523		
C1524		
C1525	Motor rotation angle sensor malfunction	
C1526		
C1528		
C1531	ECU malfunction	Assist force restricted
C1532		
C1533		
C1534		
C1541	Vehicle speed signal malfunction	Amount of power assist is locked at 100 km/h (62 mph) level of power assist
C1551	IG power source voltage error	Power assist stopped
C1552	PIG power source voltage error	
C1554	Power source relay malfunction	
C1555	Motor relay malfunction	
C1581	Assist map not written in power steering ECU	Controlled using default map
C1582	Assist map mismatch written in power steering ECU	Controlled using current default map
U0129	Skid control ECU communication error	Amount of power assist is locked at 100 km/h (62 mph) level of power assist
U0293	HV ECU communication error	Power assist stopped
U1104	Driving support ECU communication	Power assist control normally (Lane keeping assist system)

DTC No.	Detection Condition	Fail-safe
	error	does not operate)
U1105	Parking assist ECU communication error	Power assist control normally (Parking assist system does not operate)

HINT:

- The amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept at either full lock position for a long time. In such cases, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the power switch on (READY).
- If the battery is not sufficiently charged or the voltage decreases temporarily, the amount of power assist will be reduced and the P/S warning light will come on. In such cases, the amount of power assist returns to normal when the battery voltage recovers.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.
- (f) According to the display on the Techstream, read the "Data List".

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Meter Vehicle Velocity	Vehicle speed from meter/ Min.: 0 km/h (0 mph) Max.: 300 km/h (186.4 mph)	0 km/h (0 mph)	Power switch on (READY) and vehicle stopped

ON-VEHICLE INSPECTION

1. CHECK STEERING EFFORT (TORQUE)

NOTICE:

Some of these service operations may affect the SRS airbags. Read the precautionary notices concerning the SRS airbag system before servicing.

(a) Stop the vehicle on a level, paved surface and align the wheels straight ahead.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

(c) Remove the steering pad INFO.

(d) Connect the cable to the negative (-) battery terminal.

(e) Using a torque wrench, check that the steering wheel set nut is properly tightened.

Torque: **50 N·m (510 kgf·cm, 37ft·lbf)**

(f) Turn the power switch on (READY) so that the power steering is ready to operate.

(g) Turn the steering wheel 90 degrees to the right and check the steering effort (torque) while continuing to turn it further in the same direction.

Standard steering effort (Reference):

6.0 N*m (61 kgf*cm, 53 in.*lbf) or less

(h) Align the front wheels facing straight ahead.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Install the steering pad **INFO**.

(k) Connect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

(l) Clear the DTCs **INFO**.

(m) Inspect the airbag warning light **INFO**.

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor value initialization and torque sensor zero point calibration .

PROCEDURE

1. CHECK CONNECTOR CONNECTION CONDITION (TORQUE SENSOR - ECU)

(a) Check the installation condition of the torque sensor connector.

OK:

Torque sensor connector is securely connected to the power steering ECU.

NG  CONNECT CONNECTOR

OK

2. READ VALUE USING TECHSTREAM (TORQUE SENSOR1, TORQUE SENSOR2)

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (READY).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Data List.

(f) Select the items "Torque sensor 1 output" and "Torque sensor 2 output" in the Data List and read the value displayed on the Techstream.

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Torque Sensor 1 Output	Torque sensor voltage/ Min.: 0 V	2.3 to 2.7 V	Power switch on (READY) Steering wheel not turned (without load)
	Max.: 5 V	2.5 to 3.8 V	Power switch on (READY) Steering wheel turned to right with vehicle stopped

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		1.2 to 2.5 V	Power switch on (READY) Steering wheel turned to left with vehicle stopped
Torque Sensor 2 Output	Torque sensor voltage/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Power switch on (READY) Steering wheel not turned (without load)
		1.2 to 2.5 V	Power switch on (READY) Steering wheel turned to right with vehicle stopped
		2.5 to 3.8 V	Power switch on (READY) Steering wheel turned to left with vehicle stopped

OK:

Normal condition value is displayed on the Techstream during each steering operation.

NG  [CHECK POWER STEERING ECU \(TRQV VOLTAGE\)](#)

OK  **REPLACE POWER STEERING ECU**

3.	CHECK POWER STEERING ECU (TRQV VOLTAGE)
----	---

(a) Turn the power switch on (READY).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

*1

H

Tester Connection	Switch Condition	Specified Condition
z14-6 (TRQV) - z14-8 (TRQG)	Power switch on (READY)	4.5 to 5.5 V

Text in Illustration

*1	Component with harness connected (Power Steering ECU)
----	--

NG  **REPLACE POWER STEERING ECU**

OK

4. CHECK POWER STEERING ECU (TRQ1, TRQ2 VOLTAGE)

*1

(a) Turn the power switch on (READY).

H

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition (Steering Wheel Position)	Specified Condition
z14-5 (TRQ1) - z14-8 (TRQG)	Power switch on (READY) Steering wheel not turned (without load)	2.3 to 2.7 V
	Power switch on (READY) Steering wheel turned to right with vehicle stopped	2.5 to 3.8 V
	Power switch on (READY) Steering wheel turned to left with vehicle stopped	1.2 to 2.5 V
	Power switch on (READY) Steering wheel not turned (without load)	2.3 to 2.7 V
z14-7 (TRQ2) - z14-8 (TRQG)	Power switch on (READY) Steering wheel turned to right with vehicle stopped	1.2 to 2.5 V
	Power switch on (READY) Steering wheel turned to left with vehicle stopped	2.5 to 3.8 V
	Power switch on (READY) Steering wheel not turned (without load)	2.3 to 2.7 V
	Power switch on (READY) Steering wheel turned to right with vehicle stopped	1.2 to 2.5 V

NG REPLACE STEERING COLUMN ASSEMBLY

OK  **REPLACE POWER STEERING ECU**

DTC	C1515	Torque Sensor Zero Point Adjustment Undone
DTC	C1525	Rotation Angle Sensor Initialization Undone

DESCRIPTION

These DTCs do not indicate a malfunction. The power steering ECU outputs these DTCs when it determines that the rotation angle sensor value initialization and torque sensor zero point calibration have not been performed.

DTC No.	DTC Detection Condition	Trouble Area
C1515	This DTC is detected when torque sensor zero point calibration has not been performed.	There is no malfunction if this DTC is not output again after performing zero point calibration.
C1525	This DTC is detected when rotation angle sensor value initialization has not been performed.	There is no malfunction if this DTC is not output again after performing rotation angle sensor value initialization.

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor value initialization and torque sensor zero point calibration .

PROCEDURE

1.	INITIALIZE ROTATION ANGLE SENSOR VALUE AND CALIBRATE TORQUE SENSOR ZERO POINT
----	---

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point .

NEXT

2.	CHECK FOR DTC
----	---------------

(a) Check for DTCs .

Result:

Condition	Proceed to
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times*1.	A
DTCs are still output even after performing rotation angle sensor value initialization and steering	B

Condition	Proceed to
zero point calibration once or twice*2.	
Normal system code is output.	C

HINT:

- *1: The power steering ECU must be replaced if DTC C1515 or C1525 is still output even after the rotation angle sensor value initialization and torque sensor zero point calibration is performed 3 times.
- *2: Perform the rotation angle sensor value initialization and torque sensor zero point calibration again if DTC C1515 or C1525 is still output even after the rotation angle sensor value initialization and calibration is performed once or twice.

C ▶ END

B ▶ PERFORM ROTATION ANGLE SENSOR VALUE INITIALIZATION AND ZERO POINT CALIBRATION AGAIN

A
▼

3.	REPLACE POWER STEERING ECU
----	----------------------------

(a) Replace the power steering ECU INFO.

NEXT

▼

4.	INITIALIZE ROTATION ANGLE SENSOR VALUE AND CALIBRATE TORQUE SENSOR ZERO POINT
----	---

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point INFO.

NEXT

▼

5.	CHECK FOR DTC
----	---------------

(a) Check for DTCs INFO.

Result:

Condition	Proceed to
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times*1.	A
DTCs are still output even after performing rotation angle sensor value initialization and steering zero point calibration twice*2.	B
Normal system code is output.	C

HINT:

- *1: The steering column assembly must be replaced if DTC C1515 or C1525 is still output even after the rotation angle sensor value initialization and torque sensor zero point calibration is performed 3 times.
- *2: Perform the rotation angle sensor value initialization and torque sensor zero point calibration again if DTC C1515 or C1525 is still output even after the rotation angle sensor value initialization and calibration is performed twice.

NOTICE:

If replacing the steering column assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point .

C ▶ END

B ▶ PERFORM ROTATION ANGLE SENSOR VALUE INITIALIZATION AND ZERO POINT CALIBRATION AGAIN

A ▶ REPLACE STEERING COLUMN ASSEMBLY

DTC	C1516	Torque Sensor Zero Point Adjustment Incomplete
DTC	C1526	Rotation Angle Sensor Initialization Incomplete

DESCRIPTION

These DTCs do not indicate a malfunction. The power steering ECU outputs these DTCs when it determines that the rotation angle sensor value initialization and torque sensor zero point calibration are incomplete.

DTC No.	DTC Detection Condition	Trouble Area
C1516	Torque sensor zero point calibration is incomplete due to the steering wheel being touched during calibration.	There is no malfunction if this DTC is not output again after clearing the DTCs and torque sensor calibration value, and performing zero point calibration.
C1526	Rotation angle sensor value initialization is incomplete due to the steering wheel being touched during calibration.	There is no malfunction if this DTC is not output again after clearing the DTCs and torque sensor calibration value, and performing rotation angle sensor value initialization.

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor value initialization and torque sensor zero point calibration .

PROCEDURE

1.	CLEAR DTC
----	-----------

(a) Clear the DTCs .

NEXT

2.	INITIALIZE ROTATION ANGLE SENSOR VALUE AND CALIBRATE TORQUE SENSOR ZERO POINT
----	---

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point .

NEXT

3.	CHECK FOR DTC
----	---------------

(a) Check for DTCs .

Result:

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration .

PROCEDURE

1.	READ VALUE USING TECHSTREAM (MOTOR VOLTAGE)
----	---

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (READY).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.
- (f) Select the items "Motor Terminal Volt(U)", "Motor Terminal Volt(V)" and "Motor Terminal Volt(W)" in the Data List and read the value displayed on the Techstream.

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Motor Terminal Volt (U)	Motor terminal voltage (U phase)/ Min.: 0 V Max.: 46.667 V	Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned
Motor Terminal Volt (V)	Motor terminal voltage (V phase)/ Min.: 0 V Max.: 46.667 V	Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned
Motor Terminal Volt (W)	Motor terminal voltage (W phase)/ Min.: 0 V Max.: 46.667 V	Value changes within 4 to 35 V range	Power switch on (READY) and steering wheel is turned

Result:

Result	Proceed to
During steering operation, value changes within 4 to 35 V range	A
During steering operation, voltage is not generated	B

B ▶ REPLACE STEERING COLUMN ASSEMBLY

A ▶ REPLACE POWER STEERING ECU

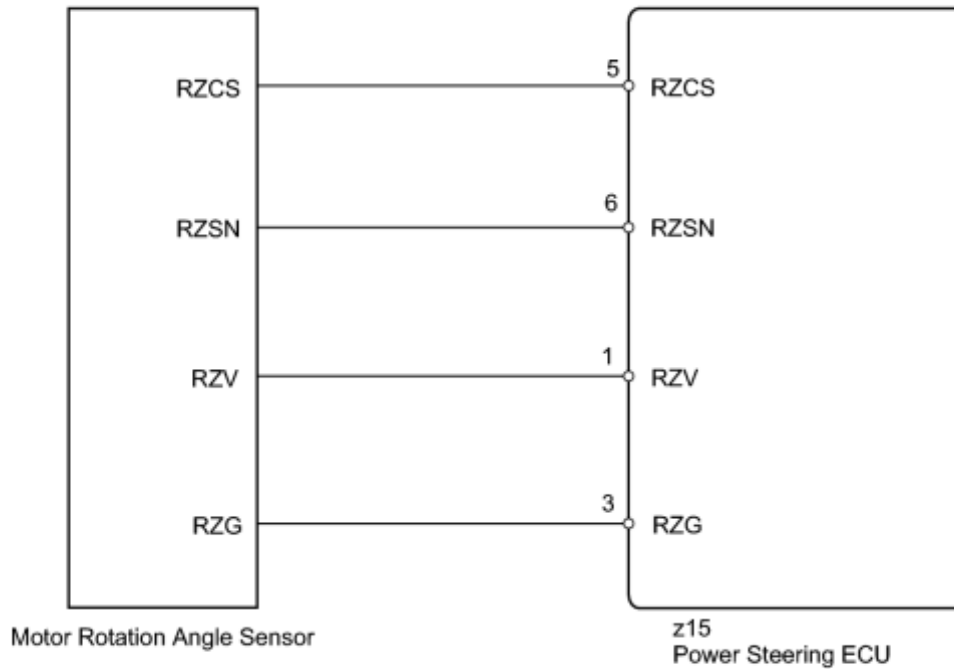

DTC	C1528	Motor Rotation Angle Sensor Malfunction
-----	-------	---

DESCRIPTION

The motor rotation angle sensor detects the motor rotation angle and sends this information to the power steering ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1528	Motor rotation angle sensor malfunction	<ul style="list-style-type: none"> Steering column assembly (Motor rotation angle sensor) Power steering ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO.

PROCEDURE

1. CHECK CONNECTOR CONNECTION CONDITION

(a) Check the installation condition of the motor rotation angle sensor connector.

OK:

Motor rotation angle sensor connector is securely connected to the power steering ECU.

NG  **CONNECT CONNECTOR**

OK

2. READ VALUE USING TECHSTREAM (MOTOR ROTATION ANGLE SENSOR)

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (READY).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Data List.

(f) Select the item "Motor Rotation Angle" in the Data List and read the value displayed on the Techstream.

EMPS

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Motor Rotation Angle	Motor rotation angle/ Min.: 0 deg Max.: 1441.77 deg	During steering operation, motor rotation angle value changes from 0 to 360°	Power switch on (READY) and power steering in operation

OK:

During steering operation, motor rotation angle value changes from 0 to 360°.

NG  **CHECK STEERING COLUMN ASSEMBLY**

OK  **REPLACE POWER STEERING ECU**

3. CHECK STEERING COLUMN ASSEMBLY

*1

(a) Disconnect the connector from the motor rotation angle sensor.

H

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z15-6 (RZSN) - z15-3 (RZG)	Always	75.2 to 112.8 Ω
z15-1 (RZV) - z15-3 (RZG)	Always	27.6 to 41.4 Ω
z15-5 (RZCS) - z15-3 (RZG)	Always	73.2 to 110.8 Ω

NG ► REPLACE STEERING COLUMN ASSEMBLY

OK ► REPLACE POWER STEERING ECU

DTC	C1541	Vehicle Speed Signal Malfunction
-----	-------	----------------------------------

DESCRIPTION

The power steering ECU receives vehicle speed signals from the skid control ECU via CAN communication. The ECU provides appropriate assisting force in accordance with the vehicle speed, based on the signals.

If the ECU detects this DTC, it adjusts the amount of power assistance for a speed of 100 km/h (62 mph) and continues the system control.

DTC No.	DTC Detection Condition	Trouble Area
C1541	This DTC is detected when vehicle speed signals via CAN communication are cut off for 3 seconds or more.	<ul style="list-style-type: none"> • Speed sensor circuit • Skid control ECU • CAN communication system • Power steering ECU

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor value initialization and torque sensor zero point calibration .

PROCEDURE

1.	CHECK OTHER DTC OUTPUT (CAN COMMUNICATION SYSTEM)
----	---

(a) Check if DTC U0129 is output.

Result:

Result	Proceed to
No output	A
U0129 is output	B

HINT:

DTC U0129 indicates a skid control ECU communication malfunction in the power steering system.

 GO TO CAN COMMUNICATION SYSTEM

A

2.	CHECK OTHER DTC OUTPUT (ELECTRONICALLY CONTROLLED BRAKE SYSTEM)
----	---

(a) Check for DTCs of the electronically controlled brake system .

OK:

DTC of speed sensor malfunction is not output.

NOTICE:

If replacing the power steering ECU, initialize the rotation angle sensor and calibrate the torque sensor zero point .

NG  REPAIR CIRCUIT INDICATED BY OUTPUT CODE (for Electronically Controlled Brake System)

OK  **REPLACE POWER STEERING ECU**

DESCRIPTION

The power steering ECU distinguishes the power switch status as on (IG) or off through the IG power source circuit.

DTC No.	DTC Detection Condition	Trouble Area
C1551	IG power source circuit malfunction inside ECU	<ul style="list-style-type: none"> • ECU-IG No. 2 fuse • IG power source circuit • Power steering ECU

WIRING DIAGRAM

----	---------------------------------------

(a) Check for DTCs **INFO**.

OK:

DTC is not output.

HINT:

If the hybrid control system DTC is output, first troubleshoot the hybrid control system, then perform the assist map writing again **INFO**.

NG▶ GO TO HYBRID CONTROL SYSTEM

OK▶ REPLACE POWER STEERING ECU

DTC	C1582	Assist Map Number Mismatch
-----	-------	----------------------------

DESCRIPTION

When an incorrect skid control ECU is installed after the assist map has been recorded in the power steering ECU, then DTC C1582 is stored because the data does not match the vehicle specifications.

DTC No.	DTC Detection Condition	Trouble Area
C1582	Assist map number mismatch	<ul style="list-style-type: none">• Power steering ECU• CAN communication system• Power management control ECU

INSPECTION PROCEDURE

NOTICE:

If the power steering ECU has been replaced with a new one, perform the rotation angle sensor value initialization and torque sensor zero point calibration .

PROCEDURE

1.	CHECK FOR DTC (CAN COMMUNICATION SYSTEM)
----	--

(a) Using the Techstream, check for DTCs and confirm that there are no problems in the CAN communication system .

OK:

DTC is not output.

NG  GO TO CAN COMMUNICATION SYSTEM

OK

2.	CHECK POWER MANAGEMENT CONTROL ECU
----	------------------------------------

(a) Check if a power management control ECU that complies with the vehicle specifications is installed.

OK:

The power management control ECU that complies with vehicle specifications is installed.

NG  REPLACE POWER MANAGEMENT CONTROL ECU

OK  REPLACE POWER STEERING ECU

DTC	U0129	Lost Communication with Brake System Control Module
DTC	U0293	Lost Communication with HV ECU
DTC	U1104	Lost Communication with Driving Support ECU
DTC	U1105	Lost Communication with Parking Assist ECU

DESCRIPTION

The power steering ECU receives signals from the power management control ECU, the skid control ECU, the driving support ECU and the parking assist ECU via the CAN communication system.

DTC No.	DTC Detection Condition	Trouble Area
U0129	Lost communication with brake system control module	<ul style="list-style-type: none"> CAN communication system Skid control ECU
U0293	Lost communication with power management control ECU	<ul style="list-style-type: none"> CAN communication system Power management control ECU
U1104	Lost communication with driving support ECU	<ul style="list-style-type: none"> CAN communication system Driving support ECU
U1105	Lost communication with parking assist ECU	<ul style="list-style-type: none"> CAN communication system Parking assist ECU

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK FOR DTC
----	---------------

(a) Clear the DTCs .

(b) Check for DTCs .

OK:

DTC is not output.

NG  GO TO CAN COMMUNICATION SYSTEM
 OK  CHECK INTERMITTENT PROBLEMS

DESCRIPTION

If the power steering ECU detects a malfunction, the P/S warning light comes on. At this time, the power steering ECU stores a DTC in its memory.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO.

PROCEDURE

1. CHECK FOR DTC (CAN COMMUNICATION SYSTEM)

(a) Check for DTCs INFO.

OK:

DTC is not output.

NG  GO TO CAN COMMUNICATION SYSTEM

OK

2.	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - BODY GROUND)
----	--

(a) Disconnect the connectors from the power steering ECU.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L54-6 (IG) - A27-2 (PGND)	Power switch on (IG)	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A27-2 (PGND) - Body ground	Always	Below 1 Ω

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.	PERFORM ACTIVE TEST USING TECHSTREAM
----	--------------------------------------

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(f) Perform the Active Test of the combination meter using the Techstream.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. EPS	EPS warning light	OFF or ON	Confirm that the vehicle is stopped with the engine idling

(g) Check that the EPS warning light operates in accordance with the Active Test.

HINT:

Reconnect the connectors and restore the vehicle to its previous condition before checking the combination meter.

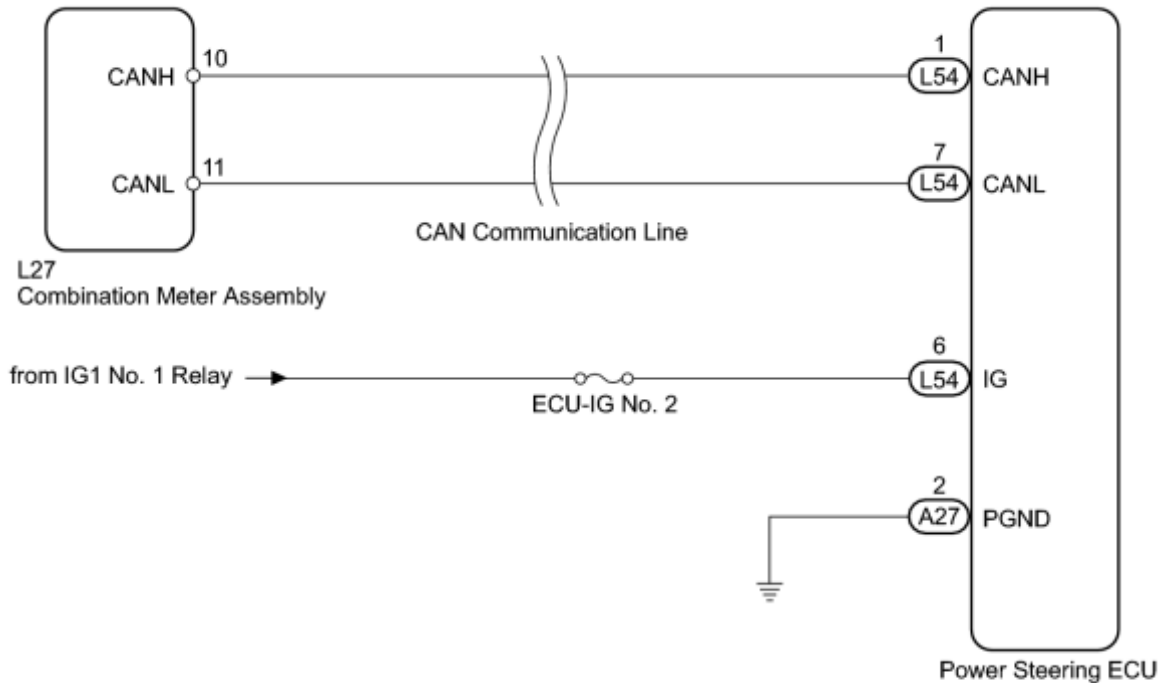

NG  REPLACE MATER CIRCUIT PLATE NO.3

OK  REPLACE POWER STEERING ECU

DESCRIPTION

If the power steering ECU detects a malfunction, the P/S warning light comes on. At this time, the power steering ECU stores a DTC in its memory.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO.

PROCEDURE

1. CHECK FOR DTC (CAN COMMUNICATION SYSTEM)

(a) Check for DTCs INFO.

OK:

DTC is not output.

NG  GO TO CAN COMMUNICATION SYSTEM

OK

2.	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU - BODY GROUND)
----	--

(a) Disconnect the connectors from the power steering ECU.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L54-6 (IG) - A27-2 (PGND)	Power switch on (IG)	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A27-2 (PGND) - Body ground	Always	Below 1 Ω

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.	PERFORM ACTIVE TEST USING TECHSTREAM
----	--------------------------------------

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(f) Perform the Active Test of the combination meter using the Techstream.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. EPS	EPS warning light	OFF or ON	Confirm that the vehicle is stopped with the engine idling

(g) Check that the EPS warning light operates in accordance with the Active Test.

HINT:

Reconnect the connectors and restore the vehicle to its previous condition before checking the combination meter.

OK  REPLACE POWER STEERING ECU

REMOVAL

CAUTION:

Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing **INFO**.

1. PRECAUTION

NOTICE:

Be sure to read Precaution thoroughly before servicing **INFO**.

2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

4. REMOVE STEERING PAD

HINT:

Refer to the instructions for Removal of the steering pad **INFO**.

5. REMOVE STEERING WHEEL ASSEMBLY **INFO**

6. REMOVE LOWER STEERING COLUMN COVER

NOTICE:

Removing the lower steering column cover in the incorrect order will cause the parts to break.

- (a) Push the right and left sides of the lower steering column cover to disengage the 4 claws.

c

c

(b) Insert fingers into the opening of the tilt lever of the lower steering column cover to disengage the 2 claws.

HINT:

Spread the claws to disengage them.

(c) Using a screwdriver, insert the tip into each service hole to disengage the 2 claws to remove the lower steering column cover as shown in the illustration.

c

Text in Illustration

*1	Service Hole	*2	Protective Tape
----	--------------	----	-----------------

HINT:

Tape the screwdriver tip before use.

7. REMOVE UPPER STEERING COLUMN COVER

c

(a) Disengage the 2 claws and 2 pins to remove the upper steering column cover.

8. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

(a) Disconnect the connectors from the turn signal switch assembly with spiral cable sub-assembly.

(b) Using pliers, expand the clamp.

Text in Illustration

*1	Clamp
*2	Claw

(c) While holding the clamp expanded, raise the claw using a screwdriver to disengage it, and then remove the turn signal switch assembly with spiral cable sub-assembly from the steering column assembly.

9. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY

HINT:

Refer to the instructions for Removal of the driver side knee airbag assembly [INFO](#).

10. REMOVE UPPER INSTRUMENT PANEL

HINT:

Refer to the instructions for Removal of the upper instrument panel [INFO](#).

11. REMOVE BRAKE PEDAL SUPPORT ASSEMBLY

HINT:

Refer to the instructions for Removal of the brake pedal support assembly [INFO](#).

12. REMOVE NO. 1 HEATER TO REGISTER DUCT [INFO](#)

13. REMOVE NO. 2 AIR DUCT SUB-ASSEMBLY

(a) Disengage the 2 claws to remove the No. 2 air duct sub-assembly.

14. REMOVE COLUMN HOLE COVER SILENCER SHEET

(a) Turn back the floor carpet.

(b) Remove the 2 clips and column hole cover silencer sheet.

15. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Put matchmarks on the No. 2 steering intermediate shaft assembly and steering intermediate shaft.

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

Do not separate the No. 2 steering intermediate shaft assembly from the steering intermediate shaft.

(b) Remove the bolt.

(c) Separate the No. 2 steering intermediate shaft assembly from the steering intermediate shaft.

16. REMOVE STEERING POST ASSEMBLY (for Brush Type Motor)

(a) Disengage the 2 wire harness clamps.

(b) Disconnect the 2 connectors from the power steering ECU assembly.

(c) Disconnect the connectors and disengage the wire harness clamps from the steering post assembly.

(d) Remove the bolt, 2 nuts and steering post assembly.

17. REMOVE STEERING POST ASSEMBLY (for Brushless Type Motor)

(a) Disengage the 2 wire harness clamps.

(b) Disconnect the connector from the power steering ECU assembly.

HINT:

As shown in the illustration, turn the lock lever to disconnect the connector.

(c) Disconnect the connector from the power steering ECU assembly.

(d) Disconnect the connectors and disengage the wire harness clamps from the steering post assembly.

(e) Remove the bolt, 2 nuts and steering post assembly.

c

18. REMOVE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

c

(a) Put matchmarks on the No. 2 steering intermediate shaft assembly and steering column assembly.

Text in Illustration

*1	Matchmark
----	-----------

(b) Remove the bolt and No. 2 steering intermediate shaft assembly from the steering column assembly.

INSPECTION

NOTICE:

When using a vise, do not overtighten it.

1. INSPECT PRELOAD

(a) Secure the steering column assembly in a vise.

(b) Using SST, turn the main shaft and measure the preload.

SST: 09616-00011

Preload (for Brush Type Motor) - Torque: **1.1 N·m (11 kgf·cm, 10in·lbf)** or less

Preload (for Brushless Type Motor) - Torque: **0.9 to 1.5 N·m (10 to 15 kgf·cm, 8 to 12in·lbf)**

If the preload is not as specified, replace the steering column assembly with a new one.

2. INSPECT BUSHING

(a) Check that the 2 bushings are securely installed to the steering column assembly.

Text in Illustration

*1	Bushing
----	---------

If the bushings are missing or damaged, replace the steering column assembly with a new one.

INSTALLATION

1. INSPECT BUSHING INFO

2. INSTALL NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Align the matchmarks on the No. 2 steering intermediate shaft assembly and steering column assembly to install the No. 2 steering intermediate shaft assembly.

Text in Illustration

*1	Matchmark
----	-----------

c

(b) Install the bolt.

Torque: **35 N·m (359 kgf·cm, 26ft·lbf)**

3. INSTALL STEERING POST ASSEMBLY (for Brush Type Motor)

(a) Install the steering post assembly with the bolt and 2 nuts.

Torque: **25 N·m (255 kgf·cm, 18ft·lbf)**

c

(b) Connect the connectors and engage the wire harness clamps to the steering post assembly.

(c) Connect the 2 connectors to the power steering ECU assembly.

(d) Engage the 2 wire harness clamps.

4. INSTALL STEERING POST ASSEMBLY (for Brushless Type Motor)

(a) Install the steering post assembly with the bolt and 2 nuts.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

(b) Connect the connectors and engage the wire harness clamps to the steering post assembly.

(c) Connect the connector to the power steering ECU assembly.

(d) Connect the connector to the power steering ECU assembly.

HINT:

As shown in the illustration, securely return the lock lever to its original position to connect the connector.

(e) Engage the 2 wire harness clamps.

5. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Align the matchmarks on the No. 2 steering intermediate shaft assembly and steering intermediate shaft to connect the No. 2 steering intermediate shaft assembly to the steering intermediate shaft.

Text in Illustration

*1	Matchmark
----	-----------

(b) Install the bolt.

Torque: **35 N·m (357 kgf·cm, 26ft·lbf)**

6. INSTALL COLUMN HOLE COVER SILENCER SHEET

(a) Install the column hole cover silencer sheet with the 2 clips.

(b) Install the floor carpet.

7. INSTALL NO. 2 AIR DUCT SUB-ASSEMBLY

(a) Engage the 2 claws to install the No. 2 air duct sub-assembly.

8. INSTALL NO. 1 HEATER TO REGISTER DUCT INFO

9. INSTALL BRAKE PEDAL SUPPORT ASSEMBLY

HINT:

Refer to the instructions for Installation of the brake pedal support assembly INFO.

10. INSTALL UPPER INSTRUMENT PANEL

HINT:

Refer to the instructions for Installation of the upper instrument panel INFO.

11. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY

HINT:

Refer to the instructions for Installation of the driver side knee airbag assembly INFO.

12. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

13. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

(a) Using pliers, expand the clamp.

Text in Illustration

*1	Clamp
*2	Claw

(b) While holding the clamp expanded, install the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly and engage the claw.

(c) Return the clamp to its original position.

(d) Connect the connectors to the turn signal switch assembly with spiral cable sub-assembly.

14. INSTALL UPPER STEERING COLUMN COVER

(a) Engage the 2 claws and 2 pins to install the upper steering column cover.

15. INSTALL LOWER STEERING COLUMN COVER

NOTICE:

If the lower steering column cover is installed in the incorrect order, it will not be possible to assemble the lower steering column cover.

(a) Engage the 2 claws to install the lower steering column cover.

(b) Engage the 4 claws.

(c) Engage the 2 claws.

HINT:

Press the area around the claws to engage them.

16. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

17. ADJUST SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY [INFO](#)

18. INSTALL STEERING WHEEL ASSEMBLY [INFO](#)

19. INSTALL STEERING PAD

HINT:

Refer to the instructions for Installation of the steering pad **INFO**.

20. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

21. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

- Connect the cable to the negative (-) battery terminal with the front wheels facing straight ahead.
- When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

22. INSPECT STEERING PAD **INFO**

23. TORQUE SENSOR ZERO POINT CALIBRATION (for Brush Type Motor)

(a) Perform the torque sensor zero point calibration **INFO**.

24. ROTATION ANGLE SENSOR INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION (for Brushless Type Motor)

(a) Clear the rotation angle sensor calibration value, initialize the rotation angle sensor, and calibrate the torque sensor zero point **INFO**.

25. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light **INFO**.

COMPONENTS

ILLUSTRATION

N*m (kgf*cm, ft.*lbf): Specified torque

c

REMOVAL

1. REMOVE STEERING PAD

HINT:

Refer to the instructions for Removal of the steering pad .

2. REMOVE STEERING PAD SWITCH ASSEMBLY

(a) Remove the 2 screws.

(b) Disengage the 2 claws to remove the steering pad switch assembly (RH side) from the steering wheel sub-assembly.

(c) Remove the 2 screws.

(d) Disengage the 2 claws to remove the steering pad switch assembly (LH side) from the steering wheel sub-assembly.

INSPECTION

1. INSPECT STEERING PAD SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
z9-1 (HO) - Terminal A	Always	Below 1 Ω
z9-3 (AC1) - z9-8 (EAU)	No switch pushed	95 to 105 k Ω
z9-3 (AC1) - z9-8 (EAU)	R/F switch: ON	323 to 335 Ω
z9-3 (AC1) - z9-8 (EAU)	TEMP+ switch: pushed	980 to 1020 Ω
z9-3 (AC1) - z9-8 (EAU)	TEMP- switch: pushed	3048 to 3172 Ω
z9-4 (DIST) - z9-6 (ECC)	Distance control switch: ON	Below 2.5 Ω
z9-4 (DIST) - z9-6 (ECC)	No switch pushed	10 k Ω or higher
z9-4 (DIST) - z9-6 (ECC)	Lane keeping assist switch: ON	236 to 244 Ω
z9-9 (AU2) - z9-8 (EAU)	No switch pushed	95 to 105 k Ω
z9-9 (AU2) - z9-8 (EAU)	MODE switch: pushed	Below 2.5 Ω
z9-9 (AU2) - z9-8 (EAU)	Voice switch: pushed	3048 to 3172 Ω

Tester Connection	Switch Condition	Specified Condition
z9-9 (AU2) - z9-8 (EAU)	On Hook switch: pushed	323 to 335 Ω
z9-9 (AU2) - z9-8 (EAU)	Off Hook switch: pushed	980 to 1020 Ω
z9-10 (AU1) - z9-8 (EAU)	No switch pushed	95 to 105 kΩ
z9-10 (AU1) - z9-8 (EAU)	Seek+ switch: pushed	Below 2.5 Ω
z9-10 (AU1) - z9-8 (EAU)	Seek- switch: pushed	323 to 335 Ω
z9-10 (AU1) - z9-8 (EAU)	Volume+ switch: pushed	980 to 1020 Ω
z9-10 (AU1) - z9-8 (EAU)	Volume- switch: pushed	3048 to 3172 Ω

HINT:

If the result is not as specified, replace the steering pad switch assembly.

Text in Illustration

*1	Component without harness connected (Steering Pad Switch Assembly)	*2	Volume+

*13	TEMP-	*14	TEMP+
*15	Distance control switch	*16	Lane keeping assist switch
*17	Terminal-A	-	-

(b) Check the illumination

*1

H

(1) Connect a positive (+) lead to terminal IL+2 and a negative (-) lead to terminal EAU of the steering pad switch assembly connector.

(2) Check that the switch illumination comes on.

OK:

Steering pad switch illumination comes on.

HINT:

If the result is not as specified, replace the steering pad switch assembly.

Text in Illustration

*1	Component without harness connected (Steering Pad Switch Assembly)
----	---

INSTALLATION

1. INSTALL STEERING PAD SWITCH ASSEMBLY

(a) Engage the 2 claws to install the steering pad switch assembly (RH side) to the steering wheel sub-assembly.

(b) Install the 2 screws.

Torque: **2.4 N·m (25 kgf·cm, 21in·lbf)**

(c) Engage the 2 claws to install the steering pad switch assembly (LH side) to the steering wheel sub-assembly.

(d) Install the 2 screws.

Torque: **2.4 N·m (25 kgf·cm, 21in·lbf)**

2. INSTALL STEERING PAD

HINT:

Refer to the instructions for Installation of the steering pad .

PRECAUTION

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

1. HANDLING PRECAUTIONS FOR STEERING SYSTEM

(a) Care must be taken when replacing parts. Incorrect replacement may affect the performance of the steering system and result in a driving hazard.

2. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with a Supplemental Restraint System (SRS). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident. Before servicing (including inspection, replacement, removal, and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System **INFO**.

3. HANDLING PRECAUTIONS FOR STEERING COLUMN (for Brushless Type Motor)

(a) When handling the steering column assembly:

(1) Avoid any impact to the steering column assembly, especially to the motor or the torque sensor. Replace the steering column assembly with a new one if it is dropped or subjected to any severe impacts.

(2) Do not pull the wire harness when moving the steering column assembly.

(3) When the steering column assembly has been replaced, perform the rotation angle sensor value initialization and the torque sensor zero point calibration after initializing the torque sensor zero point. **INFO**.

(4) Do not release the tilt lever when the steering column assembly is not installed on the vehicle.

(b) When disconnecting or reconnecting the connectors:

(1) Before disconnecting the connectors related to the power steering system, turn the power switch on (IG), center the steering wheel, turn the power switch off, and then disconnect the connectors.

(2) Before reconnecting the connectors related to the power steering system, ensure that the power switch is off. Then center the steering wheel and turn the power switch on (IG).

NOTICE:

Do not turn the power switch on (IG) when the steering wheel is not centered.

(3) If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between turning right and left. If there is a difference in steering effort between turning right and left, perform the rotation angle sensor value initialization and the torque sensor zero point calibration after initializing the torque sensor zero point **INFO**.

4. HANDLING PRECAUTIONS FOR STEERING COLUMN (for Brush Type Motor)

(a) When handling the steering column assembly:

- (1) Avoid any impact to the steering column assembly, especially to the motor or the torque sensor. Replace the steering column assembly with a new one if it is dropped or subjected to any severe impacts.
- (2) Do not pull the wire harness when moving the steering column assembly.
- (3) When the steering column assembly has been replaced, perform the torque sensor zero point calibration after initializing the torque sensor zero point **INFO**.
- (4) Do not release the tilt lever when the steering column assembly is not installed on the vehicle.

(b) When disconnecting or reconnecting the connectors:

- (1) Before disconnecting the connectors related to the power steering system, turn the power switch on (IG), center the steering wheel, turn the power switch off, and then disconnect the connectors.
- (2) Before reconnecting the connectors related to the power steering system, ensure that the power switch is off. Then center the steering wheel and turn the power switch on (IG).

NOTICE:

Do not turn the power switch on (IG) when the steering wheel is not centered.

- (3) If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between turning right and left. If there is a difference in steering effort between turning right and left, perform the torque sensor zero point calibration after initializing the torque sensor zero point **INFO**.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Steering System

Symptom	Suspected Area	See page
Heavy steering	Front tires (improperly inflated, unevenly worn)	INFO

ON-VEHICLE INSPECTION

1. INSPECT STEERING WHEEL FREE PLAY

(a) Stop the vehicle and position the front wheels straight ahead.

(b) Gently turn the steering wheel right and left, and check steering wheel free play.

Text in Illustration

*1	Maximum Free Play
----	-------------------

Maximum free play:

30 mm (1.18 in.)

HINT:

If the free play exceeds the maximum, check the steering system [INFO](#).

ADJUSTMENT

1. STEERING OFF CENTER ADJUSTMENT PROCEDURE

HINT:

This is the steering wheel off center adjustment procedure.

(a) Inspect steering wheel off center.

(1) Apply masking tape to the top center of the steering wheel and steering column upper cover.

Text in Illustration

*1	Steering Wheel
*2	Masking Tape
*3	Upper Steering Column Cover

(2) Drive the vehicle in a straight line for 100 meters at a constant speed of 35 mph (56 km/h), while holding the steering wheel to maintain the course.

(3) Draw a line on the masking tape as shown in the illustration.

Text in Illustration

*1	Upper Steering Column Cover
*2	Marked Line
*3	Steering Wheel

(4) Turn the steering wheel to the center position.

HINT:

Look at the upper surface of the steering wheel, steering spoke and SRS airbag line to find the center position.

(5) Draw a new line on the masking tape on the steering wheel as shown

in the illustration.

Text in Illustration

*1	Upper Steering Column Cover
*2	Marked Line
*3	Steering Wheel

(6) Measure the distance between the 2 lines on the masking tape on the steering wheel.

(7) Convert the measured distance to steering angle.

HINT:

- Measured distance 1 mm (0.0394 in.) = Steering angle of approximately 1 degree.
- Make a note of the steering angle.

(b) Adjust steering angle.

(1) Put matchmarks on the RH and LH tie rod ends and rack ends respectively where it can be easily seen.

Text in Illustration

*1	Matchmark
----	-----------

(2) Using a paper gauge, measure the distance from the RH and LH tie rod ends to the rack end screws.

HINT:

- Measure both RH and LH sides.
- Make a note of the measured values.

(3) Remove the RH and LH boot clips from the rack boots.

c

(4) Loosen the RH and LH lock nuts.

(5) Turn the RH and LH rack ends by the same amount (but in different directions) according to the steering angle.

HINT:

One 360 degree turn of rack end (1.5 mm (0.0591 in.) horizontal movement) equals to 12 degrees of steering angle.

(6) Tighten the RH and LH lock nuts to the specified torque.

Torque: **74 N·m (755 kgf·cm, 55ft·lbf)**

NOTICE:

Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is within 1.5 mm (0.0591 in.).

(7) Install the RH and LH boot clips.

09955-04071

NOTICE:

Apply a small amount of grease to the threads and tip of SST (09953-05020) before use.

5. REMOVE STEERING SHAKE DAMPER

(a) Remove the 2 screws and steering shake damper from the steering wheel assembly.

6. REMOVE STEERING PAD SWITCH ASSEMBLY INFO

7. REMOVE CRUISE CONTROL MAIN SWITCH (w/ Cruise Control System) INFO

8. REMOVE CRUISE CONTROL SWITCH WIRE (w/ Cruise Control System)

9. REMOVE LOWER STEERING WHEEL BOSS COVER

(a) Disengage the 2 pins and 4 claws to remove the lower steering wheel boss cover from the steering wheel sub-assembly.

c

INSTALLATION

1. INSTALL LOWER STEERING WHEEL BOSS COVER

(a) Engage the 2 pins and 4 claws to install the lower steering wheel boss cover to the steering wheel sub-assembly.

c

2. INSTALL CRUISE CONTROL SWITCH WIRE (w/ Cruise Control System)

3. INSTALL CRUISE CONTROL MAIN SWITCH (w/ Cruise Control System) INFO

4. INSTALL STEERING PAD SWITCH ASSEMBLY INFO

5. INSTALL STEERING SHAKE DAMPER

(a) Install the steering shake damper to the steering wheel assembly with the 2 screws.

Torque: **2.4 N·m (25 kgf·cm, 21in·lbf)**

c

6. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

7. ADJUST SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY INFO

8. INSTALL STEERING WHEEL ASSEMBLY

(a) Align the matchmarks on the steering wheel assembly and steering

main shaft.

Text in Illustration

*1	Matchmark
----	-----------

(b) Install the steering wheel assembly set nut.

Torque: **50 N·m (510 kgf·cm, 37ft·lbf)**

(c) Connect the connectors to the spiral cable sub-assembly.

9. INSTALL STEERING PAD

HINT:

Refer to the instructions for Installation of the steering pad **INFO**.

10. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

- Connect the cable to the negative (-) battery terminal with the front wheels facing straight ahead.
- When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

12. INSPECT STEERING PAD **INFO**

13. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light **INFO**.

REMOVAL

1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD
2. SECURE STEERING WHEEL

(a) Secure the steering wheel with the seat belt in order to prevent rotation.

HINT:

This operation is useful to prevent damage to the spiral cable.

3. REMOVE COLUMN HOLE COVER SILENCER SHEET INFO
4. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO
5. SEPARATE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Remove clip A, detach clip B from the body and disconnect the No. 1 steering column hole cover sub-assembly.

Text in Illustration

*1	Clip A
*2	Clip B

NOTICE:

Do not damage clips A and B.

6. REMOVE FRONT WHEELS
7. REMOVE NO. 1 ENGINE UNDER COVER
8. REMOVE NO. 2 ENGINE UNDER COVER
9. REMOVE FRONT NO. 3 ENGINE UNDER COVER
10. REMOVE REAR ENGINE UNDER COVER LH

11. REMOVE REAR ENGINE UNDER COVER RH

HINT:

Perform the same procedure as for the LH side.

12. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH INFO

13. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

14. SEPARATE TIE ROD END SUB-ASSEMBLY LH

(a) Remove the clip and nut.

(b) Install SST to the tie rod end.

SST: 09960-20010

09961-02060

NOTICE:

Make sure that the upper ends of the tie rod end and SST are aligned.

(c) Using SST, separate the tie rod end from the steering knuckle.

Text in Illustration

*1	Turn	*2	Nut
----	------	----	-----

SST: 09960-20010

09961-02010

CAUTION:

Apply grease to the bolt threads and the tip of SST.

NOTICE:

- Be sure to tighten the string firmly to secure SST to the steering knuckle to prevent SST from falling off.
- Install SST with the center nut so that A and B shown in the illustration are parallel. Otherwise, the dust cover may be damaged.
- Be sure to place the wrench on the part indicated in the illustration.
- Do not damage the front disc brake dust cover.
- Do not damage the ball joint dust cover.
- Do not damage the steering knuckle.

15. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

16. SEPARATE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

17. SEPARATE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

18. REMOVE FRONT ENGINE MOUNTING BRACKET LOWER REINFORCEMENT INFO

19. REMOVE REAR SIDE RAIL REINFORCEMENT SUB-ASSEMBLY LH INFO

20. REMOVE REAR SIDE RAIL REINFORCEMENT SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

21. REMOVE FRONT SUSPENSION MEMBER REAR BRACE LH INFO

22. REMOVE FRONT SUSPENSION MEMBER REAR BRACE RH

HINT:

Perform the same procedure as for the LH side.

23. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

24. REMOVE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Remove the No. 1 steering column hole cover sub-assembly from the steering link assembly.

25. REMOVE STEERING INTERMEDIATE SHAFT

(a) Put matchmarks on the steering intermediate shaft and steering link assembly.

Text in Illustration

*1	Matchmark
----	-----------

(b) Remove the bolt and steering intermediate shaft from the steering link assembly.

26. REMOVE STEERING LINK ASSEMBLY

(a) Remove the 2 bolts, 2 nuts and steering link assembly from the front suspension crossmember sub-assembly.

NOTICE:

Keep the nut from rotating while turning the bolt because the nut has its own stopper.

27. SECURE STEERING LINK ASSEMBLY

(a) Using SST, secure the steering link assembly in a vise.

Text in Illustration

*1	Protective Tape
----	-----------------

SST: 09612-00012

HINT:

Tape SST before use.

28. REMOVE TIE ROD END SUB-ASSEMBLY LH

Text in Illustration

*1	Matchmark
----	-----------

(a) Put matchmarks on the tie rod end sub-assembly LH and steering gear assembly.

(b) Remove the tie rod end sub-assembly LH and lock nut.

29. REMOVE TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

DISASSEMBLY

1. REMOVE STEERING RACK BOOT CLIP LH

(a) Using pliers, remove the steering rack boot clip LH.

2. REMOVE STEERING RACK BOOT CLIP RH

HINT:

Perform the same procedure as for the LH side.

3. REMOVE NO. 2 STEERING RACK BOOT CLAMP

(a) Using a screwdriver, remove the No. 2 steering rack boot clamp.

NOTICE:

Be careful not to damage the steering rack boot.

4. REMOVE NO. 1 STEERING RACK BOOT CLAMP

HINT:

Perform the same procedure as for the No. 2 steering rack boot clamp.

5. REMOVE STEERING RACK BOOT LH

6. REMOVE STEERING RACK BOOT RH

INSPECTION

1. INSPECT TIE ROD END SUB-ASSEMBLY LH

(a) Secure the tie rod end sub-assembly LH in a vise.

NOTICE:

Do not overtighten the vise.

c

(b) Install the nut to the stud bolt.

(c) Flip the ball joint back and forth 5 times.

(d) Set a torque wrench to the nut, turn the ball joint continuously at a rate of 2 to 4 seconds per turn, and check the turning torque on the 5th turn.

Standard turning torque:

0.3 to 1.9 N*m (3 to 19 kgf*cm, 3 to 17 in.*lbf)

HINT:

If the turning torque is not within the specified range, replace the tie rod end sub-assembly LH with a new one.

2. INSPECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

3. INSPECT TOTAL PRELOAD

c

(a) Using SST and a torque wrench, inspect the total preload.

SST: 09616-00011

Standard preload:

0.7 to 1.1 N*m (7 to 11 kgf*cm, 6 to 9 in.*lbf)

NOTICE:

Inspect the total preload around the steering rack center position.

HINT:

If the total preload is not within the specified range, replace the steering gear assembly with a new one.

REASSEMBLY

1. INSTALL STEERING RACK BOOT LH

(a) Apply lithium soap base glycol grease to the inside of the small opening of a new steering rack boot LH.

P

C57765

(b) Install the steering rack boot LH to the groove on the rack housing.

NOTICE:

- Be careful not to damage or twist the boot.
- Make sure that the boot is free of rust and foreign matter.

2. INSTALL STEERING RACK BOOT RH

HINT:

Perform the same procedure as for the LH side.

3. INSTALL NO. 2 STEERING RACK BOOT CLAMP

(a) Using SST, tighten a new No. 2 steering rack boot clamp, as shown in the illustration.

P

SST: 09521-24010

Clearance:

3.0 mm (0.118 in.) or less

NOTICE:

Be careful not to damage the steering rack boot.

4. INSTALL NO. 1 STEERING RACK BOOT CLAMP

HINT:

Perform the same procedure as for the No. 2 steering rack boot clamp.

SST: 09521-24010

5. INSTALL STEERING RACK BOOT CLIP LH

(a) Using pliers, install the steering rack boot clip LH.

6. INSTALL STEERING RACK BOOT CLIP RH

HINT:

Perform the same procedure as for the LH side.

7. INSPECT STEERING GEAR ASSEMBLY

(a) Using SST, rotate the pinion shaft to see if both the left and the right steering rack boots expand and contract smoothly.

SST: 09616-00011

HINT:

If the operation cannot be done as specified, use a new steering rack boot clamp and reinstall the steering rack boots.

INSTALLATION

1. INSTALL TIE ROD END SUB-ASSEMBLY LH

(a) Install the lock nut and tie rod end sub-assembly LH to the steering gear assembly until the matchmarks are aligned.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

After adjusting the toe-in, tighten the lock nut.

c

2. INSTALL TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

3. INSTALL STEERING LINK ASSEMBLY

(a) Install the steering link assembly to the front suspension crossmember sub-assembly with the 2 bolts and 2 nuts.

- Keep the nut from rotating while turning the bolt because the nut has its own stopper.
- Make sure to tighten the bolts starting from the left side of the vehicle.

Torque: **138 N·m (1407 kgf·cm, 102ft·lbf)**

P

4. INSTALL STEERING INTERMEDIATE SHAFT

(a) Align the matchmarks and install the steering intermediate shaft to the steering link assembly.

Text in Illustration

*1	Matchmark
----	-----------

(b) Install the bolt.

Torque: **35 N·m (357 kgf·cm, 26ft·lbf)**

5. INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Align the round hole in the No. 1 steering column hole cover sub-assembly with the protrusion of the steering link assembly to install the cover.

6. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

7. INSTALL FRONT SUSPENSION MEMBER REAR BRACE LH INFO

8. INSTALL FRONT SUSPENSION MEMBER REAR BRACE RH

HINT:

Perform the same procedure as for the LH side.

9. INSTALL REAR SIDE RAIL REINFORCEMENT SUB-ASSEMBLY LH INFO

10. INSTALL REAR SIDE RAIL REINFORCEMENT SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

11. INSTALL FRONT ENGINE MOUNTING BRACKET LOWER REINFORCEMENT INFO

12. CONNECT FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

13. CONNECT FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

14. CONNECT TIE ROD END SUB-ASSEMBLY LH

(a) Connect the tie rod end sub-assembly LH to the steering knuckle with the nut.

Torque: **49 N·m (500 kgf·cm, 36ft·lbf)**

NOTICE:

Further tighten the nut up to 60° if the holes for the clip are not aligned.

c

(b) Install a new clip.

15. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

16. CONNECT FRONT STABILIZER LINK ASSEMBLY LH INFO

17. CONNECT FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

18. CONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Place clip A as shown in the illustration and engage clip B to the body to connect the No. 1 steering column hole cover sub-assembly.

Text in Illustration

*1	Clip A
*2	Clip B

NOTICE:

Make sure that the lips of the No. 1 steering column hole cover sub-assembly are not damaged.

19. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

20. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

21. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO

22. INSTALL REAR ENGINE UNDER COVER LH

23. INSTALL REAR ENGINE UNDER COVER RH

HINT:

Perform the same procedure as for the LH side.

24. INSTALL FRONT NO. 3 ENGINE UNDER COVER

25. INSTALL NO. 2 ENGINE UNDER COVER

26. INSTALL NO. 1 ENGINE UNDER COVER

27. INSTALL FRONT WHEELS

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

28. STABILIZE SUSPENSION INFO

29. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

(a) Inspect and adjust the front wheel alignment INFO.

ADJUSTMENT

NOTICE:

If the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:

- Perform zero point calibration of the yaw rate and acceleration sensor.

1. INSPECT TIRES

INFO

2. MEASURE VEHICLE HEIGHT

- Before inspecting the wheel alignment, adjust the vehicle height to the specified value.
- Be sure to perform measurement on a level surface.
- If it is necessary to go under the vehicle for measurement, confirm that the parking brake is applied and the vehicle is secured with chocks.
- Inspect while the vehicle is unloaded.

(a) Bounce the vehicle up and down at the corners to stabilize the suspension.

(b) Measure the vehicle height.

Measurement points:

A: Ground clearance of front No. 1 lower suspension arm bushing set bolt center

B: Ground clearance of rear axle beam bushing set bolt center

C: Ground clearance of front wheel center

D: Ground clearance of rear wheel center

Vehicle Height (Unloaded Vehicle):

Tire Size	Front C - A	Rear D - B
195/65R15	108 mm (4.25 in.)	26 mm (1.02 in.)
	90 mm (3.54 in.)*	9 mm (0.354 in.)*
215/45R17	103 mm (4.06 in.)	21 mm (0.827 in.)

* For vehicle height for Rough Road Package.

3. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

NOTICE:

Inspect while the vehicle is unloaded.

(a) Install a camber-caster-kingpin gauge and place the front wheels on the center of a wheel alignment tester.

Text in Illustration

*1	Wheel Alignment Tester
*2	Gauge

(b) Inspect the camber, caster and steering axis inclination.

Camber (Unloaded Vehicle):

Tire Size	Camber Inclination	Right-left Difference
195/65R15	-0°13' +/- 45' (-0.22° +/- 0.75°)	45' (0.75°) or less
	-0°07' +/- 45' (-0.12° +/- 0.75°)*	
215/45R17	-0°12' +/- 45' (-0.20° +/- 0.75°)	

* For vehicle height for Rough Road Package.

Caster (Unloaded Vehicle):

Tire Size	Caster Inclination	Right-left Difference
195/65R15	5°53' +/- 45' (5.88° +/- 0.75°)	45' (0.75°) or less
	5°40' +/- 45' (5.67° +/- 0.75°)*	
215/45R17	5°50' +/- 45' (5.83° +/- 0.75°)	

* For vehicle height for Rough Road Package.

Steering Axis Inclination (Unloaded Vehicle):

Tire Size	Steering Axis Inclination
195/65R15	12°16' (12.27°)
	11°52' (11.87°)*

Tire Size	Steering Axis Inclination
215/45R17	12°10' (12.17°)

* For vehicle height for Rough Road Package.

4. ADJUST CAMBER

NOTICE:

Inspect toe-in after the camber has been adjusted.

(a) Remove the front wheel.

c

(b) Loosen the 2 nuts.

NOTICE:

Keep the bolts inserted.

(c) Clean the installation surfaces of the front shock absorber and the steering knuckle.

(d) Temporarily install the 2 nuts. (Step A)

P

(e) Fully push or pull the front axle hub in the direction of the required adjustment. (Step B)

c

(f) Tighten the nuts.

Torque: **240 N·m (2447 kgf·cm, 177ft·lbf)**

NOTICE:

Keep the bolts from rotating when tightening the nuts.

(g) Install the front wheel.

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

2010 Toyota Prius

Repair Manual

(h) Check the camber.

c

If the measured value is not within the specification, calculate the required adjustment amount using the formula below.

Camber adjustment amount = center of the specified range - measured value

Check the combination of the installed bolts. Select appropriate bolts from the tables below to adjust the camber to the specified values.

HINT:

Try to adjust the camber to the center of the specified values.

Move the axle hub toward (+) in step B	Move the axle hub toward (-) in step B
Refer to table (1) (Move the axle hub toward the positive side)	Refer to table (2) (Move the axle hub toward the negative side)

Selected Bolt Combination

	A	B	C	D	E	F	G
1							
2							

NOTICE:

Replace the nut with a new one when replacing the bolt.

The body and suspension may be damaged if the camber is not correctly adjusted according to the tables above.

(i) Repeat the steps mentioned above. In Step A, replace 1 or 2 selected bolts.

HINT:

Replace one bolt at a time when replacing both bolts.

5. INSPECT TOE-IN

NOTICE:

Inspect while the vehicle is unloaded.

(a) Bounce the vehicle up and down at the corners to stabilize the suspension.

(b) Release the parking brake and move the shift lever to N.

(c) Push the vehicle straight ahead approximately 5 m (16.4 ft.). (Step C)

(d) Put tread center marks on the rearmost points of the front wheels and measure the distance between the marks (dimension B).

Text in Illustration

*1	Tread Center Mark
*2	Dimension B

(e) Slowly push the vehicle straight ahead to cause the front wheels to rotate 180° using the front tire valve as a reference point.

HINT:

Do not allow the wheels to rotate more than 180°. If the wheels rotate more than 180°, perform the procedure from Step C again.

(f) Measure the distance between the tread center marks on the front side of the wheels (dimension A).

Text in Illustration

*1	Front of the Vehicle
*2	Dimension A

To-in (Unloaded Vehicle)

Specified Condition
C + D: 0°12' +/- 0°12' (0.20° +/- 0.20°)
C + D: 0°18' +/- 0°12' (0.30° +/- 0.20°)*
B - A: 2.0 +/- 2.0 mm (0.0787 +/- 0.0787 in.)
B - A: 3.0 +/- 2.0 mm (0.118 +/- 0.0787 in.)*

* For vehicle height for Rough Road Package.

HINT:

Measure "B - A" only when "C + D" cannot be measured.

If the toe-in is not within the specified range, adjust it at the rack ends.

6. ADJUST TOE-IN

(a) Make sure that the thread length of the right and left rack ends are approximately the same.

Text in Illustration

*1	Thread Length
----	---------------

Standard difference:

1.5 mm (0.0591 in.) or less

(b) Remove the boot clips.

(c) Loosen the tie rod end lock nuts.

Text in Illustration

*1	Loosen
*2	Turn

(d) Adjust the rack ends if the difference in thread length between the right and left rack ends is not within the specified range.

(1) Extend the shorter rack end if the measured toe-in deviates toward the outer-side.

(2) Shorten the longer rack end if the measured toe-in deviates toward the inner-side.

(e) Turn the right and left rack ends by an equal amount to adjust the toe-in to the center value.

(f) Make sure that the thread lengths of the right and left rack ends are the same.

(g) Tighten the tie rod end lock nuts.

Torque: **74 N·m (755 kgf·cm, 55ft·lbf)**

(h) Place the boots on the seats and install the clips.

HINT:

Make sure that the boots are not twisted.

7. INSPECT WHEEL ANGLE

Text in Illustration

*1	Front of the Vehicle
*2	Inside
*3	Outside

(a) Put tread center marks on the rearmost points of a turning radius gauge.

(b) Turn the steering wheel to the left and right full lock positions, and measure the turning angle.

NOTICE:

Inspect while the vehicle is unloaded.

Wheel Angle (Unloaded Vehicle):

Tire Size	Inside Wheel	Outside Wheel Reference
195/65R15	40°50' +/- 2° (40.83° +/- 2°)	33°50' (33.83°)
	37°42' +/- 2° (37.70° +/- 2°)*	32°13' (32.22°)*
215/45R17	37°27' +/- 2° (37.45° +/- 2°)	31°56' (31.93°)

* For vehicle height for Rough Road Package.

If the angles are not as specified, check and adjust the right and left rack end lengths.

8. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

9. PERFORM YAW RATE AND ACCELERATION SENSOR CALIBRATION

INFO .

10. PERFORM INITIALIZATION (w/ Height Control Sensor)

NOTICE:

Some systems need to be initialized after the wheel alignment is adjusted INFO .

INSPECTION

NOTICE:

If the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:

- Perform zero point calibration of the yaw rate and acceleration sensor and test mode inspection.

1. INSPECT TIRES

INFO

2. MEASURE VEHICLE HEIGHT_

INFO

3. INSPECT CAMBER

NOTICE:

Inspect while the vehicle is unloaded.

- (a) Install a camber-caster-kingpin gauge.
- (b) Inspect the camber.

Camber (Unloaded Vehicle):

Tire Size	Camber Inclination	Right-left Difference
195/65R15	-1°29' +/- 30' (-1.48° +/- 0.50°)	30' (0.50°) or less
215/45R17	-1°28' +/- 30' (-1.47° +/- 0.50°)	

HINT:

Camber is not adjustable. If the measurement is not within the specified range, inspect the suspension parts for damage and/or wear, and replace them if necessary.

4. INSPECT TOE-IN

NOTICE:

Inspect while the vehicle is unloaded.

- (a) Bounce the vehicle up and down at the corners to stabilize the suspension.
- (b) Release the parking brake and move the shift lever to N.
- (c) Push the vehicle straight ahead approximately 5 m (16.4 ft.). (Step A)

(d) Put tread center marks on the rearmost points of the rear wheels and measure the distance between the marks (dimension B).

Text in Illustration

*1	Front of the Vehicle
*2	Tread Center Mark
*3	Dimension B

(e) Slowly push the vehicle straight ahead to cause the rear wheels to rotate 180° using the rear tire valve as a reference point.

HINT:

Do not allow the wheels to rotate more than 180°. If the wheels rotate more than 180°, perform the procedure from Step A again.

(f) Measure the distance between the tread center marks on the front side of the wheels (dimension A).

Text in Illustration

*1	Front of the Vehicle
*2	Dimension A

Toe-in (Unloaded Vehicle):

Tire Size	Specified Condition	Right-left Difference
195/65R15	C + D: 0°17' +/- 18' (0.29° +/- 0.30°)	45' (0.75°) or less
	C + D: 0°10' +/- 18' (0.17° +/- 0.30°)*	
	B - A: 2.9 +/- 3 mm (0.114 +/- 0.118 in.)	-
B - A: 1.7 +/- 3 mm (0.0669 +/- 0.118 in.)*		
215/45R17	C + D: 0°15' +/- 18' (0.25° +/- 0.30°)	45' (0.75°) or less
	B - A: 2.5 +/- 3 mm (0.0984 +/- 0.118 in.)	-

* For vehicle height for Rough Road Package.

HINT:

Measure "B - A" only when "C + D" cannot be measured.

If the toe-in is not within the specified range, inspect the suspension parts and replace them if necessary.

P

REMOVAL

HINT:

- Use the same procedure for the LH side and RH side.
- The procedure listed below is for the LH side.

1. REMOVE FRONT AXLE ASSEMBLY

HINT:

Refer to the procedure up to Remove Front Axle Assembly INFO.

2. REMOVE FRONT LOWER BALL JOINT ASSEMBLY

(a) Secure the front axle assembly in a vise.

NOTICE:

When using a vise, do not overtighten it.

(b) Remove the clip and nut.

c

(c) Install SST to the front lower ball joint as shown in the illustration.

SST: 09960-20010

09961-02050

09961-02050

NOTICE:

Check that the clearance measurement between SST and the front axle assembly is 1 mm (0.0394 in.).

(d) Using SST, remove the front lower ball joint assembly from the front axle assembly as shown in the illustration.

SST: 09960-20010

09961-02010

c

09961-02050

09961-02050

Text in Illustration

*1	Apply grease
*2	Place the wrench here.

CAUTION:

Apply grease to the threads and end of the SST bolt.

- Install SST so that A and B are parallel.
- Be sure to place the wrench on the part indicated in the illustration.
- Do not damage the front lower ball joint dust cover.

INSPECTION

1. INSPECT FRONT LOWER BALL JOINT ASSEMBLY

(a) Inspect the turning torque of the ball joint.

(1) Secure the front lower ball joint assembly in a vise using aluminum plates.

(2) Install the nut to the front lower ball joint stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: **0.98 to 4.90 N·m (10 to 50 kgf·cm, 8.7 to 43in·lbf)**

HINT:

If the turning torque is not within the specified range, replace the front lower ball joint assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The procedure listed below is for the LH side.

1. INSTALL FRONT LOWER BALL JOINT ASSEMBLY

(a) Secure the front axle assembly in a vise.

NOTICE:

When using a vise, do not overtighten it.

(b) Install the front lower ball joint assembly to the front axle assembly with the nut.

Torque: 71 N·m (724 kgf·cm, 52ft·lbf)

c

(c) Install a new clip.

NOTICE:

Further tighten the nut up to 60° if the holes for the cotter pin are not aligned.

2. INSTALL FRONT AXLE ASSEMBLY

HINT:

Refer to the procedure from Install Front Axle Assembly [INFO](#).

COMPONENTS

ILLUSTRATION

c

REMOVAL

1. REMOVE FRONT WHEELS

2. REMOVE NO. 1 ENGINE UNDER COVER

3. SEPARATE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH_ INFO

4. REMOVE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH

(a) Remove the 2 bolts, nut, and front No. 1 lower suspension arm sub-assembly LH from the front suspension member.

NOTICE:

Because the nut has its own stopper, do not turn the nut. Loosen the bolt with the nut secured.

5. REMOVE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Refer to the procedure up to Remove Front No. 1 Lower Suspension Arm Sub-assembly RH INFO.

INSTALLATION

1. TEMPORARILY TIGHTEN FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Refer to the procedure from Temporarily Tighten Front No. 1 Lower Suspension Arm Sub-assembly RH INFO.

2. TEMPORARILY TIGHTEN FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH

(a) Temporarily install the front No. 1 lower suspension arm LH to the front suspension crossmember with the 2 bolts and nut.

NOTICE:

Because the nut has its own stopper, do not turn the nut. Tighten the bolt with the nut secured.

3. CONNECT FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

4. INSTALL FRONT WHEELS

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

5. STABILIZE SUSPENSION

(a) Lower the vehicle.

(b) Press down on the vehicle several times to stabilize the suspension.

6. FULLY TIGHTEN FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH

(a) Fully tighten the bolt A and B.

Torque: **233 N·m (2376 kgf·cm, 172ft·lbf)**

NOTICE:

Because the nut has its own stopper, do not turn the nut. Tighten the bolt with the nut secured.

7. INSTALL NO. 1 ENGINE UNDER COVER

8. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT:

Inspect and adjust the front wheel alignment .

COMPONENTS

c

REMOVAL

HINT:

- Use the same procedure for the LH side and RH side.
- The procedure listed below is for the LH side.

1. REMOVE FRONT WHEEL

2. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

HINT:

Refer to the procedure up to Remove Windshield Wiper Motor and Link Assembly [INFO](#).

3. REMOVE COWL BODY MOUNTING REINFORCEMENT LH_ [INFO](#)

4. REMOVE OUTER COWL TOP PANEL SUB-ASSEMBLY_ [INFO](#)

5. SEPARATE FRONT STABILIZER LINK ASSEMBLY

(a) Remove the nut and separate the stabilizer link assembly from the front shock absorber with coil spring.

HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

6. SEPARATE FRONT SPEED SENSOR

(a) Remove the bolt and clamp, and separate the front speed sensor and front flexible hose from the front shock absorber with coil spring.

NOTICE:

Be sure to separate the front speed sensor from the front shock absorber with coil spring completely.

7. REMOVE FRONT SUSPENSION SUPPORT DUST COVER

(a) Remove the front suspension support dust cover.

8. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Loosen the front support to front shock absorber nut of the front shock absorber.

- Do not remove the front support to front shock absorber nut.
- Loosen the nut only when the front shock absorber with coil spring needs to be disassembled.

(b) Support the front axle using a jack and wooden block.

Text in Illustration

*1	Wooden Block
----	--------------

(c) Remove the 2 bolts and 2 nuts, and separate the front shock absorber with coil spring (lower side) from the steering knuckle.

(d) Remove the 3 nuts and front shock absorber with coil spring.

NOTICE:

Make sure that the front speed sensor is completely separated from the front shock absorber with coil spring.

9. SECURE FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Install a bolt and nut to the front shock absorber as shown in the illustration and secure the front shock absorber in a vise.

Standard length A:

40 mm (1.575 in.)

c

10. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

(a) Using SST, compress the front coil spring.

SST: 09727-30021

09727-00010

09727-00021

09727-00031

NOTICE:

Do not use an impact wrench. It will damage SST.

HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.

c

(b) Check that the front coil spring is sufficiently compressed.

(c) Remove the front support to front shock absorber nut and collar.

p

11. REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY

12. REMOVE STRUT MOUNTING BEARING

13. REMOVE FRONT COIL SPRING UPPER SEAT

14. REMOVE FRONT COIL SPRING UPPER INSULATOR
15. REMOVE FRONT COIL SPRING
16. REMOVE FRONT SPRING BUMPER
17. REMOVE FRONT COIL SPRING LOWER INSULATOR
18. REMOVE FRONT SHOCK ABSORBER ASSEMBLY

INSPECTION

1. INSPECT FRONT SHOCK ABSORBER ASSEMBLY

P

(a) Compress and extend the shock absorber rod 4 times or more.

Standard:

There is no abnormal resistance or sound.

HINT:

If there is any abnormality, replace the front shock absorber assembly with a new one.

INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The procedure listed below is for the LH side.

1. SECURE FRONT SHOCK ABSORBER ASSEMBLY

(a) Install the bolt and nut to the front shock absorber as shown in the illustration and secure the front shock absorber in a vise.

Standard length A:

40 mm (1.575 in.)

c

2. INSTALL FRONT COIL SPRING LOWER INSULATOR

(a) Install the front coil spring lower insulator to the front shock absorber assembly.

Text in Illustration

*1	Positioning Pin
*2	Depression

NOTICE:

When installing the insulator, fit the insulator to the depression of the spring seat and align the positioning pin into the hole.

c

3. INSTALL FRONT SPRING BUMPER

(a) Install the front spring bumper to the front shock absorber assembly.

NOTICE:

Face the smaller diameter end of the front spring bumper downward.

c

4. INSTALL FRONT COIL SPRING

(a) Using SST, compress the front coil spring.

SST: 09727-30021

09727-00010

09727-00021

09727-00031

NOTICE:

Do not use an impact wrench. It will damage the SST.

HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.

P

(b) Install the front coil spring.

Text in Illustration

*1	Paint Mark
----	------------

- Make sure that the end of the front coil spring is positioned in the depression of the lower spring seat.
- Make sure to install the coil spring with the paint mark facing downward.

P

5. INSTALL FRONT COIL SPRING UPPER INSULATOR

6. INSTALL FRONT COIL SPRING UPPER SEAT

7. INSTALL STRUT MOUNTING BEARING

(a) Install the strut mounting bearing.

Text in Illustration

*1	Upper Side
*2	Lower Side

NOTICE:

Do not install the bearing upside down.

c

8. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY

(a) Install the front suspension support sub-assembly to the front shock absorber assembly.

NOTICE:

When installing, align the cutout on the front suspension support sub-assembly and the shock absorber piston rod end.

9. TEMPORARILY TIGHTEN FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

(a) Install the collar to the front shock absorber assembly.

c

(b) Temporarily tighten a new front support to front shock absorber nut.

c

(c) Remove SST from the front coil spring.

NOTICE:

Do not use an impact wrench. It will damage SST.

10. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Install the front shock absorber with coil spring (upper side) with the 3 nuts.

Torque: **50 N·m (510 kgf·cm, 37ft·lbf)**

(b) Install the front shock absorber with coil spring (lower side) to the steering knuckle with the 2 bolts and 2 nuts.

Torque: **240 N·m (2447 kgf·cm, 177ft·lbf)**

NOTICE:

While keeping the bolts from rotating, tighten the nuts.

c

11. FULLY TIGHTEN FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

(a) Fully tighten the front support to front shock absorber nut.

Torque: **47 N·m (479 kgf·cm, 35ft·lbf)**

12. INSTALL FRONT SUSPENSION SUPPORT DUST COVER

(a) Install the front suspension support dust cover.

13. INSTALL FRONT SPEED SENSOR

(a) Install the front speed sensor and front flexible hose to the front shock

absorber with the bolt and clamp.

Torque: **19 N·m (192 kgf·cm, 14ft·lbf)**

NOTICE:

Do not twist the front speed sensor when installing it.

HINT:

Install the front flexible hose first and then the speed sensor harness bracket.

14. INSTALL FRONT STABILIZER LINK ASSEMBLY

(a) Install the front stabilizer link assembly to the front shock absorber with coil spring with the nut.

Torque: **74 N·m (755 kgf·cm, 55ft·lbf)**

HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

15. INSTALL OUTER COWL TOP PANEL SUB-ASSEMBLY INFO

16. INSTALL COWL BODY MOUNTING REINFORCEMENT LH INFO

17. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

HINT:

Refer to the procedure from Install Windshield Wiper Motor and Link Assembly INFO.

18. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

19. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT:

Inspect and adjust the front wheel alignment INFO.

DISPOSAL

1. DISPOSE OF FRONT SHOCK ABSORBER ASSEMBLY

(a) Position the front shock absorber assembly level with the piston rod fully extended. Using a drill, make a hole in the cylinder between A and B shown in the illustration to discharge the gas inside.

NOTICE:

Always use proper safety equipment and be careful when drilling because shards of metal fly about.

HINT:

The gas is colorless, odorless and non-poisonous.

P

COMPONENTS ILLUSTRATION

c

REMOVAL

1. REMOVE FRONT WHEELS
2. REMOVE NO. 1 ENGINE UNDER COVER
3. REMOVE NO. 2 ENGINE UNDER COVER
4. REMOVE FRONT STABILIZER LINK ASSEMBLY LH

(a) Remove the 2 nuts and front stabilizer link assembly LH.

Text in Illustration

*1	Upper Side
*2	Lower Side

HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

5. REMOVE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

6. SEPARATE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH_ INFO

7. REMOVE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH_ INFO

8. REMOVE FRONT SUSPENSION MEMBER FRONT BRACE LH

(a) Remove the 4 bolts and front suspension member front brace LH.

9. REMOVE FRONT SUSPENSION MEMBER FRONT BRACE RH

HINT:

Perform the same procedure as for the LH side.

10. REMOVE FRONT STABILIZER BAR

(a) Remove the front stabilizer bar with front stabilizer bar bushing from the front suspension crossmember sub-assembly.

11. REMOVE FRONT STABILIZER BAR BUSHING LH

(a) Remove the front stabilizer bar bushing LH from the front stabilizer bar.

12. REMOVE FRONT STABILIZER BAR BUSHING RH

HINT:

Perform the same procedure as for the LH side.

INSPECTION

1. INSPECT FRONT STABILIZER LINK ASSEMBLY

(a) Inspect the turning torque of the ball joint.

(1) Secure the front stabilizer link assembly in a vise using aluminum plates.

(2) Install the nut to the front stabilizer link assembly stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: 0.05 to 1.96 N·m (0.5 to 20 kgf·cm, 0.4 to 17in·lbf)

HINT:

If the turning torque is not within the specified range, replace the front stabilizer link assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

INSTALLATION

1. INSTALL FRONT STABILIZER BAR BUSHING LH

(a) Install the front stabilizer bar bushing to the front stabilizer bar as shown in the illustration.

Text in Illustration

*1	Front of the Vehicle
*2	Inside of the Vehicle
*3	Stopper
*4	Dust Lip

- Install the front stabilizer bar bushing so that the dust lips face outward of the vehicle.
- Install the front stabilizer bar bushing so that the cutouts face rearward of the vehicle.

2. INSTALL FRONT STABILIZER BAR BUSHING RH

HINT:

Perform the same procedure as for the LH side.

3. INSTALL FRONT STABILIZER BAR

(a) Install the front stabilizer bar to the front suspension crossmember sub-assembly so that the identification mark is positioned on the right side of the vehicle.

Text in Illustration

*1	Identification Mark	*2	Front of the Vehicle
*3	Top of the Vehicle	-	-

4. INSTALL FRONT SUSPENSION MEMBER FRONT BRACE LH

(a) Install the front suspension member front brace LH with the 4 bolts.

Text in Illustration

*1	Protrusion
----	------------

Torque: **87 N·m (887 kgf·cm, 64ft·lbf)**

- Temporarily tighten bolt A, and then fully tighten the 4 bolts in the order of B, C, D, and A.
- After installing the front suspension member front brace LH, make sure that the protrusion of the No. 1 front stabilizer bar bushing comes out.

5. INSTALL FRONT SUSPENSION MEMBER FRONT BRACE RH

(a) Install the front suspension member front brace RH with the 4 bolts.

Text in Illustration

*1	Protrusion
----	------------

Torque: **87 N·m (887 kgf·cm, 64ft·lbf)**

- Temporarily tighten bolt A, and then fully tighten the 4 bolts in the order of B, C, D, and A.
- After installing the front suspension member front brace RH, make sure that the protrusion of the No. 1 front stabilizer bar bushing comes out.

6. TEMPORARILY INSTALL FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

7. CONNECT FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

8. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

(a) Install the front stabilizer link assembly LH with the 2 nuts.

Text in Illustration

*1	Upper Side
*2	Lower Side

Torque: **74 N·m (755 kgf·cm, 55ft·lbf)**

HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

9. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure for as the LH side.

10. INSTALL FRONT WHEELS

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

11. STABILIZE SUSPENSION INFO

12. FULLY TIGHTEN FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

6. INSTALL FRONT SUSPENSION MEMBER FRONT BRACE RH_ [INFO](#)

7. INSTALL FRONT CROSS MEMBER SUB-ASSEMBLY

c

(a) Using a transmission jack, support the engine assembly with transaxle.

(b) Install the front cross member sub-assembly with the 4 bolts.

Torque: **96 N·m (979 kgf·cm, 71ft·lbf)**

(c) Connect the engine mounting insulator with the 2 bolts.

Torque: **95 N·m (969 kgf·cm, 70ft·lbf)**

NOTICE:

Temporarily tighten bolt B and then fully tighten the 2 bolts in the order of A and B.

8. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

(a) Support the front suspension crossmember with a transmission jack.

(b) While inserting SST into the reference holes on the front suspension crossmember RH and LH alternately, tighten 2 bolts A, 2 bolts B, C and 2 nuts on the RH and LH sides to the respective specified torque in several steps.

c

SST: 09670-00020

Bolt A - Torque: **145 N·m (1479 kgf·cm, 107ft·lbf)**

Bolt B, C, Nut D, E - Torque: **95 N·m (969 kgf·cm, 70ft·lbf)**

NOTICE:

Temporarily tighten bolt B, and then fully tighten the 2 bolts and 2 nuts in the order of C, E, D, and B.

(c) Install the 2 wire harness clamp brackets with the 2 bolts.

Torque: **13 N·m (127 kgf·cm, 9ft·lbf)**

c

9. INSTALL FRONT SUSPENSION MEMBER REAR BRACE LH

(a) Install the front suspension member rear brace LH with the 3 bolts.

Bolt A - Torque: **145 N·m (1479 kgf·cm, 107ft·lbf)**

Bolt B - Torque: **93 N·m (948 kgf·cm, 69ft·lbf)**

P

10. INSTALL FRONT SUSPENSION MEMBER REAR BRACE RH

HINT:

Perform the same procedure as for the LH side.

11. INSTALL REAR SIDE RAIL REINFORCEMENT SUB-ASSEMBLY LH

(a) Install the rear side rail reinforcement sub-assembly LH with the 4 bolts.

Torque: **96 N·m (979 kgf·cm, 71ft·lbf)**

NOTICE:

Temporarily tighten bolts A and B, and then fully tighten the 4 bolts in the order of C, B, D and A.

c

12. INSTALL REAR SIDE RAIL REINFORCEMENT SUB-ASSEMBLY RH

(a) Install the rear side rail reinforcement sub-assembly RH with the 4 bolts.

Torque: **96 N·m (979 kgf·cm, 71ft·lbf)**

NOTICE:

Temporarily tighten bolts A and B, and then fully tighten the 4 bolts in the order of C, B, D and A.

13. INSTALL FRONT ENGINE MOUNTING BRACKET LOWER REINFORCEMENT

(a) Install the front engine mounting bracket lower reinforcement with the 2 bolts.

Torque: **96 N·m (979 kgf·cm, 71ft·lbf)**

14. CONNECT FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

15. CONNECT FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

16. CONNECT TIE ROD END SUB-ASSEMBLY LH INFO

17. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

18. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

(a) Install the front stabilizer link assembly LH to the front stabilizer bar with the nut.

Torque: **74 N·m (755 kgf·cm, 55ft·lbf)**

HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

19. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

20. CONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

21. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

22. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO

23. INSTALL FRONT WHEELS

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

24. STABILIZE SUSPENSION

(a) Lower the vehicle.

(b) Press down on the vehicle several times to stabilize the suspension.

25. FULLY TIGHTEN FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY LH INFO

26. FULLY TIGHTEN FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

27. INSTALL FRONT SPOILER COVER (w/ Front Spoiler)

29. INSTALL REAR ENGINE UNDER COVER LH

30. INSTALL REAR ENGINE UNDER COVER RH

31. INSTALL FRONT NO. 3 ENGINE UNDER COVER

32. INSTALL NO. 2 ENGINE UNDER COVER

33. INSTALL NO. 1 ENGINE UNDER COVER

34. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT:

Inspect and adjust the front wheel alignment .

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Suspension System

Symptom	Suspected Area	See page
Vehicle pulls to one side while driving	Tire (worn or improperly inflated)	INFO
	Front wheel alignment (incorrect)	INFO
	Front hub bearing (worn)	INFO
	Front shock absorber (worn)	INFO
	Steering gear (out of adjustment or broken)	INFO

5. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ INFO

6. LOOSEN PARKING BRAKE CABLE_ INFO

7. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately wash it off.

8. REMOVE REAR FLOOR SIDE MEMBER COVER LH (w/ Floor Under Cover)

(a) Remove the nut, 2 bolts and rear floor side member cover LH.

9. REMOVE REAR FLOOR SIDE MEMBER COVER RH (w/ Floor Under Cover)

(a) Remove the 3 bolts.

(b) Disengage the clip and remove the rear floor side member cover RH.

10. REMOVE REAR SUSPENSION BRACE SUB-ASSEMBLY

(a) Remove the 4 bolts.

c

(b) Disengage the clip and remove the rear suspension brace sub-assembly.

11. DISCONNECT REAR SPEED SENSOR WIRE (for LH Side) INFO

12. DISCONNECT REAR SPEED SENSOR WIRE (for RH Side)

HINT:

Perform the same procedure as for the LH side.

13. SEPARATE REAR SPEED SENSOR WIRE (for LH Side) INFO

14. SEPARATE REAR SPEED SENSOR WIRE (for RH Side)

HINT:

Perform the same procedure as for the LH side.

15. DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY INFO

16. DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY

HINT:

Perform the same procedure as for the No. 3 parking brake cable assembly.

17. SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Remove the bolt and separate the No. 3 parking brake cable assembly.

P

18. SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY

HINT:

Perform the same procedure as for the No. 3 parking brake cable assembly.

19. SEPARATE REAR BRAKE TUBE FLEXIBLE HOSE

(a) Using a union nut wrench, disconnect the 2 brake lines while holding the rear brake tube flexible hose with a wrench.

C

Text in Illustration

*1	LH Side	*2	RH Side
----	---------	----	---------

NOTICE:

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the connecting points.

(b) for LH Side

(1) Remove the bolt and separate the rear brake tube flexible hose from the rear axle beam assembly.

(c) for RH Side

(1) Remove the clip and separate the rear brake tube flexible hose from the rear axle beam assembly.

20. REMOVE REAR DISC BRAKE CALIPER ASSEMBLY LH

(a) Using a union nut wrench, disconnect the brake line while holding the rear flexible hose LH with a wrench.

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the connecting points.

(b) Remove the clip and separate the rear flexible hose LH.

(c) Remove the 2 bolts and rear disc brake caliper assembly LH with rear flexible hose LH.

21. REMOVE REAR DISC BRAKE CALIPER ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

22. REMOVE REAR DISC (for LH Side) INFO

23. REMOVE REAR DISC (for RH Side)

HINT:

Perform the same procedure as for the LH side.

24. REMOVE REAR NO. 4 BRAKE TUBE

(a) Remove the nut and rear No. 4 brake tube from the rear axle beam assembly.

25. REMOVE REAR NO. 3 BRAKE TUBE

HINT:

Perform the same procedure as for the rear No. 4 brake tube.

26. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH INFO

27. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

28. SEPARATE REAR WHEEL HOUSE LINER LH (w/ Wheel House Liner) INFO

29. SEPARATE REAR WHEEL HOUSE LINER RH (w/ Wheel House Liner)

HINT:

Perform the same procedure as for the LH side.

30. SEPARATE REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH (w/ Height Control Sensor)

INFO

31. REMOVE REAR COIL SPRING LH INFO

32. REMOVE REAR COIL SPRING RH

HINT:

Perform the same procedure as for the LH side.

33. REMOVE REAR UPPER COIL SPRING INSULATOR LH

34. REMOVE REAR UPPER COIL SPRING INSULATOR RH

35. REMOVE REAR LOWER COIL SPRING INSULATOR LH

36. REMOVE REAR LOWER COIL SPRING INSULATOR RH

37. REMOVE REAR AXLE BEAM ASSEMBLY

(a) Support the rear axle beam assembly with a jack using 2 wooden blocks and 2 attachments or equivalent tools to replicate standard vehicle height conditions as shown in the illustration.

c

Text in Illustration

*1	Jack	*2	Wooden Block
*3	Attachment	-	-

NOTICE:

Make sure to secure the rear axle beam assembly to prevent it from dropping.

(b) Remove the 2 bolts (A) and 2 nuts while holding the 2 nuts and separate the rear axle beam assembly from the rear shock absorber assemblies LH and RH.

NOTICE:

Since the stopper nuts are used, turn the bolts.

(c) Remove the 2 bolts (B) and rear axle beam assembly.

38. REMOVE REAR AXLE CARRIER BUSHING LH

(a) Put a matchmark on the rear axle beam assembly so that the mark aligns with the arrow mark on the rear axle carrier bushing LH. (If the rear axle beam assembly is reused.)

Text in Illustration

*1	Matchmark
----	-----------

(b) Using a chisel and hammer, bend the 2 ribs on the rear axle carrier bushing LH.

Text in Illustration

*1	Bend Portion
*2	Turn
*3	Hold

NOTICE:

When removing the rear axle carrier bushing, do not erase the matchmark on the rear axle beam assembly.

(c) Using SST, remove the rear axle carrier bushing LH from the rear axle beam assembly.

SST: 09710-26011

- Do not damage the rubber portion when installing the rear axle carrier bushing.
- Apply grease to the threads and tip of the SST center bolt before use.

P

2. INSTALL REAR AXLE CARRIER BUSHING RH

HINT:

Perform the same procedure as for the LH side.

3. TEMPORARILY TIGHTEN REAR AXLE BEAM ASSEMBLY

(a) Slowly jack up the rear axle beam assembly with a jack using 2 wooden blocks and 2 attachments or equivalent tools and temporarily install the rear axle beam assembly to the body with the 2 bolts (B).

C

Text in Illustration

*1	Jack	*3	Attachment
*2	Wooden Block	-	-

NOTICE:

Make sure to secure the rear axle beam assembly to prevent it from dropping.

(b) Temporarily tighten the rear axle beam assembly to the rear shock absorber assemblies LH and RH with the 2 bolts (A) and 2 nuts.

NOTICE:

Since the stopper nuts are used, turn the bolts.

HINT:

Insert the bolts with the threaded end facing the outside of the vehicle.

4. INSTALL REAR UPPER COIL SPRING INSULATOR LH_ INFO

5. INSTALL REAR UPPER COIL SPRING INSULATOR RH

HINT:

Perform the same procedure as for the LH side.

6. INSTALL REAR LOWER COIL SPRING INSULATOR LH

7. INSTALL REAR LOWER COIL SPRING INSULATOR RH

8. INSTALL REAR COIL SPRING LH_ INFO

9. INSTALL REAR COIL SPRING RH

HINT:

Perform the same procedure as for the LH side.

10. INSTALL REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH (w/ Height Control Sensor)_ INFO

11. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY LH_ INFO

12. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

13. INSTALL REAR NO. 4 BRAKE TUBE

(a) Install the rear No. 4 brake tube to the rear axle beam assembly with the nut.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

P

14. INSTALL REAR NO. 3 BRAKE TUBE

HINT:

Perform the same procedure as for the rear No. 4 brake tube.

15. CONNECT REAR BRAKE TUBE FLEXIBLE HOSE

(a) for LH Side

C

Text in Illustration

*1	LH Side	*2	RH Side
----	---------	----	---------

(1) Install the rear brake tube flexible hose with the bolt.

Torque: **19 N·m (194 kgf·cm, 14ft·lbf)**

(b) for RH Side

(1) Install the rear brake tube flexible hose with a new clip.

NOTICE:

Install the clip as far as it will go.

(c) Using a union nut wrench, connect the 2 brake lines to the rear brake tube flexible hose.

Torque: **15 N·m (155 kgf·cm, 11ft·lbf)**

NOTICE:

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line from the connecting points.
- Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench **INFO**.

16. INSTALL REAR DISC (for LH Side) **INFO**

17. INSTALL REAR DISC (for RH Side)

HINT:

Perform the same procedure as for the LH side.

18. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY LH

c

(a) Install the rear disc brake caliper assembly LH with rear flexible hose LH with the 2 bolts.

Torque: **57 N·m (585 kgf·cm, 42ft·lbf)**

T

(b) Connect the rear flexible hose LH to the rear axle beam assembly with a new clip.

NOTICE:

Install the clip as far as it will go.

(c) Using a union nut wrench, connect the brake line to the rear flexible hose LH while holding the rear flexible hose LH with a wrench.

Torque: **15 N·m (155 kgf·cm, 11ft·lbf)**

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake

line from the connecting points.

- Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench INFO.

19. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

20. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the No. 3 parking brake cable assembly to the rear axle beam assembly with the bolt.

Torque: **6.0 N·m (61 kgf·cm, 53in·lbf)**

P

21. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

HINT:

Perform the same procedure as for the No. 3 parking brake cable assembly.

22. CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY INFO

REMOVAL

1. REMOVE REAR WHEELS

2. DISCONNECT REAR SPEED SENSOR WIRE (for LH Side) INFO

3. DISCONNECT REAR SPEED SENSOR WIRE (for RH Side)

HINT:

Perform the same procedure as the LH side.

4. SEPARATE REAR SPEED SENSOR WIRE (for LH Side)

(a) Remove the nut and separate the 2 clamps and rear speed sensor wire.

5. SEPARATE REAR SPEED SENSOR WIRE (for RH Side)

HINT:

Perform the same procedure as the LH side.

6. SEPARATE REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH (w/ Height Control Sensor)

(a) Remove the bolt and separate the rear height control sensor sub-assembly RH from the rear axle beam assembly.

(b) Using a vinyl tape, secure the rear height control sensor sub-assembly RH as shown in the illustration.

Text in Illustration

*1	Vinyl Tape
----	------------

7. SEPARATE REAR WHEEL HOUSE LINER LH (w/ Wheel House Liner)

(a) Remove the clip and turn back the rear wheel house liner LH to separate the rear wheel house liner LH.

8. SEPARATE REAR WHEEL HOUSE LINER RH (w/ Wheel House Liner)

HINT:

Perform the same procedure as the LH side.

9. REMOVE REAR COIL SPRING LH

(a) Loosen the 2 bolts.

Text in Illustration

*1	LH Side
*2	RH Side

NOTICE:

Do not remove the bolts.

c

(b) Support the spring seat of the rear axle beam assembly using 2 jacks and 2 wooden blocks.

c

Text in Illustration

*1	Jack	*2	Wooden Block
----	------	----	--------------

CAUTION:

Do not jack up the rear axle beam assembly too high as the vehicle may fall.

HINT:

Support the rear shock absorber at a position where it compresses by approximately 20 to 30 mm (0.787 to 1.18 in.).

(c) Remove the 2 bolts while holding the 2 nuts and separate the rear axle beam assembly from the rear shock absorber assemblies LH and RH.

NOTICE:

Since the stopper nuts are used, turn the bolts.

(d) Slowly lower the rear axle beam assembly using 2 jacks and 2 wooden blocks, and remove the rear coil spring LH.

NOTICE:

When moving the rear axle beam assembly beyond full rebound, make sure that the rear axle beam assembly is not out of position for more than 10 minutes.

(e) Slowly jack up the rear axle beam assembly using 2 jacks and 2 wooden blocks, and temporarily tighten the rear axle beam assembly to the rear shock absorber assemblies LH and RH with the 2 bolts and 2 nuts.

Text in Illustration

*1	Jack	*2	Wooden Block
----	------	----	--------------

NOTICE:

Since the stopper nuts are used, turn the bolts.

10. REMOVE REAR COIL SPRING RH

HINT:

Perform the same procedure as the LH side.

11. REMOVE REAR UPPER COIL SPRING INSULATOR LH
12. REMOVE REAR UPPER COIL SPRING INSULATOR RH
13. REMOVE REAR LOWER COIL SPRING INSULATOR LH
14. REMOVE REAR LOWER COIL SPRING INSULATOR RH

INSTALLATION

1. INSTALL REAR UPPER COIL SPRING INSULATOR LH

(a) Install the rear upper coil spring insulator LH to the rear coil spring LH.

Text in Illustration

*1	10 mm or less
----	---------------

NOTICE:

Install the rear upper coil spring insulator so that the dimension between the stopper and the upper end of the rear coil spring is 10 mm (0.394 in.) or less.

2. INSTALL REAR UPPER COIL SPRING INSULATOR RH

HINT:

Perform the same procedure as the LH side.

3. INSTALL REAR LOWER COIL SPRING INSULATOR LH

4. INSTALL REAR LOWER COIL SPRING INSULATOR RH

5. INSTALL REAR COIL SPRING LH

(a) Support the spring seat of the rear axle beam assembly using 2 jacks and 2 wooden blocks.

Text in Illustration

*1	Jack	*2	Wooden Block
----	------	----	--------------

(b) Remove the 2 bolts while holding the 2 nuts and separate the rear axle beam assembly from the rear shock absorber assemblies LH and RH.

NOTICE:

Since the stopper nuts are used, turn the bolts.

(c) Slowly lower the rear axle beam assembly using 2 jacks and 2 wooden blocks.

(d) Set the rear coil spring LH to the rear axle beam assembly.

Text in Illustration

*1	Identification Mark
*2	30° or less

NOTICE:

Set the rear coil spring so that the identification marks are positioned as shown in the illustration.

(e) Slowly jack up the rear axle beam assembly using 2 jacks and 2 wooden blocks and temporarily install the rear axle beam assembly and rear coil spring LH with the 2 bolts and 2 nuts.

Text in Illustration

*1	Jack	*2	Wooden Block
----	------	----	--------------

NOTICE:

Since the stopper nuts are used, turn the bolts.

HINT:

Insert the bolt with the threaded end facing the outside of the vehicle.

6. INSTALL REAR COIL SPRING RH

HINT:

Perform the same procedure as the LH side.

7. INSTALL REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH (w/ Height Control Sensor)

(a) Install the rear height control sensor sub-assembly RH to the rear axle beam assembly with the bolt.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

8. INSTALL REAR SPEED SENSOR WIRE (for LH Side)

(a) Install the rear speed sensor wire to the rear axle beam assembly with the nut and 2 clamps.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

NOTICE:

Do not twist the rear speed sensor wire when installing it.

9. INSTALL REAR SPEED SENSOR WIRE (for RH Side)

HINT:

Perform the same procedure as the LH side.

10. CONNECT REAR SPEED SENSOR WIRE (for LH Side)

11. CONNECT REAR SPEED SENSOR WIRE (for RH Side)

HINT:

Perform the same procedure as the LH side.

12. INSTALL REAR WHEELS

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

13. STABILIZE SUSPENSION INFO

14. FULLY TIGHTEN REAR AXLE BEAM ASSEMBLY

*1

(a) Fully tighten the 2 bolts.

Text in Illustration

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover) [INFO](#)
2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)
3. REMOVE REAR DECK FLOOR BOX [INFO](#)
4. REMOVE REAR NO. 4 FLOOR BOARD (for LH Side) [INFO](#)
5. REMOVE DECK FLOOR BOX LH (for LH Side) [INFO](#)
6. REMOVE REAR NO. 3 FLOOR BOARD (for RH Side) [INFO](#)
7. REMOVE REAR NO. 1 FLOOR BOARD SUB-ASSEMBLY [INFO](#)
8. REMOVE REAR NO. 2 FLOOR BOARD SUB-ASSEMBLY [INFO](#)
9. REMOVE REAR NO. 1 FLOOR BOARD [INFO](#)
10. REMOVE DECK TRIM SERVICE HOLE COVER [INFO](#)
11. REMOVE REAR DECK TRIM COVER [INFO](#)
12. REMOVE REAR DOOR SCUFF PLATE LH (for LH Side) [INFO](#)
13. REMOVE REAR DOOR SCUFF PLATE RH (for RH Side) [INFO](#)
14. REMOVE REAR SEAT CUSHION ASSEMBLY [INFO](#)
15. REMOVE REAR SIDE SEATBACK ASSEMBLY LH (for LH Side) [INFO](#)
16. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (for LH Side) [INFO](#)
17. REMOVE TONNEAU COVER HOLDER CAP (for LH Side) [INFO](#)
18. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (for LH Side) [INFO](#)
19. REMOVE REAR SIDE SEATBACK ASSEMBLY RH (for RH Side) [INFO](#)
20. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (for RH Side) [INFO](#)
21. REMOVE TONNEAU COVER HOLDER CAP (for RH Side) [INFO](#)

22. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (for RH Side) INFO

23. REMOVE REAR WHEEL

24. SEPARATE REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH (w/ Height Control Sensor) INFO

25. REMOVE REAR NO. 1 SHOCK ABSORBER CUSHION WASHER

(a) Support the spring seat of the rear axle beam assembly using a jack and wooden block.

Text in Illustration

*1	Jack
*2	Wooden Block

CAUTION:

Do not jack up the rear axle beam assembly too high as the vehicle may fall.

NOTICE:

Keep supporting the rear axle beam assembly with a jack until the installation of the rear shock absorber assembly has been completed.

HINT:

Support the rear shock absorber at a position where it compresses by approximately 20 to 30 mm (0.787 to 1.18 in.).

(b) Using a hexagon socket wrench, secure the rear shock absorber rod and remove the lock nut.

NOTICE:

Securely insert the hexagon socket wrench to the rear shock absorber rod to prevent damage to the rear shock absorber assembly when removing the nut.

(c) Remove the rear No. 1 shock absorber cushion washer.

26. REMOVE REAR SUSPENSION SUPPORT

(a) Remove the rear suspension support.

27. REMOVE REAR SHOCK ABSORBER ASSEMBLY

(a) Remove the bolt while holding the nut and remove the rear shock absorber assembly.

NOTICE:

Since the stopper nut is used, turn the bolt.

28. REMOVE REAR NO. 1 SPRING BUMPER

(a) Remove the rear No. 1 spring bumper from the rear shock absorber assembly.

INSPECTION

1. INSPECT REAR SHOCK ABSORBER ASSEMBLY

(a) Compress and extend the rear shock absorber rod, and check that there is no abnormal resistance or unusual sound during operation.

If there is any abnormality, replace the shock absorber with a new one.

NOTICE:

When disposing of the rear shock absorber assembly, see DISPOSAL

INFO

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL REAR NO. 1 SPRING BUMPER

(a) Install the rear No. 1 spring bumper to the rear shock absorber assembly.

2. TEMPORARILY TIGHTEN REAR SHOCK ABSORBER ASSEMBLY

(a) Insert the upper end of the rear shock absorber assembly with the rear No. 1 spring bumper to the vehicle body.

(b) Temporarily tighten the rear shock absorber assembly to the rear axle beam assembly with the bolt and nut.

NOTICE:

Since the stopper nut is used, turn the bolt.

HINT:

Insert the bolt with the threaded end facing the outside of the vehicle.

3. INSTALL REAR SUSPENSION SUPPORT

(a) Install the rear suspension support.

Text in Illustration

*1	Correct
*2	Incorrect

NOTICE:

Make sure that the rear suspension support is correctly installed as shown in the illustration.

c

4. INSTALL REAR NO. 1 SHOCK ABSORBER CUSHION WASHER

(a) Apply a few drops of adhesive to the threads of a new nut.

Text in Illustration

*1	Upper Side
*2	Lower Side

Adhesive:

Toyota genuine adhesive 1324, three bond 1324 or equivalent

c

(b) Install the rear No. 1 shock absorber cushion washer.

NOTICE:

Be sure to install the rear No. 1 shock absorber cushion washer in the correct direction.

c

(c) Using a union nut wrench, fully tighten the lock nut while holding the rod of the rear shock absorber assembly with a hexagon socket wrench.

Torque: **25 N·m (255 kgf·cm, 18ft·lbf)**

- Securely insert the hexagon socket wrench to the rear shock absorber rod to prevent damage to the rear shock absorber assembly when tightening the nut.
- Use the formula to calculate special torque values for situations

where the union nut wrench is combined with a torque wrench

18. INSTALL DECK TRIM SERVICE HOLE COVER [INFO](#)
19. INSTALL REAR NO. 1 FLOOR BOARD [INFO](#)
20. INSTALL REAR NO. 2 FLOOR BOARD SUB-ASSEMBLY [INFO](#)
21. INSTALL REAR NO. 1 FLOOR BOARD SUB-ASSEMBLY [INFO](#)
22. INSTALL DECK FLOOR BOX LH (for LH Side) [INFO](#)
23. INSTALL REAR NO. 4 FLOOR BOARD (for LH Side) [INFO](#)
24. INSTALL REAR NO. 3 FLOOR BOARD (for RH Side) [INFO](#)
25. INSTALL REAR DECK FLOOR BOX [INFO](#)
26. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)
27. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonneau Cover) [INFO](#)

28. INSTALL REAR WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

29. STABILIZE SUSPENSION

- (a) Lower the vehicle.
- (b) Bounce the vehicle up and down several times to stabilize the suspension.

30. FULLY TIGHTEN REAR SHOCK ABSORBER ASSEMBLY

- (a) Fully tighten the bolt.

Torque: **90 N·m (918 kgf·cm, 66ft·lbf)**

- Since the stopper nut is used, turn the bolt.
- The final torque must be applied under the standard vehicle height conditions.

31. PERFORM INITIALIZATION (w/ Height Control Sensor)

NOTICE:

Some systems need to be initialized after the rear height control sensor sub-assembly RH is replaced INFO.

DISPOSAL

1. DISPOSE OF REAR SHOCK ABSORBER ASSEMBLY

(a) Disposal using a drill

(1) Fully extend the piston rod and secure the rear shock absorber assembly at an angle in a vise.

(2) Using a drill, slowly make a hole at the position indicated by the arrow in the illustration to discharge the gas inside.

NOTICE:

Be careful when drilling because shards of metal may fly about, so always use proper safety equipment.

HINT:

The gas is colorless, odorless and non-poisonous.

HOW TO PROCEED WITH TROUBLESHOOTING

INSPECTION

1. INSPECT TIRES

(a) Check the tires for wear and proper inflation pressure.

Cold Tire Inflation Pressure:

Tire Size	Front	Rear
	kPa (kgf/cm ² , psi)	kPa (kgf/cm ² , psi)
P195/65R15 89S	240 (2.4, 35)	230 (2.3, 33)
P215/45R17 87V	230 (2.3, 33)	220 (2.2, 32)
195/65R15 91H	220 (2.2, 32)	220 (2.2, 32)

(b) Using a dial indicator, check the runout of the tires.

Maximum tire runout:

1.4 mm (0.0551 in.)

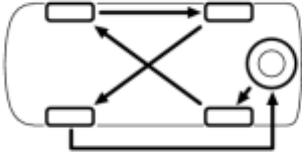

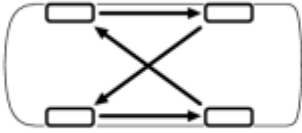

c

2. ROTATE TIRES

(a) Rotate the tires as shown in the illustration.

Area	Rotate Tire
	Vehicle Front Facing Left
North America	<p>A diagram of a vehicle chassis from a top-down perspective. It shows four wheels. Two horizontal double-headed arrows are drawn between the front and rear wheels on both the left and right sides, indicating that the front and rear wheels are to be swapped.</p>
Mexico	

c

Area	<p style="text-align: center;">Rotate Tire</p> <p style="text-align: center;">Vehicle Front Facing Left</p>
	 <p style="text-align: center;">c</p>
Korea	 <p style="text-align: center;">c</p>

3. INSPECT WHEEL BALANCE

(a) Check and adjust the off-the-car balance.

Maximum imbalance after adjustment:

8.0 g (0.0176 lb)

- Use a cleaning detergent to remove dirt, oil and water from the surface where the balance weight is to be adhered.
- Do not touch the adhesive surface of the tape.
- Adhere a sticking type balance weight to the flat surface (A) shown in the illustration.

Width (A):

25 mm (0.984 in.)

- Push the balance weight securely with your finger to adhere it to the position.
- Do not reuse the balance weight.

HINT:

The inner side balance weight should be installed by clipping it to the rim.

4. INSPECT FRONT AXLE HUB BEARING LOOSENESS

(a) Inspect the front axle hub bearing looseness **INFO**.

5. INSPECT REAR AXLE HUB BEARING LOOSENESS

(a) Inspect the rear axle hub bearing looseness **INFO**.

6. INSPECT FRONT AXLE HUB RUNOUT

(a) Inspect the front axle hub runout **INFO**.

7. INSPECT REAR AXLE HUB RUNOUT

(a) Inspect the rear axle hub runout **INFO**.

7. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

PRECAUTION

1. PRECAUTION FOR DISCONNECTING THE BATTERY CABLE

NOTICE:

When disconnecting the battery negative (-) cable, initialize the following system after the cable is reconnected:

System	See Procedure
Advanced Parking Guidance System	INFO

2. TIRE PRESSURE WARNING SYSTEM PRECAUTION

(a) When the tire pressure warning light comes on, immediately check the tire pressure of the tire and adjust it to the specified value (The tire pressure warning light will come on after blinking for 1 minute, the system may be malfunctioning. In this case, refer to following troubleshooting to repair the malfunction) **INFO**.

(b) When the tire pressure warning light comes on after blinking for 1 minute, there is a malfunction in the system. Check for DTCs.

(c) It is necessary to register the transmitter ID in the tire pressure warning ECU after replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU **INFO**.

(d) When replacing the tire pressure warning ECU:

(1) Using the Data List, read the transmitter IDs registered in the ECU and make a note of them before removing the tire pressure warning ECU.

(2) Register the transmitter IDs after installing a new tire pressure warning ECU.

(e) When replacing the tire pressure warning valve and transmitter:

(1) Take a note of the 7-digit number (transmitter ID) written on the new tire pressure warning valve and transmitter when replacing the old one. Register the transmitter IDs in the tire pressure warning ECU after replacing the tire pressure warning valve and transmitter and installing the tires and wheels on the vehicle.

Tire pressure warning valve and transmitter:

H

NOTICE:

The transmitter ID is written on the tire pressure warning valve and transmitter. It will be unable to be read after installing the tire pressure warning valve and transmitter on the tire and wheel. Therefore, take a note of the transmitter ID before installing the tire pressure warning valve and transmitter.

(f) Tire and wheel replacement or tire rotation:

- After the tires or wheels are replaced with a new tire pressure warning valve and transmitter, it is necessary to register the transmitter IDs.
- It is not necessary to register the transmitter IDs after tire rotation is performed.
- After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead from the wheel.

NOTICE:

Be careful not to damage the tire pressure warning valve and transmitter because of interference between the sensor and tire bead.

- The initialization is necessary to reset the warning threshold in accordance with the variant tire pressure settings due to the tire types.

(g) When replacing the tire pressure warning ECU and the tire pressure warning valve and transmitters, it is necessary to perform the initialization **INFO** after the registration **INFO**.

(h) Precautions about the tire pressure:

- Tire pressure decreases naturally.
- In winter, tire pressure may decrease due to low ambient temperatures (tire pressure decreases by approximately 10 kPa (0.1 kgf/cm², 1.5 psi) for every 10°C (50°F) drop in the ambient temperature).

Therefore, the tire pressure warning system is more likely to indicate a warning if the tire pressures are not adjusted appropriately. If the daily temperature variation is large, pressurize the tires high so that the tire pressures are suitable under cold conditions. As a result, incorrect tire pressure warning operation should decrease.

3. IN CASE OF TIRE AND WHEEL REPLACEMENT

- (a) When tires and wheels are replaced, always ensure that each transmitter ID is correctly registered.
- (b) Before removing the tires from the disc wheels or reinstalling the tires to the disc wheels, be sure to follow the correct procedures for removal and installation of the tire pressure warning valve and transmitter. Failure to do so may cause the tire pressure warning valve and transmitters to break **INFO**.

4. INITIALIZATION PRECAUTION

- (a) Initialize the tire pressure warning system after any of the following is performed:
- Replacing the tire pressure warning ECU and/or the tire pressure warning valve and transmitter
 - When rotating tires on vehicles with differing front and rear tire inflation pressures

HINT:

The tire pressure warning system will not operate properly if it is not initialized **INFO**.

5. FAIL-SAFE FUNCTION

- (a) When a system malfunction occurs in the tire pressure warning system, the tire pressure warning light and master warning light comes on after blinking for 1 minute to inform the driver of the system failure.
- (b) The result of this diagnosis is stored in the tire pressure warning ECU.

6. CHECK TIRE PRESSURE AFTER REPAIRS

- (a) After repairs confirm that the actual tire pressures are displayed in the Data List **INFO**.

7. REMOVAL AND INSTALLATION OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER

- (a) When installing a tire, make sure that the tire pressure warning valve and transmitter does not interfere with the tire bead in order to prevent damage to the tire pressure warning valve and transmitter.
- (b) After completing the operation, remove the valve core to rapidly release the air in the tire and check that the warning light comes on. If the warning light does not come on, the system may be defective.
- (c) If there is air leakage, tighten the nut to a torque of 4.0 N*m (41 kgf*cm, 35 in.*lbf) and push the valve core 2 or 3 times to remove any dirt attached to the valve core. If air continues to leak, replace the grommet, washer, and nut.
- (d) When installing the tire pressure warning valve and transmitter, make sure that the rim, grommet, washer, and nut are clean. Use a manufacturer-specified valve cap.
- (e) When putting air into the tire, first install the tire pressure valve straight onto the stem of the tire pressure warning valve and transmitter.

8. TIRE AND WHEEL REPLACEMENT

(a) To prevent damage to the tire pressure warning valve and transmitter, drop the tire pressure warning valve and transmitter into the tire whenever removing the tire from the wheel.

NOTICE:

Always use a new grommet, washer and nut when installing the tire pressure warning valve and transmitter.

(b) If tires and wheels are replaced, register the transmitter IDs .

PARTS LOCATION

ILLUSTRATION

P

ILLUSTRATION

P

SYSTEM DIAGRAM

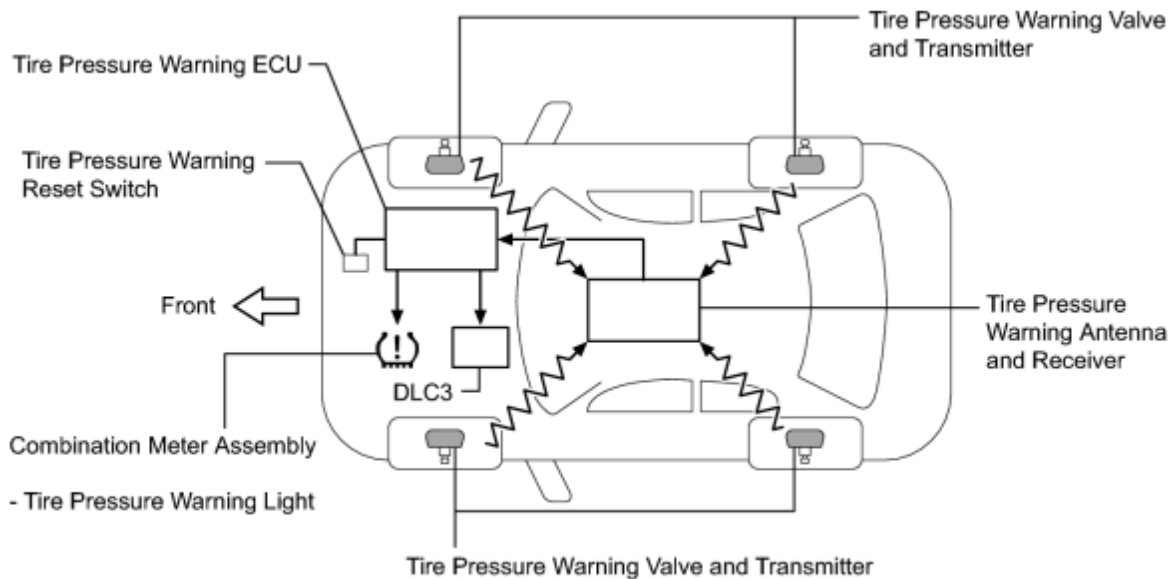

HINT:

Each tire pressure warning valve and transmitter sends information on the temperature inside the tire, the transmitter ID, and the tire pressure.

SYSTEM DESCRIPTION

1. DESCRIPTION OF SYSTEM

(a) A tire pressure warning valve and transmitter is equipped with a tire pressure sensor and a transmitter and is installed in each tire and wheel assembly. The sensor measures the tire pressure. The measured value and transmitter ID are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU from the tire pressure warning antenna and receiver. If the transmitter ID has already been registered, the ECU compares the measured air pressure value with the standard value. When the value is less than the standard value registered in the tire pressure warning ECU, the warning light on the combination meter comes on. The tire pressure warning reset switch addresses the differences in the air pressure settings by the type of tires.

H

2. INITIAL CHECK

(a) After the power switch is turned to on (IG), the tire pressure warning light comes on for 3 seconds and then goes off.

HINT:

If the warning light does not come on for 3 seconds, troubleshoot the tire pressure warning light circuit [INFO](#).

3. WHEN TIRE PRESSURE WARNING LIGHT IS LIT

(a) When the tire pressure warning light does not go off, or when it comes on during driving, check the tire pressure. If the tire pressure warning light comes on within several hours of adjusting the tire pressure, the tire may have a slow air leak.

(b) Under the following conditions, the system may not function properly:

(1) The system will be disabled in the following conditions:

(When the condition becomes normal, the system will work properly.)

- If tires not equipped with the tire pressure warning valve and transmitters are used.
- If the ID code on the tire pressure warning valve and transmitters is not registered in the tire pressure warning ECU.
- If the tire inflation pressure is absolute pressure: 600 kPa (6.0 kgf/cm², 87 psi) or more; relative pressure: 500 kPa (5.0 kgf/cm², 73 psi) or more.
- If the tire pressure warning valve and transmitter battery voltage drops. (battery life: 10 years)

(2) The system may be disabled in the following conditions:

(When the condition becomes normal, the system will work properly.)

- If electronic devices or facilities using similar radio wave frequencies are nearby.
- If a radio set at similar frequencies is in used in the vehicle.
- If a window tint that affects the radio wave signal is installed.
- If there is a lot of snow or ice on the vehicle, in particular around the wheels or wheel housings.
- If non-genuine wheels are used.
- If tire chains are used.

(c) After removing and installing the ECU or a sensor, check for a diagnostic trouble code and verify that it is a normal system code.

4. FUNCTION OF COMPONENTS

Components	Function
Tire pressure warning valve and transmitter	Combined as a single unit with a disc wheel air valve, it measures tire pressure and temperature and transmits an ID number for measurement value and identification. Built-in the battery.
Tire pressure warning antenna and receiver	Receives and transmits a necessary signal from the transmitters to the tire pressure warning ECU.
Tire pressure warning ECU	Receives a signal from the receiver and identifies it as vehicle's own signal. If the measured value is equal to or lower than the specified value, it transmits a signal to illuminate the tire pressure warning light on the combination meter.
Tire pressure warning light	Located in the combination meter, it informs the driver of lowered tire pressure and system failure.
Tire pressure warning reset switch	Allows entering initialization mode for when the standard pressure is changed

5. TIRE PRESSURE WARNING RESET SWITCH

- By operating the tire pressure warning reset switch, the tire pressure warning ECU can be set to issue a warning at an inflation pressure that corresponds to the standard pressure of tires.

Therefore, the warning threshold must be set to the proper value in order to comply with the local regulations.

- Operate the tire pressure warning reset switch only after the inflation pressures of all tires have been adjusted on the vehicle.
- To initialize the system, press and hold the tire pressure warning reset switch for 3 seconds or longer with the power switch on (IG). When the system receives the initialization signal, the warning light blinks 3 times (1 second on, 1 second off).
- During initialization, the tire pressure warning valve and transmitter measures the inflation pressure of the tire, and registers the signals that are transmitted into the tire pressure warning ECU at a frequency of once per minute. The initialization process is completed when signals from all the tires have been received. It takes a few minutes.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the tire pressure warning system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

(a) Interview the customer to confirm the trouble.

HINT:

It is important to collect as much specific information as possible from the customer to allow for a quick repair.

NEXT

3.	ADJUST TIRE PRESSURE*
----	-----------------------

(a) Turn the power switch off.

(b) Set the all tire pressure to the specified value .

(c) Connect the Techstream to the DLC3.

(d) Turn the power switch on (IG).

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Read the "ID Tire Inflation Pressure" values.

(g) Check the Data List .

HINT:

- It takes about 2 or 3 minutes to display the updated tire pressure data.
- If the problem is that the tire pressure decreases, wait until all of the tire pressure data is received by the ECU. If the data is received, the tire pressure warning light will go off.

Result:

Condition	Proceed to
Tire pressure warning light goes off	A
Tire pressure warning light remains on	B

A ► GO TO STEP 9

B

4. CHECK FOR DTC*

(a) Check for DTCs [INFO](#).

Result:

Result	Proceed to
DTC is output	A
DTC is not output	B

B ► GO TO STEP 6

A

5. DTC CHART

(a) Refer to Diagnostic Trouble Code Chart [INFO](#).

6. PROBLEM SYMPTOMS TABLE

(a) Refer to Problem Symptoms Table [INFO](#).

NEXT

7. CIRCUIT INSPECTION*

(a) Refer to Electronic Circuit Inspection Procedure [INFO](#).

NEXT

8. REPAIR OR REPLACE

(a) Repair or replace parts based on the diagnosis result.

NEXT

9. CONFIRMATION TEST*

(a) Check the Data List to confirm that the tire inflation pressure has been received [INFO](#).

(b) Perform initialization [INFO](#).

(c) Confirm that the initialization has been completed.

NEXT  END

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

It is necessary to register the transmitter ID in the tire pressure warning ECU when replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU.

Prepare all transmitter ID data before starting registration.

(a) Before registration

(1) When replacing the tire pressure warning ECU:

- Read the registered transmitter IDs that are stored in the old ECU using the Techstream and note them down.
- If reading stored transmitter IDs is impossible due to malfunctions of components such as the tire pressure warning antenna and receiver, remove the tires from the wheels and check the IDs located on the tire pressure warning valve and transmitters **INFO**.

(2) When replacing a tire pressure warning valve and transmitter:

- Take note of the 7-digit number (transmitter ID) written on the tire pressure warning valve and transmitter.

Tire pressure warning valve and transmitter:

H

NOTICE:

- The transmitter ID is written on the tire pressure warning valve and transmitter. It will be unable to be read after installing the tire pressure warning valve and transmitter on the tire and wheel. Therefore, take a note of the transmitter ID before installing the tire pressure warning valve and transmitter.
- The ID registration must be performed for all tire pressure warning valve and transmitters. Check the Data List, replace the exchanged ID with a new ID, and make a new DATA LIST of all 4 tires for the vehicle.

2. REGISTER TRANSMITTER ID (Using Techstream)

(a) Set the all tire pressure to the specified value **INFO**.

- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG).
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / ID Registration.
- (g) Perform the following procedures displayed on the screen.
- (h) Confirmation of transmitter ID registration.
- (1) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (2) Read the "ID Tire Inflation Pressure" values.
- (3) Confirm that the data of tire pressure of all tires are displayed on the Techstream.

NOTICE:

- It takes about 2 or 3 minutes to display the updated tire pressure data. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 .
- If the IDs have not been registered, DTC C2171/71 is set in the tire pressure warning ECU after 3 minutes or more.
- If normal pressure values are displayed, the IDs have been registration correctly.
- If the tire pressure values are not displayed after a few minutes, the IDs may be incorrect or the system may have a malfunction.
- After all IDs are registered, DTC C2126/26 (Transmitter ID not Received) is set in the tire pressure warning ECU and the tire pressure warning light blinks for 1 minute and then comes on. When the tire pressure warning ECU successfully receives radio waves from all the transmitters whose IDs are stored in the ECU, DTC C2126/26 is deleted and the tire pressure warning light goes off.

INITIALIZATION

1. DESCRIPTION OF INITIALIZATION

(a) Perform initialization in the following cases:

- Before delivery of a new vehicle.
- After replacement of the tire pressure warning ECU*.
- After replacement of any of the tire pressure warning valve and transmitters*.

*: Perform initialization after the transmitter ID registration is completed **INFO**.

(b) Before initialization

(1) Set the all tire pressure to the specified value **INFO**.

NOTICE:

Make sure the tires are cooled down.

2. INITIALIZATION PROCEDURE

(a) Adjust all tire (except spare tire) to the standard tire inflation pressure, as indicated on the tire and loading information label on the vehicle.

(b) Turn the power switch on (IG).

(c) Push and hold the tire pressure warning reset switch for 3 seconds or more so that the tire pressure warning light blinks 3 times.

(d) Turn the power switch off.

(e) Connect the Techstream to the DLC3.

(f) Turn the power switch on (IG).

(g) Turn the Techstream on.

(h) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(i) Check that the initialization has been completed.

(j) Confirm that the tire pressure data of all wheels are displayed on the Techstream.

- The initialization is normally completed within 2 or 3 minutes.
- If the initialization has not been completed successfully, DTC C2177/77 is set after a vehicle speed 8 km/h (5 mph) or more continues for 20 minutes or more.
- The initialization can be terminated by connecting terminals TC and CG of the DLC3.

Tire Pressure Monitor

Front View of DLC3:

ID2 Tire Inflation Pressure	<p>ID2 tire inflation pressure /</p> <p>min.: Absolute pressure / 0 kPa (0 kgf/cm², 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm², -14 psi)</p> <p>max.: Absolute</p>	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*

	pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)		
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*

- The initialization is completed when the "ID Tire Information Pressure" display shows the correct pressures.
- *: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24  .

TEST MODE PROCEDURE

1. ENTER TEST MODE

HINT:

- Operation of the tire pressure warning reset switch can be checked in TEST MODE.
- During TEST MODE, the system is not initialized by pushing the tire pressure warning reset switch. The circuit of the tire pressure warning reset switch can be inspected during this mode.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Check that the tire pressure warning light comes on for 3 seconds and then goes off.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / Signal Check.

- (g) Confirm that the tire pressure warning light in the combination meter blinks at 0.125 second intervals.

P

2. PERFORM SIGNAL CHECK

HINT:

- When entering signal check mode, the tire pressure warning ECU sets all the signal check DTCs first.
After completing signal check for each inspection item, the DTCs for systems that are determined to be normal by the tire pressure warning ECU will be cleared.
The DTCs for other inspection items may not be cleared when only a certain signal is inspected.
- When signal check returns to normal mode, all the signal check DTCs will be cleared.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / Signal Check.

HINT:

Every time the test mode DTC clear conditions are satisfied, the tire pressure warning light comes on for 1 second. Then, the tire pressure warning light blinks at 0.125 second intervals.

(f) Turn the power switch on (IG) and wait for 3 seconds or more to check the RSSI signal (C2196/96).

(g) Drive the vehicle at 20 km/h (12 mph) or more for 3 seconds or more to check the vehicle speed signal (C2191/91).

(h) Loosen the valve core and rapidly reduce the pressure (at least 40 kPa (0.4 kg/cm², 5.8 psi) within 30 seconds or more) to check the transmitter data (C2181/81 to C2184/84).

HINT:

The transmitter ID can be transmitted by rapidly reducing the tire pressure.

(i) Check that the tire pressure warning system test mode DTCs are cleared.

Test Mode DTC	Test Signal	Test Mode DTC Clear Condition
C2181/81 to C2184/84	Transmitter Data	Data is received from the transmitter which has a registered ID in the tire pressure warning ECU
C2191/91	Vehicle Speed Signal	Vehicle speed of 20 km/h (12 mph) or more is detected for 3 seconds or more
C2196/96	RSSI Signal	RSSI signal between 49 mV and 4.95 V is received for 3 seconds or more

(j) Check the tire pressure warning reset switch.

(1) Press the tire pressure warning reset switch.

(2) Check the tire pressure warning light.

Test Signal	Normal Condition
Tire Pressure Warning Reset Switch	<ul style="list-style-type: none">• Switch ON: Tire pressure warning light comes on• Switch OFF: Tire pressure warning light blinks at 0.125 sec. intervals

(k) Result

HINT:

After the signal check is completed, check for a signal check DTC to confirm the system status.

Condition	Procedure
Test mode DTC is output	Repair the faulty part and enter SIGNAL CHECK again
Test mode DTCs are cleared	No problem

(l) End of SIGNAL CHECK

(1) After completing the test mode (SIGNAL CHECK), turn the power switch off and disconnect the Techstream.

(m) DTC of SIGNAL CHECK (TEST DIAGNOSIS)

(1) If a trouble code is displayed during the test mode DTC check, check the circuit listed for that code. For details of each code, refer to the "See Procedure" below.

DTC No.	Detection Item	Trouble Area	See Procedure
C2181/81	Transmitter ID1 not received	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU 	
C2182/82	Transmitter ID2 not received	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU 	
C2183/83	Transmitter ID3 not received	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU 	
C2184/84	Transmitter ID4 not received	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU 	
C2191/91	Vehicle speed signal error	<ul style="list-style-type: none"> • Vehicle speed sensor • Combination meter assembly • Wire harness or connector • Tire pressure warning ECU 	
C2196/96	RSSI signal error	<ul style="list-style-type: none"> • Tire pressure warning antenna and receiver • Harness or connector • Tire pressure warning ECU 	

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Tire Pressure Warning System

Symptom	Suspected Area	See page
Tire pressure warning light does not illuminate, despite tire pressure decreasing	Initialization	INFO
	Check Data List (ID Tire Inflation Pressure)	INFO
	ID code check (Registration)	INFO
Tire pressure warning light remains illuminated (Goes off during initial check)	ECU power source circuit	INFO
	Tire pressure warning light circuit	INFO
Tire pressure warning light remains illuminated (Comes on during initial check)	Check Data List (ID Tire inflation pressure)	INFO
	Tire pressure warning light circuit	INFO
	ID code check (Registration)	INFO
	Initialization	INFO
Initialization cannot be done	Tire pressure warning reset switch	INFO
DTC check cannot be done	ECU power source circuit	INFO
	TC and CG terminal circuit	INFO

TERMINALS OF ECU

1. CHECK TIRE PRESSURE WARNING ECU

HINT:

Inspect the connectors from the back side while the connectors are connected.

P

- (a) Disconnect the R2 tire pressure warning antenna and receiver connector.
- (b) Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L4-12 (RDA) - Body ground	B - Body ground	Tire pressure warning antenna and receiver signal	Power switch on (IG)	11 to 14 V

- (c) Connect the R2 tire pressure warning antenna and receiver connector.
- (d) Measure the voltage and resistance according to the value(s) in the table below. If the result is not as specified, the ECU may have a malfunction.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L4-1 (CLSW) - Body ground	Y - Body ground	Tire pressure warning reset switch	<ul style="list-style-type: none"> • Power switch on (IG) • Tire pressure warning reset switch ON 	8.5 to 15 V
			<ul style="list-style-type: none"> • Power switch on (IG) • Tire pressure warning reset switch OFF 	Below 1.5 V
L4-2 (SPD) - Body ground	V - Body ground	Vehicle speed signal	Vehicle running	Pulse generation (see waveform 1)
L4-3 (TC) - Body ground	L - Body ground	TC terminal	Terminal TC not connected	11 to 14 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L4-4 (TACH) - Body ground	L - Body ground	RSSI (receive signal strength indication) signal	Power switch on (IG)	Pulse generation (see waveform 2)
L4-5 (IND) - Body ground	G - Body ground	Tire pressure warning light output signal	<ul style="list-style-type: none"> Power switch on (IG) Tire pressure warning light OFF 	Below 0.5 V
		Tire pressure warning reset switch	After turning power switch on (IG), tire pressure warning light illuminates for 3 seconds	0.9 to 3.2 V
L4-6 (RF5V) - Body ground	R - Body ground	Tire pressure warning antenna and receiver power source	Power switch on (IG)	11 to 14 V
L4-7 (IG) - Body ground	B - Body ground	IG power source	Power switch on (IG)	11 to 14 V
L4-9 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L4-10 (SIL) - Body ground	P - Body ground	Diagnostic communication	Power switch on (IG)	8 to 14 V
L4-11 (GND2) - Body ground	G - Body ground	Tire pressure warning antenna and receiver ground	Always	Below 1 Ω

(e) Using an oscilloscope, check the waveform 1.

Waveform 1:

P

Item	Contents
Terminal	L4-2 (SPD) - Body ground
Tool setting	5 V/DIV, 20 ms./DIV.
Vehicle condition	Driving at approximately 20 km/h (12 mph)

HINT:

The wavelength becomes shorter as the vehicle speed increases.

(f) Using an oscilloscope, check the waveform 2.

Waveform 2:

Item	Contents
Terminal	L4-4 (TACH) - Body ground
Tool setting	0.5 V/DIV., 10 ms./DIV.

Vehicle condition	Power switch on (IG)
-------------------	----------------------

H

HINT:

The shape of waves like figure appears approximately 2 times every 3 minutes.

DIAGNOSIS SYSTEM

1. CHECK BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding to the next step.

2. CHECK DLC3 INFO

3. DIAGNOSIS SYSTEM

(a) Warning light

(1) When there is a problem with the tire pressure warning system, the tire pressure warning light blinks at 0.5 second intervals, and comes on after 1 minute.

NOTICE:

When the malfunction has been corrected, the tire pressure warning light does not come on.

(b) DTCs (Normal mode)

(1) DTCs are memorized in the tire pressure warning ECU and read by the blinks of the tire pressure warning light or by using the Techstream INFO.

(c) Test mode

(1) By switching from normal mode into test mode (input signal check), you can inspect the tire pressure warning antenna and receiver, each tire pressure warning valve and transmitter, RSSI signal and vehicle speed sensor INFO.

4. CHECK TIRE PRESSURE WARNING LIGHT

(a) Turn the power switch on (IG).

(b) Check that the tire pressure warning light comes on for 3 seconds.

If the warning check result is not normal, proceed to troubleshooting for the tire pressure warning light circuit

INFO

5. TIRE PRESSURE WARNING LIGHT CHART

HINT:

The table below indicates the state of the tire pressure warning light after the power switch is turned on (IG).

	Immediately after turning the power switch on(IG)	Always							
	Comes on for 3 sec.	Goes off	Comes on	Warning light output pattern					Outputs DTC
				Blinks for 1 minute and then illuminates*1	Blinks*2	Blinks*3	Blinks*4		
Normal	○	○	-	-	-	-	-	-	-
Low tire pressure	○	-	○	-	-	-	-	-	-
System fail	○	-	-	○	-	-	-	-	-
Test mode	○	-	-	-	○	-	-	-	-
Initialization	○	-	-	-	-	○	-	-	-
ECU connector poorly connected	-	-	-	○ *5	-	-	-	-	-
TC ground (DTC is output)	○	-	-	-	-	-	-	-	○
TC ground (DTC is not output)	○	-	-	-	-	-	○	-	-

- *1: Comes on and goes off repeatedly at 0.5 second intervals, and stays on after 1 minute.

P

- *2: Comes on and goes off repeatedly at 0.125 second intervals.

P

- *3: Blinks 3 times (1 second on, 1 second off).

P

- *4: Comes on and goes off repeatedly at 0.25 second intervals.

- *5: When determining if there is a short circuit (10 seconds), the light goes off. Then it blinks at 0.5 second intervals, and stays on after 1 minute.

DTC CHECK / CLEAR

1. DTC CHECK (USING SST CHECK WIRE)

(a) Turn the power switch off.

(b) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST: 09843-18040

(c) Turn the power switch on (IG).

(d) Read and record any DTCs from the tire pressure warning light on the combination meter. Refer to the illustration as examples of the normal system code and codes 13 and 23.

HINT:

- If the tire pressure warning light does not indicate any DTCs or the normal system code, inspect the tire pressure warning light circuit or TC and CG terminal circuit.

Trouble Area	See Procedure
Tire pressure warning light circuit	INFO
TC and CG terminal circuit	INFO

- If 2 or more malfunctions are indicated at the same time, the lowest numbered DTC is displayed first.

(e) Refer to Diagnostic Trouble Code Chart [INFO](#) for DTC information.

(f) After completing the check, turn the power switch off and remove SST from the DLC3.

SST: 09843-18040

2. DTC CHECK (USING TECHSTREAM)

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.
- (f) Read the DTCs following the prompts on the Techstream.

HINT:

Refer to the Techstream operator's manual for further details.

3. CLEAR DTC

HINT:

After repairing the malfunctions, clear the DTCs.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.
- (f) Clear the DTCs following prompts on the Techstream.

HINT:

Refer to the Techstream operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (f) According to the display on the Techstream, read the Data List.

Tire Pressure Monitor

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Mode Status	Tire pressure warning system mode/ NORMAL or TEST	NORMAL: Normal mode TEST: Test mode	-
Main Tire	Number of main tire ID to be registered/ 0 or 1 or 2 or 3 or 4	0 to 4 displayed	-
Vehicle Speed	Vehicle speed reading/ min.: 0 km/h (0 mph), max.: 255 km/h (158 mph)	Actual vehicle speed	Speed indicated on the combination meter
Registered ID1 Code	Registered ID1 code/ min.: 0, max.: FFFFFFFF*1	ID No. registered in transmitter ID1 displayed	-
Registered ID2 Code	Registered ID2 code/	ID No. registered in transmitter ID2	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

Number of Trouble Code	Number of DTCs recorded/min.: 0, max.: 255	Min.: 0, Max.: -	-

HINT:

*1: Displayed only when the ID No. is not registered.

*2: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 .

2. Active Test

Using the Techstream to perform Active Tests allows the relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (f) Check the operation by referring to the table below.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Tire Pressure Warning System	Tire pressure warning light	Tire pressure warning light OFF or ON	Confirm that the vehicle is stopped, engine idling

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is displayed during the DTC check, inspect the circuit listed for that code. For details of each code, refer to the relevant page listed under respective "DTC Code" in the DTC chart.

Tire Pressure Warning System

DTC Code	Detection Item	Trouble Area	See page

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on. The tire pressure warning ECU stores a DTC when the tire pressure warning valve and transmitter stops transmitting signals. At this time, forcibly transmit the signals by releasing the tire pressure rapidly. The stored DTC is cleared when the signal transmission is resumed.

DTC No.	DTC Detection Condition	Trouble Area
C2111/11	Tire pressure warning valve and transmitters stop transmitting signals	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning ECU
C2112/12		
C2113/13		
C2114/14		

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

PROCEDURE

1. PERFORM FORCED TRANSMISSION OF TRANSMITTER ID OF ALL WHEELS

- (a) Set the tire pressure to the specified value .
- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG).
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (g) Check the values by referring to the table below.

Tire Pressure Monitor

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ID1 Tire Inflation Pressure	ID1 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation	ID4 tire inflation pressure /	Actual tire inflation	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Pressure	min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	pressure	14 psi) is displayed for relative pressure, data has not been received.*

HINT:

*: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 .

(h) Rapidly release the tire pressure for each wheel at least 40 kPa (0.4 kgf/cm², 5.8 psi) within 30 seconds.

(1) Check that each tire pressure data displayed on the Techstream has changed.

OK:

Each tire pressure data displayed on the Techstream will change to the value of the tire pressure.

NOTICE:

- It takes about 2 or 3 minutes to display the updated tire pressure data.
- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.

(2) After confirming that all of the tire pressure data displayed on the Techstream have changed, set the tire pressure to the appropriate specified values.

HINT:

If the tire pressure data displayed on the Techstream has not changed after rechecking, inspect for another problem .

DTC	C2184/84	Transmitter ID4 not Received (Test Mode DTC)

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.

The tire pressure warning valve and transmitters constantly send radio waves to the tire pressure warning antenna and receiver.

Under the conditions below, the tire pressure warning antenna and receiver is unable to receive the signals from the tire pressure warning valve and transmitters, and a DTC is stored.

- Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.
- The ID of the tire pressure warning valve and transmitter is mistyped during registration.
- A tire/wheel/transmitter from a different vehicle is installed.

HINT:

When no transmitter ID is received from a tire pressure warning valve and transmitter for a total of 20 minutes while the vehicle speed is more than 8 km/h (5 mph) or no transmitter ID is received from all the tire pressure warning valve and transmitters for a total of 20 minutes, DTCs are set.

DTCs from C2121/21 to C2124/24 can only be cleared by using the Techstream. DTCs from C2181/81 to C2184/84 can be cleared when the transmitter in the tire pressure warning valve and transmitter sends a forced transmission signal or test mode ends. DTCs from C2181/81 to C2184/84 are output only in test mode.

DTC No.	DTC Detection Condition	Trouble Area
C2121/21	Following condition (a) or (b) is met:	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2122/22	(a) When all conditions below are met:	
C2123/23	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter is not in stop mode. • Any transmitter ID is not received from tire pressure warning valve and transmitters. 	
C2124/24		

DTC No.	DTC Detection Condition	Trouble Area
	<ul style="list-style-type: none"> • For 20 minutes or more, vehicle speed is more than 8 km/h (5 mph) or no vehicle speed signal or RSSI signal is received. <p>(b) When all conditions below are met:</p> <ul style="list-style-type: none"> • Tire Pressure warning valve and transmitter is not in stop mode. • No transmitter ID is received from tire pressure warning valve and transmitters for 20 minutes or more. 	
C2181/81 C2182/82 C2183/83 C2184/84	Test mode procedure is performed.	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU

NOTICE:

When DTCs C2121/21 to C2124/24 are set, DTC C2175/75 may be set simultaneously. In such cases, troubleshoot DTCs C2121/21 to C2124/24 first, then troubleshoot DTC C2175/75.

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.

- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	CHECK FREQUENCY RECEIVING CONDITION
----	-------------------------------------

(a) Check that the vehicle is not located in an area such as described below:

(1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in area described above, the tire pressure warning light may come on only in a particular area.

(2) Devices using similar radio frequencies are used in the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio transmissions may be interrupted due to the surroundings or devices installed by the user.

NG  CHECK IF ANY DEVICE IS INSTALLED BY USER

OK

2.	IDENTIFY TRANSMITTER CORRESPONDING TO DTC
----	---

(a) Set the tire pressure to the specified values **INFO**.

(b) Turn the power switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the power switch on (IG).

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(g) Check the values by referring to the table below.

Tire Pressure Monitor

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ID1 Tire Inflation Pressure	ID1 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*

HINT:

*: It may take about 2 or 3 minutes until the values are displayed.

(h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm², 5.8 psi) within 30 seconds.

(i) Check the Data List.

NOTICE:

- It takes about 2 or 3 minutes to display the updated tire pressure data.
- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.
- Record the transmitter ID of which "ID Tire Inflation Pressure" data corresponds to each tire.

(j) After confirming that the "ID Tire Inflation Pressure" data for one tire (ID1 to ID4) has changed, repeat this procedure one by one. Identify the transmitter that corresponds to the DTC.

B ▶ REPLACE TIRE PRESSURE WARNING ECU

A ▶ END

DESCRIPTION

After all IDs are registered, DTC C2126/26 is set in the tire pressure warning ECU and the tire pressure warning light blinks for 1 minute and then comes on.

When the tire pressure warning ECU successfully receives radio waves from all the transmitters whose IDs are stored in the ECU, DTC C2126/26 is cleared and the tire pressure warning light goes off.

DTC No.	DTC Detection Condition	Trouble Area
C2126/26	After ID registration is completed, ECU does not receive radio waves from transmitters whose IDs are stored in ECU.	<ul style="list-style-type: none"> • ID registration failure • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU

HINT:

If the IDs stored in the tire pressure warning ECU differ from the transmitter IDs, DTC C2126/26 is set. Check that the IDs in the ECU are the same as the transmitter IDs.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.

- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.

PROCEDURE

1. IDENTIFY TRANSMITTER NOT RECEIVED

- Set the tire pressure to the specified values **INFO**.
- Turn the power switch off.
- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- Check the values by referring to the table below.

DTC	C2141/41	Transmitter ID1 Error
DTC	C2142/42	Transmitter ID2 Error
DTC	C2143/43	Transmitter ID3 Error
DTC	C2144/44	Transmitter ID4 Error

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.

When the internal circuit of the tire pressure warning valve and transmitter is malfunctioning, one of these DTCs is output.

DTC No.	DTC Detection Condition	Trouble Area
C2141/41	If an "ERROR" signal is received 3 times consecutively, the tire pressure warning valve and transmitter will be judged as defective and a DTC will be output.	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning ECU
C2142/42		
C2143/43	This will happen in situations where the inflation pressure is outside the range -100 to 538 kPa (-1.0 to 5.4 kgf/cm ² , -14 to 78 psi), the temperature inside the tire is outside the specified range -40 to 120°C (-40 to 253°F), or	
C2144/44	an error occurs in the tire pressure warning valve and transmitter or the surrounding area.	

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	IDENTIFY TRANSMITTER CORRESPONDING TO DTC
----	---

(a) Set the tire pressure to the specified value INFO.

- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG).
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (g) Display the "ID Tire Inflation Pressure" data for each wheel using the Techstream.
- (h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm², 5.8 psi) within 30 seconds. If "ID Tire Inflation Pressure" displayed on the Techstream (ID1 to ID4) does not change, the tire pressure warning valve and transmitter corresponding to the unchanged "ID Tire Inflation Pressure" data was the cause of the output DTC.

HINT:

- Identify the malfunctioning tire pressure warning valve and transmitter by repeatedly decreasing the tire pressure for each tire.
- Record which "ID Tire Inflation Pressure" data (ID1 to ID4) corresponds to each tire.

Tire Pressure Monitor

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ID1 Tire Inflation Pressure	ID1 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure /	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	-100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)		
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm ² , 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm ² , -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm ² , 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm ² , 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm ² , 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm ² , -14 psi) is displayed for relative pressure, data has not been received.*

HINT:

*: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 .

(i) Check the Data List.

Result:

Result	Detection Condition
One of "ID Tire Inflation Pressure" data (ID1 to ID4) changed.	Normal
"ID Tire Inflation Pressure" data did not change.	Transmitter corresponding to DTC

NOTICE:

- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.
- Record the transmitter IDs and positions of transmitters that are normal.

(j) When the "ID Tire inflation Pressure" data (ID1 to ID4) has changed, repeat this procedure to identify the tire pressure warning valve and transmitter that corresponds to the DTC.

(k) When all of the "ID Tire Inflation Pressure" data (ID1 to ID4) have changed, identify the malfunctioning tire pressure warning valve and transmitter using the recorded ID numbers and output DTCs.

NEXT

2. REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Replace the identified tire pressure warning valve and transmitter with a new one .

HINT:

- Before installing a new tire pressure warning valve and transmitter, read and write down its transmitter ID.
- The IDs for the tire pressure warning valve and transmitters which are not replaced should be checked using the Techstream and recorded.

NEXT

3. REGISTRATION OF TRANSMITTER ID

(a) Register the transmitter ID for all wheels .

NEXT

4. PERFORM INITIALIZATION

(a) Perform initialization .

NEXT

5. READ VALUE USING TECHSTREAM

- Turn the power switch off.
- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

All tire pressure readings are equal to specified values.	B

B ▶ END

A ▶ REPLACE TIRE PRESSURE WARNING ECU

DTC	C2165/65	Abnormal Temperature Inside ID1 Tire
DTC	C2166/66	Abnormal Temperature Inside ID2 Tire
DTC	C2167/67	Abnormal Temperature Inside ID3 Tire
DTC	C2168/68	Abnormal Temperature Inside ID4 Tire

DESCRIPTION

Each tire pressure warning valve and transmitter measures the internal temperature of its tire as well as tire pressure, and transmits the information to the tire pressure warning ECU along with the transmitter ID. If the measured temperature is out of the specified range, the tire pressure warning ECU recognizes it as a malfunction, outputs DTCs, and the tire pressure warning light blinks for 1 minute and then remains on.

DTC No.	DTC Detection Condition	Trouble Area
C2165/65	Temperature inside the tire exceeds 119°C (246.2°F).	<ul style="list-style-type: none"> • Tires • Tire pressure warning valve and transmitter • Tire pressure warning ECU
C2166/66		
C2167/67		
C2168/68		

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	CHECK TIRES
----	-------------

(a) Check that the tires are not flat, and there is no indication of air pressure drop.

OK:

The tires are normal.

HINT:

If a tire is damaged, the tire pressure warning valve and transmitter may also have been damaged at the same time.

NG  REPLACE TIRE AND TIRE PRESSURE WARNING VALVE AND TRANSMITTER

OK

2.	IDENTIFY TRANSMITTER CORRESPONDING TO DTC
----	---

- (a) Set the tire pressure to the specified value .
- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG).
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (g) Display the "ID Tire Inflation Pressure" data for each wheel using the Techstream.
- (h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm², 5.8 psi) within 30 seconds.
- (i) Check the Data List.

HINT:

- *: It may take about 2 or 3 minutes until the values are displayed.
- When no "ID Tire Inflation Pressure" data has changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.

Result:

Result	Proceed to
Tire pressure values are not displayed.	A
All tire pressure readings are equal to specified values.	B

B ▶ END

A ▶ REPLACE TIRE PRESSURE WARNING ECU

DTC	C2171/71	Transmitter ID not Registered
-----	----------	-------------------------------

DESCRIPTION

The IDs of each tire pressure warning valve and transmitter are registered to the tire pressure warning ECU.

When the ECU detects that transmitter ID code is not registered in the ECU, a DTC is output.

DTC No.	DTC Detection Condition	Trouble Area
C2171/71	Transmitter ID code is not registered. (When an ID code is unregistered for 3 minutes or more)	Tire pressure warning ECU

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU if the ECU has been replaced.

PROCEDURE

1.	CONFIRM REGISTRATION CONDITION (REGISTERED ID CODES)
----	--

- Turn the power switch off.
- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- Check the values by referring to the table below.

Tire Pressure Monitor

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Registered ID1 code	Registered ID1 code/ min.: 0 max.: FFFFFFFF*	ID No. registered in transmitter ID1 displayed	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Registered ID2 code	Registered ID2 code/ min.: 0 max.: FFFFFFFF*	ID No. registered in transmitter ID2 displayed	-
Registered ID3 code	Registered ID3 code/ min.: 0 max.: FFFFFFFF*	ID No. registered in transmitter ID3 displayed	-
Registered ID4 code	Registered ID4 code/ min.: 0 max.: FFFFFFFF*	ID No. registered in transmitter ID4 displayed	-

HINT:

*: Displayed only when the ID No. is not registered.

OK:

The registered transmitter ID codes are displayed on the Techstream.

DTC	C2175/75	Vehicle Speed or RSSI Signal Error
-----	----------	------------------------------------

DESCRIPTION

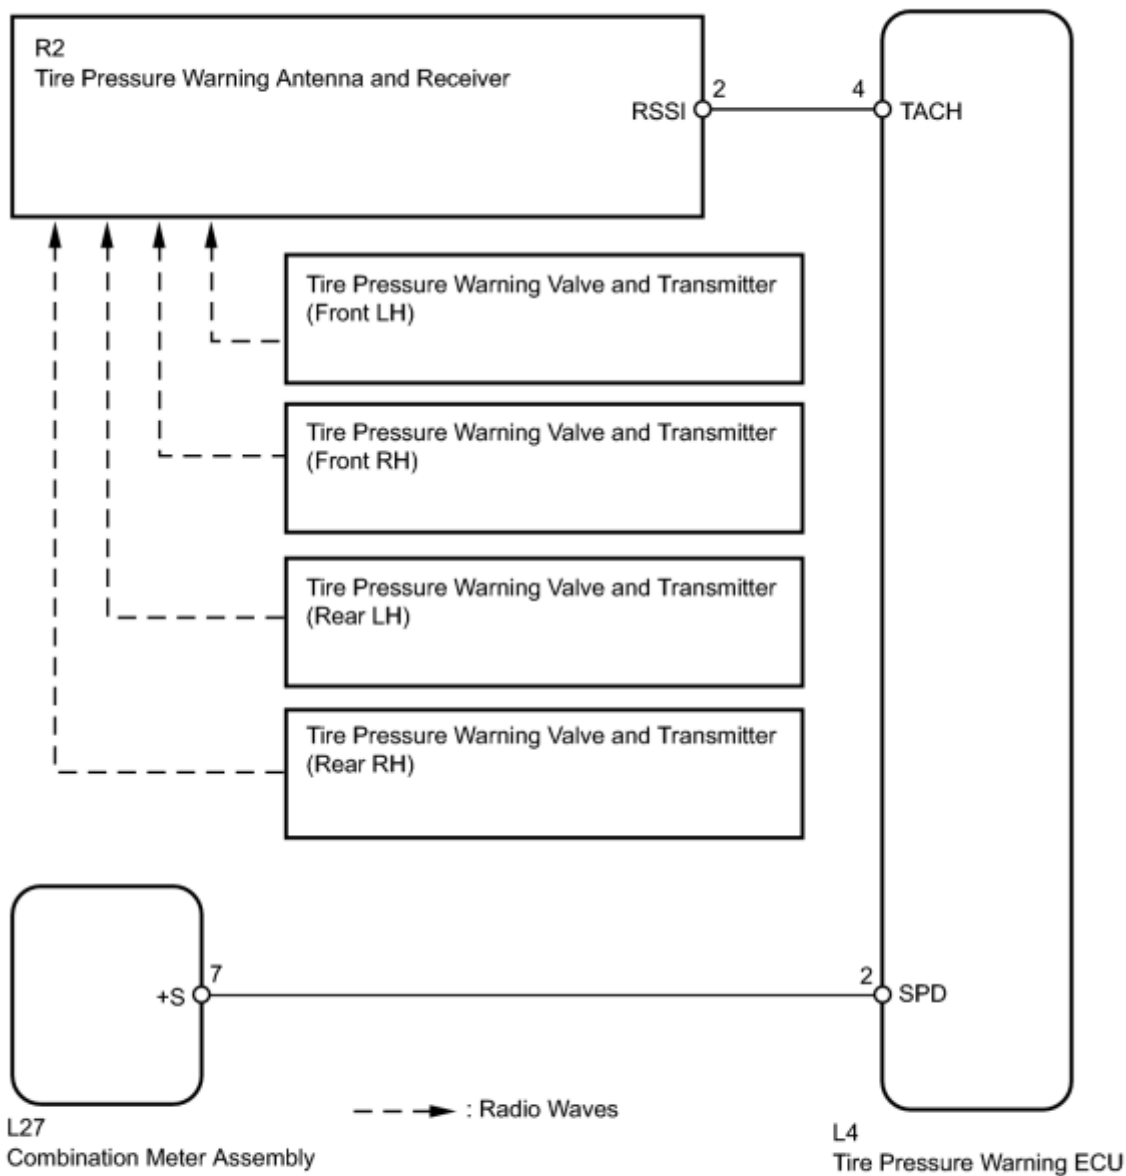

The tire pressure warning ECU receives a vehicle speed signal from the combination meter assembly and a RSSI signal from the tire pressure warning antenna and receiver. The tire pressure warning ECU uses these signals to detect DTCs C2121/21 to C2124/24 (No Signal from Transmitter) and DTC C2177/77 (Initialization not Completed).

DTC No.	DTC Detection Condition	Trouble Area
C2175/75	<p>After following condition (a) or (b) is met, the transmitter ID is not received from the tire pressure warning valve and transmitters for a total of 20 minutes:</p> <p>(a) No vehicle speed signal for 15 minutes</p> <p>(b) RSSI signal 49 mV or less, or 4.95 V or more twice continuously</p>	<ul style="list-style-type: none"> • Combination meter assembly • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU

HINT:

This DTC is set at the same time as DTCs C2121/21 to C2124/24 are being set.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU if the ECU has been replaced.

PROCEDURE

1. READ OUTPUT DTC (DTCs C2121/21 to C2124/24)

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.
- (f) Read DTCs.

Result:

Result	Proceed to
DTCs C2121/21 to C2124/24 are not output	A
DTCs C2121/21 to C2124/24 are output	B

NOTICE:

When DTCs C2121/21 to C2124/24 is output, troubleshoot that DTCs first. Then troubleshoot DTCs C2175/75.

B ► GO TO DTCs C2121/21 to C2124/24

A
▼

2. PERFORM SIGNAL CHECK (VEHICLE SPEED SIGNAL AND RSSI SIGNAL)

- (a) Enter the signal check mode in Test Mode Procedure .
- (b) Turn the power switch on (IG) and wait for 3 seconds or more to erase DTC C2196/96.
- (c) Drive the vehicle at 20 km/h (12 mph) or more for 10 seconds to erase DTC C2191/91.
- (d) Check for test mode DTCs.

Result:

Result	Proceed to
DTCs C2191/91 and C2196/96 are cleared	A
DTC C2191/91 is output	B
DTC C2196/96 is output	C

HINT:

DTCs C2181/81 to C2184/84 (Transmitter ID not Received) are output at this time, but they are not related to this check.

▼

3.	RECONFIRM DTC OUTPUT (DTC C2175/75)
----	-------------------------------------

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Drive the vehicle at 50 km/h or more for at least 20 minutes.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.
- (g) Read DTCs.

Result:

Result	Proceed to
DTC C2175/75 is not output	A
DTC C2175/75 is output	B

HINT:

If the DTC is not output, it can be determined that the system is functioning normally and that the DTC was stored due to radio wave interference.

B ▶ REPLACE TIRE PRESSURE WARNING ECU

A ▶ USE SIMULATION METHOD TO CHECK

DESCRIPTION

The signals are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU.

DTC No.	DTC Detection Condition	Trouble Area
C2176/76	Malfunction in the tire pressure warning ECU internal circuit	Tire pressure warning ECU

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU if the ECU has been replaced.

PROCEDURE

1. CHECK DTC OUTPUT (C2176/76)

- Clear the DTC **INFO**.
- Turn the power switch off.
- Turn the power switch on (IG) and check for DTC **INFO**.

OK:

DTC C2176/76 is not output.

NG **▶** REPLACE TIRE PRESSURE WARNING ECU

OK **▶** END

DESCRIPTION

Initialization is necessary if one of the following occurs:

- Tire pressure warning ECU is replaced.
- Tire pressure warning valve and transmitter is replaced.
- Tires with a different tire standard pressure are installed.
- Tires are rotated.
- A new vehicle is delivered.

DTC No.	DTC Detection Condition	Trouble Area
C2177/77	<ul style="list-style-type: none"> • All conditions below are met: <ul style="list-style-type: none"> • During initialization • Tire pressure warning valve and transmitter is not in stop mode • Signal is not received from tire pressure warning valve and transmitter for 20 minutes or more • Vehicle speed is more than 8 km/h (5 mph) for a total of 20 minutes 	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Tire pressure warning ECU • Tire pressure warning antenna and receiver • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.

- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	CHECK FREQUENCY RECEIVING CONDITION
----	-------------------------------------

(a) Check that the vehicle is not located in an area such as described below:

(1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in an area described above, the tire pressure warning light may come on after blinking 1 minute only in a particular area due to interfering radio frequencies.

(2) Devices using similar radio frequencies are used in the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio transmissions may be interrupted due to the surroundings, or devices installed by the user.

NG  CHECK IF ANY DEVICE IS INSTALLED BY USER

OK

2.	CONFIRM TIRE INFLATION PRESSURE (DATA LIST)
----	---

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Check the values by referring to the table below.

Tool Setting

Item	Contents
Tool Setting	0.5 V/DIV., 10 ms/DIV.

HINT:

- The shape of waves like figure appears approximately 2 times every 3 minutes.
- Figure is one example, and the voltage with few changes might be detected between 49 mV and 4.95 V.

NG  [CHECK HARNESS AND CONNECTOR \(TIRE PRESSURE WARNING ECU - ANTENNA AND RECEIVER\)](#)

OK  **REPLACE TIRE PRESSURE WARNING ECU**

3.	CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU - ANTENNA AND RECEIVER)
----	--

(a) Disconnect the L4 ECU connector.

(b) Disconnect the R2 tire pressure warning antenna and receiver connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L4-4 (TACH) - R2-2 (RSSI)	Always	Below 1 Ω
L4-4 (TACH) - Body ground	Always	10 k Ω or higher

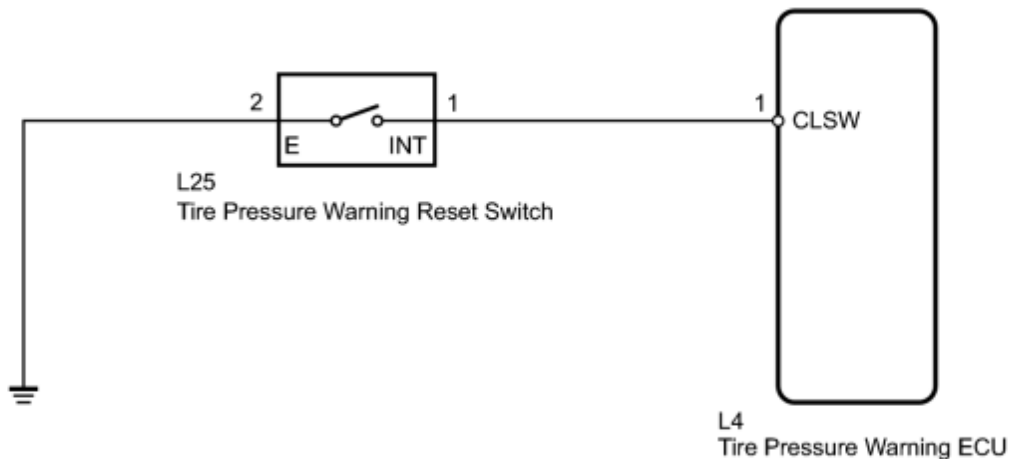

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE TIRE PRESSURE WARNING ANTENNA AND RECEIVER**

DESCRIPTION

Initialization can be started by pressing the tire pressure warning reset switch and holding it for 3 seconds or more. If the ECU receives the signal from the switch, the tire pressure warning light blinks 3 times (1 second on, 1 second off).

WIRING DIAGRAM

N

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU, after the ECU has been replaced.

PROCEDURE

1. CHECK TIRE PRESSURE WARNING RESET SWITCH FUNCTION

(a) Perform the tire pressure warning reset switch test in Test Mode Procedure **INFO**.

OK:

Reset switch ON

Tire pressure warning light comes on.

Reset switch OFF

Tire pressure warning light blinks.

NG **INSPECT TIRE PRESSURE WARNING RESET SWITCH**

OK **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	INSPECT TIRE PRESSURE WARNING RESET SWITCH
----	--

Component without harness connected:
(Tire Pressure Warning Reset Switch)

(a) Disconnect the tire pressure warning reset switch connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 (INT) - 2 (E)	ON	Below 1 Ω
	OFF	10 k Ω or higher

NG **REPLACE TIRE PRESSURE WARNING RESET SWITCH**

OK

3.	CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING RESET SW - TIRE PRESSURE WARNING ECU)
----	--

(a) Disconnect the tire pressure warning reset switch L25 connector and tire pressure warning ECU L4 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
-------------------	------------------	---------------------

Tester Connection	Switch Condition	Specified Condition
L4-1 (CLSW) - L25-1 (INT)	Always	Below 1 Ω
L4-1 (CLSW) - Body ground		10 k Ω or higher
L25-2 (E) - Body ground		Below 1 Ω

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  REPLACE TIRE PRESSURE WARNING ECU

DESCRIPTION

If the tire pressure warning ECU detects any trouble, the tire pressure warning light blinks (stays on after blinking for 1 minute) and tire pressure monitor is cancelled at the same time. At this time, the ECU records a DTC in the memory.

Connecting terminals TC and CG of the DLC3 makes the tire pressure warning light blink to output DTCs.

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU if the ECU has been replaced.

PROCEDURE

1. CHECK OPERATION OF TIRE PRESSURE WARNING LIGHT (ACTIVE TEST)

- (a) Turn the power switch off.

- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (f) Check the condition of the tire pressure warning light by using the Techstream.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Tire Pressure Warning System	Tire pressure warning light	Tire pressure warning light OFF or ON	Confirm that the vehicle is stopped, engine idling

OK:

The warning light turns on when using the Techstream.

NG  GO TO METER / GAUGE SYSTEM

OK

2.	CHECK HARNESS AND CONNECTOR (COMBINATION METER - TIRE PRESSURE WARNING ECU)
----	---

- (a) Disconnect the L27 combination meter connector.
- (b) Disconnect the L4 tire pressure warning ECU connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L27-3 (TIRE) - L4-5 (IND)	Always	Below 1 Ω
L27-3 (TIRE) - Body ground		10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  REPLACE TIRE PRESSURE WARNING ECU

DESCRIPTION

This is the power source for the tire pressure warning ECU.

WIRING DIAGRAM

6

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.

PROCEDURE

1. INSPECT FUSE (ECU-IG No. 2)

- Remove the ECU-IG No. 2 fuse from the instrument panel junction block.
- Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
EUC-IG No. 2	Always	Below 1 Ω

NG  REPLACE FUSE

OK

2. CHECK HARNESS AND CONNECTOR (ECU - BATTERY AND BODY GROUND)

*1

(a) Disconnect the L4 ECU connector.

P

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L4-7 (IG) - Body ground	Power switch on (IG)	11 to 14 V
	Power switch off	Below 1 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L4-9 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector to Tire Pressure Warning ECU
----	--

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

DESCRIPTION

DTC output mode is set by connecting terminals 13 (TC) and 4 (CG) of the DLC3. The DTCs are indicated by the blinking of the tire pressure warning light.

WIRING DIAGRAM

Y

HINT:

When various warning lights blink continuously, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in an ECU connected to this circuit may have occurred.

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization **INFO** after registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (DLC3 - TIRE PRESSURE WARNING ECU)
----	--

(a) Disconnect the L4 ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L4-3 (TC) - L61-13 (TC)	Always	Below 1 Ω
L61-4 (CG) - Body ground		

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

COMPONENTS

ILLUSTRATION

N*m (kgf*cm, ft.*lbf): Specified torque

● Non-reusable part

c

REMOVAL

1. REMOVE FRONT WHEEL

2. REMOVE REAR WHEEL

3. REMOVE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Remove the valve core and cap to release the air from the tire.

(b) After ensuring that a sufficient amount of air has been released, remove the nut and washer used to secure the tire pressure warning valve and transmitter. Drop the tire pressure warning valve and transmitter with the grommet into the tire.

NOTICE:

Keep the removed cap and valve core.

HINT:

The grommet may remain attached to the rim.

(c) After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead using the shoe of a tire remover.

Text in Illustration

*1	Tire
*2	Shoe

- Be careful not to damage the tire pressure warning valve and transmitter due to interference between the valve and the tire bead.
- Set the tire remover shoe as shown in the illustration.

Width (A):

10 to 20 mm (0.394 to 0.787 in.)

(d) Separate the upper bead.

(e) Take out the tire pressure warning valve and transmitter with the grommet from the tire and separate the lower bead.

(f) Remove the grommet from the tire pressure warning valve and transmitter.

INSTALLATION

NOTICE:

- Always use a new grommet, washer and nut when installing the tire pressure warning valve and transmitter.
- If installing a new tire pressure warning valve and transmitter, write down the ID number before installation.
- Check that there is no oil, water or lubricant around the rim hole, tire pressure warning valve and transmitter, washer and nut. Failing to do so may result in improper installation.

1. INSTALL TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Install a new grommet to the tire pressure warning valve and transmitter.

(b) Insert the tire pressure warning valve and transmitter into the valve installation hole. Insert it from the inside of the rim so that the printed surface can be seen.

Text in Illustration

*1	Printed Surface
*2	7-digit Number Transmitter ID

- Check that there is no visible deformation, damage, or other abnormalities on the tire pressure warning valve and transmitter.
- Check that there is no foreign matter on the grommet and around the rim hole.
- If the tire pressure warning valve and transmitter is installed upside down, it may be damaged or fail to transmit signals when driving at high speeds.

(c) Install a new washer on the tire pressure warning valve and transmitter with the grommet from the rim side and tighten a new nut.

Text in Illustration

*1	Tire Pressure Warning Valve and Transmitter
*2	Rim
*3	Grommet
*4	Washer
*5	Nut

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

- No further tightening is required once the nut is tightened to the

specified torque.

- Check that there is no foreign matter on the washer and nut.

(d) Set the wheel onto the mounting machine and install the lower bead. Position the main body of the tire pressure warning valve and transmitter in the shaded area shown in the illustration.

Text in Illustration

*1	Rim Rotating Direction
*2	Mount Tool of the Mounting Machine
*3	Rim
*4	Area for Tire Pressure Warning Valve and Transmitter

- If the tire pressure warning valve and transmitter is positioned outside this area, it will interfere with the tire bead and may be damaged.
- If the use of lubricant is required when installing the bead, do not apply lubricant directly to the tire pressure warning valve and transmitter.

c

(e) Install the upper bead.

NOTICE:

Make sure that the tire bead and tool do not interfere with the main body of the tire pressure warning valve and transmitter and that it is not clamped by the bead.

(f) Install the valve core.

(g) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

NOTICE:

No further tightening is required once the nut is tightened to the specified torque.

(h) Check for air leaks with soapy water.

If there is air leakage, push the valve core 2 or 3 times to remove any dirt attached to the valve core. If air continues leak, replace the grommet, washer and nut.

(i) Install the cap.

2. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

3. INSTALL REAR WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

4. INSPECT TIRES INFO

5. REGISTER TRANSMITTER ID

(a) Register all transmitter IDs INFO.

6. PERFORM INITIALIZATION

(a) Perform initialization INFO.

7. INSPECT TIRE PRESSURE WARNING SYSTEM

(a) Inspect the tire pressure warning system INFO.

DISPOSAL

NOTICE:

The tire pressure warning valve and transmitter is powered by a lithium battery. When disposing of the tire pressure warning valve and transmitter, remove the battery and dispose of it correctly.

1. DISPOSE OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Using the tip of a screwdriver, pry off the back cover.

c

(b) Cut the 2 terminals that connect the battery to the base board to remove the battery.

Text in Illustration

*1	Terminal
*2	Lithium Battery

c

HINT:

The battery and base board are covered with silicone.

P

REMOVAL

1. REMOVE BACK DOOR TRIM BOARD ASSEMBLY_ INFO

2. REMOVE BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY_ INFO

3. REMOVE BACK DOOR OPENER SWITCH ASSEMBLY

(a) Remove the back door opener switch assembly.

INSPECTION

1. INSPECT BACK DOOR OPENER SWITCH ASSEMBLY

(a) Check the operation of the opener switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
2 (E) - 3 (UL)	Back door opener switch not pushed	10 k Ω or higher
2 (E) - 3 (UL)	Back door opener switch pushed	Below 1 Ω

Text in Illustration

P

REMOVAL

1. REMOVE BACK DOOR STAY ASSEMBLY

NOTICE:

- Avoid touching the piston rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinder while servicing.
- Do not wear cotton gloves or other similar materials when handling the piston rod. Fibers may attach to the rod and result in gas leaks.
- Do not apply any horizontal load to the door stay in order to prevent the piston rod from deforming.

(a) Using a screwdriver, remove the stop ring along the groove.

HINT:

Tape the screwdriver tip before use.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Release the ball joint and remove the back door stay assembly.

NOTICE:

Remove the back door stay assembly while supporting the back door by hand.

2. REMOVE BACK DOOR STAY BOLT

(a) Remove the back door stay bolt.

3. REMOVE BACK DOOR UPPER DAMPER STAY BRACKET

(a) Remove the 2 bolts and back door upper damper stay bracket.

P

INSTALLATION

1. INSTALL BACK DOOR UPPER DAMPER STAY BRACKET

- (a) Clean the threaded portion on the vehicle body with a non-residue solvent.
- (b) Apply adhesive to the threads of the 2 bolts.

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

- (c) Install a new back door upper damper stay bracket with the 2 bolts.

Torque: **7.5 N·m (76 kgf·cm, 66in·lbf)**

2. INSTALL BACK DOOR STAY BOLT

- (a) Clean the threaded portion on the vehicle body with a non-residue solvent.
- (b) Apply adhesive to the threads of the back door stay bolt.

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

- (c) Install the back door stay bolt.

Torque: **22 N·m (224 kgf·cm, 16ft·lbf)**

3. INSTALL BACK DOOR STAY ASSEMBLY

NOTICE:

- Avoid touching the piston rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinder while servicing.

- Do not wear cotton gloves or other similar materials when handling the piston rod. Fibers may attach to the rod and result in gas leaks.
- Do not apply any horizontal load to the door stay in order to prevent the rod from deforming.

(a) When reusing the back door stay assembly:

(1) Install the 2 stop rings to the back door stay assembly.

(b) Install the back door stay assembly.

NOTICE:

Install the back door stay assembly while supporting the back door by hand.

(c) Check that the back door stay assembly is engaged in the ball joint and that the back door stay assembly cannot be pulled out.

DISPOSAL

1. DISPOSE OF BACK DOOR STAY ASSEMBLY

(a) Secure the back door stay assembly horizontally in a vise with the piston rod pulled out.

(b) Wear safety glasses. Use a metal saw to slowly cut a groove between A and B shown in the illustration to release the gas.

Area	Measurement
A-B	50 mm (1.97 in.)

NOTICE:

Although the gas inside the back door stay assembly is colorless, odorless and harmless, metal debris may scatter. Therefore, cover the back door stay assembly with a piece of cloth or other material.

P

DISASSEMBLY

1. REMOVE UPPER BACK DOOR TRIM PANEL ASSEMBLY

(a) Using a moulding remover, disengage the 4 clips and 4 claws, and remove the upper back door trim panel assembly.

2. REMOVE BACK DOOR SIDE GARNISH RH

(a) Disengage the 3 clips and 2 claws, and remove the back door side garnish RH.

3. REMOVE BACK DOOR SIDE GARNISH LH

(a) Disengage the 3 clips and 2 claws, and remove the back door side garnish LH.

4. REMOVE BACK DOOR TRIM BOARD ASSEMBLY

(a) Using a moulding remover, disengage the clip and claw.

(b) Using a moulding remover, disengage the clip and claw.

(c) Disengage the 9 clips and remove the back door trim board assembly as shown in the illustration.

5. REMOVE BACK DOOR TRIM BOARD

(a) Disengage the 5 clips and 2 guides, and remove the back door trim board.

6. REMOVE BACK DOOR LOCK STRIKER COVER

(a) Disengage the 2 claws and remove the back door lock striker cover.

7. REMOVE LOWER BACK DOOR STOPPER CUSHION

(a) Disengage the claws to remove the 2 lower back door stopper cushions.

8. REMOVE BACK DOOR LOCK STRIKER ASSEMBLY

(a) Using a T40 "TORX" socket wrench, remove the 2 screws and back door lock striker assembly.

9. REMOVE LOWER BACK DOOR STOPPER LH

(a) Remove the bolt and lower back door stopper LH.

10. REMOVE LOWER BACK DOOR STOPPER RH

HINT:

Use the same procedure for the RH side and LH side.

11. REMOVE BACK DOOR STAY ASSEMBLY LH INFO

12. REMOVE BACK DOOR STAY ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

13. REMOVE BACK DOOR STAY BOLT LH_ [INFO](#)

14. REMOVE BACK DOOR STAY BOLT RH

17. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY INFO

18. REMOVE FRONT DOOR TRIM BRACKET

(a) Remove the 2 screws and front door trim bracket.

19. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) Remove the front door service hole cover.

HINT:

Remove any remaining butyl tape from the door.

20. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

(a) Remove the grommet.

(b) Connect the power window regulator master switch assembly and move the front door glass sub-assembly so that the door glass bolts can be seen.

(c) Disconnect the cable from the negative (-) battery terminal and power window regulator master switch assembly.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected .

(d) Remove the 2 bolts.

NOTICE:

After the bolts are removed, do not allow the door glass to fall.

(e) Remove the front door glass sub-assembly as indicated by the arrows, in the order shown in the illustration.

NOTICE:

Do not damage the door glass.

21. REMOVE FRONT DOOR WINDOW REGULATOR ASSEMBLY

(a) Disconnect the connector.

(b) Loosen the temporary bolt.

Text in Illustration

*1	Temporary Bolt
----	----------------

NOTICE:

Do not remove the temporary bolt. If the temporary bolt is removed, the front door window regulator may fall and cause damage.

(c) Remove the 5 bolts.

(d) Remove the front door window regulator assembly.

(e) Remove the temporary bolt from the front door window regulator assembly.

22. REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

(a) Using a T25 "TORX" socket wrench, remove the 3 screws and front power window regulator motor assembly.

23. REMOVE FRONT DOOR STIFFENER CUSHION

(a) Remove the 2 bolts and front door stiffener cushion.

Text in Illustration

*1	Double-sided Tape
----	-------------------

24. REMOVE FRONT DOOR GLASS RUN

(a) Remove the front door glass run.

25. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Remove the bolt and front door rear lower frame sub-assembly as shown in the illustration.

26. REMOVE FRONT DOOR OUTSIDE HANDLE COVER WITH LOCK CYLINDER ASSEMBLY (for Driver Side)

(a) Remove the hole plug.

(b) Using a T30 "TORX" socket wrench, loosen the screw and remove the front door outside handle cover with lock cylinder assembly.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

27. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)

(a) Using a screwdriver, disengage the claw and 2 guides, and remove the front door outside handle cover as shown in the illustration.

28. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)

(a) Remove the hole plug.

(b) Using a T30 "TORX" socket wrench, loosen the screw and remove the front door outside handle cover.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

29. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) w/ smart key system

(1) Disengage the 2 claws.

(2) Disconnect the connector.

(b) Move the lever in the direction indicated by the arrow in the illustration.

(c) Remove the front door outside handle assembly as shown in the illustration.

30. REMOVE FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the front door front outside handle pad.

31. REMOVE FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the front door rear outside handle pad.

32. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Disconnect the connector.

P

(b) Using a T30 "TORX" socket wrench, remove the 3 screws.

(c) Slide the front door lock assembly downward, and remove the front door lock assembly and cables as a unit.

P

(d) Remove the door lock wiring harness seal from the front door lock assembly.

33. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

P

(a) Using a screwdriver, disengage the 7 claws as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

(b) Remove the front door lock remote control cable assembly as shown in the illustration.

P

34. REMOVE FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

P

(a) Remove the front door inside locking cable assembly as shown in the illustration.

35. REMOVE ELECTRICAL KEY WIRE HARNESS (w/ Smart Key System)

P

(a) Disconnect the connector.

(b) Disengage the 4 clamps and remove the electrical key wire harness.

36. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a T30 "TORX" socket wrench, loosen the screw.

(b) Slide the front door outside handle frame sub-assembly to disengage the door handle nut and claw of the front door outside handle frame sub-assembly, and then remove it.

37. REMOVE FRONT DOOR LOCK OPEN ROD

(a) Remove the front door lock open rod as indicated by the arrows, in the order shown in the illustration.

38. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the 3 bolts and front door check assembly.

39. REMOVE FRONT DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 18 clips and remove the front door weatherstrip.

40. REMOVE FRONT DOOR PANEL CUSHION

(a) Disengage the 2 claws and remove the 2 front door panel cushions.

41. REMOVE FRONT DOOR BELT MOULDING ASSEMBLY_ [INFO](#)

42. REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING_ [INFO](#)

43. REMOVE NO. 1 BLACK OUT TAPE_ [INFO](#)

44. REMOVE FRONT DOOR OUTSIDE STRIPE_ [INFO](#)

45. REMOVE FRONT DOOR LOWER OUTSIDE STRIPE_ [INFO](#)

46. REMOVE FRONT DOOR REAR OUTSIDE STRIPE_ [INFO](#)

ADJUSTMENT

P

Text in Illustration

*1	Centering Bolt
*2	Standard Bolt

CAUTION:

Before adjusting the door positions of vehicles equipped with side and curtain shield airbags, be sure to disconnect the battery. After adjustment, check that the SRS warning light is operating normally and there are no SRS DTCs output.

HINT:

- Use the same procedure for the RH side and LH side.
- The following procedure is for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart [INFO](#).

1. INSPECT FRONT DOOR

(a) Check that the clearance measurements of areas *1 through *11 are within each standard range.

P

Standard Clearance

Area	Measurement	Area	Measurement
*1	3.57 to 6.57 mm (0.141 to 0.259 in.)	*2	4.57 to 7.57 mm (0.180 to 0.298 in.)
*3	3.57 to 6.57 mm (0.141 to 0.259 in.)	*4	5.17 to 8.17 mm (0.204 to 0.322 in.)
*5	2.8 to 5.8 mm (0.110 to 0.228 in.)	*6	-1.3 to 1.7 mm (-0.0512 to 0.0669 in.)
*7	2.7 to 5.7 mm (0.106 to 0.1224 in.)	*8	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)
*9	4.15 to 7.15 mm (0.163 to 0.282 in.)	*10	2.8 to 5.8 mm (0.110 to 0.228 in.)
*11	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)	-	-

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

3. REMOVE REAR DECK FLOOR BOX [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

6. ADJUST FRONT DOOR

(a) Using SST, loosen the hinge bolts on the vehicle body and adjust the door position.

SST: 09812-00010

(b) Tighten the hinge bolts on the vehicle body after the adjustment.

Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

(c) Loosen the hinge bolts on the door and adjust the door position.

(d) Tighten the hinge bolts on the door after the adjustment.

Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

(e) Using a T40 "TORX" socket wrench, slightly loosen the striker mounting screws.

(f) Using a brass bar and a hammer, hit the striker to adjust its position.

(g) Using a T40 "TORX" socket wrench, tighten the striker mounting screws after the adjustment.

Torque: **23 N·m (235 kgf·cm, 17ft·lbf)**

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

8. INSTALL REAR NO. 3 FLOOR BOARD_ **INFO**

9. INSTALL REAR DECK FLOOR BOX_ **INFO**

10. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type)_ **INFO**

11. INSPECT SRS WARNING LIGHT

INFO

REASSEMBLY

1. REPAIR INSTRUCTION_ [INFO](#)
2. INSTALL NO. 1 BLACK OUT TAPE_ [INFO](#)
3. INSTALL FRONT DOOR LOWER OUTSIDE STRIPE_ [INFO](#)
4. INSTALL FRONT DOOR REAR OUTSIDE STRIPE_ [INFO](#)
5. INSTALL FRONT DOOR OUTSIDE STRIPE_ [INFO](#)
6. INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING_ [INFO](#)
7. INSTALL FRONT DOOR BELT MOULDING ASSEMBLY_ [INFO](#)
8. INSTALL FRONT DOOR PANEL CUSHION

(a) Engage the 2 claws and install 2 new front door panel cushions.

P

9. INSTALL FRONT DOOR WEATHERSTRIP

(a) Engage the 18 clips and install the front door weatherstrip.

10. INSTALL FRONT DOOR CHECK ASSEMBLY

(a) Apply MP grease to the sliding areas of the front door check assembly.

(b) Apply adhesive to the threads of the bolt (A).

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(c) Install the front door check assembly with the 3 bolts.

(A) - Torque: **30 N·m (306 kgf·cm, 22ft·lbf)**

(B) - Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

11. INSTALL FRONT DOOR LOCK OPEN ROD

(a) Install the front door lock open rod as indicated by the arrows, in the order shown in the illustration.

P

12. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts on the front door outside handle frame sub-assembly.

(b) Engage the door handle nut and claw.

P

(c) Using a T30 "TORX" socket wrench, install the front door outside handle frame sub-assembly with the screw.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

13. INSTALL ELECTRICAL KEY WIRE HARNESS (w/ Smart Key System)

(a) Engage the 4 clamps and install the electrical key wire harness.

P

(b) Connect the connector.

14. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

P

(a) Install the front door inside locking cable assembly as shown in the illustration.

15. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

P

(a) Install the front door lock remote control cable assembly as shown in the illustration.

P

(b) Engage the 7 claws as shown in the illustration.

16. INSTALL FRONT DOOR LOCK ASSEMBLY

NOTICE:

- When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the connector with a new one.
- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion. This may result in a malfunction of the front door lock assembly.

(a) Apply MP grease to the sliding parts of the front door lock assembly.

(b) Install a new door lock wiring harness seal to the front door lock assembly.

(c) Insert the front door lock open rod to the front door lock assembly.

(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.

(e) Using a T30 "TORX" socket wrench, install the front door lock assembly with the 3 screws.

Torque: **5.0 N·m (51 kgf·cm, 44in·lbf)**

(f) Connect the connector.

17. INSTALL FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Engage the 2 claws and install the front door rear outside handle pad.

18. INSTALL FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Engage the 3 claws and install the front door front outside handle pad.

19. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.

(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame, then slide the front door outside handle assembly toward the front of the vehicle to install it.

(c) Move the lever back in the direction indicated by the arrow in the illustration to lock the door outside handle assembly.

(d) w/ smart key system:

(1) Connect the connector.

(2) Engage the 2 claws.

20. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)

(a) Engage the claw and 2 guides, and install the front door outside handle cover to the front door lock cylinder.

21. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)

(a) Using a T30 "TORX" socket wrench, install the front door outside handle cover with the screw.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

(b) Install the hole plug.

22. INSTALL FRONT DOOR OUTSIDE HANDLE COVER WITH LOCK CYLINDER ASSEMBLY (for Driver Side)

(a) Install the front door outside handle cover with lock cylinder assembly.

HINT:

Make sure that the front door lock cylinder rod is inserted into the front door lock assembly.

(b) Using a T30 "TORX" socket wrench, install the front door lock cylinder with the screw.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

(c) Install the hole plug.

23. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Install the front door rear lower frame sub-assembly with the bolt as shown in the illustration.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

P

24. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run.

P

25. INSTALL FRONT DOOR STIFFENER CUSHION

(a) When reusing the front door stiffener cushion:

- (1) Clean the front door stiffener cushion.
- (2) Remove the double-sided tape from the front door stiffener cushion.
- (3) Wipe off any tape adhesive residue with cleaner.

(4) Apply new double-sided tape to the front door stiffener cushion as shown in the illustration.

P

Area	Dimension
*1	40.0 mm (1.575 in.)
*2	17.0 mm (0.669 in.)
*3	3.0 mm (0.118 in.)

(b) Clean the front door panel sub-assembly.

(c) Insert the front door stiffener cushion with the 2 bolts.

Text in Illustration

*1	Double-sided Tape
----	-------------------

P

26. INSTALL FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

NOTICE:

The regulator arm must be below the intermediate position when installing the power window regulator motor.

P

(a) Using a T25 "TORX" socket wrench, install the front power window regulator motor assembly with the 3 screws.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

HINT:

A new front window regulator uses self-tapping screws to thread new installation holes when the self-tapping screws are inserted.

27. INSTALL FRONT DOOR WINDOW REGULATOR ASSEMBLY

(a) Apply MP grease to the sliding parts of the front door window regulator assembly.

(b) Install the temporary bolt to the front door window regulator assembly.

P

(c) Temporarily install the front door window regulator assembly.

Text in Illustration

*1	Temporary Bolt
----	----------------

(d) Tighten the temporary bolt and 5 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

(e) Connect the connector.

28. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

(a) Connect the cable to the negative (-) battery terminal.

(b) Connect the power window regulator master switch assembly and move the front door glass sub-assembly so that the door glass bolts can be seen.

(c) Disconnect the cable from the negative (-) battery terminal and power window regulator master switch assembly.

(d) Insert the front door glass sub-assembly into the front door panel along the front door glass run as indicated by the arrows, in the order shown in the illustration.

(e) Install the front door glass sub-assembly with the 2 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

(f) Install the grommet.

(g) Connect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

29. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the front door panel.

(b) Pass the front door lock remote control cable assembly and front door inside locking cable assembly through a new front door service hole cover.

(c) Attach the front door service hole cover according to the reference points on the front door panel.

Text in Illustration

*1	Reference Point
----	-----------------

NOTICE:

Securely install the front door service hole cover preventing wrinkles and air bubbles.

30. INSTALL FRONT DOOR TRIM BRACKET

(a) Install the front door trim bracket with the 2 screws.

31. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY INFO

32. INSTALL DOOR FRAME GARNISH

(a) Engage the clip to install a new door frame garnish.

P

33. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY_ INFO

34. INSTALL OUTER MIRROR INSTALL HOLE COVER_ INFO

35. INSTALL OUTER MIRROR PROTECTOR_ INFO

36. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP

P

(a) Engage the 7 claws and install the front door inner glass weatherstrip to the front door trim board sub-assembly as shown in the illustration.

37. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Connect the front door lock remote control cable assembly and front door inside locking cable assembly to the front door inside handle.

P

(b) Engage the 2 claws and install the front door inside handle sub-assembly to the front door trim board sub-assembly.

38. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Engage the 9 clips and install the front door trim board sub-assembly.

(b) Install the 2 screws.

(c) Remove the 2 pieces of protective tape.

39. INSTALL COURTESY LIGHT ASSEMBLY #NFC

40. INSTALL DOOR ARMREST COVER

(a) Install the door armrest cover.

41. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side)

(a) Connect the connector.

P

(b) Engage the 7 claws and 3 guides, and install the power window regulator master switch assembly with front door armrest base panel.

42. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side) INFO

43. INSTALL ASSIST GRIP COVER

(a) Engage the 6 claws, 2 clips and 3 guides, and install the assist grip cover.

P

44. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Engage the 3 claws and install the front door inside handle bezel plug.

45. INITIALIZE POWER WINDOW CONTROL SYSTEM

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

ON-VEHICLE INSPECTION

1. INSPECT HOOD SUB-ASSEMBLY

(a) Check that the clearance measurements of areas *1 through *4 are within each standard range.

P

Standard Clearance

Area	Measurement	Area	Measurement
*1	2.0 to 6.0 mm (0.0787 to 0.236 in.)	*2	2.0 to 6.0 mm (0.0787 to 0.236 in.)
*3	2.5 to 5.5 mm (0.0984 to 0.217 in.)	*4	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)

DISASSEMBLY

1. REMOVE HOOD AUXILIARY CATCH HOOK ASSEMBLY

(a) Remove the 2 bolts and hood auxiliary catch hook assembly.

2. REMOVE HOOD INSULATOR

(a) Using a clip remover, remove the 6 clips and hood insulator.

3. REMOVE WASHER NOZZLE SUB-ASSEMBLY [INFO](#)

4. DISCONNECT WASHER HOSE ASSEMBLY

(a) Using a clip remover, disengage the 6 clips and disconnect the washer hose assembly.

5. REMOVE HOOD STAY HOLDER

(a) Disengage the 2 claws and remove the hood stay holder.

6. REMOVE HOOD SUPPORT ROD

(a) Disengage the 3 claws and remove the hood support rod.

7. REMOVE HOOD STAY BRACKET

(a) Remove the bolt and hood stay bracket.

P

ADJUSTMENT

P

Text in Illustration

*1	Centering Bolt
*2	Standard Bolt

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts installed. Substitute the centering bolts with standard bolts when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart [INFO](#).

1. INSPECT HOOD SUB-ASSEMBLY [INFO](#)

2. ADJUST HOOD SUB-ASSEMBLY

(a) Horizontally and vertically adjust the hood.

P

(1) Loosen the 4 hinge bolts of the hood.

(2) Adjust the clearance between the hood and front fender by moving the hood.

(3) Tighten the 4 hinge bolts after the adjustment.

Torque: **13 N·m (133 kgf·cm, 10ft·lbf)**

(b) Adjust the height of the front end of the hood using the cushion rubbers.

P

(1) Adjust the 2 cushion rubbers so that the heights of the hood and fender are aligned.

HINT:

Raise or lower the front end of the hood by turning the 2 cushion rubbers.

(c) Adjust the hood lock.

P

(1) Loosen the 3 bolts.

(2) Tighten the bolts after the adjustment.

Torque: **7.5 N·m (77 kgf·cm, 66in·lbf)**

(3) Check that the striker can engage with the hood lock smoothly.

REASSEMBLY

1. INSTALL HOOD STAY BRACKET

(a) Install the hood stay bracket with the bolt.

2. INSTALL HOOD SUPPORT ROD

(a) Engage the 3 claws and install the hood support rod.

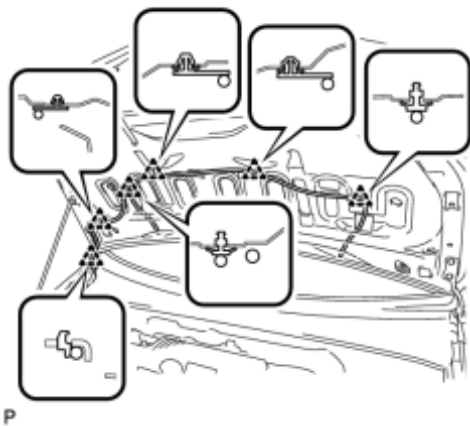

3. INSTALL HOOD STAY HOLDER

(a) Engage the 2 claws and install the hood stay holder.

4. CONNECT WASHER HOSE ASSEMBLY

(a) Engage the 6 clips and connect the washer hose assembly.

5. INSTALL WASHER NOZZLE SUB-ASSEMBLY [INFO](#)

6. INSPECT WASHER NOZZLE SUB-ASSEMBLY [INFO](#)

7. ADJUST WASHER NOZZLE SUB-ASSEMBLY [INFO](#)

8. INSTALL HOOD INSULATOR

(a) Install the hood insulator with the 6 clips.

9. INSTALL HOOD AUXILIARY CATCH HOOK ASSEMBLY

(a) Install the hood auxiliary catch hook assembly with the 2 bolts.

3. REMOVE REAR NO. 3 FLOOR BOARD INFO

4. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG

(a) Using a moulding remover, disengage the 3 claws and remove the rear door inside handle bezel plug.

5. REMOVE DOOR ASSIST GRIP COVER

(a) Using a moulding remover, disengage the 6 claws, 2 clips and 3 guides, and remove the door assist grip cover.

6. REMOVE REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH REAR DOOR ARMREST BASE PANEL

(a) Disengage the 7 claws and 2 guides.

P

(b) Disconnect the connector and remove the rear power window regulator switch assembly with rear door armrest base panel.

7. REMOVE REAR DOOR ARMREST COVER

P

(a) Remove the rear door armrest cover.

8. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

P

(a) Put protective tape around the rear door panel.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Remove the 2 screws.

(c) Using a clip remover, disengage the 8 clips.

(d) Pull out the rear door trim board sub-assembly in the direction indicated by the arrow in the illustration.

(e) Raise the rear door trim board sub-assembly and remove the rear door trim board sub-assembly together with the rear door inner glass weatherstrip.

(f) Disengage the 2 claws and disconnect the rear door inside handle sub-assembly.

(g) for 8 Speakers:

(1) Disconnect the connector.

9. REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disconnect the rear door lock remote control cable assembly and rear door inside locking cable assembly, and remove the rear door inside handle sub-assembly.

10. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP

(a) Disengage the 7 claws and remove the rear door inner glass weatherstrip from the rear door trim board sub-assembly as shown in the illustration.

11. REMOVE REAR NO. 2 SPEAKER ASSEMBLY (for 8 Speakers) INFO

12. REMOVE REAR DOOR FRAME GARNISH

(a) Disengage the clip and remove the rear door frame garnish.

HINT:

This garnish needs to be replaced with a new one because the clip will break when removing the rear door frame garnish.

13. REMOVE REAR DOOR SPEAKER COVER (for 4 Speakers)

(a) Disconnect the connector.

(b) Using a drill bit with a diameter of less than 4 mm (0.158 in.), drill out the 3 rivet heads and remove the rear door speaker cover.

- Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill out the rivet head.
- Be careful as the cut rivet will be very hot.

P

(c) Continue drilling and push out the remaining rivet fragments.

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the door.

14. REMOVE REAR SPEAKER ASSEMBLY (for 6 or 8 Speakers) INFO

15. REMOVE REAR DOOR TRIM BRACKET

P

(a) Remove the 2 screws and rear door trim bracket.

16. REMOVE REAR DOOR SERVICE HOLE COVER

(a) Disconnect the 2 connectors.

(b) Disengage the clamp and remove the rear door service hole cover.

HINT:

Remove any remaining butyl tape from the door.

17. REMOVE REAR DOOR CHECK ASSEMBLY

(a) Remove the 3 bolts and rear door check assembly.

18. REMOVE REAR DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 18 clips and remove the front door weatherstrip.

P

19. REMOVE REAR DOOR GLASS RUN

P

(a) Remove the rear door glass run.

20. REMOVE REAR DOOR WINDOW GUIDE SUB-ASSEMBLY

P

(a) Remove the screw.

(b) Remove the bolt and rear door window guide sub-assembly.

21. REMOVE REAR DOOR REAR GUIDE SEAL

(a) Loosen the temporary screw.

Text in Illustration

*1 Temporary Screw

- (b) Remove the 2 screws and rear door rear guide seal.
- (c) Remove the temporary screw from the rear door window division bar sub-assembly.

22. REMOVE REAR DOOR GLASS SUB-ASSEMBLY

- (a) Connect the rear power window regulator motor connector.
- (b) Connect the power window regulator switch assembly and move the rear door glass sub-assembly so that the door glass bolts can be seen.
- (c) Disconnect the power window regulator switch assembly and rear power window regulator motor connector.
- (d) Disconnect the cable from the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

(e) Remove the 2 bolts and rear door glass sub-assembly as shown in the illustration.

- After the bolts are removed, do not allow the door glass to fall.
- Do not damage the door glass.

23. REMOVE REAR DOOR WINDOW REGULATOR ASSEMBLY

- (a) Loosen the temporary bolt.

Text in Illustration

*1	Temporary Bolt
----	----------------

NOTICE:

Do not remove the temporary bolt. If the temporary bolt is removed, the rear door window regulator may fall and cause damage.

P

(b) Remove the 5 bolts.

(c) Remove the rear door window regulator assembly.

(d) Remove the temporary bolt from the rear door window regulator assembly.

24. REMOVE REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY

P

(a) Using a T25 "TORX" socket wrench, remove the 3 screws and rear power window regulator motor assembly.

25. REMOVE REAR DOOR CUSHION

(a) Remove the 2 bolts.

P

(b) Disengage the 2 guides and remove the rear door cushion.

Text in Illustration

*1	Double-sided Tape
----	-------------------

26. REMOVE REAR DOOR LOCK ASSEMBLY

P

(a) Using a T30 "TORX" socket wrench, remove the 3 screws.

(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.

(c) Remove the door lock wiring harness seal from the rear door lock assembly.

27. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 2 claws as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

(b) Remove the rear door lock remote control cable assembly as shown in the illustration.

28. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 4 claws as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

(b) Remove the rear door inside locking cable assembly as shown in the illustration.

P

29. REMOVE REAR DOOR OUTSIDE HANDLE COVER

P

(a) Using a T30 "TORX" socket wrench, loosen the screw.

HINT:

The screw cannot be removed because it is integrated into the rear door outside handle frame sub-assembly.

(b) Disengage the claw and remove the rear door outside handle cover.

30. REMOVE REAR DOOR OUTSIDE HANDLE ASSEMBLY

P

(a) Pull and hold the release plate of the rear door outside handle frame sub-assembly as shown in the illustration.

NOTICE:

The release plate may interfere with the rear door outside handle assembly and may be damaged when removing the rear door outside handle assembly, unless the release plate of the rear door outside handle frame sub-assembly is pulled and held.

P

(b) Move the lever in the direction indicated by the arrow in the illustration.

(c) Remove the rear door outside handle assembly as shown in the illustration.

31. REMOVE REAR DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the rear door front outside handle pad.

32. REMOVE REAR DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the rear door rear outside handle pad.

33. REMOVE REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a T30 "TORX" socket wrench, loosen the screw.

(b) Slide the rear door outside handle frame sub-assembly to disengage the door handle nut and claw of the rear door outside handle frame sub-assembly, and then remove it.

34. REMOVE REAR DOOR PANEL CUSHION

(a) Disengage the 2 claws and remove the 2 rear door panel cushions.

35. REMOVE REAR DOOR BELT MOULDING ASSEMBLY [INFO](#)

36. REMOVE REAR DOOR FRONT WINDOW FRAME MOULDING [INFO](#)

37. REMOVE NO. 2 BLACK OUT TAPE [INFO](#)

38. REMOVE REAR DOOR OUTSIDE STRIPE [INFO](#)

39. REMOVE REAR DOOR UPPER OUTSIDE STRIPE [INFO](#)

40. REMOVE REAR DOOR LOWER OUTSIDE STRIPE_ 

ADJUSTMENT

P

Text in Illustration

*1	Centering Bolt
*2	Standard Bolt

CAUTION:

Before adjusting the door positions of vehicles equipped with side and curtain shield airbags, be sure to disconnect the battery. After adjustment, check that the SRS warning light is operating normally and there are no SRS DTCs output.

HINT:

- Use the same procedure for the RH side and LH side.
- The following procedure is for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed. Substitute the centering bolts with standard bolts when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart [INFO](#).

1. INSPECT REAR DOOR

(a) Check that the clearance measurements of areas *1 through *15 are within each standard range.

P

Standard Clearance

Area	Measurement	Area	Measurement
*1	3.57 to 6.57 mm (0.141 to 0.259 in.)	*2	6.17 to 9.17 mm (0.243 to 0.361 in.)
*3	3.57 to 6.57 mm (0.141 to 0.259 in.)	*4	5.97 to 8.97 mm (0.235 to 0.353 in.)
*5	4.62 to 7.62 mm (0.182 to 0.300 in.)	*6	1.72 to 4.72 mm (0.0677 to 0.186 in.)
*7	2.7 to 5.7 mm (0.106 to 0.224 in.)	*8	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)
*9	2.7 to 5.7 mm (0.106 to 0.224 in.)	*10	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)
*11	4.15 to 7.15 mm (0.163 to 0.282 in.)	*12	2.7 to 5.7 mm (0.106 to 0.224 in.)
*13	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)	*14	2.8 to 5.8 mm (0.110 to 0.228 in.)
*15	-1.3 to 1.7 mm (-0.0512 to 0.0669 in.)	-	-

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

3. REMOVE REAR DECK FLOOR BOX [INFO](#)

4. REMOVE REAR NO. 3 FLOOR BOARD [INFO](#)

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

6. ADJUST REAR DOOR

(a) Using SST, loosen the hinge bolts on the vehicle body and adjust the door position.

SST: 09812-00010

(b) Tighten the hinge bolts on the vehicle body after the adjustment.

Torque: **26 N·m (265 kgf·cm, 19ft·lbf)**

(c) Loosen the hinge bolts on the door and adjust the door position.

(d) Tighten the hinge bolts on the door after the adjustment.

Torque: **26 N·m (265 kgf·cm, 19ft·lbf)**

(e) Using a T40 "TORX" socket wrench, slightly loosen the striker mounting screws.

(f) Using a brass bar and a hammer, hit the striker to adjust its position.

(g) Using a T40 "TORX" socket wrench, tighten the striker mounting screws after the adjustment.

Torque: **23 N·m (235 kgf·cm, 17ft·lbf)**

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

8. INSTALL REAR NO. 3 FLOOR BOARD_ [INFO](#)

9. INSTALL REAR DECK FLOOR BOX_ [INFO](#)

10. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type)_ [INFO](#)

11. INSPECT SRS WARNING LIGHT

[INFO](#)

1. REPAIR INSTRUCTION [INFO](#)
2. INSTALL NO. 2 BLACK OUT TAPE [INFO](#)
3. INSTALL REAR DOOR LOWER OUTSIDE STRIPE [INFO](#)
4. INSTALL REAR DOOR UPPER OUTSIDE STRIPE [INFO](#)
5. INSTALL REAR DOOR OUTSIDE STRIPE [INFO](#)
6. INSTALL REAR DOOR FRONT WINDOW FRAME MOULDING [INFO](#)
7. INSTALL REAR DOOR BELT MOULDING ASSEMBLY [INFO](#)
8. INSTALL REAR DOOR PANEL CUSHION

(a) Engage the 2 claws and install 2 new rear door panel cushions.

P

9. INSTALL REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts of the rear door outside handle frame sub-assembly.

(b) Engage the door handle nut and claw.

(c) Using a T30 "TORX" socket wrench, install the rear door outside handle frame sub-assembly with the screw.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

10. INSTALL REAR DOOR REAR OUTSIDE HANDLE PAD

(a) Engage the 2 claws and install the rear door rear outside handle pad.

11. INSTALL REAR DOOR FRONT OUTSIDE HANDLE PAD

(a) Engage the 3 claws to install the rear door front outside handle pad.

12. INSTALL REAR DOOR OUTSIDE HANDLE ASSEMBLY

(a) Insert the front end of the rear door outside handle assembly into the rear door outside handle frame.

NOTICE:

If the bellcrank lever is not pulled and held when installing the outside handle, the bellcrank lever will interfere with the outside handle and the release plate will be damaged.

(b) Insert the rear end of the rear door outside handle assembly into the rear door outside handle frame. Next, slide the rear door outside handle assembly toward the front of the vehicle to install it.

(c) Move the lever back in the direction indicated by the arrow in the illustration to lock the door outside handle assembly.

13. INSTALL REAR DOOR OUTSIDE HANDLE COVER

(a) Engage the claw and install the rear door outside handle cover.

(b) Using a T30 "TORX" socket wrench, install the rear door outside handle cover with the screw.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

14. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Install the rear door inside locking cable assembly as shown in the illustration.

P

(b) Engage the 4 claws as shown in the illustration.

P

15. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

P

(a) Install the rear door lock remote control cable assembly as shown in the illustration.

P

(b) Engage the 2 claws as shown in the illustration.

16. INSTALL REAR DOOR LOCK ASSEMBLY

NOTICE:

- When reusing the removed rear door lock assembly, replace the door lock wiring harness seal on the connector with a new one.

- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion. This may result in a malfunction of the rear door lock assembly.

(a) Apply MP grease to the sliding parts of the rear door lock assembly.

(b) Install a new door lock wiring harness seal to the rear door lock assembly.

(c) Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.

(d) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.

(e) Using a T30 "TORX" socket wrench, install the rear door lock assembly with the 3 screws.

Torque: **5.0 N·m (51 kgf·cm, 44in·lbf)**

17. INSTALL REAR DOOR CUSHION

(a) When reusing the rear door cushion:

- (1) Clean the rear door cushion.
- (2) Remove the double-sided tape from the rear door cushion.
- (3) Wipe off any tape adhesive residue with cleaner.

(4) Apply new double-sided tape to the rear door cushion as shown in the

illustration.

Area	Dimension
*1	54.0 mm (2.126 in.)
*2	17.0 mm (0.669 in.)
*3	3.0 mm (0.118 in.)

P

(b) Clean the rear door panel sub-assembly.

(c) Engage the 2 guides.

P

(d) Install the rear door cushion with the 2 bolts.

Text in Illustration

*1	Double-sided Tape
----	-------------------

18. INSTALL REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY

NOTICE:

The regulator arm must be below the intermediate position when installing the rear power window regulator motor assembly.

(a) Using a T25 "TORX" socket wrench, install the rear power window regulator motor assembly with the 3 screws.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

HINT:

A new rear window regulator uses self-tapping screws to thread new installation holes when the self-tapping screws are inserted.

19. INSTALL REAR DOOR WINDOW REGULATOR ASSEMBLY

- (a) Apply MP grease to the sliding parts of the rear door window regulator assembly.
- (b) Install the temporary bolt to the rear door window regulator assembly.

- (c) Temporarily install rear door window regulator assembly.

Text in Illustration

*1	Temporary Bolt
----	----------------

- (d) Tighten the temporary bolt and 5 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

20. INSTALL REAR DOOR GLASS SUB-ASSEMBLY

- (a) Connect the cable to the negative (-) battery terminal and the rear power window regulator motor connector.
- (b) Connect the power window regulator switch assembly and move the rear door glass sub-assembly so that the door glass bolts can be seen.
- (c) Disconnect the power window regulator switch assembly and rear power window regulator motor connector.
- (d) Disconnect the cable from the negative (-) battery terminal.
- (e) Insert the rear door glass sub-assembly into the rear door panel along the rear door glass run as shown in the illustration.

(f) Install the rear door glass sub-assembly with the 2 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

(g) Connect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

21. INSTALL REAR DOOR REAR GUIDE SEAL

(a) Install the temporary screw to the rear door rear guide seal.

(b) Temporarily install the rear door rear guide seal.

Text in Illustration

*1	Temporary Screw
----	-----------------

(c) Install the 2 screws.

(d) Tighten the temporary screw to install the rear door rear guide seal.

22. INSTALL REAR DOOR WINDOW GUIDE SUB-ASSEMBLY

(a) Install the screw.

(b) Install the rear door window guide sub-assembly with the bolt.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

23. INSTALL REAR DOOR GLASS RUN

(a) Install the rear door glass run.

24. INSTALL REAR DOOR WEATHERSTRIP

(a) Engage the 18 clips and install the rear door weatherstrip.

25. INSTALL REAR DOOR CHECK ASSEMBLY

(a) Apply MP grease to the sliding areas of the rear door check assembly.

(b) Apply adhesive to the threads of the bolt (A).

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(c) Install the rear door check assembly with the 3 bolts.

(A) - Torque: **30 N·m (306 kgf·cm, 22ft·lbf)**

(B) - Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

26. INSTALL REAR DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the rear door panel.

(b) Pass the rear door lock remote control cable, rear door inside locking cable and each connector through a new rear door service hole cover.

(c) Attach the rear door service hole cover according to the reference points on the rear door panel.

Text in Illustration

*1

Reference Point

NOTICE:

Securely install the rear door service hole cover preventing wrinkles and air bubbles.

(d) Connect the 2 connectors.

(e) Engage the clamp.

27. INSTALL REAR DOOR TRIM BRACKET

(a) Install the rear door trim bracket with the 2 screws.

28. INSTALL REAR DOOR SPEAKER COVER (for 4 Speakers)

(a) Using an air riveter or a hand riveter, install the rear door speaker cover with 3 new rivets.

P

Text in Illustration

*1	Riveter	*2	Mandrel
*a	INCORRECT	-	-

NOTICE:

- Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.
- Confirm that the rivet is seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any clearance between the rivet head and moulding.
- Do not leave any clearance between the moulding and door frame. Firmly hold the 2 items together while installing the rivet.

HINT:

If the rivet cannot be cut, pull it once and cut it.

(b) Connect the connector.

29. INSTALL REAR SPEAKER ASSEMBLY (for 6 or 8 Speakers) INFO

30. INSTALL REAR DOOR FRAME GARNISH

(a) Engage the clip to install a new rear door frame garnish.

31. INSTALL REAR NO. 2 SPEAKER ASSEMBLY (for 8 Speakers) INFO

32. INSTALL REAR DOOR INNER GLASS WEATHERSTRIP

(a) Engage the 7 claws and install the rear door inner glass weatherstrip to the rear door trim board sub-assembly as shown in the illustration.

33. INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Connect the rear door lock remote control cable assembly and rear

door inside locking cable assembly to the rear door inside handle.

P

(b) Engage the 2 claws and install the rear door inside handle sub-assembly to the rear door trim board sub-assembly.

P

34. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY

(a) for 8 Speakers:

(1) Connect the connector.

(b) Engage the 8 clips and install the rear door trim board sub-assembly.

P

(c) Install the 2 screws.

(d) Remove the protective tape.

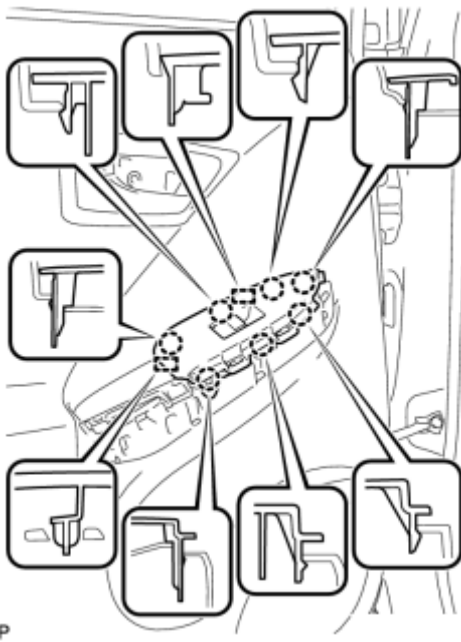

35. INSTALL REAR DOOR ARMREST COVER

(a) Install the rear door armrest cover.

36. INSTALL REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH REAR DOOR ARMREST BASE PANEL

(a) Connect the connector.

(b) Engage the 7 claws and 2 guides, and install the rear power window regulator switch assembly with rear door armrest base panel.

37. INSTALL DOOR ASSIST GRIP COVER

(a) Engage the 6 claws, 2 clips and 3 guides, and install the assist grip cover.

P

38. INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG

P

(a) Engage the 3 claws and install the rear door inside handle bezel plug.

39. INITIALIZE POWER WINDOW CONTROL SYSTEM

19. DISCONNECT FRONT DOOR WEATHERSTRIP
 - (a) Using a clip remover, disengage the 2 clips and remove the upper part of the front door weatherstrip to the extent that allows removal of the front door strip and black out tape.

P

20. REMOVE NO. 1 BLACK OUT TAPE

(a) Using a heat light, heat the No. 1 black out tape and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

P

(b) Pull back on one of the ends of the No. 1 black out tape to remove it.

HINT:

When pulling on the tape, pull it parallel to the body.

21. REMOVE FRONT DOOR OUTSIDE STRIPE

(a) Using a heat light, heat the front door outside stripe and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back on one of the ends of the front door outside stripe to remove it.

HINT:

When pulling on the stripe, pull it parallel to the body.

22. REMOVE FRONT DOOR LOWER OUTSIDE STRIPE

(a) Using a heat light, heat the front door lower outside stripe and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back on one of the ends of the front door lower outside stripe to remove it.

HINT:

When pulling on the stripe, pull it parallel to the body.

23. REMOVE FRONT DOOR REAR OUTSIDE STRIPE

(a) Using a heat light, heat the front door rear outside stripe and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back on one of the ends of the front door rear outside stripe to

P

remove it.

HINT:

When pulling on the stripe, pull it parallel to the body.

INSTALLATION

1. REPAIR INSTRUCTION

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(2) Wipe off any tape adhesive residue with cleaner.

(b) Installation temperature

(1) When the ambient temperature is below 15°C (59°F), perform the installation procedure after warming the vehicle body surface (installation surface of the door frame) and tape up to between 20 and 30°C (68 and 86°F) using a heat light. When the ambient temperature is above 35°C (95°F), cool the vehicle body surface (installation surface of the door frame) and tape down to between 20 and 30°C (68 and 86°F) prior to installation.

HINT:

- The most appropriate temperature for installing the tape is 25°C (77°F).
- When the temperature is low, the tape turns stiff and comes off easily. When the temperature is high, the tape loses elasticity.

(c) Before installation

(1) Remove any coating roughness or dirt on and around the vehicle body surface where the tape will be installed (installation surface of the door frame). If any roughness or dirt remains when pressing the tape onto the surface, air will be trapped under the tape and result in a poor appearance.

HINT:

Spray water on the shop floor to settle any dust.

(d) Key points for handling the tape

(1) The tape bends and rolls up easily. Store the tape between flat pieces of cardboard or other similar objects and keep it dry and level.

NOTICE:

Do not bend the tape or leave it in high temperature places.

(e) Key points for installation of the tape (how to use a squeegee and installation procedure for flat surfaces)

NOTICE:

- Position the tape accurately to achieve a neat finish and to avoid peeling.
- The tape cannot be reused because it deforms and will not fit any more after being removed.

(1) To avoid air bubbles, slightly raise the part of the tape that is going to be applied so that its adhesive surface does not touch the vehicle body while applying the tape. Tilt the squeegee at 40 to 50° (pressing forward) or 30 to 45° (pulling) to the vehicle body surface and press the tape onto the vehicle body surface with a force of 20 to 30 N (2 to 3 kgf, 4.5 to 6.7 lbf) at a constant slow speed of 3 to 7 cm (1.18 to 2.76 in.) per second.

NOTICE:

Be sure to observe the specified pressing speed, force and angle of the squeegee to avoid wrinkles or air bubbles.

HINT:

- Either angle of the squeegee (pressing forward or pulling) is acceptable.
- Be sure to apply the tape while removing the release paper 10 to 20 mm (0.394 to 0.787 in.) from the edge of the squeegee.

(f) Key points for installation of the tape (how to use a squeegee and installation procedure for hemmed surfaces)

(1) If it is difficult to apply the tape, install it in several steps as shown in the illustration. Use your fingers or the padded surface of a squeegee to slowly apply the tape to the hem of the vehicle, especially for a small

P

hem.

HINT:

When applying tape to the backside of a hem, remove the release paper and use your fingers or the padded surface of a squeegee.

(g) Key points for installation of the tape (how to use a squeegee and installation procedure for corners)

(1) Remove the release paper and apply the tape carefully with your fingers.

(2) Before applying the tape to each corner, heat the tape using a heat light and gradually apply it, avoiding wrinkles on the tape to achieve a neat finish.

(h) Check after installation

(1) After completing the application, check if the tape is applied neatly. If the tape is not applied neatly, reapply using new tape.

NOTICE:

Do not reuse the tape.

2. INSTALL NO. 1 BLACK OUT TAPE

P

(a) Remove the portion of the No. 1 black out tape at the perforation as shown in the illustration.

(b) Refer to the illustration to position the No. 1 black out tape.

P

Standard Measurement

Dimension	Measurement
A	2 to 4 mm (0.0787 to 0.157 in.)
B	4 to 6 mm (0.157 to 0.236 in.)

(c) Remove the release paper and apply the tape.

3. INSTALL FRONT DOOR LOWER OUTSIDE STRIPE

(a) Refer to the illustration to position the front door lower outside stripe.

P

Standard Measurement

Dimension	Measurement
A	2.0 mm (0.0787 in.)

(b) Remove the release paper and apply the stripe.

4. INSTALL FRONT DOOR REAR OUTSIDE STRIPE

(a) Refer to the illustration to position the front door rear outside stripe.

P

Standard Measurement

Dimension	Measurement
A	2.0 mm (0.0787 in.)

(b) Remove the release paper and apply the stripe.

5. INSTALL FRONT DOOR OUTSIDE STRIPE

(a) Refer to the illustration to position the front door outside stripe.

P

Standard Measurement

Dimension	Measurement
A	2.0 mm (0.0787 in.)

(b) Remove the release paper and apply the stripe.

6. CONNECT FRONT DOOR WEATHERSTRIP

(a) Engage the 2 clips and connect the front door weatherstrip.

P

17. REMOVE REAR DOOR BELT MOULDING ASSEMBLY [INFO](#)
18. REMOVE REAR DOOR FRONT WINDOW FRAME MOULDING [INFO](#)
19. DISCONNECT REAR DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the clip and remove the upper part of the rear door weatherstrip to the extent that allows removal of the rear door strip and black out tape.

20. REMOVE NO. 2 BLACK OUT TAPE

(a) Using a heat light, heat the No. 2 black out tape and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back on one of the ends of the No. 2 black out tape to remove it.

HINT:

When pulling on the tape, pull it parallel to the body.

21. REMOVE REAR DOOR OUTSIDE STRIPE

(a) Using a heat light, heat the rear door outside stripe and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back on one of the ends of the rear door outside stripe to remove it.

HINT:

When pulling on the stripe, pull it parallel to the body.

22. REMOVE REAR DOOR UPPER OUTSIDE STRIPE

(a) Using a heat light, heat the rear door upper outside stripe and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back on one of the ends of the rear door upper outside stripe to remove it.

HINT:

When pulling on the stripe, pull it parallel to the body.

23. REMOVE REAR DOOR LOWER OUTSIDE STRIPE

(a) Using a heat light, heat the rear door lower outside stripe and vehicle body.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back on one of the ends of the rear door lower outside stripe to

remove it.

HINT:

When pulling on the stripe, pull it parallel to the body.

REMOVAL

1. REMOVE RADIATOR SUPPORT OPENING COVER

(a) Remove the 3 clips.

(b) Disengage the 2 claws and remove the radiator support opening cover.

2. REMOVE FRONT BUMPER ASSEMBLY

(a) Put protective tape around the front bumper assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Use the same procedure for the RH side and LH side.

(b) Using a screwdriver, turn the pins 90 degrees and remove the pin hold clip.

HINT:

Use the same procedure for the RH side and LH side.

(c) Remove the screw.

HINT:

Use the same procedure for the RH side and LH side.

(d) Remove the 2 bolts and 4 screws.

(e) Using a clip remover, remove the 7 clips.

(f) Using a clip remover, remove the clip. (w/ Front Spoiler)

(g) Remove the 6 bolts and 2 screws, and front spoiler cover. (w/ Front Spoiler)

(h) Disengage the 3 claws and remove the front bumper assembly.

HINT:

Use the same procedure for the RH side and LH side.

P

- (i) Disconnect each connector.
- (j) Disconnect the headlight cleaner hose and drain the washer fluid. (w/ Headlight Cleaner System)

HINT:

Use a container to collect the washer fluid.

P

- (k) Remove the front bumper assembly as shown in the illustration.

DISASSEMBLY

1. REMOVE HEADLIGHT CLEANER WASHER NOZZLE LH (w/ Headlight Cleaner System) INFO

2. REMOVE HEADLIGHT CLEANER WASHER NOZZLE RH (w/ Headlight Cleaner System)

HINT:

Use the same procedure for the RH side and LH side.

3. REMOVE HEADLIGHT WASHER ACTUATOR SUB-ASSEMBLY LH (w/ Headlight Cleaner System) INFO

4. REMOVE HEADLIGHT WASHER ACTUATOR SUB-ASSEMBLY RH (w/ Headlight Cleaner System)

HINT:

Use the same procedure for the RH side and LH side.

HINT:

Use the same procedure for the RH side and LH side.

9. REMOVE FOG LIGHT ASSEMBLY LH (w/ Fog Light) INFO

10. REMOVE FOG LIGHT ASSEMBLY RH (w/ Fog Light)

HINT:

Use the same procedure for the RH side and LH side.

11. REMOVE FRONT BUMPER EXTENSION MOUNTING BRACKET

(a) Remove the 2 screws and front bumper extension mounting bracket.

12. REMOVE HOOD TO FRONT END PANEL SEAL

(a) Remove the 7 clips.

Text in Illustration

*1 Double-sided Tape

(b) Disengage the 2 clips and remove the hood to front end panel seal.

13. REMOVE HEADLIGHT CLEANER HOSE (w/ Headlight Cleaner System)

(a) Disengage the 5 clamps and remove the headlight cleaner hose.

14. REMOVE ENGINE ROOM NO. 3 WIRE

(a) Disengage the 3 clamps.

(b) Disengage the 2 clamps.

(c) Disengage the 7 clamps and remove the engine room No. 3 wire.

15. REMOVE RADIATOR GRILLE

(a) Remove the 4 clips.

(b) Disengage the 12 claws and remove the radiator grille.

16. REMOVE RADIATOR GRILLE EMBLEM ASSEMBLY

(a) Remove the 2 screws.

(b) Disengage the 4 claws and 2 pins, and remove the radiator grille emblem assembly.

17. REMOVE FRONT FENDER LINER RETAINER

(a) Disengage the claw and remove the front fender liner retainer.

HINT:

Use the same procedure for the RH side and LH side.

P

18. REMOVE FOG LIGHT COVER LH

(a) Disengage the 4 claws and remove the fog light cover LH.

P

19. REMOVE FOG LIGHT COVER RH

HINT:

Use the same procedure for the RH side and LH side.

20. REMOVE FRONT BUMPER HOLE COVER LH

(a) Disengage the 2 claws.

Text in Illustration

*1	Hook
----	------

P

(b) Disengage the hook and remove the front bumper hole cover LH.

21. REMOVE FRONT BUMPER HOLE COVER RH

HINT:

Use the same procedure for the RH side and LH side.

22. REMOVE NO. 1 LOWER RADIATOR GRILLE

(a) Disengage the 16 claws and remove the No. 1 lower radiator grille.

P

23. REMOVE FRONT BUMPER ENERGY ABSORBER

(a) Disengage the 2 guides and remove the front bumper energy absorber.

P

24. REMOVE FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Disengage the 7 clamps.

(b) Remove the 6 bolts and front bumper reinforcement sub-assembly.

25. REMOVE FRONT BUMPER SIDE SUPPORT LH

(a) Remove the bolt and screw.

Text in Illustration

*1	Bolt
*2	Screw

(b) Disengage the 2 claws and remove the front bumper side support LH.

26. REMOVE FRONT BUMPER SIDE SUPPORT RH

HINT:

Use the same procedure for the RH side and LH side.

27. REMOVE FRONT SIDE MEMBER BRACKET SUB-ASSEMBLY LH

(a) Remove the 4 bolts.

(b) Disengage the guide and remove the front side member bracket sub-assembly LH.

28. REMOVE FRONT SIDE MEMBER BRACKET SUB-ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

REASSEMBLY

1. INSTALL FRONT SIDE MEMBER BRACKET SUB-ASSEMBLY LH

(a) Engage the guide and install the front side member bracket sub-assembly LH.

(b) Install the 4 bolts.

Torque: **50 N·m (510 kgf·cm, 37ft·lbf)**

2. INSTALL FRONT SIDE MEMBER BRACKET SUB-ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

3. INSTALL FRONT BUMPER SIDE SUPPORT LH

(a) Engage the 2 claws and install the front bumper side support LH.

Text in Illustration

*1	Bolt
*2	Screw

(b) Install the bolt and screw.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

4. INSTALL FRONT BUMPER SIDE SUPPORT RH

HINT:

Use the same procedure for the RH side and LH side.

5. INSTALL FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Install the front bumper reinforcement sub-assembly with the 6 bolts.

Torque: **34 N·m (347 kgf·cm, 25ft·lbf)**

P

(b) Engage the 7 clamps.

6. INSTALL FRONT BUMPER ENERGY ABSORBER

(a) Engage the 2 guides to install the front bumper energy absorber.

P

7. INSTALL NO. 1 LOWER RADIATOR GRILLE

(a) Engage the 16 claws to install the No. 1 lower radiator grille.

P

8. INSTALL FRONT BUMPER HOLE COVER LH

P

(a) Engage the hook.

Text in Illustration

*1	Hook
----	------

(b) Engage the 2 claws and install the front bumper hole cover LH.

9. INSTALL FRONT BUMPER HOLE COVER RH

HINT:

Use the same procedure for the RH side and LH side.

10. INSTALL FRONT TURN SIGNAL LIGHT ASSEMBLY LH INFO

11. INSTALL FRONT TURN SIGNAL LIGHT ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

12. INSTALL FOG LIGHT COVER LH

(a) Engage the 4 claws and install the fog light cover LH.

13. INSTALL FOG LIGHT COVER RH

HINT:

Use the same procedure for the RH side and LH side.

14. INSTALL FOG LIGHT ASSEMBLY LH (w/ Fog Light) INFO

15. INSTALL FOG LIGHT ASSEMBLY RH (w/ Fog Light)

HINT:

Use the same procedure for the RH side and LH side.

16. INSTALL FRONT FENDER LINER RETAINER

(a) Engage the claw and install the front fender liner retainer.

HINT:

Use the same procedure for the RH side and LH side.

17. INSTALL RADIATOR GRILLE EMBLEM ASSEMBLY

(a) Engage the 2 pins and 4 claws, and install the radiator grille emblem assembly.

(b) Install the 2 screws.

Torque: **3.0 N·m (31 kgf·cm, 27in·lbf)**

18. INSTALL RADIATOR GRILLE

(a) Engage the 12 claws and install the radiator grille.

(b) Install the 4 clips.

19. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER (w/ Advanced Parking Guidance System) INFO

20. INSTALL NO. 1 ULTRASONIC SENSOR (w/ Advanced Parking Guidance System) INFO

21. INSTALL ENGINE ROOM NO. 3 WIRE

(a) Engage the 7 clamps.

(b) Engage the 3 clamps.

(c) Engage the 2 clamps and install the engine room No. 3 wire.

22. INSTALL HEADLIGHT CLEANER HOSE (w/ Headlight Cleaner System)

(a) Engage the 5 clamps and install the headlight cleaner hose.

P

23. INSTALL HEADLIGHT WASHER ACTUATOR SUB-ASSEMBLY LH (w/ Headlight Cleaner System)

INFO

24. INSTALL HEADLIGHT WASHER ACTUATOR SUB-ASSEMBLY RH (w/ Headlight Cleaner System)

HINT:

Use the same procedure for the RH side and LH side.

25. INSTALL HEADLIGHT CLEANER WASHER NOZZLE LH (w/ Headlight Cleaner System)

INFO

26. INSTALL HEADLIGHT CLEANER WASHER NOZZLE RH (w/ Headlight Cleaner System)

HINT:

Use the same procedure for the RH side and LH side.

27. INSTALL HOOD TO FRONT END PANEL SEAL

(a) Engage the 2 clips and install the new hood to front end panel seal.

Text in Illustration

*1	Double-sided Tape
----	-------------------

P

(b) Install the 7 clips.

28. INSTALL FRONT BUMPER EXTENSION MOUNTING BRACKET

(a) Install the front bumper extension mounting bracket with the 2 screws.

INSTALLATION

1. INSTALL FRONT BUMPER ASSEMBLY

(a) Connect the headlight cleaner hose. (w/ Headlight Cleaner System)

(b) Connect each connector.

(c) Install the front bumper assembly as shown in the illustration.

(d) Engage the 3 claws to install the front bumper assembly.

HINT:

Use the same procedure for the RH side and LH side.

(e) Install the front spoiler cover with the 6 bolts and 2 screws. (w/ Front Spoiler)

(f) Install the clip. (w/ Front Spoiler)

(g) Install the 7 clips.

(h) Install the 2 bolts and 4 screws.

(i) Install the screw.

HINT:

Use the same procedure for the RH side and LH side.

(j) Install the pin hold clip.

NOTICE:

Insert the pin hold clip with the slot aligned vertically. Do not rotate the clip after inserting it. After installation, confirm that the slot is vertical.

HINT:

Use the same procedure for the RH side and LH side.

2. INSTALL RADIATOR SUPPORT OPENING COVER

(a) Engage the 2 claws and install the radiator support opening cover.

(b) Install the 3 clips.

----	-------------------

INSTALLATION

1. INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING

HINT:

When installing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the vehicle body or front door rear window frame moulding excessively.

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

(2) Remove the double-sided tape from the vehicle body.

(3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door rear window frame moulding (if reusing the front door rear window frame moulding).

(1) Using a heat light, heat the front door rear window frame moulding.

(2) Remove the double-sided tape from the front door rear window frame moulding.

(3) Wipe off any tape adhesive residue with cleaner.

(4) Apply new double-sided tape to the front door rear window frame moulding.

Text in Illustration

REMOVAL

HINT:

When removing the name plates or emblems, heat the vehicle body and name plates using a heat light.

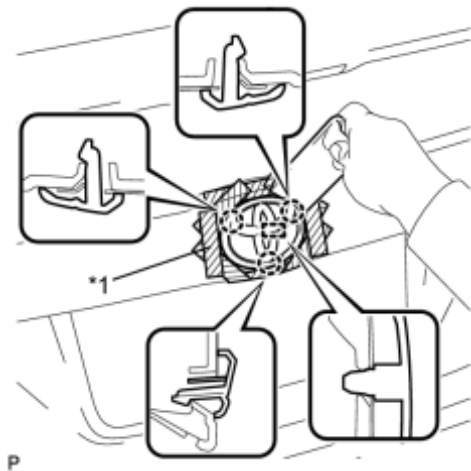

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Name Plate or emblem	20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the vehicle body, name plates or emblems excessively.

1. REMOVE LUGGAGE COMPARTMENT DOOR EMBLEM

(a) Put protective tape around the luggage component door emblem.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Using a moulding remover, disengage the 3 claws and pin and remove the luggage component door emblem.

NOTICE:

- If reusing the emblem, take care not to damage the luggage component door emblem.
- Be careful not to damage the vehicle body.

2. REMOVE NO. 2 BACK DOOR NAME PLATE

(a) Put protective tape around the No. 2 back door name plate.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Using a moulding remover, peel off the double-sided tape and disengage the 2 pins to remove the No. 2 back door name plate.

NOTICE:

- If reusing the name plate, take care not to damage the No. 2 back door name plate.
- Be careful not to damage the vehicle body.

3. REMOVE BACK DOOR NAME PLATE

(a) Put protective tape around the back door name plate.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Using a moulding remover, peel off the double-sided tape and disengage the 2 pins to remove the back door name plate.

NOTICE:

- If reusing the emblems, take care not to damage the back door name plate.
- Be careful not to damage the vehicle body.

4. REMOVE SIDE PANEL EMBLEM

(a) Put protective tape around the side panel emblem.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Using a moulding remover, peel off the double-sided tape and disengage the 2 pins to remove the side panel emblem.

NOTICE:

- If reusing the name plate, take care not to damage the side panel emblem.
- Be careful not to damage the vehicle body.

HINT:

Use the same procedure for the RH side and LH side.

INSTALLATION

HINT:

When installing new name plates or emblems, heat the vehicle body and name plates using a heat light.

Heating Temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Name Plate or emblem	20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the vehicle body, name plates or emblems excessively.

1. INSTALL LUGGAGE COMPARTMENT DOOR EMBLEM

(a) Install the luggage compartment door emblem with the pin and 3 claws.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the vehicle body.

2. INSTALL NO. 2 BACK DOOR NAME PLATE

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

(2) Remove any double-sided tape from the vehicle body.

(3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the No. 2 back door name plate (if reusing the No. 2 back door name plate).

(1) Using a heat light, heat the No. 2 back door name plate.

(2) Remove the double-sided tape from the No. 2 back door name plate.

- (3) Wipe off any tape adhesive residue with cleaner.
- (4) Apply new double-sided tape to the No. 2 back door name plate.
- (c) Install the No. 2 back door name plate.
 - (1) Using a heat light, heat the vehicle body and the No. 2 back door name plate.
 - (2) Remove the release paper from the No. 2 back door name plate.

HINT:

After removing the release paper, keep the exposed adhesive free from foreign matter.

- (3) Install the No. 2 back door name plate as shown in the illustration.

P

(b) Disengage the 4 guides and remove the rear No. 1 spoiler.

4. REMOVE REAR BUMPER SIDE RETAINER LH

P

(a) Remove the 3 screws.

(b) Disengage the 4 claws and guide, and remove the rear bumper side retainer LH.

5. REMOVE REAR BUMPER SIDE RETAINER RH

HINT:

Use the same procedure for the RH side and LH side.

6. REMOVE REAR BUMPER ENERGY ABSORBER

(a) Disengage the 2 guides and remove the rear bumper energy absorber.

P

7. REMOVE NO. 1 REAR BUMPER REINFORCEMENT

P

(a) Remove the 4 nuts and No. 1 rear bumper reinforcement.

REASSEMBLY

1. INSTALL NO. 1 REAR BUMPER REINFORCEMENT

(a) Install the No. 1 rear bumper reinforcement with the 4 nuts.

Torque: **29 N·m (296 kgf·cm, 21ft·lbf)**

P

2. INSTALL REAR BUMPER ENERGY ABSORBER

(a) Engage the 2 guides to install the rear bumper energy absorber.

P

3. INSTALL REAR BUMPER SIDE RETAINER LH

(a) Engage the guide and 4 claws.

P

(b) Install the rear bumper side retainer LH with the 3 screws.

4. INSTALL REAR BUMPER SIDE RETAINER RH

HINT:

Use the same procedure for the RH side and LH side.

5. INSTALL REAR NO. 1 SPOILER

(b) Install the rear No. 1 spoiler with the 5 clips.

6. INSTALL REAR SIDE SPOILER SUB-ASSEMBLY LH

(b) Install the rear side spoiler sub-assembly LH with the 3 screws.

7. INSTALL REAR SIDE SPOILER SUB-ASSEMBLY RH

(a) Engage the claw and clip.

(b) Install the rear side spoiler sub-assembly RH with the 3 screws.

INSTALLATION

1. INSTALL REAR BUMPER ASSEMBLY

(a) Engage the 4 claws and install the rear bumper assembly as shown in the illustration.

(b) Engage the 5 claws.

HINT:

Use the same procedure for the RH side and LH side.

(c) Install the screw.

Torque: **3.0 N·m (31 kgf·cm, 27in·lbf)**

HINT:

Use the same procedure for the RH side and LH side.

(d) Engage the claw.

HINT:

Use the same procedure for the RH side and LH side.

(e) Engage the 2 rear bumper upper stoppers and install the 2 screws.

(f) Install the 9 clips.

(g) Install the nut.

REMOVAL

1. REMOVE ROOF DRIP CENTER SIDE FINISH MOULDING (w/o Sliding Roof)

(a) Disengage the 2 clips and remove the roof drip center side finish moulding.

- Do not remove the clips.
- If the clips are damaged or dropped off, replace them with new clips.

2. REMOVE ROOF DRIP CENTER SIDE FINISH MOULDING (w/ Sliding Roof)

(a) Disengage the 2 clips and remove the roof drip center side finish moulding.

- Do not remove the clips.
- If the clips are damaged or dropped off, replace them with new clips.

INSTALLATION

1. INSTALL ROOF DRIP SIDE FINISH MOULDING CLIP (w/o Sliding Roof)

NOTICE:

- If reusing the clips, do not remove the double-sided tape remaining on the clips and where the clips will be installed on the body.
- If installing new clips, remove the double-sided tape remaining where the clips will be installed on the body and clean the body with a non-residue solvent.

(a) Apply a 2 to 3 mm (0.0787 to 0.118 in.) bead of adhesive (3M DP-105 or equivalent) to new roof drip side finish moulding clips.

HINT:

Adhesive strength (tensile strength): 13.7 MPa (140 kgf/cm², 1987 psi) or more (when the temperature is 23°C (73°F).)

(b) Press and install the 2 roof drip side finish moulding clips.

(c) Install the clips to the positions on the roof panel shown in the illustration. Determine the locations and firmly press and install the 2 roof drip side finish moulding clips after lightly applying adhesive (3M DP-105 or equivalent).

Text in Illustration

*1	Protruding Part	-	-

(e) Check the waveform.

OK:

H

Tester Connection	Tool Setting	Condition	Specified Condition
I1-6 (CLTE) - I1-4 (CLTS)	5 V/DIV., 5 ms./DIV	Power switch on (IG), light control switch in AUTO position	Correct waveform is as shown

HINT:

If the ambient light becomes brighter, width A becomes narrower.

If the result is not as specified, the automatic light control sensor may have a malfunction.

INSTALLATION

1. INSTALL AUTOMATIC LIGHT CONTROL SENSOR

(a) Engage the 2 claws and install the automatic light control sensor.

(b) Connect the connector.

2. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure from Install Upper Instrument Panel Assembly [INFO](#).

COMPONENTS

ILLUSTRATION

COURTESY LIGHT ASSEMBLY

P

REMOVAL

1. REMOVE COURTESY LIGHT ASSEMBLY

for LH Side:

(a) Using a moulding remover, disengage the claw.

for RH Side:

(b) Disconnect the connector and remove the courtesy light assembly.

INSPECTION

1. INSPECT COURTESY LIGHT ASSEMBLY

*1

(a) Connect a positive (+) lead from the battery to terminal 1 and a negative (-) lead to terminal 2.

(b) Check that the courtesy light comes on.

OK:

Courtesy light comes on.

Text in Illustration

*1	Component without harness connected (Courtesy Light Assembly)
----	--

If the result is not as specified, replace the bulb or courtesy light assembly.

INSTALLATION

1. INSTALL COURTESY LIGHT ASSEMBLY

(a) Connect the connector.

for LH Side:

(b) Engage the claw to install the courtesy light assembly.

for RH Side:

P

REMOVAL

1. REMOVE RADIATOR SUPPORT OPENING COVER INFO

2. REMOVE FRONT BUMPER ASSEMBLY INFO

3. REMOVE FOG LIGHT ASSEMBLY

(a) Disconnect the connector.

(b) Remove the screw.

(c) Disengage the 2 guides and remove the fog light assembly.

DISASSEMBLY

1. REMOVE FOG LIGHT BULB

(a) Turn the fog light bulb in the direction indicated by the arrow shown in the illustration and remove it.

NOTICE:

Do not touch the bulb glass.

P

ADJUSTMENT

HINT:

It is possible that a bulb is incorrectly installed, affecting fog light aim. Bulb installation should be considered prior to performing the adjustment procedure.

1. PREPARE VEHICLE FOR FOG LIGHT AIM ADJUSTMENT

(a) Prepare the vehicle:

- Ensure there is no damage or deformation to the body around the fog lights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.

2. PREPARE FOR FOG LIGHT AIMING

(a) Prepare the vehicle:

- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the fog lights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft.) distance between the vehicle (fog light bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Position the front wheels straight ahead.
- Bounce the vehicle up and down to settle the suspension.

P

NOTICE:

A distance of 7.62 m (25 ft.) between the vehicle (fog light bulb center) and the wall is necessary for proper aim adjustment. If sufficient space is not available, secure a distance of exactly 3 m (9.84 ft.) to allow for checking and adjustment of fog light aim. (The size of the target zone will change with the distance, so follow the instructions in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft.) (height) x 4 m (13.1 ft.) (width)) to use as a screen.

(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.

Alignment distance is 7.62 m:

Alignment distance is 3 m:

P

HINT:

- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.

(e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.

HINT:

Mark the fog light bulb center marks on the screen. If the center mark cannot be observed on the fog light, use the center of the fog light bulb or the manufacturer's name marked on the fog light as the center mark.

P

133423

(1) H Line (Fog light height):

Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the fog light bulb center marks of the fog lights.

(2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) fog lights):

Draw two vertical lines so that they intersect the H line at each center mark (aligned with the center of the fog light bulbs).

3. INSPECT FOG LIGHT AIMING

(a) Cover the fog light or disconnect the connector of the fog light on the opposite side to prevent light from the fog light that is not being inspected from affecting the fog light aiming inspection.

NOTICE:

Do not keep the fog light covered for more than 3 minutes. The fog light lens is made of synthetic resin, which may melt or be damaged due to excessive heat.

(b) Start the engine.

(c) Turn on the fog lights and check if the upper edge of the hot zone for each fog light matches the upper edge as shown in the illustration.

P

HINT:

- If the alignment distance is 7.62 m (25 ft.):
The upper edge of the hot zone for the fog light should be 102 mm (4.02 in.) below the H line.
- If the alignment distance is 3 m (9.84 ft.):
The upper edge of the hot zone for the fog light should be 40 mm (1.58 in.) below the H line.

4. ADJUST FOG LIGHT AIMING

(a) Adjust the aim vertically:

Adjust the aim of each fog light to the specified range by turning each aiming screw with a screwdriver.

Text in Illustration

*1	Aiming Screw
----	--------------

NOTICE:

The final turn of the aiming screw should be made in the clockwise

direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

HINT:

If it is not possible to correctly adjust fog light aim, check bulb, fog light unit and fog light unit reflector installation.

REASSEMBLY

1. INSTALL FOG LIGHT BULB

(a) Turn the fog light bulb in the direction indicated by the arrow shown in the illustration to install it.

NOTICE:

Do not touch the bulb glass.

P

INSTALLATION

1. INSTALL FOG LIGHT ASSEMBLY

(a) Engage the 2 guides.

(b) Install the fog light assembly with the screw.

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE RADIATOR SUPPORT OPENING COVER INFO
6. REMOVE FRONT BUMPER ASSEMBLY INFO
7. REMOVE HEADLIGHT ASSEMBLY

(a) Remove the bolt and 2 screws.

(b) Using a screwdriver wrapped with protective tape, disengage the claw.

Text in Illustration

*1	Protective Tape
----	-----------------

(c) Disengage the clamp.

(d) Disconnect each connector and remove the headlight assembly.

DISASSEMBLY

1. REMOVE NO. 1 HEADLIGHT BULB

(a) Turn the No. 1 headlight bulb in the direction indicated by the arrow shown in the illustration, and remove it.

NOTICE:

Do not touch the bulb glass.

2. REMOVE NO. 2 HEADLIGHT BULB (for Halogen Headlight)

(a) Turn the No. 2 headlight bulb in the direction indicated by the arrow shown in the illustration, and remove it.

NOTICE:

Do not touch the bulb glass.

3. REMOVE FRONT SIDE MARKER LIGHT BULB (for Halogen Headlight)

(a) Turn the front side marker light bulb and front side marker light socket in the direction indicated by the arrow shown in the illustration, and remove them as a unit.

(b) Remove the front side marker light bulb from the front side marker light socket.

4. REMOVE FRONT SIDE MARKER LIGHT BULB (for LED Headlight)

(a) Turn the front side marker light bulb and headlight cord in the direction indicated by the arrow shown in the illustration, and disconnect them as a unit.

(b) Remove the front side marker light bulb from the front side marker light socket.

5. REMOVE CLEARANCE LIGHT BULB

(a) Turn the clearance light bulb and headlight cord in the direction indicated by the arrow shown in the illustration, and disconnect them as a unit.

(b) Remove the clearance light bulb from the clearance light socket.

6. REMOVE HEADLIGHT CORD (for Halogen Headlight)

(a) Disengage the 2 clamps and remove the headlight cord.

7. REMOVE HEADLIGHT LEVELING MOTOR (for LED Headlight)

(a) Turn the aiming screw of the headlight leveling motor in the direction indicated by the arrow (1) shown in the illustration.

(b) Turn the headlight leveling motor in the direction indicated by the arrow (2) shown in the illustration to release it.

HINT:

When removing the headlight leveling motor of the headlight assembly RH, turn the headlight leveling motor in the opposite direction indicated by the arrow (2) shown in the illustration.

(c) Turn the aiming screw of the headlight leveling motor in the direction indicated by the arrow (3) shown in the illustration to disengage the shaft.

(d) Pull out the headlight leveling motor in the direction indicated by the arrow (4) shown in the illustration to remove it.

8. REMOVE HEADLIGHT LEVELING MOTOR BASE PACKING (for LED Headlight)

(a) Remove the headlight leveling motor base packing.

NOTICE:

After the headlight leveling motor base packing is removed, be sure to replace it with a new one. Failure to do this may cause water ingress.

9. REMOVE HEADLIGHT LIGHT CONTROL ECU SUB-ASSEMBLY (for LED Headlight)

(a) Remove the 4 screws and disconnect the headlight light control ECU sub-assembly.

(b) Disconnect the 2 connectors and remove the headlight light control ECU sub-assembly.

10. REMOVE HEADLIGHT GASKET (for LED Headlight)

(a) Remove the headlight gasket.

NOTICE:

After the headlight gasket is removed, be sure to replace it with a new one. Failure to do this may cause water ingress.

ADJUSTMENT

HINT:

It is possible that a bulb is incorrectly installed, affecting headlight aim. Bulb installation should be considered prior to performing the adjustment procedure.

1. PREPARE VEHICLE FOR HEADLIGHT AIM ADJUSTMENT

(a) Prepare the vehicle:

- Ensure there is no damage or deformation to the body around the headlights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.

2. PREPARE FOR HEADLIGHT AIMING (Using a headlight aim test machine)

(a) Adjust the headlight aim in accordance with the headlight aim test machine instructions.

3. PREPARE FOR HEADLIGHT AIMING (Using a screen)

(a) Prepare the vehicle:

- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the headlights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft.) distance between the vehicle (headlight bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Position the front wheels straight ahead.
- Bounce the vehicle up and down to settle the suspension.

P

NOTICE:

A distance of 7.62 m (25 ft.) between the vehicle (headlight bulb center) and the wall is necessary for proper aim adjustment. If sufficient space is not available, secure a distance of exactly 3 m (9.84 ft.) to allow for checking and adjustment of headlight aim. (The size of the target zone will change with the distance, so follow the instructions in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft.) (height) x 4 m (13.1 ft.) (width)) to use as a screen.

(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.

P

HINT:

- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.

(e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.

- The base lines differ for "low beam inspection" and "high beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb or the manufacturer's name marked on the headlight as the center mark.

P

133423

(1) H Line (Headlight height):

Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the low beam headlights.

(2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) headlights):

Draw two vertical lines so that they intersect the H line at each center mark (aligned with the center of the low beam headlight bulbs).

4. INSPECT HEADLIGHT AIMING

(a) Cover the headlight or disconnect the connector of the headlight on the opposite side to prevent light from the headlight that is not being inspected from affecting the headlight aiming inspection.

NOTICE:

Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, which may melt or be damaged due to excessive heat.

HINT:

When checking the aim of the high beam, cover the low beam or disconnect the connector.

(b) Start the engine.

(c) Turn on the headlights and check the aiming of each beam.

HINT:

Preferred position for the low beam: Matches preferred cutoff line shown in the illustration

Preferred position for the high beam: Matches center of intensity shown in the illustration

Alignment distance is 7.62 m:

Alignment distance is 3 m:

High beam:

High beam:

HINT:

- Since the low beam light and the high beam light are a unit, if the aim on the low beam is correct, the high beam should also be correct. However, check both beams just to make sure.
- If the alignment distance is 7.62 m (25 ft.):

The left half of the low beam cutoff line should be within 101 mm (3.97 in.) above or below a line drawn 53 mm (2.09 in.) below the H line (SAEJ599).

- If the alignment distance is 3 m (9.84 ft.):

The left half of the low beam cutoff line should be within 39 mm (1.56 in.) above or below a line drawn 21 mm (0.825 in.) below the H line (SAEJ599).

- If the alignment distance is 7.62 m (25 ft.):

The high beam center of intensity should be within 101 mm (3.97 in.) above or below the H line (SAE J599).

- If the alignment distance is 3 m (9.84 ft.):

The high beam center of intensity should be within 39 mm (1.56 in.) above or below the H line (SAE J599).

- If the alignment distance is 7.62 m (25 ft.):

The left half of the low beam cutoff line should be 53 mm (2.09 in.) below the H line (preferred cutoff line target).

- If the alignment distance is 3 m (9.84 ft.):

The left half of the low beam cutoff line should be 21 mm (0.825 in.) below the H line (preferred cutoff line target).

- If the alignment distance is 7.62 m (25 ft.):

The high beam center of intensity should be on the H line (preferred center of intensity).

- If the alignment distance is 3 m (9.84 ft.):

The high beam center of intensity should be on the H line (preferred center of intensity).

5. ADJUST HEADLIGHT AIMING

(a) Adjust the aim vertically:

for Halogen Headlight:

for LED Headlight:

P

Text in Illustration

*1	Aiming Screw	-	-
----	--------------	---	---

Adjust the aim of each headlight to the specified range by turning each aiming screw with a screwdriver.

NOTICE:

The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

HINT:

- Since the low beam light and the high beam light are a unit, if the aim on the low beam is correct, the high beam should also be correct. However, check both beams just to make sure.
- If it is not possible to correctly adjust headlight aim, check bulb, headlight unit and headlight unit reflector installation.
- The headlight aim moves down when turning the aiming screw clockwise, and moves up when turning the aiming screw counterclockwise.
- Confirm the direction of rotation of the aiming screw by observing it while it is being adjusted. Due to the position of the screwdriver, the direction of rotation of the adjusting screw can be different than the direction of rotation of the screwdriver being used to adjust it.

REASSEMBLY

1. INSTALL HEADLIGHT GASKET (for LED Headlight)

(a) Install a new headlight gasket.

2. INSTALL HEADLIGHT LIGHT CONTROL ECU SUB-ASSEMBLY (for LED Headlight)

(a) Connect the 2 connectors.

(b) Install the headlight light control ECU sub-assembly with the 4 screws.

3. INSTALL HEADLIGHT LEVELING MOTOR BASE PACKING (for LED Headlight)

(a) Install a new headlight leveling motor base packing.

4. INSTALL HEADLIGHT LEVELING MOTOR (for LED Headlight)

(a) Insert the headlight leveling motor in the direction indicated by the arrow (1) shown in the illustration.

(b) Turn the aiming screw of the headlight leveling motor in the direction indicated by the arrow (2) shown in the illustration to engage the shaft.

(c) Turn the headlight leveling motor in the direction indicated by the arrow (3) shown in the illustration.

HINT:

When installing the headlight leveling motor of the headlight assembly RH, turn the headlight leveling motor in the opposite direction indicated by the arrow (3) shown in the illustration.

(d) Turn the aiming screw of the headlight leveling motor in the direction indicated by the arrow (4) shown in the illustration to install it.

5. INSTALL HEADLIGHT CORD (for Halogen Headlight)

(a) Engage the 2 clamps and install the headlight cord.

6. INSTALL CLEARANCE LIGHT BULB

(a) Install the clearance light bulb to the headlight cord.

(b) Turn the clearance light bulb and headlight cord in the direction indicated by the arrow shown in the illustration and install them as a unit.

7. INSTALL FRONT SIDE MARKER LIGHT BULB (for Halogen Headlight)

(a) Install the front side marker light bulb to the front side marker light socket.

(b) Turn the front side marker light bulb and front side marker light socket in the direction indicated by the arrow shown in the illustration and install them as a unit.

8. INSTALL FRONT SIDE MARKER LIGHT BULB (for LED Headlight)

(a) Install the front side marker light bulb to the headlight cord.

(b) Turn the front side marker light bulb and headlight cord in the direction indicated by the arrow shown in the illustration and install them as a unit.

9. INSTALL NO. 2 HEADLIGHT BULB (for Halogen Headlight)

(a) Turn the No. 2 headlight bulb in the direction indicated by the arrow shown in the illustration to install it.

NOTICE:

Do not touch the bulb glass.

10. INSTALL NO. 1 HEADLIGHT BULB

(a) Turn the No. 1 headlight bulb in the direction indicated by the arrow shown in the illustration to install it.

NOTICE:

Do not touch the bulb glass.

INSTALLATION

1. INSTALL HEADLIGHT ASSEMBLY

(a) Connect each connector.

(b) Engage the clamp.

(c) Engage the claw.

(d) Install the headlight assembly with the bolt and 2 screws.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

REPAIR

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.
- If the installation area of the headlight assembly is damaged, use the supply retainer for low-cost repair.
- Ensure that the headlight assembly is not damaged.

1. INSTALL UPPER HEADLIGHT PROTECTOR RETAINER

(a) Cut off the part shaded in the illustration and sand smooth with sandpaper.

NOTICE:

After cutting off the part, place the upper headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply retainer.

(b) Install the upper headlight protector retainer with the 2 screws.

2. INSTALL UPPER NO. 2 HEADLIGHT PROTECTOR RETAINER

(a) Cut off the part shaded in the illustration and sand smooth with sandpaper.

NOTICE:

After cutting off the part, place the upper headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply retainer.

(b) Install the upper No. 2 headlight protector retainer with the 2 screws.

P

3. INSTALL LOWER HEADLIGHT PROTECTOR RETAINER

(a) Cut off the part shaded in the illustration and sand smooth with sandpaper.

NOTICE:

After cutting off the part, place the lower headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply retainer.

P

P

(b) Install the lower headlight protector retainer with the 2 screws.

4. INSTALL LOWER NO. 2 HEADLIGHT PROTECTOR RETAINER

(a) Cut off the part shaded in the illustration and sand smooth with sandpaper.

NOTICE:

After cutting off the part, place the lower headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply retainer.

P

(b) Install the lower No. 2 headlight protector retainer with the 2 screws.

REMOVAL

1. REMOVE SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

HINT:

Refer to the procedure up to Remove Spiral Cable with Sensor Sub-assembly **INFO**.

2. REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY **INFO**

3. REMOVE HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Disconnect the connector.

(b) Using pliers, expand the clamp as shown in the illustration.

(c) While holding the clamp expanded, disengage the claw and remove the headlight dimmer switch assembly as shown in the illustration.

INSPECTION

1. INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Light Control Switch

Tester Connection	Switch Condition	Specified Condition
12 (EL) - 18 (T)	Light control switch off	10 k Ω or higher
18 (T) - 19 (A)	Light control switch off	10 k Ω or higher
19 (A) - 20 (H)	Light control switch off	10 k Ω or higher
12 (EL) - 18 (T)	Light control switch in tail position	Below 1 Ω
12 (EL) - 18 (T)	Light control switch in head position	Below 1 Ω
18 (T) - 20 (H)	Light control switch in head position	Below 1 Ω
12 (EL) - 19 (A)	Light control switch in AUTO position	Below 1 Ω

Dimmer Switch

Tester Connection	Switch Condition	Specified Condition
11 (HU) - 12 (EL)	Dimmer switch in high position	Below 1 Ω
12 (EL) - 11 (HU)	Dimmer switch in high flasher position	Below 1 Ω
12 (EL) - 17 (HF)		Below 1 Ω

Turn Signal Switch

Tester Connection	Switch Condition	Specified Condition
12 (EL) - 13 (TR)	Right turn	Below 1 Ω
12 (EL) - 13 (TR)	Neutral	10 k Ω or higher
12 (EL) - 15 (TL)	Neutral	10 k Ω or higher
12 (EL) - 15 (TL)	Left turn	Below 1 Ω

Front Fog Light Switch

Tester Connection	Switch Condition	Specified Condition
3 (LFG) - 4 (BFG)	Front fog light switch off	10 k Ω or higher
3 (LFG) - 4 (BFG)	Front fog light switch on	Below 1 Ω

N*m (kgf*cm, ft.*lbf): Specified torque

P

REMOVAL

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

2. REMOVE REAR DECK FLOOR BOX INFO

3. REMOVE REAR NO. 3 FLOOR BOARD INFO

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE REAR WHEEL

6. REMOVE REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 3 bolts.

(c) Disengage the guide and remove the rear height control sensor sub-assembly.

NOTICE:

Do not drop the rear height control sensor sub-assembly. If it is dropped, replace it with a new one.

INSPECTION

1. INSPECT REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH

(a) Connect 3 dry cell batteries (1.5 V) in series.

(b) Connect the positive (+) lead from the batteries to terminal 3 (SHB) and the negative (-) lead from the batteries to terminal 1 (SHG).

(c) Measure the voltage between terminals 2 (SHRR) and 1 (SHG) while slowly moving the link up and down.

Standard Voltage:

Tester Connection	Condition	Specified Condition
2 (SHRR) - 1 (SHG)	+45° (High)	4.05 V
2 (SHRR) - 1 (SHG)	0° (Normal)	2.25 V
2 (SHRR) - 1 (SHG)	-45° (Low)	0.45 V

Text in Illustration

*1	Component without harness connected (Rear Height Control Sensor Sub-assembly RH)
----	---

If the result is not as specified, replace the rear height control sensor sub-assembly RH.

INSTALLATION

1. INSTALL REAR HEIGHT CONTROL SENSOR SUB-ASSEMBLY

(a) Engage the guide and install the rear height control sensor sub-assembly with the 3 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

(b) Connect the connector.

2. INSTALL REAR WHEEL INFO

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

4. INSTALL REAR NO. 3 FLOOR BOARD INFO

5. INSTALL REAR DECK FLOOR BOX INFO

6. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

7. HEIGHT CONTROL SENSOR SIGNAL INITIALIZATION

INFO

8. PREPARE VEHICLE FOR HEADLIGHT AIM ADJUSTMENT INFO

9. PREPARE FOR HEADLIGHT AIMING (Using a headlight aim test machine) INFO

10. PREPARE FOR HEADLIGHT AIMING (Using a screen) INFO

11. INSPECT HEADLIGHT AIMING INFO

12. ADJUST HEADLIGHT AIMING INFO

2. REMOVE BACK DOOR SIDE GARNISH RH_ INFO
3. REMOVE BACK DOOR SIDE GARNISH LH_ INFO
4. REMOVE BACK DOOR TRIM BOARD ASSEMBLY_ INFO
5. REMOVE BACK DOOR TRIM BOARD_ INFO
6. REMOVE REAR SPOILER ASSEMBLY_ INFO
7. REMOVE CENTER STOP LIGHT SET

(a) Secure a wire around the center stop light set wire harness as shown in the illustration.

Text in Illustration

*1	Wire
----	------

NOTICE:

Use a wire long enough so that the center stop light set wire harness can be passed through the rear spoiler assembly during installation.

(b) Remove the 2 screws.

(c) Place a cloth on the rear spoiler assembly as shown in the illustration.

Text in Illustration

*1	Wire Harness
*2	Gasket
*3	Wire
*4	Protective Tape
*5	Cloth

(d) Using a clip remover wrapped with protective tape, widen the space inside the rear spoiler assembly, and pull the center stop light set wire harness to remove it as shown in the illustration.

NOTICE:

- Do not apply excess force to the rear spoiler assembly or it may be damaged.
- Do not damage the gasket of the rear spoiler assembly.
- Do not apply excess force when pulling the wire harness or it may break.

(e) Remove the wire from the old center stop light set wire harness.

INSPECTION

1. INSPECT CENTER STOP LIGHT SET

*1

(a) Connect a positive (+) lead from the battery to terminal 2 and a negative (-) lead to terminal 1.

(b) Check that the center stop light comes on.

OK:

The light comes on.

Text in Illustration

*1	Component without harness connected (Center Stop Light Set)
----	--

If the result is not as specified, replace the center stop light set.

INSTALLATION

1. INSTALL CENTER STOP LIGHT SET

(a) Secure the wire running through the rear spoiler assembly to the center stop light set wire harness.

(b) Place a cloth on the rear spoiler assembly as shown in the illustration.

Text in Illustration

*1	Wire Harness
*2	Gasket
*3	Wire
*4	protective tape
*5	Cloth

(c) Using a clip remover wrapped with protective tape, widen the space inside the rear spoiler assembly, and pull the wire to pass the center stop light set wire harness through the spoiler.

NOTICE:

- Do not apply excess force to the rear spoiler assembly or it may be damaged.
- Do not damage the gasket of the rear spoiler assembly.
- Do not apply excess force when pulling the wire harness or it may break.

(d) Install the center stop light set with the 2 screws to the rear spoiler assembly.

P

ON-VEHICLE INSPECTION

1. INSPECT REAR COMBINATION LIGHT ASSEMBLY LH

*1

(a) Disconnect the connector from the rear combination light assembly LH.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
R17-1 - R17-5	Light control switch off	Below 1 V
	Light control switch in tail position	11 to 14 V
R17-2 - R17-5	Brake pedal released	Below 1 V
	Brake pedal depressed	11 to 14 V
R17-3 - R17-5	Turn signal switch in neutral position	Below 1 V
	Power switch on (IG) and turn signal switch in left turn position	11 to 14 V (60 to 120 times per minute)

Text in Illustration

*1	Front view of wire harness connector (to Rear Combination Light Assembly LH)
----	---

If the result is not as specified, repair or replace the wire harness or connector.

2. INSPECT REAR COMBINATION LIGHT ASSEMBLY RH

(a) Disconnect the connector from the rear combination light assembly RH.

*1

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
S18-1 - S18-5	Light control switch off	Below 1 V
	Light control switch in tail position	11 to 14 V
S18-2 - S18-5	Brake pedal released	Below 1 V
	Brake pedal depressed	11 to 14 V
S18-3 - S18-5	Turn signal switch in neutral position	Below 1 V
	Power switch on (IG) and turn signal switch in right turn position	11 to 14 V (60 to 120 times per minute)

Text in Illustration

*1	Front view of wire harness connector (to Rear Combination Light Assembly RH)
----	---

If the result is not as specified, repair or replace the wire harness or connector.

20. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (for LH Side) [INFO](#)
21. REMOVE LUGGAGE HOLD BELT STRIKER ASSEMBLY (for RH Side)

HINT:

2010 Toyota Prius

Use the same procedure described for the LH side.

22. REMOVE TONNEAU COVER HOLDER CAP (for RH Side)

HINT:

Use the same procedure described for the LH side.

23. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (for RH Side) INFO

24. REMOVE REAR COMBINATION LIGHT ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 2 nuts.

(c) Disengage the 2 clips and guide, and remove the rear combination light assembly as shown in the illustration.

DISASSEMBLY

1. REMOVE REAR COMBINATION LIGHT BODY GASKET

P

(a) Remove the rear combination light body gasket.

- Be sure to remove all the traces of the old gasket from the body.
- Do not reuse the removed gasket. Be sure to install a new rear combination light body gasket to prevent water ingress.

2. REMOVE REAR TURN SIGNAL LIGHT BULB

P

(a) Turn the rear turn signal light bulb and rear combination light socket and wire sub-assembly in the direction indicated by the arrow shown in the illustration, and remove them as a unit.

(b) Remove the rear turn signal light bulb from the rear combination light socket and wire sub-assembly.

3. REMOVE BACK-UP LIGHT BULB

P

(a) Turn the back-up light bulb and rear combination light socket and wire sub-assembly in the direction indicated by the arrow shown in the illustration, and remove them as a unit.

(b) Remove the back-up light bulb from the rear combination light socket and wire sub-assembly.

4. REMOVE REAR COMBINATION LIGHT SOCKET AND WIRE SUB-ASSEMBLY

(a) Turn the cap in the direction indicated by the arrow shown in the illustration and separate it.

(b) Disconnect the connector.

(c) Disengage the clamp and remove the rear combination light socket and wire sub-assembly.

5. REMOVE REAR BUMPER UPPER RETAINER

(a) Using a screwdriver, disengage the claw and remove the rear bumper upper retainer.

6. REMOVE REAR COMBINATION LIGHT GASKET

(a) Remove the rear combination light gasket.

- Be sure to remove all the traces of the old gasket from the body.
- Do not reuse the removed gasket. Be sure to install a new rear combination light gasket to prevent water ingress.

7. REMOVE REAR LIGHT GUIDE

(a) Remove the 2 rear light guides.

REASSEMBLY

1. INSTALL REAR LIGHT GUIDE

(a) Install 2 new rear light guides.

2. INSTALL REAR COMBINATION LIGHT GASKET

(a) Install a new rear combination light gasket.

3. INSTALL REAR BUMPER UPPER RETAINER

(a) Engage the claw and install the rear bumper upper retainer.

4. INSTALL REAR COMBINATION LIGHT SOCKET AND WIRE SUB-ASSEMBLY

(a) Engage the clamp.

P

(b) Connect the connector.

P

(c) Turn the cap in the direction indicated by the arrow shown in the illustration to install the cap of the rear combination light socket and wire sub-assembly.

5. INSTALL BACK-UP LIGHT BULB

(a) Install the back-up light bulb to the rear combination light socket and wire sub-assembly.

P

(b) Turn the back-up light bulb and rear combination light socket and wire sub-assembly in the direction indicated by the arrow shown in the illustration to install them as a unit.

6. INSTALL REAR TURN SIGNAL LIGHT BULB

(a) Install the rear turn signal light bulb to the rear combination light socket and wire sub-assembly.

(b) Turn the rear turn signal light bulb and rear combination light socket and wire sub-assembly in the direction indicated by the arrow shown in the illustration to install them as a unit.

7. INSTALL REAR COMBINATION LIGHT BODY GASKET

(a) Install a new rear combination light body gasket.

INSTALLATION

1. INSTALL REAR COMBINATION LIGHT ASSEMBLY

(a) Engage the guide and 2 clips, and install the rear combination light assembly as shown in the illustration.

CAUTION:

When installing the rear combination light assembly, check that the wire harness is not caught between the rear combination light assembly and the body. Failure to do so may cause a short circuit.

(b) Install the 2 nuts.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

(c) Connect the connector.

2. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (for LH Side) [INFO](#)

3. INSTALL TONNEAU COVER HOLDER CAP (for LH Side) [INFO](#)

4. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (for LH Side) [INFO](#)

5. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (for RH Side) [INFO](#)

6. INSTALL TONNEAU COVER HOLDER CAP (for RH Side)

HINT:

Use the same procedure described for the LH side.

7. INSTALL LUGGAGE HOLD BELT STRIKER ASSEMBLY (for RH Side)

HINT:

Use the same procedure described for the LH side.

8. INSTALL REAR SIDE SEATBACK ASSEMBLY LH (for LH Side) [INFO](#)

25. BUMPER POSITION SETTING (w/ Advanced Parking Guidance System)

[INFO](#)

ON-VEHICLE INSPECTION

1. INSPECT HEADLIGHT DIMMER RELAY (DIM)

P

(a) Remove the headlight dimmer relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Voltage is not applied between terminals 1 and 2	10 k Ω or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the headlight dimmer relay.

COMPONENTS

ILLUSTRATION

REMOVAL

1. REMOVE FRONT DOOR SCUFF PLATE LH [INFO](#)
2. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH [INFO](#)
3. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY [INFO](#)
4. REMOVE STOP LIGHT CONTROL ECU ASSEMBLY

(a) Using a clip remover, disengage the clamp.

(b) Disconnect the connector and remove the stop light control ECU assembly.

INSPECTION

1. INSPECT STOP LIGHT CONTROL ECU ASSEMBLY

*1

(a) Disconnect the A28 stop light control ECU assembly connector.

H

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A28-5 (STP) - Body ground	Brake pedal released	Below 1 V
	Brake pedal depressed	11 to 14 V
A28-6 (+B) - Body ground	Always	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Stop Light Control ECU Assembly)
----	--

If the result is not as specified, repair or replace the wire harness or connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A28-8 (GND) - Body ground	Always	Below 1 Ω

If the result is not as specified, repair or replace the wire harness or connector.

(d) Reconnect the A28 stop light control ECU assembly connector.

*1

H

(e) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A28-1 (OUT) - Body ground	Brake pedal released	Below 1 V
	Brake pedal depressed	11 to 14 V

Text in Illustration

*1	Component without harness connected (Stop Light Control ECU Assembly)
----	--

If the result is not as specified, the stop light control ECU assembly may have a malfunction.

INSTALLATION

1. INSTALL STOP LIGHT CONTROL ECU ASSEMBLY

(a) Connect the connector.

(b) Engage the clamp to install the stop light control ECU assembly.

2. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY [INFO](#)

3. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH [INFO](#)

4. INSTALL FRONT DOOR SCUFF PLATE LH [INFO](#)

STOP LIGHT SWITCH ASSEMBLY 

P

REMOVAL

1. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

2. REMOVE STOP LIGHT SWITCH ASSEMBLY

(a) Disconnect the connector.

(b) Turn the stop light switch assembly counterclockwise and remove it.

INSPECTION

1. INSPECT STOP LIGHT SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

*1

Tester Connection	Switch Condition	Specified Condition
1 - 2	Pushed	10 k Ω or higher
	Not pushed	Below 1 Ω
3 - 4	Pushed	Below 1 Ω
	Not pushed	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Stop Light Switch Assembly)
----	---

If the result is not as specified, replace the stop light switch assembly.

INSTALLATION

1. INSTALL STOP LIGHT SWITCH ASSEMBLY

(a) Insert the stop light switch assembly until the rod hits the pedal.

NOTICE:

When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

(b) Make a quarter turn clockwise to install the stop light switch assembly.

Torque: **1.5 N·m (15 kgf·cm, 13in·lbf)** or less

NOTICE:

When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

(c) Connect the connector.

(d) Check the protrusion of the rod.

Protrusion of the rod:

1.5 to 2.5 mm (0.0591 to 0.0984 in.)

If the protrusion is not as specified, adjust it.

NOTICE:

Do not depress the brake pedal.

2. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

COMPONENTS

ILLUSTRATION

P

REMOVAL

1. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure up to Remove Upper Instrument Panel Assembly **INFO**.

2. REMOVE NO. 3 SIDE DEFROSTER NOZZLE DUCT **INFO**

3. REMOVE TURN SIGNAL FLASHER ASSEMBLY

(a) Using a screwdriver, disengage the claw.

(b) Disconnect the connector and remove the turn signal flasher assembly.

INSPECTION

1. INSPECT TURN SIGNAL FLASHER ASSEMBLY

*1

(a) Disconnect the L55 turn signal flasher assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L55-1 (IG) - Body ground	Power switch off	Below 1 V
	Power switch on (IG)	11 to 14 V
L55-4 (B) - Body ground	Always	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Turn Signal Flasher Assembly)
----	---

If the result is not as specified, repair or replace the wire harness or connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
L55-5 (EL) - Body ground	Turn signal switch off	10 k Ω or higher
	Turn signal switch in left turn position	Below 1 Ω
L55-6 (ER) - Body ground	Turn signal switch in neutral position	10 k Ω or higher
	Turn signal switch in right turn position	Below 1 Ω
L55-7 (E) - Body ground	Always	Below 1 Ω

Tester Connection	Switch Condition	Specified Condition
L55-8 (HAZ) - Body ground	Hazard warning switch off	10 k Ω or higher
	Hazard warning switch on	Below 1 Ω

If the result is not as specified, repair or replace the wire harness or connector.

*1

(d) Reconnect the L55 turn signal flasher assembly connector.

H

(e) Measure the voltage according to the valve(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L55-2 (LR) - Body ground	Hazard warning switch off	Below 1 V
	Hazard warning switch on	11 to 14 V (60 to 120 times per minute)
	Turn signal switch off	Below 1 V
	Power switch on (IG) and turn signal switch in RH position	11 to 14 V (60 to 120 times per minute)
L55-3 (LL) - Body ground	Hazard warning switch off	Below 1 V
	Hazard warning switch on	11 to 14 V (60 to 120 times per minute)
	Turn signal switch off	Below 1 V
	Power switch on (IG) and turn signal switch in LH position	11 to 14 V (60 to 120 times per minute)

7. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO
8. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY INFO
9. REMOVE OUTER MIRROR PROTECTOR

(a) Remove the screw.

(b) Disengage the 2 claws and remove the outer mirror protector.

10. REMOVE OUTER MIRROR INSTALL HOLE COVER

(a) Disengage the 2 claws and guide, remove the outer mirror install hole cover.

11. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 3 bolts.

(c) Disengage the clip and remove the outer rear view mirror assembly.

12. REMOVE OUTER MIRROR INFO

13. REMOVE OUTER MIRROR COVER

(a) Disengage the 5 claws.

P

P

(b) Disengage the 3 claws and remove the outer mirror cover as shown in the illustration.

INSPECTION

1. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY LH

(a) Inspect outer mirror motor operation.

(1) Apply battery voltage and check the operation of the mirror face, as shown in the table and illustration.

OK:

Connection	Result
Battery positive (+) → Terminal 5 (MV)	Turns upward
Battery negative (-) → Terminal 4 (M+)	
Battery positive (+) → Terminal 4 (M+)	Turns downward
Battery negative (-) → Terminal 5 (MV)	
Battery positive (+) → Terminal 3 (MH)	Turns left
Battery negative (-) → Terminal 4 (M+)	
Battery positive (+) → Terminal 4 (M+)	Turns right
Battery negative (-) → Terminal 3 (MH)	

Text in Illustration

*1	Front view of wire harness connector (to Outer Rear View Mirror Assembly LH)
----	---

If the result is not specified, replace the outer rear view mirror assembly.

(b) Check the mirror heater (w/ Mirror heater).

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Terminal 1 (HL+) - Terminal 2 (HL-)	25°C (77°F)	7.6 to 11.4 Ω

If the result is not specified, replace the outer rear view mirror assembly.

2. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY RH

(a) Inspect outer mirror motor operation.

(1) Apply battery voltage and check the operation of the mirror face, as shown in the table and illustration.

OK:

Connection	Result
Battery positive (+) → Terminal 5 (MV)	Turns upward
Battery negative (-) → Terminal 4 (M+)	
Battery positive (+) → Terminal 4 (M+)	Turns downward
Battery negative (-) → Terminal 5 (MV)	
Battery positive (+) → Terminal 3 (MH)	Turns left
Battery negative (-) → Terminal 4 (M+)	
Battery positive (+) → Terminal 4 (M+)	Turns right
Battery negative (-) → Terminal 3 (MH)	

Text in Illustration

*1	Front view of wire harness connector (to Outer Rear View Mirror Assembly RH)
----	---

If the result is not specified, replace the outer rear view mirror assembly.

(b) Check the mirror heater (w/ Mirror heater).

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Terminal 1 (HR+) - Terminal 2 (HR-)	25°C (77°F)	7.6 to 11.4 Ω

If the result is not specified, replace the outer rear view mirror assembly.

INSTALLATION

1. INSTALL OUTER MIRROR COVER

(a) Engage the 8 claws to install the outer mirror cover.

NOTICE:

Securely engage the 8 claws.

P

2. INSTALL OUTER MIRROR INFO

3. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY

(a) Engage the clip to install the outer rear view mirror assembly.

(b) Install the outer rear view mirror assembly with the 3 bolts.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

(c) Connect the connector.

4. INSTALL OUTER MIRROR INSTALL HOLE COVER

(a) Engage the guide and 2 claws to install the outer mirror install hole cover.

5. INSTALL OUTER MIRROR PROTECTOR

(a) Engage the 2 claws.

(b) Install the outer mirror protector with the screw.

6. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY [INFO](#)

7. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY [INFO](#)

8. INSTALL COURTESY LIGHT ASSEMBLY [INFO](#)

9. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side) [INFO](#)

SYSTEM DIAGRAM

Communication Table

Transmitting ECU	Receiving ECU	Signal	Communication Method
Air Conditioning Control Panel Assembly	Air Conditioning Amplifier Assembly	Outer Mirror Heater Switch Signal	LIN

SYSTEM DESCRIPTION

1. FUNCTION OF MAIN COMPONENT

Component	Function
Vertical mirror motor	Receives a signal from the outer mirror switch and adjusts the mirror surface position vertically.
Horizontal mirror motor	Receives a signal from the outer mirror switch and adjusts the mirror surface position horizontally.
Mirror heater	Receives a signal from the outer mirror switch and operates to warm the mirror.
Mirror select switch	Consists of R and L switches. One must be chosen to operate the outer mirror switch assembly.
Mirror adjust switch	Mirror R and L signals are sent to each outer mirror control ECU assembly from the mirror select switch. After selecting the R or L switch, the right, left, up and down control switches can be operated to change the angle of the mirror.

2. SYSTEM OPERATION

(a) The remote control mirror has the following features:

Function	Outline
Electrical remote control mirror function	When the outer mirror switch assembly is operated, this function moves the mirror surface vertically or horizontally to enable the driver to attain an optimal mirror angle. Setting the mirror select switch to the R position operates the right mirror, and setting it to the L position operates the left mirror.
Mirror heater function	Automatically turns on the mirror heaters when the rear window defogger switch is turned on. The rear window defogger and mirror heaters automatically turn off after 15 min.

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

TERMINALS OF ECU

1. CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Disconnect the L17 air conditioning amplifier assembly connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L17-1 (IG+) - L17-14 (GND)	B - W-B	Power source (IG)	Power switch on (IG)	11 to 14 V
L17-1 (IG+) - L17-14 (GND)	B - W-B	Power source (IG)	Power switch off	Below 1 V
L17-21 (B) - L17-14 (GND)	Y - W-B	Battery power supply	Always	11 to 14 V
L17-14 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L17 air conditioning amplifier assembly connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L17-20 (RDEF) - L17-14 (GND)	Y - W-B	Rear window defogger signal	Power switch on (IG), rear window defogger switch off	11 to 14 V
L17-20 (RDEF) - L17-14 (GND)	Y - W-B	Rear window defogger signal	Power switch on (IG), rear window defogger switch on	Below 1 V

If the result is not as specified, the air conditioning amplifier assembly may have a malfunction.

2. CHECK AIR CONDITIONING CONTROL PANEL ASSEMBLY

(a) Disconnect the L20 air conditioning control panel assembly connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L20-5 (IG+) - L20-8 (GND)	B - W-B	Power source (IG)	Power switch on (IG)	11 to 14 V
L20-8 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L20 air conditioning control panel assembly connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L20-2 (TX+) - L20-8 (GND)	V - W-B	Rear window defogger signal	Power switch on (IG)	Pulse generation

If the result is not as specified, the air conditioning control panel assembly may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Data of the system can be read from the Data Link Connector 3 (DLC3) of the vehicle. Therefore, when the system seems to be malfunctioning, use Techstream to check for a malfunction and repair it.

2. CHECK DLC3

(a) Check the DLC3  .

DATA LIST / ACTIVE TEST

1. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

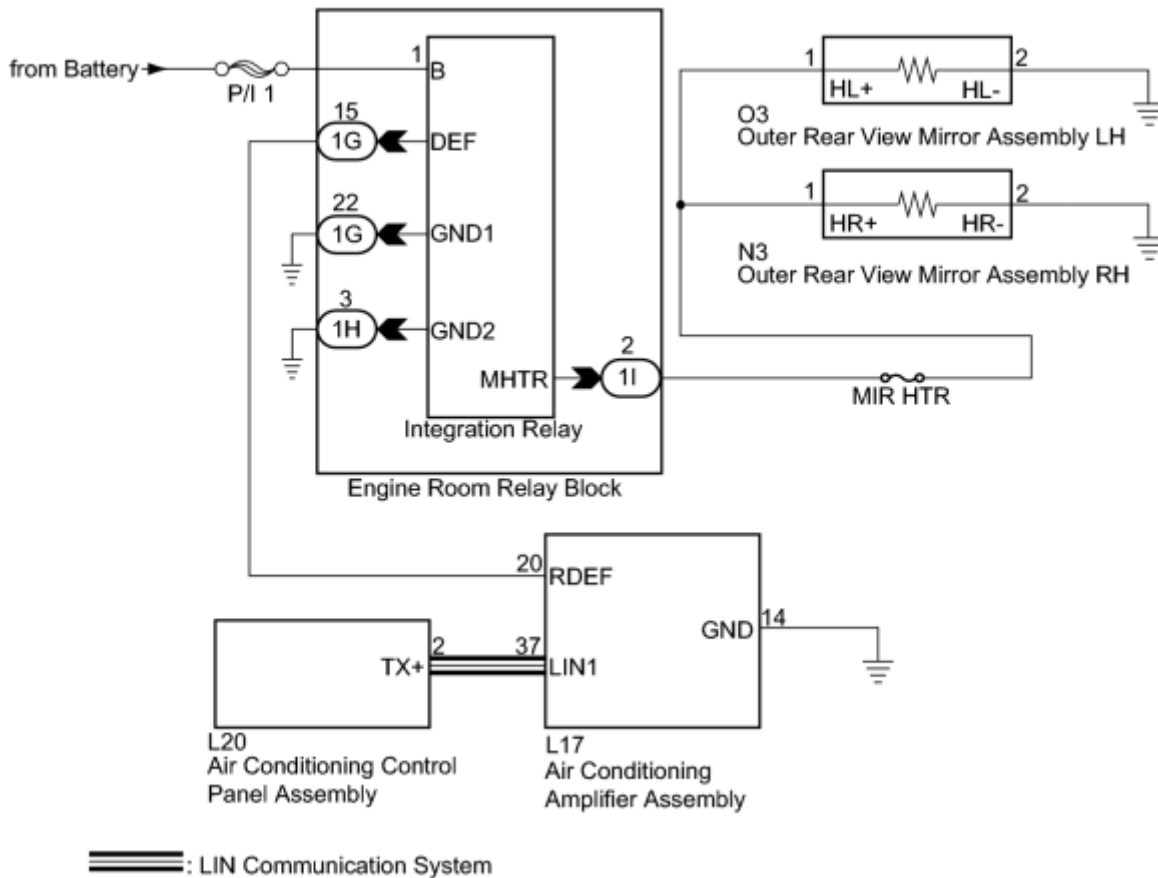

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Mirror Heater Relay	Mirror Heater	ON/OFF	-

DESCRIPTION

When the rear window defogger switch on the air conditioning control panel assembly is pressed, the operation signal is transmitted to the air conditioning amplifier assembly through a LIN communication line. When the air conditioning amplifier assembly receives the signal, it turns on the integration relay to operate the mirror heater.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Active Test.
- (e) Perform an Active Test according to the display on the Techstream.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Mirror Heater Relay	Mirror heater	ON / OFF	-

Result:

Result	Proceed to
Mirror heater operation on both mirrors is not normal	A
Mirror heater operation on RH side mirror is not normal	B
Mirror heater operation on LH side mirror is not normal	C

C [CHECK OUTER REAR VIEW MIRROR ASSEMBLY LH](#)

B [CHECK OUTER REAR VIEW MIRROR ASSEMBLY RH](#)

A

2. CHECK DEFOGGER SYSTEM

- (a) Check the rear window defogger operation.

OK:

The rear window defogger operated normally.

NG [GO TO WINDOW DEFOGGER SYSTEM](#)

OK

3. CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - BODY GROUND)

- (a) Disconnect the integration relay connector.

(b) Measure the resistance according to the value(s) in the table below

Standard Resistance:

Tester Connection	Condition	Specified Condition
1H-3 (GND2) - Body ground	Always	Below 1 Ω
1G-22 (GND1) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Integration Relay)
*2	Front view of wire harness connector (to Integration Relay)

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.	CHECK HARNESS AND CONNECTOR (OUTER REAR VIEW MIRROR ASSEMBLY RH - INTEGRATION RELAY)
----	--

(a) Disconnect the integration relay connector.

H

(b) Disconnect the outer rear view mirror assembly RH connector.

(c) Measure the resistance according to the value(s) in the table below

:

Tester Connection	Condition	Specified Condition
1I-2 (MHTR) - N3-1 (HR+)	Always	Below 1 Ω
1I-2 (MHTR) - Body ground	Always	10 k Ω or higher

REMOVAL

CAUTION:

OPERATION PRECAUTIONS INFO

1. REMOVE SLIDING ROOF SIDE GARNISH LH

(a) Remove the sliding roof side garnish LH.

2. REMOVE SLIDING ROOF SIDE GARNISH RH

HINT:

Use the same procedure for the RH side and LH side.

3. REMOVE SLIDING ROOF GLASS SUB-ASSEMBLY

(a) Using a T25 "TORX" driver, remove the 6 screws.

(b) Remove the sliding roof glass sub-assembly.

4. REMOVE TILT ROOF GLASS SUB-ASSEMBLY

(a) Using a T20 "TORX" driver, remove the 6 screws and tilt roof glass sub-assembly.

5. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure up to Remove Roof Headlining Assembly [INFO](#).

6. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY LH [INFO](#)

7. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

8. REMOVE REAR SIDE RAIL SPACER LH

(a) Engage the 2 clamps and remove the rear side rail spacer LH.

9. REMOVE REAR SIDE RAIL SPACER RH

HINT:

Use the same procedure for the RH side and LH side.

10. REMOVE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 2 bolts and sliding roof drive gear sub-assembly.

11. REMOVE FRONT SLIDING ROOF HOUSING MOUNTING BRACKET LH

(a) Remove the 2 bolts, 2 nuts and front sliding roof housing mounting bracket LH.

12. REMOVE FRONT SLIDING ROOF HOUSING MOUNTING BRACKET RH

HINT:

Use the same procedure for the RH side and LH side.

13. REMOVE CENTER SLIDING ROOF HOUSING MOUNTING BRACKET LH

(a) Remove the 2 bolts, 2 nuts and center sliding roof housing mounting bracket LH.

14. REMOVE CENTER SLIDING ROOF HOUSING MOUNTING BRACKET RH

HINT:

Use the same procedure for the RH side and LH side.

15. REMOVE SLIDING ROOF RAIL SUB-ASSEMBLY

(a) Remove the 12 nuts and sliding roof rail sub-assembly.

P

16. REMOVE MOON ROOF GLASS ASSEMBLY

P

(a) Disconnect the connector.

(b) Disengage the clamp.

P

(c) Apply protective tape to the outer surface of the vehicle body to prevent scratches.

Text in Illustration

*1	Protective Tape
----	-----------------

(d) Place matchmarks on the moon roof glass assembly and vehicle body on the locations indicated in the illustration.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

Matchmarks are not necessary if the moon roof glass assembly is not going to be reused.

(e) Pass a piano wire between the rear slide roof panel sub-assembly and moon roof glass assembly from the interior, as shown in the illustration.

Text in Illustration

*1	Piano Wire
----	------------

(f) Tie both wire ends to wooden blocks or similar objects that can serve as handles.

(g) Cut off the adhesive by pulling the piano wire around the moon roof glass assembly.

(h) Using suction cups, disengage the 2 clips and remove the moon roof glass assembly.

17. CLEAN MOON ROOF GLASS ASSEMBLY

(a) Clean the outer edge of the moon roof glass with a non-residue solvent.

- Do not touch the moon roof glass surface after cleaning it.
- Be careful not to damage the glass.
- Even if using a new moon roof glass, clean the moon roof glass with a non-residue solvent.

18. CLEAN REAR SLIDE ROOF PANEL SUB-ASSEMBLY

(a) Using a scraper, remove the moulding and adhesive from the moon

roof glass.

Text in Illustration

*1	Adhesive
*2	Rear Slide Roof Panel Sub-assembly

P

(b) Clean and shape the contact surfaces of the rear slide roof panel sub-assembly.

(1) Using a knife, cut away excess adhesive on the contact surfaces of the rear slide roof panel sub-assembly, as shown in the illustration.

NOTICE:

Be careful not to damage the rear slide roof panel sub-assembly.

(2) Clean the contact surfaces of the rear slide roof panel sub-assembly with a piece of cloth saturated with cleaner.

HINT:

Even if all the adhesive has been removed, clean the rear slide roof panel sub-assembly.

19. REMOVE REAR SLIDE ROOF PANEL SUB-ASSEMBLY

(a) Remove the 16 nuts and rear slide roof panel sub-assembly.

P

NOTICE:

- When removing the roof rail, be careful not to damage the vehicle.
- Perform this step with 2 or more technicians.

DISASSEMBLY

1. REMOVE SLIDING ROOF GLASS SEAL

(a) Remove the sliding roof glass seal.

P

2. REMOVE REAR MOON ROOF MOULDING

(a) Remove the rear moon roof moulding.

P

3. REMOVE REMOVABLE ROOF WEATHERSTRIP

(a) Remove the removable roof weatherstrip.

HINT:

Use the same procedure for the RH side and LH side.

P

4. REMOVE FRONT MOON ROOF MOULDING

(a) Remove the front moon roof moulding.

P

5. REMOVE REAR SLIDING ROOF WEATHERSTRIP

P

(a) Remove the rear sliding roof weatherstrip.

6. REMOVE SLIDING ROOF WEATHERSTRIP

P

(a) Disengage the 12 clips and remove the sliding roof weatherstrip.

REASSEMBLY

1. INSTALL SLIDING ROOF WEATHERSTRIP

(a) Engage the 12 clips and install the new sliding roof weatherstrip.

P

2. INSTALL REAR SLIDING ROOF WEATHERSTRIP

(a) Align the matchmarks on the new rear sliding roof weatherstrip and rear sliding roof rail assembly.

Text in Illustration

*1	Matchmark
----	-----------

P

3. INSTALL FRONT MOON ROOF MOULDING

(a) Install the new front moon roof moulding as shown in the illustration.

Standard

Area	Measurement
a	1.3 mm (0.00512 in.) or less

P

4. INSTALL REMOVABLE ROOF WEATHERSTRIP

(a) Install the new removal roof weatherstrip as shown in the illustration.

Standard

Area	Measurement
a	1.0 mm (0.0394 in.) or less

HINT:

Use the same procedure for the RH side and LH side.

P

5. INSTALL REAR MOON ROOF MOULDING

(a) Install the new rear moon roof moulding as shown in the illustration.

P

6. INSTALL SLIDING ROOF GLASS SEAL

(a) Install the new sliding roof glass seal as shown in the illustration.

P

INSTALLATION

1. TEMPORARILY INSTALL REAR SLIDE ROOF PANEL SUB-ASSEMBLY

(a) Temporarily install the rear sliding roof rail sub-assembly with the 16 nuts.

NOTICE:

- When installing the roof rail to the vehicle, first install the roof rail center front and center rear alignment bolts to the vehicle front and rear alignment bolt installation points, as shown in the illustration.
- When installing the roof rail, be careful not to damage the vehicle.
- Perform this step with 2 or more technicians.

(b) Check that the alignment bolts are firmly installed.

P

Text in Illustration

*1	Alignment Bolt	*2	Windshield Glass Moulding
----	----------------	----	---------------------------

NOTICE:

- When the bolts are not firmly installed, water leaks and malfunctions will occur.
- Make sure that the lip of the windshield glass moulding is not folded down.

2. FULLY TIGHTEN REAR SLIDE ROOF PANEL SUB-ASSEMBLY

(a) Fully tighten the 16 nuts to install the rear sliding roof rail sub-assembly.

Text in Illustration

*1	Front Side
----	------------

Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

HINT:

Tighten the nuts in the order indicated in the illustration.

3. CLEAN MOON ROOF GLASS ASSEMBLY

(a) Clean the outer edge of the moon roof glass with a non-residue solvent.

- Do not touch the moon roof glass surface after cleaning it.
- Be careful not to damage the glass.
- Even if using a new moon roof glass, clean the moon roof glass with a non-residue solvent.

4. INSTALL MOON ROOF GLASS ASSEMBLY

(a) Using a brush, coat the installation surface on the rear slide roof panel sub-assembly with Primer M.

CORRECT

WRONG

P

Text in Illustration

*1	Brush	*2	Primer M
*3	Adhesive	-	-

NOTICE:

- Do not coat the adhesive with Primer M.
- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Using a brush or a sponge, coat the application area of the adhesive with Primer G.

P

Text in Illustration

*1	Primer G
----	----------

Standard

Area	Dimension
a	8.0 mm (0.315 in.)
b	12.0 mm (0.472 in.)
c	24.0 mm (0.945 in.)

NOTICE:

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(c) Apply adhesive to the rear sliding roof rail sub-assembly.

Adhesive:

Toyota Genuine Windshield Glass Adhesive or equivalent

(1) Cut off the tip of the cartridge nozzle as shown in the illustration.

Standard Dimension

Area	Dimension
a	12.0 mm (0.472 in.)
b	8.0 mm (0.315 in.)

P

HINT:

After cutting off the tip, use all the adhesive within the time described in the table below.

Usage Time Frame

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour and 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with cartridge.

(3) Apply adhesive to the rear sliding roof rail sub-assembly as shown in the illustration.

P

Text in Illustration

*1	Adhesive
----	----------

Standard Dimension

Area	Dimension
a	300 mm (11.8 in.)
b	14.0 mm (0.551 in.)
c	22.0 mm (0.866 in.)
d	8.0 mm (0.315 in.)

(d) Install the moon roof glass assembly.

(1) Position the moon roof glass assembly so that the matchmarks are aligned, and press it in gently along the rim (when glass without a clip is used).

Text in Illustration

*1	Matchmark
----	-----------

(2) Lightly press the moon roof glass assembly to ensure that the moon roof glass assembly is securely fit to the vehicle body (when glass without a clip is used).

HINT:

Press the moon roof glass assembly with a force of 98 N (10 kgf, 22.0 lbf) or more.

(3) Using suction cups, engage the 2 clips to install the moon roof glass assembly.

- Check that the clips are attached to the vehicle body correctly.
- Check the clearance between the vehicle body and moon roof glass assembly.

(4) Lightly press the front surface of the moon roof glass assembly to ensure that the moon roof glass assembly is securely fit to the vehicle body.

HINT:

Press the moon roof glass assembly with a force of 98 N (10 kgf, 22.0 lbf) or more.

(5) Inspect the position of the moon roof glass assembly so that the measurements are within the standard values shown in the illustration.

P

Standard

Area	Measurement
a	7.4 mm + 2.0 mm (0.291 in. + 0.0787 in.)
	7.4 mm - 2.0 mm (0.291 in. - 0.0787 in.)
b	5.0 mm + 2.0 mm (0.197 in. + 0.0787 in.)
	5.0 mm - 2.0 mm (0.197 in. - 0.0787 in.)

HINT:

"+" represents the condition that the glass is above the panel level. "-" represents the condition that the glass is below the panel level.

(6) Hold the moon roof glass assembly using protective tape until applied adhesive becomes hard.

NOTICE:

Do not drive the vehicle within the time described in the table below.

Minimum Time:

Temperature	Minimum Time prior to Driving Vehicle
35°C (95°F)	1 hour and 30 minutes

Temperature	Minimum Time prior to Driving Vehicle
20°C (68°F)	5 hours
5°C (41°F)	24 hours

5. INSTALL SLIDING ROOF RAIL SUB-ASSEMBLY

(a) Install the sliding roof rail sub-assembly with the 12 nuts.

P

Torque: **7.0 N·m (71 kgf·cm, 62in·lbf)**

6. INSTALL CENTER SLIDING ROOF HOUSING MOUNTING BRACKET LH

(a) Install the center sliding roof housing mounting bracket LH with the 2 bolts and 2 nuts.

Bolt - Torque: **5.0 N·m (51 kgf·cm, 44in·lbf)**

Nut - Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

P

7. INSTALL CENTER SLIDING ROOF HOUSING MOUNTING BRACKET RH

HINT:

Use the same procedure for the RH side and LH side.

8. INSTALL FRONT SLIDING ROOF HOUSING MOUNTING BRACKET LH

(a) Install the front sliding roof housing mounting bracket LH with the 2 bolts and 2 nuts.

Bolt - Torque: **5.0 N·m (51 kgf·cm, 44in·lbf)**

Nut - Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

9. INSTALL FRONT SLIDING ROOF HOUSING MOUNTING BRACKET RH

HINT:

Use the same procedure for the RH side and LH side.

10. ADJUST FULLY CLOSED POSITION

(a) Using a screwdriver, slide the sliding roof drive cable to align the matchmarks.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

Tape the screwdriver tip before use.

11. INSTALL SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

(a) Install the sliding roof drive gear sub-assembly with the 2 bolts.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

12. INSTALL REAR SIDE RAIL SPACER LH

(a) Engage the 2 clamps and install the rear side rail spacer LH

13. INSTALL REAR SIDE RAIL SPACER RH

HINT:

Use the same procedure for the RH side and LH side.

14. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY LH INFO

15. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

16. TEMPORARILY INSTALL TILT ROOF GLASS SUB-ASSEMBLY

(a) Using a T20 "TORX" driver, install the tilt roof glass sub-assembly with the 6 screws.

17. TEMPORARILY INSTALL SLIDING ROOF GLASS SUB-ASSEMBLY

(a) Using a T25 "TORX" driver, install the 6 screws.

P

18. ADJUST SLIDING ROOF GLASS

(a) Adjust the sliding roof glass sub-assembly:

P

(1) Adjust the position of the sliding roof glass sub-assembly so that the measurements are within the standard values shown in the illustration.

Standard

Area	Measurement
------	-------------

Area	Measurement
a	7.4 mm + 2.0 mm (0.291 in. + 0.0787 in.)
	7.4 mm - 2.0 mm (0.291 in. - 0.0787 in.)
b	0 + 2.0 mm (0 + 0.0787 in.)
	0 - 1.0 mm (0 - 0.0394 in.)
c	5.0 mm + 2.0 mm (0.197 in. + 0.0787 in.)
	5.0 mm - 2.0 mm (0.197 in. - 0.0787 in.)
d	1.9 mm + 1.0 mm (0.0748 in. + 0.0394 in.)
	1.9 mm - 1.0 mm (0.0748 in. - 0.0394 in.)

HINT:

"+" represents the condition that the glass is above the panel level. "-" represents the condition that the glass is below the panel level.

(2) After adjusting the sliding roof glass sub-assembly, using a T25 "TORX" driver, fully tighten the 6 screws to install the sliding roof glass sub-assembly.

Torque: **4.0 N·m (41 kgf·cm, 35in·lbf)**

(b) Adjust the tilt roof glass sub-assembly:

(1) Adjust the position of the tilt roof glass sub-assembly so that the measurements are within the standard values shown in the illustration.

Standard

Area	Measurement
a	7.4 mm + 2.0 mm (0.291 in. + 0.0787 in.)
	7.4 mm - 2.0 mm (0.291 in. - 0.0787 in.)
e	0 + 2.0 mm (0 + 0.0787 in.)
	0 - 1.0 mm (0 - 0.0394 in.)
f	4.0 mm + 2.0 mm (0.158 in. + 0.0787 in.)
	4.0 mm - 2.0 mm (0.158 in. - 0.0787 in.)

HINT:

"+" represents the condition that the glass is above the panel level. "-" represents the condition that the glass is below the panel level.

(2) After adjusting the tilt roof glass sub-assembly, using a T20 "TORX" driver, fully tighten the 6 screws to install the tilt roof glass sub-assembly.

Torque: **2.2 N·m (22 kgf·cm, 20in·lbf)**

19. INSPECT FOR WATER LEAKS

- (a) After adjusting the roof glass sub-assembly, inspect for water leaks.
- (b) If there are any leaks, readjust the roof glass sub-assembly.

20. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure from Install Roof Headlining Assembly **INFO**.

21. INSTALL SLIDING ROOF SIDE GARNISH LH

(a) Install the sliding roof side garnish LH.

22. INSTALL SLIDING ROOF SIDE GARNISH RH

HINT:

Use the same procedure for the RH side and LH side.

23. RESET SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

INFO

24. INSPECT SLIDING ROOF SYSTEM

INSPECTION

1. INSPECT SLIDING ROOF SWITCH (MAP LIGHT ASSEMBLY)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

*1

H

Tester Connection	Switch Condition	Specified Condition
U13-2 (CLS) - U13-9 (GND1)	CLOSE switch is pressed	Below 1 Ω
U13-2 (CLS) - U13-9 (GND1)	CLOSE switch is not pressed	10 k Ω or higher
U13-16 (OPN) - U13-9 (GND1)	OPEN switch is pressed	Below 1 Ω
U13-16 (OPN) - U13-9 (GND1)	OPEN switch is not pressed	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Sliding Roof Switch (Map Light Assembly))
----	---

If the result is not as specified, replace the sliding roof switch (map light assembly).

INSTALLATION

1. INSTALL MAP LIGHT ASSEMBLY 

2. INSTALL ROOF TOP MOULDING (w/o Lane Keeping Assist System) 

3. INSTALL ROOF TOP MOULDING (w/ Lane Keeping Assist System) 

PRECAUTION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	

1. PRECAUTION FOR SOLAR PANEL

(a) Before disconnecting the solar module connector, make sure to cover the entire solar module with a material such as thick fabric which blocks sunlight.

CAUTION:

The solar module generates electricity from sunlight and other light sources. If the solar module connector is touched while the solar module is generating electricity, an accidental short circuit or electric shock may occur, causing serious injury.

HINT:

The solar module always generates electricity when exposed to light. When exposed to a light source such as sunlight, approximately 3.6 A and 22 V will be generated.

SYSTEM DESCRIPTION

1. GENERAL

The sliding roof system has the following functions:

manual open and close, auto open, jam protection and key off operation.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Sliding roof ECU (Sliding roof drive gear sub-assembly)	Sliding roof ECU (sliding roof drive gear sub-assembly) controls the rotational direction of the motor.
Sliding roof switch (Map light assembly)	Sliding roof switch (map light assembly) outputs operation signals to sliding roof ECU (sliding roof drive gear sub-assembly).

3. SYSTEM OPERATION

The sliding roof system has the following features:

Function	Outline
Manual open and close	This function causes sliding roof to open (tilt up and slide open) or close (slide close and tilt down) when OPEN switch or CLOSE switch is pressed for a maximum of 0.3 seconds. Sliding roof stops as soon as switch is released.
Auto open	This function causes sliding roof to fully tilts up or fully open when OPEN switch is pressed for a minimum of 0.3 seconds.
Jam protection	The jam protection function automatically stops the sliding roof and moves it open half way (or fully tilt up) if a foreign object gets jammed in the sliding roof during close operation.
Key-off operation	The key-off operation function makes it possible to operate the sliding roof for approximately 43 seconds after the power switch is turned on (ACC) or off, if the front doors are not opened.
Sliding roof open warning	When the power switch is turned from on (IG) to off and the driver door is opened with the sliding roof open, the buzzer in the combination meter assembly sounds once.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the sliding roof system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE
----	-------------------------

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

- If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	INSPECT COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*
----	---

(a) Using the Techstream, check if the LIN Communication System is functioning normally .

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

  Go to LIN COMMUNICATION SYSTEM

10. CONFIRMATION TEST

NEXT ▶ **END**

OPERATION CHECK

1. CHECK AUTO OPEN OPERATION

NOTICE:

Make sure that initialization is completed before inspection .

HINT:

When pressing the switch for 0.3 seconds or less, the roof glass moves but auto operation does not operate.

(a) Turn the power switch on (IG).

(b) When the roof glass is fully closed, press the OPEN switch for 0.3 seconds or more. Check that the roof glass automatically tilts up until it is fully tilted upward.

HINT:

When the OPEN switch is pressed for 1.7 seconds or more, the roof glass automatically opens to the comfort stop position without stopping at the fully tilted up position.

(c) When the roof glass is fully tilted upward, press the OPEN switch again for 0.3 seconds or more. Check that the roof glass automatically slides until it is comfort stop position.

(d) When the roof glass is comfort stop position, press the OPEN switch again for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully open.

(e) When the auto operation is operating, check that pressing any sliding roof switch stops the roof glass operation.

2. CHECK SLIDING ROOF OPERATION AFTER POWER SWITCH IS TURNED OFF

(a) Turn the power switch from on (IG) to off, and check that the sliding roof can be operated. Then open the front door once, and check that the sliding roof cannot be operated.

(b) Turn the power switch from on (IG) to off and wait for approximately 45 seconds. Check that the sliding roof cannot be operated.

(c) Operate the auto open operation (tilt up or slide open) with the driver or front passenger side door open. While the roof glass is in motion, turn the power switch off. Check that the roof glass stops immediately.

3. CHECK JAM PROTECTION FUNCTION

CAUTION:

- Do not use a part of your body, for example, your hand, to check the jam protection function.
- Do not allow anything to become caught in the sliding roof by accident while performing this inspection.
- Perform the inspection from the inside of the vehicle.

NOTICE:

- Do not use hard objects, such as a hammer, to avoid damaging the roof.
- Make sure that initialization is completed before inspection **INFO**.
- If the jam protection function does not operate, reset the sliding roof drive gear (motor).
- The jam protection function does not operate when the roof glass is close to the fully closed position.

(a) When the slide close function is operating and an object is caught between the vehicle body and glass, check that the roof glass opens a distance of 218 mm (8.58 in.) from the point of contact with the object, or opens fully if an opening distance of 218 mm (8.58 in.) is not available.

(b) When the tilt down function is operating, and an object is caught between the vehicle body and the roof glass, check that the sliding roof tilts up fully.

4. CHECK SLIDING ROOF OPEN WARNING

(a) Open the sliding roof by using the sliding roof switch.

(b) When the power switch is turned from on (IG) to off and the driver door is opened with the key is in the vehicle, check that the warning buzzer in the combination meter assembly sounds once.

INITIALIZATION

1. INITIALIZE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

NOTICE:

- When the sliding roof glass, sliding roof housing or sliding roof ECU (sliding roof drive gear sub-assembly) is replaced or removed and installed, the sliding roof drive gear requires initialization (pulse sensor initial position setting), as the glass position cannot be determined. If initialization is not performed, the auto slide open and tilt up functions, key-off operation and jam protection function may not operate, or the sliding roof may move in reverse or become misaligned.
- During initialization, do not apply a physical shock, such as opening/closing a door or driving the vehicle at 5 km/h (3 mph) or more, to the vehicle and do not perform the electrical operations:

HINT:

When the cable of the negative (-) battery terminal is disconnected and reconnected or the drive gear connector is disconnected and reconnected, sliding roof drive gear (pulse sensor initial position setting) initialization is not necessary.

(a) Perform initialization according to the table below.

Condition of Sliding Roof	Proceed to
Auto slide open and tilt up functions do not operate	Procedure A
Sliding roof moves in reverse direction during slide close (tilt down) operation	Procedure B
Sliding roof does not stop at the correct fully tilt up or open position during open operation	Procedure C

HINT:

Before performing initialization, make sure that there is no foreign matter on the guide rails and the guide rails are not deformed.

(1) Procedure A

1. Turn the power switch on (IG).
2. Press and hold the OPEN switch.

NOTICE:

Make sure not to release the switch during the initialization. If the switch is released, perform the initialization again.

3. The sliding roof glass starts open operation (tilt up and slide open operation) and stops at the fully open position.
4. After the sliding roof glass stops, check that the sliding roof glass moves slightly forward and stops at the correct fully open position.

HINT:

The initialization process ends when this operation completes.

(2) Procedure B

1. Turn the power switch on (IG).
2. Press and hold the CLOSE switch until the following movements finish: starts close operation (slide close or tilt down operation) → erroneously reverses → stops operation for 10 seconds → starts close operation (slide close or tilt down operation) → stops at the fully closed position.

NOTICE:

- If the switch is released before "stops operation for 10 seconds" finished, perform Procedure B again.
 - If the switch is released after "stops operation for 10 seconds" finished, perform Procedure A.
3. Perform Procedure A.

(3) Procedure C

1. Turn the power switch on (IG).
2. Press and hold the OPEN switch until the following movements finish: starts slide open operation → stops at the incorrect fully open position for 10 seconds → stops at the fully open position.

NOTICE:

- If the switch is released before "stops at the incorrect fully open position for 10 seconds" finished, perform Procedure C again.
 - If the switch is released after "stops at the incorrect fully open position for 10 seconds" finished, perform Procedure A.
3. After the sliding roof glass stops, check that the sliding roof glass moves slightly forward and stops at the correct fully open position.

HINT:

The initialization process ends when this operation completes.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Sliding Roof System

Symptom	Suspected Area	See page
Sliding Roof does not Move by Operating Sliding Roof Control Switch	Sliding roof ECU (sliding roof drive gear sub-assembly)	INFO
	Wire harness or connector	INFO
	Sliding roof switch (map light assembly)	INFO

TERMINALS OF ECU

1. CHECK SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

(a) Disconnect the R23 ECU connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
R23-1 (B) - R23-2 (E)	R - W-B	+B Power supply	Power switch off	11 to 14 V
R23-5 (IG) - R23-2 (E)	B - W-B	Power switch power supply	Power switch off	Below 1 V
R23-5 (IG) - R23-2 (E)	B - W-B	Power switch power supply	Power switch on (IG)	11 to 14 V
R23-2 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the R23 ECU connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
R23-7 (OPN) - R23-2 (E)	SB - W-B	Sliding roof motor open	Power switch on (IG), OPEN switch on	Below 1 V
R23-7 (OPN) - R23-2 (E)	SB - W-B	Sliding roof motor open	Power switch on (IG), OPEN switch off	11 to 14 V
R23-9 (CLS) - R23-2	BR - W-B	Sliding roof motor	Power switch on (IG), CLOSE	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
(E)		close	switch on	
R23-9 (CLS) - R23-2 (E)	BR - W-B	Sliding roof motor close	Power switch on (IG), CLOSE switch off	11 to 14 V

If the result is not as specified, the sliding roof ECU (sliding roof drive gear sub-assembly) may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Sliding roof system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

- If the voltage is below 11 V, recharge or replace the battery.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Sliding Roof / Trouble Codes.
- (e) Check the details of the DTC(s) .

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Sliding Roof / Trouble Codes.
- (e) Clear the DTCs.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the following table, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Sliding Roof / Data List.
- (e) Read the Data List according to the display on the Techstream.

Sliding Roof (Sliding Roof ECU (Sliding Roof Drive Gear Sub-assembly))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Open Switch	OPEN switch signal/ON or OFF	ON: OPEN switch pressed OFF: OPEN switch not pressed	-
Close Switch	CLOSE switch signal/ON or OFF	ON: CLOSE switch pressed OFF: CLOSE switch not pressed	-
Hall IC1 Pulse	Hall IC1 pulse output/Lo or Hi	Lo and Hi repeat during motor operation	Lo: Hall IC1 output is low Hi: Hall IC1 output is high
Hall IC1 Status	Status of Hall IC1/Normal or Error	Normal: Hall IC1 is normal Error: Hall IC1 is not normal	-
Hall IC2 Pulse	Hall IC2 pulse output/Lo or Hi	Lo and Hi repeat during motor operation	Lo: Hall IC2 output is low Hi: Hall IC2 output is high

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Hall IC2 Status	Status of Hall IC2/Normal or Error	Normal: Hall IC2 is normal Error: Hall IC2 is not normal	-
Ignition (Direct Signal)	Power switch signal/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
Ignition (MPX)	Power switch signal (LIN signal)/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
Door Courtesy	Driver side door courtesy light switch signal/ON or OFF	ON: Driver side door open OFF: Driver side door closed	-
Key Off Permission	Key-off sliding roof operation permit signal/ON or OFF	ON: Front doors are not opened within 45 seconds after power switch turned off OFF: Any status except "ON" status	-
Open Switch Failure(Past)	Open switch failure signal (Past)/ON or OFF	ON: Sliding roof open signal failure (Past) OFF: Sliding roof open signal not fail (Past)	-
Close Switch Failure(Past)	Close switch failure signal (Past)/ON or OFF	ON: Sliding roof close signal failure (Past) OFF: Sliding roof close signal not fail (Past)	-
Open Switch Failure(Current)	Open switch failure signal (Current)/ON or OFF	ON: Sliding roof open signal failure (Current) OFF: Sliding roof open signal not fail (Current)	-
Close Switch Failure(Current)	Close switch failure signal (Current)/ON or OFF	ON: Sliding roof close signal failure (Current) OFF: Sliding roof close signal not fail (Current)	-

2. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in

troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Sliding Roof / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- When the sliding roof ECU (sliding roof drive gear sub-assembly) is replaced or removed and reinstalled, it requires initialization [INFO](#).

PROCEDURE

1.	CHECK SLIDING ROOF OPERATION
----	------------------------------

(a) Check the sliding roof auto operation [INFO](#).

OK:

Auto operation operates normally.

NG [▶ INITIALIZE SLIDING ROOF ECU \(SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY\)](#)

OK

2. CHECK DTC OUTPUT

(a) Clear the DTC .

(b) Recheck for DTCs.

OK:

DTC B2341 or B2344 is not output.

NG  REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

OK  **USE SIMULATION METHOD TO CHECK**

3. INITIALIZE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

(a) Check that the sliding roof ECU (sliding roof drive gear sub-assembly) can be initialized .

OK:

Sliding roof ECU (sliding roof drive gear sub-assembly) can be initialized.

NG  CHECK HARNESS AND CONNECTOR (SLIDING ROOF ECU - SLIDING ROOF SWITCH)

OK

4. CHECK DTC OUTPUT

(a) Clear the DTC .

(b) Recheck for DTCs.

OK:

DTC B2341 or B2344 is not output.

NG  REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

OK  **END**

5. CHECK HARNESS AND CONNECTOR (SLIDING ROOF ECU - SLIDING ROOF SWITCH)

(a) Disconnect the sliding roof switch (map light assembly) connector.

*1

*2

(b) Disconnect the sliding roof ECU (sliding roof drive gear sub-assembly) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
R23-9 (CLS) - U13-2 (CLS)	Always	Below 1 Ω
R23-9 (CLS) - Body ground	Always	10 k Ω or higher
R23-7 (OPN) - U13-16 (OPN)	Always	Below 1 Ω
R23-7 (OPN) - Body ground	Always	10 k Ω or higher
U13-9 (GND1) - Body ground	Always	Below 1 Ω
R23-2 (E) - Body ground	Always	Below 1 Ω

OK:

"OFF" appears on the Techstream screen.

NG ► [CHECK HARNESS AND CONNECTOR \(SLIDING ROOF ECU - BODY GROUND\)](#)

OK ► **REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)**

2.	CHECK HARNESS AND CONNECTOR (SLIDING ROOF ECU - BODY GROUND)
----	--

*1

(a) Disconnect the sliding roof ECU (sliding roof drive gear sub-assembly) connector.

(b) Disconnect the sliding roof switch (map light assembly) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
R23-7 (OPN) - Body ground	Always	10 kΩ or higher
R23-9 (CLS) - Body ground	Always	10 kΩ or higher

Text in Illustration

*1	Front view of wire harness connector (to Sliding Roof ECU (Sliding Roof Drive Gear Sub-assembly))
----	--

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.	CHECK HARNESS AND CONNECTOR (SLIDING ROOF SWITCH (MAP LIGHT ASSEMBLY))
----	--

*1

(a) Reconnect the sliding roof switch (map light assembly) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
R23-7 (OPN) - Body ground	OPEN switch off	10 kΩ or higher
R23-9 (CLS) - Body ground	CLOSE switch off	10 kΩ or higher

Text in Illustration

----	--

NG ► REPLACE SLIDING ROOF SWITCH (MAP LIGHT ASSEMBLY)

OK ► REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

DTC	B2343	Position Initialization Incomplete
-----	-------	------------------------------------

DESCRIPTION

This DTC is output when the sliding roof ECU (sliding roof drive gear sub-assembly) has not been initialized.

DTC Code	DTC Detection Condition	Trouble Area
B2343	Sliding roof ECU (sliding roof drive gear sub-assembly) has not been initialized.	Sliding roof ECU (Sliding roof drive gear sub-assembly)

WIRING DIAGRAM

Refer to DTC B2341 .

INSPECTION PROCEDURE

NOTICE:

- When DTC B2342 and B2343 are output simultaneously, perform troubleshooting for DTC B2342 first.
- When the sliding roof ECU (sliding roof drive gear sub-assembly) is replaced or removed and reinstalled, it requires initialization .

PROCEDURE

1.	INITIALIZE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)
----	--

(a) Check that the sliding roof ECU (sliding roof drive gear sub-assembly) can be initialized .

OK:

Sliding roof ECU (sliding roof drive gear sub-assembly) can be initialized.

NG  REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

OK

2.	CHECK SLIDING ROOF OPERATION
----	------------------------------

(a) Check the sliding roof auto operation .

OK:

Auto operation operates normally.

NG  REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

OK

3.	CHECK DTC OUTPUT
----	------------------

(a) Clear the DTC .

(b) Recheck for DTCs.

OK:

DTC B2343 is not output.

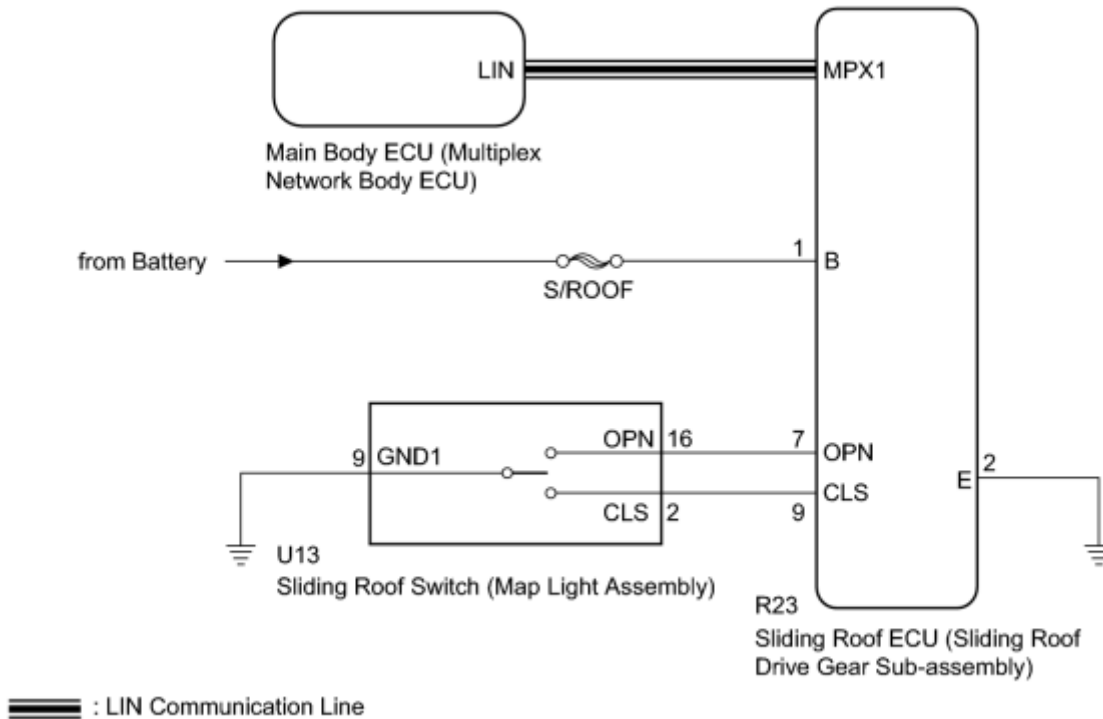

NG  REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)

OK  END

DESCRIPTION

The sliding roof ECU (sliding roof drive gear sub-assembly) receives slide and tilt switch signals and drives its built-in motor.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- When the sliding roof ECU (sliding roof drive gear sub-assembly) is reinstalled or replaced, the sliding roof ECU (sliding roof drive gear sub-assembly) must be initialized **INFO**.
- Since the sliding roof system has functions that use LIN communication, first confirm that there is no malfunction in the LIN communication system with the How to Proceed with Troubleshooting procedure **INFO**.

PROCEDURE

1. READ VALUE USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Sliding Roof / Data List.
- (e) Read the Data List according to the display on the Techstream.

Sliding Roof (Sliding Roof ECU (Sliding Roof Drive Gear Sub-assembly))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Open Switch	OPEN switch signal/ON or OFF	ON: OPEN switch pressed OFF: OPEN switch not pressed	-
Close Switch	CLOSE switch signal/ON or OFF	ON: CLOSE switch pressed OFF: CLOSE switch not pressed	-

OK:

The Techstream display changes according to switch operation as shown in the table.

NG  [INSPECT SLIDING ROOF SWITCH \(MAP LIGHT ASSEMBLY\)](#)

OK

2.	CHECK HARNESS AND CONNECTOR (SLIDING ROOF ECU - BATTERY, BODY GROUND)
----	---

*1

(a) Disconnect the sliding roof ECU (sliding roof drive gear sub-assembly) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
R23-1 (B) - Body ground	Power switch off	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
R23-2 (E) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Sliding Roof ECU (Sliding Roof Drive Gear Sub-assembly))
----	--

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK **REPLACE SLIDING ROOF ECU (SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY)**

3.	INSPECT SLIDING ROOF SWITCH (MAP LIGHT ASSEMBLY)
----	--

*1

(a) Remove the sliding roof switch (map light assembly) INFO.

H

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
U13-2 (CLS) - U13-9 (GND1)	CLOSE switch is pressed	Below 1 Ω
U13-2 (CLS) - U13-9 (GND1)	CLOSE switch is not pressed	10 k Ω or higher
U13-16 (OPN) - U13-9 (GND1)	OPEN switch is pressed	Below 1 Ω
U13-16 (OPN) - U13-9 (GND1)	OPEN switch is not pressed	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Sliding Roof Switch (Map Light Assembly))
----	---

NG▶ REPLACE SLIDING ROOF SWITCH (MAP LIGHT ASSEMBLY)

OK

4.	CHECK HARNESS AND CONNECTOR (SLIDING ROOF ECU - SLIDING ROOF SWITCH)
----	--

*1

(a) Disconnect the sliding roof ECU (sliding roof drive gear sub-assembly) connector.

*2

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
R23-9 (CLS) - U13-2 (CLS)	Always	Below 1 Ω
R23-9 (CLS) - Body ground	Always	10 kΩ or higher
R23-7 (OPN) - U13-16 (OPN)	Always	Below 1 Ω
R23-7 (OPN) - Body ground	Always	10 kΩ or higher
U13-9 (GND1) - Body ground	Always	Below 1 Ω
R23-2 (E) - Body ground	Always	Below 1 Ω

10. REMOVE REAR WIPER MOTOR ASSEMBLY (w/ Rear Wiper)

(a) for Back Door Glass:

(1) Remove the rear wiper motor assembly [INFO](#).

11. REMOVE BACK DOOR GLASS

(a) Disconnect the 2 connectors.

(b) Apply protective tape to the outer surface of the vehicle body to prevent scratches.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

When separating the back door glass from the vehicle, be careful not to damage the paint or interior and exterior ornaments.

(c) Pass a piano wire between the vehicle body and back door glass from the interior, as shown in the illustration.

HINT:

Do not allow the piano wire to interfere with the clips.

Text in Illustration

*1	Piano Wire
----	------------

(d) Tie both wire ends to wooden blocks or similar objects that can serve as handles.

(e) Cut off the adhesive by pulling the piano wire around the back door glass.

NOTICE:

Leave as much adhesive on the vehicle body as possible when removing the back door glass.

(f) Using suction cups, disengage the 2 clips and remove the back door glass.

12. REMOVE NO. 1 BACK DOOR GLASS ADHESIVE DAM

(a) Remove the No. 1 back door glass adhesive dam.

P

13. REMOVE NO. 1 BACK WINDOW OUTSIDE MOULDING LH

(a) Remove the No. 1 back window outside moulding LH.

Text in Illustration

*1	LH Side
*2	RH Side

P

14. REMOVE NO. 1 BACK WINDOW OUTSIDE MOULDING RH

HINT:

Use the same procedure for the RH side and LH side.

15. REMOVE NO. 1 BACK WINDOW LOWER MOULDING

(a) Remove the No. 1 back window lower moulding.

P

16. REMOVE NO. 2 BACK WINDOW GLASS SPACER

(a) Using a scraper, remove the No. 2 back window glass spacer.

Text in Illustration

*1	No. 2 Back Window Glass Spacer
----	--------------------------------

*2 No. 1 Back Window Glass Spacer

P

- Be careful not to damage the back door glass.
- Be sure to replace the No. 1 back window glass spacer with a new one.

17. REMOVE NO. 1 BACK WINDOW GLASS SPACER

HINT:

Use the same procedure for the No. 1 spacer and No. 2 spacer.

18. CLEAN BACK DOOR GLASS

(a) Clean the outer edge of the back door glass with a non-residue solvent.

- Do not touch the back door glass surface after cleaning it.
- Be careful not to damage the glass.
- Even if using a new back door glass, clean the back door glass with a non-residue solvent.

19. REMOVE BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY

(a) for Back Door Window Fix Glass:

(1) Remove the back door outside garnish sub-assembly .

20. REMOVE BACK WINDOW FIX GLASS

P

(a) Disconnect the 2 connectors.

(b) Apply protective tape to the outer surface of the vehicle body to prevent scratches.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

When separating the back door glass vehicle, be careful not to damage the interior and exterior ornaments.

(c) Pass a piano wire between the vehicle body and back window fix glass from the interior, as shown in the illustration.

*1	Piano Wire
----	------------

(d) Tie both wire ends to wooden blocks or similar objects that can serve as handles.

(e) Cut off the adhesive by pulling the piano wire around the back door glass.

NOTICE:

Leave as much adhesive on the vehicle body as possible when removing the back door glass.

(f) Using suction cups, disengage the 2 clips and remove the back door glass.

21. REMOVE NO. 2 BACK DOOR GLASS ADHESIVE DAM

(a) Using a scraper, remove the back door glass adhesive dam.

- Be careful not to damage the back window fix glass.
- Be sure to replace the back door glass adhesive dam with a new one.

P

22. REMOVE NO. 2 BACK WINDOW OUTSIDE MOULDING LH

(a) Using a scraper, remove the NO. 2 back window outside moulding LH.

Text in Illustration

P

*1	LH Side
*2	RH Side

- Be careful not to damage the back window fix glass.
- Be sure to replace the back window outside moulding with a new one.

23. REMOVE NO. 2 BACK WINDOW OUTSIDE MOULDING RH

HINT:

Use the same procedure for the RH side and LH side.

24. REMOVE NO. 2 BACK WINDOW LOWER MOULDING

(a) Using a scraper, remove the back window lower moulding.

P

- Be careful not to damage the back window fix glass.
- Be sure to replace the back window lower moulding with a new one.

25. REMOVE NO. 2 BACK DOOR GLASS SPACER

(a) Using a scraper, remove the No. 2 back door glass spacer.

Text in Illustration

P

*1	No. 2 Back Window Glass Spacer
*2	No. 1 Back Window Glass Spacer

- Be careful not to damage the back window fix glass.
- Be sure to replace the No. 2 back window glass spacer with a new one.

26. REMOVE NO. 1 BACK DOOR GLASS SPACER

HINT:

Use the same procedure for the No. 1 spacer and No. 2 spacer.

27. CLEAN BACK WINDOW FIX GLASS

(a) Clean the outer edge of the back window fix glass with a non-residue solvent.

- Do not touch the back window fix glass surface after cleaning it.
- Be careful not to damage the glass.
- Even if using a new back window fix glass, clean the back window fix glass with a non-residue solvent.

28. CLEAN VEHICLE BODY

(a) Using a scraper, remove the moulding and adhesive from the back window fix glass.

Text in Illustration

*1	Adhesive
*2	Vehicle Body

(b) Clean and shape the contact surfaces of the vehicle body.

(1) Using a knife, cut away excess adhesive on the contact surfaces of the vehicle body, as shown in the illustration.

NOTICE:

Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surfaces of the vehicle body with a piece of cloth saturated with cleaner.

HINT:

Even if all the adhesive has been removed, clean the vehicle body.

INSTALLATION

1. INSTALL NO. 2 BACK DOOR GLASS SPACER

(a) Apply Primer G to the installation part of a new No. 2 back door glass spacer.

HINT:

If primer is applied to an area that is not specified, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new No. 2 back door glass spacer onto the back window fix glass, as shown in the illustration.

Text in Illustration

*1	Marking for Spacer Pasting
----	----------------------------

- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

2. INSTALL NO. 1 BACK DOOR GLASS SPACER

HINT:

Use the same procedure for the No. 1 spacer and No. 2 spacer.

3. INSTALL NO. 2 BACK WINDOW LOWER MOULDING

(a) Apply Primer G to the installation part of a new No. 2 back window lower moulding.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new back window lower moulding onto the back window fix glass, as shown in the illustration.

Text in Illustration

*1	Edge of Curved Surface
----	------------------------

Standard Dimension:

Item	Dimension
a	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)
b	5.7 to 8.3 mm (0.224 to 0.326 in.)

- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

P

4. INSTALL NO. 2 BACK WINDOW OUTSIDE MOULDING LH

(a) Apply Primer G to the installation part of a new NO. 2 back window outside moulding LH.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new NO. 2 back window outside moulding LH onto the back window fix glass, as shown in the illustration.

P

Text in Illustration

*1	Marking for Moulding Pasting
----	------------------------------

Standard Dimension:

Item	Dimension
a	2.0 mm (0.0787 in.)

- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

5. INSTALL NO. 2 BACK WINDOW OUTSIDE MOULDING RH

HINT:

Use the same procedure for the LH side and RH side.

6. INSTALL NO. 2 BACK DOOR GLASS ADHESIVE DAM

(a) Apply Primer G to the installation part of a new NO. 2 back door glass adhesive dam.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new NO. 2 back door glass adhesive dam onto the back window fix glass, as shown in the illustration.

Text in Illustration

*1	Marking for Dam Pasting
----	-------------------------

- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

P

7. INSTALL BACK WINDOW FIX GLASS

(a) Using a brush, coat the installation surface on the vehicle body with Primer M.

P

Text in Illustration

*1	Brush	*2	Primer M
*3	Adhesive	-	-

NOTICE:

- Do not coat the adhesive with Primer M.

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Using a brush or a sponge, coat the application area of the adhesive with Primer G.

NOTICE:

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

- Apply Primer G onto the ceramic notches.
- If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(c) Apply adhesive to the back window fix glass.

Adhesive:

Toyota Genuine Windshield Glass Adhesive or equivalent

(1) Cut off the tip of the cartridge nozzle as shown in the illustration.

Standard Dimension:

Item	Dimension
a	12.0 mm (0.472 in.)
b	8.0 mm (0.315 in.)

P

HINT:

After cutting off the tip, use all the adhesive within the time described in the table below.

Usage Time Frame:

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour and 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

(3) Apply adhesive to the back window fix glass as shown in the illustration.

Text in Illustration

*1	Ceramic Notch	-	-
----	---------------	---	---

(d) Install the back window fix glass.

(1) Using suction cups, engage the 2 clips to install the back window fix glass.

NOTICE:

- Check that the clips are attached to the vehicle body correctly.
- Check the clearance between the vehicle body and back window fix glass.

(2) Lightly press the front surface of the back window fix glass to ensure that the back window fix glass is securely fit to the vehicle body.

HINT:

Press the back window fix glass with a force of 98 N (10 kgf, 22 lbf) or more.

(3) Using a scraper, remove any excess or protruding adhesive.

HINT:

Apply adhesive onto the glass rim.

(4) Hold the back window fix glass using protective tape until applied adhesive becomes hard.

NOTICE:

Do not drive the vehicle within the time described in the table below.

Minimum Time:

Temperature	Minimum Time prior to Driving Vehicle
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

(e) Connect the 2 connectors.

P

8. INSTALL BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY

(a) for Back Window Fix Glass:

(1) Install the back door outside garnish sub-assembly .

9. INSTALL NO. 2 BACK WINDOW GLASS SPACER

(a) Apply Primer G to the installation part of a new No. 2 back window glass spacer.

HINT:

If primer is applied to an area that is not specified, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new No. 2 back window glass spacer onto the back door glass, as shown in the illustration.

Text in Illustration

*1	Edge of Curved Surface
*2	Back Window Glass Spacer

Standard Dimension:

Item	Dimension
a	69.0 mm (2.716 in.)
b	66.1 mm (2.602 in.)
c	48.7 mm (1.917 in.)
d	49.7 mm (1.956 in.)
e	69.9 mm (2.752 in.)
f	89.9 mm (3.539 in.)

- RH and LH spacers are different parts.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

10. INSTALL NO. 1 BACK WINDOW GLASS SPACER

HINT:

Use the same procedure for the No. 1 spacer and No. 2 spacer.

11. INSTALL NO. 1 BACK WINDOW LOWER MOULDING

(a) Apply Primer G to the installation part of a new NO. 1 back window lower moulding.

Standard Dimension:

Item	Dimension
a	3.0 to 7.0 mm (0.118 to 0.275 in.)

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new NO. 1 back window lower moulding onto the back door glass, as shown in the illustration.

Text in Illustration

*1	Marking for Moulding Installation
----	-----------------------------------

Standard Dimension:

Item	Dimension
a	0.3 to 3.3 mm (0.0118 to 0.129 in.)

- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

12. INSTALL NO. 1 BACK WINDOW OUTSIDE MOULDING LH

(a) Apply Primer G to the installation part of a new NO. 1 back window outside moulding LH.

Text in Illustration

*1	Print Mark
----	------------

Standard Dimension:

Item	Dimension
a	8.0 to 12.0 mm (0.315 to 0.472 in.)

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new NO. 1 back window outside moulding LH onto the

back door glass, as shown in the illustration.

Standard Dimension:

Item	Dimension
a	8.5 to 11.5 mm (0.334 to 0.452 in.)
b	4.0 mm (0.157 in.)
c	8.0 to 14.0 mm (0.315 to 0.551 in.)

- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

13. INSTALL NO. 1 BACK WINDOW OUTSIDE MOULDING RH

HINT:

Use the same procedure for the LH side and RH side.

14. INSTALL NO. 1 BACK DOOR GLASS ADHESIVE DAM

(a) Apply Primer G to the installation part of a new NO. 1 back door glass adhesive dam.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

(b) Install the new NO. 1 back door glass adhesive dam onto the back door glass, as shown in the illustration.

Text in Illustration

REMOVAL

1. REMOVE ASSIST GRIP COVER

HINT:

Use the same procedure for the RH side and LH side INFO.

2. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL

(a) Disengage the 7 claws and 3 guides.

(b) Disconnect each connector and remove the power window regulator switch assembly with front door armrest base panel.

3. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Disengage the 2 claws and remove the power window regulator switch assembly.

INSPECTION

1. INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Check the switch function.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
6 (UP) - 1 (GND)	Auto up or up position	Below 1 Ω
7 (DOWN) - 1 (GND)	Auto down or down position	Below 1 Ω
8 (AUTO) - 1 (GND)	Auto up or auto down position	Below 1 Ω
6 (UP) - 1 (GND)	Free	10 k Ω or higher
7 (DOWN) - 1 (GND)	Free	10 k Ω or higher
8 (AUTO) - 1 (GND)	Free	10 k Ω or higher

Text in Illustration

	Component without harness connected
*1	(to Power Window Regulator Switch Assembly (for Front Passenger Side))

If the result is not as specified, replace the power window regulator switch assembly (for front passenger side).

(b) Check that the LED illuminates.

(1) Apply battery voltage to the power window regulator switch assembly and check that the LED illuminates.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → 4 (LED)	LED illuminates
Battery negative (-) → 1 (GND)	

Text in Illustration

*1	Component without harness connected (to Power Window Regulator Switch Assembly (for Front Passenger Side))
----	---

If the result is not as specified, replace the power window regulator switch assembly (for front passenger side).

INSTALLATION

1. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Engage the 2 claws to install the power window regulator switch assembly.

P

2. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL

(a) Connect each connector.

(b) Engage the 7 claws and 3 guides, and install the power window regulator switch assembly with front door armrest base panel.

P

3. INSTALL ASSIST GRIP COVER

HINT:

Use the same procedure for the LH side and RH side [INFO](#).

P

REMOVAL

HINT:

- The front side fix window assembly can be reused. When installing the window, if any of the clips on the front side fix window assembly are broken, butyl tape can be used to support the glass until the applied adhesive hardens.
- When using butyl tape to temporarily secure the window, make sure that the butyl tape is not applied exactly at the original clip location. If the butyl tape is applied exactly at the clip location, it will cause the window to protrude.
- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP

(a) Remove the front part of the front door opening trim weatherstrip to the extent that allows removal of the front pillar garnish.

2. REMOVE FRONT PILLAR GARNISH INFO

3. REMOVE FRONT PILLAR GARNISH CORNER PIECE INFO

4. REMOVE FRONT SIDE FIX WINDOW ASSEMBLY

(a) Apply protective tape to the installation position of the front side fix window assembly on the vehicle body.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Place matchmarks on the front side fix window assembly and vehicle body on the locations indicated in the illustration.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

Matchmarks are not necessary if the front side fix window assembly is not going to be reused.

(c) Pass a piano wire between the interior vehicle body and glass from the interior as shown in the illustration.

HINT:

Do not allow the piano wire to interfere with the clips.

(d) Tie both wire ends to wooden blocks or similar objects that can serve as handles.

NOTICE:

When separating the front side fix window assembly from the vehicle, be careful not to damage the paint or interior and exterior ornaments.

(e) Cut off the adhesive by pulling the piano wire around the front side fix window assembly.

NOTICE:

Leave as much adhesive on the vehicle body as possible when cutting through the adhesive.

(f) Disengage the 3 clips.

(g) Using suction cups, remove the glass.

NOTICE:

Be careful not to drop the glass.

5. CLEAN VEHICLE BODY

(a) Clean and shape the contact surfaces of the vehicle body.

Text in Illustration

*1	Adhesive
*2	Vehicle Body

(1) Using a knife, cut away excess adhesive on the contact surfaces of the vehicle body as shown in the illustration.

NOTICE:

Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(b) Clean the contact surfaces of the vehicle body with a piece of cloth saturated with cleaner.

HINT:

Even if all the adhesive has been removed, clean the vehicle body.

INSTALLATION

1. CLEAN FRONT SIDE FIX WINDOW ASSEMBLY

(a) Clean the outer edges of the front side fix window assembly with a non-residue solvent.

- Do not touch the glass surface after cleaning it.
- Be careful not to damage the glass or clips.

2. INSTALL FRONT SIDE FIX WINDOW ASSEMBLY

(a) Using a brush or a sponge, apply Primer M to the exposed part of the vehicle body.

P

Text in Illustration

*1	Brush	*2	Primer M
*3	Adhesive	*4	Edge of Curved Surface

Standard Dimension:

2010 Toyota Prius

Repair Manual

Item	Dimension
a	25 mm (0.984 in.) or more

NOTICE:

- Do not coat the adhesive with Primer M.
- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

(b) Using a brush or a sponge, apply Primer G to the contact surface of the front side fix window assembly.

Back Side:

Text in Illustration

*1	Edge of Curved Surface	-	-
----	------------------------	---	---

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

NOTICE:

- To prevent the glass from breaking at low temperatures, ensure that no primer adheres to the contact surface between the moulding and glass during application.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

(c) Apply adhesive to the front side fix window assembly.

Adhesive:

Toyota Genuine Windshield Glass Adhesive or equivalent

(1) Cut off the tip of the cartridge nozzle as shown in the illustration.

Standard Dimension:

Item	Dimension
a	6.0 mm (0.236 in.)
d	8.0 mm (0.315 in.)

P

(2) Load the sealer gun with the cartridge.

(3) Apply adhesive to the front side fix window assembly as shown in the illustration.

P  : Adhesive

(d) Install the front side fix window assembly to the vehicle body.

(1) Position the front side fix window assembly so that the matchmarks are aligned, and press it in gently along the rim (when a window with missing clips is used).

Text in Illustration

*1	Matchmark
----	-----------

(2) Lightly press the front side fix window assembly to ensure that the front side fix window assembly is securely fit to the vehicle body (when a window with missing clips is used).

HINT:

Press the glass with a force of 98 N (10 kgf, 22 lbf) or more.

(3) Engage the 3 clips to install the front side fix window assembly (when a window without missing clips is used).

(4) Hold the front side fix window assembly in place securely with protective tape or equivalent until the adhesive hardens.

NOTICE:

- Allow the primer to dry for 3 minutes or more.
- Check that the clips are attached to the body correctly.
- Check the clearance between the body and glass.

(5) Lightly press the outer surface of the glass to ensure that the glass is securely fit to the vehicle body.

(6) Using a scraper, remove any excess or protruding adhesive.

HINT:

Apply adhesive onto the glass rim.

NOTICE:

Do not drive the vehicle within the time described in the table below.

Minimum Time:

Temperature	Minimum Time prior to Driving Vehicle
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

3. INSPECT FOR LEAK AND REPAIR

(a) After the adhesive has hardened, apply water from the outside of the vehicle. Check that no water leaks into the cabin.

(b) If water leaks into the cabin, allow the water to dry and add adhesive.

(c) Remove the protective tape.

4. INSTALL FRONT PILLAR GARNISH CORNER PIECE INFO

5. INSTALL FRONT PILLAR GARNISH INFO

6. CONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP INFO

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected:

System Name	See Procedure
Advanced Parking Guidance System	

2. POWER WINDOW CONTROL SYSTEM PRECAUTIONS

CAUTION:

- The power window control system prohibits the auto up and down function when the jam protection function malfunctions. Therefore, troubleshoot the power window control system after confirming that no trouble codes are output.
- When a power window regulator or a power window regulator motor assembly is replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operation at least 5 times:
 - a. Close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly and holding it at the auto up position.
 - b. Open the power window by fully pushing down the multiplex network master switch assembly or power window regulator switch assembly.
- The jam protection function may operate unexpectedly even when the power window control system is normal due to detection of a value different from the operation learned value when the door glass moving speed changes sharply under any of the following conditions:
 - a. A power window is being opened or closed while the vehicle is driven on a rough road.
 - b. A power window is being opened or closed while the door is being opened or closed.
 - c. The voltage changes abruptly.

NOTICE:

Do not disconnect the battery while the power switch is on (IG). Otherwise, DTC B2311 will be output.

SYSTEM DESCRIPTION

1. POWER WINDOW CONTROL SYSTEM DESCRIPTION

(a) The power window control system controls the power window operation using the power window regulator motors. The main controls of this system are the multiplex network master switch assembly, which is mounted on the driver side door, and the power window regulator switch assembly (for front passenger side), which are mounted on the front passenger door, and the power window regulator switches, which are mounted on the rear doors. Operating a window switch results in electrical power being transmitted to the corresponding power window regulator motor.

2. FUNCTION OF MAIN COMPONENTS

The power window control system consists of the following components:

Component	Outline
Multiplex Network Master Switch Assembly	<ul style="list-style-type: none">• Controls power window operation for all seats.• When the lock switch is set to the lock position, window operation will be possible only for the driver door power window.
Power Window Regulator Switch Assembly <ul style="list-style-type: none">• Front Passenger Side	<ul style="list-style-type: none">• Located on the front passenger door.• Controls front passenger window operation.
Power Window Regulator Switch Assembly <ul style="list-style-type: none">• Rear LH Side• Rear RH Side	<ul style="list-style-type: none">• Located on the rear doors.• Each switch controls window operation for its respective window.
Power Window Regulator Motor Assembly	<ul style="list-style-type: none">• Receives switch signals and changes signals into motor activation. As a result, the window position changes.• Uses the Hall-ICs in the regulator motor with the ECU to detect the window position and jamming.

3. SYSTEM FUNCTION

The power window control system has the following functions:

Function	Outline
Manual up-and-down function	Function that causes the window to go up while the power window switch is being pulled halfway up and to go down while pushed halfway down. The window stops as soon as the switch is released.
All door auto up-and-down	Function that enables the windows of all doors to be fully opened or closed by one full pull or push of the multiplex network master switch assembly or power window regulator switch

Function	Outline
function	assembly.
Window lock function	<ul style="list-style-type: none"> • Function that disables the power window regulator switch assembly operation when the window lock switch is pressed. • The power window regulator switch assemblies can be operated when the window lock switch is pressed again.
Jam protection function	Function that automatically stops the power window and moves it downward if a foreign object gets jammed in the door window during auto up and manual up operation.
Remote control function	Function that allows the multiplex network master switch assembly to control manual and auto up-and-down operations of the front passenger door window and rear door windows.
Key-off operation function	<ul style="list-style-type: none"> • Function that makes it possible to operate all power windows for approximately 45 sec. after the power switch is turned off when the driver door or front passenger door has not been opened. • When 45 sec. have elapsed, or the driver door or front passenger door is opened after the power switch is turned off, the key-off operation function will be disabled. <p>HINT:</p> <ul style="list-style-type: none"> • If the window lock switch is off, the windows can be operated using any of the power window regulator switch assemblies. If the window lock switch is on, only the multiplex network master switch assembly can be used to operate the windows (remote operation remains possible). • If the driver door or front passenger door is opened during automatic window operation while the key-off operation function is on, the window will stop operating.
Diagnosis	Function that allows diagnosis of the power window control system if any of the power window ECUs (built into each power window regulator motor assembly) detect a malfunction in the system. If a malfunction is detected, the power window ECU will illuminate the LEDs on the multiplex network master switch assembly and the respective power window regulator switch assemblies to inform the driver and passenger of the malfunction.
Fail-safe	<p>A fail-safe function to disable a part of power window functions if the pulse sensor in the power window motor has a malfunction.</p> <p>Auto up-and-down function and remote control function are disabled.</p>

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the power window control system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. CUSTOMER PROBLEM ANALYSIS

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3. PRE-CHECK

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

(b) Check the fuses and relays.

(c) Check the connector connections and terminals to make sure that there are no abnormalities such as loose connections, deformation, etc.

NEXT

4. INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
ECU connected, communication line is functioning normally	A
ECU connected, communication line is malfunctioning	B

B  GO TO CAN COMMUNICATION SYSTEM

A

5.	INSPECT COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*
----	---

(a) Use the Techstream to check if the LIN communication system is functioning normally .

Result:

Result	Proceed to
No DTCs output	A
DTCs output	B

B  GO TO LIN COMMUNICATION SYSTEM

A

6.	CHECK FOR DTC*
----	----------------

(a) Check for DTCs and note any codes that are output .

(b) Clear the DTCs.

(c) Recheck for DTCs.

Result:

Result	Proceed to
No DTCs output	A
DTCs output	B

B  GO TO DIAGNOSTIC TROUBLE CODE CHART

A

7.	PROBLEM SYMPTOMS TABLE
----	------------------------

(a) Refer to Problem Symptoms Table .

Result:

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B ▶ Go to step 9

8.	OVERALL ANALYSIS AND TROUBLESHOOTING*
----	---------------------------------------

(a) Operation Check INFO

(b) Data List / Active Test INFO

(c) Terminals of ECU INFO

NEXT

9.	ADJUST, REPAIR OR REPLACE
----	---------------------------

(a) Check if any of the door window regulators or power window regulator motor assemblies have been removed and reinstalled.

Result:

Result	Proceed to
Any of the door window regulators or power window regulator motor assemblies have been removed and reinstalled.	A
None of the door window regulators or power window regulator motor assemblies has been removed and reinstalled.	B

B ▶ Go to step 11

10.	INITIALIZE POWER WINDOW REGULATOR MOTOR
-----	---

(a) If any of the door window regulators or power window regulator motor assemblies have been removed and reinstalled, perform "Initialize Power Window Control System" (initialization of the pulse sensor) for the applicable door glass INFO.

HINT:

If "Initialize Power Window Control System" (initialization of the pulse sensor) has not been performed, the auto operation function, jam protection function and key-off operation function will not operate or will operate incorrectly.

NEXT

11.	CONFIRMATION TEST
-----	-------------------

NEXT  END

OPERATION CHECK

1. CHECK WINDOW LOCK SWITCH

HINT:

Before performing the window lock switch operation check, make sure that the window lock switch is off (the switch is not pushed in).

(a) Check that the front passenger and rear windows cannot be operated from each power window regulator switch assembly (front passenger side, rear LH side or rear RH side) when the window lock switch of the multiplex network master switch assembly is pushed in.

OK:

Front passenger and rear windows are disabled.

HINT:

Even when the window lock switch of the multiplex network master switch assembly is pushed in, remote manual up and down and auto up and down functions can be operated.

(b) Check that the front passenger and rear windows can be operated from each power window regulator switch assembly (front passenger side, rear LH side or rear RH side) when the window lock switch of the multiplex network master switch assembly is pushed in again to release it.

OK:

Front passenger and rear windows operate normally.

2. CHECK MANUAL UP / DOWN FUNCTION

(a) Check that the driver door power window operates as follows:

OK

Condition	Master Switch	Switch Operation	Power Window
Power switch on (IG)	Driver side	Pulled halfway up	UP (Closes)
		Pushed halfway down	DOWN (Opens)

(b) Check that the front passenger side window and rear power windows operate as follows:

OK

Condition	Regulator Switch	Switch Operation	Power Window
• Power switch on (IG)	Front passenger side	Pulled halfway up	UP (Closes)

Condition	Regulator Switch	Switch Operation	Power Window
<ul style="list-style-type: none"> Window lock switch off 		Pushed halfway down	DOWN (Opens)
	Rear LH side	Pulled halfway up	UP (Closes)
		Pushed halfway down	DOWN (Opens)
	Rear RH side	Pulled halfway up	UP (Closes)
		Pushed halfway down	DOWN (Opens)

3. CHECK AUTO UP / DOWN FUNCTION

(a) Check that the driver door power window operates as follows:

OK

Condition	Master Switch	Switch Operation	Power Window
Power switch on (IG)	Driver side	Pulled up (One touch operation)	AUTO UP (Closes)
		Pushed down (One touch operation)	AUTO DOWN (Opens)

(b) Check that the front passenger side window and rear power windows operate as follows:

OK

Condition	Regulator Switch	Switch Operation	Power Window
<ul style="list-style-type: none"> Power switch on (IG) Window lock switch off 	Front passenger side	Pulled up (One touch operation)	AUTO UP (Closes)
		Pushed down (One touch operation)	AUTO DOWN (Opens)
	Rear LH side	Pulled up (One touch operation)	AUTO UP (Closes)
		Pushed down (One touch operation)	AUTO DOWN (Opens)
	Rear RH side	Pulled up (One touch operation)	AUTO UP (Closes)
		Pushed down (One touch operation)	AUTO DOWN (Opens)

4. CHECK REMOTE MANUAL UP / DOWN FUNCTION

(a) Check that the front passenger side window and rear power windows operate as follows:

OK

Condition	Master Switch	Switch Operation	Power Window
Power switch on (IG)	Front passenger side	Pulled halfway up	UP (Closes)
		Pushed halfway down	DOWN (Opens)
	Rear LH side	Pulled halfway up	UP (Closes)
		Pushed halfway down	DOWN (Opens)
	Rear RH side	Pulled halfway up	UP (Closes)
		Pushed halfway down	DOWN (Opens)

5. CHECK REMOTE AUTO UP / DOWN FUNCTION

(a) Check that the front passenger side window and rear power windows operate as follows:

OK

Condition	Master Switch	Switch Operation	Power Window
Power switch on (IG)	Front passenger side	Pulled up (One touch operation)	AUTO UP (Closes)
		Pushed down (One touch operation)	AUTO DOWN (Opens)
	Rear LH side	Pulled up (One touch operation)	AUTO UP (Closes)
		Pushed down (One touch operation)	AUTO DOWN (Opens)
	Rear RH side	Pulled up (One touch operation)	AUTO UP (Closes)
		Pushed down (One touch operation)	AUTO DOWN (Opens)

6. CHECK POWER WINDOW OPERATION FUNCTION AFTER POWER SWITCH IS TURNED OFF

(a) Check that all the power windows can be operated with the multiplex network master switch assembly and power window regulator switch assemblies (for front passenger, rear LH and RH sides) after the power switch is turned off.

HINT:

If the window lock switch is on, the windows cannot be operated using the power window regulator switch assemblies (for front passenger, rear LH and RH sides). Therefore, turn the window lock switch off before checking the window operation.

(b) Check that the key-off operation function does not operate after the driver door or front passenger door is opened.

HINT:

If the driver door or front passenger door is opened during automatic window operation while the key-off operation function is on, the window will stop operating.

(c) Check that all the power windows cannot be operated after more than approximately 45 seconds have elapsed since the power switch was turned off.

7. CHECK JAM PROTECTION FUNCTION

(a) Check the basic function.

CAUTION:

Do not put your fingers between the door frame and door glass to check the jam protection function. Also, prevent any part of your body from being caught during inspection.

HINT:

The jam protection function is operative during both the auto up and manual up operations.

(1) Fully open the window.

(2) Set a thick book wrapped with a piece of cloth near the window fully closed position.

(3) Operate the auto up or manual up function to check that the power window goes down after the book is caught between the window and door frame, and stops when the opening reaches approximately 200 mm (7.87 in.).

HINT:

The power window moves down approximately 125 mm (4.93 in.). However, when the opening does not reach 200 mm (7.87 in.), the power window continues to go down until the opening reaches 200 mm (7.87 in.) or until approximately 5 seconds elapse.

(4) While the power window is moving down, check that the door glass cannot be raised when the power window switch is used.

8. CHECK POWER WINDOW SWITCH LED ILLUMINATION

(a) Check the LED illumination (multiplex network master switch assembly).

(1) Check that the LEDs located on the multiplex network master switch assembly illuminate when the power switch is turned on (IG).

(b) Check the LED illumination (power window regulator switch assembly).

(1) Check that the LEDs located on the power window regulator switch assembly illuminate when the power switch is turned on (IG).

HINT:

If the window lock switch is on, the LEDs located on the power window regulator switch assemblies (for front passenger, rear LH and RH sides) do not illuminate. Therefore, turn the window lock switch off before

checking the LED illumination.

INITIALIZATION

1. INITIALIZE POWER WINDOW CONTROL SYSTEM (POWER WINDOW REGULATOR MOTOR ASSEMBLY (ALL DOORS))

CAUTION:

When the power window regulator motor assembly is reinstalled or replaced, the power window control system must be initialized. Functions such as the auto up and down, jam protection, remote control and key-off operation do not operate if the initialization is not performed.

HINT:

When the battery is replaced, it is not necessary to initialize the power window regulator motor assembly.

NOTICE:

- When the power window regulator motor assembly is replaced, DTC B2313 is output. Clear the DTC after the initialization.
- When performing initialization, do not perform any other procedures.
- When performing initialization, use the power window switch of each door to initialize each door window.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used, due to detection of a value different from the operation learned value of the door glass movement speed. In such cases, the auto up function can be reinitialized by repeating the following operation at least 5 times:
 - a. Open the power window by fully pushing down the multiplex network master switch assembly or power window regulator switch assembly.
 - b. Close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly and holding it at the auto up position.
- If the initialization is not completed properly, the LIN communication system may have a malfunction

INFO

(a) Initialization procedure when replacing the power window regulator motor assembly with a new one:

(1) Connect the battery and turn the power switch on (IG) (at this time, the LED on the multiplex network master switch assembly or power window regulator switch assembly blinks to indicate that it is ready for initialization).

(2) Fully open the window by fully pushing down the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 1 second or more after the window is fully opened.

(3) Fully close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 1 second or more after the window is fully closed to reset the glass position. The LED on the multiplex network master switch assembly or power window regulator switch assembly stops blinking and illuminates to indicate that the initialization is complete.

(b) Initialization procedure when removing/installing the power window regulator motor assembly:

(1) Connect the battery and turn the power switch on (IG).

(2) Fully close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 6 seconds or more after the window is fully closed (if the power window does not move or stops halfway even when the switch is fully pulled, release the switch and fully pull it again).

(3) Fully open the window by pushing down the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 1 second or more after the window is fully opened.

(4) Release the multiplex network master switch assembly or power window regulator switch assembly. Then fully push down and hold the switch for 4 seconds or more.

(5) Fully close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 1 second or more after the window is fully closed to reset the glass position and complete the initialization.

(c) Initialization procedure when the power window does not fully open:

(1) Connect the battery and turn the power switch on (IG).

(2) Fully close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 6 seconds or more after the window is fully closed (if the power window does not move or stops halfway even when the switch is fully pulled, release the switch and fully pull it again).

(3) Fully open the window by pushing down the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 1 second or more after the window is fully opened.

(4) Release the multiplex network master switch assembly or power window regulator switch assembly. Then fully push down and hold the switch for 4 seconds or more.

(5) Fully close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly, and hold the switch for 1 second or more after the window is fully closed to reset the glass position and complete the initialization.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

TERMINALS OF ECU

1. MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY

(a) Disconnect the O6 multiplex network master switch assembly connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O6-11 (B) - O6-12 (GND)	L - W-B	Power supply	Power switch off	11 to 14 V
O6-12 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the O6 multiplex network master switch assembly connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O6-15 (DOWN) - O6-12 (GND)	Y - W-B	Power window motor DOWN output	Power switch on (IG), driver door power window regulator switch OFF	11 to 14 V
O6-15 (DOWN) - O6-12 (GND)	Y - W-B	Power window motor DOWN output	Power switch on (IG), driver door power window switch DOWN (Manual operation)	Below 1 V
O6-18 (LED) - O6-12 (GND)	B - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
O6-18 (LED) - O6-12 (GND)	B - W-B	LED illumination signal	Approximately 45 seconds after power switch turned off	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O6-20 (UP) - O6-12 (GND)	V - W-B	Power window motor UP output	Power switch on (IG), driver door power window switch OFF	11 to 14 V
O6-20 (UP) - O6-12 (GND)	V - W-B	Power window motor UP output	Power switch on (IG), driver door power window switch UP (Manual operation)	Below 1 V

If the result is not as specified, the multiplex network master switch assembly may have a malfunction.

2. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side)

(a) Disconnect the N7 power window regulator switch assembly (for front passenger side) connector.

(b) Measure the resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N7-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the N7 power window regulator switch assembly (for front passenger side) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N7-6 (UP) - N7-1 (GND)	B - W-B	Power window motor UP output	Power switch on (IG), power window regulator switch assembly (for front passenger side) OFF	11 to 14 V
N7-6 (UP) - N7-1 (GND)	B - W-B	Power window motor UP output	Power switch on (IG), power window regulator switch assembly (for front passenger side) UP (Manual operation)	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N7-6 (UP) - N7-1 (GND)	B - W-B	Power window motor UP output	Power switch on (IG), front passenger side power window fully open	11 to 14 V
N7-6 (UP) - N7-1 (GND)	B - W-B	Power window motor UP output	Power switch on (IG), front passenger side power window fully UP (AUTO UP position)	Below 1 V
N7-6 (UP) - N7-1 (GND)	B - W-B	Power window motor UP output	Power switch on (IG), front passenger side power window fully stopped (UP)	11 to 14 V
N7-8 (AUTO) - N7-1 (GND)	L - W-B	Power window motor AUTO UP output	Power switch on (IG), front passenger side power window fully open	11 to 14 V
N7-8 (AUTO) - N7-1 (GND)	L - W-B	Power window motor AUTO UP output	Power switch on (IG), front passenger side power window fully UP (AUTO UP position)	Below 1 V
N7-8 (AUTO) - N7-1 (GND)	L - W-B	Power window motor AUTO UP output	Power switch on (IG), front passenger side power window fully stopped (UP)	11 to 14 V
N7-8 (AUTO) - N7-1 (GND)	L - W-B	Power window motor AUTO DOWN output	Power switch on (IG), front passenger side power window fully closed	11 to 14 V
N7-8 (AUTO) - N7-1 (GND)	L - W-B	Power window motor AUTO DOWN output	Power switch on (IG), front passenger side power window fully DOWN (AUTO DOWN position)	Below 1 V
N7-8 (AUTO) - N7-1 (GND)	L - W-B	Power window motor AUTO DOWN output	Power switch on (IG), front passenger side power window fully stopped (DOWN)	11 to 14 V
N7-4 (LED) - N7-1 (GND)	Y - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
N7-4 (LED) - N7-1 (GND)	Y - W-B	LED illumination signal	Approximately 45 seconds after the power switch is turned off	Below 1 V
N7-7 (DOWN) - N7-1 (GND)	G - W-B	Power window motor DOWN output	Power switch on (IG), power window regulator switch assembly (for front passenger side) OFF	11 to 14 V
N7-7 (DOWN) - N7-1 (GND)	G - W-B	Power window motor DOWN output	Power switch on (IG), power window regulator switch assembly (for front passenger side) DOWN (Manual operation)	Below 1 V
N7-7 (DOWN) - N7-1 (GND)	G - W-B	Power window motor DOWN output	Power switch on (IG), front passenger side power window fully closed	11 to 14 V
N7-7 (DOWN) - N7-1 (GND)	G - W-B	Power window motor DOWN output	Power switch on (IG), front passenger side power window fully DOWN (AUTO DOWN position)	Below 1 V
N7-7 (DOWN) - N7-1 (GND)	G - W-B	Power window motor DOWN output	Power switch on (IG), front passenger side power window fully stopped (DOWN)	11 to 14 V

If the result is not as specified, the power window regulator switch assembly (for front passenger side) may have a malfunction.

3. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Rear LH Side)

(a) Disconnect the Q2 power window regulator switch assembly (for rear LH side) connector.

(b) Measure the resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q2-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the Q2 power window regulator switch assembly (for rear LH side) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q2-6 (UP) - Q2-1 (GND)	L - W-B	Power window motor UP output	Power switch on (IG), power window regulator switch assembly (for rear LH side) OFF	11 to 14 V
Q2-6 (UP) - Q2-1 (GND)	L - W-B	Power window motor UP output	Power switch on (IG), power window regulator switch assembly (for rear LH side) UP (Manual operation)	Below 1 V
Q2-6 (UP) - Q2-1 (GND)	L - W-B	Power window motor UP output	Power switch on (IG), rear LH side power window fully open	11 to 14 V
Q2-6 (UP) - Q2-1 (GND)	L - W-B	Power window motor UP output	Power switch on (IG), rear LH side power window fully UP (AUTO UP position)	Below 1 V
Q2-6 (UP) - Q2-1 (GND)	L - W-B	Power window motor UP output	Power switch on (IG), rear LH side power window fully stopped (UP)	11 to 14 V
Q2-8 (AUTO) - Q2-1 (GND)	V - W-B	Power window motor AUTO UP output	Power switch on (IG), rear LH side power window fully open	11 to 14 V
Q2-8 (AUTO) - Q2-1 (GND)	V - W-B	Power window motor AUTO UP output	Power switch on (IG), rear LH side power window fully UP (AUTO UP position)	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q2-8 (AUTO) - Q2-1 (GND)	V - W-B	Power window motor AUTO UP output	Power switch on (IG), rear LH side power window fully stopped (UP)	11 to 14 V
Q2-8 (AUTO) - Q2-1 (GND)	V - W-B	Power window motor AUTO DOWN output	Power switch on (IG), rear LH side power window fully closed	11 to 14 V
Q2-8 (AUTO) - Q2-1 (GND)	V - W-B	Power window motor AUTO DOWN output	Power switch on (IG), rear LH side power window fully DOWN (AUTO DOWN position)	Below 1 V
Q2-8 (AUTO) - Q2-1 (GND)	V - W-B	Power window motor AUTO DOWN output	Power switch on (IG), rear LH side power window fully stopped (DOWN)	11 to 14 V
Q2-4 (LED) - Q2-1 (GND)	Y - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
Q2-4 (LED) - Q2-1 (GND)	Y - W-B	LED illumination signal	Approximately 45 seconds after the power switch is turned off	Below 1 V
Q2-7 (DOWN) - Q2-1 (GND)	GR - W-B	Power window motor DOWN output	Power switch on (IG), power window regulator switch assembly (for rear LH side) OFF	11 to 14 V
Q2-7 (DOWN) - Q2-1 (GND)	GR - W-B	Power window motor DOWN output	Power switch on (IG), power window regulator switch assembly (for rear LH side) DOWN (Manual operation)	Below 1 V
Q2-7 (DOWN) - Q2-1 (GND)	GR - W-B	Power window motor DOWN output	Power switch on (IG), rear LH side power window fully closed	11 to 14 V
Q2-7 (DOWN) - Q2-1 (GND)	GR - W-B	Power window motor DOWN output	Power switch on (IG), rear LH side power window fully DOWN (AUTO DOWN position)	Below 1 V
Q2-7 (DOWN) - Q2-1 (GND)	GR - W-B	Power window motor DOWN output	Power switch on (IG), rear LH side power window fully stopped (DOWN)	11 to 14 V

If the result is not as specified, the power window regulator switch assembly (for rear LH side) may have a malfunction.

4. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Rear RH Side)

(a) Disconnect the P2 power window regulator switch assembly (for rear RH side) connector.

(b) Measure the resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
P2-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the P2 power window regulator switch assembly (for rear RH side) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
P2-6 (UP) - P2-1 (GND)	V - W-B	Power window motor UP output	Power switch on (IG), power window regulator switch assembly (for rear RH side) OFF	11 to 14 V
P2-6 (UP) - P2-1 (GND)	V - W-B	Power window motor UP output	Power switch on (IG), power window regulator switch assembly (for rear RH side) UP (Manual operation)	Below 1 V
P2-6 (UP) - P2-1 (GND)	V - W-B	Power window motor UP output	Power switch on (IG), rear RH side power window fully open	11 to 14 V
P2-6 (UP) - P2-1 (GND)	V - W-B	Power window motor UP output	Power switch on (IG), rear RH side power window fully UP (AUTO UP position)	Below 1 V
P2-6 (UP) - P2-1 (GND)	V - W-B	Power window motor UP output	Power switch on (IG), rear RH side power window fully stopped (UP)	11 to 14 V
P2-8 (AUTO) - P2-1 (GND)	L - W-B	Power window motor AUTO UP output	Power switch on (IG), rear RH side power window fully open	11 to 14 V
P2-8 (AUTO) - P2-1 (GND)	L - W-B	Power window motor AUTO UP output	Power switch on (IG), rear RH side power window fully UP (AUTO UP position)	Below 1 V
P2-8 (AUTO) - P2-1 (GND)	L - W-B	Power window motor AUTO UP output	Power switch on (IG), rear RH side power window fully stopped (UP)	11 to 14 V
P2-8 (AUTO) - P2-1 (GND)	L - W-B	Power window motor AUTO DOWN output	Power switch on (IG), rear RH side power window fully closed	11 to 14 V
P2-8 (AUTO) - P2-1 (GND)	L - W-B	Power window motor AUTO DOWN output	Power switch on (IG), rear RH side power window fully DOWN (AUTO DOWN position)	Below 1 V
P2-8 (AUTO) - P2-1 (GND)	L - W-B	Power window motor AUTO DOWN output	Power switch on (IG), rear RH side power window fully stopped (DOWN)	11 to 14 V
P2-4 (LED) - P2-1 (GND)	GR - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
P2-4 (LED) - P2-	GR - W-	LED illumination	Approximately 45 seconds after the power	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
1 (GND)	B	signal	switch is turned off	
P2-7 (DOWN) - P2-1 (GND)	Y - W-B	Power window motor DOWN output	Power switch on (IG), power window regulator switch assembly (for rear RH side) OFF	11 to 14 V
P2-7 (DOWN) - P2-1 (GND)	Y - W-B	Power window motor DOWN output	Power switch on (IG), power window regulator switch assembly (for rear RH side) DOWN (Manual operation)	Below 1 V
P2-7 (DOWN) - P2-1 (GND)	Y - W-B	Power window motor DOWN output	Power switch on (IG), rear RH side power window fully closed	11 to 14 V
P2-7 (DOWN) - P2-1 (GND)	Y - W-B	Power window motor DOWN output	Power switch on (IG), rear RH side power window fully DOWN (AUTO DOWN position)	Below 1 V
P2-7 (DOWN) - P2-1 (GND)	Y - W-B	Power window motor DOWN output	Power switch on (IG), rear RH side power window fully stopped (DOWN)	11 to 14 V

If the result is not as specified, the power window regulator switch assembly (for rear RH side) may have a malfunction.

5. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)

(a) Disconnect the O2 power window regulator motor assembly (for driver side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O2-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
O2-2 (B) - Body ground	L - Body ground	Power supply	Power switch off	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the O2 power window regulator motor assembly (for driver side) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
O2-5 (LED) - O2-1 (GND)	B - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
O2-5 (LED) - O2-1 (GND)	B - W-B	LED illumination signal	Approximately 45 seconds after power switch turned off	Below 1 V
O2-7 (DOWN) - O2-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), driver door power window regulator switch OFF	11 to 14 V
O2-7 (DOWN) - O2-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), driver door power window switch DOWN (Manual operation)	Below 1 V
O2-7 (DOWN) - O2-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), driver door power window fully closed	11 to 14 V
O2-7 (DOWN) - O2-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), driver door power window switch fully DOWN (AUTO DOWN position)	Below 1 V
O2-7 (DOWN) - O2-1 (GND)	Y - W-B	Power window motor AUTO DOWN input	Power switch on (IG), driver door power window fully open (DOWN)	11 to 14 V
O2-10 (UP) - O2-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), driver door power window switch OFF	11 to 14 V
O2-10 (UP) - O2-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), driver door power window switch UP (Manual operation)	Below 1 V
O2-10 (UP) - O2-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), driver door power window fully open	11 to 14 V
O2-10 (UP) - O2-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), driver door power window switch fully UP (AUTO UP position)	Below 1 V
O2-10 (UP) - O2-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), driver door power window fully closed (UP)	11 to 14 V

If the result is not as specified, the power window regulator motor assembly (for driver side) may have a malfunction.

6. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

(a) Disconnect the N2 power window regulator motor assembly (for front passenger side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N2-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
N2-2 (B) - Body ground	R - Body ground	Power supply	Power switch off	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the N2 power window regulator motor assembly (for front passenger side) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N2-4 (AUTO) - N2-1 (GND)	L - W-B	Power window motor AUTO UP input	Power switch on (IG), front passenger side power window fully open	11 to 14 V
N2-4 (AUTO) - N2-1 (GND)	L - W-B	Power window motor AUTO UP input	Power switch on (IG), front passenger side power window switch fully UP (AUTO UP position)	Below 1 V
N2-4 (AUTO) - N2-1 (GND)	L - W-B	Power window motor AUTO UP input	Power switch on (IG), front passenger side power window fully closed (UP)	11 to 14 V
N2-4 (AUTO) - N2-1 (GND)	L - W-B	Power window motor AUTO DOWN input	Power switch on (IG), front passenger side power window fully closed	11 to 14 V
N2-4 (AUTO) - N2-1 (GND)	L - W-B	Power window motor AUTO DOWN input	Power switch on (IG), front passenger side power window switch fully DOWN (AUTO DOWN position)	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
N2-4 (AUTO) - N2-1 (GND)	L - W-B	Power window motor AUTO DOWN input	Power switch on (IG), front passenger side power window fully open (DOWN)	11 to 14 V
N2-5 (LED) - N2-1 (GND)	Y - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
N2-5 (LED) - N2-1 (GND)	Y - W-B	LED illumination signal	Approximately 45 seconds after power switch turned off	Below 1 V
N2-7 (DOWN) - N2-1 (GND)	G - W-B	Power window motor DOWN input	Power switch on (IG), power window regulator switch assembly (for front passenger side) OFF	11 to 14 V
N2-7 (DOWN) - N2-1 (GND)	G - W-B	Power window motor DOWN input	Power switch on (IG), power window regulator switch assembly (for front passenger side) DOWN (Manual operation)	Below 1 V
N2-7 (DOWN) - N2-1 (GND)	G - W-B	Power window motor DOWN input	Power switch on (IG), front passenger side power window fully closed	11 to 14 V
N2-7 (DOWN) - N2-1 (GND)	G - W-B	Power window motor DOWN input	Power switch on (IG), front passenger side power window switch fully DOWN (AUTO DOWN position)	Below 1 V
N2-7 (DOWN) - N2-1 (GND)	G - W-B	Power window motor DOWN input	Power switch on (IG), front passenger side power window fully open (DOWN)	11 to 14 V
N2-10 (UP) - N2-1 (GND)	B - W-B	Power window motor UP input	Power switch on (IG), power window regulator switch assembly (for front passenger side) OFF	11 to 14 V
N2-10 (UP) - N2-1 (GND)	B - W-B	Power window motor UP input	Power switch on (IG), power window regulator switch assembly (for front passenger side) UP (Manual operation)	Below 1 V
N2-10 (UP) - N2-1 (GND)	B - W-B	Power window motor UP input	Power switch on (IG), front passenger side power window fully open	11 to 14 V
N2-10 (UP) - N2-1 (GND)	B - W-B	Power window motor UP input	Power switch on (IG), front passenger side power window switch fully UP (AUTO UP position)	Below 1 V
N2-10 (UP) - N2-1 (GND)	B - W-B	Power window motor UP input	Power switch on (IG), front passenger side power window fully closed (UP)	11 to 14 V

If the result is not as specified, the power window regulator motor assembly (for front passenger side) may have a malfunction.

7. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)

(a) Disconnect the Q4 power window regulator motor assembly (for rear LH side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q4-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
Q4-2 (B) - Body ground	R - Body ground	Power supply	Power switch off	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the Q4 power window regulator motor assembly (for rear LH side) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q4-4 (AUTO) - Q4-1 (GND)	V - W-B	Power window motor AUTO UP input	Power switch on (IG), rear LH side power window fully open	11 to 14 V
Q4-4 (AUTO) - Q4-1 (GND)	V - W-B	Power window motor AUTO UP input	Power switch on (IG), rear LH side power window switch fully UP (AUTO UP position)	Below 1 V
Q4-4 (AUTO) - Q4-1 (GND)	V - W-B	Power window motor AUTO UP input	Power switch on (IG), rear LH side power window fully closed (UP)	11 to 14 V
Q4-4 (AUTO) - Q4-1 (GND)	V - W-B	Power window motor AUTO DOWN input	Power switch on (IG), rear LH side power window fully closed	11 to 14 V
Q4-4 (AUTO) - Q4-1 (GND)	V - W-B	Power window motor AUTO DOWN input	Power switch on (IG), rear LH side power window switch fully DOWN (AUTO DOWN position)	Below 1 V
Q4-4 (AUTO) - Q4-1 (GND)	V - W-B	Power window motor AUTO DOWN input	Power switch on (IG), rear LH side power window fully open (DOWN)	11 to 14 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Q4-5 (LED) - Q4-1 (GND)	Y - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
Q4-5 (LED) - Q4-1 (GND)	Y - W-B	LED illumination signal	Approximately 45 seconds after power switch turned off	Below 1 V
Q4-7 (DOWN) - Q4-1 (GND)	GR - W-B	Power window motor DOWN input	Power switch on (IG), power window regulator switch assembly (for rear LH side) OFF	11 to 14 V
Q4-7 (DOWN) - Q4-1 (GND)	GR - W-B	Power window motor DOWN input	Power switch on (IG), power window regulator switch assembly (for rear LH side) DOWN (Manual operation)	Below 1 V
Q4-7 (DOWN) - Q4-1 (GND)	GR - W-B	Power window motor DOWN input	Power switch on (IG), rear LH side power window fully closed	11 to 14 V
Q4-7 (DOWN) - Q4-1 (GND)	GR - W-B	Power window motor DOWN input	Power switch on (IG), rear LH side power window switch fully DOWN (AUTO DOWN position)	Below 1 V
Q4-7 (DOWN) - Q4-1 (GND)	GR - W-B	Power window motor DOWN input	Power switch on (IG), rear LH side power window fully open (DOWN)	11 to 14 V
Q4-10 (UP) - Q4-1 (GND)	L - W-B	Power window motor UP input	Power switch on (IG), power window regulator switch assembly (for rear LH side) OFF	11 to 14 V
Q4-10 (UP) - Q4-1 (GND)	L - W-B	Power window motor UP input	Power switch on (IG), power window regulator switch assembly (for rear LH side) UP (Manual operation)	Below 1 V
Q4-10 (UP) - Q4-1 (GND)	L - W-B	Power window motor UP input	Power switch on (IG), rear LH side power window fully open	11 to 14 V
Q4-10 (UP) - Q4-1 (GND)	L - W-B	Power window motor UP input	Power switch on (IG), rear LH side power window switch fully UP (AUTO UP position)	Below 1 V
Q4-10 (UP) - Q4-1 (GND)	L - W-B	Power window motor UP input	Power switch on (IG), rear LH side power window fully closed (UP)	11 to 14 V

If the result is not as specified, the power window regulator motor assembly (for rear LH side) may have a malfunction.

8. CHECK POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)

(a) Disconnect the P4 power window regulator motor assembly (for rear RH side) connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
P4-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
P4-2 (B) - Body ground	R - Body ground	Power supply	Power switch off	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the P4 power window regulator motor assembly (for rear RH side) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
P4-4 (AUTO) - P4-1 (GND)	L - W-B	Power window motor AUTO UP input	Power switch on (IG), rear RH side power window fully open	11 to 14 V
P4-4 (AUTO) - P4-1 (GND)	L - W-B	Power window motor AUTO UP input	Power switch on (IG), rear RH side power window switch fully open (AUTO UP position)	Below 1 V
P4-4 (AUTO) - P4-1 (GND)	L - W-B	Power window motor AUTO UP input	Power switch on (IG), rear RH side power window fully closed (UP)	11 to 14 V
P4-4 (AUTO) - P4-1 (GND)	L - W-B	Power window motor AUTO DOWN input	Power switch on (IG), rear RH side power window fully closed	11 to 14 V
P4-4 (AUTO) - P4-1 (GND)	L - W-B	Power window motor AUTO DOWN input	Power switch on (IG), rear RH side power window switch fully DOWN (AUTO DOWN position)	Below 1 V
P4-4 (AUTO) - P4-1 (GND)	L - W-B	Power window motor AUTO DOWN input	Power switch on (IG), rear RH side power window fully open (DOWN)	11 to 14 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
P4-5 (LED) - P4-1 (GND)	GR - W-B	LED illumination signal	Power switch on (IG)	11 to 14 V
P4-5 (LED) - P4-1 (GND)	GR - W-B	LED illumination signal	Approximately 45 seconds after power switch turned off	Below 1 V
P4-7 (DOWN) - P4-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), power window regulator switch assembly (for rear RH side) OFF	11 to 14 V
P4-7 (DOWN) - P4-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), power window regulator switch assembly (for rear RH side) DOWN (Manual operation)	Below 1 V
P4-7 (DOWN) - P4-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), rear RH side power window fully closed	11 to 14 V
P4-7 (DOWN) - P4-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), rear RH side power window switch fully DOWN (AUTO DOWN position)	Below 1 V
P4-7 (DOWN) - P4-1 (GND)	Y - W-B	Power window motor DOWN input	Power switch on (IG), rear RH side power window switch fully open (DOWN)	11 to 14 V
P4-10 (UP) - P4-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), power window regulator switch assembly (for rear RH side) OFF	11 to 14 V
P4-10 (UP) - P4-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), power window regulator switch assembly (for rear RH side) UP (Manual operation)	Below 1 V
P4-10 (UP) - P4-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), rear RH side power window fully open	11 to 14 V
P4-10 (UP) - P4-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), rear RH side power window switch fully UP (AUTO UP position)	Below 1 V
P4-10 (UP) - P4-1 (GND)	V - W-B	Power window motor UP input	Power switch on (IG), rear RH side power window fully closed (UP)	11 to 14 V

If the result is not as specified, the power window regulator motor assembly (for rear RH side) may have a malfunction.

9. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY, MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

(a) Disconnect the 2B and 2C junction block connectors.

*: LED Type

- (b) Disconnect the A main body ECU (multiplex network body ECU) connector.
- (c) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2B-6 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2C-18 (BECU) - Body ground	Y - Body ground	Battery power supply	Power switch off	11 to 14 V
A-31 (ALTB) - Body ground	-	Battery power supply	Power switch off	11 to 14 V
A-32 (IG) - Body ground	-	IG power supply	Power switch off	Below 1 V
A-32 (IG) - Body ground	-	IG power supply	Power switch on (IG)	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness or instrument panel junction block assembly.

- (d) Reconnect the 2B and 2C junction block connectors.
- (e) Reconnect the A main body ECU (multiplex network body ECU) connector.
- (f) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2D-35 (FLCY) - Body ground	V - Body ground	Front door courtesy switch LH input	Front door LH open	Below 1 V
2D-35 (FLCY) - Body ground	V - Body ground	Front door courtesy switch LH input	Front door LH closed	11 to 14 V
2D-36 (FRCY) - Body ground	BR - Body ground	Front door courtesy switch RH input	Front door RH open	Below 1 V
2D-36 (FRCY) - Body ground	BR - Body ground	Front door courtesy switch RH input	Front door RH closed	11 to 14 V

If the result is not as specified, the main body ECU (multiplex network body ECU) or instrument panel junction block assembly may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The power window control system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / (desired system) / Trouble Codes.
- (e) Check the details of the DTC(s) .

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / (desired system) / Trouble Codes.
- (e) Clear the DTCs.

FAIL-SAFE CHART

1. POWER WINDOW OPERATION IN FAIL-SAFE MODE

HINT:

If the pulse sensor built into the power window regulator motor malfunctions, the power window control system enters fail-safe mode.

(a) The power window control system prohibits the following power window operations when the pulse sensor for the jam protection function has problems and the window position or the learned value is abnormal.

Multiplex Network Master Switch Assembly

Power Window Operation	Condition		
	Power switch on (IG)	Power switch off (Key-off operation permitted)	Power switch off (Key-off operation prohibited)
Manual up (Driver side door window)	X	X	-
Manual down (Driver side door window)	○	X	-
Auto up (Driver side door window) (hold switch at auto up position)	○*	X	-
Auto up (Driver side door window)	X	X	-
Auto down (Driver side door window)	X	X	-
Manual up (Remote switch operation)	X	X	-
Manual down (Remote switch operation)	X	X	-
Auto up (Remote switch operation) (hold switch at auto up position)	X	X	-
Auto up (Remote switch operation)	X	X	-
Auto down (Remote switch operation)	X	X	-

HINT:

- ○: Operates

- X: Operation prohibited
- *: Operates in manual mode without jam protection

Power Window Regulator Switch Assembly (for Front Passenger, Rear LH and Rear RH Sides)

Power Window Operation	Condition		
	Power switch on (IG)	Power switch off (Key-off operation permitted)	Power switch off (Key-off operation prohibited)
Manual up	X	X	-
Manual down	○	X	-
Auto up (hold switch at auto up position)	○*	X	-
Auto up	X	X	-
Auto down	X	X	-

HINT:

- ○: Operates
- X: Operation prohibited
- *: Operates in manual mode without jam protection

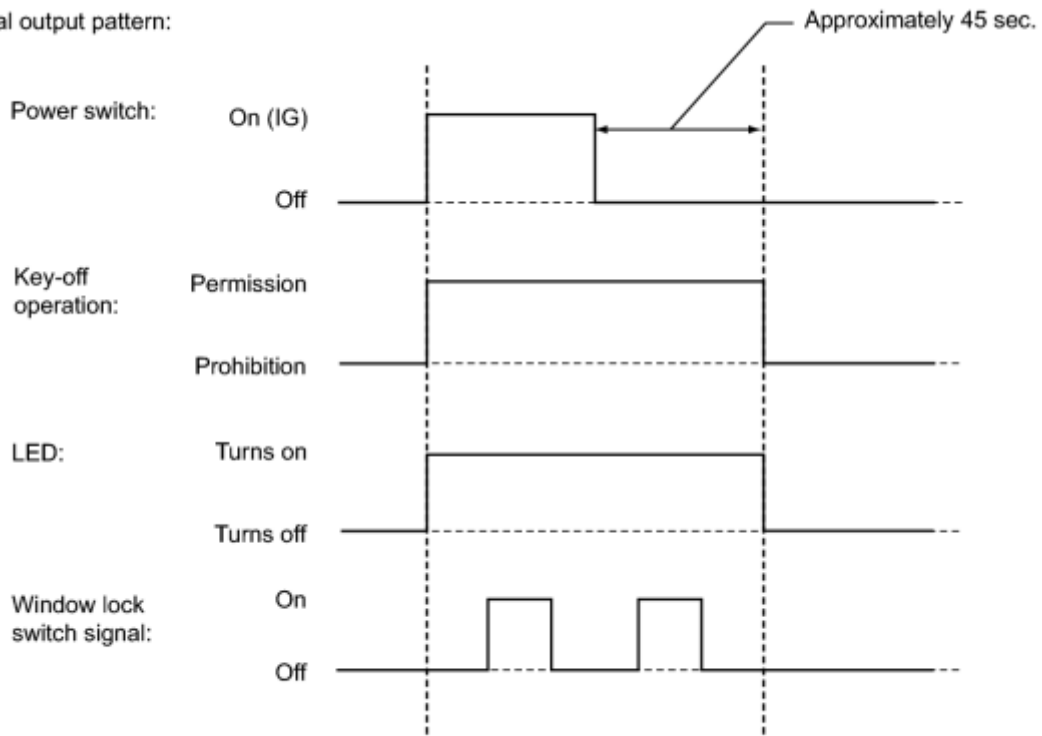

(1) Power window switch LED control

HINT:

During normal operation (fail-safe is not operating), or during fail-safe mode when there is a pulse sensor malfunction or the window position or learned value is abnormal, the LED illuminates as shown in the illustration.

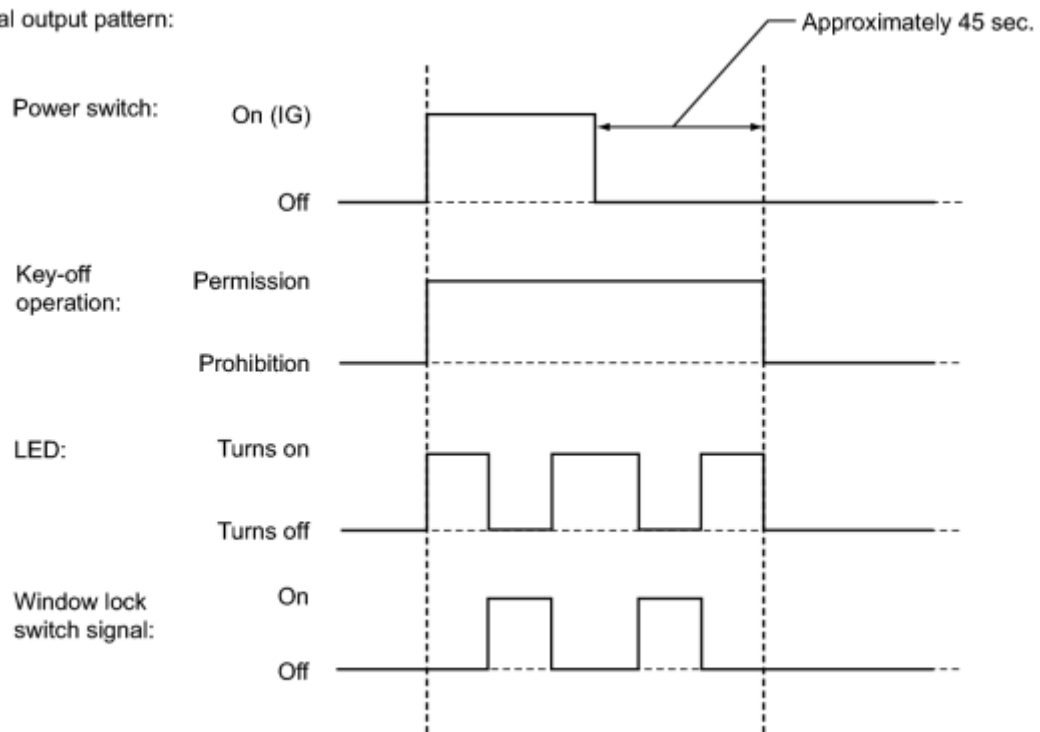

1. For driver side:

Normal output pattern:

2. For front passenger, rear LH and rear RH sides:

Normal output pattern:

(2) Fail-safe deactivation condition

- When the pulse sensor is normal, to deactivate fail-safe mode, pull up the power window switch to the auto up position and hold it for at least 1 second to fully close the window from the fully open position. As a result, the auto up and down function will return.

(b) Initialization failure

HINT:

During initialization of the power window regulator motor ECU, when the window position or initialization complete status cannot be properly read from the EEPROM, the power window control system prohibits the operations as follows:

Multiplex Network Master Switch Assembly

Power Window Operation	Condition		
	Power switch on (IG)	Power switch off (Key-off operation permitted)	Power switch off (Key-off operation prohibited)
Manual up (Driver side door window)	X	X	-
Manual down (Driver side door window)	○	X	-
Auto up (Driver side door window) (hold switch at auto up position)	○*	X	-
Auto up (Driver side door window)	X	X	-
Auto down (Driver side door window)	X	X	-
Manual up (Remote switch operation)	X	X	-
Manual down (Remote switch operation)	X	X	-
Auto up (Remote switch operation) (hold switch at auto up position)	X	X	-
Auto up (Remote switch operation)	X	X	-
Auto down (Remote switch operation)	X	X	-

HINT:

- ○: Operates

- X: Operation prohibited
- *: Operates in manual mode without jam protection

Power Window Regulator Switch Assembly (for Front Passenger, Rear LH and Rear RH Sides)

Power Window Operation	Condition		
	Power switch on (IG)	Power switch off (Key-off operation permitted)	Power switch off (Key-off operation prohibited)
Manual up	X	X	-
Manual down	○	X	-
Auto up (hold switch at auto up position)	○*	X	-
Auto up	X	X	-
Auto down	X	X	-

HINT:

- ○: Operates
- X: Operation prohibited
- *: Operates in manual mode without jam protection

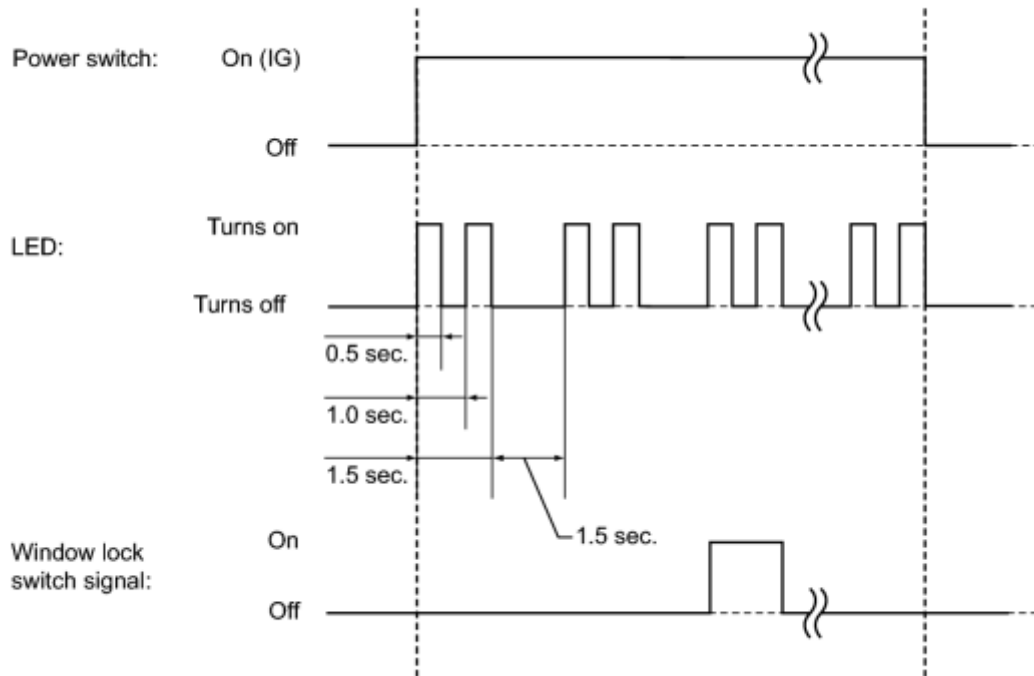

(1) Power window switch LED control

HINT:

During initialization of the power window regulator motor ECU, when the window position or initialization complete status cannot be properly read from the EEPROM during fail-safe mode, the LED illuminates as shown in the illustration.

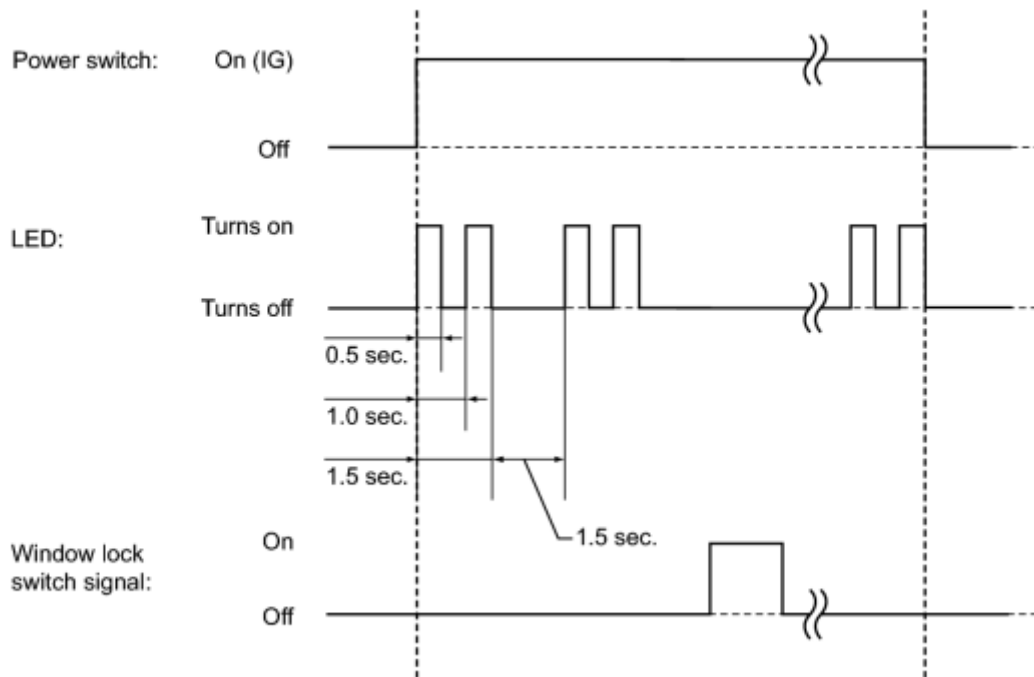

1. For driver side:

Initialization failure output pattern:

2. For front passenger, rear LH and rear RH sides:

Initialization failure output pattern:

(c) LIN communication failure

HINT:

If the LIN communication line malfunctions (communication stop), the power window control system prohibits the operations as follows:

Multiplex Network Master Switch Assembly

Power Window Operation	Condition
	Power switch on (IG)
Manual up	○*
Manual down	○
Auto up (hold switch at auto up position)	X
Auto up	X
Auto down	X

HINT:

- ○: Operates
- X: Operation prohibited
- *: Jam protection can operate.
- Remote up and down function does not operate.

Power Window Regulator Switch Assembly (for Front Passenger, Rear LH and Rear RH Sides)

Power Window Operation	Condition
	Power switch on (IG)
Manual up	○*
Manual down	○
Auto up (hold switch at auto up position)	○*
Auto up	○*
Auto down	○

HINT:

- ○: Operates
- X: Operation prohibited
- *: Jam protection can operate.

(d) LIN communication failure and pulse sensor failure

HINT:

If the LIN communication line malfunctions (communication stop) and the pulse sensor for the jam protection function has problems, the power window control system prohibits the operations as follows:

Multiplex Network Master Switch Assembly

Power Window Operation	Condition
	Always
Manual up	X

Power Window Operation	Condition
	Always
Manual down	X
Auto up (hold switch at auto up position)	X
Auto up	X
Auto down	X

HINT:

- ○: Operates
- X: Operation prohibited
- Driver door window: When the jam protection function does not operate due to a LIN communication failure, the manual up and auto up functions will not operate.
- Remote switch operation: Not operative during a LIN communication failure

Power Window Regulator Switch Assembly (for Front Passenger, Rear LH and Rear RH Sides)

Power Window Operation	Condition
	Always
Manual up	X
Manual down	X
Auto up (hold switch at auto up position)	X
Auto up	X
Auto down	X

HINT:

- ○: Operates
- X: Operation prohibited

(e) LIN communication failure and abnormal window position learned value or initialization failure

HINT:

If the LIN communication line malfunctions (communication stop) and the window position or the learned value is abnormal, the power window control system prohibits the operations as follows:

Multiplex Network Master Switch Assembly

Power Window Operation	Condition
	Always
Manual up	○*
Manual down	○
Auto up (hold switch at auto up position)	-
Auto up	-
Auto down	-

HINT:

- ○: Operates
- *: Jam protection can operate and window reverses upon reaching the fully closed position.
- Remote switch operation: Operation is not possible during a LIN communication failure.

Power Window Regulator Switch Assembly (for Front Passenger, Rear LH and Rear RH Sides)

Power Window Operation	Condition
	Always
Manual up	○*
Manual down	○
Auto up (hold switch at auto up position)	○*
Auto up	X
Auto down	X

HINT:

- ○: Operates
- X: Operation prohibited
- *: Jam protection can operate and window reverses upon reaching the fully closed position.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / (desired system) / Data List.
- (e) Read the Data List according to the display on the Techstream.

Master Switch (Multiplex Network Master Switch Assembly)

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / (desired system) / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

CAUTION:

Be careful to avoid injuries as this test causes vehicle parts to move. During the Active Test, the jam protection function will not operate.

DTC	B2311	Power Window Motor Malfunction
-----	-------	--------------------------------

DESCRIPTION

The power window regulator motor is operated by the multiplex network master switch assembly or power window regulator switch assembly. The power window regulator motor assembly has motor, regulator and ECU functions.

This DTC is output when the power window regulator motor assembly has a malfunction, or the ECU built into the regulator motor assembly determines that the fully closed window position has deviated approximately 20 mm (0.787 in.) or more from the normal position.

HINT:

DTC B2311 can be stored in each power window regulator motor assembly (power window ECU).

D-Door Motor (Power Window Regulator Motor Assembly (for Driver Side))

INSPECTION PROCEDURE

NOTICE:

- When the power window regulator motor assembly is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - a. Close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly and holding it in the auto up position.
 - b. Open the power window by fully pushing down the switch.

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (APPLICABLE LOCATION)
----	--

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / (desired system) / Active Test.

HINT:

Perform the Active Test for the power window regulator motor assembly that has DTC B2311 stored in its ECU.

(e) Perform the Active Test according to the display on the Techstream.

CAUTION:

Be careful to avoid injuries as this test causes vehicle parts to move. During the Active Test, the jam protection function will not operate.

Power Window	Power window	OFF / UP / DOWN	-

RR-Door Motor (Power Window Regulator Motor Assembly (for Rear RH Side))

Tester Display	Test Part	Control Range	Diagnostic Note
Power Window	Power window	OFF / UP / DOWN	-

OK:

Each power window motor operates.

Result:

Result	Proceed to
OK	A
NG (Driver door power window)	B
NG (Front passenger side power window)	C
NG (Rear LH side power window)	D
NG (Rear RH side power window)	E

E ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)

D ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)

C ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

B ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)

A

2. PERFORM INITIALIZATION (APPLICABLE LOCATION)

(a) Initialize the power window regulator motor assembly **INFO**.

HINT:

Initialize the power window regulator motor assembly that has DTC B2311 stored in its ECU.

NEXT

3. CHECK POWER WINDOW CONTROL SYSTEM (APPLICABLE LOCATION)

(a) Check that the power window operates normally by opening and closing the window **INFO**.

HINT:

Check the power window operation of the window where DTC B2311 has been stored.

OK:

Each power window operates normally.

Result:

Result	Proceed to
OK	A
NG (Driver door power window)	B
NG (Front passenger side power window)	C
NG (Rear LH side power window)	D
NG (Rear RH side power window)	E

E ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)

D ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)

C ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

B ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)

A

4.	CHECK WHETHER PARTS HAVE BEEN INSTALLED CORRECTLY
----	---

(a) Check that the power window components are installed correctly.

OK:

Power window components are installed correctly.

HINT:

When the power window components are installed correctly, the problem has occurred because the battery is disconnected while the power switch is on (IG), the power window components are installed improperly or the motor is overheated.

NG  INSTALL PARTS CORRECTLY

OK  END

DTC	B2312	Power Window Switch Malfunction
-----	-------	---------------------------------

DESCRIPTION

The power window regulator motor assembly is operated by the multiplex network master switch assembly or power window regulator switch assembly. The power window regulator motor assembly has motor, regulator and ECU functions.

This DTC is output when the ECU built into the regulator motor and master switch determines that the multiplex network master switch assembly or power window regulator switch assembly is stuck.

HINT:

DTC B2312 can be stored in the multiplex network master switch assembly and in each power window regulator motor assembly (power window ECU).

INSPECTION PROCEDURE

NOTICE:

- If DTC B2312 is not output again after the DTC has been cleared, the DTC was output due to the switch being held.
- When the power window regulator motor assembly is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - a. Close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly and holding it at the auto up position.
 - b. Open the power window by fully pushing down the switch.

PROCEDURE

1.	CHECK FOR DTC
----	---------------

(a) Clear the DTC INFO.

(b) Check for DTCs INFO.

OK:

DTC B2312 is not output.

NG [▶ CHECK DTC OUTPUT](#)

OK [▶ END \(DUE TO SWITCH BEING OPERATED FOR 20 SECONDS OR MORE\)](#)

DTC	B2313	Glass Position Initialization Incomplete
-----	-------	--

DESCRIPTION

The power window regulator motor assembly is operated by the multiplex network master switch or power window regulator switch assembly. The power window regulator motor assembly has motor, regulator and ECU functions.

When the ECU determines that the power window regulator motor assembly has not been initialized, DTC B2313 is set.

HINT:

DTC B2313 can be stored in each power window regulator motor assembly (power window ECU).

INSPECTION PROCEDURE

NOTICE:

- When the power window regulator motor assembly is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - Close the power window by fully pulling up the multiplex network master switch or power window regulator switch assembly and holding it at the auto up position.
 - Open the power window by fully pushing down the switch.

PROCEDURE

1. PERFORM INITIALIZATION (APPLICABLE LOCATION)

- Turn the power switch on (IG).
- Initialize the power window regulator motor assembly .

HINT:

Initialize the power window regulator motor assembly that has DTC B2313 stored in its ECU.

NEXT

2. CHECK DTC OUTPUT

- Turn the power switch off.
- Wait for at least 10 seconds, and then turn the power switch on (IG).
- Check for DTCs .

HINT:

Check for DTCs for the power window regulator motor assembly that has DTC B2313 stored in its ECU.

OK:

DTC B2313 is not output.

Result:

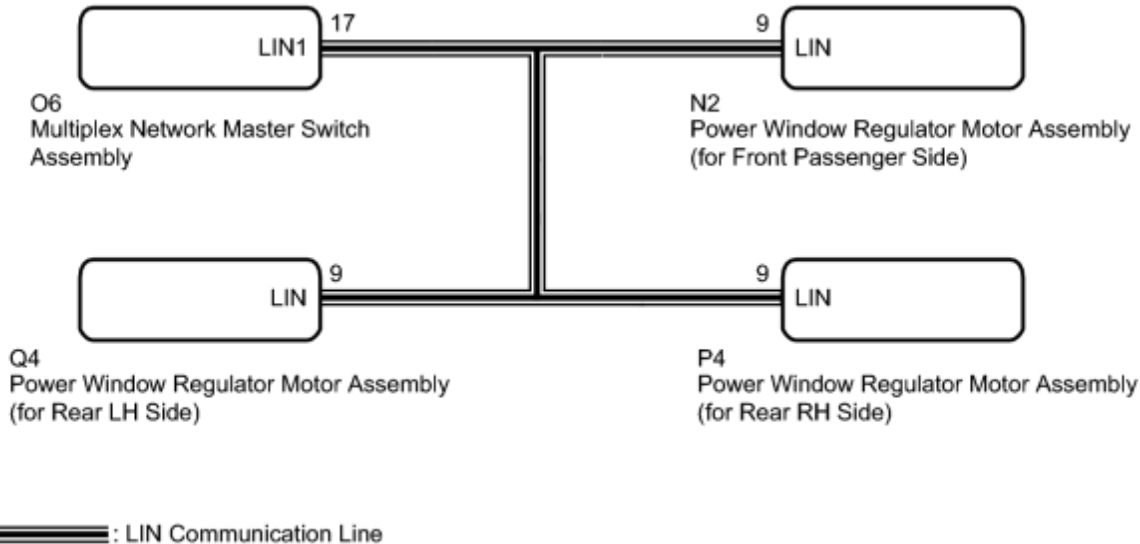

Result	Proceed to
OK	A

- A ▶ **END (POWER WINDOW CONTROL SYSTEM HAS NOT BEEN INITIALIZED)**

DESCRIPTION

When the power switch is on (IG), the multiplex network master switch assembly sends remote up and down signals to each power window regulator motor assembly via the LIN communication line.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The power window control system uses a multiplex communication system (LIN communication system). Inspect the communication function by following How to Proceed with Troubleshooting [INFO](#). Troubleshoot the power window control system after confirming that the communication system is functioning properly.

PROCEDURE

1. READ VALUE USING TECHSTREAM (Main Body)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Communication P-Door Motor	Connection status between power window regulator motor (for front passenger side) and main body ECU (multiplex network body ECU) / OK or STOP	OK: Normal communication STOP: Communication stopped	-
Communication RL-Door Motor	Connection status between power window regulator motor (for rear LH) and main body ECU (multiplex network body ECU) / OK or STOP	OK: Normal communication STOP: Communication stopped	-
Communication RR-Door Motor	Connection status between power window regulator motor (for rear RH) and main body ECU (multiplex network body ECU) / OK or STOP	OK: Normal communication STOP: Communication stopped	-
Communication Master SW	Connection status between multiplex network master switch assembly and main body ECU (multiplex network body ECU) / OK or STOP	OK: Normal communication STOP: Communication stopped	-

OK:

On the Techstream screen, OK is displayed.

NG  GO TO LIN COMMUNICATION SYSTEM (Proceed to How to Proceed with Troubleshooting)

OK

2.	READ VALUE USING TECHSTREAM (Master Switch)
----	---

(a) Enter the following menus: Body Electrical / Master Switch / Data List.

(b) Read the Data List according to the display on the Techstream.

Master Switch (Multiplex Network Master Switch Assembly)

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

- D ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)
- C ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)
- B ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)
- A ► **REPLACE MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY**

DESCRIPTION

When the hybrid vehicle control system is running or the power switch is on (IG), the power window regulator motor assembly (for driver side) is operated by the multiplex network master switch assembly. The power window regulator motor assembly (for driver side) has motor, regulator and ECU functions.

HINT:

If the pulse sensor built into the power window regulator motor assembly (for driver side) malfunctions, the power window control system enters fail-safe mode. The remote up and down and auto up and down functions cannot be operated during fail-safe mode. However, the power window can be closed by holding the multiplex network master switch assembly at the auto up position, and opened manually by pushing down the multiplex network master switch assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The power window control system uses a multiplex communication system (LIN communication system). Inspect the communication function by following How to Proceed with Troubleshooting INFO. Troubleshoot the power window control system after confirming that the communication system is functioning properly.
- When the power window regulator motor assembly (for driver side) is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - a. Close the power window by fully pulling up the multiplex network master switch assembly and holding it at the auto up position.
 - b. Open the power window by fully pushing down the multiplex network master switch assembly.

- When the ECU determines that the power window regulator motor assembly (for driver side) has a malfunction, DTC B2311 is set.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (Main Body)
----	---

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Main Body / Data List.
- Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Communication D-Door Motor	Connection status between power window regulator motor (for driver side) and main body ECU (multiplex network body ECU) / OK or STOP	OK: Normal communication STOP: Communication stopped	-

OK:

On the Techstream screen, OK is displayed.

NG  GO TO LIN COMMUNICATION SYSTEM (Proceed to How to Proceed with Troubleshooting)

OK

2.	READ VALUE USING TECHSTREAM (D-Door Motor)
----	--

- Enter the following menus: Body Electrical / D-Door Motor / Data List.
- Read the Data List according to the display on the Techstream.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH side)

DESCRIPTION

When the hybrid vehicle control system is running or the power switch is on (IG), the power window regulator motor assembly (for rear RH side) is operated by the power window regulator switch assembly (for rear RH side). The power window regulator motor assembly (for rear RH side) has motor, regulator, and ECU functions.

HINT:

If the pulse sensor built into the power window regulator motor (for rear RH side) malfunctions, the power window control system enters fail-safe mode. The remote up and down and auto up and down functions cannot be operated during fail-safe mode. However, the power window can be closed by holding the power window regulator switch assembly (for rear RH side) at the auto up position, and opened manually by pushing down the power window regulator switch assembly (for rear RH side).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The power window control system uses a multiplex communication system (LIN communication system). Inspect the communication function by following How to Proceed with Troubleshooting **INFO**. Troubleshoot the power window control system after confirming that the communication system is functioning properly.
- When the power window regulator motor assembly (for rear RH side) is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - a. Close the power window by fully pulling up the power window regulator switch assembly (for rear RH side) and holding it at the auto up position.
 - b. Open the power window by fully pushing down the power window regulator switch assembly (for rear RH side).
- When the ECU determines that the power window regulator motor assembly (for rear RH side) has a malfunction, DTC B2311 is set.

PROCEDURE

1. READ VALUE USING TECHSTREAM (Main Body)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

- (a) Initialize the power window regulator motor assembly (for front passenger side) .

NEXT

3. CHECK POWER WINDOW CONTROL SYSTEM (AUTO UP/DOWN FUNCTION)

- (a) Check that the front passenger side door power window moves when the auto up and down function of the power window regulator switch assembly (for front passenger side) is operated .

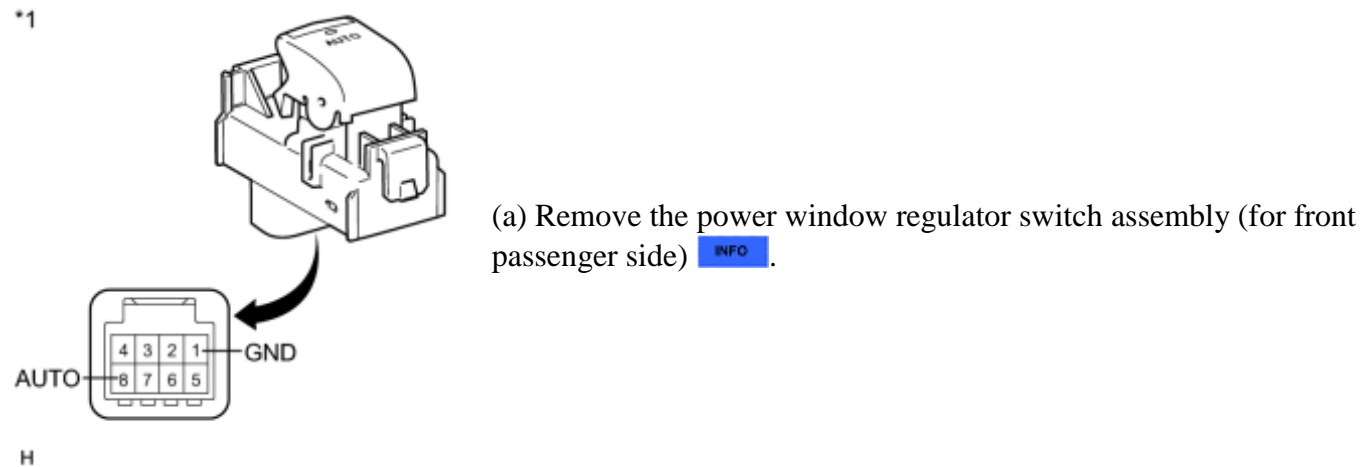

OK:

Front passenger side auto up and down function is normal.

NG ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

OK ► END (PROBLEM DUE TO INITIALIZATION FAILURE)

4. INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side)

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
8 (AUTO) - 1 (GND)	Auto up or auto down position	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Power Window Regulator Switch Assembly (for Front Passenger Side))
----	--

NG ► REPLACE POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side)

OK

5. CHECK HARNESS AND CONNECTOR (POWER WINDOW SWITCH - REGULATOR MOTOR)

(a) Disconnect the power window regulator motor assembly (for front passenger side) connector.

*1

*2

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
N7-8 (AUTO) - N2-4 (AUTO)	Always	Below 1 Ω
N7-8 (AUTO) - Body ground	Always	10 k Ω or higher

*2	Front view of wire harness connector (to Power Window Regulator Motor Assembly (for Front Passenger Side))

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

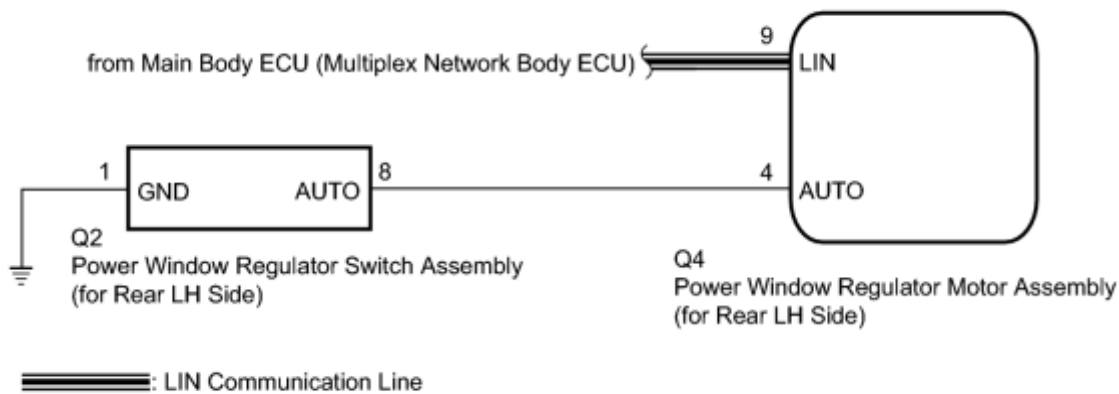

OK REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

DESCRIPTION

If the manual up and down function can be performed but the auto up and down function cannot, the fail-safe mode may be functioning.

If the power window initialization INFO has not been performed, the auto up and down function will not operate.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- The power window control system uses a multiplex communication system (LIN communication system). Inspect the communication function by following How to Proceed with Troubleshooting INFO. Troubleshoot the power window control system after confirming that the communication system is functioning properly.
- When the power window regulator motor assembly (for rear LH side) is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - a. Close the power window by fully pulling up the power window regulator switch assembly (for rear LH side) and holding it at the auto up position.
 - b. Open the power window by fully pushing down the power window regulator switch assembly (for rear LH side).
- When the ECU determines that the power window regulator motor assembly (for rear LH side) has a malfunction, DTC B2311 is set.

PROCEDURE

1. READ VALUE USING TECHSTREAM (RL-Door Motor)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / RL-Door Motor / Data List.
- (e) Read the Data List according to the display on the Techstream.

RL-Door Motor (Power Window Regulator Motor Assembly (for Rear LH Side))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
RL Door P/W Auto SW	Rear LH side power window auto switch signal / ON or OFF	ON: Rear LH power window auto switch operated OFF: Rear LH power window auto switch not operated	-

OK:

On the Techstream screen, ON or OFF is displayed accordingly.

NG  [INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY \(for Rear LH Side\)](#)

OK

2. PERFORM INITIALIZATION (for Rear LH Side)

- (a) Initialize the power window regulator motor assembly (for rear LH side) .

NEXT

3. CHECK POWER WINDOW CONTROL SYSTEM (AUTO UP/DOWN FUNCTION)

- (a) Check that the rear LH side door power window moves when the auto up and down function of the power window regulator switch assembly (for rear LH side) is operated .

OK:

Rear LH side auto up and down function is normal.

NG ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)

OK ▶ END (PROBLEM DUE TO INITIALIZATION FAILURE)

4. INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Rear LH Side)

(a) Remove the power window regulator switch assembly (for rear LH side) INFO.

H

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)

DESCRIPTION

- When the front doors are closed, each power window regulator motor assembly can control its power window operation for approximately 45 seconds after the power switch is turned from on (IG) to off by receiving operation permission signals from the main body ECU (multiplex network body ECU).
- However, when approximately 45 seconds have elapsed, or the driver side door or front passenger side door is opened within approximately 45 seconds of the power switch being turned off, the power window regulator motor assembly stops operating.
- During an auto operation, when 45 seconds have passed and key-off operation is prohibited, the window operation stops immediately.

INSPECTION PROCEDURE

NOTICE:

The power window control system uses a multiplex communication system (LIN communication system). Inspect the communication function by following How to Proceed with Troubleshooting . Troubleshoot the power window control system after confirming that the communication system is functioning properly.

PROCEDURE

1. CHECK MANUAL UP / DOWN FUNCTION

(a) Check that the manual up and down function using the multiplex network master switch assembly and power window regulator switch assemblies can operate all the power windows .

OK:

Manual up and down function is normal.

NG  GO TO OTHER PROBLEM (Proceed to Problem Symptoms Table)

OK

2. CHECK REMOTE UP / DOWN FUNCTION

(a) Check that the remote up and down function using the multiplex network master switch assembly operates the power windows .

OK:

Remote up and down function is normal.

NG  GO TO OTHER PROBLEM (Proceed to Problem Symptoms Table)

OK

3.	CHECK OPERATION FUNCTION AFTER POWER SWITCH IS TURNED OFF
----	---

(a) Check the power window operation function after the power switch is turned off.

Result:

Result	Proceed to
When power window can still be operated even after opening driver side door or front passenger side door within approximately 45 seconds of power switch being turned off	A
When power window can still be operated even after approximately 45 seconds have elapsed after power switch is turned off (for All Doors)	B
When power window can still be operated even after approximately 45 seconds have elapsed after power switch is turned off (for Driver Side, Front Passenger Side, Rear LH Side or Rear RH Side))	C*

HINT:

*: Replace the power window regulator motor assembly  for Front Door,  for Rear Door) for the window that still operates when more than 45 seconds have elapsed after the power switch was turned off.

 REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (APPLICABLE LOCATION)

 REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

A

4.	READ VALUE USING TECHSTREAM (Main Body)
----	---

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR Door Courtesy SW	Front door courtesy switch RH signal / ON or OFF	ON: Front door RH open OFF: Front door RH closed	-
FL Door Courtesy SW	Front door courtesy switch LH signal / ON or OFF	ON: Front door LH open OFF: Front door LH closed	-

OK:

On the Techstream screen, ON or OFF is displayed accordingly.

NG ► GO TO LIGHTING SYSTEM (Proceed to Door Courtesy Light Switch Circuit)

OK ► **REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)**

Auto Up Operation does not Fully Close Power Window (Jam Protection Function is Activated)

DESCRIPTION

If a door glass or a power window regulator motor assembly does not operate smoothly, the jam protection function may be triggered automatically, resulting in the auto up function being unable to fully close the window.

HINT:

This symptom may occur for any of the windows.

INSPECTION PROCEDURE

NOTICE:

- The power window control system uses a multiplex communication system (LIN communication system). Inspect the communication function by following How to Proceed with Troubleshooting **INFO**. Troubleshoot the power window control system after confirming that the communication system is functioning properly.
- When the power window regulator motor assembly is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - a. Close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly and holding it at the auto up position.
 - b. Open the power window by fully pushing down the multiplex network master switch assembly or power window regulator switch assembly.

PROCEDURE

1. PERFORM INITIALIZATION (APPLICABLE LOCATION)

(a) Initialize the power window regulator motor assembly (applicable location) **INFO**.

NEXT

2. CHECK POWER WINDOW CONTROL SYSTEM (AUTO UP/DOWN FUNCTION (APPLICABLE LOCATION))

(a) Check that all the power windows move when the auto up and down function of the multiplex network master switch assembly and power window regulator switch assemblies are operated **INFO**.

OK:

Auto up and down function is normal (applicable location).

NG **CHECK WINDOW GLASS SLIDING MOVEMENT (APPLICABLE LOCATION)**

OK **END (PROBLEM DUE TO INITIALIZATION FAILURE)**

3. CHECK WINDOW GLASS SLIDING MOVEMENT (APPLICABLE LOCATION)

- (a) Remove the window regulator.
- (b) Install the window glass onto the door glass run.
- (c) Check if the door window regulator operates smoothly.
- (d) Check that the window glass slides smoothly when sliding it up by hand.

OK:

Door window glass slides smoothly.

Result:

Result	Proceed to
NG	A
OK (Driver door power window)	B
OK (Front passenger side power window)	C
OK (Rear LH side power window)	D
OK (Rear RH side power window)	E

HINT:

Ensure the following:

- The window glass fits with the glass run without improper contact or deformation.
- Foreign objects are not caught in the glass run.

CAUTION:

Perform initialization again.

E ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)

D ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)

C ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

B ▶ REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)

A ▶ **FIT WINDOW GLASS CORRECTLY (REMOVE FOREIGN OBJECTS CAUSING IMPROPER FIT OR REPLACE PARTS)**

DESCRIPTION

This symptom may occur for any of the windows.

The jam protection function operates within a specified range during the manual up or auto up operation.

INSPECTION PROCEDURE

NOTICE:

- The power window control system uses a multiplex communication system (LIN communication system). Inspect the communication function by following How to Proceed with Troubleshooting . Troubleshoot the power window control system after confirming that the communication system is functioning properly.
- When the power window regulator motor assembly is reinstalled or replaced, the power window control system must be initialized.
- After a door glass or a door glass run has been replaced, the jam protection function may operate unexpectedly when the auto up function is used. In such cases, the auto up function can be reinitialized by repeating the following operations at least 5 times:
 - a. Close the power window by fully pulling up the multiplex network master switch assembly or power window regulator switch assembly and holding it at the auto up position.
 - b. Open the power window by fully pushing down the multiplex network master switch assembly or power window regulator switch assembly.

PROCEDURE

1. PERFORM INITIALIZATION (APPLICABLE LOCATION)

- (a) Initialize the power window regulator motor assembly (applicable location) .

NEXT

2. CHECK POWER WINDOW CONTROL SYSTEM (AUTO UP/DOWN FUNCTION)

- (a) Check if the power window auto up and down function operates normally .

OK:

Auto up and down function is normal.

 GO TO OTHER PROBLEM (Proceed to Problem Symptoms Table)

OK

3. CHECK JAM PROTECTION FUNCTION OPERATING RANGE

(a) Check if the jam protection function operates normally for the applicable power window.

HINT:

The jam protection function will not operate within 4 mm (0.157 in.) of the fully closed position.

OK:

Jam protection function operates normally.

Result:

Result	Proceed to
OK	A
NG (Driver door power window)	B
NG (Front passenger side power window)	C
NG (Rear LH side power window)	D
NG (Rear RH side power window)	E

E ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear RH Side)

D ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Rear LH Side)

C ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Front Passenger Side)

B ► REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)

A ► **END (PROBLEM DUE TO INITIALIZATION FAILURE)**

*1	Component without harness connected (to Rear Power Window Regulator Motor Assembly RH)
----	---

- If the result is not as specified, replace the rear power window regulator motor assembly RH.

CAUTION:

Reset the power window regulator motor (initialize the pulse sensor) after installing the power window regulator motor and regulator assembly onto the door.

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY

NOTICE:

The regulator arm must be below the intermediate position when installing the rear power window regulator motor assembly.

(a) Using a T25 "TORX" driver, install the rear power window regulator motor assembly with the 3 screws.

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

HINT:

A new rear window regulator uses self-tapping screws to thread new installation holes when the self-tapping screws are inserted.

2. INSTALL REAR DOOR WINDOW REGULATOR ASSEMBLY [INFO](#)

3. INSTALL REAR DOOR GLASS SUB-ASSEMBLY [INFO](#)

REMOVAL

HINT:

- The front side fix window assembly can be reused. When installing the window, if any of the clips on the quarter window glass are broken, butyl tape can be used to support the glass until the applied adhesive hardens.
- When using butyl tape to temporarily secure the window, make sure that the butyl tape is not applied exactly at the original clip location. If the butyl tape is applied exactly at the clip location, it will cause the window to protrude
- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

2. REMOVE REAR DECK FLOOR BOX [INFO](#)

3. REMOVE REAR NO. 3 FLOOR BOARD (for RH Side) [INFO](#)

4. REMOVE REAR DOOR SCUFF PLATE [INFO](#)

20. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (for RH Side) INFO

21. REMOVE ROOF SIDE INNER GARNISH ASSEMBLY INFO

22. REMOVE QUARTER WINDOW ASSEMBLY

(a) Apply protective tape to the outer surface of the vehicle body to prevent scratches.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Place matchmarks on the quarter window assembly and vehicle body on the locations indicated in the illustration.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

Do not allow the piano wire to interfere with the clips.

(c) Pass a piano wire between the vehicle body and glass from the interior as shown in the illustration.

HINT:

Ensure not to interfere with the clips when passing the piano wire.

Text in Illustration

*1	Piano Wire
----	------------

(d) Tie both wire ends to wooden blocks or similar objects that can serve as handles.

NOTICE:

When separating the quarter window assembly from the vehicle, be careful not to damage the paint or interior and exterior ornaments.

(e) Cut off the adhesive by pulling the piano wire around the quarter window assembly.

NOTICE:

Leave as much adhesive on the vehicle body as possible when cutting through the adhesive.

(f) Disengage the 3 clips.

(g) Using suction cups, remove the glass.

NOTICE:

Be careful not to drop the glass.

23. CLEAN VEHICLE BODY

(a) Clean and shape the contact surfaces of the vehicle body.

Text in Illustration

*1	Adhesive
*2	Vehicle Body

(1) Using a knife, cut away excess adhesive on the contact surfaces of the vehicle body as shown in the illustration.

NOTICE:

Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(b) Clean the contact surfaces of the vehicle body with a piece of cloth saturated with cleaner.

HINT:

Even if all the adhesive has been removed, clean the vehicle body.

INSTALLATION

1. CLEAN QUARTER WINDOW ASSEMBLY

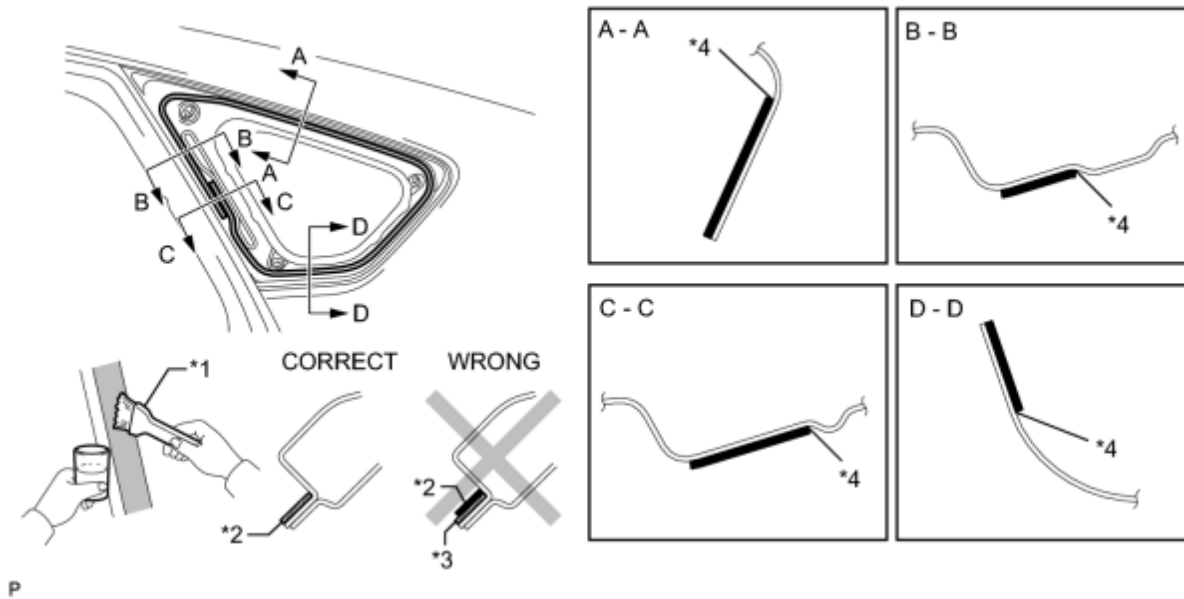

(a) Clean the outer edges of the quarter window assembly with a non-residue solvent.

- Do not touch the glass surface after cleaning it.
- Be careful not to damage the glass or clips.

2. INSTALL QUARTER WINDOW ASSEMBLY

(a) Using a brush or a sponge, apply Primer M to the exposed part of the vehicle body.

Text in Illustration

*1	Brush	*2	Primer M
*3	Adhesive	*4	Edge of Curved Surface

NOTICE:

- Do not coat the adhesive with Primer M.
- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

(b) Using a brush or a sponge, apply Primer G to the contact surface of the quarter window glass.

Text in Illustration

*1	Ceramic Notch x 20	-	-
Item	Dimension		
a	11.0 mm (0.433 in.)		
b	19.0 mm (0.748 in.)		

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a non-residue solvent before it dries.

NOTICE:

- To prevent the glass from breaking at low temperatures, ensure that no primer adheres to the contact surface between the moulding and glass during application.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.
- Do not apply too much primer.

(c) Apply adhesive to the quarter window assembly.

Adhesive:

Toyota Genuine Windshield Glass Adhesive or equivalent

(1) Cut off the tip of the cartridge nozzle as shown in the illustration.

Standard Dimension:

Item	Dimension
------	-----------

a	12.0 mm (0.472 in.)
b	8.0 mm (0.315 in.)

P

(2) Load the sealer gun with cartridge.

(3) Apply adhesive to the quarter window glass as shown in the illustration.

Back Side:

Text in Illustration

*1	Ceramic Notch x 20	-	-
----	--------------------	---	---

(d) Install the quarter window glass to the vehicle body.

(1) Position the quarter window glass so that the matchmarks are aligned, and press it in gently along the rim (when a window with missing clips is used).

Text in Illustration

*1	Matchmark
----	-----------

(2) Lightly press the front surface of the windshield glass to ensure that the windshield glass is securely fit to the vehicle body (when a window with missing clips is used).

HINT:

Press the glass with a force of 98 N (10 kgf, 22 lbf) or more.

(3) Engage the 3 clips to install the quarter window glass (when a window without missing clips is used).

(4) Hold the quarter window assembly in place securely with protective tape or equivalent until the adhesive hardens.

NOTICE:

- Allow the primer to dry for 3 minutes or more.
- Check that the clips are attached to the body correctly.
- Check the clearance between the body and glass.

(5) Lightly press the outer surface of the glass to ensure that the glass is securely fit to the vehicle body.

(6) Using a scraper, remove any excess or protruding adhesive.

HINT:

Apply adhesive onto the glass rim.

NOTICE:

Do not drive the vehicle within the time described in the table below.

Minimum Time:

Temperature	Minimum Time prior to Driving Vehicle
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

3. INSPECT FOR LEAK AND REPAIR

(a) After the adhesive has hardened, apply water from the outside of the vehicle. Check that no water leaks into the cabin.

(b) If water leaks into the cabin, allow the water to dry and add adhesive.

(c) Remove the protective tape.

4. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY_ [INFO](#)

3. REMOVE REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Disengage the 2 claws and remove the rear power window regulator switch assembly.

P

INSPECTION

1. INSPECT REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY (for LH Side)

(a) Check the switch function.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
6 (UP) - 1 (GND)	Auto up or up position	Below 1 Ω
7 (DOWN) - 1 (GND)	Auto down or down position	Below 1 Ω
8 (AUTO) - 1 (GND)	Auto up or auto down position	Below 1 Ω
6 (UP) - 1 (GND)	Free	10 k Ω or higher
7 (DOWN) - 1 (GND)	Free	10 k Ω or higher
8 (AUTO) - 1 (GND)	Free	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (to Power Window Regulator Switch Assembly (for Rear LH Side))
----	---

If the result is not as specified, replace the power window regulator switch assembly (for rear LH side).

(b) Check that the LED illuminates.

(1) Apply battery voltage to the power window regulator switch assembly and check that the LED illuminates.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → 4 (LED)	LED illuminates
Battery negative (-) → 1 (GND)

PRECAUTION

1. NOTICE FOR INITIALIZATION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

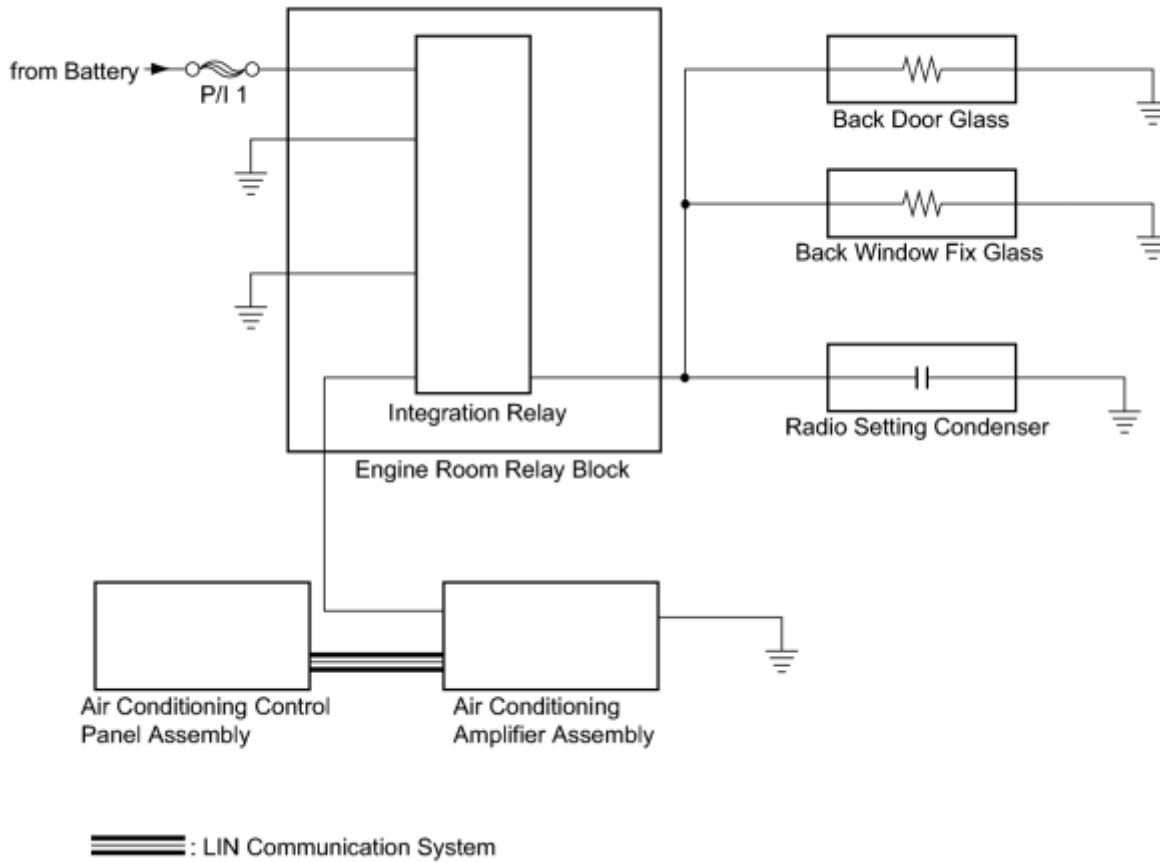

System Name	See Procedure
Advanced Parking Guidance System	

PARTS LOCATION

ILLUSTRATION

SYSTEM DIAGRAM

Communication Table

Transmitting ECU	Receiving ECU	Signal	Communication Method
Air Conditioning Control Panel Assembly	Air Conditioning Amplifier Assembly	Rear window defogger switch signal	LIN

SYSTEM DESCRIPTION

1. GENERAL

The rear window defogger wires are attached to the inside of the rear window and defog the window surface quickly by pressing the rear window defogger switch on the air conditioning control assembly. The indicator light illuminates while the system is operating. The system automatically turns off after approximately 15 minutes.

HINT:

If both of the following conditions are met after approximately 15 minutes from the rear window defogger was activated, the rear window defogger continues to operate up to approximately 45 minutes. If the following conditions are not met, the rear window defogger stops operating immediately.

- The outside temperature is -3°C (27°F) or below.
- The vehicle speed is 45 km/h (28 mph) or more.

HINT:

The rear window defogger is linked with the mirror defogger.

NOTICE:

If the battery voltage becomes low, window defogger operation is canceled to prioritize supplying power to the power steering system.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Integration Relay	Receives rear window defogger activation request signal from the air conditioning amplifier assembly and supplies power to the rear window defogger.
Rear Window Defogger	Receives power from the integration relay and heats the window using the rear window defogger wires.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the window defogger system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4. CHECK COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*

(a) Check the LIN communication function to ensure there are no malfunctions in the communication system

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses related to this system before inspecting the suspected areas below.

Window Defogger System

Symptom	Suspected Area	See page
Rear Window Defogger System does not Operate.	Back door glass	INFO
	Back window fix glass	-
	Air conditioning system	-
	Integration relay	-
	Wire harness or connector	-
	Air conditioning amplifier assembly	-

TERMINALS OF ECU

1. CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Disconnect the L17 air conditioning amplifier assembly connector.

H

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L17-1 (IG+) - L17-14 (GND)	B - W-B	Power source (IG)	Power switch on (IG)	11 to 14 V
L17-1 (IG+) - L17-14 (GND)	B - W-B	Power source (IG)	Power switch off	Below 1 V
L17-21 (B) - L17-14 (GND)	Y - W-B	Battery power supply	Always	11 to 14 V
L17-14 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L17 air conditioning amplifier assembly connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L17-20 (RDEF) - L17-14 (GND)	Y - W-B	Rear window defogger signal	Power switch on (IG), rear window defogger switch off	11 to 14 V
L17-20 (RDEF) - L17-14 (GND)	Y - W-B	Rear window defogger signal	Power switch on (IG), rear window defogger switch on	Below 1 V

If the result is not as specified, the air conditioning amplifier assembly may have a malfunction.

2. CHECK AIR CONDITIONING CONTROL PANEL ASSEMBLY

(a) Disconnect the L20 air conditioning control panel assembly connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L20-5 (IG+) - L20-8 (GND)	B - W-B	Power supply	Power switch on (IG)	11 to 14 V
L20-8 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L20 air conditioning control panel assembly connector.

(d) Check for pulses according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L20-2 (TX+) - L20-8 (GND)	V - W-B	Rear window defogger signal	Power switch on (IG)	Pulse generation

If the result is not as specified, the air conditioning control panel assembly may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 .

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.
- (f) Read the Data List according to the display on the Techstream.

EMPS

Tester Display	Test Part	Control Range	Diagnostic Note
Battery Voltage Lo Record	Battery voltage reduction history/ Min.: 0 times, Max.: 65535 times	0 to 65535	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Air Conditioner / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

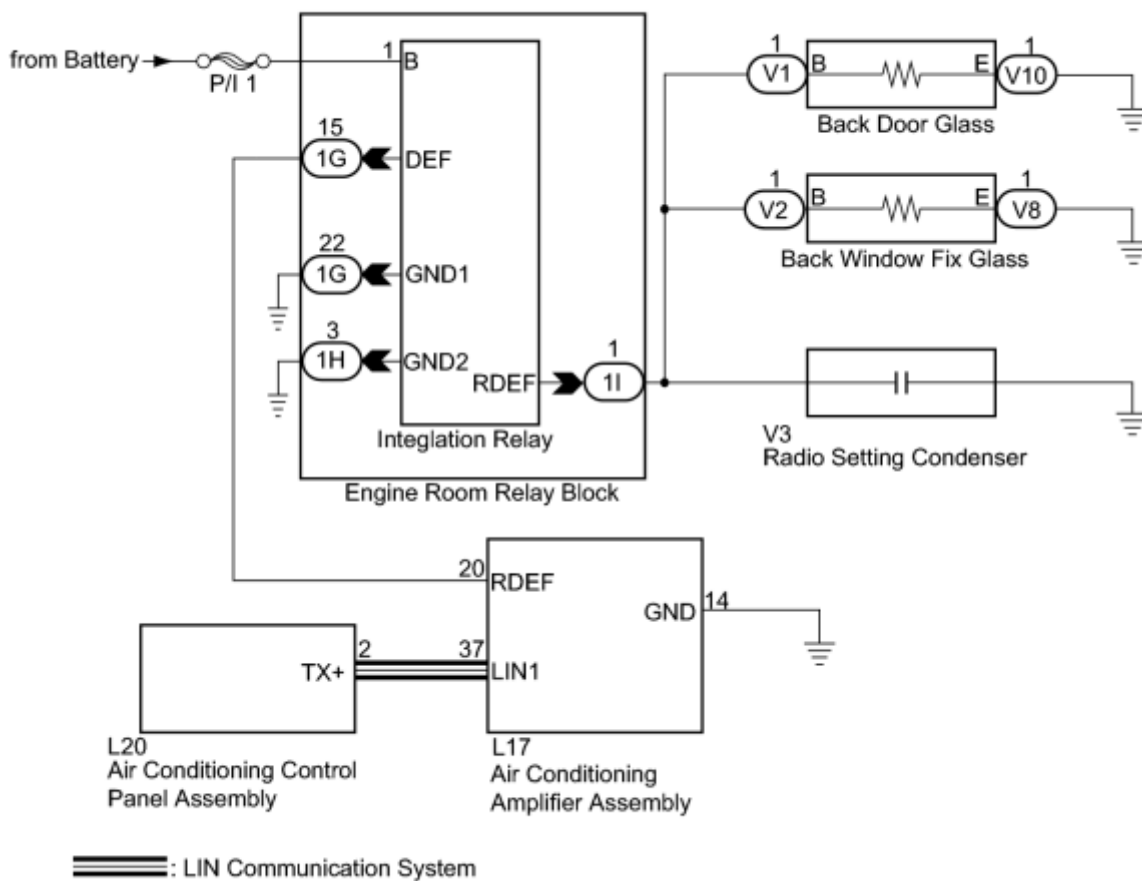

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Defogger Relay (Rear)	Rear window defogger	OFF/ON	-

DESCRIPTION

When the rear window defogger switch on the air conditioning control panel assembly is pressed, the operation signal is transmitted to the air conditioning amplifier assembly through a LIN communication line. When the air conditioning amplifier assembly receives the signal, it turns on the integration relay to operate the rear window defogger.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK REAR WINDOW DEFOGGER SYSTEM

(a) Active the rear defogger system and check the symptoms.

Result:

Result	Proceed to
Both back window defoggers do not warm up.	A
The back door glass defogger does not warm up.	B
The back window fix glass defogger does not warm up.	C

*2	Front view of wire harness connector (to Integration Relay)

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.	CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY
----	---

(a) Turn the power switch on (READY).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L17-20 (RDEF) - L17-14 (GND)	Rear defogger switch off	11 to 14 V
L17-20 (RDEF) - L17-14 (GND)	Rear defogger switch on	Below 1 V

Text in Illustration

*1	Rear view of wire harness connector (to Air Conditioning Amplifier Assembly)
----	---

NG  REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY

OK

6.	INSPECT RADIO SETTING CONDENSER
----	---------------------------------

(a) Remove the radio setting condenser.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	Always	10 k Ω or higher
2 - 3	Always	Below 1 Ω

Text in Illustration

*1	Radio Setting Condenser
----	-------------------------

NG REPLACE RADIO SETTING CONDENSER

OK

7.	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - BODY GROUND)
----	---

(a) Disconnect the V1 back door glass battery side connector.

H

(b) Disconnect the V2 back window fix glass battery side connector.

(c) Disconnect the 1I integration relay connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1I-1 (RDEF) - Body ground	Always	10 k Ω or higher
1I-1 (RDEF) - V1-1	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Integration Relay)
*2	Front view of wire harness connector (to Back Door Glass)

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK **REPLACE INTEGRATION NO.1 RELAY**

8.	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - BACK DOOR GLASS)
----	---

*1

(a) Disconnect the V1 back door glass battery side connector.

*2

H

(b) Disconnect the V10 back door glass body ground side connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1I-1 (RDEF) - V1-1	Always	Below 1 Ω
V10-1 - Body ground	Always	Below 1 Ω
1I-1 (RDEF) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE BACK DOOR GLASS

9.	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - BACK WINDOW FIX GLASS)
----	---

*1

(a) Disconnect the V2 back window fix glass battery side connector.

*2

H

(b) Disconnect the V8 back window fix glass body ground side connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
11-1 (RDEF) - V2-1	Always	Below 1 Ω
V8-1 - Body ground	Always	Below 1 Ω
11-1 (RDEF) - Body ground	Always	10 k Ω or higher
V2-1 - Body ground	Always	10 k Ω or higher

*4	Back Window Fix Glass Body Ground Side

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  **REPLACE BACK WINDOW FIX GLASS**

ON-VEHICLE INSPECTION

1. CHECK REAR WINDOW DEFOGGER OPERATION

(a) When the power switch is on (IG) and the rear window defogger switch is pressed, check that the rear window defogger operates.

2. INSPECT REAR WINDOW DEFOGGER WIRE (BACK DOOR GLASS)

NOTICE:

- When cleaning the glass, wipe the glass along the wire using a soft and dry cloth. Take care not to damage the wires.
- Do not use detergents or glass cleaners that have abrasive ingredients.
- When measuring voltage, wrap a piece of tin foil around the tip of the negative tester probe and press the foil against the wire with your finger, as shown in the illustration.

(a) Turn the power switch on (IG).

(b) Turn the rear window defogger switch on.

(c) Measure the voltage at the center of each rear window defogger wire to check the wire, as shown in the illustration.

Result:

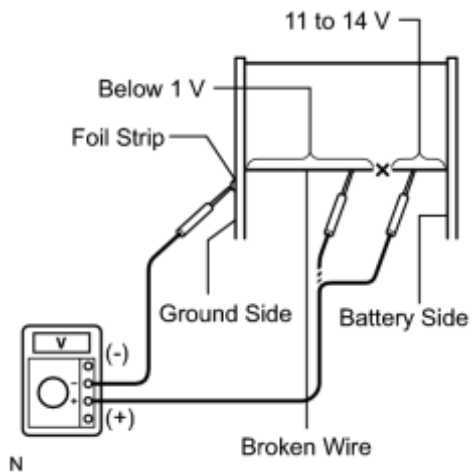

Voltage	Criteria
4 to 6 V	Wire is not broken
11 to 14 V	Wire is broken between the center and battery side end
Below 1 V	Wire is broken between the center and ground side end

HINT:

If the voltage is 11 to 14 V, the wire may be faulty between the center of the wire and the wire end on the battery side. If the voltage is below 1 V, the wire may be faulty between the center of the wire and the wire end on the ground side.

(d) Place the positive (+) lead of the voltmeter against the rear window defogger wire on the battery side.

(e) Place the negative (-) lead of the voltmeter with the foil strip against the wire on the ground side.

(f) Slide the positive (+) lead from the battery side to the ground side. The point where the voltage drops to below 1 V from 11 to 14 V is the place where the rear window defogger wire is broken.

HINT:

If the rear window defogger wire is not broken, the voltmeter should indicate 11 to 14 V at the battery side. When the positive (+) lead slides to the ground side, the voltage gradually decreases to below 1 V.

REPAIR

1. REPAIR REAR WINDOW DEFOGGER WIRE (BACK DOOR GLASS)

N

- (a) Clean the broken wire tips with a grease, wax and silicone remover.
- (b) Place masking tape along both sides of the wire.

N

- (c) Thoroughly mix the repair agent (Dupont paste No. 4817 or equivalent).

- (d) Using a fine tip brush, apply a small amount of the agent to the wire.
- (e) After a few minutes, remove the masking tape.

NOTICE:

Do not use the rear window defogger for at least 24 hours after performing the repair.

22. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

23. REMOVE VISOR HOLDER INFO

24. REMOVE ROOF HEADLINING ASSEMBLY

(a) Slightly lower the front section of the roof headlining assembly so that the windshield glass can be removed.

HINT:

It is not necessary to completely remove the roof headlining assembly.

25. REMOVE WINDSHIELD GLASS SUB-ASSEMBLY

(a) Apply protective tape to the installation position of the windshield glass sub-assembly on the vehicle body.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Apply protective tape to the installation surface to prevent it from being scratched.

(b) Pass a piano wire between the vehicle body and glass from the interior, as shown in the illustration.

Text in Illustration

*1	Wooden Block
*2	Plastic Sheet
*3	Stopper
*4	Piano Wire

(c) Tie both wire ends to wooden blocks or similar objects that can serve as handles.

(d) Cut off the adhesive by pulling the piano wire around the windshield glass sub-assembly.

NOTICE:

- When separating the windshield glass sub-assembly, be careful not to damage the paint or interior and exterior ornaments.
- To prevent the safety pad from being scratched when removing the windshield glass sub-assembly, place a plastic sheet between the piano wire and safety pad.

(e) Place matchmarks on the windshield glass sub-assembly and vehicle body on the locations indicated in the illustration.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

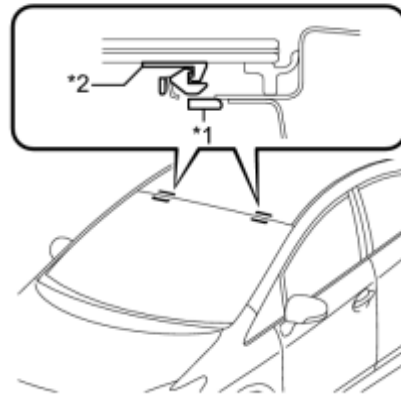

Matchmarks are not necessary if the windshield glass assembly is not going to be reused.

(f) Disconnect the windshield glass stoppers.

1-piece type:

2-piece type:

Text in Illustration

*1	No. 1 Stopper	*2	No. 2 Stopper
----	---------------	----	---------------

NOTICE:

- There are No. 1 and No. 2 stoppers on the windshield glass sub-assembly as shown in the illustration. Be careful not to damage the windshield glass sub-assembly when cutting off the adhesive.
- To prevent the windshield glass sub-assembly from dropping when performing this operation, be sure to hold the windshield glass using suction cups.

HINT:

Depending on vehicles, 1-piece or 2-piece type stoppers are used.

(g) Using suction cups, remove the windshield glass sub-assembly .

NOTICE:

- Be careful not to drop the windshield glass sub-assembly.
- Leave as much adhesive on the vehicle body as possible when removing the windshield glass sub-assembly.

26. REMOVE WINDOW GLASS ADHESIVE DAM

P

(a) Using a scraper, remove the windshield glass adhesive dam.

- Be careful not to damage the windshield glass.
- Be sure to replace the window glass adhesive dam with a new one.

27. REMOVE WINDSHIELD OUTSIDE MOULDING

P

(a) Using a scraper, remove the windshield outside moulding.

- Be careful not to damage the windshield glass.
- Be sure to replace the windshield outside moulding with a new one.

28. REMOVE NO. 2 WINDSHIELD GLASS STOPPER

P

(a) Using a scraper, remove the 2 No. 2 windshield glass stoppers.

- Be careful not to damage the windshield glass.
- Be sure to replace the No. 2 windshield glass stoppers with new ones.

29. REMOVE NO. 1 WINDSHIELD GLASS STOPPER (for 2-piece Type)

(a) Remove the 2 No. 1 windshield glass stoppers.

NOTICE:

Be sure to replace the No. 1 windshield glass stoppers with new ones.

30. CLEAN WINDSHIELD GLASS

(a) Using a scraper, remove the adhesive tape and adhesive sticking to the windshield glass.

NOTICE:

Be careful not to damage the windshield glass.

(b) Clean the outer circumference of the windshield glass with a non-residue solvent.

NOTICE:

- Do not touch the windshield glass surface after cleaning it.
- Even if using a new windshield glass, clean the windshield glass with a non-residue solvent.

31. CLEAN VEHICLE BODY

(a) Clean and shape the contact surfaces of the vehicle body.

Text in Illustration

*1	Adhesive
*2	Body

(1) Using a knife, cut away excess adhesive on the contact surfaces of the

vehicle body, as shown in the illustration.

NOTICE:

Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surfaces of the vehicle body with a piece of cloth saturated with cleaner.

HINT:

Even if all the adhesive has been removed, clean the vehicle body.

INSTALLATION

1. INSTALL NO. 2 WINDSHIELD GLASS STOPPER

(a) Using a brush or a sponge, coat the application area of the No. 2 windshield glass stoppers with Primer G.

NOTICE:

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Install 2 new No. 2 windshield glass stoppers onto the windshield glass, as shown in the illustration.

Back Side:

P

Text in Illustration

*1	Ceramic Notch
----	---------------

Standard Dimension:

Area	Dimension
a	13.7 to 14.7 mm (0.539 to 0.578 in.)

NOTICE:

Only the 2-piece type No. 2 windshield glass stoppers are supplied. Use the 2-piece type stoppers even if the 1-piece type stoppers were used.

2. INSTALL NO. 1 WINDSHIELD GLASS STOPPER

(a) Install 2 new No. 1 windshield glass stoppers to the vehicle body, as shown in the illustration.

NOTICE:

Only the 2-piece type No. 1 windshield glass stoppers are supplied. Use the 2-piece type stoppers even if the 1-piece type stoppers were used.

P

3. INSTALL WINDSHIELD OUTSIDE MOULDING

(a) Using a brush or a sponge, coat the application area of a new windshield outside moulding with Primer G.

NOTICE:

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Install the windshield outside moulding onto the windshield glass, as shown in the illustration.

P

4. INSTALL WINDOW GLASS ADHESIVE DAM

(a) Using a brush or a sponge, coat the application area of a new window glass adhesive dam with Primer G.

NOTICE:

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

P

(b) Install the window glass adhesive dam onto the windshield glass, as shown in the illustration.

Text in Illustration

*1	Dam Center Line
----	-----------------

5. INSTALL WINDSHIELD GLASS SUB-ASSEMBLY

(a) Position the windshield glass sub-assembly.

Text in Illustration

*1	Matchmark
----	-----------

P

(1) Using suction cups, place the windshield glass in the correct position.

(2) Check that the whole contact surface of the windshield glass rim is perfectly even.

(3) Align the matchmarks on the windshield glass sub-assembly and vehicle body.

NOTICE:

Check that the windshield glass stoppers are attached to the vehicle body correctly.

(4) Remove the windshield glass sub-assembly.

(b) Using a brush, coat the installation surface on the vehicle body with Primer M.

P

Text in Illustration

*1	Brush	*2	Primer M
*3	Adhesive	*4	Edge of Curved Surface

NOTICE:

- Do not coat the adhesive with Primer M.
- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(c) Using a brush or a sponge, coat the application area of adhesive with Primer G.

Text in Illustration

*1	Ceramic Notch	-	-
----	---------------	---	---

Standard Dimension:

Area	Dimension
a	9.5 mm (0.374 in.)
b	7.0 mm (0.275 in.)
c	4.0 mm (0.157 in.)

NOTICE:

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover primer.

HINT:

- Apply Primer G onto the ceramic notches.
- If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(d) Apply adhesive to the glass.

Adhesive:

Toyota Genuine Windshield Glass Adhesive or equivalent

(1) Cut off the tip of the cartridge nozzle as shown in the illustration.

Standard Dimension:

Area	Dimension
a	12.0 mm (0.472 in.)
b	8.0 mm (0.315 in.)

P

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Usage Time Frame:

Temperature	Usage Time Frame
35°C (95°F)	15 minutes
20°C (68°F)	1 hour and 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with cartridge.

(3) Apply adhesive to the windshield glass as shown in the illustration.

Text in Illustration

*1	Ceramic Notch	-	-
----	---------------	---	---

Standard Dimension:

Area	Dimension
a	9.5 mm (0.374 in.)
b	8.0 mm (0.315 in.)

HINT:

Apply adhesive onto the ceramic notches.

(e) Install the windshield glass sub-assembly.

Text in Illustration

*1	Matchmark
----	-----------

(1) Using suction cups, position the windshield glass sub-assembly so that the matchmarks are aligned, and press it in gently along the rim.

NOTICE:

- Check that the windshield glass stoppers are attached to the vehicle body correctly.
- Check the clearance between the vehicle body and windshield glass.

(2) Lightly press the front surface of the windshield glass sub-assembly to ensure that the windshield glass sub-assembly is securely fit to the vehicle body.

HINT:

Press the glass with a force of 98 N (10 kgf, 22 lbf) or more.

(3) Using a scraper, remove any excess or protruding adhesive.

Text in Illustration

*1	Dam
*2	Adhesive
*3	Windshield

HINT:

Apply adhesive onto the windshield glass rim.

(4) Hold the windshield glass using protective tape until applied adhesive becomes hard.

NOTICE:

Do not drive the vehicle for the time described in the table below.

Minimum Time:

2010 Toyota Prius

Temperature	Minimum Time prior to Driving Vehicle
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

6. INSPECT FOR LEAK AND REPAIR

- (a) After the adhesive has hardened, apply water from the outside of the vehicle. Check that no water leaks into the cabin.
- (b) If water leaks into the cabin, allow the water to dry and add adhesive.
- (c) Remove the protective tape.

7. INSTALL ROOF HEADLINING ASSEMBLY

- (a) Return the front section of the roof headlining assembly to the original position.

8. INSTALL VISOR HOLDER_ INFO

9. INSTALL VISOR ASSEMBLY LH_ INFO

10. INSTALL VISOR BRACKET COVER LH_ INFO

REMOVAL

1. REMOVE FRONT WIPER ARM HEAD CAP

(a) Using a screwdriver, disengage the 3 claws and remove the front wiper arm head cap.

Text in Illustration

*1	Protective Tape
----	-----------------

- Tape the screwdriver tip before use.
- Use the same procedure for the RH side and LH side.

2. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH

(a) Remove the nut and the front wiper arm and blade assembly LH.

3. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH

(a) Remove the 2 nuts and the front wiper arm and blade assembly RH.

4. REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY LH

(a) Using a screwdriver, disengage the claw and guide <A> as shown in the illustration.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:
Tape the screwdriver tip before use.

(b) Disengage the guide and remove the cowl side ventilator sub-assembly LH as shown in the illustration.

5. REMOVE COWL SIDE VENTILATOR SUB-ASSEMBLY RH

HINT:
Use the same procedure for the RH side and LH side.

6. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(a) Remove the 2 clips.

(b) Disengage the 5 claws and 3 guides <A>.

P

(c) Disengage the 8 guides and pull out the cowl top ventilator louver sub-assembly as shown in the illustration.

7. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

(a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.

P

(b) Disconnect the connector.

(c) Disengage the 2 clamps.

P

(d) Remove the 4 bolts.

Text in Illustration

*1	Grommet
----	---------

(e) Disengage the grommet and remove the windshield wiper motor and link assembly as shown in the illustration.

NOTICE:

Be careful not to damage the windshield when removing the windshield wiper motor and link assembly.

8. REMOVE FRONT WIPER CRANK SUB-ASSEMBLY

(a) Using a screwdriver, separate the windshield wiper link rod from the crank arm pivot of the front wiper crank sub-assembly as shown in the illustration.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Tape the screwdriver tip before use.

(b) When reusing the windshield wiper motor assembly and front wiper crank sub-assembly:

(1) Place matchmarks on the windshield wiper link assembly and front wiper crank sub-assembly as shown in the illustration.

Text in Illustration

*1	Matchmark
----	-----------

(c) Remove the nut and the front wiper crank sub-assembly.

9. REMOVE WINDSHIELD WIPER MOTOR ASSEMBLY

(a) Remove the 3 bolts and remove the windshield wiper motor assembly.

P

INSPECTION

NOTICE:

Ensure that fingers or articles of clothing do not get caught in moving parts when performing this test.

1. INSPECT WINDSHIELD WIPER MOTOR ASSEMBLY

*1

(a) Check the low speed operation.

(1) Connect a battery positive (+) lead to terminal 1 (+1) and a negative (-) lead to terminal 5 (E), and check that the motor operates at low speed.

OK:

Motor operates at low speed.

P

(b) Check the high speed operation.

(1) Connect a battery positive (+) lead to terminal 4 (+2) and a negative (-) lead to terminal 5 (E), and check that the motor operates at high speed.

OK:

Motor operates at high speed.

Text in Illustration

*1	Component without harness connected (Windshield Wiper Motor Assembly)

REMOVAL

1. REMOVE RADIATOR SUPPORT OPENING COVER [INFO](#)

2. REMOVE FRONT BUMPER ASSEMBLY [INFO](#)

3. REMOVE HEADLIGHT CLEANER MOTOR AND PUMP ASSEMBLY

(a) Loosen the clip and disconnect the headlight cleaner hose from the headlight cleaner motor and pump assembly as shown in the illustration.

P

(b) Disconnect the connector and remove the headlight cleaner motor and pump assembly.

INSPECTION

1. INSPECT HEADLIGHT CLEANER MOTOR AND PUMP ASSEMBLY

HINT:

The following check should be performed with the headlight cleaner motor and pump assembly installed to the washer jar.

(a) Fill the washer jar with washer fluid.

*1

(b) Connect a battery positive (+) lead to terminal 2 of the headlight cleaner motor and pump, and a battery negative (-) lead to terminal 1.

(c) Check that washer fluid flows from the washer jar.

OK:

Washer fluid is pumped from the washer jar.

Text in Illustration

*1	Component without harness connected (Headlight Cleaner Motor and Pump Assembly)
----	--

If the result is not as specified, replace the headlight cleaner motor and pump assembly.

INSTALLATION

1. INSTALL HEADLIGHT CLEANER MOTOR AND PUMP ASSEMBLY

(a) Install the headlight cleaner motor and pump assembly.

P

(b) Connect the headlight cleaner hose to the headlight cleaner motor and pump assembly with the clip as shown in the illustration.

(c) Connect the connector.

2. INSTALL FRONT BUMPER ASSEMBLY [INFO](#)

3. INSTALL RADIATOR SUPPORT OPENING COVER [INFO](#)

4. ADD WINDSHIELD WASHER FLUID [INFO](#)

5. PREPARE VEHICLE FOR FOG LIGHT AIM ADJUSTMENT (w/ Fog Light) [INFO](#)

4. REMOVE BACK DOOR TRIM BOARD ASSEMBLY_ [INFO](#)

5. REMOVE BACK DOOR TRIM BOARD_ [INFO](#)

6. REMOVE REAR WIPER ARM HEAD CAP

(a) Disengage the 2 claws and open the rear wiper arm head cap as shown in the illustration.

(b) Disengage the 2 claws and remove the rear wiper arm head cap.

7. REMOVE REAR WIPER ARM AND BLADE ASSEMBLY

(a) Remove the nut, and the rear wiper arm and blade assembly.

8. REMOVE REAR WIPER MOTOR GROMMET

(a) Remove the rear wiper motor grommet.

9. REMOVE REAR WIPER MOTOR ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 3 bolts and the rear wiper motor assembly.

INSPECTION

1. INSPECT REAR WIPER MOTOR ASSEMBLY

(a) Check the wiper intermittent operation.

(1) Connect a battery positive (+) lead to terminal 4 (+B), and a negative (-) lead to terminal 2 (C1) and terminal 5 (E), and check that the motor operates.

*1

OK:

Motor operates.

Text in Illustration

*1	Component without harness connected (Rear Wiper Motor and Bracket Assembly)
----	--

If the result is not as specified, replace the motor assembly.

(b) Check the wiper continuous operation.

(1) Connect a battery positive (+) lead to terminal 4 (+B), and a negative (-) lead to terminal 3 (LS) and terminal 5 (E), and check that the motor operates.

*1

OK:

Motor operates.

Text in Illustration

*1	Component without harness connected (Rear Wiper Motor and Bracket Assembly)
----	--

If the result is not as specified, replace the motor assembly.

INSTALLATION

1. INSTALL REAR WIPER MOTOR ASSEMBLY

(a) Install the rear wiper motor assembly with the 3 bolts.

Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

(b) Connect the connector.

2. INSTALL BACK DOOR TRIM BOARD [INFO](#)

3. INSTALL BACK DOOR TRIM BOARD ASSEMBLY [INFO](#)

4. INSTALL BACK DOOR SIDE GARNISH LH [INFO](#)

5. INSTALL BACK DOOR SIDE GARNISH RH [INFO](#)

7. INSTALL REAR WIPER MOTOR GROMMET

(a) Apply MP grease to the entire surface of the rear wiper motor grommet lip.

Text in Illustration

*1	MP grease
----	-----------

HINT:

Make sure that the hole does not get clogged with grease and the grooves on the lip are filled with grease.

(b) Install the rear wiper motor grommet.

HINT:

Install the grommet with its alignment mark facing up.

Text in Illustration

*1	Alignment Mark
----	----------------

8. INSTALL REAR WIPER ARM AND BLADE ASSEMBLY

- (a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.
- (b) When reusing the rear wiper arm and blade assembly:

- (1) Clean the wiper arm serrations.

Text in Illustration

*1	Wiper Arm Serration
----	---------------------

- (c) When reusing the rear wiper motor assembly:

- (1) Clean the wiper pivot serrations with a wire brush.

Text in Illustration

*1	Wire Brush
*2	Wiper Pivot Serration

- (d) Install the rear wiper arm and blade assembly with the nut to the position shown in the illustration.

Text in Illustration

*1	Ceramic Dot
----	-------------

Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

HINT:

Hold the wiper arm by hand while tightening the nut.

(e) Operate the rear wiper while spraying washer fluid onto the back door glass. Make sure that the rear wiper functions properly and the wiper does not come into contact with the vehicle body.

9. INSTALL REAR WIPER ARM HEAD CAP

(a) Engage the 2 claws to install the rear wiper arm head cap.

(b) Engage the 2 claws to close the rear wiper arm head cap as shown in the illustration.

COMPONENTS

ILLUSTRATION

REAR WIPER BLADE

P

REPLACEMENT

1. REMOVE REAR WIPER BLADE

(a) Raise the wiper blade to the position where the claw detaches with a click sound as shown in the illustration.

NOTICE:

Be careful not to damage the claw.

(b) Pull the wiper blade straight toward to remove it from the wiper arm.

NOTICE:

Do not lower the wiper arm with the wiper blade removed. The arm tip may damage the back door glass surface.

2. REMOVE REAR WIPER RUBBER

(a) Lift and pull the end of the wiper rubber protrusion from the blade stopper as shown in the illustration.

NOTICE:

Do not forcibly pull out the wiper rubber. The backing plates will be deformed or the blade claws will be damaged.

HINT:

Lightly pushing the rubber in the middle will allow it to be removed more easily.

(b) Remove the rear wiper rubber backing plates.

3. INSTALL REAR WIPER RUBBER

(a) Install the rear wiper rubber backing plates as shown in the illustration.

NOTICE:

Install the backing plates facing the correct direction.

P

(b) Insert the wiper rubber from the front end of the wiper blade to the rear end through the second claw.

(c) After pushing the wiper rubber through the rear end claw, allow it to stick out from the rear end stopper.

P

(d) Slide the wiper rubber through the front end claw.

P

4. INSTALL REAR WIPER BLADE

(a) Push the wiper blade straight toward to install it to the wiper arm.

(b) Engage the claw to install the rear wiper blade as shown in the illustration.

NOTICE:

Be careful not to damage the claw.

ON-VEHICLE INSPECTION

1. INSPECT HEADLIGHT CLEANER CONTROL RELAY

*1

(a) Disconnect the A44 headlight cleaner control relay connector.

N

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A44-3 (IG) - Body ground	Power switch off	Below 1 V
	Power switch on (IG)	11 to 14 V
A44-6 (PB) - Body ground	Always	11 to 14 V
A44-1 (HDLO) - Body ground	Light control switch in head position	Below 1 V
	Light control switch off	11 to 14 V
A44-2 (H) - Body ground	Headlight cleaner switch off	11 to 14 V
	Headlight cleaner switch on	Below 1 V
A44-5 (FRWA) - Body ground	Front washer switch off	11 to 14 V
	Front washer switch on	Below 1 V

If the result is not as specified, there is a malfunction in the wire harness.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A44-4 (E) - Body ground	Always	Below 1 Ω

PRECAUTION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	INFO

1. PRECAUTION OF WASHER NOZZLE ADJUSTMENT

(a) Do not clean or adjust the washer nozzle with a safety pin, etc. because:

(1) the washer nozzle tip is made of resin and could be damaged.

(2) adjustment is not necessary for this spray type washer nozzle. If it is necessary to change the nozzle angle, replace the washer nozzle with one that has a different nozzle angle.

(b) If the washer nozzle is clogged with wax, etc., remove it and clean the nozzle hole with a soft resin brush or other cleaning tool.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

*1

H

Tester Connection	Switch Condition	Specified Condition
1 (E) - 4 (B)	Headlight cleaner switch off	10 kΩ or higher
1 (E) - 4 (B)	Headlight cleaner switch on	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Headlight Cleaner Switch Assembly)
----	--

NG **REPLACE HEADLIGHT CLEANER SWITCH ASSEMBLY**

OK **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - HEADLIGHT CLEANER CONTROL RELAY)**

DESCRIPTION

The headlight cleaner control relay controls the headlight cleaner motor and pump assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. INSPECT HEADLIGHT CLEANER MOTOR AND PUMP ASSEMBLY

HINT:

The following check should be performed with the headlight cleaner motor and pump assembly installed to the washer jar.

- (a) Fill the washer jar with washer fluid.

*1

- (b) Connect a battery positive (+) lead to terminal 2 of the headlight cleaner motor and pump assembly, and a battery negative (-) lead to terminal 1.

(c) Check that washer fluid flows from the washer jar.

OK:

Washer fluid is pumped from the washer jar.

Text in Illustration

*1	Component without harness connected (Headlight Cleaner Motor and Pump Assembly)
----	--

NG ► REPLACE HEADLIGHT CLEANER MOTOR AND PUMP ASSEMBLY

OK

2.	CHECK HARNESS AND CONNECTOR (HEADLIGHT CLEANER MOTOR CIRCUIT)
----	---

(a) Connect the headlight cleaner motor and pump assembly connector.

*1

(b) Disconnect the A44 headlight cleaner control relay connector.

N

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A44-6 (PB) - Body ground	Always	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Headlight Cleaner Control Relay)
----	--

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (HEADLIGHT CLEANER CONTROL RELAY - BATTERY)

OK  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

DESCRIPTION

This circuit provides power to the headlight cleaner control relay.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (HEADLIGHT CLEANER CONTROL RELAY - BATTERY AND BODY GROUND)

(a) Disconnect the A44 headlight cleaner control relay connector.

*1

N

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A44-3 (IG) - Body ground	Power switch off	Below 1 V
	Power switch on (IG)	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A44-4 (E) - Body ground	Always	Below 1 Ω

SWITCH ASSEMBLY

P

REMOVAL

1. REMOVE LOWER STEERING COLUMN COVER

NOTICE:

Removing the lower steering column cover in the incorrect order will cause the lower steering column cover to break.

(a) Release the tilt and telescopic lever, and fully extend and lower the steering column assembly.

(b) Lock the tilt and telescopic lever.

(c) Push the right and left sides of the lower steering column cover to disengage the 4 claws.

P

(d) Insert fingers into the opening of the tilt lever of the lower steering column cover to disengage the claw.

HINT:

Spread the claw to disengage it.

P

(e) Turn the steering wheel assembly to the right.

P

(f) Using a screwdriver, disengage the claw as shown in the illustration.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Tape the screwdriver tip before use.

P

(g) Turn the steering wheel assembly to the left.

(h) Using a screwdriver, disengage the claw as shown in the illustration.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Tape the screwdriver tip before use.

(i) Remove the lower steering column cover as shown in the illustration.

c

2. REMOVE UPPER STEERING COLUMN COVER

(a) Disengage the claw and 2 pins, and remove the upper steering column cover.

P

3. REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY

(a) Turn the steering wheel assembly to the right.

(b) Disconnect the 2 connectors.

(c) Disengage the claw and remove the windshield wiper switch assembly as shown in the illustration.

NOTICE:

If the claw is pushed with excessive force, it may break.

INSPECTION

1. INSPECT WINDSHIELD WIPER SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Front Washer Switch

Rear Wiper Switch

Rear Washer Switch

Front Wiper Switch

Tester Connection	Switch Condition	Specified Condition
L48-1 (+S) - L48-3 (+1)	OFF	Below 1 Ω
	INT	
L48-2 (+B) - L48-3 (+1)	MIST	
	LO	
L48-2 (+B) - L48-4 (+2)	HI	
Tester Connection	Switch Condition	
L49-2 (EW) - L49-3 (WF)	ON	Below 1 Ω
	OFF	10 k Ω or higher
Tester Connection	Switch Condition	Specified Condition
L49-6 (C1R) - L49-2 (EW)	OFF	10 k Ω or higher
L49-7 (+1R) - L49-2 (EW)		
L49-6 (C1R) - L49-2 (EW)	INT	Below 1 Ω
L49-7 (+1R) - L49-2 (EW)	HI	Below 1 Ω
Tester Connection	Switch Condition	Specified Condition
L48-5 (WR) - L49-2 (EW)	OFF	10 k Ω or higher
L49-7 (+1R) - L49-2 (EW)		
L48-5 (WR) - L49-2 (EW)	WASH	Below 1 Ω
L48-5 (WR) - L49-2 (EW)	ON + WASH	Below 1 Ω
L49-7 (+1R) - L49-2 (EW)		

If the result is not as specified, replace the windshield wiper switch assembly.

Text in Illustration

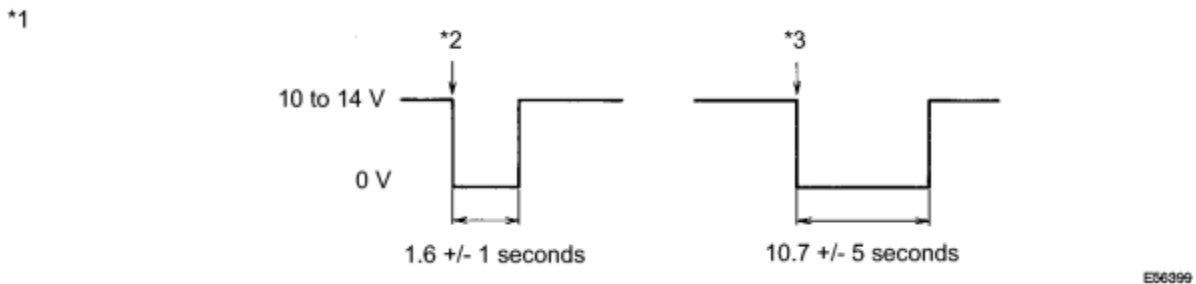

*1	Component without harness connected (Windshield Wiper Switch Assembly)
----	---

(b) Check the intermittent operation.

1. Connect a voltmeter positive (+) lead to terminal L48-3 (+1) and a negative (-) lead to terminal L49-2 (EW).
2. Connect a battery positive (+) lead to terminal L48-2 (+B) and a negative (-) lead to terminal L49-2 (EW) and L48-1 (+S).
3. Turn the wiper switch to the INT position.
4. Connect a battery positive (+) lead to terminal L48-1 (+S) for 5 seconds.
5. Connect a battery negative (-) lead to terminal L48-1 (+S). Operate the intermittent wiper relay and check the voltage between terminals L48-3 (+1) and L49-2 (EW).

OK:

Voltage changes as shown in the illustration.

If the result is not as specified, replace the windshield wiper switch assembly.

Text in Illustration

*1	Voltage between terminals L48-3 (+1) and L49-2 (EW)	*2	FAST: Connect battery negative lead to terminal L48-1 (+S)
*3	SLOW: Connect battery negative lead to terminal L48-1 (+S)	-	-

INSTALLATION

1. INSTALL WINDSHIELD WIPER SWITCH ASSEMBLY

(a) Engage the claw and install the windshield wiper switch assembly as shown in the illustration.

(b) Connect the 2 connectors.

2. INSTALL UPPER STEERING COLUMN COVER

(a) Engage the claw and 2 pins to install the upper steering column cover.

3. INSTALL LOWER STEERING COLUMN COVER

NOTICE:

If the lower steering column cover is installed in the incorrect order, it will not be possible to assemble the lower steering column cover.

(a) Engage the 2 claws to install the lower steering column cover.

P

(b) Engage the 4 claws.

P

(c) Engage the claw.

HINT:

Press the area around the claw to engage it.

16. REMOVE TONNEAU COVER HOLDER CAP INFO
17. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH INFO
18. REMOVE BACK DOOR LOCK ASSEMBLY

(a) Disconnect the connector and disengage the 4 clamps.

(b) Remove the 3 bolts and back door lock assembly.

INSPECTION

1. INSPECT BACK DOOR LOCK ASSEMBLY

(a) Check the operation of the door lock motor.

(1) Move the door lock to the lock position.

*1

P

(2) Apply battery voltage to the door lock motor and check the operation of the door lock motor.

OK:

Connection	Result
Battery positive (+) → 4 (ACT+)	Unlocks
Battery negative (-) → 3 (ACT-)	

If the result is not as specified, replace the back door lock assembly.

(b) Check the operation of the door courtesy switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-------------------	-----------	---------------------

Tester Connection	Condition	Specified Condition
1 (E) - 2 (+)	Locked	10 k Ω or higher
1 (E) - 2 (+)	Unlocked	Below 1 Ω

If the result is not as specified, replace the door control switch assembly.

INSTALLATION

1. INSTALL DOOR CONTROL SWITCH ASSEMBLY

(a) Engage the 2 claws to install the door control switch assembly.

2. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL INFO

3. INSTALL ASSIST GRIP COVER

HINT:

Use the same procedure for the RH side and LH side INFO.

COMPONENTS

ILLUSTRATION

REMOVAL

1. REMOVE TRANSMITTER BATTERY_

INSPECTION

1. INSPECT ELECTRICAL KEY TRANSMITTER

(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery) from the transmitter INFO.

H

(2) Install a new or normal battery (lithium battery).

HINT:

If a new or normal battery is not available, first connect 2 new 1.5 V batteries in series. Then connect leads to the batteries and apply 3 V to the transmitter, as shown in the illustration.

(3) From outside the vehicle, approximately 1 m (3.28 ft.) away from the driver side outside door handle, test the transmitter by pointing its key plate at the vehicle and pressing a transmitter switch.

OK:

The door lock can be operated via the transmitter.

The LED comes on more than once.

- The operational area differs depending on the user, the way the transmitter is held, and the location.
- The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operation area may be shortened or the transmitter may not function.

(b) Inspect the battery capacity.

(1) Remove the battery INFO from the electrical key transmitter that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) in diameter or less including wire sheath) with tape or equivalent to the negative terminal.

NOTICE:

Do not wrap the lead wire around a terminal, wedge it between the terminals, or solder it. A terminal may be deformed or damaged, and the battery will not be able to be installed correctly.

(2) Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.

H

(3) Using an oscilloscope, check the transmitter battery voltage waveform.

HINT:

When measuring the battery voltage, while operating the lock sensor of a door handle, bring the electrical key transmitter within the entry operating range to perform the measurement. For the entry operating range, refer to **SYSTEM DESCRIPTION** [INFO](#).

Standard voltage:

H

Item	Content
Tester Connection	Battery positive (+) - Battery negative (-)
Tool Setting	0.5 V/DIV., 100 ms/DIV.
Condition	Power switch OFF, all doors closed and lock sensor touched
Specified Condition	2.2 to 3.2 V (Refer to the waveform)

If the result is not as specified, replace the transmitter battery.

INSTALLATION

1. INSTALL TRANSMITTER BATTERY_

*1	Component without harness connected (Front Door Lock Assembly RH)
*2	Unlock
*3	Lock

If the result is not as specified, replace the front door lock assembly RH.

(b) Check the operation of the door unlock detection switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
7 (LSSR) - 8 (E)	Locked	10 k Ω or higher
7 (LSSR) - 8 (E)	Unlocked	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Front Door Lock Assembly RH)
*2	Unlock
*3	Lock

If the result is not as specified, replace the front door lock assembly RH.

P

INSTALLATION

1. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY [INFO](#)

2. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY [INFO](#)

3. INSTALL FRONT DOOR LOCK ASSEMBLY

NOTICE:

- When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the connector with a new one.
- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion. This may result in a malfunction of the front door lock assembly.

(a) Apply MP grease to the sliding parts of the front door lock assembly.

(b) Install a new door lock wiring harness seal to the front door lock assembly.

(c) Insert the front door lock open rod to the front door lock assembly.

(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.

(e) Using a T30 "TORX" socket wrench, install the front door lock assembly with the 3 screws.

Certification ECU (Smart Key ECU Assembly)*3	Main Body ECU (Multiplex Network Body ECU)	Back door opener switch signal	CAN

- *3: w/ Entry System Back Door Open Function

SYSTEM DESCRIPTION

1. POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION

(a) The power door lock system locks/unlocks all doors.

The driver and front passenger door control switches send lock/unlock request signals to the main body ECU (multiplex network body ECU). Then, the main body ECU (multiplex network body ECU) sends these request signals to the door lock motors in each door to lock/unlock all doors at once in response to the inputs.

Operating the driver door lock using a mechanical key sends request signals to lock or unlock the doors to the main body ECU (multiplex network body ECU).

2. FUNCTION OF MAIN COMPONENTS

Component	Function
Multiplex network master switch assembly	Driver door control switch on multiplex network master switch assembly locks or unlocks all doors.
Door control switch assembly*1	Front passenger door control switch assembly locks or unlocks all doors.
Door courtesy light switch assembly	<ul style="list-style-type: none">Placed on each door.Detects door status (open or closed) and outputs data to main body ECU (multiplex network body ECU).Turns on when door is opened and turns off when door is closed.
Front door lock assembly (for driver side)	<ul style="list-style-type: none">Built-in motor locks or unlocks door.Built-in door control switch (key-linked) detects door key operation status (locked or unlocked) and outputs a signal to main body ECU (multiplex network body ECU).Built-in position switch detects door status (locked or unlocked) and outputs a signal to main body ECU (multiplex network body ECU). This switch turns off when door is locked and turns on when door is unlocked.
Front door lock assembly (for front passenger side) Rear door lock assembly LH/RH	<ul style="list-style-type: none">Built-in motor locks or unlocks door.Built-in position switch detects door status (locked or unlocked) and outputs a signal to main body ECU (multiplex network body ECU). This switch turns off when door is locked and turns on when door is unlocked.
Back door lock assembly	<ul style="list-style-type: none">Built-in motor opens door latch.Performs back door open operation according to locked/unlocked state determination of main body ECU (multiplex network body ECU).

- *1: w/ Front Passenger Side Door Control Switch

3. SYSTEM FUNCTION

(a) This system is controlled by the main body ECU (multiplex network body ECU). The main body ECU (multiplex network body ECU) outputs signals to each door lock motor. The power door lock control system has the following functions:

Function	Outline
Manual lock and unlock function	This function can lock or unlock all doors by the door control switch operation.
Key-linked lock and unlock function	This function, which is linked with the mechanical key cylinder, can lock or unlock all doors when a lock or unlock operation is effected.
Manual unlock prohibition function	<p>When the condition below is met, unlocking the vehicle using the door control switch will be prohibited.</p> <ul style="list-style-type: none"> • The doors are locked using a mechanical key, door control transmitter or entry lock operation with all doors closed.
Key lock-in prevention function	When the key is in the vehicle, performing the door lock operation will not lock the door.
Key-linked 2-step unlock function	Unlocks only the driver door by turning the key cylinder once and unlocks the other doors by turning it twice.
Shift-linked automatic door lock function*2	<p>When the conditions listed below are met consecutively, this function causes all doors to be automatically locked:</p> <ul style="list-style-type: none"> • All doors are closed. • The hybrid vehicle control system is started. • The shift lever is moved to any position.
Shift-linked automatic door unlock function	<p>When the conditions listed below are met consecutively, this function causes all doors to be automatically unlocked:</p> <ul style="list-style-type: none"> • The power switch is on (IG). • Push the P position switch.
Speed-sensitive automatic door lock function*3	<p>When the conditions listed below are met consecutively, this function causes all doors to be automatically locked:</p> <ul style="list-style-type: none"> • All doors are closed. • Any of the doors is unlocked. • Vehicle speed is higher than approximately 20 km/h (12 mph).
Opening driver door-linked automatic door unlock*4	All doors are unlocked automatically when the driver door is opened within 10 seconds after the power switch is turned from on (IG) to off.

- *2: Default setting for Korea is OFF.
- *3: Default setting for except Korea is OFF.
- *4: Default setting is OFF.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the power door lock control system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS CHECK
----	---------------------------------

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points for problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE
----	-------------------------

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	SYSTEM CHECK
----	--------------

(a) Check the vehicle specification.

Result:

Result	Proceed to
w/ Entry System Back Door Open Function	A
w/o Entry System Back Door Open Function	B

B ▶ Go to step 6

A
▼

5.	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*
----	---

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B ▶  GO TO CAN COMMUNICATION SYSTEM

A
▼

6.	INSPECT COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*
----	---

(a) Use the Techstream to check if the LIN communication system is functioning normally .

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B ▶  GO TO LIN COMMUNICATION SYSTEM

A
▼

7.	CHECK FOR DTC (MASTER SWITCH)*
----	--------------------------------

(a) Clear the DTCs .

(b) Recheck for DTCs.

Result:

Result	Proceed to
DTC B2312 is not output	A
DTC B2312 is output	B

B ▶  GO TO POWER WINDOW CONTROL SYSTEM

A
▼

8.	PROBLEM SYMPTOMS TABLE
----	------------------------

(a) Refer to Problem Symptoms Table [INFO](#).

Result:

Result	Proceed to
Fault is not listed in Problem Symptoms Table	A
Fault is listed in Problem Symptoms Table	B

B ▶ Go to step 10

NEXT ▶ **END**

OPERATION CHECK

1. CHECK POWER DOOR LOCK OPERATION

NOTICE:

The operation check below is based on the non-customized initial condition of the vehicle.

(a) Check basic functions.

(1) Check that all doors lock when the lock side of the door control switch (for manual operation) is pressed, and all doors unlock when the unlock side is pressed.

(2) Check that all doors lock when the driver door lock key cylinder is turned to lock using the key.

(3) Check that the driver door unlock when the driver door lock key cylinder is turned to unlock using the key.

(b) Check the key lock-in prevention function.

NOTICE:

In order to prevent the key from being locked in, the following inspection should be performed with the driver door window open.

(1) Turn the power switch on (IG) or (ACC).

(2) With the driver door open, check that all doors unlock immediately after the door lock knob for the driver door is locked.

(3) With the driver door open, check that all doors unlock immediately after the lock side of the door control switch (for manual operation) is pressed.

(4) With the driver door open, lock the driver door lock knob and hold it for 2 seconds or more, then close the driver door and check that all doors unlock.

(c) Check the security function of the door lock control system.

(1) Close all doors and leave the driver door window open so that the door control switch can be operated from outside the vehicle. (Step 1)

(2) Open the driver door and remove the key from the vehicle. With the door still open, lock the door using the lock knob. Hold the outside handle of the driver door open, and close the door while holding the handle open (confirm that the lock knob remained in the lock position). Then, check that the doors do not unlock when the unlock side of the door control switch (for manual operation) is pressed from outside the vehicle.

(3) Starting from Step 1, with the key outside the vehicle, close and lock the driver door using the mechanical key. Then, check that the doors do not unlock when the unlock side of the door control switch (for manual operation) is pressed from outside the vehicle.

(4) Starting from Step 1, with the key outside the vehicle, close and lock the driver door using wireless door lock or entry lock operation. Then, check that the doors do not unlock when the unlock side of the door control switch (for manual operation) is pressed from outside the vehicle.

HINT:

Check that the security function of the door lock control system is canceled under the following conditions:

- The power switch is turned on (IG).
- The driver door is unlocked using the key.
- The unlock side of the door control switch (for manual operation) is pressed after the door lock knob is unlocked manually.
- The doors are unlocked by wireless operation.

(d) Check the illumination function.

(1) Set the map light switch to the door position.

(2) When the driver door is unlocked by the key linked or wireless operation with the power switch off and all doors closed and locked, check that the roof light comes on.

(3) Check that the interior light turns off in approximately 15 seconds* if the doors have not been opened.

HINT:

*: This function can be customized .

(e) Check the key-linked 2-step unlock function.

(1) Lock all doors.

(2) Check that only the driver door unlocks when the driver door lock cylinder is turned to unlock once using the key and other doors unlock when turned to unlock consecutively once again.

(f) Check the driver door-linked automatic door unlock function.

HINT:

The default setting is OFF. If necessary, the function must be set to ON through the customize function.

(1) When the driver door is closed, turning the power switch from on (IG) to off and opening the driver door within 10 seconds will automatically unlock all doors.

(g) Check the shift linked automatic door lock function.

HINT:

The default setting for Korea is OFF. If necessary, the function must be set to ON through the customize function.

(1) When the power switch is on (IG) and the shift lever is moved to any position, check that all doors lock automatically.

(h) Check the shift linked automatic door unlock function.

(1) When the power switch is on (IG) and push the P position switch, check that all doors unlock automatically.

(i) Check the speed-sensitive automatic door lock function.

HINT:

The default setting for except Korea is OFF. If necessary, the function must be set to ON through the customize function.

(1) Confirm that all doors lock when the vehicle speed reaches 20 km/h (12mph) if the vehicle starts off with any of the doors unlocked.

HINT:

If the vehicle is being driven after the speed-sensitive automatic door lock function has locked the doors, the speed-sensitive automatic door lock function does not attempt to relock the doors, even if any of the doors is unlocked. The vehicle must be stopped first before the speed-sensitive automatic door lock function will relock the doors.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH TECHSTREAM

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Customize Setting.
- (e) Select the setting by referring to the table below.

Door Lock

Display	Default	Content	Setting
Unlock Key Twice	ON	Function that unlocks only the driver door when the driver door key cylinder is turned to unlock once, and unlock all doors when it is turned to unlock twice. For the OFF setting, turning it once unlocks all doors.	ON or OFF
Auto Lock	OFF ON*	Function that locks all doors when the vehicle speed reaches a certain level.	ON or OFF
Auto Lock/Shift	ON OFF*	Function that locks all doors when the shift lever is moved from P to any position other than P while the engine is running and all doors are closed.	ON or OFF
Auto Unlock/Shift	ON	Function that unlocks all doors when the shift lever is moved to P from any position other than P while the power switch is on (IG).	ON or OFF
All Unlock/Open-Close	OFF	Function that unlocks the other doors when the driver door is opened within 10 seconds after the power switch is turned off.	ON or OFF

- *: for Korea

Illuminated Entry

Display	Default	Content	Setting
Lighting Time	15 s	Function that changes the lighting time after closing all doors. (It will quickly fade out in case of turning the power switch from off to on (ACC) or (IG).)	7.5 s, 15 s or 30 s

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

(a) Disconnect the 2B and 2C junction block connectors.

(b) Disconnect the A main body ECU connector.

(c) Measure the voltage and resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connectors disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2B-6 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2C-18 (BECU) - Body ground	Y - Body ground	Battery power supply	Power switch off	11 to 14 V
A-29 (ACC) - Body ground	-	ACC power supply	Power switch on (ACC)	11 to 14 V
A-29 (ACC) - Body ground	-	ACC power supply	Power switch off	Below 1 V
A-31 (ALTB) - Body ground	-	Battery power supply	Power switch off	11 to 14 V
A-32 (IG) - Body ground	-	Power switch power supply	Power switch on (IG)	11 to 14 V
A-32 (IG) - Body ground	-	Power switch power supply	Power switch off	Below 1 V

If the result is not as specified, there may be a malfunction in the wire harness.

(d) Reconnect the 2B and 2C junction block connectors.

(e) Reconnect the A main body ECU connector.

(f) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
2B-1 (ACT-) - Body ground	B - Body ground	Door lock motor unlock drive output (except driver side)	Driver or front passenger side door control switch off	Below 1 V
2B-1 (ACT-) - Body ground	B - Body ground	Door lock motor unlock drive output (except driver side)	Driver or front passenger side door control switch unlocked	11 to 14 V
2B-8 (ACT+) - Body ground	L - Body ground	Door lock motor lock drive output (all doors)	Driver or front passenger side door control switch off	Below 1 V
2B-8 (ACT+) - Body ground	L - Body ground	Door lock motor lock drive output (all doors)	Driver or front passenger side door control switch locked	11 to 14 V
2B-5 (ACTD) -	B - Body	Driver side door lock motor	Driver or front passenger side	Below 1 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Body ground	ground	unlock drive output	door control switch off	
2B-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor unlock drive output	Driver or front passenger side door control switch unlocked	11 to 14 V
2D-36 (FRCY) - Body ground	BR - Body ground	Front passenger side door courtesy switch input	Front passenger side door open	Below 1 V
2D-36 (FRCY) - Body ground	BR - Body ground	Front passenger side door courtesy switch input	Front passenger side door closed	11 to 14 V
2D-35 (FLCY) - Body ground	V - Body ground	Driver side door courtesy switch input	Driver door open	Below 1 V
2D-35 (FLCY) - Body ground	V - Body ground	Driver side door courtesy switch input	Driver door closed	11 to 14 V
2D-25 (LSR) - Body ground	GR - Body ground	Rear door LH lock position switch input	Rear door LH unlocked	Below 1 V
2D-25 (LSR) - Body ground	GR - Body ground	Rear door LH lock position switch input	Power switch off, all doors closed and rear door LH locked	11 to 14 V
2B-29 (LSR) - Body ground	GR - Body ground	Rear door RH lock position switch input	Rear door RH unlocked	Below 1 V
2B-29 (LSR) - Body ground	GR - Body ground	Rear door RH lock position switch input	Power switch off, all doors closed and rear door RH locked	11 to 14 V
L7-6 (LRCY) - Body ground	G - Body ground	Rear door courtesy light switch input	Rear door open	Below 1 V
L7-6 (LRCY) - Body ground	G - Body ground	Rear door courtesy light switch input	Rear door closed	11 to 14 V
L7-7 (LSFL) - Body ground	GR - Body ground	Driver door lock position switch input	Driver door unlocked	Below 1 V
L7-7 (LSFL) - Body ground	GR - Body ground	Driver door lock position switch input	Power switch off, all doors closed and driver door locked	11 to 14 V
L7-9 (L1) - Body ground*1	LG - Body ground	Front passenger side door control switch input	Front passenger side door control switch locked	Below 1 V
L7-9 (L1) - Body ground*1	LG - Body ground	Front passenger side door control switch input	Front passenger side door control switch off	11 to 14 V
L7-10 (UL1) - Body ground*1	BR - Body ground	Front passenger side door control switch input	Front passenger side door control switch unlocked	Below 1 V
L7-10 (UL1) - Body ground*1	BR - Body ground	Front passenger side door control switch input	Front passenger side door control switch off	11 to 14 V
L7-11 (L2) - Body ground	G - Body ground	Driver door key-linked lock input	Driver door key cylinder turned to lock	Below 1 V
L7-11 (L2) - Body ground	G - Body ground	Driver door key-linked lock input	Driver door key cylinder off	11 to 14 V
L7-18 (LSFR) - Body ground	LG - Body ground	Front passenger side door lock position switch input	Front passenger side door unlocked	Below 1 V
L7-18 (LSFR) -	LG - Body	Front passenger side door	Power switch off, all doors	11 to 14 V

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
Body ground	ground	lock position switch input	closed and front passenger side door locked	
L7-19 (BCTY) - Body ground	L - Body ground	Back door courtesy light switch input	Back door open	Below 1 V
L7-19 (BCTY) - Body ground	L - Body ground	Back door courtesy light switch input	Back door closed	11 to 14 V
L7-23 (BDSU) - Body ground*2	GR - Body ground	Back door opener switch input	Back door opener switch pushed	Below 1 V
L7-23 (BDSU) - Body ground*2	GR - Body ground	Back door opener switch input	Back door opener switch not pushed	11 to 14 V
L7-24 (UL3) - Body ground	V - Body ground	Driver door key-linked unlock input	Driver door key cylinder turned to unlock	Below 1 V
L7-24 (UL3) - Body ground	V - Body ground	Driver door key-linked unlock input	Driver door key cylinder off	11 to 14 V

- *1: w/ Front Passenger Side Door Control Switch

- *2: w/o Entry System Back Door Open Function

If the result is not as specified, the main body ECU (multiplex network body ECU) may have a malfunction.

2. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY) (w/ Entry System Back Door Open Function)

(a) Disconnect the L62 certification ECU (smart key ECU assembly) connector.

(b) Measure the resistance according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-22 (TSW5) - Body	GR - Body	Back door opener switch	Back door opener	Below 1 Ω

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
ground	ground	signal	switch on	
L62-22 (TSW5) - Body ground	GR - Body ground	Back door opener switch signal	Back door opener switch off	10 kΩ or higher

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the L62 certification ECU (smart key ECU assembly) connector.

(d) Measure the voltage according to the value(s) in the table below.

Tester Connection	Wiring Color	Terminal Description	Condition	Specified Condition
L62-22 (TSW5) - Body ground	GR - Body ground	Back door opener switch signal	Back door opener switch off	11 to 14 V
L62-22 (TSW5) - Body ground	GR - Body ground	Back door opener switch signal	Back door opener switch on	Below 1 V

If the result is not as specified, the certification ECU (smart key ECU assembly) may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 .

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body or Master Switch / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
RR Door Courtesy SW	Rear door courtesy light switch signal/ON or OFF	ON: Rear left side or rear right side door open OFF: Rear left side and rear right side door closed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Test Part	Control Range	Diagnostic Note
Door Lock	Operate door lock motor	Unlock/Lock/OFF	-
D-Door Unlock	Operate driver side door lock motor	ON/OFF	-
Trunk and Back-Door Open	Operate back door lock motor	ON/OFF	-

DESCRIPTION

The main body ECU (multiplex network body ECU) receives switch signals from the multiplex network master switch assembly, and driver side door key cylinder switch signals from the front door lock assembly LH. The main body ECU (multiplex network body ECU) activates the door lock motor on each door according to these signals.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DOOR LOCK OPERATION

(a) Check door lock operation INFO.

Result:

	Result	Proceed to
--	---------------	-------------------

Result	Proceed to
All doors cannot be locked through multiplex network master switch	A
All doors cannot be locked through driver door key cylinder	B

B  [READ VALUE USING TECHSTREAM \(DOOR KEY LINKED LOCK AND UNLOCK SWITCH\)](#)

A

2. CHECK DTC OUTPUT (LIN COMMUNICATION SYSTEM)

(a) Clear the DTC .

(b) Recheck for DTCs.

OK:

DTC B1206 is not output.

NG  GO TO LIN COMMUNICATION SYSTEM (DTC B1206)

OK

3. REPLACE MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY

(a) Replace the multiplex network master switch assembly .

NEXT

4. CHECK DOOR LOCK OPERATION

(a) Check that all doors can be locked and unlocked by using the multiplex network master switch .

OK:

All doors can be locked and unlocked with the multiplex network master switch.

NG  REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

OK  **END (MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY WAS DEFECTIVE)**

5. READ VALUE USING TECHSTREAM (DOOR KEY LINKED LOCK AND UNLOCK SWITCH)

(a) Connect the Techstream to the DLC3.

- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Door Key SW-Lock	Driver door key-linked lock/unlock switch lock signal/ON or OFF	ON: Driver door key cylinder turned to lock position OFF: Driver door key cylinder not turned to lock position	-
D Door Key SW-UL	Driver door key-linked lock/unlock switch unlock signal/ON or OFF	ON: Driver door key cylinder turned to unlock position OFF: Driver door key cylinder not turned to unlock position	-

OK:

The Techstream indicates ON or OFF according to the key cylinder operation shown in the table.

NG ► [INSPECT FRONT DOOR LOCK ASSEMBLY LH \(DOOR KEY LINKED LOCK AND UNLOCK SWITCH\)](#)

OK ► **REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)**

6.	INSPECT FRONT DOOR LOCK ASSEMBLY LH (DOOR KEY LINKED LOCK AND UNLOCK SWITCH)
----	--

- (a) Remove the front door lock assembly LH INFO.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
9 (L) - 7 (E)	Locked	Below 1 Ω
9 (L) - 7 (E)	off	10 k Ω or higher
10 (UL) - 7 (E)	Unlocked	Below 1 Ω
10 (UL) - 7 (E)	off	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Front Door Lock Assembly LH)
*2	Lock
*3	off
*4	Unlock

NG REPLACE FRONT DOOR LOCK ASSEMBLY LH

OK

7.	CHECK HARNESS AND CONNECTOR (FRONT DOOR LOCK - MAIN BODY ECU)
----	---

(a) Disconnect the main body ECU (multiplex network body ECU) connector.

*1

*2

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
O8-9 (L) - L7-11 (L2)	Always	Below 1 Ω
O8-10 (UL) - L7-24 (UL3)	Always	Below 1 Ω
O8-7 (E) - Body ground	Always	Below 1 Ω
L7-11 (L2) - Body ground	Always	10 k Ω or higher
L7-24 (UL3) - Body ground	Always	10 k Ω or higher

*1	Front view of wire harness connector (to Front Door Lock Assembly LH)
*2	Front view of wire harness connector (to Main Body ECU (Multiplex Network Body ECU))

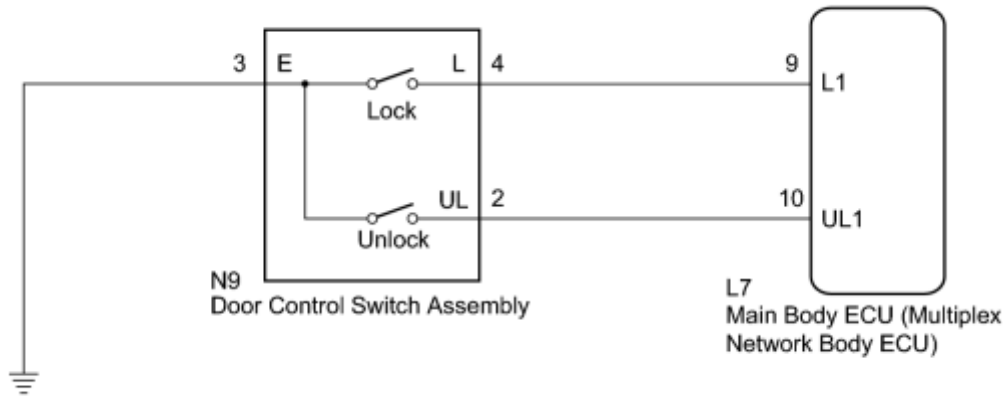

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK **REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)**

DESCRIPTION

The main body ECU (multiplex network body ECU) receives switch signals from the door control switch assembly and activates the door lock motor on each door according to these signals.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. READ VALUE USING TECHSTREAM (DOOR CONTROL SWITCH)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Door Lock SW-Lock	Front passenger side door control switch lock signal/ON or OFF	ON: Lock side of front passenger side door control switch pushed	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		OFF: Lock side of front passenger side door control switch not pushed	
Door Lock SW-Unlock	Front passenger side door control switch unlock signal/ON or OFF	ON: Unlock side of front passenger side door control switch pushed OFF: Unlock side of front passenger side door control switch not pushed	-

OK:

The Techstream indicates ON or OFF according to the switch operation shown in the table.

NG [INSPECT DOOR CONTROL SWITCH ASSEMBLY](#)

OK [REPLACE MAIN BODY ECU \(MULTIPLEX NETWORK BODY ECU\)](#)

2.	INSPECT DOOR CONTROL SWITCH ASSEMBLY
----	--------------------------------------

(a) Remove the door control switch assembly [INFO](#).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
4 (L) - 3 (E)	Locked	Below 1 Ω
4 (L) - 3 (E)	off	10 k Ω or higher
2 (UL) - 3 (E)	Unlocked	Below 1 Ω
2 (UL) - 3 (E)	off	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Door Control Switch Assembly)
*2	Unlock
*3	Lock

NG **REPLACE DOOR CONTROL SWITCH ASSEMBLY**

OK

3. CHECK HARNESS AND CONNECTOR (DOOR CONTROL SWITCH - MAIN BODY ECU AND BODY GROUND)

*1

*2

(a) Disconnect the main body ECU (multiplex network body ECU) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
N9-2 (UL) - L7-10 (UL1)	Always	Below 1 Ω
N9-4 (L) - L7-9 (L1)	Always	Below 1 Ω
N9-3 (E) - Body ground	Always	Below 1 Ω
N9-2 (UL) - Body ground	Always	10 k Ω or higher
N9-4 (L) - Body ground	Always	10 k Ω or higher

Text in Illustration

*2	Front view of wire harness connector (to Main Body ECU (Multiplex Network Body ECU))

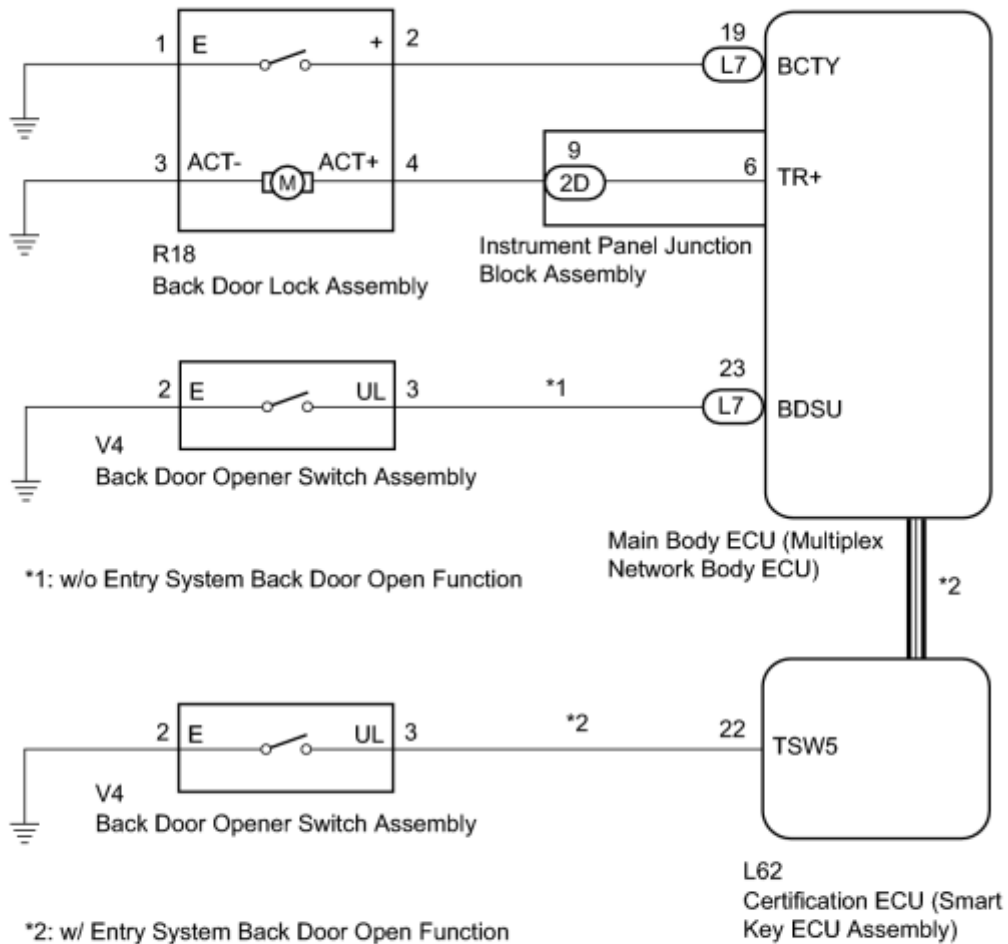

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)**

DESCRIPTION

The main body ECU (multiplex network body ECU) receives signals from the back door opener switch assembly. Then, the main body ECU (multiplex network body ECU) activates the back door lock motor.

INSPECTION PROCEDURE

PROCEDURE

1.	SYSTEM CHECK
----	--------------

(a) Check the vehicle specification.

Result:

Result	Proceed to
w/o Entry System Back Door Open Function	A
w/ Entry System Back Door Open Function	B

B [INSPECT BACK DOOR LOCK ASSEMBLY](#)

A

2.	CHECK POWER DOOR LOCK OPERATION (BASIC FUNCTION)
----	--

(a) Check the power door lock basic function INFO.

OK:

The power door lock basic functions operate normally.

NG [GO TO PROBLEM SYMPTOMS TABLE](#)

OK

3.	READ VALUE USING TECHSTREAM (DOOR LOCK STATUS)
----	--

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Back Door Open	Back door lock/Permit or Prohibit	Permit: Back door unlocked Prohibit: Back door locked	-

OK:

The Techstream indicates Permit or Prohibit according to the door lock operation shown in the table.

NG  REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

OK

4.	PERFORM ACTIVE TEST USING TECHSTREAM
----	--------------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Test Part	Control Range	Diagnostic Note
Trunk and Back-Door Open	Operate back door lock motor	ON or OFF	-

OK:

The back door lock assembly unlatches when ON is selected.

NG  INSPECT BACK DOOR LOCK ASSEMBLY

OK

5.	READ VALUE USING TECHSTREAM
----	-----------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Multiplex Network Body ECU))

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
----------------	------------------------	------------------	-----------------

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Back Door Open Handle SW	Back door opener switch signal/ON or OFF	ON: Back door opener switch pushed OFF: Back door opener switch not pushed	-

OK:

The Techstream indicates ON or OFF according to the switch operation shown in the table.

NG [INSPECT BACK DOOR OPENER SWITCH ASSEMBLY](#)

OK [REPLACE MAIN BODY ECU \(MULTIPLEX NETWORK BODY ECU\)](#)

6.	INSPECT BACK DOOR LOCK ASSEMBLY
----	---------------------------------

(a) Remove the back door lock assembly INFO.

*1

P

(b) Check the operation of the door lock motor.

(1) Move the door lock to the lock position.

(2) Apply battery voltage to the door lock motor and check the operation of the door lock motor.

OK:

Connection	Result
Battery positive (+) → Terminal 4 (ACT+)	Unlocks
Battery negative (-) → Terminal 3 (ACT-)	

(c) Check the operation of the door courtesy switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 (E) - 2 (+)	Locked	10 k Ω or higher
1 (E) - 2 (+)	Unlocked	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Back Door Lock Assembly)
*2	Lock
*3	Unlock

NG  REPLACE BACK DOOR LOCK ASSEMBLY

OK

7.	CHECK HARNESS AND CONNECTOR (BACK DOOR LOCK ASSEMBLY - MAIN BODY ECU)
----	---

(a) Disconnect the main body ECU (multiplex network body ECU) connector.

(b) Disconnect the instrument panel junction block assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
R18-4 (ACT+) - 2D-9 (TR+)	Always	Below 1 Ω
R18-4 (ACT+) - Body ground	Always	10 k Ω or higher
R18-2 (+) - L7-19 (BCTY)	Always	Below 1 Ω
R18-2 (+) - Body ground	Always	10 k Ω or higher
R18-3 (ACT-) - Body ground	Always	Below 1 Ω
R18-1 (E) - Body ground	Always	Below 1 Ω

*1	Front view of wire harness connector (to Back Door Lock Assembly)	*2	Front view of wire harness connector (to Instrument Panel Junction Block Assembly)
*3	Front view of wire harness connector (to Main Body ECU (Multiplex Network Body ECU))	-	-

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.	REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY
----	--

(a) Replace the instrument panel junction block assembly .

NEXT

9.	CHECK BACK DOOR OPEN OPERATION
----	--------------------------------

(a) Check that the back door can be opened.

OK:

The back door can be opened normally.

NG  REPLACE MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)

OK  END (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY WAS DEFECTIVE)

10.	INSPECT BACK DOOR OPENER SWITCH ASSEMBLY
-----	--

(a) Remove the back door opener switch assembly .

(b) Check the operation of the opener switch.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
2 (E) - 3 (UL)	Back door opener switch not pushed	10 k Ω or higher
2 (E) - 3 (UL)	Back door opener switch pushed	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Back Door Opener Switch Assembly)
----	---

NG REPLACE BACK DOOR OPENER SWITCH ASSEMBLY

OK

11.	CHECK HARNESS AND CONNECTOR (BACK DOOR OPENER SWITCH ASSEMBLY - MAIN BODY ECU)
-----	--

(a) Disconnect the main body ECU (multiplex network body ECU) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
V4-3 (UL) - L7-23 (BDSU)	Always	Below 1 Ω
V4-3 (UL) - Body ground	Always	10 k Ω or higher
V4-2 (E) - Body ground	Always	Below 1 Ω

14. REMOVE REAR DOOR REAR GUIDE SEAL [INFO](#)
15. REMOVE REAR DOOR GLASS SUB-ASSEMBLY [INFO](#)
16. REMOVE REAR DOOR LOCK ASSEMBLY

(a) Using a T30 "TORX" socket wrench, remove the 3 screws.

P

(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.

P

(c) Remove the door lock wiring harness seal from the rear door lock assembly.

17. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY [INFO](#)

18. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY [INFO](#)

INSPECTION

1. INSPECT REAR DOOR LOCK ASSEMBLY LH

(a) Check the operation of the door lock motor.

(1) Apply battery voltage and check the operation of the door lock motor.

OK:

*1

Connection	Result
Battery positive (+) → Terminal 4 (L)	Locks
Battery negative (-) → Terminal 1 (UL)	
Battery positive (+) → Terminal 1 (UL)	Unlocks
Battery negative (-) → Terminal 4 (L)	

Text in Illustration

*1	Component without harness connected (Rear Door Lock Assembly LH)
*2	Lock
*3	Unlock

If the result is not as specified, replace the rear door lock assembly LH.

(b) Check the operation of the unlock detection switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (LSSR) - 9 (E)	Locked	10 kΩ or higher
6 (LSSR) - 9 (E)	Unlocked	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Rear Door Lock Assembly LH)
*2	Lock
*3	Unlock

*1

P

P

If the result is not as specified, replace the rear door lock assembly LH.

2. INSPECT REAR DOOR LOCK ASSEMBLY RH

(a) Check the operation of the door lock motor.

(1) Apply battery voltage and check the operation of the door lock motor.

OK:

Connection	Result
Battery positive (+) → Terminal 4 (L)	Locks
Battery negative (-) → Terminal 1 (UL)	
Battery positive (+) → Terminal 1 (UL)	Unlocks
Battery negative (-) → Terminal 4 (L)	

Text in Illustration

*1	Component without harness connected (Rear Door Lock Assembly RH)
*2	Unlock
*3	Lock

If the result is not as specified, replace the rear door lock assembly RH.

(b) Check the operation of the unlock detection switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (LSSR) - 9 (E)	Locked	10 kΩ or higher
6 (LSSR) - 9 (E)	Unlocked	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Rear Door Lock Assembly RH)
*2	Unlock

*3	Lock
----	------

If the result is not as specified, replace the rear door lock assembly RH.

INSTALLATION

1. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY INFO

2. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY INFO

3. INSTALL REAR DOOR LOCK ASSEMBLY

NOTICE:

- When reusing the removed rear door lock assembly, replace the door lock wiring harness seal on the connector with a new one.
- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion. This may result in a malfunction of the rear door lock assembly.

(a) Apply MP grease to the sliding parts of the rear door lock assembly.

(b) Install a new door lock wiring harness seal to the rear door lock assembly.

(c) Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.

(d) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.

(e) Using a T30 "TORX" socket wrench, install the rear door lock assembly with the 3 screws.

Torque: **5.0 N·m (51 kgf·cm, 44in·lbf)**

4. INSTALL REAR DOOR GLASS SUB-ASSEMBLY INFO

REPLACEMENT

1. REMOVE TRANSMITTER BATTERY

NOTICE:

Take extra care when handling these precision electronic components.

(a) Push the release hook knob and extract the mechanical key.

Y

(b) Insert a precision screwdriver into the gap, and turn the screwdriver to detach the transmitter housing cover.

P

HINT:

Tape the screwdriver tip before use.

(c) Insert a precision screwdriver into the gap and gently remove the battery (lithium battery: CR1632).

- Do not push the terminals with your finger.
